

Tennessee III, November 2002 - October 2003
Unbundled Network Elements - Provisioning
Mean Held Order Interval & Distribution Intervals

(Average Time an Order Is Held Past the Due Date for Company Reasons)

Numerator indicates total time orders held past the due date for BellSouth reasons for this disaggregation in the reporting period.

Volume indicates total number of service orders for this disaggregation in the reporting period held for BellSouth reasons.

B.2.8.13.1.2.2 2W Analog Loop w/LNP Non-Design/<10 circuits/Non-Dispatch/Equipment/TN (days)

Note 1: Retail Residence / Business (POTS) excluding Switch Based Orders data serves as the BST Analog for this report

B.2.8.13.1.2.3 2W Analog Loop w/LNP Non-Design/<10 circuits/Non-Dispatch/Other/TN (days)

Note 1: Retail Residence / Business (POTS) excluding Switch Based Orders data serves as the BST Analog for this report

B.2.8.13.2.1.1 2W Analog Loop w/LNP Non-Design/>=10 circuits/Dispatch/Facility/TN (days)

Tennessee III, November 2002 - October 2003
Local Interconnection Trunks - Provisioning
% Missed Installation Appointments
(% of Installation Order Appointments Missed)

Numerator indicates total number of installation appointments missed for this disaggregation in the reporting period.
Volume Indicates total trunk orders for this disaggregation completed in the reporting period.

C.2.7 Local Interconnection Trunks/TN (%)

Tennessee III, November 2002 - October 2003
Local Interconnection Trunks - Provisioning
% Provisioning Troubles within 30 Days

(% of Trouble Reports Received within 30 Days of Service Order Completion)

Numerator indicates total number of initial trouble reports received within 30 days of service order completion for this disaggregation in the previous reporting period.
Volume indicates total number of trunk service orders for this disaggregation in the previous reporting period.

C.2.9 Local Interconnection Trunks/TN (%)

Tennessee III, November 2002 - October 2003
Local Interconnection Trunks - Maintenance and Repair
Missed Repair Appointments

(% of Appointments Not Met)

Numerator indicates total number of appointments not met in the reporting period.

Volume indicates total trouble reports for this disaggregation closed in the reporting period.

C.3.1.1 Local Interconnection Trunks/Dispatch/TN (%)

C.3.1.2 Local Interconnection Trunks/Non-Dispatch/TN (%)

Tennessee III, November 2002 - October 2003
Local Interconnection Trunks - Maintenance and Repair
Customer Trouble Report Rate
(% of Total Troubles Reported)

Numerator Indicates total number of troubles reported for this disaggregation.
Volume Indicates total number of service access lines in service for this disaggregation at the end of the reporting period.

C.3.2.1 Local Interconnection Trunks/Dispatch/TN (%)

C.3.2.2 Local Interconnection Trunks/Non-Dispatch/TN (%)

Tennessee III, November 2002 - October 2003
Local Interconnection Trunks - Maintenance and Repair
Maintenance Average Duration
(Duration from the Start to Finish of a Trouble)

Numerator indicates total of trouble durations for this disaggregation in the reporting period.
Volume indicates total closed troubles for this disaggregation in the reporting period.

Tennessee III, November 2002 - October 2003
Local Interconnection Trunks - Maintenance and Repair
% Repeat Troubles within 30 Days
(% of Troubles that Repeated within 30 Days)

Numerator indicates total number of troubles that repeated within 30 days in the reporting period.
Volume indicates total trouble reports for this disaggregation closed in the reporting period.

C.3.4.1 Local Interconnection Trunks/Dispatch/TN (%)

C.3.4.2 Local Interconnection Trunks/Non-Dispatch/TN (%)

Tennessee III, November 2002 - October 2003
Local Interconnection Trunks - Provisioning
Average Completion Notice Interval

(Interval between Order Completion and Completion Notice Release to CLEC/BST)

Numerator indicates total of completion notice intervals for this disaggregation in the reporting period.

Volume indicates total number of orders for this disaggregation receiving completion notice in the reporting period.

C.2.10 Local Interconnection Trunks/TN (hours)

Tennessee III, November 2002 - October 2003
Unbundled Network Elements - Provisioning
% Cooperative Test Attempts for xDSL
(% of Test Attempts that are Cooperative)
Numerator indicates total number of cooperative test attempts.
Volume indicates total number of line tests.

B.2.37.1 xDSL (ADSL, HDSL and UCL)TN (%)

B.2.37.2 xDSL Other/TN (%)

Tennessee III, October 2002 - September 2003
Unbundled Network Elements - Provisioning
Service Order Accuracy

(% of Service Orders that are Accurate)

Numerator indicates total number of service orders that are accurate.
Volume indicates total number of service orders.

GEORGIA PERFORMANCE MEASUREMENT DATA DEMONSTRATE THAT

BELLSOUTH PROVIDES NONDISCRIMINATORY PERFORMANCE FOR

HOT CUTS AND UNE LOCAL LOOPS

A. INTRODUCTION

1. Hot Cut and other UNE Local Loop data for October 2002 through September 2003 are included with this Exhibit as Attachment 1. However, because of the major changes with the implementation of the more stringent Georgia II SQM beginning with March 2003 data, only March through September 2003 has been included with this analysis. These performance data indicate whether each sub-metric demonstrates parity performance by comparing the CLEC data to the applicable retail analogue or benchmark as stated in the SQM.
2. BellSouth will first discuss the overall Hot Cut performance in detail and then follow up with other performance data for UNE Local Loops in Georgia. All data will include BellSouth's performance for the months of March through September 2003.
3. A high level summary of the measurement results indicates the high level of service that BellSouth provides as follows. BellSouth met the Coordinated Customer Conversion 15-minute benchmark for over 99.7% of all cutovers in the past 7 months in Georgia. This measurement calculates the average time it takes to disconnect an unbundled loop from the BellSouth switch and cross connect it to the CLEC equipment. For UNE Local Loops, BellSouth processed 95% of all LSRs by the

required benchmark interval during the period. BellSouth met the performance standard for 91% of the provisioning sub-metrics and 93% of the maintenance & repair sub-metrics during the 7-month period. BellSouth also met the performance standard for 100% of all collocation sub-metrics during this period.

4. BellSouth has maintained high performance levels over the past twelve months in Georgia for all of its customers, both retail and wholesale. The GPSC established high performance thresholds for BellSouth to meet. The hot cut, ordering, provisioning and maintenance & repair benchmarks and retail analogues are some of the most stringent of any of the nine states within BellSouth.

B. SUMMARY OF MEASUREMENTS

5. The SQM Hot Cut measures discussed in this Exhibit include the following:
 - (P-7) Coordinated Customer Conversions
 - (P-7A) Hot Cut Timeliness
 - (P-7C) % Provisioning Troubles within 7 days of Hot Cut
6. BellSouth has included the following SQM measures associated with Ordering, Provisioning in addition to the hot cut measurements referenced above and Maintenance & Repair functions for UNE local loops in Georgia in this analysis:
 - Ordering

TN Exhibit AJV-4

AJV PM Affidavit

Exhibit AJV-1

Georgia

- i. (O-8) Reject Interval - Fully Mechanized, Partial Mechanized and Non Mechanized
- ii. (O-9) FOC Timeliness - Fully Mechanized, Partial Mechanized and Non Mechanized
- iii. (O-11) FOC and Reject Response Completeness - Fully Mechanized, Partial Mechanized and Non Mechanized
- iv. (O-3) Flow Through – UNE products
- v. (O-10) Service Inquiry with Firm Order
- Provisioning (in addition to the hot cut measurements)
 - i. (P-1) Mean Held Order Interval
 - ii. (P-2) Average Jeopardy Notice Interval (Mechanized)
 - iii. (P-2) % Jeopardy Notice $\geq$ 48 Hours (Mechanized)
 - iv. (P-4) Order Completion Interval
 - v. (P-3) Missed Installation Appointments
 - vi. (P-9) Provisioning Troubles within 30 Days
 - vii. (P-5) Average Completion Notice Interval (Mechanized)
 - viii. (P-8) Cooperative Test Attempts for DSL
 - ix. (P-11) Service Order Accuracy (Design & Non Design)
- Maintenance & Repair
 - i. (M&R-1) Missed Repair Appointments
 - ii. (M&R-2) Customer Trouble Report Rate
 - iii. (M&R-3) Maintenance Average Duration
 - iv. (M&R-4) Repeat Troubles within 30 Days

7. The Collocation Measures included with this filing are:

- (C-1) Average Response Time
- (C-2) Average Arrangement Time
- (C-3) Due Dates Missed

8. BellSouth has included the latest performance data with this filing for October 2002 through September 2003. When errors in the data occur, BellSouth must report these data errors in accordance with the Commission's approved reposting policy. During this 12-month period, the only reposted data that impact the results included in this filing are for March and April of 2003 for UNE Other and UNE-P Flow Through. The data, as reposted for these two months, are reflected in the results provided herein.

9. Each month BellSouth files a Notice of Proposed Changes to performance measurements and holds a conference call to discuss them with the CLECs. Any changes in the method of calculating data are listed in the Notice. BellSouth has notified the GPSC and the CLECs of upcoming changes to its measures for October through January data months that could affect data in the months used in this analysis. The notification items potentially affecting the data included with this exhibit are as follows:

October 2003

Ordering Measurements

- (1) *Affected Measures in Exhibit: O-8, O-9 & O-11*

TN Exhibit AJV-4

AJV PM Affidavit

Exhibit AJV-1

Georgia

Description of Change: For LENS (WEB), and TAG LSRs, PMAP is currently using the timestamp from LEO or LNP, where a timestamp is not available in the interface. BellSouth proposes to use a new time stamp in SGG, where SGG is available, which is closer to the CLEC interface. This proposed change was Item (1) on the Preliminary October 2003 Data Notification filed on August 1, 2003. (RQ2028 & RQ3978)

Impact of Change: Intervals will be slightly longer but BellSouth does not expect an impact on overall results.

Provisioning Measurements

(5) *Affected Measure in Exhibit: P- 3*

Description of Change: Currently, certain denial and restoral orders are being classified inappropriately as missed appointments. Denial/Restoral Orders are bulk completed in the switch. However, the recorded completion date is the date that SOCS completes the bulk orders reflecting the denial and restoral of service. If the bulk completion occurs after the appointment day, these orders are being incorrectly counted as a BellSouth missed appointment even though there is no missed appointment code on the order. If the appointment was missed, the order would reflect a missed appointment code input by the RCMAG organization. BellSouth proposes counting only records with a valid missed appointment code in the numerator of this measure. This proposed change was Item (4) on the Preliminary September 2003 Data Notification filed on July 1, 2003. (RQ3074)

Impact of Change: For May 2003 for both Retail and Wholesale, 198 of 3,337,331 records (0.0005%) were marked as missed appointments without a valid missed appointment code.

(6) *Affected Measures in Exhibit: P-1, P-2, P-3, P-4, P-5, P-6, & P-9*

Description of Change: Station Worked On (SWO) codes are the section of the completed service order that describes the number of lines worked on, which is used to determine in which circuit category to report the order (<10, >=10). Currently, PMAP is using the wrong table to determine the SWO code. BellSouth proposes using the correct table. This proposed change was Item (7) on the Preliminary July 2003 Data Notification filed on May 1, 2003. (RQ3215)

Impact of Change: For January 2003 in Georgia, only 1 of 709,109 wholesale and retail orders was incorrectly identified, resulting in a .00014% difference in reported records.

(8) *Affected Measure in Exhibit: P-5*

Description of Change: Currently, the ending timestamp for Average Completion Notice Interval is the first timestamp indicating that a completion notice was sent. In some cases, this initial notice is misleading because the order may be updated before it goes to final completion status and a final notice is sent. The code will be modified to only report the notify timestamp when the order goes to final completion status. This proposed change was Item (5) on the Preliminary September 2003 Data Notification filed on July 1, 2003, but has been expanded to include Georgia. (RQ3914 & RQ4120)

Impact of Change: In May 2003, for 294,837 records in Alabama, the average duration was 1.117 hours. With this change, the average duration would be 1.120 hours. In June 2003, of 19,985 records sampled in Georgia, the ACNI duration increased from .71 hours to .80 hours.

November 2003

Ordering Measurements

(2) *Affected Measures in Exhibit: O-8, O-9 & O-11*

Description of Change: With Encore Release 14.0, BellSouth will implement the ability to electronically process groups of related PONs (RPONs) submitted by the CLECs. To accommodate this new capability, BellSouth proposes to use the timestamp associated with the last PON received of any RPON group. This proposed change was item two (2) on preliminary November 2003 Data Notification filed on September 2, 2003. (RQ4381)

Impact of Change: Information required to determine impact is not available.

December 2003

Provisioning Measurements

(5) *Affected Measure in Exhibit: P-7*

Description of Change: Currently, hot cuts with durations equal to fifteen minutes are being counted as misses. BellSouth proposes counting these hot cuts as met, consistent with the SQM. This proposed change was Item (2) on the Preliminary December 2003 Data Notification tiled on October 1, 2003. (RQ4326)

Impact of change: Regional results for June 2003 would increase by 0.28%.

M&R Measurements

(7) *Affected Measures in Exhibit:* MR- 1, MR-2, MR-3 & MR-4

Description of Change: Currently, BellSouth is unable to identify the wire center on some retail services provided over Fiber in the Loop (F/TL). BellSouth proposes using the wire frame code for these services to identify the wire center. This proposed change was Item (4) on the Preliminary December 2003 Data Notification filed on October 1, 2003. (RQ4366)

Impact of Change: Based on August 2003 data the ADSL provided to Retail trouble report rate would increase .36%.

January 2004

Ordering Measurements

(1) *Affected Measures in Exhibit:* O-8, O-9 & O-11

Description of Change: In addition to the current fields, BellSouth proposes to use the LSR Local Serving Office to more accurately identify the state to which the order should be assigned. This change will permit some records currently going to an error file due to an unidentified state code to be included in the data. This proposed change was Item (1) on the Preliminary January Data Notification filed on November 3, 2003. (RQ4586)

Impact of Change: For August 2003, 1456 CLEC orders in the region, with an unidentified state code, could be correctly identified using the new criteria.

(2) *Affected Measure in Exhibit:* O-11

Description of Change: For manual LSRs, the denominator of measure O-11 erroneously includes FOCs/Rejects for LSRs received in the prior month in addition to LSRs received in the data month. BellSouth proposes to correct both of these problems. This proposed change was Item (2) on the Preliminary January Data Notification filed on November 3, 2003. (RQ4601)

Impact of Change: For August 2003, for Measure O-11, 586 of 30,340 (1.93%) manually submitted LSRs should not have been counted in the denominator. This change will increase the performance of O-11 (non-mechanized) from 94.88% to 96.75%.

(3) *Affected Measures in Exhibit: O-8, O-9 & O-11*

Description of Change: Currently, the PMAP code is not utilizing certain criteria that correctly identify an LNP LSR as Partially Mechanized. In these cases, the LSR is assigned as Fully Mechanized. BellSouth proposes to change the code to utilize these additional criteria. This proposed change was Item (3) on the Preliminary January Data Notification filed on November 3, 2003. (RQ4623)

Impact of Change: For July 2003, 29 of 6,609 LNP orders were misclassified as Fully Mechanized.

Provisioning Measurements

(6) *Affected Measures in Exhibit: P-7C*

Description of Change: Currently, BellSouth does not include non-coordinated conversions for the Provisioning Trouble in 7 Days Measure. BellSouth proposes to include these orders as required by the SQM. This proposed change was Item (5) on the Preliminary January Data Notification filed on November 3, 2003. (RQ4128)

Impact of Change: For May 2003, there were 17 non-coordinated conversions that were not reported, none of which had troubles.

(7) *Affected Measure in Exhibit: P-1 (Georgia and Tennessee only)*

Description of Change: BellSouth currently does not include held orders, which were actually completed (and service was delivered) in the current month, but the completion was not posted in SOCS until the following month. This circumstance would occur when orders are completed near the end of the month and posting of the completion in SOCS is delayed into the following month. BellSouth proposes modifying the processing to include these held orders in the measure. This proposed change was Item (6) on the Preliminary January Data Notification filed on November 3, 2003. (RQ4207).

Impact of Change: For June 2003, 3 additional records would be included in the wholesale results. Minimal change to reported result.

(8) *Affected Measure in Exhibit: P-8*

TN Exhibit AJV-4

AJV PM Affidavit

Exhibit AJV-1

Georgia

Description of Change: For this measure, all orders completed in the data month should be reflected in the data. Currently, the original due date is used to determine the data month for SQM data and the date the data was extracted by PMAP is used to determine the data month for MSS data. BellSouth proposes to use the completion date to determine the month in which data is reported on all reports. This proposed change was Item (7) on the Preliminary January Data Notification filed on November 3, 2003. (RQ4308)

Impact of Change: For June 2003, there were 495 total orders, one of which should have been included in the July data. Moving the orders to July data would result in a .2% change in the volume.

(9) *Affected Measures in Exhibit:* All Provisioning Measures

Description of Change: BellSouth has discovered that Special Access services are erroneously being included in certain of the BellSouth Retail Analog data. BellSouth proposes to remove these records, as they are not retail services. This proposed change was Item (8) on the Preliminary January Data Notification filed on November 3, 2003. (RQ4522)

Impact of Change: Less than 1% volume impact in July 2003 data.

(11) *Affected Measures in Exhibit:* All Provisioning Measures

Description of Change: Service orders occasionally appear in the data with an issue date that is later than the due date, resulting in a negative interval. When this occurs, BellSouth proposes to use the earliest timestamp that appears in the SOCS history file as the issue date. If this date is later than the due date, which generally occurs when a new or change order was issued solely to correct records, BellSouth proposes to exclude the record. This proposed change was Item (10) on the Preliminary January Data Notification filed on November 3, 2003. (RQ4540)

Impact of Change: For August 2003, 3725 of 4,482,341 (.08%) wholesale and retail orders had negative durations.

M&R Measurements

(13) *Affected Measures in Exhibit:* All

Description of Change: BellSouth has discovered that Special Access services are erroneously being included in certain of the BellSouth Retail Analog data. BellSouth proposes to remove these records, as they are not retail services. This

proposed change was Item (12) on the Preliminary January Data Notification filed on November 3, 2003. (RQ4550)

Impact of Change: Less than 1% volume impact in July 2003 data.

10. None of the above notice items impacted the data to the extent that reposting would be required.
11. The following paragraphs that discuss BellSouth's Hot Cut and UNE Local Loop performance in Georgia provide empirical evidence that demonstrate that BellSouth provides nondiscriminatory access to UNE Loops. Except where noted, all measures and sub-metrics indicate state level results for the CLEC aggregate and BellSouth retail analogues.

C. BELL SOUTH'S HOT CUT PERFORMANCE IN GEORGIA

12. Attachment 1 to this Exhibit provides detailed data for BellSouth's performance measurements for Hot Cuts that provide comparative performance data to facilitate the evaluation of compliance with the section 271 requirements. Attachment 1 consists of the charts for the measurements referenced in the remainder of this exhibit. Each chart has a number, such as B.2.12 and this number is included with the heading on the following paragraphs.

Coordinated Conversions – Hot Cuts

13. BellSouth's SQM measures included with this Exhibit provide the Georgia

Commission sufficient evidence to evaluate the extent to which BellSouth complies with the Commission's requirements regarding the timeliness of coordinated cutovers. A cursory review of the data shows that BellSouth met 52 of the 54 sub-metrics with CLEC activity from March through September 2003. This strong performance indicated by a cursory view is further supported by the more detailed analyses that follow and indicates BellSouth's commitment to performing hot cuts timely and accurately for CLECs in Georgia. These results, both individually and collectively, demonstrate that BellSouth's performance does not pose a barrier for market entry for the CLECs.

Coordinated Customer Conversions (B.2. 12)

14. This report measures the average elapsed time it takes to disconnect an unbundled loop from the BellSouth switch and cross connect it to the CLEC equipment. For the coordinated conversions (i.e., hot cuts), BellSouth in Georgia met the 15-minute benchmark for 4,006 of the 4,018 scheduled conversions (lines) or 99.7% for the 7-month period. The average interval for each cutover was 2:44 minutes (minutes: seconds) during this period.

% Hot Cuts > 15 minutes Early (B.2.13)

15. This measure reflects the extent to which BellSouth begins a hot cut more than 15 minutes before the agreed upon start time. During the period of March through September 2003, BellSouth in Georgia performed 1,840 hot cuts (orders). This measure includes the actual number of orders instead of the individual lines as shown in the Coordinated Customer Conversions measure B.2.12 above. The order has a specific start time to begin the cutover of the series of lines on that order. For the entire 7-month period, there were only 13 orders with an actual beginning time in excess of the 15 minutes allowed. The resulting performance met or exceeded the 5% benchmark 22 of the 23 sub-metrics with CLEC activity.

Hot Cut Timeliness (B.2.14)

16. This category measures the percentage of orders where the cut begins within 15 minutes of the requested start time of the order. There were a total of 1,840 hot cuts hot cuts (orders) during March through September 2003, and 99.24% of these were within the 15-minute cutover criteria. There was a total of 1 missed sub-metric out of the 23 with CLEC activity during the period. For the non-time specific SL2 cutovers, BellSouth met 16 of 17 cutovers in August. With such small volumes and a 95% benchmark, BellSouth would have to perform perfectly to meet this benchmark.

% Hot Cuts > 15 minutes Late (B.2.15)

17. This measure reflects the extent to which BellSouth begins a hot cut more than 15 minutes after the agreed upon start time. During the period of March through

September 2003, BellSouth in Georgia performed 1,840 hot cuts (orders). There was only 1 late order cutover over the period, which met or exceeded the 5% benchmark in each of the 7 months.

% Provisioning Troubles within 7 days of the Hot Cut (B.2.17)

18. The percent of completed service orders that had a trouble reported within 7 days of completion associated with a Hot Cut Conversion measures the quality and accuracy of Coordinated Customer Conversion activities. BellSouth in Georgia met the Commission established benchmark for 24 of the 25 sub-metrics that had CLEC activity in March through September 2003. In September 2003, BellSouth received a total of 3 trouble reports for the 36 total completed hot cut service order circuits (8.33%) for the UNE Loop Design non-dispatch category. While this did not meet the 5% benchmark, no systemic issues were identified for any of the 3 reports received for September.

D. BELLSOUTH'S PERFORMANCE IN GEORGIA FOR UNE LOCAL LOOPS

19. Attachment 1 to this Exhibit provides detailed comparative performance data for UNE Local Loops to facilitate evaluation of the extent to which nondiscriminatory performance is provided. BellSouth's SQM measures show that BellSouth provides high quality performance for CLECs in Georgia.

20. BellSouth has included the following disaggregations within the UNE Local Loop

data with this filing:

- xDSL – this includes ADSL, HDSL and UCL except UCL-ND
- UCL-ND
- UNE ISDN Loops – this includes BRI, PRI and UDC
- UNE 2W Analog Loops Design with and without LNP
- UNE 2W Analog Loops Non Design with and without LNP
- EELs

These categories were chosen because they appear to cover all of the likely products that a CLEC would order to convert from UNE-P to UNE Loops (UNE-L) when unbundling switching is no longer required.

UNE Ordering Measures

21. Items B.1.1 – B.1.16 show data for Reject Interval, FOC Timeliness, and FOC & Reject Response Completeness. These reports are disaggregated by interface type (electronic, partially electronic and manual), as well as product type. BellSouth will discuss the ordering measures at the aggregate level. For many of these sub-metrics, the individual sub-metrics contain such small volumes that it is not possible to perform a meaningful root cause analysis from which any conclusions can be drawn.

Reject Interval

22. Items B.1.4 - B.1.8 examine the Reject Interval for BellSouth in Georgia. BellSouth demonstrated strong performance in this category with 3,617 of the 4,028 LSRs (90%) returned to the CLEC within the specified benchmarks during the months of March through September 2003. BellSouth has provided excellent performance in the three interface categories (electronic, partially electronic and manual) as well.

Reject Interval / Electronic (B.1.4.)

23. For orders submitted electronically, the benchmark is a very stringent - 97% returned within one hour. Fully mechanized is defined as an order that is submitted electronically and does not require any manual handling by a service representative. BellSouth met the one-hour benchmark for 1,872 of the 1,967 LSRs (95%) returned to the CLECs in the 7-month period.

24. For those LSRs for which BellSouth did not meet the benchmark, BellSouth has conducted a detailed root cause analysis of the process for electronic rejects. The root cause analysis has identified three issues that account for a significant portion of the LSRs that are rejected back to the CLEC and missed the 1-hour benchmark. These three issues and their corresponding status are as follows:

<u>ISSUE</u>	<u>STATUS</u>
1. Errors are being detected with Listing LSRs. When a CLEC sends in an LSR for a Listing on a new account and completes	1. Feature implemented with Release 12.0 on 3/30/03.

TN Exhibit AJV-4

AJV PM Affidavit
Exhibit AJV-1
Georgia

the LSR properly, a FOC will be returned. However, if that account is found to be already active, then the order cannot be provisioned. The LSR is manually rejected and returned to the CLEC. If the LSR was submitted as a record only change to the directory listing, this would not be an issue. A Feature was implemented that will autoclarify the error prior to issuance of an FOC for this condition.	
2. Errors are being detected for LSRs that are Planned for Manual Fallout, but are being counted as Fully Mechanized. Such LSRs are designed to be worked by a service representative. If a CLEC calls regarding an LSR and the service representative retrieves the record outside of their normal process for retrieving orders, the LSR is not properly counted as Partially Mechanized because the proper service representative information is not populated and PMAP counts the LSR as Fully Mechanized. The LSR does not reflect that it was handled by the service representative and therefore is counted as fully mechanized.	2. Feature implemented with Release 13.0 on 6/22/03
3. Errors are being detected for LSRs with errors that require manual intervention, but are being counted as Fully Mechanized. LSRs are submitted, but then encounter an error that cannot be handled by the system. The LSR is manually rejected and returned to the CLEC.	3. Feature implemented with Release 13.0 on 6/22/03

25. With the implementation of Release 13.0 with May data, BellSouth has met the 1-hour benchmark for 1,374 of the 1,428 (96%) of the rejected LSRs for May through September 2003. Importantly, none of these changes were to correct a problem with the systems. Two of the changes simply corrected conditions that caused BellSouth to

understate its performance and the third required a change in both CLEC and retail order processing. BellSouth continues to review the small number of rejected LSRs that did not meet the 1-hour benchmark for potential system issues.

Reject Interval / Partially Electronic (B.1.6.)

26. For orders that are submitted electronically but require additional handling by a BellSouth service representative, the benchmark was 90% within 7 hours. This is a much more stringent benchmark than the 85% within 10 hours that was used to evaluate BellSouth's 271 application in Georgia. BellSouth returned 1,093 of 1,393 LSRs (78%) within the 7-hour benchmark for March through September 2003. BellSouth returned 1,266 of 1,393 LSRs (91%) within the 10-hour benchmark for March through September 2003.

27. To address the remaining LSRs that were not returned within the 7-hour benchmark, BellSouth conducted a detailed raw data analysis that has revealed three areas associated with the mechanized portion of the partially mechanized LSRs:

–BellSouth experienced delays in processing LSRs submitted via the EDI system.

During September and October 2003, this problem was corrected. The EDI CPUs and hard drives were replaced as well as additional CPU capacity installed. Also, additional pathways between the EDI translator and down stream Legacy systems were added. Finally, the electronic processing of certain administrative and

archival activities was removed from the EDI translator to reduce overall processing time of the LSRs.

– Some LSRs experience delays in resolving incorrect connecting facility assignments (CFA) by the CLECs. BellSouth has determined that when an incorrect CFA is provided, it is being assigned an error status for further correction. Additional analysis is being performed to determine if the resolution is being delayed by a system problem or if the service representatives are not handling the corrections in a timely manner.

– LSRs are dropping out for manual handling because of an error discovered after a FOC was returned to the CLEC. There are instances where an error is discovered as the Service Order begins to process through the provisioning systems. Due to the way the ordering and provisioning systems interact, it is not feasible for the order processing systems to query the provisioning system to detect these errors, prior to sending the FOC. Thus, when the error is detected as the Service Order begins to process, the reject is returned to the CLEC, but the time interval is measured from when the LSR was first received, resulting in an unusually long reject interval. It may be appropriate to exclude these types of rejects from the reject interval measurement and this exclusion can be addressed in the next periodic review of measurements. There are only small quantities of cases where the types of conditions that cause BellSouth to miss the standard occur, averaging about 65 per month. These volumes make it extremely difficult

to duplicate the event that caused the problem, so that the problem can be corrected. Importantly, the small volume of misses indicates that performance is not having a significant adverse impact on CLECs.

Reject Interval / Manual (B.1.8.)

29. For orders that are submitted on a non-mechanized basis, the benchmark is 95% within 24 hours. BellSouth met or exceeded the 24-hour benchmark for 652 of 668 LSRs (98%) rejected for March through September 2003, well above the 95% requirement.

FOC Timeliness

30. Items B.1.9 - B.1.13 examine the FOC Timeliness for BellSouth in Georgia. The overall results for these measurements in Georgia demonstrate BellSouth's strong performance in providing CLECs timely, nondiscriminatory access to BellSouth's pre-ordering and ordering systems. During the 7-month period of March through September 2003, BellSouth met the specified time interval for 16,148 of the 17,768 FOCs (91%) returned.

FOC Timeliness / Electronic (B.1.9.)

31. For orders submitted electronically, the benchmark is 95% of the FOCs returned within 3 hours. During the March through September 2003 time period, 33,947 of the 35,104 FOCs returned (97%) met the 3-hour benchmark.

FOC Timeliness / Partially Electronic (B.1.12.)

32. For partially mechanized orders, the benchmark is 90% returned within 7 hours. This is a much more stringent benchmark than the 85% within 10 hours that was used to evaluate the 271 application. BellSouth returned FOCs for 4,524 of the 5,883 partially electronic LSRs (77%) submitted by the CLECs within the 7-hour criteria for the months of March through September 2003. . BellSouth returned FOCs for 5,318 of the 5,883 partially electronic LSRs (90%) submitted by the CLECs within the 10-hour criteria for the months of March through September 2003.

33. To address the remaining LSRs that were not returned within the 7-hour benchmark, BellSouth conducted a detailed raw data analysis that has revealed three areas associated with the mechanized portion of the partially mechanized LSRs:

–A number of FOCs were entered into the system within the benchmark but were not counted correctly due to repeated attempts to respond to the CLEC. BellSouth met its requirement of initially returning the FOC within the 7-hour benchmark. However, because of a system error the performance was stated incorrectly. The

TN Exhibit AJV-4

AJV PM Affidavit

Exhibit AJV-1

Georgia

issue does not affect BellSouth's performance for returning the FOC to the CLEC;

it is just understating BellSouth's performance.

-BellSouth experienced delays in processing LSRs submitted via the EDI system.

See detailed explanation included with Reject Interval B.1.12 for this issue.

-Some CLECs are requesting that certain auto clarified (rejected)LSRs be corrected and processed without the CLEC resubmitting a new version of the existing LSR. In specific cases, some LSRs are being corrected and put into the ordering systems without receiving a new LSR from the CLEC. This causes the FOC to exceed the 7-hour benchmark. This is due to the fact that the beginning timestamp is not changed from the time the LSR was initially submitted by the CLEC, and as a result the entire time is included in the interval. This interval will almost always exceed the 7-hour FOC benchmark. In an effort to provide good customer service, BellSouth is meeting the request of the CLECs but this causes the FOC benchmark to be exceeded.

FOC Timeliness / Manual (B.1.13.)

34. For non-mechanized orders, the benchmark is 95% returned within 24 hours. This is a much more stringent benchmark than the 85% within 36 hours that was used to evaluate the 271 application. BellSouth in Georgia returned FOCs for 2,106 of the

2,177 manual LSRs (97%) submitted by the CLECs within the 24-hour criteria for the months of March through September 2003.

FOC and Reject Response Completeness

35. Items B.1.14 - B.1.16 examine the FOC and Reject Response Completeness for BellSouth in Georgia. The overall results for these measurements in Georgia demonstrate BellSouth's strong performance in providing CLECs timely, nondiscriminatory access to BellSouth's pre-ordering and ordering systems. During the 12-month period of March through September 2003, BellSouth met the benchmark for 17,923 of the 18,554 FOCs and/or Rejects (97%) returned.

FOC and Reject Response Completeness / Electronic (B.1.14.)

36. For orders submitted electronically, the benchmark is 97% of the FOC and Reject Responses returned to the CLECs. During the March through September 2003 time period, 11,263 of the 11,763 LSRs (96%) had responses returned to the CLECs.

FOC and Reject Response Completeness / Partially Electronic (B.1.15.)

37. For partially mechanized orders, the benchmark is 97% of the FOC and Reject Responses returned to the CLECs. BellSouth returned responses to the CLECs for 5,192 of the 5,273 partially electronic LSRs (98%) submitted by the CLECs for the months of March through September 2003.

FOC and Reject Response Completeness / Manual (B.1.16.)

38. For non-mechanized orders, the benchmark is 97% of the FOC and Reject Responses returned to the CLECs. BellSouth in Georgia returned responses for 1,468 of the 1,518 manual LSRs (97%) submitted by the CLECs for the months of March through September 2003.

Flow-Through / UNE Other (F.1.1.7)

39. Beginning in March 2003, BellSouth in Georgia added UNE-P and UNE Other disaggregations to Flow-Through. The following data provides the percent flow through for UNE Other (mostly UNE Loop performance) for March through September 2003. (UNE Other is defined as the total UNE LSRs minus the UNE-P LSRs.)

% OF UNE OTHER LSRs MEETING FLOW THROUGH BENCHMARK (85%) REGION			
<u>Month</u>	<u># LSRs Submitted</u>	<u># LSRs Meeting Benchmark</u>	<u>Percentage</u>
Mar '03	10,911	9,348	85.68%
Apr '03	11,089	9,634	86.88%
May '03	11,081	9,413	84.95%
Jun '03	12,703	11,150	87.77%
Jul '03	13,367	11,600	86.78%
Aug '03	13,103	11,294	86.19%
'Sep '03	12,391	10,365	83.65%
TOTAL	84,645	72804	86.01%

Flow-Through / LNP (F.1.3.1)

40. The following data provides the percent flow through for LNP for March through September 2003.

% OF LNP LSRs MEETING FLOW THROUGH BENCHMARK (85%) REGION			
<u>Month</u>	<u># LSRs Submitted</u>	<u># LSRs Meeting Benchmark</u>	<u>Percentage</u>
Mar '03	5,306	4,085	76.99%
Apr '03	4,649	3,711	79.82%
May '03	4,493	3,444	76.65%
Jun '03	4,973	4,130	83.05%
Jul '03	6,646	5,743	86.41%
Aug '03	7,188	6,084	84.64%
Sep '03	6,902	5,445	78.89%
TOTAL	40,157	32,642	81.29%

41. BellSouth filed a flow-through improvement plan progress report with the Florida Commission on September 11 and December 12, 2003. The following excerpts highlight the efforts being made to improve flow-through.

Flow-through Improvement Efforts

BellSouth's additional Flow-Through Improvement (FTI) project that began in August 2002 continues to focus solely on reducing or eliminating items classified as "BST errors" in the current flow-through process. Seventy-three features and defect corrections to improve flow-through have been implemented through Release 13.0 on June 22, 2003.

BellSouth's FTI project (summarized below) has consistently improved flow-through rates for Residential Resale, Business Resale, UNE, and LNP segments from August 2002 through July 2003. BellSouth's commercial data for July 2003 demonstrates the efforts placed upon meeting the benchmarks established by this

TN Exhibit AJV-4

AJV PM Affidavit
Exhibit AJV-1
Georgia

Commission – and BellSouth's success in so doing. According to the Georgia Service Quality Measurement Plan, Version 2.0 dated January 23, 2002, the benchmarks for the segments of Percent Flow-Through Service Requests are provided below along with July 2003 results:

<u>SQM FLOW-THROUGH</u> <u>SEGMENTS</u>	<u>BENCHMARKS</u>	<u>JULY 2003</u> <u>RESULTS</u>
Residence Resale	95%	97.25%
Business Resale	90%	88.82%
Unbundled Network Elements (UNE)	85%	95.38%
Local Number Portability (LNP)	85%	86.41%

The guidelines for the FTI project are as follows:

1. This project is focusing solely on reducing or eliminating items classified as "BST errors" in the current flow-through reporting process. BST errors require manual review by the Local Carrier Service Center ("LCSC"), and are due to BellSouth's functionality. In other words, the CLEC orders are accepted by the BellSouth OSS and then the orders fall out for BST manual intervention. This 'fallout' is categorized into Error Buckets or Error Codes.
2. This project has added information technology resources, over and above those that would be designated for the normal release capacity allocation, and does not affect the capacity already identified for the 2003 or 2004 release schedule, as published and shared through the BellSouth Change Control Process ("CCP").

3. BellSouth is following the guidelines of the CCP and has opened Type-6 defect change requests as identified for improvement purposes. A description of the CCP is outlined in the Change Control Process Document located at:

http://www.interconnection.bellsouth.com/markets/lec/ccp_live/docs/bccp/ccp_bccp_guide.pdf

These Type-6 defect change requests are being implemented during the system maintenance windows as point releases and are tied to the existing release schedule. These corrections are not available for testing in CAVE since they require no change on the part of the CLEC, and affect only orders currently being processed as “BST errors”.

4. The flow-through improvement plan outlined is focusing on the Local Exchange Service Order Generator (“LESOG”), LNP Automation (“LAUTO”), and LNP Service Order Generator (“LNP SOG”) applications. BellSouth performs an analysis of the top error codes impacting flow-through and identifies flow-through errors that are isolated to the LESOG, LAUTO and LNP SOG applications. Other systems may be impacted with future maintenance releases. Implementation began mid-August 2002 for LESOG and April 2003 for the LAUTO and LNP SOG applications.

BellSouth implemented Flow-Through Improvement items on August 25, 2002, October 13, 2002, December 29, 2002, January 19, 2003, March 30, 2003, April 13, 2003, June 22, 2003, September 13, 2003 and November 23, 2003. BellSouth

has targeted software releases for the implementation of Flow-Through Improvement items in 2004.

The leveling-off of the projections in no way indicates any lack of focus on continued flow-through improvement by BellSouth; rather, it is due to the fact that further results improvements become increasingly difficult to produce. Most of the large-impact items have been implemented. That leaves only low-volume errors that, when corrected, yield only tenths-of-percentage-points improvement.

LNP

BellSouth met the flow-through benchmark of 85% for July 2003 as demonstrated by BellSouth's commercial data in PMAP. BellSouth consistently met the benchmark prior to this Commission's *Order* to implement facilities check before firm order confirmation ("FOC"). LNP Percent Flow-Through dropped from 89.8% in May 2002 to 83.63% in June 2002. The facilities check before FOC was implemented in Georgia with Release 10.5 on June 1, 2002, which caused a negative impact on LNP flow-through as explained in BellSouth's July 30, 2002 filing. Subsequently, this functionality was implemented for Tennessee (December 2002), and precipitated the drop in LNP flow-through for February 2003. BellSouth implemented facility check for North Carolina on August 1, 2003. As anticipated, the LNP results for that month reflected a similar degradation of performance as experienced with the implementation of this functionality previously in Florida and Tennessee. That carried forward for a portion of the drop in the September and October results.

September and October results were further skewed downward due to a defect that inhibits fully mechanized FOCs from being sent for requests in the three (3) states where a facility check is required, even though service orders were mechanically generated according to process. Upon discovery of the defect, BellSouth implemented a manual workaround that allowed the Local Carrier Service Centers (LCSC) to return a mechanized FOC. On November 30, 2003, BellSouth implemented a mechanized workaround to return FOCs. BellSouth implemented a code change to fix the defect on December 7, 2003.

Approximately 1,200 LSRs were impacted by this defect in October. The low volume of total requests in this segment – coupled with the relative high number of segment requests affected by this defect – created a significant impact on segment performance. The LNP segment represents only 1.56% of total mechanized LSR volume in October. Based upon current performance and planned improvements, BellSouth expects to reach the 85% benchmark with April 2004 data.

Service Inquiry with Firm Order / xDSL (F.3.1.1)

42. This measure addresses a small group of services (*i.e.*, xDSL and Unbundled Interoffice Transport) that require BellSouth to check equipment availability before the CLEC can submit an LSR. BellSouth returned 121 of the 130 service inquiries

TN Exhibit AJV-4

AJV PM Affidavit
Exhibit AJV-1
Georgia

(93%) within the 5-day interval specified by the Commission during the period of March through September 2003. The following table shows these results by month. From March through September 2003, BellSouth either met the 95% benchmark or missed the benchmark by one LSR except in March and September where the volume of service inquiries did not allow for any misses.

% OF SERVICE INQUIRIES MEETING 95% BENCHMARK			
<u>Month</u>	<u># SIs Submitted</u>	<u># SIs Meeting Benchmark</u>	<u>Percentage</u>
Mar '03	26	25	96.15%
Apr '03	8	7	87.50%
May '03	43	42	97.67%
Jun '03	9	8	88.89%
Jul '03	15	14	93.33%
Aug '03	10	10	100.00%
Sep '03	19	15	78.95%
TOTAL	130	121	93.08%

As noted above, the volume of these services has been very small. Nonetheless, BellSouth has provided good performance.

UNE Local Loops Provisioning Measures

Mean Held Order Interval

43. When delays occur in completing CLEC orders, the average period that CLEC orders are held for BellSouth reasons, pending a delayed completion, should be no worse for the CLEC when compared to BellSouth delayed retail orders. Significantly, the

number of held orders is very low, which indicates a very high level of performance in this area.

Mean Held Order Interval / xDSL (B.2. 3.5)

44. BellSouth met 21 of the 21 sub-metrics with CLEC activity during the period from March 2003 through September 2003.

Mean Held Order Interval / UNE ISDN Loops (B.2.3.6)

45. BellSouth met 20 of the 21 sub-metrics with CLEC activity during the period from March 2003 through September 2003. There are very few held orders in this category. The only missed sub-metric was in June 2003, where there was one CLEC held order for 8 days. With such small volumes, it is not possible to perform a meaningful root cause analysis from which any conclusions can be drawn.

Mean Held Order Interval / UNE 2W Analog Loops Design with and without LNP (B.2.3.8 & B.2.3.12)

46. BellSouth met 84 of the 84 sub-metrics with CLEC activity during the period from March 2003 through September 2003. There are very few held orders in this sub-metric.

Mean Held Order Interval / UNE 2W Analog Loops Non Design with and without LNP (B.2.3.9 & B.2.3.13)

47. BellSouth met 78 of the 78 sub-metrics with CLEC activity during the period from March 2003 through September 2003. There are very few held orders in this sub-metric.

Mean Held Order Interval / Combo Other (EELs) (B.2.3.4)

48. BellSouth met 7 of the 7 sub-metrics with CLEC activity during the period from March through September 2003.

Average Jeopardy Notice Interval

49. When BellSouth can determine in advance, at least 48 hours, that a committed due date is in jeopardy for facility delay, it will provide advance notice to the CLEC. The interval is from the date/time the notice is released to the CLEC until 5pm on the due date of the order.

Average Jeopardy Notice Interval / xDSL (B.2.8.5)

50. BellSouth met 1 of the 1 sub-metric with CLEC activity during the period from March 2003 through September 2003.

Average Jeopardy Notice Interval / UNE ISDN Loops (B.2.8.6)

51. BellSouth met 7 of the 7 sub-metrics with CLEC activity during the period from March 2003 through September 2003.

Average Jeopardy Notice Interval / UNE 2W Analog Loops Design with and without

LNP (B.2.8.8 & .12)

52. BellSouth met 13 of the 13 sub-metrics with CLEC activity during the period from
March 2003 through September 2003.

Average Jeopardy Notice Interval / UNE 2W Analog Loops Non Design with and

without LNP (B.2.8.9 & .13)

53. BellSouth met 14 of the 14 sub-metrics with CLEC activity during the period from
March 2003 through September 2003.

Average Jeopardy Notice Interval / Combo Other (EELs) (B.2.8.4)

54. BellSouth met 7 of the 7 sub-metrics with CLEC activity during the period from
March through September 2003.

% Jeopardy Notice $\geq$ 48 Hours / xDSL (B.2.10.5)

BellSouth met 1 of the 1 sub-metric with CLEC activity during the period from March
2003 through September 2003.

% Jeopardy Notice $\geq$ 48 Hours / UNE ISDN Loops (B.2.10.6)

55. BellSouth met 7 of the 7 sub-metrics with CLEC activity during the period from
March 2003 through September 2003.

TN Exhibit AJV-4

AJV PM Affidavit

Exhibit AJV-1

Georgia

% Jeopardy Notice >= 48 Hours / UNE 2W Analog Loops Design with and without LNP

(B.2.10.8 & .12)

56. BellSouth met 13 of the 13 sub-metrics with CLEC activity during the period from March 2003 through September 2003.

% Jeopardy Notice >= 48 Hours / UNE 2W Analog Loops Non Design with and without LNP (B.2.10.9 & .13)

57. BellSouth met 12 of the 14 sub-metrics with CLEC activity during the period from March 2003 through September 2003. In July 2003, BellSouth met 6 of the 8 notices for the SL1 circuits without LNP and 17 of 18 notices with LNP. In both cases with a 95% benchmark, BellSouth was required to perform perfectly to meet the benchmark. With such small volumes, it is not possible to perform a meaningful root cause analysis from which any conclusions can be drawn. Also, the low number of jeopardies shows that the most meaningful activity, providing facilities to meet due dates is performed very well.

% Jeopardy Notice >= 48 Hours / Combo Other (EELs) (B.2.10.4)

58. BellSouth met 7 of the 7 sub-metrics with CLEC activity during the period from March through September 2003.

Percent Missed Installation Appointments

59. This measure monitors the reliability of BellSouth commitments with respect to due dates to assure that the CLEC can reliably quote expected due dates to their retail customer as compared to BellSouth retail.

%Missed Installation Appointments / xDSL (B.2.18.5)

60. BellSouth met 12 of the 12 sub-metrics with CLEC activity during the period from March 2003 through September 2003.

%Missed Installation Appointments / UNE ISDN Loops (B.2.18.6)

61. BellSouth met 11 of the 12 sub-metrics with CLEC activity during the period from March 2003 through September 2003. For the one missed sub-metrics, BellSouth missed 3 of the 30 scheduled appointments in July. With such small volumes, it is not possible to perform a meaningful root cause analysis from which any conclusions can be drawn.

%Missed Installation Appointments / UNE 2W Analog Loops Design with and without LNP (B.2.18.8 & .12)

62. BellSouth met 39 of the 39 sub-metrics with CLEC activity during the period from March 2003 through September 2003.

%Missed Installation Appointments / UNE 2W Analog Loops Non Design with and without LNP (B.2.18.9 & .13)

63. BellSouth met 42 of the 45 sub-metrics with CLEC activity during the period from March 2003 through September 2003. All of the missed sub-metrics were in the non-dispatched in category and missed 1 appointment each. For the non-LNP SL1 circuits, BellSouth missed 1 of 3 appointments in March and 1 of 22 in June. The LNP SL1 circuits missed one sub-metric in June with 1 missed appointment out of the 150 scheduled. With such small volumes, it is not possible to perform a meaningful root cause analysis from which any conclusions can be drawn.

%Missed Installation Appointments / UCL-NDs (B.2.18.15)

64. BellSouth met 7 of the 8 sub-metrics with CLEC activity during the period from March 2003 through September 2003. In March 2003, BellSouth missed 3 of the 5 scheduled appointments, which did not meet the retail analogue comparison. With such small volumes, it is not possible to perform a meaningful root cause analysis from which any conclusions can be drawn.

%Missed Installation Appointments / EELs (B.2.18.22)

65. BellSouth met 9 of the 10 sub-metrics with CLEC activity during the period from March 2003 through September 2003. In June 2003, BellSouth missed 3 of the 185 scheduled appointments, which did not meet the retail analogue comparison. There was no systemic issue identified for any of the missed sub-metrics.

Average Completion Interval (OCI)

66. The average completion interval measure monitors the interval of time it takes

BellSouth to provide service for the CLEC or its own customers. The interval is measured from the time the CLEC is notified of the firm order due date until the order is completed by BellSouth. The standard for all measures except xDSL is a retail analogue. For xDSL, the orders that require conditioning are measured against a 12-day benchmark while orders that do not require conditioning have a 6-day benchmark.

Average Completion Interval / xDSL (B.2.2.1-2)

67. BellSouth met 11 of the 11 sub-metrics with CLEC activity during the period from March 2003 through September 2003.

Average Completion Interval / UCL-ND (B.2.2.3-4)

68. BellSouth met 1 of the 8 sub-metrics with CLEC activity during the period from March 2003 through September 2003. All of the missed sub-metrics had 10 or less orders completed during the period. With such small volumes, it is not possible to perform a meaningful root cause analysis from which any conclusions can be drawn. However, this measure is compared with a 5-day benchmark. The average interval for the missed sub-metrics was 6 days. BellSouth continues to work to meet the benchmark for this small number of orders.

Average Completion Interval / UNE ISDN Loops (B.2.1.6)

69. BellSouth met 9 of the 13 sub-metrics with CLEC activity during the period from

March 2003 through September 2003. All of the missed sub-metrics were in the non-dispatch category. For UNE ISDN Loops, BellSouth is unable to determine at the time the order is received whether a technician must be dispatched to the customer's premises. As a result, all orders are scheduled assuming a dispatch is required and this assumption results in a longer provisioning interval. These orders are then compared with the shorter non-dispatched retail analogue results, thus resulting in an out of parity condition. All of these orders would have met the parity requirement if compared with the dispatched retail analogue. All the difference between the CLEC orders and the retail analogue indicate that the out of parity conditions is in part a result on inequality in the measurements instead of poor performance.

Average Completion Interval / UNE 2W Analog Loops Design with and without LNP

(B.2.1.8 & .12)

70. BellSouth met 25 of the 33 sub-metrics with CLEC activity during the period from

March 2003 through September 2003. All of the missed sub-metrics were in the non-dispatch category. BellSouth is unable to determine at the time the order is received whether a technician must be dispatched to the customer's premises. As a result, all orders are scheduled assuming a dispatch is required and this assumption results in a longer provisioning interval. These orders are then compared with the shorter non-dispatched retail analogue results, thus resulting in an out of parity condition. All of these orders would have met the parity requirement if compared with the dispatched retail analogue. All the difference between the CLEC orders and the retail analogue

indicate that the out of parity conditions is in part a result on inequality in the measurements instead of poor performance.

Average Completion Interval / UNE 2W Analog Loops Non Design with and without LNP (B.2.1.9 & .13)

71. BellSouth met 25 of the 37 sub-metrics with CLEC activity during the period from March 2003 through September 2003. BellSouth is unable to determine at the time the order is received whether a technician must be dispatched to the customer's premises. As a result, all orders are scheduled assuming a dispatch is required and this assumption results in a longer provisioning interval. These orders are then compared with the shorter non-dispatched retail analogue results, thus resulting in an out of parity condition. All of these orders would have met the parity requirement if compared with the dispatched retail analogue. All the difference between the CLEC orders and the retail analogue indicate that the out of parity conditions is in part a result on inequality in the measurements instead of poor performance.

Average Completion Interval / EELs (B.2.1.4)

72. BellSouth met 1 of the 15 sub-metrics with CLEC activity during the period from March through September 2003. The products included in these sub-metrics consist mainly of designed combinations that are complex and consist of multiple facilities between customer locations and at least two central office locations. The current retail analogue for these circuits is residence, business and design which is over 90% POTS and have much shorter installation intervals than designed circuits.

% Provisioning Troubles within 30 Days of Service Order Completion

73. This measure shows the quality and accuracy of the completed orders. It includes the reported troubles up to 30 days after the completion of the order.

% Provisioning Troubles within 30 Days / xDSL (B.2.19.5)

74. BellSouth met 10 of the 11 sub-metrics with CLEC activity during the period from March 2003 through September 2003. In July 2003, there were a total of 6 troubles reported for the 13 orders that completed. There were no systemic issues identified for any of the 6 reported troubles.

% Provisioning Troubles within 30 Days / UNE ISDN Loops (B.2.19.6)

75. BellSouth met 8 of the 11 sub-metrics with CLEC activity during the period from March 2003 through September 2003. In July, there was 1 reported trouble for the 10 completed orders. In August, there were 4 troubles for 30 completed orders and in September there were 3 troubles reported for the 22 orders completed. With such small volumes, it is not possible to perform a meaningful root cause analysis from which any conclusions can be drawn.

% Provisioning Troubles within 30 Days / UNE 2W Analog Loops Design with and without LNP (B.2.19.8 & .12)

76. BellSouth met 33 of the 34 sub-metrics with CLEC activity during the period from March 2003 through September 2003. In July, there was only one order completed in

the non-dispatched greater than 10 without LNP category and there was one reported trouble. With such small volumes, it is not possible to perform a meaningful root cause analysis from which any conclusions can be drawn.

% Provisioning Troubles within 30 Days / UNE 2W Analog Loops Non Design with and without LNP (B.2.19.9 & .13)

77. BellSouth met 40 of the 44 sub-metrics with CLEC activity during the period from March 2003 through September 2003. In April for the greater than 10-circuit category, there was completed order with 1 reported trouble and in August there was one trouble for two completed orders. For the LNP circuits, in May there were a total of 5 troubles reported for the 53 orders that completed. With such small volumes, it is not possible to perform a meaningful root cause analysis from which any conclusions can be drawn.

% Provisioning Troubles within 30 Days / EELs (B.2.19.4)

78. BellSouth met 8 of the 10 sub-metrics with CLEC activity during the period from March through September 2003. The analysis of the 2 missed sub-metrics indicated that the reports were not confined to any one area or issue. Facilities, equipment, network terminating wire, broken jumpers, etc. were some of the reasons for the failures. With less than 300 orders in most months and one of the most complex local services offer by BellSouth, only a few troubles can increase the overall percentage when compared with a retail analogue that has a volume of at least 10 times greater

than wholesale BellSouth continues to review this service for any potential systemic issues that may occur.

% Provisioning Troubles within 30 Days / UCL-NDs (B.2.19.15)

79. BellSouth met 8 of the 8 sub-metrics with CLEC activity during the period from March through September 2003.

Cooperative Acceptance Testing

80. A loop will be considered successfully tested when both the CLEC and BellSouth agree that the loop meets the technical specifications set forth in TR 73600 for DSL service.

% Successful Cooperative Test Attempts for xDSL / (B.2.33)

81. BellSouth met 7 of the 7 sub-metrics with CLEC activity during the period from March through September 2003.

Average Completion Notice Interval

82. The interval is the elapsed time between the BellSouth reported completion of work and the issuance of a valid completion notice to the CLEC.

Average Completion Notice Interval / xDSL (B.2.21.5)

83. BellSouth met 10 of the 10 sub-metrics with CLEC activity during the period from March 2003 through September 2003.

Average Completion Notice Interval / UNE ISDN Loop (B.2.21.6)

84. BellSouth met 10 of the 12 sub-metrics with CLEC activity during the period from March 2003 through September 2003. Both of the missed sub-metrics were in September and no systemic issue was identified for the missed sub-metric. The initial October data indicates these sub-metrics are in parity.

Average Completion Interval / UNE 2W Analog Loops Design with and without LNP (B.2.21.8 & .12)

85. BellSouth met 29 of the 31 sub-metrics with CLEC activity during the period from March 2003 through September 2003. Both of the missed sub-metrics were in the LNP area and had a small number of completed orders. With the implementation of the new SQM effective with March 2003 data, BellSouth incorrectly changed the ending timestamp for the ACNI measure. This issue will be addressed in a PMAP change effective with October 2003 data, as described more fully in the Proposed October 2003 Data Notification filed on September 2, 2003 (Item No. 8).

Average Completion Interval / UNE 2W Analog Loops Design with and without LNP (B.2.21.9 & .13)

86. BellSouth met 27 of the 38 sub-metrics with CLEC activity during the period from March 2003 through September 2003. With the implementation of the new SQM

effective with March 2003 data, BellSouth incorrectly changed the ending timestamp for the ACNI measure. This issue will be addressed in a PMAP change effective with October 2003 data, as described more fully in the Proposed October 2003 Data Notification filed on September 2, 2003 (Item No. 8).

Average Completion Notice Interval / UCL-NDs (B.2.21.15)

87. BellSouth met 8 of the 8 sub-metrics with CLEC activity during the period from March 2003 through September 2003.

Average Completion Notice Interval / EELs (B.2.21.21)

88. BellSouth met 9 of the 10 sub-metrics with CLEC activity during the period from March 2003 through September 2003. The missed sub-metric was in September and BellSouth is reviewing the data to determine what is in error. The intervals for both the CLEC and retail data have increased dramatically and seem to indicate a possible data problem. The initial October data indicates this sub-metric is in parity.

Service Order Accuracy

89. This measurement indicates the accuracy with which CLEC requests for service are converted to LSRs by comparing the LSR to the completed service order after provisioning has been finished.

% Service Order Accuracy / UNE & UNE-P (F.15.2, .3)

90. BellSouth met 6 of the 10 sub-metrics with CLEC activity during the period from March 2003 through September 2003. While BellSouth met 5 of the 5 sub-metrics for UNE, it only met 1 of the 5 for the UNP-P sub-metrics. Over 91% of the sample of orders reviewed met the UNE-P accuracy test. The average number of LSRs sampled for UNE-P was 114 LSRs with BellSouth meeting the criteria for 110. This small difference of 4 LSRs did not indicate any systemic issue when reviewed. BellSouth continues to review the data to try and meet this 95% benchmark.

UNE Local Loops Maintenance & Repair Measures

91. While the SQM does not require that the EELs and UCL-ND disaggregations be separated for maintenance and repair measures, BellSouth has provided these disaggregations to augment the information for UNE Local loops. The data for EELs and UCL-ND is also included in the sub-metrics ordered by the GPSC in the approved SQM.

Missed Repair Appointments

92. This measures tracks the percent of customer reports not cleared by the committed due date and time.

% Missed Repair Appointments / EELs (B.3.1.4)

93. BellSouth met 14 of the 14 sub-metrics with CLEC activity during the period from March through September 2003.

% Missed Repair Appointments / xDSL (B.3.1.5)

94. BellSouth met 14 of the 14 sub-metrics with CLEC activity during the period from March 2003 through September 2003.

% Missed Repair Appointments / UNE ISDN Loops (B.3.1.6)

95. BellSouth met 14 of the 14 sub-metrics with CLEC activity during the period from March 2003 through September 2003.

% Missed Repair Appointments / UNE 2W Analog Loops Design (B.3.1.8)

96. BellSouth met 14 of the 14 sub-metrics with CLEC activity during the period from March 2003 through September 2003.

% Missed Repair Appointments / UNE 2W Analog Loops Non Design (B.3.1.9)

97. BellSouth met 11 of the 14 sub-metrics with CLEC activity during the period from March through September 2003. Two of the three missed sub-metrics were in the non-dispatched category. In April, BellSouth missed one of the five scheduled appointments and one of four scheduled appointments in May. With such small volumes, it is not possible to perform a meaningful root cause analysis from which any conclusions can be drawn. The remaining missed sub-metric was in April for dispatched with no systemic issues identified for any of the missed appointments.

% Missed Repair Appointments / UCD-ND (B.3.1.11)

98. BellSouth met 14 of the 14 sub-metrics with CLEC activity during the period from March through September 2003.

Customer Trouble Report Rate

99. This measure tracks the initial and repeated customer direct or referred customer troubles reported within a calendar month per 100 lines/circuits in service. The standard comparison for each of these sub-metrics is a retail analogue. BellSouth provided over 98% trouble-free service to all CLEC lines during the past year.

% Customer Trouble Report Rate / EELs (B.3.2.4)

100. BellSouth met 4 of the 14 sub-metrics with CLEC activity during the period from March through September 2003. Seven (7) of the 10 sub-metrics that did not meet the retail analogue comparison were in the dispatch category. BellSouth provided 95% trouble-free service to all customers in this category. The major difference is the volume for the analogue is over 500 times larger than the CLEC volume. This difference magnifies the percentage for the CLEC and therefore the Z-score becomes overly sensitive when the service levels are this high.

% Customer Trouble Report Rate / xDSL (B.3.2.5)

101. BellSouth met 8 of the 14 sub-metrics with CLEC activity during the period from March 2003 through September 2003. The 6 sub-metrics that did not meet the retail analogue comparison were all in the dispatch category. However, BellSouth provided 99% trouble-free service to all customers in this category. The major difference is the

volume for the analogue is over 1000 times larger than the CLEC volume. This difference magnifies the percentage for the CLEC and therefore the Z-score becomes overly sensitive when the service levels are this high.

% Customer Trouble Report Rate / UNE ISDN Loops (B.3.2.6)

102. BellSouth met 14 of the 14 sub-metrics with CLEC activity during the period from March 2003 through September 2003.

% Customer Trouble Report Rate / UNE 2W Analog Loops Design (B.3.2.8)

103. BellSouth met 14 of the 14 sub-metrics with CLEC activity during the period from March 2003 through September 2003.

% Customer Trouble Report Rate / UNE 2W Analog Loops Non Design (B.3.2.9)

104. BellSouth met 14 of the 14 sub-metrics with CLEC activity during the period from March 2003 through September 2003. BellSouth has determined that the CLEC volume for this measure was being counted incorrectly. BellSouth has determined that the CLEC volume for this measure was being counted incorrectly. With December 2002 data, a new source feed from WFA began including the originating and terminating end of each circuit causing PMAP to double count the CLEC in service volume. The corrected data for Georgia is included in Attachment 1 to this exhibit. There was no change in the parity status with this update. The following item was included in the preliminary February Data Notification dated December 1, 2003.

(8) *Affected Measures:* MR-2

Description of Change: Currently, BellSouth is over-counting lines for 2 wire analog loop non-design. Due to a change in the source system data, each end of the circuit is being counted as an individual line. Bellsouth proposes to correct the over-counting of these loops. (RQ4664)

Impact of Change: CLEC CTRR for 2-wire analog loops non-design will approximately double.

% Customer Trouble Report Rate / UCD-ND (B.3.2.11)

105. BellSouth met 14 of the 14 sub-metrics with CLEC activity during the period from March through September 2003.

Maintenance Average Duration

106. This measure tracks the average duration of the customer trouble report from the receipt of the report until the time the trouble is cleared and closed within the system.

Maintenance Average Duration / EELs (B.3.3.4)

107. BellSouth met 14 of the 14 sub-metrics with CLEC activity during the period from March through September 2003.

Maintenance Average Duration / xDSL (B.3.3.5)

108. BellSouth met 13 of the 14 sub-metrics with CLEC activity during the period from March 2003 through September 2003. In July there were a total of 30 trouble reports with one having an extremely long interval. With such a small number of reports, this one interval had a major effect on the overall interval that caused an out of parity condition with the retail analogue.

Maintenance Average Duration / UNE ISDN Loops (B.3.3.6)

109. BellSouth met 14 of the 14 sub-metrics with CLEC activity during the period from March 2003 through September 2003.

Maintenance Average Duration / UNE 2W Analog Loops Design (B.3.3.8)

110. BellSouth met 14 of the 14 sub-metrics with CLEC activity during the period from March 2003 through September 2003.

Maintenance Average Duration / UNE 2W Analog Loops Non Design (B.3.3.9)

111. BellSouth met 14 of the 14 sub-metrics with CLEC activity during the period from March 2003 through September 2003.

Maintenance Average Duration / UCD-ND (B.3.3.11)

112. BellSouth met 14 of the 14 sub-metrics with CLEC activity during the period from March through September 2003.

% Repeat Troubles within 30 Days

113. This measurement records the percent of customer troubles, during the current reporting period, which had at least one prior trouble on the same line/circuit, anytime in the preceding 30 calendar days from the receipt of the current trouble report.

% Repeat Troubles within 30 Days / EELs (B.3.4.4)

114. BellSouth met 7 of the 14 sub-metrics with CLEC activity during the period from March through September 2003. There were a large number (over 50%) of these reports that were closed as no trouble found. Also, with less than 300 total reports, the small number of CLEC repeated reports increases the percentage more dramatically than the retail analogue with over 70,000 reported troubles.

% Repeat Troubles within 30 Days / xDSL (B.3.4.5)

115. BellSouth met 12 of the 14 sub-metrics with CLEC activity during the period from March 2003 through September 2003. The two missed sub-metrics had 9 and 8 repeated trouble reports. However, with less than 38 total troubles reported in both sub-metrics, the small number of repeated reports increases the percentage more dramatically than the retail analogue with over 2,000 reported troubles.

% Repeat Troubles within 30 Days / UNE ISDN Loops (B.3.4.6)

116. BellSouth met 13 of the 14 sub-metrics with CLEC activity during the period from March 2003 through September 2003. In July there were a total of 85 reports with 26 being repeats. There were no systemic issues identified and this was the only month that was out of parity for the period.

% Repeat Troubles within 30 Days / UNE 2W Analog Loops Design (B.3.4.8)

117. BellSouth met 14 of the 14 sub-metrics with CLEC activity during the period from March 2003 through September 2003.

% Repeat Troubles within 30 Days / UNE 2W Analog Loops Non Design (B.3.4.9)

118. BellSouth met 12 of the 14 sub-metrics with CLEC activity during the period from March 2003 through September 2003.

% Repeat Troubles within 30 Days / UCD-ND (B.3.4.11)

119. BellSouth met 14 of the 14 sub-metrics with CLEC activity during the period from March through September 2003. The two missed sub-metrics had 4 troubles in one and 2 troubles in another. With such small volumes, it is not possible to perform a meaningful root cause analysis from which any conclusions can be drawn.

Collocation

120. BellSouth provides three separate collocation reports: 1) Average Response Time; 2) Average Arrangement Time; and 3) Percent of Due Dates Missed. Section E, Items E.1.1.1 through E.1.3.2, provides these results.

121. During the months of March 2003 through September 2003, BellSouth met or exceeded the benchmark for every sub-metric that had CLEC activity in this category. There were a total of 92 requests for physical collocation received from the CLECs during this period. The benchmark for the average response time for such requests is less than or equal to 20 days. BellSouth averaged less than 12 days for the average response interval (E.1.1.2 & E.1.1.3) in this sub-metric. In addition, there were a total of 7 requests for virtual collocation received from the CLECs during this period. The benchmark for the average response time for virtual requests is less than or equal to

10 days. BellSouth averaged 7 days for the average response interval (E.1.1.1) in this sub-metric.

122. There were a total of 114 physical collocation orders and 1 virtual collocation order that completed during the period. BellSouth completed all 115 orders in less than the ordered benchmarks for each sub-metric. See sub-metrics E.1.2.1 – E.1.2.13 in Attachment 1 for the individual results for each virtual and physical category.

123. During the period from March 2003 through September 2003, BellSouth completed all 115 of the 115 (100%) (E.1.3.1 - E.1.3.4) scheduled virtual and physical orders on time. These results demonstrate BellSouth's commitment to provide nondiscriminatory access to collocation arrangements in Georgia's central offices.

124. This concludes the data analysis associated with BellSouth's performance for Hot Cuts and UNE Local Loops.

Georgia, March 2002 - February 2003
Unbundled Network Elements - Ordering
Reject Interval - Partially Mechanized - 10 hours

(% of CLEC Reject Notification Intervals within 10 Hours)

Numerator Indicates total number of CLEC reject notification intervals within 10 hours for this disaggregation in the reporting period.

Volume Indicates total number of service requests for this disaggregation rejected in the reporting period.

Order Completion Interval

(Interval Between Order Issuance and Completion)

Numerator indicates total of order completion intervals for this disaggregation in the reporting period.

Volume indicates total number of service orders completed for this disaggregation in the reporting period.

The graph displays two data series over time from October 2002 to February 2003. The Y-axis represents a value ranging from 0.00 to 1.00 in increments of 0.10. The X-axis lists the months: Oct-02, Nov-02, Dec-02, Jan-03, and Feb-03. The legend indicates that the solid line with diamond markers represents 'BST Analog' and the dashed line with square markers represents 'CLEC'. Both series show a constant value of 0.00 across all months.

Performance

Note 1: Retail Residence / Business (POTS) excluding Switch Based Orders data serves as the BST Analog for this report

Georgia II, October 2002 - September 2003
Unbundled Network Elements - Provisioning
Held Orders

(Average Time an Order Is Held Past the Due Date for Company Reasons)

Numerator Indicates total time orders held past the due date for BellSouth reasons for this disaggregation in the reporting period.

Volume Indicates total number of service orders for this disaggregation in the reporting period held for BellSouth reasons.

B.2.3.13.2.2 2W Analog Loop w/LNP Non-Design/>=10 circuits/Equipment/GA (days)

Note 1: Retail Residence / Business (POTS) excluding Switch Based Orders data serves as the BST Analog for this report

B.2.3.13.2.3 2W Analog Loop w/LNP Non-Design/>=10 circuits/Other/GA (days)

Note 1: Retail Residence / Business (POTS) excluding Switch Based Orders data serves as the BST Analog for this report

Georgia II, October 2002 - September 2003
Unbundled Network Elements - Provisioning
Average Jeopardy Notice Interval - Mechanized

(Average Time of Advanced Warning that Order is In Jeopardy Prior to Due Date)

Numerator indicates total time of advanced warning that order is in jeopardy prior to due date for this disaggregation.

Volume indicates total number of service orders for this disaggregation in the reporting period notified in advance of their jeopardy.

B.2.8.4

Combo Other/GA (hours)

Georgia II, October 2002 - September 2003
Unbundled Network Elements - Provisioning
Average Jeopardy Notice Interval - Mechanized

(Average Time of Advanced Warning that Order is In Jeopardy Prior to Due Date)

Numerator Indicates total time of advanced warning that order is In Jeopardy prior to due date for this disaggregation.

Volume Indicates total number of service orders for this disaggregation in the reporting period notified in advance of their jeopardy.

B.2.8.5 xDSL (ADSL, HDSL and UCL)/GA (hours)

B.2.8.6 UNE ISDN/GA (hours)

B.2.8.8 2W Analog Loop Design/GA (hours)

Georgia II, October 2002 - September 2003
Unbundled Network Elements - Provisioning
Average Jeopardy Notice Interval - Mechanized

(Average Time of Advanced Warning that Order is in Jeopardy Prior to Due Date)

Numerator Indicates total time of advanced warning that order is in jeopardy prior to due date for this disaggregation.

Volume Indicates total number of service orders for this disaggregation in the reporting period notified in advance of their jeopardy.

Note 1: Retail Residence / Business (POTS) excluding Switch Based Feature Troubles data serves as the BST Analog for this report

Georgia, March 2002 - February 2003
Unbundled Network Elements - Maintenance and Repair
Customer Trouble Report Rate
 (% of Total Troubles Reported)

Numerator indicates total number of troubles reported for this disaggregation.
 Volume indicates total number of service access lines in service for this disaggregation at the end of the reporting period.
