- 4.5.3 Custom Branding for Directory Assistance (DA) is not available for certain classes of service, including but not limited to Hotel/Motel services, WATS service, and certain PBX services.
- Where available, <customer_short_name> specific and unique LCCs are programmed in each BellSouth end office switch where <customer_short_name> intends to serve End Users with customized OCP/DA branding. The LCCs specifically identify <customer_short_name>'s End Users so OCP/DA calls can be routed over the appropriate trunk group to the requested OCP/DA platform. Additional LCCs are required in each end office if the end office serves multiple NPAs (i.e., a unique LCC is required per NPA), and/or if the end office switch serves multiple rate areas and <customer_short_name> intends to provide <customer_short_name> -branded OCP/DA to its End Users in these multiple rate areas.

4.5.5 [Parties Disagree]

[<customer_short_name> Version] SCR-LCC supporting Custom Branding and Self Branding require <customer_short_name> to order dedicated trunking from each BellSouth end office identified by <customer_short_name>, either to the BellSouth Traffic Operator Position System (TOPS) for Custom Branding or to the <customer_short_name> Operator Service Provider for Self Branding. Separate trunk groups are required for Operator Services and for DA. Rates for transport and trunks are set forth in Exhibit A to this Attachment.

[BellSouth Version] SCR-LCC supporting Custom Branding and Self Branding require <customer_short_name> to order dedicated trunking from each BellSouth end office identified by <customer_short_name>, either to the BellSouth Traffic Operator Position System (TOPS) for Custom Branding or to the <customer_short_name> Operator Service Provider for Self Branding. Separate trunk groups are required for Operator Services and for DA. Rates for trunks shall be in accordance with Section 4.8.1.1 of Attachment 3.

- 4.5.6 Unbranding Unbranded DA and/or OCP calls ride common trunk groups provisioned by BellSouth from those end offices identified by <customer_short_name> to the BellSouth TOPS.
- 4.5.7 The rates for SCR-LCC are as set forth in Exhibit A of this Attachment. There is a nonrecurring charge for the establishment of each LCC in each BellSouth central office. Furthermore, for Unbranded and Custom Branded OCP/DA provided by BellSouth Operator Services with unbundled ports and unbundled port/loop switch combinations, monthly recurring usage charges shall apply for the UNEs necessary to provide the service, such as end office and tandem switching and common transport. A flat rated end office switching charge shall apply to Self-Branded OCP/DA when used in conjunction with unbundled ports and unbundled port/loop switch combinations.

5 Unbundled Network Element Combinations

- 5.1 BellSouth shall provide unbundled network element combinations in accordance with 47 CFR 51.315.
- 5.1.1 For purposes of this Section, references to "Currently Combined" Network Elements shall mean that the particular Network Elements requested by <customer_short_name> are in fact already combined by BellSouth in the BellSouth network. References to "Ordinarily Combined" Network Elements shall mean that the particular Network Elements requested by <customer_short_name> are not already combined by BellSouth in the location requested by <customer_short_name> but are elements that are typically combined in BellSouth's network. References to "Not Typically Combined" Network Elements shall mean that the particular Network Elements requested by <customer_short_name> are not elements that BellSouth combines for its use in its network.
- Upon request, BellSouth shall perform the functions necessary to combine unbundled Network Elements in any manner, even if those elements are not ordinarily combined in BellSouth's network, provided that such combination is technically feasible and will not undermine the ability of other carriers to obtain access to unbundled Network Elements or to interconnect with BellSouth's network.
- 5.2 Enhanced Extended Links (EELs)
- 5.2.1 EELs are combinations of unbundled Loops and unbundled Dedicated Transport, together with any facilities, equipment, or functions necessary to combine those Network Elements. BellSouth shall provide <customer_short_name> with EELs where the underlying UNE or UNEs are available and in all instances where the requesting carrier meets the FCC's eligibility requirements, if applicable.
- 5.2.2 EELs include, but are not limited to the following combinations:
- 5.2.2.1 DS1 Interoffice Channel + DS1 Channelization + 2-wire VG Local Loop
- 5.2.2.2 DS1 Interoffice Channel + DS1 Channelization + 4-wire VG Local Loop
- 5.2.2.3 DS1 Interoffice Channel + DS1 Channelization + 2-wire ISDN Local Loop
- 5.2.2.4 DS1 Interoffice Channel + DS1 Channelization + 4-wire 56 kbps Local Loop
- 5.2.2.5 DS1 Interoffice Channel + DS1 Channelization + 4-wire 64 kbps Local Loop
- 5.2.2.6 DS1 Interoffice Channel + DS1 Local Loop
- 5.2.2.7 DS3 Interoffice Channel + DS3 Local Loop

- 5.2.2.8 STS-1 Interoffice Channel + STS-1 Local Loop 5.2.2.9 DS3 Interoffice Channel + DS3 Channelization + DS1 Local Loop 5.2.2.10 STS-1 Interoffice Channel + DS3 Channelization + DS1 Local Loop 5.2.2.11 2-wire VG Interoffice Channel + 2-wire VG Local Loop 5.2.2.12 4wire VG Interoffice Channel + 4-wire VG Local Loop 5.2.2.13 4-wire 56 kbps Interoffice Channel + 4-wire 56 kbps Local Loop 5.2.2.14 4-wire 64 kbps Interoffice Channel + 4-wire 64 kbps Local Loop 5.2.2.15 Commingled loop and transport facilities at the DS1 and/or DS3 level 5.2.3 High-capacity EELs are combinations of loop and transport UNEs or commingled loop and transport facilities at the DS1 and/or DS3 level as described in FCC 47 C.F.R. 51.318(b). High-capacity EELs must comply with the service eligibility requirements set forth in Section 5.2.5 below.
- 5.2.4 [Parties Disagree]

[<customer_short_name> Version] By placing an order for a high-capacity EEL, <customer_short_name> thereby certifies that the high-capacity EEL service eligibility criteria set forth herein are met for access to a converted high-capacity EEL, a new high-capacity EEL, or the UNE portion of a high-capacity commingled EEL. BellSouth may not deny or delay <customer_short_name>'s request for a high-capacity EEL based upon eligibility criteria. However, BellSouth may notify <customer_short_name> when it detects an order that it does not believe complies with the eligibility criteria and <customer_short_name> shall have the option of modifying or canceling such order.

[BellSouth Version] By placing an order for a high-capacity EEL, <customer_short_name> thereby certifies that the high-capacity EEL service eligibility criteria set forth herein are met for access to a converted high-capacity EEL, a new high-capacity EEL, or part of a high-capacity commingled EEL as a UNE. BellSouth may not deny, except as set forth in Section 5.2.6 below, <customer_short_name>'s request for a high-capacity EEL based upon eligibility criteria, but shall have the right to clarify the order back to <customer_short_name> rather than processing the order should the BellSouth representative identify that a service eligibility criteria has been violated such as <customer_short_name> not having a collocation arrangement in the central office for which the order has been requested.

5.2.5 Service Eligibility Criteria

- 5.2.5.1 By placing an order for a high-capacity EEL, <customer_short_name> certifies that all of the following service eligibility criteria are met for each high-capacity EEL:
- 5.2.5.2 For each combined circuit, including each DS1 circuit, each DS1 EEL, and each DS1-equivalent circuit on a DS3 EEL:

5.2.5.2.1 [Parties Disagree]

[<customer_short_name> Version] 1) Each circuit to be provided to each **customer** will be assigned a local number prior to the provision of service over that circuit;

[BellSouth Version] 1) Each circuit to be provided to each **End User** will be assigned a local number prior to the provision of service over that circuit;

5.2.5.2.2 2) Each DS1-equivalent circuit on a DS3 EEL must have its own local number assignment, so that each DS3 must have at least twenty-eight (28) local voice numbers assigned to it;

5.2.5.2.3 [Parties Disagree]

[<customer_short_name> Version] 3) Each circuit to be provided to each **customer** will have 911 or E911 capability prior to provision of service over that circuit;

[BellSouth Version 3) Each circuit to be provided to each **End User** will have 911 or E911 capability prior to provision of service over that circuit;

5.2.5.2.4 [Parties Disagree]

[<customer_short_name> Version] 4) Each circuit to be provided to each **customer** will terminate in a collocation arrangement that meets the requirements of FCC 47 C.F.R. 51.318(c);

[BellSouth Version 4) Each circuit to be provided to each **End User** will terminate in a collocation arrangement that meets the requirements of FCC 47 C.F.R. 51.318(c);

5.2.5.2.5 [Parties Disagree]

[<customer_short_name> Version] 5) Each circuit to be provided to each customer will be served by an interconnection trunk in the same LATA as the customer premises served by the EEL over which <customer_short_name> will transmit the calling party's number in connection with calls exchanged over the trunk;

[BellSouth Version 5) Each circuit to be provided to each **End User** will be served by an interconnection trunk in the same LATA as the customer premises served by the EEL over which <customer_short_name> will transmit the calling party's number in connection with calls exchanged over the trunk;

5.2.5.2.6 6) For each twenty-four (24) DS1 EELs or other facilities having equivalent capacity, <customer_short_name> will have at least one (1) active DS1 local service interconnection trunk within the LATA over which <customer_short_name> will transmit the calling party's number in connection with calls exchanged over the trunk;

5.2.5.2.7 [Parties Disagree]

[<customer_short_name> Version] 7) Each circuit to be provided to each **customer** will be served by a switch capable of switching local voice traffic.

[BellSouth Version] 7) Each circuit to be provided to each **End User** will be served by a switch capable of switching local voice traffic.

5.2.6 [Parties Disagree]

[<customer_short_name> Version] BellSouth may, no more frequently than on an annual basis, and only based upon cause, conduct a limited audit of <customer_short_name>'s records in order to verify compliance with the high capacity EEL eligibility criteria.

[BellSouth Version] BellSouth may, on an annual basis, audit in order to verify compliance with the qualifying service eligibility criteria. The audit shall be conducted by an independent auditor, and the auditor must perform its evaluation in accordance with the standards established by the American Institute for Certified Public Accountants (AICPA). The auditor will perform an "examination engagement" and issue an opinion regarding <customer_short_name>'s compliance with the qualifying service eligibility criteria. The independent auditor's report will conclude whether <customer_short_name> has complied in all material respects with the applicable service eligibility criteria. Consistent with standard auditing practices, such audits require compliance testing designed by the independent auditor, which typically include an examination of a sample selected in accordance with the independent auditor's judgment.

5.2.6.1 [Parties Disagree]

[<customer_short_name> Version] To invoke its limited right to audit, BellSouth will send a Notice of Audit to <customer_short_name>, identifying the particular circuits for which BellSouth alleges non-compliance and the cause upon which BellSouth rests its allegations. The Notice of Audit shall also include all supporting documentation upon which BellSouth establishes the cause that forms the basis of BellSouth's allegations of noncompliance. Such Notice of Audit will be delivered to <customer_short_name> with all supporting documentation no less than thirty (30) calendar days prior to the date upon which BellSouth seeks to commence an audit.

[BellSouth Version] No Section.

5.2.6.2 [Parties Disagree]

[<customer_short_name> Version] The audit shall be conducted by a third party independent auditor mutually agreed-upon by the Parties and retained and paid for by BellSouth. The audit shall commence at a mutually agreeable location (or locations) no sooner than thirty (30) calendar days after the parties have reached agreement on the auditor.

[BellSouth Version] No Section.

5.2.6.2.1 [Parties Disagree]

[<customer_short_name> Version] The audit must be performed in accordance with the standards established by the American Institute for Certified Public Accountants (AICPA) which will require the auditor to perform an "examination engagement" and issue an opinion regarding <customer_short_name>'s compliance with the high capacity EEL eligibility criteria. AICPA standards and other requirements related to determining the independence of an auditor shall govern the audit of requesting carrier compliance. The concept of materiality governs this audit; the independent auditor's report will conclude whether or the extent to which <customer_short_name> complied in all material respects with the applicable service eligibility criteria. Consistent with standard auditing practices, such audits require compliance testing designed by the independent auditor, which typically include an examination of a sample selected in accordance with the independent auditor's judgment.

[BellSouth Version] No Section.

5.2.6.2.2 To the extent the independent auditor's report concludes that <customer_short_name> failed to comply with the high capacity EEL service eligibility criteria, <customer_short_name> must true-up any difference in payments, convert all noncompliant circuits to the appropriate service, and make the correct payments on a going-forward basis.

5.2.6.2.3 [Parties Disagree]

[<customer_short_name> Version] In the event the auditor's report concludes that <customer_short_name> did not comply in all material respects with the service eligibility criteria, <customer_short_name> shall reimburse BellSouth for the cost of the independent auditor. Similarly, to the extent the independent auditor's report concludes that <customer_short_name> did comply in all material respects with the service eligibility criteria, BellSouth will reimburse <customer_short_name> for its reasonable and demonstrable costs associated with the audit, including, among other things, staff time. The Parties shall provide such reimbursement within thirty (30) calendar days of receipt from <customer_short_name> of a statement of such costs.

[BellSouth Version] To the extent the independent auditor's report concludes that <customer_short_name> failed to comply with the service eligibility criteria, <customer_short_name> shall reimburse BellSouth for the cost of the independent auditor. Similarly, to the extent the independent auditor's report concludes that <customer_short_name> did comply in all material respects with the service eligibility criteria, BellSouth will reimburse <customer_short_name> for its reasonable and demonstrable costs associated with the audit, including, among other things, staff time. The Parties shall provide such reimbursement within thirty (30) calendar days of receipt from <customer_short_name> of a statement of such costs.

5.2.6.2.4 <customer_short_name> will maintain appropriate documentation to support its certifications.

5.3 <u>UNE Port/Loop Combinations</u>

- 5.3.1 Combinations of port and loop unbundled Network Elements along with switching and transport unbundled Network Elements provide local exchange service for the origination or termination of calls. Port/loop combinations support the same local calling and feature requirements as described in the Unbundled Local Switching Section of this Attachment and the ability to presubscribe to a primary carrier for intraLATA toll service and/or to presubscribe to a primary carrier for interLATA toll service.
- BellSouth is not required to provide combinations of port and loop Network Elements on an unbundled basis in locations where, pursuant to FCC and Commission rules, BellSouth is not required to provide local circuit switching as set forth in Section 4.2.2 above.
- 5.3.3 UNE Port/Loop combinations include but are not limited to the following:
- 5.3.3.1 2-wire voice grade Loop with 2-wire port.
- 5.3.3.2 2-wire voice grade Loop with 2-wire analog line_Coin port.

- 5.3.3.3 2-wire voice grade Loop business only with 2-wire_DID port.
- 5.3.3.4 2-wire CENTREX port, voice grade Loop with 2-wire voice grade port (CENTREX).
- 5.3.3.5 2-wire voice grade Loop with 2-wire ISDN digital line side port.
- 5.3.3.6 2-wire voice Loop with 2-wire voice grade interoffice transport with 2-wire line port
- 5.3.3.7 4-wire DS1 Loop with 4-wire ISDN DS1 digital trunk port.
- 5.3.3.8 4-wire DS1 Loop with 4-wire DDITS trunk port.
- 5.3.3.9 4-wire DS1 Loop with channelization with port.
- BellSouth shall make 911 updates in the BellSouth 911 database for <customer_short_name>'s UNE port/Loop combinations. BellSouth will not bill <customer_short_name> for 911 surcharges. <customer_short_name> is responsible for paying all 911 surcharges to the applicable governmental agency.
- 5.4 Rates
- 5.4.1 The rates for the Currently Combined Network Elements specifically set forth in Exhibit A of this Attachment shall be the rates associated with such combinations. Where a Currently Combined combination is not specifically set forth in Exhibit A of this Attachment, the rate for such Currently Combined combination of Network Elements shall be the sum of the recurring rates for those individual Network Elements in addition to the applicable non-recurring switch-as-is charge set forth in Exhibit A of this Attachment.
- 5.4.2 The rates for the Ordinarily Combined Network Elements specifically set forth in Exhibit A of this Attachment shall be the non-recurring and recurring charges for those combinations. Where an Ordinarily Combined combination is not specifically set forth in Exhibit A of this Attachment, the rate for such Ordinarily Combined combination of Network Elements shall be the sum of the recurring and non-recurring rates for those individual Network Elements as set forth in Exhibit A of this Attachment.
- 5.4.3 BellSouth shall provide other Currently Combined and Ordinarily Combined and Not Typically Combined UNE Combinations to <customer_short_name> in addition to those specifically referenced in this Section 5 above, where available. To the extent <customer_short_name> requests a combination for which BellSouth does not have rates and methods and procedures in place to provide such combination, rates and/or methods and procedures for such combination will be developed pursuant to the BFR process.

6 Transport, Channelization and Dark Fiber

- 6.1 Transport
- 6.1.1 BellSouth shall offer unbundled access to Dedicated Transport in accordance with 47 CFR 319(e). Dedicated Transport is defined as BellSouth's interoffice transmission facilities, dedicated to a particular customer or carrier that <customer_short_name> uses for transmission between wire centers or switches owned by BellSouth and within the same LATA. To the extent that BellSouth has local switching equipment, as defined by the FCC's rules, "reverse collocated" in a non-incumbent LEC premises, the transmission path from this point back to the BellSouth wire center shall constitute Dedicated Transport.
- 6.1.1.1 Dark Fiber Transport is unactivated optical Dedicated Transport as defined in Section 6.1.1 above.
- 6.1.1.2 Common (Shared) Transport is as defined in 47 C.F.R. 51.319(d)(4)(i)(C). Where BellSouth UNEs are connected by intraoffice wiring, such wiring is provided as part of the UNE and is not Common (Shared) Transport.
- 6.1.1.3 BellSouth will only provide unbundled access to Common (Shared) Transport to the extent BellSouth is required to provide and is providing unbundled Local Circuit Switching to <customer_short_name>.
- 6.1.2 BellSouth shall:
- 6.1.2.1 Provide <customer_short_name> exclusive use of Dedicated Transport to a particular customer or carrier, or shared use of the features, functions, and capabilities of interoffice transmission facilities shared by more than one customer or carrier;
- 6.1.2.2 Provide all technically feasible features, functions, and capabilities of the transport facility;
- 6.1.2.3 Permit, to the extent technically feasible, <customer_short_name> to connect such interoffice facilities to equipment designated by <customer_short_name>, including but not limited to, <customer_short_name>'s collocated facilities; and
- 6.1.2.4 Permit, to the extent technically feasible and on a nondiscriminatory basis, <customer_short_name> to obtain the functionality provided by BellSouth's digital cross-connect systems.
- 6.1.3 Technical Requirements of Common (Shared) Transport
- 6.1.3.1 Common (Shared) Transport provided on DS1, DS3, and STS-1 circuits shall at a minimum meet the performance, availability, jitter, and delay requirements specified for Central Office to Central Office (CO to CO) connections in the applicable industry standards.

- 6.1.3.2 BellSouth shall be responsible for the engineering, provisioning, and maintenance of the underlying equipment and facilities that are used to provide Common (Shared) Transport.
- 6.1.3.3 At a minimum, Common (Shared) Transport shall meet all of the requirements set forth in the applicable industry standards.
- 6.2 Dedicated Transport
- 6.2.1 BellSouth shall offer Dedicated Transport in each of the following ways:
- 6.2.1.1 As capacity on a shared facility.
- 6.2.1.2 As a circuit (e.g., DS0, DS1, DS3) dedicated to <customer_short_name>.
- 6.2.2 Dedicated Transport may be provided over facilities such as optical fiber, copper twisted pair, and coaxial cable, and shall include transmission equipment such as line terminating equipment, amplifiers, and regenerators.
- <customer_short_name> may obtain a maximum of twelve (12) unbundled dedicated DS3 circuits, or their equivalent, for any single route at the UNE rates set forth in Exhibit A of this Attachment for which dedicated DS3 transport is available as unbundled transport. Additional capacity may be purchased pursuant to the rates, terms and conditions as set forth in the applicable tariff. A route is defined as a transmission path between one of BellSouth's wire centers or switches and another of BellSouth's wire centers or switches. A route between two (2) points may pass through one or more intermediate wire centers or switches. Transmission paths between identical end points are the same "route", irrespective of whether they pass through the same intermediate wire centers or switches, if any.
- Any request to re-terminate one end of a circuit will require the issuance of new service and disconnection of the existing service and the applicable charges in Exhibit A of this Attachment shall apply, and the re-terminated circuit shall be considered a new circuit as of the installation date.
- 6.2.5 Technical Requirements
- 6.2.5.1 The entire designated transmission service (e.g., DS0, DS1, DS3) shall be dedicated to <customer_short_name> designated traffic.
- 6.2.5.2 For DS1 or DS3 circuits, Dedicated Transport shall at a minimum meet the performance, availability, jitter, and delay requirements specified for Customer Interface to Central Office (CI to CO) connections in the applicable industry standards.

- 6.2.5.3 BellSouth shall offer the following interface transmission rates for Dedicated Transport:
- 6.2.5.3.1 DS0 Equivalent;
- 6.2.5.3.2 DS1;
- 6.2.5.3.3 DS3; and
- 6.2.5.3.4 SDH (Synchronous Digital Hierarchy) Standard interface rates are in accordance with International Telecommunications Union (ITU) Recommendation G.707 and Plesiochronous Digital Hierarchy (PDH) rates per ITU Recommendation G.704.
- 6.2.5.4 BellSouth shall design Dedicated Transport according to its network infrastructure. <customer_short_name> shall specify the termination points for Dedicated Transport.
- 6.2.5.5 At a minimum, Dedicated Transport shall meet each of the requirements set forth in the applicable industry technical references.
- 6.2.5.6 <u>BellSouth Technical References</u>:
- 6.2.5.6.1 TR-TSY-000191 Alarm Indication Signals Requirements and Objectives, Issue 1, May 1986.
- 6.2.5.6.2 TR 73501 LightGate® Service Interface and Performance Specifications, Issue D, June 1995.
- 6.2.5.6.3 TR 73525 MegaLink® Service, MegaLink Channel Service and MegaLink Plus Service Interface and Performance Specifications, Issue C, May 1996.
- 6.3 Unbundled Channelization (Multiplexing)
- Unbundled Channelization (UC) provides the optional multiplexing capability that will allow a DS1 (1.544 Mbps) or DS3 (44.736 Mbps) or STS-1 (51.84 Mbps) UNE or collocation cross connect to be multiplexed or channelized at a BellSouth central office. Channelization can be accomplished through the use of a multiplexer or a digital cross connect system at the discretion of BellSouth. Once UC has been installed, <customer_short_name> may request channel activation on an as needed basis and BellSouth shall connect the requested facilities via Central Office Channel Interfaces (COCIs). The COCI must be compatible with the lower capacity facility and ordered with the lower capacity facility. This service is available as defined in NECA 4. Channelization may be incorporated within dedicated transport or ordered as a stand-alone capability, which requires either the high or low speed side to be connected to collocation.
- 6.3.2 BellSouth shall make available the following channelization systems and interfaces:

- 6.3.2.1 DS1 Channelization System: channelizes a DS1 signal into a maximum of twenty-four (24) DS0s. The following Central Office Channel Interfaces (COCI) are available: Voice Grade, Digital Data and ISDN.
- DS3 Channelization System: channelizes a DS3 signal into a maximum of twenty-eight (28) DS1s. A DS1 COCI is available with this system.
- 6.3.2.3 STS-1 Channelization System: channelizes a STS-1 signal into a maximum of twenty-eight (28) DS1s. A DS1 COCI is available with this system.
- 6.3.2.4 AMI and B8ZS line coding with either Super Frame (SF) and Extended Super Frame (ESF) framing formats will be supported as an optional feature on DS1 facilities.
- 6.3.3 <u>Technical Requirements</u>
- 6.3.3.1 In order to assure proper operation with BellSouth provided central office multiplexing functionality, <customer_short_name>'s channelization equipment must adhere strictly to form and protocol standards. <customer_short_name> must also adhere to such applicable industry standards for the multiplex channel bank, for voice frequency encoding, for various signaling schemes, and for sub rate digital access.
- 6.3.3.2 TR 73501 LightGate[®] Service Interface and Performance Specifications, Issue D, June 1995
- 6.4 Dark Fiber Transport
- 6.4.1 BellSouth shall make Dark Fiber Transport available in accordance with FCC Rule 51.319 (e)(3). Dark Fiber Transport consists of unactivated optical interoffice transmission facilities existing in aerial or underground structure.
- 6.4.2 [Parties Disagree]

[<<customer_short_name Version] <customer_short_name> may splice and test Dark Fiber Transport obtained from BellSouth, at any technically feasible point, using CLEC or CLEC designated personnel. BellSouth shall provide appropriate interfaces to allow splicing and testing of Dark Fiber.

[BellSouth Version] <customer_short_name> may test Dark Fiber Transport obtained from BellSouth using CLEC or CLEC designated personnel. BellSouth shall provide appropriate interfaces to allow <customer_short_name> to test Dark Fiber.

- 6.4.3 Requirements
- 6.4.3.1 BellSouth shall make available in a reasonable and nondiscriminatory manner_Dark Fiber Transport where it exists in BellSouth's network and where, as a result of

future building or deployment, it becomes available. Dark Fiber Transport will not be deemed available if (1) it is used by BellSouth for maintenance and repair purposes, (2) it is designated for use pursuant to a firm order placed by another customer, (3) it is restricted for use by all carriers, including BellSouth, because of transmission problems or because it is scheduled for removal due to documented changes to roads and infrastructure, or (4) BellSouth has plans to use the fiber within a two-year planning period. BellSouth is not required to place fibers for Dark Fiber Transport if there are none available.

- 6.4.3.2 <customer_short_name> may test the quality of the Dark Fiber Transport to
 determine its usability and performance specifications.
- 6.4.3.3 BellSouth shall use its best efforts to provide to <customer_short_name> information regarding the location, availability and performance of Dark Fiber Transport within ten (10) business days after receiving a request from <customer_short_name>. Within such time period, BellSouth shall send written confirmation of availability of the Dark Fiber Transport.
- 6.4.3.4 If the requested Dark Fiber Transport is available, BellSouth shall use its commercially reasonable efforts to provision the Dark Fiber Transport to <customer_short_name> within twenty (20) business days after <customer_short_name> submits a valid, error free LSR. Provisioning includes identification of appropriate connection points (e.g., LGX) to enable <customer_short_name> to connect <customer_short_name> provided transmission media (e.g., optical fiber) or equipment to the Dark Fiber Transport.
- 6.4.3.5 If requested dark fiber has any lightwave repeater equipment interspliced to it, BellSouth will remove such equipment at <customer_short_name>'s request subject to time and materials charges.
- 6.4.4 If deployed in BellSouth's network, on a case by case basis, BellSouth may provide wave division multiplexer ("WDM") applications at rates to be negotiated by the Parties. For WDM applications, BellSouth shall provide to <customer_short_name> an interface to an existing WDM device or allow <customer_short_name> to install its own WDM device (where sufficient system loss margins exist or where <customer_short_name> provides the necessary loss compensation) to multiplex the traffic at wavelengths. This applies to both the transmit and the receive ends of the Dark Fiber.

7 Service Control Points (SCPs)/Databases

- 7.1 911 and E911 databases. BellSouth shall provide <customer_short_name> with nondiscriminatory access to 911 and E911 databases on an unbundled basis, in accordance with 47 CFR 319(f).
- 7.2 [Parties Disagree]

[<customer_short_name> Version] Call Related Databases are the databases other than OSS, that are used in signaling networks for billing and collection, or the transmission, routing or other provision of a telecommunications service. BellSouth shall only provide unbundled access to BellSouth Switched Access (SWA) 8XX Toll Free Dialing Ten Digit Screening Service, Line Information Database (LIDB), Signaling, Signaling Link Transport, Signaling Transfer Points, SS7 AIN Access, Service Control Point\Databases, Local Number Portability Databases, SS7 Network Interconnection, and Calling Name (CNAM) Database Service at the prices set forth herein where BellSouth is required to provide and is providing unbundled access to local circuit switching to <customer_short_name>. SS7 Network Interconnection and Signaling Link Transport shall be provided at the TELRIC-compliant, Commission approved rates set forth in Exhibit A of Attachment 3, regardless of whether BellSouth is required to provide and is providing unbundled access to local circuit switching to <customer short name>.

[BellSouth Version] Call Related Databases are the databases set forth in this Attachment, other than OSS, that are used in signaling networks for billing and collection, or the transmission, routing or other provision of a telecommunications service. Notwithstanding anything to the contrary herein, BellSouth shall only provide unbundled access to BellSouth Switched Access (SWA) 8XX Toll Free Dialing Ten Digit Screening Service, Line Information Database (LIDB), Signaling, Signaling Link Transport, Signaling Transfer Points, SS7 AIN Access, Service Control Point\Databases, Local Number Portability Databases, SS7 Network Interconnection, and Calling Name (CNAM) Database Service at the prices set forth herein where BellSouth is required to provide and is providing unbundled access to local circuit switching to <customer_short_name>.

7.3 [Parties Disagree]

[<customer_short_name> Version] To the extent unbundled local circuit switching is converted to market based switching pursuant to Section 4.2.2 above, BellSouth may, at its discretion, provide access to BellSouth Switched Access (SWA) 8XX Toll Free Dialing Ten Digit Screening Service, LIDB, Signaling, Signaling Transfer Points, SS7 AIN Access, Service Control Point\Databases, Local Number Portability Databases, Calling Name (CNAM) at market based rates pursuant to a separate agreement or tariff.

[BellSouth Version] To the extent unbundled local circuit switching is converted to market based switching pursuant to Section 4.2.2 above, BellSouth may, at its discretion, provide access to BellSouth Switched Access (SWA) 8XX Toll Free Dialing Ten Digit Screening Service, LIDB, Signaling, Signaling Link Transport, Signaling Transfer Points, SS7 AIN Access, Service Control Point\Databases, Local Number Portability Databases, SS7 Network Interconnection, Calling Name (CNAM) at market based rates pursuant to a separate agreement or tariff.

7.4 [Parties Disagree]

[<customer_short_name> Version] The Parties agree that they will perform CNAM queries and pass such information on all calls exchanged between the Parties, regardless of whether that would require BellSouth to query a third party database provider.

[BellSouth Version] Nothing in this Agreement will be construed to require BellSouth to query a third party database. Should BellSouth query a third party database then it will be performed subject to a separate agreement. If BellSouth terminates an agreement with a third party database provider, then BellSouth will provide notice pursuant to a carrier notification letter to the CLECs.

7.5 Service management systems are defined as computer databases or systems not part of the public switched network that interconnect to the service control point and send to the service control point information and call processing instructions needed for a network switch to process and complete a telephone call, and provide a telecommunications carrier with the capability of entering and storing data regarding the processing and completing of a telephone call. Where <customer_short_name> purchases unbundled local circuit switching BellSouth, BellSouth shall allow <customer_short_name> carrier to use BellSouth's service management systems by providing <customer_short_name> with the information necessary to enter correctly, or format for entry, the information relevant for input into the BellSouth's service management system, including access to design, create, test, and deploy advanced intelligent network-based services at the service management system, through a service creation environment, that BellSouth provides to itself.

8 Toll Free Number Database / BellSouth Switched Access (SWA) 8XX Toll Free Dialing Ten Digit Screening Service

- 8.1 The BellSouth SWA 8XX Toll Free Dialing Ten Digit Screening Service database (8XX SCP Database) is a SCP that contains customer record information and the functionality to provide call-handling instructions for 8XX calls. The 8XX SCP IN software stores data downloaded from the national SMS/8XX database and provides the routing instructions in response to queries from the SSP or tandem. The BellSouth SWA 8XX Toll Free Dialing Ten Digit Screening Service (8XX TFD Service) utilizes the 8XX SCP Database to provide identification and routing of the 8XX calls, based on the ten digits dialed. At <customer_short_name>'s option, 8XX TFD Service is provided with or without POTS number delivery, dialing number delivery, and other optional complex features as selected by <customer_short_name>.
- 8.2 The 8XX SCP Database is designated to receive and respond to queries using the ANSI Specification of Signaling System Seven (SS7) protocol.

8.3 BellSouth provides four (4) options of this service, two (2) that provide POTS number delivery and two (2) that provide Toll Free Dialing Number Delivery.

9 Line Information Database

- 9.1 LIDB is a transaction-oriented database accessible through Common Channel Signaling (CCS) networks. For access to LIDB, <customer_short_name> must purchase appropriate signaling links pursuant to Section 10 below. LIDB contains records associated with End User Line Numbers and Special Billing Numbers. LIDB accepts queries from other Network Elements and provides appropriate responses. The query originator need not be the owner of LIDB data. LIDB queries include functions such as screening billed numbers that provides the ability to accept Collect or Third Number Billing calls and validation of Telephone Line Number based non-proprietary calling cards. The interface for the LIDB functionality is the interface between BellSouth's CCS network and other CCS networks. LIDB also interfaces to administrative systems.
- 9.2 Technical Requirements
- 9.2.1 BellSouth will offer to <customer_short_name> any additional capabilities that are developed for LIDB during the life of this Agreement.
- 9.2.2 BellSouth shall process <customer_short_name>'s customer records in LIDB at least at parity with BellSouth customer records, with respect to other LIDB functions. BellSouth shall indicate to <customer_short_name> what additional functions (if any) are performed by LIDB in the BellSouth network.
- 9.2.3 Within two (2) weeks after a request by <customer_short_name>, BellSouth shall provide <customer_short_name> with a list of the customer data items, which <customer_short_name> would have to provide in order to support each required LIDB function. The list shall indicate which data items are essential to LIDB function and which are required only to support certain services. For each data item, the list shall show the data formats, the acceptable values of the data item and the meaning of those values.
- 9.2.4 BellSouth shall provide LIDB systems for which operating deficiencies that would result in calls being blocked shall not exceed thirty (30) minutes per year.
- 9.2.5 BellSouth shall provide LIDB systems for which operating deficiencies that would not result in calls being blocked shall not exceed twelve (12) hours per year.
- 9.2.6 BellSouth shall provide LIDB systems for which the LIDB function shall be in overload no more than twelve (12) hours per year.
- 9.2.7 All additions, updates and deletions of <customer_short_name> data to the LIDB shall be solely at the direction of <customer_short_name>. Such direction from <customer_short_name> will not be required where the addition, update or

deletion is necessary to perform standard fraud control measures (e.g., calling card auto-deactivation).

- 9.2.8 BellSouth shall provide priority updates to LIDB for <customer_short_name> data upon <customer_short_name>'s request (e.g., to support fraud detection), via password-protected telephone card, facsimile, or electronic mail within one hour of notice from the established BellSouth contact.
- 9.2.9 BellSouth shall provide LIDB systems such that no more than 0.01% of <customer_short_name> customer records will be missing from LIDB, as measured by <customer_short_name> audits. BellSouth will audit <customer_short_name> records in LIDB against Data Base Administration System (DBAS) to identify record mismatches and provide this data to a designated <customer_short_name> contact person to resolve the status of the records and BellSouth will update system appropriately. BellSouth will refer record of mismatches to <customer_short_name> within one (1) business day of audit. Once reconciled records are received back from <customer_short_name>, BellSouth will update LIDB the same business day if less than 500 records are received before 1:00PM Central Time. If more than 500 records are received, BellSouth will contact <customer_short_name> to negotiate a time frame for the updates, not to exceed three (3) business days.
- 9.2.10 BellSouth shall perform backup and recovery of all of <customer_short_name>'s data in LIDB including sending to LIDB all changes made since the date of the most recent backup copy, in at least the same time frame BellSouth performs backup and recovery of BellSouth data in LIDB for itself. Currently, BellSouth performs backups of the LIDB for itself on a weekly basis; and when a new software release is scheduled, a backup is performed prior to loading the new release.
- 9.2.11 BellSouth shall provide <customer_short_name> with LIDB reports of data which are missing or contain errors, as well as any misrouted errors, within a reasonable time period as negotiated between <customer_short_name> and BellSouth.
- 9.2.12 BellSouth shall prevent any access to or use of <customer_short_name> data in LIDB by BellSouth personnel that are outside of established administrative and fraud control personnel, or by any other Party that is not authorized by <customer_short_name> in writing.
- 9.2.13 BellSouth shall provide <customer_short_name> performance of the LIDB Data Screening function, which allows a LIDB to completely or partially deny specific query originators access to LIDB data owned by specific data owners, for Customer Data that is part of an NPA-NXX or RAO-0/1XX wholly or partially owned by <customer_short_name> at least at parity with BellSouth Customer Data. BellSouth shall obtain from <customer_short_name> the screening information associated with LIDB Data Screening of <customer_short_name>

data in accordance with this requirement. BellSouth currently does not have LIDB Data Screening capabilities. When such capability is available, BellSouth shall offer it to <customer_short_name> under the BFR/NBR process as set forth in Attachment 11.

- 9.2.14 BellSouth shall accept queries to LIDB associated with <customer_short_name> customer records and shall return responses in accordance with industry standards.
- 9.2.15 BellSouth shall provide mean processing time at the LIDB within 0.50 seconds under normal conditions as defined in industry standards.
- 9.2.16 BellSouth shall provide processing time at the LIDB within 1 second for 99% of all messages under normal conditions as defined in industry standards.
- 9.3 Interface Requirements
- 9.3.1 BellSouth shall offer LIDB in accordance with the requirements of this subsection.
- 9.3.2 The interface to LIDB shall be in accordance with the technical references contained within.
- 9.3.3 The CCS interface to LIDB shall be the standard interface described herein.
- 9.3.4 The LIDB Data Base interpretation of the ANSI-TCAP messages shall comply with the technical reference herein. Global Title Translation (GTT) shall be maintained in the signaling network in order to support signaling network routing to the LIDB.
- 9.3.5 [Parties Disagree]

[<customer short name> Version] No Section.

[BellSouth Version] The application of the LIDB rates contained in Exhibit A of this Attachment will be based on a Percent CLEC LIDB Usage (PCLU) factor. <customer_short_name> shall provide BellSouth a PCLU. The PCLU will be applied to determine the percentage of total LIDB usage to be billed to the other Party at local rates. <customer_short_name> shall update its PCLU on the first of January, April, July and October and shall send it to BellSouth to be received no later than thirty (30) calendar days after the first of each such month based on local usage for the past three months ending the last day of December, March, June and September, respectively. Requirements associated with PCLU calculation and reporting shall be as set forth in BellSouth's Jurisdictional Factors Reporting Guide, as it is amended from time to time.

10 Signaling

10.1 BellSouth shall offer access to signaling and access to BellSouth's signaling databases subject to compatibility testing and at the rates set forth in Exhibit A of this Attachment. BellSouth may provide mediated access to BellSouth signaling systems and databases. Available signaling elements include signaling links, signal transfer points and service control points. Signaling functionality will be available with both A-link and B-link connectivity. 10.2 Signaling Link Transport 10.2.1 Signaling Link Transport is a set of two (2) or four (4) dedicated 56 kbps transmission paths between <customer short name> designated Signaling Points of Interconnection that provide appropriate physical diversity. 10.2.2 **Technical Requirements** 10.2.3 Signaling Link Transport shall consist of full duplex mode 56 kbps transmission paths and shall perform in the following two ways: 10.2.3.1 As an "A-link" Signaling Link Transport is a connection between a switch or SCP and a home Signaling Transfer Point switch pair; and 10.2.3.2 As a "B-link" Signaling Link Transport is a connection between two Signaling Transfer Point switch pairs in different company networks (e.g., between two Signaling Transfer Point switch pairs for two CLECs). 10.2.4 Signaling Link Transport shall consist of two (2) or more signaling link layers as follows: 10.2.4.1 An A-link layer shall consist of two (2) links. There shall be no more than two minutes down time per year for an A-link layer. A B-link layer shall consist of four (4) links. There shall be negligible (less than 2 10.2.4.2 seconds) down time per year for a B-link layer. A signaling link layer shall satisfy interoffice and intraoffice diversity of facilities and equipment, such that: 10.2.4.2.1 No single failure of facilities or equipment causes the failure of both links in an Alink layer (i.e., the links should be provided on a minimum of two (2) separate physical paths end-to-end); and 10.2.4.2.2 No two (2) concurrent failures of facilities or equipment shall cause the failure of all four (4) links in a B-link layer (i.e., the links should be provided on a minimum of three separate physical paths end-to-end).

10.2.5

Interface Requirements

- 10.2.5.1 There shall be a DS1 (1.544 Mbps) interface at <customer_short_name>'s designated SPOIs. Each 56 kbps transmission path shall appear as a DS0 channel within the DS1 interface.
- 10.3 Signaling Transfer Points
- 10.3.1 A STP is a signaling network function that includes all of the capabilities provided by the signaling transfer point switches (STPS) and their associated signaling links that enables the exchange of SS7 messages among and between switching elements, database elements and STPSs.
- 10.3.2 Technical Requirements
- 10.3.2.1 STPs shall provide access to BellSouth Local Switching or Tandem Switching and to BellSouth Service Control Points/Databases connected to BellSouth SS7 network. STPs also provide access to third-party local or tandem switching and third-party-provided STPs.
- 10.3.2.2 The connectivity provided by STPs shall fully support the functions of all other Network Elements connected to the BellSouth SS7 network. This includes the use of the BellSouth SS7 network to convey messages that neither originate nor terminate at a signaling end point directly connected to the BellSouth SS7 network (i.e., transit messages). When the BellSouth SS7 network is used to convey transit messages, there shall be no alteration of the Integrated Services Digital Network User Part or Transaction Capabilities Application Part (TCAP) user data that constitutes the content of the message.
- If a BellSouth tandem switch routes traffic, based on dialed or translated digits, on SS7 trunks between a <customer_short_name> local switch and third party local switch, the BellSouth SS7 network shall convey the TCAP messages that are necessary to provide Call Management features (Automatic Callback, Automatic Recall, and Screening List Editing) between <customer_short_name> local STPs and the STPs that provide connectivity with the third party local switch, even if the third party local switch is not directly connected to BellSouth STPs.
- 10.3.2.4 STPs shall provide all functions of the SCCP necessary for Class 0 (basic connectionless) service as defined in Telcordia ANSI Interconnection Requirements. This includes GTT and SCCP Management procedures, as specified in ANSI T1.112.4. Where the destination signaling point is a <customer_short_name> or third party local or tandem switching system directly connected to BellSouth SS7 network, BellSouth shall perform final GTT of messages to the destination and SCCP Subsystem Management of the destination. In all other cases, BellSouth shall perform intermediate GTT of messages to a gateway pair of STPs in an SS7 network connected with BellSouth SS7 network and shall not perform SCCP Subsystem Management of the destination. If BellSouth performs final GTT to a <customer_short_name> database, then

<customer_short_name> agrees to provide BellSouth with the Destination Point
Code for <customer_short_name> database.

- STPs shall provide all functions of the Operations, Maintenance and Administration Part (OMAP) as specified in applicable industry standard technical references, which may include, where available in BellSouth's network, MTP Routing Verification Test (MRVT) and SCCP Routing Verification Test (SRVT).
- 10.3.2.6 Where the destination signaling point is a BellSouth local or tandem switching system or database, or is a <customer_short_name> or third party local or tandem switching system directly connected to the BellSouth SS7 network, STPs shall perform MRVT and SRVT to the destination signaling point. In all other cases, STPs shall perform MRVT and SRVT to a gateway pair of STPs in an SS7 network connected with the BellSouth SS7 network. This requirement may be superseded by the specifications for Internetwork MRVT and SRVT when these become approved ANSI standards and available capabilities of BellSouth STPs.
- 10.3.2.7
 customer_short_name>'s signaling information (e.g., ISUP, TSAP) from customer_short_name>'s signaling network to another LECs or CMRS provider's signaling network via BellSouth's signaling network for the purpose of exchanging call processing/network information between customer_short_name> and the other LEC's or CMRS provider's network, whether or not BellSouth has a trunk to the terminating switching, provided that, where BellSouth does not have such a trunk, customer_short_name> furnishes BellSouth with:
- the destination point codes ("DPCs") of all the LEC or CMRS provider switches to which it wishes to send transit signaling;
- the identify of the STPs in BellSouth's network in which each DPC will be translated; and
- the identity of the STPs in the other signaling network to which such transit signaling will be sent.
- 10.4 SS7 Advanced Intelligent Network (AIN) Access
- When technically feasible and upon request by <customer_short_name>, SS7 AIN Access shall be made available in association with switching. SS7 AIN Access is the provisioning of AIN 0.1 triggers in an equipped BellSouth local switch and interconnection of the BellSouth SS7 network with <customer_short_name>'s SS7 network to exchange TCAP queries and responses with a <customer_short_name> SCP.
- 10.4.2 SS7 AIN Access shall provide <customer_short_name> SCP access to an equipped BellSouth local switch via interconnection of BellSouth's SS7 and <customer_short_name> SS7 Networks. BellSouth shall offer SS7 AIN Access

through its STPs. If BellSouth requires a mediation device on any part of its network specific to this form of access, BellSouth must route its messages in the same manner. The interconnection arrangement shall result in the BellSouth local switch recognizing the <customer_short_name> SCP as at least at parity with BellSouth's SCPs in terms of interfaces, performance and capabilities.

- 10.4.3 Interface Requirements
- 10.4.3.1 BellSouth shall provide the following STP options to connect <customer_short_name> or <customer_short_name>-designated local switching systems to the BellSouth SS7 network:
- 10.4.3.1.1 An A-link interface from <customer_short_name> local switching systems; and,
- 10.4.3.1.2 A B-link interface from <customer_short_name> local STPs.
- Each type of interface shall be provided by one or more layers of signaling links.
- 10.4.3.3 The Signaling Point of Interconnection for each link shall be located at a cross-connect element in the CO where the BellSouth STP is located. There shall be a DS1 or higher rate transport interface at each of the SPOIs. Each signaling link shall appear as a DS0 channel within the DS1 or higher rate interface.
- 10.4.3.4 BellSouth shall provide intraoffice diversity between the SPOI and BellSouth STPs so that no single failure of intraoffice facilities or equipment shall cause the failure of both B-links in a layer connecting to a BellSouth STP.
- 10.4.3.5 STPs shall provide all functions of the MTP as defined in the applicable industry standard technical references.
- 10.4.4 Message Screening
- 10.4.4.1 BellSouth shall set message screening parameters so as to accept valid messages from <customer_short_name> local or tandem switching systems destined to any signaling point within BellSouth's SS7 network where the <customer_short_name> switching system has a valid signaling relationship.
- BellSouth shall set message screening parameters so as to pass valid messages from <customer_short_name> local or tandem switching systems destined to any signaling point or network accessed through BellSouth's SS7 network where the <customer_short_name> switching system has a valid signaling relationship.
- BellSouth shall set message screening parameters so as to accept and pass/send valid messages destined to and from <customer_short_name> from any signaling point or network interconnected through BellSouth's SS7 network where the <customer_short_name> SCP has a valid signaling relationship.

- 10.5 Service Control Points (SCP)/Databases
- 10.5.1 Call Related Databases provide the storage of, access to, and manipulation of information required to offer a particular service and/or capability. BellSouth shall provide access to the following Databases: Local Number Portability, LIDB, Toll Free Number Database, Automatic Location Identification/Data Management System, and Calling Name Database. BellSouth also provides access to Service Creation Environment and Service Management System (SCE/SMS) application databases and Directory Assistance.
- 10.5.2 A SCP is deployed in a SS7 network that executes service application logic in response to SS7 queries sent to it by a switching system also connected to the SS7 network. Service Management Systems provide operational interfaces to allow for provisioning, administration and maintenance of subscriber data and service application data stored in SCPs.
- 10.5.3 Technical Requirements for SCPs/Databases
- BellSouth shall provide physical access to SCPs through the SS7 network and protocols with TCAP as the application layer protocol.
- BellSouth shall provide physical interconnection to databases via industry standard interfaces and protocols (e.g. SS7, ISDN and X.25).
- 10.5.3.3 The reliability of interconnection options shall be consistent with requirements for diversity and survivability.
- 10.6 Database Availability
- 10.6.1 Call processing databases shall have a maximum unscheduled availability of 30 minutes per year. Unavailability due to software and hardware upgrades shall be scheduled during minimal usage periods and only be undertaken upon proper notification to providers, which might be impacted. Any downtime associated with the provision of call processing related databases will impact all service providers, including BellSouth, equally.
- The operational interface provided by BellSouth shall complete Database transactions (i.e., add, modify, delete) for NewSouth customer records stored in BellSouth databases within three (3) business days, or sooner where BellSouth provisions its own customer records within a shorter interval.
- 10.7 Local Number Portability Database
- 10.7.1 The Permanent Number Portability (PNP) database supplies routing numbers for calls involving numbers that have been ported from one local service provider to another. BellSouth agrees to provide access to the PNP database at rates, terms

and conditions as set forth by BellSouth and in accordance with an effective FCC or Commission directive.

- 10.8 SS7 Network Interconnection
- 10.8.1 SS7 Network Interconnection is the interconnection of <customer_short_name> local signaling transfer point switches or <customer_short_name> local or tandem switching systems with BellSouth signaling transfer point switches. This interconnection provides connectivity that enables the exchange of SS7 messages among BellSouth switching systems and databases, <customer_short_name> local or tandem switching systems, and other third-party switching systems directly connected to the BellSouth SS7 network.
- The connectivity provided by SS7 Network Interconnection shall fully support the functions of BellSouth switching systems and databases and <customer_short_name> or other third-party switching systems with A-link access to the BellSouth SS7 network.
- 10.8.3 If traffic is routed based on dialed or translated digits between a
 <customer_short_name> local switching system and a BellSouth or other thirdparty local switching system, either directly or via a BellSouth tandem switching
 system, then it is a requirement that the BellSouth SS7 network convey via SS7
 Network Interconnection the TCAP messages that are necessary to provide Call
 Management services (Automatic Callback, Automatic Recall, and Screening List
 Editing) between the <customer_short_name> local signaling transfer point
 switches and BellSouth or other third-party local switch.
- 10.8.4 SS7 Network Interconnection shall provide:
- 10.7.4.1 Signaling Data Link functions, as specified in ANSI T1.111.2;
- 10.7.4.2 Signaling Link functions, as specified in ANSI T1.111.3; and
- 10.7.4.3 Signaling Network Management functions, as specified in ANSI T1.111.4.
- 10.7.5 SS7 Network Interconnection shall provide all functions of the SCCP necessary for Class 0 (basic connectionless) service as specified in ANSI T1.112. This includes GTT and SCCP Management procedures as specified in ANSI T1.112.4. Where the destination signaling point is a BellSouth switching system or DB, or is another third-party local or tandem switching system directly connected to the BellSouth SS7 network, SS7 Network Interconnection shall include final GTT of messages to the destination and SCCP Subsystem Management of the destination. Where the destination signaling point is a <customer_short_name> local or tandem switching system, SS7 Network Interconnection shall include intermediate GTT of messages to a gateway pair of <customer_short_name> local STPs and shall not include SCCP Subsystem Management of the destination.

10.7.6 SS7 Network Interconnection shall provide all functions of the Integrated Services Digital Network User Part as specified in ANSI T1.113. 10.7.7 SS7 Network Interconnection shall provide all functions of the TCAP as specified in ANSI T1.114. 10.7.8 If Internetwork MRVT and SRVT become approved ANSI standards and available capabilities of BellSouth STPs, SS7 Network Interconnection may provide these functions of the OMAP. 10.7.9 **Interface Requirements** 10.7.9.1 The following SS7 Network Interconnection interface options are available to connect <customer short name> or <customer short name>-designated local or tandem switching systems or signaling transfer point switches to the BellSouth SS7 network: 10.7.9.1.1 A-link interface from <customer_short_name> local or tandem switching systems; and 10.7.9.1.2 B-link interface from <customer_short_name> STPs. 10.7.9.2 The Signaling Point of Interconnection for each link shall be located at a crossconnect element in the central office where the BellSouth STP is located. There shall be a DS1 or higher rate transport interface at each of the Signaling Points of interconnection. Each signaling link shall appear as a DS0 channel within the DS1 or higher rate interface. 10.7.9.3 BellSouth shall provide intraoffice diversity between the Signaling Points of Interconnection and the BellSouth STP, so that no single failure of intraoffice facilities or equipment shall cause the failure of both B-links in a layer connecting to a BellSouth STP. 10.7.9.4 The protocol interface requirements for SS7 Network Interconnection include the MTP, ISDNUP, SCCP, and TCAP. These protocol interfaces shall conform to the applicable industry standard technical references. 10.7.9.5 BellSouth shall set message screening parameters to accept messages from <customer short name> local or tandem switching systems destined to any signaling point in the BellSouth SS7 network with which the <customer_short_name> switching system has a valid signaling relationship. 10.7.9.6 SS7 Network Interconnection shall be equal to or better than all of the requirements for SS7 Network Interconnection set forth in the applicable industry standard technical references. 11

Automatic Location Identification / Data Management System (ALI/DMS)

- The ALI/DMS Database contains End User information (including name, address, telephone information, and sometimes special information from the local service provider or End User) used to determine to which PSAP to route the call. The ALI/DMS database is used to provide enhanced routing flexibility for E911. <customer_short_name> will be required to provide BellSouth daily updates to the E911 database. <customer_short_name> shall also be responsible for providing BellSouth with complete and accurate data for submission to the 911/E911 database for the purpose of providing 911/E911 service to <customer_short_name>'s End Users.
- 11.2 Technical Requirements
- BellSouth shall provide <customer_short_name> the capability of providing updates to the ALI/DMS database. BellSouth shall provide error reports from the ALI/DMS database to <customer_short_name> after <customer_short_name> provides End User information for input into the ALI/DMS database.
- 11.2.2 <customer_short_name> shall conform to the National Emergency Number
 Association (NENA) recommended standards for LNP and updating the ALI/DMS
 database.

12 Calling Name Database Service

- 12.1 CNAM is the ability to associate a name with the calling party number, allowing the End User (to which a call is being terminated) to view the calling party's name before the call is answered. The calling party's information is accessed by queries launched to the CNAM database. This service also provides <customer_short_name> the opportunity to load and store its subscriber names in the BellSouth CNAM SCPs.
- 12.2 <ustomer_short_name> shall submit to BellSouth a notice of its intent to access and utilize BellSouth CNAM Database Services. Said notice shall be in writing no less than sixty (60) calendar days prior to <customer_short_name>'s access to BellSouth's CNAM Database Services and shall be addressed to <customer_short_name>'s Local Contract Manager.
- BellSouth's provision of CNAM Database Services to <customer_short_name> requires interconnection from <customer_short_name> to BellSouth CNAM SCPs. Such interconnections shall be established pursuant to Attachment 3 of this Agreement.
- In order to formulate a CNAM query to be sent to the BellSouth CNAM SCP, <customer_short_name> shall provide its own CNAM SSP.
 <customer_short_name>'s CNAM SSPs must be compliant with TR-NWT-001188, "CLASS Calling Name Delivery Generic Requirements".

- If <customer_short_name> elects to access the BellSouth CNAM SCP via a third party CCS7 transport provider, the third party CCS7 provider shall interconnect with the BellSouth CCS7 network according to BellSouth's Common Channel Signaling Interconnection Guidelines and Telcordia's CCS Network Interface Specification document, TR-TSV-000905. In addition, the third party provider shall establish CCS7 interconnection at the BellSouth Local Signal Transfer Points (LSTPs) serving the BellSouth CNAM SCPs that <customer_short_name> desires to query.
- 12.6 If <customer_short_name> queries the BellSouth CNAM SCP via a third party national SS7 transport provider, the third party SS7 provider shall interconnect with the BellSouth CCS7 network according to BellSouth's Common Channel Signaling Interconnection Guidelines and Telcordia's CCS Network Interface Specification document, TR-TSV-000905. In addition, the third party provider shall establish SS7 interconnection at one or more of the BellSouth Gateway STPs. The payment of all costs associated with the transport of SS7 signals via a third party will be established by BellSouth and the third party or by mutual agreement of the Parties.
- 12.7 The mechanism to be used by <customer_short_name> for initial CNAM record load and/or updates shall be determined by mutual agreement. The initial load and all updates shall be provided by <customer_short_name> in the BellSouth specified format and shall contain records for every working telephone number that can originate phone calls. It is the responsibility of <customer_short_name> to provide accurate information to BellSouth on a current basis.
- 12.8 Updates to the SMS shall occur no less than once a week, reflect service order activity affecting either name or telephone number, and involve only record additions, deletions or changes.
- 12.9 ccnAM records provided for storage in the BellSouth CNAM SCP shall be available, on a SCP query basis only, to all Parties querying the BellSouth CNAM SCP. Further, CNAM service shall be provided by each Party consistent with state and/or federal regulation.
- Service Creation Environment and Service Management System (SCE/SMS)
 Advanced Intelligent Network Access (AIN Tool Kit)
- BellSouth's AIN Tool Kit shall provide <customer_short_name> the capability to create service applications in a BellSouth SCE and deploy those applications in a BellSouth SMS to a BellSouth SCP.
- BellSouth's AIN Tool Kit shall provide access to SCE hardware, software, testing and technical support (e.g., help desk, system administrator) resources available to <customer_short_name>. Training, documentation, and technical support will address use of SCE and SMS access and administrative functions but will not

include support for the creation of a specific service application. Scheduling procedures shall provide <customer_short_name> with access at parity to these resources.

- 13.3 BellSouth SCP shall partition and protect <customer_short_name> service logic and data from unauthorized access.
- When <customer_short_name> selects AIN Tool Kit, BellSouth shall provide training, documentation, and technical support to enable <customer_short_name> to use BellSouth's AIN Tool Kit to create and administer applications.
- 13.5 ccess will be provided via remote data connection (e.g., dial-in, ISDN).
- BellSouth shall allow <customer_short_name> to download data forms and/or tables to BellSouth SCP via BellSouth SMS without intervention from BellSouth.

14 Operational Support Systems (OSS)

14.1 [Parties Disagree]

[<<customer_short_nasme>> Version] BellSouth shall provide
<customer_short_name> with nondiscriminatory access to operations support
systems on an unbundled basis, in accordance with 47 CFR 51.319(g) and as set
forth in Attachment 6. Operations support system ("OSS") functions consist
of pre-ordering, ordering, provisioning, maintenance and repair, and billing
functions supported by BellSouth's databases and information. BellSouth, as
part of its duty to provide access to the pre-ordering function, shall provide
<customer_short_name> with nondiscriminatory access to the same detailed
information about the loop that is available to BellSouth.

[BellSouth Version] BellSouth shall provide <customer_short_name> with nondiscriminatory access to operations support systems on an unbundled basis, in accordance with Attachment 6.

- 14.2 Denial/Restoral OSS Charge
- In the event <customer_short_name> provides a list of customers to be denied and restored, rather than an LSR, each location on the list will require a separate PON and therefore will be billed as one LSR per location.
- 14.3 Cancellation OSS Charge
- 14.3.1 <customer_short_name> will incur an OSS charge for an accepted LSR that is
 later canceled.

- Supplements or clarifications to a previously billed LSR will not incur another OSS charge.
- 14.5 Network Elements and Other Services Manual Additive
- 14.6 The Commissions in some states have ordered per element manual additive nonrecurring charges (NRC) for Network Elements and Other Services ordered by means other than one of the interactive interfaces. These ordered Network Elements and Other Services manual additive NRCs will apply in these states, rather than the charge per LSR. The per element charges are listed in Exhibit A of this Attachment.
