Appendix C: Statistical Properties and Definitions

The statistical process for testing whether BellSouth's (BST) wholesale customers (alternative local exchange carriers or ALECs) are being treated equally with BST's retail customers involves more than a simple mathematical formula. Three key elements need to be considered before an appropriate decision process can be developed. These are the type of:

- data
- comparison
- performance

This appendix describes the properties of a test methodology and the truncated Z statistic for four types of measures.

1.   Necessary Properties for a Test Methodology

Once the key elements are determined. a test methodology should be developed that complies with the following properties:

- Like-to-Like Comparisons
- Aggregate Level Test Statistic
- Production Mode Process
- Balancing
- Trimming

Like-to-Like Comparisons

When possible, data should be compared at appropriate levels, e.g. wire center. time of month, dispatched residential, new orders. The testing process should:

- Identify variables that may affect the performance measure
- Record these important confounding covariates
- Adjust for the observed covariates in order to remove potential biases and to make the ALEC and the ILEC units as comparable as possible

Aggregate Level Test Statistic

Each performance measure of interest should be summarized by one overall test statistic giving the decision make a rule that determines whether a statistically significant difference exists. The test statistic should have the following properties:

- The method should provide a single overall index on a standard scale.
- If entries in comparison cells are exactly proportional over a covariate. the aggregated index should be very nearly the same as if comparisons on the covariate had not been done.
- The contribution of each comparison cell should depend on the number of observations in the cell.
- Cancellation between comparison cells should be limited.
- The index should be a continuous function of the observations.

Production Mode Process

The decision system must be developed so that it does not require intermediate manual intervention, i.e., the process must be mechanized to the extent possible.

- Calculations are well defined for possible eventualities.
- The decision process is an algorithm that needs no manual intervention.
- Results should be arrived at in a timely manner.
- The system must recognize that resources are needed for other performance measure-related processes that also must be run in a timely manner.
- The system should be auditable. and adjustable over time.

Balancing

The testing methodology should balance Type I and Type II Error probabilities.

- P (Type I Error) = P (Type II Error) for well-defined null and alternative hypotheses.
- The formula for a test's balancing critical value should be simple enough to calculate using standard mathematical functions. i.e., one should avoid methods that require computationally intensive techniques.
- Little to no information beyond the null hypothesis, the alternative hypothesis, and the number of observations should be required for calculating the balancing critical value.

Trimming

Trimming of extreme observations from BellSouth and ALEC distributions is needed in order to ensure that a fair comparison is made between performance measures. Three conditions are needed to accomplish this goal. These conditions are:

- Trimming should be based on a general rule that can be used in a production setting.
- Trimmed observations should not simply be discarded; they need to be examined and possibly used in the final decision-making process.
- Trimming should only be used on performance measures that are sensitive to "outliers."

Measurement Types

The performance measurements that will undergo testing are of four types: mean, ratio, proportion, and rate. All four have similar characteristics. Different types of data are used to calculate them. Table C-1 shows the type of data that is used to derive each measurement type.

Table C-1: Measurements Types and Data

Measurement Type	Data Used to Derive Measure
Mean	Interval measurements
Ratio	
Proportion	Counts
Rate	

⊚ **BELLSOUTH**®

2.   Testing Methodology – The Truncated Z

The calculation of the Truncated Z statistic is described in Appendix A of the "Louisiana Statistician's Report." The methodology described in this document is the same as that described in the "Statistician's Report;" however, this document contains extra technical details to avoid undefined situations when programming the technique.

In summary, many covariates are chosen in order to provide meaningful comparison levels below the submetric level chosen for the parity comparison. This includes such factors as wire center and time of month, as well as order type for provisioning measures. In each comparison cell, a Z statistic is calculated. The form of the Z statistic may vary depending on the performance measure, but it should be distributed approximately as a standard normal, with mean zero and variance equal to one. Assuming that the test statistic is derived so that it is negative when the performance for the ALEC is worse than for the ILEC, a positive truncation is done – i.e. if the result is negative it is left alone, if the result is positive it is changed to zero. A weighted sum of the truncated statistics is calculated where a cell's weight depends on the volume of BST and ALEC orders in the cell. The weighted sum is standardized by the subtracting theoretical mean of the truncated distribution, and this is divided by the standard error of the weighted sum. Summaries based on measurement type are given for the calculation of the cell Z statistic.

Mean Measures

For mean measures, an adjusted, asymmetric t statistic is calculated for each like-to-like cell that has at least seven BST and seven ALEC transactions. This statistic is an adjustment to the modified z statistic in order to make the assumption that the statistic is approximately normally distributed more reasonable even for fairly small sample sizes. The adjusted, asymmetric t statistic is part of the methodology described in the "Statistician's Report," and it has been documented for the statistical community in the August 2001 issue of The American Statistician,[1] a peer review statistics journal. The statistic was created for mean performance measure parity tests in order to reduce the number of permutation tests needed for calculating cell statistics. Several sets of BST/CLEC mean measure data from Louisiana were examined in order to determine when the adjustment results give approximately the same results as a permutation test. The result is that a permutation test is used when one or both of the BST and ALEC sample sizes is less than seven. The adjusted, asymmetric t statistic and the permutation calculation are described below.

Proportion Measures

For performance measures that are calculated as a proportion, in each adjustment cell, the cell Z and the moments for the truncated cell Z can be calculated in a direct manner. In adjustment cells where proportions are not close to zero or one, and where the sample sizes are reasonably large ($n_{ij}p_{ij}(1-p_{ij}) > 9$), a normal approximation can be used. In this case, the moments for the truncated Z come directly from properties of the standard normal distribution. If the normal approximation is not appropriate, the hypergeometric distribution is the exact permutation distribution. In this case, the moments of the truncated Z are calculated exactly using the hypergeometric probabilities.

Rate Measures

The truncated Z methodology for rate measures has the same general structure for calculating the Z in each cell as proportion measures. For the rate measure customer trouble report rate there are a fixed number of access lines in service for the ALEC, b_{2j}, and a fixed number for BST, b_{1j}. The modeling assumption is that the occurrence of a trouble is independent between access lines, and the number of troubles in b access lines follows a Poisson distribution with mean λ_b where λ is the probability of a trouble per 1 access line and b ($= b_{1j} + b_{2j}$) is the total number of access lines in service. The exact permutation distribution for this situation is the binomial distribution (the limit for the hypergeometric distribution) that is based on the total number of BST and ALEC troubles, n, and the proportion of BST access lines in service, $q_j = b_{1j}/b$

---

1. Balkin, S. D. and Mallows, C. L. (2001), "An Adjusted, Asymmetric Two-Sample t Test," The American Statistician, 55, 203-206.

ⓐ *BELL*SOUTH°

Florida Plan

In an adjustment cell, if the number of ALEC troubles is greater than 15 and the number of BST troubles is greater than 15, and $n_{ij}q_{ij}(1-q_{ij}) > 9$, then a normal approximation can be used. In this case, the moments of the truncated Z come directly from properties of the standard normal distribution. Otherwise, if there are very few troubles, the number of ALEC troubles can be modeled using a binomial distribution with n equal to the total number of troubles (ALEC plus BST troubles.) In this case, the moments for the truncated Z are calculated explicitly using the binomial distribution.

Ratio Measures

The current plan contains no measures that call for the use of a Z parity statistic.

Florida Plan

Appendix D: Statistical Formulas and Technical Descriptions

We start by assuming that any necessary trimming[2] of the data is complete, and that the data are disaggregated so that the comparison are made within appropriate classes or adjustment cells that define "like" observations.

This appendix contains information on the following:

- Notation and Exact Testing Distributions
- Calculating the Truncated Z
- Balancing Critical Value

1.   Notation and Exact Testing Distributions

The basic notation for the construction of the truncated z statistic is detailed below. In these notations the word "cell" should be taken to mean a like-to-like comparison cell that has both of the following:

- one (or more) ILEC observations
- one (or more) ALEC observations

L =   the total number of occupied cells

j = $1, \ldots, L$; and index for the cells

n_{1j} =   the number of ILEC transactions in cell j

n_{2j} =   the number of ALEC transactions in cell j

n_j =   the total number of transactions in cell j: $n_{1j} + n_{2j}$

X_{1jk}=   individual ILEC transactions in cell j; $k = 1, \ldots, n_{1j}$

X_{2jk}=   individual ALEC transactions in cell j; $k = 1, \ldots, n_{2j}$

Y_{jk} =   individual transactions (both ILEC and ALEC) in cell j

$$= \begin{cases} X_{1jk} & k = 1, \ldots, n_{1j} \\ X_{2jk} & k = n_{1j} + 1, \ldots, n_j \end{cases}$$

$\Phi^{-1}(.)$=the inverse of the cumulative standard normal distribution function

In addition to this basic notation, additional notation is necessary for mean and ratio measures. This additional notation, and the notation needed for proportional and rate measures, is given in the following sections.

---

2. When it is determined that a measure should be trimmed, trim the ILEC observations to the largest ALEC value from all ALEC observations in the month under consideration. That is, no ALEC values are removed; all ILEC observations greater than the largest ALEC observation are trimmed.

⊛ *BELLSOUTH*°

Florida Plan   **Statistical Formulas and Technical Descriptions**

Additional Notation for Mean Measures

For mean performance measures, the following additional notation is needed.

$\overline{X}_{1j}$ = the ILEC sample mean of cell j

$\overline{X}_{2j}$ = the ALEC sample mean of cell j

s_{1j}^2 = the ILEC sample variance in cell j

s_{2j}^2 = the ALEC sample variance in cell j

$\{Y_{jk}\}$ = a random sample of size n_{2j} from the set of $Y_{j1}, \ldots, Y_{jn}; k = 1, \ldots, n_{2j}$

M_j = The total number of distinct pairs of samples of size n_{1j} and n_{2j};

$$= \binom{n_j}{n_{1j}}$$

The exact parity test is the permutation test based on the "modified Z" statistic. For large samples, we can avoid permutation calculations since this statistic will be normal (or Student's t) to a good approximation. For small samples, where we cannot avoid permutation calculations, we have found that the difference between "modified Z" and the textbook "pooled Z" is negligible. We therefore propose to use the permutation test based on pooled Z for small samples. This decision speeds up the permutation computations considerably because for each permutation we need only compute the sum of the ALEC sample values, and not the pooled statistic itself.

A permutation probability mass function distribution for cell j, based on the "pooled Z" can be written as

$$PM(t) = P(\sum_k y_{jk} = t) = \frac{\textit{the number of samples that sum to } t}{M_j}$$

and the corresponding cumulative permutation distribution is

$$CPM(t) = P(\sum_k y_{jk} \le t) = \frac{\textit{the number of samples with sum } \le t}{M_j}$$

Ⓐ *BELL*SOUTH®

Florida Plan

Notation for Proportion Measures

For proportion measures the following notation is defined.

a_{1j} = the number of ILEC cases possessing an attribute of interest in cell j'

a_{2j} = the number of ALEC cases possessing an attribute of interest in cell j

a_j = the number of cases possessing an attribute of interest in cell j; $a_{1j} + a_{2j}$

The exact distribution for a parity test is the hypergeometric distribution. The hypergeometric probability mass function distribution for cell j is

$$HG(h) = P(H = h) = \begin{cases} \dfrac{\binom{n_{1j}}{h}\binom{n_{2j}}{a_j - h}}{\binom{n_j}{a_j}}, & \max(0, a_j - n_{2j}) \le h \le \min(a_j, n_{1j}) \\ \\ 0 & \text{otherwise} \end{cases}$$

and the cumulative hypergeometric distribution is

$$CHG(x) = P(H \le x) = \begin{cases} 0 & x < \max(0, a_j - n_{2j}) \\ \displaystyle\sum_{h=\max(0, a_j - n_{1j})}^{x} HG(h), & \max(0, a_j - n_{2j}) \le x \le \min(a_j, n_{1j}) \\ 1 & x > \min(a_j, n_{1j}) \end{cases}$$

Notation for Rate Measures

For rate measures, the notation needed is defined as:

b_{1j} = the number of ILEC base elements in cell j

b_{2j} = the number of ALEC base elements in cell j

b_j = the total number of base elements in cell j: $b_{1j} + b_{2j}$

$\ddot{r}_{1j}$ = the ILED sample rate of cell j: $n_{1j} + b_{1j}$

r_{2j} = the ILED sample rate of cell j; $n_{2j} \div b_{2j}$

q_{1j} = the relative proportion of ILEC elements for cell j; $b_{1j} \div b_j$

Statistical Formulas and Technical Descriptions

The exact distribution for a parity test is the binomial distribution. The binomial probability mass function distribution for cell j is:

$$BN(k) = P(B = k) = \begin{cases} \binom{n_j}{k} q_j^k (1-q_j)^{n_j-k}, & 0 \leq k \leq n_j \\ 0 & \text{otherwise} \end{cases}$$

and the cumulative binomial distribution is

$$CBN(x) = P(B \leq x) = \begin{cases} 0 & x < 0 \\ \sum_{k=0}^{x} BN(k), & 0 \leq x \leq n_j \\ 1 & x > n_j \end{cases}$$

2.   Calculating the Truncated Z

The general methodology for calculating an aggregate level test statistic is outlined below. More detailed instructions follow.

- Calculate Cell Weights (W_j)
- Calculate Z_j
- Obtain a Truncated Z Value for Each Cell (Z^*j)
- Calculate the Theoretical Mean and Variance of the Truncated Statistic Under the Null Hypothesis of Parity
- Calculate the Aggregate Test Statistic, Z^T

Calculate Cell Weights (W_j)

To calculate cell weights, W_j, a weight based on the number of transactions is used so that a cell, which has a larger number of transactions, has a larger weight. The actual weight formula depends on the type of measure. The formulas for each type of measure are given below.

W_j for Mean Measures

$$W_j = \sqrt{\frac{n_{1j} n_{2j}}{n_j}}$$

In the special case where all BST and ALEC values in a cell are identical, the weight must be reset to zero, that is $W_j = 0$. For more information, see "Calculate Z_j" on page 5.

ⓐ *BELLSOUTH*®

Florida Plan

W_j for Proportion Measures

$$W_j = \sqrt{\frac{n_{2j}n_{1j}}{n_j} \cdot \frac{a_j}{n_j} \cdot \left(1 - \frac{a_j}{n_j}\right)}$$

W_j for Rate Measures

$$W_j = \sqrt{\frac{b_{1j}b_{2j}}{b_j} \cdot \frac{n_j}{b_j}}$$

Calculate Z_j

In each cell calculate a Z statistic, Z_j, which has mean 0 and variance 1 under the null hypothesis. The formula for the test statistic depends on the type of measure.

Mean Measure

Use the conditions in the following table to determine the method for calculating Z_j. Details of each solution are given below.

Condition 1	Condition 2	Condition 3	Solution
$s_{1j}^2 = 0$	$s_{2j}^2 = 0$	$\overline{X}_{1j} = \overline{X}_{2j}$ †	Set $Z_j = 0$ and reset $W_j = 0$.
		$\overline{X}_{1j} \neq \overline{X}_{2j}$	Permutation Test, See Solution 1
	$s_{2j}^2 > 0$	NA	
$s_{1j}^2 > 0$	$\min(n_{1j}, n_{2j}) \leq 6$	NA	
	$\min(n_{1j}, n_{2j}) > 6$	NA	"t" Test, See Solution 2

† All values in the cell, from BellSouth and the ALEC, are the same.

Solution 1: Permutation Test

The type of permutation test will depend on M_j, the total number of distinct pairs of samples of size n_{1j} and n_{2j}.

a) $M_j \le 1000$, Perform an Exact Permutation Test

  i) Calculate the sample sum for all possible samples of size n_{2j}.

  ii) Rank the sample sums from smallest to largest. Ties are dealt by using average ranks.

  iii) Let R_0 be the rank of the observed sample sum with respect to all the sample sums.

  iv) $\alpha = 1 - \dfrac{R_a - 0.5}{M_j}$

  v) $Z_j = \Phi^{-1}(\alpha)$

b) $M_j > 1000$. Perform a Random Permutation Test

  i) Draw a random sample of 1,000 sample sums from the permutation distribution.

  ii) Add the observed sample sum to the list. There is a total of 1001 sample sums.

  iii) Rank the sample sums from smallest to largest. Ties are dealt by using average ranks.

  vi) Let R_0 be the rank of the observed sample sum with respect to all the sample sums.

  vii) $\alpha = 1 - \dfrac{R_a - 0.5}{1001}$

  iv) $Z_j = \Phi^{-1}(\alpha)$

Solution 2: Adjusted Asymmetric "t" Test

  i) $t_j = \dfrac{\bar{X}_{1j} - \bar{X}_{2j}}{s_{1j}\sqrt{\frac{1}{n_{1j}} + \frac{1}{n_{2j}}}}$ This is the "modified Z" statistic.

  ii) Find g, the median value of all values of

$$\gamma_{1j} = \frac{n_{1j}}{(n_{1j}-1)(n_{1j}-2)} \sum_{k}\left(\frac{X_{1jk} - \bar{X}_{1j}}{s_{1j}}\right)^{3}$$

over all cells within the submeasure being tested such that all three conditions stated below are true. If no submeasure cells exist that satisfy these conditions, then $g = 0$.

$\gamma_{1j} > 0$

$n_{1j} > 6$

$n_{1j} \ge n_{3q}$, where n_{3q} is the 3 quartile of all n_{1j} in cells where the first two conditions are true.

© BELLSOUTH®

Florida Plan   **Statistical Formulas and Technical Descriptions**

---

iii) If $g = 0$, skip this step. Otherwise, calculate

$$t_{\min j} = \frac{-3\sqrt{n_{1j} n_{2j} n_j}}{g(n_{1j} + 2n_{2j})}$$

iv) $$T_j = \begin{cases} t_j & g = 0 \\[2ex] t_j + \dfrac{g}{6}\left(\dfrac{n_{1j} + 2n_{2j}}{\sqrt{n_{1j}\, n_{2j}(n_{1j} + n_{2j})}}\right)\left(t_j^2 + \dfrac{n_{2j} - n_{1j}}{n_{1j} + 2n_{2j}}\right) & g > 0,\, t_j \geq t_{\min j} \\[3ex] t_j + \dfrac{g}{6}\left(\dfrac{n_{1j} + 2n_{2j}}{\sqrt{n_{1j}\, n_{2j}(n_{1j} + n_{2j})}}\right)\left(t_{\min j}^2 + \dfrac{n_{2j} - n_{1j}}{n_{1j} + 2n_{2j}}\right) & g > 0,\, t_j < t_{\min j} \end{cases}$$

v) $\alpha = P(t_{n_{1j}-1} \leq T_j)$

That is, α is the probability that a t random variable with $n_{1j} - 1$ degrees of freedom, is less than T_j.

vi) $Z_j = \Phi^{-1}(\alpha)$

Florida Plan   **Statistical Formulas and Technical Descriptions**

Obtain a Truncated Z Value for Each Cell (Z_j^*)

To limit the amount of cancellation that takes place between cell results during aggregation, cells whose results suggest possible favoritism are left alone. Otherwise the cell statistic is set to zero. This means that positive equivalent Z values are set to 0, and negative values are left alone. However, if there is only one cell, this is unnecessary. Mathematically, this is written as

$$Z_j^* = \begin{cases} Z_j, & L = 1 \\ \min(0, Z_j) & \text{otherwise} \end{cases}$$

Recall that L is the total number of occupied cells with positive weight for the test.

Calculate the Theoretical Mean and Variance of the Truncated Statistic Under the Null Hypothesis of Parity

To compensate for the truncation in Obtain a Truncated Z Value for Each Cell (Z^*j) an aggregated, weighted sum of the Z_j^* must be centered and scaled properly so that the final aggregate statistic follows a standard normal distribution.

Note: If there is only one occupied cell with positive weight, that is, L = 1, then the following calculations are not needed.

There are three possibilities in this procedure:

1.   If $W_j = 0$, then no evidence of favoritism is contained in the cell. The formula for calculating

$E(Z_j^*|H_0)$ and $Var(Z_j^*|H_0)$ cannot be used. Set both equal to 0.

2.   If one of the following statements in the 'If' column is true, use the formulas in the 'Then' column.

Measure Type	If	Then
Mean	$\min(n_{1j}, n_{2j}) > 6$ and $s_{1j}^2 > 0$	$E(Z_j^*|H_0) = -\dfrac{1}{\sqrt{2\pi}}$
Proportion	$\min\left\{a_{1j}\left(1-\frac{a_{1j}}{n_{1j}}\right), a_{2j}\left(1-\frac{a_{2j}}{n_{2j}}\right)\right\} > 9$	and
Rate	$\min\left(n_{1j}, n_{2j}\right) > 15$ and $n_j q_j(1-q_j) > 9$	$Var(Z_j^*|H_0) = \dfrac{1}{2} - \dfrac{1}{2\pi}$

3. Otherwise, determine the total number of values for Z^*_j. Let Z_{ji} and θ_{ji} denote the values of Z^*_j and the probabilities of observing each value, respectively.

$$E(Z^*_j \mid H_0) = \sum_i \theta_{ji} z_{ji} \qquad Var(Z^*_j \mid H_0) = \sum_i \theta_{ji} z^2_{ji} - \left[E(Z^*_j \mid H_0) \right]^2$$

and

The actual value of z and θ depends on the type of measure. Use the table below to calculate z and θ.

Measure Type	Formulas
Mean	$N_j = \min(M_j, 1,000), \ i = 1,\dots, N_j$ $z_{ji} = \min\left\{0, \Phi^{-1}\left(1 - \frac{R_i - 0.5}{N_i}\right)\right\}$ where R_i is the rank of sample sum i $\theta_j = \dfrac{1}{N_j}$
Proportion	$z_{ji} = \min\left\{0, \dfrac{n_j i - n_{1j} a_j}{\sqrt{\dfrac{n_{1j} n_{2j} a_j (n_j - a_j)}{n_j - 1}}}\right\}, \quad i = \max(0, a_j - n_{2j}), \dots, \min(a_j, n_{1j})$ $\theta_{ji} = HG(i)$
Rate	$z_{ji} = \min\left\{0, \dfrac{i - n_j q_j}{\sqrt{n_j q_j (1 - q_j)}}\right\}, \quad i = 0, \dots, n_j$ $\theta_{ji} = BN(i)$

Florida Plan

Calculate the Aggregate Test Statistic, Z^T

Calculate the aggregate test statistic, Z^T, using the following formula.

$$Z^T = \begin{cases} Z_i & L=1 \\ \dfrac{\sum_j W_j Z_i^* - \sum_j W_j E(Z_j^*|H_0)}{\sqrt{\sum_j W_j^2 Var(Z_j^*|H_0)}} & \text{otherwise} \end{cases}$$

3.   Balancing Critical Value

There are four key elements of the statistical testing process:

Symbol	Element	Description
H_0	Null hypothesis	parity exists between ILEC and ALEC services
H_a	alternative hypothesis	the ILEC is giving better service to its own customers
Z^T	truncated Z statistic	
c	critical value	

The decision rule[3] using these elements is summarized below.

If $Z^T < c$ then   accept H_a

If $Z^T \geq c$ then   accept H_0.

There are two types of errors possible when using such a decision rule:

- Type I Error   Deciding favoritism exists when there is, in fact, no favoritism
- Type II Error   Deciding parity exists when there is, in fact, favoritism.

---

3. *This decision rule assumes that a negative test statistic indicates poor service for the ALEC customer. If the opposite is true, then reverse the decision rule.*

ⓐ *BELLSOUTH*®

Florida Plan

Statistical Formulas and Technical Descriptions

The probabilities of each type of error are:

- Type I Error $\alpha = P(Z^T < c \mid H_0)$

- Type II Error $\beta = P(Z^T \geq c \mid H_a)$

We want a balancing critical value, c_B, so that $\alpha = \beta$.

It can be shown that

$$c_B = \frac{E(Z^T \mid H_a) - E(Z^T \mid H_0)}{SE(Z^T \mid H_a) + SE(Z^T \mid H_0)}$$

when Z^T is approximately normally distributed. The derivation of the components of this equation depends on the form of the null and alternative hypotheses, as well as other factors.

Test Hypotheses

Measure Type	Null Hypothesis, H_0	Alternative Hypothesis, H_a
Mean	$\mu_{1j} = \mu_{2j}, \sigma_{1j}^2 = \sigma_{2j}^2$	$\mu_{2j} = \mu_{1j} + \delta_j \sigma_{1j}, \sigma_{2j}^2 = \lambda_j \sigma_{1j}^2 \; \delta_j > 0, \lambda_j \geq 1$
Proportion	$p_{2j} = p_{1j}$	$\arcsin(\sqrt{p_{2j}}) - \arcsin(\sqrt{p_{1j}}) = \frac{\delta_j}{2}$
Rate	$r_{2j} = r_{1j}$	$\sqrt{r_{2j}} - \sqrt{r_{1j}} = \frac{\delta_j}{2}$

⊛ *BELLSOUTH*®

Statistical Formulas and Technical Descriptions

Determining the Parameters of the Alternative Hypothesis

Parameter Choices for δ_j – set of parameters δ_j are important because they directly index differences in service. The Florida commission staff has chosen to use one value across all cells for a submeasure test ($\delta_j = \delta$). The value of δ will be based on the effective number of ALEC transaction used in the test. The following formulae will be used to determine δ.

1) $$\Omega_j = \begin{cases} \dfrac{W_j}{\sqrt{\frac{n_{2j}}{n_{1j}}}} & \text{mean or proportion measure} \\[2ex] \dfrac{W_j}{\sqrt{\frac{n_{2j}}{b_{1j}}}} & \text{rate measure} \end{cases}$$

2) $$n_e = \frac{\left(\sum_j \Omega_j n_{2j} \right)^2}{\sum_j \Omega_j^2 n_{2j}}$$

Note, that given the definition of W_j for mean measures, Ω_j is either 0 or 1. Thus, n_e for mean measures is the total number of ALEC transactions across cells with positive weight. Also, when there is only one occupied cell with positive weight, then $n_e = n_{2j}$, the ALEC sample size in the single cell.

3) $$\delta = \left(\frac{4}{n_e} \right)^{0.434}$$

Parameter Choices for λ_j – set of parameters λ_j index alternatives to the mean measure null hypothesis that arise because there might be greater unpredictability or variability in the delivery of service to an ALEC customer over that which would be achieved for an otherwise comparable ILEC customer. While concerns about differences in the variability of service are important, it turns out that the truncated Z test is relatively insensitive to all but very large values of the λ_j. Put another way, reasonable differences in the values chosen here could make very little difference in the balancing points chosen. Hence,

$$\lambda_j = 1 \quad j = 1, \dots, L$$

Calculate the Mean and Standard Error of Z_j Under the Alternative Hypothesis

Let m_j and se_j be the mean and standard error of Z_j under the alternative hypothesis. The distribution of the cell statistic depends on the measurement type.

Mean Measure

Z_j is approximately normally distributed with mean 0 and standard error 1 under the null hypotheses. Under the alternative hypothesis, the distribution is approximately normal with mean and variance given in the table below.

⊕ BELLSOUTH®

Florida Plan

Proportion Measure

In this case, Z_j is approximately the same as

$$Z = \frac{\arcsin\left(\sqrt{\frac{a_{1j}}{n_{1j}}}\right) - \arcsin\left(\sqrt{\frac{a_{2j}}{n_{2j}}}\right)}{\frac{1}{2}\sqrt{\frac{1}{n_{1j}} + \frac{1}{n_{2j}}}}$$

which is approximately normally distributed with mean 0 and standard error 1 under the null hypotheses. Under the alternative hypothesis, the distribution is approximately normal with mean and standard error given in the table below.

Rate Measure

In this case, Z_j is approximately the same as

$$Z = \frac{\sqrt{\frac{a_{1j}}{b_{1j}}} - \sqrt{\frac{a_{2j}}{b_{2j}}}}{\frac{1}{2}\sqrt{\frac{1}{b_{1j}} + \frac{1}{b_{2j}}}}$$

which is approximately normally distributed with mean 0 and standard error 1 under the null hypotheses. Note that this statistic is approximately the same as

$$Z = \frac{\arcsin\left(\sqrt{\frac{a_{1j}}{b_{1j}}}\right) - \arcsin\left(\sqrt{\frac{a_{2j}}{b_{2j}}}\right)}{\frac{1}{2}\sqrt{\frac{1}{a_{1j}} + \frac{1}{b_{2j}}}}$$

⊕ *BELLSOUTH*®

Florida Plan   **Statistical Formulas and Technical Descriptions**

when the BST and CLEC sample rates are close to 0. Under the alternative hypothesis, the distribution is approximately normal with mean and standard error given in the table below.

Measure Type	m_j	se_j
Mean		
Proportion	$-\delta\sqrt{\dfrac{n_{1j}n_{2j}}{n_{1j}+n_{2j}}}$	1
Rate	$-\delta\sqrt{\dfrac{b_{1j}b_{2j}}{b_{1j}+b_{2j}}}$	

Calculate the Critical Value

Single Cell Test (L = 1)

$$c_B = \frac{m_j}{se_j+1} = \frac{m_j}{2} \quad \text{since } se_j = 1 \text{ in all cases.}$$

Multi-Cell Tests (L > 1)

Calculate the critical value according to the following procedure.

1.   Calculate the theoretical mean and variance of the truncated statistic under the null hypothesis of parity, $E(Z_j|H_0)$ and $Var(Z_j|H_0)$, within each cell.

Condition	$E(Z_j|H_0)$	$Var(Z_j|H_0)$
$W_j = 0$	0	0
$W_j > 0$	$-\dfrac{1}{\sqrt{2\pi}}$	$\dfrac{1}{2}-\dfrac{1}{2\pi}$

2.   Calculate the theoretical mean and variance of the truncated statistic under the alternative hypothesis, $E(Z_j^*|H_a)$ and $Var(Z_j^*|H_a)$, within each cell.

Condition	$E(Z_j^*|H_a)$	$Var(Z_j^*|H_a)$
$W_j = 0$	0	0
$W_j > 0$	$m_j\Phi(-m_j) - \phi(-m_j)$	$(m_j^2 + 1)\Phi(-m_j) - m_j\phi(-m_j) - E(Z_j^*|H_a)^2$

Note: $\Phi(\cdot)$ is the cumulative standard normal distribution function, and $\phi(\cdot)$ is the standard normal density function.

3. $$c_B = \frac{\sum_j W_j E(Z_j^*|H_a) - \sum_j W_j E(Z_j^*|H_0)}{\sqrt{\sum_j W_j^2 Var(Z_j^*|H_a)} + \sqrt{\sum_j W_j^2 Var(Z_j^*|H_0)}}$$

Appendix E: BST SEEM Remedy Calculation Procedures

Four sample calculations are included in this appendix. These calculations cover the following:

- Tier 1 Calculation for Retail Analogs
- Tier 2 Calculation for Retail Analogs
- Tier 1 Calculation for Benchmarks
- Tier 2 Calculations for Benchmarks

1.   Tier 1 Calculation for Retail Analogs

Complete the steps below to calculate performance for a Tier 1 retail analog. An example follows the procedure.

1. Calculate the overall test statistic for each ALEC; Z^{T}_{ALEC-1} (per statistical methodology discussed in Appendix D).

2. Calculate the balancing critical value ($^{C}B_{ALEC-1}$) that is associated with the alternative hypothesis (for fixed parameters δ, Ψ, or ε).

3. Determine parity or disparity by subtracting the value of Step 2 from that of Step 1. $ABS(Z^{T}_{ALEC-1} - {}^{C}B_{ALEC-1})$

4. Determine the relationship of the overall test statistic (from Step 1) and the balancing critical value (from Step 2).

Relationship	Action
$^{C}B_{ALEC-1} \geq Z^{T}_{ALEC-1}$	No payment is necessary. End procedure.
$^{C}B_{ALEC-1} < Z^{T}_{ALEC-1}$	Go to Step 5.

5. Determine the payment to ALEC-1 by obtaining the appropriate dollar amount from the Tier 1 fee schedule (Appendix A) for the measurement category containing the submetric being evaluated.

   ALEC Payment = fee ($$) from Tier 1 fee schedule for the appropriate measurement category.

BST SEEM Remedy Calculation Procedures

Table E-1: Small Sample Size Table (Continued)

90% Sample Size		95% Sample Size		85% Sample Size		97% Sample Size	
Size	Benchmark	Size	Benchmark	Size	95% Equivalent	Size	95% Equivalent
25	80.00%	25	88.00%	25	72.00%	25	92.00%
26	80.77%	26	88.46%	26	73.08%	26	92.31%
27	81.48%	27	88.89%	27	74.07%	27	92.59%
28	78.57%	28	89.29%	28	75.00%	28	89.29%
29	79.31%	29	86.21%	29	72.41%	29	89.66%
30	80.00%	30	86.67%	30	73.33%	30	90.00%

3. Determine whether the monthly performance percentage meets the benchmark standard (or equivalent percentage for small samples).

Monthly Performance and Benchmark Relationship	Action
Monthly performance ≥ benchmark	No payment is necessary; end procedure.
Monthly performance < benchmark	Failure; go to Step 4.

4. Determine the payment to ALEC-1 by obtaining the appropriate dollar amount from the Tier 1 fee schedule (Appendix A) for the measurement category containing the submetric being evaluated.

ALEC-1 payment= $$ from Tier 1 Fee Schedule

Tier 1 Benchmark, Small Sample Size Example:

Reject Interval Fully Mechanized 2-Wire Analog Loop Non-Design; Benchmark = 97%: Month 1

Numerator	Denominator	CLEC Performance	Benchmark (small sample size of 9)	Pass/Fail
7	9	77.78% ≤ 1 hour	88.89% ≤ 1 hour (small sample size of 9)[A]	fail
[A] The comparison benchmark of 88.89% was obtained from the Table E-1 (the small sample size table) for 97% benchmarks.				

Payment to the ALEC would be $450, the fee obtained from Ordering measures in the Tier 1 fee schedule.

Tier 1 Benchmark Example:

Reject Interval - Partially Mechanized, Business; Benchmark is 95%; Month 1

Numerator	Denominator	CLEC Performance	Benchmark	Pass/Fail
36	40	90% ≤ 10 hours	95% ≤ 10 hours	fail

Payment to the ALEC would be $450, the fee obtained from Ordering measures in the Tier 1 fee schedule.

4.   Tier 2 Calculations for Benchmarks

Tier-2 calculations for benchmark measures are the same as the Tier 1 benchmark calculations, except the ALEC aggregate data is evaluated over three consecutive months.

1.   Accumulate the statewide monthly results for the measurement.
2.   Determine whether the current month fails the statewide average.

Current Month Tier 2 Failure	Action
Yes	Go to Step 3.
No	No Tier 2 payment is necessary; end procedure.

3.   Determine whether there is a Tier 2 failure.

Tier 2 Failure		Action
One Month Prior to Current Month	Two Months Prior to Current Month	
Failure	Failure	Go to Step 4.
Failure	Pass	No Tier 2 failure, no payment. End of procedure.
Pass	Failure	

4.   Determine the payment to the state designated agency by obtaining the appropriate dollar amount from the Tier 2 Fee Schedule (Appendix A) for the fee measurement category containing the submetric being evaluated.

State designated agency payment = Fee ($$) from Tier 2 Fee Schedule for the appropriate measurement category.

Tier 2 Benchmark Example:

Percent Missed Installation Appointments - LNP; Benchmark = 95%

Month	Numerator	Denominator	CLEC Performance (%)	Benchmark (%)	Pass/Fail
Current	1	8	87.5	95	fail
One month prior to Current	3	39	92.31	95	fail
Two months prior to current	4	75	94.6	95	fail

Payment to the state would be $5,700, the fee obtained from the LNP category in the Tier 2 Fee Schedule.

BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION

In re: Investigation into the establishment of operations support systems permanent performance measures for incumbent local exchange telecommunications companies. (BELLSOUTH TRACK)	DOCKET NO. 000121A-TP ORDER NO. PSC-02-0989-PAA-TP ISSUED: July 22, 2002

The following Commissioners participated in the disposition of this matter:

LILA A. JABER, Chairman
J. TERRY DEASON
BRAULIO L. BAEZ
MICHAEL A. PALECKI
RUDOLPH "RUDY" BRADLEY

NOTICE OF PROPOSED AGENCY ACTION
ORDER REVISING PERFORMANCE ASSESSMENT PLAN

BY THE COMMISSION:

NOTICE is hereby given by the Florida Public Service Commission that the action discussed herein is preliminary in nature and will become final unless a person whose interests are substantially affected files a petition for a formal proceeding, pursuant to Rule 25-22.029, Florida Administrative Code.

BACKGROUND

We opened Docket No. 000121-TP to develop permanent performance metrics for the ongoing evaluation of operations support systems (OSS) provided for alternative local exchange carriers' (ALECs) use by incumbent local exchange carriers (ILECs). Associated with the performance metrics is a monitoring and enforcement program that is to ensure that ALECs receive nondiscriminatory access to the ILEC's OSS. Performance monitoring is necessary to ensure that ILECs are meeting their obligation to provide unbundled access, interconnection and resale to ALECs in a nondiscriminatory manner. Additionally, it establishes a standard

against which ALECs and this Commission can measure performance over time to detect and correct any degradation of service provided to ALECs.

Docket No. 000121-TP consists of three phases. Phase I began with workshops conducted by our staff with members of the ALEC and ILEC communities. These workshops were held on March 30, 2000, August 8, 2000, and December 13, 2000. The purpose of Phase I was to determine and resolve any policy and legal issues in this matter. Phase II involved establishing permanent metrics for BellSouth Telecommunications, Inc. (BellSouth), including a specific monitoring and enforcement program. With the completion of Phase II, we are beginning Phase III of this docket, which entails the establishment of performance metrics and a performance monitoring and evaluation program for the other Florida ILECs.

By Order No. PSC-01-1819-FOF-TP, issued September 10, 2001, (Final Order), we established permanent performance measures and benchmarks as well as a voluntary self-executing enforcement mechanism (Performance Assessment Plan) for BellSouth. By Order No. PSC-02-0187-FOF-TP, issued February 12, 2002, as amended by Order No. PSC-01-0187A-FOF-TP, issued March 13, 2002, BellSouth's Performance Assessment Plan was approved.

By Order No. PSC-02-0503-PCO-TP, issued April 11, 2002, Docket No. 000121-TP was divided into three sub-dockets: (1) 000121A-TP, in which filings directed towards the BellSouth track would be placed; (2) 000121B-TP, in which filings directed towards the Sprint track would be placed; and (3) 000121C-TP, in which filings directed towards the Verizon track would be placed.

This order resolves outstanding issues with the BellSouth OSS test and is therefore linked to Dockets 960786B-TL and 981834-TP. However, because the issues raised here are related to Service Quality Measures, the method of effecting change in this case is through Docket 000121A-TP.

We are vested with jurisdiction over this matter pursuant to Sections 364.01(3) and (4)(g), Florida Statutes. Pursuant to Section 364.01 (3), Florida Statutes, the Florida legislature has found that regulatory oversight is necessary for the development of fair and effective competition in the telecommunications industry.

To that end, Section 364.01 (4) (g), Florida Statutes, provides, in part, that we shall exercise our exclusive jurisdiction to ensure that all providers of telecommunications service are treated fairly by preventing anticompetitive behavior. Furthermore, it is noted that the FCC has encouraged the states to implement performance metrics and oversight for purposes of evaluating the status of competition under the Telecommunications Act of 1996.

FLOW-THROUGH

Flow-through is the ability of an ALEC's electronically submitted order to flow from the OSS interface to BellSouth's ordering systems and on to completion without human intervention. Flow-through of Local Service Requests (LSRs) is critical to the ALECs' ability to deliver service to customers in a timely manner. Fall-out of LSRs for manual handling can result in delays in the return of confirmations or errors and may have a negative impact on the timeliness of the completion of ALEC orders. Ultimately, these delays can result in a lower level of customer satisfaction and ultimately lead to loss of the ALEC's customer altogether.

In Docket No. 960786B-TL, the OSS Test Manager, KPMG Consulting, conducted transaction testing to determine if BellSouth's systems process order transactions in accordance with Service Quality Measures approved in Order No. PSC-00-2451-PAA-TP and PSC-01-1428-PAA-TL. According to the Florida Interim Service Quality Measurement Plan, Version 3.0, dated June 1, 2001, the benchmarks for the components of Percent Flow-Through Service Requests are:

SQM Flow-Through Benchmarks	
Residence	95%
Business	90%
Unbundled Network Elements (UNE)	85%
Local Number Portability (LNP)	85%

As a result of OSS testing and evaluation criteria, KPMG Consulting issued a "Not Satisfied" for UNE flow-through, meaning that this issue may have a significant business impact on ALECs.

During the initial production testing, from March 13, 2001 through November 25, 2001, KPMG Consulting experienced a 73.50 percent UNE flow-through rate. KPMG Consulting issued Exception 136 on January 15, 2002, detailing that BellSouth's performance of 82.14 percent on UNE flow-through during testing through January 4, 2002, was below the SQM benchmark of 85 percent. BellSouth's response to Exception 136 indicated that a defect modification was completed in a release in February 2002 to address orders that fell out for manual handling due to a due date calculation problem.

Based on retesting results through March 24, 2002, KPMG Consulting issued Second Amended Exception 136. The amendment noted that BellSouth's performance on UNE flow-through of 74.6 percent was again below the SQM benchmark of 85 percent. BellSouth's response indicated that a system enhancement was opened and implemented on June 1, 2002, to increase the opportunity for flow-through of xDSL migration orders. Exception 136 remains open.

Detailed KPMG Consulting results for UNE products are as follows:

KPMG Consulting UNE Flow-Through Testing Results			
	Initial Test	Retest 1	Retest 2
Number of Expected Flow-Through	566	196	378
Number of Flow-Through	416	161	282
Percent Flow-Through	73.50%	82.14%	74.60%
SQM Benchmark	85%	85%	85%

(Source: BellSouth Telecommunications, Inc. OSS Evaluation Report, pg POP-274)

As a result of failing the OSS test for UNE flow-through, we reviewed the aggregate commercial data for the flow-through metric. Residential and Business flow-through for December 2001 through March 2002 have consistently fallen below the benchmark as indicated in the table below. This table presents the most recent

four months of available ALEC commercial data results reported by
BellSouth:

Aggregate Commercial Data Results December 2001–March 2002					
	Benchmark	Dec	Jan	Feb	March
Residential	95%	89.50%	88.56%	87.17%	86.49
Business	90%	74.07%	74.56%	75.20%	73.55%
UNE	85%	82.67%	85.50%	84.86	83.88%
LNP	85%	87.62%	92.81%	94.12%	92.25%

Source: Varner Affidavit dated May 24, 2002, filed in Docket
960786B-TP and BellSouth Monthly Performance Summary Report,
January 2002. (Shading denotes failure to meet benchmark.)

As noted above, BellSouth has consistently failed to achieve
the benchmark for Residential, Business, and UNE flow-through.
Flow-through, in general, is an important issue for ALECs. UNE
flow-through is especially important to ALECs in Florida because
UNEs are a step in the direction of facilities-based competition.
As such, a more proactive approach will be taken to motivate
BellSouth to perform at or above the benchmark for all elements of
flow-through.

To this end, BellSouth shall file a specific action plan by
July 30, 2002, that would reduce BellSouth-caused fall-out and
result in compliance with benchmarks. In addition, BellSouth shall
adjust its Self-Effectuating Enforcement Mechanism (SEEM) to
establish a greater monetary incentive to meet the minimum flow-
through benchmark for this metric.

We are also modifying the approved BellSouth SEEM and
establishing a separate remedy payment schedule for flow-through.

Proposed Tier 1

The "Ordering (O-4): Percent Flow-Through Service Requests (Detail)" metric provides flow-through results by individual ALEC. Currently, if BellSouth flow-through for a particular ALEC falls below the benchmark, payments under Tier 1 progress as follows:

Current SEEM Tier 1 Payments						
Measure	Month 1	Month 2	Month 3	Month 4	Month 5	Month 6
Ordering	$450	$650	$800	$1,000	$1,150	$1,350

(Source: Florida Self-Effectuating Enforcement Mechanism Administrative Plan, pg A-1)

Since recent flow-through results have, in general, not achieved benchmarks, we find it necessary to add a separate category and schedule of payments to address flow-through. Flow-through results which do not meet the benchmark for any one month would trigger payments per affected item as indicated below:

Proposed SEEM Tier 1 Payments						
Measure	Month 1	Month 2	Month 3	Month 4	Month 5	Month 6
Flow Through	$900	$1,300	$1,600	$2,000	$2,300	$2,700

We are increasing the payments for flow-through because the SEEM plan has been approved since February 12, 2002, yet there has not been a positive impact on flow-through results. We find that significant action is needed at this time.

Proposed Tier 2

The "Ordering (O-3): Percent Flow-Through Service Requests (Summary)" metric is applicable to the Tier 2 SEEM. The Tier 2 remedy payment for Ordering, which included flow-through, is

currently $700 and is triggered when aggregate ALEC performance trails the benchmark for three consecutive months.

Tier 2 payments for flow-through, currently at $700, shall be set at $1,400 per month. Unlike the current scheme for Tier 2, which imposes payments after results fall below the benchmark for three consecutive months, payments for flow-through shall be imposed each month BellSouth fails to meet the benchmark.

Moreover, this modification to the Self-Effectuating Enforcement Mechanism Administrative Plan shall be revisited during the six-month review to determine if performance warrants continuance of the special Tier 1 and Tier 2 payment scheme for flow-through.

SOFTWARE DEFECTS

Defective software releases are a significant issue that has emerged from the Florida Third Party Test of BellSouth's OSS. Software defects impair effective ALEC use of BellSouth's ordering, pre-ordering, billing, maintenance and repair systems. ALECs also incur increased costs for having to use manual systems when electronic interfaces fail.

KPMG Consulting Exception 123

Exception 123 states that BellSouth is not classifying change requests as defects in accordance with the BellSouth definition of a defect. KPMG Consulting identified a number of instances where defects were classified inappropriately as new features. According to KPMG Consulting, BellSouth is required to provide alternatives and/or fixes for all defect change requests within a specified time frame. However, issues classified as features or not opened at all are not subject to any resolution time frame. KPMG Consulting states that the lack of timely workarounds and resolutions to defects may result in the ALEC's inability to efficiently execute transactions with BellSouth resulting in ALEC customer dissatisfaction.

KPMG Consulting Exception 157

Exception 157 states that BellSouth fails to follow its software testing and quality processes. According to KPMG Consulting, BellSouth's incomplete internal software testing may affect an ALEC's ability to efficiently execute transactions with BellSouth, resulting in ALEC customer dissatisfaction. KPMG Consulting states that BellSouth did not completely test code changes for Release 10.2 and 10.3 prior to these releases going into production. The exception cited internal BellSouth documentation that showed BellSouth had "no plan to mitigate the adverse effect of reduced pre-release testing."

Exception 157 states that there were numerous "significant defects in the software when the releases were placed into the production environment." Exception 157 reveals that in Release 10.2 of September 2001, there were ten defects when the release was placed into production. In Release 10.3 of January 2002, there were 31 defects, and, in Release 10.5 in May 2002, there were an additional eleven defects in the software upon release into production.

According to KPMG Consulting, BellSouth identified and published 31 defects contained in the 10.3 release since its January 5, 2002, implementation. As of January 22, 2002, there was a backlog of 61 defect change requests with only 37 scheduled for correction in the April 2002 release.

BellSouth Response to Exceptions 123 and 157

In its post-workshop supplemental data submission on May 31, 2002, for Docket 960786B-TL, BellSouth argues that, notwithstanding the current and ongoing status of the two exceptions, the FCC adequately addressed these complaints together in its Georgia/Louisiana 271 application approval. BellSouth believes that due to information it provided to the FCC in its application, and supported by the Georgia Public Service Commission in its comments, the FCC did not concur with "commenters' assertions that BellSouth fails to implement corrections to defects in a timely manner and that there are unnecessary defects because BellSouth's software implementations are not sufficiently tested before release." BellSouth agrees that reducing coding defects is beneficial for ALECs and that software releases with numerous defects can inhibit a smooth transition between releases.

BellSouth claims that the FCC found "that BellSouth demonstrates that most of these defects have a very small impact and have been corrected quickly and within the time frames set by the Change Control Process." BellSouth points out that the FCC noted the BellSouth explanation that, of the 38 defects outstanding as of March 5, 2002, a number were scheduled or targeted for implementation this year.

BellSouth contends that the evidence shows that it adequately tests for defects. As affirmation of its resolve to properly test and implement releases, BellSouth points to the recent testing of Release 10.5. This release contained numerous complex features and defect fixes. BellSouth claims that appropriate notifications leading up to the implementation were provided to ALECs. BellSouth notes that Release 10.5 was also available to ALECs in the CLEC Application Verification Environment (CAVE). BellSouth discovered certain defects for which there was no workaround or fixes by the scheduled date for implementation. BellSouth argues that it acted appropriately by delaying Release 10.5 for two weeks.

BellSouth contends that such discoveries are not the result of inadequate testing but rather the result of extensive and intensive internal testing. It believes that ALECs will be better served by the delay in terms of receiving a better release, as well as gaining an additional two weeks of testing their own scenarios. BellSouth states that the ALEC complaints, as well as the Florida Third Party Exceptions, are based upon situations occurring prior to the development of new Change Control Process language regarding "ALEC-affecting" defects and revisions to the software testing processes (including additional ALEC testing capabilities in CAVE).

We are concerned that some BellSouth releases have contained so many defects that software development resources are being dedicated to correcting those defects after a release, which may be diverting resources from addressing and providing ALEC-requested new features. This contributes to the backlog of unimplemented change requests.

We understand that Release 10.5 was delayed due to newly found defects just prior to the scheduled implementation date. As a result, Release 10.6 and 11.0 have each been delayed three weeks to a month. BellSouth contends that the delay of Release 10.5

demonstrates that it adequately tests for defects. We agree that a delay is better than putting a problematic release into production just to meet the announced schedule. However, BellSouth's argument does not address the resulting after effects of the delay. Not only did Release 10.5 contain additional defects after it went into production, but BellSouth has announced that two upcoming releases will be delayed three weeks to a month each. We find that BellSouth is in a spiral in which it is unable to implement releases both on schedule and with only a reasonable number of defects.

For example, on June 10, 2002, the BellSouth Quarterly Tracking Reports showed that 76 percent of the Change Requests BellSouth has implemented since the Change Control Process began in 1998 have been for defects. According to the current BellSouth Release Log for the month of May 10 to June 10, 2002, 87 percent of the Change Requests implemented were for defects.

We are concerned that the problems in Release 10.5 were found so close to the originally scheduled release date. If BellSouth testing procedures and resources are adequate, why are severe defects being found so late in release development? Moreover, we are concerned that while the delay may have prevented some serious defects from going into production, there were still high and medium-impact defects in Release 10.5 after it was placed into production. Based on the above, we cannot concur with BellSouth's contention that it adequately tests for defects.

Tighter software defect correction intervals will diminish concerns about miscoding the severity levels of defects by BellSouth. ALECs and our staff have observed numerous instances of miscoding of defect severity levels. Defect correction intervals are tied to BellSouth assigned severity codes. Defects coded as "low impact" have an open-ended resolution time period, which is stated in the Change Control document as "best effort."

In addition, we find that tighter defect software intervals with associated metrics will incent BellSouth to improve the quality of software releases rather than suffer penalties for excessive defects. The metrics to be implemented for defect correction interval measurement is contained in Attachment 1. The metric is *Percent of Software Error Corrected in X (10, 30, 45)*

Business Days. This metric will expedite defect correction. Tier 2 remedy payments are applicable to this metric. Additionally, we are implementing a metric titled *Number of Defects in Production Releases*. This metric will capture the number of defects associated with a release within the initial three-week period of its implementation. The bulk of defects associated with any release are typically found within three weeks. This metric is shown in Attachment 2.

Adequate testing should help BellSouth meet the twin goals of quality and timeliness. In addition, adequate testing should help BellSouth retain all the scheduled features and defect corrections in a particular release with minimal further defects. In order to potentially resolve this issue, BellSouth shall develop a new metric for Software Validation. The metric shall be designed similar to the Software Validation metric currently in place for Verizon New York. Implementation of a new metric for software validation will require BellSouth to improve and expand the test deck it currently uses to validate scenarios used by ALECs.

Based on the foregoing, it is

ORDERED by the Florida Public Service Commission that BellSouth Telecommunications, Inc. shall file a specific action plan by July 30, 2002, designed to improve flow-through in order to achieve the flow-through benchmark. It is further

ORDERED that BellSouth Telecommunications, Inc. shall implement the remedy payment schedule for flow-through as detailed in the body of this Order by July 30, 2002 for the August 2002 results. It is further

ORDERED that effective August 1, 2002, BellSouth Telecommunications, Inc. shall implement the metric entitled *Percent of Software Error Corrected in X (10, 30, 45) Business Days*, described in Attachment 1, which is attached hereto and incorporated herein by reference. It is further

ORDERED that effective August 1, 2002, BellSouth Telecommunications, Inc. shall implement the metric entitled *Number of Defects in Production Releases*, described in Attachment 2, which

is attached hereto and incorporated herein by reference. It is further

ORDERED that effective August 1, 2002, BellSouth Telecommunications, Inc. shall develop a Software Validation metric similar to that in use for Verizon New York. It is further

ORDERED that the provisions of this Order, issued as proposed agency action, shall become final and effective upon the issuance of a Consummating Order unless an appropriate petition, in the form provided by Rule 28-106.201, Florida Administrative Code, is received by the Director, Division of the Commission Clerk and Administrative Services, 2540 Shumard Oak Boulevard, Tallahassee, Florida 32399-0850, by the close of business on the date set forth in the "Notice of Further Proceedings" attached hereto. It is further

ORDERED that in the event a protest is filed, the resolution of the protest shall be addressed during the six-month review process. It is further

ORDERED that in the event this Order becomes final, this docket shall remain open.

By ORDER of the Florida Public Service Commission this <u>22nd</u> day of <u>July</u>, <u>2002</u>.

BLANCA S. BAYÓ, Director
Division of the Commission Clerk
and Administrative Services

NOTICE OF FURTHER PROCEEDINGS OR JUDICIAL REVIEW

The Florida Public Service Commission is required by Section 120.569(1), Florida Statutes, to notify parties of any administrative hearing that is available under Section 120.57, Florida Statutes, as well as the procedures and time limits that apply. This notice should not be construed to mean all requests for an administrative hearing will be granted or result in the relief sought.

Mediation may be available on a case-by-case basis. If mediation is conducted, it does not affect a substantially interested person's right to a hearing.

The action proposed herein is preliminary in nature. Any person whose substantial interests are affected by the action proposed by this order may file a petition for a formal proceeding, in the form provided by Rule 28-106.201, Florida Administrative Code. This petition must be received by the Director, Division of the Commission Clerk and Administrative Services, 2540 Shumard Oak Boulevard, Tallahassee, Florida 32399-0850, by the close of business on August 12, 2002.

In the absence of such a petition, this order shall become final and effective upon the issuance of a Consummating Order.

Any objection or protest filed in this/these docket(s) before the issuance date of this order is considered abandoned unless it satisfies the foregoing conditions and is renewed within the specified protest period.

<u>ATTACHMENT 1</u>

Percent of Software Errors Corrected in X (10, 30, 45)
Business Days

Definition

Measures the percent of Software Errors corrected by BellSouth in X (10, 30, 45) business days within the report period.

Exclusions

◆ Software Corrections having implementation intervals that are longer than those defined in this measure and agreed upon by the CLECs.

◆ Rejected or reclassified software error (BellSouth must report the number of rejected or reclassified software errors disputed by the CLECs.)

Business Rules

This metric is designed to measure BellSouth's performance in correcting identified Software Errors within the specified interval. The clock starts when a Software Error validation is due to the CLEC per the Change Control Process, a copy of which can be found at <u>http://www.interconnection.bellsouth.com/markets/lec/ccp_live/index.html</u>, and stops when the error is corrected and notice is posted to the Change Control Website. Software defects are defined as Type 6 Change Requests in the Change Control Process.

Calculation

Percent of software Errors Corrected in X (10, 30, 45) Business Days = (a ÷ b) x 100

a = Total number of Software Errors corrected where "X" = 10, 30, or 45 business days.
b = Total number of Software Errors requiring correction where "X" = 10, 30, or 45 business days.

Report Structure

Severity Level 2 = 10 Business Days
Severity Level 3 = 30 Business Days
Severity Level 4 = 45 Business Days

Data Retained

<u>ATTACHMENT 2</u>

Number of Defects in Production Releases (Type 6 CR)

Definition

Measures the number of defects in Production Releases. This measure will be presented as the number of Type 6 Severity 1 defects, the number of Type 6 Severity 2 defects without a mechanized work around, and the number of Type 6 Severity 3 defects resulting within a three week period from a Production Release date. The definition of Type 6 Change Requests (CR) and Severity 1, Severity 2, and Severity 3 defects can be found in the Change Control Process Document.

Exclusions

None

Business Rules

This metric measures the number of Type 6 Severity 1 defects, the number of Type 6 Severity 2 defects without a mechanized work around, and the number of Type 6 Severity 3 defects resulting within a three week period from a Production Release date. The definitions of Type 6 Change Requests (CR) and Severity 1, 2, and 3 defects can be found in the Change Control Process, which can be found at http://www.interconnection.bellsouth.com/markets/lec/ccp_live/index.html.

Calculation

The number of Type 6 Severity 1 Defects, the number of Type 6 Severity 2 Defects, and the number of Type 6 Severity 3 Defects without a mechanized work around.

BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION

In re: Investigation into the establishment of operations support systems permanent performance measures for incumbent local exchange telecommunications companies. (BELLSOUTH TRACK)	DOCKET NO. 000121A-TP ORDER NO. PSC-02-1094-PAA-TP ISSUED: August 9, 2002

The following Commissioners participated in the disposition of this matter:

LILA A. JABER, Chairman
J. TERRY DEASON
BRAULIO L. BAEZ
MICHAEL A. PALECKI
RUDOLPH "RUDY" BRADLEY

NOTICE OF PROPOSED AGENCY ACTION
ORDER IMPLEMENTING CHANGE REQUEST METRICS AND
REVISING DUE DATE FOR TIER 1 AND TIER 2 PAYMENTS

BY THE COMMISSION:

BACKGROUND

NOTICE is hereby given by the Florida Public Service Commission that the action discussed herein is preliminary in nature and will become final unless a person whose interests are substantially affected files a petition for a formal proceeding, pursuant to Rule 25-22.029, Florida Administrative Code.

We opened Docket No. 000121-TP to develop permanent performance metrics for the ongoing evaluation of operations support systems (OSS) provided for alternative local exchange carriers' (ALECs) use by incumbent local exchange carriers (ILECs). Associated with the performance metrics is a monitoring and enforcement program that is to ensure that ALECs receive nondiscriminatory access to the ILEC's OSS. Performance monitoring is necessary to ensure that ILECs are meeting their obligation to provide unbundled access, interconnection and resale to ALECs in a

nondiscriminatory manner. Additionally, it establishes a standard against which ALECs and this Commission can measure performance over time to detect and correct any degradation of service provided to ALECs.

Docket No. 000121-TP consists of three phases. Phase I began with workshops conducted by our staff with members of the ALEC and ILEC communities. These workshops were held on March 30, 2000, August 8, 2000, and December 13, 2000. The purpose of Phase I was to determine and resolve any policy and legal issues in this matter. Phase II involved establishing permanent metrics for BellSouth Telecommunications, Inc. (BellSouth), including a specific monitoring and enforcement program. With the completion of Phase II, we are beginning Phase III of this docket, which entails the establishment of performance metrics and a performance monitoring and evaluation program for the other Florida ILECs.

By Order No. PSC-01-1819-FOF-TP, issued September 10, 2001, (Final Order), we established permanent performance measures and benchmarks as well as a voluntary self-executing enforcement mechanism (Performance Assessment Plan) for BellSouth. By Order No. PSC-02-0187-FOF-TP, issued February 12, 2002, as amended by Order No. PSC-01-0187A-FOF-TP, issued March 13, 2002, BellSouth's Performance Assessment Plan was approved.

By Order No. PSC-02-0503-PCO-TP, issued April 11, 2002, Docket No. 000121-TP was divided into three sub-dockets: (1) 000121A-TP, in which filings directed toward the BellSouth track would be placed; (2) 000121B-TP, in which filings directed toward the Sprint track would be placed; and (3) 000121C-TP, in which filings directed toward the Verizon track would be placed.

By Order No. PSC-02-0989-PAA-TP, issued July 22, 2002, BellSouth was required to file a specific action plan designed to improve flow-through and adjust the Self Effectuating Enforcement Mechanism (SEEM) for the flow-through metric by July 30, 2002, for the August 2002 results. Additionally, BellSouth was ordered to establish defect correction metrics to be effective August 1, 2002 as part of the Service Quality Measures in Docket No. 000121A-TP.

JURISDICTION

We are vested with jurisdiction over this matter pursuant to Sections 364.01(3) and (4)(g), Florida Statutes. Pursuant to Section 364.01(3), Florida Statutes, the Florida legislature has found that regulatory oversight is necessary for the development of fair and effective competition in the telecommunications industry. To that end, Section 364.01(4)(g), Florida Statutes, provides, in part, that we shall exercise our exclusive jurisdiction to ensure that all providers of telecommunications service are treated fairly by preventing anticompetitive behavior. Furthermore, it is noted that the FCC has encouraged the states to implement performance metrics and oversight for purposes of evaluating the status of competition under the Telecommunications Act of 1996.

CHANGE REQUESTS

A BellSouth-stated objective in the Change Control Process (CCP) document is "[t]imely and effective implementation of feature and defect change requests." However, timely implementation of change requests remains an issue in the Change Control Process.

There is no required time frame for the implementation of ALEC-initiated (Type 5) change requests. As of June 28, 2002, the backlog of new feature change requests had reached 65. The backlog includes new features requested by ALECs, features requested by internal BellSouth organizations (Type 4), and those ordered by various regulatory mandates (Type 2).

ALEC Comments

In the OSS commercial experience workshop, ALECs contended that BellSouth takes too long to implement ALEC-initiated (Type 5) change requests. ALECs have also pointed out that, as of February 2002, BellSouth implemented its own change requests within an average of 60 days while taking an average of 164 days to implement ALEC-initiated change requests. WorldCom noted that in other states no backlog of change requests exists at Verizon. Further, WorldCom stated that Verizon implemented over 170 ALEC-initiated change requests during the same three-year period in which BellSouth implemented only 32.

BellSouth Comments

In recent submissions to the Georgia PSC, BellSouth argues that a mandatory 60-week implementation cycle for prioritized change requests would require that BellSouth commit unlimited resource capacity to meet an infinite (yet undetermined) amount of demand (i.e., number of ALEC-initiated change requests) merely upon the request of ALECs to implement these features. BellSouth said that it fears hundreds of ALECs could make requests for new features. Further, BellSouth contends that there is no limit to the number of CLECs that participate in CCP and there is no limit to the number of change requests any ALEC may make of BellSouth. Further, BellSouth argues that no company has unlimited resources, and no ILEC, to BellSouth's knowledge, is subject to a Change Control Process by which ALECs determine the level of OSS investment that the incumbent must make.

CHANGE REQUEST METRICS

To compete, especially beyond the footprint of any one ILEC, ALECs need similar functionalities for pre-ordering, ordering, billing, repair and maintenance systems. A case in point is Parsed Customer Service Records, which was effectuated by all other RBOCs well before BellSouth made it available under mandate from the Florida and Georgia Commissions. We note that BellSouth actively resisted implementation of Parsed Customer Service Records, an ALEC-initiated change request, for reasons of cost for over two years.

We observe that at least 19 ALEC-initiated change requests within the backlog were filed two to three years ago. None of those requests has been rejected by BellSouth for cost or technical reasons. We consider that lag to be an unreasonable delay for ALECs wishing to proceed with marketing plans and/or achieve efficiencies that are used in other ILEC territories.

Under these metrics, BellSouth retains the ability to reject an ALEC-initiated change request for reasons stated within the CCP document. There are three stated reasons for rejection: cost, industry direction, and technical feasibility. The latter two reasons are technically based and are typically easily resolved in discussion between ALEC and BellSouth technical experts. The first reason, cost, is quite subjective and can be used by BellSouth to

reject any ALEC-initiated change request. BellSouth can still control ALEC-initiated demands for new software features by using the stated reason of cost. However, we note that, according to the CCP document, BellSouth must provide ALECs its rationale for decisions made on a cost basis, and that decision is appealable. Rejections are appealable both through escalations within BellSouth and through filing a complaint with a regulatory body.

These additional metrics are needed to address timeliness concerns. Because of the current CCP backlog a 60-week implementation benchmark is necessary to ensure timely adoption of change requests. Measuring the percent change request rejected and the percent rejected within 10 days provides information regarding BellSouth's acceptance of ALEC input and timeliness of its action.

BellSouth shall implement the metric Percent of Change Requests Implemented Within 60 Weeks of Prioritization (Attachment 1). Additionally, BellSouth shall file a specific action plan on August 30, 2002, on how it proposes to accomplish the stated benchmark. Further, BellSouth shall be ordered to establish two additional metrics: Percent Change Requests Rejected and Percent of Change Requests Accepted or Rejected Within 10 Business Days (Attachments 2 and 3).

DUE DATE FOR TIER 1 AND TIER 2 PAYMENTS

There is an internal conflict between BellSouth's Service Quality Measurement Plan and the SEEM Administrative Plan regarding the due date of Tier 1 and Tier 2 payments for failure to meet the prescribed performance standards.

As stated currently in Section 4.4.1 of the SEEM Administrative Plan, payments are due "by the end of the second month following the month for which disparate treatment was detected." We find that the due date shall be changed to the 15th day of the month to coincide with the payment due date cited in BellSouth's Service Quality Measurement Plan.

In addition to resolving the internal inconsistency, changing the payment due date to the 15th of the month would coincide with the date payments are made under BellSouth's SEEM plan in effect for Georgia, Kentucky, and Louisiana. This would provide BellSouth

with a more efficient way of administering and monitoring its SEEM plan in all four states.

Based on the foregoing, it is

ORDERED by the Florida Public Service Commission that effective September 1, 2002, BellSouth Telecommunications, Inc. shall implement the metric entitled *Percent of Change Requests Implemented Within 60 weeks of Prioritization*, described in Attachment 1, which is attached hereto and incorporated herein by reference. It is further

ORDERED that BellSouth Telecommunications, Inc. shall file a specific action plan by August 30, 2002, on how it proposes to accomplish the metrics established by this Order. It is further

ORDERED that effective September 1, 2002, BellSouth Telecommunications, Inc. shall implement the metric entitled *Percent Change Requests Rejected*, described in Attachment 2, which is attached hereto and incorporated herein by reference. It is further

ORDERED that effective September 1, 2002, BellSouth Telecommunications, Inc. shall implement the metric entitled *Percent of Change Requests Accepted or Rejected Within 10 Business Days*, described in Attachment 3, which is attached hereto and incorporated herein by reference. It is further

ORDERED that BellSouth Telecommunications, Inc. shall revise Section 4.4.1 of the SEEM Administrative Plan to require Tier 1 and Tier 2 payments be made by the 15th day of the second month following the month for which disparate treatment was detected. It is further

ORDERED that the provisions of this Order, issued as proposed agency action, shall become final and effective upon the issuance of a Consummating Order unless an appropriate petition, in the form provided by Rule 28-106.201, Florida Administrative Code, is received by the Director, Division of the Commission Clerk and Administrative Services, 2540 Shumard Oak Boulevard, Tallahassee, Florida 32399-0850, by the close of business on the date set forth
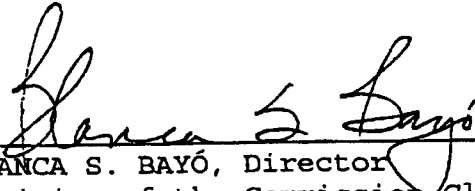

in the "Notice of Further Proceedings" attached hereto. It is further

ORDERED that in the event a protest is filed, the resolution of the protest shall be addressed during the six-month review process. It is further

ORDERED that in the event this Order becomes final, this docket shall remain open.

By ORDER of the Florida Public Service Commission this 9th Day of August, 2002.

BLANCA S. BAYÓ, Director
Division of the Commission Clerk
and Administrative Services

(S E A L)

JKF

NOTICE OF FURTHER PROCEEDINGS OR JUDICIAL REVIEW

The Florida Public Service Commission is required by Section 120.569(1), Florida Statutes, to notify parties of any administrative hearing that is available under Section 120.57, Florida Statutes, as well as the procedures and time limits that apply. This notice should not be construed to mean all requests for an administrative hearing will be granted or result in the relief sought.

Mediation may be available on a case-by-case basis. If mediation is conducted, it does not affect a substantially interested person's right to a hearing.

The action proposed herein is preliminary in nature. Any person whose substantial interests are affected by the action proposed by this order may file a petition for a formal proceeding, in the form provided by Rule 28-106.201, Florida Administrative Code. This petition must be received by the Director, Division of the Commission Clerk and Administrative Services, 2540 Shumard Oak Boulevard, Tallahassee, Florida 32399-0850, by the close of business on <u>August 30, 2002</u>.

In the absence of such a petition, this order shall become final and effective upon the issuance of a Consummating Order.

Any objection or protest filed in this/these docket(s) before the issuance date of this order is considered abandoned unless it satisfies the foregoing conditions and is renewed within the specified protest period.

ATTACHMENT 1

Percent of Change Requests Implemented Within 60 Weeks of Prioritization

Definition

Measures whether BellSouth provides CLECs timely implementation of prioritized change requests.

Exclusions

Change requests that are implemented later than 60 weeks with the consent of the CLECs.
Change Requests for which BellSouth has regulatory authority to exceed the interval.

Business Rules

This metric is designed to measure BellSouth's performance in implementing prioritized change requests. The clock starts when a change request has been prioritized as described in the Change Control Process. The clock stops when the change request has been implemented by BellSouth and made available to the CLECs. BellSouth will begin reporting this measure with the next release for diagnostic purposes, and will be measured for SEEM purposes 60 weeks from first prioritization meeting following Commission approval of measure.

Calculation

Percent of Type 5 CLEC-initiated Change Requests implemented on time = $(a \div b) \times 100$

- a = Total number of prioritized Type 5 CLEC initiated Change Request. that are less than or equal to 60 weeks of age from the date of the release prioritization list

- b = Total number of prioritized Type 5 CLEC initiated Change Requests from the date of the release prioritization list

Percent of Type 4 BellSouth-initiated Change Requests implemented on time = $(a \div b) \times 100$

- a = Total number of prioritized Type 4 BellSouth-initiated Change Request. that are less than or equal to 60 weeks of age from the date of the release prioritization list

- b = Total number of prioritized Type 4 BellSouth-initiated Change Requests from the date of the release prioritization list

Report Structure

- BellSouth Aggregate
- Type 4s implemented
- Type 5s implemented
- % implemented within 16, 32, 48, and 60 weeks

<u>**ATTACHMENT 2**</u>

Percent Change Requests Rejected

Definition

Measures the percent of Change Requests (other than Type 1 or Type 6 Change Requests) submitted by CLECs that are rejected based on the reasons specified per the Change Control Process within the report period.

Exclusions

- Change Requests that are cancelled or withdrawn by CLEC before a response from BellSouth is due.

Business Rules

This metric includes any rejected change requests in the reporting period, regardless of whether received early or late. The metric will be disaggregated by major categories of rejections per the Change Control Process, a copy of which can be found at http://www.interconnection.bellsouth.com/markets/lec/ccp_live/index.html. These reasons are: Cost, Technical Feasibility, and Industry Direction. This metric includes all change requests not subject to above exclusions, not just those received and rejected in the same reporting period.

Calculation

Percent Change Requests Rejected = (a ÷ b) x 100
- a = Total number of Change Requests rejected.
- b = Total number of Change Requests submitted within the report period.

Report Structure

- BellSouth Aggregate
- Cost
- Technical Feasibility
- Industry Direction

ATTACHMENT 3

Percent of Change Requests Accepted or Rejected Within 10 days

Definition

Measures the percent of Change Requests (other than Type 1 or Type 6 Change Requests) submitted by CLECs that are Accepted or Rejected by BellSouth in 10 business days within the report period.

Exclusions

- Change Requests that are canceled or withdrawn before a response from BellSouth is due.

Business Rules

The Acceptance/Rejection interval starts when the acknowledgment is due to the CLEC per the Change Control Process, a copy of which can be found at http://www.interconnection.bellsouth.com/markets/lec/ccp_live/index.html. The clock ends when BellSouth issues an acceptance or rejection notice to the CLEC. This metric includes all change requests not subject to above exclusions, not just those received and accepted or rejected in the same reporting period.

Calculation

Percent of Change Requests Accepted or Rejected within 10 Business Days = (a ÷ b) x 100
- a = Total number of Change Requests accepted or rejected within 10 business days.
- b = Total number of Change Requests submitted in the reporting period.

Report Structure

DATE: October 22, 2002
TO: All Parties of Record
FROM: Linda H. Dodson, Attorney, Office of the General Counsel
RE: Docket No. 000121A Six Month Review of BellSouth Performance Assessment Plan

---

     The attached list of proposed changes to the SQM plan for Docket No. 000121A has been agreed to at workshops held on September 25 and 26, 2002, and October 17 and 18, 2002. Please file comments by November 1, 2002, confirming your agreement to the issues on the list. Any issue to which you believe agreement has not been reached should be noted in your comments. Any such issues will be moved to the Disputed Issues list and all parties should comment appropriately.

     If you have further questions about this memorandum or the attached list, please contact Linda H. Dodson at (850) 413-6216 or Carl Vinson at (850) 413-6812.

Original No.	Proposer	Reference	Metric	Proposal	Parties Agree
29	BST	Exhibit 3	P-4	Change to Report Structure: ~~Residence & Business reported in day intervals= 0,1,2,3,4,5,5+~~ ~~ISDN Orders included in Non-Design~~	Yes
31	BST	Exhibit 3	P-4	Change to SQM Disagg-Analog/Benchmark section: The Retail Analog to UNE Digital Loop>=DS1 incorrectly shows the analog as Retail Digital Loop <=DS1 and needs to be corrected to >=DS1.	Yes
32	BST	Exhibit 3	P-4A	Change to Business Rules: The interval breakout for UNE is: 1,2,3,4,5+ and Design is :0-=5,>5-,=10,>10-<=15,>15-<=20,>20-<=25,>25-<=30,>30 ~~0-5=0, <5,5-10=5, <10,10-15=10, <15, 15-20=15, <20, 20-25=20, <25,25-30=25, <30,>=30=30 and greater~~	Yes
33	BST	Exhibit 3	P-4A	Change to Report Structure: • ~~Residence & Business reported in day intervals= 0,1,2,3,4,5,5+~~ • UNE and Design reported in day intervals ~~=0-5,5-10,10-15,15-20,20-25,25-30,>=30~~ 0-<=5, >5-<=10, >10-<=15, >15-<=20,>20-<=25,>25-+30,>30 • ~~ISDN Orders included in Non-Design~~ • Geographic Scope • State	Yes
35	BST	Exhibit 3	P-4A	Change to SQM Disagg-Analog/Benchmark section: The Retail Analog to UNE Digital Loop>=DS1 incorrectly shows the analog as Retail Digital Loop <=DS1 and needs to be corrected to >=DS1.	Yes
36	BST	Exhibit 3	P-5	Business Rule Change: ~~For non-mechanized orders the end time will be date and timestamp of order update from the FAX record via LON or C-SOTS system.~~ For the retail analog, the start time is when the technician completes the order and the end time is when the order status is changed to complete in SOCS. Agreement reached at workshop to delete strikeout of first sentence and include the language.	Yes

TABLE OF AGREED ISSUES

Original No.	Proposer	Reference	Metric	Proposal	Parties Agree
37	BST	Exhibit 3	P-5	Report Structure Change: Reporting intervals in Hours; 0, 1-<=2,>2-=4,>4-<=8,>8-<=12,>12-<=24,>24 plus Overall Average Hour Interval 1-2,2-4,4-8,8-12,12-24 plus Overall Average Hour Interval (The categories are inclusive of these time intervals; 0-1=0-0.99;1-2=1-1.99; 2-4=2-3.99, etc.)	Yes
39	BST	Exhibit 3	P-5	Change to SQM Disagg-Analog/Benchmark section: The Retail Analog to UNE Digital Loop>=DS1 incorrectly shows the analog as Retail Digital Loop <=DS1 and needs to be corrected to >=DS1.	Yes
41	BST	Exhibit 3	P-7A	Business Rule Change: 1. BST performs the hot cut, notifies the CLEC by telephone. 2. BST performs the hot cut and attempts to notify the CLEC by telephone, but receives no answer and leaves a phone message.	Yes
43	BST	Exhibit 3	P-7B	Calculation Change: Average Recovery Time=(c/d) • c-Sum of all the Recovery Times • d=# of Troubles per circuit Referred to BST	Yes
46	BST	Exhibit 3	P-8	Change the Title of this measure by replacing the word "Tested" with the phrase "Passing Cooperative Testing".	Yes
47	BST	Exhibit 3	P-8	Definition Change: A loop will be considered successfully cooperatively tested when both the CLEC and ILEC BST representatives agree that the loop has passed the cooperative testing meets the technical specifications set forth in TR 73600.	Yes
49	BST	Exhibit 3	P-9	Business Rule Change: Measures the quality and accuracy of completed orders. The first trouble report from a received after service order after completion is counted in this measure.	Yes
52	BST	Exhibit 3	M&R-1	Definition Change: The percent of customer trouble reports not cleared by the committed date and time.	Yes

Original No.	Proposer	Reference	Metric	Proposal	Parties Agree
53	BST	Exhibit 3	M&R-1	Calculation Change: % of Missed Repair Appts=(a/b) x 100 a=Count of Customer Troubles Not Cleared by the Quoted Commitment Date and Time b=Total Customer Trouble reports closed in Reporting Period	Yes
55	BST	Exhibit 3	M&R-2	Definition Change: Initial and repeated customer direct or referred customer troubles reported within a calendar month per 100 lines/circuits in service.	Yes
56	BST	Exhibit 3	M&R-2	Calculation Change: a=Count of Initial and Repeated Customer Trouble Reports closed in the Current period b=Number of Service Access Lines in service at End of the Report Period	Yes
58	BST	Exhibit 3	M&R-3	Calculation Change: Maintenance Duration=(a-b) a=Date and Time of Service Restoration b=Date and Time Customer Trouble Ticket was Opened Avg Maintenance Duration=(c/d) c=Total of all maint durations in the reporting period d=Total Closed Customer Troubles in the reporting period	Yes
60	BST	Exhibit 3	M&R-4	Definition Change: Closed customer trouble reports on the same line/circuit as a previous customer trouble report received within 30 calendar days as a percent of total customer troubles closed reported.	Yes
61	BST	Exhibit 3	M&R-4	Calculation Change: % Repeat Customer Troubles within 30 Days=(a/b)x100 a=Count of closed Customer Troubles where more than one trouble report was logged for the same service line within a continuous 30 days. B=Total Customer Trouble Reports Closed in Reporting Period.	Yes

Original No.	Proposer	Reference	Metric	Proposal	Parties Agree
62	BST	Exhibit 3	M&R-4	Data Retained Change: Relating to CLEC Experience: • Total and % Repeat Customer Trouble Reports within 30 Days (TOT_REPEAT) Relating to BST Performance • Total and % Repeat Customer Trouble Reports within 30 Days	Yes
64	BST	Exhibit 3	M&R-5	Definition Change: For Out of Service Customer Troubles (no dial tone, cannot be called or cannot call out (the percentage of Total OSS Customer Troubles cleared in excess of 24 hours (All design services are considered to be out of service).	Yes
65	BST	Exhibit 3	M&R-5	Business Rule Change: Customer Trouble reports that are out of service and cleared in excess of 24 hours. The clock begins when the customer trouble report is created in LMOS/WFA and the customer trouble is counted if the elapsed time exceeds 24 hours.	Yes
66	BST	Exhibit 3	M&R-5	Calculation Change: Out of Service (OOS)>24 Hours=(a/b) x 100 a=Total Cleared Customer Troubles OOS>24 Hours b=Total OOS Customer Troubles in Reporting Period	Yes
68	BST	Exhibit 3	M&R-6	Definition Change: This report measures the average time a customer is in queue when calling a BST Repair Center.	Yes
69	BST	Exhibit 3	B-1	Calculation Change: Invoice Accuracy=[(a-b)/a x 100) a=Absolute Value of Total Billing Revenues during current month b=Absolute Value of Total Billing Related Adjustments during current month.	Yes
70	BST	Exhibit 3	B-1	Report Structure Change: • Number of Adjustments	Yes
71	BST	Exhibit 3	B-1	Data Retained Change: Change the phrase "Billing Related Adjustments" to "Total Billing Related Adjustments" for both CLEC Experience and BST Performance.	Yes
72	BST	Exhibit 3	B-2	Definition Change	Yes

Original No.	Proposer	Reference	Metric	Proposal	Parties Agree
73	BST	Exhibit 3	B-2	Business Rule Change	Yes
74	BST	Exhibit 3	B-2	SQM Analog/Benchmark Change: ~~CRIS based invoices will be released for delivery within 6 business days;~~ ~~CRIS based invoices will be released for delivery within 8 calendar days;~~ CLEC Avg Delivery Intervals for both CRIS and CABS Invoices are comparable to BST Avg delivery for both systems.	Yes
75	BST	Exhibit 3	B-4	Report Structure Change: Remove "BellSouth Aggregate".	Yes
76	BST	Exhibit 3	B-4	Data Retained Change: Replace "Report Month" and "Record Type" with "None"	Yes
77	BST	Exhibit 3	B-5	Report Structure Change: Remove "BellSouth Aggregate".	Yes
78	BST	Exhibit 3	B-5	Data Retained Change: Replace "Report Month" and "Record Type" with "None"	Yes
79	BST	Exhibit 3	B-6	Report Structure Change: Remove "BellSouth Aggregate".	Yes
80	BST	Exhibit 3	B-6	Data Retained Change: Replace "Report Month" and "Record Type" with "None"	Yes
81	BST	Exhibit 3	B-7	Business Rule Change: Add sentence: The count of fractional recurring charges in the calculation refers to a sum of absolute total dollar values either billed on the correct bill or the absolute value of total fractional recurring charges on the bill. Agreement reached at workshop to delete the word "correct" from the denominator.	Yes
82	BST	Exhibit 3	B-8	Business Rule Change: Add sentence: The count of non-recurring charges in the calculation refers to a sum of absolute total dollar values wither billed on the correct bill or the absolute value of total non-recurring charges on the bill.	Yes

Original No.	Proposer	Reference	Metric	Proposal	Parties Agree
83	BST	Exhibit 3	B-10	Title, Calculation, and Data Retained Change: Inserting "Business" before "Days".	Yes
85	BST	Exhibit 3	C-1	Definition Change: Measures the avg time (counted in calendar days) from the receipt of a complete and accurate collocation application (including receipt of app fee if required) to the date BST returns a response electronically or in writing. Within ~~10~~ the number of calendar days as designated by the Collocation Order after having received a bona fide application for physical collocation, BST must respond ~~as to whether space is available or not~~ with space availability and a price quote.	Yes
86	BST	Exhibit 3	C-2	SQM Analog/Benchmark Change: Virtual-Augment ~~45~~ 60 Calendar Days (Without Space Increase).	Yes
87	BST	Exhibit 3	CM-3	Definition Change: Measures whether CLECs received requirements or business rule documentation on time to prepare for BST interface/system changes so CLEC interfaces are not impaired by change ~~as set forth in the Change Control Process governed by the CLEC/BST Review Board.~~	Yes
88	BST	Exhibit 3	CM-3	Business Rule Change: This metric is designed to measure the percent of requirements or business rule documentation sent to the CLECs according to documentation standards and time frames set forth in the Change Control Process a copy of which can be found at http://www.interconnection.bellsouth.com/markets/lec /cp_live/index.html. The CCP is used by BellSouth and the CLECs to manage requested changes to the BellSouth Local Interfaces.	Yes
89	BST	Exhibit 3	CM-9	Calculation Change: The number of Type 6 Severity 1 Defects, the number of Type 6 Severity 2 Defects without a mechanized work around, and the number of Type 6 Severity 3 defects, ~~without a mechanized work around.~~	Yes

BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION

In re: Investigation into the
establishment of operations
support systems permanent
performance measures for
incumbent local exchange
telecommunications companies.
(BELLSOUTH TRACK)

DOCKET NO. 000121A-TP
ORDER NO. PSC-02-1736-PAA-TP
ISSUED: December 10, 2002

The following Commissioners participated in the disposition of
this matter:

LILA A. JABER, Chairman
J. TERRY DEASON
BRAULIO L. BAEZ
MICHAEL A. PALECKI
RUDOLPH "RUDY" BRADLEY

NOTICE OF PROPOSED AGENCY ACTION
ORDER IMPLEMENTING PROPOSED REVISIONS TO THE PERFORMANCE
ASSESSMENT PLAN

BY THE COMMISSION:

NOTICE is hereby given by the Florida Public Service
Commission that the action discussed herein is preliminary in
nature and will become final unless a person whose interests are
substantially affected files a petition for a formal proceeding,
pursuant to Rule 25-22.029, Florida Administrative Code.

I. Case Background

We opened Docket No. 000121-TP to develop permanent
performance metrics for the ongoing evaluation of operations
support systems (OSS) provided by incumbent local exchange carriers
(ILECs) for use by alternative local exchange carriers' (ALECs). A
monitoring and enforcement program to ensure that ALECs receive
nondiscriminatory access to the ILEC's OSS is associated with the
performance metrics. Performance monitoring is necessary to ensure

that ILECs are meeting their obligation to provide unbundled access, interconnection and resale to ALECs in a nondiscriminatory manner. Additionally, it establishes a standard against which ALECs and this Commission can measure performance over time to detect and correct any degradation of service provided to ALECs.

Docket No. 000121-TP consists of three phases. Phase I began with workshops conducted with members of the ALEC and ILEC communities. These workshops were held on March 30, 2000, August 8, 2000, and December 13, 2000. The purpose of Phase I was to determine and resolve any policy and legal issues in this matter. Phase II involved establishing permanent metrics for BellSouth Telecommunications, Inc. (BellSouth), including a specific monitoring and enforcement program. With the completion of Phase II, we are beginning Phase III of this docket, which entails the establishment of performance metrics and a performance monitoring and evaluation program for the other Florida ILECs.

By Order No. PSC-01-1819-FOF-TP (Final Order), issued September 10, 2001, we established permanent performance measures and benchmarks as well as a voluntary self-executing enforcement mechanism (Performance Assessment Plan) for BellSouth. By Order No. PSC-02-0187-FOF-TP, issued February 12, 2002, as amended by Order No. PSC-01-0187A-FOF-TP, issued March 13, 2002, BellSouth's Performance Assessment Plan was approved.

By Order No. PSC-02-0503-PCO-TP, issued April 11, 2002, Docket No. 000121-TP was divided into three subdockets: (1) 000121A-TP, in which filings directed toward the BellSouth track would be placed; (2) 000121B-TP, in which filings directed toward the Sprint track would be placed; and (3) 000121C-TP, in which filings directed toward the Verizon track would be placed.

By Order No. PSC-02-0989-PAA-TP, issued July 22, 2002, BellSouth was required to file a specific action plan designed to improve flow-through and adjust the Self Effectuating Enforcement Mechanism (SEEM) for the flow-through metric by July 30, 2002, for the August 2002 results. Additionally, BellSouth was ordered to establish defect correction metrics to be effective August 1, 2002, as part of the Service Quality Measures in Docket 000121A-TP.

By Order No. PSC-02-1094-PAA-TP, issued August 9, 2002, BellSouth was required to implement three new Service Quality Measures to address concerns over the timely and effective implementation of ALEC-initiated change requests for new features. Additionally, BellSouth was ordered to change the required due date for Tier 1 and Tier 2 SEEM payments.

This Order addresses proposed changes to BellSouth's Performance Assessment Plan in conjunction with our six-month review process set forth in Order No. PSC-02-0187-FOF-TP in Docket 000121A-TP. The six-month review process consisted of a collaborative work group, which included BellSouth, interested ALECs, and the Commission. The group reviewed the Performance Assessment Plan for additions, deletions and other modifications.

We are vested with jurisdiction over this matter pursuant to Sections 364.01(3) and (4)(g), Florida Statutes. Pursuant to Section 364.01 (3), Florida Statutes, the Florida legislature has found that regulatory oversight is necessary for the development of fair and effective competition in the telecommunications industry. To that end, Section 364.01 (4) (g), Florida Statutes, provides, in part, that we shall exercise our exclusive jurisdiction in order to ensure that all providers of telecommunications service are treated fairly by preventing anticompetitive behavior. Furthermore, it is noted that the FCC has encouraged the states to implement performance metrics and oversight for purposes of evaluating the status of competition under the Telecommunications Act of 1996.

II. Analysis

The Service Quality Measurement Plan describes in detail the measurements produced by BellSouth in order to evaluate the quality of service delivered to both wholesale and retail BellSouth customers. The major measurement categories are: preordering, ordering, provisioning, maintenance and repair, and billing. In addition, the following categories are also included: operator services and directory assistance, database information, E911, trunk group performance, collocation, and change management.

BellSouth's SEEM Plan, as approved in Order No. PSC-01-1819-FOF-TP, describes in detail the means by which enforcement will be determined. This includes the appropriate level of performance

measurement disaggregation for compliance reporting and the statistical methodology to be used to compare retail to wholesale performance for determination of penalties and payments.

As part of Order No. PSC-01-1819-FOF-TP, the parties stipulated that, within the first two years of implementation, BellSouth will participate in six-month review cycles to discuss any proposed changes to the Performance Assessment Plan. On September 25-26, 2002 and October 17-18, 2002, the first six-month review workshops were held to gauge the effectiveness of BellSouth's permanent performance measures and to determine whether the current remedy structure is effective in driving BellSouth's performance toward the required standards. The proposed changes to the remedy structure of the SEEM plan will be addressed at a future time.

In response to the parties' workshop comments concerning the proposed changes to the permanent performance measures, two separate tables were developed: 1) One that lists proposed changes to the performance measures that were agreed upon by the parties, and 2) One that lists proposed changes to the performance measures that were not agreed upon by the parties. The parties were requested to file respective comments in regards to both tables.

This order addresses the proposed changes to BellSouth's Performance Assessment Plan on which the participating parties agreed. The parties' comments on the proposed changes to the performance measures that were not agreed upon are due on December 12, 2002, and will be addressed at a later date.

Attachment 1, incorporated herein by reference, is a table listing the proposed changes to the performance measures that were agreed upon by the parties. The table is divided into four columns which identify:

- The party proposing the change,

- The performance measurement being changed,

- The proposed change to the performance measurement, and

- The parties' confirmation of the proposed change.

Measures 92 through 112 and 135 through 156 in Attachment 1 represent proposed changes that the parties agreed to be deleted from this six-month review cycle.

As a part of the Operation Support System test, BearingPoint Consulting (formerly KPMG Consulting) was required to conduct an independent assessment of the adequacy of BellSouth's permanent performance measures. This assessment, known as the Adequacy Study, filed in Docket 000121A-TP in September 2002, details documentation ambiguities (red-line changes) in the performance measures as well as recommended changes to the structure of the Service Quality Measures. As part of this docket, the parties were requested to file comments on the Adequacy Study. Attachment 2, incorporated herein by reference, reflects documentation or red-line changes to the performance measures noted in the Adequacy Study that were agreed upon by the parties.

ALEC Comments

In the ALEC Coalition's comments concerning the proposed table of agreed upon issues, the ALEC Coalition acknowledged that the table accurately states the issues upon which the parties agreed. However, in its comments, the ALEC Coalition clarified that for item numbers 55 through 66 listed in Attachment 1, their agreement to the addition of the word "customer" in the proposed changes would not result in the exclusion of "no trouble found" or "found OK/test OK" situations.

BellSouth Comments

In BellSouth's comments concerning the proposed table of agreed issues, BellSouth concurred with the assessment of all the issues proposed in the table with the exception of a proposed change that was inadvertently listed as in agreement by the parties. The change was a modification to an exclusion to the Firm Order Confirmation Timeliness Measure (0-9). The proposed change has been removed from Attachment 1 and will be addressed with other proposed changes to the performance measures that were not agreed upon in a future recommendation.

After consideration of the proposed changes, we order that BellSouth shall implement the revisions to the Performance Assessment Plan contained in Attachments 1 and 2 of this Order and

agreed to by the parties in the six-month review process, with the ALEC clarification that for item numbers 55 through 66, ALEC agreement to the addition of the word "customer" in the proposed changes will not result in the exclusion of "no trouble found" or "found OK/test OK" situations.

Based on the foregoing, it is

ORDERED by the Florida Public Service Commission that BellSouth Telecommunications, Inc. shall implement the revisions to the Performance Assessment Plan set forth in Attachments 1 and 2 to this Order, which are attached and incorporated, with the herein clarification that for item numbers 55 through 66, the ALECs' agreement to the addition of the word "customer" in the proposed changes will not result in the exclusion of "no trouble found" or "found OK/test OK" situations. It is further
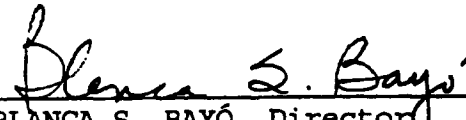

ORDERED that the provisions of this Order, issued as proposed agency action, shall become final and effective upon the issuance of a Consummating Order unless an appropriate petition, in the form provided by Rule 28-106.201, Florida Administrative Code, is received by the Director, Division of the Commission Clerk and Administrative Services, 2540 Shumard Oak Boulevard, Tallahassee, Florida 32399-0850, by the close of business on the date set forth in the "Notice of Further Proceedings" attached hereto. It is further

ORDERED that in the event a protest is filed, the resolution of the protest shall be addressed during the six-month review process. It is further

ORDERED that in the event this Order becomes final, this docket shall remain open.

By ORDER of the Florida Public Service Commission this <u>10th</u> day of <u>December, 2002</u>.

<u>Blanca S. Bayo</u>
BLANCA S. BAYÓ, Director
Division of the Commission Clerk
and Administrative Services

<u>NOTICE OF FURTHER PROCEEDINGS OR JUDICIAL REVIEW</u>

The Florida Public Service Commission is required by Section 120.569(1), Florida Statutes, to notify parties of any administrative hearing that is available under Section 120.57, Florida Statutes, as well as the procedures and time limits that apply. This notice should not be construed to mean all requests for an administrative hearing will be granted or result in the relief sought.

Mediation may be available on a case-by-case basis. If mediation is conducted, it does not affect a substantially interested person's right to a hearing.

The action proposed herein is preliminary in nature. Any person whose substantial interests are affected by the action proposed by this order may file a petition for a formal proceeding, in the form provided by Rule 28-106.201, Florida Administrative Code. This petition must be received by the Director, Division of

the Commission Clerk and Administrative Services, 2540 Shumard Oak
Boulevard, Tallahassee, Florida 32399-0850, by the close of
business on December 31, 2002.

In the absence of such a petition, this order shall become
final and effective upon the issuance of a Consummating Order.

Any objection or protest filed in this/these docket(s) before
the issuance date of this order is considered abandoned unless it
satisfies the foregoing conditions and is renewed within the
specified protest period.

		TABLE OF AGREED ISSUES Florida BellSouth Performance Assessment Plan Six Month Review as of October 22, 2002			
1	BST	Pg 3, 8/30 Filing	OSS-1	ADD: Exclusion - Scheduled OSS Maintenance	Yes
2	BST	Pg 3, 8/30 Filing	OSS-1	ADD: Exclusion - Retail Usage of LENS	Yes
3	BST	Pg 5, 8/30 Filing	OSS-2	ADD: Exclusion - Add language addressing trouble caused by outside BST control	Yes
4	BST	Pg 5, 8/30 Filing	OSS-2	ADD: Exclusion - Degraded service outage and scheduled maintenance	Yes
5	BST	Pg 5, 8/30 Filing	OSS-2	ADD: Business Rule - Add the words "loss of functionality" to the measure.	Yes
6	BST	Pg 5, 8/30 Filing	OSS-2	ADD: Disaggregation - Add "per OSS interface" to the Regional level of Disaggregation.	Yes
7	BST	Pg 5, 8/30 Filing	O-1	ADD: Exclusion - Scheduled OSS Maintenance	Yes
8	BST	Pg 6, 8/30 Filing	O-1	ADD: Calculation - Add the words "for returned acknowledgements" to the sum of all response interval in numerator.	Yes
9	BST	Pg 6, 8/30 Filing	O-1	Calculation - Change denominator to include acknowledgement notices returned in reporting period.	Yes
10	BST	Pg 6, 8/30 Filing	O-2	MODIFY: Benchmark - From 100% to 99.5% for TAG	Yes
11	BST	Pg 6, 8/30 Filing	O-3	ADD: Exclusion - Scheduled OSS Maintenance	Yes

TABLE OF AGREED ISSUES
Florida BellSouth Performance Assessment Plan
Six Month Review
as of October 22, 2002

Original No.	Proposer	Reference	Metric	Proposal	Parties Agree
12	BST	Pg 7, 8/30 Filing	LSR Flow-Through Matrix	DELETE: Remove LSR Flow-Through Matrix from the SQM Agreement reached at workshop not to delete, but to include an "as of date"	Yes
13	BST	Pg 7, 8/30 Filing	LSR Flow-Through Matrix	ADD: SQM directions for locating the latest version of the Flow-Through Matrix on PMAP	Yes
14	BST	Pg 9, 8/30 Filing	P-2	SPLIT MEASUREMENT: P-2A - Jeopardy Notice Interval P-2B - % of Orders Given Jeopardy Notices	Yes
15	BST	Pg 9, 8/30 Filing	P-2	ADD: Exclusion to P-2A - Orders issued with a due date of 48 hours of less.	Yes
16	BST	Pg 12, 8/30 Filing	P-12	DELETE: Eliminate measurement P-12 (LNP-Avg Disconnect Timeliness Intvl & Disconnect Timeliness Intvl Dist)	Yes
17	BST	Pg 12, 8/30 Filing	P-13B P-13C	ADD: P-13B (LNP-Avg Time Out of Svce for LNP Conversions) and P-13C (LNP-% of Time BST Applies the 10-digit Trigger Prior to the LNP Order Due Date) Agreement reached at workshop if P-13D is added. BST filed P-13D in errata.	Yes
18	BST	Pg 15, 8/30 Filing	B-4, B-5, B-6	MODIFY BENCHMARK: BST proposes benchmarks be adopted for these three billing measures, rather than retail analogs	Yes
19	BST	Pg 15, 8/30 Filing	TGP-1, TGP-2	ADD: Exclusion - 1)trunk groups blocked due to ALEC network/equipment failure	Yes
20	BST	Pg 15, 8/30 Filing	TGP-1, TGP-2	ADD: Exclusion - 4)final groups actually overflowing, not blocked	Yes

Original No.	Proposer	Reference	Metric	Proposal	Parties Agree
				TABLE OF AGREED ISSUES Florida BellSouth Performance Assessment Plan Six Month Review as of October 22, 2002	
21	BST	Pg 15, 8/30 Filing	TGP-1, TGP-2	**MODIFY BUSINESS RULES:** Categories 1, 10 & 16 are all "BST affecting" and should be added to the "BST affecting categories"	Yes
22	BST	Pg 17, 8/30 Filing	C-2	**MODIFY BUSINESS RULE:** Define the end time as the time when BST notifies the ALEC, not when the ALEC accepts the arrangement.	Yes
23	BST	SEEM Admin. Plan Sec. 2.2	N/A	**ADD LANGUAGE UNDERLINED:** BellSouth will make performance reports available to each ALEC on a monthly basis. The reports will contain information collected in each performance category and will be available to each ALEC <u>via the Performance Measurements Reports website.</u>	Yes
24	BST	SEEM Admin. Plan Sec. 2.3	N/A	**ADD LANGUAGE UNDERLINED:** Final validated SQM reports will be posted no later than the last day of the month <u>following the data month</u> in which the activity is incurred, or the first business day thereafter.	Yes
25	BST	SEEM Admin Plan Sec. 2.5	N/A	**ADD LANGUAGE UNDERLINED:** Such penalty shall be made to the Commission for deposit into the state General Revenue Fund within fifteen (15) calendar days of the <u>end of the reporting month in which the late publication of the report occurs.</u>	Yes
26	BST	SEEM Admin Plan	N/A	**INSERT NEW SECTION 2.7 TO STATE:** Tier II SEEMS payments and Administrative fines and penalties for late, incomplete, and reposted reports will be sent via Federal Express to the Commission. Checks and the accompanying transmittal letter will be postmarked on or before the 15th of the month.	Yes

				TABLE OF AGREED ISSUES Florida BellSouth Performance Assessment Plan Six Month Review as of October 22, 2002	
Original No.	Proposer	Reference	Metric	Proposal	Parties Agree
27	BST	SEEM Admin Plan	N/A	INSERT NEW SECTION 2.9 TO STATE: BellSouth will provide documentation of late and incomplete occurences during the reporting month that the data is posted to the website. These notations may be viewed on the Performance Measurements website from the PMAP home page on the Current Month Site Updates link	Yes
				SQM Changes-Exhibit 3	
28	BST	Exhibit 3	Intro-duction	In the 4ᵗʰ paragraph of the Introduction section of the SQMP, change "This document is intended for use by someone with knowledge of the telecommunication industry,..."	Yes
29	BST	Exhibit 3	Intro-duction	In the 5ᵗʰ paragraph of the Introduction section of the SQMP, change: "Once it is approved, the most current copy of this document can be found on the web at URL: https://pmap.bellsouth.com in the Help Documentation Downloads folder.	Yes
30	BST	Exhibit 3	OSS-1	In the Business Rules, change the phrase: "...when the appropriate response is returned to the client application" to "when the appropriate response is received by the client application."	Yes
31	BST	Exhibit 3	OSS-1	In the Business Rules, add the following sentence: BST will not schedule maintenance during the hours from 8:00 am until 9:00 pm, Monday through Friday.	Yes
32	BST	Exhibit 3	OSS-1	In the Calculation, add the following formula: % within interval=(e/f) X 100 e=Sum of Response Time for Interval f=# of Legacy Requests During the Reporting Period for System "for which a response was provided"	Yes
33	BST	Exhibit 3	OSS-1	Delete the OASISCAR, OASISLPC, and OASISMTN from the Legacy System Access Times table.	Yes

Original No.	Proposer	Reference	Metric	Proposal	Parties Agree
				TABLE OF AGREED ISSUES Florida BellSouth Performance Assessment Plan Six Month Review as of October 22, 2002	
34	BST	Exhibit 3	OSS-2	Change the title and calculation of this measure from "Interface Availability..." to "OSS Availability..."	Yes
35	BST	Exhibit 3	OSS-3	Change the title and calculation of this measure from "Interface Availability..." to "OSS Availability..."	Yes
36	BST	Exhibit 3	OSS-3	Calculation change: OSS Availability (a/b) x 100 a=Functional Availability of front end systems b= Scheduled Availability of front end systems Agreement reached at workshop to delete reference to "front end systems"	Yes
37	BST	Exhibit 3	OSS-3	Change the SQM disagg and the SEEM disagg from "Regional Level" to "Regional Level, per OSS interface"."	Yes
38	BST	Exhibit 3	OSS-3	Move the OSS Interface Availability and the SEEM OSS Interface Availability to Appendix C and change the OSS Interface "LNP" to "LNP Gateway".	Yes
39	BST	Exhibit 3	OSS-4	Change the SQM disagg and the SEEM disagg from "Regional Level" to "Regional Level, Per OSS Interface."	Yes
40	BST	Exhibit 3	PO-2	Business Rules-Delete references to "RoboTAG".	Yes
41	BST	Exhibit 3	PO-2	Changes to Data Retained: Relation to CLEC Experience • Report Month • ~~Legacy Contract~~ • ~~Response Interval~~ • ~~Regional Scope~~ • Total Number of Inquiries • SI Interval • State and Region	Yes
42	BST	Exhibit 3	O-9	Definition change: Interval for Return of a FOC Interval is the average response time from receipt of a valid LSR or ASR to distribution of a FOC. The interval will include an electronic facilities check.	Yes

RED-LINE CHANGES FROM THE BEARINGPOINT ADEQUACY REVIEW	
Metric Name	**Documentation Improvements (Red-line changes)**
OSS-1: Average Response Time and Response Interval (Pre-Ordering/ Ordering)	The Definition, Business Rules, and Calculation documentation should be updated to reflect the red-line SQM changes associated with the Florida Third Party OSS Test. As part of FL Observation 120, BellSouth submitted a red-line SQM to modify the documented SQM text to provide additional clarity regarding the SQM name, as well as the definition, business rules, and calculation sections. These changes are not present in the Permanent Metrics.
OSS-2: Interface Availability (Pre-Ordering/Ordering)	**Definition** The hours of operation website should be updated to show hours of availability for all appropriate levels of disaggregation. BellSouth references in both the Interim and Permanent Metrics a matrix on its website (http://www.interconnection.bellsouth.com/oss/oss_hour.html). This matrix does not list hours of availability for all levels of disaggregation.
OSS-3: Interface Availability (Maintenance & Repair)	**Definition** The hours of operation website should be updated to show hours of availability for all appropriate levels of disaggregation. BellSouth references in both the Interim and Permanent Metrics a matrix on its website (http://www.interconnection.bellsouth.com/oss/oss_hour.html). This matrix does not list hours of availability for all levels of disaggregation. **Business Rules** The Business Rules documentation should be updated to reflect the red-line SQM changes associated with the Florida Third Party OSS Test. As part of FL Exception 59, BellSouth submitted a red-line SQM to modify the documented SQM text to provide additional clarity regarding the Business Rules documentation. These changes are not present in the Permanent Metrics.
OSS-4: Response Interval (Maintenance & Repair)	**Performance Standard** The Performance Standard documentation of this SQM should be modified to reflect a benchmark of "Parity with Retail." The benchmark in the Interim Metrics is listed as "Parity with Retail," while the benchmark in the Permanent Metrics is listed as "Average Interval." KPMG Consulting has confirmed that "Parity with Retail" is the correct performance standard for this SQM.
PO-1: Loop Makeup – Response Time – Manual	**Business Rules** The Business Rules section reference to "mail" should be replaced with "e-mail." BellSouth states the following: "The CLEC Manual Loop Makeup Service Inquiry (LMUSI) process includes inquiries submitted via mail or FAX to BellSouth's Complex Resale Support Group (CRSG)." KPMG Consulting has confirmed that the CRSG does not receive inquiries via mail and believes that this statement refers to electronic mail.
PO-2: Loop Makeup – Response Time – Electronic	**Exclusions** The Exclusions documentation should be modified to remove the "designated holidays" exclusion. KPMG Consulting believes the exclusion of "designated holidays" is inappropriate for an SQM that measures an automated process.

Metric Name	Documentation Improvements (Red-line changes)
O-1: Acknowledgement Message Timeliness	The Definition and Calculation documentation should be updated to reflect the red-line SQM changes associated with the Florida Third Party OSS Test. As part of FL Observation 112, BellSouth submitted a red-line SQM to add distribution intervals to the documented SQM. These distribution intervals are not present in the Permanent Metrics for this SQM. **Exclusions** The Exclusions documentation should be modified to note the exclusion of "Manually Submitted LSRs." KPMG Consulting notes that no exclusions are listed in the Permanent Metrics. Since the O-1 SQM includes only transactions electronically submitted via EDI or TAG, manually submitted LSRs would not be included in the calculation of this SQM.
O-3: Percent Flow-Through Service Requests (Summary)	**Business Rules** The Business Rules documentation should be updated to reflect the red-line SQM changes associated with the Florida Third Party OSS Test. As part of its response to FL Exception 121, BellSouth modified category three and added a 14th category in the documented SQM. Both additions clarified differences in the flow-through handling of Local Number Portability (LNP) orders. These changes are not present in the Permanent Metrics. **Calculation** The Calculation documentation should be modified to provide additional clarity on the calculation references to clarifications and errors. The Calculation documentation states the following: Percent Flow Through $= a \div [b - (c + d + e + f)] \times 100$ • a = The total number of LSRs that flow through LESOG/LAUTO and reach a status for a FOC to be issued • b = the number of LSRs passed from LEO/LNP Gateway to LESOG/LAUTO • c = the number of LSRs that fall out for manual processing • d = the number of LSRs that are returned to the CLEC for clarification • e = the number of LSRs that contain errors made by CLECs • f = the number of LSRs that receive a Z status. Since clarifications and errors are synonymous, "d" and "e" could be interpreted to double count the number of clarifications and errors. By double-counting clarifications and errors, the reported flow through percentage increases since the denominator is reduced. KPMG Consulting has confirmed that "d" refers to auto clarifications only, and "e" refers to clarifications returned from the Local Carrier Service Center (LCSC) to the CLEC. The Calculation documentation also states the following: Percent Achieved Flow Through $= a \div [b-(c+d+e)] \times 100$ • a = the number of LSRs that flow through LESOG/LAUTO and reach a status for a FOC to be issued. • b = the number of LSRs passed from LEO/LNP Gateway to LESOG/LAUTO • c = the number of LSRs that are returned to the CLEC for clarification • d = the number of LSRs that contain errors made by CLECs • e = the number of LSRs that receive Z status Since clarifications and errors are synonymous, "c" and "d" could be interpreted to double-count the number of clarifications and errors. By double-counting clarifications and errors, the reported flow through percentage increases since the denominator is reduced. KPMG Consulting has confirmed that "c" refers to auto clarifications only, and "d" refers to clarifications returned from the LCSC to the CLEC.

Metric Name	Documentation Improvements (Red-line changes)
O-4: Percent Flow-Through Service Requests (Detail)	**Business Rules** The Business Rules documentation should be updated to reflect the red-line SQM changes associated with the Florida Third Party OSS Test. As part of its response to FL Exception 121, BellSouth modified category three and added a 14th category to the documented SQM. Both additions clarified differences in the flow-through handling of Local Number Portability (LNP) orders. These changes are not present in the Permanent Metrics. **Calculation** The Calculation documentation should be modified to provide additional clarity on the calculation references to clarifications and errors. The Calculation section states the following: Percent Flow Through = a ÷ [b - (c + d + e + f)] X 100 ● a = The total number of LSRs that flow through LESOG/LAUTO and reach a status for a FOC to be issued ● b = the number of LSRs passed from LEO/LNP Gateway to LESOG/LAUTO ● c = the number of LSRs that fall out for manual processing ● d = the number of LSRs that are returned to the CLEC for clarification ● e = the number of LSRs that contain errors made by CLECs ● f = the number of LSRs that receive a Z status. Since clarifications and errors are synonymous, "d" and "e" could be interpreted to double count the number of clarifications and errors. By double-counting clarifications and errors, the reported flow through percentage increases since the denominator is reduced. KPMG Consulting has confirmed that "d" refers to auto clarifications only, and "e" refers to clarifications returned from the LCSC to the CLEC. The Calculation section also states the following: Percent Achieved Flow Through = a ÷ [b-(c+d+e)] X 100 ● a = the number of LSRs that flow through LESOG/LAUTO and reach a status for a FOC to be issued. ● b = the number of LSRs passed from LEO/LNP Gateway to LESOG/LAUTO ● c = the number of LSRs that are returned to the CLEC for clarification ● d = the number of LSRs that contain errors made by CLECs ● e = the number of LSRs that receive Z status Since clarifications and errors are synonymous, "c" and "d" could be interpreted to double-count the number of clarifications and errors. By double-counting clarifications and errors, the reported flow through percentage increases since the denominator is reduced. KPMG Consulting has confirmed that "c" refers to auto clarifications only, and "d" refers to clarifications returned from the LCSC to the CLEC.
O-5: Flow-Through Error Analysis	**Name of SQM** The name of the SQM should be modified to remove "O-5" from the SQM header. KPMG Consulting notes that this measurement has no calculation other than a count; it presents data that is used to assist in the calculation of O-3 and O-4. The removal of "O-5" from the SQM header would make it clear that this measurement has no calculation component.

Metric Name	Documentation Improvements (Red-line changes)
O-8: Reject Interval	**Exclusions** The Exclusions documentation's holiday exclusion should be labeled as referencing partially mechanized and non-mechanized transactions only. BellSouth lists the following exclusion: "Designated Holidays are excluded from the interval calculation." KPMG Consulting has confirmed that the holiday exclusion is appropriate for partially mechanized and non-mechanized transactions, but that this exclusion is not appropriate for fully mechanized transactions. The Exclusions documentation's reference to hours of exclusion should be updated. KPMG Consulting notes that the hours of operation and hours of exclusion for various centers can change over time. The hours of exclusion listed in the Permanent Metrics may not accurately reflect actual hours of exclusion. To address this issue, KPMG Consulting suggests that a reference be added to the Exclusions section to indicate the websites where current hours of operation can be found.
O-9: Firm Order Confirmation Timeliness	**Exclusions** The Exclusions documentation's holiday exclusion should be labeled as referencing partially mechanized and non-mechanized transactions only. BellSouth lists the following exclusion: "Designated Holidays are excluded from the interval calculation." KPMG Consulting has confirmed that the holiday exclusion is appropriate for partially mechanized and non-mechanized transactions, but that this exclusion is not appropriate for fully mechanized transactions. The Exclusion documentation's reference to hours of exclusion should be updated. KPMG Consulting notes that the hours of operation and hours of exclusion for various centers can change over time and therefore, the hours of exclusion listed in the Permanent Metrics may not accurately reflect actual hours of exclusion. To address this issue, KPMG Consulting suggests that a reference be added to the Exclusions section to indicate the websites where current hours of operation can be found. **Report Structure** The Report Structure documentation should be updated to reflect the red-line SQM changes associated with the Florida Third Party OSS Test. As part of FL Observation 129, BellSouth submitted a red-line SQM to address documented time bucket discrepancies. These changes are not present in the Permanent Metrics.

Metric Name	Documentation Improvements (Red-line changes)
O-10: Service Inquiry with LSR Firm Order Confirmation (FOC) Response Time Manual	**Exclusions** The Exclusions documentation's reference to hours of exclusion should be updated. KPMG Consulting notes that the hours of operation and hours of exclusion for various centers can change over time and therefore, the hours of exclusion listed in the Permanent Metrics may not accurately reflect actual hours of exclusion. To address this issue, KPMG Consulting suggests that a reference be added to the Exclusions section to indicate the website where current hours of operation can be found. **Calculation** The Calculation documentation should be updated so the FOC Timeliness Interval calculation label and the Average Interval numerator ("c") are renamed. The calculation label and numerator should reflect the measurement of the O-10 SQM, rather than the O-9 SQM. The first calculation shown in this section is listed as follows: FOC Timeliness Interval = (a - b) ● a = Date and Time Firm Order Confirmation (FOC) for SI with LSR returned to CLEC ● b = Date and Time SI with LSR received KPMG Consulting believes that the calculation heading: "FOC Timeliness Interval" could be misleading since the O-9 SQM measures the FOC Timeliness interval. The second calculation shown in this section is listed as follows: Average Interval = (c + d) ● c = Sum of all FOC Timeliness Intervals ● d = Total number of SIs with LSRs received in the reporting period The numerator "c" could also be misleading since it also refers to the FOC Timeliness intervals.
O-11: Firm Order Confirmation and Reject Response Completeness	**Exclusions** The Exclusions documentation should be updated to reflect a "Fatal Rejects" exclusion. BellSouth states the following in the Business Rules documentation: "Mechanized - The number of FOCs or Auto Clarifications sent to the CLEC from EDI, or TAG in response to electronically submitted LSRs." BellSouth defines a Mechanized reject in the Business Rules section of the O-7: Percent Rejected Service Requests text as "either a Fatal Reject or an Auto Clarification." While Auto Clarifications are one type of Reject, Fatal Rejects are not mentioned in the O-11 SQM documentation. BellSouth also does not list Fatal Rejects in the Exclusions section of the O-11 SQM. KPMG Consulting believes that Fatal Rejects should be excluded from this SQM since BellSouth defines a Fatal Reject in the O-7: Percent Rejected Service Requests text as follows: "A Fatal Reject occurs when a CLEC attempts to electronically submit an LSR but required fields are either not populated or incorrectly populated and the request is returned to the CLEC before it is considered a valid LSR." The O-11 SQM Definition documentation states the following: "A response is expected from BellSouth for every Local Service Request transaction (version)." Since a Fatal Reject is not considered a valid LSR, the exclusion of Fatal Rejects from O-11 would be consistent with the Definition documentation of this SQM as stated above. KPMG Consulting has also confirmed that Fatal Rejects are excluded from this SQM.
O-12: Speed of Answer in Ordering Center	**Report Structure** The Report Structure documentation should be updated to reflect the geographic scope. KPMG Consulting notes that no geographic scope designation (region or state) is present in the Permanent Metrics SQM. This designation is important to determine at what level the SQM report results are presented. KPMG Consulting notes that BellSouth's current SQM report is reported on a regional basis.

Metric Name	Documentation Improvements (Red-line changes)
P-1: Mean Held Order Interval & Distribution Interval	**Report Structure** The Report Structure documentation should be updated to reflect geographic scope. KPMG Consulting notes that no geographic scope designation (region or state) is present in the Permanent Metrics SQM. This designation is important to determine at what level the SQM report results are presented. KPMG Consulting notes that BellSouth's current SQM report is reported on a regional and state-specific basis.
P-2: Average Jeopardy Notice Interval & Percentage of Orders Given Jeopardy Notices	The Calculation, Levels of Disaggregation, and Performance Standard documentation should be updated to reflect the red-line SQM changes associated with the Florida Third Party OSS Test. As part of FL Observation 150, BellSouth submitted a red-line SQM to modify the SQM text to provide additional documentation clarity regarding the calculation, levels of disaggregation, and performance standard sections. These changes are not present in the Permanent Metrics. **Report Structure** The Report Structure documentation should be updated to reflect geographic scope. KPMG Consulting notes that no geographic scope designation (region or state) is present in the Permanent Metrics SQM. This designation is important to determine at what level the SQM report results are presented. KPMG Consulting notes that BellSouth's current SQM report is reported on a regional and state-specific basis.

P-3A: Percent Missed Installation Appointments Including Subsequent Appointments	**Definition**
	The Definition documentation should be updated to account for the inclusion of subsequent appointments.
	
	Calculation
	The Calculation documentation should be modified.
	    Percent Missed Installation Appointments = (a + b) X 100
	    • a = Number of Appointments in Reporting Period past the Original (Date/Time as applicable) Committed and Subsequent Committed Due Date
	    • b = Number of Appointments on Orders Completed in Reporting Period
	
	KPMG Consulting believes that "a" could be interpreted that the appointment be counted only if it were past the original committed due date and the subsequent committed due date, which would only count subsequent misses. However, since the P-3 SQM, which measures the percentage of missed initial installation appointments, has not been ordered by the FPSC, the P-3A SQM must include both types of misses: initial and subsequent.
	
	    "a" should be redefined as "a = (Number of Appointments in Reporting Period past the Original Committed Due Date) + (Number of Appointments in Reporting Period past the Subsequent Committed Due Date)."
	
	Report Structure
	The Report Structure documentation should be updated to reflect geographic scope. KPMG Consulting notes that no geographic scope designation (region or state) is present in the Permanent Metrics SQM. This designation is important to determine at what level the SQM report results are presented. KPMG Consulting notes that BellSouth's current SQM report is reported on a regional and state-specific basis.

Metric Name	Documentation Improvements (Red-line changes)

P-4A: Average Order Completion and Completion Notice Interval (AOCCNI) Distribution	**Definition**
	The Definition documentation should be modified to include completion notices. The Definition section includes the following statement: "The "Order Completion And Completion Notice Interval" provides the percentages of orders completed within certain time periods." The phrase "orders completed" could imply that only the order completion interval is being measured by this SQM. Since this SQM measures both the completion interval and the completion notice interval, the statement is not accurate. "Orders completed" should be updated to include completion notices.
	
	Business Rules
	The Business Rules documentation should be updated. The Business Rules section includes the following statement: "The accumulated time for each reporting dimension is then divided by the associated total number of orders completed." The phrase "orders completed" could imply that only the order completion interval is being measured by this SQM. Since this SQM measures both the completion interval and the completion notice interval, the statement is not accurate. "Orders completed" should be updated to include completion notices. The Business Rules section also includes the following statement: "Orders that are worked on zero due dates are calculated with a .33-day interval (8 hours) in order to report a portion of a day interval. These orders are issued and worked/completed on the same day. They can be either flow through orders (no field work-non-dispatched) or field orders (dispatched)." Since this SQM measures both the completion interval and the completion notice interval, the text could be misleading and should be removed.
	
	Calculation
	The Calculation documentation should be updated.
	      Completion Interval = (a - b)
	        ● a = Date and Time Completion Notice is sent
	        ● b = FOC/SOCS date time-stamp (application date)
	
	The name of the calculation, "Completion Interval," could imply that only the order completion interval is being calculated. The interval (a – b) measures both the order completion interval and the completion notice interval. The phrase "Completion Interval" could be misleading and should be updated to include completion notices.
	
	Average Completion Interval = (c + d)
	● c = Sum of all Completion Intervals
	● d = Count of Orders Completed in Reporting Period

Metric Name	Documentation Improvements (Red-line changes)
P-4A: Average Order Completion and Completion Notice Interval (AOCCNI) Distribution (Continued)	The name of the calculation, "Average Completion Interval," could imply that only the average of all completion intervals is being calculated. Both the "c" and "d" variables refer only to completions, not to completions and completion notices and should be updated in the documentation. Order Completion Interval Distribution (for each interval) = (e ÷ f) X 100 ● e = Service Orders Completed in "X" days ● f = Total Service Orders Completed in Reporting Period For the reasons stated above, the name of the calculation, "Order Completion Interval Distribution (for each interval)," could also be misinterpreted. Both the "e" and "f" variables refer only to completed service orders, not to completed service orders and completion notices and should be updated in the documentation. **Report Structure** The Report Structure documentation should be updated to reflect geographic scope. KPMG Consulting notes that no geographic scope designation (region or state) is present in the Permanent Metrics SQM. This designation is important to determine at what level the SQM report results are presented. KPMG Consulting notes that BellSouth's current SQM report is reported on a regional and state-specific basis. **Performance Standard** The Performance Standard documentation should be modified. KPMG Consulting notes that the retail analog for UNE Digital Loop ' DS1 is listed as Retail Digital Loop £ DS1. KPMG Consulting has confirmed that the retail analog is, in fact, Retail Digital Loop ' DS1.
P-5: Average Completion Notice Interval	**Report Structure** The Report Structure documentation should be updated to reflect geographic scope. KPMG Consulting notes that no geographic scope designation (region or state) is present in the Permanent Metrics SQM. This designation is important to determine at what level the SQM report results are presented. KPMG Consulting notes that BellSouth's current SQM report is reported on a regional and state-specific basis. **Performance Standard** The Performance Standard documentation should be modified. KPMG Consulting notes that the retail analog for UNE Digital Loop ' DS1 is listed as Retail Digital Loop £ DS1. KPMG Consulting has confirmed that the retail analog is, in fact, Retail Digital Loop ' DS1.
P-6: % Completions/Attempts without Notice or < 24 hours Notice	**Report Structure** The Report Structure documentation should be updated to reflect geographic scope. KPMG Consulting notes that no geographic scope designation (region or state) is present in the Permanent Metrics SQM. This designation is important to determine at what level the SQM report results are presented. KPMG Consulting notes that BellSouth's current SQM report is reported on a regional and state-specific basis.
P-7: Coordinated Customer Conversions Interval	**Report Structure** The Report Structure documentation should be updated to reflect geographic scope. KPMG Consulting notes that no geographic scope designation (region or state) is present in the Permanent Metrics SQM. This designation is important to determine at what level the SQM report results are presented. KPMG Consulting notes that BellSouth's current SQM report is reported on a regional and state-specific basis.

Metric Name	Documentation Improvements (Red-line changes)
P-7A: Coordinated Customer Conversions - Hot Cut Timeliness % Within Interval and Average Interval	**Report Structure** The Report Structure documentation should be updated to reflect geographic scope. KPMG Consulting notes that no geographic scope designation (region or state) is present in the Permanent Metrics SQM. This designation is important to determine at what level the SQM report results are presented. KPMG Consulting notes that BellSouth's current SQM report is reported on a regional and state-specific basis.
P-7B: Coordinated Customer Conversions – Average Recovery Time	**Report Structure** The Report Structure documentation should be updated to reflect geographic scope. KPMG Consulting notes that no geographic scope designation (region or state) is present in the Permanent Metrics SQM. This designation is important to determine at what level the SQM report results are presented. KPMG Consulting notes that BellSouth's current SQM report is reported on a regional and state-specific basis.
P-7C: Hot Cut Conversions - % Provisioning Troubles Received Within 7 days of a completed Service Order	**Report Structure** The Report Structure documentation should be updated to reflect geographic scope. KPMG Consulting notes that no geographic scope designation (region or state) is present in the Permanent Metrics SQM. This designation is important to determine at what level the SQM report results are presented. KPMG Consulting notes that BellSouth's current SQM report is reported on a regional and state-specific basis.
P-8: Cooperative Acceptance Testing - % of xDSL Loops Successfully Tested	**Report Structure** The Report Structure documentation should be updated to reflect geographic scope. KPMG Consulting notes that no geographic scope designation (region or state) is present in the Permanent Metrics SQM. This designation is important to determine at what level the SQM report results are presented. KPMG Consulting notes that BellSouth's current SQM report is reported on a regional and state-specific basis.
P-9: % Provisioning Troubles within 30 days of Service Order Completion	**Calculation** The Calculation documentation should be updated. % Provisioning Troubles within 30 days of Service Order Activity = (a ÷ b) X 100 • a = Trouble reports on all completed orders 30 days following service order(s) completion • b = All Service Orders completed in the previous report calendar month The definition for "a" could be interpreted to include trouble reports for only the 30-day point following service order(s) completion, not trouble reports within 30 days. "a" should be redefined as "a = Trouble reports on all completed orders within 30 days following service order(s) completion." **Report Structure** The Report Structure documentation should be updated to reflect geographic scope. KPMG Consulting notes that no geographic scope designation (region or state) is present in the Permanent Metrics SQM. This designation is important to determine at what level the SQM report results are presented. KPMG Consulting notes that BellSouth's current SQM report is reported on a regional and state-specific basis.
P-10: Total Service Order Cycle Time (TSOCT)	**Report Structure** The Report Structure documentation should be updated to reflect geographic scope. KPMG Consulting notes that no geographic scope designation (region or state) is present in the Permanent Metrics SQM. This designation is important to determine at what level the SQM report results are presented. KPMG Consulting notes that BellSouth's current SQM report is reported on a regional and state-specific basis.

Metric Name	Documentation Improvements (Red-line changes)
P-11: Service Order Accuracy	**Report Structure** The Report Structure documentation should be updated to reflect geographic scope. KPMG Consulting notes that no geographic scope designation (region or state) is present in the Permanent Metrics SQM. This designation is important to determine at what level the SQM report results are presented. KPMG Consulting notes that BellSouth's current SQM report is reported on a regional basis.

P-12: LNP-Average Disconnect Timeliness Interval & Disconnect Timeliness Interval Distribution	**Calculation**
	The Calculation documentation should be modified.
	Disconnect Timeliness Interval Distribution (for each interval) = (e + f) X 100
	    ● e = Disconnected numbers completed in "X" days
	    ● f = Total disconnect numbers completed in reporting period
	"e" should be changed from days to minutes since, as noted below, the time buckets are in minutes.
	
	Report Structure
	The Report Structure documentation should be updated to reflect the red-line SQM changes associated with the Florida Third Party OSS Test. As part of FL Exception 15, BellSouth submitted a red-line SQM to address the lack of time buckets (<=15 minutes, >15 minutes) in the SQM documentation. The time buckets are not present in the Permanent Metrics SQM.

M&R-1: Missed Repair Appointments	**Report Structure** The Report Structure documentation should be updated to reflect geographic scope. KPMG Consulting notes that no geographic scope designation (region or state) is present in the Permanent Metrics SQM. This designation is important to determine at what level the SQM report results are presented. KPMG Consulting notes that BellSouth's current SQM report is reported on a regional and state-specific basis.
M&R-2: Customer Trouble Report Rate	**Report Structure** The Report Structure documentation should be updated to include Dispatch/Non-Dispatch. KPMG Consulting believes that this designation is important and notes that BellSouth's published report for this SQM is reported by Dispatch/Non-Dispatch. The Report Structure documentation should be updated to reflect geographic scope. KPMG Consulting notes that no geographic scope designation (region or state) is present in the Permanent Metrics SQM. This designation is important to determine at what level the SQM report results are presented. KPMG Consulting notes that BellSouth's current SQM report is reported on a regional and state-specific basis.
M&R-3: Maintenance Average Duration	**Report Structure** The Report Structure documentation should be updated to reflect geographic scope. KPMG Consulting notes that no geographic scope designation (region or state) is present in the Permanent Metrics SQM. This designation is important to determine at what level the SQM report results are presented. KPMG Consulting notes that BellSouth's current SQM report is reported on a regional and state-specific basis.
M&R-4: Percent Repeat Troubles within 30 Days	**Report Structure** The Report Structure documentation should be updated to reflect geographic scope. KPMG Consulting notes that no geographic scope designation (region or state) is present in the Permanent Metrics SQM. This designation is important to determine at what level the SQM report results are presented. KPMG Consulting notes that BellSouth's current SQM report is reported on a regional and state-specific basis.

Metric Name	Documentation Improvements (Red-line changes)
M&R-5: Out of Service (OOS) > 24 Hours	**Report Structure** The Report Structure documentation should be updated to reflect geographic scope. KPMG Consulting notes that no geographic scope designation (region or state) is present in the Permanent Metrics SQM. This designation is important to determine at what level the SQM report results are presented. KPMG Consulting notes that BellSouth's current SQM report is reported on a regional and state-specific basis.
M&R-6: Average Answer Time – Repair Centers	**Exclusions** The Exclusions documentation should be updated to list abandoned calls as an exclusion. KPMG Consulting notes that abandoned calls are not listed as an exclusion. Since the SQM is based on the total number of calls answered in the reporting period, abandoned calls cannot be included. **Report Structure** The Report Structure documentation should be updated to reflect geographic scope. KPMG Consulting notes that no geographic scope designation (region or state) is present in the Permanent Metrics SQM. This designation is important to determine at what level the SQM report results are presented. KPMG Consulting notes that BellSouth's current SQM report is reported on a regional basis.
M&R-7: Mean Time To Notify CLEC of Network Outages	The Definition, Business Rules, and Calculation documentation should be updated to reflect the red-line SQM changes associated with the Florida Third Party OSS Test. As part of FL Observation 133, BellSouth submitted a red-line SQM to modify the SQM text to provide additional clarity regarding the definition, business rules, and calculation documentation. These changes are not present in the Permanent Metrics. **Definition** The Definition section should be modified. BellSouth refers to "Key Customer Accounts" in this section, which implies that only key customers are notified. Since all CLECs have the opportunity to subscribe to the notification list, KPMG Consulting believes that the phrase "Key Customer Accounts" should be removed to avoid confusion. **Report Structure** The Report Structure documentation should be updated to reflect geographic scope. KPMG Consulting notes that no geographic scope designation (region or state) is present in the Permanent Metrics SQM. This designation is important to determine at what level the SQM report results are presented. KPMG Consulting notes that BellSouth's current SQM report is reported on a regional basis. **Performance Standard** The Performance Standard documentation should be updated to reflect the red-line SQM changes associated with the Florida Third Party OSS Test. As part of FL Observation 161, BellSouth issued a red-line SQM regarding the documentation change of the performance standard from Parity by Design to Parity with Retail. The change is not present in the Permanent Metrics.

Metric Name	Documentation Improvements (Red-line changes)
B-2: Mean Time to Deliver Invoices	**Definition** The Definition documentation should be modified, as the Business Rules documentation appears to provide a better definition of the SQM, while the Definition documentation appears to contain background information on the SQM. The Definition documentation states the following: "Bill Distribution is calculated as follows: CRIS BILLS-The number of workdays is reported for CRIS bills. This is calculated by counting the Bill Period date as the first work day. Weekends and holidays are excluded when counting workdays. J/N Bills are counted in the CRIS work day category for the purposes of the measurement since their billing account number (Q account) is provided from the CRIS system. CABS BILLS-The number of calendar days is reported for CABS bills. This is calculated by counting the day following the Bill Period date as the first calendar day. Weekends and holidays are included when counting the calendar days." The Business Rules documentation states the following: "This report measures the mean interval for timeliness of billing records delivered to CLECs in an agreed upon format. CRIS-based invoices are measured in business days, and CABS-based invoices in calendar days." KPMG Consulting believes that the Business Rules documentation as stated above is a more appropriate definition of the SQM. KPMG Consulting also believes that the reference to "records" in the Definition documentation should be changed to "invoices" to remain consistent with the intent of the SQM. **Business Rules** The Business Rules documentation should be modified, as the Definition documentation appears to contain background information on the SQM, while the Business Rules documentation appears to provide a better definition of the SQM. The Business Rules documentation should be modified to state "timeliness of billing records sent to CLECs." The Calculation documentation states the following: Invoice Timeliness = (a - b) • a = Invoice Transmission Date • b = Close Date of Scheduled Bill Cycle The end point for the Invoice Timeliness calculation is the transmission date to the CLEC. The Business Rules state: "This report measures the mean interval for timeliness of billing records delivered to CLECs in an agreed upon format. CRIS-based invoices are measured in business days, and CABS-based invoices in calendar days." The Business Rules section should be modified to state "timeliness of billing records sent to CLECs," rather than "delivered to CLECs" since BellSouth cannot be held responsible for the billing records after they have been sent.
B-8: Non-Recurring Charge Completeness	**Report Structure** The Report Structure documentation should be updated to reflect the geographic scope. KPMG Consulting notes that no geographic scope designation (region or state) is present in the Permanent Metrics SQM. This designation is important to determine at what level the SQM report results are presented. KPMG Consulting notes that BellSouth's current SQM report is reported on a state-specific basis.
D-1: Average Database Update Interval	**Report Structure** The Report Structure documentation should be updated to reflect the geographic scope. KPMG Consulting notes that no geographic scope designation (region or state) is present in the Permanent Metrics SQM. This designation is important to determine at what level the SQM report results are presented. KPMG Consulting notes that BellSouth's current SQM report is reported on a regional and state-specific basis.

Metric Name	Documentation Improvements (Red-line changes)

D-2: Percent Database Update Accuracy	The Definition and Business Rules documentation should be updated to reflect the red-line SQM changes associated with the Florida Third Party OSS Test. As part of FL Observation 180, BellSouth submitted a red-line SQM to clarify the documented SQM text. The text in the Permanent Metrics for this SQM does not match the text in the red-line SQM.
	
	Report Structure
	The Report Structure documentation should be updated to reflect the geographic scope. KPMG Consulting notes that no geographic scope designation (region or state) is present in the Permanent Metrics SQM. This designation is important to determine at what level the SQM report results are presented. KPMG Consulting notes that BellSouth's current SQM report is reported on a regional and state-specific basis.
	
	Levels of Disaggregation
	The Levels of Disaggregation documentation should be updated to include Directory Assistance. There are two levels of disaggregation listed for this SQM:
	    LIDB
	    Directory Listings
	
	KPMG Consulting notes that BellSouth's published report for this SQM includes a third level of disaggregation: Directory Assistance. BellSouth also refers to Directory Assistance in both the Definition and Business Rules sections.

D-3: Percent NXXs and LRNS Loaded by the LERG Effective Date	**Definition** The Definition documentation should be modified. KPMG Consulting notes that the first paragraph of the Definition documentation appears to contain the actual SQM definition. The second and third paragraphs appear to contain more background information that would be more appropriately presented in the Business Rules section. **Report Structure** The Report Structure documentation should be updated to reflect the geographic scope. KPMG Consulting notes that no geographic scope designation (region or state) is present in the Permanent Metrics SQM. This designation is important to determine at what level the SQM report results are presented. KPMG Consulting notes that BellSouth's current SQM report is reported on a regional basis.
TGP-2: Trunk Group Performance-CLEC Specific	**Definition** The Definition documentation should be updated to reflect that the SQM is measured on a CLEC specific basis. KPMG Consulting notes that the wording of the definition is exactly the same as the TGP-1 wording definition. While TGP-2 is reported on a CLEC specific basis, TGP-1 is reported on an aggregate basis.
C-1: Collocation Average Response Time	**Report Structure** The Report Structure documentation should be updated to reflect the geographic scope. KPMG Consulting notes that no geographic scope designation (region or state) is present in the Permanent Metrics SQM. This designation is important to determine at what level the SQM report results are presented. KPMG Consulting notes that BellSouth's current SQM report is reported on a state-specific basis.

Metric Name	Documentation Improvements (Red-line changes)
C-2: Collocation Average Arrangement Time	**Report Structure** The Report Structure documentation should be updated to reflect the geographic scope. KPMG Consulting notes that no geographic scope designation (region or state) is present in the Permanent Metrics SQM. This designation is important to determine at what level the SQM report results are presented. KPMG Consulting notes that BellSouth's current SQM report is reported on a state-specific basis.
C-3: Collocation Percent of Due Dates Missed	**Business Rules** The Business Rules documentation should be modified. The Business Rules documentation includes the following statement: "The clock starts on the date that BellSouth receives a complete and accurate Bona Fide firm order accompanied by the appropriate fee if required." KPMG Consulting notes that this statement also appears in the Business Rules section of the C-2: Collocation Average Arrangement Time SQM. Since the C-3 SQM measures the percentage of due dates missed, no time intervals are required for the percentage calculation. **Calculation** The Calculation documentation should be modified. The Calculation section includes the following statement: • a = Number of Completed Orders that were not completed within BellSouth Committed Due Date during Reporting Period KPMG Consulting notes that "within" should be replaced with "by" since orders cannot be completed within a due date, but can be completed by a due date. **Report Structure** The Report Structure documentation should be updated to reflect the geographic scope. KPMG Consulting notes that no geographic scope designation (region or state) is present in the Permanent Metrics SQM. This designation is important to determine at what level the SQM report results are presented. KPMG Consulting notes that BellSouth's current SQM report is reported on a state-specific basis.
CM-1: Timeliness of Change Management Notices	**Report Structure** The Report Structure documentation should be updated to reflect the geographic scope. KPMG Consulting notes that no geographic scope designation (region or state) is present in the Permanent Metrics SQM. This designation is important to determine at what level the SQM report results are presented. KPMG Consulting notes that BellSouth's current SQM report is reported on a regional basis.
CM-2: Change Management Notice Average Delay Days	**Business Rules** The Business Rules documentation should be updated to reflect the red-line SQM changes associated with the Florida Third Party OSS Test. As part of FL Observation 69, BellSouth submitted a red-line SQM to clarify the documented Business Rules regarding the intent of the SQM. These changes are not present in the Permanent Metrics. **Report Structure** The Report Structure documentation should be updated to reflect the geographic scope. KPMG Consulting notes that no geographic scope designation (region or state) is present in the Permanent Metrics SQM. This designation is important to determine at what level the SQM report results are presented. KPMG Consulting notes that BellSouth's current SQM report is reported on a regional basis.

Metric Name	Documentation Improvements (Red-line changes)
CM-3: Timeliness of Documents Associated with Change	**Report Structure** The Report Structure documentation should be updated to reflect the geographic scope. KPMG Consulting notes that no geographic scope designation (region or state) is present in the Permanent Metrics SQM. This designation is important to determine at what level the SQM report results are presented. KPMG Consulting notes that BellSouth's current SQM report is reported on a regional basis.
CM-4: Change Management Documentation Average Delay Days	**Business Rules** The Business Rules documentation should be updated to reflect the red-line SQM changes associated with the Florida Third Party OSS Test. As part of FL Observation 69, BellSouth submitted a red-line SQM to clarify the documented Business Rules regarding the intent of the SQM. These changes are not present in the Permanent Metrics.
CM-4: Change Management Documentation Average Delay Days (Continued)	**Report Structure** The Report Structure documentation should be updated to reflect the geographic scope. KPMG Consulting notes that no geographic scope designation (region or state) is present in the Permanent Metrics SQM. This designation is important to determine at what level the SQM report results are presented. KPMG Consulting notes that BellSouth's current SQM report is reported on a regional basis.
CM-5: Notification of CLEC Interface Outages	**Business Rules** The Business Rules documentation should be updated to reflect the red-line SQM changes associated with the Florida Third Party OSS Test. As part of FL Exception 81, BellSouth submitted a red-line SQM to clarify the documented Business Rules regarding the intent of the SQM. These changes are not present in the Permanent Metrics. **Report Structure** The Report Structure documentation should be updated to reflect the geographic scope. KPMG Consulting notes that no geographic scope designation (region or state) is present in the Permanent Metrics SQM. This designation is important to determine at what level the SQM report results are presented. KPMG Consulting notes that BellSouth's current SQM report is reported on a regional basis.
