NETWORK INTERCONNECTION

1. GENERAL

1.1 The Parties shall provide interconnection with each other's networks for the transmission and routing of telephone exchange service (Local Traffic), ISP-bound Traffic, and exchange access (Switched Access Traffic) on the following terms:

2. DEFINITIONS: (FOR THE PURPOSE OF THIS ATTACHMENT)

For purposes of this attachment only, the following terms shall have the definitions set forth below:

- 2.1 **Automatic Location Identification (ALI)** is a feature by which the address associated with the calling party's telephone number (ANI) is forwarded to the PSAP for display. Access to the ALI database is described in Attachment 2 to this Agreement.
- 2.2 **Automatic Number Identification (ANI)** corresponds to the seven-digit telephone number assigned by the serving local exchange carrier.
- 2.3 **Basic 911 Service (B911)** routes a call to one centralized answering location. The attendant at the answering location obtains the pertinent information that identifies the call and the caller's needs. The attendant then determines the appropriate agency and dials a 7-digit number to transfer the caller to that agency. The calling party's emergency information is verbally relayed to the responding agency and a unit is dispatched to the caller's location.
- 2.4 **Call Termination** has the meaning set forth for "termination" in 47CFR § 51.701(d).
- 2.5 **Call Transport** has the meaning set forth for "transport" in 47 CFR § 51.701(c).
- 2.6 **Call Transport and Termination** is used collectively to mean the switching and transport functions from the Interconnection Point to the last point of switching.
- 2.7 **Common (Shared) Transport** is defined as the transport of the originating Party's traffic by the terminating Party over the terminating Party's common (shared) facilities between (1) the terminating Party's tandem switch and end office switch, (2) between the terminating Party's tandem switches, and/or (3) between the terminating Party's host and remote end office switches. All switches referred herein must be entered into the Local Exchange Routing Guide (LERG).
- 2.8 **Cross Connect** is as defined in Attachment 4 of the Interconnection Agreement. If a Party provisions a cross connect for the purposes of interconnection under this Attachment 3, and such cross connect is not associated with a physical or virtual

Version 3Q03: 11/12/2003 KMC 2/10/04

collocation arrangement, the provisioning party shall not charge for such cross connect.

- 2.9 **Dedicated Interoffice Facility** is defined as a switch transport facility between a Party's Serving Wire Center and the first point of switching within the LATA on the other Party's network.
- 2.10 **End Office Switching** is defined as the function that establishes a communications path between the trunk side and line side of the End Office switch.
- 2.11 **Enhanced 911 Service** provides features not present in Basic 911 Service, including ANI and ALI display, Selective Routing (SR) and other standard and optional features.
- 2.12 **Fiber Meet** is an interconnection arrangement whereby the Parties physically interconnect their networks via an optical fiber interface at which one Party's facilities, provisioning, and maintenance responsibility begins and the other Party's responsibility ends.
- 2.13 **Interconnection Point (IP)** is the physical telecommunications equipment interface that interconnects the networks of BellSouth and KMC.
- 2.14 **IntraLATA Toll Traffic** does not exist for purposes of this Agreement, as the Parties have agreed upon a LATA-wide Local Traffic definition.
- 2.15 **ISP-bound Traffic** is defined as a call to an information service provider/enhanced service provider or Internet Service Provider ("ISP") that is dialed by using a local dialing pattern (7 or 10 digits).
- 2.16 Local Channel is defined as a switched transport facility between a Party's Point of Presence and its designated Serving Wire center where the POP is not located in the designated Serving Wire Center.
- 2.17 Local Traffic is as defined any circuit switched call that is originated by an end user of one Party and terminated to an end user of the other Party within a given LATA on that other Party's network, except for those calls that are originated or terminated through switched access arrangements as established by applicable FCC and Commissions rules and orders.
- 2.18 **Point of Presence** (POP) is the physical location at which a Party establishes itself for obtaining access to the other Party's network.
- 2.19 **Public Safety Answering Point (PSAP)** is the answering location for 911 calls.

- 2.20 **Reciprocal Trunk Group** is defined as a one-way trunk group carrying BellSouth originated traffic to be terminated by KMC.
- 2.21 **Serving Wire Center** is defined as the first, or only, wire center (such as a tandem or an end office) owned, or leased by one Party that is designated by that Party to serve the geographic area in which the other Party's POP is located and to which the other Party's facilities are connected (i.e. interconnected or transverses/passes through) for the purposes of interconnection.
- 2.22 **Selective Routing (SR)** is a standard feature that routes an E911 call from the tandem to the designated PSAP based upon the address of the ANI of the calling party.
- 2.23 **Tandem Switching** is defined as the function that establishes a communications path between two switching offices through a third switching office through the provision of trunk side to trunk side switching.
- 2.23.1 Consistent with FCC rules and orders, a KMC switch shall be considered a tandem switch if it serves a geographic area comparable, but not necessarily identical, to that served by the relevant BellSouth tandem switch. KMC shall provide to BellSouth supporting data to show such geographic comparability and if the Parties are unable to agree then the issue shall be resolved pursuant to the Dispute Resolution process set forth in the General Terms and Conditions of this Agreement.
- 2.24 **Transit Traffic** is traffic originating on one Party's network that is switched and/or transported by the other Party and delivered to a third party's network, or traffic originating on a third party's network that is switched and/or transported by one Party and delivered to the other Party's network.

3. NETWORK INTERCONNECTION

- 3.1 This Attachment pertains only to the provision of network interconnection where KMC owns, leases from a third party or otherwise provides its own switch(es).
- 3.2 Network interconnection may be provided by the Parties at any technically feasible point within BellSouth's network in accordance with applicable FCC and Commission Rules and Orders. In accordance with the terms of this Agreement, network interconnection may be provided via a DS0 where technically feasible and supported by applicable industry standards. Requests for interconnection via methods, such as OCn level interconnection, other than as set forth in this Attachment may be made through the Bona Fide Request (BFR) process set out in Attachment 11 to this Agreement.
- 3.2.1 Each Party is responsible for providing, engineering and maintaining the network on its side of the IP. The IP must be located within BellSouth's serving territory in

the LATA in which traffic is originating. The IP determines the point at which the originating Party shall pay the terminating Party for the Call Transport and Termination of Local Traffic, and ISP-bound Traffic.

- 3.2.2 Pursuant to the provisions of this Attachment, the location of the initial IP in a given LATA shall be established by mutual agreement of the Parties. Subject to the requirements for installing additional IPs, as set forth below, any IPs existing prior to the Effective Date of the Agreement will be accepted as initial IPs and BellSouth will not require re-grooming, however, KMC may augment and regroom such IP(s). When the Parties mutually agree to utilize two-way interconnection trunk groups for the exchange of Local Traffic, ISP-bound Traffic and between each other, the Parties shall mutually agree to the location of the IP. Notwithstanding the foregoing, if the Parties are unable to agree to a mutual initial IP, each Party, as originating Party, shall establish a single IP in the LATA for the delivery of its originated Local Traffic, ISP-bound Traffic and to the other Party for Call Transport and Termination by the terminating Party.
- 3.2.3 When first establishing the interconnection arrangement in each LATA, the location of the IP shall be established by mutual agreement of the Parties. In selecting the IP, both Parties will act in good faith and select the point that is most efficient for both Parties. If the Parties are unable to agree on the location of the IP, each Party will designate IPs for its originated traffic. Additional IP(s) in a LATA may be established by mutual agreement of the Parties. In selecting additional IP(s) both Parties will act in good faith and shall consider points that are efficient for both Parties. Notwithstanding the foregoing, and unless mutually agreed to otherwise, additional IP(s) in a particular LATA shall be established, at the request of either Party, when the following criteria are satisfied: (1) the Local Traffic and ISP-bound Traffic exceeds 8.9 million minutes per month for three consecutive months at the proposed location of the additional IP; and (2) any end office to be designated as an IP must be more than twenty (20) miles from an existing IP. BellSouth will not request the establishment of an IP where physical or virtual collocation space is not available or where BellSouth fiber connectivity is not available. When the Parties agree to utilize two-way interconnection trunk groups for the exchange of Local Traffic, ISP-bound Traffic and the Parties must agree to the location of the additional IP(s).
- 3.2.4 Upon written notification from the Party requesting the establishment of an additional IP, the receiving Party has twenty (20) business days to analyze, respond to, and negotiate in good faith regarding the establishment of such IP.

3.3 Interconnection via Dedicated Facilities

3.3.1 With the exception of Transit Traffic, the Parties shall institute a "bill and keep" compensation plan under which neither Party will charge the other Party recurring and nonrecurring charges for trunks (one-way or two-way), trunk ports and associated dedicated facilities for the exchange of Local Traffic (non-transit) and

ISP-bound Traffic (non-transit) and 911 traffic. The appropriate rate elements that are subject to this "bill and keep" compensation plan are set forth in Exhibit A to this Attachment. Each Party has the obligation to install and maintain the appropriate trunks, trunk ports and associated facilities on its respective side of the IP and is responsible for bearing its costs for such trunks, trunk ports and associated facilities on its side of the IP. Both Parties, as appropriate, shall be compensated for the ordering of trunks, trunk ports and facilities used exclusively for transit traffic and for ancillary traffic types including, but not limited to OS/DA. The Parties agree that charges for such trunks, trunk ports and facilities are as set forth in Exhibit A to this Attachment or to the extent a rate associated with the interconnecting trunk group is not set forth in Exhibit A, the rate shall be as set forth in the appropriate Party's tariff as filed and effective with the FCC or Commission, or reasonable and non-discriminatory web-posted listing if the FCC or Commission does not require filing of a tariff.

- 3.3.2 <u>Local Channel Facilities</u>. In lieu of providing facilities on its side of Interconnection Point or as part of Call Transport and Termination, either Party may purchase Local Channel facilities from the other Party pursuant to the provisions of this Attachment, where such facilities are available. The percentage of Local Channel Facilities utilized for Local Traffic and ISP-bound Traffic shall be determined based upon the application of the Percent Local Facility (PLF) Factor on a statewide basis. The charges applied to the percentage of Local Channel facilities used for Local Traffic and ISP-bound Traffic as determined by the PLF are set forth in Section 3.3.1 above. The remaining percentage of Local Channel Facilities shall be billed at the appropriate Party's intrastate or interstate tariff rates for switched access services or reasonable and non-discriminatory web-posted listing if the FCC or Commission does not require filing of a tariff.
- 3.3.3 Dedicated Interoffice Facilities. In lieu of providing facilities on its side of Interconnection Point or as part of Call Transport and Termination, either Party may purchase Dedicated Interoffice facilities from the other Party pursuant to the provisions of this Attachment, where such facilities are available. The percentage of Dedicated Interoffice Facilities utilized for Local Traffic and ISP-bound Traffic shall be determined based upon the application of the Percent Local Facility (PLF) Factor on a statewide basis. The charges applied to the percentage of Dedicated Interoffice facilities used for Local Traffic and ISP-bound Traffic as determined by the PLF are set forth in Section 3.3.1 above. The remaining percentage of the Dedicated Interoffice Facilities shall be billed at the appropriate Party's intrastate or interstate tariff rates for switched access services or reasonable and non-discriminatory web-posted listing if the FCC or Commission does not require filing of a tariff.

3.3.4 [Parties Disagree]

[KMC Version] In the event that a Party's Point of Presence is located within any serving wire center (i.e., switch location), such Party may interconnect to the other Party's switch via a Cross Connect or any other technically feasible means of interconnection.

[BellSouth Version] If a Party provisions a cross connect for the purposes of interconnection under this Attachment 3, and such cross connect is not associated with a physical or virtual collocation arrangement, the provisioning party shall not charge for such cross connect.

3.3.5 The facilities and associated components as set forth in Exhibit A of this Attachment purchased pursuant to this Section 3 shall be ordered via the Access Service Request (ASR) process. The terms, conditions and rates for ordering charges (i.e., expedite, cancellation, and order modification charges) are as set forth in the BellSouth FCC Tariff No. 1. To the extent that BellSouth requests that <customer_short_name> submit an ASR for an augmentation to the facilities purchased by <customer_short_name> from BellSouth but utilized for BellSouth's originated traffic, the Parties will work in good faith and make best efforts to ensure that the ASR submitted for such augmentations does not require expedition, cancellation or modification and in the event that <customer_short_name> incurs ordering charges, BellSouth and <customer_short_name> shall work cooperatively to determine which Party caused the incurrence of such charges and that Party shall be responsible for such charges.

3.4 Fiber Meet

- 3.4.1 Notwithstanding Section 3.2.1, 3.2.2, and 3.2.3 above, if KMC elects to establish interconnection with BellSouth pursuant to a Fiber Meet Local Channel, KMC and BellSouth shall jointly engineer, operate and maintain a Synchronous Optical Network (SONET) transmission system by which they shall interconnect their transmission and routing of Local Traffic via a Local Channel at either the DS1 or DS3 level. The Parties shall work jointly to determine the specific transmission system. However, KMC's SONET transmission system must be compatible with BellSouth's equipment, and the Data Communications Channel (DCC) must be turned off, unless otherwise mutually agreed to by the Parties.
- 3.4.2 Each Party, at its own expense, shall procure, install and maintain the agreed upon SONET transmission system in its network.
- 3.4.3 The Parties shall agree to a Fiber Meet point between the BellSouth Serving Wire Center and the KMC Serving Wire Center. The Parties shall deliver their fiber optic facilities to the Fiber Meet point with sufficient spare length to reach the fusion splice point for the Fiber Meet Point. BellSouth shall, at its own expense, provide and maintain the fusion splice point for the Fiber Meet. A building type Common Language Location Identification (CLLI) code will be established for

each Fiber Meet point. All orders for interconnection facilities from the Fiber Meet point shall indicate the Fiber Meet point as the originating point for the facility.

- 3.4.4 Upon verbal request by KMC, and within a reasonable and non-discriminatory time frame, BellSouth shall allow KMC access to the fusion splice point for the Fiber Meet point for maintenance purposes on KMC 's side of the Fiber Meet point.
- 3.4.5 Neither Party shall charge the other for its Local Channel portion of the Fiber Meet facility used exclusively for Local Traffic and ISP-Bound Traffic. The remaining portion of the Local Channel shall be billed at the appropriate Party's intrastate or interstate tariff rates for switched access services or reasonable and non-discriminatory web-posted listing if the FCC or Commission does not require filing of a tariff.

4. INTERCONNECTION TRUNK GROUP ARCHITECTURES

- 4.1 BellSouth and KMC shall establish interconnecting trunk groups and trunk group configurations between networks, including the use of one-way or two-way trunks in accordance with the following provisions set forth in this Attachment. For trunking purposes, traffic will be routed based on the digits dialed by the originating End User and in accordance with the LERG.
- 4.2 Consistent with Section 3.2, 3.2.1, 3.2.2, and 3.3.3. KMC shall establish an interconnection trunk group(s) to at least one BellSouth access tandem within the LATA for the delivery of KMC 's originated Local Traffic, ISP-bound Traffic and and for the receipt and delivery of Transit Traffic. To the extent KMC desires to deliver Local Traffic, ISP-bound Traffic, and/or Transit Traffic to BellSouth access tandems within the LATA, other than the tandems(s) to which KMC has established interconnection trunk groups, KMC shall order Multiple Tandem Access, as described in this Attachment, to such other BellSouth access tandems.
- 4.2.1 Notwithstanding the forgoing, <customer_short_name> shall establish an interconnection trunk group(s) to all BellSouth access and local tandems in the LATA where <customer_short_name> has homed (i.e. assigned) its NPA/NXXs. <customer_short_name> shall home its NPA/NXXs on the BellSouth tandems that serve the exchange rate center areas to which the NPA/NXXs are assigned. The specified exchange rate center assigned to each BellSouth tandem is defined in the LERG. <customer_short_name> shall enter its NPA/NXX access and/or local tandem homing arrangements into the LERG.
- 4.3 Switched access traffic will be delivered to and from Interexchange Carriers (IXCs) based on KMC 's NXX access tandem homing arrangement as specified by KMC in the LERG.

- Any KMC interconnection request that (1) deviates from the interconnection trunk group architectures as described in this Attachment, (2) affects traffic delivered to KMC from a BellSouth switch, and (3) requires special BellSouth switch translations and other network modifications will require KMC to submit a BFR/NBR via the BFR/NBR Process as set forth in Attachment 11 of this Agreement. At such time that BellSouth submits a request for interconnection that meets the requirements of this section, the Parties will negotiate the rates, terms, and conditions for such request.
- 4.5 All trunk groups will be provisioned as Signaling System 7 (SS7) capable where technically feasible. If SS7 is not technically feasible multi-frequency (MF) protocol signaling shall be used.
- 4.6 In cases where KMC is also an IXC, the IXC's Feature Group D (FG D) trunk group(s) must remain separate from the local interconnection trunk group(s).
- Each Party shall order interconnection trunks and trunk group including trunk and trunk group augmentations via the ASR process. A Firm Order Confirmation (FOC) shall be returned to the ordering Party, after receipt of a valid, error free ASR, within the timeframes set forth in each state's applicable Performance Measures. Notwithstanding the foregoing, blocking situations and projects shall be managed through BellSouth's Carrier Interconnection Switching Center (CISC) Project Management Group and KMC 's equivalent trunking group, and FOCs for such orders shall be returned in the timeframes negotiated by the Parties and suitable to the project. No additional charges shall be triggered due to the involvement of such project management. A project is defined as (1) a new trunk group, excluding augments to existing routes or trunk groups already provided for pursuant to the terms of this Attachment or (2) a request for more than 96 trunks on a single or multiple group(s) in a given BellSouth local calling area.

4.8 Interconnection Trunk Groups for Exchange of Local Traffic, ISP-Bound Traffic and Transit Traffic

Upon mutual agreement of the Parties in a joint planning meeting, the Parties' shall exchange Local Traffic, ISP-Bound Traffic, , and Transit Traffic, where applicable, on two-way interconnection trunk group(s) with the quantity of trunks being mutually determined and the provisioning being jointly coordinated. Furthermore, the Parties shall agree upon the IP(s) for two-way interconnection trunk groups transporting both Parties' Local Traffic, ISP-bound Traffic, and Transit Traffic, where applicable as set forth in Section 3 of this Attachment above. KMC shall order such two-way trunks via the Access Service Request (ASR) process. BellSouth will use the Trunk Group Service Request (TGSR) to request changes in trunking. Furthermore, the Parties shall jointly review trunk performance and forecasts on a periodic basis as set forth in section 7 of this Attachment. The Parties' use of two-way interconnection trunk groups for the transport of Local Traffic, ISP-bound Traffic, , and Transit Traffic between the Parties does not

preclude either Party from establishing additional one-way interconnection trunks for the delivery of its originated Local Traffic, ISP-bound Traffic, and , and Transit Traffic to the other Party.

4.8.1 **BellSouth Access Tandem Interconnection**

BellSouth access tandem interconnection at a single access tandem provides access to those end offices subtending that access tandem (Intratandem Access). Access tandem interconnection is available for any of the following access tandem architectures

4.8.1.1 **Basic Architecture**

In the basic architecture, KMC 's originating Local Traffic, ISP-bound Traffic and and originating and terminating Transit Traffic is transported on a single two-way trunk group between KMC and BellSouth access tandem(s) within a LATA to provide Intratandem Access. This trunk group carries Transit Traffic between KMC and Independent Companies, Interexchange Carriers, other CLECs, CMRS providers that have a Meet Point Billing arrangement with BellSouth, and other network providers with which KMC desires to exchange traffic. This trunk group also carries KMC originated Transit Traffic transiting a single BellSouth access tandem destined to third party tandems such as an Independent Company tandem or other CLEC tandem. BellSouth originated Local Traffic, ISP-bound Traffic and is transported on a separate single one-way trunk group terminating to KMC. Other trunk groups for operator services, directory assistance, emergency services and intercept may be established pursuant to the applicable BellSouth tariff if service is requested. The LERG contains current routing and tandem serving arrangements. The basic Architecture is illustrated in Exhibit B.

4.8.1.2 One-Way Trunk Group Architecture

In one-way trunk group architecture, the Parties interconnect using three separate trunk groups. A one-way trunk group provides Intratandem Access for KMC – originated Local Traffic, ISP-bound Traffic and destined for BellSouth End Users. A second one-way trunk group carries BellSouth-originated Local Traffic, ISPbound Traffic and destined for KMC End-Users. A two-way trunk group provides Intratandem Access for KMC 's originating and terminating Transit Traffic. This trunk group carries Transit Traffic between KMC and Independent Companies, Interexchange Carriers, other CLECs, CMRS providers that have a Meet Point Billing arrangement with BellSouth, and other network providers with which KMC desires to exchange traffic. This trunk group also carries KMC originated Transit Traffic transiting a single BellSouth access tandem destined to third party tandems such as an Independent Company tandem or other CLEC tandem. BellSouth originated Local Traffic, ISP-bound Traffic and is transported on a separate single one-way trunk group terminating to KMC. Other trunk groups for operator services, directory assistance, emergency services and intercept may be established pursuant to the applicable BellSouth tariff if service is

requested. The LERG contains current routing and tandem serving arrangements. The one-way trunk group architecture is illustrated in Exhibit C.

4.8.1.3 Two-Way Trunk Group Architecture

The two-way trunk group Architecture establishes one two-way trunk group to provide Intratandem Access for the exchange of Local Traffic, ISP-bound Traffic and between KMC and BellSouth. In addition, a separate two-way transit trunk group must be established for KMC 's originating and terminating Transit Traffic. This trunk group carries Transit Traffic between KMC and Independent Companies, Interexchange Carriers, other CLECs, CMRS providers that have a Meet Point Billing arrangement with BellSouth, and other network providers with which KMC desires to exchange traffic. This trunk group also carries KMC originated Transit Traffic transiting a single BellSouth access tandem destined to third party tandems such as an Independent Company tandem or other CLEC tandem. Upon reasonable notice, either Party's originated traffic may, in order to prevent or remedy traffic blocking situations, be transported on a separate single one-way trunk group terminating to the other Party. However, where KMC is responsive in a timely manner to BellSouth's transport needs for its originated traffic, BellSouth originating traffic will be placed on the two-way Local Traffic trunk group carrying ISP-bound Traffic and. Other trunk groups for operator services, directory assistance, emergency services and intercept may be established pursuant to the applicable BellSouth tariff if service is requested. The LERG contains current routing and tandem serving arrangements. The two-way trunk group architecture is illustrated in Exhibit D.

4.8.1.4 **Supergroup Architecture**

In the supergroup architecture, the Parties' Local Traffic, ISP-bound Traffic and and KMC 's Transit Traffic are exchanged on a single two-way trunk group between KMC and BellSouth to provide Intratandem Access to KMC. This trunk group carries Transit Traffic between KMC and Independent Companies, Interexchange Carriers, other CLECs, CMRS providers that have a Meet Point Billing arrangement with BellSouth, and other network providers with which KMC desires to exchange traffic. This trunk group also carries KMC originated Transit Traffic transiting a single BellSouth access tandem destined to third party tandems such as an Independent Company tandem or other CLEC tandem. Upon reasonable notice, either Party's originated traffic may, in order to prevent or remedy traffic blocking situations, be transported on a separate single one-way trunk group terminating to the other Party. However, where KMC is responsive in a timely manner to BellSouth's transport needs for its originated traffic, BellSouth originating traffic will be placed on the Supergroup. Other trunk groups for operator services, directory assistance, emergency services and intercept may be established pursuant to the applicable BellSouth tariff if service is requested. The LERG contains current routing and tandem serving arrangements. The supergroup architecture is illustrated in Exhibit E.

4.8.1.5 **Multiple Tandem Access Interconnection**

- 4.8.1.5.1 Where KMC does not choose access tandem interconnection at every BellSouth access tandem within a LATA, KMC may utilize BellSouth's multiple tandem access interconnection (MTA). To utilize MTA KMC must establish an interconnection trunk group(s) at a BellSouth access tandem through multiple BellSouth access tandems within the LATA as required. BellSouth will route KMC 's originated Local Traffic, ISP-bound Traffic and for LATA wide transport and termination. KMC must also establish an interconnection trunk group(s) at all BellSouth access tandems where KMC NXXs are homed as described in Section 4.2.1 above. If KMC does not have NXXs homed at any particular BellSouth access tandem within a LATA and elects not to establish an interconnection trunk group(s) at such BellSouth access tandem, KMC can order MTA in each BellSouth access tandem within the LATA where it does have an interconnection trunk group(s) and BellSouth will terminate KMC 's Local Traffic, ISP-bound Traffic and to End-Users served through those BellSouth access tandems where KMC does not have an interconnection trunk group(s). MTA shall be provisioned in accordance with BellSouth's Ordering Guidelines.
- 4.8.1.5.2 KMC may also utilize MTA to route its originated Transit Traffic; provided, however, that MTA may not be utilized to route switched access traffic that transits the BellSouth network to an Interexchange Carrier (IXC). Switched access traffic originated by or terminated to KMC will be delivered to and from IXCs based on KMC 's NXX access tandem homing arrangement as specified by KMC in the LERG.
- 4.8.1.5.3 Compensation for MTA shall be at the applicable tandem switching and transport charges specified in Exhibit A to this Attachment and shall be billed in addition to any Call Transport and Termination charges.
- 4.8.1.5.4 To the extent KMC does not purchase MTA in a LATA served by multiple access tandems, KMC must establish an interconnection trunk group(s) to every access tandem in the LATA to serve the entire LATA. To the extent KMC routes its traffic in such a way that utilizes BellSouth's MTA service without properly ordering MTA, KMC shall pay BellSouth the associated MTA charges.

4.8.2 **Local Tandem Interconnection**

4.8.2.1 Local Tandem Interconnection arrangement allows KMC to establish its IP, pursuant to the provisions of this Attachment, and the associated interconnection trunk group(s) at BellSouth local tandems for: (1) the delivery of KMC – originated Local Traffic, ISP-bound Traffic and transported and terminated by BellSouth to BellSouth end offices served by those BellSouth local tandems, and (2) for local Transit Traffic transported by BellSouth for third party network providers who have also established an interconnection trunk group(s) at those BellSouth local tandems.

- 4.8.2.2 When a specified local calling area is served by more than one BellSouth local tandem, KMC must designate a "home" local tandem for each of its assigned NPA/NXXs and establish trunk connections to such local tandems. Additionally, KMC may choose to establish an interconnection trunk group(s) at the BellSouth local tandems where it has no codes homing but is not required to do so. KMC may deliver Local Traffic, ISP-bound Traffic and to a "home" BellSouth local tandem that is destined for other BellSouth or third party network provider end offices subtending other BellSouth local tandems in the same local calling area where KMC does not choose to establish an interconnection trunk group(s). It is KMC 's responsibility to enter its own NPA/NXX local tandem homing arrangements into the LERG either directly or via a vendor in order for other third party network providers to determine appropriate traffic routing to KMC 's codes. Likewise, KMC shall obtain its routing information from the LERG.
- 4.8.2.3 Notwithstanding establishing an interconnection trunk group(s) to BellSouth's local tandems, KMC must also establish an interconnection trunk group(s) to a BellSouth access tandem within the LATA on which KMC has NPA/NXXs homed for the delivery of Interexchange Carrier Switched Access (SWA) and toll traffic, and traffic to Type 2A CMRS connections located at the access tandems. BellSouth shall not switch SWA traffic through more than one BellSouth access tandem. SWA, Type 2A CMRS or toll traffic routed to the local tandem in error will not be backhauled to the BellSouth access tandem for completion. (Type 2A CMRS interconnection is defined in BellSouth's A35 General Subscriber Services Tariff).
- 4.8.2.4 BellSouth's provisioning of Local Tandem Interconnection assumes that KMC has executed the necessary local interconnection agreements with the other third party network providers subtending those local tandems as required by the Act.

4.8.3 **Direct End Office-to-End Office Interconnection**

- 4.8.3.1 Direct End Office-to-End Office one-way or two-way interconnection trunk groups allow for the delivery of a Party's originating Local Traffic, ISP-bound Traffic and to the terminating Party on a direct end office-to-end office basis.
- 4.8.3.2 The Parties may utilize direct end office-to-end office trunk groups under any one of the following conditions:
- 4.8.3.2.1 Tandem Exhaust If a tandem through which the Parties are interconnected is unable to, or is forecasted to be unable to support additional traffic loads for the Parties or any other carrier for any period of time, the Parties will endeavor to mutually agree on an end office trunking plan or an appropriate alternate routing plan that will alleviate the tandem capacity shortage and ensure completion of traffic between KMC and BellSouth.

- 4.8.3.2.2 Traffic Volume –To the extent either Party has the capability to measure the amount of traffic between KMC 's switch and a BellSouth end office switch, and where such traffic exceeds or is forecasted to exceed a single DS3 (i.e. 8.9 million minutes) of traffic for three consecutive months, then the Parties shall install and maintain direct end office trunking sufficient to handle such traffic volumes. Either Party will install and maintain additional capacity between such points when overflow traffic exceeds or is forecasted to exceed a single DS3 (i.e. 8.9 million minutes) of traffic for three consecutive months. In the case of one-way trunking, additional trunking shall only be required by the Party whose trunking has achieved the preceding usage threshold.
- 4.8.3.2.3 Mutual Agreement The Parties may install direct end office trunking upon mutual agreement in the absence of conditions (1) or (2) above.
- 4.10.3.3 Overflow Routing To the extent technically feasible and where appropriate,
 BellSouth will provide overflow routing consistent with how BellSouth overflows
 its traffic. The overflow will be based on the homing arrangements displayed in
 the LERG.

4.8.4 Transit Traffic Trunk Group

Transit Traffic trunks can either be two-way trunks or two one-way trunks ordered by KMC to deliver and receive Transit Traffic. Establishing Transit Traffic trunks at BellSouth access and local tandems provides intratandem access to the third parties also interconnected at those tandems.

4.8.4.1 **Toll Free Traffic**

- 4.8.4.1.1 If KMC chooses BellSouth to perform the Service Switching Point (SSP) Function (i.e., handle Toll Free database queries) from BellSouth's switches, all KMC originating Toll Free traffic will be routed over the Transit Traffic Trunk Group and shall be delivered using GR-394 format. Carrier Code "0110" and Circuit Code (to be determined for each LATA) shall be used for all such calls.
- 4.8.4.1.2 KMC may choose to perform its own Toll Free database queries from its switch. In such cases, KMC will determine the nature (local/intraLATA/interLATA) of the Toll Free call (local/IntraLATA/InterLATA) based on the response from the database. If the call is a BellSouth local or intraLATA Toll Free call, KMC will route the post-query local or IntraLATA converted ten-digit local number to BellSouth over the local or intraLATA trunk group. If the call is a third party (ICO, IXC, CMRS or other CLEC) local or intraLATA Toll Free call, KMC will route the post-query local or intraLATA converted ten-digit local number to BellSouth over the Transit Traffic Trunk Group and KMC shall provide to BellSouth a Toll Free billing record when appropriate. If the query reveals the call is an interLATA Toll Free call, KMC will route the post-query interLATA Toll Free call (1) directly from its switch for carriers interconnected with its network or

- (2) over the Transit Traffic Trunk Group to carriers that are not directly connected to KMC 's network but that are connected to BellSouth's access tandem.
- 4.8.4.2 All post-query Toll Free calls for which KMC performs the SSP function, if delivered to BellSouth, shall be delivered using GR-394 format for calls destined to IXCs, and GR-317 format for calls destined to end offices that directly subtend a BellSouth access tandem within the LATA.

4.8.5 High Volume Calling (Mass Calling) Trunk Groups

- 4.8.5.1 The Parties will cooperate to establish separate trunk groups, or provide some other means of protective controls (i.e., call gapping), for the completion of calls to high volume customers, such as radio contest lines.
- 4.8.5.2 Both parties agree to terminate each Party's mass calling codes as Local Traffic, where appropriate. The Parties agree that each will put in place controls for NXXs that are dedicated for media stimulated mass calling.

5. NETWORK DESIGN AND MANAGEMENT FOR INTERCONNECTION

- Network Management and Changes. The Parties will work cooperatively with each other to install and maintain the most effective and reliable interconnected telecommunications networks, including but not limited to the exchange of toll-free maintenance contact numbers and escalation procedures. The Parties will provide public notice of network changes in the information necessary for the transmission and routing of services using their local exchange facilities and networks, to the extent required by, and in accordance with applicable federal and state rules and regulations.
- 5.2 Interconnection Technical Standards. The interconnection of all networks will be based upon accepted industry/national guidelines for transmission standards and traffic blocking criteria. Interconnecting facilities shall conform, at a minimum, to the telecommunications industry standard of DS-1 pursuant to Telcordia Standard No. TR-NWT-00499. Where KMC chooses to utilize Signaling System 7 signaling, also known as Common Channel Signaling (SS7), SS7 connectivity is required between the KMC switch and the BellSouth Signaling Transfer Point (STP). BellSouth will provide SS7 signaling using Common Channel Signaling Access Capability in accordance with the technical specifications set forth in the BellSouth Guidelines to Technical Publication, TR-TSV-000905. Facilities of each Party shall provide the necessary on-hook, off-hook answer and disconnect supervision and shall provide calling number ID (Calling Party Number) when technically feasible.
- 5.3 <u>Quality of Interconnection</u>. The local interconnection for the transmission and routing of telephone exchange service and exchange access that each Party

provides to each other will be at least Equal in Quality to what it provides to itself and any subsidiary or affiliate, where technically feasible, or to any other Party to which each Party provides local interconnection.

- 5.3.1 In the event of an outage or trouble in any arrangement, facility, or service being provided by BellSouth hereunder, BellSouth will follow procedures for isolating and clearing the outage or trouble that are no less favorable than those that apply to comparable arrangements, facilities, or services being provided by BellSouth to itself, Affiliate or any other carrier whose network is connected to that of BellSouth.
- 5.3.2 "Equal in Quality" shall have the meaning accorded in Section 51.305(a)(3) of the FCC's Rules, 47 C.F.R. § 51.305(a)(3). As soon as possible and in no case later than twenty-four (24) hours after receipt of notification of blocking of traffic originated within the other Party's network, the Parties shall determine and begin work to implement reasonable corrective measures in a manner consistent with industry practices.
- 5.4 <u>Network Management Controls</u>. Both Parties will work cooperatively to apply sound network management principles by invoking appropriate network management controls (e.g., call gapping) to alleviate or prevent network congestion.

6. SIGNALING

- 6.1 BellSouth shall offer access to signaling and access to BellSouth's signaling databases subject to compatibility testing and at the rates set forth in this Attachment. BellSouth may provide mediated access to BellSouth signaling systems and databases. Available signaling elements include signaling links, signal transfer points and service control points. Signaling functionality will be available with both A-link and B-link connectivity.
- 6.1.1 Both Parties will utilize LEC-to-LEC SS7 Signaling, where available, in conjunction with all traffic in order to enable full interoperability of CLASS features and functions except for call return. All SS7 signaling parameters will be provided, including but not limited to automatic number identification (ANI), originating line information (OLI) calling company category and charge number.
- 6.2 Signaling Link Transport

6.2.1	Signaling Link Transport is a set of two (2) or four (4) dedicated 56 kbps transmission paths between <customer_short_name> designated Signaling Points of Interconnection that provide appropriate physical diversity.</customer_short_name>
6.2.2	Technical Requirements
6.2.3	Signaling Link Transport shall consist of full duplex mode 56 kbps transmission paths and shall perform in the following two ways:
6.2.3.1	An "A-link" Signaling Link Transport is a connection between a switch or SCP and a Signaling Transfer Point switch pair; and
6.2.3.2	As a "B-link" Signaling Link Transport is a connection between two Signaling Transfer Point switch pairs in different company networks (e.g., between two Signaling Transfer Point switch pairs for two CLECs).
6.2.4	Signaling Link Transport shall consist of signaling link layers as follows:
6.2.4.1	An A-link layer shall consist of two (2) links. There shall be no more than two (2) minutes down time per year for an A-link layer.
6.2.4.2	A B-link layer shall consist of four (4) links. There shall be negligible (less than two (2)seconds) down time per year for a B-link layer.
6.2.5	A signaling link layer shall satisfy interoffice and intraoffice diversity of facilities and equipment, such that:
6.2.5.1	No single failure of facilities or equipment causes the failure of both links in an A-link layer (i.e., the links should be provided on a minimum of two (2) separate physical paths end-to-end); and
6.2.5.2	No two (2) concurrent failures of facilities or equipment shall cause the failure of all four (4) links in a B-link layer (i.e., the links should be provided on a minimum of three (3) separate physical paths end-to-end).
6.2.6	Interface Requirements
6.2.6.1	There shall be a DS1 (1.544 Mbps) interface at <customer_short_name>'s designated SPOIs. Each 56 kbps transmission path shall appear as a DS0 channel within the DS1 interface.</customer_short_name>
6.3	Signaling Transfer Points (STPs)
6.3.1	A Signaling Transfer Point is a signaling network function that includes all of the capabilities provided by the signaling transfer point switches (STPs) and their

associated signaling links that enables the exchange of SS7 messages among and between switching elements, database elements and STPs.

- 6.3.2 Technical Requirements
- 6.3.2.1 STPs shall provide access to BellSouth Local Switching or Tandem Switching and to BellSouth Service Control Points/Databases connected to BellSouth SS7 network. STPs also provide access to third-party local or tandem switching and third-party-provided STPs.
- 6.3.2.2 The connectivity provided by STPs shall fully support the functions of all other Network Elements connected to the BellSouth SS7 network. This includes the use of the BellSouth SS7 network to convey messages that neither originate nor terminate at a signaling end point directly connected to the BellSouth SS7 network (i.e., transit messages). When the BellSouth SS7 network is used to convey transit messages, there shall be no alteration of the Integrated Services Digital Network User Part or Transaction Capabilities Application Part (TCAP) user data that constitutes the content of the message.
- 6.3.2.3 STPs shall provide all functions of the SCCP necessary for Class 0 (basic connectionless) service, as defined in Telcordia ANSI Interconnection Requirements. This includes Global Title Translation (GTT) and SCCP Management procedures, as specified in ANSI T1.112.4. Where the destination signaling point is a <customer_short_name> or third party local or tandem switching system directly connected to BellSouth SS7 network, BellSouth shall perform final GTT of messages to the destination and SCCP Subsystem Management of the destination. In all other cases, BellSouth shall perform intermediate GTT of messages to a gateway pair of STPs in an SS7 network connected with the BellSouth SS7 network, and shall not perform SCCP Subsystem Management of the destination. If BellSouth performs final GTT to a <customer_short_name> database, then <customer_short_name> agrees to provide BellSouth with the Destination Point Code for <customer_short_name> database.
- 6.3.2.4 STPs shall provide all functions of the Operations, Maintenance and Admninistration Part (OMAP) as specified in applicable industry standard technical references, which may include, where available in BellSouth's network, MTP Routing Verification Test (MRVT); and SCCP Routing Verification Test (SRVT).
- 6.3.2.5 Where the destination signaling point is a BellSouth local or tandem switching system or database, or is a <customer_short_name> or third party local or tandem switching system directly connected to the BellSouth SS7 network, STPs shall perform MRVT and SRVT to the destination signaling point. In all other cases, STPs shall perform MRVT and SRVT to a gateway pair of STPs in an SS7 network connected with the BellSouth SS7 network. This requirement may be

become approved ANSI standards and available capabilities of BellSouth STPs. 6.4 SS7 Advanced Intelligent Network (AIN) Access 6.4.1 **Interface Requirements** 6.4.1.1 BellSouth shall provide the following STP options to connect <customer_short_name> or <customer_short_name>-designated local switching systems to the BellSouth SS7 network: 6.4.1.1.1 An A-link interface from <customer_short_name> local switching systems; and, 6.4.1.1.2 A B-link interface from <customer_short_name> local STPs. 6.4.1.2 Each type of interface shall be provided by one or more layers of signaling links. 6.4.1.3 The Signaling Point of Interconnection for each link shall be located at a cross connect element in the central office where the BellSouth STP is located. 6.4.1.4 BellSouth shall provide intraoffice diversity between the SPOI and BellSouth STPs, so that no single failure of intraoffice facilities or equipment shall cause the failure of both B-links in a layer connecting to a BellSouth STP. 6.4.1.5 STPs shall provide all functions of the MTP as defined in the applicable industry standard technical references. 6.4.2 Message Screening 6.4.2.1 BellSouth shall set message screening parameters so as to accept/send valid messages from <customer_short_name> local or tandem switching systems destined to/from any signaling point within BellSouth's SS7 network where the <customer_short_name> switching system has a valid signaling relationship. 6.4.3 BellSouth shall set message screening parameters so as to accept/send valid messages from <customer_short_name> local or tandem switching systems destined to/from any signalling point or network accessed through BellSouth's SS7 network where the <customer_short_name> switching system has a valid signalling relationship. 6.5 Service Control Points/Databases

superseded by the specifications for Internetwork MRVT and SRVT when these

Version 3Q03: 11/12/2003 KMC 2/10/04

Call Related Databases provide the storage of, access to, and manipulation of information required to offer a particular service and/or capability. BellSouth shall provide access to the following Databases: Local Number Portability, LIDB, Toll Free Number Database, Automatic Location Identification/Data Management

6.5.1

System, and Calling Name Database. BellSouth also provides access to Service Creation Environment and Service Management System (SCE/SMS) application databases and Directory Assistance.

- 6.5.2 A Service Control Point (SCP) is deployed in a SS7 network that executes service application logic in response to SS7 queries sent to it by a switching system also connected to the SS7 network. Service Management Systems provide operational interfaces to allow for provisioning, administration and maintenance of subscriber data and service application data stored in SCPs.
- 6.5.3 Technical Requirements for SCPs/Databases
- 6.5.3.1 BellSouth shall provide physical access to SCPs through the SS7 network and protocols with TCAP as the application layer protocol.
- 6.5.3.2 BellSouth shall provide physical interconnection to databases via industry standard interfaces and protocols (e.g. SS7, ISDN and X.25).
- 6.5.3.3 The reliability of interconnection options shall be consistent with requirements for diversity and survivability.
- 6.6 Local Number Portability Database
- 6.6.1 The Permanent Number Portability (PNP) database supplies routing numbers for calls involving numbers that have been ported from one local service provider to another. BellSouth agrees to provide access to the PNP database at rates, terms and conditions as set forth by BellSouth and in accordance with an effective FCC or Commission directive.
- 6.7 SS7 Network Interconnection
- 6.7.1 SS7 Network Interconnection is the interconnection of <customer_short_name> local STPs or <customer_short_name> local or tandem switching systems with BellSouth STPs. This interconnection provides connectivity that enables the exchange of SS7 messages among BellSouth switching systems and databases, <customer_short_name> local or tandem switching systems, and other third-party switching systems directly connected to the BellSouth SS7 network.
- 6.7.2 The connectivity provided by SS7 Network Interconnection shall fully support the functions of BellSouth switching systems and databases and <customer_short_name> or other third-party switching systems with A-link access to the BellSouth SS7 network.
- 6.7.3 If traffic is routed based on dialed or translated digits between a <customer_short_name> local switching system and a BellSouth or other third-

party local switching system, either directly or via a BellSouth tandem switching system, then it is a requirement that the BellSouth SS7 network convey via SS7 Network Interconnection the TCAP messages that are necessary to provide Call Management services (Automatic Callback, Automatic Recall, and Screening List Editing) between the <customer_short_name> local STPs and BellSouth or other third-party local switch.

- 6.7.4 SS7 Network Interconnection shall provide:
- 6.7.4.1 Signaling Data Link functions, as specified in ANSI T1.111.2;
- 6.7.4.2 Signaling Link functions, as specified in ANSI T1.111.3; and
- 6.7.4.3 Signaling Network Management functions, as specified in ANSI T1.111.4.
- 6.7.5 SS7 Network Interconnection shall provide all functions of the SCCP necessary for Class 0 (basic connectionless) service, as specified in ANSI T1.112. This includes GTT and SCCP Management procedures, as specified in ANSI T1.112.4. Where the destination signaling point is a BellSouth switching system or database, or is another third-party local or tandem switching system directly connected to the BellSouth SS7 network, SS7 Network Interconnection shall include final GTT of messages to the destination and SCCP Subsystem Management of the destination. Where the destination signaling point is a <customer_short_name> local or tandem switching system, SS7 Network Interconnection shall include intermediate GTT of messages to a gateway pair of <customer_short_name> local STPs, and shall not include SCCP Subsystem Management of the destination.
- 6.7.6 SS7 Network Interconnection shall provide all functions of the Integrated Services Digital Network User Part, as specified in ANSI T1.113.
- 6.7.7 SS7 Network Interconnection shall provide all functions of the TCAP, as specified in ANSI T1.114.
- 6.7.8 If Internetwork MRVT and SRVT become approved ANSI standards and available capabilities of BellSouth STPs, SS7 Network Interconnection may provide these functions of the OMAP.
- 6.7.9 Interface Requirements
- 6.7.9.1 The following SS7 Network Interconnection interface options are available to connect <customer_short_name> or <customer_short_name>-designated local or tandem switching systems or STPs to the BellSouth SS7 network:
- 6.7.9.1.1 A-link interface from <customer_short_name> local or tandem switching systems; and

- 6.7.9.1.2 B-link interface from <customer_short_name> STPs.
- 6.7.9.2 The SPOI for each link shall be located at a cross-connect element in the central office where the BellSouth STP is located. There shall be a DS1 or higher rate transport interface at each of the SPOIs. Each signaling link shall appear as a DS0 channel within the DS1 or higher rate interface.
- 6.7.9.3 BellSouth shall provide intraoffice diversity between the SPOIs and the BellSouth STP, so that no single failure of intraoffice facilities or equipment shall cause the failure of both B-links in a layer connecting to a BellSouth STP.
- 6.7.9.4 The protocol interface requirements for SS7 Network Interconnection include the MTP, ISDNUP, SCCP, and TCAP. These protocol interfaces shall conform to the applicable industry standard technical references. BellSouth does not have the capability to support any of the VoIP interfaces at the present time but is willing to negotiate new protocol interfaces IAW 7.7.8.
- 6.7.9.5 BellSouth shall set message screening parameters to accept messages from <customer_short_name> local or tandem switching systems destined to any signaling point in the BellSouth SS7 network with which the <customer_short_name> switching system has a valid signaling relationship.
- 6.8 Rate Categories And Applications
- 6.8.1 Message Charges
- 6.8.1.1 Message charges, as set forth in 6.8.1.3, following, are assessed based on the type of message protocol, ISUP or TCAP. ISUP messages are associated with call setup, while TCAP messages are used to query call related databases. ISUP message charges are assessed per terminating and originating call set-up request and TCAP message charges are assessed per data request.
- 6.8.1.2 Message charges do not apply for TCAP messages switched by the regional STPs to the BellSouth provided 800 Data Base, LIDB or LNP Data Base. Query charges are assessed in lieu of message charges. Query charges for 800 Data Base are described in 6.9.5, following. When TCAP messages are destined for a foreign database, including a non-company provided LNP Data Base, message charges are assessed in lieu of query charges.
- 6.8.1.3 Message charges are assessed in the following manner:
- 6.8.1.3.1 Signal Formulation
