

BEFORE THE
ARKANSAS PUBLIC SERVICE COMMISSION

IN THE MATTER OF THE APPLICATION)	
OF ENTERGY ARKANSAS, INC. FOR)	DOCKET NO. 06-101-U
APPROVAL OF CHANGES IN RATES FOR)	
RETAIL ELECTRIC SERVICE)	

DIRECT TESTIMONY

OF

GORDON D. MEYER

SENIOR STAFF RATE ANALYST

RATE DESIGN AND ANALYSIS

ENTERGY SERVICES, INC.

ON BEHALF OF

ENTERGY ARKANSAS, INC.

AUGUST 15, 2006

1 **I. INTRODUCTION AND BACKGROUND**

2 Q. PLEASE STATE YOUR NAME, BUSINESS ADDRESS, EMPLOYER AND
3 JOB TITLE.

4 A. My name is Gordon D. Meyer. My business address is 425 West Capitol
5 Avenue, Little Rock, Arkansas 72201. I am employed by Entergy
6 Services, Inc. ("ESI"), an affiliate of Entergy Arkansas, Inc. ("EAI" or the
7 "Company") as a Senior Staff Rate Analyst in Rate Design and Analysis.

8

9 Q. ON WHOSE BEHALF ARE YOU SUBMITTING THIS DIRECT
10 TESTIMONY?

11 A. I am submitting this Direct Testimony on behalf of EAI.

12

13 Q. PLEASE STATE YOUR EDUCATION, PROFESSIONAL AND WORK
14 EXPERIENCES.

15 A. I have a Bachelor of Science degree in Statistics, with distinction, from
16 Iowa State University in Ames, Iowa. I was a Mathematical Statistician for
17 the United States Department of Agriculture from 1975 to 1978.

18 In 1978 I joined Entergy Mississippi, Inc. as a Rate Analyst II. I was
19 responsible for developing and implementing the load research program to
20 support cost-of-service filings. In 1983 I was promoted to Rate Analyst III
21 and in 1985 was promoted to Senior Rate Analyst, assuming more
22 responsibilities for the load research program.

1 In 1993 I joined ESI as a Senior Lead Analyst in the Load Research
2 Department. My responsibilities included developing and implementing
3 load research programs for ESI to support various regulatory filings. I
4 joined the Business Accounts Market Department in 1996 and developed
5 load profiles for business segments and end-use equipment. I was
6 promoted to Senior Staff Analyst in 1998. I accepted my current position
7 as a Senior Staff Rate Analyst in Rate Design and Analysis in 1999. My
8 current responsibilities include general regulatory support, the
9 development of adjusted revenues, the development of allocation factors
10 and rate design.

11

12 Q. HAVE YOU PROVIDED TESTIMONY PREVIOUSLY?

13 A. Yes. I have provided testimony before the Arkansas Public Service
14 Commission ("APSC" or the "Commission") in Docket No. 01-041-U,
15 Docket No. 01-084-U and Docket No. 05-139-TF, before the Louisiana
16 Public Service Commission in Docket No. U-27167, and before the City
17 Council of New Orleans in Docket No. UD-01-4.

18

19 Q. WHAT IS THE PURPOSE OF YOUR TESTIMONY IN THIS
20 PROCEEDING?

21 A. The purpose of my testimony is to address the following topics:

- The development of certain class allocation factors that were utilized in the Company's cost-of-service studies;
- The development of adjusted present test year sales revenue;
- The development of the proposed rate design; and
- The tariff sheets reflecting the proposed rate design.

The following is an outline of the remaining sections of my testimony:

II. Allocation Factors Summary

III. Allocation Factors Development

IV. Present Test Year Sales Revenue

V. Proposed Rate Design

VI. Rate Schedules

II. ALLOCATION FACTORS SUMMARY

Q. PLEASE SUMMARIZE THE ALLOCATION METHODS THE COMPANY USED IN ITS COST-OF-SERVICE STUDY.

A. The following table lists the allocation methods the Company has used for each of the major function/classification cost categories in the cost-of-service study:

<u>Function</u>	<u>Classification</u>	<u>Allocation Method</u>
-----------------	-----------------------	--------------------------

1) Production

A) Capacity-related	Demand	Energy and Peak
---------------------	--------	-----------------

1	B) Energy-related	Energy	Energy
2	2) Transmission	Demand	Average 12 Coincident Peaks
3	3) Distribution/Customer Service		
4	A) Substations	Demand	Maximum Diversified Demand
5	B) Primary Voltage	Demand	Maximum Diversified Demand
6	System		
7			
8	C) Line Transformers	Demand	50/50 weighting of Maximum
9			Diversified Demand and Non-
10			Coincident Maximum Demand
11			
12	D) Secondary Voltage	Demand	50/50 weighting of Maximum
13	System		Diversified Demand and Non-
14			Coincident Maximum Demand
15	E) Service Drops	Customer	Weighted Customers
16	F) Meter Investment	Customer	Weighted Customers
17	G) Lighting	NA	Assigned to Lighting Class
18	H) Customer Related	Customer	Weighted Customers
19	Services		

20

21 Q. PLEASE DISCUSS THE METHOD THE COMPANY UTILIZED FOR THE
22 ALLOCATION OF CAPACITY RELATED GENERATION COSTS TO THE
23 RETAIL RATE CLASSES.

24 A. The method used for the allocation of capacity related generation costs is
25 based on the relationship of each rate class's contribution to the
26 Company's annual energy requirements weighted by the Company's
27 annual load factor and each rate class's contribution to the Company's

1 highest monthly peak load weighted by one minus the Company's annual
2 load factor. This method is commonly referred to as the energy and peak
3 ("Energy & Peak") methodology.

4

5 Q. WHY DID THE COMPANY USE THE ENERGY & PEAK METHOD TO
6 ALLOCATE GENERATION COSTS?

7 A. The Company used the Energy & Peak allocation method for generation
8 costs because it is a method that reasonably reflects the mix of its
9 customers' respective electrical load characteristics and the relative costs
10 incurred to serve such loads. This method is consistent with the APSC
11 General Staff recommendation in testimony in Docket No. 96-360-U.

12 The Energy & Peak method used by the Company provides a
13 reasonable balance between the Company's cost to serve the annual
14 peak load and the Company's cost to serve annual energy requirements.

15

16 Q. HOW DID THE COMPANY ALLOCATE ENERGY RELATED
17 PRODUCTION COSTS TO THE RETAIL RATE CLASSES?

18 A. The Company allocated these costs based on the total sales during the
19 test year by rate class. These costs are a function of energy consumption.

20

21 Q. PLEASE DISCUSS THE METHOD THE COMPANY UTILIZED FOR THE
22 ALLOCATION OF TRANSMISSION COSTS.

1 A. The method used for the allocation of transmission costs is based on the
2 average relationship of each rate class's contribution to the Company's 12
3 highest monthly peak loads. This method is commonly referred to as the
4 average 12 coincident peak ("Average 12CP") methodology.

5
6 Q. WHY DID THE COMPANY USE THE AVERAGE 12CP METHOD TO
7 ALLOCATE TRANSMISSION COSTS?

8 A. The Company used the Average 12CP allocation method for transmission
9 costs because it is a method that reasonably reflects the mix of its
10 customers' respective electrical load characteristics and the relative costs
11 incurred to serve such loads throughout the year.

12
13 Q. PLEASE DESCRIBE THE DISTRIBUTION AND CUSTOMER SERVICE-
14 RELATED ALLOCATION METHODOLOGIES THE COMPANY HAS
15 UTILIZED.

16 A. For distribution substations and primary line costs, the Company has used
17 the simultaneous peak load of each rate class, which is known as the
18 Maximum Diversified Demand ("MDD"), as the basis for the allocation of
19 these costs. These costs are localized in nature, as those facilities are
20 designed and constructed to serve loads close to the point of ultimate use.

21 For line transformers and secondary line costs, the Company has
22 used an allocation factor that consists of a 50/50 weighting of the MDD

1 and the Non-Coincident Peak (“NCP”) demand of each customer class.
2 These costs are more localized than distribution substations and primary
3 lines. Line transformers and secondary lines are installed, in some cases,
4 to supply power to a single customer. At most, they serve a very limited
5 number of customers. The customer class NCP demand represents the
6 summation of the maximum individual demand of all customers in each
7 customer class. Deriving the allocation factor in this manner reflects the
8 fact that there is some diversity among customers, but not as much as
9 with substations and primary lines.

10 The customer service-related allocation factors were based on the
11 number of customers served under each rate class, weighted by the
12 applicable estimated typical meter investment.

13

1 **III. ALLOCATION FACTORS DEVELOPMENT**

2 Q. FOR WHAT TEST YEAR HAVE YOU DEVELOPED ALLOCATION
3 FACTORS?

4 A. I have developed allocation factors for the test year ending June 30, 2006.
5 This test year includes the historical period of July through December
6 2005 and the projected period of January through June 2006. As
7 explained in detail below, the development of allocation factors for the
8 projected period is based upon information from the corresponding
9 months of 2005.

10
11 Q. WHAT WAS THE BASIS FOR DETERMINING THE RESPECTIVE
12 CUSTOMER LOAD DEMANDS CONTRIBUTED BY EACH RATE CLASS
13 IN YOUR DEVELOPMENT OF THE ALLOCATION FACTORS?

14 A. Customer load demands were established based on the Company's load
15 research data for the 12 months ending December 31, 2005. Actual
16 customer load research demands were compiled for customers with loads
17 that are metered with recording devices that provide hourly demand data.
18 Customer load research sample data was the basis for developing hourly
19 demand data for each rate class without 100 percent saturation of interval
20 recording devices for billing purposes.

1 Q. WHAT WAS THE BASIS FOR THE ENERGY AND NUMBER OF
2 CUSTOMERS USED IN THE DEVELOPMENT OF THE ALLOCATION
3 FACTORS?

4 A. The energy and number of customers are based on the sales (kWh) and
5 customer count from the Company's billing system for the 12 months
6 ending December 31, 2005.

7

8 Q. WHAT METHODOLOGY WAS USED IN DEVELOPING THE
9 CUSTOMER LOAD DEMANDS, ENERGY AND NUMBER OF
10 CUSTOMERS FOR THE PROJECTED PERIOD OF JANUARY
11 THROUGH JUNE 2006?

12 A. The January through June 2006 energy and adjusted number of
13 customers developed from the Company's forecast prepared in the regular
14 course of business were proportioned to the various Company rate
15 schedules based upon historical relationships from the corresponding
16 months of January through June 2005. Customer load demands were
17 proportioned based on energy, thus maintaining a consistent load factor.
18 Energy and number of customers were balanced to the forecast for
19 January through June 2006 by revenue class and month. Slight
20 adjustments were made to the industrial revenue class customer counts to
21 maintain consistency with historical customer counts and to smooth
22 monthly variations in those counts caused by forecasting seasonal

1 agricultural customers.

2

3 Q. HAVE YOU MADE ANY PRO FORMA ADJUSTMENTS TO THE LOAD
4 RESEARCH INFORMATION, BILLING SYSTEM INFORMATION OR
5 FORECAST?

6 A. Yes. I have made pro forma adjustments for significant changes to certain
7 individual customers and for certain rate schedules.

8

9 Q. PLEASE DESCRIBE THESE PRO FORMA ADJUSTMENTS.

10 A. Adjustments were made for significant known and reasonable changes to
11 certain individual customers to better represent the demand and energy
12 requirements of those customers in the near future. Adjustments were
13 made to annualize changes in the rate class the customer is being served
14 under and/or to annualize the customer's demand and energy
15 consumption.

16 I have excluded the billing and load research data related to
17 existing customer load that is being served under standby power. The
18 actual usage of standby power is intermittent and difficult to predict. There
19 may be a significant amount of standby usage in one year, while another
20 year may have an insignificant amount. In fact, this same fluctuation often
21 occurs from month to month. Accordingly, standby service does not lend
22 itself to the traditional costing logic employed by the Company with regard

1 to standard rate schedules and was excluded for purposes of allocation
2 factor development.

3

4 Q. HAVE YOU MADE ANY ADDITIONAL ADJUSTMENTS TO THE LOAD
5 RESEARCH INFORMATION, BILLING SYSTEM INFORMATION OR
6 FORECAST?

7 A. Yes. The test year demands and energy were adjusted to reflect normal
8 weather conditions for the historical period of July through December
9 2005. Demands and energy for January through June 2006 were based
10 on the forecast which assumes normal weather conditions. Test year
11 demands and energy were also adjusted to reflect the year-end level of
12 customers. All customer-related allocation factors were adjusted to reflect
13 the year-end level of customers.

14

15 Q. PLEASE EXPLAIN HOW YOU DEVELOPED THE ADJUSTMENTS TO
16 THE LOAD RESEARCH AND BILLING SYSTEM INFORMATION FOR
17 JULY THROUGH DECEMBER FOR NORMAL WEATHER AND FOR THE
18 YEAR-END CUSTOMER LEVELS.

19 A. The monthly class Coincident Peak ("CP"), MDD and NCP demands and
20 the monthly energy for each weather sensitive rate class were adjusted by
21 weather adjustment factors developed for each month for July through
22 December 2005.

1 The applicable class monthly CP, MDD, and NCP demands, as well
2 as the energy and the number of customers, were adjusted to reflect the
3 number of customers at the end of the year.

4

5 Q. HAVE YOU ADJUSTED DEMANDS AND ENERGY FOR LINE AND
6 TRANSFORMATION LOSSES?

7 A. Yes. The demands and energy have been adjusted for losses to the
8 generation level.

9

10 Q. ARE THERE ANY OTHER TOPICS YOU WOULD LIKE TO DISCUSS
11 CONCERNING ALLOCATION FACTOR DEVELOPMENT?

12 A. Yes. I have set the retail production demand allocation factor ("PDAF") to
13 0.8613 and the retail production energy allocation factor ("PEAF") to
14 0.8623 as supported by and consistent with the testimony of Company
15 witness Andrew P. Frits in Docket No. 03-028-U. The jurisdictional
16 numbers for PDAF and PEAF are derived from the Stipulation and
17 Settlement Agreement in Docket No. 96-360-U ("Settlement Agreement")
18 utilizing the wholesale numbers at the Settlement Agreement level of
19 644,128 kW and 2,866,212 kWh. In the Settlement Agreement, these
20 values were set to protect retail customers from a reallocation of existing
21 production demand costs in the event that EAI lost wholesale customers in
22 such a manner that wholesale load would fall below the Settlement

1 Agreement minimums. As discussed in Docket No. 03-028-U, the
2 permanent assignment of EAI's current capacity based on the PDAF
3 established in Docket No. 96-360-U will accomplish this purpose.
4 Although the Settlement Agreement values only pertained to demand
5 related production costs, Mr. Frits discussed that the non-fuel related
6 energy cost should also be fixed in the same manner as the demand
7 related cost. Therefore, it is appropriate to utilize the jurisdictional splits
8 derived from the PDAF in Docket No. 96-360-U.

9

10 Q. DO YOU HAVE A SCHEDULE THAT CONTAINS THE DEVELOPMENT
11 OF THE ALLOCATION FACTORS FOR ALL FUNCTIONS?

12 A. Yes. The detail of the development of the allocation factors is contained in
13 Schedule G-4a.

14

15 **IV. PRESENT TEST YEAR SALES REVENUE**

16 Q. FOR WHAT TEST YEAR HAVE YOU DEVELOPED SALES REVENUE?

17 A. I have developed sales revenue for the test year ending June 30, 2006.
18 This test year includes the historical period of July through December
19 2005 and the projected period of January through June 2006.

20

21 Q. WHAT METHODOLOGY WAS USED IN DEVELOPING THE BILLING
22 DETERMINANTS FOR THE PROJECTED PERIOD OF JANUARY

1 THROUGH JUNE 2006?

2 A. Billing determinants for the projected period were developed in the same
3 manner as the customer, demand, and energy values utilized in the
4 development of the allocation factors.

5

6 Q. WHAT IS THE BASIS FOR THE PRESENT TEST YEAR SALES
7 REVENUE?

8 A. The present test year revenue is based on the application of currently
9 effective rates to test year billing determinants.

10

11 Q. HAVE YOU MADE ADJUSTMENTS TO THE PRESENT TEST YEAR
12 SALES REVENUES YOU DEVELOPED FOR USE IN THE COMPANY'S
13 RATE FILING?

14 A. Yes. Adjustments were made to the test year billing determinants that
15 were consistent with the adjustments made to the load research and
16 billing system information for the development of allocation factors.
17 Adjustments were made for significant changes to certain individual
18 customers. Additionally, adjustments were made to the test year billing
19 determinants to reflect normal weather conditions for the historical period
20 of July through December 2005 and to reflect year-end customer levels.
21 The adjusted test year revenue is calculated utilizing the adjusted billing
22 determinants. The resulting pro formed revenue is summarized in

1 Schedule H-1. The detail of the development is contained in Schedule H-

2 2.

3

4 Q. PLEASE EXPLAIN THE REVENUE ADJUSTMENTS FOR INDIVIDUAL
5 CUSTOMERS.

6 A. Certain individual customer revenue was adjusted to annualize changes in
7 the rate class the customer is being served under and/or to annualize the
8 customer's demand and energy consumption.

9

10 Q. PLEASE PROVIDE MORE DETAIL REGARDING HOW ADJUSTMENTS
11 WERE MADE TO THE TEST YEAR REVENUES TO REFLECT THE
12 WEATHER NORMALIZATION?

13 A. The monthly kWh sales of residential, commercial and governmental
14 customers were adjusted to reflect normal weather for July through
15 December 2005 of the test year. The industrial customers' usage was not
16 considered to be weather sensitive. I have applied monthly weather
17 normalization factors to the applicable monthly test year sales to calculate
18 each respective rate schedule's normalized usage. Because electrical
19 usage for January through June 2006 was based on the forecast, which
20 assumes normal weather conditions, no adjustments were made.

21

1 Q. WHAT ADJUSTMENTS WERE MADE TO THE TEST YEAR REVENUES
2 TO REFLECT THE YEAR-END NUMBER OF CUSTOMERS?

3 A. The number of customers served under each rate schedule and the
4 related electrical usage for such customers were annualized to reflect the
5 number of customers who were served under each of these rate
6 schedules during the last month of the test year.

7

8 **V. PROPOSED RATE DESIGN**

9 Q. WHAT WAS THE STARTING POINT FOR YOUR RATE DESIGN?

10 A. I received the base rate sales revenue requirement from Company
11 witness Phillip B. Gillam. Mr. Gillam explains the development of the
12 revenue requirement in his Direct Testimony.

13

14 Q. DID YOU MAKE ANY ADJUSTMENTS TO THE BASE RATE SALES
15 REVENUE REQUIREMENT?

16 A. Yes. I adjusted the base rate sales revenue requirement to reflect
17 changes in the rate charged for additional facilities and for standby
18 service. I have calculated an adjustment to the amount of revenue
19 collected from additional facilities charges and standby service in
20 Schedule H-5.

21

1 Q. HOW DID YOU DEVELOP RATES TO RECOVER THE COMPANY'S
2 TOTAL ADJUSTED BASE RATE SALES REVENUE REQUIREMENT?

3 A. All rate schedules within a rate class were assigned an equal percent
4 increase based on the rate class's total base rate revenue percent
5 increase above current rates. With the exception of the Large General
6 Service Time of Use ("LGSTOU") and the Large Power Service Time of
7 Use ("LPSTOU") rate schedules discussed below, all rate schedules' rate
8 structures were maintained by increasing each respective pricing
9 component with the same percent increase. However, the Company
10 removed the functional structure from each rate schedule because the
11 APSC removed its previous requirement for functional rate schedules in its
12 Order No. 2A in Docket No. 03-054-R. The rate design is shown in
13 Schedule H-5. A summary of the class revenue effect of the proposed
14 rate design is also contained in Schedule H-1.

15
16 Q. WHAT DO YOU PROPOSE FOR THE CURRENT LGSTOU AND
17 LPSTOU RATE SCHEDULES?

18 A. The Company is proposing to combine the existing LGSTOU rate
19 schedule and the existing LPSTOU rate schedule into one new schedule
20 called Large Customer Time of Use ("LCTOU"). The current relationship
21 between the LGSTOU rate schedule and the LPSTOU rate schedule
22 represents an anomaly from traditional rate design because the unit cost

1 increases as load grows above 1,000 kW. This also differs from the
2 relationship in the Company's corresponding non-time-of-use rate
3 schedules. This anomaly was documented in Docket No. 82-314-U and
4 led to establishing a 1,000 kW threshold to preserve revenue levels
5 projected for a specific test year in Order No. 36 in that Docket. The
6 current availability sections of the LGSTOU and LPSTOU rate schedules
7 require that customers with a maximum demand greater than or equal to
8 1,000 kW be on the LPSTOU rate schedule. LPSTOU customers pay
9 higher demand charges than LGSTOU while energy charges are the
10 same. This inverted rate structure is contrary to customer perception of a
11 lower unit cost with load growth and has caused confusion among
12 customers as they have grown from LGSTOU to LPSTOU. The LCTOU
13 proposal mitigates the current problem while minimizing rate impact
14 among various LGSTOU and LPSTOU customers.

15
16 Q. WHAT RATE DESIGN IS THE COMPANY PROPOSING FOR THE
17 LCTOU RATE SCHEDULE?

18 A. The energy charges were adjusted based on the rate class's total base
19 rate revenue percent increase. The customer and demand charges are a
20 blending of the current charges for LGSTOU and LPSTOU rate schedules.
21 The rate design is developed in Schedule H-2.

1 Q. ARE THERE ANY OTHER RATE DESIGN ISSUES YOU WISH TO
2 ADDRESS?

3 A. Yes. The Company is proposing an energy only rate for certain
4 applications of the All Night Outdoor Lighting Service rate schedule.
5 Company witness Greg J. Grillo discusses the reasons the Company is
6 proposing this rate. The rate design is shown in Schedule H-5. Mr. Grillo
7 also discusses the development of a new reconnect fee for a reconnect at
8 a point other than the meter.

9

10 Q. HAVE YOU PROVIDED TYPICAL BILLS REFLECTING THE IMPACT OF
11 YOUR PROPOSED RATE DESIGN?

12 A. Yes. The typical bills are contained in Schedule H-3.

13

14 **VI. RATE SCHEDULES**

15 Q. WHAT ADDITIONAL CHANGES TO THE RATE SCHEDULES IS THE
16 COMPANY PROPOSING?

17 A. In addition to the changes mentioned above, the Company is proposing
18 closing to new business certain lights and poles in rate schedules
19 Municipal Street Lighting Service and All Night Outdoor Lighting Service.
20 Mr. Grillo discusses the reasons for these changes. The Company is also
21 recommending discontinuing the Optional Irrigation Control Service.
22 Company witness Robert R. Cooper discusses the reasons for

1 discontinuing this rate schedule. The Company is therefore canceling
2 Rate Schedule No. 36, Optional Irrigation Control Service Rider.

3

4 Q. IS THE COMPANY CANCELING ANY ADDITIONAL RATE
5 SCHEDULES?

6 A. Yes. The Company is canceling Rate Schedule No. 33, Special Rate
7 Contract Service Rider because future rates will not be functionalized.
8 The Company is also canceling the LPSTOU rate schedule, Rate
9 Schedule No. 9, because it is being combined with the LGSTOU rate
10 schedule as discussed above. The Company is also canceling Rate
11 Schedule No. 44, Economic Development Rider and Rate Schedule No.
12 47, Transition Cost Rider as they are no longer applicable.

13

14 Q. PLEASE DISCUSS THE MISCELLANEOUS TARIFF SHEET TEXTUAL
15 CHANGES YOU ARE PROPOSING.

16 A. There are several miscellaneous changes to the tariff sheets that were
17 made to clarify the current practice in the application of the tariffs. These
18 changes included re-ordering and re-wording existing language and
19 adding additional language to the rate schedules. Textual changes were
20 made to several rate schedule titles and designations. Other textual
21 changes were made to implement the rate design changes discussed
22 above and those changes discussed by Mr. Grillo.

1

2 Q. HAVE YOU PROVIDED TARIFF SHEETS THAT REFLECT THE
3 PROPOSED RATE DESIGN, NEW RATE SCHEDULES AND WORDING
4 CHANGES?

5 A. Yes. The proposed tariff sheets are contained in the Company's filing in
6 Schedule I. The changes described above are indicated on the proposed
7 tariff sheets by providing the applicable explanation symbol in the right
8 hand margin opposite each proposed revision.

9

10 Q. DOES THIS CONCLUDE YOUR DIRECT TESTIMONY?

11 A. Yes.

CERTIFICATE OF SERVICE

I, Steven K. Strickland, do hereby certify that a copy of the foregoing has been served upon all parties of record this 15th day of August 2006.

 / S /
Steven K. Strickland
