30	NOTES:				
31	(1) Retirement date is unavailable for several projects because				
32	removal and salvage are not readily associated with a specific				
33	retirement amount. An example is mass property retirements.				
34	(2) There is no projected cost of removal or salvage in the filing,				
35	so this schedule will not reconcile to a specific adjustment				
36	in Schedule B-2. The proforma adjustment above decreases				
37	the cost of removal that was recorded on the books at the end				
38	of the test year. This adjustment is embedded in				
39	adjustment 14 shown on Schedule B-2.				
40	(3) The only retirements projected are included in Schedule F-1				
41	for general plant assets. These general plant assets will				
42	not incur cost of removal and salvage.

30	NOTES:					
31	(1) Retirement date is unavailable for several projects because					
32	removal and salvage are not readily associated with a specific					
33	retirement amount. An example is mass property retirements.					
34	(2) There is no projected cost of removal or salvage in the filing,					
35	so this schedule will not reconcile to a specific adjustment					
36	in Schedule B-2. The proforma adjustment above decreases					
37	the cost of removal that was recorded on the books at the end					
38	of the test year. This adjustment is embedded in					
39	adjustment 14 shown on Schedule B-2.					
40	(3) The only retirements projected are included in Schedule F-1					
41	for general plant assets. These general plant assets will					
42	not incur cost of removal and salvage.
