Re: ***Petition Of Tennessee American Water Company To Change And Increase Certain Rates And Charges So As To Permit It To Earn A Fair And Adequate Rate Of Return On Its Property Used And Useful In Furnishing Water Service To Its Customers***
Docket No. 10-00189

Dear Chairman Freeman:

Enclosed please find the original and five (5) copies of Tennessee American Water Company's First Supplemental Responses to the City of Chattanooga's First Discovery Requests to Petitioner Tennessee American Water Company, Questions 32 through 86. In addition, these responses are being filed today by way of email to the Tennessee Regulatory Authority Docket Manager, Sharla Dillon.

Please file the original and four copies of this material and stamp the additional copy as "filed". Then please return the stamped copies to me by way of our courier.

Should you have any questions concerning this matter, please do not hesitate to contact me at the email address or telephone number listed above.

With kindest regards, I remain

Very truly yours,

R. Dale Grimes

IN RE:	)	
	)	
PETITION OF TENNESSEE AMERICAN WATER COMPANY TO CHANGE AND INCREASE CERTAIN RATES AND CHARGES SO AS TO PERMIT IT TO EARN A FAIR AND ADEQUATE RATE OF RETURN ON ITS PROPERTY USED AND USEFUL IN FURNISHING WATER SERVICE TO ITS CUSTOMERS	)	**Docket No. 10-00189**

TENNESSEE AMERICAN WATER COMPANY'S FIRST SUPPLEMENTAL RESPONSES TO THE CITY OF CHATTANOOGA'S FIRST DISCOVERY REQUESTS TO PETITIONER TENNESSEE AMERICAN WATER COMPANY

The Tennessee American Water Company ("TAWC") hereby responds as follows to the remaining requests contained in the City of Chattanooga's ("COC") First Discovery Requests to Petitioner TAWC:

GENERAL OBJECTIONS

(1) TAWC objects to all requests that seek information protected by the attorney-client privilege, the work product doctrine and/or any other applicable privilege or restriction on disclosure.

(2) TAWC objects to the definitions and instructions accompanying the requests to the extent the definitions and instructions contradict, are inconsistent with, or impose any obligations beyond those required by applicable provisions of the Tennessee Rules of Civil Procedure or the rules, regulations or orders of the Tennessee Regulatory Authority.

(3) TAWC objects to the definitions of the words "document," "communication," "explain," "identify," "non-regulated company," "non-regulated service," "Schumaker &

Company," and "Baryenbruch," that accompany the data requests because such definitions are overbroad and unduly burdensome.

(4) The specific responses set forth below are based upon information now available to TAWC, and TAWC reserves the right at any time to revise, correct, add to or clarify the objections or responses and supplement the information and/or documents produced.

(5) TAWC is providing its responses herein without wavier of, or prejudice to, its right at any later time to raise objections to: (a) the competence, relevance, materiality, privilege, or admissibility of the response, or the subject matter thereof; and (b) the use of any response, or subject matter thereof, in any subsequent proceedings.

(6) TAWC objects to each request to the extent that it is unreasonably cumulative or duplicative, or seeks information obtainable from some other source that is more convenient, less burdensome or less expensive.

(7) TAWC objects to each request to the extent it seeks information outside TAWC's custody or control.

(8) TAWC objects to requests that call upon TAWC to create, categorize, manipulate, customize or otherwise organize data regarding time periods outside of TAWC's historical test year. TAWC objects to all such requests because they are unduly burdensome, seek to have TAWC create work product and seek information that is not relevant to this rate case.

(9) TAWC's specific objections to each request are in addition to the General Objections set forth in this section. These General Objections form a part of each discovery response, and they are set forth here to avoid the duplication and repetition of restating them for each discovery response. The absence of a reference to a General Objection in response to a particular request does not constitute a waiver of any General Objection with respect to that

discovery request. All responses are made subject to and without waiver of TAWC's general and specific objections.

Respectfully submitted,

R. Dale Grimes (#006332)
E. Steele Clayton (#017298)
C. David Killion (#026412)

I - Introduction

Purpose Of This Study

This study was undertaken to answer three questions concerning the services provided by American Water Works Service Company, Inc. (Service Company) to Illinois American Water Company (IAWC):

1. Was IAWC charged the lower of cost or market for managerial and professional services provided by the Service Company during the 12 months ending June 30, 2007?

2. Was the 12 months ending June 30, 2007 cost of the Service Company's customer accounts services, including those of the National Call Centers, reasonable?

3. Are the services IAWC receives from Service Company necessary?

Study Results

Concerning question 1, the following conclusions can be drawn from this study:

- IAWC was charged the lower of cost or market for managerial and professional services during the 12 months ending June 30, 2007.

- On average, the hourly rates for outside service providers are **51% higher** than the Service Company's hourly rates.

- The managerial and professional services provided by the Service Company are vital and could not be procured externally by IAWC without careful supervision on the part of IAWC. If these services were contracted entirely to outside providers, IAWC would have to add at least one position to manage activities of outside firms. These positions would be necessary to ensure the quality and timeliness of services provided.

- If all the managerial and professional services now provided by the Service Company had been out-sourced during the 12 months ending June 30, 2007, IAWC and its ratepayers would have incurred an **additional $7.8 million** in expenses. This amount includes the higher cost of outside providers and the cost of two additional IAWC positions needed to direct and oversee the outsourced work.

- This study's hourly rate comparison actually understates the cost advantages that accrue to IAWC from its use of the Service Company. Outside service providers generally bill for every hour worked. Service Company exempt personnel, on the other hand, charge a maximum 8 per day even when they work more. If the overtime hours of Service Company personnel were factored into the hourly rate calculation, the Service Company would have had an even greater annual dollar advantage than the $7.8 million cited above. For instance, if Service Company overtime is conservatively estimated at 5% (2 hours per week), then that work would have cost an estimated $376,000 in additional charges from outside providers.

- It would be difficult for IAWC to find local service providers with the same specialized water industry expertise as that possessed by the Service Company staff. Service Company personnel spend substantially all their time serving operating water companies. This specialization brings with it a unique knowledge of water utility operations and regulation that is most likely unavailable from local service providers.

- Service Company fees do not include any profit markup. Only its actual cost of service is being recovered from IAWC ratepayers.

Concerning question 2, it was determined that the cost of the Service Company's customer accounts services, including those provided by the National Call Center, **is within the range of the comparison group of neighboring electric utilities**. As will be explained further herein, this group of companies provides a reasonable proxy group for comparison to a regulated utility of the size and scope of IAWC. During the 12 months ending June 30, 2007, the customer accounts cost for IAWC customers was $32.18 compared to the 2006 average of $27.65 for neighboring electric utilities. The highest comparison group per customer cost was $43.63 and the lowest $12.99.

IAWC's comparative position is completely acceptable for two reasons. First, every appropriate cost element has been included in the calculation of IAWC's customer account services cost pool. Second, some of the comparison group electric utilities may follow accounting policies that cause their cost pools to be higher or lower than that of IAWC. Even though electric utilities follow the FERC's Uniform System of Accounts, there is still some discretion as to how transactions are recorded. For instance, one utility may record the IT support costs for their customer information system to FERC account 903 Customer Records and Collections Expenses while another utility records that type of expense to different FERC account. This probably accounts for some of the wide range in per customer costs among the electric utilities.

Concerning question 3, the following conclusions can be drawn:

- The services that the Service Company provides are necessary and would be required even if IAWC were a stand-alone water utility.

- There is no redundancy or overlap in the services provided by the Service Company to IAWC. For all of the services listed in Schedule 10, there was only one entity that was primarily responsible for the service.

II - Background

Overview Of American Water Works Service Company

The Service Company maintains several types of offices from which it provides services to American Water operating companies. They include:

- Corporate Office – Includes American Water's executive management and personnel from the various corporate support services. American Water's corporate office is located in Voorhees, New Jersey.

- National Call Centers – Perform customer service functions, including: customer call processing, service order processing, correspondence processing, credit and collections. American Water maintains two call centers. One in Alton, Illinois that went into operation in the second quarter of 2001 and a second in Pensacola, Florida that went into operation in April 2005. Prior to the establishment of these national call centers, customer service functions were performed by employees of IAWC, which incurred the expense on its books.

- National Shared Services Center – The Shared Services Center, located in Cherry Hill, New Jersey, provides various financial, accounting and treasury functions that had been performed by individual operating companies. This arrangement has improved and streamlined the Company's financial processes and allowed operating companies to focus on providing utility service.

- Regional Offices – Regional offices provide operating companies with certain support services that can be performed more effectively on a regional basis because individual operating company/center workloads are not sufficient to warrant a full-time staff for these activities. At the same time, these services require closer proximity to operating companies served so they are not provided by the National Shared Services Center. Examples of regional office services include rates and revenues, engineering and operations.

- Belleville Lab – The national trace substance laboratory is located in Belleville, Illinois and performs testing for all American Water operating companies.

- Information Technology Service Centers – American Water's principal data center, located in Hershey, Pennsylvania, supports the IT infrastructure required to run corporate and operating company business applications and the communications systems. IT personnel rotate, as needed, throughout the regional offices and operating companies.

Service Company Expense Categories

The Service Company renders a monthly bill to operating companies. Charges are broken down into the following expense categories:

- Labor – base pay (salaries) of managerial and professional employees
- Labor-Related Overheads - employee benefit costs (payroll taxes, medical coverage, pensions, disability insurance) and other general expenses
- Support - wages and salaries of office support personnel, including secretaries, clerical personnel, telephone operators and mail clerks

- Office Expenses - office rent, equipment leases, telephone, electric, office supplies, property taxes, office maintenance
- Vouchers/Journal Entries – (1) travel expenses incurred by Service Company personnel, (2) other items submitted for reimbursement by employees, including professional association dues, (3) outside service contracts for such things as actuarial services, and (4) various other expenditures, including data center expenses for software licenses and hardware maintenance.

Service Company expenses are either assigned directly or allocated to operating companies, as shown in the table below.

Expense Category	Direct Charged	Allocated	Comments
Labor	X	X	Professional personnel working for one or several operating companies
Labor-Related Overheads	X	X	These are primarily employee benefit costs that relate directly to labor
Support		X	Administrative personnel support the professional staff, thus support costs are allocated on the basis of professional labor
Office Expense		X	Are all allocated on the basis of professional labor
Vouchers/Journals	X	X	May be either directly in support of one operating company (e.g., an engineer traveling from the Corporate Office to the operating company) or allocated to several operating companies

A direct charge occurs when Service Company work or expenses are incurred in support of only one operating company. Direct charge examples include work in support of an operating company's rate case, engineering design work on an operating company's project and the preparation of an operating company's financial statements.

Service Company expenses are allocated when more than one operating company benefits from the underlying work. Examples include assessments of new Federal water quality regulations, development of the company-wide materials procurement contracts and creation of company-wide engineering design standards.

Charging and Assignment Of Service Company Time and Expenses

Service Company transactions are assigned with the following information so there is a proper accounting and eventual charging to an operating company:

- Operating company number, if transaction is a direct charge
- Formula number if transaction is allocated
- Employee hours worked
- Account number for non-labor charges

Charges can originate from the following systems:

- Payroll System
- RVI System (outside vendor payments)
- PCard System (credit card payments)
- Internal Purchase Order System
- Journal entries

The Service Company's time reporting process enables labor and support charges to be assigned to the proper operating company. Labor charges are based on the time reported by managerial and professional Service Company employees. Every week, Service Company professional employees complete an electronic time sheet that shows:

- Operating company (for direct charge)
- Formula number (for allocation)
- Work order (where applicable)
- Authorization number (where applicable)

At month-end, time report information is processed and direct and allocated professional labor hours tabulated for each operating company. Dollar charges are then calculated using the hourly rate of each Service Company professional employee based upon their base salary (i.e., an employee's hours times their hourly rate of pay).

Support (administrative) personnel charge their time to the activity "General Admin." As described in the table on page 4, their labor charges are allocated to operating companies based upon how their office's professional personnel labor charges are assigned. For instance, if 20% of the Central Region's professional labor is assigned to IAWC during a month, then 20% of that office's monthly administrative labor charges also are assigned to the operating company.

The overhead cost category is next assigned based on professional and administrative labor costs. Thus, if 20% of the Central Region's accumulated professional and support labor is charged to IAWC during the month, then 20% of that month's overhead expenses will be assigned to IAWC.

Each Service Company location's office expenses are allocated to operating companies based on how professional labor charges for that office have been assigned. For instance, if 2% of professional labor from one Service Company office is assigned to IAWC, then 2% of that office's office expenses would be assigned to IAWC. Thus, office expenses are allocated in the very same way as administrative labor.

Vouchers/journal entries may be charged directly or allocated, depending on who benefits from the expenditure. For instance, the cost of a continuing professional education course taken by a professional in a regional office is allocated to the operating companies served by that office. Travel expenses by that same professional to a rate case proceeding are charged directly to the operating company whose case is being heard.

III – Service Company Cost Comparison Approach

During the 12 months ending June 30, 2007, the Service Company billed IAWC $21.5 million in management fees (O&M) and $2.6 million in capital and other charges. For purposes of this market cost study, certain items were subtracted from the Service Company's total charges to IAWC, as shown in the table below. The first item was the non-recurring accounting reclassification of pension expenses from management fees to pension expense. Other non-recurring expenses (Sarbanes Oxley implementation, business change, Service Company building write-off) for which IAWC is not seeking recovery were also subtracted. Finally, certain charges from regional offices other than the Central Region were eliminated. After these adjustments, testable Service Company charges totaled just over $19 million.

	12 Months Ended June 30, 2007
Total Management Fees (O&M)	$ 21,500,593
JE to reclass pension expense	$ (2,101,519)
Mgmt Fee Expense per P&L	$ 19,399,074
Less: Non-Recurring Expenses	
Divestiture & SOX	$ (2,728,916)
Business Change	$ (71,099)
Write-Off of Svc Co Bldg	$ (45,289)
Net O&M Adjustments	$ (2,845,304)
Less: Non-Central Regions	$ (92,668)
Net Testable O&M	$ 16,461,102
Total Capital	$ 2,570,040
Total Other	$ 50,158
Total Testable SC Charges	**$ 19,081,299**

For purposes of comparing these charges to outside benchmarks, Service Company services were placed into two categories:

- Managerial and Professional Services – Includes such services as management, accounting, legal, human resources, information technology, and engineering.
- Water Quality Testing Services – Includes testing services performed by the Belleville Laboratory.
- Customer Accounts Services – Includes customer-related services, such as call center, credit, billing, collection and payment processing.

Total test period Service Company charges break down between management/professional services and customer account services as follows:

	12 Months Ended June 30, 2007	
	Amount	Hours
Management and Professional Services	$ 14,702,513	153,312
Customer Account Services	$ 4,378,786	118,362
Total Service Company Charges	$ 19,081,299	271,674

This study's first question—whether the Service Company charges the lower of cost or market—was evaluated by comparing the cost per hour for managerial and professional services provided by Service Company personnel to hourly billing rates that would be charged by outside providers of equivalent services. Service Company costs per hour were based on actual charges to IAWC

during the 12 months ending June 30, 2007. Outside providers' billing rates came from surveys or other information from professionals that could perform the services now provided by the Service Company.

The second question—reasonableness of the National Call Center costs—was addressed by comparing IAWC's customer accounts services expenses to those of neighboring electric utilities. This approach was selected because the costs of outside providers of call center services are not publicly available. However, electric utility customer account services expenses can be obtained from the FERC Form 1. The availability and transparency of FERC data adds to the validity of its use in this comparison.

The third question—the necessity of Service Company services—was first investigated by determining the services provided to IAWC. A determination was then made as to whether these services would be required if IAWC were a stand-alone utility.

IV – Managerial And Professional Services Hourly Rate Comparison

Methodology

The lower-of-cost-or-market comparison is accomplished by comparing the cost per hour for Service Company managerial and professional services to those of outside service providers to whom these duties could be assigned. Based on the nature of the Service Company services it was determined that the following outside providers could perform the categories of services indicated below:

- Management Consultants – executive and administrative management, risk management services, human resources and communications services
- Attorneys – legal services
- Certified Public Accountants – accounting, financial, information technology and rates and revenues services
- Professional Engineers – engineering, operations and water quality services.

Service Company hourly rates were calculated for the four outside service provider categories, based on the dollars and hours charged to IAWC during the 12 months ended June 30, 2007. Hourly billing rates for outside service providers were developed using third party surveys or directly from information furnished by outside providers.

The last step in the market cost comparison was to compare the Service Company's average cost per hour to the average cost per hour for outside providers.

It should be noted that by using the Service Company's hours charged IAWC during the 12 months ended June 30, 2007, its hourly rates are actually overstated because Service Company personnel charge a maximum 8 per day even when they work more. Outside service providers generally bill for every hour worked. If the overtime hours of Service Company personnel had been factored into the hourly rate calculation, Service Company hourly rates would have been lower.

Service Company Hourly Rates

Schedule 1 (page 10) details the assignment of 12 months ended June 30, 2007 management and professional Service Company charges by outsider provider category. Schedule 2 (page 11) shows the same assignment for Service Company management and professional hours charged to IAWC during the 12 months ended June 30, 2007.

Certain adjustments to these dollar amounts were necessary to calculate Service Company hourly rates that are directly comparable to those of outside providers. Adjustments were made to the following June 30, 2007 test period non-labor Service Company charges:

- Contract Services – 12 months ended June 30, 2007 Service Company charges to IAWC include approximately $989,000 in expenses associated with the use of outside professional firms to perform certain corporate-wide services (e.g., legal, financial audit, actuarial services). These professional fees are excluded from the Service Company hourly rate calculation because the related services have effectively been out-sourced already.

- Travel Expenses – In general, client-related travel expenses are not recovered by outside service providers through their hourly billing rate. Rather, actual out-of-pocket travel expenses are billed to clients in addition to fees for professional services. Thus, it is appropriate to remove these Service Company charges from the hourly rate calculation.

- Computer Hardware and Software Expenses – Included in the 12 months ended June 30, 2007 Service Company charges to IAWC are charges for outside expenses for leases and maintenance fees related to mainframe, server and network infrastructure, corporate business applications and the communications systems. An outside provider that would take over operation of a data center would recover these expenses over and above the labor necessary to operate the data center.

Schedule 3 (page 12) shows how contract services, travel expenses and computer hardware/software-related Service Company charges are assigned among the four outside provider categories.

Based on the assignment of expenses and hours shown in Schedules 1 and 2 and the excludable items shown in Schedule 3, the Service Company's equivalent costs per hour for the 12 months ended June 30, 2007 are calculated below.

	Attorney	Management Consultant	Certified Public Accountant	Professional Engineer	Total
Total management, professional & technical services charges	$ 558,149	$ 4,926,856	$ 6,000,263	$ 3,217,245	$ 14,702,513
Less:					
Contract services	$ 17,421	$ 326,297	$ 590,549	$ 55,094	$ 989,361
Travel expenses	$ 3,230	$ 64,319	$ 20,769	$ 30,606	$ 118,924
Computer hardware/software	$ 15	$ 41,237	$ 148,137	$ 34,510	$ 223,898
Net Service Charges (A)	$ 537,483	$ 4,495,003	$ 5,240,808	$ 3,097,035	$ 13,370,329
Total Hours (B)	5,062	36,342	64,686	47,222	153,312
Average Hourly Rate (A / B)	**$ 106**	**$ 124**	**$ 81**	**$ 66**	

Illinois American Water Company
Analysis of 12 Months Ended June 30, 2007 Service Company Charges By Location And Function

Location	Function	12 Months Ended June 30, 2007 Service Company Charges				
		Attorney	Management Consultant	Certified Public Accountant	Professional Engineer	Total

Outside Service Provider Hourly Rates

The next step in the cost comparison was to obtain the average billing rates for each outside service provider. The source of this information and the determination of the average rates are described in the paragraphs that follow.

Attorneys

The Illinois Bar Association does not survey its members as to their hourly billing rates. In addition, publicly available billing rate information could not be found for Illinois attorneys. Therefore, an Illinois estimate was developed from a survey of Michigan lawyers conducted annually by the Michigan Lawyers Weekly. As presented in Schedule 4, the average rate for each Michigan firm respondent was adjusted for the cost of living differential between their location and Belleville, Illinois. The survey includes rates that were in effect at December 31, 2005. Thus, the 2005 average rate was escalated to December 31, 2006—the midpoint of the 12 months ending June 30, 2007.

Management Consultants

The cost per hour for management consultants was developed from the 2006 annual survey performed by the Association of Management Consulting Firms—an industry trade organization. The first step in the calculation, presented in Schedule 5, was to determine an average rate by consultant position level. From these rates, a single weighted average hourly rate was calculated based upon the percent of time that is typically applied to a consulting assignment by each consultant position level. This survey includes rates that were in effect during 2005 for firms in the United States. Consultants typically do not limit their practice to any one region and must travel to a client's location. Thus, the U.S. national average is appropriate for comparison. The survey includes rates that were in effect at December 31, 2005. This 2005 average rate was escalated to December 31, 2006— the midpoint of the 12 months ending June 30, 2007.

Certified Public Accountants

The average hourly rate for Illinois certified public accountants was developed from a 2006 survey conducted by the American Institute of Certified Public Accountants (AICPA) every two years. Hourly rates in the AICPA survey are the average of firms in Illinois. The average hourly rate was calculated for a set of typical accountant positions, as shown in Schedule 6. Based on a typical staff assignment by each accountant position, a weighted average hourly rate was calculated. The survey includes rates that were in effect at December 31, 2005. Thus, the 2005 average rate was escalated to December 31, 2006—the midpoint of the 12 months ending June 30, 2007.

Professional Engineers

The Service Company provided hourly rate information for outside engineering firms that could have been utilized by IAWC during 2007. As presented in Schedule 7, an average rate was developed for each engineering position level. Then, using a typical percentage mix of project time by engineering position, a weighted average cost per hour was calculated.

Schedule 4

Illinois American Water Company
Estimated Billing Rates For Illinois Attorneys Based On Michigan Attorney Billing Rates

Billing rates as of December 31, 2006 (Note A)								Cost of	
		Number	Billing Rate Range					Living	
	Michigan	Of Mich	Associate		Partner			Adjust	Adjusted

	$21	$28	$32	$16	**$97**

Source: Information provided by American Water Works Service Company

Service Company Versus Outside Provider Cost Comparison

As shown in the table below, Service Company costs per hour are considerably lower than those of outside providers.

	12 Months Ended June 30, 2007		
Service Provider	Service Company	Outside Provider	Difference--Service Co. Greater(Less) Than Outside
Attorney	$ 106	$ 250	$ (144)
Management Consultant	$ 124	$ 212	$ (88)
Certified Public Accountant	$ 81	$ 114	$ (33)
Professional Engineer	$ 66	$ 97	$ (31)

Based on these cost per hour differentials and the number of managerial and professional services hours billed to IAWC during the 12 months ending June 30, 2007, outside service providers would have cost $7,522,703 more than the Service Company (see table below). Thus, on average, outside provider's hourly rates are almost 51% higher than those of the Service Company ($7,522,703 / $14,702,513).

	12 Months Ended June 30, 2007		
Service Provider	Hourly Rate Difference--Service Co. Greater(Less) Than Outside	Service Company Hours Charged	Dollar Difference
Attorney	$ (144)	5,062	$ (729,957)
Management Consultant	$ (88)	36,342	$ (3,200,321)
Certified Public Accountant	$ (33)	64,686	$ (2,108,937)
Professional Engineer	$ (31)	47,222	$ (1,483,488)
Service Company Less Than Outside Providers			$ (7,522,703)

If IAWC were to use outside service providers rather than the Services Company for managerial and professional services, it would incur other additional expenses besides those associated with higher hourly rates. Managing outside firms who would perform 153,312 hours of work (over 100 full-time equivalents at 1,500 "billable" hours per FTE per year) would add a significant workload to the existing IAWC management team. Thus, it would be necessary for IAWC to add at least two positions to supervise the outside firms and ensure they delivered quality and timely services. The individuals that would fill these positions would need a good understanding of each profession being managed. They must also have management experience and the authority necessary to give them credibility with the outside firms. As calculated in the table below, these positions would add another $304,000 per year to IAWC's personnel expenses.

Cost of Adding Administrative Positions To IAWC's Staff

	Per Position	Total
New Positions' (2) Salary	$ 100,000	$ 200,000
Benefits (at 52%)	$ 52,000	$ 104,000
Total Cost of the New Positions		$ 304,000

Thus, the total effect on the ratepayers of IAWC of contracting all services now provided by Service Company would be an increase in their costs of $7,826,703 ($7,522,703 + $304,000).

Other Cost Comparisons

Every year, the Belleville Lab conducts a comparison of its cost for performing major tests to the cost of using outside testing laboratories. Over the past several years, these surveys have shown the following results been as follows:

Year	Number of Major Tests Surveyed	Percent Belleville Lower Than Outside Labs
2000	26	15%
2001	25	19%
2002	24	16%
2003	23	10%
2004	24	9%
2005	24	25%
2006	24	31%

These studies provide additional evidence that the Service Company arrangement is the lowest-cost alternative for IAWC.

V – Customer Account Services Cost Comparison

Background

It is difficult to compare the cost of American Water's National Call Centers with outside providers of the same call center-related services. Call center survey data is proprietary and expensive to obtain. For this reason, IAWC's National Call Center costs are compared to those of neighboring electric utilities because the data necessary to make this comparison is readily available to the public.

Electric utility cost information comes from their FERC Form 1. FERC's chart of accounts is defined in chapter 18, part 101 of Code of Federal Regulations. FERC accounts that contain call center-related expenses and are used in this study's comparison are:

- Account 903 Customer Accounts Expense – Records and Collection Expense
- Account 905 Customer Accounts Expense – Miscellaneous Customer Accounts Expense.

In addition, labor-related overheads charged to the following FERC accounts must be added to the labor components of Accounts 903 and 905.

- Account 926 Employee Pension and Benefits
- Account 408 Taxes Other Than Income (employer's portion of FICA).

Schedule 9 provides FERC's description of what should be charged to these accounts. In questioning the controller of a large Southeastern electric utility, it was determined that expenses of the activities described below are recorded in the designated FERC accounts.

903 Records and Collection Expense

- Customer Call Center – customer calls/contact, credit, order taking/disposition, bill collection efforts, outage calls
- Call Center IT – maintenance of phone banks, voice recognition units, call center software applications, telecommunications
- Customer billing – bill printing, stuffing and mailing
- Remittance processing – processing of customer payments received in the mail
- Bill payment centers – locations where customers can pay their bills in person

905 Miscellaneous Customer Accounts Expense

- Customer Information System IT – maintenance and support of the customer information system

This study assumes the FERC accounts for other electric and gas utilities contain expenses for the same activities.

Illinois American Water Company
FERC Account Descriptions

903 – Customer Records and Collection Expenses

This account shall include the cost of labor, materials used and expenses incurred in work on customer applications, contracts, orders, credit investigations, billing and accounting, collections and complaints.

Labor

1. Receiving, preparing, recording and handling routine orders for service, disconnections, transfers or meter tests initiated by the customer, excluding the cost of carrying out such orders, which is chargeable to the account appropriate for the work called for by such orders.
2. Investigations of customers' credit and keeping of records pertaining thereto, including records of uncollectible accounts written off.
3. Receiving, refunding or applying customer deposits and maintaining customer deposit, line extension, and other miscellaneous records.
4. Checking consumption shown by meter readers' reports where incidental to preparation of billing data.
5. Preparing address plates and addressing bills and delinquent notices.
6. Preparing billing data.
7. Operating billing and bookkeeping machines.
8. Verifying billing records with contracts or rate schedules.
9. Preparing bills for delivery, and mailing or delivering bills.
10. Collecting revenues, including collection from prepayment meters unless incidental to meter reading operations.
11. Balancing collections, preparing collections for deposit, and preparing cash reports.
12. Posting collections and other credits or charges to customer accounts and extending unpaid balances.
13. Balancing customer accounts and controls.
14. Preparing, mailing, or delivering delinquent notices and preparing reports of delinquent accounts.
15. Final meter reading of delinquent accounts when done by collectors incidental to regular activities.
16. Disconnecting and reconnecting services because of nonpayment of bills.
17. Receiving, recording, and handling of inquiries, complaints, and requests for investigations from customers, including preparation of necessary orders, but excluding the cost of carrying out such orders, which is chargeable to the account appropriate for the work called for by such orders.
18. Statistical and tabulating work on customer accounts and revenues, but not including special analyses for sales department, rate department, or other general purposes, unless incidental to regular customer accounting routines.
19. Preparing and periodically rewriting meter reading sheets.
20. Determining consumption and computing estimated or average consumption when performed by employees other than those engaged in reading meters.

Materials and expenses

21. Address plates and supplies.
22. Cash overages and shortages.
23. Commissions or fees to others for collecting.
24. Payments to credit organizations for investigations and reports.
25. Postage.
26. Transportation expenses, including transportation of customer bills and meter books under centralized billing procedure.
27. Transportation, meals, and incidental expenses.
28. Bank charges, exchange, and other fees for cashing and depositing customers' checks.
29. Forms for recording orders for services, removals, etc.
30. Rent of mechanical equipment.

Illinois American Water Company
FERC Account Descriptions

905 – Miscellaneous Customer Accounts Expenses
This account shall include the cost of labor, materials used and expenses incurred not provided for in other accounts.
Labor
1. General clerical and stenographic work.
2. Miscellaneous labor.

Materials and expenses
3. Communication service.
4. Miscellaneous office supplies and expenses and stationery and printing other than those specifically provided for in accounts 902 and 903.

Comparison Group

Electric utilities included in the comparison group are shown in the table below. These are companies whose FERC Form 1 show amounts for accounts 903 and 905.

Illinois	• Central Illinois Light • Central Illinois Public Service	• Commonwealth Edison • Illinois Power
Iowa	• Interstate Power & Light	• MidAmerican Energy
Wisconsin	• Madison Gas & Electric • Northern States Power – Wis • Northwestern Wisconsin Elect • So. Beloit Light & Power	• Superior Water, Light & Pwr • Wisconsin Electric Power • Wisconsin Power & Light • Wisconsin Public Service
Missouri	• Aquila Inc. • Kansas City Power & Light	• Union Electric
Kentucky	• Duke Energy – Kentucky • Kentucky Power	• Kentucky Utilities • Louisville Gas & Electric
Indiana	• Duke Energy – Indiana • Indiana Michigan Power • Indiana Power & Light	• NIPSCO • So. Indiana Gas & Electric

Some neighboring electric utilities could not be included in the comparison group because they did not submit the necessary FERC Form 1 data.

Comparison Approach

The basis for this comparison is customer account services expenses per customer. IAWC's cost pool was developed to include the same expenses included in electric utility's FERC accounts 903 and 905. As shown in the graphic below, IAWC's resultant cost pool contains the expenses of Service Company locations and certain operating company expenses.

American Water
Service Company
Pensacola & Alton Call Centers
a. Customer contact
b. Customer order processing
c. Billing information processing
d. Collections
e. Correspondence processing
f. Customer payment processing
Operating Company
a. Postage and forms

Electric Utilities
FERC Acct 903 - Records and Collection Expense and FERC Acct 905 - Misc Customer Accounts Expense
a. Customer contact
b. Customer order processing
c. Bill preparation and mailing
d. Collections
e. Payment processing
f. Correspondence processing

IAWC Cost Per Customer

In order to make a valid comparison to neighboring electric utilities, certain adjustments had to be made to the applicable Service Company charges to IAWC. It was necessary to adjust the National Call Center charges because electric utilities experience an average of 2.50 calls per customer compared to American Water's 1.28 calls per customer. Thus, National Call Center expenses had to be increased, for comparison purposes, to reflect its costs at a 2.50 calls per customer level. As shown below, IAWC's adjusted annual expense per customer is $32.18—the number that can be compared to neighboring electric utilities' expenses.

Illinois American 12 Months Ended June 30, 2007 Cost Per Customer

	Cost Component	Service Co Charges	Adjustment Fewer Calls For Water Cos. (A)	Adjusted	
Service Company					
Call Centers	Call processing, order processing, credit, bill collection	$ 3,836,943	$ 3,657,086	$ 7,494,028	
Regional Offices		$ 541,844		$ 541,844	
Service Company	Customer payment processing			$ 454,284	
Operating Company	Postage & forms			$ 1,295,703	Note B
			Cost Pool Total	$ 9,785,858	
			Total Customers	304,072	
	12 Months Ended June 30, 2007 Cost Per Illinois American Customer			**$ 32.18**	

Note A: Adjustment for American Water's fewer calls per customer

This adjustment is necessary because water utilities experience fewer calls per customer than do electric utilities

Test year annualized Call Center charges		$ 3,836,943
Electric utility industry's avg calls/customer	2.50	
American Water's avg calls/customer	1.28	
Percent different	95%	95%
Total Adjustment B		$ 3,657,086

Note B: Estimated customer payment processing expenses

Number of customers	304,072
Number of payments/customer/year	12
Total payments processed/year	3,648,864
Bank charge per item	$ 0.1245
Total estimated annual expense	$ 454,284

Electric Utility Group Cost Per Customer

Schedule 9 shows the actual 2006 customer accounts expense per customer calculation for the electric utility comparison group. All of the underlying data was taken from the utilities' FERC Form 1.

Summary Of Results

As shown in the table below, IAWC's cost per customer is within the range of the electric utility comparison group. It can therefore be concluded that the customer accounts-related expenses, including those of the Alton and Pensacola Call Centers, assigned by the Service Company to IAWC are reasonable.

Average Customer Accounts Expense Per Customer		
Wisconsin Power & Light	$	12.99
Louisville Gas & Electric	$	13.46
Interstate Power & Light	$	13.79
Superior Water, Light & Power	$	17.56

VI - Need For Service Company Services

Analysis Of Services

The final aspect of this study was an assessment of whether the services that are provided to IAWC by the Service Company would be necessary if IAWC were a stand-alone water utility. The first step in this evaluation was to determine specifically what the Service Company does for IAWC. Based on discussions with Service Company personnel, the matrix in Schedule 10 was created showing which entity—IAWC or a Service Company location—is responsible for each of the functions IAWC requires to ultimately provide service to its customers. This matrix was reviewed to determine: (1) if there was redundancy or overlap in the services being provided by the Service Company and (2) if Service Company services are typical of those needed by a stand-alone water utility.

Upon review of Schedule 10, the following conclusions can be drawn:

- The services that the Service Company provides are necessary and would be required even if IAWC were a stand-alone water utility.

- There is no redundancy or overlap in the services provided by the Service Company to IAWC. For all of the services listed in Schedule 11, there was only one entity that was primarily responsible for the service.

Governance Practices Associated With Service Company Charges

There are several ways by which IAWC exercises control over Service Company services and charges. The most important of these are described below.

- **Regional President Oversight** – The Regional President of the Central Region is on the Executive Management Team (EMT) of American Water. The Regional President is responsible for the overall performance of each operating company in the region, including IAWC. As part of the EMT, each Regional President has equal say with other EMT members in major business decisions of American Water and has the ability to monitor Service Company performance quality and spending. The Regional President also serves as a Director on the Board of the Service Company.

- **Regional Vice President & Treasurer** – The Regional Vice President and Treasurer of the Central Region is responsible for the financial reporting, performance and internal controls of each of the operating companies in the region. The Regional Service Delivery and Finance Directors monitor the performance and reporting from the Service Company and pushes back whenever the quality and service are not appropriate.

- **Operating Company Board Oversight** – IAWC board of directors includes the Regional President, Vice President of Operations and Vice President of Finance.

- **Service Company Budget Review/Approval** – Every Regional President sits on the Service Company board and that board must formally approve the budget for Service Company charges for the next year. These budgeted charges are consolidated with the operating company's own spending into an overall budget which must be approved by the operating company's board of directors.

- **Major Project Review And Approval** – Major projects undertaken by the Service Company must first be reviewed by American Water's Executive Management Team, which includes the Regional President. The Regional President, with input from the regional management team has the ability to impact all new initiatives and projects before they are authorized. Projects ultimately must be accounted for in the Service Company Budget, approved by its Board.

- **Service Company Bill Scrutiny** – Operating company personnel review the monthly Service Company bill for accuracy and reasonableness on a monthly basis. Any mistakes or overcharges are credited on a subsequent billing.

- **Service Company Budget Variance Reporting** – Each month, a summary variance analysis is prepared that explains differences between budgeted and actual Service Company spending. In addition, the monthly financial review meetings are held to review various aspects of the financial statements of the Service Company.

- **Operating Company Budget Variance Reporting** – The "Budget/Plan Analysis," produced monthly by each operating company, has a line item for Management Fees (i.e., Service Company charges). In this way, Service Company budget versus actual charges can be monitored for the month and year-to-date. The Regional President attends the monthly review of the Service Company which includes an analysis of variances in both operating and financial data.

- **Capital Investment Management (CIM) –** Capital investment within American Water is a significant and essential part of the business. It is necessary to maintain regulatory compliance, provide for reliable, efficient, and quality service, keep pace with growth, and

facilitate appropriate infrastructure renewal. American Water's CIM policy supports the following objectives:

- Capital investment plans are developed and aligned with business plan objectives
- Effective technical oversight and governance is in place for individual projects
- Establishes investment strategies that represent value enhancements for customers
- Periodically review investment performance against established objectives and make adjustments to meet business needs

The CIM process was designed to optimize the effectiveness of asset investment. The process is managed at three levels for all American Water companies, including IAWC.

I - Introduction

Purpose Of This Study

This study was undertaken to answer three questions concerning the services provided by American Water Works Service Company, Inc. (Service Company) to Kentucky American Water Company (KAWC):

1. Was KAWC charged the lower of cost or market for managerial and professional services provided by the Service Company during the 12-months ended December 31, 2006?

2. Were the 12-months ended December 31, 2006 costs of the Service Company's customer accounts services, including those of the National Call Centers, reasonable?

3. Are the services KAWC receives from Service Company necessary?

Study Results

Concerning question 1, the following conclusions can be drawn from this study:

- KAWC was charged the lower of cost or market for managerial and professional services during the 12-months ended December 31, 2006.

- On average, the hourly rates for outside service providers are **44% higher** than the Service Company's hourly rates.

- The managerial and professional services provided by the Service Company are vital and could not be procured externally by KAWC without careful supervision on the part of KAWC. If these services were contracted entirely to outside providers, KAWC would have to add at least one position to manage activities of outside firms. This position would be necessary to ensure the quality and timeliness of services provided.

- If all the managerial and professional services now provided by the Service Company had been out-sourced during the 12-months ended December 31, 2006, KAWC and its ratepayers would have incurred an **additional $2.7 million** in expenses. This amount includes the higher cost of outside providers and the cost of a KAWC position needed to direct the outsourced work.

- This study's hourly rate comparison actually understates the cost advantages that accrue to KAWC from its use of the Service Company. Outside service providers generally bill for every hour worked. Service Company personnel, on the other hand, charge a maximum 8 per day even when they work more. If the overtime hours of Service Company personnel had been factored into the hourly rate calculation, the Service Company would have had an even greater annual dollar advantage than the $2.7 million cited above.

- It would be difficult for KAWC to find local service providers with the same specialized water industry expertise as that possessed by the Service Company staff. Service Company personnel spend substantially all their time serving operating water companies. This specialization brings with it a unique knowledge of water utility operations and regulation that is most likely unavailable from local service providers.

- Service Company fees do not include any profit markup. Only its actual cost of service is being recovered from KAWC ratepayers.

Concerning question 2, it was determined that the cost of the Service Company's customer accounts services, including those provided by the National Call Center, **is near the average of the comparison group of neighboring electric utilities**. As will be explained further herein, this group of companies provides a reasonable proxy group for comparison to a regulated utility of the size and scope of KAWC. During the 12-months ended December 31, 2006, the customer accounts cost for KAWC customers was $26.98 compared to the 2005 average of $26.07 for neighboring electric utilities. The highest comparison group per customer cost was $35.82 and the lowest $12.43.

Concerning question 3, the following conclusions can be drawn:

- The services that the Service Company provides are necessary and would be required even if KAWC were a stand-alone water utility.

- There is no redundancy or overlap in the services provided by the Service Company to KAWC. For all of the services listed in Schedule 11, there was only one entity that was primarily responsible for the service.

II - Background

Overview Of American Water Service Company

The Service Company maintains several types of offices from which it provides services to American Water operating companies. They include:

- Corporate Office – Includes American Water's executive management and personnel from the various corporate support services. American Water's corporate office is located in Voorhees, New Jersey.

- National Call Centers – Perform customer service functions, including: customer call processing, service order processing, correspondence processing, credit and collections. American Water maintains two call centers. One in Alton, Illinois that went into operation in the second quarter of 2001 and a second in Pensacola, Florida that went into operation in April 2005. Prior to the establishment of these national call centers, customer service functions were performed by employees of KAWC, which incurred the expense on its books. KAWC transitioned to the Alton Call Center in October 2003 and to the Pensacola Call Center in June 2005.

- National Shared Services Center – The Shared Services Center, located in Cherry Hill, New Jersey, provides various financial, accounting and treasury functions that had been performed by individual operating companies. This arrangement has improved and streamlined the Company's financial processes and allowed operating companies to focus on providing utility service.

- Regional Offices – Regional offices provide operating companies with certain support services that can be performed more effectively on a regional basis because individual operating company/center workloads are not sufficient to warrant a full-time staff for these activities. At the same time, these services require closer proximity to operating companies served so they have not been consolidated into the National Shared Services Center. Examples of regional office services include rates and revenues, engineering and operations. There are four regional offices—Northeast, Southeast, Central and West.

- Belleville Lab – The national trace substance laboratory is located in Belleville, Illinois and performs testing for all American Water operating companies.

- Information Technology Service Centers – American Water's principal data center, located Hershey, Pennsylvania, supports the IT infrastructure required to run corporate and operating company business applications and the email system. IT personnel rotate, as needed, throughout the regional offices and operating companies.

Service Company Expense Categories

The Service Company renders a monthly bill to operating companies. Charges are broken down into the following expense categories:

- Labor – base pay (salaries) of managerial and professional employees
- Labor-Related Overheads – employee benefit costs (payroll taxes, medical coverage, pensions, disability insurance) and other general expenses
- Support – wages and salaries of office support personnel, including secretaries, clerical personnel, telephone operators and mail clerks

- Office Expenses – office rent, equipment leases, telephone, electric, office supplies, property taxes, office maintenance
- Vouchers/Journal Entries – (1) travel expenses incurred by Service Company personnel, (2) other items submitted for reimbursement by employees, including professional association dues, (3) outside service contracts for such things as actuarial services, and (4) various other expenditures, including data center expenses for software licenses and hardware maintenance.

Service Company expenses are either assigned directly or allocated to operating companies, as shown in the table below.

Expense Category	Direct Charged	Allocated	Comments
Labor	X	X	Professional personnel working for one or several operating companies
Labor-Related Overheads	X	X	These are primarily employee benefit costs that relate directly to labor
Support		X	Administrative personnel support the professional staff, thus support costs are allocated on the basis of professional labor
Office Expense		X	Are all allocated on the basis of professional labor
Vouchers/Journals	X	X	May be either directly in support of one operating company (e.g., an engineer traveling from the Corporate Office to the operating company) or allocated to several operating companies

A direct charge occurs when Service Company work or expenses are incurred in support of only one operating company. Direct charge examples include work in support of an operating company's rate case, engineering design work on an operating company's project and the preparation of an operating company's financial statements.

Service Company expenses are allocated when more than one operating company benefits from the underlying work. Examples include assessments of new Federal water quality regulations, development of the company-wide materials procurement contracts and creation of company-wide engineering design standards.

Charging and Assignment Of Service Company Time and Expenses

Service Company transactions are assigned with the following information so there is a proper accounting and eventual charging to an operating company:

- Operating company number, if transaction is a direct charge
- Formula number if transaction is allocated
- Employee hours worked
- Account number for non-labor charges.

Charges can originate from the following systems:

- Payroll System
- RVI System (outside vendor payments)
- PCard System (credit card payments)
- Internal Purchase Order System
- Journal entries.

The Service Company's time reporting process enables labor and support charges to be assigned to the proper operating company. Labor charges are based on the time reported by managerial and professional Service Company employees. Every week, Service Company professional employees complete an electronic time sheet (see example in Schedule 1) that shows:

- Operating company (for direct charge)
- Formula number (for allocation)
- Work order (where applicable)
- Authorization number (where applicable).

At month-end, time report information is processed and direct and allocated professional labor hours tabulated for each operating company. Dollar charges are then calculated using the hourly rate of each Service Company professional employee based upon their base salary (i.e., an employee's hours times their hourly rate of pay).

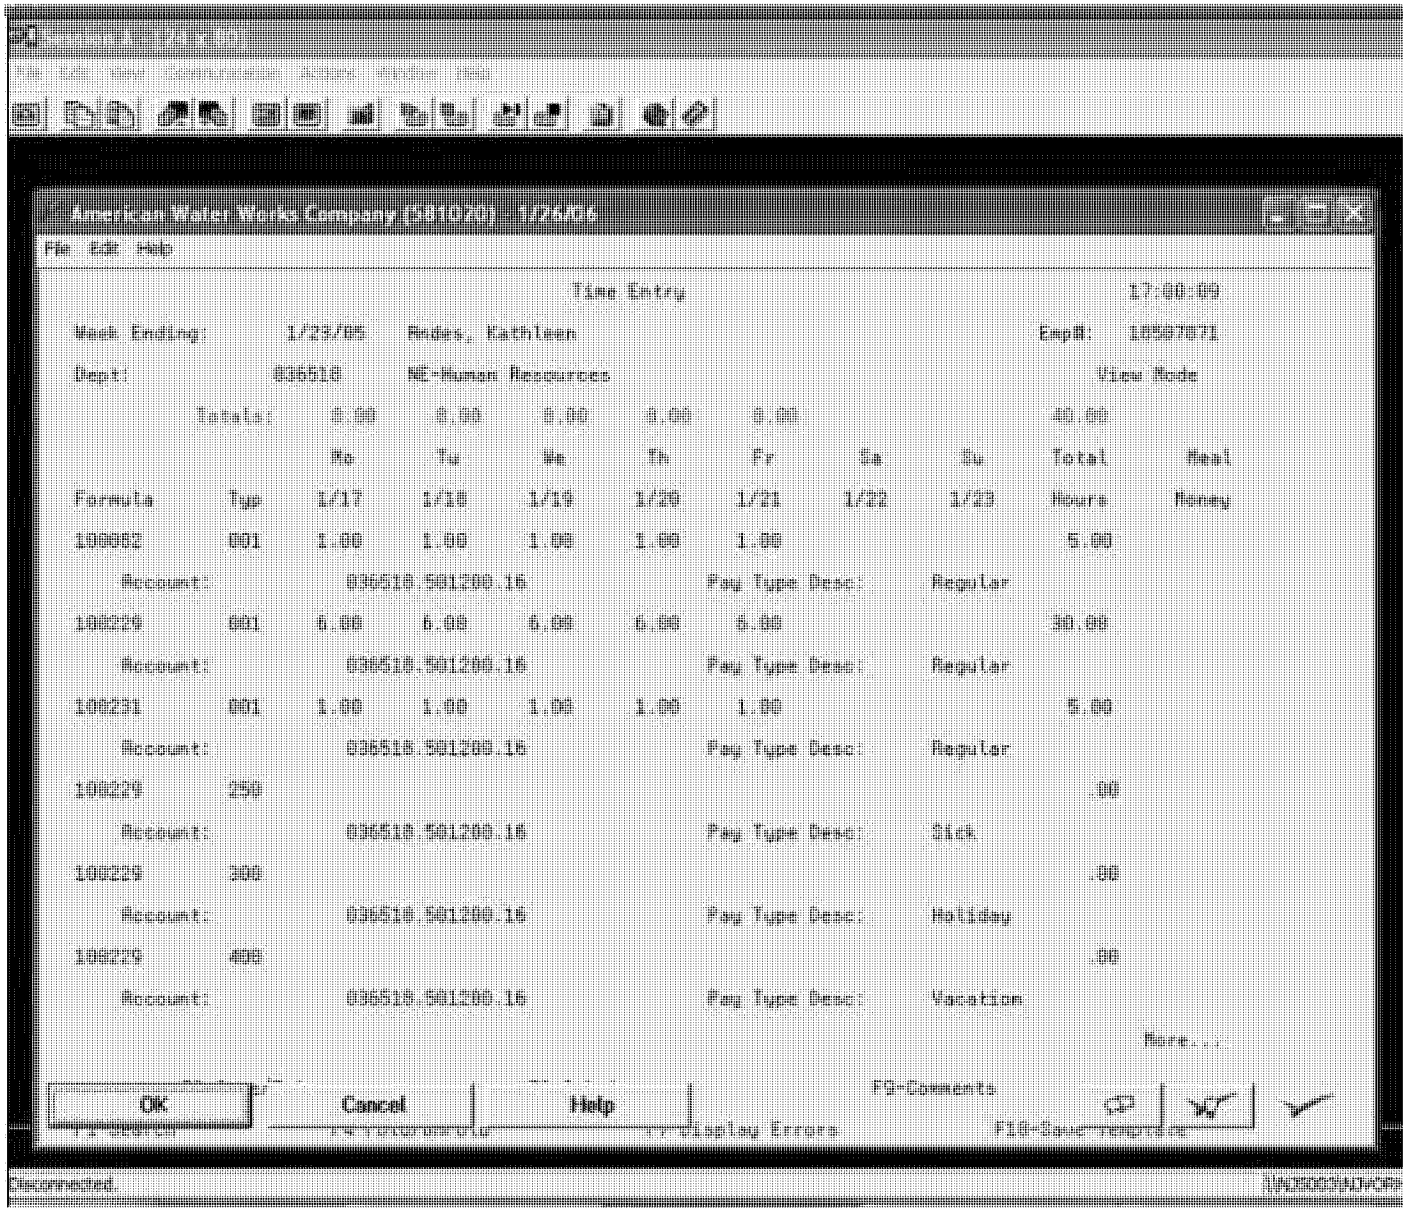
Support (administrative) personnel charge their time to the activity "General Admin." As described in the table on page 4, their labor charges are allocated to operating companies based upon how their office's professional personnel labor charges are assigned. For instance, if 2% of the Voorhees Data Center's professional labor is assigned to KAWC during a month, then 2% of that office's monthly administrative labor charges also is assigned to the operating company.

The overhead cost category is next assigned based on professional and administrative labor costs. Thus, if 2% of the Corporate Office's accumulated professional and support labor is charged to KAWC during the month, then 2% of that month's overhead expenses will be assigned to KAWC.

Each Service Company location's office expenses are allocated to operating companies based on how professional labor charges for that office have been assigned. For instance, if 2% of professional labor from one Service Company office is assigned to KAWC, then 2% of that office's office expenses would be assigned to KAWC. Thus, office expenses are allocated in the very same way as administrative labor.

Vouchers/journal entries may be charged directly or allocated, depending on who benefits from the expenditure. For instance, the cost of a continuing professional education course taken by a professional in a regional office is allocated to the operating companies served by that office. Travel expenses by that same professional to a state rate case proceeding are charged directly to the operating company whose case is being heard.

Kentucky American Water Company
Sample Electronic Time Sheet



III – Service Company Cost Comparison Approach

During the 12-months ended December 31, 2006, the Service Company billed KAWC $6,612,414 in O&M-related charges. Included in this amount is $733,724 associated with several non-recurring items, for which KAWC is not seeking recovery. This market study excludes the non-recurring items so as to align with the rate case's recoverable costs.

For purposes of comparing Service Company charges to outside benchmarks, Service Company services were placed into two categories:

- Managerial and Professional Services – Includes such services as management, accounting, legal, human resources, information technology, and engineering.

- Customer Accounts Services – Includes customer-related services, such as call center, credit, billing, collection and payment processing.

Total test period Service Company charges break down between management/professional services and customer account services as follows:

	2006	
	Amount	Hours
Management and Professional Services	$ 4,406,473	48,595
Customer Account Services	$ 1,472,217	49,904
Total Charges	$ 5,878,690	98,499

This study's first question—whether the Service Company charges the lower of cost or market—was evaluated by comparing the cost per hour for managerial and professional services provided by Service Company personnel to hourly billing rates that would be charged by outside providers of equivalent services. Service Company costs per hour were based on actual charges to KAWC during 2006. Outside providers' billing rates came from surveys or other information from professionals that could perform the services now provided by the Service Company.

The second question—reasonableness of the National Call Center costs—was addressed by comparing KAWC's customer accounts services expenses to those of neighboring electric utilities. This approach was selected because the costs of outside providers of call center services are not publicly available. However, electric utility customer account services expenses can be obtained from the FERC Form 1. The availability and transparency of FERC data adds to the validity of its use in this comparison.

The third question—the necessity of Service Company services—was first investigated by determining the services provided to KAWC. A determination was then made as to whether these services would be required if KAWC were a stand-alone utility.

IV – Managerial And Professional Services Hourly Rate Comparison

Methodology

The lower-of-cost-or-market comparison is accomplished by comparing the cost per hour for Service Company managerial and professional services to those of outside service providers to whom these duties could be assigned. Based on the nature of the Service Company services it was determined that the following outside providers could perform the categories of services indicated below:

- Management Consultants – executive and administrative management, risk management services, human resources and communications services
- Attorneys – legal services
- Certified Public Accountants – accounting, financial, information technology and rates and revenues services
- Professional Engineers – engineering, operations and water quality services.

The services provided by the Belleville lab are assumed to be transferable to professional engineers for purposes of this cost comparison. This was done for two reasons. First, there is no readily available survey of hourly billing rates for testing services such as those performed by Belleville. Second, Belleville personnel have similar educational backgrounds as Service Company engineering personnel. In fact, many Belleville employees have engineering degrees. Thus, it is valid to compare the hourly rates of Belleville services to those of outside engineering firms.

Service Company's hourly rate were calculated for each of the four outside service provider categories, based on the dollars and hours charged to KAWC during 2006. Hourly billing rates for outside service providers were developed using third party surveys or directly from information furnished by outside providers themselves.

It should be noted that by using the Service Company's hours charged KAWC during 2006, its hourly rates are actually overstated because Service Company personnel charge a maximum 8 per day even when they work more. Outside service providers generally bill for every hour worked. If the overtime hours of Service Company personnel had been factored into the hourly rate calculation, Service Company hourly rates would have been lower.

The last step in the market cost comparison was to compare the Service Company's average cost per hour to the average cost per hour for outside providers.

Service Company Hourly Rates

Schedule 2 (page 10) details the assignment of 2006 management and professional Service Company charges to outsider provider categories. Schedule 3 (page 11) shows the same assignment for Service Company management and professional hours charged to KAWC during 2006.

Certain adjustments to these dollar amounts were necessary to calculate Service Company hourly rates that are directly comparable to those of outside providers. Adjustments were made to the following 2006 test year non-labor Service Company charges:

- Contract Services – 2006 Service Company charges to KAWC include over $413,000 in charges associated with existing arrangements with outside professional firms who perform certain corporate-wide services (e.g., legal, financial audit, actuarial services). These professional fees are excluded from the Service Company hourly rate calculation because the related services have effectively been out-sourced already.

- Travel Expenses – In general, client-related travel expenses are not recovered by outside service providers through their hourly billing rate. Rather, actual out-of-pocket travel expenses are billed to clients in addition to fees for professional services. Thus, it is appropriate to remove these Service Company charges from the hourly rate calculation.

- Computer Hardware and Software Expenses – Included in 2006 Service Company charges to KAWC are charges for outside expenses related to leases and maintenance fees related to mainframe, server and network infrastructure, corporate business applications and the email system. An outside provider that would take over operation of a data center would recover these expenses over and above the labor necessary to operate the data center.

Schedule 4 (page 12) shows how contract services, travel expenses and computer hardware/software-related Service Company charges are assigned among the four outside provider categories.

Based on the assignment of expenses and hours shown in Schedules 2 and 3 and the excludable items shown in Schedule 4, the Service Company's equivalent costs per hour for 2006 are calculated below.

	Attorney	Management Consultant	Certified Public Accountant	Professional Engineer	Total
Total management, professional & technical services charges	$ 280,454	$ 1,227,408	$ 2,068,084	$ 830,527	$ 4,406,473
Less:

Outside Service Provider Hourly Rates

The next step in the cost comparison was to obtain the average billing rates for each outside service provider. The source of this information and the determination of the average rates are described in the paragraphs that follow.

Attorneys

The Kentucky Bar Association does not survey its members as to their hourly billing rates. In addition, publicly available billing rate information could not be found for Kentucky attorneys. Therefore, a Kentucky estimate was developed from a survey of Michigan lawyers conducted annually by the Michigan Lawyers Weekly. As presented in Schedule 5, the average rate for each Michigan firm respondent was adjusted for the cost of living differential between their location and Lexington, Kentucky. The survey includes rates that were in effect at December 31, 2005. Thus, the 2005 average rate was escalated to June 30, 2006—the midpoint of 2006.

Management Consultants

The cost per hour for management consultants was developed from the 2006 annual survey performed by the Association of Management Consulting Firms—an industry trade organization. The first step in the calculation, presented in Schedule 6, was to determine an average rate by consultant position level. From these rates, a single weighted average hourly rate was calculated based upon the percent of time that is typically applied to a consulting assignment by each consultant position level. This survey includes rates that were in effect during 2005 for firms in the United States. Consultants typically do not limit their practice to any one region and must travel to a client's location. Thus, the U.S. national average is appropriate for comparison. The survey includes rates that were in effect at December 31, 2005. Thus, the 2005 average rate was escalated to June 30, 2006—the midpoint of 2006.

Certified Public Accountants

The average hourly rate for Kentucky certified public accountants was developed from a 2006 survey conducted by the American Institute of Certified Public Accountants (AICPA) every two years. Hourly rates in the AICPA survey are the average of firms in the Kentucky region. The average hourly rate was calculated for a set of typical accountant positions, as shown in Schedule 7. Based on a typical staff assignment by each accountant position, a weighted average hourly rate was calculated. This survey covered hourly rates in effect during 2005. Thus, the 2005 average rate was escalated to June 30, 2006—the midpoint of 2006.

Professional Engineers

The Service Company provided hourly rate information for outside engineering firms that could have been used by KAWC in 2006. As presented in Schedule 8, an average rate was developed for each engineering position level. Then, using a typical percentage mix of project time by engineering position, a weighted average cost per hour was calculated.

Source: Information provided by American Water Works Service Company

Service Company Versus Outside Provider Cost Comparison

As shown in the table below, Service Company costs per hour are considerably lower than those of outside providers.

	12 Months Ended December 31, 2006		
Service Provider	Service Company	Outside Provider	Difference--Service Co. Greater(Less) Than Outside
Attorney	$ 131	$ 244	$ (113)
Management Consultant	$ 94	$ 218	$ (124)
Certified Public Accountant	$ 68	$ 98	$ (30)
Professional Engineer	$ 85	$ 101	$ (16)

Based on these cost per hour differentials and the number of managerial and professional services hours billed to KAWC during the 12-months ended December 31, 2006, outside service providers would have cost $2,602,632 more than the Service Company (see table below). Thus, on average, outside provider's hourly rates are almost 44% higher than those of the Service Company ($2,602,632 / $5,878,690).

	12 Months Ended December 31, 2006		
Service Provider	Hourly Rate Difference--Service Co. Greater(Less) Than Outside	Service Company Hours Charged	Dollar Difference
Attorney	$ (113)	2,041	$ (231,164)
Management Consultant	$ (124)	11,786	$ (1,459,265)
Certified Public Accountant	$ (30)	25,258	$ (761,368)
Professional Engineer	$ (16)	9,510	$ (150,835)
Service Company Less Than Outside Providers			$ (2,602,632)

If KAWC were to use outside service providers rather than the Services Company for managerial and professional services, it would incur other additional expenses besides those associated with higher hourly rates. Managing outside firms who would perform 48,595 hours of work (around 32 full-time equivalents at 1,500 billable hours per FTE) would add a significant workload to the existing KAWC management team. Thus, it would be necessary for KAWC to add at least one position to supervise the outside firms and ensure they delivered quality and timely services. The individuals that would fill these positions would need a good understanding of each profession being managed. They must also have management experience and the authority necessary to give them credibility with the outside firms. As calculated in the table below, this position would add another $121,400 per year to KAWC's personnel expenses.

Cost of Adding Administrative Positions To KAWC's Staff

	Total
New Positions' Salary	$ 85,000
Benefits (at 52%)	$ 36,400
Total Cost of the New Position	$ 121,400

Thus, the total effect on the ratepayers of KAWC of contracting all services now provided by Service Company would be an increase in their costs of **$2,724,032** ($2,602,632 + $121,400).

Other Cost Comparisons

Every year, the Belleville Lab conducts a comparison of its cost for performing major tests to the cost of using outside testing laboratories. Over the past several years, these surveys have shown the following results been as follows:

Year	Number of Major Tests Surveyed	Percent Belleville Lower Than Outside Labs
2000	26	15%
2001	25	19%
2002	24	16%
2003	23	10%
2004	24	9%
2005	24	25%

These studies provide additional evidence that the Service Company arrangement is the lowest-cost alternative for KAWC.

V – Customer Account Services Cost Comparison

Background

It is difficult to compare the cost of American Water's National Call Centers with outside providers of the same call center-related services. Call center survey data is proprietary and expensive to obtain. For this reason, KAWC's National Call Center costs are compared to those of neighboring electric utilities because the data necessary to make this comparison is readily available to the public.

Electric utility cost information comes from their FERC Form 1. FERC's chart of accounts is defined in chapter 18, part 101 of Code of Federal Regulations. FERC accounts that contain call center-related expenses and are used in this study's comparison are:

- Account 903 Customer Accounts Expense – Records and Collection Expense
- Account 905 Customer Accounts Expense – Miscellaneous Customer Accounts Expense.

In addition, labor-related overheads charged to the following FERC accounts must be added to the labor components of Accounts 903 and 905.

- Account 926 Employee Pension and Benefits
- Account 408 Taxes Other Than Income (employer's portion of FICA).

Schedule 9 provides FERC's description of what should be charged to these accounts. In questioning the controller of a large Southeastern electric utility, it was determined that expenses of the activities described below are recorded in the designated FERC accounts.

903 Records and Collection Expense

- Customer Call Center – customer calls/contact, credit, order taking/disposition, bill collection efforts, outage calls
- Call Center IT – maintenance of phone banks, voice recognition units, call center software applications, telecommunications
- Customer billing – bill printing, stuffing and mailing
- Remittance processing – processing of customer payments received in the mail
- Bill payment centers – locations where customers can pay their bills in person

905 Miscellaneous Customer Accounts Expense

- Customer Information System IT – maintenance and support of the customer information system

This study assumes the FERC accounts for other electric and gas utilities contain expenses for the same activities.

Kentucky American Water Company
FERC Account Descriptions

903 – Customer Records and Collection Expenses
This account shall include the cost of labor, materials used and expenses incurred in work on customer applications, contracts, orders, credit investigations, billing and accounting, collections and complaints.

Labor

1. Receiving, preparing, recording and handling routine orders for service, disconnections, transfers or meter tests initiated by the customer, excluding the cost of carrying out such orders, which is chargeable to the account appropriate for the work called for by such orders.
2. Investigations of customers' credit and keeping of records pertaining thereto, including records of uncollectible accounts written off.
3. Receiving, refunding or applying customer deposits and maintaining customer deposit, line extension, and other miscellaneous records.
4. Checking consumption shown by meter readers' reports where incidental to preparation of billing data.
5. Preparing address plates and addressing bills and delinquent notices.
6. Preparing billing data.
7. Operating billing and bookkeeping machines.
8. Verifying billing records with contracts or rate schedules.
9. Preparing bills for delivery, and mailing or delivering bills.
10. Collecting revenues, including collection from prepayment meters unless incidental to meter reading operations.
11. Balancing collections, preparing collections for deposit, and preparing cash reports.
12. Posting collections and other credits or charges to customer accounts and extending unpaid balances.
13. Balancing customer accounts and controls.
14. Preparing, mailing, or delivering delinquent notices and preparing reports of delinquent accounts.
15. Final meter reading of delinquent accounts when done by collectors incidental to regular activities.
16. Disconnecting and reconnecting services because of nonpayment of bills.
17. Receiving, recording, and handling of inquiries, complaints, and requests for investigations from customers, including preparation of necessary orders, but excluding the cost of carrying out such orders, which is chargeable to the account appropriate for the work called for by such orders.
18. Statistical and tabulating work on customer accounts and revenues, but not including special analyses for sales department, rate department, or other general purposes, unless incidental to regular customer accounting routines.
19. Preparing and periodically rewriting meter reading sheets.
20. Determining consumption and computing estimated or average consumption when performed by employees other than those engaged in reading meters.

Materials and expenses

21. Address plates and supplies.
22. Cash overages and shortages.
23. Commissions or fees to others for collecting.
24. Payments to credit organizations for investigations and reports.
25. Postage.
26. Transportation expenses, including transportation of customer bills and meter books under centralized billing procedure.
27. Transportation, meals, and incidental expenses.
28. Bank charges, exchange, and other fees for cashing and depositing customers' checks.
29. Forms for recording orders for services, removals, etc.
30. Rent of mechanical equipment.

Kentucky American Water Company
FERC Account Descriptions

905 – Miscellaneous Customer Accounts Expenses
This account shall include the cost of labor, materials used and expenses incurred not provided for in other accounts.
Labor
1. General clerical and stenographic work.
2. Miscellaneous labor.

Materials and expenses
3. Communication service.
4. Miscellaneous office supplies and expenses and stationery and printing other than those specifically provided for in accounts 902 and 903.

Comparison Group

Electric utilities included in the comparison group are shown in the table below. These are companies whose FERC Form 1 show amounts for accounts 903 and 905.

Kentucky	• Kentucky Power • Kentucky Utilities	• Louisville Gas & Electric • Union Light, Heat & Power
Illinois	• Commonwealth Edison • Illinois Power	• MidAmerica Energy
Indiana	• Indiana Michigan Power • Indianapolis Power & Light	• Northern Indiana Public Service • Public Service of Indiana
Missouri	• Kansas City Power & Light	
Ohio	• Cincinnati Gas & Electric • Cleveland Electric • Columbus Southern Power • Dayton Power & Light	• Ohio Edison • Ohio Power • Toledo Edison
Tennessee	• Kingsport Power	
Virginia	• Appalachian Power	• Virginia Electric Power
West Virginia	• Wheeling Power	

Some neighboring electric utilities could not be included in the comparison group because they did not submit the necessary FERC Form 1 data.

Comparison Approach

The basis for this comparison is customer account services expenses per customer. KAWC's cost pool was developed to include the same expenses included in electric utility's FERC accounts 903 and 905. As shown in the graphic below, KAWC's resultant cost pool contains the expenses of Service Company locations and certain operating company expenses.

American Water
Service Company Pensacola & Alton Call Centers a. Customer contact b. Customer order processing c. Billing information processing d. Collections e. Correspondence processing IT Service Centers a. Support expenses for the customer information system (ORCOM) Kentucky American Water a. Payment processing

Electric Utilities
FERC Acct 903 - Records and Collection Expense and FERC Acct 905 - Misc Customer Accounts Expense a. Customer contact b. Customer order processing c. Bill preparation and mailing d. Collections e. Payment processing f. Correspondence processing

KAWC Cost Per Customer

In order to make a valid comparison to neighboring electric utilities, certain adjustments had to be made to the applicable Service Company charges to KAWC. It was necessary to adjust the National Call Center charges because electric utilities experience an average of 2.50 calls per customer compared to American Water's 1.28 calls per customer. Thus, National Call Center expenses had to be increased, for comparison purposes, to reflect its costs at a 2.50 calls per customer level. As shown below, KAWC's adjusted annual expense per customer is $26.18—the number that can be compared to neighboring electric utilities' expenses.

Kentucky-American 2006 Cost Per Customer

Cost Component		2006 Service Co Charges	Adjustment Fewer Calls For Water Cos. (A)	Adjusted	
Service Company					
Call Centers	Call processing, order processing, credit, bill collection	$ 1,315,990	$ 1,254,303	$ 2,570,294	
Regional Offices		$ 156,227		$ 156,227	
IT/Data Centers	Bill preparation and mailing	$ 274,661		$ 274,661	
Operating Company	Customer payment processing			$ 152,198	Note B
			Cost Pool Total	$ 3,153,378	
			Total Customers	116,865	
	2006 Cost Per Kentucky-American Customer			**$ 26.98**	

Note A: Adjustment for American Water's fewer calls per customer

This adjustment is necessary because water utilities experience fewer calls per customer than do electric utilities

Test year annualized Call Center charges		$ 1,315,990
Electric utility industry's avg calls/customer	2.50	
American Water's avg calls/customer	1.28	
Percent different	95%	95%
Total Adjustment B		$ 1,254,303

Note B: Estimated customer payment processing expenses

Number of customers	116,865
Number of payments/customer/year	12
Total payments processed/year	1,402,380
Bank charge per item	$ 0.1085
Total estimated annual expense	$ 152,198

Electric Utility Group Cost Per Customer

Schedule 10 shows the actual 2005 customer accounts expense per customer calculation for the electric utility comparison group. All of the underlying data was taken from the utilities' FERC Form 1.

Summary Of Results

As shown in the table below, KAWC's cost per customer is near the average of the electric utility comparison group. It can therefore be concluded that the customer accounts-related expenses, including those of the Alton and Pensacola Call Centers, assigned by the Service Company to KAWC are reasonable.

Average Customer Accounts Expense Per Customer		
Louisville Gas & Electric	$	12.43
Illinois Power	$	14.01
Virginia Electric Power	$	15.77
Ohio Edison	$	16.68
Cleveland Electric Illuminating	$	17.15
Dayton Power & Light	$	19.72
Toledo Edison	$	21.45
Indianapolis Power & Light	$	21.91
Kentucky Utilities	$	24.87
Union Heat, Light & Power	$	25.64
Public Service of Indiana	$	26.02
Comparison Group Average	**$**	**26.07**
Kansas City Power & Light	$	26.64
Kentucky American Water	**$**	**26.98**
Wheeling Power	$	29.20
Cincinnati Gas & Electric	$	30.50
MidAmerican Energy	$	31.14
Indiana Michigan Power	$	31.50
Kingsport Power	$	32.18
Ohio Power	$	32.30
Appalachian Power	$	32.40
Commonwealth Edison	$	33.43
Kentucky Power	$	34.25
Columbus & Souther Power	$	35.49

VI - Need For Service Company Services

Analysis Of Services

The final aspect of this study was an assessment of whether the services that are provided to KAWC by the Service Company would be necessary if KAWC were a stand-alone water utility. The first step in this evaluation was to determine specifically what the Service Company does for KAWC. Based on discussions with Service Company personnel, the matrix in Schedule 11 was created showing which entity—KAWC or a Service Company location—is responsible for each of the functions KAWC requires to ultimately provide service to its customers. This matrix was reviewed to determine: (1) if there was redundancy or overlap in the services being provided by the Service Company and (2) if Service Company services are typical of those needed by a stand-alone water utility.

Upon review of Schedule 11, the following conclusions can be drawn:

- The services that the Service Company provides are necessary and would be required even if KAWC were a stand-alone water utility.

- There is no redundancy or overlap in the services provided by the Service Company to KAWC. For all of the services listed in Schedule 11, there was only one entity that was primarily responsible for the service.

Governance Practices Associated With Service Company Charges

There are several ways by which KAWC exercises control over Service Company services and charges. The most important of these are described below.

- **Regional President Oversight** – The Regional President of the Southeast Region is on the Executive Management Team (EMT) of American Water. The Regional President is responsible for the overall performance of each operating company in the region, including PAWC, VAWC, WVAWC, KAWC, KAWC and MAWC. As part of the EMT, each Regional President has equal say with other EMT members in major business decisions of American Water and has the ability to monitor Service Company performance quality and spending. The regional president has dialogue with each operating sub president to address their local concerns.

- **Regional Vice President & Treasurer** – The Regional Vice President and Treasurer of the Southeast Region is responsible for the financial reporting, performance and internal controls of each of the operating companies in the region. The Vice President and Treasurer monitor the performance and reporting from the Service Company and pushes back whenever the quality and service are not appropriate. The operating sub interacts with the regional VP & Treasurer to discuss any concerns with billings, etc.

- **Operating Company Board Oversight** – KAWC board of directors includes members of American Water's EMT, members of the regional management team and business and community leaders from outside the Company. This helps ensure that KAWC's needs are a factor in the delivery of Service Company services.

- **Service Company Budget Review/Approval** – Every operating company's regional president sits on the Service Company board and that board must formally approve the budget for Service Company charges for the next year. These budgeted charges are consolidated with the operating company's own spending into an overall budget which must be approved by the operating company's board of directors. KAWC's president is chairman of the local board.

- **Major Project Review And Approval** – Major projects undertaken by the Service Company must first be reviewed by American Water's Executive Management Team, which includes the Regional President. The Regional President, with input from the regional management team (including president of KAWC) has the ability to impact all new initiatives and projects before they are authorized.

- **Service Company Bill Scrutiny** – Regional office personnel review the monthly Service Company bill for accuracy and reasonableness on a monthly basis. Local subsidiary financial analyst has dialogue with regional office personnel on the monthly bill and any mistakes or overcharges are credited on a subsequent billing.

- **Service Company Budget Variance Reporting** – Each month, a summary variance analysis is prepared that explains differences between budgeted and actual Service Company spending. In addition, a more detailed monthly variance report, called the "Statement of Expenses and Billed Charges," is produced by Service Company location and shows actual spending for the month.

- **Operating Company Budget Variance Reporting** – The "Budget/Plan Analysis," produced monthly by each operating company, has a line item for Management Fees (i.e., Service Company charges). In this way, Service Company budget versus actual charges can be monitored for the month and year-to-date.

- **Capital Investment Management (CIM) –** CIM is one of American Water's primary business planning processes. It covers capital and asset planning and is employed throughout American Water and Thames Water. The current CIM process and procedures were established in 2003 as part of an initiative to implement leading water industry practices. CIM provides a full range of governance practices, including a formal protocol for assessing system needs, prioritizing expenditures, managing the capital program, approving project spending, delivering projects and measuring outputs. CIM ensures that:
  - Capital expenditure plans are aligned with the strategic intent of the business,
  - The impact of capital expenditure and income plans are fully reflected in operating expense plans,
  - The impacts of these plans are understood and affordable, and
  - Effective controls are in place over budgets (through business plans) and individual capital projects (through appropriate authorization thresholds, management and reporting processes).

  The CIM process was designed to optimize the effectiveness of asset investment. The process is managed at three levels for all American Water companies, including all KAWC Operating Units. Monthly meetings are held to review projects and when appropriate, KAWC is represented locally by appropriate parties.

WITNESS: P.BARYENBRUCH

KENTUCKY AMERICAN WATER COMPANY

1. Q. Please state your name and business address.

A. Patrick L. Baryenbruch, 302 East Park Drive, Raleigh, North Carolina 27605.

2. Q. Please describe your educational and professional background.

A. I received a Bachelors degree in accounting from the University of Wisconsin-Oshkosh in 1974 and a Masters in Business Administration degree from the University of Michigan in 1979.

I am a financial consultant and am a member of the American Institute of Certified Public Accountants and the North Carolina Association of Certified Public Accountants.

I began my career as a staff accountant with Arthur Andersen & Company where I performed financial audits of utilities, banks and finance companies. After three years I left to pursue an M.B.A. degree. Upon graduation from business school, I worked with the consulting firms of Theodore Barry & Associates and Scott, Madden & Associates.

During my consulting career, I have performed consulting assignments for approximately 50 utilities and 10 public service commissions. I have participated as project manager, lead or staff consultant for 24 commission-ordered management and prudence audits of public utilities. Of these, I have been responsible for evaluating the area of affiliate charges and allocation of corporate expenses in the Commission-ordered audits of Connecticut Light and Power, Connecticut Natural Gas, General Water Corporation (Pennsylvania Operations), Philadelphia Suburban Water Company (now Aqua America) and Pacific Gas & Electric Company.

My firm has performed the commission-ordered audit of Southern California Edison's 2002, 2003, 2004 and 2005 transactions with its non-regulated affiliate companies.

3. Q. What are your duties and responsibilities in your current position?

A. I am the President of my own consulting practice, Baryenbruch & Company, LLC, which was established in 1985. In that capacity, I provide consulting services to utilities and their regulators.

4. Q. Please describe the reason for your testimony in this case.

A. I am presenting the results of my study which evaluated the services provided by American Water Service Company ("Service Company") during 2006 to Kentucky American Water (KAWC). This study was undertaken in conjunction with KAWC's rate case and is true to the best of my knowledge and belief. The study is attached as Exhibit PLB-1.

5. Q. What were the objectives of your study?

A. This study was undertaken to answer three questions. First, was KAWC charged the lower of cost or market for managerial and professional services provided by the Service Company during 2006? Second, were the 2006 costs of the Service Company's customer accounts services, including those of the National Call Centers, reasonable? Third, are the services KAWC receives from Service Company necessary?

6. Q. What conclusions were you able to draw concerning question number 1, whether KAWC was charged the lower of cost or market services provided by the Service Company?

A. I was able to draw the following conclusions:

(1) KAWC was charged the lower of cost or market for managerial and professional services during the 12 months ended December 31, 2006.

(2) On average, the hourly rates for outside service providers are 44% higher than the Service Company's hourly rates.

(3) The managerial and professional services provided by the Service Company are vital and could not be procured externally by KAWC without careful supervision on the part of KAWC. If these services were contracted entirely to outside providers, KAWC would have to add at least one position to manage activities of outside firms. This position would be necessary to ensure the quality and timeliness of services provided.

(4) If all the managerial and professional services now provided by the Service Company had been out-sourced during the 12-months ended December 31, 2006, KAWC and its ratepayers would have incurred an **additional $2.7 million** in expenses. This amount includes the higher cost of outside providers and the cost of a KAWC position needed to direct the outsourced work.

(5) This study's hourly rate comparison actually understates the cost advantages that accrue to KAWC from its use of the Service Company. Outside service providers generally bill for every hour worked. Service Company personnel, on the other hand, charge a maximum 8 hours per day even when they work more. If the overtime hours of Service Company personnel had been factored into the hourly rate calculation, the Service Company would have had an even greater annual dollar advantage than the $2.7 million cited above.

(6) It would be difficult for KAWC to find local service providers with the same specialized water industry expertise as that possessed by the Service Company staff. Service Company personnel spend substantially all their time serving operating water companies. This specialization brings with it a unique knowledge of water utility operations and regulation that is most likely unavailable from local service providers.

(7) Service Company fees do not include any profit markup. Only its actual cost of service is being recovered from KAWC ratepayers.

7. Q. What is your conclusion regarding the reasonableness of the costs of the National Call Center that provides service to KAWC?

A. I was able to determine that the cost of the Service Company's customer accounts services, including those provided by the National Call Center, **is near the average of the comparison group of neighboring electric utilities**. As will be explained further herein, this group of companies provides a reasonable proxy group for comparison to a regulated utility of the size and scope of KAWC. During the 12-months ended December 31, 2006, the customer accounts cost for KAWC customers was $26.98 compared to the 2005 average of $26.07 for neighboring electric utilities. The highest comparison group per customer cost was $35.82 and the lowest $12.43.

9. Q. What conclusions were you able to draw concerning the necessity of the services KAWC receives from the Service Company?

A. I was able to draw the following conclusions:

(1) The services that the Service Company provides are necessary and would be required even if KAWC were a stand-alone water utility.

(2) There is no redundancy or overlap in the services provided by the Service Company to KAWC.

10. Q. Does this complete your testimony?

A. Yes.

I - Introduction

Purpose Of This Study

This study was undertaken to answer four questions concerning the services provided by American Water Works Service Company, Inc. ("Service Company") to Kentucky American Water Company ("KAWC"), each of which bears on the reasonableness of those charges as incurred during the 12 months ended July 31, 2008:

1. Was KAWC charged the lower of cost or market for managerial and professional services provided by the Service Company during this test period?

2. Was the 12 months ended July 31, 2008 cost of the Service Company's customer accounts services, including those of the National Call Centers, comparable to those of other utilities?

3. Are the services KAWC receives from Service Company necessary?

4. Were the Service Company's charges to KAWC during the 12-months ended July 31, 2008 comparable to other utility service companies?

Study Results

Concerning question 1, the following conclusions can be drawn from this study:

- KAWC was charged the lower of cost or market for managerial and professional services during the 12-months ended July 31, 2008.

- On average, the hourly rates for outside service providers are 28% higher than the Service Company's hourly rates.

- The managerial and professional services provided by the Service Company are vital and could not be procured externally by KAWC without careful supervision on the part of KAWC. If these services were contracted entirely to outside providers, KAWC would have to add at least one position to manage activities of outside firms. This position would be necessary to ensure the quality and timeliness of services provided.

- If all the managerial and professional services now provided by the Service Company had been outsourced during the 12-months ended July 31, 2008, KAWC and its ratepayers would have incurred nearly $1,745,000 in additional expenses. This amount includes the higher cost of outside providers and the cost of an additional KAWC position needed to direct the outsourced work.

- This study's hourly rate comparison actually understates the cost advantages that accrue to KAWC from its use of the Service Company. Outside service providers generally bill for every hour worked. Service Company exempt personnel, on the other hand, charge a maximum of 8 hours per day even when they work more hours. If the overtime hours of Service Company personnel were factored into the hourly rate calculation, the Service Company would have had an even greater annual dollar advantage than the $1,745,000 cited above. For instance, if Service Company overtime is conservatively estimated at 5% (2 hours per week), then that work would have cost an estimated $80,000 in additional charges from outside providers.

- It would be difficult for KAWC to find local service providers with the same specialized water industry expertise as that possessed by the Service Company staff. Service Company personnel spend substantially all their time serving operating water companies. This specialization brings with it a unique knowledge of water utility operations and regulation that is most likely unavailable from local service providers.

- Service Company fees do not include any profit markup. Only its actual cost of service is being recovered from KAWC ratepayers.

Concerning question 2, it was determined that the cost of the Service Company's customer accounts services, including those provided by the National Call Centers, is close to the average of the neighboring electric utility comparison group. As will be explained further herein, this group of companies provides a reasonable proxy group for comparison to a regulated utility of the size and scope of the Service Company and KAWC. During the 12-months ended July 31, 2008, the customer accounts cost for KAWC customers was $28.07 compared to the 2007 average of $27.99 for neighboring electric utilities. The highest comparison group per customer cost was $39.81 and the lowest $13.71.

Concerning question 3, the following conclusions can be drawn:

- The services that the Service Company provides are necessary and would be required even if KAWC were a stand-alone water utility.

- There is no redundancy or overlap in the services provided by the Service Company to KAWC. For all of the services listed in Schedule 10, there was only one entity that was primarily responsible for the service.

Concerning question 4, the following conclusions were reached:

- The Service Company provides KAWC with services similar to those provided by other utility service companies. This determination was based on service company information included in the Form 60, which must be filed with the Federal Energy Regulatory Commission ("FERC") by electric and combination electric/gas utility holding companies.

- The Service Company's 12 months ended July 31, 2008 cost per KAWC customer was reasonable compared to cost per customer for electric and combination electric/gas service companies. During the 2008 test period, KAWC was charged an average of $60 per customer by the Service Company compared to an average of $121 per customer for service companies reporting to the FERC.

II - Background

Overview Of American Water Works Service Company

American Water's Service Company exists to provide certain shared services to American Water subsidiaries. It follows a service company model used by many utility holding companies that own multiple regulated utilities. By consolidating executive and professional services into a single service company, utility holding companies are able to realize the following benefits for ratepayers:

- Purchasing Economies – Common costs (e.g., insurance, chemicals, piping) can be procured on a much larger scale thereby providing greater bargaining power for the combined entity compared to individual utility operating companies. A service company facilitates corporate-wide purchasing programs through its procurement and contract administration functions.

- Operating Economies of Scale – A service company is able to deliver services more efficiently because workloads can be balanced across more persons and facilities. For instance, American Water's Service Company is able to maintain one principal data center for the entire corporation. This is much more cost-efficient than each operating utility funding its own data center with its large fixed hardware, software and staffing costs.

- Continuity of Service – Centralizing service company personnel who perform similar services facilitates job cross-training and sharing of knowledge and expertise. This makes it easier to deal with staff turnover and absences and to sustain high levels of service to operating utilities. An individual operating utility might experience considerable disruption if a key professional left and it was necessary to hire outside to fill the vacancy.

- Maintenance of Corporate-Wide Standards – Personnel in American Water's Service Company establish standards for many functions (e.g., engineering designs, operating procedures and maintenance practices). It is easier to ensure these standards are followed by every operating utility because their implementation is overseen by the Service Company.

- Improved Governance – American Water's Service Company provides another dimension of management and financial oversight that supplements local operating utility management. The Service Company facilitates standard planning and reporting that help ensure operating utilities meet the requirements of their customers in a cost effective manner.

- Retention of Personnel – A service company organization provides operating utility personnel with another career path beyond what may be available on a local level. These opportunities tend to improve employee retention.

American Water follows the model for other utility service companies in another important regard. Its services are provided to affiliate operating utilities, like KAWC, at cost. American Water's Service Company is not a profit-making entity. It assigns only its actual expenses to the American Water subsidiaries it services.

The Service Company provides services to American Water operating companies from the following locations:

- Corporate Office – Includes American Water's executive management and personnel from the various corporate support services. American Water's corporate office is located in Voorhees, New Jersey.

- National Call Centers – Perform customer service functions, including: customer call processing, service order processing, correspondence processing, credit and collections. American Water maintains two call centers: one in Alton, Illinois that went into operation in 2001 and a second in Pensacola, Florida that went into operation in 2005. Prior to the establishment of these national call centers, customer service functions were performed by employees of KAWC, which incurred the expense on its books.

- National Shared Services Center – The Shared Services Center, located in Cherry Hill, New Jersey, provides various financial, accounting and treasury functions that had been performed by individual operating companies. This arrangement has improved and streamlined the Company's financial processes and allowed operating companies to focus on providing utility service.

- Regional Offices – Regional offices provide operating companies with certain support services that can be performed more effectively on a regional basis because individual operating company/center workloads are not sufficient to warrant a full-time staff for these activities. At the same time, these services require closer proximity to operating companies served so they are not provided by the National Shared Services Center. Examples of regional office services include rates and revenues, engineering and operations.

- Belleville Lab – The national trace substance laboratory is located in Belleville, Illinois, and performs testing for all American Water operating companies.

- Information Technology Service Centers – American Water's principal data center, located in Hershey, Pennsylvania, supports the IT infrastructure required to run corporate and operating company business applications and the communications systems. IT personnel rotate, as needed, throughout the regional offices and operating companies.

Service Company Expense Categories

The Service Company renders a monthly bill to American Water's operating companies. Charges are broken down into the following expense categories:

- Labor – base pay (salaries) of managerial and professional employees
- Labor-Related Overheads - employee benefit costs (payroll taxes, medical coverage, pensions, disability insurance) and other general expenses
- Support - wages and salaries of office support personnel, including secretaries, clerical personnel, telephone operators and mail clerks
- Office Expenses - office rent, equipment leases, telephone, electric, office supplies, property taxes, office maintenance
- Vouchers/Journal Entries – (1) travel expenses incurred by Service Company personnel, (2) other items submitted for reimbursement by employees, including professional association dues, (3) outside service contracts for such things as actuarial services, and (4) various other expenditures, including data center expenses for software licenses and hardware maintenance.

Service Company expenses can be directly charged and allocated to operating companies, as shown in the table below.

Expense Category	Direct Charged	Allocated	Comments
Labor	X	X	Professional personnel working for one or several operating companies
Labor-Related Overheads	X	X	These are primarily employee benefit costs that relate directly to labor
Support		X	Administrative personnel support the professional staff, thus support costs are allocated on the basis of professional labor
Office Expense		X	Are all allocated on the basis of professional labor
Vouchers/Journals	X	X	May be either directly in support of one operating company (e.g., an engineer traveling from the Corporate Office to the operating company) or allocated to several operating companies

A direct charge occurs when Service Company work or expenses are incurred in support of only one operating company. Direct charge examples include work in support of an operating company's rate case, engineering design work on an operating company's project and the preparation of an operating company's financial statements.

Service Company expenses are allocated when more than one operating company benefits from the underlying work. Examples include assessments of new Federal water quality regulations, development of the company-wide materials procurement contracts and creation of company-wide engineering design standards.

Charging and Assignment Of Service Company Time and Expenses

Service Company transactions are assigned with the following information so there is a proper accounting and eventual charging to an operating company:

- Operating company number, if transaction is a direct charge
- Formula number if transaction is allocated
- Employee hours worked
- Account number for non-labor charges

Charges can originate from the following systems:

- Payroll System
- RVI System (outside vendor payments)
- PCard System (credit card payments)
- Internal Purchase Order System
- Journal entries

The Service Company's time reporting process enables labor and support charges to be assigned to the proper operating company. Labor charges are based on the time reported by managerial and professional Service Company employees. Every week, Service Company professional employees complete an electronic time sheet that shows:

- Operating company (for direct charge)
- Formula number (for allocation)
- Work order (where applicable)
- Authorization number (where applicable)

At month-end, time report information is processed and direct and allocated professional labor hours tabulated for each operating company. Dollar charges are then calculated using the hourly rate of each Service Company professional employee based upon their base salary (i.e., an employee's hours times their hourly rate of pay).

Support (administrative) personnel charge their time to the activity "General Admin." As described in the table on page 4, their labor charges are allocated to operating companies based upon how their office's professional personnel labor charges are assigned. For instance, if 20% of American Water's Southeast Region's professional labor is assigned to KAWC during a month, then 20% of that office's monthly administrative labor charges also are assigned to the operating company.

The overhead cost category is next assigned based on professional and administrative labor costs. Thus, if 20% of the Southeast Region's accumulated professional and support labor is charged to KAWC during the month, then 20% of that month's overhead expenses will be assigned to KAWC.

Each Service Company location's office expenses are allocated to operating companies based on how professional labor charges for that office have been assigned. For instance, if 2% of professional labor from one Service Company office is assigned to KAWC, then 2% of that office's office expenses would be assigned to KAWC. Thus, office expenses are allocated in the very same way as administrative labor.

Vouchers/journal entries may be charged directly or allocated, depending on who benefits from the expenditure. For instance, the cost of a continuing professional education course taken by a professional in a regional office is allocated to the operating companies served by that office. Travel expenses by that same professional to a rate case proceeding are charged directly to the operating company whose case is being heard.

III – Service Company Cost Comparison Approach

During the 12 months ended July 31, 2008, the Service Company billed KAWC $8,347,528 in O&M-related charges, $486,878 in capital-related charges and $1,114 in other charges. Included in the O&M amount are certain non-recurring expenses and non-Southeast Region charges which are excluded from this market study. As calculated in the table below, net Service Company charges of $7,552,811 were subjected to a market cost comparison.

Reconciliation to Testable Service Company Charges		
Total Management Fees (O&M)	$	7,859,536
Non-Recurring Items:		
Business Change - Corporate	$	(23,400)
Business Change - Regions	$	(9,111)
Divestiture & SOX - Corp	$	(729,860)
Divestiture & SOX - Regions	$	17,854
Less: Non-Southeast Region Charges	$	(50,041)
Net Testable O&M	$	7,064,978
Total Capital	$	486,878
Total Other	$	1,114
Total Testable Svc Co Charges	**$**	**7,552,970**

For purposes of comparing these charges to outside benchmarks, Service Company services were placed into two categories:

- Managerial and Professional Services – Includes such services as management, accounting, legal, human resources, information technology, and engineering.

- Customer Accounts Services – Includes customer-related services, such as call center, credit, billing, collection and payment processing.

Total test period Service Company charges break down between management/professional services and customer account services as follows:

	12 Months Ended July 31, 2008		
	Amount		Hours
Management and Professional Services	$	5,724,142	48,123
Customer Account Services	$	1,828,827	43,730
Total Service Company Charges	$	7,552,970	91,853

This study's first question—whether Service Company 12 months ended July 31, 2008 charges were charged at the lower of cost or market—was evaluated by comparing the cost per hour for managerial and professional services provided by Service Company personnel to hourly billing rates that would be charged by outside providers of equivalent services. Service Company costs per hour were based on actual charges to KAWC during the 12 months ended July 31, 2008. Outside providers' billing rates came from surveys or other information from professionals that could perform the services now provided by the Service Company.

The second question—whether Service Company 12 months ended July 31, 2008 customer account services charges, including those of the National Call Center costs, were comparable to other utilities—was addressed by comparing KAWC's customer accounts services expenses to those of neighboring electric utilities. This approach was selected because the costs of outside providers of call center services are not publicly available. However, electric utility customer

account services expenses can be obtained from the FERC Form 1. The availability and transparency of FERC data adds to the validity of its use in this comparison.

The third question—the necessity of Service Company services—was first investigated by determining the services provided to KAWC. A determination was then made as to whether these services would be required if KAWC were a stand-alone utility.

The fourth question—whether Service Company 12 months ended July 31, 2008 charges were reasonable by other comparative measures—was determined by comparing KAWC's net testable O&M Service Company charges per customer to those of electric and combination electric/gas utilities that file FERC Form 60 – Annual Report of Service Companies.

IV – Managerial And Professional Services Hourly Rate Comparison

Methodology

The lower-of-cost-or-market comparison is accomplished by comparing the cost per hour for Service Company managerial and professional services to those of outside service providers to whom these duties could be assigned. Based on the nature of the Service Company services it was determined that the following outside providers could perform the categories of services indicated below:

- Management Consultants – executive and administrative management, risk management services, human resources and communications services
- Attorneys – legal services
- Certified Public Accountants – accounting, financial, information technology and rates and revenues services
- Professional Engineers – engineering, operations and water quality services.

The services provided by the Belleville lab are assumed to be transferable to professional engineers for purposes of this cost comparison. This was done for two reasons. First, there is no readily available survey of hourly billing rates for testing services such as those performed by Belleville. Second, Belleville personnel have similar, scientific educational backgrounds as Service Company engineering personnel. Thus, it is valid to compare the hourly rates of Belleville services to those of outside engineering firms.

The Service Company's hourly rate were calculated for each of the four outside service provider categories, based on the dollars and hours charged to KAWC during the 12 months ended July 31, 2008. Hourly billing rates for outside service providers were developed using third party surveys or directly from information furnished by outside providers themselves.

It should be noted that by using the Service Company's hours charged KAWC during the 12 months ended December 31, 2008, its hourly rates are actually overstated because Service Company personnel charge a maximum 8 per day even when they work more. Outside service providers generally bill for every hour worked. If the overtime hours of Service Company personnel had been factored into the hourly rate calculation, then Service Company hourly rates would have been lower.

The last step in the market cost comparison was to compare the Service Company's average cost per hour to the average cost per hour for outside providers.

Service Company Hourly Rates

Schedule 1 (page 11) details the assignment of 12 months ended July 31, 2008 management and professional Service Company charges by outsider provider category. Schedule 2 (page 12) shows the same assignment for Service Company management and professional hours charged to KAWC during the 12 months ended July 31, 2008.

Certain adjustments to these dollar amounts were necessary to calculate Service Company hourly rates that are directly comparable to those of outside providers. Adjustments were made to the following 2008 test period non-labor Service Company charges:

- Contract Services – 12 months ended July 31, 2008 Service Company charges to KAWC include over $383,000 in expenses associated with the use of outside professional firms to perform certain corporate-wide services (e.g., legal, financial audit, actuarial services). These professional fees are excluded from the Service Company hourly rate calculation because the related services have effectively been out-sourced already.

- Travel Expenses – In general, client-related travel expenses are not recovered by outside service providers through their hourly billing rate. Rather, actual out-of-pocket travel expenses are billed to clients in addition to fees for professional services. Thus, it is appropriate to remove these Service Company charges from the hourly rate calculation.

- Computer Hardware and Software Expenses – Included in the 12 months ended July 31, 2008 Service Company charges to KAWC are charges for outside expenses related to leases and maintenance fees related to mainframe, server and network infrastructure, corporate business applications and the communications systems. An outside provider that would take over operation of a data center would recover these expenses over and above the labor necessary to operate the data center.

Schedule 3 (page 13) shows how contract services, travel expenses and computer hardware/software-related Service Company charges are assigned among the four outside provider categories.

Based on the assignment of expenses and hours shown in Schedules 1 and 2 and the excludable items shown in Schedule 3, the Service Company's equivalent costs per hour for the 12 months ended July 31, 2008 are calculated below.

	Attorney	Management Consultant	Certified Public Accountant	Professional Engineer	Total
Total testable management & professional charges	$ 291,662	$ 2,209,038	$ 2,416,857	$ 806,585	$ 5,724,142
Less:

Outside Service Provider Hourly Rates

The next step in the cost comparison was to obtain the average billing rates for each outside service provider. The source of this information and the determination of the average rates are described in the paragraphs below.

It should be noted that professionals working for 3 of the 4 outside provider categories may be licensed to practice by state regulatory bodies. However, not every professional working for these firms is licensed. For instance, among certified public accounting firms within Kentucky's regions, only more experienced staff are predominantly CPAs, as shown in the table below. Some employees of the Service Company also have professional licenses. Thus, it is valid to compare the Service Company's hourly rates to those of the outside professional service providers included in this study.

	Firm Size		
Position	Small	Medium	Large
Partners/Owners	97.8%	96.6%	98.1%
Directors (over 10 years experience)	na	72.7%	78.0%
Managers (6-10 years experience)	na	50.0%	91.9%
Sr Associates (4-5 years experience)	100.0%	20.0%	72.2%
Associates (1-3 years experience)	na	40.0%	31.4%
New Professionals	na	0.0%	15.0%

Attorneys

The Kentucky Bar Association does not survey its members as to their hourly billing rates. In addition, publicly available billing rate information could not be found for Kentucky attorneys. Therefore, an estimate of Kentucky attorney rates was developed from a survey of Michigan lawyers conducted annually by the Michigan Lawyers Weekly. As presented in Schedule 4, the average rate for each Michigan firm respondent was adjusted for the cost of living differential between their location and Lexington, Kentucky. The survey includes rates that were in effect during 2007.

Management Consultants

The cost per hour for management consultants was developed from the 2007 annual survey performed by the Association of Management Consulting Firms, an industry trade organization. The first step in the calculation, presented in Schedule 5, was to determine an average rate by consultant position level. From these rates, a single weighted average hourly rate was calculated based upon the percent of time that is typically applied to a consulting assignment by each consultant position level. This survey includes rates that were in effect during 2006 for firms in the United States. Consultants typically do not limit their practice to any one region and must travel to a client's location. Thus, the U.S. national average is appropriate for comparison. The survey 2006 average rate was escalated to January 31, 2008—the midpoint of the 12 months ended July 31, 2008.

Certified Public Accountants

The average hourly rate for Kentucky certified public accountants was developed from a 2006 survey performed by the American Institute of Certified Public Accountants (AICPA). Hourly rates in the AICPA survey are the average of firms in Kentucky's region. The average hourly rate was calculated for a set of typical accountant positions, as shown in Schedule 6. Based on a typical staff assignment by each accountant position, a weighted average hourly rate was calculated. This survey covered hourly rates in effect during 2005. Thus, the 2005 average rate was escalated to January 31, 2008, the midpoint of the 12 months ended July 31, 2008.

Professional Engineers

The Service Company provided hourly rate information for outside engineering firms that could have been used by KAWC in 2007 and 2008. As presented in Schedule 7, an average rate was developed for each engineering position level. Then, using a typical percentage mix of project time by engineering position, a weighted average cost per hour was calculated.

Schedule 4

	$21	$30	$34	$18	**$102**

Source: Information provided by American Water Works Service Company

Service Company Versus Outside Provider Cost Comparison

As shown in the table below, Service Company costs per hour are considerably lower than those of outside providers.

	12 Months Ended July 31, 2008		
Service Provider	Service Company	Outside Provider	Difference--Service Co. Greater(Less) Than Outside
Attorney	$ 77	$ 279	$ (202)
Management Consultant	$ 212	$ 222	$ (10)
Certified Public Accountant	$ 80	$ 102	$ (22)
Professional Engineer	$ 81	$ 102	$ (21)

Based on these cost per hour differentials and the number of managerial and professional services hours billed to KAWC during the 12-months ended July 31, 2008, outside service providers would have cost $1,595,514 more than the Service Company (see table below). Thus, on average, outside provider's hourly rates are 28% higher than those of the Service Company ($1,595,514 / $5,724,142).

	12 Months Ended July 31, 2008		
Service Provider	Hourly Rate Difference--Service Co. Greater(Less) Than Outside	Service Company Hours Charged	Dollar Difference
Attorney	$ (202)	3,599	$ (726,242)
Management Consultant	$ (10)	9,514	$ (98,587)
Certified Public Accountant	$ (22)	26,141	$ (583,251)
Professional Engineer	$ (21)	8,870	$ (187,433)
Service Company Less Than Outside Providers			$ (1,595,514)

If KAWC were to use outside service providers rather than the Service Company for managerial and professional services, it would incur other additional expenses besides those associated with higher hourly rates. Managing outside firms who would perform 48,123 hours of work (around 32 full-time equivalents at 1,500 "billable" hours per FTE per year) would add a significant workload to the existing KAWC management team. Thus, it would be necessary for KAWC to add at least one position to supervise the outside firms and ensure they delivered quality and timely services. The individual that would fill this position would need a good understanding of each profession being managed. They must also have management experience and the authority necessary to give them credibility with the outside firms. As calculated in the table below, this position would add another $149,400 per year to KAWC's personnel expenses.

Cost of Adding a Professional Position To KAWC's Staff

	Total
New Position's Salary	$ 100,000
Benefits (49.4%)	$ 49,400
Office Expenses (15.2%)	$ 15,200
Total Cost of Full Time Position	$ 149,400

Thus, the total effect on the ratepayers of KAWC of contracting all services now provided by the Service Company would be an increase in their costs of $1,744,914 ($1,595,514 + $149,400). Based on the results of this comparison, it is possible to conclude that the Service Company

charged KAWC at the lower of cost or market for services provided during the 12 months ended July 31, 2008.

Other Cost Comparisons

Every year, the Belleville Lab conducts a comparison of its cost for performing major tests to the cost of using outside testing laboratories. Over the past several years, these surveys have shown the following results been as follows:

Year	Number of Major Tests Surveyed	Percent Belleville Lower Than Outside Labs
2000	26	15%
2001	25	19%
2002	24	16%
2003	23	10%
2004	24	9%
2005	24	25%
2006	24	31%

These studies provide additional evidence that the Service Company arrangement is the lowest-cost alternative for KAWC.

V – Customer Account Services Cost Comparison

Background

It is difficult to compare the cost of American Water's National Call Centers with outside providers of the same call center-related services. Call center survey data is proprietary and expensive to obtain. For this reason, KAWC's National Call Center costs are compared to those of neighboring electric utilities because the data necessary to make this comparison is readily available to the public.

Electric utility cost information comes from the FERC Form 1 that each must file. FERC's chart of accounts is defined in chapter 18, part 101 of Code of Federal Regulations. FERC accounts that contain call center-related expenses and are used in this study's comparison are:

- Account 903 Customer Accounts Expense – Records and Collection Expense
- Account 905 Customer Accounts Expense – Miscellaneous Customer Accounts Expense.

In addition, labor-related overheads charged to the following FERC accounts must be added to the labor components of Accounts 903 and 905.

- Account 926 Employee Pension and Benefits
- Account 408 Taxes Other Than Income (employer's portion of FICA).

Schedule 8 provides FERC's description of what should be charged to these accounts. In questioning the controller of a large Southeastern electric utility, it was determined that expenses of the activities described below are recorded in the designated FERC accounts.

903 Records and Collection Expense

- Customer Call Center – customer calls/contact, credit, order taking/disposition, bill collection efforts, outage calls
- Call Center IT – maintenance of phone banks, voice recognition units, call center software applications, telecommunications
- Customer billing – bill printing, stuffing and mailing
- Remittance processing – processing of customer payments received in the mail
- Bill payment centers – locations where customers can pay their bills in person

905 Miscellaneous Customer Accounts Expense

- Customer Information System IT – maintenance and support of the customer information system

This study assumes the FERC accounts for other electric and gas utilities contain expenses for the same activities.

Kentucky American Water Company
FERC Account Descriptions

903 – Customer Records and Collection Expenses

This account shall include the cost of labor, materials used and expenses incurred in work on customer applications, contracts, orders, credit investigations, billing and accounting, collections and complaints.

Labor

1. Receiving, preparing, recording and handling routine orders for service, disconnections, transfers or meter tests initiated by the customer, excluding the cost of carrying out such orders, which is chargeable to the account appropriate for the work called for by such orders.
2. Investigations of customers' credit and keeping of records pertaining thereto, including records of uncollectible accounts written off.
3. Receiving, refunding or applying customer deposits and maintaining customer deposit, line extension, and other miscellaneous records.
4. Checking consumption shown by meter readers' reports where incidental to preparation of billing data.
5. Preparing address plates and addressing bills and delinquent notices.
6. Preparing billing data.
7. Operating billing and bookkeeping machines.
8. Verifying billing records with contracts or rate schedules.
9. Preparing bills for delivery, and mailing or delivering bills.
10. Collecting revenues, including collection from prepayment meters unless incidental to meter reading operations.
11. Balancing collections, preparing collections for deposit, and preparing cash reports.
12. Posting collections and other credits or charges to customer accounts and extending unpaid balances.
13. Balancing customer accounts and controls.
14. Preparing, mailing, or delivering delinquent notices and preparing reports of delinquent accounts.
15. Final meter reading of delinquent accounts when done by collectors incidental to regular activities.
16. Disconnecting and reconnecting services because of nonpayment of bills.
17. Receiving, recording, and handling of inquiries, complaints, and requests for investigations from customers, including preparation of necessary orders, but excluding the cost of carrying out such orders, which is chargeable to the account appropriate for the work called for by such orders.
18. Statistical and tabulating work on customer accounts and revenues, but not including special analyses for sales department, rate department, or other general purposes, unless incidental to regular customer accounting routines.
19. Preparing and periodically rewriting meter reading sheets.
20. Determining consumption and computing estimated or average consumption when performed by employees other than those engaged in reading meters.

Materials and expenses

21. Address plates and supplies.
22. Cash overages and shortages.
23. Commissions or fees to others for collecting.
24. Payments to credit organizations for investigations and reports.
25. Postage.
26. Transportation expenses, including transportation of customer bills and meter books under centralized billing procedure.
27. Transportation, meals, and incidental expenses.
28. Bank charges, exchange, and other fees for cashing and depositing customers' checks.
29. Forms for recording orders for services, removals, etc.
30. Rent of mechanical equipment.

Kentucky American Water Company
FERC Account Descriptions

905 – Miscellaneous Customer Accounts Expenses
This account shall include the cost of labor, materials used and expenses incurred not provided for in other accounts.

Labor

1. General clerical and stenographic work.
2. Miscellaneous labor.

Materials and expenses

3. Communication service.
4. Miscellaneous office supplies and expenses and stationery and printing other than those specifically provided for in accounts 902 and 903.

Comparison Group

Electric utilities included in the comparison group are shown in the table below. These are companies whose FERC Form 1 shows amounts for accounts 903 and 905.

Kentucky	• Duke Energy – Kentucky • Kentucky Power	• Kentucky Utilities • Louisville Gas & Electric
West Virginia	• Wheeling Power	
Virginia	• Appalachian Power	• Virginia Electric Power
Ohio	• Cleveland Electric • Columbus Southern Power • Dayton Power & Light • Duke Energy – Ohio	• Ohio Edison • Ohio Power • Toledo Edison
Missouri	• Aquila • Kansas City Power & Light	• Union Electric
Indiana	• Duke Energy – Indiana • Indiana Michigan Power	• Indianapolis Power & Light • NIPSCo
Illinois	• Central Illinois Light • Central Illinois Public Service • Commonwealth Edison	• Illinois Power • Interstate Power & Light • MidAmerica Energy
Tennessee	• Kingsport Power	

Comparison Approach

The basis for this comparison is customer account services expenses per customer. KAWC's cost pool was developed to include the same expenses included in electric utility's FERC accounts 903 and 905. As shown in the graphic below, KAWC's resultant cost pool contains the expenses of Service Company locations and certain operating company expenses.

American Water
Service Company
Pensacola & Alton Call Centers
a. Customer contact
b. Customer order processing
c. Billing information processing
d. Collections
e. Correspondence processing
f. Customer payment processing
Operating Company
a. Postage and forms

Electric Utilities
FERC Acct 903 - Records and Collection Expense and FERC Acct 905 - Misc Customer Accounts Expense
a. Customer contact
b. Customer order processing
c. Bill preparation and mailing
d. Collections
e. Payment processing
f. Correspondence processing

KAWC Cost Per Customer

In order to make a valid comparison to neighboring electric utilities, certain adjustments had to be made to the applicable Service Company charges to KAWC. It was necessary to adjust the National Call Center call handling charges because electric utilities experience an average of 2.50 calls per customer compared to American Water's 1.33 calls per customer. Thus, National Call Center call handling charges had to be increased for comparison purposes, to reflect its costs at a 2.50 calls per customer level. As shown below, KAWC's adjusted annual expense per customer is $28.07—the number that can be compared to neighboring electric utilities' expenses. KAWC's 12 months ended July 31, 2008 unadjusted annual expense per customer is $23.22.

Kentucky-American Cost Per Customer		Year Ended 7/31/2008 Service Co Charges	Adjustment Fewer Calls For Water Cos. (A)	Adjusted	
Cost Component					
Service Company					
Call Centers	Call processing, order processing, credit, bill collection	$ 1,648,336	$ 567,707	$ 2,216,043	
Regional Offices		$ 180,491		$ 180,491	
Operating Company	Customer payment processing			$ 166,689	Note B
Operating Company	Postage & forms			$ 724,532	
			Cost Pool Total	$ 3,287,755	
			Total Customers	117,119	
	12 Months Ended July 31, 2008 Cost Per KAWC Customer			**$ 28.07**	

Note A: Adjustment for American Water's fewer calls per customer

This adjustment is necessary because water utilities experience fewer calls per customer than do electric utilities

Call handling expenses		$ 643,808
Electric utility industry's avg calls/customer	2.50	
American Water's avg calls/customer	1.33	
Percent different	88%	88%
Total Adjustment		$ 567,707

Note B: Estimated customer payment processing expenses

Number of customers	117,119
Number of payments/customer/year	12
Total payments processed/year	1,405,428
Bank charge per item	$ 0.1186
Total estimated annual expense	$ 166,689

Electric Utility Group Cost Per Customer

Schedule 9 shows the actual 2007 customer accounts expense per customer calculation for the electric utility comparison group. All of the underlying data were taken from each utility's FERC Form 1.

Summary Of Results

As shown in the table below, KAWC's cost per customer is close to the average of the neighboring electric utility comparison group. It can therefore be concluded that KAWC's 12 months ended July 31, 2008 customer accounts-related expenses, including those of the Alton and Pensacola Call Centers, assigned by the Service Company to KAWC are reasonable compared to those of other utilities.

Average Customer Accounts Expense Per Customer		
Louisville Gas & Electric	$	13.71
Interstate Power & Light	$	15.86
Virginia Electric Power	$	15.89
Ohio Edison	$	19.04
Dayton Power & Light	$	19.15
Illinois Power	$	19.83
Indianapolis Power & Light	$	20.62
Cleveland Electric Illuminating	$	21.33
Union Electric	$	23.46
Aquila	$	23.72
Kansas City Power & Light	$	25.09
Toledo Edison	$	25.77
Kentucky Utilities	$	25.91
Central Illinois Public Service	$	26.50
MidAmerican Energy	$	27.50
Comparison Group Average	**$**	**27.99**
Kentucky American Water	**$**	**28.07**
Wheeling Power	$	28.08
Northern Indiana Public Serice	$	28.32
Indiana Michigan Power	$	31.74
Duke Energy Indiana	$	32.14
Kingsport Power	$	32.31
Central Illinois Light	$	34.22
Duke Energy Kentucky	$	34.88
Appalachian Power	$	34.99
Ohio Power	$	35.00
Duke Energy Ohio	$	36.10
Kentucky Power	$	37.59
Columbus & Southern Power	$	38.57
Commonwealth Edison	$	39.81

It should be noted that comparison group per customer costs at the low end are unusually low given the nature of Customer Accounts expenses. For instance, the annual cost of forms and postage alone is around $6.20 per customer for KAWC. It would be expected that this cost would be the same for every utility in the comparison group because all likely mail customer bills monthly. Thus, for a low-end cost utility like Louisville Gas & Electric, that leaves only $7.51 ($13.71-$6.20) to cover labor and information technology expenses that Customer Accounts services require. It is possible that the very low end cost utilities record the cost of supporting their customer information systems to an A&G FERC account rather than to a Customer Accounts FERC account (903).

VI - Need For Service Company Services

Analysis Of Services

The third aspect of this study was an assessment of whether the services that are provided to KAWC by the Service Company would be necessary if KAWC were a stand-alone water utility. The first step in this evaluation was to determine specifically what the Service Company does for KAWC. Based on Baryenbruch & Company, LLC's experience working with the Service Company and information from Service Company personnel, the matrix in Schedule 10 was created showing which entity—KAWC or a Service Company location—is responsible for each of the functions KAWC requires to ultimately provide service to its customers. This matrix was reviewed to determine: (1) if there was redundancy or overlap in the services being provided by the Service Company and (2) if Service Company services are typical of those needed by a stand-alone water utility.

Upon review of Schedule 10, the following conclusions can be drawn:

- The services that the Service Company provides are necessary and would be required even if KAWC were a stand-alone water utility.

- There is no redundancy or overlap in the services provided by the Service Company to KAWC. For all of the services listed in Schedule 10, there was only one entity that was primarily responsible for the service.

Governance Practices Associated With Service Company Charges

There are several ways by which KAWC exercises control over Service Company services and charges. The most important of these are described below.

- **President of Regulated Operations Oversight** – The President of Regulated Operations is on the Executive Management Team (EMT) of American Water. This position is responsible for the overall performance of each operating company in American Water. As part of the EMT, the President of Regulated Operations has equal say with other EMT members in major business decisions of American Water and has the ability to monitor Service Company performance quality and spending. The President of Regulated Operations also has dialogue with each operating company president to address local concerns.

- **Regional Vice President & Treasurer** – The Regional Vice President and Treasurer of the southeast states is responsible for the financial reporting, performance and internal controls of each of the operating companies in the region. The Vice President and Treasurer monitors the performance and reporting from the Service Company and follows up on instances where the quality and timeliness of services are not as expected. The operating company interacts with the Regional VP & Treasurer to discuss any concerns with billings, etc.

- **Operating Company Board Oversight** – KAWC board of directors includes members of American Water's EMT, members of the regional management team and business and community leaders from outside the Company. KAWC's president is Chairman of the KAWC board. This helps ensure that KAWC's needs are a factor in the delivery of Service Company services.

- **Service Company Budget Review/Approval** – The President of Regulated Operations sits on the Service Company board and that board must formally approve the budget for Service Company charges for the next year. These budgeted charges are consolidated with the operating company's own spending into an overall budget which must be approved by the operating company's board of directors. KAWC's president also sits on the Service Company board.

- **Major Project Review And Approval** – Major projects undertaken by the Service Company must first be reviewed by American Water's Executive Management Team, which includes the President of Regulated Operations. With input from the local presidents and Regional Vice President & Treasurer, they have the ability to impact all new initiatives and projects before they are authorized.

- **Service Company Bill Scrutiny** – Southeast Region Finance personnel review the monthly Service Company bill for accuracy and reasonableness on a monthly basis. KAWC's financial analyst has dialogue with regional office personnel concerning the monthly bill and any mistakes or overcharges are credited on a subsequent billing. The Southeast Region Finance unit prepares an actual to budget comparison of management fees each month for use in identifying unusual variances. Service Company actual to budget comparison is included in the monthly FRP. Unusual variances are researched, explanations are provided and any corrections are made, as necessary.

- **Service Company Budget Variance Reporting** – Each month, a summary variance analysis is prepared that explains differences between budgeted and actual Service Company spending. In addition, a more detailed monthly variance report, called the "Statement of Expenses and Billed Charges," is produced by Service Company location and shows actual spending for the month.

- **Operating Company Budget Variance Reporting** – The "Budget/Plan Analysis," produced monthly, has a line item for Management Fees (i.e., Service Company charges). In this way, Service Company budget versus actual charges can be monitored for the month and year-to-date. Additional information exists that allows more detailed analysis of "Regional" and "Corporate" Management Fees.

- **Capital Investment Management ("CIM") –** CIM is one of American Water's primary business planning processes. It covers capital and asset planning and is employed throughout American Water. CIM provides a full range of governance practices, including a formal protocol for assessing system needs, prioritizing expenditures, managing the capital program, approving project spending, delivering projects and measuring outputs. CIM ensures that:

  - Capital expenditure plans are aligned with the strategic intent of the business
  - The impact of capital expenditure and income plans are fully reflected in operating expense plans
  - The impacts of these plans are understood and affordable, and
  - Effective controls are in place over budgets (through business plans) and individual capital projects (through appropriate authorization thresholds, management and reporting processes).

  The CIM process was designed to optimize the effectiveness of asset investment. The process is managed at two levels for all American Water companies, including all KAWC Operating Units. Monthly meetings of the CIM are held to review capital spending compared to plan, review new project requests, and review updates or modifications to existing projects. The President of KAWC, VP Finance, and others participate as necessary (e.g. KAWC operations managers and Rates Manager) and provide the data used in the monthly review schedules.

VII – Other Comparative Measures Of Reasonableness Of Service Company Charges

KAWC's Service Company Cost Per Customer

During the 12 months ended July 31, 2008, KAWC was charged $60 per customer in O&M expenses by the Service Company. As shown in the table below, this calculation is based on net testable O&M, which eliminates certain O&M items for which KAWC has not requested cost recovery.

	12 Months Ended July 31, 2008
Net Testable Service Company O&M Expenses	$ 7,064,978
KAWC American Customers (12/31/07)	117,119
KAWC American Cost Per Customer	$ 60

Comparison Group Cost Per Customer

Every centralized service company in a holding company system must file a Form 60 in accordance with the Public Utility Holding Company Act of 2005, Section 1270, Section 390 of the Federal Power Act and 18 C.F.R. paragraph 366.23. This report is designed to collect financial information from service companies that are subject to regulation by the FERC.

Twenty-three utility holding companies filed a Form 60 for 2007. All but two were included in the comparison group. The service company for PNM Resources, Inc. was excluded because its 2007 service company cost per regulated utility customer was clearly an anomaly as a negative number. This result is likely due to the unique manner by which PNM's service company expenses are reported on Form 60. Duke Energy was also excluded from the comparison group because one of its two service companies did not provide numbers for its Form 60. Thus, it was not possible to develop Duke's consolidated service company cost per customer for 2007.

Schedule 11 compares the services provided by American Water's Service Company to the services provided by comparison group service companies. In general, the types of services provided by American Water's Service Company are similar to those provided by comparison group service companies.

O&M expenses charged to utility affiliates for the comparison group service companies were obtained from Schedule XVII – Schedule of Expense Distribution by Department or Service Function (p. 305 to 305c) of each entity's FERC Form 60. This schedule shows charges by category of service (e.g., accounting, information technology) and type of cost (e.g., labor, benefits, outside services). The following were eliminated from the comparison group's total expenses because they are not in American Water Service Company's 2007 charges to KAWC:

- All electric- and gas-specific services
- Income taxes (account 409), provision for deferred income taxes (account 410), provision for deferred income taxes – credit (account 411) and investment tax credit (account 411.5).
- Donations (account 426.1)
- Interest on long-term debt (account 427), interest on debt to associate companies (account 430) and other interest expense (account 431)

Comparison group service company 2007 expenses were also adjusted to remove charges to non-regulated affiliates from the cost pool used to calculate the cost per regulated service customer. This determination was made using information from the FERC Form 60 schedule: Account 457 – Analysis of Billing – Associate Companies.

Schedule 12 shows KAWC's 12 months ended July 31, 2008 Service Company cost per customer of $60 to be considerably lower than the average of $121 per customer for the comparison group service companies. Only 3 of 21 comparison group service companies had a lower 2007 cost per customer than KAWC. These results further support the conclusion that the Service Company's 2007 charges to KAWC were reasonable.

WITNESS: P.BARYENBRUCH

KENTUCKY AMERICAN WATER COMPANY

1. Q. Please state your name and business address.

A. Patrick L. Baryenbruch, 2832 Claremont Road, Raleigh, North Carolina 27608.

2. Q. Please describe your educational and professional background.

A. I received a Bachelors degree in accounting from the University of Wisconsin-Oshkosh in 1974 and a Masters in Business Administration degree from the University of Michigan in 1979.

I am a financial consultant and am a member of the American Institute of Certified Public Accountants and the North Carolina Association of Certified Public Accountants.

I began my career as a staff accountant with Arthur Andersen & Company where I performed financial audits of utilities, banks and finance companies. After three years I left to pursue an M.B.A. degree. Upon graduation from business school, I worked with the consulting firms of Theodore Barry & Associates and Scott, Madden & Associates.

During my consulting career, I have performed consulting assignments for approximately 50 utilities and 10 public service commissions. I have participated as project manager, lead or staff consultant for 24 commission-ordered management and prudence audits of public utilities. Of these, I have been responsible for evaluating the area of affiliate charges and allocation of corporate expenses in the Commission-ordered audits of Connecticut Light and Power, Connecticut Natural Gas, General Water Corporation (Pennsylvania Operations), Philadelphia Suburban Water Company (now Aqua America) and Pacific Gas & Electric Company.

My firm has performed the commission-ordered audit of Southern California Edison's 2002, 2003, 2004 and 2005 transactions with its non-regulated affiliate companies.

3. Q. What are your duties and responsibilities in your current position?

A. I am the President of my own consulting practice, Baryenbruch & Company, LLC, which was established in 1985. In that capacity, I provide consulting services to utilities and their regulators.

4. Q. Please describe the reason for your testimony in this case.

A. I am presenting the results of my study which evaluated the services provided by American Water Service Company ("Service Company") during the 12 months ended July 31, 2008 to Kentucky American Water (KAWC). This study was undertaken in conjunction with KAWC's rate case and is true to the best of my knowledge and belief. The study is attached as Exhibit PLB-1.

5. Q. What were the objectives of your study?

A. This study was undertaken to answer four questions concerning the services provided by American Water Works Service Company, Inc. ("Service Company") to Kentucky American Water Company ("KAWC"), each of which bears on the reasonableness of those charges as incurred during the 12 months ended July 31, 2008. First, was KAWC charged the lower of cost or market for managerial and professional services provided by the Service Company during 12 months ended July 31, 2008? Second, was the 12 months ended July 31, 2008 cost of the Service Company's customer account services, including those of the National Call Centers, reasonable? Third, are the services KAWC receives from Service Company necessary? Fourth, were the Service Company's charges to KAWC

during the 12 months ended July 31, 2008 comparable to other utility service companies?

6. Q. **What conclusions were you able to draw concerning question number 1, whether KAWC was charged the lower of cost or market services provided by the Service Company?**

A. I was able to draw the following conclusions:

(1) KAWC was charged the lower of cost or market for managerial and professional services during the 12 months ended July 31, 2008.

(2) On average, the hourly rates for outside service providers are 28% higher than the Service Company's hourly rates.

(3) The managerial and professional services provided by the Service Company are vital and could not be procured externally by KAWC without careful supervision on the part of KAWC. If these services were contracted entirely to outside providers, KAWC would have to add at least one position to manage activities of outside firms. This position would be necessary to ensure the quality and timeliness of services provided.

(4) If all the managerial and professional services now provided by the Service Company had been out-sourced during the 12-months ended July 31, 2008, KAWC and its ratepayers would have incurred an **additional $1.7 million** in expenses. This amount includes the higher cost of outside providers and the cost of a KAWC position needed to direct the outsourced work.

(5) This study's hourly rate comparison actually understates the cost advantages that accrue to KAWC from its use of the Service Company. Outside service providers generally bill for every hour worked. Service

Company managerial and professional personnel, on the other hand, charge a maximum 8 hours per day even when they work more. If the overtime hours of Service Company personnel had been factored into the hourly rate calculation, the Service Company would have had an even greater annual dollar advantage than the $1.7 million cited above.

(6) It would be difficult for KAWC to find local service providers with the same specialized water industry expertise as that possessed by the Service Company staff. Service Company personnel spend substantially all their time serving operating water companies. This specialization brings with it a unique knowledge of water utility operations and regulation that is most likely unavailable from local service providers.

(7) Service Company fees do not include any profit markup. Only its actual cost of service is being recovered from KAWC ratepayers.

7. Q. **What conclusions were you able to draw concerning question number 2, whether the 12 months ended July 31, 2008 costs of the Service Company's customer account services, including those of the National Call Centers, were reasonable?**

A. I was able to determine that the cost of the Service Company's customer accounts services, including those provided by the National Call Center, **is close to the average of the neighboring electric utility comparison group**. As will be explained further herein, this group of companies provides a reasonable proxy group for comparison to a regulated utility of the size and scope of KAWC. During the 12-months ended July 31, 2008, the customer accounts cost for KAWC customers was $28.07 compared to the 2007 average of $27.99 for neighboring electric utilities. The highest comparison group per customer cost was $39.81 and the lowest $13.71.

9. Q. What conclusions were you able to draw concerning question number 3, whether the services KAWC receives from the Service Company are necessary?

A. I was able to draw the following conclusions:

(1) The services that the Service Company provides are necessary and would be required even if KAWC were a stand-alone water utility.

(2) There is no redundancy or overlap in the services provided by the Service Company to KAWC.

10. Q. What conclusions were you able to draw concerning question number 4, whether the Service Company charges to KAWC were comparable to other utility service companies?

A. I was able to draw the following conclusions:

(1) The Service Company provides KAWC with services similar to those provided by other utility service companies. This determination was based on service company information included in the Form 60, which must be filed with the Federal Energy Regulatory Commission ("FERC") by electric and combination electric/gas utility holding companies.

(2) The Service Company's 12 months ended July 31, 2008 cost per KAWC customer was reasonable compared to cost per customer for electric and combination electric/gas service companies. During the 2008 test period, KAWC was charged an average of $60 per customer by the Service Company compared to an average of $121 per customer for service companies reporting to the FERC.

10. Q. Does this complete your testimony?

A. Yes.

I – Introduction

Purpose of This Study

This study was undertaken to answer four questions concerning the services provided by American Water Works Service Company, Inc. (Service Company) to Kentucky American Water Company (KAWC):

1. Were the Service Company's charges to KAWC during the 12 months ended September 30, 2009 reasonable?

2. Was KAWC charged the lower of cost or market for managerial and professional services provided by the Service Company during the 12 months ended September 30, 2009?

3. Were the 12 months ended September 30, 2009 costs of the Service Company's customer accounts services, including those of the National Call Centers, comparable to those of other utilities?

4. Are the services KAWC receives from Service Company necessary?

Study Results

Concerning question 1, the following conclusion was reached:

- The Service Company's 12 months ended September 30, 2009 cost per KAWC customer was very reasonable compared to cost per customer for electric and combination electric/gas service companies. During the 12 months ended September 30, 2009, KAWC was charged $55 per customer for administrative and general (A&G)-related services provided by the Service Company. This compares to an average of $109 per customer for service companies reporting to the Federal Energy Regulatory Commission (FERC). Only 3 of the 24 utility service companies that filed a FERC Form 60 for 2008 had a lower per customer A&G cost than KAWC's charges from the Service Company.

Concerning question 2, the following conclusions were drawn from this study:

- KAWC was charged the lower of cost or market for managerial and professional services during the 12 months ended September 30, 2009.

- On average, the hourly rates for outside service providers are 21% higher than the Service Company's hourly rates.

- The managerial and professional services provided by the Service Company are vital and could not be procured externally by KAWC without careful supervision on the part of KAWC. If these services were contracted entirely to outside providers, KAWC would have to add at least one position to manage activities of outside firms. This position would be necessary to ensure the quality and timeliness of services provided.

- If all the managerial and professional services now provided by the Service Company had been outsourced during the 12 months ended September 30, 2009, KAWC and its ratepayers would have incurred more than $1,500,000 in additional expenses. This amount includes the higher cost of outside providers and the cost of one KAWC positions needed to direct the outsourced work.

- This study's hourly rate comparison actually understates the cost advantages that accrue to KAWC from its use of the Service Company. Outside service providers generally bill

for every hour worked. Service Company exempt personnel, on the other hand, charge a maximum of 8 hours per day even when they work more hours. If the overtime hours of Service Company personnel were factored into the hourly rate calculation, the Service Company would have had an even greater annual dollar advantage than the $1,500,000 cited above. For instance, if Service Company overtime is conservatively estimated at 5% (2 hours per week), then that work would have cost an estimated $70,000 in additional charges from outside providers.

- It would be difficult for KAWC to find local service providers with the same specialized water industry expertise as that possessed by the Service Company staff. Service Company personnel spend substantially all their time serving operating water companies. This specialization brings with it a unique knowledge of water utility operations and regulation that is most likely unavailable from local service providers.

- Service Company fees do not include any profit markup. Only its actual cost of service is being recovered from KAWC ratepayers.

Concerning question 3, the following conclusion was reached:

- The cost of the Service Company's customer accounts services, including those provided by the National Call Center, is within a reasonable range of the average of the neighboring electric utility comparison group. As will be explained further herein, this group of companies provides a reasonable proxy group for comparison to a regulated utility of the size and scope of the Service Company and KAWC. During the 12-months ended September 30, 2009, the customer accounts cost for KAWC customers was $28.35 compared to the 2008 average of $27.07 for neighboring electric utilities. The highest comparison group per customer cost was $39.29 and the lowest $15.67.

Concerning question 4, the following conclusions were drawn:

- The services that the Service Company provides are necessary and would be required even if KAWC were a stand-alone water utility.

- Furthermore, there is no redundancy or overlap in the services provided by the Service Company to KAWC. For all of the services listed in Exhibit 11, there was only one entity primarily responsible for the service.

II – Background

Overview of American Water Works Service Company

American Water's Service Company exists to provide certain shared services to American Water subsidiaries. It follows a service company model used by many utility holding companies that own multiple regulated utilities. By consolidating executive and professional services into a single service company, utility holding companies are able to realize the following benefits for ratepayers:

- Purchasing Economies – Common expenses (e.g., insurance, chemicals, piping) can be procured on a much larger scale thereby providing greater bargaining power for the combined entity compared to individual utility operating companies. A service company facilitates corporate-wide purchasing programs through its procurement and contract administration functions.

- Operating Economies of Scale – A service company is able to deliver services more efficiently because workloads can be balanced across more persons and facilities. For instance, American Water's Service Company is able to maintain one principal data center for the entire corporation. This is much more cost-efficient than each operating utility funding their own data center with its large fixed hardware, software and staffing costs.

- Continuity of Service – Centralizing service company personnel who perform similar services facilitates job cross-training and sharing of knowledge and expertise. This makes it easier to deal with staff turnover and absences and to sustain high levels of service to operating utilities. An individual operating utility might experience considerable disruption if a key professional left and it was necessary to hire outside to fill the vacancy.

- Maintenance of Corporate-Wide Standards – Personnel in American Water's Service Company establish standards for many functions (e.g., engineering designs, operating procedures and maintenance practices). It is easier to ensure these standards are followed by every operating utility because their implementation is overseen by the Service Company.

- Improved Governance – American Water's Service Company provides another dimension of management and financial oversight that supplements local operating utility management. The Service Company facilitates standard planning and reporting that help ensure operating utilities meet the requirements of their customers in a cost effective manner.

- Retention of Personnel – A service company organization provides operating utility personnel with another career path beyond what may be available on a local level. These opportunities tend to improve employee retention.

American Water follows the model for other utility service companies in another important regard. Its services are provided to affiliate operating utilities, like KAWC, at cost. American Water's Service Company is not a profit-making entity. It assigns only its actual expenses to the American Water subsidiaries it services.

The Service Company provides services to American Water operating companies from the following locations:

- Corporate Office – Includes American Water's executive management and personnel from the various corporate support services. American Water's corporate office is located in Voorhees, New Jersey.

- National Call Centers – Perform customer service functions, including: customer call processing, service order processing, correspondence processing, credit and collections. American Water maintains two call centers. One in Alton, Illinois that went into operation in 2001 and a second in Pensacola, Florida that went into operation in 2005. Prior to the establishment of these national call centers, customer service functions were performed by employees of KAWC, which incurred the expense on its books.

- National Shared Services Center – The Shared Services Center, located in Cherry Hill, New Jersey, provides various financial, accounting and treasury functions that had been performed by individual operating companies. This arrangement has improved and streamlined the Company's financial processes and allowed operating companies to focus on providing utility service.

- Regional Offices – Regional offices provide operating companies with certain support services that can be performed more effectively on a regional basis because individual operating company/center workloads are not sufficient to warrant a full-time staff for these activities. At the same time, these services require closer proximity to operating companies served so they are not provided by the National Shared Services Center. Examples of regional office services include rates and revenues, engineering, operations and field resource coordination.

- Belleville Lab – The national trace substance laboratory is located in Belleville, Illinois and performs testing for all American Water operating companies.

- Information Technology Service Centers – American Water's principal data center, located in Hershey, Pennsylvania, supports the IT infrastructure required to run corporate and operating company business applications and the communications systems. IT personnel rotate, as needed, throughout the regional offices and operating companies.

Service Company Expense Categories

The Service Company renders a monthly bill to operating companies. Charges are broken down into the following expense categories:

- Labor – base pay (salaries) of managerial and professional employees
- Labor-Related Overheads - employee benefit costs (payroll taxes, medical coverage, pensions, disability insurance) and other general expenses
- Support - wages and salaries of office support personnel, including secretaries, clerical personnel, telephone operators and mail clerks
- Office Expenses - office rent, equipment leases, telephone, electric, office supplies, property taxes, office maintenance
- Vouchers/Journal Entries – (1) travel expenses incurred by Service Company personnel, (2) other items submitted for reimbursement by employees, including professional association dues, (3) outside service contracts for such things as actuarial

services, and (4) various other expenditures, including data center expenses for software licenses and hardware maintenance.

Service Company expenses are either assigned directly or allocated to operating companies, as shown in the table below.

Expense Category	Direct Charged	Allocated	Comments
Labor	X	X	Professional personnel working for one or several operating companies
Labor-Related Overheads	X	X	These are primarily employee benefit costs that relate directly to labor
Support		X	Administrative personnel support the professional staff, thus support costs are allocated on the basis of professional labor
Office Expense		X	Are all allocated on the basis of professional labor
Vouchers/Journals	X	X	May be either directly in support of one operating company (e.g., an engineer traveling from the Corporate Office to the operating company) or allocated to several operating companies

A direct charge occurs when Service Company work or expenses are incurred in support of only one operating company. Direct charge examples include work in support of an operating company's rate case, engineering design work on an operating company's project and the preparation of an operating company's financial statements.

Service Company expenses are allocated when more than one operating company benefits from the underlying work. Examples include assessments of new Federal water quality regulations, development of the company-wide materials procurement contracts and creation of company-wide engineering design standards.

Charging and Assignment Of Service Company Time and Expenses

Service Company transactions are assigned with the following information so there is a proper accounting and eventual charging to an operating company:

- Operating company
- Formula number
- Work order (where applicable)
- Authorization number (where applicable)

Charges can originate from the following systems:

- Payroll System
- RVI System (outside vendor payments)
- PCard System (credit card payments)
- Internal Purchase Order System
- Journal entries

II – Background

The Service Company's time reporting process enables labor and support charges to be assigned to the proper operating company. Labor charges are based on the time reported by managerial and professional Service Company employees. Every week, Service Company professional employees complete an electronic time sheet that shows:

- Formula number (this is linked to operating company within American Water's financial system)
- Employee hours worked
- Account number for non-labor charges

At month-end, time report information is processed and direct and allocated professional labor hours tabulated for each operating company. Dollar charges are then calculated using the hourly rate of each Service Company professional employee based upon their base salary (i.e., an employee's hours times his/her hourly rate of pay).

Support (administrative) personnel charge their time to the activity "General Admin." As described in the table on page 4, their labor charges are allocated to operating companies based upon how their office's professional personnel labor charges are assigned. For instance, if 20% of American Water's Eastern Region's professional labor is assigned to KAWC during a month, then 20% of that office's monthly administrative labor charges also are assigned to the operating company.

The overhead cost category is next assigned based on professional and administrative labor costs. Thus, if 20% of the Eastern Region's accumulated professional and support labor is charged to KAWC during the month, then 20% of that month's overhead expenses will be assigned to KAWC.

Each Service Company location's office expenses are allocated to operating companies based on how professional labor charges for that office have been assigned. For instance, if 2% of professional labor from one Service Company office is assigned to KAWC, then 2% of that office's office expenses would be assigned to KAWC. Thus, office expenses are allocated in the very same way as administrative labor.

Vouchers/journal entries may be charged directly or allocated, depending on who benefits from the expenditure. For instance, the cost of a continuing professional education course taken by a professional in a regional office is allocated to the operating companies served by that office. Travel expenses by that same professional to a rate case proceeding are charged directly to the operating company whose case is being heard.

III – Service Company Cost Comparison Approach

During the 12 months ended September 30, 2009, the Service Company billed KAWC $7,892,467 in O&M-related charges and $891,627 in capital-related charges. Included in the O&M amount are certain non-recurring expenses which are excluded from this market study. As calculated in the table below, net testable Service Company charges of $8,798,773 were subjected to a market cost comparison.

	12 Months Ended September 30, 2009
Mgmt Fee Expense (O&M)	$ 7,892,467
Add(Subtract): Non-Recurring Items	
Sarbanes-Oxley	$ 14,679
Net O&M Expenses	$ 7,907,146
Mgmt Fees - Capital	$ 891,627
Total Testable AWWSC Charges	**$ 8,798,773**

For purposes of comparing these charges to certain outside benchmarks, Service Company services were placed into three categories:

- Managerial and Professional Services – Includes such services as management, accounting, legal, human resources, information technology and engineering.
- Customer Accounts Services – Includes customer-related services, such as call center, credit, billing, collection and payment processing.
- Field Resource Coordination Services – Includes the dispatching and oversight of work to operating company field crews.

Total test period Service Company charges break down between management/professional services, customer account services and field resource coordination as follows:

	12 Months Ended Sep 30, 2009	
	Amount	Hours
Management and Professional Services	$ 6,816,711	52,690
Customer Account Services	$ 1,728,850	47,924
Field Resource Coordination	$ 253,212	5,049
Total Service Company Charges	**$ 8,798,773**	**105,663**

This study's first question—whether Service Company 12 months ended September 30, 2009 charges were reasonable—was determined by comparing KAWC's A&G-related Service Company charges per customer to the same charges for utility companies that must file the FERC Form 60 – Annual Report of Service Companies.

The second question—whether Service Company charges during the 12 months ended September 3, 2009 were at the lower of cost or market—was evaluated by comparing the cost per hour for managerial and professional services provided by Service Company personnel to hourly billing rates that would be charged by outside providers of equivalent services. Service Company costs per hour were based on actual charges to KAWC during the 12 months ended September 30, 2009. Outside providers' billing rates came from surveys or other information from professionals that could perform the services now provided by the Service Company.

III – Service Company Cost Comparison Approach

The third question—whether Service Company's 12 months ended September 30, 2009 customer account services charges, including those of the National Call Center costs, were comparable to other utilities—was addressed by comparing KAWC's customer accounts services expenses to those of neighboring electric utilities. This approach was selected because the costs of outside providers of call center services are not publicly available. However, electric utility customer account services expenses can be obtained from the FERC Form 1. The availability and transparency of FERC data adds to the validity of its use in this comparison.

The fourth question—the necessity of Service Company services—was investigated by defining the services provided to KAWC and determining if these services would be required if KAWC were a stand-alone utility.

KAWC's Service Company Cost per Customer

During the 12 months ended September 30, 2009, KAWC was charged $55 per customer by the Service Company for A&G/O&M-related services. The calculation of this amount, shown in the table below, starts with total net testable Service Company charges and adjusts for capital and non-A&G functions (engineering, operations and water quality) charges. These adjustments are necessary to develop a per customer cost that is comparable to cost of utility service companies.

	12 Months ended Sep 30, 2009 AWWSC Charges
Testable Service Company charges	$ 8,798,773
Less: Capital charges	$ (891,627)
Less: Non-A&G function O&M charges	
Engineering	$ (11,031)
Operations	$ (1,073,526)
Water Quality	$ (260,216)
Net A&G/O&M-related charges	$ 6,562,374
KAWC customers	118,279
KAWC Cost Per Customer	**$ 55**

Comparison Group Cost Per Customer

Every centralized service company in a holding company system must file a Form 60 in accordance with the Public Utility Holding Company Act of 2005, Section 1270, Section 390 of the Federal Power Act and 18 C.F.R. paragraph 366.23. This report is designed to collect financial information from service companies that are subject to regulation by the FERC.

For 2008, a Form 60 was filed by 24 utility service companies, all of which serve utilities that provide regulated electric and, in some cases, gas service to retail customers. In order to make a valid comparison of this group's costs to those of American Water Works Service Company, it was necessary to isolate expenses that that they have in common. These include A&G/O&M-related charges associated with the following FERC accounts:

901 – Supervision	921 – Office supplies and expenses
903 – Customer records and collection expenses	923 – Outside services employed
905 – Miscellaneous customer accounts expenses	926 – Employee pensions and benefits
907 – Supervision	928 – Regulatory commission expenses
910 – Misc customer service and info expenses	930.2 – Miscellaneous general expenses
911 – Supervision	931 – Rents
920 - Administrative and general salaries	935 – Maintenance of structures and equipment

O&M expenses charged to utility affiliates for the comparison group service companies were obtained from Schedule XVI – Analysis of Charges for Service Associate and Non-Associate Companies (p. 303 to 306) of each entity's FERC Form 60. This schedule shows charges by FERC Account.

Comparison group service company 2008 expenses were also adjusted to remove charges to non-regulated affiliates from the cost pool used to calculate the cost per regulated service customer. This determination was made using information from the FERC Form 60 schedule: Account 457 – Analysis of Billing – Associate Companies.

IV – Question 1 – Reasonableness of Service Company Charges

A&G expenses per regulated utility customer for the 24 utility companies that file Form 60 for 2008 are calculated below.

Utility Company	2008 Regulated Retail Service Company A&G Expenses	Regulated Retail Customers	Cost per Customer
AEP	$396,340,118	5,213,000	$ 76
Allegheny	$263,588,707	1,577,873	$ 167
Alliant	$205,754,832	3,000,000	$ 69
Ameren	$291,684,710	3,400,000	$ 86
Black Hills	$20,763,828	759,400	$ 27
Dominion	$357,718,046	3,588,500	$ 100
Duke	$923,936,645	4,500,000	$ 205
Energy East	$113,714,789	2,989,800	$ 38
Entergy	$432,575,683	2,700,000	$ 160
E-On	$136,276,177	1,263,000	$ 108
Exelon	$558,687,014	5,885,000	$ 95
FirstEnergy	$354,028,109	4,499,000	$ 79
Great Plains	$15,000,708	820,000	$ 18
Integrys	$216,364,166	2,157,000	$ 100
Nat Grid	$1,240,706,398	6,700,000	$ 185
NiSource	$237,380,009	3,750,000	$ 63

Group Total	**$7,840,162,191**	**71,666,473**	**$ 109**

Exhibit 1 shows KAWC's 12 months ended September 30, 2009 Service Company cost per customer of $58 to be considerably lower than the average of $109 per customer for the comparison group service companies. Only 3 of 24 comparison group service companies had a lower cost per customer than KAWC. Based on this result, it is possible to conclude that the Service Company's 12 months ended September 30, 2009 charges to KAWC were reasonable.

V – Question 2 – Provision of Services at the Lower of Cost or Market

Methodology

The lower-of-cost-or-market comparison is accomplished by comparing the cost per hour for Service Company managerial and professional services to those of outside service providers to whom these duties could be assigned. Based on the nature of the Service Company services it was determined that the following outside providers could perform the categories of services indicated below:

- Management Consultants – executive and administrative management, risk management services, human resources and communications services
- Attorneys – legal services
- Certified Public Accountants – accounting, financial, information technology and rates and revenues services
- Professional Engineers – engineering, operations and water quality services.

The services provided by the Belleville lab are assumed to be transferable to professional engineers for purposes of this cost comparison. This was done for two reasons. First, there is no readily available survey of hourly billing rates for testing services such as those performed by Belleville. Second, Belleville personnel have similar, scientific educational backgrounds as Service Company engineering personnel. Thus, it is valid to compare the hourly rates of Belleville services to those of outside engineering firms.

Service Company's hourly rate were calculated for each of the four outside service provider categories, based on the dollars and hours charged to KAWC during the 12 months ended September 30, 2009. Hourly billing rates for outside service providers were developed using third party surveys or directly from information furnished by outside providers themselves.

It should be noted that by using the Service Company's hours charged KAWC during the 12 months ended September 30, 2009, its hourly rates are actually overstated because Service Company personnel charge a maximum 8 per day even when they work more. Outside service providers generally bill for every hour worked. If the overtime hours of Service Company personnel had been factored into the hourly rate calculation, Service Company hourly rates would have been lower.

The last step in the market cost comparison was to compare the Service Company's average cost per hour to the average cost per hour for outside providers.

Service Company Hourly Rates

Exhibit 2 (page 14) details the assignment of 12 months ended September 30, 2009 management and professional Service Company charges by outsider provider category. Exhibit 3 (page 15) shows the same assignment for Service Company management and professional hours charged to KAWC during the 12 months ended September 30, 2009.

Certain adjustments to these dollar amounts were necessary to calculate Service Company hourly rates that are directly comparable to those of outside providers. The three categories of adjustments are:

- Contract Services – 12 months ended September 30, 2009 Service Company charges to KAWC include expenses associated with the use of outside professional firms to

perform certain corporate-wide services (e.g., legal, financial audit, actuarial services). These professional fees are excluded from the Service Company hourly rate calculation because the related services have effectively been out-sourced already.

- Travel Expenses – In general, client-related travel expenses are not recovered by outside service providers through their hourly billing rate. Rather, actual out-of-pocket travel expenses are billed to clients in addition to fees for professional services. Thus, it is appropriate to remove these Service Company charges from the hourly rate calculation.

- Information Technology Infrastructure Expenses – Included in the 12 months ended September 30, 2009 Service Company charges to KAWC are leases, maintenance fees and depreciation related to American Water's enterprise mainframe, server and network infrastructure and corporate business applications. An outside provider that would take over operation of this infrastructure would recover these expenses over and above the labor necessary to operate the data center.

Exhibit 4 (page 16) shows how contract services, travel expenses and computer hardware/software-related Service Company charges are assigned among the four outside provider categories.

Based on the assignment of expenses and hours shown in Exhibits 2 and 3 and the excludable items shown in Exhibit 4, the Service Company's equivalent costs per hour for the 12 months ended September 30, 2009 are calculated below.

	Attorney	Management Consultant	Certified Public Accountant	Professional Engineer	Total
Total management, professional & technical services charges	$ 334,249	$ 1,710,026	$ 3,561,408	$ 1,211,028	$ 6,816,711
Less:

Outside Service Provider Hourly Rates

The next step in the cost comparison was to obtain the average billing rates for each outside service provider. The source of this information and the determination of the average rates are described in the paragraphs that follow.

It should be noted that professionals working for three of the five outside provider categories may be licensed to practice by state regulatory bodies. However, not every professional working for these firms is licensed. For instance, among Kentucky certified public accounting firms, only more experienced staff are predominantly CPAs (see table below). Some Service Company employees also have professional licenses. Thus, it is valid to compare the Service Company's hourly rates to those of the outside professional service providers included in this study.

	Firm Size		
Position	Small	Medium	Large
Partners/Owners	97%	98%	99%
Directors (11+ years experience)	na	100%	86%
Managers (6-10 years experience)	na	72%	88%
Sr Associates (4-5 years experience)	na	25%	69%
Associates (1-3 years experience)	na	0%	24%
New Professionals	na	8%	1%

Source: AICPA's National PCPS/TSCPA Management of an Accounting Practice Survey (2008)

Attorneys

The Kentucky State Bar does not survey its members as to their hourly billing rates. In addition, publicly available billing rate information could not be found for Kentucky attorneys. Therefore, an estimate of Kentucky attorney rates was developed from two surveys conducted by Lawyers Weekly in the states of Michigan and Massachusetts. As presented in Exhibit 5, the average rate for each firm was adjusted for the cost of living differential between its location and Lexington, Kentucky. The Lawyers Weekly surveys included rates in effect at December 31, 2007. Thus, the 2007 average rate was escalated to March 31, 2009—the midpoint of the test year ended September 30, 2009.

Management Consultants

The cost per hour for management consultants was developed from a 2009 survey performed by the Association of Management Consulting Firms—an industry trade organization. The survey includes rates that were in effect during 2008 for firms throughout the United States. Consultants typically do not limit their practice to any one region and must travel to a client's location. Thus, the U.S. national average is appropriate for comparison.

The first step in the calculation, presented in Exhibit 6, was to determine an average rate by consultant position level. From these rates, a single weighted average hourly rate was calculated based upon the percent of time that is typically applied to a consulting assignment by each consultant position level. The 2008 average rate was escalated to March 31, 2009—the midpoint of the 12 months ended September 30, 2009.

Certified Public Accountants

The average hourly rate for Kentucky CPAs was developed from a 2008 survey performed by the American Institute of Certified Public Accountants (AICPA). The Kentucky version of this survey was used to develop hourly rates for member firms in Kentucky.

As shown in Exhibit 7, a weighted average hourly rate was developed based on a set of accountant positions and a percent of time that is typically applied to an accounting assignment. This survey includes rate information in effect during 2007. Thus, the data had to be escalated to March 31, 2009—the test year's midpoint.

Professional Engineers

The Company provided hourly rate information for outside engineering firms that could have been used by KAWC in 2009. As presented in Exhibit 8, an average rate was developed for each engineering position level. Then, using a typical percentage mix of project time by engineering position, a weighted average cost per hour was calculated.

Service Company versus Outside Provider Cost Comparison

As shown in the table below, Service Company costs per hour are considerably lower than those of outside providers.

	12 Months Ended September 30, 2009		
Service Provider	Service Company	Outside Provider	Difference--Service Co. Greater(Less) Than Outside
Attorney	$ 73	$ 253	$ (180)
Management Consultant	$ 189	$ 227	$ (38)
Certified Public Accountant	$ 96	$ 103	$ (7)
Professional Engineer	$ 89	$ 105	$ (16)

Based on these cost per hour differentials and the number of managerial and professional services hours billed to KAWC during the 12-months ended September 30, 2009, outside service providers would have cost $1,409,800 more than the Service Company (see table below). Thus, on average, outside providers' hourly rates are 21% higher than those of the Service Company ($1,409,800 / $6,816,711).

	12 Months Ended September 30, 2009		
Service Provider	Hourly Rate Difference--Service Co. Greater(Less) Than Outside	Service Company Hours Charged	Dollar Difference
Attorney	$ (180)	4,166	$ (748,260)
Management Consultant	$ (38)	7,038	$ (270,282)
Certified Public Accountant	$ (7)	29,356	$ (192,538)
Professional Engineer	$ (16)	12,130	$ (198,720)
Service Company Less Than Outside Providers			$ (1,409,800)

It should be noted that the cost differential associated with using outside providers is even greater because Service Company personnel do not charge for more than 8 hours per day even when they work more. Outside providers generally charge clients for all hours worked. If, for instance, Service Company personnel worked 5% overtime (2 hours) per week on KAWC's behalf, that would have amounted to over 2,600 additional hours of work during the 12 months ended September 30, 2009. Based on the hourly rate differentials above, this overtime would have added another $70,000 to the cost of using outside providers.

If KAWC were to use outside service providers rather than the Service Company for managerial and professional services, it would incur other additional expenses besides those associated with higher hourly rates. Managing outside firms who would perform over 52,000 hours of work (more than 35 full-time equivalents at 1,500 "billable" hours per FTE per year) would add a significant workload to the existing KAWC management team. Thus, it would be necessary for KAWC to add at least one position to supervise the outside firms and ensure they delivered quality and timely services. The individual that would fill this position would need a good understanding of each profession being managed. He/she must also have management experience and the authority necessary to give them credibility with the outside firms. As calculated in the table below, this position would add almost $150,000 per year to KAWC's personnel expenses.

V – Question 2 – Provision of Services at the Lower of Cost or Market

Cost of Adding 1 Professional Position To KAWC's Staff

	Total
New Position's Salary	$ 100,000
Benefits (at 49.4%)	$ 49,400
Office Expenses (15.2%)	$ 15,200
Cost of One Position	$ 149,400

Thus, the total effect on the ratepayers of KAWC of contracting all services now provided by Service Company would be an increase in their costs of $1,559,200 ($1,409,800 + $149,400). Based on the results of this comparison, it is possible to conclude that the Service Company charged KAWC at the lower of cost or market for services provided during the 12 months ended September 30, 2009.

VI - Question 3 - Reasonableness of Customer Accounts Services Costs

Background

Customer Accounts Services covers the following utility functions:

- Customer Call Center – customer calls/contact, credit, order taking/disposition, bill collection efforts, outage calls
- Call Center IT – maintenance of phone banks, voice recognition units, call center software applications, telecommunications
- Customer billing – bill printing, stuffing, and mailing
- Remittance processing – processing customer payments received in the mail
- Bill payment centers – locations where customers can pay their bills in person

It is difficult to compare the cost of the Service Company's customer accounts services-related charges to KAWC with outside providers of the same services because survey data is proprietary and expensive to obtain. For this reason, KAWC's charges from the Service Company for customer accounts services are compared to those of neighboring electric utilities because the data necessary to make such comparison is available to the public.

Neighboring electric utility cost information comes from the FERC Form 1 that each utility must file. FERC's chart of accounts is defined in Chapter 18, Part 101 of the Code of Federal Regulations. FERC accounts that contain customer accounts services-related expenses are Account 903 Customer Accounts Expense – Records and Collection Expense and Account 905 Customer Accounts Expense – Miscellaneous Customer Accounts Expense. Exhibit 9 provides FERC's definition of the type of expenses that should be recorded in these accounts.

In addition to the charges in these FERC accounts, labor-related overheads charged to the following FERC accounts must be added to the labor components of Accounts 903 and 905:

- Account 926 Employee Pension and Benefits
- Account 408 Taxes Other Than Income (employer's portion of FICA)

Comparison Group

Electric utilities included in the comparison group are shown in the table below. These are companies whose FERC Form 1 show amounts for accounts 903 and 905.

Kentucky	• Duke Energy – Kentucky • Kentucky Power	• Kentucky Utilities • Louisville Gas & Electric
West Virginia	• Wheeling Power	
Virginia	• Appalachian Power	• Virginia Electric Power
Ohio	• Cleveland Electric • Columbus Southern Power • Dayton Power & Light • Duke Energy – Ohio	• Ohio Edison • Ohio Power • Toledo Edison
Missouri	• Aquila • Kansas City Power & Light	• Union Electric
Indiana	• Duke Energy – Indiana • Indiana Michigan Power	• Indianapolis Power & Light • NIPSCo
Illinois	• Central Illinois Light • Central Illinois Public Service • Commonwealth Edison	• Illinois Power • Interstate Power & Light • MidAmerica Energy

VI - Question 3 - Reasonableness of Customer Accounts Services Costs

Tennessee	• Kingsport Power

Kentucky-American Water Company
FERC Account Descriptions

903 – Customer Records and Collection Expenses

This account shall include the cost of labor, materials used and expenses incurred in work on customer applications, contracts, orders, credit investigations, billing and accounting, collections and complaints.

Labor

1. Receiving, preparing, recording and handling routine orders for service, disconnections, transfers or meter tests initiated by the customer, excluding the cost of carrying out such orders, which is chargeable to the account appropriate for the work called for by such orders.
2. Investigations of customers' credit and keeping of records pertaining thereto, including records of uncollectible accounts written off.
3. Receiving, refunding or applying customer deposits and maintaining customer deposit, line extension, and other miscellaneous records.
4. Checking consumption shown by meter readers' reports where incidental to preparation of billing data.
5. Preparing address plates and addressing bills and delinquent notices.
6. Preparing billing data.
7. Operating billing and bookkeeping machines.
8. Verifying billing records with contracts or rate schedules.
9. Preparing bills for delivery, and mailing or delivering bills.
10. Collecting revenues, including collection from prepayment meters unless incidental to meter reading operations.
11. Balancing collections, preparing collections for deposit, and preparing cash reports.
12. Posting collections and other credits or charges to customer accounts and extending unpaid balances.
13. Balancing customer accounts and controls.
14. Preparing, mailing, or delivering delinquent notices and preparing reports of delinquent accounts.
15. Final meter reading of delinquent accounts when done by collectors incidental to regular activities.
16. Disconnecting and reconnecting services because of nonpayment of bills.
17. Receiving, recording, and handling of inquiries, complaints, and requests for investigations from customers, including preparation of necessary orders, but excluding the cost of carrying out such orders, which is chargeable to the account appropriate for the work called for by such orders.
18. Statistical and tabulating work on customer accounts and revenues, but not including special analyses for sales department, rate department, or other general purposes, unless incidental to regular customer accounting routines.
19. Preparing and periodically rewriting meter reading sheets.
20. Determining consumption and computing estimated or average consumption when performed by employees other than those engaged in reading meters.

Materials and expenses

21. Address plates and supplies.
22. Cash overages and shortages.
23. Commissions or fees to others for collecting.
24. Payments to credit organizations for investigations and reports.
25. Postage.
26. Transportation expenses, including transportation of customer bills and meter books under centralized billing procedure.
27. Transportation, meals, and incidental expenses.
28. Bank charges, exchange, and other fees for cashing and depositing customers' checks.
29. Forms for recording orders for services, removals, etc.
30. Rent of mechanical equipment.

Kentucky-American Water Company
FERC Account Descriptions

905 – Miscellaneous Customer Accounts Expenses
This account shall include the cost of labor, materials used and expenses incurred not provided for in other accounts.
Labor
1. General clerical and stenographic work.
2. Miscellaneous labor.

Materials and expenses
3. Communication service.
4. Miscellaneous office supplies and expenses and stationery and printing other than those specifically provided for in accounts 902 and 903.

VI - Question 3 - Reasonableness of Customer Accounts Services Costs

KAWC Cost per Customer

As calculated below, KAWC's 12 months ended September 30, 2009 customer account services expense per customer was $28.35. The cost pool used to calculate this average includes charges for Service Company services (e.g., call center, billing, payment processing) and postage and forms expenses, which are incurred directly by KAWC. It was necessary to adjust the National Call Center charges because electric utilities experience an average of 2.50 calls per customer compared to American Water's 1.32 calls per customer. Thus, National Call Center expenses had to be increased, for comparison purposes, to reflect its costs at a 2.50 calls per customer level.

Kentucky American Cost Per Customer		Year Ended 9/30/2009 Service Co Charges	Adjustment Fewer Calls For Water Cos. (A)	Adjusted	
Cost Component					
Service Company					
Call Centers	Call processing, order processing, credit, bill collection	$ 1,728,850	$ 688,295	$ 2,417,145	
Operating Company	Customer payment processing			$ 151,772	Note B
Operating Company	Postage & forms			$ 784,459	
			Cost Pool Total	$ 3,353,376	
			Total Customers	118,279	
	12 Months Ended September 30, 2009 Cost Per KAWC Customer			**$ 28.35**	

Note A: Adjustment for American Water's fewer calls per customer

This adjustment is necessary because water utilities experience fewer calls per customer than do electric utilities

Call handling expenses		$ 765,328
Electric utility industry's avg calls/customer	2.50	
American Water's avg calls/customer	1.32	
Percent different	90%	90%
Total Adjustment		$ 688,295

Note B: Estimated customer payment processing expenses

Number of customers	118,279
Number of payments/customer/year	12
Total payments processed/year	1,419,348
Bank charge per item	$ 0.1069
Total estimated annual expense	$ 151,772

Electric Utility Group Cost per Customer

Exhibit 10 shows the actual 2008 customer accounts expense per customer calculation for the electric utility comparison group. All of the underlying data was taken from the utilities' FERC Form 1.

VI - Question 3 - Reasonableness of Customer Accounts Services Costs

Summary of Results

As shown in the table below, KAWC's cost per customer within a reasonable range of the average cost of the neighboring electric utility comparison group. It can therefore be concluded that KAWC's 12 months ended September 30, 2009 customer accounts-related expenses, including those of the Alton and Pensacola Call Centers, assigned by the Service Company to KAWC were comparable to those of other utilities.

Average Customer Accounts Expense Per Customer		
Louisville Gas & Electric	$	15.67
Interstate Power & Light	$	15.79
Virginia Electric Power	$	16.15

Analysis of Services

The final aspect of this study was an assessment of whether the services that are provided to KAWC by the Service Company would be necessary if KAWC were a stand-alone water utility. The first step in this evaluation was to determine specifically what the Service Company does for KAWC. Based on discussions with Service Company personnel, the matrix in Exhibit 11 was created showing which entity—KAWC or a Service Company location—is responsible for each of the functions KAWC requires to ultimately provide service to its customers. This matrix was reviewed to determine: (1) if there was redundancy or overlap in the services being provided by the Service Company and (2) if Service Company services are typical of those needed by a stand-alone water utility.

Upon review of Exhibit 12, the following conclusions can be drawn:

- The services that the Service Company provides are necessary and would be required even if KAWC were a stand-alone water utility.

- There is no redundancy or overlap in the services provided by the Service Company to KAWC. For all of the services listed in Exhibit 12, there was only one entity that was primarily responsible for the service.

Governance Practices Associated With Service Company Charges

There are several ways by which KAWC exercises control over Service Company services and charges. The most important of these are described below.

- **President of Regulated Operations Oversight** – The President of Regulated Operations is on the Executive Management Team (EMT) of American Water. This position is responsible for the overall performance of each operating company in American Water. As part of the EMT, the President of Regulated Operations has equal say with other EMT members in major business decisions of American Water and has the ability to monitor Service Company performance quality and spending. The President of Regulated Operations also has dialogue with each operating company president to address local concerns.
- **Divisional Vice President & Treasurer** – The Divisional Vice President and Treasurer of the Eastern Division states is responsible for the financial reporting, performance and internal controls of each of the operating companies in the division. The Vice President and Treasurer monitors the performance and reporting from the Service Company and follows up on instances where the quality and timeliness of services are not as expected. The operating company interacts with the Divisional VP & Treasurer to discuss any concerns with billings, etc.
- **Operating Company Board Oversight** – KAWC's board of directors includes members of American Water's EMT, members of the divisional management team and business and community leaders from outside the Company. KAWC's president is Chairman of the KAWC board. This helps ensure that KAWC's needs are a factor in the delivery of Service Company services.
- **Service Company Budget Review/Approval** – The President of Regulated Operations sits on the Service Company board and that board must formally approve the budget for Service Company charges for the next year. These budgeted charges are consolidated with the operating company's own spending into an overall budget which must be approved by the operating company's board of directors. KAWC's president also sits on the Service Company board.
- **Major Project Review And Approval** – Major projects undertaken by the Service Company must first be reviewed by American Water's Executive Management Team, which includes the President of Regulated Operations. With input from the local presidents and Divisional Vice President & Treasurer, they have the ability to impact all new initiatives and projects before they are authorized.
- **Service Company Bill Scrutiny** – KAWC Finance personnel review the monthly Service Company bill for accuracy and reasonableness on a monthly basis. KAWC's financial manager has dialogue with Shared Services Center office personnel concerning the monthly bill and any mistakes or overcharges are credited on a subsequent billing. The KAWC Finance Manager prepares an actual to budget comparison of management fees each month for use in identifying unusual variances. Service Company actual to budget comparison is included in the monthly FRP. Unusual variances are researched, explanations are provided and any corrections are made, as necessary.
- **Service Company Budget Variance Reporting** – Each month, a summary variance analysis is prepared that explains differences between budgeted and actual Service Company spending. In addition, a more detailed monthly variance report, called the "Statement of Expenses and Billed Charges," is produced by Service Company location and shows actual spending for the month.
- **Operating Company Budget Variance Reporting** – The "Budget/Plan Analysis," produced monthly, has a line item for Management Fees (i.e., Service Company charges). In this way, Service Company budget versus actual charges can be monitored

for the month and year-to-date. Additional information exists that allows more detailed analysis of "Divisional" and "Corporate" Management Fees.

- **Capital Investment Management ("CIM") –** CIM is one of American Water's primary business planning processes. It covers capital and asset planning and is employed throughout American Water. CIM provides a full range of governance practices, including a formal protocol for assessing system needs, prioritizing expenditures, managing the capital program, approving project spending, delivering projects and measuring outputs. CIM ensures that:
  - Capital expenditure plans are aligned with the strategic intent of the business
  - The impact of capital expenditure and income plans are fully reflected in operating expense plans
  - The impacts of these plans are understood and affordable, and
  - Effective controls are in place over budgets (through business plans) and individual capital projects (through appropriate authorization thresholds, management and reporting processes).

  The CIM process was designed to optimize the effectiveness of asset investment. The process is managed at two levels for all American Water companies, including all KAWC Operating Units. Monthly meetings of the CIM are held to review capital spending compared to plan, review new project requests, and review updates or modifications to existing projects. The President of KAWC, VP Finance, and others participate as necessary (e.g. KAWC operations managers and Rates Manager) and provide the data used in the monthly review schedules.

WITNESS: P.BARYENBRUCH

KENTUCKY AMERICAN WATER COMPANY

1. Q. Please state your name and business address.

A. Patrick L. Baryenbruch, 2832 Claremont Road, Raleigh, North Carolina 27608.

2. Q. Please describe your educational and professional background.

A. I received a Bachelors degree in accounting from the University of Wisconsin-Oshkosh in 1974 and a Masters in Business Administration degree from the University of Michigan in 1979.

I am a financial consultant and a certified public accountant. I am a member of the American Institute of Certified Public Accountants and the North Carolina Association of Certified Public Accountants.

I began my career as a staff accountant with Arthur Andersen & Company where I performed financial audits of utilities, banks and finance companies. After three years I left to pursue an M.B.A. degree. Upon graduation from business school, I worked with the consulting firms of Theodore Barry & Associates and Scott, Madden & Associates.

During my consulting career, I have performed consulting assignments for approximately 50 utilities and 10 public service commissions. I have participated as project manager, lead or staff consultant for 24 commission-ordered management and prudence audits of public utilities. Of these, I have been responsible for evaluating the area of affiliate charges and allocation of corporate expenses in the Commission-ordered audits of Connecticut Light and Power, Connecticut Natural Gas, General Water Corporation (Pennsylvania Operations), Philadelphia Suburban Water Company (now Aqua America) and Pacific Gas & Electric Company.

My firm has performed the commission-ordered audit of Southern California Edison's 2002, 2003, 2004 and 2005 transactions with its non-regulated affiliate companies.

3. Q. What are your duties and responsibilities in your current position?

A. I am the President of my own consulting practice, Baryenbruch & Company, LLC, which was established in 1985. In that capacity, I provide consulting services to utilities and their regulators.

4. Q. Please describe the reason for your testimony in this case.

A. I am presenting the results of my study which evaluated the services provided by American Water Service Company ("Service Company") during the 12 months ended September 30, 2009 to Kentucky American Water (KAWC). This study was undertaken in conjunction with KAWC's rate case and is true to the best of my knowledge and belief. The study is attached as Exhibit PLB-1.

5. Q. What were the objectives of your study?

A. This study was undertaken to answer four questions concerning the services provided by American Water Works Service Company, Inc. ("Service Company") to Kentucky American Water Company ("KAWC"), each of which bears on the reasonableness of those charges as incurred during the 12 months ended September 30, 2009. First, were the Service Company's charges to KAWC during the 12 months ended September 30, 2009 reasonable? Second, was KAWC charged the lower of cost or market for managerial and professional services provided by the Service Company during the 12 months ended September 30, 2009? Third, were the 12 months ended September 30, 2009 costs of the Service Company's customer accounts services, including those of the National Call

Centers, comparable to those of other utilities? Fourth, are the services KAWC receives from Service Company necessary?

6. **Q. What conclusions were you able to draw concerning question number 1, whether the Service Company charges to KAWC were reasonable?**

A. The Service Company's 12 months ended September 30, 2009 cost per KAWC customer was very reasonable compared to cost per customer for electric and combination electric/gas service companies. During the 12 months ended September 30, 2009, KAWC was charged $55 per customer for administrative and general (A&G)-related services provided by the Service Company. This compares to an average of $109 per customer for service companies reporting to the Federal Energy Regulatory Commission (FERC). Only 3 of the 24 utility service companies that filed a FERC Form 60 for 2008 had a lower per customer A&G cost than KAWC's charges from the Service Company.

7. **Q. What conclusions were you able to draw concerning question number 2, whether KAWC was charged the lower of cost or market services provided by the Service Company?**

A. I was able to draw the following conclusions:

(1) KAWC was charged the lower of cost or market for managerial and professional services during the 12 months ended September 30, 2009.

(2) On average, the hourly rates for outside service providers are 21% higher than the Service Company's hourly rates.

(3) The managerial and professional services provided by the Service Company are vital and could not be procured externally by KAWC without careful supervision on the part of KAWC. If these services were

contracted entirely to outside providers, KAWC would have to add at least one position to manage activities of outside firms. This position would be necessary to ensure the quality and timeliness of services provided.

(4) If all the managerial and professional services now provided by the Service Company had been out-sourced during the 12-months ended September 30, 2009, KAWC and its ratepayers would have incurred an additional $1,500,000 in expenses. This amount includes the higher cost of outside providers and the cost of a KAWC position needed to direct the outsourced work.

(5) This study's hourly rate comparison actually understates the cost advantages that accrue to KAWC from its use of the Service Company. Outside service providers generally bill for every hour worked. Service Company managerial and professional personnel, on the other hand, charge a maximum 8 hours per day even when they work more. If the overtime hours of Service Company personnel had been factored into the hourly rate calculation, the Service Company would have had an even greater annual dollar advantage than the $1,500,000 cited above.

(6) It would be difficult for KAWC to find local service providers with the same specialized water industry expertise as that possessed by the Service Company staff. Service Company personnel spend substantially all their time serving operating water companies. This specialization brings with it a unique knowledge of water utility operations and regulation that is most likely unavailable from local service providers.

(7) Service Company fees do not include any profit markup. Only its actual cost of service is being recovered from KAWC ratepayers.

8. Q. What conclusions were you able to draw concerning question number 3, whether the 12 months ended September 30, 2009 costs of the Service Company's customer account services, including those of the National Call Centers, were reasonable?

A. I was able to determine that the cost of the Service Company's customer accounts services, including those provided by the National Call Center, is within a reasonable range of the average of the neighboring electric utility comparison group. As will be explained further herein, this group of companies provides a reasonable proxy group for comparison to a regulated utility of the size and scope of KAWC. During the 12-months ended September 30, 2009, the customer accounts cost for KAWC customers was $28.35 compared to the 2008 average of $27.07 for neighboring electric utilities. The highest comparison group per customer cost was $39.29 and the lowest $15.67.

9. Q. What conclusions were you able to draw concerning question number 4, whether the services KAWC receives from the Service Company are necessary?

A. I was able to draw the following conclusions:

(1) The services that the Service Company provides are necessary and would be required even if KAWC were a stand-alone water utility.

(2) There is no redundancy or overlap in the services provided by the Service Company to KAWC.

10. Q. Does this complete your testimony?

A. Yes.

I - Introduction

Purpose Of This Study

This study was undertaken to answer three questions concerning the services provided by American Water Works Service Company, Inc. (Service Company) to New Jersey American Water Company, Inc. (NJAWC):

1. Was NJAWC charged the lower of cost or market for managerial and professional services provided by the Service Company during the 12 months ended June 30, 2007?

2. Were the 12 months ended June 30, 2007 costs of the Service Company's customer accounts services, including those of the National Call Centers, reasonable?

3. Are the services NJAWC receives from Service Company necessary?

Study Results

Concerning question 1, the following conclusions can be drawn from this study:

- NJAWC was charged the lower of cost or market for managerial and professional services during the 12 months ended June 30, 2007.

- On average, the hourly rates for outside service providers are **66% higher** than the Service Company's hourly rates.

- The managerial and professional services provided by the Service Company are vital and could not be procured externally by NJAWC without careful supervision on the part of NJAWC. If these services were contracted entirely to outside providers, NJAWC would have to add at least two positions to manage activities of outside firms. These positions would be necessary to ensure the quality and timeliness of services provided.

- If all the managerial and professional services now provided by the Service Company had been out-sourced during the 12 months ended June 30, 2007, NJAWC and its ratepayers would have incurred an **additional $17.9 million** in expenses. This amount includes the higher cost of outside providers and the cost of two NJAWC positions needed to direct the outsourced work.

- This study's hourly rate comparison actually understates the cost advantage that accrues to NJAWC from its use of the Service Company. Outside service providers generally bill for every hour worked. Service Company personnel, on the other hand, charge a maximum 8 per day even when they work more. If the overtime hours of Service Company personnel were factored into the hourly rate calculation, the Service Company would have had an even greater annual dollar advantage than the $17.9 million cited above. For instance, if Service Company overtime is conservatively estimated at 5% (only 2 hours per week), then that work would have cost over $800,000 in additional charges from outside providers.

- It would be difficult for NJAWC to find local service providers with the same specialized water industry expertise as that possessed by the Service Company staff. Service Company personnel spend substantially all their time serving operating water companies. This specialization brings with it a unique knowledge of water utility operations and regulation that is most likely unavailable from local service providers.

- Service Company fees do not include any profit markup. Only its actual cost of service is being recovered from NJAWC ratepayers.

Concerning question 2, it was determined that the cost of the Service Company's customer accounts services, including those provided by the National Call Center, **is close to the average of the comparison group of electric utilities in New Jersey and surrounding states**. It can therefore be concluded that the customer accounts-related expenses, including those of the Alton and Pensacola Call Centers, assigned by the Service Company to NJAWC are reasonable. As will be explained further herein, these companies provide a reasonable proxy group for comparison to a regulated utility of the size and scope of NJAWC. During the 12 months ended June 30, 2007, the customer accounts cost for NJAWC customers was $31.02 compared to the 2006 average of $27.70 for neighboring electric utilities. The highest comparison group per customer cost was $61.67 and the lowest $12.22.

Concerning question 3, the following conclusions can be drawn:

- The services that the Service Company provides are necessary and would be required even if NJAWC were a stand-alone water utility.

- There is no redundancy or overlap in the services provided by the Service Company to NJAWC. For all of the services listed in Schedule 11, there was only one entity that was primarily responsible for the service.

II - Background

Overview Of American Water Works Service Company

The Service Company maintains several types of offices from which it provides services to American Water operating companies. They include:

- Central Services – Includes American Water's executive management and personnel from the various corporate support services. American Water's corporate office is located in Voorhees, New Jersey.

- National Call Centers – Perform customer service functions, including: customer call processing, service order processing, correspondence processing, credit and collections. American Water maintains two call centers. One in Alton, Illinois that went into operation in the second quarter of 2001 and a second in Pensacola, Florida that went into operation in April 2005. Prior to the establishment of these national call centers, customer service functions were performed by employees of NJAWC, which incurred the expense on its books.

- National Shared Services Center – The Shared Services Center, located in Cherry Hill, New Jersey, provides various financial, accounting and treasury functions that had been performed by individual operating companies. This arrangement has improved and streamlined the Company's financial processes and allowed operating companies to focus on providing utility service.

- Regional/Divisional Offices – Regional and Divisional offices provide operating companies with certain support services that can be performed more effectively on a regional or divisional basis because individual operating company/center workloads are not sufficient to warrant a full-time staff for these activities. At the same time, these services require closer proximity to operating companies served so they are not provided by the National Shared Services Center. Examples of regional office services include rates and revenues, legal, human resources and operations. There are four regional offices—Northeast, Southeast, Central and West. Examples of divisional office services include administration, operation and customer support and security. Currently there is one divisional office, the Eastern Division which oversees the Northeast and Southeast regions.

- Laboratory Services – The national trace substance laboratory is located in Belleville, Illinois and performs testing for all American Water operating companies.

- Information Technology Service Centers – American Water's principal data center, located in Hershey, Pennsylvania, supports the IT infrastructure required to run corporate and operating company business applications and the communications systems. IT personnel rotate, as needed, throughout the regional offices and operating companies.

Service Company Expense Categories

The Service Company renders a monthly bill to operating companies. Charges are broken down into the following expense categories:

- Labor – base pay (salaries) of managerial and professional employees

- Labor-Related Overheads - employee benefit costs (payroll taxes, medical coverage, pensions, disability insurance) and other general expenses
- Support - wages and salaries of office support personnel, including secretaries, clerical personnel, telephone operators and mail clerks
- Office Expenses - office rent, equipment leases, telephone, electric, office supplies, property taxes, office maintenance
- Vouchers/Journal Entries – (1) travel expenses incurred by Service Company personnel, (2) other items submitted for reimbursement by employees, including professional association dues, (3) outside service contracts for such things as actuarial services, and (4) various other expenditures, including data center expenses for software licenses and hardware maintenance.

Service Company expenses are either assigned directly or allocated to operating companies, as shown in the table below.

Expense Category	Direct Charged	Allocated	Comments
Labor	X	X	Professional personnel working for one or several operating companies
Support		X	Administrative personnel support the professional staff, thus support costs are allocated on the basis of professional labor
Overhead	X	X	These are primarily employee benefit costs that relate directly to labor
Office Expense		X	Are all allocated on the basis of professional labor
Vouchers/Journals	X	X	May be either directly in support of one operating company (e.g., an engineer traveling from the Corporate Office to the operating company) or allocated to several operating companies

A direct charge occurs when Service Company work or expenses are incurred in support of only one operating company. Direct charge examples include work in support of an operating company's rate case, engineering design work on an operating company's project and the preparation of an operating company's financial statements.

Service Company expenses are allocated when more than one operating company benefits from the underlying work. Examples include assessments of new Federal water quality regulations, development of the company-wide materials procurement contracts and creation of company-wide engineering design standards.

Charging and Assignment Of Service Company Time and Expenses

Service Company transactions are assigned with the following information so there is a proper accounting and eventual charging to an operating company:

- Operating company number, if transaction is a direct charge
- Formula number if transaction is allocated
- Employee hours worked
- Account number for non-labor charges.

Charges can originate from the following systems:

- Payroll System
- RVI System (outside vendor payments)
- PCard System (credit card payments)
- Internal Purchase Order System
- Journal entries.

The Service Company's time reporting process enables labor and support charges to be assigned to the proper operating company. Labor charges are based on the time reported by managerial and professional Service Company employees. Every week, Service Company professional employees complete an electronic time sheet (see example in Schedule 1) that shows:

- Operating company (for direct charge)
- Formula number (for allocation)
- Work order (where applicable)
- Authorization number (where applicable).

At month-end, time report information is processed and direct and allocated professional labor hours tabulated for each operating company. Dollar charges are then calculated using the hourly rate of each Service Company professional employee based upon their base salary (i.e., an employee's hours times their hourly rate of pay).

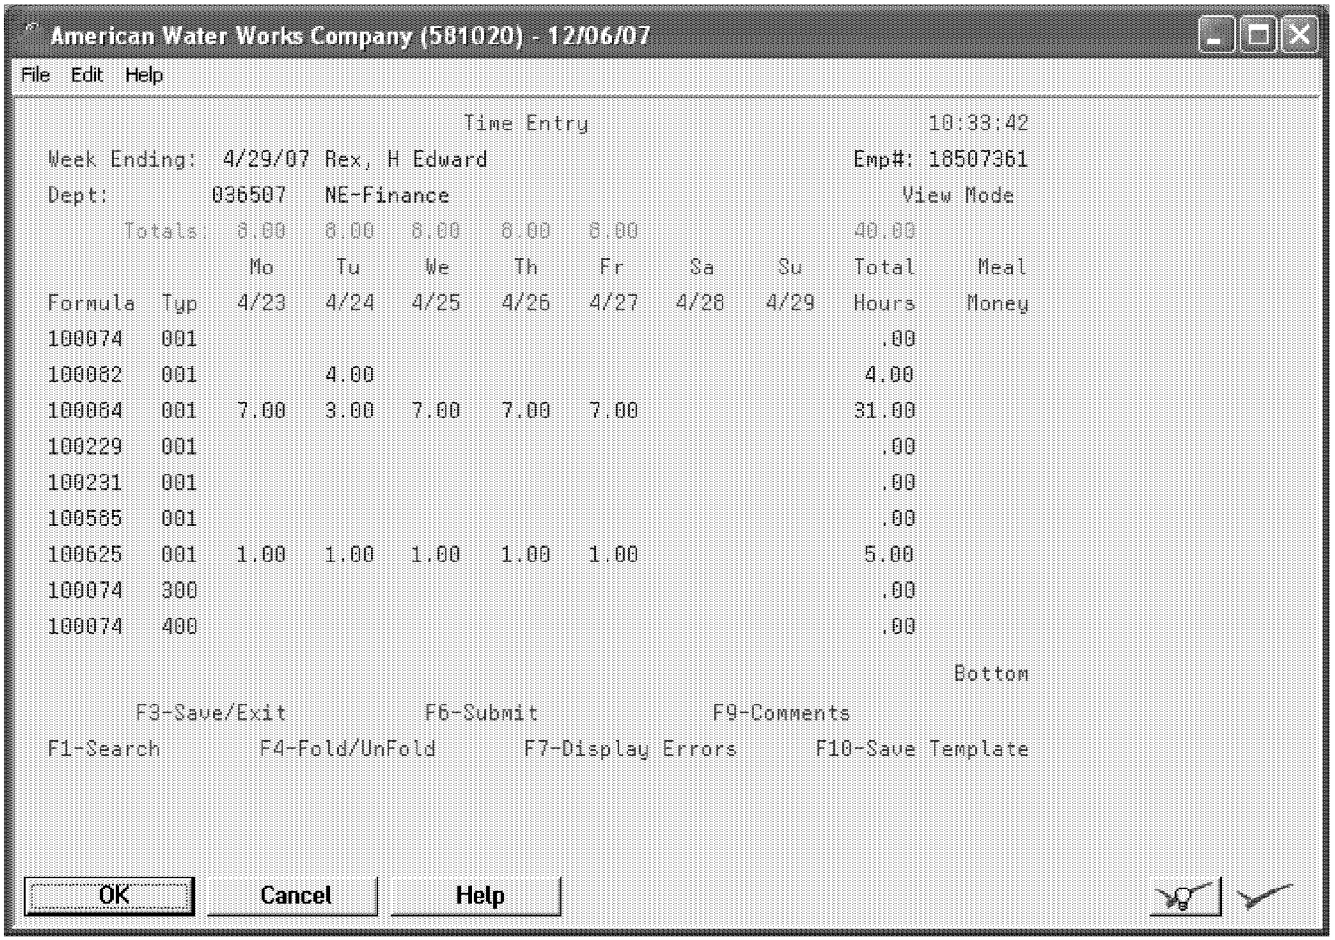
Support (administrative) personnel charge their time to the activity "General Admin." As described in the table on page 4, their labor charges are allocated to operating companies based upon how their office's professional personnel labor charges are assigned. For instance, if 25% of the Northeast Region professional labor is assigned to NJAWC during a month, then 25% of that office's monthly administrative labor charges also are assigned to the operating company.

The overhead cost category is next assigned based on professional and administrative labor costs. Thus, if 25% of the Northeast Region accumulated professional and support labor is charged to NJAWC during the month, then 25% of that month's overhead expenses will be assigned to NJAWC.

Each Service Company location's office expenses are allocated to operating companies based on how professional labor charges for that office have been assigned. For instance, if 25% of professional labor from one Service Company office is assigned to NJAWC, then 25% of that office's office expenses would be assigned to NJAWC. Thus, office expenses are allocated in the very same way as administrative labor.

Vouchers/journal entries may be charged directly or allocated, depending on who benefits from the expenditure. For instance, the cost of a continuing professional education course taken by a professional in a regional office is allocated to the operating companies served by that office. Travel expenses by that same professional to a rate case proceeding are charged directly to the operating company whose case is being heard.

Sample Electronic Time Sheet



III – Service Company Cost Comparison Approach

During the 12 months ended June 30, 2007, the Service Company charged NJAWC $34,866,623. For purposes of comparing these charges to outside benchmarks, Service Company services were placed into two categories:

- Managerial and Professional Services – Includes such services as management, accounting, legal, human resources, information technology, and engineering.

- Customer Accounts Services – Includes customer-related services, such as call center, credit, billing, collection and payment processing.

Total test period Service Company charges break down by these categories as follows:

	12 Months Ended June 30, 2007	
	Amount	Hours
Management and Professional Services	$ 26,691,726	294,000
Customer Account Services	$ 8,174,897	256,156
Total	$ 34,866,623	550,156

This study's first question—whether the Service Company charges the lower of cost or market—was evaluated by comparing the cost per hour for managerial and professional services provided by Service Company personnel to hourly billing rates that would be charged by outside providers of equivalent services. Service Company costs per hour were based on actual charges to NJAWC during the 12 months ended June 30, 2007. Outside providers' billing rates came from surveys or other information from professionals that could perform the services now provided by the Service Company.

The second question—reasonableness of the National Call Center costs—was addressed by comparing NJAWC's customer accounts services expenses to those of neighboring electric utilities. This approach was selected because the costs of outside providers of call center services are not publicly available. However, electric utility customer account services expenses can be obtained from the FERC Form 1. The availability and transparency of FERC data adds to the validity of its use in this comparison.

The third question—the necessity of Service Company services—was first investigated by determining the services provided to NJAWC. A determination was then made as to whether these services would be required if NJAWC were a stand-alone utility.

IV – Managerial And Professional Services Hourly Rate Comparison

Methodology

The lower-of-cost-or-market comparison is accomplished by comparing the cost per hour for Service Company managerial and professional services to those of outside service providers to whom these duties could be assigned. Based on the nature of the Service Company services it was determined that the following outside providers could perform the categories of services indicated below:

- Management Consultants – executive and administrative management, risk management services, human resources and communications services
- Attorneys - legal services
- Certified Public Accountants - accounting, financial, information technology and rates and revenues
- Professional Engineers - engineering, operations and water quality services.

It should be noted that the services provided by the Belleville lab are assumed to be transferable to professional engineers for purposes of this cost comparison. This was done for two reasons. First, there is no readily available survey of hourly billing rates for testing services such as those performed by Belleville. Second, Belleville personnel have similar scientific educational backgrounds as Service Company engineering personnel. Thus, it is valid to compare the hourly rates of Belleville services to those of outside engineering firms.

Service Company's hourly rate were calculated for each of the four outside service provider categories, based on the dollars and hours charged to NJAWC during the 12 months ended June 30, 2007. Hourly billing rates for outside service providers were developed using third party surveys or directly from information furnished by outside providers themselves.

It should be noted that by using the Service Company's hours charged NJAWC during the 12 months ended June 30, 2007, its hourly rates are actually overstated because Service Company personnel charge a maximum 8 per day even when they work more. Outside service providers generally bill for every hour worked. If the overtime hours of Service Company personnel had been factored into the hourly rate calculation, Service Company hourly rates would have been lower.

The last step in the market cost comparison was to compare the Service Company's average cost per hour to the average cost per hour for outside providers.

Service Company Hourly Rates

Schedules 2 and 3 (pages 10-11) details the assignment of 12 months ended June 30, 2007 management and professional Service Company charges and hours by outsider provider category.

Certain adjustments to these dollar amounts were necessary to calculate Service Company hourly rates that are directly comparable to those of outside providers. Adjustments were made to the following 12 months ended June 30, 2007 non-labor Service Company charges:

- Contract Services – 12 months ended June 30, 2007 Service Company charges to NJAWC include over $2.2 million in charges associated with the use of outside

professional firms to perform certain corporate-wide services (e.g., legal, financial audit, actuarial services). These professional fees are excluded because the related services have effectively been out-sourced already.

- Travel Expenses – In general, client-related travel expenses are not recovered by outside service providers through their hourly billing rate. Rather, actual out-of-pocket travel expenses are billed to clients in addition to fees for professional services. Thus, it is appropriate to remove these Service Company charges from the hourly rate calculation.

- Computer Hardware and Software Expenses – Included in the 12 months ended June 30, 2007 Service Company charges to NJAWC are charges from the IT Service Centers for outside expenses related to leases and maintenance fees related to mainframe, server and network infrastructure, corporate business applications and the communications systems. An outside provider that would take over operation of a data center would recover these expenses over and above the labor necessary to operate the systems.

Schedule 4 (page 12) shows how computer hardware/software, contract services and travel expense-related Service Company charges are assigned among the four outside provider categories.

Based on the assignment of expenses and hours shown in Schedules 2, 3 and 4, the Service Company's equivalent costs per hour for the 12 months ended June 30, 2007 are calculated below.

	12 Months Ended June 30, 2007				
	Attorney	Management Consultant	Certified Public Accountant	Professional Engineer	Total
Total management, professional & technical services charges	$ 1,260,479	$ 8,800,100	$ 13,893,353	$ 2,737,793	$ 26,691,726
Less:					
Contract services	24,154	604,264	1,537,948	51,306	2,217,672
Travel expenses	31	84,744	241,460	7,149	333,384
Computer hardware/software	11,442	92,693	55,223	14,866	174,224
Net Service Charges (A)	$ 1,224,852	$ 8,018,399	$ 12,058,722	$ 2,664,472	$ 23,966,446
Total Hours (B)	13,140	77,725	170,370	32,764	294,000
Average Hourly Rate (A / B)	**$ 93**	**$ 103**	**$ 71**	**$ 81**

Outside Service Provider Hourly Rates

The next step in the cost comparison was to obtain the average billing rates for each outside service provider. The source of this information and the determination of the average rates are described in the paragraphs that follow.

Attorneys

The New Jersey Bar Association does not survey its members as to their hourly billing rates. In addition, publicly available billing rate information could not be found for New York or Pennsylvania attorneys. Therefore, a New Jersey estimate was developed from a survey of Michigan lawyers conducted annually by the Michigan Lawyers Weekly. As presented in Schedule 5, the average rate for each Michigan firm respondent was adjusted for the cost of living differential between their location and Trenton, New Jersey. The survey includes rates that were in effect at December 31, 2006—the midpoint of the 12 months ended June 30, 2007.

Management Consultants

The cost per hour for management consultants was developed from the 2006 annual survey performed by the Association of Management Consulting Firms—an industry trade organization. The first step in the calculation, presented in Schedule 6, was to determine an average rate by consultant position level. From these rates, a single weighted average hourly rate was calculated based upon the percent of time that is typically applied to a consulting assignment by each consultant position level. This survey includes rates that were in effect during 2005 for firms in the United States. Consultants typically do not limit their practice to any one region and must travel to a client's location. Thus, the U.S. national average is appropriate for comparison. The 2005 average rate was escalated to December 31, 2006—the midpoint of the 12 months ended June 30, 2007.

Certified Public Accountants

The average hourly rate for New Jersey certified public accountants was developed from a 2006 survey performed by the American Institute of Certified Public Accountants (AICPA). Hourly rates in the AICPA survey are the average of firms in New Jersey. The average hourly rate was calculated for a set of typical accountant positions, as shown in Schedule 7. Based on a typical staff assignment by each accountant position, a weighted average hourly rate was calculated. This survey covered hourly rates in effect during 2005, thus they had to be escalated to December 31, 2006—the midpoint of the 12 months ended June 30, 2007.

Professional Engineers

The Service Company provided hourly rate information for three outside engineering firms that were used by NJAWC in 2007. As presented in Schedule 8, an average rate was developed for each engineering position level. Then, using a typical percentage mix of project time by engineering position, a weighted average cost per hour was calculated.

New Jersey American
Estimated Billing Rates Of New Jersey Attorneys

Billing rates as of December 31, 2006 (Note A)														
Firm	Michigan Location	Number Of Mich Lawyers	Billing Rate Range Associate		Partner		Average		Cost of Living Adjust (C)	Adjusted Rate

Source: Information provided by American Water Works Service Company

Service Company Versus Outside Provider Cost Comparison

As shown in the table below, Service Company costs per hour are considerably lower than those of outside providers.

	12 Months Ended June 30, 2007		
Service Provider	Service Company	Outside Provider	Difference--Service Co. Greater(Less) Than Outside
Attorney	$ 93	$ 286	$ (193)
Management Consultant	$ 103	$ 217	$ (114)
Certified Public Accountant	$ 71	$ 104	$ (33)
Professional Engineer	$ 81	$ 100	$ (19)

Based on these cost per hour differentials and the number of managerial and professional services hours billed to NJAWC during the 12 months ended June 30, 2007, outside service providers would have cost almost $9 million more than the Service Company (see table below). Thus, on average, outside provider's hourly rates are 66% higher than those of the Service Company ($17,662,967 / $26,691,726).

	12 Months Ended June 30, 2007		
Service Provider	Hourly Rate Difference--Service Co. Greater(Less) Than Outside	Service Company Hours Charged	Dollar Difference
Attorney	$ (193)	13,140	$ (2,533,145)
Management Consultant	$ (114)	77,725	$ (8,858,090)
Certified Public Accountant	$ (33)	170,370	$ (5,659,800)
Professional Engineer	$ (19)	32,764	$ (611,932)
Service Company Less Than Outside Providers			$ (17,662,967)

If NJAWC were to use outside service providers rather than the Services Company for managerial and professional services, it would incur other additional expenses besides those associated with higher hourly rates. Managing outside firms who would perform 294,000 hours of work (almost 196 full-time equivalents at 1,500 billable hours per FTE) would add a significant workload to the existing NJAWC management team. Thus, it would be necessary for NJAWC to add at least two positions to supervise the outside firms and ensure they delivered quality and timely services. The individuals that would fill these positions would need a good understanding of each profession being managed. They must also have management experience and the authority necessary to give them credibility with the outside firms. As calculated in the table below, this position would add another $304,000 per year to NJAWC's personnel expenses.

Cost of Adding Administrative Positions To NJAM's Staff

	Per Position	Total
New Positions' (2) Salary	$ 100,000	$ 200,000
Benefits (at 52%)	$ 52,000	$ 104,000
Total Cost of the New Positions		$ 304,000

Thus, the total effect on the ratepayers of NJAWC of contracting all services now provided by Service Company would be an increase in their costs of **$17,966,967** ($17,662,967 + $304,000).

Other Cost Comparisons

Every year, the Belleville Lab conducts a comparison of its cost for performing major tests to the cost of using outside testing laboratories. Over the past several years, these surveys have shown the following results been as follows:

Year	Number of Major Tests Surveyed	Percent Belleville Lower Than Outside Labs
2000	26	15%
2001	25	19%
2002	24	16%
2003	23	10%
2004	24	9%
2005	24	25%
2006	24	31%

These survey results provide further evidence that the Service Company arrangement is the lowest-cost alternative for NJAWC.

V – Customer Account Services Cost Comparison

Background

It is difficult to compare the cost of American Water's National Call Center with outside providers of the same call center-related services. Call center survey data is proprietary and expensive to obtain. For this reason, NJAWC's National Call Center costs are compared to those of neighboring electric utilities because the data necessary to make this comparison is readily available to the public.

Electric utility cost information comes from their FERC Form 1. FERC's chart of accounts is defined in chapter 18, part 101 of Code of Federal Regulations. FERC accounts that contain call center-related expenses and are used in this study's comparison are:

- Account 903 Customer Accounts Expense – Records and Collection Expense
- Account 905 Customer Accounts Expense – Miscellaneous Customer Accounts Expense.

In addition, labor-related overheads charged to the following FERC accounts must be added to the labor components of Accounts 903 and 905.

- Account 926 Employee Pension and Benefits
- Account 408 Taxes Other Than Income (employer's portion of FICA).

Schedule 8 provides FERC's description of what should be charged to these accounts. In questioning the controller of a large Southeastern electric utility, it was determined that expenses of the activities described below are recorded in the designated FERC accounts.

903 Records and Collection Expense

- Customer Call Center – customer calls/contact, credit, order taking/disposition, bill collection efforts, outage calls
- Call Center IT – maintenance of phone banks, voice recognition units, call center software applications, telecommunications
- Customer billing – bill printing, stuffing and mailing
- Remittance processing – processing of customer payments received in the mail
- Bill payment centers – locations where customers can pay their bills in person

905 Miscellaneous Customer Accounts Expense

- Customer Information System IT – maintenance and support of the customer information system

This study assumes the FERC accounts for other electric and gas utilities contain expenses for the same activities.

New Jersey American
FERC Account Descriptions

903 – Customer Records and Collection Expenses
This account shall include the cost of labor, materials used and expenses incurred in work on customer applications, contracts, orders, credit investigations, billing and accounting, collections and complaints.

Labor

1. Receiving, preparing, recording and handling routine orders for service, disconnections, transfers or meter tests initiated by the customer, excluding the cost of carrying out such orders, which is chargeable to the account appropriate for the work called for by such orders.
2. Investigations of customers' credit and keeping of records pertaining thereto, including records of uncollectible accounts written off.
3. Receiving, refunding or applying customer deposits and maintaining customer deposit, line extension, and other miscellaneous records.
4. Checking consumption shown by meter readers' reports where incidental to preparation of billing data.
5. Preparing address plates and addressing bills and delinquent notices.
6. Preparing billing data.
7. Operating billing and bookkeeping machines.
8. Verifying billing records with contracts or rate schedules.
9. Preparing bills for delivery, and mailing or delivering bills.
10. Collecting revenues, including collection from prepayment meters unless incidental to meter reading operations.
11. Balancing collections, preparing collections for deposit, and preparing cash reports.
12. Posting collections and other credits or charges to customer accounts and extending unpaid balances.
13. Balancing customer accounts and controls.
14. Preparing, mailing, or delivering delinquent notices and preparing reports of delinquent accounts.
15. Final meter reading of delinquent accounts when done by collectors incidental to regular activities.
16. Disconnecting and reconnecting services because of nonpayment of bills.
17. Receiving, recording, and handling of inquiries, complaints, and requests for investigations from customers, including preparation of necessary orders, but excluding the cost of carrying out such orders, which is chargeable to the account appropriate for the work called for by such orders.
18. Statistical and tabulating work on customer accounts and revenues, but not including special analyses for sales department, rate department, or other general purposes, unless incidental to regular customer accounting routines.
19. Preparing and periodically rewriting meter reading sheets.
20. Determining consumption and computing estimated or average consumption when performed by employees other than those engaged in reading meters.

Materials and expenses

21. Address plates and supplies.
22. Cash overages and shortages.
23. Commissions or fees to others for collecting.
24. Payments to credit organizations for investigations and reports.
25. Postage.
26. Transportation expenses, including transportation of customer bills and meter books under centralized billing procedure.
27. Transportation, meals, and incidental expenses.
28. Bank charges, exchange, and other fees for cashing and depositing customers' checks.
29. Forms for recording orders for services, removals, etc.
30. Rent of mechanical equipment.

New Jersey American
FERC Account Descriptions

905 – Miscellaneous Customer Accounts Expenses
This account shall include the cost of labor, materials used and expenses incurred not provided for in other accounts.
Labor
1. General clerical and stenographic work.
2. Miscellaneous labor.

Materials and expenses
3. Communication service.
4. Miscellaneous office supplies and expenses and stationery and printing other than those specifically provided for in accounts 902 and 903.

Comparison Group

Electric utilities included in the comparison group are shown in the table below. These are companies whose FERC Form 1 show amounts for accounts 903 and 905.

New Jersey	• Atlantic City Electric • Jersey Central Power	• Public Service Electric & Gas • Rockland Electric
New York	• Central Hudson Gas & Electric • Consolidated Edison • New York State Electric & Gas	• Niagara Mohawk Electric Power • Rochester Gas & Electric
Pennsylvania	• Duquesne Light • Metropolitan Edison • PECO Energy • Pennsylvania Electric	• Pennsylvania Power • PPL Electric Utilities • West Penn Power
Delaware	• Delmarva Power & Light	

Comparison Approach

The basis for this comparison is customer account services expenses per customer. NJAWC's cost pool was developed to include the same expenses included in electric utility's FERC accounts 903 and 905. As shown in the graphic below, NJAWC's resultant cost pool contains the expenses of Service Company locations and certain operating company expenses.

American Water
Service Company
Pensacola & Alton Call Centers
a. Customer contact
b. Customer order processing
c. Billing information processing
d. Collections
e. Correspondence processing
f. Customer payment processing
IT Service Centers
a. Support expenses for the customer information system (ORCOM)
Operating Company
a. Postage and forms

Electric Utilities
FERC Acct 903 - Records and Collection Expense and FERC Acct 905 - Misc Customer Accounts Expense
a. Customer contact
b. Customer order processing
c. Bill preparation and mailing
d. Collections
e. Payment processing
f. Correspondence processing

NJAWC Cost Per Customer

In order to make a valid comparison to neighboring electric utilities, certain adjustments had to be made to the applicable Service Company charges to NJAWC. It was necessary to adjust the National Call Center charges because electric utilities experience an average of 2.50 calls per customer compared to American Water's 1.28 calls per customer. Thus, National Call Center expenses had to be increased, for comparison purposes, to reflect its costs at a 2.50 calls per customer level. As shown below, NJAWC's adjusted annual expense per customer is $31.02—the number that can be compared to neighboring electric utilities' expenses.

New Jersey American 12-Months Ended June 30, 2007 Cost Per Customer

Cost Component		YE 6/30/07 Service Co Charges	Adjustment Fewer Calls For Water Cos. (A)	Adjusted	
Service Company					
Call Centers	Call processing, order processing, credit, bill collection	$ 7,972,957	$ 7,599,224	$ 15,572,181	
Regional Offices		$ 201,941		$ 201,941	
IT/Data Centers	Bill preparation/systems support	$ 1,465,922		$ 1,465,922	
Service Company	Customer payment processing			$ 592,816	Note B
Operating Company	Postage & forms			$ 1,513,501	
			Cost Pool Total	$ 19,346,361	
			Total Customers	623,754	
	12 Months Ended June 30, 2007 Cost Per New Jersey American Customer			**$ 31.02**	

Note A: Adjustment for American Water's fewer calls per customer

This adjustment is necessary because water utilities experience fewer calls per customer than do electric utilities

Test Period Call Center charges		$ 7,972,957
Electric utility industry's avg calls/customer	2.50	
American Water's avg calls/customer	1.28	
Percent different	95%	95%
Total Adjustment B		$ 7,599,224

Note B: Estimated customer payment processing expenses

Number of customers	623,754
Number of payments/customer/year	9
Total payments processed/year	5,613,786
Bank charge per item	$ 0.1056
Total estimated annual expense	$ 592,816

Electric Utility Group Cost Per Customer

Schedule 9 shows the actual 2006 customer accounts expense per customer calculation for the electric utility comparison group. All of the underlying data was taken from the utilities' FERC Form 1.

Summary Of Results

As shown in the table below, NJAWC's cost per customer is close to the average of the electric utility comparison group. It can therefore be concluded that the customer accounts-related expenses, including those of the Alton and Pensacola Call Centers, assigned by the Service Company to NJAWC are reasonable.

Customer Account Services Expenses Per Customer	
Public Service Electric & Gas	$12.22
West Penn Power Company	$12.82
Duquesne Light Company	$15.97
Metropolitan Edison Company	$18.17
Jersey Central Power & Light Company	$18.18
Pennsylvania Electric Company	$18.24
Pennsylvania Power Company	$18.88
PPL Electric Utilities Corporation	$21.13
Rochester Gas & Electric Corporation	$22.61
Comparison Group Average	**$ 28.90**
New Jersey American Water	**$ 31.02**
Niagra Mohawk Power Corporation	$31.14
Central Hudson Gas & Electric Company	$33.67
New York State Electric & Gas Corporation	$34.00
Consolidated Edison Company	$39.40
PECO Energy Company	$46.18
Atlantic City Electric Company	$47.65
Delmarva Power & Light Company	$49.05
Rockland Electric Company	$61.67

VI - Need For Service Company Services

Analysis Of Service Company Services

The final aspect of this study was an assessment of whether the services that are provided to NJAWC by the Service Company would be necessary if NJAWC were a stand-alone water utility. The first step in this evaluation was to determine specifically what the Service Company does for NJAWC. Based on discussions with Service Company personnel, the matrix in Schedule 11 was created showing which entity--NJAWC or a Service Company location--is responsible for each of the functions NJAWC requires to ultimately provide service to its customers. This matrix was reviewed to determine: (1) if there was redundancy or overlap in the services being provided by the Service Company and (2) if Service Company services are typical of those needed by a stand-alone water utility.

Upon review of Schedule 11, the following conclusions can be drawn:

- The services that the Service Company provides are necessary and would be required even if NJAWC were a stand-alone water utility.

- There is no redundancy or overlap in the services provided by the Service Company to NJAWC. For all of the services listed in Schedule 11, there was only one entity that was primarily responsible for the service.

Governance Practices Associated With Service Company Charges

There are several ways by which NJAWC exercises control over Service Company services and charges. The most important of these are described below.

- **Company President Oversight** – The Company President of the state utility is responsible for the overall performance of each operating company in the state. As part of the management team, through the Executive Vice President of the Eastern Division, each state utility President has a significant voice in major business decisions of American Water and has the ability to monitor Service Company performance quality and spending.
- **Vice President & Treasurer** – The Vice President and Treasurer position retains the functions previously performed on behalf of the Northeast Region. The Vice President and Treasurer is responsible for the financial reporting, performance and internal controls of the New Jersey and New York operating companies. The Vice President and Treasurer monitor the performance and reporting from the Service Company and pushes back whenever the quality and service are not appropriate.
- **Operating Company Board Oversight** – The board of directors includes members of American Water's EMT, members of the state management team and business and community leaders from outside the Company. This helps ensure that NJAWC's needs are a factor in the delivery of Service Company services.
- **Service Company Budget Review/Approval** – Every operating company president sits on the Service Company board and that board must formally approve the budget for Service Company charges for the next year. These budgeted charges are consolidated with the operating company's own spending into an overall budget which must be approved by the operating company's board of directors.
- **Major Project Review And Approval** – Major projects undertaken by the Service Company must first be reviewed by American Water's Executive Management Team, which includes the Executive Vice President. The Executive Vice President, with significant input from the state President and local management team, has the ability to impact all new initiatives and projects before they are authorized.
- **Service Company Bill Scrutiny** – Operating company personnel review the monthly Service Company bill for accuracy and reasonableness on a monthly basis. Any mistakes or overcharges are credited on a subsequent billing.
- **Service Company Budget Variance Reporting** – Each month, a summary variance analysis is prepared that explains differences between budgeted and actual Service Company spending. In addition, a more detailed monthly variance report, called the "Statement of Expenses and Billed Charges," is produced by Service Company location and shows budget versus actual spending for the month and year-to-date by cost category.
- **Operating Company Budget Variance Reporting** – The "Budget/Plan Analysis," produced monthly by each operating company, has a line item for Management Fees (i.e., Service Company charges). In this way, Service Company budget versus actual charges can be monitored for the month and year-to-date.
- **Capital Investment Management** (CIM) – CIM is one of American Water's primary business planning processes. It covers capital and asset planning and is employed throughout American Water and Thames Water. The current CIM process and procedures were established in 2003 as part of an initiative to implement leading water industry practices. CIM provides a full range of governance practices, including a formal protocol for assessing system needs, prioritizing expenditures, managing the capital

program, approving project spending, delivering projects and measuring outputs. CIM ensures that:

- Capital expenditure plans are aligned with the strategic intent of the business,
- The impact of capital expenditure and income plans are fully reflected in operating expense plans,
- The impacts of these plans are understood and affordable, and
- Effective controls are in place over budgets (through business plans) and individual capital projects (through appropriate authorization thresholds, management and reporting processes).

The CIM process was designed to optimize the effectiveness of asset investment. The process is managed at three levels for all American Water companies, including all NJAWC operating units.

BARYENBRUCH PT-15

NEW JERSEY-AMERICAN WATER COMPANY, INC.

1. Q. Please state your name and business address.

A. Patrick L. Baryenbruch, 302 East Park Drive, Raleigh, North Carolina 27605.

2. Q. Please describe your educational and professional background.

A. I received a Bachelors degree in accounting from the University of Wisconsin-Oshkosh in 1974 and a Masters in Business Administration degree from the University of Michigan in 1979.

I am a financial consultant and am a member of the American Institute of Certified Public Accountants and the North Carolina Association of Certified Public Accountants.

I began my career as a staff accountant with Arthur Andersen & Company where I performed financial audits of utilities, banks and finance companies. After three years I left to pursue an M.B.A. degree. Upon graduation from business school, I worked with the consulting firms of Theodore Barry & Associates and Scott, Madden & Associates.

During my consulting career, I have performed consulting assignments for approximately 50 utilities and 10 public service commissions. I have participated as project manager, lead or staff consultant for 24 commission-ordered management and prudence audits of public utilities. Of these, I have been responsible for evaluating the area of affiliate charges and allocation of corporate expenses in the Commission-ordered audits of Connecticut Light and Power, Connecticut Natural Gas, General Water Corporation (Pennsylvania Operations), Philadelphia Suburban Water Company (now Aqua America), Pacific Gas & Electric Company and Southern California Edison.

My firm has performed the commission-ordered audit of Southern California Edison's 2002, 2003, 2004 and 2005 transactions with its non-regulated affiliate companies.

3. Q. What are your duties and responsibilities in your current position?

A. I am the President of my own consulting practice, Baryenbruch & Company, which was established in 1985. In that capacity, I provide consulting services to utilities and their regulators.

4. Q. Please describe the reason for your testimony in this case.

A. I am presenting the results of my study which evaluated the services provided by American Water Works Service Company ("Service Company") during the 12 months ended June 30, 2007 to New Jersey American Water Company, Inc (NJAWC). This study was undertaken in conjunction with NJAWC's rate case and is accurate and reliable to the best of my knowledge and belief. The study is attached as the Appendix to Exhibit PT-15.

5. Q. What were the objectives of your study?

A. This study was undertaken to answer three questions. First, was NJAWC charged the lower of cost or market for managerial and professional services provided by the Service Company during the 12 months ended June 30, 2007? Second, were the 12 months ended June 30, 2007 costs of the Service Company's customer accounts services, including those of the National Call Centers, reasonable? Third, are the services NJAWC receives from Service Company necessary?

NEW JERSEY-AMERICAN WATER COMPANY, INC.

6. Q. What conclusions were you able to draw concerning question number 1, whether NJAWC was charged the lower of cost or market services provided by the Service Company?

A. I was able to draw the following conclusions:

(1) NJAWC was charged the lower of cost or market for managerial and professional services during the 12 months ended June 30, 2007.

(2) On average, the hourly rates for outside service providers are 66% higher than the Service Company's hourly rates.

(3) The managerial and professional services provided by the Service Company are vital and could not be procured externally by NJAWC without careful supervision on the part of NJAWC. If these services were contracted entirely to outside providers, NJAWC would have to add at least two positions to manage activities of outside firms. These positions would be necessary to ensure the quality and timeliness of services provided.

(4) If all the managerial and professional services now provided by the Service Company had been out-sourced during the 12 months ended June 30, 2007, NJAWC and its ratepayers would have incurred an additional $17.9 million in expenses. This amount includes the higher cost of outside providers and the cost of two NJAWC positions needed to direct the outsourced work.

(5) This study's hourly rate comparison actually understates the cost advantage that accrues to NJAWC from its use of the Service Company. Outside service providers generally bill for every hour worked. Service Company personnel, on the other hand, charge a maximum 8 per day even when they work more. If the overtime hours of Service Company personnel were factored into the hourly rate calculation, the Service Company would have had an even greater annual dollar advantage than the $17.9 million cited above. For instance, if Service Company overtime is conservatively estimated at 5% (only 2 hours per week), then that work would have cost over $800,000 in additional charges from outside providers.

(6) It would be difficult for NJAWC to find local service providers with the same specialized water industry expertise as that possessed by the Service Company staff. Service Company personnel spend substantially all their time serving operating water companies. This specialization brings with it a unique knowledge of water utility operations and regulation that is most likely unavailable from local service providers.

(7) Service Company fees do not include any profit markup. Only its actual cost of service is being recovered from NJAWC ratepayers.

7. **Q. What is your conclusion regarding the reasonableness of the costs of the National Call Center that provides service to NJAWC?**

A. I was able to determine that the cost of the Service Company's customer accounts services, including those provided by the National Call Center, is close to the

average of the comparison group of neighboring electric utilities. As will be explained further herein, this group of companies provides a reasonable proxy group for comparison to a regulated utility of the size and scope of NJAWC. During the 12-months ended June 30, 2007, the customer accounts cost for NJAWC customers was $31.02 compared to the 2006 average of $27.70 for neighboring electric utilities. The highest comparison group per customer cost was $61.67 and the lowest $12.22.

8. Q. Does it concern you that NJAWC's cost per customer for customer account services is slightly higher than the electric utility comparison group?

A. No. I am satisfied that NJAWC's comparative position is completely acceptable for two reasons. First, I have included every appropriate cost element in the calculation of NJAWC's customer account services cost pool. Second, some of the comparison group electric utilities may follow accounting policies that cause their cost pools to be higher or lower than that of NJAWC. Even though electric utilities follow the FERC's Uniform System of Accounts, there is still some discretion as to how transactions are recorded. For instance, one utility may record the IT support costs for their customer information system to FERC account 903 Customer Records and Collections Expenses while another utility records that type of expense to a different FERC account. This probably accounts for some of the wide range in per customer costs among the electric utilities.

9. Q. What conclusions were you able to draw concerning the necessity of the services NJAWC receives from the Service Company?

A. I was able to draw the following conclusions:

(1) The services that the Service Company provides are necessary and would be required even if NJAWC were a stand-alone water utility.

(2) There is no redundancy or overlap in the services provided by the Service Company to NJAWC. For all of the services listed in Schedule 11 of my study, there was only one entity that was primarily responsible for the service.

10. Q. Does this complete your testimony?

A. Yes.

I – Introduction

Purpose of This Study

This study was undertaken to answer four questions concerning the services provided by American Water Works Service Company, Inc. (Service Company) to Kentucky American Water Company (KAWC):

1. Were the Service Company's charges to KAWC during the 12 months ended September 30, 2009 reasonable?

2. Was KAWC charged the lower of cost or market for managerial and professional services provided by the Service Company during the 12 months ended September 30, 2009?

3. Were the 12 months ended September 30, 2009 costs of the Service Company's customer accounts services, including those of the National Call Centers, comparable to those of other utilities?

4. Are the services KAWC receives from Service Company necessary?

Study Results

Concerning question 1, the following conclusion was reached:

- The Service Company's 12 months ended September 30, 2009 cost per KAWC customer was very reasonable compared to cost per customer for electric and combination electric/gas service companies. During the 12 months ended September 30, 2009, KAWC was charged $55 per customer for administrative and general (A&G)-related services provided by the Service Company. This compares to an average of $109 per customer for service companies reporting to the Federal Energy Regulatory Commission (FERC). Only 3 of the 24 utility service companies that filed a FERC Form 60 for 2008 had a lower per customer A&G cost than KAWC's charges from the Service Company.

Concerning question 2, the following conclusions were drawn from this study:

- KAWC was charged the lower of cost or market for managerial and professional services during the 12 months ended September 30, 2009.

- On average, the hourly rates for outside service providers are 21% higher than the Service Company's hourly rates.

- The managerial and professional services provided by the Service Company are vital and could not be procured externally by KAWC without careful supervision on the part of KAWC. If these services were contracted entirely to outside providers, KAWC would have to add at least one position to manage activities of outside firms. This position would be necessary to ensure the quality and timeliness of services provided.

- If all the managerial and professional services now provided by the Service Company had been outsourced during the 12 months ended September 30, 2009, KAWC and its ratepayers would have incurred more than $1,500,000 in additional expenses. This amount includes the higher cost of outside providers and the cost of one KAWC positions needed to direct the outsourced work.

- This study's hourly rate comparison actually understates the cost advantages that accrue to KAWC from its use of the Service Company. Outside service providers generally bill

for every hour worked. Service Company exempt personnel, on the other hand, charge a maximum of 8 hours per day even when they work more hours. If the overtime hours of Service Company personnel were factored into the hourly rate calculation, the Service Company would have had an even greater annual dollar advantage than the $1,500,000 cited above. For instance, if Service Company overtime is conservatively estimated at 5% (2 hours per week), then that work would have cost an estimated $70,000 in additional charges from outside providers.

- It would be difficult for KAWC to find local service providers with the same specialized water industry expertise as that possessed by the Service Company staff. Service Company personnel spend substantially all their time serving operating water companies. This specialization brings with it a unique knowledge of water utility operations and regulation that is most likely unavailable from local service providers.

- Service Company fees do not include any profit markup. Only its actual cost of service is being recovered from KAWC ratepayers.

Concerning question 3, the following conclusion was reached:

- The cost of the Service Company's customer accounts services, including those provided by the National Call Center, is within a reasonable range of the average of the neighboring electric utility comparison group. As will be explained further herein, this group of companies provides a reasonable proxy group for comparison to a regulated utility of the size and scope of the Service Company and KAWC. During the 12-months ended September 30, 2009, the customer accounts cost for KAWC customers was $28.35 compared to the 2008 average of $27.07 for neighboring electric utilities. The highest comparison group per customer cost was $39.29 and the lowest $15.67.

Concerning question 4, the following conclusions were drawn:

- The services that the Service Company provides are necessary and would be required even if KAWC were a stand-alone water utility.

- Furthermore, there is no redundancy or overlap in the services provided by the Service Company to KAWC. For all of the services listed in Exhibit 11, there was only one entity primarily responsible for the service.

II – Background

Overview of American Water Works Service Company

American Water's Service Company exists to provide certain shared services to American Water subsidiaries. It follows a service company model used by many utility holding companies that own multiple regulated utilities. By consolidating executive and professional services into a single service company, utility holding companies are able to realize the following benefits for ratepayers:

- Purchasing Economies – Common expenses (e.g., insurance, chemicals, piping) can be procured on a much larger scale thereby providing greater bargaining power for the combined entity compared to individual utility operating companies. A service company facilitates corporate-wide purchasing programs through its procurement and contract administration functions.

- Operating Economies of Scale – A service company is able to deliver services more efficiently because workloads can be balanced across more persons and facilities. For instance, American Water's Service Company is able to maintain one principal data center for the entire corporation. This is much more cost-efficient than each operating utility funding their own data center with its large fixed hardware, software and staffing costs.

- Continuity of Service – Centralizing service company personnel who perform similar services facilitates job cross-training and sharing of knowledge and expertise. This makes it easier to deal with staff turnover and absences and to sustain high levels of service to operating utilities. An individual operating utility might experience considerable disruption if a key professional left and it was necessary to hire outside to fill the vacancy.

- Maintenance of Corporate-Wide Standards – Personnel in American Water's Service Company establish standards for many functions (e.g., engineering designs, operating procedures and maintenance practices). It is easier to ensure these standards are followed by every operating utility because their implementation is overseen by the Service Company.

- Improved Governance – American Water's Service Company provides another dimension of management and financial oversight that supplements local operating utility management. The Service Company facilitates standard planning and reporting that help ensure operating utilities meet the requirements of their customers in a cost effective manner.

- Retention of Personnel – A service company organization provides operating utility personnel with another career path beyond what may be available on a local level. These opportunities tend to improve employee retention.

American Water follows the model for other utility service companies in another important regard. Its services are provided to affiliate operating utilities, like KAWC, at cost. American Water's Service Company is not a profit-making entity. It assigns only its actual expenses to the American Water subsidiaries it services.

The Service Company provides services to American Water operating companies from the following locations:

- Corporate Office – Includes American Water's executive management and personnel from the various corporate support services. American Water's corporate office is located in Voorhees, New Jersey.

- National Call Centers – Perform customer service functions, including: customer call processing, service order processing, correspondence processing, credit and collections. American Water maintains two call centers. One in Alton, Illinois that went into operation in 2001 and a second in Pensacola, Florida that went into operation in 2005. Prior to the establishment of these national call centers, customer service functions were performed by employees of KAWC, which incurred the expense on its books.

- National Shared Services Center – The Shared Services Center, located in Cherry Hill, New Jersey, provides various financial, accounting and treasury functions that had been performed by individual operating companies. This arrangement has improved and streamlined the Company's financial processes and allowed operating companies to focus on providing utility service.

- Regional Offices – Regional offices provide operating companies with certain support services that can be performed more effectively on a regional basis because individual operating company/center workloads are not sufficient to warrant a full-time staff for these activities. At the same time, these services require closer proximity to operating companies served so they are not provided by the National Shared Services Center. Examples of regional office services include rates and revenues, engineering, operations and field resource coordination.

- Belleville Lab – The national trace substance laboratory is located in Belleville, Illinois and performs testing for all American Water operating companies.

- Information Technology Service Centers – American Water's principal data center, located in Hershey, Pennsylvania, supports the IT infrastructure required to run corporate and operating company business applications and the communications systems. IT personnel rotate, as needed, throughout the regional offices and operating companies.

Service Company Expense Categories

The Service Company renders a monthly bill to operating companies. Charges are broken down into the following expense categories:

- Labor – base pay (salaries) of managerial and professional employees
- Labor-Related Overheads - employee benefit costs (payroll taxes, medical coverage, pensions, disability insurance) and other general expenses
- Support - wages and salaries of office support personnel, including secretaries, clerical personnel, telephone operators and mail clerks
- Office Expenses - office rent, equipment leases, telephone, electric, office supplies, property taxes, office maintenance
- Vouchers/Journal Entries – (1) travel expenses incurred by Service Company personnel, (2) other items submitted for reimbursement by employees, including professional association dues, (3) outside service contracts for such things as actuarial

services, and (4) various other expenditures, including data center expenses for software licenses and hardware maintenance.

Service Company expenses are either assigned directly or allocated to operating companies, as shown in the table below.

Expense Category	Direct Charged	Allocated	Comments
Labor	X	X	Professional personnel working for one or several operating companies
Labor-Related Overheads	X	X	These are primarily employee benefit costs that relate directly to labor
Support		X	Administrative personnel support the professional staff, thus support costs are allocated on the basis of professional labor
Office Expense		X	Are all allocated on the basis of professional labor
Vouchers/Journals	X	X	May be either directly in support of one operating company (e.g., an engineer traveling from the Corporate Office to the operating company) or allocated to several operating companies

A direct charge occurs when Service Company work or expenses are incurred in support of only one operating company. Direct charge examples include work in support of an operating company's rate case, engineering design work on an operating company's project and the preparation of an operating company's financial statements.

Service Company expenses are allocated when more than one operating company benefits from the underlying work. Examples include assessments of new Federal water quality regulations, development of the company-wide materials procurement contracts and creation of company-wide engineering design standards.

Charging and Assignment Of Service Company Time and Expenses

Service Company transactions are assigned with the following information so there is a proper accounting and eventual charging to an operating company:

- Operating company
- Formula number
- Work order (where applicable)
- Authorization number (where applicable)

Charges can originate from the following systems:

- Payroll System
- RVI System (outside vendor payments)
- PCard System (credit card payments)
- Internal Purchase Order System
- Journal entries

II – Background

The Service Company's time reporting process enables labor and support charges to be assigned to the proper operating company. Labor charges are based on the time reported by managerial and professional Service Company employees. Every week, Service Company professional employees complete an electronic time sheet that shows:

- Formula number (this is linked to operating company within American Water's financial system)
- Employee hours worked
- Account number for non-labor charges

At month-end, time report information is processed and direct and allocated professional labor hours tabulated for each operating company. Dollar charges are then calculated using the hourly rate of each Service Company professional employee based upon their base salary (i.e., an employee's hours times his/her hourly rate of pay).

Support (administrative) personnel charge their time to the activity "General Admin." As described in the table on page 4, their labor charges are allocated to operating companies based upon how their office's professional personnel labor charges are assigned. For instance, if 20% of American Water's Eastern Region's professional labor is assigned to KAWC during a month, then 20% of that office's monthly administrative labor charges also are assigned to the operating company.

The overhead cost category is next assigned based on professional and administrative labor costs. Thus, if 20% of the Eastern Region's accumulated professional and support labor is charged to KAWC during the month, then 20% of that month's overhead expenses will be assigned to KAWC.

Each Service Company location's office expenses are allocated to operating companies based on how professional labor charges for that office have been assigned. For instance, if 2% of professional labor from one Service Company office is assigned to KAWC, then 2% of that office's office expenses would be assigned to KAWC. Thus, office expenses are allocated in the very same way as administrative labor.

Vouchers/journal entries may be charged directly or allocated, depending on who benefits from the expenditure. For instance, the cost of a continuing professional education course taken by a professional in a regional office is allocated to the operating companies served by that office. Travel expenses by that same professional to a rate case proceeding are charged directly to the operating company whose case is being heard.

III – Service Company Cost Comparison Approach

During the 12 months ended September 30, 2009, the Service Company billed KAWC $7,892,467 in O&M-related charges and $891,627 in capital-related charges. Included in the O&M amount are certain non-recurring expenses which are excluded from this market study. As calculated in the table below, net testable Service Company charges of $8,798,773 were subjected to a market cost comparison.

	12 Months Ended September 30, 2009
Mgmt Fee Expense (O&M)	$ 7,892,467
Add(Subtract): Non-Recurring Items	
Sarbanes-Oxley	$ 14,679
Net O&M Expenses	$ 7,907,146
Mgmt Fees - Capital	$ 891,627
Total Testable AWWSC Charges	**$ 8,798,773**

For purposes of comparing these charges to certain outside benchmarks, Service Company services were placed into three categories:

- Managerial and Professional Services – Includes such services as management, accounting, legal, human resources, information technology and engineering.
- Customer Accounts Services – Includes customer-related services, such as call center, credit, billing, collection and payment processing.
- Field Resource Coordination Services – Includes the dispatching and oversight of work to operating company field crews.

Total test period Service Company charges break down between management/professional services, customer account services and field resource coordination as follows:

	12 Months Ended Sep 30, 2009	
	Amount	Hours
Management and Professional Services	$ 6,816,711	52,690
Customer Account Services	$ 1,728,850	47,924
Field Resource Coordination	$ 253,212	5,049
Total Service Company Charges	**$ 8,798,773**	**105,663**

This study's first question—whether Service Company 12 months ended September 30, 2009 charges were reasonable—was determined by comparing KAWC's A&G-related Service Company charges per customer to the same charges for utility companies that must file the FERC Form 60 – Annual Report of Service Companies.

The second question—whether Service Company charges during the 12 months ended September 3, 2009 were at the lower of cost or market—was evaluated by comparing the cost per hour for managerial and professional services provided by Service Company personnel to hourly billing rates that would be charged by outside providers of equivalent services. Service Company costs per hour were based on actual charges to KAWC during the 12 months ended September 30, 2009. Outside providers' billing rates came from surveys or other information from professionals that could perform the services now provided by the Service Company.

III – Service Company Cost Comparison Approach

The third question—whether Service Company's 12 months ended September 30, 2009 customer account services charges, including those of the National Call Center costs, were comparable to other utilities—was addressed by comparing KAWC's customer accounts services expenses to those of neighboring electric utilities. This approach was selected because the costs of outside providers of call center services are not publicly available. However, electric utility customer account services expenses can be obtained from the FERC Form 1. The availability and transparency of FERC data adds to the validity of its use in this comparison.

The fourth question—the necessity of Service Company services—was investigated by defining the services provided to KAWC and determining if these services would be required if KAWC were a stand-alone utility.

KAWC's Service Company Cost per Customer

During the 12 months ended September 30, 2009, KAWC was charged $55 per customer by the Service Company for A&G/O&M-related services. The calculation of this amount, shown in the table below, starts with total net testable Service Company charges and adjusts for capital and non-A&G functions (engineering, operations and water quality) charges. These adjustments are necessary to develop a per customer cost that is comparable to cost of utility service companies.

	12 Months ended Sep 30, 2009 AWWSC Charges
Testable Service Company charges	$ 8,798,773
Less: Capital charges	$ (891,627)
Less: Non-A&G function O&M charges	
Engineering	$ (11,031)
Operations	$ (1,073,526)
Water Quality	$ (260,216)
Net A&G/O&M-related charges	$ 6,562,374
KAWC customers	118,279
KAWC Cost Per Customer	**$ 55**

Comparison Group Cost Per Customer

Every centralized service company in a holding company system must file a Form 60 in accordance with the Public Utility Holding Company Act of 2005, Section 1270, Section 390 of the Federal Power Act and 18 C.F.R. paragraph 366.23. This report is designed to collect financial information from service companies that are subject to regulation by the FERC.

For 2008, a Form 60 was filed by 24 utility service companies, all of which serve utilities that provide regulated electric and, in some cases, gas service to retail customers. In order to make a valid comparison of this group's costs to those of American Water Works Service Company, it was necessary to isolate expenses that that they have in common. These include A&G/O&M-related charges associated with the following FERC accounts:

901 – Supervision	921 – Office supplies and expenses
903 – Customer records and collection expenses	923 – Outside services employed
905 – Miscellaneous customer accounts expenses	926 – Employee pensions and benefits
907 – Supervision	928 – Regulatory commission expenses
910 – Misc customer service and info expenses	930.2 – Miscellaneous general expenses
911 – Supervision	931 – Rents
920 - Administrative and general salaries	935 – Maintenance of structures and equipment

O&M expenses charged to utility affiliates for the comparison group service companies were obtained from Schedule XVI – Analysis of Charges for Service Associate and Non-Associate Companies (p. 303 to 306) of each entity's FERC Form 60. This schedule shows charges by FERC Account.

Comparison group service company 2008 expenses were also adjusted to remove charges to non-regulated affiliates from the cost pool used to calculate the cost per regulated service customer. This determination was made using information from the FERC Form 60 schedule: Account 457 – Analysis of Billing – Associate Companies.

IV – Question 1 – Reasonableness of Service Company Charges

A&G expenses per regulated utility customer for the 24 utility companies that file Form 60 for 2008 are calculated below.

Utility Company	2008 Regulated Retail Service Company A&G Expenses	Regulated Retail Customers	Cost per Customer
AEP	$396,340,118	5,213,000	$ 76
Allegheny	$263,588,707	1,577,873	$ 167
Alliant	$205,754,832	3,000,000	$ 69
Ameren	$291,684,710	3,400,000	$ 86
Black Hills	$20,763,828	759,400	$ 27
Dominion	$357,718,046	3,588,500	$ 100
Duke	$923,936,645	4,500,000	$ 205
Energy East	$113,714,789	2,989,800	$ 38
Entergy	$432,575,683	2,700,000	$ 160
E-On	$136,276,177	1,263,000	$ 108
Exelon	$558,687,014	5,885,000	$ 95
FirstEnergy	$354,028,109	4,499,000	$ 79
Great Plains	$15,000,708	820,000	$ 18
Integrys	$216,364,166	2,157,000	$ 100
Nat Grid	$1,240,706,398	6,700,000	$ 185
NiSource	$237,380,009	3,750,000	$ 63
Northeast	$302,138,730	1,654,000	$ 183
PHI	$302,463,412	1,910,000	$ 158
Progress	$242,677,256	3,100,000	$ 78
PNM	$102,688,385	859,000	$ 120
SCANA	$191,207,825	1,424,300	$ 134
Southern Co	$546,498,605	4,402,000	$ 124
Unitil	$20,341,422	169,600	$ 120
Xcel	$367,626,617	5,345,000	$ 69
Group Total	**$7,840,162,191**	**71,666,473**	**$ 109**

Exhibit 1 shows KAWC's 12 months ended September 30, 2009 Service Company cost per customer of $58 to be considerably lower than the average of $109 per customer for the comparison group service companies. Only 3 of 24 comparison group service companies had a lower cost per customer than KAWC. Based on this result, it is possible to conclude that the Service Company's 12 months ended September 30, 2009 charges to KAWC were reasonable.

V – Question 2 – Provision of Services at the Lower of Cost or Market

Methodology

The lower-of-cost-or-market comparison is accomplished by comparing the cost per hour for Service Company managerial and professional services to those of outside service providers to whom these duties could be assigned. Based on the nature of the Service Company services it was determined that the following outside providers could perform the categories of services indicated below:

- Management Consultants – executive and administrative management, risk management services, human resources and communications services
- Attorneys – legal services
- Certified Public Accountants – accounting, financial, information technology and rates and revenues services
- Professional Engineers – engineering, operations and water quality services.

The services provided by the Belleville lab are assumed to be transferable to professional engineers for purposes of this cost comparison. This was done for two reasons. First, there is no readily available survey of hourly billing rates for testing services such as those performed by Belleville. Second, Belleville personnel have similar, scientific educational backgrounds as Service Company engineering personnel. Thus, it is valid to compare the hourly rates of Belleville services to those of outside engineering firms.

Service Company's hourly rate were calculated for each of the four outside service provider categories, based on the dollars and hours charged to KAWC during the 12 months ended September 30, 2009. Hourly billing rates for outside service providers were developed using third party surveys or directly from information furnished by outside providers themselves.

It should be noted that by using the Service Company's hours charged KAWC during the 12 months ended September 30, 2009, its hourly rates are actually overstated because Service Company personnel charge a maximum 8 per day even when they work more. Outside service providers generally bill for every hour worked. If the overtime hours of Service Company personnel had been factored into the hourly rate calculation, Service Company hourly rates would have been lower.

The last step in the market cost comparison was to compare the Service Company's average cost per hour to the average cost per hour for outside providers.

Service Company Hourly Rates

Exhibit 2 (page 14) details the assignment of 12 months ended September 30, 2009 management and professional Service Company charges by outsider provider category. Exhibit 3 (page 15) shows the same assignment for Service Company management and professional hours charged to KAWC during the 12 months ended September 30, 2009.

Certain adjustments to these dollar amounts were necessary to calculate Service Company hourly rates that are directly comparable to those of outside providers. The three categories of adjustments are:

- Contract Services – 12 months ended September 30, 2009 Service Company charges to KAWC include expenses associated with the use of outside professional firms to

perform certain corporate-wide services (e.g., legal, financial audit, actuarial services). These professional fees are excluded from the Service Company hourly rate calculation because the related services have effectively been out-sourced already.

- Travel Expenses – In general, client-related travel expenses are not recovered by outside service providers through their hourly billing rate. Rather, actual out-of-pocket travel expenses are billed to clients in addition to fees for professional services. Thus, it is appropriate to remove these Service Company charges from the hourly rate calculation.

- Information Technology Infrastructure Expenses – Included in the 12 months ended September 30, 2009 Service Company charges to KAWC are leases, maintenance fees and depreciation related to American Water's enterprise mainframe, server and network infrastructure and corporate business applications. An outside provider that would take over operation of this infrastructure would recover these expenses over and above the labor necessary to operate the data center.

Exhibit 4 (page 16) shows how contract services, travel expenses and computer hardware/software-related Service Company charges are assigned among the four outside provider categories.

Based on the assignment of expenses and hours shown in Exhibits 2 and 3 and the excludable items shown in Exhibit 4, the Service Company's equivalent costs per hour for the 12 months ended September 30, 2009 are calculated below.

	Attorney	Management Consultant	Certified Public Accountant	Professional Engineer	Total
Total management, professional & technical services charges	$ 334,249	$ 1,710,026	$ 3,561,408	$ 1,211,028	$ 6,816,711
Less:					
Contract services	$ 20,484	$ 95,374	$ 467,125	$ 14,259	$ 597,241
Travel expenses	$ 2,520	$ 43,997	$ 45,186	$ 73,938	$ 165,640
IT infrastructure expenses	$ 5,573	$ 243,378	$ 217,932	$ 47,913	$ 514,795
Net Service Charges (A)	$ 305,672	$ 1,327,278	$ 2,831,166	$ 1,074,919	$ 5,539,035
Total Hours (B)	4,166	7,038	29,356	12,130	52,690
Average Hourly Rate (A / B)	**$ 73**	**$ 189**	**$ 96**	**$ 89**

Outside Service Provider Hourly Rates

The next step in the cost comparison was to obtain the average billing rates for each outside service provider. The source of this information and the determination of the average rates are described in the paragraphs that follow.

It should be noted that professionals working for three of the five outside provider categories may be licensed to practice by state regulatory bodies. However, not every professional working for these firms is licensed. For instance, among Kentucky certified public accounting firms, only more experienced staff are predominantly CPAs (see table below). Some Service Company employees also have professional licenses. Thus, it is valid to compare the Service Company's hourly rates to those of the outside professional service providers included in this study.

	Firm Size		
Position	Small	Medium	Large
Partners/Owners	97%	98%	99%
Directors (11+ years experience)	na	100%	86%
Managers (6-10 years experience)	na	72%	88%
Sr Associates (4-5 years experience)	na	25%	69%
Associates (1-3 years experience)	na	0%	24%
New Professionals	na	8%	1%

Source: AICPA's National PCPS/TSCPA Management of an Accounting Practice Survey (2008)

Attorneys

The Kentucky State Bar does not survey its members as to their hourly billing rates. In addition, publicly available billing rate information could not be found for Kentucky attorneys. Therefore, an estimate of Kentucky attorney rates was developed from two surveys conducted by Lawyers Weekly in the states of Michigan and Massachusetts. As presented in Exhibit 5, the average rate for each firm was adjusted for the cost of living differential between its location and Lexington, Kentucky. The Lawyers Weekly surveys included rates in effect at December 31, 2007. Thus, the 2007 average rate was escalated to March 31, 2009—the midpoint of the test year ended September 30, 2009.

Management Consultants

The cost per hour for management consultants was developed from a 2009 survey performed by the Association of Management Consulting Firms—an industry trade organization. The survey includes rates that were in effect during 2008 for firms throughout the United States. Consultants typically do not limit their practice to any one region and must travel to a client's location. Thus, the U.S. national average is appropriate for comparison.

The first step in the calculation, presented in Exhibit 6, was to determine an average rate by consultant position level. From these rates, a single weighted average hourly rate was calculated based upon the percent of time that is typically applied to a consulting assignment by each consultant position level. The 2008 average rate was escalated to March 31, 2009—the midpoint of the 12 months ended September 30, 2009.

Certified Public Accountants

The average hourly rate for Kentucky CPAs was developed from a 2008 survey performed by the American Institute of Certified Public Accountants (AICPA). The Kentucky version of this survey was used to develop hourly rates for member firms in Kentucky.

As shown in Exhibit 7, a weighted average hourly rate was developed based on a set of accountant positions and a percent of time that is typically applied to an accounting assignment. This survey includes rate information in effect during 2007. Thus, the data had to be escalated to March 31, 2009—the test year's midpoint.

Professional Engineers

The Company provided hourly rate information for outside engineering firms that could have been used by KAWC in 2009. As presented in Exhibit 8, an average rate was developed for each engineering position level. Then, using a typical percentage mix of project time by engineering position, a weighted average cost per hour was calculated.

V – Question 2 – Provision of Services at the Lower of Cost or Market

Service Company versus Outside Provider Cost Comparison

As shown in the table below, Service Company costs per hour are considerably lower than those of outside providers.

	12 Months Ended September 30, 2009		
Service Provider	Service Company	Outside Provider	Difference--Service Co. Greater(Less) Than Outside
Attorney	$ 73	$ 253	$ (180)
Management Consultant	$ 189	$ 227	$ (38)
Certified Public Accountant	$ 96	$ 103	$ (7)
Professional Engineer	$ 89	$ 105	$ (16)

Based on these cost per hour differentials and the number of managerial and professional services hours billed to KAWC during the 12-months ended September 30, 2009, outside service providers would have cost $1,409,800 more than the Service Company (see table below). Thus, on average, outside providers' hourly rates are 21% higher than those of the Service Company ($1,409,800 / $6,816,711).

	12 Months Ended September 30, 2009		
Service Provider	Hourly Rate Difference--Service Co. Greater(Less) Than Outside	Service Company Hours Charged	Dollar Difference
Attorney	$ (180)	4,166	$ (748,260)
Management Consultant	$ (38)	7,038	$ (270,282)
Certified Public Accountant	$ (7)	29,356	$ (192,538)
Professional Engineer	$ (16)	12,130	$ (198,720)
Service Company Less Than Outside Providers			$ (1,409,800)

It should be noted that the cost differential associated with using outside providers is even greater because Service Company personnel do not charge for more than 8 hours per day even when they work more. Outside providers generally charge clients for all hours worked. If, for instance, Service Company personnel worked 5% overtime (2 hours) per week on KAWC's behalf, that would have amounted to over 2,600 additional hours of work during the 12 months ended September 30, 2009. Based on the hourly rate differentials above, this overtime would have added another $70,000 to the cost of using outside providers.

If KAWC were to use outside service providers rather than the Service Company for managerial and professional services, it would incur other additional expenses besides those associated with higher hourly rates. Managing outside firms who would perform over 52,000 hours of work (more than 35 full-time equivalents at 1,500 "billable" hours per FTE per year) would add a significant workload to the existing KAWC management team. Thus, it would be necessary for KAWC to add at least one position to supervise the outside firms and ensure they delivered quality and timely services. The individual that would fill this position would need a good understanding of each profession being managed. He/she must also have management experience and the authority necessary to give them credibility with the outside firms. As calculated in the table below, this position would add almost $150,000 per year to KAWC's personnel expenses.

V – Question 2 – Provision of Services at the Lower of Cost or Market

Cost of Adding 1 Professional Position To KAWC's Staff

	Total
New Position's Salary	$ 100,000
Benefits (at 49.4%)	$ 49,400
Office Expenses (15.2%)	$ 15,200
Cost of One Position	$ 149,400

Thus, the total effect on the ratepayers of KAWC of contracting all services now provided by Service Company would be an increase in their costs of $1,559,200 ($1,409,800 + $149,400). Based on the results of this comparison, it is possible to conclude that the Service Company charged KAWC at the lower of cost or market for services provided during the 12 months ended September 30, 2009.

VI - Question 3 - Reasonableness of Customer Accounts Services Costs

Background

Customer Accounts Services covers the following utility functions:

- Customer Call Center – customer calls/contact, credit, order taking/disposition, bill collection efforts, outage calls
- Call Center IT – maintenance of phone banks, voice recognition units, call center software applications, telecommunications
- Customer billing – bill printing, stuffing, and mailing
- Remittance processing – processing customer payments received in the mail
- Bill payment centers – locations where customers can pay their bills in person

It is difficult to compare the cost of the Service Company's customer accounts services-related charges to KAWC with outside providers of the same services because survey data is proprietary and expensive to obtain. For this reason, KAWC's charges from the Service Company for customer accounts services are compared to those of neighboring electric utilities because the data necessary to make such comparison is available to the public.

Neighboring electric utility cost information comes from the FERC Form 1 that each utility must file. FERC's chart of accounts is defined in Chapter 18, Part 101 of the Code of Federal Regulations. FERC accounts that contain customer accounts services-related expenses are Account 903 Customer Accounts Expense – Records and Collection Expense and Account 905 Customer Accounts Expense – Miscellaneous Customer Accounts Expense. Exhibit 9 provides FERC's definition of the type of expenses that should be recorded in these accounts.

In addition to the charges in these FERC accounts, labor-related overheads charged to the following FERC accounts must be added to the labor components of Accounts 903 and 905:

- Account 926 Employee Pension and Benefits
- Account 408 Taxes Other Than Income (employer's portion of FICA)

Comparison Group

Electric utilities included in the comparison group are shown in the table below. These are companies whose FERC Form 1 show amounts for accounts 903 and 905.

Kentucky	• Duke Energy – Kentucky • Kentucky Power	• Kentucky Utilities • Louisville Gas & Electric
West Virginia	• Wheeling Power	
Virginia	• Appalachian Power	• Virginia Electric Power
Ohio	• Cleveland Electric • Columbus Southern Power • Dayton Power & Light • Duke Energy – Ohio	• Ohio Edison • Ohio Power • Toledo Edison
Missouri	• Aquila • Kansas City Power & Light	• Union Electric
Indiana	• Duke Energy – Indiana • Indiana Michigan Power	• Indianapolis Power & Light • NIPSCo
Illinois	• Central Illinois Light • Central Illinois Public Service • Commonwealth Edison	• Illinois Power • Interstate Power & Light • MidAmerica Energy

VI - Question 3 - Reasonableness of Customer Accounts Services Costs

Tennessee	• Kingsport Power

Kentucky-American Water Company
FERC Account Descriptions

903 – Customer Records and Collection Expenses

This account shall include the cost of labor, materials used and expenses incurred in work on customer applications, contracts, orders, credit investigations, billing and accounting, collections and complaints.

Labor

1. Receiving, preparing, recording and handling routine orders for service, disconnections, transfers or meter tests initiated by the customer, excluding the cost of carrying out such orders, which is chargeable to the account appropriate for the work called for by such orders.
2. Investigations of customers' credit and keeping of records pertaining thereto, including records of uncollectible accounts written off.
3. Receiving, refunding or applying customer deposits and maintaining customer deposit, line extension, and other miscellaneous records.
4. Checking consumption shown by meter readers' reports where incidental to preparation of billing data.
5. Preparing address plates and addressing bills and delinquent notices.
6. Preparing billing data.
7. Operating billing and bookkeeping machines.
8. Verifying billing records with contracts or rate schedules.
9. Preparing bills for delivery, and mailing or delivering bills.
10. Collecting revenues, including collection from prepayment meters unless incidental to meter reading operations.
11. Balancing collections, preparing collections for deposit, and preparing cash reports.
12. Posting collections and other credits or charges to customer accounts and extending unpaid balances.
13. Balancing customer accounts and controls.
14. Preparing, mailing, or delivering delinquent notices and preparing reports of delinquent accounts.
15. Final meter reading of delinquent accounts when done by collectors incidental to regular activities.
16. Disconnecting and reconnecting services because of nonpayment of bills.
17. Receiving, recording, and handling of inquiries, complaints, and requests for investigations from customers, including preparation of necessary orders, but excluding the cost of carrying out such orders, which is chargeable to the account appropriate for the work called for by such orders.
18. Statistical and tabulating work on customer accounts and revenues, but not including special analyses for sales department, rate department, or other general purposes, unless incidental to regular customer accounting routines.
19. Preparing and periodically rewriting meter reading sheets.
20. Determining consumption and computing estimated or average consumption when performed by employees other than those engaged in reading meters.

Materials and expenses

21. Address plates and supplies.
22. Cash overages and shortages.
23. Commissions or fees to others for collecting.
24. Payments to credit organizations for investigations and reports.
25. Postage.
26. Transportation expenses, including transportation of customer bills and meter books under centralized billing procedure.
27. Transportation, meals, and incidental expenses.
28. Bank charges, exchange, and other fees for cashing and depositing customers' checks.
29. Forms for recording orders for services, removals, etc.
30. Rent of mechanical equipment.

Kentucky-American Water Company
FERC Account Descriptions

905 – Miscellaneous Customer Accounts Expenses
This account shall include the cost of labor, materials used and expenses incurred not provided for in other accounts.
Labor
1. General clerical and stenographic work.
2. Miscellaneous labor.

Materials and expenses
3. Communication service.
4. Miscellaneous office supplies and expenses and stationery and printing other than those specifically provided for in accounts 902 and 903.

VI - Question 3 - Reasonableness of Customer Accounts Services Costs

KAWC Cost per Customer

As calculated below, KAWC's 12 months ended September 30, 2009 customer account services expense per customer was $28.35. The cost pool used to calculate this average includes charges for Service Company services (e.g., call center, billing, payment processing) and postage and forms expenses, which are incurred directly by KAWC. It was necessary to adjust the National Call Center charges because electric utilities experience an average of 2.50 calls per customer compared to American Water's 1.32 calls per customer. Thus, National Call Center expenses had to be increased, for comparison purposes, to reflect its costs at a 2.50 calls per customer level.

Kentucky American Cost Per Customer		Year Ended 9/30/2009 Service Co Charges	Adjustment Fewer Calls For Water Cos. (A)	Adjusted	
Service Company					
Call Centers	Call processing, order processing, credit, bill collection	$ 1,728,850	$ 688,295	$ 2,417,145	
Operating Company	Customer payment processing			$ 151,772	Note B
Operating Company	Postage & forms			$ 784,459	
			Cost Pool Total	$ 3,353,376	
			Total Customers	118,279	
	12 Months Ended September 30, 2009 Cost Per KAWC Customer			**$ 28.35**	

Note A: Adjustment for American Water's fewer calls per customer

This adjustment is necessary because water utilities experience fewer calls per customer than do electric utilities

Call handling expenses		$ 765,328
Electric utility industry's avg calls/customer	2.50	
American Water's avg calls/customer	1.32	
Percent different	90%	90%
Total Adjustment		$ 688,295

Note B: Estimated customer payment processing expenses

Number of customers	118,279
Number of payments/customer/year	12
Total payments processed/year	1,419,348
Bank charge per item	$ 0.1069
Total estimated annual expense	$ 151,772

Electric Utility Group Cost per Customer

Exhibit 10 shows the actual 2008 customer accounts expense per customer calculation for the electric utility comparison group. All of the underlying data was taken from the utilities' FERC Form 1.

VI - Question 3 - Reasonableness of Customer Accounts Services Costs

Summary of Results

As shown in the table below, KAWC's cost per customer within a reasonable range of the average cost of the neighboring electric utility comparison group. It can therefore be concluded that KAWC's 12 months ended September 30, 2009 customer accounts-related expenses, including those of the Alton and Pensacola Call Centers, assigned by the Service Company to KAWC were comparable to those of other utilities.

Average Customer Accounts Expense Per Customer		
Louisville Gas & Electric	$	15.67

Analysis of Services

The final aspect of this study was an assessment of whether the services that are provided to KAWC by the Service Company would be necessary if KAWC were a stand-alone water utility. The first step in this evaluation was to determine specifically what the Service Company does for KAWC. Based on discussions with Service Company personnel, the matrix in Exhibit 11 was created showing which entity—KAWC or a Service Company location—is responsible for each of the functions KAWC requires to ultimately provide service to its customers. This matrix was reviewed to determine: (1) if there was redundancy or overlap in the services being provided by the Service Company and (2) if Service Company services are typical of those needed by a stand-alone water utility.

Upon review of Exhibit 12, the following conclusions can be drawn:

- The services that the Service Company provides are necessary and would be required even if KAWC were a stand-alone water utility.

- There is no redundancy or overlap in the services provided by the Service Company to KAWC. For all of the services listed in Exhibit 12, there was only one entity that was primarily responsible for the service.

Governance Practices Associated With Service Company Charges

There are several ways by which KAWC exercises control over Service Company services and charges. The most important of these are described below.

- **President of Regulated Operations Oversight** – The President of Regulated Operations is on the Executive Management Team (EMT) of American Water. This position is responsible for the overall performance of each operating company in American Water. As part of the EMT, the President of Regulated Operations has equal say with other EMT members in major business decisions of American Water and has the ability to monitor Service Company performance quality and spending. The President of Regulated Operations also has dialogue with each operating company president to address local concerns.
- **Divisional Vice President & Treasurer** – The Divisional Vice President and Treasurer of the Eastern Division states is responsible for the financial reporting, performance and internal controls of each of the operating companies in the division. The Vice President and Treasurer monitors the performance and reporting from the Service Company and follows up on instances where the quality and timeliness of services are not as expected. The operating company interacts with the Divisional VP & Treasurer to discuss any concerns with billings, etc.
- **Operating Company Board Oversight** – KAWC's board of directors includes members of American Water's EMT, members of the divisional management team and business and community leaders from outside the Company. KAWC's president is Chairman of the KAWC board. This helps ensure that KAWC's needs are a factor in the delivery of Service Company services.
- **Service Company Budget Review/Approval** – The President of Regulated Operations sits on the Service Company board and that board must formally approve the budget for Service Company charges for the next year. These budgeted charges are consolidated with the operating company's own spending into an overall budget which must be approved by the operating company's board of directors. KAWC's president also sits on the Service Company board.
- **Major Project Review And Approval** – Major projects undertaken by the Service Company must first be reviewed by American Water's Executive Management Team, which includes the President of Regulated Operations. With input from the local presidents and Divisional Vice President & Treasurer, they have the ability to impact all new initiatives and projects before they are authorized.
- **Service Company Bill Scrutiny** – KAWC Finance personnel review the monthly Service Company bill for accuracy and reasonableness on a monthly basis. KAWC's financial manager has dialogue with Shared Services Center office personnel concerning the monthly bill and any mistakes or overcharges are credited on a subsequent billing. The KAWC Finance Manager prepares an actual to budget comparison of management fees each month for use in identifying unusual variances. Service Company actual to budget comparison is included in the monthly FRP. Unusual variances are researched, explanations are provided and any corrections are made, as necessary.
- **Service Company Budget Variance Reporting** – Each month, a summary variance analysis is prepared that explains differences between budgeted and actual Service Company spending. In addition, a more detailed monthly variance report, called the "Statement of Expenses and Billed Charges," is produced by Service Company location and shows actual spending for the month.
- **Operating Company Budget Variance Reporting** – The "Budget/Plan Analysis," produced monthly, has a line item for Management Fees (i.e., Service Company charges). In this way, Service Company budget versus actual charges can be monitored

for the month and year-to-date. Additional information exists that allows more detailed analysis of "Divisional" and "Corporate" Management Fees.

- **Capital Investment Management ("CIM") –** CIM is one of American Water's primary business planning processes. It covers capital and asset planning and is employed throughout American Water. CIM provides a full range of governance practices, including a formal protocol for assessing system needs, prioritizing expenditures, managing the capital program, approving project spending, delivering projects and measuring outputs. CIM ensures that:
  - Capital expenditure plans are aligned with the strategic intent of the business
  - The impact of capital expenditure and income plans are fully reflected in operating expense plans
  - The impacts of these plans are understood and affordable, and
  - Effective controls are in place over budgets (through business plans) and individual capital projects (through appropriate authorization thresholds, management and reporting processes).

  The CIM process was designed to optimize the effectiveness of asset investment. The process is managed at two levels for all American Water companies, including all KAWC Operating Units. Monthly meetings of the CIM are held to review capital spending compared to plan, review new project requests, and review updates or modifications to existing projects. The President of KAWC, VP Finance, and others participate as necessary (e.g. KAWC operations managers and Rates Manager) and provide the data used in the monthly review schedules.

WITNESS: P.BARYENBRUCH

KENTUCKY AMERICAN WATER COMPANY

1. Q. Please state your name and business address.

A. Patrick L. Baryenbruch, 2832 Claremont Road, Raleigh, North Carolina 27608.

2. Q. Please describe your educational and professional background.

A. I received a Bachelors degree in accounting from the University of Wisconsin-Oshkosh in 1974 and a Masters in Business Administration degree from the University of Michigan in 1979.

I am a financial consultant and a certified public accountant. I am a member of the American Institute of Certified Public Accountants and the North Carolina Association of Certified Public Accountants.

I began my career as a staff accountant with Arthur Andersen & Company where I performed financial audits of utilities, banks and finance companies. After three years I left to pursue an M.B.A. degree. Upon graduation from business school, I worked with the consulting firms of Theodore Barry & Associates and Scott, Madden & Associates.

During my consulting career, I have performed consulting assignments for approximately 50 utilities and 10 public service commissions. I have participated as project manager, lead or staff consultant for 24 commission-ordered management and prudence audits of public utilities. Of these, I have been responsible for evaluating the area of affiliate charges and allocation of corporate expenses in the Commission-ordered audits of Connecticut Light and Power, Connecticut Natural Gas, General Water Corporation (Pennsylvania Operations), Philadelphia Suburban Water Company (now Aqua America) and Pacific Gas & Electric Company.

My firm has performed the commission-ordered audit of Southern California Edison's 2002, 2003, 2004 and 2005 transactions with its non-regulated affiliate companies.

3. Q. What are your duties and responsibilities in your current position?

A. I am the President of my own consulting practice, Baryenbruch & Company, LLC, which was established in 1985. In that capacity, I provide consulting services to utilities and their regulators.

4. Q. Please describe the reason for your testimony in this case.

A. I am presenting the results of my study which evaluated the services provided by American Water Service Company ("Service Company") during the 12 months ended September 30, 2009 to Kentucky American Water (KAWC). This study was undertaken in conjunction with KAWC's rate case and is true to the best of my knowledge and belief. The study is attached as Exhibit PLB-1.

5. Q. What were the objectives of your study?

A. This study was undertaken to answer four questions concerning the services provided by American Water Works Service Company, Inc. ("Service Company") to Kentucky American Water Company ("KAWC"), each of which bears on the reasonableness of those charges as incurred during the 12 months ended September 30, 2009. First, were the Service Company's charges to KAWC during the 12 months ended September 30, 2009 reasonable? Second, was KAWC charged the lower of cost or market for managerial and professional services provided by the Service Company during the 12 months ended September 30, 2009? Third, were the 12 months ended September 30, 2009 costs of the Service Company's customer accounts services, including those of the National Call

Centers, comparable to those of other utilities? Fourth, are the services KAWC receives from Service Company necessary?

6. **Q. What conclusions were you able to draw concerning question number 1, whether the Service Company charges to KAWC were reasonable?**

A. The Service Company's 12 months ended September 30, 2009 cost per KAWC customer was very reasonable compared to cost per customer for electric and combination electric/gas service companies. During the 12 months ended September 30, 2009, KAWC was charged $55 per customer for administrative and general (A&G)-related services provided by the Service Company. This compares to an average of $109 per customer for service companies reporting to the Federal Energy Regulatory Commission (FERC). Only 3 of the 24 utility service companies that filed a FERC Form 60 for 2008 had a lower per customer A&G cost than KAWC's charges from the Service Company.

7. **Q. What conclusions were you able to draw concerning question number 2, whether KAWC was charged the lower of cost or market services provided by the Service Company?**

A. I was able to draw the following conclusions:

(1) KAWC was charged the lower of cost or market for managerial and professional services during the 12 months ended September 30, 2009.

(2) On average, the hourly rates for outside service providers are 21% higher than the Service Company's hourly rates.

(3) The managerial and professional services provided by the Service Company are vital and could not be procured externally by KAWC without careful supervision on the part of KAWC. If these services were

contracted entirely to outside providers, KAWC would have to add at least one position to manage activities of outside firms. This position would be necessary to ensure the quality and timeliness of services provided.

(4) If all the managerial and professional services now provided by the Service Company had been out-sourced during the 12-months ended September 30, 2009, KAWC and its ratepayers would have incurred an additional $1,500,000 in expenses. This amount includes the higher cost of outside providers and the cost of a KAWC position needed to direct the outsourced work.

(5) This study's hourly rate comparison actually understates the cost advantages that accrue to KAWC from its use of the Service Company. Outside service providers generally bill for every hour worked. Service Company managerial and professional personnel, on the other hand, charge a maximum 8 hours per day even when they work more. If the overtime hours of Service Company personnel had been factored into the hourly rate calculation, the Service Company would have had an even greater annual dollar advantage than the $1,500,000 cited above.

(6) It would be difficult for KAWC to find local service providers with the same specialized water industry expertise as that possessed by the Service Company staff. Service Company personnel spend substantially all their time serving operating water companies. This specialization brings with it a unique knowledge of water utility operations and regulation that is most likely unavailable from local service providers.

(7) Service Company fees do not include any profit markup. Only its actual cost of service is being recovered from KAWC ratepayers.

8. Q. What conclusions were you able to draw concerning question number 3, whether the 12 months ended September 30, 2009 costs of the Service Company's customer account services, including those of the National Call Centers, were reasonable?

A. I was able to determine that the cost of the Service Company's customer accounts services, including those provided by the National Call Center, is within a reasonable range of the average of the neighboring electric utility comparison group. As will be explained further herein, this group of companies provides a reasonable proxy group for comparison to a regulated utility of the size and scope of KAWC. During the 12-months ended September 30, 2009, the customer accounts cost for KAWC customers was $28.35 compared to the 2008 average of $27.07 for neighboring electric utilities. The highest comparison group per customer cost was $39.29 and the lowest $15.67.

9. Q. What conclusions were you able to draw concerning question number 4, whether the services KAWC receives from the Service Company are necessary?

A. I was able to draw the following conclusions:

(1) The services that the Service Company provides are necessary and would be required even if KAWC were a stand-alone water utility.

(2) There is no redundancy or overlap in the services provided by the Service Company to KAWC.

10. Q. Does this complete your testimony?

A. Yes.

WITNESS: P.BARYENBRUCH

KENTUCKY AMERICAN WATER COMPANY
REBUTTAL TESTIMONY

1. Q. Please state your name and business address.

A. Patrick L. Baryenbruch, 2832 Claremont Road, Raleigh, North Carolina 27608.

2. Q. Did you previously file direct testimony in this case?

A. Yes, I filed direct testimony and a study that evaluated the reasonableness of charges from and the necessity of services provided by American Water Works Service Company, Inc. ("Service Company") to Kentucky American Water Company ("KAWC").

3. Q. Please describe the reason for your rebuttal testimony?

A. I am responding to a portion of the direct testimony of Ralph C. Smith, witness for the Kentucky Office of Attorney General.

4. Q. Which of Mr. Smith's comments do you wish to address?

A. I will respond to his criticisms of my study. These comments can be found in section VII on pages 81 and 82 of his testimony.

5. Q. Please state the purpose of the study you performed for KAWC?

A. My study was undertaken to answer four questions concerning the services provided by American Water Works Service Company, Inc. ("Service Company") to Kentucky American Water Company ("KAWC"), each of which bears on the reasonableness of those charges as incurred during the 12 months ended September 30, 2009. First, were the Service Company's charges to KAWC during the 12 months ended September 30, 2009 reasonable? Second, was KAWC charged the lower of cost or market for managerial and professional services provided by the Service Company during the 12 months ended September 30, 2009? Third, were the 12 months ended September 30, 2009 costs of the Service Company's customer accounts services, including those of the National Call

Centers, comparable to those of other utilities? Fourth, are the services KAWC receives from Service Company necessary?

6. Q. How would you characterize Mr. Smith's comments on your study?

A. Mr. Smith spends ½ of a page trying to criticize my study, which is documented in a 40-page report that was filed with my direct testimony. His comments are conclusory statements that are, in some cases, factually incorrect.

7. Q. Which of Mr. Smith's comments are factually incorrect?

A. Regarding my study, Mr. Smith states "In general, it attempts to compare KAWC with electric utilities." Two of the four questions my study answers have absolutely nothing to do with comparisons to electric utilities. Question 2 determined if the Service Company charged KAWC the lower of cost or market rates charged by outside providers of similar services. Question 4 determined if the services provided by the Service Company were necessary and would be required by KAWC if it were a stand-alone company. With this statement, Mr. Smith attempts to paint with a broad brush to avoid constructing more specific and detailed arguments.

8. Q. For your study's question 1, do you compare KAWC with electric utilities?

A. Question 1 compares the Service Company's cost of administrative and general-type services to the costs of service companies that are part of utility holding companies. These service companies provide the same type of A&G services to their regulated electric and gas utility affiliates as the Service Company provides KAWC. Examples of such services include accounting, taxes, human resources, information technology and executive management. O&M-related charges are not included in my service company cost comparison because a water company's O&M activities (e.g., water treatment, transmission, distribution) are clearly

different than those of an electric utility (e.g., power generation, transmission and distribution). I might add that it is not possible to perform a cost comparison for only water utility service companies because their cost information is not publicly available. Service companies that are part of a utility holding company must file a Form 60 with the FERC. Information in the Form 60 is sufficiently detailed to allow me to isolate applicable A&G expenses and make a valid comparison. The service company comparison methodology I employed for the KAWC study is the same I have used in other cases and which has been accepted by regulators in other states as evidence of the reasonableness of a service company charges to regulated affiliates.

9. Q. For your study's question 3, do you compare KAWC with electric utilities?

A. Question 3 compares KAWC's cost of customer account services (bill printing, collection, payment processing) to those of neighboring electric utilities. The nature of these activities is similar for water utilities and electric utilities. I make this comparison in order to incorporate the Service Company's call center costs into my benchmark comparisons. Here too, there is no publicly available source of water company only customer account services costs, including charges from service company affiliates. As with question 1, this comparison approach has been accepted by regulators in other states as evidence of the reasonableness of service company charges.

10. Q. Would you comment on Mr. Smith's final sentence in his comments on your study?

A. In his concluding sentence, Mr. Smith states that my study "…really provides no useful insight as to whether affiliate Service Company charges to KAWC are reasonable or appropriate for inclusion in operating expenses in the current KAWC

rate case." While I have fully supported my conclusions, Mr. Smith has totally failed to provide any basis for his. I present a 40 page report containing significant detail, calculations and comparisons that support my conclusion that the Service Company's charges for the 12 months ended September 30, 2009 were reasonable. , Mr. Smith has simply constructed a generalized, and in some cases inaccurate, list of criticisms that seem like an after-thought to the rest of his work on this case.

11. Q. Does this complete your rebuttal testimony?

A. Yes.

I - Introduction

Purpose Of This Study

This study was undertaken to answer three questions concerning the services provided by American Water Works Service Company, Inc. (Service Company) to New Jersey American Water Company, Inc. (NJAWC):

1. Was NJAWC charged the lower of cost or market for managerial and professional services provided by the Service Company during the 12 months ended June 30, 2007?

2. Were the 12 months ended June 30, 2007 costs of the Service Company's customer accounts services, including those of the National Call Centers, reasonable?

3. Are the services NJAWC receives from Service Company necessary?

Study Results

Concerning question 1, the following conclusions can be drawn from this study:

- NJAWC was charged the lower of cost or market for managerial and professional services during the 12 months ended June 30, 2007.

- On average, the hourly rates for outside service providers are **66% higher** than the Service Company's hourly rates.

- The managerial and professional services provided by the Service Company are vital and could not be procured externally by NJAWC without careful supervision on the part of NJAWC. If these services were contracted entirely to outside providers, NJAWC would have to add at least two positions to manage activities of outside firms. These positions would be necessary to ensure the quality and timeliness of services provided.

- If all the managerial and professional services now provided by the Service Company had been out-sourced during the 12 months ended June 30, 2007, NJAWC and its ratepayers would have incurred an **additional $17.9 million** in expenses. This amount includes the higher cost of outside providers and the cost of two NJAWC positions needed to direct the outsourced work.

- This study's hourly rate comparison actually understates the cost advantage that accrues to NJAWC from its use of the Service Company. Outside service providers generally bill for every hour worked. Service Company personnel, on the other hand, charge a maximum 8 per day even when they work more. If the overtime hours of Service Company personnel were factored into the hourly rate calculation, the Service Company would have had an even greater annual dollar advantage than the $17.9 million cited above. For instance, if Service Company overtime is conservatively estimated at 5% (only 2 hours per week), then that work would have cost over $800,000 in additional charges from outside providers.

- It would be difficult for NJAWC to find local service providers with the same specialized water industry expertise as that possessed by the Service Company staff. Service Company personnel spend substantially all their time serving operating water companies. This specialization brings with it a unique knowledge of water utility operations and regulation that is most likely unavailable from local service providers.

- Service Company fees do not include any profit markup. Only its actual cost of service is being recovered from NJAWC ratepayers.

Concerning question 2, it was determined that the cost of the Service Company's customer accounts services, including those provided by the National Call Center, **is close to the average of the comparison group of electric utilities in New Jersey and surrounding states**. It can therefore be concluded that the customer accounts-related expenses, including those of the Alton and Pensacola Call Centers, assigned by the Service Company to NJAWC are reasonable. As will be explained further herein, these companies provide a reasonable proxy group for comparison to a regulated utility of the size and scope of NJAWC. During the 12 months ended June 30, 2007, the customer accounts cost for NJAWC customers was $31.02 compared to the 2006 average of $27.70 for neighboring electric utilities. The highest comparison group per customer cost was $61.67 and the lowest $12.22.

Concerning question 3, the following conclusions can be drawn:

- The services that the Service Company provides are necessary and would be required even if NJAWC were a stand-alone water utility.

- There is no redundancy or overlap in the services provided by the Service Company to NJAWC. For all of the services listed in Schedule 11, there was only one entity that was primarily responsible for the service.

II - Background

Overview Of American Water Works Service Company

The Service Company maintains several types of offices from which it provides services to American Water operating companies. They include:

- Central Services – Includes American Water's executive management and personnel from the various corporate support services. American Water's corporate office is located in Voorhees, New Jersey.

- National Call Centers – Perform customer service functions, including: customer call processing, service order processing, correspondence processing, credit and collections. American Water maintains two call centers. One in Alton, Illinois that went into operation in the second quarter of 2001 and a second in Pensacola, Florida that went into operation in April 2005. Prior to the establishment of these national call centers, customer service functions were performed by employees of NJAWC, which incurred the expense on its books.

- National Shared Services Center – The Shared Services Center, located in Cherry Hill, New Jersey, provides various financial, accounting and treasury functions that had been performed by individual operating companies. This arrangement has improved and streamlined the Company's financial processes and allowed operating companies to focus on providing utility service.

- Regional/Divisional Offices – Regional and Divisional offices provide operating companies with certain support services that can be performed more effectively on a regional or divisional basis because individual operating company/center workloads are not sufficient to warrant a full-time staff for these activities. At the same time, these services require closer proximity to operating companies served so they are not provided by the National Shared Services Center. Examples of regional office services include rates and revenues, legal, human resources and operations. There are four regional offices—Northeast, Southeast, Central and West. Examples of divisional office services include administration, operation and customer support and security. Currently there is one divisional office, the Eastern Division which oversees the Northeast and Southeast regions.

- Laboratory Services – The national trace substance laboratory is located in Belleville, Illinois and performs testing for all American Water operating companies.

- Information Technology Service Centers – American Water's principal data center, located in Hershey, Pennsylvania, supports the IT infrastructure required to run corporate and operating company business applications and the communications systems. IT personnel rotate, as needed, throughout the regional offices and operating companies.

Service Company Expense Categories

The Service Company renders a monthly bill to operating companies. Charges are broken down into the following expense categories:

- Labor – base pay (salaries) of managerial and professional employees

- Labor-Related Overheads - employee benefit costs (payroll taxes, medical coverage, pensions, disability insurance) and other general expenses
- Support - wages and salaries of office support personnel, including secretaries, clerical personnel, telephone operators and mail clerks
- Office Expenses - office rent, equipment leases, telephone, electric, office supplies, property taxes, office maintenance
- Vouchers/Journal Entries – (1) travel expenses incurred by Service Company personnel, (2) other items submitted for reimbursement by employees, including professional association dues, (3) outside service contracts for such things as actuarial services, and (4) various other expenditures, including data center expenses for software licenses and hardware maintenance.

Service Company expenses are either assigned directly or allocated to operating companies, as shown in the table below.

Expense Category	Direct Charged	Allocated	Comments
Labor	X	X	Professional personnel working for one or several operating companies
Support		X	Administrative personnel support the professional staff, thus support costs are allocated on the basis of professional labor
Overhead	X	X	These are primarily employee benefit costs that relate directly to labor
Office Expense		X	Are all allocated on the basis of professional labor
Vouchers/Journals	X	X	May be either directly in support of one operating company (e.g., an engineer traveling from the Corporate Office to the operating company) or allocated to several operating companies

A direct charge occurs when Service Company work or expenses are incurred in support of only one operating company. Direct charge examples include work in support of an operating company's rate case, engineering design work on an operating company's project and the preparation of an operating company's financial statements.

Service Company expenses are allocated when more than one operating company benefits from the underlying work. Examples include assessments of new Federal water quality regulations, development of the company-wide materials procurement contracts and creation of company-wide engineering design standards.

Charging and Assignment Of Service Company Time and Expenses

Service Company transactions are assigned with the following information so there is a proper accounting and eventual charging to an operating company:

- Operating company number, if transaction is a direct charge
- Formula number if transaction is allocated
- Employee hours worked
- Account number for non-labor charges.

Charges can originate from the following systems:

- Payroll System
- RVI System (outside vendor payments)
- PCard System (credit card payments)
- Internal Purchase Order System
- Journal entries.

The Service Company's time reporting process enables labor and support charges to be assigned to the proper operating company. Labor charges are based on the time reported by managerial and professional Service Company employees. Every week, Service Company professional employees complete an electronic time sheet (see example in Schedule 1) that shows:

- Operating company (for direct charge)
- Formula number (for allocation)
- Work order (where applicable)
- Authorization number (where applicable).

At month-end, time report information is processed and direct and allocated professional labor hours tabulated for each operating company. Dollar charges are then calculated using the hourly rate of each Service Company professional employee based upon their base salary (i.e., an employee's hours times their hourly rate of pay).

Support (administrative) personnel charge their time to the activity "General Admin." As described in the table on page 4, their labor charges are allocated to operating companies based upon how their office's professional personnel labor charges are assigned. For instance, if 25% of the Northeast Region professional labor is assigned to NJAWC during a month, then 25% of that office's monthly administrative labor charges also are assigned to the operating company.

The overhead cost category is next assigned based on professional and administrative labor costs. Thus, if 25% of the Northeast Region accumulated professional and support labor is charged to NJAWC during the month, then 25% of that month's overhead expenses will be assigned to NJAWC.

Each Service Company location's office expenses are allocated to operating companies based on how professional labor charges for that office have been assigned. For instance, if 25% of professional labor from one Service Company office is assigned to NJAWC, then 25% of that office's office expenses would be assigned to NJAWC. Thus, office expenses are allocated in the very same way as administrative labor.

Vouchers/journal entries may be charged directly or allocated, depending on who benefits from the expenditure. For instance, the cost of a continuing professional education course taken by a professional in a regional office is allocated to the operating companies served by that office. Travel expenses by that same professional to a rate case proceeding are charged directly to the operating company whose case is being heard.

Sample Electronic Time Sheet

Page 278 of 1175

III – Service Company Cost Comparison Approach

During the 12 months ended June 30, 2007, the Service Company charged NJAWC $34,866,623. For purposes of comparing these charges to outside benchmarks, Service Company services were placed into two categories:

- Managerial and Professional Services – Includes such services as management, accounting, legal, human resources, information technology, and engineering.

- Customer Accounts Services – Includes customer-related services, such as call center, credit, billing, collection and payment processing.

Total test period Service Company charges break down by these categories as follows:

	12 Months Ended June 30, 2007	
	Amount	Hours
Management and Professional Services	$ 26,691,726	294,000
Customer Account Services	$ 8,174,897	256,156
Total	$ 34,866,623	550,156

This study's first question—whether the Service Company charges the lower of cost or market—was evaluated by comparing the cost per hour for managerial and professional services provided by Service Company personnel to hourly billing rates that would be charged by outside providers of equivalent services. Service Company costs per hour were based on actual charges to NJAWC during the 12 months ended June 30, 2007. Outside providers' billing rates came from surveys or other information from professionals that could perform the services now provided by the Service Company.

The second question—reasonableness of the National Call Center costs—was addressed by comparing NJAWC's customer accounts services expenses to those of neighboring electric utilities. This approach was selected because the costs of outside providers of call center services are not publicly available. However, electric utility customer account services expenses can be obtained from the FERC Form 1. The availability and transparency of FERC data adds to the validity of its use in this comparison.

The third question—the necessity of Service Company services—was first investigated by determining the services provided to NJAWC. A determination was then made as to whether these services would be required if NJAWC were a stand-alone utility.

IV – Managerial And Professional Services Hourly Rate Comparison

Methodology

The lower-of-cost-or-market comparison is accomplished by comparing the cost per hour for Service Company managerial and professional services to those of outside service providers to whom these duties could be assigned. Based on the nature of the Service Company services it was determined that the following outside providers could perform the categories of services indicated below:

- Management Consultants – executive and administrative management, risk management services, human resources and communications services
- Attorneys - legal services
- Certified Public Accountants - accounting, financial, information technology and rates and revenues
- Professional Engineers - engineering, operations and water quality services.

It should be noted that the services provided by the Belleville lab are assumed to be transferable to professional engineers for purposes of this cost comparison. This was done for two reasons. First, there is no readily available survey of hourly billing rates for testing services such as those performed by Belleville. Second, Belleville personnel have similar scientific educational backgrounds as Service Company engineering personnel. Thus, it is valid to compare the hourly rates of Belleville services to those of outside engineering firms.

Service Company's hourly rate were calculated for each of the four outside service provider categories, based on the dollars and hours charged to NJAWC during the 12 months ended June 30, 2007. Hourly billing rates for outside service providers were developed using third party surveys or directly from information furnished by outside providers themselves.

It should be noted that by using the Service Company's hours charged NJAWC during the 12 months ended June 30, 2007, its hourly rates are actually overstated because Service Company personnel charge a maximum 8 per day even when they work more. Outside service providers generally bill for every hour worked. If the overtime hours of Service Company personnel had been factored into the hourly rate calculation, Service Company hourly rates would have been lower.

The last step in the market cost comparison was to compare the Service Company's average cost per hour to the average cost per hour for outside providers.

Service Company Hourly Rates

Schedules 2 and 3 (pages 10-11) details the assignment of 12 months ended June 30, 2007 management and professional Service Company charges and hours by outsider provider category.

Certain adjustments to these dollar amounts were necessary to calculate Service Company hourly rates that are directly comparable to those of outside providers. Adjustments were made to the following 12 months ended June 30, 2007 non-labor Service Company charges:

- Contract Services – 12 months ended June 30, 2007 Service Company charges to NJAWC include over $2.2 million in charges associated with the use of outside

professional firms to perform certain corporate-wide services (e.g., legal, financial audit, actuarial services). These professional fees are excluded because the related services have effectively been out-sourced already.

- Travel Expenses – In general, client-related travel expenses are not recovered by outside service providers through their hourly billing rate. Rather, actual out-of-pocket travel expenses are billed to clients in addition to fees for professional services. Thus, it is appropriate to remove these Service Company charges from the hourly rate calculation.

- Computer Hardware and Software Expenses – Included in the 12 months ended June 30, 2007 Service Company charges to NJAWC are charges from the IT Service Centers for outside expenses related to leases and maintenance fees related to mainframe, server and network infrastructure, corporate business applications and the communications systems. An outside provider that would take over operation of a data center would recover these expenses over and above the labor necessary to operate the systems.

Schedule 4 (page 12) shows how computer hardware/software, contract services and travel expense-related Service Company charges are assigned among the four outside provider categories.

Based on the assignment of expenses and hours shown in Schedules 2, 3 and 4, the Service Company's equivalent costs per hour for the 12 months ended June 30, 2007 are calculated below.

	12 Months Ended June 30, 2007				
	Attorney	Management Consultant	Certified Public Accountant	Professional Engineer	Total
Total management, professional & technical services charges	$ 1,260,479	$ 8,800,100	$ 13,893,353	$ 2,737,793	$ 26,691,726
Less:					
Contract services	24,154	604,264	1,537,948	51,306	2,217,672
Travel expenses	31	84,744	241,460	7,149	333,384
Computer hardware/software	11,442	92,693	55,223	14,866	174,224
Net Service Charges (A)	$ 1,224,852	$ 8,018,399	$ 12,058,722	$ 2,664,472	$ 23,966,446
Total Hours (B)	13,140	77,725	170,370	32,764	294,000
Average Hourly Rate (A / B)	**$ 93**	**$ 103**	**$ 71**	**$ 81**

Outside Service Provider Hourly Rates

The next step in the cost comparison was to obtain the average billing rates for each outside service provider. The source of this information and the determination of the average rates are described in the paragraphs that follow.

Attorneys

The New Jersey Bar Association does not survey its members as to their hourly billing rates. In addition, publicly available billing rate information could not be found for New York or Pennsylvania attorneys. Therefore, a New Jersey estimate was developed from a survey of Michigan lawyers conducted annually by the Michigan Lawyers Weekly. As presented in Schedule 5, the average rate for each Michigan firm respondent was adjusted for the cost of living differential between their location and Trenton, New Jersey. The survey includes rates that were in effect at December 31, 2006—the midpoint of the 12 months ended June 30, 2007.

Management Consultants

The cost per hour for management consultants was developed from the 2006 annual survey performed by the Association of Management Consulting Firms—an industry trade organization. The first step in the calculation, presented in Schedule 6, was to determine an average rate by consultant position level. From these rates, a single weighted average hourly rate was calculated based upon the percent of time that is typically applied to a consulting assignment by each consultant position level. This survey includes rates that were in effect during 2005 for firms in the United States. Consultants typically do not limit their practice to any one region and must travel to a client's location. Thus, the U.S. national average is appropriate for comparison. The 2005 average rate was escalated to December 31, 2006—the midpoint of the 12 months ended June 30, 2007.

Certified Public Accountants

The average hourly rate for New Jersey certified public accountants was developed from a 2006 survey performed by the American Institute of Certified Public Accountants (AICPA). Hourly rates in the AICPA survey are the average of firms in New Jersey. The average hourly rate was calculated for a set of typical accountant positions, as shown in Schedule 7. Based on a typical staff assignment by each accountant position, a weighted average hourly rate was calculated. This survey covered hourly rates in effect during 2005, thus they had to be escalated to December 31, 2006—the midpoint of the 12 months ended June 30, 2007.

Professional Engineers

The Service Company provided hourly rate information for three outside engineering firms that were used by NJAWC in 2007. As presented in Schedule 8, an average rate was developed for each engineering position level. Then, using a typical percentage mix of project time by engineering position, a weighted average cost per hour was calculated.

Source: Information provided by American Water Works Service Company

Service Company Versus Outside Provider Cost Comparison

As shown in the table below, Service Company costs per hour are considerably lower than those of outside providers.

	12 Months Ended June 30, 2007		
Service Provider	Service Company	Outside Provider	Difference--Service Co. Greater(Less) Than Outside
Attorney	$ 93	$ 286	$ (193)
Management Consultant	$ 103	$ 217	$ (114)
Certified Public Accountant	$ 71	$ 104	$ (33)
Professional Engineer	$ 81	$ 100	$ (19)

Based on these cost per hour differentials and the number of managerial and professional services hours billed to NJAWC during the 12 months ended June 30, 2007, outside service providers would have cost almost $9 million more than the Service Company (see table below). Thus, on average, outside provider's hourly rates are 66% higher than those of the Service Company ($17,662,967 / $26,691,726).

	12 Months Ended June 30, 2007		
Service Provider	Hourly Rate Difference--Service Co. Greater(Less) Than Outside	Service Company Hours Charged	Dollar Difference
Attorney	$ (193)	13,140	$ (2,533,145)
Management Consultant	$ (114)	77,725	$ (8,858,090)
Certified Public Accountant	$ (33)	170,370	$ (5,659,800)
Professional Engineer	$ (19)	32,764	$ (611,932)
Service Company Less Than Outside Providers			$ (17,662,967)

If NJAWC were to use outside service providers rather than the Services Company for managerial and professional services, it would incur other additional expenses besides those associated with higher hourly rates. Managing outside firms who would perform 294,000 hours of work (almost 196 full-time equivalents at 1,500 billable hours per FTE) would add a significant workload to the existing NJAWC management team. Thus, it would be necessary for NJAWC to add at least two positions to supervise the outside firms and ensure they delivered quality and timely services. The individuals that would fill these positions would need a good understanding of each profession being managed. They must also have management experience and the authority necessary to give them credibility with the outside firms. As calculated in the table below, this position would add another $304,000 per year to NJAWC's personnel expenses.

Cost of Adding Administrative Positions To NJAM's Staff

	Per Position	Total
New Positions' (2) Salary	$ 100,000	$ 200,000
Benefits (at 52%)	$ 52,000	$ 104,000
Total Cost of the New Positions		$ 304,000

Thus, the total effect on the ratepayers of NJAWC of contracting all services now provided by Service Company would be an increase in their costs of **$17,966,967** ($17,662,967 + $304,000).

Other Cost Comparisons

Every year, the Belleville Lab conducts a comparison of its cost for performing major tests to the cost of using outside testing laboratories. Over the past several years, these surveys have shown the following results been as follows:

Year	Number of Major Tests Surveyed	Percent Belleville Lower Than Outside Labs
2000	26	15%
2001	25	19%
2002	24	16%
2003	23	10%
2004	24	9%
2005	24	25%
2006	24	31%

These survey results provide further evidence that the Service Company arrangement is the lowest-cost alternative for NJAWC.

V – Customer Account Services Cost Comparison

Background

It is difficult to compare the cost of American Water's National Call Center with outside providers of the same call center-related services. Call center survey data is proprietary and expensive to obtain. For this reason, NJAWC's National Call Center costs are compared to those of neighboring electric utilities because the data necessary to make this comparison is readily available to the public.

Electric utility cost information comes from their FERC Form 1. FERC's chart of accounts is defined in chapter 18, part 101 of Code of Federal Regulations. FERC accounts that contain call center-related expenses and are used in this study's comparison are:

- Account 903 Customer Accounts Expense – Records and Collection Expense
- Account 905 Customer Accounts Expense – Miscellaneous Customer Accounts Expense.

In addition, labor-related overheads charged to the following FERC accounts must be added to the labor components of Accounts 903 and 905.

- Account 926 Employee Pension and Benefits
- Account 408 Taxes Other Than Income (employer's portion of FICA).

Schedule 8 provides FERC's description of what should be charged to these accounts. In questioning the controller of a large Southeastern electric utility, it was determined that expenses of the activities described below are recorded in the designated FERC accounts.

903 Records and Collection Expense

- Customer Call Center – customer calls/contact, credit, order taking/disposition, bill collection efforts, outage calls
- Call Center IT – maintenance of phone banks, voice recognition units, call center software applications, telecommunications
- Customer billing – bill printing, stuffing and mailing
- Remittance processing – processing of customer payments received in the mail
- Bill payment centers – locations where customers can pay their bills in person

905 Miscellaneous Customer Accounts Expense

- Customer Information System IT – maintenance and support of the customer information system

This study assumes the FERC accounts for other electric and gas utilities contain expenses for the same activities.

New Jersey American
FERC Account Descriptions

903 – Customer Records and Collection Expenses
This account shall include the cost of labor, materials used and expenses incurred in work on customer applications, contracts, orders, credit investigations, billing and accounting, collections and complaints.

Labor

1. Receiving, preparing, recording and handling routine orders for service, disconnections, transfers or meter tests initiated by the customer, excluding the cost of carrying out such orders, which is chargeable to the account appropriate for the work called for by such orders.
2. Investigations of customers' credit and keeping of records pertaining thereto, including records of uncollectible accounts written off.
3. Receiving, refunding or applying customer deposits and maintaining customer deposit, line extension, and other miscellaneous records.
4. Checking consumption shown by meter readers' reports where incidental to preparation of billing data.
5. Preparing address plates and addressing bills and delinquent notices.
6. Preparing billing data.
7. Operating billing and bookkeeping machines.
8. Verifying billing records with contracts or rate schedules.
9. Preparing bills for delivery, and mailing or delivering bills.
10. Collecting revenues, including collection from prepayment meters unless incidental to meter reading operations.
11. Balancing collections, preparing collections for deposit, and preparing cash reports.
12. Posting collections and other credits or charges to customer accounts and extending unpaid balances.
13. Balancing customer accounts and controls.
14. Preparing, mailing, or delivering delinquent notices and preparing reports of delinquent accounts.
15. Final meter reading of delinquent accounts when done by collectors incidental to regular activities.
16. Disconnecting and reconnecting services because of nonpayment of bills.
17. Receiving, recording, and handling of inquiries, complaints, and requests for investigations from customers, including preparation of necessary orders, but excluding the cost of carrying out such orders, which is chargeable to the account appropriate for the work called for by such orders.
18. Statistical and tabulating work on customer accounts and revenues, but not including special analyses for sales department, rate department, or other general purposes, unless incidental to regular customer accounting routines.
19. Preparing and periodically rewriting meter reading sheets.
20. Determining consumption and computing estimated or average consumption when performed by employees other than those engaged in reading meters.

Materials and expenses

21. Address plates and supplies.
22. Cash overages and shortages.
23. Commissions or fees to others for collecting.
24. Payments to credit organizations for investigations and reports.
25. Postage.
26. Transportation expenses, including transportation of customer bills and meter books under centralized billing procedure.
27. Transportation, meals, and incidental expenses.
28. Bank charges, exchange, and other fees for cashing and depositing customers' checks.
29. Forms for recording orders for services, removals, etc.
30. Rent of mechanical equipment.

New Jersey American
FERC Account Descriptions

905 – Miscellaneous Customer Accounts Expenses
This account shall include the cost of labor, materials used and expenses incurred not provided for in other accounts.
Labor
1. General clerical and stenographic work.
2. Miscellaneous labor.

Materials and expenses
3. Communication service.
4. Miscellaneous office supplies and expenses and stationery and printing other than those specifically provided for in accounts 902 and 903.

Comparison Group

Electric utilities included in the comparison group are shown in the table below. These are companies whose FERC Form 1 show amounts for accounts 903 and 905.

New Jersey	• Atlantic City Electric • Jersey Central Power	• Public Service Electric & Gas • Rockland Electric
New York	• Central Hudson Gas & Electric • Consolidated Edison • New York State Electric & Gas	• Niagara Mohawk Electric Power • Rochester Gas & Electric
Pennsylvania	• Duquesne Light • Metropolitan Edison • PECO Energy • Pennsylvania Electric	• Pennsylvania Power • PPL Electric Utilities • West Penn Power
Delaware	• Delmarva Power & Light	

Comparison Approach

The basis for this comparison is customer account services expenses per customer. NJAWC's cost pool was developed to include the same expenses included in electric utility's FERC accounts 903 and 905. As shown in the graphic below, NJAWC's resultant cost pool contains the expenses of Service Company locations and certain operating company expenses.

American Water
Service Company
Pensacola & Alton Call Centers
a. Customer contact
b. Customer order processing
c. Billing information processing
d. Collections
e. Correspondence processing
f. Customer payment processing
IT Service Centers
a. Support expenses for the customer information system (ORCOM)
Operating Company
a. Postage and forms

Electric Utilities
FERC Acct 903 - Records and Collection Expense and FERC Acct 905 - Misc Customer Accounts Expense
a. Customer contact
b. Customer order processing
c. Bill preparation and mailing
d. Collections
e. Payment processing
f. Correspondence processing

NJAWC Cost Per Customer

In order to make a valid comparison to neighboring electric utilities, certain adjustments had to be made to the applicable Service Company charges to NJAWC. It was necessary to adjust the National Call Center charges because electric utilities experience an average of 2.50 calls per customer compared to American Water's 1.28 calls per customer. Thus, National Call Center expenses had to be increased, for comparison purposes, to reflect its costs at a 2.50 calls per customer level. As shown below, NJAWC's adjusted annual expense per customer is $31.02—the number that can be compared to neighboring electric utilities' expenses.

New Jersey American 12-Months Ended June 30, 2007 Cost Per Customer

Cost Component		YE 6/30/07 Service Co Charges	Adjustment Fewer Calls For Water Cos. (A)	Adjusted	
Service Company					
Call Centers	Call processing, order processing, credit, bill collection	$ 7,972,957	$ 7,599,224	$ 15,572,181	
Regional Offices		$ 201,941		$ 201,941	
IT/Data Centers	Bill preparation/systems support	$ 1,465,922		$ 1,465,922	
Service Company	Customer payment processing			$ 592,816	Note B
Operating Company	Postage & forms			$ 1,513,501	
			Cost Pool Total	$ 19,346,361	
			Total Customers	623,754	
	12 Months Ended June 30, 2007 Cost Per New Jersey American Customer			**$ 31.02**	

Note A: Adjustment for American Water's fewer calls per customer

This adjustment is necessary because water utilities experience fewer calls per customer than do electric utilities

Test Period Call Center charges		$ 7,972,957
Electric utility industry's avg calls/customer	2.50	
American Water's avg calls/customer	1.28	
Percent different	95%	95%
Total Adjustment B		$ 7,599,224

Note B: Estimated customer payment processing expenses

Number of customers	623,754
Number of payments/customer/year	9
Total payments processed/year	5,613,786
Bank charge per item	$ 0.1056
Total estimated annual expense	$ 592,816

Electric Utility Group Cost Per Customer

Schedule 9 shows the actual 2006 customer accounts expense per customer calculation for the electric utility comparison group. All of the underlying data was taken from the utilities' FERC Form 1.

Summary Of Results

As shown in the table below, NJAWC's cost per customer is close to the average of the electric utility comparison group. It can therefore be concluded that the customer accounts-related expenses, including those of the Alton and Pensacola Call Centers, assigned by the Service Company to NJAWC are reasonable.

Customer Account Services Expenses Per Customer	
Public Service Electric & Gas	$12.22
West Penn Power Company	$12.82
Duquesne Light Company	$15.97
Metropolitan Edison Company	$18.17
Jersey Central Power & Light Company	$18.18
Pennsylvania Electric Company	$18.24

VI - Need For Service Company Services

Analysis Of Service Company Services

The final aspect of this study was an assessment of whether the services that are provided to NJAWC by the Service Company would be necessary if NJAWC were a stand-alone water utility. The first step in this evaluation was to determine specifically what the Service Company does for NJAWC. Based on discussions with Service Company personnel, the matrix in Schedule 11 was created showing which entity--NJAWC or a Service Company location--is responsible for each of the functions NJAWC requires to ultimately provide service to its customers. This matrix was reviewed to determine: (1) if there was redundancy or overlap in the services being provided by the Service Company and (2) if Service Company services are typical of those needed by a stand-alone water utility.

Upon review of Schedule 11, the following conclusions can be drawn:

- The services that the Service Company provides are necessary and would be required even if NJAWC were a stand-alone water utility.

- There is no redundancy or overlap in the services provided by the Service Company to NJAWC. For all of the services listed in Schedule 11, there was only one entity that was primarily responsible for the service.

Governance Practices Associated With Service Company Charges

There are several ways by which NJAWC exercises control over Service Company services and charges. The most important of these are described below.

- **Company President Oversight** – The Company President of the state utility is responsible for the overall performance of each operating company in the state. As part of the management team, through the Executive Vice President of the Eastern Division, each state utility President has a significant voice in major business decisions of American Water and has the ability to monitor Service Company performance quality and spending.
- **Vice President & Treasurer** – The Vice President and Treasurer position retains the functions previously performed on behalf of the Northeast Region. The Vice President and Treasurer is responsible for the financial reporting, performance and internal controls of the New Jersey and New York operating companies. The Vice President and Treasurer monitor the performance and reporting from the Service Company and pushes back whenever the quality and service are not appropriate.
- **Operating Company Board Oversight** – The board of directors includes members of American Water's EMT, members of the state management team and business and community leaders from outside the Company. This helps ensure that NJAWC's needs are a factor in the delivery of Service Company services.
- **Service Company Budget Review/Approval** – Every operating company president sits on the Service Company board and that board must formally approve the budget for Service Company charges for the next year. These budgeted charges are consolidated with the operating company's own spending into an overall budget which must be approved by the operating company's board of directors.
- **Major Project Review And Approval** – Major projects undertaken by the Service Company must first be reviewed by American Water's Executive Management Team, which includes the Executive Vice President. The Executive Vice President, with significant input from the state President and local management team, has the ability to impact all new initiatives and projects before they are authorized.
- **Service Company Bill Scrutiny** – Operating company personnel review the monthly Service Company bill for accuracy and reasonableness on a monthly basis. Any mistakes or overcharges are credited on a subsequent billing.
- **Service Company Budget Variance Reporting** – Each month, a summary variance analysis is prepared that explains differences between budgeted and actual Service Company spending. In addition, a more detailed monthly variance report, called the "Statement of Expenses and Billed Charges," is produced by Service Company location and shows budget versus actual spending for the month and year-to-date by cost category.
- **Operating Company Budget Variance Reporting** – The "Budget/Plan Analysis," produced monthly by each operating company, has a line item for Management Fees (i.e., Service Company charges). In this way, Service Company budget versus actual charges can be monitored for the month and year-to-date.
- **Capital Investment Management** (CIM) – CIM is one of American Water's primary business planning processes. It covers capital and asset planning and is employed throughout American Water and Thames Water. The current CIM process and procedures were established in 2003 as part of an initiative to implement leading water industry practices. CIM provides a full range of governance practices, including a formal protocol for assessing system needs, prioritizing expenditures, managing the capital

program, approving project spending, delivering projects and measuring outputs. CIM ensures that:

- Capital expenditure plans are aligned with the strategic intent of the business,
- The impact of capital expenditure and income plans are fully reflected in operating expense plans,
- The impacts of these plans are understood and affordable, and
- Effective controls are in place over budgets (through business plans) and individual capital projects (through appropriate authorization thresholds, management and reporting processes).

The CIM process was designed to optimize the effectiveness of asset investment. The process is managed at three levels for all American Water companies, including all NJAWC operating units.

BARYENBRUCH PT-15

NEW JERSEY-AMERICAN WATER COMPANY, INC.

1. Q. Please state your name and business address.

A. Patrick L. Baryenbruch, 302 East Park Drive, Raleigh, North Carolina 27605.

2. Q. Please describe your educational and professional background.

A. I received a Bachelors degree in accounting from the University of Wisconsin-Oshkosh in 1974 and a Masters in Business Administration degree from the University of Michigan in 1979.

I am a financial consultant and am a member of the American Institute of Certified Public Accountants and the North Carolina Association of Certified Public Accountants.

I began my career as a staff accountant with Arthur Andersen & Company where I performed financial audits of utilities, banks and finance companies. After three years I left to pursue an M.B.A. degree. Upon graduation from business school, I worked with the consulting firms of Theodore Barry & Associates and Scott, Madden & Associates.

During my consulting career, I have performed consulting assignments for approximately 50 utilities and 10 public service commissions. I have participated as project manager, lead or staff consultant for 24 commission-ordered management and prudence audits of public utilities. Of these, I have been responsible for evaluating the area of affiliate charges and allocation of corporate expenses in the Commission-ordered audits of Connecticut Light and Power, Connecticut Natural Gas, General Water Corporation (Pennsylvania Operations), Philadelphia Suburban Water Company (now Aqua America), Pacific Gas & Electric Company and Southern California Edison.

My firm has performed the commission-ordered audit of Southern California Edison's 2002, 2003, 2004 and 2005 transactions with its non-regulated affiliate companies.

3. Q. What are your duties and responsibilities in your current position?

A. I am the President of my own consulting practice, Baryenbruch & Company, which was established in 1985. In that capacity, I provide consulting services to utilities and their regulators.

4. Q. Please describe the reason for your testimony in this case.

A. I am presenting the results of my study which evaluated the services provided by American Water Works Service Company ("Service Company") during the 12 months ended June 30, 2007 to New Jersey American Water Company, Inc (NJAWC). This study was undertaken in conjunction with NJAWC's rate case and is accurate and reliable to the best of my knowledge and belief. The study is attached as the Appendix to Exhibit PT-15.

5. Q. What were the objectives of your study?

A. This study was undertaken to answer three questions. First, was NJAWC charged the lower of cost or market for managerial and professional services provided by the Service Company during the 12 months ended June 30, 2007? Second, were the 12 months ended June 30, 2007 costs of the Service Company's customer accounts services, including those of the National Call Centers, reasonable? Third, are the services NJAWC receives from Service Company necessary?

NEW JERSEY-AMERICAN WATER COMPANY, INC.

6. Q. What conclusions were you able to draw concerning question number 1, whether NJAWC was charged the lower of cost or market services provided by the Service Company?

A. I was able to draw the following conclusions:

(1) NJAWC was charged the lower of cost or market for managerial and professional services during the 12 months ended June 30, 2007.

(2) On average, the hourly rates for outside service providers are 66% higher than the Service Company's hourly rates.

(3) The managerial and professional services provided by the Service Company are vital and could not be procured externally by NJAWC without careful supervision on the part of NJAWC. If these services were contracted entirely to outside providers, NJAWC would have to add at least two positions to manage activities of outside firms. These positions would be necessary to ensure the quality and timeliness of services provided.

(4) If all the managerial and professional services now provided by the Service Company had been out-sourced during the 12 months ended June 30, 2007, NJAWC and its ratepayers would have incurred an additional $17.9 million in expenses. This amount includes the higher cost of outside providers and the cost of two NJAWC positions needed to direct the outsourced work.

(5) This study's hourly rate comparison actually understates the cost advantage that accrues to NJAWC from its use of the Service Company. Outside service providers generally bill for every hour worked. Service Company personnel, on the other hand, charge a maximum 8 per day even when they work more. If the overtime hours of Service Company personnel were factored into the hourly rate calculation, the Service Company would have had an even greater annual dollar advantage than the $17.9 million cited above. For instance, if Service Company overtime is conservatively estimated at 5% (only 2 hours per week), then that work would have cost over $800,000 in additional charges from outside providers.

(6) It would be difficult for NJAWC to find local service providers with the same specialized water industry expertise as that possessed by the Service Company staff. Service Company personnel spend substantially all their time serving operating water companies. This specialization brings with it a unique knowledge of water utility operations and regulation that is most likely unavailable from local service providers.

(7) Service Company fees do not include any profit markup. Only its actual cost of service is being recovered from NJAWC ratepayers.

7. **Q. What is your conclusion regarding the reasonableness of the costs of the National Call Center that provides service to NJAWC?**

A. I was able to determine that the cost of the Service Company's customer accounts services, including those provided by the National Call Center, is close to the

average of the comparison group of neighboring electric utilities. As will be explained further herein, this group of companies provides a reasonable proxy group for comparison to a regulated utility of the size and scope of NJAWC. During the 12-months ended June 30, 2007, the customer accounts cost for NJAWC customers was $31.02 compared to the 2006 average of $27.70 for neighboring electric utilities. The highest comparison group per customer cost was $61.67 and the lowest $12.22.

8. Q. Does it concern you that NJAWC's cost per customer for customer account services is slightly higher than the electric utility comparison group?

A. No. I am satisfied that NJAWC's comparative position is completely acceptable for two reasons. First, I have included every appropriate cost element in the calculation of NJAWC's customer account services cost pool. Second, some of the comparison group electric utilities may follow accounting policies that cause their cost pools to be higher or lower than that of NJAWC. Even though electric utilities follow the FERC's Uniform System of Accounts, there is still some discretion as to how transactions are recorded. For instance, one utility may record the IT support costs for their customer information system to FERC account 903 Customer Records and Collections Expenses while another utility records that type of expense to a different FERC account. This probably accounts for some of the wide range in per customer costs among the electric utilities.

9. Q. What conclusions were you able to draw concerning the necessity of the services NJAWC receives from the Service Company?

A. I was able to draw the following conclusions:

(1) The services that the Service Company provides are necessary and would be required even if NJAWC were a stand-alone water utility.

(2) There is no redundancy or overlap in the services provided by the Service Company to NJAWC. For all of the services listed in Schedule 11 of my study, there was only one entity that was primarily responsible for the service.

10. Q. Does this complete your testimony?

A. Yes.

I – Introduction

Purpose of This Study

This study was undertaken to answer four questions concerning the services provided by American Water Works Service Company, Inc. (Service Company) to New Jersey American Water Company (NJAWC):

1. Were the Service Company's charges to NJAWC during the 12 months ended June 30, 2009 reasonable?

2. Was NJAWC charged the lower of cost or market for managerial and professional services provided by the Service Company during the 12 months ended June 30, 2009?

3. Were the 12 months ended June 30, 2009 costs of the Service Company's customer accounts services, including those of the National Call Centers, comparable to those of other utilities?

4. Are the services NJAWC receives from Service Company necessary?

Study Results

Concerning question 1, the following conclusion was reached:

- The Service Company's 12 months ended June 30, 2009 cost per NJAWC customer was very reasonable compared to cost per customer for electric and combination electric/gas service companies. During the 12 months ended June 30, 2009, NJAWC was charged $49 per customer for administrative and general (A&G)-related services provided by the Service Company. This compares to an average of $109 per customer for service companies reporting to the Federal Energy Regulatory Commission (FERC). Only 3 of the 24 utility service companies that filed a FERC Form 60 for 2008 had a lower per customer A&G cost than NJAWC's charges from the Service Company.

Concerning question 2, the following conclusions were drawn from this study:

- NJAWC was charged the lower of cost or market for managerial and professional services during the 12 months ended June 30, 2009.

- On average, the hourly rates for outside service providers are 75% higher than the Service Company's hourly rates.

- The managerial and professional services provided by the Service Company are vital and could not be procured externally by NJAWC without careful supervision on the part of NJAWC. If these services were contracted entirely to outside providers, NJAWC would have to add at least two positions to manage activities of outside firms. These positions would be necessary to ensure the quality and timeliness of services provided.

- If all the managerial and professional services now provided by the Service Company had been outsourced during the 12 months ended June 30, 2009, NJAWC and its ratepayers would have incurred more than $20.6 million in additional expenses. This amount includes the higher cost of outside providers and the cost of two NJAWC positions needed to direct the outsourced work.

- This study's hourly rate comparison actually understates the cost advantages that accrue to NJAWC from its use of the Service Company. Outside service providers generally bill

for every hour worked. Service Company exempt personnel, on the other hand, charge a maximum of 8 hours per day even when they work more hours. If the overtime hours of Service Company personnel were factored into the hourly rate calculation, the Service Company would have had an even greater annual dollar advantage than the $20.6 million cited above. For instance, if Service Company overtime is conservatively estimated at 5% (2 hours per week), then that work would have cost an estimated $1.0 million in additional charges from outside providers.

- It would be difficult for NJAWC to find local service providers with the same specialized water industry expertise as that possessed by the Service Company staff. Service Company personnel spend substantially all their time serving operating water companies. This specialization brings with it a unique knowledge of water utility operations and regulation that is most likely unavailable from local service providers.

- Service Company fees do not include any profit markup. Only its actual cost of service is being recovered from NJAWC ratepayers.

Concerning question 3, the following conclusion was reached:

- The cost of the Service Company's customer accounts services, including those provided by the National Call Centers, is well below the average of the neighboring electric utility comparison group. As will be explained further herein, this group of companies provides a reasonable proxy group for comparison to a regulated utility of the size and scope of the Service Company and NJAWC. During the 12-months ended June 30, 2009, the customer accounts cost for NJAWC customers was $26.33 compared to the 2008 average of $43.23 for neighboring electric utilities. The highest comparison group per customer cost was $83.88 and the lowest $12.54.

Concerning question 4, the following conclusions was drawn:

- The services that the Service Company provides are necessary and would be required even if NJAWC were a stand-alone water utility.

- Furthermore, there is no redundancy or overlap in the services provided by the Service Company to NJAWC. For all of the services listed in Exhibit 11, there was only one entity primarily responsible for the service.

Overview of American Water Works Service Company

American Water's Service Company exists to provide certain shared services to American Water subsidiaries. It follows a service company model used by many utility holding companies that own multiple regulated utilities. By consolidating executive and professional services into a single service company, utility holding companies are able to realize the following benefits for ratepayers:

- Purchasing Economies – Common expenses (e.g., insurance, chemicals, piping) can be procured on a much larger scale thereby providing greater bargaining power for the combined entity compared to individual utility operating companies. A service company facilitates corporate-wide purchasing programs through its procurement and contract administration functions.

- Operating Economies of Scale – A service company is able to deliver services more efficiently because workloads can be balanced across more persons and facilities. For instance, American Water's Service Company is able to maintain one principal data center for the entire corporation. This is much more cost-efficient than each operating utility funding their own data center with its large fixed hardware, software and staffing costs.

- Continuity of Service – Centralizing service company personnel who perform similar services facilitates job cross-training and sharing of knowledge and expertise. This makes it easier to deal with staff turnover and absences and to sustain high levels of service to operating utilities. An individual operating utility might experience considerable disruption if a key professional left and it was necessary to hire outside to fill the vacancy.

- Maintenance of Corporate-Wide Standards – Personnel in American Water's Service Company establish standards for many functions (e.g., engineering designs, operating procedures and maintenance practices). It is easier to ensure these standards are followed by every operating utility because their implementation is overseen by the Service Company.

- Improved Governance – American Water's Service Company provides another dimension of management and financial oversight that supplements local operating utility management. The Service Company facilitates standard planning and reporting that help ensure operating utilities meet the requirements of their customers in a cost effective manner.

- Retention of Personnel – A service company organization provides operating utility personnel with another career path beyond what may be available on a local level. These opportunities tend to improve employee retention.

American Water follows the model for other utility service companies in another important regard. Its services are provided to affiliate operating utilities, like NJAWC, at cost. American Water's Service Company is not a profit-making entity. It assigns only its actual expenses to the American Water subsidiaries it services.

The Service Company provides services to American Water operating companies from the following locations:

- Corporate Office – Includes American Water's executive management and personnel from the various corporate support services. American Water's corporate office is located in Voorhees, New Jersey.

- National Call Centers – Perform customer service functions, including: customer call processing, service order processing, correspondence processing, credit and collections. American Water maintains two call centers. One in Alton, Illinois that went into operation in 2001 and a second in Pensacola, Florida that went into operation in 2005. Prior to the establishment of these national call centers, customer service functions were performed by employees of NJAWC, which incurred the expense on its books.

- National Shared Services Center – The Shared Services Center, located in Cherry Hill, New Jersey, provides various financial, accounting and treasury functions that had been performed by individual operating companies. This arrangement has improved and streamlined the Company's financial processes and allowed operating companies to focus on providing utility service.

- Regional Offices – Regional offices provide operating companies with certain support services that can be performed more effectively on a regional basis because individual operating company/center workloads are not sufficient to warrant a full-time staff for these activities. At the same time, these services require closer proximity to operating companies served so they are not provided by the National Shared Services Center. Examples of regional office services include legal, communication, human resources and maintenance.

- Belleville Lab – The national trace substance laboratory is located in Belleville, Illinois and performs testing for all American Water operating companies.

- Information Technology Service Centers – American Water's principal data center, located in Hershey, Pennsylvania, supports the IT infrastructure required to run corporate and operating company business applications and the communications systems. IT personnel rotate, as needed, throughout the regional offices and operating companies.

Service Company Expense Categories

The Service Company renders a monthly bill to operating companies. Charges are broken down into the following expense categories:

- Labor – base pay (salaries) of managerial and professional employees
- Labor-Related Overheads - employee benefit costs (payroll taxes, medical coverage, pensions, disability insurance) and other general expenses
- Support - wages and salaries of office support personnel, including secretaries, clerical personnel, telephone operators and mail clerks
- Office Expenses - office rent, equipment leases, telephone, electric, office supplies, property taxes, office maintenance
- Vouchers/Journal Entries – (1) travel expenses incurred by Service Company personnel, (2) other items submitted for reimbursement by employees, including professional association dues, (3) outside service contracts for such things as actuarial

services, and (4) various other expenditures, including data center expenses for software licenses and hardware maintenance.

Service Company expenses are either assigned directly or allocated to operating companies, as shown in the table below.

Expense Category	Direct Charged	Allocated	Comments
Labor	X	X	Professional personnel working for one or several operating companies
Labor-Related Overheads	X	X	These are primarily employee benefit costs that relate directly to labor
Support		X	Administrative personnel support the professional staff, thus support costs are allocated on the basis of professional labor
Office Expense		X	Are all allocated on the basis of professional labor
Vouchers/Journals	X	X	May be either directly in support of one operating company (e.g., an engineer traveling from the Corporate Office to the operating company) or allocated to several operating companies

A direct charge occurs when Service Company work or expenses are incurred in support of only one operating company. Direct charge examples include work in support of an operating company's rate case, engineering design work on an operating company's project and the preparation of an operating company's financial statements.

Service Company expenses are allocated when more than one operating company benefits from the underlying work. Examples include assessments of new Federal water quality regulations, development of the company-wide materials procurement contracts and creation of company-wide engineering design standards.

Charging and Assignment Of Service Company Time and Expenses

Service Company transactions are assigned with the following information so there is a proper accounting and eventual charging to an operating company:

- Operating company
- Formula number
- Work order (where applicable)
- Authorization number (where applicable)

Charges can originate from the following systems:

- Payroll System
- RVI System (outside vendor payments)
- PCard System (credit card payments)
- Internal Purchase Order System
- Journal entries

II – Background

The Service Company's time reporting process enables labor and support charges to be assigned to the proper operating company. Labor charges are based on the time reported by managerial and professional Service Company employees. Every week, Service Company professional employees complete an electronic time sheet that shows:

- Formula number (this is linked to operating company within American Water's financial system)
- Employee hours worked
- Account number for non-labor charges

At month-end, time report information is processed and direct and allocated professional labor hours tabulated for each operating company. Dollar charges are then calculated using the hourly rate of each Service Company professional employee based upon their base salary (i.e., an employee's hours times their hourly rate of pay).

Support (administrative) personnel charge their time to the activity "General Admin." As described in the table on page 4, their labor charges are allocated to operating companies based upon how their office's professional personnel labor charges are assigned. For instance, if 10% of American Water's Shared Services' professional labor is assigned to NJAWC during a month, then 10% of that office's monthly administrative labor charges also are assigned to the operating company.

The overhead cost category is next assigned based on professional and administrative labor costs. Thus, if 10% of the Shared Services' accumulated professional and support labor is charged to NJAWC during the month, then 10% of that month's overhead expenses will be assigned to NJAWC.

Each Service Company location's office expenses are allocated to operating companies based on how professional labor charges for that office have been assigned. For instance, if 2% of professional labor from one Service Company office is assigned to NJAWC, then 2% of that office's office expenses would be assigned to NJAWC. Thus, office expenses are allocated in the very same way as administrative labor.

Vouchers/journal entries may be charged directly or allocated, depending on who benefits from the expenditure. For instance, the cost of a continuing professional education course taken by a professional in a regional office is allocated to the operating companies served by that office. Travel expenses by that same professional to a rate case proceeding are charged directly to the operating company whose case is being heard.

III – Service Company Cost Comparison Approach

During the 12 months ended June 30, 2009, the Service Company billed NJAWC $34,094,415 in O&M-related charges and $2,541,741 in capital-related charges. Included in the O&M amount are certain non-recurring expenses which are excluded from this market study because NJAWC is not seeking their recovery. As calculated in the table below, net testable Service Company charges of $36,550,356 were subjected to a market cost comparison.

	12 Months Ended June 30, 2009
Mgmt Fee Expense (O&M)	$ 34,094,415
Add/Subtract: Non-Recurring Items	
Sarbanes-Oxley	$ 9,117
Divestiture Support	$ 19,012
Business Change	$ (113,929)
Net O&M Expenses	$ 34,008,615
Mgmt Fees - Capital	$ 2,541,741
Total Testable AWWSC Charges	**$ 36,550,356**

For purposes of comparing these charges to certain outside benchmarks, Service Company services were placed into two categories:

- Managerial and Professional Services – Includes such services as management, accounting, legal, human resources, information technology, and engineering.

- Customer Accounts Services – Includes customer-related services, such as call center, credit, billing, collection and payment processing.

Total test period Service Company charges break down between management/professional services and customer account services as follows:

	12 Months Ended June 30, 2009	
	Amount	Hours
Management and Professional Services	$ 26,876,116	261,863
Customer Account Services	$ 9,674,240	278,715
Total	$ 36,550,356	540,578

This study's first question—whether Service Company 12 months ended June 30, 2009 charges were reasonable—was determined by comparing NJAWC's A&G-related Service Company charges per customer to the same charges for utility companies that must file the FERC Form 60 – Annual Report of Service Companies.

The second question—whether Service Company charges during the 12 months ended June 30, 2009 were at the lower of cost or market—was evaluated by comparing the cost per hour for managerial and professional services provided by Service Company personnel to hourly billing rates that would be charged by outside providers of equivalent services. Service Company costs per hour were based on actual charges to NJAWC during the 12 months ended June 30, 2009. Outside providers' billing rates came from surveys or other information from professionals that could perform the services now provided by the Service Company.

III – Service Company Cost Comparison Approach

The third question—whether Service Company's 12 months ended June 30, 2009 customer account services charges, including National Call Center costs, were comparable to other utilities—was addressed by comparing NJAWC's customer accounts services expenses to those of neighboring investor owned electric utilities. This utility comparison group was selected because the cost of outside providers of customer accounts services is proprietary and not publicly available. Comparison to electric utilities is appropriate because all utilities, regardless of service type, must perform customer account services activities, including updating customer records for meter reads, printing and mailing bills, and the collection and processing of customer payments. Electric utility costs are available from the Federal Energy Regulatory Commission (FERC) Form 1, thus there is appropriate data transparency. The selection of electric utilities from New Jersey and neighboring states provides a sufficiently sized comparison group.

The fourth question—the necessity of Service Company services—was investigated by defining the services provided to NJAWC and determining if these services would be required if NJAWC were a stand-alone utility.

NJAWC's Service Company Cost per Customer

During the 12 months ended June 30, 2009, NJAWC was charged $49 per customer by the Service Company for A&G/O&M-related services. The calculation of this amount, shown in the table below, starts with total net testable Service Company charges and adjusts for capital and non-A&G functions (engineering, operations and water quality) charges. These adjustments are necessary to develop a per customer cost that is comparable to cost of utility service companies.

	12 Months ended Jun 30, 2009 AWWSC Charges
Testable Service Company charges	$ 36,550,356
Less: Capital charges	$ (2,541,741)
Less: Non-A&G function O&M charges	
Engineering	$ (4,153)
Operations	$ (1,232,226)
Water Quality	$ (1,277,188)
Net A&G/O&M-related charges	$ 31,495,047
NJAWC customers	638,458
NJAWC Cost Per Customer	**$ 49**

Comparison Group Cost Per Customer

Every centralized service company in a holding company system subject to regulation by the FERC must file a Form 60 in accordance with the Public Utility Holding Company Act of 2005, Section 1270, Section 390 of the Federal Power Act and 18 C.F.R. paragraph 366.23. This report is designed to collect financial information from service companies that are subject to regulation by the FERC.

For 2008, a Form 60 was filed by 24 utility service companies, all of which serve utilities that provide regulated electric and, in some cases, gas service to retail customers. In order to make a valid comparison of this group's costs to those of American Water Works Service Company, it was necessary to isolate expenses that that they have in common. These include A&G-related charges associated with the following FERC accounts:

901 – Supervision	921 – Office supplies and expenses
903 – Customer records and collection expenses	923 – Outside services employed
905 – Miscellaneous customer accounts expenses	926 – Employee pensions and benefits
907 – Supervision	928 – Regulatory commission expenses
910 – Misc customer service and info expenses	930.2 – Miscellaneous general expenses
911 – Supervision	931 – Rents
920 - Administrative and general salaries	935 – Maintenance of structures and equipment

O&M expenses charged to utility affiliates for the comparison group service companies were obtained from Schedule XVI – Analysis of Charges for Service Associate and Non-Associate Companies (p. 303 to 306) of each entity's FERC Form 60. This schedule shows charges by FERC Account.

Comparison group service company 2008 expenses were also adjusted to remove charges to non-regulated affiliates from the cost pool used to calculate the cost per regulated service

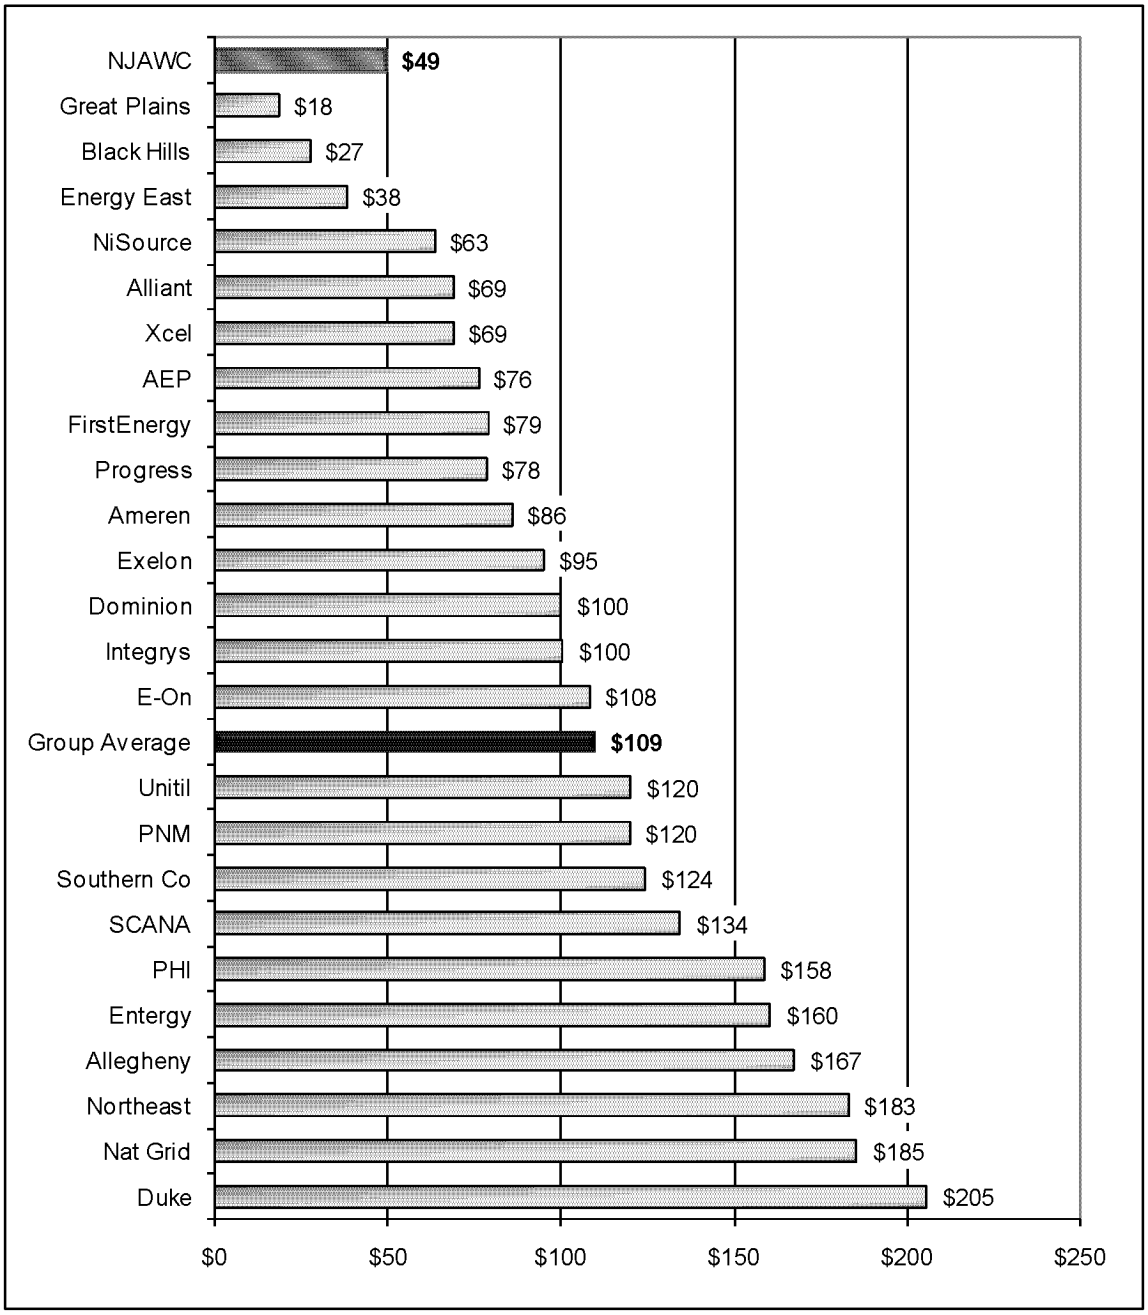
customer. This determination was made using information from the FERC Form 60 schedule: Account 457 – Analysis of Billing – Associate Companies.

IV – Question 1 – Reasonableness of Service Company Charges

A&G expenses per regulated utility customer for the 24 utility companies that file Form 60 for 2008 are calculated below.

Utility Company	2008 Regulated Retail Service Company A&G Expenses	Regulated Retail Customers	Cost per Customer
AEP	$396,340,118	5,213,000	$ 76
Allegheny	$263,588,707	1,577,873	$ 167
Alliant	$205,754,832	3,000,000	$ 69
Ameren	$291,684,710	3,400,000	$ 86
Black Hills	$20,763,828	759,400	$ 27
Dominion	$357,718,046	3,588,500	$ 100
Duke	$923,936,645	4,500,000	$ 205
Energy East	$113,714,789	2,989,800	$ 38
Entergy	$432,575,683	2,700,000	$ 160
E-On	$136,276,177	1,263,000	$ 108
Exelon	$558,687,014	5,885,000	$ 95
FirstEnergy	$354,028,109	4,499,000	$ 79
Great Plains	$15,000,708	820,000	$ 18
Integrys	$216,364,166	2,157,000	$ 100
Nat Grid	$1,240,706,398	6,700,000	$ 185
NiSource	$237,380,009	3,750,000	$ 63
Northeast	$302,138,730	1,654,000	$ 183
PHI	$302,463,412	1,910,000	$ 158
Progress	$242,677,256	3,100,000	$ 78
PNM	$102,688,385	859,000	$ 120
SCANA	$191,207,825	1,424,300	$ 134
Southern Co	$546,498,605	4,402,000	$ 124
Unitil	$20,341,422	169,600	$ 120
Xcel	$367,626,617	5,345,000	$ 69
Group Total	**$7,840,162,191**	**71,666,473**	**$ 109**

Exhibit 1 shows NJAWC's 12 months ended June 30, 2009 Service Company cost per customer of $49 to be considerably lower than the average of $109 per customer for the comparison group service companies. Only 3 of 24 comparison group service companies had a lower cost per customer than NJAWC. Based on this result, it is possible to conclude that the Service Company's 12 months ended June 30, 2009 charges to NJAWC were reasonable.



NJAWC $49
Great Plains $18
Black Hills $27
Energy East $38
NiSource $63
Alliant $69
Xcel $69
AEP $76
FirstEnergy $79
Progress $78
Ameren $86
Exelon $95
Dominion $100
Integrys $100
E-On $108
Group Average $109
Unitil $120
PNM $120
Southern Co $124
SCANA $134
PHI $158
Entergy $160
Allegheny $167
Northeast $183
Nat Grid $185
Duke $205
$0
$50
$100
$150
$200
$250

V – Question 2 – Provision of Services at the Lower of Cost or Market

Methodology

The lower-of-cost-or-market comparison is accomplished by comparing the cost per hour for Service Company managerial and professional services to those of outside service providers to whom these duties could be assigned. Based on the nature of the Service Company services it was determined that the following outside providers could perform the categories of services indicated below:

- Management Consultants – executive and administrative management, risk management services, human resources and communications services
- Attorneys – legal services
- Certified Public Accountants – accounting, financial, information technology and rates and revenues services
- Professional Engineers – engineering, operations and water quality services.

The services provided by the Belleville lab are assumed to be transferable to professional engineers for purposes of this cost comparison. This was done for two reasons. First, there is no readily available survey of hourly billing rates for testing services such as those performed by Belleville. Second, Belleville personnel have similar, scientific educational backgrounds as Service Company engineering personnel. Thus, it is valid to compare the hourly rates of Belleville services to those of outside engineering firms.

Service Company's hourly rate were calculated for each of the four outside service provider categories, based on the dollars and hours charged to NJAWC during the 12 months ended June 30, 2009. Hourly billing rates for outside service providers were developed using third party surveys or directly from information furnished by outside providers themselves.

It should be noted that by using the Service Company's hours charged NJAWC during the 12 months ended June 30, 2009, its hourly rates are actually overstated because Service Company personnel charge a maximum 8 per day even when they work more. Outside service providers generally bill for every hour worked. If the overtime hours of Service Company personnel had been factored into the hourly rate calculation, Service Company hourly rates would have been lower.

The last step in the market cost comparison was to compare the Service Company's average cost per hour to the average cost per hour for outside providers.

Service Company Hourly Rates

Exhibit 2 (page 14) details the assignment of 12 months ended June 30, 2009 management and professional Service Company charges by outsider provider category. Exhibit 3 (page 15) shows the same assignment for Service Company management and professional hours charged to NJAWC during the 12 months ended June 30, 2009.

Certain adjustments to these dollar amounts were necessary to calculate Service Company hourly rates that are directly comparable to those of outside providers. Adjustments were made to the following the 12 months ended June 30, 2009 test period non-labor Service Company charges:

V – Question 2 – Provision of Services at the Lower of Cost or Market

- Contract Services – 12 months ended June 30, 2009 Service Company charges to NJAWC include expenses associated with the use of outside professional firms to perform certain corporate-wide services (e.g., legal, financial audit, actuarial services). These professional fees are excluded from the Service Company hourly rate calculation because the related services have effectively been out-sourced already.

- Travel Expenses – In general, client-related travel expenses are not recovered by outside service providers through their hourly billing rate. Rather, actual out-of-pocket travel expenses are billed to clients in addition to fees for professional services. Thus, it is appropriate to remove these Service Company charges from the hourly rate calculation.

- Information Technology Infrastructure Expenses – Included in the 12 months ended June 30, 2009 Service Company charges to NJAWC are leases, maintenance fees and depreciation related to American Water's enterprise mainframe, server and network infrastructure and corporate business applications. An outside provider that would take over operation of this infrastructure would recover these expenses over and above the labor necessary to operate the data center.

Exhibit 4 (page 16) shows how contract services, travel expenses and computer hardware/software-related Service Company charges are assigned among the four outside provider categories.

Based on the assignment of expenses and hours shown in Exhibits 2 and 3 and the excludable items shown in Exhibit 4, the Service Company's equivalent costs per hour for the 12 months ended June 30, 2009 are calculated below.

	Attorney	Management Consultant	Certified Public Accountant	Professional Engineer	Total
Total management, professional & technical services charges	$ 1,289,713	$ 6,715,215	$ 15,836,670	$ 3,034,517	$ 26,876,116
Less:

Outside Service Provider Hourly Rates

The next step in the cost comparison was to obtain the average billing rates for each outside service provider. The source of this information and the determination of the average rates are described in the paragraphs that follow.

It should be noted that professionals working for three of the five outside provider categories may be licensed to practice by state regulatory bodies. However, not every professional working for these firms is licensed. For instance, among New Jersey certified public accounting firms, only more experienced staff are predominantly CPAs (see table below). Some Service Company employees also have professional licenses. Thus, it is valid to compare the Service Company's hourly rates to those of the outside professional service providers included in this study.

Position	New Jersey Average
Partners/Owners	97%
Directors (11+ years experience)	73%
Managers (6-10 years experience)	97%
Sr Associates (4-5 years experience)	59%
Associates (1-3 years experience)	26%
New Professionals	na

Attorneys

The New Jersey State Bar does not survey its members as to their hourly billing rates. In addition, publicly available billing rate information could not be found for New Jersey attorneys. Therefore, an estimate of New Jersey attorney rates was developed from two surveys conducted by Lawyers Weekly in the states of Michigan and Massachusetts. As presented in Exhibit 5, the average rate for each firm was adjusted for the cost of living differential between its location and Trenton, New Jersey. The Lawyers Weekly surveys included rates in effect at December 31, 2007. Thus, the 2007 average rate was escalated to December 31, 2008—the midpoint of the test year ended June 30, 2009.

Management Consultants

The cost per hour for management consultants was developed from a 2009 survey performed by the Association of Management Consulting Firms—an industry trade organization. The survey includes rates that were in effect during 2008 for firms throughout the United States. Consultants typically do not limit their practice to any one region and must travel to a client's location. Thus, the U.S. national average is appropriate for comparison.

The first step in the calculation, presented in Exhibit 6, was to determine an average rate by consultant position level. From these rates, a single weighted average hourly rate was calculated based upon the percent of time that is typically applied to a consulting assignment by each consultant position level.

Certified Public Accountants

The average hourly rate for New Jersey CPAs was developed from a 2008 survey performed by the American Institute of Certified Public Accountants (AICPA). The New Jersey version of this survey was used to develop hourly rates for member firms in New Jersey.

As shown in Exhibit 7, a weighted average hourly rate was developed based on a set of accountant positions and a percent of time that is typically applied to an accounting assignment. This survey includes rate information in effect during 2007. Thus, the data had to be escalated to December 31, 2008—the midpoint of the test year ended June 30, 2009.

Professional Engineers

The Company provided hourly rate information for outside engineering firms that could have been used by NJAWC in 2009. As presented in Exhibit 8, an average rate was developed for each engineering position level. Then, using a typical percentage mix of project time by engineering position, a weighted average cost per hour was calculated.

V – Question 2 – Provision of Services at the Lower of Cost or Market

Service Company versus Outside Provider Cost Comparison

As shown in the table below, Service Company costs per hour are considerably lower than those of outside providers.

	12 Months Ended June 30, 2009		
Service Provider	Service Company	Outside Provider	Difference-- Service Co. Greater(Less) Than Outside
Attorney	$ 97	$ 266	$ (170)
Management Consultant	$ 109	$ 224	$ (115)
Certified Public Accountant	$ 71	$ 143	$ (72)
Professional Engineer	$ 73	$ 102	$ (28)

Based on these cost per hour differentials and the number of managerial and professional services hours billed to NJAWC during the 12-months ended June 30, 2009, outside service providers would have cost $20,240,390 more than the Service Company (see table below). Thus, on average, outside provider's hourly rates are 75% higher than those of the Service Company ($20,240,390 / $26,876,116).

	12 Months Ended June 30, 2009		
Service Provider	Hourly Rate Difference-- Service Co. Greater(Less) Than Outside	Service Company Hours Charged	Dollar Difference
Attorney	$ (170)	11,798	$ (2,002,519)
Management Consultant	$ (115)	43,874	$ (5,055,494)
Certified Public Accountant	$ (72)	170,127	$(12,165,996)
Professional Engineer	$ (28)	36,064	$ (1,016,381)
Service Company Less Than Outside Providers			$(20,240,390)

It should be noted that the cost differential associated with using outside providers is even greater because Service Company personnel do not charge for more than 8 hours per day even when they work more. Outside providers generally charge clients for all hours worked. If, for instance, Service Company personnel worked 5% overtime (2 hours) per week on NJAWC's behalf, that would have amounted to over 13,000 additional hours of work during the 12 months ended June 30, 2009. Based on the hourly rate differentials above, this overtime would have added another $1,012,000 to the cost of using outside provider.

If NJAWC were to use outside service providers rather than the Service Company for managerial and professional services, it would incur other additional expenses besides those associated with higher hourly rates. Managing outside firms who would perform over 264,000 hours of work (more than 176 full-time equivalents at 1,500 "billable" hours per FTE per year) would add a significant workload to the existing NJAWC management team. Thus, it would be necessary for NJAWC to add at least two positions to supervise the outside firms and ensure they delivered quality and timely services. The individuals that would fill these positions would need a good understanding of each profession being managed. They must also have management experience and the authority necessary to give them credibility with the outside firms. As calculated in the table below, this position would add more than $300,000 per year to NJAWC's personnel expenses.

V – Question 2 – Provision of Services at the Lower of Cost or Market

Cost of Adding 2 Professional Positions To NJAWC's Staff

	Total
New Positions' Salary	$ 100,000
Benefits (at 49.4%)	$ 49,400
Office Expenses (15.2%)	$ 15,200
Cost per Position	$ 164,600
Number of Positions	2
Total Cost of Two Positions	$ 329,200

Thus, the total effect on the ratepayers of NJAWC of contracting all services now provided by Service Company would be an increase in their costs of $20,569,590 ($20,240,390 + $329,200). Based on the results of this comparison, it is possible to conclude that the Service Company charged NJAWC at the lower of cost or market for services provided during the 12 months ended June 30, 2009.

VI - Question 3 - Reasonableness of Customer Accounts Services Costs

Background

Customer Accounts Services involve the processes that occur from the time meter read data is recorded in the customer information system through the printing and mailing of bills through the collection and processing of customer payments. Customer Accounts Services are accomplished by the following utility functions:

- Customer Call Center Operations – customer calls/contact, credit, order taking/disposition, bill collection efforts and outage calls
- Customer Call Center Maintenance – support of phone banks, voice recognition units, call center software applications and telecommunications
- Customer billing – bill printing, stuffing, and mailing
- Remittance processing – processing customer payments received in the mail
- Bill payment centers – processing customer payments at locations where customers can pay their bills in person

Neighboring electric utility cost information comes from the FERC Form 1 that each utility that is subject to FERC regulation, must file. FERC's chart of accounts is defined in Chapter 18, Part 101 of the Code of Federal Regulations. FERC accounts that contain customer accounts services-related expenses are Account 903 Customer Accounts Expense – Records and Collection Expense and Account 905 Customer Accounts Expense – Miscellaneous Customer Accounts Expense. Exhibit 9 provides FERC's definition of the type of expenses that should be recorded in these accounts.

In addition to the charges in these FERC accounts, labor-related overheads charged to the following FERC accounts must be added to the labor components of Accounts 903 and 905:

- Account 926 Employee Pension and Benefits
- Account 408 Taxes Other Than Income (employer's portion of FICA)

Comparison Group

Electric utilities included in the comparison group are shown in the table below. These are companies whose FERC Form 1 show amounts for accounts 903 and 905.

New York	• Central Hudson Gas & Elect • Consolidated Edison • New York State Elect & Gas	• Niagra Mohawk Power • Orange & Rockland Utilities • Rochester Gas & Electric
Pennsylvania	• Duquesne Light • Metropolitan Edison • PECO Energy • Pennsylvania Electric	• Pennsylvania Power • PPL Electric Utilities • West Penn Power
New Jersey	• Atlantic City Electric • Jersey Central Power	• Public Service Electric & Gas
Maryland	• Delmarva Power & Light	

New Jersey American Water Company
FERC Account Descriptions

903 – Customer Records and Collection Expenses

This account shall include the cost of labor, materials used and expenses incurred in work on customer applications, contracts, orders, credit investigations, billing and accounting, collections and complaints.

Labor

1. Receiving, preparing, recording and handling routine orders for service, disconnections, transfers or meter tests initiated by the customer, excluding the cost of carrying out such orders, which is chargeable to the account appropriate for the work called for by such orders.
2. Investigations of customers' credit and keeping of records pertaining thereto, including records of uncollectible accounts written off.
3. Receiving, refunding or applying customer deposits and maintaining customer deposit, line extension, and other miscellaneous records.
4. Checking consumption shown by meter readers' reports where incidental to preparation of billing data.
5. Preparing address plates and addressing bills and delinquent notices.
6. Preparing billing data.
7. Operating billing and bookkeeping machines.
8. Verifying billing records with contracts or rate schedules.
9. Preparing bills for delivery, and mailing or delivering bills.
10. Collecting revenues, including collection from prepayment meters unless incidental to meter reading operations.
11. Balancing collections, preparing collections for deposit, and preparing cash reports.
12. Posting collections and other credits or charges to customer accounts and extending unpaid balances.
13. Balancing customer accounts and controls.
14. Preparing, mailing, or delivering delinquent notices and preparing reports of delinquent accounts.
15. Final meter reading of delinquent accounts when done by collectors incidental to regular activities.
16. Disconnecting and reconnecting services because of nonpayment of bills.
17. Receiving, recording, and handling of inquiries, complaints, and requests for investigations from customers, including preparation of necessary orders, but excluding the cost of carrying out such orders, which is chargeable to the account appropriate for the work called for by such orders.
18. Statistical and tabulating work on customer accounts and revenues, but not including special analyses for sales department, rate department, or other general purposes, unless incidental to regular customer accounting routines.
19. Preparing and periodically rewriting meter reading sheets.
20. Determining consumption and computing estimated or average consumption when performed by employees other than those engaged in reading meters.

Materials and expenses

21. Address plates and supplies.
22. Cash overages and shortages.
23. Commissions or fees to others for collecting.
24. Payments to credit organizations for investigations and reports.
25. Postage.
26. Transportation expenses, including transportation of customer bills and meter books under centralized billing procedure.
27. Transportation, meals, and incidental expenses.
28. Bank charges, exchange, and other fees for cashing and depositing customers' checks.
29. Forms for recording orders for services, removals, etc.
30. Rent of mechanical equipment.

New Jersey American Water Company
FERC Account Descriptions

905 – Miscellaneous Customer Accounts Expenses
This account shall include the cost of labor, materials used and expenses incurred not provided for in other accounts.
Labor
1. General clerical and stenographic work.
2. Miscellaneous labor.

Materials and expenses
3. Communication service.
4. Miscellaneous office supplies and expenses and stationery and printing other than those specifically provided for in accounts 902 and 903.

VI - Question 3 - Reasonableness of Customer Accounts Services Costs

NJAWC Cost per Customer

As calculated below, NJAWC's 12 months ended June 30, 2009 customer account services expense per customer was $26.33. The cost pool used to calculate this average includes charges for Service Company services (e.g., call center, billing, payment processing) and postage and forms expenses, which are incurred directly by NJAWC. It was necessary to adjust the National Call Center charges because electric utilities experience an average of 2.50 calls per customer compared to American Water's 1.32 calls per customer. Thus, National Call Center expenses had to be increased, for comparison purposes, to reflect its costs at a 2.50 calls per customer level.

New Jersey American Water Company

Cost Component		Service Co Charges	Adjustment Fewer Calls For Water Cos. (A)	Adjusted	
Service Company					
Call Centers	Call processing, order processing, credit, bill collection	$ 9,663,854	$ 3,513,016	$13,176,870	
Regional Offices		$ 10,386		$ 10,386	
Service Company	Customer payment processing			$ 819,780	(B)
Operating Company	Postage & forms			$ 2,806,407	
			Cost Pool Total	$16,813,442	
			Total Customers	638,458	
Year Ended June 30, 2009 Cost Per New Jersey American Customer				**$ 26.33**	

Note A: Adjustment for American Water's fewer calls per customer

This adjustment is necessary because water utilities experience fewer calls per customer than do electric utilities

Call handling expenses		$ 3,906,184
Electric utility industry's avg calls/customer	2.50	
American Water's avg calls/customer	1.32	
Percent different	90%	90%
Total Adjustment		$ 3,513,016

Note B: Estimated customer payment processing expenses

Number of customer bills	7,661,496
Bank charge per item	$ 0.1070
Total estimated annual expense	$ 819,780

Electric Utility Group Cost per Customer

Exhibit 10 shows the actual 2008 customer accounts expense per customer calculation for the electric utility comparison group. All of the underlying data was taken from the utilities' FERC Form 1.

VI - Question 3 - Reasonableness of Customer Accounts Services Costs

Summary of Results

As shown in the table below, NJAWC's cost per customer is well below the average cost of the neighboring electric utility comparison group. It can therefore be concluded that NJAWC's 12 months ended June 30, 2009 customer accounts-related expenses, including those of the Alton and Pensacola Call Centers, assigned by the Service Company to NJAWC were comparable to those of other utilities.

Customer Account Services Expenses Per Customer	
West Penn Power Company	$12.54
Pennsylvania Electric Company	$14.28
Pennsylvania Power Company	$15.69
Metropolitan Edison Company	$15.79
Jersey Central Power & Light Company	$15.99
Duquesne Light Company	$17.17
New Jersey American Water	**$26.33**
Rochester Gas & Electric Corporation	$26.62
PPL Electric Utilities Corporation	$28.02
Niagra Mohawk Power Corporation	$31.14

Analysis of Services

The final aspect of this study was an assessment of whether the services that are provided to NJAWC by the Service Company would be necessary if NJAWC were a stand-alone water utility. The first step in this evaluation was to determine specifically what the Service Company does for NJAWC. Based on discussions with Service Company personnel, the matrix in Exhibit 11 was created showing which entity—NJAWC or a Service Company location—is responsible for each of the functions NJAWC requires to ultimately provide service to its customers. This matrix was reviewed to determine: (1) if there was redundancy or overlap in the services being provided by the Service Company and (2) if Service Company services are typical of those needed by a stand-alone water utility.

Upon review of Exhibit 12, the following conclusions can be drawn:

- The services that the Service Company provides are necessary and would be required even if NJAWC were a stand-alone water utility.

- There is no redundancy or overlap in the services provided by the Service Company to NJAWC. For all of the services listed in Exhibit 12, there was only one entity that was primarily responsible for the service.

Governance Practices Associated With Service Company Charges

There are several ways by which NJAWC exercises control over Service Company services and charges. The most important of these are described below.

- **NJAWC Company Board Oversight** – The NJAWC board of directors includes members of American Water's Executive Management Team, members of the NJAWC management team and external business and community leaders. This diverse board ensures that NJAWC's needs are a factor in the delivery of Service Company services. The NJAWC Board meets at a minimum of four times each year and at every meeting financial and operational reports and issues are discussed at length.
- **NJAWC President Oversight** – The NJAWC President is responsible for the overall performance of NJAWC, including services and charges received from the American Water Service Company. The President of NJAW is also a board member on the Service Company's Board of Directors (see below for further discussion). In addition, as part of the overall management team of American Water through the President of Regulated Operations, NJAWC's President has a significant voice in major business decisions of American Water and has the ability to monitor Service Company performance quality and spending as NJAWC's President is one of five direct reports to the President of Regulated Operations.
- **NJAWC Vice President and Treasurer** – The Vice President and Treasurer is responsible for the financial reporting, performance and internal controls of the NJAWC. The Vice President and Treasurer monitors the performance, expense and reporting from the Service Company and verifies and validates the cost of services received. In addition, the Vice President and Treasurer through the Financial Planning and Analysis staff reviews the monthly charges and investigates whenever the amount, quality and/or services are appropriate.
- **Service Company Board Oversight** – The Service Company Board of Directors is comprised of 16 members, of which NJAWC President is one of the members. They typically meet four times a year to provide governance on the activities and bylaws of Service Company. Their primary responsibilities include:
  - Approve the Business Plan and Operating Budget
  - Review Financial Performance of the Service Center
  - Review performance metrics of certain functional groups
  - Approve policy, procedures and practices of AW as it relates to Service Company.
- **Service Company Budget Review/Approval** – the NJAWC president and several other state regulated water utility presidents serve on the Service Company board of directors and that board must formally approve the budget for Service Company charges for the next year. These budgeted charges are consolidated with the operating company's own spending into an overall budget which must be approved by the individual operating company's board of directors (e.g., NJAWC).
- **Major Project Review And Approval –** Major non-capital projects undertaken by the Service Company must first be reviewed by American Water's Executive Management Team, which includes the President of Regulated Operations. The President of Regulated Operations, with significant input from his direct reports (including the NJAWC president), has the ability to impact all new initiatives and projects before they are authorized. Major non-capital projects and initiatives for the Service Company are approved through the Business Plan. All significant business initiatives (capital or non-capital) are required to be submitted to the "BATT" (Business and Technology Team) committee for final approval. The "BATT" team is comprised of C-level executive members (CEO, CFO, etc.).

- **Capital Investment Management** (CIM) – CIM covers capital and asset planning and is employed throughout American Water, including the Service Company. CIM provides a full range of governance practices, including a formal protocol for assessing system needs, prioritizing expenditures, managing the capital program, approving project spending, delivering projects and measuring outputs. CIM ensures that:
  - Capital expenditure plans are aligned with the strategic intent of the business
  - The impact of capital expenditure and income plans are fully reflected in operating expense plans
  - The impacts of these plans are understood and affordable
  - Effective controls are in place over budgets (through business plans) and individual capital projects (through appropriate authorization thresholds, management and reporting processes).

  The CIM process was designed to optimize the effectiveness of asset investment.
- **Accounting and Financial Reporting –** Similar to the states, the Service Company follows the same accounting and financial reporting processes. During the month accounting transactions are recorded. At month end, the SSC and Service Company Finance teams review all transactions. Variance analyses are performed based on month to month actual as well as actual to budget to ensure accuracy. Once completed, the service company bill is run and the actuals are "pushed down" and allocated to the states based on predetermined formulas. A conference call is schedule before the operating companies close their books each month to discuss Service Company performance. This is based at a functional level with explanation reported for those expense variances that meet or exceed certain thresholds. At this time, the operating companies may question expenses and spending for better understanding of results. NJAWC Financial Performance and Analysis (FP&A) personnel review the monthly Service Company bill for accuracy and reasonableness on a monthly basis. Any mistakes or overcharges are credited on a subsequent billing.
- **NJAWC Company Budget Variance Reporting** – The "Budget/Plan Analysis," produced monthly by each operating company, has line items for Management Fees and Shared Service Expense (i.e., IT, Call Center, etc.). In this way, Service Company budget versus actual charges as charged to the operating company can be monitored and reviewed for the month and year-to-date as compared to prior year, plan and reforecast.

NEW JERSEY-AMERICAN WATER COMPANY, INC.,

FOR APPROVAL OF INCREASED TARIFF RATES

AND CHARGES FOR WATER AND WASTEWATER SERVICE

AND OTHER TARIFF REVISIONS

B.P.U. Docket No. WR1004_____

O.A.L. Docket No. PUC

Direct Testimony of

Patrick L. Baryenbruch

Exhibit PT 18

NEW JERSEY-AMERICAN WATER COMPANY, INC.

1. Q. Please state your name and business address.

A. Patrick L. Baryenbruch, 2832 Claremont Road, Raleigh, North Carolina 27608.

2. Q. Please describe your educational and professional background.

A. I received a Bachelors degree in accounting from the University of Wisconsin-Oshkosh in 1974 and a Masters in Business Administration degree from the University of Michigan in 1979.

I am a financial consultant and a certified public accountant. I am a member of the American Institute of Certified Public Accountants and the North Carolina Association of Certified Public Accountants.

I began my career as a staff accountant with Arthur Andersen & Company where I performed financial audits of utilities, banks and finance companies. After three years I left to pursue an M.B.A. degree. Upon graduation from business school, I worked with the consulting firms of Theodore Barry & Associates and Scott, Madden & Associates.

During my consulting career, I have performed consulting assignments for approximately 50 utilities and 10 public service commissions. I have participated as project manager, lead or staff consultant for 24 commission-ordered management and prudence audits of public utilities. Of these, I have been responsible for evaluating the area of affiliate charges and allocation of corporate expenses in the Commission-ordered audits of Connecticut Light and Power, Connecticut Natural Gas, General Water Corporation (Pennsylvania Operations), Philadelphia Suburban Water Company (now Aqua America) and Pacific Gas & Electric Company.

My firm has performed the commission-ordered audit of Southern California Edison's 2002, 2003, 2004 and 2005 transactions with its non-regulated affiliate companies.

3. Q. What are your duties and responsibilities in your current position?

A. I am the President of my own consulting practice, Baryenbruch & Company, LLC, which was established in 1985. In that capacity, I provide consulting services to utilities and their regulators.

4. Q. Please describe the reason for your testimony in this case.

A. I am presenting the results of my study which evaluated the services provided by American Water Service Company ("Service Company") during the 12 months ended June 30, 2009 to New Jersey American Water Company (NJAWC). This study was undertaken in conjunction with NJAWC's rate case and is true to the best of my knowledge and belief. The study is attached as Schedule PLB-1.

5. Q. What were the objectives of your study?

A. This study was undertaken to answer four questions concerning the services provided by the Service Company to NJAWC, each of which bears on the reasonableness of those charges as incurred during the 12 months ended June 30, 2009. First, were the Service Company's charges to NJAWC during the 12 months ended June 30, 2009 reasonable? Second, was NJAWC charged the lower of cost or market for managerial and professional services provided by the Service Company during the 12 months ended June 30, 2009? Third, were the 12 months ended June 30, 2009 costs of the Service Company's customer accounts services, including those of the National Call Centers, comparable to those of other utilities? Fourth, are the services NJAWC receives from Service Company necessary?

6. Q. What conclusions were you able to draw concerning question number 1, whether the Service Company charges to NJAWC were reasonable?

A. The Service Company's 12 months ended June 30, 2009 cost per NJAWC customer was very reasonable compared to cost per customer for electric and combination electric/gas service companies. During the 12 months ended June 30, 2009, NJAWC was charged $49 per

customer for administrative and general (A&G)-related services provided by the Service Company. This compares to an average of $109 per customer for service companies reporting to the Federal Energy Regulatory Commission (FERC). Only 3 of the 24 utility service companies that filed a FERC Form 60 for 2008 had a lower per customer A&G cost than NJAWC's charges from the Service Company.

7. Q. What conclusions were you able to draw concerning question number 2, whether NJAWC was charged the lower of cost or market services provided by the Service Company?

A. I was able to draw the following conclusions:

(1) NJAWC was charged the lower of cost or market for managerial and professional services during the 12 months ended June 30, 2009.

(2) On average, the hourly rates for outside service providers are 75% higher than the Service Company's hourly rates.

(3) The managerial and professional services provided by the Service Company are vital and could not be procured externally by NJAWC without careful supervision on the part of NJAWC. If these services were contracted entirely to outside providers, NJAWC would have to add at least two positions to manage activities of outside firms. These positions would be necessary to ensure the quality and timeliness of services provided.

(4) If all the managerial and professional services now provided by the Service Company had been out-sourced during the 12-months ended June 30, 2009, NJAWC and its ratepayers would have incurred an additional $20.6 million in expenses. This amount includes the higher cost of outside providers and the cost of two NJAWC positions needed to direct the outsourced work.

(5) This study's hourly rate comparison actually understates the cost advantages that accrue to NJAWC from its use of the Service Company. Outside service providers generally bill for every hour worked. Service Company managerial and professional personnel, on the other hand, charge a maximum 8 hours per day even when they work more. If the overtime hours of these Service Company personnel had been factored into the hourly rate calculation, the Service Company would have had an even greater annual dollar advantage than the $20.6 million cited above.

(6) It would be difficult for NJAWC to find local service providers with the same specialized water industry expertise as that possessed by the Service Company staff. Service Company personnel spend substantially all their time serving operating water companies. This specialization brings with it a unique knowledge of water utility operations and regulation that is most likely unavailable from local service providers.

(7) Service Company fees do not include any profit markup. Only its actual cost of service is being recovered from NJAWC ratepayers.

8. Q. What conclusions were you able to draw concerning question number 3, whether the 12 months ended June 30, 2009 costs of the Service Company's customer account services, including those of the National Call Centers, were reasonable?

A. I was able to determine that the cost of the Service Company's customer accounts services, including those provided by the National Call Centers, is within a reasonable range of the average of the neighboring electric utility comparison group. As explained in my study, this group of companies provides a reasonable proxy group for comparison to a regulated utility of the size and scope of NJAWC. During the 12-months ended June 30, 2009, the customer accounts cost for NJAWC customers was $26.34 compared to the 2008 average of $43.23 for

neighboring electric utilities. The highest comparison group per customer cost was $83.88 and the lowest $12.54.

9. Q. What conclusions were you able to draw concerning question number 4, whether the services NJAWC receives from the Service Company are necessary?

A. I was able to draw the following conclusions:

(1) The services that the Service Company provides are necessary and would be required even if NJAWC were a stand-alone water utility.

(2) There is no redundancy or overlap in the services provided by the Service Company to NJAWC.

10. Q. Does this complete your testimony?

A. Yes.

I - Introduction

Purpose Of This Study

This study was undertaken to answer four questions concerning the services provided by American Water Works Service Company, Inc. ("Service Company") to New Mexico-American Water Company ("NMA"):

1. Were the Service Company's charges to NMA during the 12-months ended December 31, 2007 reasonable?

2. Was NMA charged the lower of cost or market for managerial and professional services provided by the Service Company during 2007?

3. Were the 2007 costs of the Service Company's customer accounts services, including those of the National Call Centers, comparable to those of other utilities?

4. Are the services NMA receives from Service Company necessary?

Study Results

Concerning question 1, the following conclusions were reached:

- American Water's Service Company provides NMA with services similar to those provided by other utility service companies. This was determined based on service company information included in the Form 60, which must be filed with the Federal Energy Regulatory Commission ("FERC") by electric and combination electric/gas utility holding companies.

- American Water's 2007 cost per NMA customer was very reasonable compared to cost per customer for electric and combination electric/gas service companies. During 2007, NMA was charged $68 per customer by the Service Company compared to an average of $122 per customer for service companies reporting to the FERC.

Concerning question 2, the following conclusions can be drawn from this study:

- NMA was charged the lower of cost or market for managerial and professional services during the 12-months ended December 31, 2007.

- On average, the hourly rates for outside service providers are 52% higher than the Service Company's hourly rates.

- The managerial and professional services provided by the Service Company are vital and could not be procured externally by NMA without careful supervision on the part of NMA. If these services were contracted entirely to outside providers, NMA would have to add at least one half of one position to manage activities of outside firms. This position would be necessary to ensure the quality and timeliness of services provided.

- If all the managerial and professional services now provided by the Service Company had been outsourced during the 12-months ended December 31, 2007, NMA and its ratepayers would have incurred more than $610,000 in additional expenses. This amount includes the higher cost of outside providers and the cost of an additional one half NMA position needed to direct the outsourced work.

- This study's hourly rate comparison actually understates the cost advantages that accrue to NMA from its use of the Service Company. Outside service providers generally bill for every hour worked. Service Company exempt personnel, on the other hand, charge a maximum of 8 hours per day even when they work more hours. If the overtime hours of Service Company personnel were factored into the hourly rate calculation, the Service Company would have had an even greater annual dollar advantage than the $610,000 cited above. For instance, if Service Company overtime is conservatively estimated at 5% (2 hours per week), then that work would have cost an estimated $26,800 in additional charges from outside providers.

- It would be difficult for NMA to find local service providers with the same specialized water industry expertise as that possessed by the Service Company staff. Service Company personnel spend substantially all their time serving operating water companies. This specialization brings with it a unique knowledge of water utility operations and regulation that is most likely unavailable from local service providers.

- Service Company fees do not include any profit markup. Only its actual cost of service is being recovered from NMA ratepayers.

Concerning question 3, it was determined that the cost of the Service Company's customer accounts services, including those provided by the National Call Center, is within a reasonable range of the average of the neighboring electric utility comparison group. As will be explained further herein, this group of companies provides a reasonable proxy group for comparison to a regulated utility of the size and scope of the Service Company and NMA. During the 12-months ended December 31, 2007, the customer accounts cost for NMA customers was $32.48 compared to the 2006 average of $24.88 for neighboring electric utilities. The highest comparison group per customer cost was $49.27 and the lowest $8.82.

Concerning question 4, the following conclusions can be drawn:

- The services that the Service Company provides are necessary and would be required even if NMA were a stand-alone water utility.

- There is no redundancy or overlap in the services provided by the Service Company to NMA. For all of the services listed in Schedule 10, there was only one entity that was primarily responsible for the service.

II - Background

Overview Of American Water Works Service Company

American Water's Service Company exists to provide certain shared services to American Water subsidiaries. It follows a service company model used by many utility holding companies that own multiple regulated utilities. By consolidating executive and professional services into a single service company, utility holding companies are able to realize the following benefits for ratepayers:

- Purchasing Economies – Common expenses (e.g., insurance, chemicals, piping) can be procured on a much larger scale thereby providing greater bargaining power for the combined entity compared to individual utility operating companies. A service company facilitates corporate-wide purchasing programs through its procurement and contract administration functions.

- Operating Economies of Scale – A service company is able to deliver services more efficiently because workloads can be balanced across more persons and facilities. For instance, American Water's Service Company is able to maintain one principal data center for the entire corporation. This is much more cost-efficient than each operating utility funding their own data center with its large fixed hardware, software and staffing costs.

- Continuity of Service – Centralizing service company personnel who perform similar services facilitates job cross-training and sharing of knowledge and expertise. This makes it easier to deal with staff turnover and absences and to sustain high levels of service to operating utilities. An individual operating utility might experience considerable disruption if a key professional left and it was necessary to hire outside to fill the vacancy.

- Maintenance of Corporate-Wide Standards – Personnel in American Water's Service Company establish standards for many functions (e.g., engineering designs, operating procedures and maintenance practices). It is easier to ensure these standards are followed by every operating utility because their implementation is overseen by the Service Company.

- Improved Governance – American Water's Service Company provides another dimension of management and financial oversight that supplements local operating utility management. The Service Company facilitates standard planning and reporting that help ensure operating utilities meet the requirements of their customers in a cost effective manner.

- Retention of Personnel – A service company organization provides operating utility personnel with another career path beyond what may be available on a local level. These opportunities tend to improve employee retention.

American Water follows the model for other utility service companies in another important regard. Its services are provided to affiliate operating utilities, like NMA, at cost. American Water's Service Company is not a profit-making entity. It assigns only its actual expenses to the American Water subsidiaries it services.

The Service Company provides services to American Water operating companies from the following locations:

- Corporate Office – Includes American Water's executive management and personnel from the various corporate support services. American Water's corporate office is located in Voorhees, New Jersey.

- National Call Centers – Perform customer service functions, including: customer call processing, service order processing, correspondence processing, credit and collections. American Water maintains two call centers. One in Alton, Illinois that went into operation in 2001 and a second in Pensacola, Florida that went into operation in 2005. Prior to the establishment of these national call centers, customer service functions were performed by employees of NMA, which incurred the expense on its books.

- National Shared Services Center – The Shared Services Center, located in Cherry Hill, New Jersey, provides various financial, accounting and treasury functions that had been performed by individual operating companies. This arrangement has improved and streamlined the Company's financial processes and allowed operating companies to focus on providing utility service.

- Regional Offices – Regional offices provide operating companies with certain support services that can be performed more effectively on a regional basis because individual operating company/center workloads are not sufficient to warrant a full-time staff for these activities. At the same time, these services require closer proximity to operating companies served so they are not provided by the National Shared Services Center. Examples of regional office services include rates and revenues, engineering and operations.

- Belleville Lab – The national trace substance laboratory is located in Belleville, Illinois and performs testing for all American Water operating companies.

- Information Technology Service Centers – American Water's principal data center, located in Hershey, Pennsylvania, supports the IT infrastructure required to run corporate and operating company business applications and the communications systems. IT personnel rotate, as needed, throughout the regional offices and operating companies.

Service Company Expense Categories

The Service Company renders a monthly bill to operating companies. Charges are broken down into the following expense categories:

- Labor – base pay (salaries) of managerial and professional employees
- Labor-Related Overheads - employee benefit costs (payroll taxes, medical coverage, pensions, disability insurance) and other general expenses
- Support - wages and salaries of office support personnel, including secretaries, clerical personnel, telephone operators and mail clerks
- Office Expenses - office rent, equipment leases, telephone, electric, office supplies, property taxes, office maintenance
- Vouchers/Journal Entries – (1) travel expenses incurred by Service Company personnel, (2) other items submitted for reimbursement by employees, including professional association dues, (3) outside service contracts for such things as actuarial services, and (4) various other expenditures, including data center expenses for software licenses and hardware maintenance.

Service Company expenses are either assigned directly or allocated to operating companies, as shown in the table below.

Expense Category	Direct Charged	Allocated	Comments
Labor	X	X	Professional personnel working for one or several operating companies
Labor-Related Overheads	X	X	These are primarily employee benefit costs that relate directly to labor
Support		X	Administrative personnel support the professional staff, thus support costs are allocated on the basis of professional labor
Office Expense		X	Are all allocated on the basis of professional labor
Vouchers/Journals	X	X	May be either directly in support of one operating company (e.g., an engineer traveling from the Corporate Office to the operating company) or allocated to several operating companies

A direct charge occurs when Service Company work or expenses are incurred in support of only one operating company. Direct charge examples include work in support of an operating company's rate case, engineering design work on an operating company's project and the preparation of an operating company's financial statements.

Service Company expenses are allocated when more than one operating company benefits from the underlying work. Examples include assessments of new Federal water quality regulations, development of the company-wide materials procurement contracts and creation of company-wide engineering design standards.

Charging and Assignment Of Service Company Time and Expenses

Service Company transactions are assigned with the following information so there is a proper accounting and eventual charging to an operating company:

- Operating company number, if transaction is a direct charge
- Formula number if transaction is allocated
- Employee hours worked
- Account number for non-labor charges

Charges can originate from the following systems:

- Payroll System
- RVI System (outside vendor payments)
- PCard System (credit card payments)
- Internal Purchase Order System
- Journal entries

The Service Company's time reporting process enables labor and support charges to be assigned to the proper operating company. Labor charges are based on the time reported by managerial and professional Service Company employees. Every week, Service Company professional employees complete an electronic time sheet that shows:

- Operating company (for direct charge)
- Formula number (for allocation)
- Work order (where applicable)
- Authorization number (where applicable)

At month-end, time report information is processed and direct and allocated professional labor hours tabulated for each operating company. Dollar charges are then calculated using the hourly rate of each Service Company professional employee based upon their base salary (i.e., an employee's hours times their hourly rate of pay).

Support (administrative) personnel charge their time to the activity "General Admin." As described in the table on page 4, their labor charges are allocated to operating companies based upon how their office's professional personnel labor charges are assigned. For instance, if 20% of American Water's Western Region's professional labor is assigned to NMA during a month, then 20% of that office's monthly administrative labor charges also are assigned to the operating company.

The overhead cost category is next assigned based on professional and administrative labor costs. Thus, if 20% of the Western Region's accumulated professional and support labor is charged to NMA during the month, then 20% of that month's overhead expenses will be assigned to NMA.

Each Service Company location's office expenses are allocated to operating companies based on how professional labor charges for that office have been assigned. For instance, if 2% of professional labor from one Service Company office is assigned to NMA, then 2% of that office's office expenses would be assigned to NMA. Thus, office expenses are allocated in the very same way as administrative labor.

Vouchers/journal entries may be charged directly or allocated, depending on who benefits from the expenditure. For instance, the cost of a continuing professional education course taken by a professional in a regional office is allocated to the operating companies served by that office. Travel expenses by that same professional to a rate case proceeding are charged directly to the operating company whose case is being heard.

III – Service Company Cost Comparison Approach

During the 12 months ended December 31, 2007, the Service Company billed NMA $1,316,757 in O&M-related charges, $112,539 in capital-related charges and $7,844 other charges. Included in the O&M amount are certain non-recurring expenses and charges from non-Western regions, which are excluded from this market study. As calculated in the table below, net Service Company charges of $1,252,897 were subjected to a market cost comparison.

	12 Months Ended December 31, 2007
Mgmt Fee Expense (O&M) per P&L	$ 1,316,757
Less: Non-Recurring Expenses	
Business Change	$ (3,341)
Divestiture & SOX	$ (174,226)
Total Non-Recurring Expenses	$ (177,567)
Less: Non-Western Regions	$ (6,676)
Net Testable O&M	$ 1,132,514
Total Capital	$ 112,539
Total Other	$ 7,844
Total Testable Service Co Charges	**$ 1,252,897**

For purposes of comparing these charges to outside benchmarks, Service Company services were placed into two categories:

- Managerial and Professional Services – Includes such services as management, accounting, legal, human resources, information technology, and engineering.

- Customer Accounts Services – Includes customer-related services, such as call center, credit, billing, collection and payment processing.

Total test period Service Company charges break down between management/professional services and customer account services as follows:

	12 Months Ended Dec. 31, 2007	
	Amount	Hours
Management and Professional Services	$ 1,031,624	10,864
Customer Account Services	$ 221,273	6,261
Total Service Company Charges	$ 1,252,897	17,125

This study's first question—whether Service Company 2007 charges were reasonable—was determined by comparing NMA's net testable O&M Service Company charges per customer to those of electric and combination electric/gas utilities that file FERC Form 60 – Annual Report of Service Companies.

The second question—whether Service Company 2007 charges the lower of cost or market—was evaluated by comparing the cost per hour for managerial and professional services provided by Service Company personnel to hourly billing rates that would be charged by outside providers of equivalent services. Service Company costs per hour were based on actual charges to NMA during the 12 months ended December 31, 2007. Outside providers' billing rates came from surveys or other information from professionals that could perform the services now provided by the Service Company.

The third question—whether Service Company 2007 customer account services charges, including those of the National Call Center costs, were comparable to other utilities—was addressed by comparing NMA's customer accounts services expenses to those of neighboring electric utilities. This approach was selected because the costs of outside providers of call center services are not publicly available. However, electric utility customer account services expenses can be obtained from the FERC Form 1. The availability and transparency of FERC data adds to the validity of its use in this comparison.

The fourth question—the necessity of Service Company services—was first investigated by determining the services provided to NMA. A determination was then made as to whether these services would be required if NMA were a stand-alone utility.

IV – Reasonableness Of Service Company Charges

NMA's Service Company Cost Per Customer

During 2007, NMA was charged $68 per customer in O&M expenses by the Service Company. As shown in the table below, this calculation is made using net testable O&M, which eliminates certain O&M items for which NMA has not requested cost recovery.

	2007
Net Testable Service Company O&M Expenses	$ 1,132,514
NMA Customers (12/31/07)	16,774
NMA Cost Per Customer	$ 68

Comparison Group Cost Per Customer

Every centralized service company in a holding company system must file a Form 60 in accordance with the Public Utility Holding Company Act of 2005, Section 1270, Section 390 of the Federal Power Act and 18 C.F.R. paragraph 366.23. This report is designed to collect financial information from service companies that are subject to regulation by the FERC.

Twenty-three utility holding companies filed a Form 60 for 2007. All but two were included in the comparison group. The service company for PNM Resources, Inc. was excluded because its 2007 service company cost per regulated utility customer was clearly an anomaly as a negative number. This result is likely due to the unique manner by which PNM's service company expenses are reported on Form 60. Duke Energy was also excluded from the comparison group because one of its two service companies did not provide numbers for its Form 60. Thus, it was not possible to develop Duke's consolidated service company cost per customer for 2007.

Schedule 1 compares the services provided by American Water's Service Company to the services provided by comparison group service companies. In general, the types of services provided by American Water's Service Company are similar to those provided by comparison group service companies.

O&M expenses charged to utility affiliates for the comparison group service companies were obtained from Schedule XVII – Schedule of Expense Distribution by Department or Service Function (p. 305 to 305c) of each entity's FERC Form 60. This schedule shows charges by category of service (e.g., accounting, information technology) and type of cost (e.g., labor, benefits, outside services). The following were eliminated from the comparison group's total expenses because they are not in American Water Service Company's 2007 charges to NMA:

- All electric- and gas-related services
- Income taxes (account 409), provision for deferred income taxes (account 410), provision for deferred income taxes – credit (account 411) and investment tax credit (account 411.5).
- Donations (account 426.1)
- Interest on long-term debt (account 427), interest on debt to associate companies (account 430) and other interest expense (account 431)

Comparison group service company 2007 expenses were also adjusted to remove charges to non-regulated affiliates from the cost pool used to calculate the cost per regulated service customer. This determination was made using information from the FERC Form 60 schedule: Account 457 – Analysis of Billing – Associate Companies.

Schedule 2 shows NMA's 2007 Service Company cost per customer of $68 to be considerably lower than the average of $122 per customer for the comparison group service companies. Only 4 of 21 comparison group service companies had a lower 2007 cost per customer than NMA. Based on this result, it is possible to conclude that the Service Company's 2007 charges to NMA were reasonable.

V – Managerial And Professional Services Hourly Rate Comparison

Methodology

The lower-of-cost-or-market comparison is accomplished by comparing the cost per hour for Service Company managerial and professional services to those of outside service providers to whom these duties could be assigned. Based on the nature of the Service Company services it was determined that the following outside providers could perform the categories of services indicated below:

- Management Consultants – executive and administrative management, risk management services, human resources and communications services
- Attorneys – legal services
- Certified Public Accountants – accounting, financial, information technology and rates and revenues services
- Professional Engineers – engineering, operations and water quality services.

The services provided by the Belleville lab are assumed to be transferable to professional engineers for purposes of this cost comparison. This was done for two reasons. First, there is no readily available survey of hourly billing rates for testing services such as those performed by Belleville. Second, Belleville personnel have similar, scientific educational backgrounds as Service Company engineering personnel. Thus, it is valid to compare the hourly rates of Belleville services to those of outside engineering firms.

Service Company's hourly rate were calculated for each of the four outside service provider categories, based on the dollars and hours charged to NMA during the 12 months ended December 31, 2007. Hourly billing rates for outside service providers were developed using third party surveys or directly from information furnished by outside providers themselves.

It should be noted that by using the Service Company's hours charged NMA during 2007, its hourly rates are actually overstated because Service Company personnel charge a maximum 8 per day even when they work more. Outside service providers generally bill for every hour worked. If the overtime hours of Service Company personnel had been factored into the hourly rate calculation, Service Company hourly rates would have been lower.

The last step in the market cost comparison was to compare the Service Company's average cost per hour to the average cost per hour for outside providers.

Service Company Hourly Rates

Schedule 3 (page 14) details the assignment of 12 months ended December 31, 2007 management and professional Service Company charges by outsider provider category. Schedule 4 (page 15) shows the same assignment for Service Company management and professional hours charged to NMA during the 12 months ended December 31, 2007.

Certain adjustments to these dollar amounts were necessary to calculate Service Company hourly rates that are directly comparable to those of outside providers. Adjustments were made to the following 2007 test period non-labor Service Company charges:

- Contract Services – 12 months ended December 31, 2007 Service Company charges to NMA include almost $54,000 in expenses associated with the use of outside

professional firms to perform certain corporate-wide services (e.g., legal, financial audit, actuarial services). These professional fees are excluded from the Service Company hourly rate calculation because the related services have effectively been out-sourced already.

- Travel Expenses – In general, client-related travel expenses are not recovered by outside service providers through their hourly billing rate. Rather, actual out-of-pocket travel expenses are billed to clients in addition to fees for professional services. Thus, it is appropriate to remove these Service Company charges from the hourly rate calculation.

- Computer Hardware and Software Expenses – Included in the 12 months ended December 31, 2007 Service Company charges to NMA are charges for outside expenses related to leases and maintenance fees related to mainframe, server and network infrastructure, corporate business applications and the communications systems. An outside provider that would take over operation of a data center would recover these expenses over and above the labor necessary to operate the data center.

Schedule 5 (page 16) shows how contract services, travel expenses and computer hardware/software-related Service Company charges are assigned among the four outside provider categories.

Based on the assignment of expenses and hours shown in Schedules 3 and 4 and the excludable items shown in Schedule 5, the Service Company's equivalent costs per hour for the 12 months ended December 31, 2007 are calculated below.

	Attorney	Management Consultant	Certified Public Accountant	Professional Engineer	Total
Total management, professional & technical services charges	$ 41,025	$ 283,418	$ 482,541	$ 224,640	$ 1,031,624
Less:

Page 379 of 1175

Outside Service Provider Hourly Rates

The next step in the cost comparison was to obtain the average billing rates for each outside service provider. The source of this information and the determination of the average rates are described in the paragraphs that follow.

Attorneys

The New Mexico Bar Association does not survey its members as to their hourly billing rates. In addition, publicly available billing rate information could not be found for New Mexico attorneys. Therefore, an estimate of New Mexico attorney rates was developed from a survey of Michigan lawyers conducted annually by the Michigan Lawyers Weekly. As presented in Schedule 6, the average rate for each Michigan firm respondent was adjusted for the cost of living differential between their location and Clovis, New Mexico. The survey includes rates that were in effect during 2007.

Management Consultants

The cost per hour for management consultants was developed from the 2007 annual survey performed by the Association of Management Consulting Firms—an industry trade organization. The first step in the calculation, presented in Schedule 7, was to determine an average rate by consultant position level. From these rates, a single weighted average hourly rate was calculated based upon the percent of time that is typically applied to a consulting assignment by each consultant position level. This survey includes rates that were in effect during 2006 for firms in the United States. Consultants typically do not limit their practice to any one region and must travel to a client's location. Thus, the U.S. national average is appropriate for comparison. The survey includes rates that were in effect at December 31, 2006. Thus, the 2006 average rate was escalated to June 30, 2007—the midpoint of the 12 months ended December 31, 2007.

Certified Public Accountants

The average hourly rate for New Mexico certified public accountants was developed from a 2006 survey conducted every two years by the American Institute of Certified Public Accountants (AICPA). Hourly rates in the AICPA survey are the average of firms in Arizona and Texas. The New Mexico Society of CPAs did not participate in the last AICPA survey so New Mexico-only data was not available. The average hourly rate was calculated for a set of typical accountant positions, as shown in Schedule 8. Based on a typical staff assignment by each accountant position, a weighted average hourly rate was calculated. This survey covered hourly rates in effect during 2005. Thus, the 2005 average rate was escalated to June 30, 2007—the midpoint of the 12 months ended December 31, 2007.

Professional Engineers

The Service Company provided hourly rate information for outside engineering firms that were used by American Water's Western Region during 2007. One firm is located in New Mexico and two are located in Arizona. As presented in Schedule 9, an average rate was developed for each engineering position level. Then, using a typical percentage mix of project time by engineering position, a weighted average cost per hour was calculated.

Source: Information provided by American Water Works Service Company

Service Company Versus Outside Provider Cost Comparison

As shown in the table below, Service Company costs per hour are considerably lower than those of outside providers.

	12 Months Ended December 31, 2007		
Service Provider	Service Company	Outside Provider	Difference--Service Co. Greater(Less) Than Outside
Attorney	$ 122	$ 215	$ (92)
Management Consultant	$ 124	$ 219	$ (95)
Certified Public Accountant	$ 75	$ 118	$ (42)
Professional Engineer	$ 74	$ 101	$ (27)

Based on these cost per hour differentials and the number of managerial and professional services hours billed to NMA during the 12-months ended December 31, 2007, outside service providers would have cost $535,895 more than the Service Company (see table below). Thus, on average, outside provider's hourly rates are almost 52% higher than those of the Service Company ($535,895 / $ 1,031,624).

	12 Months Ended December 31, 2007		
Service Provider	Hourly Rate Difference--Service Co. Greater(Less) Than Outside	Service Company Hours Charged	Dollar Difference
Attorney	$ (92)	302	$ (27,890)
Management Consultant	$ (95)	1,978	$ (187,804)
Certified Public Accountant	$ (42)	5,779	$ (244,345)
Professional Engineer	$ (27)	2,805	$ (75,856)
Service Company Less Than Outside Providers			$ (535,895)

If NMA were to use outside service providers rather than the Service Company for managerial and professional services, it would incur other additional expenses besides those associated with higher hourly rates. Managing outside firms who would perform 10,864 hours of work (more than 7 full-time equivalents at 1,500 "billable" hours per FTE per year) would add a significant workload to the existing NMA management team. Thus, it would be necessary for NMA to add at least one half of one position to supervise the outside firms and ensure they delivered quality and timely services. The individuals that would fill this position would need a good understanding of each profession being managed. They must also have management experience and the authority necessary to give them credibility with the outside firms. As calculated in the table below, this position would add another $74,700 per year to NMA's personnel expenses.

Cost of Adding 1/2 of a Professional Position To NMA's Staff

	Total
New Positions' Salary	$ 100,000
Benefits (at 49.4%)	$ 49,400
Office Expenses (15.2%)	$ 15,200
Total Cost of Full Time Position	$ 149,400
Percent of Position Required	50%
Half Time Cost of Position	$ 74,700

Thus, the total effect on the ratepayers of NMA of contracting all services now provided by Service Company would be an increase in their costs of $610,595 ($535,895 + $74,700). Based on the results of this comparison, it is possible to conclude that the Service Company charged NMA at the lower of cost or market for services provided during 2007.

Other Cost Comparisons

Every year, the Belleville Lab conducts a comparison of its cost for performing major tests to the cost of using outside testing laboratories. Over the past several years, these surveys have shown the following results been as follows:

Year	Number of Major Tests Surveyed	Percent Belleville Lower Than Outside Labs
2000	26	15%
2001	25	19%
2002	24	16%
2003	23	10%
2004	24	9%
2005	24	25%
2006	24	31%

These studies provide additional evidence that the Service Company arrangement is the lowest-cost alternative for NMA.

VI – Customer Account Services Cost Comparison

Background

It is difficult to compare the cost of American Water's National Call Centers with outside providers of the same call center-related services. Call center survey data is proprietary and expensive to obtain. For this reason, NMA's National Call Center costs are compared to those of neighboring electric utilities because the data necessary to make this comparison is readily available to the public.

Electric utility cost information comes from their FERC Form 1. FERC's chart of accounts is defined in chapter 18, part 101 of Code of Federal Regulations. FERC accounts that contain call center-related expenses and are used in this study's comparison are:

- Account 903 Customer Accounts Expense – Records and Collection Expense
- Account 905 Customer Accounts Expense – Miscellaneous Customer Accounts Expense.

In addition, labor-related overheads charged to the following FERC accounts must be added to the labor components of Accounts 903 and 905.

- Account 926 Employee Pension and Benefits
- Account 408 Taxes Other Than Income (employer's portion of FICA).

Schedule 10 provides FERC's description of what should be charged to these accounts. In questioning the controller of a large Southeastern electric utility, it was determined that expenses of the activities described below are recorded in the designated FERC accounts.

903 Records and Collection Expense

- Customer Call Center – customer calls/contact, credit, order taking/disposition, bill collection efforts, outage calls
- Call Center IT – maintenance of phone banks, voice recognition units, call center software applications, telecommunications
- Customer billing – bill printing, stuffing and mailing
- Remittance processing – processing of customer payments received in the mail
- Bill payment centers – locations where customers can pay their bills in person

905 Miscellaneous Customer Accounts Expense

- Customer Information System IT – maintenance and support of the customer information system

This study assumes the FERC accounts for other electric and gas utilities contain expenses for the same activities.

New Mexico-American Water Company
FERC Account Descriptions

903 – Customer Records and Collection Expenses
This account shall include the cost of labor, materials used and expenses incurred in work on customer applications, contracts, orders, credit investigations, billing and accounting, collections and complaints.

Labor

1. Receiving, preparing, recording and handling routine orders for service, disconnections, transfers or meter tests initiated by the customer, excluding the cost of carrying out such orders, which is chargeable to the account appropriate for the work called for by such orders.
2. Investigations of customers' credit and keeping of records pertaining thereto, including records of uncollectible accounts written off.
3. Receiving, refunding or applying customer deposits and maintaining customer deposit, line extension, and other miscellaneous records.
4. Checking consumption shown by meter readers' reports where incidental to preparation of billing data.
5. Preparing address plates and addressing bills and delinquent notices.
6. Preparing billing data.
7. Operating billing and bookkeeping machines.
8. Verifying billing records with contracts or rate schedules.
9. Preparing bills for delivery, and mailing or delivering bills.
10. Collecting revenues, including collection from prepayment meters unless incidental to meter reading operations.
11. Balancing collections, preparing collections for deposit, and preparing cash reports.
12. Posting collections and other credits or charges to customer accounts and extending unpaid balances.
13. Balancing customer accounts and controls.
14. Preparing, mailing, or delivering delinquent notices and preparing reports of delinquent accounts.
15. Final meter reading of delinquent accounts when done by collectors incidental to regular activities.
16. Disconnecting and reconnecting services because of nonpayment of bills.
17. Receiving, recording, and handling of inquiries, complaints, and requests for investigations from customers, including preparation of necessary orders, but excluding the cost of carrying out such orders, which is chargeable to the account appropriate for the work called for by such orders.
18. Statistical and tabulating work on customer accounts and revenues, but not including special analyses for sales department, rate department, or other general purposes, unless incidental to regular customer accounting routines.
19. Preparing and periodically rewriting meter reading sheets.
20. Determining consumption and computing estimated or average consumption when performed by employees other than those engaged in reading meters.

Materials and expenses

21. Address plates and supplies.
22. Cash overages and shortages.
23. Commissions or fees to others for collecting.
24. Payments to credit organizations for investigations and reports.
25. Postage.
26. Transportation expenses, including transportation of customer bills and meter books under centralized billing procedure.
27. Transportation, meals, and incidental expenses.
28. Bank charges, exchange, and other fees for cashing and depositing customers' checks.
29. Forms for recording orders for services, removals, etc.
30. Rent of mechanical equipment.

New Mexico-American Water Company
FERC Account Descriptions

905 – Miscellaneous Customer Accounts Expenses
This account shall include the cost of labor, materials used and expenses incurred not provided for in other accounts.

Labor

1. General clerical and stenographic work.
2. Miscellaneous labor.

Materials and expenses

3. Communication service.
4. Miscellaneous office supplies and expenses and stationery and printing other than those specifically provided for in accounts 902 and 903.

Comparison Group

Electric utilities included in the comparison group are shown in the table below. These are companies whose FERC Form 1 show amounts for accounts 903 and 905.

New Mexico	• Public Service Company of New Mexico	• Texas New Mexico Power
Texas	• Centerpoint Energy (formerly HL&P)	• El Paso Electric
Arizona	• Arizona Public Service	• Tucson Electric
Colorado	• Aquilla	• Public Service Company of Colorado
Oklahoma	• Empire District Electric • Oklahoma Gas & Electric	• Public Service Company of Oklahoma

It should be noted that Oncor Electric Delivery (formerly Texas Utilities) was not included in the comparison group because it has outsourced customer account services. As a result, much of its expenses related to this function are charged to FERC account 923 – Outside Services rather than FERC accounts 903 and 905. The customer accounts services' portion of FERC account 923 cannot be isolated from FERC Form 1 information. Thus, a customer accounts services cost comparison to Oncor was not possible.

Comparison Approach

The basis for this comparison is customer account services expenses per customer. NMA's cost pool was developed to include the same expenses included in electric utility's FERC accounts 903 and 905. As shown in the graphic below, NMA's resultant cost pool contains the expenses of Service Company locations and certain operating company expenses.

American Water
Service Company
Pensacola & Alton Call Centers
a. Customer contact
b. Customer order processing
c. Billing information processing
d. Collections
e. Correspondence processing
f. Customer payment processing
Operating Company
a. Postage and forms

Electric Utilities
FERC Acct 903 - Records and Collection Expense and FERC Acct 905 - Misc Customer Accounts Expense
a. Customer contact
b. Customer order processing
c. Bill preparation and mailing
d. Collections
e. Payment processing
f. Correspondence processing

NMA Cost Per Customer

In order to make a valid comparison to neighboring electric utilities, certain adjustments had to be made to the applicable Service Company charges to NMA. It was necessary to adjust the National Call Center charges because electric utilities experience an average of 2.50 calls per customer compared to American Water's 1.33 calls per customer. Thus, National Call Center expenses had to be increased, for comparison purposes, to reflect its costs at a 2.50 calls per customer level. As shown below, NMA's adjusted annual expense per customer is $32.48—the number that can be compared to neighboring electric utilities' expenses. NMA's 2007 unadjusted annual expense per customer is $20.86.

New Mexico-American Water Company					
	Cost Component	Service Co Charges	Adjustment Fewer Calls For Water Cos. (A)	Adjusted	
Service Company					
Call Centers	Call processing, order processing, credit, bill collection	$ 221,037	$ 194,910	$ 415,947	
Regional Offices		$ 236		$ 236	
Service Company	Customer payment processing			$ 14,160	(B)
Operating Company	Postage & forms			$ 114,400	
			Cost Pool Total	$ 544,743	
			Total Customers	16,774	
	12 Months Ended December 31, 2007 Cost Per New Mexico-American Customer			**$ 32.48**	

Note A: Adjustment for American Water's fewer calls per customer
This adjustment is necessary because water utilities experience fewer calls per customer than do electric utilities

Test year annualized Call Center charges		$ 221,037
Electric utility industry's avg calls/customer	2.50	
American Water's avg calls/customer	1.33	
Percent different	88%	88%
Total Adjustment B		$ 194,910

Note B: Estimated customer payment processing expenses

Number of customer bills	179,238
Bank charge per item	$ 0.0790
Total estimated annual expense	$ 14,160

Electric Utility Group Cost Per Customer

Schedule 11 shows the actual 2006 customer accounts expense per customer calculation for the electric utility comparison group. All of the underlying data was taken from the utilities' FERC Form 1.

Summary Of Results

As shown in the table below, NMA's cost per customer is within a reasonable range of the average of the neighboring electric utility comparison group. It can therefore be concluded that NMA's 2007 customer accounts-related expenses, including those of the Alton and Pensacola Call Centers, assigned by the Service Company to NMA were comparable to those of other utilities.

Annual Expense Per Customer	
Texas New Mexico Power	$ 8.82
CenterPoint Energy (HL&P)	$ 12.29
Public Service of New Mexico	$ 18.50
Oklahoma Gas & Electric	$ 19.93
Public Svc of Colorado	$ 21.61
Comparison Group Average	**$ 24.88**
Acquilla, Inc.	$ 28.26
El Paso Electric	$ 31.98
New Mexico-American Water	**$ 32.48**
Empire District Electric Company	$ 33.03
Tucson Electric	$ 34.02
Public Svc of Oklahoma	$ 35.55
Arizona Public Service Co	$ 49.27

VII - Need For Service Company Services

Analysis Of Services

The final aspect of this study was an assessment of whether the services that are provided to NMA by the Service Company would be necessary if NMA were a stand-alone water utility. The first step in this evaluation was to determine specifically what the Service Company does for NMA. Based on discussions with Service Company personnel, the matrix in Schedule 12 was created showing which entity—NMA or a Service Company location—is responsible for each of the functions NMA requires to ultimately provide service to its customers. This matrix was reviewed to determine: (1) if there was redundancy or overlap in the services being provided by the Service Company and (2) if Service Company services are typical of those needed by a stand-alone water utility.

Upon review of Schedule 12, the following conclusions can be drawn:

- The services that the Service Company provides are necessary and would be required even if NMA were a stand-alone water utility.

- There is no redundancy or overlap in the services provided by the Service Company to NMA. For all of the services listed in Schedule 12, there was only one entity that was primarily responsible for the service.

Governance Practices Associated With Service Company Charges

There are several ways by which NMA exercises control over Service Company services and charges. The most important of these are described below.

- **Company President Oversight** – The Company President of the state utility is responsible for the overall performance of the each operating company or district in the state. Presently the Western States President is also the President of New Mexico-American. Through the Western States President, New Mexico-American has a significant voice in major business decisions of American Water and has the ability to monitor Service Company quality and spending.
- **Vice President Finance** – The VP Finance of the Western states is responsible for the financial reporting, performance and internal controls of each of the operating companies in the region. The VP Finance monitors the performance and reporting from the Service Company. The VP Finance attends monthly Business Plan Review sessions with the New Mexico-American General Manager and finance group to review actual results and address forecast modifications for the remainder of the year. The VP Finance reports on the quarterly financial results and forecast updates to New Mexico-American's Board of Directors. The rates function reports to the VP Finance, who reviews and authorizes the filing of New Mexico-American rate cases and regularly monitors the status of cases. The operating subsidiary interacts with the VP Finance to discuss various issues.
- **Operating Company Board Oversight** – New Mexico-American's board of directors includes a member of American Water's senior executive team, members of the Division management team and two external Directors. This helps ensure that New Mexico-American's needs are a factor in the delivery of Service Company services.
- **Service Company Budget Review/Approval** – The Western States President sits on the Service Company board and that board must formally approve the budget for Service Company charges for the next year. These budgeted charges are consolidated with the operating company's own spending into an overall budget which must be approved by the operating company's board of directors. New Mexico-American's president is also on the local board.
- **Major Project Review And Approval** – Major projects undertaken by the Service Company must first be reviewed by American Water's senior executive team, which includes the President of the Western States. The President, with input from the Division management team, has the ability to impact all new initiatives and projects before they are authorized.
- **Service Company Bill Scrutiny** – Western States Finance personnel review the monthly Service Company bill for accuracy and reasonableness on a monthly basis. New Mexico's financial analyst has dialogue with regional office personnel concerning the monthly bill and any mistakes or overcharges are credited on a subsequent billing. The Western States' Finance unit prepares an actual to budget comparison of management fees each month for use in identifying unusual variances. Service Company actual to budget comparison is included in the monthly Financial Review Package. Unusual variances are researched, explanations are provided and any corrections are made, as deemed necessary.
- **Service Company Budget Variance Reporting** – Each month, a summary variance analysis is prepared that explains differences between budgeted and actual Service Company spending. In addition, a more detailed monthly variance report, called the "Statement of Expenses and Billed Charges," is produced by Service Company location and shows actual spending for the month.

- **Operating Company Budget Variance Reporting** – The "Budget/Plan Analysis," produced monthly, has a line item for Management Fees (i.e., Service Company charges). In this way, Service Company budget versus actual charges can be monitored for the month and year-to-date. Additional information exists that allows more detailed analysis of "Regional" and "Corporate" Management Fees.
- **Capital Investment Management Committee (CIMC) –** CIMC is one of American Water's primary business planning processes. It covers capital and asset planning and is employed throughout American Water. CIMC provides a full range of governance practices, including a formal protocol for assessing system needs, prioritizing expenditures, managing the capital program, approving project spending, delivering projects and measuring outputs. CIMC ensures that:
  - Capital expenditure plans are aligned with the strategic intent of the business
  - The impact of capital expenditure and income plans are fully reflected in operating expense plans
  - The impacts of these plans are understood and affordable
  - Effective controls are in place over budgets (through business plans) and individual capital projects (through appropriate authorization thresholds, management and reporting processes).

  The CIMC process was designed to optimize the effectiveness of asset investment. The process is managed at three levels for all American Water companies, including all New Mexico Operating Units. Monthly meetings of the CIMC are held to review capital spending compared to plan, review new project requests, and review updates or modifications to existing projects. The President of New Mexico-American, VP Finance, and others participate as necessary (e.g. operations managers and Rates Manager) and provide the data used in the monthly review schedules.

BEFORE THE NEW MEXICO PUBLIC REGULATION COMMISSION

IN THE MATTER OF THE PETITION BY NEW MEXICO-AMERICAN WATER COMPANY, INC. FOR ADJUSTMENT OF WATER RATES FOR ITS CLOVIS DISTRICT

Case No. 08-00134-UT

NEW MEXICO-AMERICAN WATER COMPANY, INC., Petitioner.

DIRECT TESTIMONY OF

PATRICK L. BARYENBRUCH

ON BEHALF OF

NEW MEXICO-AMERICAN WATER COMPANY, INC.

I. WITNESS BACKGROUND AND QUALIFICATIONS

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. Patrick L. Baryenbruch. 2832 Claremont Road, Raleigh, North Carolina, 27608.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am the President of my own consulting practice, Baryenbruch & Company, LLC, which was established in 1985. In that capacity, I provide consulting services to utilities and their regulators.

Q. DESCRIBE YOUR EDUCATIONAL AND PROFESSIONAL BACKGROUND

A. I received a Bachelors degree in accounting from the University of Wisconsin-Oshkosh in 1974 and a Masters in Business Administration degree from the University of Michigan in 1979.

I am a financial consultant and am a member of the American Institute of Certified Public Accountants and the North Carolina Association of Certified Public Accountants.

I began my career as a staff accountant with Arthur Andersen & Company where I performed financial audits of utilities, banks and finance companies. After three years I left to pursue an M.B.A. degree. Upon graduation from business school, I worked with the consulting firms of Theodore Barry & Associates and Scott, Madden & Associates.

During my consulting career, I have performed consulting assignments for approximately 50 utilities and 10 public service commissions. I have participated as project manager, lead or staff consultant for 24 commission-ordered management and prudence audits of public utilities. Of these, I have been responsible for evaluating the area of affiliate charges and allocation of corporate expenses in the Commission-ordered audits of Connecticut Light and Power, Connecticut Natural Gas, General Water Corporation (Pennsylvania Operations), Philadelphia Suburban Water Company (now Aqua America) and Pacific Gas & Electric Company.

My firm has performed the commission-ordered audit of Southern California Edison's 2002, 2003, 2004 and 2005 transactions with its non-regulated affiliate companies.

Q. PLEASE DESCRIBE THE PURPOSE OF YOUR TESTIMONY IN THIS CASE.

A. I am presenting the results of my study which evaluated the services provided by American Water Works Service Company ("Service Company") during 12 months ended December 31, 2007 to New Mexico-American Water (NMA). This study was undertaken in conjunction with NMA's rate case and is representative to the best of my knowledge and belief. The study is attached as Exhibit PLB-1.

Q. WHAT WERE THE OBJECTIVES OF YOUR STUDY?

A. This study was undertaken to answer four questions. First, were the Service Company's charges to NMA during 2007 reasonable? Second, was NMA charged the lower of cost or market for managerial and professional services provided by the Service Company during 2007? Third, were the 2007 costs of the Service Company's customer accounts services, including those of the National Call Centers comparable to those of other utilities? Fourth, are the services NMA receives from Service Company necessary?

Q. WHAT CONCLUSIONS WERE YOU ABLE TO DRAW CONCERNING QUESTION NUMBER 1 – WERE SERVICE COMPANY CHARGES TO NMA DURING 2007 REASONABLE?

A. I was able to draw the following conclusions:

(1) American Water's Service Company provides NMA with services similar to those provided by other utility service companies. This was determined based on service company information included in the Form 60, which must be filed with the Federal Energy Regulatory Commission (FERC) by electric and combination electric/gas utility holding companies.

(2) American Water's 2007 cost per NMA customer was very reasonable compared to cost per customer for electric and combination electric/gas service companies. During 2007, NMA was charged $68 per customer by the Service Company compared to an average of $122 per customer for service companies reporting to the FERC.

Q. WHAT CONCLUSIONS WERE YOU ABLE TO DRAW CONCERNING QUESTION NUMBER 2 – WAS NMA CHARGED THE LOWER OF COST OR MARKET FOR MANAGERIAL AND PROFESSIONAL SERVICES PROVIDED BY THE SERVICE COMPANY DURING 2007?

A. I was able to draw the following conclusions:

(1) NMA was charged the lower of cost or market for managerial and professional services during the 12 months ended December 31, 2007.

(2) On average, the hourly rates for comparable services provided by outside service providers are 52% higher than the Service Company.

(3) The managerial and professional services provided by the Service Company are vital and could not be procured externally by NMA without careful supervision on the part of NMA. If these services were contracted entirely to outside providers, NMA would have to add at least one half of one position to manage activities of outside firms. This position would be necessary to ensure the quality and timeliness of services provided.

(4) If all the managerial and professional services now provided by the Service Company had been outsourced during the 12-months ended December 31, 2007, NMA and its ratepayers would have incurred more than $610,000 in additional expenses. This amount

includes the higher cost of outside providers and the cost of an additional one half NMA position needed to direct the outsourced work.

(5) This study's hourly rate comparison actually understates the cost advantages that accrue to NMA from its use of the Service Company. Outside service providers generally bill for every hour worked. Service Company exempt personnel, on the other hand, charge a maximum of 8 hours per day even when they work more hours. If the overtime hours of Service Company personnel were factored into the hourly rate calculation, the Service Company would have had an even greater annual dollar advantage than the $610,000 cited above. For instance, if Service Company overtime is conservatively estimated at 5% (2 hours per week), then that work would have cost an estimated $26,800 in additional charges from outside providers.

(6) It would be difficult for NMA to find local service providers with the same specialized water industry expertise as that possessed by the Service Company staff. Service Company personnel spend substantially all their time serving operating water companies. This specialization brings with it a unique knowledge of water utility operations and regulation that is most likely unavailable from local service providers.

(7) Service Company fees do not include any profit markup. Only its actual cost of service is being recovered from NMA ratepayers.

Q. WHAT IS YOUR CONCLUSION REGARDING QUESTION 3 – WERE THE 2007 COSTS OF THE SERVICE COMPANY'S CUSTOMER ACCOUNTS SERVICES, INCLUDING THOSE OF THE NATIONAL CALL CENTERS, COMPARABLE TO THOSE OF OTHER UTILITIES?

A. I was able to determine that the cost of the Service Company's customer accounts services, including those provided by the National Call Center, is within a reasonable range of the average of neighboring electric utility comparison group. This group of companies provides a reasonable proxy group for comparison to a regulated utility of the size and scope of NMA. During the 12-months ended December 31, 2007, the customer accounts cost for NMA customers was $32.48 compared to the 2006 average of $24.88 for neighboring electric utilities. The highest comparison group per customer cost was $49.27 and the lowest $8.82.

Q. WHAT CONCLUSIONS WERE YOU ABLE TO DRAW REGARDING QUESTION 4 - ARE THE SERVICES NMA RECEIVES FROM THE SERVICE COMPANY NECESSARY?

A. I was able to draw the following conclusions:

(1) The services listed in Schedule 10 of my report attached as Exhibit PLB-1 that the Service Company provides are necessary and would be required even if NMA were a stand-alone water utility.

(2) There is no redundancy or overlap in the services provided by the Service Company to NMA. For all of the services listed in Schedule 10, there was only one entity that was primarily responsible for the service.

Q. DOES THIS CONCLUDE YOUR TESTIMONY?

A. Yes it does.

I - Introduction

Purpose Of This Study

This study was undertaken to answer three questions concerning the services provided by American Water Works Service Company, Inc. (Service Company) to Ohio American Water Company (OAWC):

1. Was OAWC charged the lower of cost or market for managerial and professional services provided by the Service Company during 2006?

2. Were the 2006 cost of the Service Company's customer accounts services, including those of the National Call Centers, reasonable?

3. Are the services OAWC receives from Service Company necessary?

Study Results

Concerning question 1, the following conclusions can be drawn from this study:

- OAWC was charged the lower of cost or market for managerial and professional services during the 12-months ended December 31, 2006.

- On average, the hourly rates for outside service providers are **55% higher** than the Service Company's hourly rates.

- The managerial and professional services provided by the Service Company are vital and could not be procured externally by OAWC without careful supervision on the part of OAWC. If these services were contracted entirely to outside providers, OAWC would have to add at least one position to manage activities of outside firms. These positions would be necessary to ensure the quality and timeliness of services provided.

- If all the managerial and professional services now provided by the Service Company had been out-sourced during the 12-months ended December 31, 2006, OAWC and its ratepayers would have incurred an **additional $1.8 million** in expenses. This amount includes the higher cost of outside providers and the cost of an additional OAWC position needed to direct the outsourced work.

- This study's hourly rate comparison actually understates the cost advantages that accrue to OAWC from its use of the Service Company. Outside service providers generally bill for every hour worked. Service Company exempt personnel, on the other hand, charge a maximum 8 per day even when they work more. If the overtime hours of Service Company personnel were factored into the hourly rate calculation, the Service Company would have had an even greater annual dollar advantage than the $1.8 million cited above. For instance, if Service Company overtime is conservatively estimated at 5% (2 hours per week), then that work would have cost an estimated $84,000 in additional charges from outside providers.

- It would be difficult for OAWC to find local service providers with the same specialized water industry expertise as that possessed by the Service Company staff. Service Company personnel spend substantially all their time serving operating water companies. This specialization brings with it a unique knowledge of water utility operations and regulation that is most likely unavailable from local service providers.

- Service Company fees do not include any profit markup. Only its actual cost of service is being recovered from OAWC ratepayers.

Concerning question 2, it was determined that the cost of the Service Company's customer accounts services, including those provided by the National Call Center, **is within a reasonable range of the average of the comparison group of neighboring electric utilities**. As will be explained further herein, this group of companies provides a reasonable proxy group for comparison to a regulated utility of the size and scope of OAWC. During the 12-months ended December 31, 2006, the customer accounts cost for OAWC customers was $31.70 compared to the 2005 average of $26.45 for neighboring electric utilities. The highest comparison group per customer cost was $46.94 and the lowest $12.43.

Concerning question 3, the following conclusions can be drawn:

- The services that the Service Company provides are necessary and would be required even if OAWC were a stand-alone water utility.

- There is no redundancy or overlap in the services provided by the Service Company to OAWC. For all of the services listed in Schedule 10, there was only one entity that was primarily responsible for the service.

II - Background

Overview Of American Water Works Service Company

The Service Company maintains several types of offices from which it provides services to American Water operating companies. They include:

- Corporate Office – Includes American Water's executive management and personnel from the various corporate support services. American Water's corporate office is located in Voorhees, New Jersey.

- National Call Centers – Perform customer service functions, including: customer call processing, service order processing, correspondence processing, credit and collections. American Water maintains two call centers. One in Alton, Illinois that went into operation in the second quarter of 2001 and a second in Pensacola, Florida that went into operation in April 2005. Prior to the establishment of these national call centers, customer service functions were performed by employees of OAWC, which incurred the expense on its books.

- National Shared Services Center – The Shared Services Center, located in Cherry Hill, New Jersey, provides various financial, accounting and treasury functions that had been performed by individual operating companies. This arrangement has improved and streamlined the Company's financial processes and allowed operating companies to focus on providing utility service.

- Regional Offices – Regional offices provide operating companies with certain support services that can be performed more effectively on a regional basis because individual operating company/center workloads are not sufficient to warrant a full-time staff for these activities. At the same time, these services require closer proximity to operating companies served so they are not provided by the National Shared Services Center. Examples of regional office services include rates and revenues, engineering and operations.

- Belleville Lab – The national trace substance laboratory is located in Belleville, Illinois and performs testing for all American Water operating companies.

- Information Technology Service Centers – American Water's principal data center, located in Hershey, Pennsylvania, supports the IT infrastructure required to run corporate and operating company business applications and the communications systems. IT personnel rotate, as needed, throughout the regional offices and operating companies.

Service Company Expense Categories

The Service Company renders a monthly bill to operating companies. Charges are broken down into the following expense categories:

- Labor – base pay (salaries) of managerial and professional employees
- Labor-Related Overheads - employee benefit costs (payroll taxes, medical coverage, pensions, disability insurance) and other general expenses
- Support - wages and salaries of office support personnel, including secretaries, clerical personnel, telephone operators and mail clerks

- Office Expenses - office rent, equipment leases, telephone, electric, office supplies, property taxes, office maintenance
- Vouchers/Journal Entries – (1) travel expenses incurred by Service Company personnel, (2) other items submitted for reimbursement by employees, including professional association dues, (3) outside service contracts for such things as actuarial services, and (4) various other expenditures, including data center expenses for software licenses and hardware maintenance.

Service Company expenses are either assigned directly or allocated to operating companies, as shown in the table below.

Expense Category	Direct Charged	Allocated	Comments
Labor	X	X	Professional personnel working for one or several operating companies
Labor-Related Overheads	X	X	These are primarily employee benefit costs that relate directly to labor
Support		X	Administrative personnel support the professional staff, thus support costs are allocated on the basis of professional labor
Office Expense		X	Are all allocated on the basis of professional labor
Vouchers/Journals	X	X	May be either directly in support of one operating company (e.g., an engineer traveling from the Corporate Office to the operating company) or allocated to several operating companies

A direct charge occurs when Service Company work or expenses are incurred in support of only one operating company. Direct charge examples include work in support of an operating company's rate case, engineering design work on an operating company's project and the preparation of an operating company's financial statements.

Service Company expenses are allocated when more than one operating company benefits from the underlying work. Examples include assessments of new Federal water quality regulations, development of the company-wide materials procurement contracts and creation of company-wide engineering design standards.

Charging and Assignment Of Service Company Time and Expenses

Service Company transactions are assigned with the following information so there is a proper accounting and eventual charging to an operating company:

- Operating company number, if transaction is a direct charge
- Formula number if transaction is allocated
- Employee hours worked
- Account number for non-labor charges

Charges can originate from the following systems:

- Payroll System
- RVI System (outside vendor payments)
- PCard System (credit card payments)
- Internal Purchase Order System
- Journal entries

The Service Company's time reporting process enables labor and support charges to be assigned to the proper operating company. Labor charges are based on the time reported by managerial and professional Service Company employees. Every week, Service Company professional employees complete an electronic time sheet that shows:

- Operating company (for direct charge)
- Formula number (for allocation)
- Work order (where applicable)
- Authorization number (where applicable)

At month-end, time report information is processed and direct and allocated professional labor hours tabulated for each operating company. Dollar charges are then calculated using the hourly rate of each Service Company professional employee based upon their base salary (i.e., an employee's hours times their hourly rate of pay).

Support (administrative) personnel charge their time to the activity "General Admin." As described in the table on page 4, their labor charges are allocated to operating companies based upon how their office's professional personnel labor charges are assigned. For instance, if 20% of the Central Region's professional labor is assigned to OAWC during a month, then 20% of that office's monthly administrative labor charges also are assigned to the operating company.

The overhead cost category is next assigned based on professional and administrative labor costs. Thus, if 20% of the Central Region's accumulated professional and support labor is charged to OAWC during the month, then 20% of that month's overhead expenses will be assigned to OAWC.

Each Service Company location's office expenses are allocated to operating companies based on how professional labor charges for that office have been assigned. For instance, if 2% of professional labor from one Service Company office is assigned to OAWC, then 2% of that office's office expenses would be assigned to OAWC. Thus, office expenses are allocated in the very same way as administrative labor.

Vouchers/journal entries may be charged directly or allocated, depending on who benefits from the expenditure. For instance, the cost of a continuing professional education course taken by a professional in a regional office is allocated to the operating companies served by that office. Travel expenses by that same professional to a rate case proceeding are charged directly to the operating company whose case is being heard.

III – Service Company Cost Comparison Approach

During 2006, the Service Company billed OAWC $3,706,151 in O&M-related and $504,356 in capital-related charges. Included in the O&M amount is $364,509 for which OAWC will not seek recovery. As calculated in the table below, the net O&M and capital charges of $3,845,998 were subjected to a market cost comparison.

Reconciliation to 2006 Testable Service Co Charges

O&M Per OAWC G/L	$	3,706,151
Net O&M Adjustments	$	(364,509)
Net Testable O&M	$	3,341,642
Capital per OAWC G/L	$	504,356
Net Testable SC Charges	$	3,845,998

For purposes of comparing these charges to outside benchmarks, Service Company services were placed into two categories:

- Managerial and Professional Services – Includes such services as management, accounting, legal, human resources, information technology, and engineering.

- Customer Accounts Services – Includes customer-related services, such as call center, credit, billing, collection and payment processing.

Total test period Service Company charges break down between management/professional services and customer account services as follows:

	2006		
		Amount	Hours
Management and Professional Services	$	3,082,016	35,958
Customer Account Services	$	763,982	25,291
Total Service Company Charges	$	3,845,998	61,249

This study's first question—whether the Service Company charges the lower of cost or market—was evaluated by comparing the cost per hour for managerial and professional services provided by Service Company personnel to hourly billing rates that would be charged by outside providers of equivalent services. Service Company costs per hour were based on actual charges to OAWC during 2006. Outside providers' billing rates came from surveys or other information from professionals that could perform the services now provided by the Service Company.

The second question—reasonableness of the National Call Center costs—was addressed by comparing OAWC's customer accounts services expenses to those of neighboring electric utilities. This approach was selected because the costs of outside providers of call center services are not publicly available. However, electric utility customer account services expenses can be obtained from the FERC Form 1. The availability and transparency of FERC data adds to the validity of its use in this comparison.

The third question—the necessity of Service Company services—was first investigated by determining the services provided to OAWC. A determination was then made as to whether these services would be required if OAWC were a stand-alone utility.

IV – Managerial And Professional Services Hourly Rate Comparison

Methodology

The lower-of-cost-or-market comparison is accomplished by comparing the cost per hour for Service Company managerial and professional services to those of outside service providers to whom these duties could be assigned. Based on the nature of the Service Company services it was determined that the following outside providers could perform the categories of services indicated below:

- Management Consultants – executive and administrative management, risk management services, human resources and communications services
- Attorneys – legal services
- Certified Public Accountants – accounting, financial, information technology and rates and revenues services
- Professional Engineers – engineering, operations and water quality services.

The services provided by the Belleville lab are assumed to be transferable to professional engineers for purposes of this cost comparison. This was done for two reasons. First, there is no readily available survey of hourly billing rates for testing services such as those performed by Belleville. Second, Belleville personnel have similar, scientific educational backgrounds as Service Company engineering personnel. Thus, it is valid to compare the hourly rates of Belleville services to those of outside engineering firms.

Service Company's hourly rate were calculated for each of the four outside service provider categories, based on the dollars and hours charged to OAWC during 2006. Hourly billing rates for outside service providers were developed using third party surveys or directly from information furnished by outside providers themselves.

It should be noted that by using the Service Company's hours charged OAWC during 2006, its hourly rates are actually overstated because Service Company personnel charge a maximum 8 per day even when they work more. Outside service providers generally bill for every hour worked. If the overtime hours of Service Company personnel had been factored into the hourly rate calculation, Service Company hourly rates would have been lower.

The last step in the market cost comparison was to compare the Service Company's average cost per hour to the average cost per hour for outside providers.

Service Company Hourly Rates

Schedule 1 (page 10) details the assignment of 2006 management and professional Service Company charges by outsider provider category. Schedule 2 (page 10) shows the same assignment for Service Company management and professional hours charged to OAWC during 2006.

Certain adjustments to these dollar amounts were necessary to calculate Service Company hourly rates that are directly comparable to those of outside providers. Adjustments were made to the following 2006 test period non-labor Service Company charges:

- Contract Services – 2006 Service Company charges to OAWC include approximately $289,000 in charges associated with the use of outside professional firms to perform

certain corporate-wide services (e.g., legal, financial audit, actuarial services). These professional fees are excluded from the Service Company hourly rate calculation because the related services have effectively been out-sourced already.

- Travel Expenses – In general, client-related travel expenses are not recovered by outside service providers through their hourly billing rate. Rather, actual out-of-pocket travel expenses are billed to clients in addition to fees for professional services. Thus, it is appropriate to remove these Service Company charges from the hourly rate calculation.

- Computer Hardware and Software Expenses – Included in 2006 Service Company charges to OAWC are charges for outside expenses related to leases and maintenance fees related to mainframe, server and network infrastructure, corporate business applications and the communications systems. An outside provider that would take over operation of a data center would recover these expenses over and above the labor necessary to operate the data center.

Schedule 3 (page 11) shows how contract services, travel expenses and computer hardware/software-related Service Company charges are assigned among the four outside provider categories.

Based on the assignment of expenses and hours shown in Schedules 1 and 2 and the excludable items shown in Schedule 3, the Service Company's equivalent costs per hour for 2006 are calculated below.

	Attorney	Management Consultant	Certified Public Accountant	Professional Engineer	Total
Total management, professional & technical services charges	$ 102,617	$ 878,476	$ 1,268,600	$ 832,323	$ 3,082,016
Less:

Outside Service Provider Hourly Rates

The next step in the cost comparison was to obtain the average billing rates for each outside service provider. The source of this information and the determination of the average rates are described in the paragraphs that follow.

Attorneys

The Ohio Bar Association does not survey its members as to their hourly billing rates. In addition, publicly available billing rate information could not be found for Ohio attorneys. Therefore, an Ohio estimate was developed from a survey of Michigan lawyers conducted annually by the Michigan Lawyers Weekly. As presented in Schedule 4, the average rate for each Michigan firm respondent was adjusted for the cost of living differential between their location and Columbus, Ohio. The survey includes rates that were in effect at December 31, 2005. Thus, the 2005 average rate was escalated to June 30, 2006—the midpoint of 2006.

Management Consultants

The cost per hour for management consultants was developed from the 2006 annual survey performed by the Association of Management Consulting Firms—an industry trade organization. The first step in the calculation, presented in Schedule 5, was to determine an average rate by consultant position level. From these rates, a single weighted average hourly rate was calculated based upon the percent of time that is typically applied to a consulting assignment by each consultant position level. This survey includes rates that were in effect during 2005 for firms in the United States. Consultants typically do not limit their practice to any one region and must travel to a client's location. Thus, the U.S. national average is appropriate for comparison. The survey includes rates that were in effect at December 31, 2005. Thus, the 2005 average rate was escalated to June 30, 2006—the midpoint of 2006.

Certified Public Accountants

The average hourly rate for Ohio certified public accountants was developed from a 2006 survey conducted by the American Institute of Certified Public Accountants (AICPA) every two years. Hourly rates in the AICPA survey are the average of firms in Ohio. The average hourly rate was calculated for a set of typical accountant positions, as shown in Schedule 6. Based on a typical staff assignment by each accountant position, a weighted average hourly rate was calculated. The survey includes rates that were in effect at December 31, 2005. Thus, the 2005 average rate was escalated to June 30, 2006—the midpoint of 2006.

Professional Engineers

The Service Company provided hourly rate information for outside engineering firms that could have been utilized by OAWC during 2006. As presented in Schedule 7, an average rate was developed for each engineering position level. Then, using a typical percentage mix of project time by engineering position, a weighted average cost per hour was calculated.

Schedule 4

B. Calculation of Overall Average Engineering Hourly Billing Rate

	CAD Drafter Engineer Tech	Engineer Design Engineer Project Engineer Elect Proj Engineer	Project Manager Project Associate Sr. Mgr. Engineer	Officer Principal Engineer	
Average Hourly Billing Rate (From Above)	$68	$92	$144	$179	
Typical Percent of Time on an Engineering Assignment	30%	35%	25%	10%	Weighted Average
	$20	$32	$36	$18	**$107**

Note A: source is information provided by American Water Works Service Company
Note B: billing rate information is considered confidential by the outside engineering firms, thus their names are not shown

Service Company Versus Outside Provider Cost Comparison

As shown in the table below, Service Company costs per hour are considerably lower than those of outside providers.

	12 Months Ended December 31, 2006		
Service Provider	Service Company	Outside Provider	Difference--Service Co. Greater(Less) Than Outside
Attorney	$ 122	$ 279	$ (157)
Management Consultant	$ 122	$ 218	$ (97)
Certified Public Accountant	$ 61	$ 93	$ (32)
Professional Engineer	$ 71	$ 107	$ (36)

Based on these cost per hour differentials and the number of managerial and professional services hours billed to OAWC during the 12-months ended December 31, 2006, outside service providers would have cost $1,692,642 more than the Service Company (see table below). Thus, on average, outside provider's hourly rates are almost 55% higher than those of the Service Company ($1,692,642 / $ 3,082,016).

	12 Months Ended December 31, 2006		
Service Provider	Hourly Rate Difference--Service Co. Greater(Less) Than Outside	Service Company Hours Charged	Dollar Difference
Attorney	$ (157)	795	$ (124,629)
Management Consultant	$ (97)	6,118	$ (592,219)
Certified Public Accountant	$ (32)	18,016	$ (583,167)
Professional Engineer	$ (36)	11,029	$ (392,628)
Service Company Less Than Outside Providers			$ (1,692,642)

If OAWC were to use outside service providers rather than the Services Company for managerial and professional services, it would incur other additional expenses besides those associated with higher hourly rates. Managing outside firms who would perform 35,958 hours of work (about 24 full-time equivalents at 1,500 "billable" hours per FTE per year) would add a significant workload to the existing OAWC management team. Thus, it would be necessary for OAWC to add at least one position to supervise the outside firms and ensure they delivered quality and timely services. The individuals that would fill this position would need a good understanding of each profession being managed. They must also have management experience and the authority necessary to give them credibility with the outside firms. As calculated in the table below, this position would add another $152,700 per year to OAWC's personnel expenses.

Cost of Adding Administrative Positions To OAWC's Staff

	Total
New Positions' Salary	$ 100,000
Benefits (at 52.7%)	$ 52,700
Total Cost of the New Position	$ 152,700

Thus, the total effect on the ratepayers of OAWC of contracting all services now provided by Service Company would be an increase in their costs of **$1,845,342** ($1,692,642 + $152,700).

Other Cost Comparisons

Every year, the Belleville Lab conducts a comparison of its cost for performing major tests to the cost of using outside testing laboratories. Over the past several years, these surveys have shown the following results been as follows:

Year	Number of Major Tests Surveyed	Percent Belleville Lower Than Outside Labs
2000	26	15%
2001	25	19%
2002	24	16%
2003	23	10%
2004	24	9%
2005	24	25%
2006	24	31%

These studies provide additional evidence that the Service Company arrangement is the lowest-cost alternative for OAWC.

V – Customer Account Services Cost Comparison

Background

It is difficult to compare the cost of American Water's National Call Centers with outside providers of the same call center-related services. Call center survey data is proprietary and expensive to obtain. For this reason, OAWC's National Call Center costs are compared to those of neighboring electric utilities because the data necessary to make this comparison is readily available to the public.

Electric utility cost information comes from their FERC Form 1. FERC's chart of accounts is defined in chapter 18, part 101 of Code of Federal Regulations. FERC accounts that contain call center-related expenses and are used in this study's comparison are:

- Account 903 Customer Accounts Expense – Records and Collection Expense
- Account 905 Customer Accounts Expense – Miscellaneous Customer Accounts Expense.

In addition, labor-related overheads charged to the following FERC accounts must be added to the labor components of Accounts 903 and 905.

- Account 926 Employee Pension and Benefits
- Account 408 Taxes Other Than Income (employer's portion of FICA).

Schedule 9 provides FERC's description of what should be charged to these accounts. In questioning the controller of a large Southeastern electric utility, it was determined that expenses of the activities described below are recorded in the designated FERC accounts.

903 Records and Collection Expense

- Customer Call Center – customer calls/contact, credit, order taking/disposition, bill collection efforts, outage calls
- Call Center IT – maintenance of phone banks, voice recognition units, call center software applications, telecommunications
- Customer billing – bill printing, stuffing and mailing
- Remittance processing – processing of customer payments received in the mail
- Bill payment centers – locations where customers can pay their bills in person

905 Miscellaneous Customer Accounts Expense

- Customer Information System IT – maintenance and support of the customer information system

This study assumes the FERC accounts for other electric and gas utilities contain expenses for the same activities.

Ohio American Water Company
FERC Account Descriptions

903 – Customer Records and Collection Expenses
This account shall include the cost of labor, materials used and expenses incurred in work on customer applications, contracts, orders, credit investigations, billing and accounting, collections and complaints.

Labor

1. Receiving, preparing, recording and handling routine orders for service, disconnections, transfers or meter tests initiated by the customer, excluding the cost of carrying out such orders, which is chargeable to the account appropriate for the work called for by such orders.
2. Investigations of customers' credit and keeping of records pertaining thereto, including records of uncollectible accounts written off.
3. Receiving, refunding or applying customer deposits and maintaining customer deposit, line extension, and other miscellaneous records.
4. Checking consumption shown by meter readers' reports where incidental to preparation of billing data.
5. Preparing address plates and addressing bills and delinquent notices.
6. Preparing billing data.
7. Operating billing and bookkeeping machines.
8. Verifying billing records with contracts or rate schedules.
9. Preparing bills for delivery, and mailing or delivering bills.
10. Collecting revenues, including collection from prepayment meters unless incidental to meter reading operations.
11. Balancing collections, preparing collections for deposit, and preparing cash reports.
12. Posting collections and other credits or charges to customer accounts and extending unpaid balances.
13. Balancing customer accounts and controls.
14. Preparing, mailing, or delivering delinquent notices and preparing reports of delinquent accounts.
15. Final meter reading of delinquent accounts when done by collectors incidental to regular activities.
16. Disconnecting and reconnecting services because of nonpayment of bills.
17. Receiving, recording, and handling of inquiries, complaints, and requests for investigations from customers, including preparation of necessary orders, but excluding the cost of carrying out such orders, which is chargeable to the account appropriate for the work called for by such orders.
18. Statistical and tabulating work on customer accounts and revenues, but not including special analyses for sales department, rate department, or other general purposes, unless incidental to regular customer accounting routines.
19. Preparing and periodically rewriting meter reading sheets.
20. Determining consumption and computing estimated or average consumption when performed by employees other than those engaged in reading meters.

Materials and expenses

21. Address plates and supplies.
22. Cash overages and shortages.
23. Commissions or fees to others for collecting.
24. Payments to credit organizations for investigations and reports.
25. Postage.
26. Transportation expenses, including transportation of customer bills and meter books under centralized billing procedure.
27. Transportation, meals, and incidental expenses.
28. Bank charges, exchange, and other fees for cashing and depositing customers' checks.
29. Forms for recording orders for services, removals, etc.
30. Rent of mechanical equipment.

Ohio American Water Company
FERC Account Descriptions

905 – Miscellaneous Customer Accounts Expenses
This account shall include the cost of labor, materials used and expenses incurred not provided for in other accounts.
Labor
1. General clerical and stenographic work.
2. Miscellaneous labor.

Materials and expenses
3. Communication service.
4. Miscellaneous office supplies and expenses and stationery and printing other than those specifically provided for in accounts 902 and 903.

Comparison Group

Electric utilities included in the comparison group are shown in the table below. These are companies whose FERC Form 1 show amounts for accounts 903 and 905.

Ohio	• Cincinnati Gas & Electric • Cleveland Electric Illuminating • Columbus & Southern Power • Dayton Power & Light	• Ohio Edison • Ohio Power • Toledo Edison
Michigan	• Consumers Energy • Detroit Edison	• Indiana Michigan Power
Kentucky	• Kentucky Power • Kentucky Utilities	• Louisville Gas & Electric • Union Light, Heat & Power
Pennsylvania	• Duquesne Light • Philadelphia Electric • Pennsylvania Electric	• Pennsylvania Power • Pennsylvania Power & Light • West Penn Power
Indiana	• Indiana-Michigan Power • Indianapolis Power & Light	• NIPSCO • Public Service of Indiana
West Virginia	• Wheeling Power	

Some neighboring electric utilities could not be included in the comparison group because they did not submit the necessary FERC Form 1 data.

Comparison Approach

The basis for this comparison is customer account services expenses per customer. OAWC's cost pool was developed to include the same expenses included in electric utility's FERC accounts 903 and 905. As shown in the graphic below, OAWC's resultant cost pool contains the expenses of Service Company locations and certain operating company expenses.

American Water
Service Company
Pensacola & Alton Call Centers
a. Customer contact
b. Customer order processing
c. Billing information processing
d. Collections
e. Correspondence processing
f. Customer payment processing
IT Service Centers
a. Support expenses for the customer information system (ORCOM)
Operating Company
a. Postage and forms

Electric Utilities
FERC Acct 903 - Records and Collection Expense and FERC Acct 905 - Misc Customer Accounts Expense
a. Customer contact
b. Customer order processing
c. Bill preparation and mailing
d. Collections
e. Payment processing
f. Correspondence processing

OAWC Cost Per Customer

In order to make a valid comparison to neighboring electric utilities, certain adjustments had to be made to the applicable Service Company charges to OAWC. It was necessary to adjust the National Call Center charges because electric utilities experience an average of 2.50 calls per customer compared to American Water's 1.28 calls per customer. Thus, National Call Center expenses had to be increased, for comparison purposes, to reflect its costs at a 2.50 calls per customer level. As shown below, OAWC's adjusted annual expense per customer is $31.70—the number that can be compared to neighboring electric utilities' expenses.

Ohio American 2006 Cost Per Customer

	Cost Component	2006 Service Co Charges	Adjustment Fewer Calls For Water Cos. (A)	Adjusted	
Service Company					
Call Centers	Call processing, order processing, credit, bill collection	$ 669,645	$ 638,256	$ 1,307,901	
Regional Offices		$ 94,337		$ 94,337	
IT/Data Centers	Bill preparation and mailing	$ 136,170		$ 136,170	
Service Company	Customer payment processing			$ 92,058	Note B
Operating Company	Postage & forms			$ 202,279	
			Cost Pool Total	$ 1,832,744	
			Total Customers	57,811	
	2006 Cost Per Ohio American Customer			**$ 31.70**	

Note A: Adjustment for American Water's fewer calls per customer

This adjustment is necessary because water utilities experience fewer calls per customer than do electric utilities

Test year annualized Call Center charges		$ 669,645
Electric utility industry's avg calls/customer	2.50	
American Water's avg calls/customer	1.28	
Percent different	95%	95%
Total Adjustment B		$ 638,256

Note B: Estimated customer payment processing expenses

Number of customers	57,811
Number of payments/customer/year	12
Total payments processed/year	693,732
Bank charge per item	$ 0.1327
Total estimated annual expense	$ 92,058

Electric Utility Group Cost Per Customer

Schedule 9 shows the actual 2005 customer accounts expense per customer calculation for the electric utility comparison group. All of the underlying data was taken from the utilities' FERC Form 1.

Summary Of Results

As shown in the table below, OAWC's cost per customer is near the average of the electric utility comparison group. It can therefore be concluded that the customer accounts-related expenses, including those of the Alton and Pensacola Call Centers, assigned by the Service Company to OAWC are within a reasonable range of the comparison group average.

Average Customer Accounts Expense Per Customer		
Louisville Gas & Electric	$	12.43
West Penn Power	$	13.83
Duquesne Light	$	15.52
Ohio Edison	$	16.68
Cleveland Electric Illuminating	$	17.15
Consumers Energy	$	18.72

VI - Need For Service Company Services

Analysis Of Services

The final aspect of this study was an assessment of whether the services that are provided to OAWC by the Service Company would be necessary if OAWC were a stand-alone water utility. The first step in this evaluation was to determine specifically what the Service Company does for OAWC. Based on discussions with Service Company personnel, the matrix in Schedule 10 was created showing which entity—OAWC or a Service Company location—is responsible for each of the functions OAWC requires to ultimately provide service to its customers. This matrix was reviewed to determine: (1) if there was redundancy or overlap in the services being provided by the Service Company and (2) if Service Company services are typical of those needed by a stand-alone water utility.

Upon review of Schedule 10, the following conclusions can be drawn:

- The services that the Service Company provides are necessary and would be required even if OAWC were a stand-alone water utility.

- There is no redundancy or overlap in the services provided by the Service Company to OAWC. For all of the services listed in Schedule 11, there was only one entity that was primarily responsible for the service.

Governance Practices Associated With Service Company Charges

There are several ways by which OAWC exercises control over Service Company services and charges. The most important of these are described below.

- **Regional President Oversight** – The Regional President of the Central Region is on the Executive Management Team (EMT) of American Water. The Regional President is responsible for the overall performance of each operating company in the region, including OAWC. As part of the EMT, each Regional President has equal say with other EMT members in major business decisions of American Water and has the ability to monitor Service Company performance quality and spending. The Regional President also serves as a Director on the Board of the Service Company.

- **Regional Vice President & Treasurer** – The Regional Vice President and Treasurer of the Central Region is responsible for the financial reporting, performance and internal controls of each of the operating companies in the region. The Regional Service Delivery and Finance Directors monitor the performance and reporting from the Service Company and pushes back whenever the quality and service are not appropriate.

- **Operating Company Board Oversight** – OAWC board of directors includes the Regional President, Vice President of Operations and Vice President of Finance.

- **Service Company Budget Review/Approval** – Every Regional President sits on the Service Company board and that board must formally approve the budget for Service Company charges for the next year. These budgeted charges are consolidated with the operating company's own spending into an overall budget which must be approved by the operating company's board of directors.

- **Major Project Review And Approval** – Major projects undertaken by the Service Company must first be reviewed by American Water's Executive Management Team, which includes the Regional President. The Regional President, with input from the regional management team has the ability to impact all new initiatives and projects before they are authorized. Projects ultimately must be accounted for in the Service Company Budget, approved by its Board.

- **Service Company Bill Scrutiny** – Operating company personnel review the monthly Service Company bill for accuracy and reasonableness on a monthly basis. Any mistakes or overcharges are credited on a subsequent billing.

- **Service Company Budget Variance Reporting** – Each month, a summary variance analysis is prepared that explains differences between budgeted and actual Service Company spending. In addition, the monthly financial review meetings are held to review various aspects of the financial statements of the Service Company.

- **Operating Company Budget Variance Reporting** – The "Budget/Plan Analysis," produced monthly by each operating company, has a line item for Management Fees (i.e., Service Company charges). In this way, Service Company budget versus actual charges can be monitored for the month and year-to-date. The Regional President attends the monthly review of the Service Company which includes an analysis of variances in both operating and financial data.

- **Capital Investment Management (CIM) –** Capital investment within American Water is a significant and essential part of the business. It is necessary to maintain regulatory compliance, provide for reliable, efficient, and quality service, keep pace with growth, and

facilitate appropriate infrastructure renewal. American Water's CIM policy supports the following objectives:

- Capital investment plans are developed and aligned with business plan objectives
- Effective technical oversight and governance is in place for individual projects
- Establishes investment strategies that represent value enhancements for customers
- Periodically review investment performance against established objectives and make adjustments to meet business needs

The CIM process was designed to optimize the effectiveness of asset investment. The process is managed at three levels for all American Water companies, including OAWC.

Ohio American Water Company
Case No. 071112-WS-AIR
Direct Testimony of Patrick L. Baryenbruch
Page 1 of 5

1. Q. Please state your name and business address.

A. Patrick L. Baryenbruch, 302 East Park Drive, Raleigh, North Carolina 27605.

2. Q. Please describe your educational and professional background.

A. I received a Bachelors degree in accounting from the University of Wisconsin-Oshkosh in 1974 and a Masters in Business Administration degree from the University of Michigan in 1979.

I am a financial consultant and am a member of the American Institute of Certified Public Accountants and the North Carolina Association of Certified Public Accountants.

I began my career as a staff accountant with Arthur Andersen & Company where I performed financial audits of utilities, banks and finance companies. After three years I left to pursue an M.B.A. degree. Upon graduation from business school, I worked with the consulting firms of Theodore Barry & Associates and Scott, Madden & Associates.

During my consulting career, I have performed consulting assignments for approximately 50 utilities and 10 public service commissions. I have participated as project manager, lead or staff consultant for 24 commission-ordered management and prudence audits of public utilities. Of these, I have been responsible for evaluating the area of affiliate charges and allocation of corporate expenses in the Commission-ordered audits of Connecticut Light and Power, Connecticut Natural Gas, General Water Corporation (Pennsylvania Operations), Philadelphia Suburban Water Company (now Aqua America) and Pacific Gas & Electric Company.

My firm has performed the commission-ordered audit of Southern California Edison's 2002, 2003, 2004 and 2005 transactions with its non-regulated affiliate companies.

3. Q. What are your duties and responsibilities in your current position?

A. I am the President of my own consulting practice, Baryenbruch & Company, LLC, which was established in 1985. In that capacity, I provide consulting services to utilities and their regulators.

4. Q. Please describe the reason for your testimony in this case.

A. I am presenting the results of my study which evaluated the services provided by American Water Service Company ("Service Company") during 2006 to Ohio American Water (OAWC). This study was undertaken in conjunction with OAWC's rate case and is true to the best of my knowledge and belief. The study is attached as Exhibit PLB-1.

5. Q. What were the objectives of your study?

A. This study was undertaken to answer three questions. First, was OAWC charged the lower of cost or market for managerial and professional services provided by the Service Company during 2006? Second, were the 2006 costs of the Service Company's customer accounts services, including those of the National Call Centers, reasonable? Third, are the services OAWC receives from Service Company necessary?

6. Q. What conclusions were you able to draw concerning question number 1, whether OAWC was charged the lower of cost or market services provided by the Service Company?

A. I was able to draw the following conclusions:

(1) OAWC was charged the lower of cost or market for managerial and professional services during the 12 months ended December 31, 2006.

(2) On average, the hourly rates for outside service providers are 55% higher than the Service Company's hourly rates.

(3) The managerial and professional services provided by the Service Company are vital and could not be procured externally by OAWC without careful supervision on the part of OAWC. If these services were contracted entirely to outside providers, OAWC would have to add at least one position to manage activities of outside firms. These positions would be necessary to ensure the quality and timeliness of services provided.

(4) If all the managerial and professional services now provided by the Service Company had been out-sourced during the 12-months ended December 31, 2006, OAWC and its ratepayers would have incurred an additional $1.8 million in expenses. This amount includes the higher cost of outside providers and the cost of an additional OAWC position needed to direct the outsourced work.

(5) This study's hourly rate comparison actually understates the cost advantages that accrue to OAWC from its use of the Service Company. Outside service providers generally bill for every hour worked. Service Company exempt personnel, on the other hand, charge a maximum 8 per day even when they work more. If the overtime hours of Service Company personnel were factored into the hourly rate calculation, the Service Company would have had an even greater annual dollar advantage than the $1.8 million cited above. For instance, if Service Company overtime is

conservatively estimated at 5% (2 hours per week), then that work would have cost an estimated $84,000 in additional charges from outside providers.

(6) It would be difficult for OAWC to find local service providers with the same specialized water industry expertise as that possessed by the Service Company staff. Service Company personnel spend substantially all their time serving operating water companies. This specialization brings with it a unique knowledge of water utility operations and regulation that is most likely unavailable from local service providers.

(7) Service Company fees do not include any profit markup. Only its actual cost of service is being recovered from OAWC ratepayers.

7. Q. What is your conclusion regarding the reasonableness of the costs of the National Call Center that provides service to OAWC?

A. I was able to determine that the cost of the Service Company's customer accounts services, including those provided by the National Call Center, is below the average of the comparison group of neighboring electric utilities. As will be explained further herein, this group of companies provides a reasonable proxy group for comparison to a regulated utility of the size and scope of OAWC. During the 12-months ended December 31, 2006, the customer accounts cost for OAWC customers was $27.59 compared to the 2005 average of $28.09 for neighboring electric utilities. The highest comparison group per customer cost was $68.26 and the lowest $12.43.

9. Q. What conclusions were you able to draw concerning the necessity of the services OAWC receives from the Service Company?

A. I was able to draw the following conclusions:

(1) The services that the Service Company provides are necessary and would be required even if OAWC were a stand-alone water utility.

(2) There is no redundancy or overlap in the services provided by the Service Company to OAWC. For all of the services listed in Schedule 10, there was only one entity that was primarily responsible for the service.

10. Q. Does this complete your testimony?

A. Yes.

I - Introduction

Purpose Of This Study

This study was undertaken to answer three questions concerning the services provided by American Water Works Service Company, Inc. (Service Company) to Tennessee American Water Company (TAWC):

1. Was TAWC charged the lower of cost or market for managerial and professional services provided by the Service Company during the 12-months ended June 30, 2006?

2. Were the 12-months ended June 30, 2006 costs of the Service Company's customer accounts services, including those of the National Call Centers, reasonable?

3. Are the services TAWC receives from Service Company necessary?

Study Results

Concerning question 1, the following conclusions can be drawn from this study:

- TAWC was charged the lower of cost or market for managerial and professional services during the 12-months ended June 30, 2006.

- On average, the hourly rates for outside service providers are **34% higher** than the Service Company's hourly rates.

- The managerial and professional services provided by the Service Company are vital and could not be procured externally by TAWC without careful supervision on the part of TAWC. If these services were contracted entirely to outside providers, TAWC would have to add one position to manage activities of outside firms. This position would be necessary to ensure the quality and timeliness of services provided.

- If all the managerial and professional services now provided by the Service Company had been out-sourced during the 12-months ended June 30, 2006, TAWC and its ratepayers would have incurred an **additional $1.6 million** in expenses. This amount includes the higher cost of outside providers and the cost of a TAWC position needed to direct the outsourced work.

- This study's hourly rate comparison actually understates the cost advantages that accrue to TAWC from its use of the Service Company. Outside service providers generally bill for every hour worked. Service Company personnel, on the other hand, charge a maximum 8 per day even when they work more. If the overtime hours of Service Company personnel had been factored into the hourly rate calculation, the Service Company would have had an even greater annual dollar advantage than the $1.6 million cited above.

- It would be difficult for TAWC to find local service providers with the same specialized water industry expertise as that possessed by the Service Company staff. Service Company personnel spend substantially all their time serving operating water companies. This specialization brings with it a unique knowledge of water utility operations and regulation that is most likely unavailable from local service providers.

- Service Company fees do not include any profit markup. Only its actual cost of service is being recovered from TAWC ratepayers.

Concerning question 2, it was determined that the cost of the Service Company's customer accounts services, including those provided by the National Call Center, **is below the average of the comparison group of neighboring electric utilities**. As will be explained further herein, this group of companies provides a reasonable proxy group for comparison to a regulated utility of the size and scope of TAWC. During the 12-months ended June 30, 2006, the customer accounts cost for TAWC customers was $28.32 compared to the 2005 average of $31.73 for neighboring electric utilities. The highest comparison group 2005 per customer cost was $65.51 and the lowest $12.61.

Concerning question 3, the following conclusions can be drawn:

- The services that the Service Company provides are necessary and would be required even if TAWC were a stand-alone water utility.

- There is no redundancy or overlap in the services provided by the Service Company to TAWC. For all of the services listed in Schedule 10, there was only one entity that was primarily responsible for the service.

II - Background

Overview Of American Water Service Company

The Service Company maintains several types of offices from which it provides services to American Water operating companies. They include:

- Corporate Office – Includes American Water's executive management and personnel from the various corporate support services. American Water's corporate office is located in Voorhees, New Jersey.

- National Call Centers – Perform customer service functions, including: customer call processing, service order processing, correspondence processing, credit and collections. American Water maintains two call centers. One in Alton, Illinois that went into operation in the second quarter of 2001 a second in Pensacola, Florida that went into operation in April 2005. Prior to the establishment of these national call centers, customer service functions were performed by employees of TAWC, which incurred the expense on its books. TAWC transitioned to the Alton Call Center during July and August 2003. During the test period, TAWC also utilized the Pensacola Call Center.

- National Shared Services Center – The Shared Services Center, located in Mount Laurel, New Jersey during 2005 and moved to Cherry Hill, New Jersey in January 2006, provides various financial, accounting and treasury functions that had been performed by individual operating companies. This arrangement has improved and streamlined the Company's financial processes and allowed operating companies to focus on providing utility service.

- Regional Offices – Regional offices provide operating companies with certain support services that can be performed more effectively on a regional basis because individual operating company/center workloads are not sufficient to warrant a full-time staff for these activities. At the same time, these services require closer proximity to operating companies served so they have not been consolidated into the National Shared Services Center. Examples of regional office services include rates and revenues, engineering and operations. There are four regional offices—Northeast, Southeast, Central and West.

- Belleville Lab – The national trace substance laboratory is located in Belleville, Illinois and performs testing for all American Water operating companies.

- Information Technology Service Centers – American Water's principal data center, located in Voorhees, New Jersey, supports the IT infrastructure required to run corporate and operating company business applications and the email system. Two smaller data centers, located in Hershey, Pennsylvania and Richmond, Indiana host some Company servers and print customer bills. IT personnel rotate, as needed, throughout the regional offices and operating companies.

Service Company Expense Categories

The Service Company renders a monthly bill to operating companies. Charges are broken down into the following expense categories:

- Labor – base pay (salaries) of managerial and professional employees

- Labor-Related Overheads - employee benefit costs (payroll taxes, medical coverage, pensions, disability insurance) and other general expenses
- Support - wages and salaries of office support personnel, including secretaries, clerical personnel, telephone operators and mail clerks
- Office Expenses - office rent, equipment leases, telephone, electric, office supplies, property taxes, office maintenance
- Vouchers/Journal Entries – (1) travel expenses incurred by Service Company personnel, (2) other items submitted for reimbursement by employees, including professional association dues, (3) outside service contracts for such things as actuarial services, and (4) various other expenditures, including data center expenses for software licenses and hardware maintenance.

Service Company expenses are either assigned directly or allocated to operating companies, as shown in the table below.

Expense Category	Direct Charged	Allocated	Comments
Labor	X	X	Professional personnel working for one or several operating companies
Labor-Related Overheads	X	X	These are primarily employee benefit costs that relate directly to labor
Support		X	Administrative personnel support the professional staff, thus support costs are allocated on the basis of professional labor
Office Expense		X	Are all allocated on the basis of professional labor
Vouchers/Journals	X	X	May be either directly in support of one operating company (e.g., an engineer traveling from the Corporate Office to the operating company) or allocated to several operating companies

A direct charge occurs when Service Company work or expenses are incurred in support of only one operating company. Direct charge examples include work in support of an operating company's rate case, engineering design work on an operating company's project and the preparation of an operating company's financial statements.

Service Company expenses are allocated when more than one operating company benefits from the underlying work. Examples include assessments of new Federal water quality regulations, development of the company-wide materials procurement contracts and creation of company-wide engineering design standards.

Charging and Assignment Of Service Company Time and Expenses

Service Company transactions are assigned with the following information so there is a proper accounting and eventual charging to an operating company:

- Operating company number, if transaction is a direct charge
- Formula number if transaction is allocated
- Employee hours worked
- Account number for non-labor charges.

Charges can originate from the following systems:

- Payroll System
- RVI System (outside vendor payments)
- PCard System (credit card payments)
- Internal Purchase Order System
- Journal entries.

The Service Company's time reporting process enables labor and support charges to be assigned to the proper operating company. Labor charges are based on the time reported by managerial and professional Service Company employees. Every week, Service Company professional employees complete an electronic time sheet (see example in Schedule 1) that shows:

- Operating company (for direct charge)
- Formula number (for allocation)
- Work order (where applicable)
- Authorization number (where applicable).

At month-end, time report information is processed and direct and allocated professional labor hours tabulated for each operating company. Dollar charges are then calculated using the hourly rate of each Service Company professional employee based upon their base salary (i.e., an employee's hours times their hourly rate of pay).

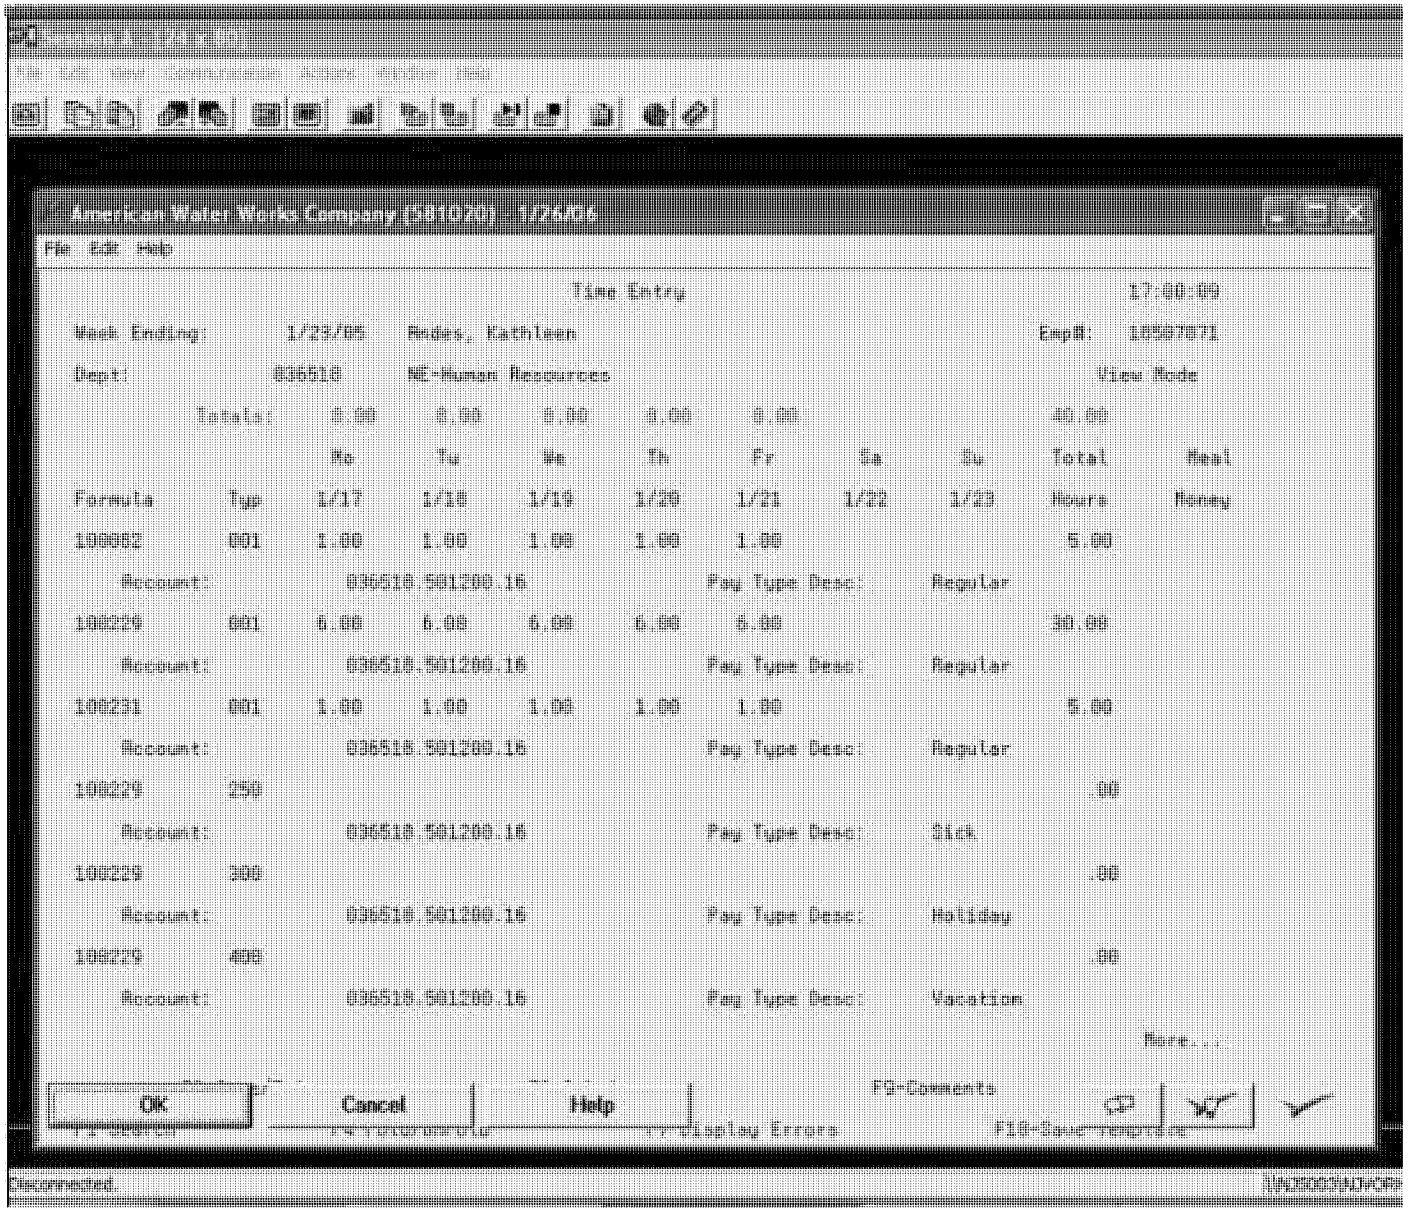
Support (administrative) personnel charge their time to the activity "General Admin." As described in the table on page 4, their labor charges are allocated to operating companies based upon how their office's professional personnel labor charges are assigned. For instance, if 2% of the Voorhees Data Center's professional labor is assigned to TAWC during a month, then 2% of that office's monthly administrative labor charges also is assigned to the operating company.

The overhead cost category is next assigned based on professional and administrative labor costs. Thus, if 2% of the Corporate Office's accumulated professional and support labor is charged to TAWC during the month, then 2% of that month's overhead expenses will be assigned to TAWC.

Each Service Company location's office expenses are allocated to operating companies based on how professional labor charges for that office have been assigned. For instance, if 2% of professional labor from one Service Company office is assigned to TAWC, then 2% of that office's office expenses would be assigned to TAWC. Thus, office expenses are allocated in the very same way as administrative labor.

Vouchers/journal entries may be charged directly or allocated, depending on who benefits from the expenditure. For instance, the cost of a continuing professional education course taken by a professional in a regional office is allocated to the operating companies served by that office. Travel expenses by that same professional to a state rate case proceeding are charged directly to the operating company whose case is being heard.

Tennessee American Water Company
Sample Electronic Time Sheet



III – Service Company Cost Comparison Approach

During the 12-months ended June 30, 2006, Service Company charged TAWC $4,536,342. For purposes of comparing these charges to outside benchmarks, Service Company services were placed into two categories:

- Managerial and Professional Services – Includes such services as management, accounting, legal, human resources, information technology, and engineering.

- Customer Accounts Services – Includes customer-related services, such as call center, credit, billing, collection and payment processing.

Total test period Service Company charges break down between management/professional services and customer account services as follows:

	12-Months Ended June 30, 2006	
	Amount	Hours
Management and Professional Services	$ 3,580,292	31,995
Customer Account Services	$ 956,050	29,476
Total Charges	$ 4,536,342	61,471

This study's first question—whether the Service Company charges the lower of cost or market—was evaluated by comparing the cost per hour for managerial and professional services provided by Service Company personnel to hourly billing rates that would be charged by outside providers of equivalent services. Service Company costs per hour were based on actual charges to TAWC during the 12-months ended June 30, 2006. Outside providers' billing rates came from surveys or other information from professionals that could perform the services now provided by the Service Company.

The second question—reasonableness of the National Call Center costs—was addressed by comparing TAWC's customer accounts services expenses to those of neighboring electric utilities. This approach was selected because the costs of outside providers of call center services are not publicly available. However, electric utility customer account services expenses can be obtained from the FERC Form 1. The availability and transparency of FERC data adds to the validity of its use in this comparison.

The third question—the necessity of Service Company services—was first investigated by determining the services provided to TAWC. A determination was then made as to whether these services would be required if TAWC were a stand-alone utility.

IV – Managerial And Professional Services Hourly Rate Comparison

Methodology

The lower-of-cost-or-market comparison is accomplished by comparing the cost per hour for Service Company managerial and professional services to those of outside service providers to whom these duties could be assigned. Based on the nature of the Service Company services, it was determined that the following outside providers could perform the categories of services indicated below:

- Management Consultants – executive and administrative management, risk management services, human resources and communications services
- Attorneys – legal services
- Certified Public Accountants – accounting, financial, information technology and rates and revenues
- Professional Engineers – engineering, operations and water quality services.

It should be noted that the services provided by the Belleville lab are assumed to be transferable to professional engineers for purposes of this cost comparison. This was done for two reasons. First, there is no readily available survey of hourly billing rates for testing services such as those performed by Belleville. Second, Belleville personnel have similar educational backgrounds as Service Company engineering personnel. In fact, many Belleville employees have engineering degrees. Thus, it is valid to compare the hourly rates of Belleville services to those of outside engineering firms.

Service Company's hourly rate were calculated for each of the four outside service provider categories, based on the dollars and hours charged to TAWC during the 12-months ended June 30, 2006. Hourly billing rates for outside service providers were developed using third party surveys or directly from information furnished by outside providers themselves.

It should be noted that by using the Service Company's hours charged TAWC during the 12-months ended June 30, 2006, its hourly rates are actually overstated because Service Company personnel charge a maximum 8 per day even when they work more. Outside service providers generally bill for every hour worked. If the overtime hours of Service Company personnel had been factored into the hourly rate calculation, Service Company hourly rates would have been lower.

The last step in the market cost comparison was to compare the Service Company's average cost per hour to the average cost per hour for outside providers.

Service Company Hourly Rates

Schedule 2 (pages 10-11) details the assignment of 2006 test period management and professional Service Company charges and hours to outsider provider categories.

Certain adjustments to these dollar amounts were necessary to calculate Service Company hourly rates that are directly comparable to those of outside providers. Adjustments were made to the following 2006 test period non-labor Service Company charges:

- Contract Services – 12-months ended June 30, 2006 Service Company charges to TAWC include over $700,000 in charges associated with existing arrangements with

outside professional firms who perform certain corporate-wide services (e.g., legal, financial audit, actuarial services). These professional fees are excluded from the Service Company hourly rate calculation because the related services have effectively been out-sourced already.

- Travel Expenses – In general, client-related travel expenses are not recovered by outside service providers through their hourly billing rate. Rather, actual out-of-pocket travel expenses are billed to clients in addition to fees for professional services. Thus, it is appropriate to remove these Service Company charges from the hourly rate calculation.

- Computer Hardware and Software Expenses – Included in the 12-months ended June 30, 2006 Service Company charges to TAWC are charges for outside expenses related to leases and maintenance fees related to mainframe, server and network infrastructure, corporate business applications and the email system. An outside provider that would take over operation of a data center would recover these expenses over and above the labor necessary to operate the data center.

- Severance Payments – During the 12-months ended June 30, 2006, the Service Company instituted layoffs that resulted in severance payments to some departing employees. TAWC's portion of these payments are excluded from the hourly rate calculation because they are non-recurring items.

Schedule 3 (page 12) shows how contract services, travel expenses and computer hardware/software-related Service Company charges are assigned among the four outside provider categories.

Based on the assignment of expenses and hours shown in Schedules 3 and 4, the Service Company's equivalent costs per hour for the 12-months ended June 30, 2006 are calculated below.

	Attorney	Management Consultant	Certified Public Accountant	Professional Engineer	Total
Total management, professional & technical services charges	$ 169,849	$ 1,324,057	$ 1,408,453	$ 677,933	$ 3,580,292
Less:

Outside Service Provider Hourly Rates

The next step in the cost comparison was to obtain the average billing rates for each outside service provider. The source of this information and the determination of the average rates are described in the paragraphs that follow.

Attorneys

The Tennessee Bar Association does not survey its members as to their hourly billing rates. In addition, publicly available billing rate information could not be found for Tennessee attorneys. Therefore, a Tennessee estimate was developed from a survey of Michigan lawyers conducted annually by the Michigan Lawyers Weekly. As presented in Schedule 4, the average rate for each Michigan firm respondent was adjusted for the cost of living differential between their location and Chattanooga, Tennessee. The survey includes rates that were in effect at December 31, 2005—the midpoint of the 12-months ended 2006.

Management Consultants

The cost per hour for management consultants was developed from the 2005 annual survey performed by the Association of Management Consulting Firms—an industry trade organization. The first step in the calculation, presented in Schedule 5, was to determine an average rate by consultant position level. From these rates, a single weighted average hourly rate was calculated based upon the percent of time that is typically applied to a consulting assignment by each consultant position level. This survey includes rates that were in effect during 2004 for firms in the United States. Consultants typically do not limit their practice to any one region and must travel to a client's location. Thus, the U.S. national average is appropriate for comparison. The 2004 average rate was escalated to December 31, 2005—the midpoint of 12-months ended June 30, 2006.

Certified Public Accountants

The average hourly rate for Tennessee certified public accountants was developed from a 2004 survey conducted by the American Institute of Certified Public Accountants (AICPA) every two years. Hourly rates in the AICPA survey are the average of firms in Tennessee. The average hourly rate was calculated for a set of typical accountant positions, as shown in Schedule 6. Based on a typical staff assignment by each accountant position, a weighted average hourly rate was calculated. This survey covered hourly rates in effect during 2003, thus they had to be escalated to December 31, 2005—the midpoint of 12-months ended June 30, 2006.

Professional Engineers

The Service Company provided hourly rate information for three outside engineering firms that were used by TAWC in 2005 and 2006. As presented in Schedule 7, an average rate was developed for each engineering position level. Then, using a typical percentage mix of project time by engineering position, a weighted average cost per hour was calculated.

Schedule 7

Tennessee American Water Company
Billing Rates Of Tennessee Engineers

Note: Billing rates are the average for 2005 and 2006

A. Calculation of Average Hourly Rate by Engineer Position

	Average Hourly Billing Rates			
Name of Firm	CAD Drafter Engineer Tech	Engineer Design Engineer Project Engineer Elect Proj Engineer	Project Manager Project Associate Sr. Mgr. Engineer	Officer Principal Engineer
Firm #1	$59	$99	$122	$133
Firm #2	$67	$78	$125	$149

B. Calculation of Overall Average Engineering Hourly Billing Rate

	CAD Drafter Engineer Tech	Engineer Design Engineer Project Engineer Elect Proj Engineer	Project Manager Project Associate Sr. Mgr. Engineer	Officer Principal Engineer	
Average Hourly Billing Rate (From Above)	$63	$88	$123	$141	
Typical Percent of Time on an Engineering Assignment	30%	35%	25%	10%	Weighted Average
	$19	$31	$31	$14	**$95**

Source: Information provided by American Water Works Service Company. Firm names have not been disclosed to preserve the confidentiality of their hourly rates.

Service Company Versus Outside Provider Cost Comparison

As shown in the table below, Service Company costs per hour are considerably lower than those of outside providers.

	12 Months Ended June 30, 2006		
Service Provider	Service Company	Outside Provider	Difference--Service Co. Greater(Less) Than Outside
Attorney	$ 112	$ 223	$ (111)
Management Consultant	$ 154	$ 216	$ (62)
Certified Public Accountant	$ 64	$ 113	$ (49)
Professional Engineer	$ 66	$ 95	$ (29)

Based on these cost per hour differentials and the number of managerial and professional services hours billed to TAWC during the 12-months ended June 30, 2006, outside service providers would have cost $1,530,452 more than the Service Company (see table below). Thus, on average, outside provider's hourly rates are almost 34% higher than those of the Service Company ($1,530,452 / $4,536,342).

	12 Months Ended June 30, 2006		
Service Provider	Hourly Rate Difference--Service Co. Greater(Less) Than Outside	Service Company Hours Charged	Dollar Difference
Attorney	$ (111)	1,396	$ (155,217)
Management Consultant	$ (62)	5,167	$ (321,083)
Certified Public Accountant	$ (49)	16,097	$ (785,939)
Professional Engineer	$ (29)	9,335	$ (268,213)
Net Service Co Less Than Outside Providers			$ (1,530,452)

If TAWC were to use outside service providers rather than the Services Company for managerial and professional services, it would incur other additional expenses besides those associated with higher hourly rates. Managing outside firms who would perform 31,995 hours of work (around 21 full-time equivalents at 1,500 billable hours per FTE) would add a significant workload to the existing TAWC management team. Thus, it would be necessary for TAWC to add at least one position to supervise the outside firms and ensure they delivered quality and timely services. The individuals that would fill these positions would need a good understanding of each profession being managed. They must also have management experience and the authority necessary to give them credibility with the outside firms. As calculated in the table below, this position would add another $121,400 per year to TAWC's personnel expenses.

Cost of Adding Administrative Positions To TAWC's Staff

	Total
New Positions' Salary	$ 85,000
Benefits (at 52%)	$ 36,400
Total Cost of the New Position	$ 121,400

Thus, the total effect on the ratepayers of TAWC of contracting all services now provided by Service Company would be an increase in their costs of **$1,651,852** ($1,530,452 + $121,400).

Other Cost Comparisons

Every year, the Belleville Lab conducts a comparison of its cost for performing major tests to the cost of using outside testing laboratories. Over the past several years, these surveys have shown the following results been as follows:

Year	Number of Major Tests Surveyed	Percent Belleville Lower Than Outside Labs
2000	26	15%
2001	25	19%
2002	24	16%
2003	23	10%
2004	24	9%
2005	24	25%

These studies present further evidence that the Service Company arrangement is the lowest-cost alternative for TAWC.

V – Customer Account Services Cost Comparison

Background

It is difficult to compare the cost of American Water's National Call Centers with outside providers of the same call center-related services. Call center survey data is proprietary and expensive to obtain. For this reason, TAWC's National Call Center costs are compared to those of neighboring electric utilities because the data necessary to make this comparison is readily available to the public.

Electric utility cost information comes from their FERC Form 1. FERC's chart of accounts is defined in chapter 18, part 101 of Code of Federal Regulations. FERC accounts that contain call center-related expenses and are used in this study's comparison are:

- Account 903 Customer Accounts Expense – Records and Collection Expense
- Account 905 Customer Accounts Expense – Miscellaneous Customer Accounts Expense.

In addition, labor-related overheads charged to the following FERC accounts must be added to the labor components of Accounts 903 and 905.

- Account 926 Employee Pension and Benefits
- Account 408 Taxes Other Than Income (employer's portion of FICA).

Schedule 8 provides FERC's description of what should be charged to these accounts. In questioning the controller of a large Southeastern electric utility, it was determined that expenses of the activities described below are recorded in the designated FERC accounts.

903 Records and Collection Expense

- Customer Call Center – customer calls/contact, credit, order taking/disposition, bill collection efforts, outage calls
- Call Center IT – maintenance of phone banks, voice recognition units, call center software applications, telecommunications
- Customer billing – bill printing, stuffing and mailing
- Remittance processing – processing of customer payments received in the mail
- Bill payment centers – locations where customers can pay their bills in person

905 Miscellaneous Customer Accounts Expense

- Customer Information System IT – maintenance and support of the customer information system

This study assumes the FERC accounts for other electric and gas utilities contain expenses for the same activities.

Tennessee American Water Company
FERC Account Descriptions

903 – Customer Records and Collection Expenses
This account shall include the cost of labor, materials used and expenses incurred in work on customer applications, contracts, orders, credit investigations, billing and accounting, collections and complaints.

Labor

1. Receiving, preparing, recording and handling routine orders for service, disconnections, transfers or meter tests initiated by the customer, excluding the cost of carrying out such orders, which is chargeable to the account appropriate for the work called for by such orders.
2. Investigations of customers' credit and keeping of records pertaining thereto, including records of uncollectible accounts written off.
3. Receiving, refunding or applying customer deposits and maintaining customer deposit, line extension, and other miscellaneous records.
4. Checking consumption shown by meter readers' reports where incidental to preparation of billing data.
5. Preparing address plates and addressing bills and delinquent notices.
6. Preparing billing data.
7. Operating billing and bookkeeping machines.
8. Verifying billing records with contracts or rate schedules.
9. Preparing bills for delivery, and mailing or delivering bills.
10. Collecting revenues, including collection from prepayment meters unless incidental to meter reading operations.
11. Balancing collections, preparing collections for deposit, and preparing cash reports.
12. Posting collections and other credits or charges to customer accounts and extending unpaid balances.
13. Balancing customer accounts and controls.
14. Preparing, mailing, or delivering delinquent notices and preparing reports of delinquent accounts.
15. Final meter reading of delinquent accounts when done by collectors incidental to regular activities.
16. Disconnecting and reconnecting services because of nonpayment of bills.
17. Receiving, recording, and handling of inquiries, complaints, and requests for investigations from customers, including preparation of necessary orders, but excluding the cost of carrying out such orders, which is chargeable to the account appropriate for the work called for by such orders.
18. Statistical and tabulating work on customer accounts and revenues, but not including special analyses for sales department, rate department, or other general purposes, unless incidental to regular customer accounting routines.
19. Preparing and periodically rewriting meter reading sheets.
20. Determining consumption and computing estimated or average consumption when performed by employees other than those engaged in reading meters.

Materials and expenses

21. Address plates and supplies.
22. Cash overages and shortages.
23. Commissions or fees to others for collecting.
24. Payments to credit organizations for investigations and reports.
25. Postage.
26. Transportation expenses, including transportation of customer bills and meter books under centralized billing procedure.
27. Transportation, meals, and incidental expenses.
28. Bank charges, exchange, and other fees for cashing and depositing customers' checks.
29. Forms for recording orders for services, removals, etc.
30. Rent of mechanical equipment.

Tennessee American Water Company
FERC Account Descriptions

905 – Miscellaneous Customer Accounts Expenses
This account shall include the cost of labor, materials used and expenses incurred not provided for in other accounts.
Labor
1. General clerical and stenographic work.
2. Miscellaneous labor.

Materials and expenses
3. Communication service.
4. Miscellaneous office supplies and expenses and stationery and printing other than those specifically provided for in accounts 902 and 903.

Comparison Group

Electric utilities included in the comparison group are shown in the table below. These are companies whose FERC Form 1 show amounts for accounts 903 and 905.

Tennessee	• Kingsport Power	
Kentucky	• Kentucky Power • Kentucky Utilities	• Louisville Gas & Electric • Union Light, Heat & Power
Virginia	• Appalachian Power	• Virginia Electric Power
North Carolina	• Duke Power	• Progress Energy – Carolinas
Georgia	• Georgia Power	• Savannah Electric
Alabama	• Alabama Power	
Mississippi	• Entergy Mississippi	• Mississippi Power
Arkansas	• Entergy Arkansas	
Missouri	• Aquila	• Union Electric

Several neighboring electric utilities could not be included in the comparison group because they did not submit the necessary FERC Form 1 data.

Comparison Approach

The basis for this comparison is customer account services expenses per customer. TAWC's cost pool was developed to include the same expenses included in electric utility's FERC accounts 903 and 905. As shown in the graphic below, TAWC's resultant cost pool contains the expenses of Service Company locations and certain operating company expenses.

American Water
Service Company Pensacola & Alton Call Centers a. Customer contact b. Customer order processing c. Billing information processing d. Collections e. Correspondence processing IT Service Centers a. Support expenses for the customer information system (ORCOM) New Jersey American a. Payment processing

Electric Utilities
FERC Acct 903 - Records and Collection Expense and FERC Acct 905 - Misc Customer Accounts Expense a. Customer contact b. Customer order processing c. Bill preparation and mailing d. Collections e. Payment processing f. Correspondence processing

TAWC Cost Per Customer

In order to make a valid comparison to neighboring electric utilities, certain adjustments had to be made to the applicable Service Company charges to TAWC. It was necessary to adjust the National Call Center charges because electric utilities experience an average of 2.50 calls per customer compared to American Water's 1.32 calls per customer. Thus, National Call Center expenses had to be increased, for comparison purposes, to reflect its costs at a 2.50 calls per customer level. As shown below, TAWC's adjusted annual expense per customer is $28.32—the number that can be compared to neighboring electric utilities' expenses.

Year Ended June 30, 2006 TAWC Cost Per Customer			Tennessee American	
Cost Component			Actual	Adjusted
Service Company				
Call Centers	Call processing, order processing, credit, bill collection	Note A	$ 866,197	$ 1,640,525
Regional Offices	Customer service support		$ 89,853	$ 89,853
IT Services	Customer info system support, bill printing			$ 245,314
Operating Company	Customer payment processing	Note B		$ 107,702
	Cost Pool Total			$ 2,083,394
	Average Number of Customers			73,567
	Year Ended June 30, 2006 Cost Per Customer			**$ 28.32**

Note A: Adjustment for American Water's fewer calls per customer		
Net Test Year Call Center Charges (above)		$ 866,197
Electric Utility industry's avg calls/customer	2.50	
American Water's avg calls/customer	1.32	
Multiplier		1.89
Total estimated cost		$ 1,640,525

Note B: Estimated customer customer payment processing expenses	
Average number of customers	73,567
Average number of payments/customer/year	12
Total payments processed/year	882,804
Bank charge per item	$ 0.1220
Total estimated annual expense	$ 107,702

Electric Utility Group Cost Per Customer

Schedule 9 shows the actual 2005 customer accounts expense per customer calculation for the electric utility comparison group. All of the underlying data was taken from the utilities' FERC Form 1.

Summary Of Results

As shown in the table below, TAWC's cost per customer is below the average of the electric utility comparison group. It can therefore be concluded that the customer accounts-related expenses, including those of the Alton and Pensacola Call Centers, assigned by the Service Company to TAWC are reasonable.

Customer Account Services Expenses Per Customer	
Louisville Gas & Electric	$ 12.61
Virginia Electric Power	$ 15.77
Union Electric	$ 22.38
Aquilla	$ 22.84
Duke Power	$ 24.35
Union Light, Heat & Power	$ 25.75
Kentucky Utilities	$ 25.78
Progress Energy - Carolinas	$ 27.09
Tennessee American Water	**$ 28.32**
Comparison Group Average	**$ 31.73**
Kingsport Power	$ 32.18
Appalachian Power	$ 32.40
Kentucky Power	$ 34.25
Georgia Power	$ 43.44
Alabama Power	$ 48.50
Savannah Electric	$ 54.72
Mississippi Power	$ 58.93
Entergy Arkansas	$ 60.77
Entergy Mississippi	$ 65.51

VI - Need For Service Company Services

Analysis Of Services

The final aspect of this study was an assessment of whether the services that are provided to TAWC by the Service Company would be necessary if TAWC were a stand-alone water utility. The first step in this evaluation was to determine specifically what the Service Company does for TAWC. Based on discussions with Service Company personnel, the matrix in Schedule 10 was created showing which entity—TAWC or a Service Company location—is responsible for each of the functions TAWC requires to ultimately provide service to its customers. This matrix was reviewed to determine: (1) if there was redundancy or overlap in the services being provided by the Service Company and (2) if Service Company services are typical of those needed by a stand-alone water utility.

Upon review of Schedule 10, the following conclusions can be drawn:

- The services that the Service Company provides are necessary and would be required even if TAWC were a stand-alone water utility.

- There is no redundancy or overlap in the services provided by the Service Company to TAWC. For all of the services listed in Schedule 10, there was only one entity that was primarily responsible for the service.

Governance Practices Associated With Service Company Charges

There are several ways by which TAWC exercises control over Service Company services and charges. The most important of these are described below.

- **Regional President Oversight** – The Regional President of the Southeast Region is on the Executive Management Team (EMT) of American Water. The Regional President is responsible for the overall performance of each operating company in the region, including PAWC, VAWC, WVAWC, KAWC, TAWC, MAWC. As part of the EMT, each Regional President has equal say with other EMT members in major business decisions of American Water and has the ability to monitor Service Company performance quality and spending.

- **Regional Vice President & Treasurer** – The Regional Vice President and Treasurer of the Southeast Region is responsible for the financial reporting, performance and internal controls of each of the operating companies in the region. The Vice President and Treasurer monitor the performance and reporting from the Service Company to insure the timely and accurate support.

- **Operating Company Board Oversight** – TAWC board of directors includes members of American Water's EMT, members of the regional management team and business and community leaders from outside the Company. This helps ensure that Tennessee American's needs are a factor in the delivery of Service Company services.

- **Service Company Budget Review/Approval** – Every operating company president sits on the Service Company board and that board must formally approve the budget for Service Company charges for the next year. These budgeted charges are consolidated with the operating company's own spending into an overall budget which must be approved by the operating company's board of directors.

- **Major Project Review And Approval** – Major projects undertaken by the Service Company must first be reviewed by American Water's Executive Management Team, which includes the Regional President. The Regional President, with input from the regional management team has the ability to impact all new initiatives and projects before they are authorized.

- **Service Company Bill Scrutiny** – Regional office personnel review the monthly Service Company bill for accuracy and reasonableness on a monthly basis. Any mistakes or overcharges are credited on a subsequent billing.

- **Operating Company Budget Variance Reporting** – The "Budget/Plan Analysis," produced monthly by each operating company, has a line item for Management Fees (i.e., Service Company charges). In this way, Service Company budget versus actual charges can be monitored for the month and year-to-date.

- **Capital Investment Management** (CIM) – CIM is one of American Water's primary business planning processes. It covers capital and asset planning and is employed throughout American Water and Thames Water. The current CIM process and procedures were established in 2003 as part of an initiative to implement leading water industry practices. CIM provides a full range of governance practices, including a formal protocol for assessing system needs, prioritizing expenditures, managing the capital program, approving project spending, delivering projects and measuring outputs. CIM ensures that:
  - Capital expenditure plans are aligned with the strategic intent of the business,
  - The impact of capital expenditure and income plans are fully reflected in operating expense plans,
  - The impacts of these plans are understood and affordable, and
  - Effective controls are in place over budgets (through business plans) and individual capital projects (through appropriate authorization thresholds, management and reporting processes).

  The CIM process was designed to optimize the effectiveness of asset investment. The process is managed at three levels for all American Water companies, including all Tennessee American Operating Units.

P.Baryenbruch

Tennessee American Water Company

1. **Q. Please state your name and business address.**

   A. Patrick L. Baryenbruch, 302 East Park Drive, Raleigh, North Carolina 27605.

2. **Q. Please describe your educational and professional background**.

   A. I received a Bachelors degree in accounting from the University of Wisconsin-Oshkosh in 1974 and a Masters in Business Administration degree from the University of Michigan in 1979.

   I am a certified public accountant and am a member of the American Institute of Certified Public Accountants and the North Carolina Association of Certified Public Accountants.

   I began my career as a staff accountant with Arthur Andersen & Company where I performed financial audits of utilities, banks and finance companies. After three years I left to pursue an M.B.A. degree. Upon graduation from business school, I worked with the consulting firms of Theodore Barry & Associates and Scott, Madden & Associates.

   During my consulting career, I have performed consulting assignments for approximately 50 utilities and 10 public service commissions. I have participated as project manager, lead or staff consultant for 24 commission-ordered management and prudence audits of public utilities. Of these, I have been responsible for evaluating the area of affiliate charges and allocation of corporate expenses in the Commission-ordered audits of Connecticut Light and Power, Connecticut Natural Gas, General Water Corporation (Pennsylvania Operations), Philadelphia Suburban Water Company (now Aqua America), Pacific Gas & Electric Company and Southern California Edison.

   My firm has performed or is performing the commission-ordered audit of Southern California Edison's 2002, 2003, 2004 and 2005 transactions with its non-regulated affiliate companies.

3. **Q. What are your duties and responsibilities in your current position?**

A. I am the President of my own consulting practice, Baryenbruch & Company, which was established in 1985. In that capacity, I provide consulting services to utilities and their regulators.

4. **Q. Please describe the reason for your testimony in this case**.

A. I am presenting the results of my study which evaluated the services provided by American Water Service Company, Inc. ("Service Company") during the 12-months ended June 30, 2006 to Tennessee American Water Company ("TAWC"). This study was undertaken in conjunction with TAWC's rate case and is true to the best of my knowledge and belief. The study is attached as Exhibit PLB-1.

5. **Q. What were the objectives of your study?**

A. This study was undertaken to answer three questions. First, was TAWC charged the lower of cost or market for managerial and professional services provided by the Service Company during the 12-months ended June 30, 2006? Second, were the 12-months ended June 30, 2006 costs of the Service Company's customer accounts services, including those of the National Call Centers, reasonable? Third, are the services TAWC receives from Service Company necessary?

6. **Q. What conclusions were you able to draw concerning question number 1, the economic impact of outsourcing all the services provided by the Service Company?**

A. I was able to draw the following conclusions:

(1) TAWC was charged the lower of cost or market for managerial and professional services during the 12-months ended June 30, 2006.

(2) On average, the hourly rates for outside service providers are 34% higher than the Service Company's hourly rates.

(3) The managerial and professional services provided by the Service Company are vital and could not be procured externally by TAWC without careful supervision on the part of TAWC. If these services were contracted entirely to outside providers, TAWC would have to add one position to manage activities of outside firms. This position would be necessary to ensure the quality and timeliness of services provided.

(4) If all the managerial and professional services now provided by the Service Company had been out-sourced during the 12-months ended June 30, 2006, TAWC and its ratepayers would have incurred an additional $1.6 million in expenses. This amount includes the higher cost of outside providers and the cost of a TAWC position needed to direct the outsourced work.

(5) This study's hourly rate comparison actually understates the cost advantages that accrue to TAWC from its use of the Service Company. Outside service providers generally bill for every hour worked. Service Company personnel, on the other hand, charge a maximum 8 per day even when they work more. If the overtime hours of Service Company personnel had been factored into the hourly rate calculation, the Service Company would have had an even greater annual dollar advantage than the $1.6 million cited above.

(6) It would be difficult for TAWC to find local service providers with the same specialized water industry expertise as that possessed by the Service Company staff. Service Company personnel spend substantially all their time serving operating water companies. This specialization brings with it a unique knowledge of water utility operations and regulation that is most likely unavailable from local service providers.

(7) Service Company fees do not include any profit markup. Only its actual cost of service is being recovered from TAWC ratepayers.

7. **Q. What is your conclusion regarding the reasonableness of the costs of the National Call Center that provides service to TAWC?**

A. I was able to determine that the cost of the Service Company's customer accounts services, including those provided by the National Call Center, is below the average of the comparison group of neighboring electric utilities. As will be explained further herein, this group of companies provides a reasonable proxy group for comparison to a regulated utility of the size and scope of TAWC. During the 12-months ended June 30, 2006, the customer accounts cost for TAWC customers was $28.32 compared to the 2005 average of $31.73 for neighboring electric utilities. The highest comparison group 2005 per customer cost was $65.51 and the lowest $12.61.

8. **Q. What conclusions were you able to draw concerning the necessity of the services TAWC receives from the Service Company?**

A. I was able to draw the following conclusions:

(1) The services that the Service Company provides are necessary and would be required even if TAWC were a stand-alone water utility.

(2) There is no redundancy or overlap in the services provided by the Service Company to TAWC. For all of the services listed in Schedule 10 of my report, there was only one entity that was primarily responsible for the service.

9. **Q. Does this complete your testimony?**

A. Yes.

I - Introduction

Purpose Of This Study

This study was undertaken to answer three questions concerning the services provided by American Water Works Service Company, Inc. (Service Company) to Virginia American Water Company (VAWC):

1. Was VAWC charged the lower of cost or market for managerial and professional services provided by the Service Company during the 12 months ended September 30, 2007?

2. Was the 12 months ended September 30, 2007 cost of the Service Company's customer accounts services, including those of the National Call Centers, reasonable?

3. Are the services VAWC receives from Service Company necessary?

Study Results

Concerning question 1, the following conclusions can be drawn from this study:

- VAWC was charged the lower of cost or market for managerial and professional services during the 12-months ended September 30, 2007.

- On average, the hourly rates for outside service providers are 46% higher than the Service Company's hourly rates.

- The managerial and professional services provided by the Service Company are vital and could not be procured externally by VAWC without careful supervision on the part of VAWC. If these services were contracted entirely to outside providers, VAWC would have to add at least one position to manage activities of outside firms. These positions would be necessary to ensure the quality and timeliness of services provided.

- If all the managerial and professional services now provided by the Service Company had been out-sourced during the 12-months ended September 30, 2007, VAWC and its ratepayers would have incurred more than $1.2 million in additional expenses. This amount includes the higher cost of outside providers and the cost of an additional VAWC position needed to direct the outsourced work.

- This study's hourly rate comparison actually understates the cost advantages that accrue to VAWC from its use of the Service Company. Outside service providers generally bill for every hour worked. Service Company exempt personnel, on the other hand, charge a maximum 8 per day even when they work more. If the overtime hours of Service Company personnel were factored into the hourly rate calculation, the Service Company would have had an even greater annual dollar advantage than the $1.2 million cited above. For instance, if Service Company overtime is conservatively estimated at 5% (2 hours per week), then that work would have cost an estimated $56,000 in additional charges from outside providers.

- It would be difficult for VAWC to find local service providers with the same specialized water industry expertise as that possessed by the Service Company staff. Service Company personnel spend substantially all their time serving operating water companies. This specialization brings with it a unique knowledge of water utility operations and regulation that is most likely unavailable from local service providers.

- Service Company fees do not include any profit markup. Only its actual cost of service is being recovered from VAWC ratepayers.

Concerning question 2, it was determined that the cost of the Service Company's customer accounts services, including those provided by the National Call Center, is within a reasonable range of the average of the neighboring electric utility comparison group. As will be explained further herein, this group of companies provides a reasonable proxy group for comparison to a regulated utility of the size and scope of VAWC. During the 12-months ended September 30, 2007, the customer accounts cost for VAWC customers was $31.03 compared to the 2006 average of $28.57 for neighboring electric utilities. The highest comparison group per customer cost was $74.21 and the lowest $13.46.

Concerning question 3, the following conclusions can be drawn:

- The services that the Service Company provides are necessary and would be required even if VAWC were a stand-alone water utility.

- There is no redundancy or overlap in the services provided by the Service Company to VAWC. For all of the services listed in Schedule 10, there was only one entity that was primarily responsible for the service.

II - Background

Overview Of American Water Works Service Company

The Service Company maintains several types of offices from which it provides services to American Water operating companies. They include:

- Corporate Office – Includes American Water's executive management and personnel from the various corporate support services. American Water's corporate office is located in Voorhees, New Jersey.

- National Call Centers – Perform customer service functions, including: customer call processing, service order processing, correspondence processing, credit and collections. American Water maintains two call centers. One in Alton, Illinois that went into operation in 2001 and a second in Pensacola, Florida that went into operation in 2005. Prior to the establishment of these national call centers, customer service functions were performed by employees of VAWC, which incurred the expense on its books.

- National Shared Services Center – The Shared Services Center, located in Cherry Hill, New Jersey, provides various financial, accounting and treasury functions that had been performed by individual operating companies. This arrangement has improved and streamlined the Company's financial processes and allowed operating companies to focus on providing utility service.

- Regional Offices – Regional offices provide operating companies with certain support services that can be performed more effectively on a regional basis because individual operating company/center workloads are not sufficient to warrant a full-time staff for these activities. At the same time, these services require closer proximity to operating companies served so they are not provided by the National Shared Services Center. Examples of regional office services include rates and revenues, engineering and operations.

- Belleville Lab – The national trace substance laboratory is located in Belleville, Illinois and performs testing for all American Water operating companies.

- Information Technology Service Centers – American Water's principal data center, located in Hershey, Pennsylvania, supports the IT infrastructure required to run corporate and operating company business applications and the communications systems. IT personnel rotate, as needed, throughout the regional offices and operating companies.

Service Company Expense Categories

The Service Company renders a monthly bill to operating companies. Charges are broken down into the following expense categories:

- Labor – base pay (salaries) of managerial and professional employees
- Labor-Related Overheads - employee benefit costs (payroll taxes, medical coverage, pensions, disability insurance) and other general expenses
- Support - wages and salaries of office support personnel, including secretaries, clerical personnel, telephone operators and mail clerks

- Office Expenses - office rent, equipment leases, telephone, electric, office supplies, property taxes, office maintenance
- Vouchers/Journal Entries – (1) travel expenses incurred by Service Company personnel, (2) other items submitted for reimbursement by employees, including professional association dues, (3) outside service contracts for such things as actuarial services, and (4) various other expenditures, including data center expenses for software licenses and hardware maintenance.

Service Company expenses are either assigned directly or allocated to operating companies, as shown in the table below.

Expense Category	Direct Charged	Allocated	Comments
Labor	X	X	Professional personnel working for one or several operating companies
Labor-Related Overheads	X	X	These are primarily employee benefit costs that relate directly to labor
Support		X	Administrative personnel support the professional staff, thus support costs are allocated on the basis of professional labor
Office Expense		X	Are all allocated on the basis of professional labor
Vouchers/Journals	X	X	May be either directly in support of one operating company (e.g., an engineer traveling from the Corporate Office to the operating company) or allocated to several operating companies

A direct charge occurs when Service Company work or expenses are incurred in support of only one operating company. Direct charge examples include work in support of an operating company's rate case, engineering design work on an operating company's project and the preparation of an operating company's financial statements.

Service Company expenses are allocated when more than one operating company benefits from the underlying work. Examples include assessments of new Federal water quality regulations, development of the company-wide materials procurement contracts and creation of company-wide engineering design standards.

Charging and Assignment Of Service Company Time and Expenses

Service Company transactions are assigned with the following information so there is a proper accounting and eventual charging to an operating company:

- Operating company number, if transaction is a direct charge
- Formula number if transaction is allocated
- Employee hours worked
- Account number for non-labor charges

Charges can originate from the following systems:

- Payroll System
- RVI System (outside vendor payments)
- PCard System (credit card payments)
- Internal Purchase Order System
- Journal entries

The Service Company's time reporting process enables labor and support charges to be assigned to the proper operating company. Labor charges are based on the time reported by managerial and professional Service Company employees. Every week, Service Company professional employees complete an electronic time sheet that shows:

- Operating company (for direct charge)
- Formula number (for allocation)
- Work order (where applicable)
- Authorization number (where applicable)

At month-end, time report information is processed and direct and allocated professional labor hours tabulated for each operating company. Dollar charges are then calculated using the hourly rate of each Service Company professional employee based upon their base salary (i.e., an employee's hours times their hourly rate of pay).

Support (administrative) personnel charge their time to the activity "General Admin." As described in the table on page 4, their labor charges are allocated to operating companies based upon how their office's professional personnel labor charges are assigned. For instance, if 20% of the Southeast Region's professional labor is assigned to VAWC during a month, then 20% of that office's monthly administrative labor charges also are assigned to the operating company.

The overhead cost category is next assigned based on professional and administrative labor costs. Thus, if 20% of the Southeast Region's accumulated professional and support labor is charged to VAWC during the month, then 20% of that month's overhead expenses will be assigned to VAWC.

Each Service Company location's office expenses are allocated to operating companies based on how professional labor charges for that office have been assigned. For instance, if 2% of professional labor from one Service Company office is assigned to VAWC, then 2% of that office's office expenses would be assigned to VAWC. Thus, office expenses are allocated in the very same way as administrative labor.

Vouchers/journal entries may be charged directly or allocated, depending on who benefits from the expenditure. For instance, the cost of a continuing professional education course taken by a professional in a regional office is allocated to the operating companies served by that office. Travel expenses by that same professional to a rate case proceeding are charged directly to the operating company whose case is being heard.

III – Service Company Cost Comparison Approach

During the 12 months ended September 30, 2007, the Service Company billed VAWC $4,458,383 in O&M-related charges, $265,518 in capital-related charges and $8,293 other charges. Included in the O&M amount are certain non-recurring expenses and charge from non-Southeast Region charges for which VAWC is not seeking recovery. As calculated in the table below, net Service Company charges of $3,296,676 were subjected to a market cost comparison.

	12 Months Ended September 30, 2007
Total Management Fees (O&M)	$ 4,458,383
JE to reclass pension expense	$ (862,993)
Mgmt Fee Expense per P&L	$ 3,595,390
Less: Non-Recurring Expenses	
Divestiture & SOX	$ (516,068)
Business Change	$ (12,590)
Write-Off of Svc Co Bldg	$ (8,293)
Net O&M Adjustments	$ (536,952)
Less: Non-Central Regions	$ (36,574)
Net Testable O&M	$ 3,021,865
Total Capital	$ 266,518
Total Other	$ 8,293
Total Testable SC Charges	**$ 3,296,676**

For purposes of comparing these charges to outside benchmarks, Service Company services were placed into two categories:

- Managerial and Professional Services – Includes such services as management, accounting, legal, human resources, information technology, and engineering.

- Customer Accounts Services – Includes customer-related services, such as call center, credit, billing, collection and payment processing.

Total test period Service Company charges break down between management/professional services and customer account services as follows:

	12 Months Ended Sept. 30, 2007	
	Amount	Hours
Management and Professional Services	$ 2,474,926	24,399
Customer Account Services	$ 821,750	22,311
Total Service Company Charges	$ 3,296,676	46,711

This study's first question—whether the Service Company charges the lower of cost or market—was evaluated by comparing the cost per hour for managerial and professional services provided by Service Company personnel to hourly billing rates that would be charged by outside providers of equivalent services. Service Company costs per hour were based on actual charges to VAWC during the 12 months ended September 30, 2007. Outside providers' billing rates came from surveys or other information from professionals that could perform the services now provided by the Service Company.

The second question—reasonableness of the National Call Center costs—was addressed by comparing VAWC's customer accounts services expenses to those of neighboring electric utilities. This approach was selected because the costs of outside providers of call center services are not publicly available. However, electric utility customer account services expenses can be obtained from the FERC Form 1. The availability and transparency of FERC data adds to the validity of its use in this comparison.

The third question—the necessity of Service Company services—was first investigated by determining the services provided to VAWC. A determination was then made as to whether these services would be required if VAWC were a stand-alone utility.

IV – Managerial And Professional Services Hourly Rate Comparison

Methodology

The lower-of-cost-or-market comparison is accomplished by comparing the cost per hour for Service Company managerial and professional services to those of outside service providers to whom these duties could be assigned. Based on the nature of the Service Company services it was determined that the following outside providers could perform the categories of services indicated below:

- Management Consultants – executive and administrative management, risk management services, human resources and communications services
- Attorneys – legal services
- Certified Public Accountants – accounting, financial, information technology and rates and revenues services
- Professional Engineers – engineering, operations and water quality services.

The services provided by the Belleville lab are assumed to be transferable to professional engineers for purposes of this cost comparison. This was done for two reasons. First, there is no readily available survey of hourly billing rates for testing services such as those performed by Belleville. Second, Belleville personnel have similar, scientific educational backgrounds as Service Company engineering personnel. Thus, it is valid to compare the hourly rates of Belleville services to those of outside engineering firms.

Service Company's hourly rate were calculated for each of the four outside service provider categories, based on the dollars and hours charged to VAWC during the 12 months ended September 30, 2007. Hourly billing rates for outside service providers were developed using third party surveys or directly from information furnished by outside providers themselves.

It should be noted that by using the Service Company's hours charged VAWC during 2006, its hourly rates are actually overstated because Service Company personnel charge a maximum 8 per day even when they work more. Outside service providers generally bill for every hour worked. If the overtime hours of Service Company personnel had been factored into the hourly rate calculation, Service Company hourly rates would have been lower.

The last step in the market cost comparison was to compare the Service Company's average cost per hour to the average cost per hour for outside providers.

Service Company Hourly Rates

Schedule 1 (page 10) details the assignment of 12 months ended September 30, 2007 management and professional Service Company charges by outsider provider category. Schedule 2 (page 10) shows the same assignment for Service Company management and professional hours charged to VAWC during the 12 months ended September 30, 2007.

Certain adjustments to these dollar amounts were necessary to calculate Service Company hourly rates that are directly comparable to those of outside providers. Adjustments were made to the following 2007 test period non-labor Service Company charges:

- Contract Services – 12 months ended September 30, 2007 Service Company charges to VAWC include approximately $88,000 in expenses associated with the use of outside

professional firms to perform certain corporate-wide services (e.g., legal, financial audit, actuarial services). These professional fees are excluded from the Service Company hourly rate calculation because the related services have effectively been out-sourced already.

- Travel Expenses – In general, client-related travel expenses are not recovered by outside service providers through their hourly billing rate. Rather, actual out-of-pocket travel expenses are billed to clients in addition to fees for professional services. Thus, it is appropriate to remove these Service Company charges from the hourly rate calculation.

- Computer Hardware and Software Expenses – Included in the 12 months ended September 30, 2007 Service Company charges to VAWC are charges for outside expenses related to leases and maintenance fees related to mainframe, server and network infrastructure, corporate business applications and the communications systems. An outside provider that would take over operation of a data center would recover these expenses over and above the labor necessary to operate the data center.

Schedule 3 (page 11) shows how contract services, travel expenses and computer hardware/software-related Service Company charges are assigned among the four outside provider categories.

Based on the assignment of expenses and hours shown in Schedules 1 and 2 and the excludable items shown in Schedule 3, the Service Company's equivalent costs per hour for the 12 months ended September 30, 2007 are calculated below.

	Attorney	Management Consultant	Certified Public Accountant	Professional Engineer	Total
Total management, professional & technical services charges	$ 79,237	$ 928,973	$ 1,020,240	$ 446,476	$ 2,474,926
Less:					
Contract services	$ 1,027	$ 22,660	$ 47,621	$ 16,842	$ 88,150
Travel expenses	$ 5,721	$ 89,271	$ 110,141	$ 48,969	$ 254,101
Computer hardware/software	$ 0	$ 12,915	$ 26,698	$ 1,880	$ 41,493
Net Service Charges (A)	$ 72,488	$ 804,127	$ 835,780	$ 378,785	$ 2,091,181
Total Hours (B)	372	5,573	12,770	5,684	24,399
Average Hourly Rate (A / B)	**$ 195**	**$ 144**	**$ 65**	**$ 67**

Outside Service Provider Hourly Rates

The next step in the cost comparison was to obtain the average billing rates for each outside service provider. The source of this information and the determination of the average rates are described in the paragraphs that follow.

Attorneys

The Virginia Bar Association does not survey its members as to their hourly billing rates. In addition, publicly available billing rate information could not be found for Virginia attorneys (Virginia Lawyers Weekly used to ask for hourly rates in its annual survey but eliminated that question a few years ago). Therefore, an estimate of Virginia attorney rates was developed from a survey of Michigan lawyers conducted annually by the Michigan Lawyers Weekly. As presented in Schedule 3, the average rate for each Michigan firm respondent was adjusted for the cost of living differential between their location and Richmond, Virginia. The survey includes rates that were in effect at December 31, 2006. Thus, the 2006 average rate was escalated to March 31, 2007—the midpoint of the 12 months ended September 30, 2007.

Management Consultants

The cost per hour for management consultants was developed from the 2006 annual survey performed by the Association of Management Consulting Firms—an industry trade organization. The first step in the calculation, presented in Schedule 5, was to determine an average rate by consultant position level. From these rates, a single weighted average hourly rate was calculated based upon the percent of time that is typically applied to a consulting assignment by each consultant position level. This survey includes rates that were in effect during 2005 for firms in the United States. Consultants typically do not limit their practice to any one region and must travel to a client's location. Thus, the U.S. national average is appropriate for comparison. The survey includes rates that were in effect at December 31, 2006. Thus, the 2006 average rate was escalated to March 31, 2007—the midpoint of the 12 months ended September 30, 2007.

Certified Public Accountants

The average hourly rate for Virginia certified public accountants was developed from a 2006 survey conducted by the American Institute of Certified Public Accountants (AICPA) every two years. Hourly rates in the AICPA survey are the average of firms in Virginia. The average hourly rate was calculated for a set of typical accountant positions, as shown in Schedule 4. Based on a typical staff assignment by each accountant position, a weighted average hourly rate was calculated. This survey covered hourly rates in effect during 2005. Thus, the 2005 average rate was escalated to March 31, 2007—the midpoint of the 12 months ended September 30, 2007.

Professional Engineers

The Service Company provided hourly rate information for outside engineering firms that could have been utilized by VAWC during 2007. As presented in Schedule 7, an average rate was developed for each engineering position level. Then, using a typical percentage mix of project time by engineering position, a weighted average cost per hour was calculated.

Schedule 4

Virginia American Water Company
Estimated Billing Rates For Virginia Attorneys Based On Michigan Attorney Billing Rates

Billing rates as of December 31, 2006 (Note A)									
		Number	Billing Rate Range					Cost of Living

	$19	$29	$29	$15	**$92**

Source: Information provided by American Water Works Service Company

Service Company Versus Outside Provider Cost Comparison

As shown in the table below, Service Company costs per hour are considerably lower than those of outside providers.

	12 Months Ended September 30, 2007		
Service Provider	Service Company	Outside Provider	Difference--Service Co. Greater(Less) Than Outside
Attorney	$ 195	$ 276	$ (82)
Management Consultant	$ 144	$ 216	$ (72)
Certified Public Accountant	$ 65	$ 109	$ (43)
Professional Engineer	$ 67	$ 92	$ (26)

Based on these cost per hour differentials and the number of managerial and professional services hours billed to VAWC during the 12-months ended September 30, 2007, outside service providers would have cost $1,127,069 more than the Service Company (see table below). Thus, on average, outside provider's hourly rates are almost 46% higher than those of the Service Company ($1,127,069 / $ 2,474,926).

	12 Months Ended September 30, 2007		
Service Provider	Hourly Rate Difference--Service Co. Greater(Less) Than Outside	Service Company Hours Charged	Dollar Difference
Attorney	$ (82)	372	$ (30,356)
Management Consultant	$ (72)	5,573	$ (400,089)
Certified Public Accountant	$ (43)	12,770	$ (551,278)
Professional Engineer	$ (26)	5,684	$ (145,346)
Service Company Less Than Outside Providers			$ (1,127,069)

If VAWC were to use outside service providers rather than the Services Company for managerial and professional services, it would incur other additional expenses besides those associated with higher hourly rates. Managing outside firms who would perform 24,399 hours of work (more than 16 full-time equivalents at 1,500 "billable" hours per FTE per year) would add a significant workload to the existing VAWC management team. Thus, it would be necessary for VAWC to add at least one position to supervise the outside firms and ensure they delivered quality and timely services. The individuals that would fill this position would need a good understanding of each profession being managed. They must also have management experience and the authority necessary to give them credibility with the outside firms. As calculated in the table below, this position would add another $152,700 per year to VAWC's personnel expenses.

Cost of Adding Administrative Positions To VAWC's Staff

	Total
New Positions' Salary	$ 100,000
Benefits (at 52.7%)	$ 52,700
Total Cost of the New Position	$ 152,700

Thus, the total effect on the ratepayers of VAWC of contracting all services now provided by Service Company would be an increase in their costs of **$1,279,769** ($1,127,069 + $152,700).

Other Cost Comparisons

Every year, the Belleville Lab conducts a comparison of its cost for performing major tests to the cost of using outside testing laboratories. Over the past several years, these surveys have shown the following results been as follows:

Year	Number of Major Tests Surveyed	Percent Belleville Lower Than Outside Labs
2000	26	15%
2001	25	19%
2002	24	16%
2003	23	10%
2004	24	9%
2005	24	25%
2006	24	31%

These studies provide additional evidence that the Service Company arrangement is the lowest-cost alternative for VAWC.

V – Customer Account Services Cost Comparison

Background

It is difficult to compare the cost of American Water's National Call Centers with outside providers of the same call center-related services. Call center survey data is proprietary and expensive to obtain. For this reason, VAWC's National Call Center costs are compared to those of neighboring electric utilities because the data necessary to make this comparison is readily available to the public.

Electric utility cost information comes from their FERC Form 1. FERC's chart of accounts is defined in chapter 18, part 101 of Code of Federal Regulations. FERC accounts that contain call center-related expenses and are used in this study's comparison are:

- Account 903 Customer Accounts Expense – Records and Collection Expense
- Account 905 Customer Accounts Expense – Miscellaneous Customer Accounts Expense.

In addition, labor-related overheads charged to the following FERC accounts must be added to the labor components of Accounts 903 and 905.

- Account 926 Employee Pension and Benefits
- Account 408 Taxes Other Than Income (employer's portion of FICA).

Schedule 9 provides FERC's description of what should be charged to these accounts. In questioning the controller of a large Southeastern electric utility, it was determined that expenses of the activities described below are recorded in the designated FERC accounts.

903 Records and Collection Expense

- Customer Call Center – customer calls/contact, credit, order taking/disposition, bill collection efforts, outage calls
- Call Center IT – maintenance of phone banks, voice recognition units, call center software applications, telecommunications
- Customer billing – bill printing, stuffing and mailing
- Remittance processing – processing of customer payments received in the mail
- Bill payment centers – locations where customers can pay their bills in person

905 Miscellaneous Customer Accounts Expense

- Customer Information System IT – maintenance and support of the customer information system

This study assumes the FERC accounts for other electric and gas utilities contain expenses for the same activities.

Virginia American Water Company
FERC Account Descriptions

903 – Customer Records and Collection Expenses
This account shall include the cost of labor, materials used and expenses incurred in work on customer applications, contracts, orders, credit investigations, billing and accounting, collections and complaints.

Labor

1. Receiving, preparing, recording and handling routine orders for service, disconnections, transfers or meter tests initiated by the customer, excluding the cost of carrying out such orders, which is chargeable to the account appropriate for the work called for by such orders.
2. Investigations of customers' credit and keeping of records pertaining thereto, including records of uncollectible accounts written off.
3. Receiving, refunding or applying customer deposits and maintaining customer deposit, line extension, and other miscellaneous records.
4. Checking consumption shown by meter readers' reports where incidental to preparation of billing data.
5. Preparing address plates and addressing bills and delinquent notices.
6. Preparing billing data.
7. Operating billing and bookkeeping machines.
8. Verifying billing records with contracts or rate schedules.
9. Preparing bills for delivery, and mailing or delivering bills.
10. Collecting revenues, including collection from prepayment meters unless incidental to meter reading operations.
11. Balancing collections, preparing collections for deposit, and preparing cash reports.
12. Posting collections and other credits or charges to customer accounts and extending unpaid balances.
13. Balancing customer accounts and controls.
14. Preparing, mailing, or delivering delinquent notices and preparing reports of delinquent accounts.
15. Final meter reading of delinquent accounts when done by collectors incidental to regular activities.
16. Disconnecting and reconnecting services because of nonpayment of bills.
17. Receiving, recording, and handling of inquiries, complaints, and requests for investigations from customers, including preparation of necessary orders, but excluding the cost of carrying out such orders, which is chargeable to the account appropriate for the work called for by such orders.
18. Statistical and tabulating work on customer accounts and revenues, but not including special analyses for sales department, rate department, or other general purposes, unless incidental to regular customer accounting routines.
19. Preparing and periodically rewriting meter reading sheets.
20. Determining consumption and computing estimated or average consumption when performed by employees other than those engaged in reading meters.

Materials and expenses

21. Address plates and supplies.
22. Cash overages and shortages.
23. Commissions or fees to others for collecting.
24. Payments to credit organizations for investigations and reports.
25. Postage.
26. Transportation expenses, including transportation of customer bills and meter books under centralized billing procedure.
27. Transportation, meals, and incidental expenses.
28. Bank charges, exchange, and other fees for cashing and depositing customers' checks.
29. Forms for recording orders for services, removals, etc.
30. Rent of mechanical equipment.

Ohio American Water Company
FERC Account Descriptions

905 – Miscellaneous Customer Accounts Expenses
This account shall include the cost of labor, materials used and expenses incurred not provided for in other accounts.
Labor
1. General clerical and stenographic work.
2. Miscellaneous labor.

Materials and expenses
3. Communication service.
4. Miscellaneous office supplies and expenses and stationery and printing other than those specifically provided for in accounts 902 and 903.

Comparison Group

Electric utilities included in the comparison group are shown in the table below. These are companies whose FERC Form 1 show amounts for accounts 903 and 905.

Virginia	• Appalachian Power	• Virginia Electric Power
Kentucky	• Duke Energy Kentucky • Kentucky Power	• Kentucky Utilities • Louisville Gas & Electric
Tennessee	• Kingsport Power	
Maryland	• Baltimore Gas & Electric • Delmarva Power & Light	• Potomac Electric
West Virginia	• Wheeling Power	
North Carolina	• Duke Energy Carolinas	• Progress Energy Carolinas

Comparison Approach

The basis for this comparison is customer account services expenses per customer. VAWC's cost pool was developed to include the same expenses included in electric utility's FERC accounts 903 and 905. As shown in the graphic below, VAWC's resultant cost pool contains the expenses of Service Company locations and certain operating company expenses.

American Water
Service Company
Pensacola & Alton Call Centers
a. Customer contact
b. Customer order processing
c. Billing information processing
d. Collections
e. Correspondence processing
f. Customer payment processing
Operating Company
a. Postage and forms

Electric Utilities
FERC Acct 903 - Records and Collection Expense and FERC Acct 905 - Misc Customer Accounts Expense
a. Customer contact
b. Customer order processing
c. Bill preparation and mailing
d. Collections
e. Payment processing
f. Correspondence processing

VAWC Cost Per Customer

In order to make a valid comparison to neighboring electric utilities, certain adjustments had to be made to the applicable Service Company charges to VAWC. It was necessary to adjust the National Call Center charges because electric utilities experience an average of 2.50 calls per customer compared to American Water's 1.33 calls per customer. Thus, National Call Center expenses had to be increased, for comparison purposes, to reflect its costs at a 2.50 calls per customer level. As shown below, VAWC's adjusted annual expense per customer is $31.03—the number that can be compared to neighboring electric utilities' expenses.

Virginia American Water Company			Adjustment Fewer Calls For		
Cost Component		Service Co Charges	Water Cos. (A)	Adjusted	
Service Company					
Call Centers	Call processing, order processing, credit, bill collection	$ 739,456	$ 652,049	$ 1,391,505	
Regional Offices		$ 82,294		$ 82,294	
Service Company	Customer payment processing			$ 40,805	Note B
Operating Company	Postage & forms			$ 168,786	
			Cost Pool Total	$ 1,683,390	
			Total Customers	54,247	
	12 Months Ended September 30, 2007 Cost Per Virginia American Customer			**$ 31.03**	

Note A: Adjustment for American Water's fewer calls per customer

This adjustment is necessary because water utilities experience fewer calls per customer than do electric utilities

Test year annualized Call Center charges		$ 739,456
Electric utility industry's avg calls/customer	2.50	
American Water's avg calls/customer	1.33	
Percent different	88%	88%
Total Adjustment B		$ 652,049

Note B: Estimated customer payment processing expenses

Number of customers	54,247
Number of payments/customer/year	4.3
Total payments processed/year	233,262
Bank charge per item	$ 0.1749
Total estimated annual expense	$ 40,805

Electric Utility Group Cost Per Customer

Schedule 9 shows the actual 2006 customer accounts expense per customer calculation for the electric utility comparison group. All of the underlying data was taken from the utilities' FERC Form 1.

Summary Of Results

As shown in the table below, VAWC's cost per customer is within a reasonable range of the average of the neighboring electric utility comparison group. It can therefore be concluded that the customer accounts-related expenses, including those of the Alton and Pensacola Call Centers, assigned by the Service Company to VAWC are reasonable.

Average Customer Accounts Expense Per Customer		
Louisville Gas & Electric	$	13.46
Virginia Electric Power	$	14.89
Duke Power	$	22.16
Prog Energy - Carolinas	$	24.75
Kentucky Utilities	$	27.14
Comparison Group Average	**$**	**28.57**
Wheeling Power	$	29.48
Virginia American Water	**$**	**31.03**
Baltimore Gas & Electric	$	31.26
Appalachian Power	$	33.43
Kingsport Power	$	33.56
Kentucky Power	$	35.75
Duke Energy Kentucky	$	39.46
Delmarva Power & Light	$	50.81
Potomac Electric	$	74.21

VI - Need For Service Company Services

Analysis Of Services

The final aspect of this study was an assessment of whether the services that are provided to VAWC by the Service Company would be necessary if VAWC were a stand-alone water utility. The first step in this evaluation was to determine specifically what the Service Company does for VAWC. Based on discussions with Service Company personnel, the matrix in Schedule 10 was created showing which entity—VAWC or a Service Company location—is responsible for each of the functions VAWC requires to ultimately provide service to its customers. This matrix was reviewed to determine: (1) if there was redundancy or overlap in the services being provided by the Service Company and (2) if Service Company services are typical of those needed by a stand-alone water utility.

Upon review of Schedule 10, the following conclusions can be drawn:

- The services that the Service Company provides are necessary and would be required even if VAWC were a stand-alone water utility.

- There is no redundancy or overlap in the services provided by the Service Company to VAWC. For all of the services listed in Schedule 11, there was only one entity that was primarily responsible for the service.

Governance Practices Associated With Service Company Charges

There are several ways by which VAWC exercises control over Service Company services and charges. The most important of these are described below.

- **Company President Oversight** – The Company President of the state utility is responsible for the overall performance of the each operating company or district in the state. Through the Executive Vice President of the Eastern Division, each state utility President in the division has a significant voice in major business decisions of American Water and has the ability to monitor Service Company quality and spending.

- **Vice President Finance** – The VP Finance of the Southeast states is responsible for the financial reporting, performance and internal controls of each of the operating companies in the region. The VP Finance monitors the performance and reporting from the Service Company. The VP Finance attends monthly Business Plan Review sessions with the VAWC President and finance group to review actual results and address forecast modifications for the remainder of the year. The VP Finance reports on the quarterly financial results and forecast updates to VAWC's Board of Directors. The rates function reports to the VP Finance, who reviews and authorizes the filing of VAWC rate cases and regularly monitors the status of cases. The operating subsidiary interacts with the VP Finance to discuss various issues.

- **Operating Company Board Oversight** – VAWC's board of directors includes members of American Water's senior executive team and members of the Division management team. This helps ensure that VA American's needs are a factor in the delivery of Service Company services.

- **Service Company Budget Review/Approval** – VAWC's President and the Executive VP sit on the Service Company board and that board must formally approve the budget for Service Company charges for the next year. These budgeted charges are consolidated with the operating company's own spending into an overall budget which must be approved by the operating company's board of directors. VA American's president is also on the local board.

- **Major Project Review And Approval** – Major projects undertaken by the Service Company must first be reviewed by American Water's senior executive team, which includes the Executive VP. The Executive VP, with input from the Division management team (including the president of VAWC), has the ability to impact all new initiatives and projects before they are authorized.

- **Service Company Bill Scrutiny** – Southeast Finance personnel review the monthly Service Company bill for accuracy and reasonableness on a monthly basis. VAWC's financial analyst has dialogue with regional office personnel concerning the monthly bill and any mistakes or overcharges are credited on a subsequent billing. The Southeast Finance unit prepares an actual to budget comparison of management fees each month for use in identifying unusual variances. Service Company actual to budget comparison is included in the monthly FRP. Unusual variances are researched, explanations are provided and any corrections are made, as necessary.

- **Service Company Budget Variance Reporting** – Each month, a summary variance analysis is prepared that explains differences between budgeted and actual Service Company spending. In addition, a more detailed monthly variance report, called the "Statement of Expenses and Billed Charges," is produced by Service Company location and shows actual spending for the month.

- **Operating Company Budget Variance Reporting –** The "Budget/Plan Analysis," produced monthly, has a line item for Management Fees (i.e., Service Company charges). In this way, Service Company budget versus actual charges can be monitored for the month and year-to-date. Additional information exists that allows more detailed analysis of "Regional" and "Corporate" Management Fees.

- **Capital Investment Management (CIM) –** CIMC is one of American Water's primary business planning processes. It covers capital and asset planning and is employed throughout American Water. CIMC provides a full range of governance practices, including a formal protocol for assessing system needs, prioritizing expenditures, managing the capital program, approving project spending, delivering projects and measuring outputs. CIMC ensures that:

  - Capital expenditure plans are aligned with the strategic intent of the business
  - The impact of capital expenditure and income plans are fully reflected in operating expense plans
  - The impacts of these plans are understood and affordable, and
  - Effective controls are in place over budgets (through business plans) and individual capital projects (through appropriate authorization thresholds, management and reporting processes).

  The CIMC process was designed to optimize the effectiveness of asset investment. The process is managed at three levels for all American Water companies, including all VAWC Operating Units. Monthly meetings of the CIMC are held to review capital spending compared to plan, review new project requests, and review updates or modifications to existing projects. The President of VAWC, VP Finance, and others participate as necessary (e.g. VAWC operations managers and Rates Manager) and provide the data used in the monthly review schedules.

1. Q. Please state your name and business address.

A. Patrick L. Baryenbruch, 302 East Park Drive, Raleigh, North Carolina 27605.

2. Q. Please describe your educational and professional background.

A. I received a Bachelors degree in accounting from the University of Wisconsin-Oshkosh in 1974 and a Masters in Business Administration degree from the University of Michigan in 1979.

I am a financial consultant and am a member of the American Institute of Certified Public Accountants and the North Carolina Association of Certified Public Accountants.

I began my career as a staff accountant with Arthur Andersen & Company where I performed financial audits of utilities, banks and finance companies. After three years I left to pursue an M.B.A. degree. Upon graduation from business school, I worked with the consulting firms of Theodore Barry & Associates and Scott, Madden & Associates.

During my consulting career, I have performed consulting assignments for approximately 50 utilities and 10 public service commissions. I have participated as project manager, lead or staff consultant for 24 commission-ordered management and prudence audits of public utilities. Of these, I have been responsible for evaluating the area of affiliate charges and allocation of corporate expenses in the Commission-ordered audits of Connecticut Light and Power, Connecticut Natural Gas, General Water Corporation (Pennsylvania Operations), Philadelphia Suburban Water Company (now Aqua America) and Pacific Gas & Electric Company.

My firm has performed the commission-ordered audit of Southern California Edison's 2002, 2003, 2004 and 2005 transactions with its non-regulated affiliate companies.

3. Q. What are your duties and responsibilities in your current position?

A. I am the President of my own consulting practice, Baryenbruch & Company, LLC, which was established in 1985. In that capacity, I provide consulting services to utilities and their regulators.

4. Q. Please describe the reason for your testimony in this case.

A. I am presenting the results of my study which evaluated the services provided by American Water Service Company ("Service Company") during 12 months ended September 30, 2007 to Virginia American Water (VAWC). This study was undertaken in conjunction with VAWC's rate case and is true to the best of my knowledge and belief. The study is attached as Exhibit PLB-1.

5. Q. What were the objectives of your study?

A. This study was undertaken to answer three questions. First, was VAWC charged the lower of cost or market for managerial and professional services provided by the Service Company during the 12 months ended September 30, 2007? Second, were the 12 months ended September 30, 2007 costs of the Service Company's customer accounts services, including those of the National Call Centers, reasonable? Third, are the services VAWC receives from Service Company necessary?

6. Q. What conclusions were you able to draw concerning question number 1, whether VAWC was charged the lower of cost or market services provided by the Service Company?

A. I was able to draw the following conclusions:

(1) VAWC was charged the lower of cost or market for managerial and professional services during the 12 months ended September 30, 2007.

(2) On average, the hourly rates for outside service providers are 46% higher than the Service Company's hourly rates.

(3) The managerial and professional services provided by the Service Company are vital and could not be procured externally by VAWC without careful supervision on the part of VAWC. If these services were contracted entirely to outside providers, VAWC would have to add at least one position to manage activities of outside firms. These positions would be necessary to ensure the quality and timeliness of services provided.

(4) If all the managerial and professional services now provided by the Service Company had been out-sourced during the 12-months ended September 30, 2007, VAWC and its ratepayers would have incurred more than $1.2 million in additional expenses. This amount includes the higher cost of outside providers and the cost of an additional VAWC position needed to direct the outsourced work.

(5) This study's hourly rate comparison actually understates the cost advantages that accrue to VAWC from its use of the Service Company. Outside service providers generally bill for every hour worked. Service Company exempt personnel, on the other hand, charge a maximum 8 per day even when they work more. If the overtime hours of Service Company personnel were factored into the hourly rate calculation, the Service Company would have had an even greater annual dollar advantage than the $1.2 million cited above. For instance, if Service Company overtime is conservatively estimated at 5% (2 hours per week), then that work would

have cost an estimated $56,000 in additional charges from outside providers.

(6) It would be difficult for VAWC to find local service providers with the same specialized water industry expertise as that possessed by the Service Company staff. Service Company personnel spend substantially all their time serving operating water companies. This specialization brings with it a unique knowledge of water utility operations and regulation that is most likely unavailable from local service providers.

(7) Service Company fees do not include any profit markup. Only its actual cost of service is being recovered from VAWC ratepayers.

7. Q. What is your conclusion regarding the reasonableness of the costs of the National Call Center that provides service to VAWC?

A. I was able to determine that the cost of the Service Company's customer accounts services, including those provided by the National Call Center, is within a reasonable range of the average of neighboring electric utility comparison group. This group of companies provides a reasonable proxy group for comparison to a regulated utility of the size and scope of VAWC. During the 12-months ended September 30, 2007, the customer accounts cost for VAWC customers was $31.03 compared to the 2006 average of $28.57 for neighboring electric utilities. The highest comparison group per customer cost was $74.21 and the lowest $13.46.

9. Q. What conclusions were you able to draw concerning the necessity of the services VAWC receives from the Service Company?

A. I was able to draw the following conclusions:

(1) The services that the Service Company provides are necessary and would be required even if VAWC were a stand-alone water utility.

(2) There is no redundancy or overlap in the services provided by the Service Company to VAWC. For all of the services listed in Schedule 10 of my report, there was only one entity that was primarily responsible for the service.

10. Q. Does this complete your testimony?

A. Yes.

I – Introduction

Purpose of This Study

This study was undertaken to answer four questions concerning the services provided by American Water Works Service Company, Inc. (Service Company) to Virginia American Water Company (VAWC):

1. Were the Service Company's charges to VAWC during the 12 months ended September 30, 2009 reasonable?

2. Was VAWC charged the lower of cost or market for managerial and professional services provided by the Service Company during the 12 months ended September 30, 2009?

3. Were the 12 months ended September 30, 2009 costs of the Service Company's customer accounts services, including those of the National Call Centers, comparable to those of other utilities?

4. Are the services VAWC receives from the Service Company necessary?

Study Results

Concerning question 1, the following conclusion was reached:

- The Service Company's costs for the 12 months ended September 30, 2009 per VAWC customer was very reasonable. For example, during the 12 months ended September 30, 2009, VAWC was charged $58 per customer for administrative and general ('A&G")-related services provided by the Service Company. This compares favorably to costs per customer for electric and combination electric/gas service companies that average $109 for service companies reporting to the Federal Energy Regulatory Commission ("FERC"). Only 3 of the 24 utility service companies that filed a FERC Form 60 for 2008 had a lower A&G cost per customer than VAWC's charges from the Service Company.

Concerning question 2, the following conclusions were drawn from this study:

- VAWC was charged the lower of cost or market for managerial and professional services during the 12 months ended September 30, 2009.

- On average, the hourly rates for outside service providers are 60% higher than the Service Company's hourly rates.

- The managerial and professional services provided by the Service Company are vital and could only be procured effectively by VAWC from outside professionals if it provided careful supervision to those service providers. If these services were contracted entirely to outside providers, VAWC would have to add at least one position to manage activities of outside firms. This position would be necessary to ensure the quality and timeliness of services provided.

- If all the managerial and professional services now provided by the Service Company had been outsourced during the 12 months ended September 30, 2009, VAWC and its ratepayers would have incurred more than $2.2 million in additional expenses. This amount includes the higher cost of outside providers and the cost of one VAWC position needed to direct the outsourced work.

- This study's hourly rate comparison actually understates the cost advantages that accrue to VAWC from its use of the Service Company. Outside service providers generally bill for every hour worked. Service Company exempt personnel, on the other hand, charge a maximum of 8 hours per day even when they work more hours. If the overtime hours of Service Company personnel were factored into the hourly rate calculation, the Service Company would have had an even greater annual dollar advantage than the $2.2 million cited above. For instance, if Service Company overtime is conservatively estimated at 5% (2 hours per week), then that work would have cost an estimated $100,000 in additional charges from outside providers.

- It would be difficult for VAWC to find local service providers with the same specialized water industry expertise as that possessed by the Service Company staff. Service Company personnel spend substantially all their time serving operating water companies. This specialization brings with it a unique knowledge of water utility operations and regulation that is most likely unavailable from local service providers.

- Service Company fees do not include any profit markup. Only its actual cost of service is being recovered from VAWC customers.

Concerning question 3, the following conclusion was reached:

- The cost of the Service Company's customer accounts services, including those provided by the National Call Center, is below the average of the neighboring electric utility comparison group. As will be explained further , this group of companies provides a reasonable proxy group for comparison to a regulated utility of the size and scope of the Service Company and VAWC. During the 12-months ended September 30, 2009, the customer accounts cost for VAWC customers was $27.58 compared to the 2008 average of $29.13 for neighboring electric utilities. The highest comparison group per customer cost was $76.47 and the lowest $15.67.

Concerning question 4, the following conclusions was drawn:

- The services that the Service Company provides are necessary and would be required even if VAWC were a stand-alone water utility.

- Furthermore, there is no redundancy or overlap in the services provided by the Service Company to VAWC. For all of the services listed in Exhibit 11, there was only one entity primarily responsible for the service and thus no duplication of efforts between the Service Company and VAWC.

II – Background

Overview of American Water Works Service Company

American Water's Service Company exists to provide certain shared services to American Water subsidiaries. It follows a service company model used by many utility holding companies that own multiple regulated utilities. By consolidating executive and professional services into a single service company, utility holding companies are able to realize the following benefits for ratepayers:

- Purchasing Economies – Common expenses (e.g., insurance, chemicals, piping) can be procured on a much larger scale thereby providing greater bargaining power for the combined entity compared to individual utility operating companies. A service company facilitates corporate-wide purchasing programs through its procurement and contract administration functions.

- Operating Economies of Scale – A service company is able to deliver services more efficiently because workloads can be balanced across more persons and facilities. For instance, American Water's Service Company is able to maintain one principal data center for the entire corporation. This is much more cost-efficient than each operating utility funding its own data center with its large fixed hardware, software and staffing costs.

- Continuity of Service – Centralizing service company personnel who perform similar services facilitates job cross-training and sharing of knowledge and expertise. This makes it easier to deal with staff turnover and absences and to sustain high levels of service to operating utilities. An individual operating utility might experience considerable disruption if a key professional left and it was necessary to hire outside to fill the vacancy.

- Maintenance of Corporate-Wide Standards – Personnel in American Water's Service Company establish standards for many functions (e.g., engineering designs, operating procedures and maintenance practices). It is easier to ensure these standards are followed by every operating utility because their implementation is overseen by the Service Company.

- Improved Governance – American Water's Service Company provides another dimension of management and financial oversight that supplements local operating utility management. The Service Company facilitates standard planning and reporting that help ensure operating utilities meet the requirements of their customers in a cost effective manner.

- Retention of Personnel – A service company organization provides operating utility personnel with another career path beyond what may be available on a local level. These opportunities tend to improve employee retention.

American Water follows the model for other utility service companies in another important regard. Its services are provided to affiliate operating utilities, like VAWC, at cost. American Water's Service Company is not a profit-making entity. It assigns only its actual expenses to the American Water subsidiaries it services.

The Service Company provides services to American Water operating companies from the following locations:

- Corporate Office – Includes American Water's executive management and personnel from the various corporate support services. American Water's corporate office is located in Voorhees, New Jersey.

- National Call Centers – Perform customer service functions, including: customer call processing, service order processing, correspondence processing, credit and collections. American Water maintains two call centers. One is in Alton, Illinois that went into operation in 2001 and a second is in Pensacola, Florida that went into operation in 2005. Prior to the establishment of these national call centers, customer service functions were performed by employees of VAWC in a manner that was not as .comprehensive as that now provided by the national call centers.

- National Shared Services Center – The Shared Services Center, located in Cherry Hill, New Jersey, provides financial, accounting and treasury functions that had been performed by individual operating companies. This arrangement has improved and streamlined the Company's financial processes and allowed operating companies to focus on providing utility service.

- Regional Offices – Regional offices provide operating companies with certain support services that can be performed more effectively on a regional basis because individual operating company/center workloads are not sufficient to warrant a full-time staff for these activities. At the same time, these services require closer proximity to operating companies served so they are not provided by the National Shared Services Center. Examples of regional office services include rates and revenues, engineering, operations and field resource coordination.

- Belleville Lab – The national trace substance laboratory is located in Belleville, Illinois and performs testing for all American Water operating companies.

- Information Technology ("IT") Service Centers – American Water's principal data center, located in Hershey, Pennsylvania, supports the IT infrastructure required to run corporate and operating company business applications and the communications systems. IT personnel rotate, as needed, throughout the regional offices and operating companies.

Service Company Expense Categories

The Service Company renders a monthly bill to operating companies. Charges are broken down into the following expense categories:

- Labor – base pay (salaries) of managerial and professional employees
- Labor-Related Overheads - employee benefit costs (payroll taxes, medical coverage, pensions, disability insurance) and other general expenses
- Support - wages and salaries of office support personnel, including secretaries, clerical personnel, telephone operators and mail clerks
- Office Expenses - office rent, equipment leases, telephone, electric, office supplies, property taxes, office maintenance
- Vouchers/Journal Entries – (1) travel expenses incurred by Service Company personnel, (2) other items submitted for reimbursement by employees, including professional association dues, (3) outside service contracts for such things as actuarial

services, and (4) various other expenditures, including data center expenses for software licenses and hardware maintenance.

Service Company expenses are either assigned directly or allocated to operating companies, as shown in the table below.

Expense Category	Direct Charged	Allocated	Comments
Labor	X	X	Professional personnel working for one or several operating companies
Labor-Related Overheads	X	X	These are primarily employee benefit costs that relate directly to labor
Support		X	Administrative personnel support the professional staff, thus support costs are allocated on the basis of professional labor
Office Expense		X	Are all allocated on the basis of professional labor
Vouchers/Journals	X	X	May be either directly in support of one operating company (e.g., an engineer traveling from the Corporate Office to the operating company) or allocated to several operating companies

A direct charge occurs when Service Company work or expenses are incurred in support of only one operating company. Direct charge examples include work in support of an operating company's rate case, engineering design work on an operating company's project and the preparation of an operating company's financial statements.

Service Company expenses are allocated when more than one operating company benefits from the underlying work. Examples include assessments of new Federal water quality regulations, development of the company-wide materials procurement contracts and creation of company-wide engineering design standards.

Charging and Assignment Of Service Company Time and Expenses

Service Company transactions are assigned with the following information so there is a proper accounting and eventual charging to an operating company:

- Operating company
- Formula number
- Work order (where applicable)
- Authorization number (where applicable)

Charges can originate from the following systems:

- Payroll System
- RVI System (outside vendor payments)
- PCard System (credit card payments)
- Internal Purchase Order System
- Journal entries

II – Background

The Service Company's time reporting process enables labor and support charges to be assigned to the proper operating company. Labor charges are based on the time reported by managerial and professional Service Company employees. Every week, Service Company professional employees complete an electronic time sheet that shows:

- Formula number (this is linked to operating company within American Water's financial system)
- Employee hours worked
- Account number for non-labor charges

At month-end, time report information is processed and direct and allocated professional labor hours tabulated for each operating company. Dollar charges are then calculated using the hourly rate of each Service Company professional employee based upon their base salary (i.e., an employee's hours times their hourly rate of pay).

Support (administrative) personnel charge their time to the activity "General Admin." As described in the table on page 5, their labor charges are allocated to operating companies based upon how their office's professional personnel labor charges are assigned. For instance, if 2% of American Water's Shared Services' professional labor is assigned to VAWC during a month, then 2% of that office's monthly administrative labor charges also are assigned to the operating company.

The overhead cost category is next assigned based on professional and administrative labor costs. Thus, if 2% of the Shared Services' accumulated professional and support labor is charged to VAWC during the month, then 2% of that month's overhead expenses will be assigned to VAWC.

Each Service Company location's office expenses are allocated to operating companies based on how professional labor charges for that office have been assigned. For instance, if 2% of professional labor from one Service Company office is assigned to VAWC, then 2% of that office's office expenses would be assigned to VAWC. Thus, office expenses are allocated in the very same way as administrative labor.

Vouchers/journal entries may be charged directly or allocated, depending on who benefits from the expenditure. For instance, the cost of a continuing professional education course taken by a professional in a regional office is allocated to the operating companies served by that office. Travel expenses by that same professional to a rate case proceeding are charged directly to the operating company whose case is being heard.

III – Service Company Cost Comparison Approach

During the 12 months ended September 30, 2009, the Service Company billed VAWC $3,814,848 in O&M-related charges and $645,553 in capital-related charges. Included in the O&M amount are certain non-recurring expenses which are excluded from this market study. As calculated in the table below, net testable Service Company charges of $4,467,146 were subjected to a market cost comparison.

	12 Months Ended Sep. 30, 2009
Mgmt Fee Expense (O&M)	$ 3,814,848
Add(Subtract): Non-Recurring Items	
Sarbanes-Oxley	$ 6,745
Net O&M Expenses	$ 3,821,593
Mgmt Fees - Capital	$ 645,553
Total Testable AWWSC Charges	**$ 4,467,146**

For purposes of comparing these charges to certain outside benchmarks, Service Company services were placed into two categories:

- Managerial and Professional Services – Includes such services as management, accounting, legal, human resources, information technology, and engineering.

- Customer Accounts Services – Includes customer-related services, such as call center, credit, billing, collection and payment processing.

Total test period Service Company charges break down between management/professional services and customer account services as follows:

	12 Months Ended Sep 30, 2009	
	Amount	Hours
Management and Professional Services	$ 3,485,883	37,564
Customer Account Services	$ 981,263	25,779
Total Service Company Charges	**$ 4,467,146**	**63,343**

This study's first question—whether Service Company 12 months ended September 30, 2009 charges were reasonable—was determined by comparing VAWC's A&G-related Service Company charges per customer to the same charges for utility companies that must file the FERC Form 60 – Annual Report of Service Companies.

The second question—whether Service Company charges during the 12 months ended September 3, 2009 were at the lower of cost or market—was evaluated by comparing the cost per hour for managerial and professional services provided by Service Company personnel to hourly billing rates that would be charged by outside providers of equivalent services. Service Company costs per hour were based on actual charges to VAWC during the 12 months ended September 30, 2009. Outside providers' billing rates came from surveys or other information from professionals that could perform the services now provided by the Service Company.

III – Service Company Cost Comparison Approach

The third question—whether Service Company's 12 months ended September 30, 2009 customer account services charges, including those of the National Call Center costs, were comparable to other utilities—was addressed by comparing VAWC's customer accounts services expenses to those of neighboring electric utilities. This approach was selected because the costs of outside providers of call center services are not publicly available. However, electric utility customer account services expenses can be obtained from the FERC Form 1. The availability and transparency of FERC data adds to the validity of its use in this comparison.

The fourth question—the necessity of Service Company services—was investigated by defining the services provided to VAWC and determining if these services would be required if VAWC were a stand-alone utility.

VAWC's Service Company Cost per Customer

During the 12 months ended September 30, 2009, VAWC was charged $58 per customer by the Service Company for A&G/O&M-related services. The calculation of this amount, shown in the table below, starts with total net testable Service Company charges and adjusts for capital and non-A&G functions (engineering, operations and water quality) charges. These adjustments are necessary to develop a per customer cost that is comparable to cost of utility service companies.

	12 Months ended Sep 30, 2009 Svc. Co. Charges
Testable Service Company charges	$ 4,467,146
Less: Capital charges	$ (645,553)
Less: Non-A&G function O&M charges	
Engineering	$ (5,905)
Operations	$ (511,757)
Water Quality	$ (128,477)
Net A&G/O&M-related charges	$ 3,175,454
VAWC customers	54,437
VAWC Cost Per Customer	**$ 58**

Comparison Group Cost Per Customer

Every centralized service company in a holding company system must file a Form 60 in accordance with the Public Utility Holding Company Act of 2005, Section 1270, Section 390 of the Federal Power Act and 18 C.F.R. paragraph 366.23. This report is designed to collect financial information from service companies that are subject to regulation by the FERC.

For 2008, a Form 60 was filed by 24 utility service companies, all of which serve utilities that provide regulated electric and, in some cases, gas service to retail customers. In order to make a valid comparison of this group's costs to those of American Water Works Service Company, it was necessary to isolate expenses that that they have in common. These include A&G/O&M-related charges associated with the following FERC accounts:

901 – Supervision	921 – Office supplies and expenses
903 – Customer records and collection expenses	923 – Outside services employed
905 – Miscellaneous customer accounts expenses	926 – Employee pensions and benefits
907 – Supervision	928 – Regulatory commission expenses
910 – Misc customer service and info expenses	930.2 – Miscellaneous general expenses
911 – Supervision	931 – Rents
920 - Administrative and general salaries	935 – Maintenance of structures and equipment

O&M expenses charged to utility affiliates for the comparison group service companies were obtained from Schedule XVI – Analysis of Charges for Service Associate and Non-Associate Companies (p. 303 to 306) of each entity's FERC Form 60. This schedule shows charges by FERC Account.

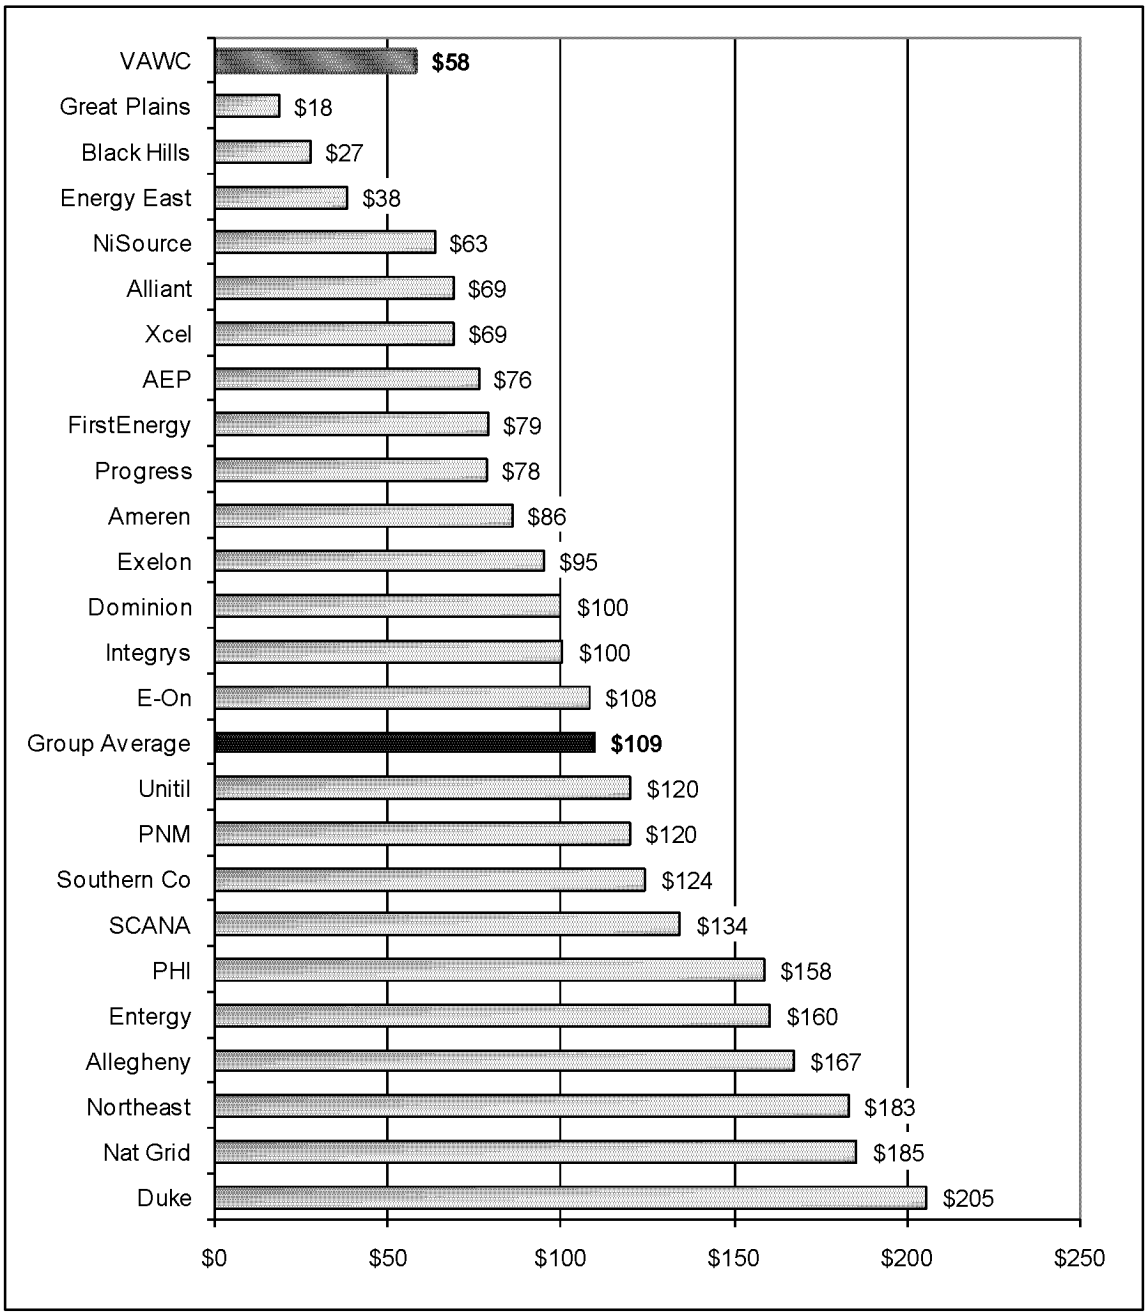
Comparison group service company 2008 expenses were also adjusted to remove charges to non-regulated affiliates from the cost pool used to calculate the cost per regulated service customer. This determination was made using information from the FERC Form 60 schedule: Account 457 – Analysis of Billing – Associate Companies.

IV – Question 1 – Reasonableness of Service Company Charges

A&G expenses per regulated utility customer for the 24 utility companies that file Form 60 for 2008 are calculated below.

Utility Company	2008 Regulated Retail Service Company A&G Expenses	Regulated Retail Customers	Cost per Customer
AEP	$396,340,118	5,213,000	$ 76
Allegheny	$263,588,707	1,577,873	$ 167
Alliant	$205,754,832	3,000,000	$ 69
Ameren	$291,684,710	3,400,000	$ 86
Black Hills	$20,763,828	759,400	$ 27
Dominion	$357,718,046	3,588,500	$ 100
Duke	$923,936,645	4,500,000	$ 205
Energy East	$113,714,789	2,989,800	$ 38
Entergy	$432,575,683	2,700,000	$ 160
E-On	$136,276,177	1,263,000	$ 108
Exelon	$558,687,014	5,885,000	$ 95
FirstEnergy	$354,028,109	4,499,000	$ 79
Great Plains	$15,000,708	820,000	$ 18
Integrys	$216,364,166	2,157,000	$ 100
Nat Grid	$1,240,706,398	6,700,000	$ 185
NiSource	$237,380,009	3,750,000	$ 63
Northeast	$302,138,730	1,654,000	$ 183
PHI	$302,463,412	1,910,000	$ 158
Progress	$242,677,256	3,100,000	$ 78
PNM	$102,688,385	859,000	$ 120
SCANA	$191,207,825	1,424,300	$ 134
Southern Co	$546,498,605	4,402,000	$ 124
Unitil	$20,341,422	169,600	$ 120
Xcel	$367,626,617	5,345,000	$ 69
Group Total	**$7,840,162,191**	**71,666,473**	**$ 109**

Exhibit 1 shows VAWC's 12 months ended September 30, 2009 Service Company cost per customer of $58 to be considerably lower than the average of $109 per customer for the comparison group service companies. Only 3 of 24 comparison group service companies had a lower cost per customer than VAWC. Based on this result, it is possible to conclude that the Service Company's 12 months ended September 30, 2009 charges to VAWC were reasonable.



VAWC $58
Great Plains $18
Black Hills $27
Energy East $38

V – Question 2 – Provision of Services at the Lower of Cost or Market

Methodology

The lower-of-cost-or-market comparison is accomplished by comparing the cost per hour for Service Company managerial and professional services to those of outside service providers to whom these duties could be assigned. Based on the nature of the Service Company services it was determined that the following outside providers could perform the categories of services indicated below:

- Management Consultants – executive and administrative management, risk management services, human resources and communications services
- Attorneys – legal services
- Certified Public Accountants – accounting, financial, information technology and rates and revenues services
- Professional Engineers – engineering, operations and water quality services.

The services provided by the Belleville lab are assumed to be transferable to professional engineers for purposes of this cost comparison. This was done for two reasons. First, there is no readily available survey of hourly billing rates for testing services such as those performed by Belleville. Second, Belleville personnel have similar, scientific educational backgrounds as Service Company engineering personnel. Thus, it is valid to compare the hourly rates of Belleville services to those of outside engineering firms.

Service Company's hourly rate were calculated for each of the four outside service provider categories, based on the dollars and hours charged to VAWC during the 12 months ended September 30, 2009. Hourly billing rates for outside service providers were developed using third party surveys or directly from information furnished by outside providers themselves.

It should be noted that by using the Service Company's hours charged VAWC during the 12 months ended September 30, 2009, its hourly rates are actually overstated because Service Company personnel charge a maximum 8 per day even when they work more. Outside service providers generally bill for every hour worked. If the overtime hours of Service Company personnel had been factored into the hourly rate calculation, Service Company hourly rates would have been lower.

The last step in the market cost comparison was to compare the Service Company's average cost per hour to the average cost per hour for outside providers.

Service Company Hourly Rates

Exhibit 2 (page 14) details the assignment of 12 months ended September 30, 2009 management and professional Service Company charges by outsider provider category. Exhibit 3 (page 15) shows the same assignment for Service Company management and professional hours charged to VAWC during the 12 months ended September 30, 2009.

Certain adjustments to these dollar amounts were necessary to calculate Service Company hourly rates that are directly comparable to those of outside providers. Adjustments were made to the following 12 months ended September 30, 2009 test period non-labor Service Company charges:

V – Question 2 – Provision of Services at the Lower of Cost or Market

- Contract Services – 12 months ended September 30, 2009 Service Company charges to VAWC include expenses associated with the use of outside professional firms to perform certain corporate-wide services (e.g., legal, financial audit, actuarial services). These professional fees are excluded from the Service Company hourly rate calculation because the related services have effectively been out-sourced already.

- Travel Expenses – In general, client-related travel expenses are not recovered by outside service providers through their hourly billing rate. Rather, actual out-of-pocket travel expenses are billed to clients in addition to fees for professional services. Thus, it is appropriate to remove these Service Company charges from the hourly rate calculation.

- Information Technology Infrastructure Expenses – Included in the 12 months ended September 30, 2009 Service Company charges to VAWC are leases, maintenance fees and depreciation related to American Water's enterprise mainframe, server and network infrastructure and corporate business applications. An outside provider that would take over operation of this infrastructure would recover these expenses over and above the labor necessary to operate the data center.

Exhibit 4 (page 16) shows how contract services, travel expenses and computer hardware/software-related Service Company charges are assigned among the four outside provider categories.

Based on the assignment of expenses and hours shown in Exhibits 2 and 3 and the excludable items shown in Exhibit 4, the Service Company's equivalent costs per hour for the 12 months ended September 30, 2009 are calculated below.

	Attorney	Management Consultant	Certified Public Accountant	Professional Engineer	Total
Total management, professional & technical services charges	$ 92,848	$ 1,008,025	$ 1,672,626	$ 712,384	$ 3,485,883

Outside Service Provider Hourly Rates

The next step in the cost comparison was to obtain the average billing rates for each outside service provider. The source of this information and the determination of the average rates are described in the paragraphs that follow.

It should be noted that professionals working for three of the five outside provider categories may be licensed to practice by state regulatory bodies. However, not every professional working for these firms is licensed. For instance, among Virginia certified public accounting firms, only more experienced staff are predominantly CPAs (see table below). Some Service Company employees also have professional licenses. Thus, it is valid to compare the Service Company's hourly rates to those of the outside professional service providers included in this study.

Position	Virginia Average
Partners/Owners	98%
Directors (11+ years experience)	86%
Managers (6-10 years experience)	88%
Sr Associates (4-5 years experience)	81%
Associates (1-3 years experience)	23%
New Professionals	0%

Source: AICPA's National PCPS/TSCPA Management of an Accounting Practice Survey (2008)

Attorneys

The Virginia State Bar does not survey its members as to their hourly billing rates. In addition, publicly available billing rate information could not be found for Virginia attorneys. Therefore, an estimate of Virginia attorney rates was developed from two surveys conducted by Lawyers Weekly in the states of Michigan and Massachusetts. As presented in Exhibit 5, the average rate for each firm was adjusted for the cost of living differential between its location and Richmond, Virginia. The Lawyers Weekly surveys included rates in effect at December 31, 2007. Thus, the 2007 average rate was escalated to March 31, 2009—the midpoint of the test year ended September 30, 2009.

Management Consultants

The cost per hour for management consultants was developed from a 2009 survey performed by the Association of Management Consulting Firms—an industry trade organization. The survey includes rates that were in effect during 2008 for firms throughout the United States. Consultants typically do not limit their practice to any one region and must travel to a client's location. Thus, the U.S. national average is appropriate for comparison.

The first step in the calculation, presented in Exhibit 6, was to determine an average rate by consultant position level. From these rates, a single weighted average hourly rate was calculated based upon the percent of time that is typically applied to a consulting assignment by each consultant position level. The 2008 average rate was escalated to March 31, 2009—the midpoint of the 12 months ended September 30, 2009.

Certified Public Accountants

The average hourly rate for Virginia CPAs was developed from a 2008 survey performed by the American Institute of Certified Public Accountants (AICPA). The Virginia version of this survey was used to develop hourly rates for member firms in Virginia.

As shown in Exhibit 7, a weighted average hourly rate was developed based on a set of accountant positions and a percent of time that is typically applied to an accounting assignment. This survey includes rate information in effect during 2007. Thus, the data had to be escalated to March 31, 2009—the test year's midpoint.

Professional Engineers

The Company provided hourly rate information for outside engineering firms that could have been used by VAWC in 2009. As presented in Exhibit 8, an average rate was developed for each engineering position level. Then, using a typical percentage mix of project time by engineering position, a weighted average cost per hour was calculated.

Virginia-American Water Company
Estimated Billing Rates Of Virginia Engineers

Billing rates in effect in 2009

A. Calculation of Average Hourly Rate by Engineer Position

	Average Hourly Billing Rates			
	Technician	Engineer Design Engineer	Project Manager	Officer
Name of Firm	Senior Technician	Project Engineer	Sr. Mgr. Engineer	Principal Engineer
Firm #1	$73	$85	$135	$175
Firm #2	$70	na	$129	$160
Firm #3	$53	$63	$118	$155

B. Calculation of Overall Average Engineering Hourly Billing Rate

	Technician	Engineer Design Engineer	Project Manager	Officer	
	Senior Technician	Project Engineer	Sr. Mgr. Engineer	Principal Engineer	
Average Hourly Billing Rate (From Above)	$65	$74	$127	$163	
Typical Percent of Time on an Engineering Assignment	30%	35%	25%	10%	Weighted Average
	$20	$26	$32	$16	**$93**

Source: Information provided by American Water Works Service Company

Service Company versus Outside Provider Cost Comparison

As shown in the table below, Service Company costs per hour are considerably lower than those of outside providers.

	12 Months Ended September 30, 2009		
Service Provider	Service Company	Outside Provider	Difference--Service Co. Greater(Less) Than Outside
Attorney	$ 179	$ 256	$ (77)
Management Consultant	$ 111	$ 227	$ (116)
Certified Public Accountant	$ 73	$ 118	$ (45)
Professional Engineer	$ 60	$ 93	$ (33)

Based on these cost per hour differentials and the number of managerial and professional services hours billed to VAWC during the 12-months ended September 30, 2009, outside service providers would have cost $2,094,318 more than the Service Company (see table below). Thus, on average, outside provider's hourly rates are 60% higher than those of the Service Company ($2,094,318 / $3,485,883).

	12 Months Ended September 30, 2009		
Service Provider	Hourly Rate Difference--Service Co. Greater(Less) Than Outside	Service Company Hours Charged	Dollar Difference
Attorney	$ (77)	443	$ (34,228)
Management Consultant	$ (116)	7,391	$ (859,040)
Certified Public Accountant	$ (45)	18,771	$ (837,603)
Professional Engineer	$ (33)	10,960	$ (363,447)
Service Company Less Than Outside Providers			$ (2,094,318)

It should be noted that the cost differential associated with using outside providers is even greater because Service Company personnel do not charge for more than 8 hours per day even when they work more. Outside providers generally charge clients for all hours worked. If, for instance, Service Company personnel worked 5% overtime (2 hours) per week on VAWC's behalf, that would have amounted to over 1,800 additional hours of work during the 12 months ended September 30, 2009. Based on the hourly rate differentials above, this overtime would have added another $104,000 to the cost of using outside provider.

If VAWC were to use outside service providers rather than the Service Company for managerial and professional services, it would incur other additional expenses besides those associated with higher hourly rates. Managing outside firms who would perform over 37,000 hours of work (more than 25 full-time equivalents at 1,500 "billable" hours per FTE per year) would add a significant workload to the existing VAWC management team. Thus, it would be necessary for VAWC to add at least one position to supervise the outside firms and ensure they delivered quality and timely services. The individuals that would fill this position would need a good understanding of each profession being managed. They must also have management experience and the authority necessary to give them credibility with the outside firms. As calculated in the table below, this position would add almost $150,000 per year to VAWC's personnel expenses.

V – Question 2 – Provision of Services at the Lower of Cost or Market

Cost of Adding 1 Professional Position To VAWC's Staff

	Total
New Positions' Salary	$ 100,000
Benefits (at 49.4%)	$ 49,400
Office Expenses (15.2%)	$ 15,200
Cost of One Position	$ 149,400

Thus, the total effect on the ratepayers of VAWC of contracting all services now provided by Service Company would be an increase in their costs of $2,243,718 ($2,094,318 + $149,400). Based on the results of this comparison, it is possible to conclude that the Service Company charged VAWC at the lower of cost or market for services provided during the 12 months ended September 30, 2009.

VI - Question 3 - Reasonableness of Customer Accounts Services Costs

Background

Customer Accounts Services covers the following utility functions:

- Customer Call Center – customer calls/contact, credit, order taking/disposition, bill collection efforts, outage calls
- Call Center IT – maintenance of phone banks, voice recognition units, call center software applications, telecommunications
- Customer billing – bill printing, stuffing, and mailing
- Remittance processing – processing customer payments received in the mail
- Bill payment centers – locations where customers can pay their bills in person

It is difficult to compare the cost of the Service Company's customer accounts services-related charges to VAWC with outside providers of the same services because survey data is proprietary and expensive to obtain. For this reason, VAWC's charges from the Service Company for customer accounts services are compared to those of neighboring electric utilities because the data necessary to make such comparison is available to the public.

Neighboring electric utility cost information comes from the FERC Form 1 that each utility must file. FERC's chart of accounts is defined in Chapter 18, Part 101 of the Code of Federal Regulations. FERC accounts that contain customer accounts services-related expenses are Account 903 Customer Accounts Expense – Records and Collection Expense and Account 905 Customer Accounts Expense – Miscellaneous Customer Accounts Expense. Exhibit 9 provides FERC's definition of the type of expenses that should be recorded in these accounts.

In addition to the charges in these FERC accounts, labor-related overheads charged to the following FERC accounts must be added to the labor components of Accounts 903 and 905:

- Account 926 Employee Pension and Benefits
- Account 408 Taxes Other Than Income (employer's portion of FICA)

Comparison Group

Electric utilities included in the comparison group are shown in the table below. These are companies whose FERC Form 1 show amounts for accounts 903 and 905.

Virginia	• Appalachian Power	• Virginia Electric Power
West Virginia	• Appalachian Power • Monongahela Power	• Wheeling Power
Maryland	• Baltimore Gas & Electric • Delmarva Power & Light	• Potomac Electric
North Carolina	• Duke Energy Carolinas	• Progress Energy Carolinas
Kentucky	• Duke Energy Kentucky • Kentucky Power	• Kentucky Utilities • Louisville Gas & Electric
Tennessee	• Kingsport Power	

Virginia-American Water Company
FERC Account Descriptions

903 – Customer Records and Collection Expenses

This account shall include the cost of labor, materials used and expenses incurred in work on customer applications, contracts, orders, credit investigations, billing and accounting, collections and complaints.

Labor

1. Receiving, preparing, recording and handling routine orders for service, disconnections, transfers or meter tests initiated by the customer, excluding the cost of carrying out such orders, which is chargeable to the account appropriate for the work called for by such orders.
2. Investigations of customers' credit and keeping of records pertaining thereto, including records of uncollectible accounts written off.
3. Receiving, refunding or applying customer deposits and maintaining customer deposit, line extension, and other miscellaneous records.
4. Checking consumption shown by meter readers' reports where incidental to preparation of billing data.
5. Preparing address plates and addressing bills and delinquent notices.
6. Preparing billing data.
7. Operating billing and bookkeeping machines.
8. Verifying billing records with contracts or rate schedules.
9. Preparing bills for delivery, and mailing or delivering bills.
10. Collecting revenues, including collection from prepayment meters unless incidental to meter reading operations.
11. Balancing collections, preparing collections for deposit, and preparing cash reports.
12. Posting collections and other credits or charges to customer accounts and extending unpaid balances.
13. Balancing customer accounts and controls.
14. Preparing, mailing, or delivering delinquent notices and preparing reports of delinquent accounts.
15. Final meter reading of delinquent accounts when done by collectors incidental to regular activities.
16. Disconnecting and reconnecting services because of nonpayment of bills.
17. Receiving, recording, and handling of inquiries, complaints, and requests for investigations from customers, including preparation of necessary orders, but excluding the cost of carrying out such orders, which is chargeable to the account appropriate for the work called for by such orders.
18. Statistical and tabulating work on customer accounts and revenues, but not including special analyses for sales department, rate department, or other general purposes, unless incidental to regular customer accounting routines.
19. Preparing and periodically rewriting meter reading sheets.
20. Determining consumption and computing estimated or average consumption when performed by employees other than those engaged in reading meters.

Materials and expenses

21. Address plates and supplies.
22. Cash overages and shortages.
23. Commissions or fees to others for collecting.
24. Payments to credit organizations for investigations and reports.
25. Postage.
26. Transportation expenses, including transportation of customer bills and meter books under centralized billing procedure.
27. Transportation, meals, and incidental expenses.
28. Bank charges, exchange, and other fees for cashing and depositing customers' checks.
29. Forms for recording orders for services, removals, etc.
30. Rent of mechanical equipment.

Virginia-American Water Company
FERC Account Descriptions

905 – Miscellaneous Customer Accounts Expenses

This account shall include the cost of labor, materials used and expenses incurred not provided for in other accounts.

Labor

1. General clerical and stenographic work.
2. Miscellaneous labor.

Materials and expenses

3. Communication service.
4. Miscellaneous office supplies and expenses and stationery and printing other than those specifically provided for in accounts 902 and 903.

VI - Question 3 - Reasonableness of Customer Accounts Services Costs

VAWC Cost per Customer

As calculated below, VAWC's 12 months ended September 30, 2009 customer account services expense per customer was $27.58. The cost pool used to calculate this average includes charges for Service Company services (e.g., call center, billing, payment processing) and postage and forms expenses, which are incurred directly by VAWC. It was necessary to adjust the National Call Center charges because electric utilities experience an average of 2.50 calls per customer compared to American Water's 1.32 calls per customer. Thus, National Call Center expenses had to be increased, for comparison purposes, to reflect its costs at a 2.50 calls per customer level.

Virginia-American Cost Per Customer		Year Ended 9/30/2009 Service Co Charges	Adjustment Fewer Calls For Water Cos. (A)	Adjusted	
Service Company					
Call Centers	Call processing, order processing, credit, bill collection	$ 833,451	$ 316,716	$ 1,150,168	
Regional Offices		$ 147,812		$ 147,812	
Operating Company	Customer payment processing			$ 38,868	Note B
Operating Company	Postage & forms			$ 164,723	
			Cost Pool Total	$ 1,501,570	
			Total Customers	54,437	
	12 Months Ended September 30, 2009 Cost Per VAWC Customer			**$ 27.58**	

Note A: Adjustment for American Water's fewer calls per customer

This adjustment is necessary because water utilities experience fewer calls per customer than do electric utilities

Call handling expenses		$ 352,162	
Electric utility industry's avg calls/customer	2.50		
American Water's avg calls/customer	1.32		
Percent different	90%	90%	
Total Adjustment		$ 316,716	

Note B: Estimated customer payment processing expenses

Number of customers	54,437	
Number of payments/customer/year	4.2	
Total payments processed/year	228,635	
Bank charge per item	$ 0.1700	(subject to check)
Total estimated annual expense	$ 38,868	

Electric Utility Group Cost per Customer

Exhibit 10 shows the actual 2008 customer accounts expense per customer calculation for the electric utility comparison group. All of the underlying data was taken from the utilities' FERC Form 1.

VI - Question 3 - Reasonableness of Customer Accounts Services Costs

Summary of Results

As shown in the table below, VAWC's cost per customer is below the average cost of the neighboring electric utility comparison group. It can therefore be concluded that VAWC's 12 months ended September 30, 2009 customer accounts-related expenses, including those of the Alton and Pensacola Call Centers, assigned by the Service Company to VAWC were comparable to those of other utilities.

Average Customer Accounts Expense Per Customer	
Louisville Gas & Electric	$ 15.67
Virginia Electric Power	$ 16.15
Monongahela Power	$ 16.17
Duke Power	$ 22.99

Analysis of Services

The final aspect of this study was an assessment of whether the services that are provided to VAWC by the Service Company would be necessary if VAWC were a stand-alone water utility. The first step in this evaluation was to determine specifically what the Service Company does for VAWC. Based on discussions with Service Company personnel, the matrix in Exhibit 11 was created showing which entity—VAWC or a Service Company location—is responsible for each of the functions VAWC requires to ultimately provide service to its customers. This matrix was reviewed to determine: (1) if there was redundancy or overlap in the services being provided by the Service Company and (2) if Service Company services are typical of those needed by a stand-alone water utility.

Upon review of Exhibit 12, the following conclusions can be drawn:

- The services that the Service Company provides are necessary and would be required even if VAWC were a stand-alone water utility.

- There is no redundancy or overlap in the services provided by the Service Company to VAWC. For all of the services listed in Exhibit 12, there was only one entity that was primarily responsible for the service.

Governance Practices Associated With Service Company Charges

There are several ways by which VAWC exercises control over Service Company services and charges. The most important of these are described below.

- **President of Regulated Operations Oversight** – The President of Regulated Operations is on the Executive Management Team (EMT) of American Water. This position is responsible for the overall performance of each operating company in American Water. As part of the EMT, the President of Regulated Operations has equal say with other EMT members in major business decisions of American Water and has the ability to monitor Service Company performance quality and spending. The President of Regulated Operations also addresses local concerns with each operating company president.
- **Divisional Vice President & Treasurer** – The Divisional Vice President and Treasurer of the Eastern Division is responsible for the financial reporting, performance and internal controls of each of the operating companies in the division. The Vice President and Treasurer monitors the performance and reporting from the Service Company and follows up on instances where the quality and timeliness of services are not as expected. The operating company interacts with the Divisional VP & Treasurer to discuss any concerns with billings, etc.
- **Operating Company Board Oversight** – VAWC board of directors includes members of American Water's EMT, members of the divisional management team and business and community leaders from outside the Company. VAWC's president is Chairman of the VAWC board. This helps ensure that VAWC's needs are a factor in the delivery of Service Company services.
- **Service Company Budget Review/Approval** – The President of Regulated Operations sits on the Service Company board and that board must formally approve the budget for Service Company charges for the next year. These budgeted charges are consolidated with the operating company's own spending into an overall budget which must be approved by the operating company's board of directors. VAWC's president also sits on the Service Company board.
- **Major Project Review And Approval** – Major projects undertaken by the Service Company must first be reviewed by American Water's Executive Management Team, which includes the President of Regulated Operations. With input from the local presidents and Divisional Vice President & Treasurer, they have the ability to impact all new initiatives and projects before they are authorized.
- **Service Company Bill Scrutiny** – VAWC Finance personnel review the monthly Service Company bill for accuracy and reasonableness on a monthly basis. VAWC's financial manager discusses the monthly bill with Shared Services Center office personnel and any mistakes or overcharges are credited on a subsequent billing. The VAWC Finance Manager prepares an actual-to-budget comparison of management fees each month for use in identifying unusual variances. Service Company actual-to-budget comparison is included in the monthly Financial Review Package (FRP). Unusual variances are researched, explanations are provided and any necessary corrections are made.
- **Service Company Budget Variance Reporting** – Each month, a summary variance analysis is prepared that explains differences between budgeted and actual Service Company spending. In addition, a more detailed monthly variance report, called the "Statement of Expenses and Billed Charges," is produced by Service Company location and shows actual spending for the month.

- **Operating Company Budget Variance Reporting** – The "Budget/Plan Analysis," produced monthly, has a line item for Management Fees (i.e., Service Company charges). In this way, Service Company budget versus actual charges can be monitored for the month and year-to-date. Additional information exists that allows more detailed analysis of "Divisional" and "Corporate" Management Fees.
- **Capital Investment Management ("CIM") –** CIM is one of American Water's primary business planning processes. It covers capital and asset planning and is employed throughout American Water. CIM provides a full range of governance practices, including a formal protocol for assessing system needs, prioritizing expenditures, managing the capital program, approving project spending, delivering projects and measuring outputs. CIM ensures that:
  - Capital expenditure plans are aligned with the strategic intent of the business
  - The impact of capital expenditure and income plans are fully reflected in operating expense plans
  - The impacts of these plans are understood and affordable, and
  - Effective controls are in place over budgets (through business plans) and individual capital projects (through appropriate authorization thresholds, management and reporting processes).

  The CIM process was designed to optimize the effectiveness of asset investment. The process is managed at two levels for all American Water companies, including all VAWC Operating Units. Monthly meetings of the CIM are held to review capital spending compared to plan, review new project requests, and review updates or modifications to existing projects. The President of VAWC and others participate as necessary (e.g. VAWC operations managers and Rates Manager) and provide the data used in the monthly review schedules.

WITNESS: P.BARYENBRUCH

VIRGINIA AMERICAN WATER COMPANY

1. Q. Please state your name and business address.

A. Patrick L. Baryenbruch, 2832 Claremont Road, Raleigh, North Carolina 27608.

2. Q. Please describe your educational and professional background.

A. I received a Bachelors degree in accounting from the University of Wisconsin-Oshkosh in 1974 and a Masters in Business Administration degree from the University of Michigan in 1979.

I am a financial consultant and a certified public accountant. I am a member of the American Institute of Certified Public Accountants and the North Carolina Association of Certified Public Accountants.

I began my career as a staff accountant with Arthur Andersen & Company where I performed financial audits of utilities, banks and finance companies. After three years I left to pursue an M.B.A. degree. Upon graduation from business school, I worked with the consulting firms of Theodore Barry & Associates and Scott, Madden & Associates.

During my consulting career, I have performed consulting assignments for approximately 50 utilities and 10 public service commissions. I have participated as project manager, lead or staff consultant for 24 commission-ordered management and prudence audits of public utilities. Of these, I have been responsible for evaluating the area of affiliate charges and allocation of corporate expenses in the Commission-ordered audits of Connecticut Light and Power, Connecticut Natural Gas, General Water Corporation (Pennsylvania Operations), Philadelphia Suburban Water Company (now Aqua America) and Pacific Gas & Electric Company.

My firm has performed the commission-ordered audit of Southern California Edison's 2002, 2003, 2004 and 2005 transactions with its non-regulated affiliate companies.

3. Q. What are your duties and responsibilities in your current position?

A. I am the President of my own consulting practice, Baryenbruch & Company, LLC, which was established in 1985. In that capacity, I provide consulting services to utilities and their regulators.

4. Q. Please describe the reason for your testimony in this case.

A. I am presenting the results of my study which evaluated the services provided by American Water Works Service Company, Inc. ("Service Company") during the 12 months ended September 30, 2009 to Virginia American Water Company ("VAWC"). This study was undertaken in conjunction with VAWC's rate case and is accurate to the best of my knowledge and belief. The study is attached as Exhibit PLB-1.

5. Q. What were the objectives of your study?

A. This study was undertaken to answer four questions concerning the services provided by Service Company to VAWC, each of which bears on the reasonableness of those charges as incurred during the 12 months ended September 30, 2009. First, were the Service Company's charges to VAWC during the 12 months ended September 30, 2009 reasonable? Second, was VAWC charged the lower of cost or market for managerial and professional services provided by the Service Company during the 12 months ended September 30, 2009? Third, were the 12 months ended September 30, 2009 costs of the Service Company's customer accounts services, including those of the National Call

Centers, comparable to those of other utilities? Fourth, are the services VAWC receives from Service Company necessary?

6. Q. What conclusions were you able to draw as to the reasonableness of the Service Company's charges to VAWC ?

A. The Service Company's costs for the 12 months ended September 30, 2009 per VAWC customer was very reasonable. For example, during the 12 months ended September 30, 2009, VAWC was charged $58 per customer for administrative and general ('A&G")-related services provided by the Service Company. This compares favorably to costs per customer for electric and combination electric/gas service companies that average $109 for service companies reporting to the Federal Energy Regulatory Commission ("FERC"). Only 3 of the 24 utility service companies that filed a FERC Form 60 for 2008 had a lower A&G cost per customer than VAWC's charges from the Service Company.

7. Q. What conclusions were you able to draw as to whether VAWC was charged the lower of cost or market for the services provided by the Service Company?

A. I was able to draw the following conclusions:

(1) VAWC was charged the lower of cost or market for managerial and professional services during the 12 months ended September 30, 2009.

(2) On average, the hourly rates for outside service providers are 60% higher than the Service Company's hourly rates.

(3) The managerial and professional services provided by the Service Company are vital and could only be procured effectively by VAWC from outside professionals if it provided careful supervision to those service

providers. If these services were contracted entirely to outside providers, VAWC would have to add at least one position to manage activities of outside firms. This position would be necessary to ensure the quality and timeliness of services provided.

(4) If all the managerial and professional services now provided by the Service Company had been outsourced during the 12 months ended September 30, 2009, VAWC and its ratepayers would have incurred more than $2.2 million in additional expenses. This amount includes the higher cost of outside providers and the cost of one VAWC position needed to direct the outsourced work.

(5) This study's hourly rate comparison actually understates the cost advantages that accrue to VAWC from its use of the Service Company. Outside service providers generally bill for every hour worked. Service Company exempt personnel, on the other hand, charge a maximum of 8 hours per day even when they work more hours. If the overtime hours of Service Company personnel were factored into the hourly rate calculation, the Service Company would have had an even greater annual dollar advantage than the $2.2 million cited above. For instance, if Service Company overtime is conservatively estimated at 5% (2 hours per week), then that work would have cost an estimated $100,000 in additional charges from outside providers.

(6) It would be difficult for VAWC to find local service providers with the same specialized water industry expertise as that possessed by the Service Company staff. Service Company personnel spend substantially all their time serving operating water companies. This specialization

brings with it a unique knowledge of water utility operations and regulation that is most likely unavailable from local service providers.

(7) Service Company fees do not include any profit markup. Only its actual cost of service is being recovered from VAWC customers.

8. Q. What conclusions were you able to draw concerning whether the 12 months ended September 30, 2009 costs of the Service Company's customer account services, including those of the National Call Centers, were reasonable?

A. The per customer cost of the Service Company's customer accounts services, including those provided by the National Call Center, is below the average of the neighboring electric utility comparison group. As will be explained further in my report, this group of companies provides a reasonable proxy group for comparison to a regulated utility of the size and scope of the Service Company and VAWC. During the 12-months ended September 30, 2009, the customer accounts cost for VAWC customers was $27.58 compared to the 2008 average of $29.13 for neighboring electric utilities. The highest comparison group per customer cost was $76.47 and the lowest $15.67.

9. Q. What conclusions were you able to draw concerning whether the services VAWC receives from the Service Company are necessary?

A. I was able to draw the following conclusions:

(1) The services that the Service Company provides are necessary and would be required even if VAWC were a stand-alone water utility.

(2) Furthermore, there is no redundancy or overlap in the services provided by the Service Company to VAWC. For all of the services listed in PLB-1 Exhibit 11, there was only one entity primarily responsible for the

service and thus no duplication of efforts between the Service Company and VAWC.

10. Q. Does this complete your testimony?

A. Yes.

I - Introduction

Purpose Of This Study

This study was undertaken to answer three questions concerning the services provided by American Water Works Service Company, Inc. (Service Company) to West Virginia-American Water Company (WV American):

1. Was WV American charged the lower of cost or market for managerial and professional services provided by the Service Company during the 12-months ended December 31, 2006?

2. Were the 12-months ended December 31, 2006 costs of the Service Company's customer accounts services, including those of the National Call Centers, reasonable?

3. Are the services WV American receives from the Service Company reasonably necessary to WV American's provision of service to its customers?

Study Results

Concerning question 1, the following conclusions can be drawn from this study:

- WV American was charged the lower of cost or market for managerial and professional services during the 12-months ended December 31, 2006.

- On average, the hourly rates for outside service providers are **58% higher** than the Service Company's hourly rates.

- The managerial and professional services provided by the Service Company are vital and could not be procured externally by WV American without careful supervision on the part of WV American. If these services were contracted entirely to outside providers, WV American would have to add at least one position to manage activities of outside firms. This position would be necessary to ensure the quality and timeliness of services provided.

- If all the managerial and professional services now provided by the Service Company had been out-sourced during the 12-months ended December 31, 2006, WV American and its ratepayers would have incurred an **additional $4.3 million** in expenses. This amount includes the higher cost of outside providers and the cost of a WV American position needed to direct the outsourced work.

- This study's hourly rate comparison actually understates the cost advantages that accrue to WV American from its use of the Service Company. Outside service providers generally bill for every hour worked. Service Company personnel, on the other hand, charge a maximum 8 per day even when they work more. If the overtime hours of Service Company personnel had been factored into the hourly rate calculation, the Service Company would have had an even greater annual dollar advantage than the $4.3 million cited above.

- It would be difficult for WV American to find local service providers with the same specialized water industry expertise as that possessed by the Service Company staff. Service Company personnel spend substantially all their time serving operating water companies. This specialization brings with it a unique knowledge of water utility operations and regulation that is most likely unavailable from local service providers.

- Service Company fees do not include any profit markup. Only its actual cost of service is being recovered from WV American ratepayers.

Concerning question 2, it was determined that the cost of the Service Company's customer accounts services, including those provided by the National Call Center, **is within a reasonable range of the neighboring electric utility comparison group average cost per customer**. As will be explained further herein, this group of companies provides a reasonable proxy group for comparison to a regulated utility of the size and scope of WV American. During the 12 months ended December 31, 2006, the customer accounts cost for WV American customers was $32.03 compared to the 2005 average of $28.09 for neighboring electric utilities. The highest comparison group per customer cost was $68.26 and the lowest $12.43. Seven comparison group utilities had higher per customer costs while 15 were lower than WV American.

Concerning question 3, the following conclusions can be drawn:

- The services that the Service Company provides are necessary and would be required even if WV American were a stand-alone water utility.

- There is no redundancy or overlap in the services provided by the Service Company to WV American.

II - Background

Overview Of American Water Service Company

The Service Company maintains several types of offices from which it provides services to American Water operating companies. They include:

- Corporate Office – Includes American Water's executive management and personnel from the various corporate support services. American Water's corporate office is located in Voorhees, New Jersey.

- National Call Centers – Perform customer service functions, including: customer call processing, service order processing, correspondence processing, credit and collections. American Water maintains two call centers: one in Alton, Illinois that went into operation in the second quarter of 2001 and a second in Pensacola, Florida that went into operation in April 2005. Prior to the establishment of these national call centers, customer service functions were performed by employees of WV American, which incurred the expense on its books.

- National Shared Services Center – The Shared Services Center, located in Cherry Hill, New Jersey, provides various financial, accounting and treasury functions that had been performed by individual operating companies. This arrangement has improved and streamlined the Company's financial processes and allowed operating companies to focus on providing utility service.

- Regional Offices – Regional offices provide operating companies with certain support services that can be performed more effectively on a regional basis because individual operating company/center workloads are not sufficient to warrant a full-time staff for these activities. At the same time, these services require closer proximity to operating companies served so they have not been consolidated into the National Shared Services Center. Examples of regional office services include rates and revenues, engineering and operations. There are four regional offices—Northeast, Southeast, Central and West.

- Belleville Lab – The national trace substance laboratory is located in Belleville, Illinois and performs testing for all American Water operating companies.

- Information Technology Service Centers – American Water's principal data center, located Hershey, Pennsylvania, supports the IT infrastructure required to run corporate and operating company business applications and the email system. IT personnel rotate, as needed, throughout the regional offices and operating companies.

Service Company Expense Categories

The Service Company renders a monthly bill to operating companies. Charges are broken down into the following expense categories:

- Labor – base pay (salaries) of managerial and professional employees
- Labor-Related Overheads – employee benefit costs (payroll taxes, medical coverage, pensions, disability insurance) and other general expenses
- Support – wages and salaries of office support personnel, including secretaries, clerical personnel, telephone operators and mail clerks

- Office Expenses – office rent, equipment leases, telephone, electric, office supplies, property taxes, office maintenance
- Vouchers/Journal Entries – (1) travel expenses incurred by Service Company personnel, (2) other items submitted for reimbursement by employees, including professional association dues, (3) outside service contracts for such things as actuarial services, and (4) various other expenditures, including data center expenses for software licenses and hardware maintenance.

Service Company expenses are either assigned directly or allocated to operating companies, as shown in the table below.

Expense Category	Direct Charged	Allocated	Comments
Labor	X	X	Professional personnel working for one or several operating companies
Labor-Related Overheads	X	X	These are primarily employee benefit costs that relate directly to labor
Support		X	Administrative personnel support the professional staff, thus support costs are allocated on the basis of professional labor
Office Expense		X	Are all allocated on the basis of professional labor
Vouchers/Journals	X	X	May be either directly in support of one operating company (e.g., an engineer traveling from the Corporate Office to the operating company) or allocated to several operating companies

A direct charge occurs when Service Company work or expenses are incurred in support of only one operating company. Direct charge examples include work in support of an operating company's rate case, engineering design work on an operating company's project and the preparation of an operating company's financial statements.

Service Company expenses are allocated when more than one operating company benefits from the underlying work. Examples include assessments of new Federal water quality regulations, development of the company-wide materials procurement contracts and creation of company-wide engineering design standards.

Charging and Assignment Of Service Company Time and Expenses

Service Company transactions are assigned with the following information so there is a proper accounting and eventual charging to an operating company:

- Operating company number, if transaction is a direct charge
- Formula number if transaction is allocated
- Employee hours worked
- Account number for non-labor charges.

Charges can originate from the following systems:

- Payroll System
- RVI System (outside vendor payments)
- PCard System (credit card payments)
- Internal Purchase Order System
- Journal entries.

The Service Company's time reporting process enables labor and support charges to be assigned to the proper operating company. Labor charges are based on the time reported by managerial and professional Service Company employees. Every week, Service Company professional employees complete an electronic time sheet (see example in Schedule 1) that shows:

- Operating company (for direct charge)
- Formula number (for allocation)
- Work order (where applicable)
- Authorization number (where applicable).

At month-end, time report information is processed and direct and allocated professional labor hours tabulated for each operating company. Dollar charges are then calculated using the hourly rate of each Service Company professional employee based upon their base salary (i.e., an employee's hours times their hourly rate of pay).

Support (administrative) personnel charge their time to the activity "General Admin." As described in the table on page 4, their labor charges are allocated to operating companies based upon how their office's professional personnel labor charges are assigned. For instance, if 2% of the Voorhees Data Center's professional labor is assigned to WV American during a month, then 2% of that office's monthly administrative labor charges also are assigned to the operating company.

The overhead cost category is next assigned based on professional and administrative labor costs. Thus, if 2% of the Corporate Office's accumulated professional and support labor is charged to WV American during the month, then 2% of that month's overhead expenses will be assigned to WV American.

Each Service Company location's office expenses are allocated to operating companies based on how professional labor charges for that office have been assigned. For instance, if 2% of professional labor from one Service Company office is assigned to WV American, then 2% of that office's office expenses would be assigned to WV American. Thus, office expenses are allocated in the very same way as administrative labor.

Vouchers/journal entries may be charged directly or allocated, depending on who benefits from the expenditure. For instance, the cost of a continuing professional education course taken by a professional in a regional office is allocated to the operating companies served by that office. Travel expenses by that same professional to a state rate case proceeding are charged directly to the operating company whose case is being heard.

III – Service Company Cost Comparison Approach

During 2006, the Service Company billed WV American $9,809,249 in O&M-related and $633,146 in capital-related charges. Included in the O&M amount is $1,057,355 of several non-recurring expenses for which WV American will not seek recovery. These non-recurring items have been excluded from this study. As calculated in the table below, net O&M and capital Service Company charges of $9,385,040 were subjected to a market cost comparison.

Reconciliation to 2006 Testable Service Co Charges

O&M Per WV American G/L	$	9,809,249
Net O&M Adjustments	$	(1,057,355)
Net Testable O&M	$	8,751,894
Capital per WV American G/L	$	633,146
Net Testable SC Charges	$	9,385,040

For purposes of comparing Service Company charges to outside benchmarks, the net testable Service Company services were placed into two categories:

- Managerial and Professional Services – Includes such services as management, accounting, legal, human resources, information technology, and engineering.

- Customer Accounts Services – Includes customer-related services, such as call center, credit, billing, collection and payment processing.

Total test period Service Company charges break down between management/professional services and customer account services as follows:

	2006		
	Amount		Hours
Management and Professional Services	$	7,243,051	80,523
Customer Account Services	$	2,141,989	73,095
Total	$	9,385,040	153,618

This study's first question—whether the Service Company charges the lower of cost or market—was evaluated by comparing the cost per hour for managerial and professional services provided by Service Company personnel to hourly billing rates that would be charged by outside providers of equivalent services. Service Company costs per hour were based on actual charges to WV American during 2006. Outside providers' billing rates came from surveys or other information from professionals that could perform the services now provided by the Service Company.

The second question—reasonableness of the National Call Center costs—was addressed by comparing WV American's customer accounts services expenses to those of neighboring electric utilities. This approach was selected because the costs of outside providers of call center services are not publicly available. However, electric utility customer account services expenses can be obtained from the FERC Form 1. The availability and transparency of FERC data adds to the validity of its use in this comparison.

The third question—the necessity of Service Company services—was first investigated by determining the services provided to WV American. A determination was then made as to whether these services would be required if WV American were a stand-alone utility.

IV – Managerial And Professional Services Hourly Rate Comparison

Methodology

The lower-of-cost-or-market comparison is accomplished by comparing the cost per hour for Service Company managerial and professional services to those of outside service providers to whom these duties could be assigned. Based on the nature of the Service Company services it was determined that the following outside providers could perform the categories of services indicated below:

- Management Consultants – executive and administrative management, risk management services, human resources and communications services
- Attorneys – legal services
- Certified Public Accountants – accounting, financial, information technology and rates and revenues services
- Professional Engineers – engineering, operations and water quality services.

The services provided by the Belleville lab are assumed to be transferable to professional engineers for purposes of this cost comparison. This was done for two reasons. First, there is no readily available survey of hourly billing rates for testing services such as those performed by Belleville. Second, Belleville personnel have similar educational backgrounds as Service Company engineering personnel. In fact, many Belleville employees have engineering degrees. Thus, it is valid to compare the hourly rates of Belleville services to those of outside engineering firms.

Service Company hourly rates were calculated for each of the four outside service provider categories, based on the dollars and hours charged to WV American during 2006. Hourly billing rates for outside service providers were developed using third party surveys or directly from information furnished by outside providers themselves.

It should be noted that by using the Service Company's hours charged WV American during 2006, its hourly rates are actually overstated because Service Company personnel charge a maximum 8 per day even when they work more. Outside service providers generally bill for every hour worked. If the overtime hours of Service Company personnel had been factored into the hourly rate calculation, Service Company hourly rates would have been lower.

The last step in the market cost comparison was to compare the Service Company's average cost per hour to the average cost per hour for outside providers.

Service Company Hourly Rates

Schedule 2 (page 10) details the assignment of 2006 management and professional Service Company charges to outsider provider categories. Schedule 3 (page 11) shows the same assignment for Service Company management and professional hours charged to WV American during 2006.

Certain adjustments to these dollar amounts were necessary to calculate Service Company hourly rates that are directly comparable to those of outside providers. Adjustments were made to the following 2006 test year non-labor Service Company charges:

- Contract Services – 2006 Service Company charges to WV American include over $630,000 in charges associated with existing arrangements with outside professional firms who perform certain corporate-wide services (e.g., legal, financial audit, actuarial services). These professional fees are excluded from the Service Company hourly rate calculation because the related services have effectively been out-sourced already.

- Travel Expenses – In general, client-related travel expenses are not recovered by outside service providers through their hourly billing rate. Rather, actual out-of-pocket travel expenses are billed to clients in addition to fees for professional services. Thus, it is appropriate to remove these Service Company charges from the hourly rate calculation.

- Computer Hardware and Software Expenses – Included in 2006 Service Company charges to WV American are charges for outside expenses related to leases and maintenance fees related to mainframe, server and network infrastructure, corporate business applications and the email system. An outside provider that would take over operation of a data center would recover these expenses over and above the labor necessary to operate the data center.

Schedule 4 (page 12) shows how contract services, travel expenses and computer hardware/software-related Service Company charges are assigned among the four outside provider categories.

Based on the assignment of expenses and hours shown in Schedules 2 and 3 and the excludable items shown in Schedule 4, the Service Company's equivalent costs per hour for 2006 are calculated below.

	Attorney	Management Consultant	Certified Public Accountant	Professional Engineer	Total
Total management, professional & technical services charges	$ 331,705	$ 2,222,792	$ 3,293,418	$ 1,395,135	$ 7,243,051

Outside Service Provider Hourly Rates

The next step in the cost comparison was to o

btain the average billing rates for each outside service provider. The source of this information and the determination of the average rates are described in the paragraphs that follow.

Attorneys

The West Virginia Bar Association does not survey its members as to their hourly billing rates. In addition, publicly available billing rate information could not be found for West Virginia attorneys. Therefore, a West Virginia estimate was developed from a survey of Michigan lawyers conducted annually by the Michigan Lawyers Weekly. As presented in Schedule 5, the average rate for each Michigan firm respondent was adjusted for the cost of living differential between their location and Charleston, West Virginia. The survey includes rates that were in effect at December 31, 2005. Thus, the 2005 average rate was escalated to June 30, 2006—the midpoint of 2006.

Management Consultants

The cost per hour for management consultants was developed from the 2006 annual survey performed by the Association of Management Consulting Firms—an industry trade organization. The first step in the calculation, presented in Schedule 6, was to determine an average rate by consultant position level. From these rates, a single weighted average hourly rate was calculated based upon the percent of time that is typically applied to a consulting assignment by each consultant position level. This survey includes rates that were in effect during 2005 for firms in the United States. Consultants typically do not limit their practice to any one region and must travel to a client's location. Thus, the U.S. national average is appropriate for comparison. The survey includes rates that were in effect at December 31, 2005. Thus, the 2005 average rate was escalated to June 30, 2006—the midpoint of 2006.

Certified Public Accountants

The average hourly rate for West Virginia certified public accountants was developed from a 2006 survey performed by the American Institute of Certified Public Accountants (AICPA). Hourly rates in the AICPA survey are the average of firms in the south Atlantic region. The average hourly rate was calculated for a set of typical accountant positions, as shown in Schedule 7. Based on a typical staff assignment by each accountant position, a weighted average hourly rate was calculated. This survey covered hourly rates in effect during 2005. Thus, the 2005 average rate was escalated to June 30, 2006—the midpoint of 2006.

Professional Engineers

The Service Company provided hourly rate information for outside engineering firms that could have been used by WV American in 2006. As presented in Schedule 8, an average rate was developed for each engineering position level. Then, using a typical percentage mix of project time by engineering position, a weighted average cost per hour was calculated.

Source: Information provided by American Water Works Service Company

Service Company Versus Outside Provider Cost Comparison

As shown in the table below, Service Company costs per hour are considerably lower than those of outside providers.

	12 Months Ended December 31, 2006		
Service Provider	Service Company	Outside Provider	Difference--Service Co. Greater(Less) Than Outside
Attorney	$ 123	$ 224	$ (101)
Management Consultant	$ 112	$ 218	$ (107)
Certified Public Accountant	$ 69	$ 107	$ (38)
Professional Engineer	$ 69	$ 96	$ (27)

Based on these cost per hour differentials and the number of managerial and professional services hours billed to WV American during the 12-months ended December 31, 2006, outside service providers would have cost $4,222,408 more than the Service Company (see table below). Thus, on average, outside provider's hourly rates are almost 58% higher than those of the Service Company ($4,222,408 / $ 7,243,051).

	12 Months Ended December 31, 2006		
Service Provider	Hourly Rate Difference--Service Co. Greater(Less) Than Outside	Service Company Hours Charged	Dollar Difference
Attorney	$ (101)	2,579	$ (259,354)
Management Consultant	$ (107)	17,990	$ (1,919,333)
Certified Public Accountant	$ (38)	40,272	$ (1,519,633)
Professional Engineer	$ (27)	19,683	$ (524,088)
Service Company Less Than Outside Providers			$ (4,222,408)

If WV American were to use outside service providers rather than the Service Company for managerial and professional services, it would incur other additional expenses besides those associated with higher hourly rates. Managing outside firms who would perform 80,523 hours of work (around 53 full-time equivalents at 1,500 billable hours per FTE) would add a significant workload to the existing WV American management team. Thus, it would be necessary for WV American to add at least one position to supervise the outside firms and ensure they delivered quality and timely services. The individuals that would fill these positions would need a good understanding of each profession being managed. They must also have management experience and the authority necessary to give them credibility with the outside firms. As calculated in the table below, this position would add another $121,400 per year to WV American's personnel expenses.

Cost of Adding Administrative Positions To KAWC's Staff

	Total
New Positions' Salary	$ 85,000
Benefits (at 52%)	$ 36,400
Total Cost of the New Position	$ 121,400

Thus, the total effect on the ratepayers of WV American of contracting all services now provided by Service Company would be an increase in their costs of **$4,343,808** ($4,222,408 + $121,400).

Other Cost Comparisons

Every year, the Belleville Lab conducts a comparison of its cost for performing major tests to the cost of using outside testing laboratories. Over the past several years, these surveys have shown the following results been as follows:

Year	Number of Major Tests Surveyed	Percent Belleville Lower Than Outside Labs
2000	26	15%
2001	25	19%
2002	24	16%
2003	23	10%
2004	24	9%
2005	24	25%
2006	24	31%

These surveys show the cost of Belleville Lab's testing services to be consistently lower than the cost of outside service providers.

V – Customer Account Services Cost Comparison

Background

It is difficult to compare the cost of American Water's National Call Centers with outside providers of the same call center-related services. Call center survey data is proprietary and expensive to obtain. For this reason, WV American's National Call Center costs are compared to those of neighboring electric utilities because the data necessary to make this comparison is readily available to the public.

Electric utility cost information comes from their FERC Form 1. FERC's chart of accounts is defined in chapter 18, part 101 of Code of Federal Regulations. FERC accounts that contain call center-related expenses and are used in this study's comparison are:

- Account 903 Customer Accounts Expense – Records and Collection Expense
- Account 905 Customer Accounts Expense – Miscellaneous Customer Accounts Expense.

In addition, labor-related overheads charged to the following FERC accounts must be added to the labor components of Accounts 903 and 905.

- Account 926 Employee Pension and Benefits
- Account 408 Taxes Other Than Income (employer's portion of FICA).

Schedule 9 provides FERC's description of what should be charged to these accounts. In questioning the controller of a large Southeastern electric utility, it was determined that expenses of the activities described below are recorded in the designated FERC accounts.

903 Records and Collection Expense

- Customer Call Center – customer calls/contact, credit, order taking/disposition, bill collection efforts, outage calls
- Call Center IT – maintenance of phone banks, voice recognition units, call center software applications, telecommunications
- Customer billing – bill printing, stuffing and mailing
- Remittance processing – processing of customer payments received in the mail
- Bill payment centers – locations where customers can pay their bills in person

905 Miscellaneous Customer Accounts Expense

- Customer Information System IT – maintenance and support of the customer information system

This study assumes the FERC accounts for other electric and gas utilities contain expenses for the same activities.

West Virginia American Water Company
FERC Account Descriptions

903 – Customer Records and Collection Expenses

This account shall include the cost of labor, materials used and expenses incurred in work on customer applications, contracts, orders, credit investigations, billing and accounting, collections and complaints.

Labor

1. Receiving, preparing, recording and handling routine orders for service, disconnections, transfers or meter tests initiated by the customer, excluding the cost of carrying out such orders, which is chargeable to the account appropriate for the work called for by such orders.
2. Investigations of customers' credit and keeping of records pertaining thereto, including records of uncollectible accounts written off.
3. Receiving, refunding or applying customer deposits and maintaining customer deposit, line extension, and other miscellaneous records.
4. Checking consumption shown by meter readers' reports where incidental to preparation of billing data.
5. Preparing address plates and addressing bills and delinquent notices.
6. Preparing billing data.
7. Operating billing and bookkeeping machines.
8. Verifying billing records with contracts or rate schedules.
9. Preparing bills for delivery, and mailing or delivering bills.
10. Collecting revenues, including collection from prepayment meters unless incidental to meter reading operations.
11. Balancing collections, preparing collections for deposit, and preparing cash reports.
12. Posting collections and other credits or charges to customer accounts and extending unpaid balances.
13. Balancing customer accounts and controls.
14. Preparing, mailing, or delivering delinquent notices and preparing reports of delinquent accounts.
15. Final meter reading of delinquent accounts when done by collectors incidental to regular activities.
16. Disconnecting and reconnecting services because of nonpayment of bills.
17. Receiving, recording, and handling of inquiries, complaints, and requests for investigations from customers, including preparation of necessary orders, but excluding the cost of carrying out such orders, which is chargeable to the account appropriate for the work called for by such orders.
18. Statistical and tabulating work on customer accounts and revenues, but not including special analyses for sales department, rate department, or other general purposes, unless incidental to regular customer accounting routines.
19. Preparing and periodically rewriting meter reading sheets.
20. Determining consumption and computing estimated or average consumption when performed by employees other than those engaged in reading meters.

Materials and expenses

21. Address plates and supplies.
22. Cash overages and shortages.
23. Commissions or fees to others for collecting.
24. Payments to credit organizations for investigations and reports.
25. Postage.
26. Transportation expenses, including transportation of customer bills and meter books under centralized billing procedure.
27. Transportation, meals, and incidental expenses.
28. Bank charges, exchange, and other fees for cashing and depositing customers' checks.
29. Forms for recording orders for services, removals, etc.
30. Rent of mechanical equipment.

West Virginia American Water Company
FERC Account Descriptions

905 – Miscellaneous Customer Accounts Expenses
This account shall include the cost of labor, materials used and expenses incurred not provided for in other accounts.
Labor
1. General clerical and stenographic work.
2. Miscellaneous labor.

Materials and expenses
3. Communication service.
4. Miscellaneous office supplies and expenses and stationery and printing other than those specifically provided for in accounts 902 and 903.

Comparison Group

Electric utilities included in the comparison group are shown in the table below. These are companies whose FERC Form 1 show amounts for accounts 903 and 905.

West Virginia	• Wheeling Power	
Kentucky	• Kentucky Power • Kentucky Utilities	• Louisville Gas & Electric • Union Light, Heat & Power
Virginia	• Appalachian Power	• Virginia Electric Power
Ohio	• Cincinnati Gas & Electric • Cleveland Electric • Columbus Southern Power • Dayton Power & Light	• Ohio Edison • Ohio Power • Toledo Edison
Pennsylvania	• Duquesne Light • PECO Energy • Pennsylvania Electric	• Pennsylvania Power • PPL Electric
Maryland	• Baltimore Gas & Electric • Delmarva Power & Light	• Potomac Electric

Some neighboring electric utilities could not be included in the comparison group because they did not submit the necessary FERC Form 1 data.

Comparison Approach

The basis for this comparison is customer account services expenses per customer. WV American's cost pool was developed to include the same expenses included in the electric utilities' FERC accounts 903 and 905. As shown in the graphic below, WV American's resultant cost pool contains the expenses of Service Company locations and certain operating company expenses.

American Water
Service Company
Pensacola & Alton Call Centers
a. Customer contact
b. Customer order processing
c. Billing information processing
d. Collections
e. Correspondence processing
f. Customer payment processing
IT Service Centers
a. Support expenses for the customer information system (ORCOM)
Operating Company
a. Postage and forms

Electric Utilities
FERC Acct 903 - Records and Collection Expense and FERC Acct 905 - Misc Customer Accounts Expense
a. Customer contact
b. Customer order processing
c. Bill preparation and mailing
d. Collections
e. Payment processing
f. Correspondence processing

WV American Cost Per Customer

In order to make a valid comparison to neighboring electric utilities, certain adjustments had to be made to the applicable Service Company charges to WV American. It was necessary to adjust the National Call Center charges because electric utilities experience an average of 2.50 calls per customer compared to American Water's 1.28 calls per customer. Thus, National Call Center expenses had to be increased, for comparison purposes, to reflect its costs at a 2.50 calls per customer level. As shown below, WV American's adjusted annual expense per customer is $32.03—the number that can be compared to neighboring electric utilities' expenses.

West Virginia American 2006 Cost Per Customer

	Cost Component	2006 Service Co Charges	Adjustment Fewer Calls For Water Cos. (A)	Adjusted	
Service Company					
Call Centers	Call processing, order processing, credit, bill collection	$ 1,904,766	$ 1,815,480	$ 3,720,246	
Regional Offices		$ 237,223		$ 237,223	
IT/Data Centers	Bill preparation and mailing	$ 391,488		$ 391,488	
Service Company	Customer payment processing			$ 244,921	Note B
Operating Company	Postage & forms			$ 738,329	
			Cost Pool Total	$ 5,332,207	
			Total Customers	166,477	
	2006 Cost Per West Virginia American Customer			**$ 32.03**	

Note A: Adjustment for American Water's fewer calls per customer

This adjustment is necessary because water utilities experience fewer calls per customer than do electric utilities

Test year annualized Call Center charges		$ 1,904,766
Electric utility industry's avg calls/customer	2.50	
American Water's avg calls/customer	1.28	
Percent different	95%	95%
Total Adjustment B		$ 1,815,480

Note B: Estimated customer payment processing expenses

Number of customers	166,477
Number of payments/customer/year	12
Total payments processed/year	1,997,724
Bank charge per item	$ 0.1226
Total estimated annual expense	$ 244,921

Electric Utility Group Cost Per Customer

Schedule 10 shows the actual 2005 customer accounts expense per customer calculation for the electric utility comparison group. All of the underlying data were taken from the utilities' FERC Form 1.

Summary Of Results

As shown in the table below, WV American's cost per customer is within a reasonable range of electric utility comparison group average. Seven comparison group utilities had higher per customer costs while 15 were lower than WV American. It can therefore be concluded that the customer accounts-related expenses, including those of the Alton and Pensacola Call Centers, assigned by the Service Company to WV American are reasonable.

Average Customer Accounts Expense Per Customer	
Louisville Gas & Electric	$ 12.43
Duquesne Light	$ 15.52
Virginia Electric Power	$ 15.77
Ohio Edison	$ 16.68
Cleveland Electric Illuminating	$ 17.15
Pennsylvania Electric	$ 19.13
Pennsylvania Power	$ 19.69
Dayton Power & Light	$ 19.72
Toledo Edison	$ 21.45
PPL Electric	$ 22.28
Kentucky Utilities	$ 24.87
Union Light, Heat & Power	$ 25.64
Baltimore Gas & Electric	$ 27.17
Comparison Group Average	**$ 28.09**
Wheeling Power	$ 29.20
Cin Gas & Electric	$ 30.50
West Virginia American Water	**$ 32.03**
Ohio Power	$ 32.30
Appalachian Power	$ 32.40
Kentucky Power	$ 34.25
Columbus Southern Power	$ 35.49
PECO Energy	$ 46.94
Delmarva Power & Light	$ 51.68
Potomac Electric	$ 68.26

VI - Need For Service Company Services

Analysis Of Services

The final aspect of this study was an assessment of whether the services that are provided to WV American by the Service Company would be necessary if WV American were a stand-alone water utility. The first step in this evaluation was to determine specifically what the Service Company does for WV American. Based on interviews of Service Company personnel, the matrix in Schedule 11 was created showing which entity—WV American or a Service Company location—is responsible for each of the functions WV American requires to ultimately provide service to its customers. This matrix was reviewed to determine: (1) if there was redundancy or overlap in the services being provided by the Service Company and (2) if Service Company services are typical of those needed by a stand-alone water utility.

Upon review of Schedule 11, the following conclusions can be drawn:

- The services that the Service Company provides are necessary and would be required even if WV American were a stand-alone water utility.

- There is no redundancy or overlap in the services provided by the Service Company to WV American. For all of the services listed in Schedule 11, there was only one entity that was primarily responsible for the service.

Governance Practices Associated With Service Company Charges

There are several ways by which WV American exercises control over Service Company services and charges. The most important of these are described below.

- **Regional President Oversight** – The Regional President of the Southeast Region is on the Executive Management Team (EMT) of American Water. The Regional President is responsible for the overall performance of each operating company in the region, including Pennsylvania American, Virginia American, West Virginia American, Kentucky American, Tennessee American and Maryland American. As part of the EMT, each Regional President has equal say with other EMT members in major business decisions of American Water and has the ability to monitor Service Company performance quality and spending. The regional president has dialogue with each operating subsidiary president to address their local concerns.

- **Regional Vice President Finance and Treasurer** – The Regional VP Finance and Treasurer of the Southeast Region is responsible for the financial reporting, performance and internal controls of each of the operating companies in the region. The VP Finance and Treasurer monitors the performance and reporting from the Service Company and pushes back whenever the quality and service are not appropriate. The Regional VP Finance and Treasurer attends monthly Business Plan Review sessions with the WV American President and finance group to review actual results and address forecast modifications for the remainder of the year. The Regional VP Finance and Treasurer reports on the quarterly the financial results and Business Plan updates to WV American 's Board of Directors. The rates function reports to the Regional VP Finance and Treasurer, who reviews and authorizes the filing of WV American rate cases, including regular involvement with status of the cases. The operating subsidiary interacts with the Regional VP & Treasurer to discuss various issues.

- **Operating Company Board Oversight** – WV American's board of directors includes members of American Water's EMT, members of the regional management team and business and community leaders from outside the Company. This helps ensure that WV American's needs are a factor in the delivery of Service Company services.

- **Service Company Budget Review/Approval** – Every operating company's regional president sits on the Service Company board and that board must formally approve the budget for Service Company charges for the next year. These budgeted charges are consolidated with the operating company's own spending into an overall budget which must be approved by the operating company's board of directors. WV American's president is chairman of the local board.

- **Major Project Review And Approval** – Major projects undertaken by the Service Company must first be reviewed by American Water's Executive Management Team, which includes the Regional President. The Regional President, with input from the regional management team (including the president of WV American), has the ability to impact all new initiatives and projects before they are authorized.

- **Service Company Bill Scrutiny** – Regional office personnel review the monthly Service Company bill for accuracy and reasonableness on a monthly basis. WV American's financial analyst has dialogue with regional office personnel concerning the monthly bill and any mistakes or overcharges are credited on a subsequent billing. The Regional Office Finance unit prepares an actual to budget comparison of management fees each month for use in identifying unusual variances. These schedules are reviewed at the monthly BPR. Unusual variances are researched, explanations are provided and any corrections are made, as necessary.

- **Service Company Budget Variance Reporting** – Each month, a summary variance analysis is prepared that explains differences between budgeted and actual Service Company spending. In addition, a more detailed monthly variance report, called the "Statement of Expenses and Billed Charges," is produced by Service Company location and shows actual spending for the month.

- **Operating Company Budget Variance Reporting** – The "Budget/Plan Analysis," produced monthly by each operating company, has a line item for Management Fees (i.e., Service Company charges). In this way, Service Company budget versus actual charges can be monitored for the month and year-to-date.

- **Capital Investment Management Committee (CIMC)** – CIMC is one of American Water's primary business planning processes. It covers capital and asset planning and is employed throughout American Water. The current CIMC process and procedures were established in 2003 as part of an initiative to implement leading water industry practices. CIMC provides a full range of governance practices, including a formal protocol for assessing system needs, prioritizing expenditures, managing the capital program, approving project spending, delivering projects and measuring outputs. CIMC ensures that:

  - Capital expenditure plans are aligned with the strategic intent of the business,
  - The impact of capital expenditure and income plans are fully reflected in operating expense plans,
  - The impacts of these plans are understood and affordable, and
  - Effective controls are in place over budgets (through business plans) and individual capital projects (through appropriate authorization thresholds, management and reporting processes).

  The CIMC process was designed to optimize the effectiveness of asset investment. The process is managed at three levels for all American Water companies, including all WV American Operating Units.

  Monthly meetings of the CIMC are held to review capital spending compared to plan, review new project requests, review updates or modifications to existing projects and address the Capital Spending Plan over the five year planning horizon. The President of WV American, Manager of Rates, WV American engineers, and WV American operations managers participate in the meetings and provide the data used in the monthly review schedules

Case No. 07-0998-W-42T

WEST VIRGINIA-AMERICAN WATER COMPANY

Rule 42T Tariff Filing to Increase
Rates and Charges

DIRECT TESTIMONY OF

PATRICK L. BARYENBRUCH

July 23, 2007

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. Patrick L. Baryenbruch, 302 East Park Drive, Raleigh, North Carolina 27605.

Q. PLEASE DESCRIBE YOUR EDUCATIONAL AND PROFESSIONAL BACKGROUND.

A. I received a Bachelors degree in accounting from the University of Wisconsin-Oshkosh in 1974 and a Masters in Business Administration degree from the University of Michigan in 1979.

I am a financial consultant and am a member of the American Institute of Certified Public Accountants and the North Carolina Association of Certified Public Accountants.

I began my career as a staff accountant with Arthur Andersen & Company where I performed financial audits of utilities, banks and finance companies. After three years I left to pursue an M.B.A. degree. Upon graduation from business school, I worked with the consulting firms of Theodore Barry & Associates and Scott, Madden & Associates.

During my consulting career, I have performed consulting assignments for approximately 50 utilities and 10 public service commissions. I have participated as project manager, lead or staff consultant for 24 commission-ordered management and prudence audits of public utilities. Of these, I have been

responsible for evaluating the area of affiliate charges and allocation of corporate expenses in the Commission-ordered audits of Connecticut Light and Power, Connecticut Natural Gas, General Water Corporation (Pennsylvania Operations), Philadelphia Suburban Water Company (now Aqua America), and Pacific Gas & Electric Company.

My firm has performed the commission-ordered audit of Southern California Edison's 2002, 2003, 2004 and 2005 transactions with its non-regulated affiliate companies.

Q. WHAT ARE YOUR DUTIES AND RESPONSIBILITIES IN YOUR CURRENT POSITION?

A. I am the President of my own consulting practice, Baryenbruch & Company, LLC, which was established in 1985. In that capacity, I provide consulting services to utilities and their regulators.

Q. PLEASE DESCRIBE THE REASON FOR YOUR TESTIMONY IN THIS CASE.

A. I am presenting the results of my study which evaluated the services provided by American Water Works Service Company ("Service Company") during 2006 to West Virginia-American Water Company (WV American). This study was

undertaken in conjunction with WV American's rate case and is true to the best of my knowledge and belief. The study is attached as Exhibit PLB-1.

Q. WHAT WERE THE OBJECTIVES OF YOUR STUDY?

A. This study was undertaken to answer three questions. First, was WV American charged the lower of cost or market for managerial and professional services provided by the Service Company during 2006? Second, were the 2006 costs of the Service Company's customer accounts services, including those of the National Call Centers, reasonable? Third, are the services WV American receives from the Service Company reasonably necessary to WV American's provision of service to its customers?

Q. WHAT CONCLUSIONS WERE YOU ABLE TO DRAW CONCERNING QUESTION NUMBER 1, WHETHER WV AMERICAN WAS CHARGED THE LOWER OF COST OR MARKET SERVICES PROVIDED BY THE SERVICE COMPANY?

A. I was able to draw the following conclusions:

(1) WV American was charged the lower of cost or market for managerial and professional services during the 12-months ended December 31, 2006.

(2) On average, the hourly rates for outside service providers are 58% higher than the Service Company's hourly rates.

(3) The managerial and professional services provided by the Service Company are vital and could not be procured externally by WV American without careful supervision on the part of WV American. If these services were contracted entirely to outside providers, then WV American would have to add at least one position to manage activities of outside firms in order to ensure the quality and timeliness of services provided.

(4) If all the managerial and professional services now provided by the Service Company had been out-sourced during the 12-months ended December 31, 2006, then WV American and its ratepayers would have incurred an **additional $4.3 million** in expenses. This amount includes the higher cost of outside providers and the cost of a WV American position needed to direct the outsourced work.

(5) This study's hourly rate comparison actually understates the cost advantages that accrue to WV American from its use of the Service Company. Outside service providers generally bill for every hour worked. Service Company personnel, on the other hand, charge a maximum 8 hours per day, even when they work more. If the overtime hours of Service

Company personnel had been factored into the hourly rate calculation, then the Service Company would have had an even greater annual dollar advantage than the $4.3 million cited above.

(6) It would be difficult for WV American to find local service providers with the same specialized water industry expertise as that possessed by the Service Company staff. Service Company personnel spend substantially all their time serving operating water companies. This specialization brings with it a unique knowledge of water utility operations and regulation that is most likely unavailable from local service providers.

(7) Service Company fees do not include any profit markup. Only the Service Company's actual cost of service is being recovered from WV American ratepayers.

Q. WHAT IS YOUR CONCLUSION REGARDING THE REASONABLENESS OF THE COSTS OF THE NATIONAL CALL CENTER THAT PROVIDES SERVICE TO WV AMERICAN?

A. I was able to determine that the cost of the Service Company's customer accounts services, including those provided by the National Call Center, is within a reasonable range of the neighboring electric utility comparison group average cost per customer. As explained in the study, this group of companies provides a

reasonable proxy group for comparison to a regulated utility of the size and scope of WV American. During the 12 months ended December 31, 2006, the customer accounts cost for WV American customers was $32.03, compared to the 2005 average of $28.09 for neighboring electric utilities. The highest comparison group per customer cost was $68.26 and the lowest $12.43. Seven comparison group utilities had higher per customer costs while 15 were lower than WV American.

Q. WHAT CONCLUSIONS WERE YOU ABLE TO DRAW CONCERNING THE NECESSITY OF THE SERVICES WV AMERICAN RECEIVES FROM THE SERVICE COMPANY?

A. I was able to draw the following conclusions:

(1) The services that the Service Company provides are necessary and would be required even if WV American were a stand-alone water utility.

(2) There is no redundancy or overlap in the services provided by the Service Company to WV American.

Q. DOES THIS COMPLETE YOUR TESTIMONY?

A. Yes.

I - Introduction

Purpose Of This Study

This study was undertaken to answer four questions concerning the services provided by American Water Works Service Company, Inc. ("Service Company") to West Virginia-American Water Company ("WV American"), each of which bears on the reasonableness of those charges as incurred during the 2007 test in Case No. 08-0900-W-42-T pending before the Public Service Commission of West Virginia:

1. Was WV American charged the lower of cost or market for managerial and professional services provided by the Service Company during 2007?

2. Was the 2007 cost of the Service Company's customer accounts services, including those of the National Call Centers, comparable to those of other utilities?

3. Are the services WV American receives from Service Company necessary?

4. Were the Service Company's charges to WV American during the 12-months ended December 31, 2007 reasonable by other comparative measures?

Study Results

Concerning question 1, the following conclusions can be drawn from this study:

- WV American was charged the lower of cost or market for managerial and professional services during the 12-months ended December 31, 2007.

- On average, the hourly rates for outside service providers are 44% higher than the Service Company's hourly rates.

- The managerial and professional services provided by the Service Company are vital and could not be procured externally by WV American without careful supervision on the part of WV American. If these services were contracted entirely to outside providers, WV American would have to add at least one position to manage activities of outside firms. This position would be necessary to ensure the quality and timeliness of services provided.

- If all the managerial and professional services now provided by the Service Company had been outsourced during the 12-months ended December 31, 2007, WV American and its ratepayers would have incurred more than $3,354,359 in additional expenses. This amount includes the higher cost of outside providers and the cost of an additional one half WV American position needed to direct the outsourced work.

- This study's hourly rate comparison actually understates the cost advantages that accrue to WV American from its use of the Service Company. Outside service providers generally bill for every hour worked. Service Company exempt personnel, on the other hand, charge a maximum of 8 hours per day even when they work more hours. If the overtime hours of Service Company personnel were factored into the hourly rate calculation, the Service Company would have had an even greater annual dollar advantage than the $3,354,359 cited above. For instance, if Service Company overtime is conservatively estimated at 5% (2 hours per week), then that work would have cost an estimated $160,000 in additional charges from outside providers.

- It would be difficult for WV American to find local service providers with the same specialized water industry expertise as that possessed by the Service Company staff. Service Company personnel spend substantially all their time serving operating water companies. This specialization brings with it a unique knowledge of water utility operations and regulation that is most likely unavailable from local service providers.

- Service Company fees do not include any profit markup. Only its actual cost of service is being recovered from WV American ratepayers.

Concerning question 2, it was determined that the cost of the Service Company's customer accounts services, including those provided by the National Call Center, is within a reasonable range of the average of the neighboring electric utility comparison group. As will be explained further herein, this group of companies provides a reasonable proxy group for comparison to a regulated utility of the size and scope of the Service Company and WV American. During the 12-months ended December 31, 2007, the customer accounts cost for WV American customers was $33.31 compared to the 2007 average of $31.27 for neighboring electric utilities. The highest comparison group per customer cost was $70.37 and the lowest $13.71.

Concerning question 3, the following conclusions can be drawn:

- The services that the Service Company provides are necessary and would be required even if WV American were a stand-alone water utility.

- There is no redundancy or overlap in the services provided by the Service Company to WV American. For all of the services listed in Schedule 10, there was only one entity that was primarily responsible for the service.

Concerning question 4, the following conclusions were reached:

- The Service Company provides WV American with services similar to those provided by other utility service companies. This was determined based on service company information included in the Form 60, which must be filed with the Federal Energy Regulatory Commission ("FERC") by electric and combination electric/gas utility holding companies.

- American Water's 2007 cost per WV American customer was reasonable compared to cost per customer for electric and combination electric/gas service companies. During 2007, WV American was charged an average of $55 per customer by the Service Company compared to an average of $122 per customer for service companies reporting to the FERC.

II - Background

Overview Of American Water Works Service Company

American Water's Service Company exists to provide certain shared services to American Water subsidiaries. It follows a service company model used by many utility holding companies that own multiple regulated utilities. By consolidating executive and professional services into a single service company, utility holding companies are able to realize the following benefits for ratepayers:

- Purchasing Economies – Common expenses (e.g., insurance, chemicals, piping) can be procured on a much larger scale thereby providing greater bargaining power for the combined entity compared to individual utility operating companies. A service company facilitates corporate-wide purchasing programs through its procurement and contract administration functions.

- Operating Economies of Scale – A service company is able to deliver services more efficiently because workloads can be balanced across more persons and facilities. For instance, American Water's Service Company is able to maintain one principal data center for the entire corporation. This is much more cost-efficient than each operating utility funding its own data center with its large fixed hardware, software and staffing costs.

- Continuity of Service – Centralizing service company personnel who perform similar services facilitates job cross-training and sharing of knowledge and expertise. This makes it easier to deal with staff turnover and absences and to sustain high levels of service to operating utilities. An individual operating utility might experience considerable disruption if a key professional left and it was necessary to hire outside to fill the vacancy.

- Maintenance of Corporate-Wide Standards – Personnel in American Water's Service Company establish standards for many functions (e.g., engineering designs, operating procedures and maintenance practices). It is easier to ensure these standards are followed by every operating utility because their implementation is overseen by the Service Company.

- Improved Governance – American Water's Service Company provides another dimension of management and financial oversight that supplements local operating utility management. The Service Company facilitates standard planning and reporting that help ensure operating utilities meet the requirements of their customers in a cost effective manner.

- Retention of Personnel – A service company organization provides operating utility personnel with another career path beyond what may be available on a local level. These opportunities tend to improve employee retention.

American Water follows the model for other utility service companies in another important regard. Its services are provided to affiliate operating utilities, like WV American, at cost. American Water's Service Company is not a profit-making entity. It assigns only its actual expenses to the American Water subsidiaries it services.

The Service Company provides services to American Water operating companies from the following locations:

- Corporate Office – Includes American Water's executive management and personnel from the various corporate support services. American Water's corporate office is located in Voorhees, New Jersey.

- National Call Centers – Perform customer service functions, including: customer call processing, service order processing, correspondence processing, credit and collections. American Water maintains two call centers: one in Alton, Illinois that went into operation in 2001 and a second in Pensacola, Florida that went into operation in 2005. Prior to the establishment of these national call centers, customer service functions were performed by employees of WV American, which incurred the expense on its books.

- National Shared Services Center – The Shared Services Center, located in Cherry Hill, New Jersey, provides various financial, accounting and treasury functions that had been performed by individual operating companies. This arrangement has improved and streamlined the Company's financial processes and allowed operating companies to focus on providing utility service.

- Regional Offices – Regional offices provide operating companies with certain support services that can be performed more effectively on a regional basis because individual operating company/center workloads are not sufficient to warrant a full-time staff for these activities. At the same time, these services require closer proximity to operating companies served so they are not provided by the National Shared Services Center. Examples of regional office services include rates and revenues, engineering and operations.

- Belleville Lab – The national trace substance laboratory is located in Belleville, Illinois, and performs testing for all American Water operating companies.

- Information Technology Service Centers – American Water's principal data center, located in Hershey, Pennsylvania, supports the IT infrastructure required to run corporate and operating company business applications and the communications systems. IT personnel rotate, as needed, throughout the regional offices and operating companies.

Service Company Expense Categories

The Service Company renders a monthly bill to American Water's operating companies. Charges are broken down into the following expense categories:

- Labor – base pay (salaries) of managerial and professional employees
- Labor-Related Overheads - employee benefit costs (payroll taxes, medical coverage, pensions, disability insurance) and other general expenses
- Support - wages and salaries of office support personnel, including secretaries, clerical personnel, telephone operators and mail clerks
- Office Expenses - office rent, equipment leases, telephone, electric, office supplies, property taxes, office maintenance
- Vouchers/Journal Entries – (1) travel expenses incurred by Service Company personnel, (2) other items submitted for reimbursement by employees, including professional association dues, (3) outside service contracts for such things as actuarial services, and (4) various other expenditures, including data center expenses for software licenses and hardware maintenance.

Service Company expenses are either assigned directly or allocated to operating companies, as shown in the table below.

Expense Category	Direct Charged	Allocated	Comments
Labor	X	X	Professional personnel working for one or several operating companies
Labor-Related Overheads	X	X	These are primarily employee benefit costs that relate directly to labor
Support		X	Administrative personnel support the professional staff, thus support costs are allocated on the basis of professional labor
Office Expense		X	Are all allocated on the basis of professional labor
Vouchers/Journals	X	X	May be either directly in support of one operating company (e.g., an engineer traveling from the Corporate Office to the operating company) or allocated to several operating companies

A direct charge occurs when Service Company work or expenses are incurred in support of only one operating company. Direct charge examples include work in support of an operating company's rate case, engineering design work on an operating company's project and the preparation of an operating company's financial statements.

Service Company expenses are allocated when more than one operating company benefits from the underlying work. Examples include assessments of new Federal water quality regulations, development of the company-wide materials procurement contracts and creation of company-wide engineering design standards.

Charging and Assignment Of Service Company Time and Expenses

Service Company transactions are assigned with the following information so there is a proper accounting and eventual charging to an operating company:

- Operating company number, if transaction is a direct charge
- Formula number if transaction is allocated
- Employee hours worked
- Account number for non-labor charges

Charges can originate from the following systems:

- Payroll System
- RVI System (outside vendor payments)
- PCard System (credit card payments)
- Internal Purchase Order System
- Journal entries

The Service Company's time reporting process enables labor and support charges to be assigned to the proper operating company. Labor charges are based on the time reported by managerial and professional Service Company employees. Every week, Service Company professional employees complete an electronic time sheet that shows:

- Operating company (for direct charge)
- Formula number (for allocation)
- Work order (where applicable)
- Authorization number (where applicable)

At month-end, time report information is processed and direct and allocated professional labor hours tabulated for each operating company. Dollar charges are then calculated using the hourly rate of each Service Company professional employee based upon their base salary (i.e., an employee's hours times their hourly rate of pay).

Support (administrative) personnel charge their time to the activity "General Admin." As described in the table on page 4, their labor charges are allocated to operating companies based upon how their office's professional personnel labor charges are assigned. For instance, if 20% of American Water's Southeast Region's professional labor is assigned to WV American during a month, then 20% of that office's monthly administrative labor charges also are assigned to the operating company.

The overhead cost category is next assigned based on professional and administrative labor costs. Thus, if 20% of the Southeast Region's accumulated professional and support labor is charged to WV American during the month, then 20% of that month's overhead expenses will be assigned to WV American.

Each Service Company location's office expenses are allocated to operating companies based on how professional labor charges for that office have been assigned. For instance, if 2% of professional labor from one Service Company office is assigned to WV American, then 2% of that office's office expenses would be assigned to WV American. Thus, office expenses are allocated in the very same way as administrative labor.

Vouchers/journal entries may be charged directly or allocated, depending on who benefits from the expenditure. For instance, the cost of a continuing professional education course taken by a professional in a regional office is allocated to the operating companies served by that office. Travel expenses by that same professional to a rate case proceeding are charged directly to the operating company whose case is being heard.

III – Service Company Cost Comparison Approach

During the 12 months ended December 31, 2007, the Service Company billed WV American $10,909,934 in O&M-related charges, $673,657 in capital-related charges and $11,283 in other charges. Included in the O&M amount are certain non-recurring expenses and non-Southeast Region charges which are excluded from this market study. As calculated in the table below, net Service Company charges of $9,909,212 were subjected to a market cost comparison.

	12 Months Ended December 31, 2007
Mgmt Fee Expense (O&M)	$ 10,909,934
Less: Non-Recurring Expenses	
Business Change	$ 3,590
Divestiture & SOX	$ (1,607,454)
Total Non-Recurring Expenses	$ (1,603,864)
Less: Non-Southeast Regions	$ (81,799)
Net Testable O&M	$ 9,224,272
Total Capital	$ 673,657
Total Other	$ 11,283
Total Testable SC Charges	**$ 9,909,212**

For purposes of comparing these charges to outside benchmarks, Service Company services were placed into two categories:

- Managerial and Professional Services – Includes such services as management, accounting, legal, human resources, information technology, and engineering.

- Customer Accounts Services – Includes customer-related services, such as call center, credit, billing, collection and payment processing.

Total test period Service Company charges break down between management/professional services and customer account services as follows:

	12 Months Ended Dec. 31, 2007	
	Amount	Hours
Management and Professional Services	$ 7,338,635	71,137
Customer Account Services	$ 2,570,577	73,349
Total Service Company Charges	$ 9,909,212	144,486

This study's first question—whether Service Company 2007 charges the lower of cost or market—was evaluated by comparing the cost per hour for managerial and professional services provided by Service Company personnel to hourly billing rates that would be charged by outside providers of equivalent services. Service Company costs per hour were based on actual charges to WV American during the 12 months ended December 31, 2007. Outside providers' billing rates came from surveys or other information from professionals that could perform the services now provided by the Service Company.

The second question—whether Service Company 2007 customer account services charges, including those of the National Call Center costs, were comparable to other utilities—was addressed by comparing WV American's customer accounts services expenses to those of neighboring electric utilities. This approach was selected because the costs of outside providers of call center services are not publicly available. However, electric utility customer account

services expenses can be obtained from the FERC Form 1. The availability and transparency of FERC data adds to the validity of its use in this comparison.

The third question—the necessity of Service Company services—was first investigated by determining the services provided to WV American. A determination was then made as to whether these services would be required if WV American were a stand-alone utility.

The fourth question—whether Service Company 2007 charges were reasonable by other comparative measures—was determined by comparing WV American's net testable O&M Service Company charges per customer to those of electric and combination electric/gas utilities that file FERC Form 60 – Annual Report of Service Companies.

IV – Managerial And Professional Services Hourly Rate Comparison

Methodology

The lower-of-cost-or-market comparison is accomplished by comparing the cost per hour for Service Company managerial and professional services to those of outside service providers to whom these duties could be assigned. Based on the nature of the Service Company services it was determined that the following outside providers could perform the categories of services indicated below:

- Management Consultants – executive and administrative management, risk management services, human resources and communications services
- Attorneys – legal services
- Certified Public Accountants – accounting, financial, information technology and rates and revenues services
- Professional Engineers – engineering, operations and water quality services.

The services provided by the Belleville lab are assumed to be transferable to professional engineers for purposes of this cost comparison. This was done for two reasons. First, there is no readily available survey of hourly billing rates for testing services such as those performed by Belleville. Second, Belleville personnel have similar, scientific educational backgrounds as Service Company engineering personnel. Thus, it is valid to compare the hourly rates of Belleville services to those of outside engineering firms.

The Service Company's hourly rate were calculated for each of the four outside service provider categories, based on the dollars and hours charged to WV American during the 12 months ended December 31, 2007. Hourly billing rates for outside service providers were developed using third party surveys or directly from information furnished by outside providers themselves.

It should be noted that by using the Service Company's hours charged WV American during 2007, its hourly rates are actually overstated because Service Company personnel charge a maximum 8 per day even when they work more. Outside service providers generally bill for every hour worked. If the overtime hours of Service Company personnel had been factored into the hourly rate calculation, then Service Company hourly rates would have been lower.

The last step in the market cost comparison was to compare the Service Company's average cost per hour to the average cost per hour for outside providers.

Service Company Hourly Rates

Schedule 1 (page 11) details the assignment of 12 months ended December 31, 2007 management and professional Service Company charges by outsider provider category. Schedule 2 (page 12) shows the same assignment for Service Company management and professional hours charged to WV American during the 12 months ended December 31, 2007.

Certain adjustments to these dollar amounts were necessary to calculate Service Company hourly rates that are directly comparable to those of outside providers. Adjustments were made to the following 2007 test period non-labor Service Company charges:

- Contract Services – 12 months ended December 31, 2007 Service Company charges to WV American include almost $432,000 in expenses associated with the use of outside

professional firms to perform certain corporate-wide services (e.g., legal, financial audit, actuarial services). These professional fees are excluded from the Service Company hourly rate calculation because the related services have effectively been out-sourced already.

- Travel Expenses – In general, client-related travel expenses are not recovered by outside service providers through their hourly billing rate. Rather, actual out-of-pocket travel expenses are billed to clients in addition to fees for professional services. Thus, it is appropriate to remove these Service Company charges from the hourly rate calculation.

- Computer Hardware and Software Expenses – Included in the 12 months ended December 31, 2007 Service Company charges to WV American are charges for outside expenses related to leases and maintenance fees related to mainframe, server and network infrastructure, corporate business applications and the communications systems. An outside provider that would take over operation of a data center would recover these expenses over and above the labor necessary to operate the data center.

Schedule 3 (page 13) shows how contract services, travel expenses and computer hardware/software-related Service Company charges are assigned among the four outside provider categories.

Based on the assignment of expenses and hours shown in Schedules 1 and 2 and the excludable items shown in Schedule 3, the Service Company's equivalent costs per hour for the 12 months ended December 31, 2007 are calculated below.

	Attorney	Management Consultant	Certified Public Accountant	Professional Engineer	Total
Total management, professional & technical services charges	$ 376,485	$ 2,443,080	$ 3,318,764	$ 1,200,306	$ 7,338,635
Less:

Outside Service Provider Hourly Rates

The next step in the cost comparison was to obtain the average billing rates for each outside service provider. The source of this information and the determination of the average rates are described in the paragraphs below.

It should be noted that professionals working for 3 of the 4 outside providers may be licensed to practice by state regulatory bodies. However, not every professional working for these firms is licensed. For instance, among certified public accounting firms within West Virginia's region, only partner/owners are predominantly CPAs, as shown in the table below. Some employees of the Service Company also have professional licenses. Thus, it is valid to compare the Service Company's hourly rates to those of the outside professional service providers included in this study.

	Firm Size		
Position	Small	Medium	Large
Partners/Owners	90.1%	93.0%	98.4%
Directors (over 10 years experience)	42.9%	60.9%	78.6%
Managers (6-10 years experience)	37.5%	51.2%	86.6%
Sr Associates (4-5 years experience)	0.0%	60.9%	64.5%
Associates (1-3 years experience)	0.0%	17.9%	19.2%
New Professionals	0.0%	0.0%	7.9%

Attorneys

The West Virginia Bar Association does not survey its members as to their hourly billing rates. In addition, publicly available billing rate information could not be found for West Virginia attorneys. Therefore, an estimate of West Virginia attorney rates was developed from a survey of Michigan lawyers conducted annually by the Michigan Lawyers Weekly. As presented in Schedule 4, the average rate for each Michigan firm respondent was adjusted for the cost of living differential between their location and Charleston, West Virginia. The survey includes rates that were in effect during 2007.

Management Consultants

The cost per hour for management consultants was developed from the 2007 annual survey performed by the Association of Management Consulting Firms, an industry trade organization. The first step in the calculation, presented in Schedule 5, was to determine an average rate by consultant position level. From these rates, a single weighted average hourly rate was calculated based upon the percent of time that is typically applied to a consulting assignment by each consultant position level. This survey includes rates that were in effect during 2006 for firms in the United States. Consultants typically do not limit their practice to any one region and must travel to a client's location. Thus, the U.S. national average is appropriate for comparison. The survey includes rates that were in effect at December 31, 2006. Thus, the 2006 average rate was escalated to June 30, 2007—the midpoint of the 12 months ended December 31, 2007.

Certified Public Accountants

The average hourly rate for West Virginia certified public accountants was developed from a 2006 survey performed by the American Institute of Certified Public Accountants (AICPA). Hourly rates in the AICPA survey are the average of firms in the south Atlantic region. The average hourly rate was calculated for a set of typical accountant positions, as shown in Schedule 6. Based on a typical staff assignment by each accountant position, a weighted average hourly rate was calculated. This survey covered hourly rates in effect during 2005. Thus, the 2005 average rate was escalated to June 30, 2007, the midpoint of 2007.

Professional Engineers

The Service Company provided hourly rate information for outside engineering firms that could have been used by WV American in 2007. As presented in Schedule 7, an average rate was developed for each engineering position level. Then, using a typical percentage mix of project time by engineering position, a weighted average cost per hour was calculated.

Schedule 4

Source: Information provided by American Water Works Service Company

Service Company Versus Outside Provider Cost Comparison

As shown in the table below, Service Company costs per hour are considerably lower than those of outside providers.

	12 Months Ended December 31, 2007		
Service Provider	Service Company	Outside Provider	Difference--Service Co. Greater(Less) Than Outside
Attorney	$ 149	$ 244	$ (95)
Management Consultant	$ 132	$ 219	$ (87)
Certified Public Accountant	$ 74	$ 109	$ (35)
Professional Engineer	$ 88	$ 99	$ (11)

Based on these cost per hour differentials and the number of managerial and professional services hours billed to WV American during the 12-months ended December 31, 2007, outside service providers would have cost $3,204,959 more than the Service Company (see table below). Thus, on average, outside provider's hourly rates are almost 44% higher than those of the Service Company ($3,204,959 / $ 1,031,624).

	12 Months Ended December 31, 2007		
Service Provider	Hourly Rate Difference--Service Co. Greater(Less) Than Outside	Service Company Hours Charged	Dollar Difference
Attorney	$ (95)	2,418	$ (228,648)
Management Consultant	$ (87)	16,815	$ (1,462,293)
Certified Public Accountant	$ (35)	39,098	$ (1,370,273)
Professional Engineer	$ (11)	12,807	$ (143,746)
Service Company Less Than Outside Providers			$ (3,204,959)

If WV American were to use outside service providers rather than the Service Company for managerial and professional services, it would incur other additional expenses besides those associated with higher hourly rates. Managing outside firms who would perform 71,137 hours of work (more than 47 full-time equivalents at 1,500 "billable" hours per FTE per year) would add a significant workload to the existing WV American management team. Thus, it would be necessary for WV American to add at least one half of one position to supervise the outside firms and ensure they delivered quality and timely services. The individuals that would fill this position would need a good understanding of each profession being managed. They must also have management experience and the authority necessary to give them credibility with the outside firms. As calculated in the table below, this position would add another $149,400 per year to WV American's personnel expenses.

Cost of Adding a Professional Position To WVA's Sta	Total
New Positions' Salary	$ 100,000
Benefits (at 49.4%)	$ 49,400
Office Expenses (15.2%)	$ 15,200
Total Cost of Full Time Position	$ 149,400

Thus, the total effect on the ratepayers of WV American of contracting all services now provided by the Service Company would be an increase in their costs of $3,354,359 ($3,204,959 + $149,400). Based on the results of this comparison, it is possible to conclude that the Service Company charged WV American at the lower of cost or market for services provided during 2007.

Other Cost Comparisons

Every year, the Belleville Lab conducts a comparison of its cost for performing major tests to the cost of using outside testing laboratories. Over the past several years, these surveys have shown the following results been as follows:

Year	Number of Major Tests Surveyed	Percent Belleville Lower Than Outside Labs
2000	26	15%
2001	25	19%
2002	24	16%
2003	23	10%
2004	24	9%
2005	24	25%
2006	24	31%

These studies provide additional evidence that the Service Company arrangement is the lowest-cost alternative for WV American.

V – Customer Account Services Cost Comparison

Background

It is difficult to compare the cost of American Water's National Call Centers with outside providers of the same call center-related services. Call center survey data is proprietary and expensive to obtain. For this reason, WV American's National Call Center costs are compared to those of neighboring electric utilities because the data necessary to make this comparison is readily available to the public.

Electric utility cost information comes from the FERC Form 1 that each must file. FERC's chart of accounts is defined in chapter 18, part 101 of Code of Federal Regulations. FERC accounts that contain call center-related expenses and are used in this study's comparison are:

- Account 903 Customer Accounts Expense – Records and Collection Expense
- Account 905 Customer Accounts Expense – Miscellaneous Customer Accounts Expense.

In addition, labor-related overheads charged to the following FERC accounts must be added to the labor components of Accounts 903 and 905.

- Account 926 Employee Pension and Benefits
- Account 408 Taxes Other Than Income (employer's portion of FICA).

Schedule 8 provides FERC's description of what should be charged to these accounts. In questioning the controller of a large Southeastern electric utility, it was determined that expenses of the activities described below are recorded in the designated FERC accounts.

903 Records and Collection Expense

- Customer Call Center – customer calls/contact, credit, order taking/disposition, bill collection efforts, outage calls
- Call Center IT – maintenance of phone banks, voice recognition units, call center software applications, telecommunications
- Customer billing – bill printing, stuffing and mailing
- Remittance processing – processing of customer payments received in the mail
- Bill payment centers – locations where customers can pay their bills in person

905 Miscellaneous Customer Accounts Expense

- Customer Information System IT – maintenance and support of the customer information system

This study assumes the FERC accounts for other electric and gas utilities contain expenses for the same activities.

West Virginia American Water Company
FERC Account Descriptions

903 – Customer Records and Collection Expenses

This account shall include the cost of labor, materials used and expenses incurred in work on customer applications, contracts, orders, credit investigations, billing and accounting, collections and complaints.

Labor

1. Receiving, preparing, recording and handling routine orders for service, disconnections, transfers or meter tests initiated by the customer, excluding the cost of carrying out such orders, which is chargeable to the account appropriate for the work called for by such orders.
2. Investigations of customers' credit and keeping of records pertaining thereto, including records of uncollectible accounts written off.
3. Receiving, refunding or applying customer deposits and maintaining customer deposit, line extension, and other miscellaneous records.
4. Checking consumption shown by meter readers' reports where incidental to preparation of billing data.
5. Preparing address plates and addressing bills and delinquent notices.
6. Preparing billing data.
7. Operating billing and bookkeeping machines.
8. Verifying billing records with contracts or rate schedules.
9. Preparing bills for delivery, and mailing or delivering bills.
10. Collecting revenues, including collection from prepayment meters unless incidental to meter reading operations.
11. Balancing collections, preparing collections for deposit, and preparing cash reports.
12. Posting collections and other credits or charges to customer accounts and extending unpaid balances.
13. Balancing customer accounts and controls.
14. Preparing, mailing, or delivering delinquent notices and preparing reports of delinquent accounts.
15. Final meter reading of delinquent accounts when done by collectors incidental to regular activities.
16. Disconnecting and reconnecting services because of nonpayment of bills.
17. Receiving, recording, and handling of inquiries, complaints, and requests for investigations from customers, including preparation of necessary orders, but excluding the cost of carrying out such orders, which is chargeable to the account appropriate for the work called for by such orders.
18. Statistical and tabulating work on customer accounts and revenues, but not including special analyses for sales department, rate department, or other general purposes, unless incidental to regular customer accounting routines.
19. Preparing and periodically rewriting meter reading sheets.
20. Determining consumption and computing estimated or average consumption when performed by employees other than those engaged in reading meters.

Materials and expenses

21. Address plates and supplies.
22. Cash overages and shortages.
23. Commissions or fees to others for collecting.
24. Payments to credit organizations for investigations and reports.
25. Postage.
26. Transportation expenses, including transportation of customer bills and meter books under centralized billing procedure.
27. Transportation, meals, and incidental expenses.
28. Bank charges, exchange, and other fees for cashing and depositing customers' checks.
29. Forms for recording orders for services, removals, etc.
30. Rent of mechanical equipment.

West Virginia American Water Company
FERC Account Descriptions

905 – Miscellaneous Customer Accounts Expenses
This account shall include the cost of labor, materials used and expenses incurred not provided for in other accounts.

Labor

1. General clerical and stenographic work.
2. Miscellaneous labor.

Materials and expenses

3. Communication service.
4. Miscellaneous office supplies and expenses and stationery and printing other than those specifically provided for in accounts 902 and 903.

Comparison Group

Electric utilities included in the comparison group are shown in the table below. These are companies whose FERC Form 1 shows amounts for accounts 903 and 905.

West Virginia	• Wheeling Power	
Kentucky	• Kentucky Power • Kentucky Utilities	• Louisville Gas & Electric • Union Light, Heat & Power
Virginia	• Appalachian Power	• Virginia Electric Power
Ohio	• Cincinnati Gas & Electric • Cleveland Electric • Columbus Southern Power • Dayton Power & Light	• Ohio Edison • Ohio Power • Toledo Edison
Pennsylvania	• Duquesne Light • PECO Energy • Pennsylvania Electric	• Pennsylvania Power • PPL Electric
Maryland	• Baltimore Gas & Electric • Delmarva Power & Light	• Potomac Electric

Comparison Approach

The basis for this comparison is customer account services expenses per customer. WV American's cost pool was developed to include the same expenses included in electric utility's FERC accounts 903 and 905. As shown in the graphic below, WV American's resultant cost pool contains the expenses of Service Company locations and certain operating company expenses.

American Water
Service Company
Pensacola & Alton Call Centers
a. Customer contact
b. Customer order processing
c. Billing information processing
d. Collections
e. Correspondence processing
f. Customer payment processing
Operating Company
a. Postage and forms

Electric Utilities
FERC Acct 903 - Records and Collection Expense and FERC Acct 905 - Misc Customer Accounts Expense
a. Customer contact
b. Customer order processing
c. Bill preparation and mailing
d. Collections
e. Payment processing
f. Correspondence processing

WV American Cost Per Customer

In order to make a valid comparison to neighboring electric utilities, certain adjustments had to be made to the applicable Service Company charges to WV American. It was necessary to adjust the National Call Center charges because electric utilities experience an average of 2.50 calls per customer compared to American Water's 1.33 calls per customer. Thus, National Call Center expenses had to be increased, for comparison purposes, to reflect its costs at a 2.50 calls per customer level. As shown below, WV American's adjusted annual expense per customer is $32.48—the number that can be compared to neighboring electric utilities' expenses. WV American's 2007 unadjusted annual expense per customer is $21.90.

West Virginia American Water Company

Cost Component		Service Co Charges	Adjustment Fewer Calls For Water Cos. (A)	Adjusted	
Service Company					
Call Centers	Call processing, order processing, credit, bill collection	$ 2,174,942	$ 1,917,855	$ 4,092,797	
Regional Offices		$ 395,635		$ 395,635	
Service Company	Customer payment processing			$ 102,473	Note B
Operating Company	Postage & forms			$ 1,007,341	
			Cost Pool Total	$ 5,598,246	
			Total Customers	168,060	
	12 Months Ended December 31, 2007 Cost Per WV American Customer			**$ 33.31**	

Note A: Adjustment for American Water's fewer calls per customer

This adjustment is necessary because water utilities experience fewer calls per customer than do electric utilities

Test year annualized Call Center charges		$ 2,174,942
Electric utility industry's avg calls/customer	2.50	
American Water's avg calls/customer	1.33	
Percent different	88%	88%
Total Adjustment B		$ 1,917,855

Note B: Estimated customer payment processing expenses

Number of customers	168,060
Number of payments/customer/year	4.3
Total payments processed/year	722,658
Bank charge per item	$ 0.1418
Total estimated annual expense	$ 102,473

Electric Utility Group Cost Per Customer

Schedule 9 shows the actual 2007 customer accounts expense per customer calculation for the electric utility comparison group. All of the underlying data were taken from each utility's FERC Form 1.

Summary Of Results

As shown in the table below, WV American's cost per customer is within a reasonable range of the average of the neighboring electric utility comparison group. It can therefore be concluded that WV American's 2007 customer accounts-related expenses, including those of the Alton and Pensacola Call Centers, assigned by the Service Company to WV American were comparable to those of other utilities.

Average Customer Accounts Expense Per Customer		
Louisville Gas & Electric	$	13.71
Pennsylvania Electric	$	13.97
Virginia Electric Power	$	15.89
Duquesne Light	$	17.18

VI - Need For Service Company Services

Analysis Of Services

The third aspect of this study was an assessment of whether the services that are provided to WV American by the Service Company would be necessary if WV American were a stand-alone water utility. The first step in this evaluation was to determine specifically what the Service Company does for WV American. Based on discussions with Service Company personnel, the matrix in Schedule 10 was created showing which entity—WV American or a Service Company location—is responsible for each of the functions WV American requires to ultimately provide service to its customers. This matrix was reviewed to determine: (1) if there was redundancy or overlap in the services being provided by the Service Company and (2) if Service Company services are typical of those needed by a stand-alone water utility.

Upon review of Schedule 10, the following conclusions can be drawn:

- The services that the Service Company provides are necessary and would be required even if WV American were a stand-alone water utility.

- There is no redundancy or overlap in the services provided by the Service Company to WV American. For all of the services listed in Schedule 12, there was only one entity that was primarily responsible for the service.

Governance Practices Associated With Service Company Charges

There are several ways by which WV American exercises control over Service Company services and charges. The most important of these are described below.

- **Company President Oversight** – The Company President of the state utility is responsible for the overall performance of the each operating company or district in the state. Through the Executive Vice President of the Western Division, each state utility President in the division has a significant voice in major business decisions of American Water and has the ability to monitor Service Company quality and spending.

- **Vice President Finance** – The VP Finance of the Western states is responsible for the financial reporting, performance and internal controls of each of the operating companies in the region. The VP Finance monitors the performance and reporting from the Service Company. The VP Finance attends monthly Business Plan Review sessions with the WV American President and finance group to review actual results and address forecast modifications for the remainder of the year. The VP Finance reports on the quarterly financial results and forecast updates to WV American's Board of Directors. The rates function reports to the VP Finance, who reviews and authorizes the filing of WV American rate cases and regularly monitors the status of cases. The operating subsidiary interacts with the VP Finance to discuss various issues.

- **Operating Company Board Oversight** – WV American's board of directors includes members of American Water's senior executive team and members of the Division management team. This helps ensure that WV American's needs are a factor in the delivery of Service Company services.

- **Service Company Budget Review/Approval** – WV American's President and the Executive VP sit on the Service Company board and that board must formally approve the budget for Service Company charges for the next year. These budgeted charges are consolidated with the operating company's own spending into an overall budget which must be approved by the operating company's board of directors. WV American's president is also on the local board.

- **Major Project Review And Approval** – Major projects undertaken by the Service Company must first be reviewed by American Water's senior executive team, which includes the Executive VP. The Executive VP, with input from the Division management team (including the president of WV American), has the ability to impact all new initiatives and projects before they are authorized.

- **Service Company Bill Scrutiny** – Western Region Finance personnel review the monthly Service Company bill for accuracy and reasonableness on a monthly basis. WV American's financial analyst has dialogue with regional office personnel concerning the monthly bill and any mistakes or overcharges are credited on a subsequent billing. The Western Region Finance unit prepares an actual to budget comparison of management fees each month for use in identifying unusual variances. Service Company actual to budget comparison is included in the monthly FRP. Unusual variances are researched, explanations are provided and any corrections are made, as necessary.

- **Service Company Budget Variance Reporting** – Each month, a summary variance analysis is prepared that explains differences between budgeted and actual Service Company spending. In addition, a more detailed monthly variance report, called the "Statement of Expenses and Billed Charges," is produced by Service Company location and shows actual spending for the month.

- **Operating Company Budget Variance Reporting –** The "Budget/Plan Analysis," produced monthly, has a line item for Management Fees (i.e., Service Company charges). In this way, Service Company budget versus actual charges can be monitored for the month and year-to-date. Additional information exists that allows more detailed analysis of "Regional" and "Corporate" Management Fees.

- **Capital Investment Management ("CIM") –** CIM is one of American Water's primary business planning processes. It covers capital and asset planning and is employed throughout American Water. CIM provides a full range of governance practices, including a formal protocol for assessing system needs, prioritizing expenditures, managing the capital program, approving project spending, delivering projects and measuring outputs. CIM ensures that:

  - Capital expenditure plans are aligned with the strategic intent of the business
  - The impact of capital expenditure and income plans are fully reflected in operating expense plans
  - The impacts of these plans are understood and affordable, and
  - Effective controls are in place over budgets (through business plans) and individual capital projects (through appropriate authorization thresholds, management and reporting processes).

  The CIM process was designed to optimize the effectiveness of asset investment. The process is managed at three levels for all American Water companies, including all WV American Operating Units. Monthly meetings of the CIM are held to review capital spending compared to plan, review new project requests, and review updates or modifications to existing projects. The President of WV American, VP Finance, and others participate as necessary (e.g. WV American operations managers and Rates Manager) and provide the data used in the monthly review schedules.

VII – Other Comparative Measures Of Reasonableness Of Service Company Charges

WV American's Service Company Cost Per Customer

During 2007, WV American was charged $55 per customer in O&M expenses by the Service Company. As shown in the table below, this calculation is based on net testable O&M, which eliminates certain O&M items for which WV American has not requested cost recovery.

	2007
Net Testable Service Company O&M Expenses	$ 9,224,272
WV American Customers (12/31/07)	168,060
WV American Cost Per Customer	$ 55

Comparison Group Cost Per Customer

Every centralized service company in a holding company system must file a Form 60 in accordance with the Public Utility Holding Company Act of 2005, Section 1270, Section 390 of the Federal Power Act and 18 C.F.R. paragraph 366.23. This report is designed to collect financial information from service companies that are subject to regulation by the FERC.

Twenty-three utility holding companies filed a Form 60 for 2007. All but two were included in the comparison group. The service company for PNM Resources, Inc. was excluded because its 2007 service company cost per regulated utility customer was clearly an anomaly as a negative number. This result is likely due to the unique manner by which PNM's service company expenses are reported on Form 60. Duke Energy was also excluded from the comparison group because one of its two service companies did not provide numbers for its Form 60. Thus, it was not possible to develop Duke's consolidated service company cost per customer for 2007.

Schedule 11 compares the services provided by American Water's Service Company to the services provided by comparison group service companies. In general, the types of services provided by American Water's Service Company are similar to those provided by comparison group service companies.

O&M expenses charged to utility affiliates for the comparison group service companies were obtained from Schedule XVII – Schedule of Expense Distribution by Department or Service Function (p. 305 to 305c) of each entity's FERC Form 60. This schedule shows charges by category of service (e.g., accounting, information technology) and type of cost (e.g., labor, benefits, outside services). The following were eliminated from the comparison group's total expenses because they are not in American Water Service Company's 2007 charges to WV American:

- All electric- and gas-related services
- Income taxes (account 409), provision for deferred income taxes (account 410), provision for deferred income taxes – credit (account 411) and investment tax credit (account 411.5).
- Donations (account 426.1)
- Interest on long-term debt (account 427), interest on debt to associate companies (account 430) and other interest expense (account 431)

Comparison group service company 2007 expenses were also adjusted to remove charges to non-regulated affiliates from the cost pool used to calculate the cost per regulated service customer. This determination was made using information from the FERC Form 60 schedule: Account 457 – Analysis of Billing – Associate Companies.

Schedule 12 shows WV American's 2007 Service Company cost per customer of $55 to be considerably lower than the average of $122 per customer for the comparison group service companies. Only 2 of 21 comparison group service companies had a lower 2007 cost per customer than WV American. These results further support the conclusion that the Service Company's 2007 charges to WV American were reasonable.

PUBLIC SERVICE COMMISSION
OF WEST VIRGINIA
CHARLESTON

Case No. 08-0900-W-42T

WEST VIRGINIA-AMERICAN WATER COMPANY

Rule 42T Tariff Filing to Increase
Rates and Charges

DIRECT TESTIMONY OF

PATRICK L. BARYENBRUCH

July __, 2008

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. Patrick L. Baryenbruch, 2832 Claremont Road, Raleigh, North Carolina 27608.

Q. PLEASE DESCRIBE YOUR EDUCATIONAL AND PROFESSIONAL BACKGROUND.

A. I received a Bachelors degree in accounting from the University of Wisconsin-Oshkosh in 1974 and a Masters in Business Administration degree from the University of Michigan in 1979.

I am a financial consultant and am a member of the American Institute of Certified Public Accountants and the North Carolina Association of Certified Public Accountants.

I began my career as a staff accountant with Arthur Andersen & Company where I performed financial audits of utilities, banks and finance companies. After three years I left to pursue an M.B.A. degree. Upon graduation from business school, I worked with the consulting firms of Theodore Barry & Associates and Scott, Madden & Associates.

During my consulting career, I have performed consulting assignments for approximately 50 utilities and 10 public service commissions. I have participated as project manager, lead or staff consultant for 24 commission-ordered management and prudence audits of public utilities. Of these, I have been

responsible for evaluating the area of affiliate charges and allocation of corporate expenses in the Commission-ordered audits of Connecticut Light and Power, Connecticut Natural Gas, General Water Corporation (Pennsylvania Operations), Philadelphia Suburban Water Company (now Aqua America), and Pacific Gas & Electric Company.

My firm has performed the commission-ordered audit of Southern California Edison's 2002, 2003, 2004 and 2005 transactions with its non-regulated affiliate companies.

Q. WHAT ARE YOUR DUTIES AND RESPONSIBILITIES IN YOUR CURRENT POSITION?

A. I am the President of my own consulting practice, Baryenbruch & Company, LLC, which was established in 1985. In that capacity, I provide consulting services to utilities and their regulators.

Q. PLEASE DESCRIBE THE REASON FOR YOUR TESTIMONY IN THIS CASE.

A. I am presenting the results of my study which evaluated the services provided by American Water Works Service Company ("Service Company") during 2007 to West Virginia-American Water Company (WV American). This study was

undertaken in conjunction with WV American's rate case and is true to the best of my knowledge and belief. The study is attached as Exhibit PLB-1.

Q. WHAT WERE THE OBJECTIVES OF YOUR STUDY?

A. This study was undertaken to answer four questions, the first three of which were the focus of the study I sponsored in WV American's last general rate case in West Virginia, Case No. 07-0998-W-42T. First, was WV American charged the lower of cost or market for managerial and professional services provided by the Service Company during 2007? Second, were the 2007 costs of the Service Company's customer accounts services, including those of the National Call Centers, reasonable? Third, are the services WV American receives from the Service Company necessary to WV American's provision of service to its customers?

In Case No. 07-0998-W-42T, my study was criticized by a witness retained by the Consumer Advocate Division, Mr. Peterson, on the ground that it failed to address the reasonableness of the Service Company's charges to WV American. In Mr. Peterson's words, "The question that should have been explored is this: Were the Service Company's charges during the test year reasonable?" It remains my view that answers to the first three questions above demonstrate that this is, in fact, the case. Nevertheless, I have in this study also analyzed this ultimate question with

additional data.

Q. WHAT CONCLUSIONS WERE YOU ABLE TO DRAW CONCERNING QUESTION NUMBER 1, WHETHER WV AMERICAN WAS CHARGED THE LOWER OF COST OR MARKET SERVICES PROVIDED BY THE SERVICE COMPANY?

A. I was able to draw the following conclusions:

(1) WV American was charged the lower of cost or market for managerial and professional services during the 12-months ended December 31, 2007.

(2) On average, the hourly rates for outside service providers are 44% higher than the Service Company's hourly rates.

(3) The managerial and professional services provided by the Service Company are vital and could not be procured externally by WV American without careful supervision on the part of WV American. If these services were contracted entirely to outside providers, then WV American would have to add at least one position to manage activities of outside firms in order to ensure the quality and timeliness of services provided.

(4) If all the managerial and professional services now provided

by the Service Company had been out-sourced during the 12-months ended December 31, 2007, then WV American and its ratepayers would have incurred an **additional $3.3 million** in expenses. This amount includes the higher cost of outside providers and the cost of a WV American position needed to direct the outsourced work.

(5) This study's hourly rate comparison actually understates the cost advantages that accrue to WV American from its use of the Service Company. Outside service providers generally bill for every hour worked. Service Company personnel, on the other hand, charge a maximum 8 hours per day, even when they work more. If the overtime hours of Service Company personnel had been factored into the hourly rate calculation, then the Service Company would have had an even greater annual dollar advantage than the $3.3 million cited above.

(6) It would be difficult for WV American to find local service providers with the same specialized water industry expertise as that possessed by the Service Company staff. Service Company personnel spend substantially all their time serving operating water companies. This specialization brings with it a unique knowledge of water utility operations and regulation that is most likely unavailable from local service providers.

(7) Service Company fees do not include any profit markup.

Only the Service Company's actual cost of service is being recovered from WV American ratepayers.

Q. WHAT IS YOUR CONCLUSION REGARDING THE REASONABLENESS OF THE COSTS OF THE NATIONAL CALL CENTER THAT PROVIDES SERVICE TO WV AMERICAN?

A. I was able to determine that the cost of the Service Company's customer accounts services, including those provided by the National Call Center, is within a reasonable range of the neighboring electric utility comparison group average cost per customer. As explained in the study, this group of companies provides a reasonable proxy group for comparison to a regulated utility of the size and scope of WV American. During the 12 months ended December 31, 2007, the customer accounts cost for WV American customers was $33.31, compared to the 2007 average of $31.27 for neighboring electric utilities. The highest comparison group per customer cost was $70.37 and the lowest $13.71.

Q. WHAT CONCLUSIONS WERE YOU ABLE TO DRAW CONCERNING THE NECESSITY OF THE SERVICES WV AMERICAN RECEIVES FROM THE SERVICE COMPANY?

A. I was able to draw the following conclusions:

(1) The services that the Service Company provides are necessary and would be required even if WV American were a stand-alone water utility.

(2) There is no redundancy or overlap in the services provided by the Service Company to WV American.

Q. WHAT CONCLUSIONS WERE YOU ABLE TO DRAW CONCERNING QUESTION NUMBER 4, WHETHER THE SERVICE COMPANY CHARGES TO WV AMERICAN DURING 2007 WERE REASONABLE?

A. I was able to draw the following, additional conclusions about the reasonableness of those charges:

(1) American Water's Service Company provides WV American with services similar to those provided by other utility service companies. This was determined based on service company information included in the Form 60, which must be filed with the Federal Energy Regulatory Commission ("FERC") by electric and combination electric/gas utility holding companies.

(2) American Water's 2007 cost per WV American customer was reasonable compared to cost per customer for electric and combination electric/gas service companies. During 2007, WV American was charged

an average of $55 per customer by the Service Company compared to an average of $122 per customer for service companies reporting to the FERC.

Q. DOES THIS COMPLETE YOUR TESTIMONY?

A. Yes.

I – Introduction

Purpose of This Study

This study was undertaken to answer four questions concerning the services provided by American Water Works Service Company, Inc. (Service Company) to West Virginia American Water Company (WV American):

1. Were the Service Company's charges to WV American during the 12 months ended December 31, 2009 reasonable?

2. Was WV American charged the lower of cost or market for managerial and professional services provided by the Service Company during the 12 months ended December 31, 2009?

3. Were the 12 months ended December 31, 2009 costs of the Service Company's customer accounts services, including those of the National Call Centers, comparable to those of other utilities?

4. Are the services WV American receives from Service Company necessary?

Study Results

Concerning question 1, the following conclusion was reached:

- The Service Company's 12 months ended December 31, 2009 cost per WV American customer was very reasonable compared to cost per customer for electric and combination electric/gas service companies. During the 12 months ended December 31, 2009, WV American was charged $54 per customer for administrative and general (A&G)-related services provided by the Service Company. This compares to an average of $109 per customer for service companies reporting to the Federal Energy Regulatory Commission (FERC). Only 3 of the 24 utility service companies that filed a FERC Form 60 for 2008 had a lower per customer A&G cost than WV American's charges from the Service Company.

Concerning question 2, the following conclusions were drawn from this study:

- WV American was charged the lower of cost or market for managerial and professional services during the 12 months ended December 31, 2009.

- On average, the hourly rates for outside service providers are 48% higher than the Service Company's hourly rates.

- The managerial and professional services provided by the Service Company are vital and could not be procured externally by WV American without careful supervision on the part of WV American. If these services were contracted entirely to outside providers, WV American would have to add at least one position to manage activities of outside firms. This position would be necessary to ensure the quality and timeliness of services provided.

- If all the managerial and professional services now provided by the Service Company had been outsourced during the 12 months ended December 31, 2009, WV American and its ratepayers would have incurred more than $4,100,000 in additional expenses. This amount includes the higher cost of outside providers and the cost of one WV American position needed to direct the outsourced work.

- This study's hourly rate comparison actually understates the cost advantages that accrue to WV American from its use of the Service Company. Outside service providers generally bill for every hour worked. Service Company exempt personnel, on the other hand, charge a maximum of 8 hours per day even when they work more hours. If the overtime hours of Service Company personnel were factored into the hourly rate calculation, the Service Company would have had an even greater annual dollar advantage than the $4,100,000 cited above. For instance, if Service Company overtime is conservatively estimated at 5% (2 hours per week), then that work would have added more than $200,000 in charges from outside providers.

- It would be difficult for WV American to find local service providers with the same specialized water industry expertise as that possessed by the Service Company staff. Service Company personnel spend substantially all their time serving operating water companies. This specialization brings with it a unique knowledge of water utility operations and regulation that is most likely unavailable from local service providers.

- Service Company fees do not include any profit markup. Only its actual cost of service is being recovered from WV American ratepayers.

Concerning question 3, the following conclusion was reached:

- The cost of the Service Company's customer accounts services, including those provided by the National Call Center, is below the range of the average of the neighboring electric utility comparison group. As will be explained further herein, this group of companies provides a reasonable proxy group for comparison to a regulated utility of the size and scope of the Service Company and WV American. During the 12-months ended December 31, 2009, the customer accounts cost for WV American customers was $29.15 compared to the 2008 average of $32.23 for neighboring electric utilities. The highest comparison group per customer cost was $72.58 and the lowest $15.58.

Concerning question 4, the following conclusions were drawn:

- The services that the Service Company provides are necessary and would be required even if WV American were a stand-alone water utility.

- Furthermore, there is no redundancy or overlap in the services provided by the Service Company to WV American. For all of the services listed in Exhibit 11, there was only one entity primarily responsible for the service.

II – Background

Overview of American Water Works Service Company

American Water's Service Company exists to provide certain shared services to American Water subsidiaries. It follows a service company model used by many utility holding companies that own multiple regulated utilities. By consolidating executive and professional services into a single service company, utility holding companies are able to realize the following benefits for ratepayers:

- Purchasing Economies – Common expenses (e.g., insurance, chemicals, piping) can be procured on a much larger scale thereby providing greater bargaining power for the combined entity compared to individual utility operating companies. A service company facilitates corporate-wide purchasing programs through its procurement and contract administration functions.

- Operating Economies of Scale – A service company is able to deliver services more efficiently because workloads can be balanced across more persons and facilities. For instance, American Water's Service Company is able to maintain one principal data center for the entire corporation. This is much more cost-efficient than each operating utility funding their own data center with its large fixed hardware, software and staffing costs.

- Continuity of Service – Centralizing service company personnel who perform similar services facilitates job cross-training and sharing of knowledge and expertise. This makes it easier to deal with staff turnover and absences and to sustain high levels of service to operating utilities. An individual operating utility might experience considerable disruption if a key professional left and it was necessary to hire outside to fill the vacancy.

- Maintenance of Corporate-Wide Standards – Personnel in American Water's Service Company establish standards for many functions (e.g., engineering designs, operating procedures and maintenance practices). It is easier to ensure these standards are followed by every operating utility because their implementation is overseen by the Service Company.

- Improved Governance – American Water's Service Company provides another dimension of management and financial oversight that supplements local operating utility management. The Service Company facilitates standard planning and reporting that help ensure operating utilities meet the requirements of their customers in a cost effective manner.

- Retention of Personnel – A service company organization provides operating utility personnel with another career path beyond what may be available on a local level. These opportunities tend to improve employee retention.

American Water follows the model for other utility service companies in another important regard. Its services are provided to affiliate operating utilities, like WV American, at cost. American Water's Service Company is not a profit-making entity. It assigns only its actual expenses to the American Water subsidiaries it services.

The Service Company provides services to American Water operating companies from the following locations:

- Corporate Office – Includes American Water's executive management and personnel from the various corporate support services. American Water's corporate office is located in Voorhees, New Jersey.

- National Call Centers – Perform customer service functions, including: customer call processing, service order processing, correspondence processing, credit and collections. American Water maintains two call centers. One in Alton, Illinois that went into operation in 2001 and a second in Pensacola, Florida that went into operation in 2005. Prior to the establishment of these national call centers, customer service functions were performed by employees of WV American, which incurred the expense on its books.

- National Shared Services Center – The Shared Services Center, located in Cherry Hill, New Jersey, provides various financial, accounting and treasury functions that had been performed by individual operating companies. This arrangement has improved and streamlined the Company's financial processes and allowed operating companies to focus on providing utility service.

- Regional Offices – Regional offices provide operating companies with certain support services that can be performed more effectively on a regional basis because individual operating company/center workloads are not sufficient to warrant a full-time staff for these activities. At the same time, these services require closer proximity to operating companies served so they are not provided by the National Shared Services Center. Examples of regional office services include rates and revenues, engineering, operations and field resource coordination.

- Belleville Lab – The national trace substance laboratory is located in Belleville, Illinois and performs testing for all American Water operating companies.

- Information Technology Service Centers – American Water's principal data center, located in Hershey, Pennsylvania, supports the IT infrastructure required to run corporate and operating company business applications and the communications systems. IT personnel rotate, as needed, throughout the regional offices and operating companies.

Service Company Expense Categories

The Service Company renders a monthly bill to operating companies. Charges are broken down into the following expense categories:

- Labor – base pay (salaries) of managerial and professional employees
- Labor-Related Overheads - employee benefit costs (payroll taxes, medical coverage, pensions, disability insurance) and other general expenses
- Support - wages and salaries of office support personnel, including secretaries, clerical personnel, telephone operators and mail clerks
- Office Expenses - office rent, equipment leases, telephone, electric, office supplies, property taxes, office maintenance
- Vouchers/Journal Entries – (1) travel expenses incurred by Service Company personnel, (2) other items submitted for reimbursement by employees, including professional association dues, (3) outside service contracts for such things as actuarial

services, and (4) various other expenditures, including data center expenses for software licenses and hardware maintenance.

Service Company expenses are either assigned directly or allocated to operating companies, as shown in the table below.

Expense Category	Direct Charged	Allocated	Comments
Labor	X	X	Professional personnel working for one or several operating companies
Labor-Related Overheads	X	X	These are primarily employee benefit costs that relate directly to labor
Support		X	Administrative personnel support the professional staff, thus support costs are allocated on the basis of professional labor
Office Expense		X	Are all allocated on the basis of professional labor
Vouchers/Journals	X	X	May be either directly in support of one operating company (e.g., an engineer traveling from the Corporate Office to the operating company) or allocated to several operating companies

A direct charge occurs when Service Company work or expenses are incurred in support of only one operating company. Direct charge examples include work in support of an operating company's rate case, engineering design work on an operating company's project and the preparation of an operating company's financial statements.

Service Company expenses are allocated when more than one operating company benefits from the underlying work. Examples include assessments of new Federal water quality regulations, development of the company-wide materials procurement contracts and creation of company-wide engineering design standards.

Charging and Assignment Of Service Company Time and Expenses

Service Company transactions are assigned with the following information so there is a proper accounting and eventual charging to an operating company:

- Operating company
- Formula number
- Work order (where applicable)
- Authorization number (where applicable)

Charges can originate from the following systems:

- Payroll System
- RVI System (outside vendor payments)
- PCard System (credit card payments)
- Internal Purchase Order System
- Journal entries

II – Background

The Service Company's time reporting process enables labor and support charges to be assigned to the proper operating company. Labor charges are based on the time reported by managerial and professional Service Company employees. Every week, Service Company professional employees complete an electronic time sheet that shows:

- Formula number (this is linked to operating company within American Water's financial system)
- Employee hours worked
- Account number for non-labor charges

At month-end, time report information is processed and direct and allocated professional labor hours tabulated for each operating company. Dollar charges are then calculated using the hourly rate of each Service Company professional employee based upon their base salary (i.e., an employee's hours times his/her hourly rate of pay).

Support (administrative) personnel charge their time to the activity "General Admin." As described in the table on page 4, their labor charges are allocated to operating companies based upon how their office's professional personnel labor charges are assigned. For instance, if 20% of American Water's Southeast Region's professional labor is assigned to WV American during a month, then 20% of that office's monthly administrative labor charges also are assigned to the operating company.

The overhead cost category is next assigned based on professional and administrative labor costs. Thus, if 20% of the Southeast Region's accumulated professional and support labor is charged to WV American during the month, then 20% of that month's overhead expenses will be assigned to WV American.

Each Service Company location's office expenses are allocated to operating companies based on how professional labor charges for that office have been assigned. For instance, if 2% of professional labor from one Service Company office is assigned to WV American, then 2% of that office's office expenses would be assigned to WV American. Thus, office expenses are allocated in the very same way as administrative labor.

Vouchers/journal entries may be charged directly or allocated, depending on who benefits from the expenditure. For instance, the cost of a continuing professional education course taken by a professional in a regional office is allocated to the operating companies served by that office. Travel expenses by that same professional to a rate case proceeding are charged directly to the operating company whose case is being heard.

III – Service Company Cost Comparison Approach

During the 12 months ended December 31, 2009, the Service Company billed WV American $10,565,539 in O&M-related charges and $803,376 in capital-related charges. These total charges of $11,368,915 were subjected to a market cost comparison.

Service Company Charges	12 Months Ended December 31, 2009
Management Fees - O&M	$ 10,565,539
Management Fees - Capital	$ 803,376
Total Testable SC Charges	**$ 11,368,915**

For purposes of comparing these charges to certain outside benchmarks, Service Company services were placed into three categories:

- Managerial and Professional Services – Includes such services as management, accounting, legal, human resources, information technology and engineering.
- Customer Accounts Services – Includes customer-related services, such as call center, credit, billing, collection and payment processing.
- Field Resource Coordination Services – Includes the dispatching and oversight of work to operating company field crews.

Total test period Service Company charges break down between management/professional services, customer account services and field resource coordination as follows:

	12 Months Ended Dec. 31, 2009	
	Amount	Hours
Management and Professional Services	$ 8,433,389	77,663
Customer Account Services	$ 2,592,450	68,701
Field Resource Coordination	$ 343,076	7,906
Total Service Company Charges	**$ 11,368,915**	**154,270**

This study's first question—whether Service Company 12 months ended December 31, 2009 charges were reasonable—was determined by comparing WV American's A&G-related Service Company charges per customer to the same charges for utility companies that must file the FERC Form 60 – Annual Report of Service Companies.

The second question—whether Service Company charges during the 12 months ended December 31, 2009 were at the lower of cost or market—was evaluated by comparing the cost per hour for managerial and professional services provided by Service Company personnel to hourly billing rates that would be charged by outside providers of equivalent services. Service Company costs per hour were based on actual charges to WV American during the 12 months ended December 31, 2009. Outside providers' billing rates came from surveys or other information from professionals that could perform the services now provided by the Service Company.

III – Service Company Cost Comparison Approach

The third question—whether Service Company's 12 months ended December 31, 2009 customer account services charges, including those of the National Call Center costs, were comparable to other utilities—was addressed by comparing WV American's customer accounts services expenses to those of neighboring electric utilities. This approach was selected because the costs of outside providers of call center services are not publicly available. However, electric utility customer account services expenses can be obtained from the FERC Form 1. The availability and transparency of FERC data adds to the validity of its use in this comparison.

The fourth question—the necessity of Service Company services—was investigated by defining the services provided to WV American and determining if these services would be required if WV American were a stand-alone utility.

WV American's Service Company Cost per Customer

During the 12 months ended December 31, 2009, WV American was charged $54 per customer by the Service Company for A&G/O&M-related services. The calculation of this amount, shown in the table below, starts with total net testable Service Company charges and adjusts for capital and non-A&G functions (engineering, operations and water quality) charges. These adjustments are necessary to develop a per customer cost that is comparable to cost of utility service companies.

	12 Months ended Dec 31, 2009 Svc. Co. Charges
Testable Service Company charges	$ 11,368,915
Less: Capital charges	$ (803,376)
Less: Non-A&G function O&M charges	
Engineering	$ (17,086)
Operations	$ (989,038)
Water Quality	$ (326,125)
Net A&G/O&M-related charges	$ 9,233,290
WV American customers	172,006
WV American Cost Per Customer	**$ 54**

Comparison Group Cost Per Customer

Every centralized service company in a holding company system must file a Form 60 in accordance with the Public Utility Holding Company Act of 2005, Section 1270, Section 390 of the Federal Power Act and 18 C.F.R. paragraph 366.23. This report is designed to collect financial information from service companies that are subject to regulation by the FERC.

For 2008, a Form 60 was filed by 24 utility service companies, all of which serve utilities that provide regulated electric and, in some cases, gas service to retail customers. In order to make a valid comparison of this group's costs to those of American Water Works Service Company, it was necessary to isolate expenses that that they have in common. These include A&G/O&M-related charges associated with the following FERC accounts:

901 – Supervision	921 – Office supplies and expenses
903 – Customer records and collection expenses	923 – Outside services employed
905 – Miscellaneous customer accounts expenses	926 – Employee pensions and benefits
907 – Supervision	928 – Regulatory commission expenses
910 – Misc customer service and info expenses	930.2 – Miscellaneous general expenses
911 – Supervision	931 – Rents
920 - Administrative and general salaries	935 – Maintenance of structures and equipment

O&M expenses charged to utility affiliates for the comparison group service companies were obtained from Schedule XVI – Analysis of Charges for Service Associate and Non-Associate Companies (p. 303 to 306) of each entity's FERC Form 60. This schedule shows charges by FERC Account.

Comparison group service company 2008 expenses were also adjusted to remove charges to non-regulated affiliates from the cost pool used to calculate the cost per regulated service customer. This determination was made using information from the FERC Form 60 schedule: Account 457 – Analysis of Billing – Associate Companies.

IV – Question 1 – Reasonableness of Service Company Charges

A&G expenses per regulated utility customer for the 24 utility companies that file Form 60 for 2008 are calculated below.

Utility Company	2008 Regulated Retail Service Company A&G Expenses	Regulated Retail Customers	Cost per Customer
AEP	$396,340,118	5,213,000	$ 76
Allegheny	$263,588,707	1,577,873	$ 167
Alliant	$205,754,832	3,000,000	$ 69
Ameren	$291,684,710	3,400,000	$ 86
Black Hills	$20,763,828	759,400	$ 27
Dominion	$357,718,046	3,588,500	$ 100
Duke	$923,936,645	4,500,000	$ 205
Energy East	$113,714,789	2,989,800	$ 38
Entergy	$432,575,683	2,700,000	$ 160
E-On	$136,276,177	1,263,000	$ 108
Exelon	$558,687,014	5,885,000	$ 95
FirstEnergy	$354,028,109	4,499,000	$ 79
Great Plains	$15,000,708	820,000	$ 18
Integrys	$216,364,166	2,157,000	$ 100
Nat Grid	$1,240,706,398	6,700,000	$ 185
NiSource	$237,380,009	3,750,000	$ 63
Northeast	$302,138,730	1,654,000	$ 183
PHI	$302,463,412	1,910,000	$ 158
Progress	$242,677,256	3,100,000	$ 78
PNM	$102,688,385	859,000	$ 120
SCANA	$191,207,825	1,424,300	$ 134
Southern Co	$546,498,605	4,402,000	$ 124
Unitil	$20,341,422	169,600	$ 120
Xcel	$367,626,617	5,345,000	$ 69
Group Total	**$7,840,162,191**	**71,666,473**	**$ 109**

Exhibit 1 shows WV American's 12 months ended December 31, 2009 Service Company cost per customer of $54 to be considerably lower than the average of $109 per customer for the comparison group service companies. Only 3 of 24 comparison group service companies had a lower cost per customer than WV American. Based on this result, it is possible to conclude that the Service Company's 12 months ended December 31, 2009 charges to WV American were reasonable.

V – Question 2 – Provision of Services at the Lower of Cost or Market

Methodology

The lower-of-cost-or-market comparison is accomplished by comparing the cost per hour for Service Company managerial and professional services to those of outside service providers to whom these duties could be assigned. Based on the nature of the Service Company services it was determined that the following outside providers could perform the categories of services indicated below:

- Management Consultants – executive and administrative management, risk management services, human resources and communications services
- Attorneys – legal services
- Certified Public Accountants – accounting, financial, information technology and rates and revenues services
- Professional Engineers – engineering, operations and water quality services.

The services provided by the Belleville lab are assumed to be transferable to professional engineers for purposes of this cost comparison. This was done for two reasons. First, there is no readily available survey of hourly billing rates for testing services such as those performed by Belleville. Second, Belleville personnel have similar, scientific educational backgrounds as Service Company engineering personnel. Thus, it is valid to compare the hourly rates of Belleville services to those of outside engineering firms.

Service Company's hourly rate were calculated for each of the four outside service provider categories, based on the dollars and hours charged to WV American during the 12 months ended December 31, 2009. Hourly billing rates for outside service providers were developed using third party surveys or directly from information furnished by outside providers themselves.

It should be noted that by using the Service Company's hours charged WV American during the 12 months ended December 31, 2009, its hourly rates are actually overstated because Service Company personnel charge a maximum 8 per day even when they work more. Outside service providers generally bill for every hour worked. If the overtime hours of Service Company personnel had been factored into the hourly rate calculation, Service Company hourly rates would have been lower.

The last step in the market cost comparison was to compare the Service Company's average cost per hour to the average cost per hour for outside providers.

Service Company Hourly Rates

Exhibit 2 (page 14) details the assignment of 12 months ended December 31, 2009 management and professional Service Company charges by outsider provider category. Exhibit 3 (page 15) shows the same assignment for Service Company management and professional hours charged to WV American during the 12 months ended December 31, 2009.

Certain adjustments to these dollar amounts were necessary to calculate Service Company hourly rates that are directly comparable to those of outside providers. Adjustments were made to the following 12 months ended December 31, 2009 test period non-labor Service Company charges:

V – Question 2 – Provision of Services at the Lower of Cost or Market

- Contract Services – 12 months ended December 31, 2009 Service Company charges to WV American include expenses associated with the use of outside professional firms to perform certain corporate-wide services (e.g., legal, financial audit, actuarial services). These professional fees are excluded from the Service Company hourly rate calculation because the related services have effectively been out-sourced already.

- Travel Expenses – In general, client-related travel expenses are not recovered by outside service providers through their hourly billing rate. Rather, actual out-of-pocket travel expenses are billed to clients in addition to fees for professional services. Thus, it is appropriate to remove these Service Company charges from the hourly rate calculation.

- Information Technology Infrastructure Expenses – Included in the 12 months ended December 31, 2009 Service Company charges to WV American are leases, maintenance fees and depreciation related to American Water's enterprise mainframe, server and network infrastructure and corporate business applications. An outside provider that would take over operation of this infrastructure would recover these expenses over and above the labor necessary to operate the data center.

Exhibit 4 (page 16) shows how contract services, travel expenses and computer hardware/software-related Service Company charges are assigned among the four outside provider categories.

Based on the assignment of expenses and hours shown in Exhibits 2 and 3 and the excludable items shown in Exhibit 4, the Service Company's equivalent costs per hour for the 12 months ended December 31, 2009 are calculated below.

	Attorney	Management Consultant	Certified Public Accountant	Professional Engineer	Total
Total management, professional & technical services charges	$ 368,301	$ 2,223,797	$ 4,849,695	$ 991,596	$ 8,433,389

Outside Service Provider Hourly Rates

The next step in the cost comparison was to obtain the average billing rates for each outside service provider. The source of this information and the determination of the average rates are described in the paragraphs that follow.

It should be noted that professionals working for three of the five outside provider categories may be licensed to practice by state regulatory bodies. However, not every professional working for these firms is licensed. For instance, among West Virginia certified public accounting firms, only more experienced staff are predominantly CPAs (see table below). Some Service Company employees also have professional licenses. Thus, it is valid to compare the Service Company's hourly rates to those of the outside professional service providers included in this study.

Position	WVa Average
Partners/Owners	98%
Directors (11+ years experience)	81%
Managers (6-10 years experience)	66%
Sr Associates (4-5 years experience)	44%
Associates (1-3 years experience)	16%
New Professionals	7%

Source: AICPA's National PCPS/TSCPA Management of an Accounting Practice Survey (2008)

Attorneys

The West Virginia State Bar does not survey its members as to their hourly billing rates. In addition, publicly available billing rate information could not be found for West Virginia attorneys. Therefore, an estimate of West Virginia attorney rates was developed from two surveys conducted by Lawyers Weekly in the states of Michigan and Massachusetts. As presented in Exhibit 5, the average rate for each firm was adjusted for the cost of living differential between its location and Charleston, West Virginia. The Lawyers Weekly surveys included rates in effect at December 31, 2007. Thus, the 2007 average rate was escalated to June 30, 2009—the midpoint of the test year ended December 31, 2009.

Management Consultants

The cost per hour for management consultants was developed from a 2009 survey performed by the Association of Management Consulting Firms—an industry trade organization. The survey includes rates that were in effect during 2008 for firms throughout the United States. Consultants typically do not limit their practice to any one region and must travel to a client's location. Thus, the U.S. national average is appropriate for comparison.

The first step in the calculation, presented in Exhibit 6, was to determine an average rate by consultant position level. From these rates, a single weighted average hourly rate was calculated based upon the percent of time that is typically applied to a consulting assignment by each consultant position level. The 2008 average rate was escalated to June 30, 2009—the midpoint of the 12 months ended December 31, 2009.

Certified Public Accountants

The average hourly rate for West Virginia CPAs was developed from a 2008 survey performed by the American Institute of Certified Public Accountants (AICPA). The West Virginia version of this survey was used to develop hourly rates for member firms in West Virginia.

As shown in Exhibit 7, a weighted average hourly rate was developed based on a set of accountant positions and a percent of time that is typically applied to an accounting assignment. This survey includes rate information in effect during 2007. Thus, the data had to be escalated to June 30, 2009—the test year's midpoint.

Professional Engineers

The Company provided hourly rate information for outside engineering firms that could have been used by WV American in 2009. As presented in Exhibit 8, an average rate was developed for each engineering position level. Then, using a typical percentage mix of project time by engineering position, a weighted average cost per hour was calculated.

V – Question 2 – Provision of Services at the Lower of Cost or Market

Service Company versus Outside Provider Cost Comparison

As shown in the table below, Service Company costs per hour are considerably lower than those of outside providers.

	12 Months Ended December 31, 2009		
Service Provider	Service Company	Outside Provider	Difference--Service Co. Greater(Less) Than Outside
Attorney	$ 132	$ 225	$ (93)
Management Consultant	$ 125	$ 230	$ (105)
Certified Public Accountant	$ 80	$ 117	$ (36)
Professional Engineer	$ 65	$ 112	$ (47)

Based on these cost per hour differentials and the number of managerial and professional services hours billed to WV American during the 12-months ended December 31, 2009, outside service providers would have cost $4,019,121 more than the Service Company (see table below). Thus, on average, outside provider's hourly rates are 48% higher than those of the Service Company ($4,019,121 / $8,433,389).

	12 Months Ended December 31, 2009		
Service Provider	Hourly Rate Difference--Service Co. Greater(Less) Than Outside	Service Company Hours Charged	Dollar Difference
Attorney	$ (93)	2,472	$ (228,950)
Management Consultant	$ (105)	13,138	$ (1,384,160)
Certified Public Accountant	$ (36)	48,051	$ (1,745,758)
Professional Engineer	$ (47)	14,002	$ (660,253)
Service Company Less Than Outside Providers			$ (4,019,121)

It should be noted that the cost differential associated with using outside providers is even greater because Service Company personnel do not charge for more than 8 hours per day even when they work more. Outside providers generally charge clients for all hours worked. If, for instance, Service Company personnel worked 5% overtime (2 hours) per week on WV American's behalf, that would have amounted to over 3,800 additional hours of work during the 12 months ended December 31, 2009. Based on the hourly rate differentials above, this overtime would have added another $200,000 to the cost of using outside provider.

If WV American were to use outside service providers rather than the Service Company for managerial and professional services, it would incur other additional expenses besides those associated with higher hourly rates. Managing outside firms who would perform approximately 77,600 hours of work (more than 51 full-time equivalents at 1,500 "billable" hours per FTE per year) would add a significant workload to the existing WV American management team. Thus, it would be necessary for WV American to add at least one position to supervise the outside firms and ensure they delivered quality and timely services. The individuals that would fill this position would need a good understanding of each profession being managed. They must also have management experience and the authority necessary to give them credibility with the outside firms. As calculated in the table below, this position would add almost $165,000 per year to WV American's personnel expenses.

V – Question 2 – Provision of Services at the Lower of Cost or Market

Cost of Adding a Professional Position To WVA's S		
		Total
New Positions' Salary	$	100,000
Benefits (at 49.4%)	$	49,400
Office Expenses (15.2%)	$	15,200
Total Cost of Full Time Position	$	164,600

Thus, the total effect on the ratepayers of WV American of contracting all services now provided by Service Company would be an increase in their costs of $4,183,721 ($4,019,121 + $164,600). Based on the results of this comparison, it is possible to conclude that the Service Company charged WV American at the lower of cost or market for services provided during the 12 months ended December 31, 2009.

VI - Question 3 - Reasonableness of Customer Accounts Services Costs

Background

Customer Accounts Services covers the following utility functions:

- Customer Call Center – customer calls/contact, credit, order taking/disposition, bill collection efforts, outage calls
- Call Center IT – maintenance of phone banks, voice recognition units, call center software applications, telecommunications
- Customer billing – bill printing, stuffing, and mailing
- Remittance processing – processing customer payments received in the mail
- Bill payment centers – locations where customers can pay their bills in person

It is difficult to compare the cost of the Service Company's customer accounts services-related charges to WV American with outside providers of the same services because survey data is proprietary and expensive to obtain. For this reason, WV American's charges from the Service Company for customer accounts services are compared to those of neighboring electric utilities because the data necessary to make such comparison is available to the public.

Neighboring electric utility cost information comes from the FERC Form 1 that each utility must file. FERC's chart of accounts is defined in Chapter 18, Part 101 of the Code of Federal Regulations. FERC accounts that contain customer accounts services-related expenses are Account 903 Customer Accounts Expense – Records and Collection Expense and Account 905 Customer Accounts Expense – Miscellaneous Customer Accounts Expense. Exhibit 9 provides FERC's definition of the type of expenses that should be recorded in these accounts.

In addition to the charges in these FERC accounts, labor-related overheads charged to the following FERC accounts must be added to the labor components of Accounts 903 and 905:

- Account 926 Employee Pension and Benefits
- Account 408 Taxes Other Than Income (employer's portion of FICA)

Comparison Group

Electric utilities included in the comparison group are shown in the table below. These are companies whose FERC Form 1 show amounts for accounts 903 and 905.

West Virginia	• Appalachian Power • Monongahela Power	• Wheeling Power
Kentucky	• Duke Energy Kentucky • Kentucky Power	• Kentucky Utilities • Louisville Gas & Electric
Maryland	• Baltimore Gas & Electric • Delmarva Power & Light	• Potomac Electric
Ohio	• Cleveland Elect Illuminating • Columbus Southern Electric • Dayton Power & Light • Duke Energy Ohio	• Ohio Edison • Ohio Power • Toledo Edison
Virginia	• Appalachian Power	• Virginia Electric Power
Pennsylvania	• Duquesne Light • PECO Energy • Pennsylvania Electric	• Pennsylvania Power • PPL Electric

Virginia-American Water Company
FERC Account Descriptions

903 – Customer Records and Collection Expenses

This account shall include the cost of labor, materials used and expenses incurred in work on customer applications, contracts, orders, credit investigations, billing and accounting, collections and complaints.

Labor

1. Receiving, preparing, recording and handling routine orders for service, disconnections, transfers or meter tests initiated by the customer, excluding the cost of carrying out such orders, which is chargeable to the account appropriate for the work called for by such orders.
2. Investigations of customers' credit and keeping of records pertaining thereto, including records of uncollectible accounts written off.
3. Receiving, refunding or applying customer deposits and maintaining customer deposit, line extension, and other miscellaneous records.
4. Checking consumption shown by meter readers' reports where incidental to preparation of billing data.
5. Preparing address plates and addressing bills and delinquent notices.
6. Preparing billing data.
7. Operating billing and bookkeeping machines.
8. Verifying billing records with contracts or rate schedules.
9. Preparing bills for delivery, and mailing or delivering bills.
10. Collecting revenues, including collection from prepayment meters unless incidental to meter reading operations.
11. Balancing collections, preparing collections for deposit, and preparing cash reports.
12. Posting collections and other credits or charges to customer accounts and extending unpaid balances.
13. Balancing customer accounts and controls.
14. Preparing, mailing, or delivering delinquent notices and preparing reports of delinquent accounts.
15. Final meter reading of delinquent accounts when done by collectors incidental to regular activities.
16. Disconnecting and reconnecting services because of nonpayment of bills.
17. Receiving, recording, and handling of inquiries, complaints, and requests for investigations from customers, including preparation of necessary orders, but excluding the cost of carrying out such orders, which is chargeable to the account appropriate for the work called for by such orders.
18. Statistical and tabulating work on customer accounts and revenues, but not including special analyses for sales department, rate department, or other general purposes, unless incidental to regular customer accounting routines.
19. Preparing and periodically rewriting meter reading sheets.
20. Determining consumption and computing estimated or average consumption when performed by employees other than those engaged in reading meters.

Materials and expenses

21. Address plates and supplies.
22. Cash overages and shortages.
23. Commissions or fees to others for collecting.
24. Payments to credit organizations for investigations and reports.
25. Postage.
26. Transportation expenses, including transportation of customer bills and meter books under centralized billing procedure.
27. Transportation, meals, and incidental expenses.
28. Bank charges, exchange, and other fees for cashing and depositing customers' checks.
29. Forms for recording orders for services, removals, etc.
30. Rent of mechanical equipment.

West Virginia American Water Company
FERC Account Descriptions

905 – Miscellaneous Customer Accounts Expenses

This account shall include the cost of labor, materials used and expenses incurred not provided for in other accounts.

Labor

1. General clerical and stenographic work.
2. Miscellaneous labor.

Materials and expenses

3. Communication service.
4. Miscellaneous office supplies and expenses and stationery and printing other than those specifically provided for in accounts 902 and 903.

VI - Question 3 - Reasonableness of Customer Accounts Services Costs

WV American Cost per Customer

As calculated below, WV American's 12 months ended December 31, 2009 customer account services expense per customer was $29.15. The cost pool used to calculate this average includes charges for Service Company services (e.g., call center, billing, payment processing) and postage and forms expenses, which are incurred directly by WV American. It was necessary to adjust the National Call Center charges because electric utilities experience an average of 2.50 calls per customer compared to American Water's 1.32 calls per customer. Thus, National Call Center expenses had to be increased, for comparison purposes, to reflect its costs at a 2.50 calls per customer level.

West Virginia American Water Company

	Cost Component	Service Co Charges	Adjustment Fewer Calls For Water Cos. (A)	Adjusted	
Service Company					
Call Centers	Call processing, order processing, credit, bill collection	$ 2,592,450	$ 1,035,507	$ 3,627,957	
Service Company	Customer payment processing			$ 251,817	Note B
Operating Company	Postage & forms			$ 1,134,869	
			Cost Pool Total	$ 5,014,643	
			Total Customers	172,006	
	12 Months Ended December 31, 2009 Cost Per WV American Customer			**$ 29.15**	

Note A: Adjustment for American Water's fewer calls per customer

This adjustment is necessary because water utilities experience fewer calls per customer than do electric utilities

Test year Call Handling charges		$ 1,154,220
Electric utility industry's avg calls/customer	2.50	
American Water's avg calls/customer	1.32	
Percent different	90%	90%
Total Adjustment B		$ 1,035,507

Note B: Estimated customer payment processing expenses

Number of customers	172,006
Number of payments/customer/year	12.0
Total payments processed/year	2,064,072
Bank charge per item	$ 0.1220
Total estimated annual expense	$ 251,817

Electric Utility Group Cost per Customer

Exhibit 10 shows the actual 2008 customer accounts expense per customer calculation for the electric utility comparison group. All of the underlying data was taken from the utilities' FERC Form 1.

VI - Question 3 - Reasonableness of Customer Accounts Services Costs

Summary of Results

As shown in the table below, WV American's cost per customer is below the average cost of the neighboring electric utility comparison group. It can therefore be concluded that WV American's 12 months ended December 31, 2009 customer accounts-related expenses, including those of the Alton and Pensacola Call Centers, assigned by the Service Company to WV American were comparable to those of other utilities.

Average Customer Accounts Expense Per Customer		
Monongahela Power	$	15.58
Pennsylvania Electric	$	15.59
Pennsylvania Power	$	16.65
Duquesne Light	$	16.83

Analysis of Services

The final aspect of this study was an assessment of whether the services that are provided to WV American by the Service Company would be necessary if WV American were a stand-alone water utility. The first step in this evaluation was to determine specifically what the Service Company does for WV American. Based on discussions with Service Company personnel, the matrix in Exhibit 11 was created showing which entity—WV American or a Service Company location—is responsible for each of the functions WV American requires to ultimately provide service to its customers. This matrix was reviewed to determine: (1) if there was redundancy or overlap in the services being provided by the Service Company and (2) if Service Company services are typical of those needed by a stand-alone water utility.

Upon review of Exhibit 12, the following conclusions can be drawn:

- The services that the Service Company provides are necessary and would be required even if WV American were a stand-alone water utility.

- There is no redundancy or overlap in the services provided by the Service Company to WV American. For all of the services listed in Exhibit ~~12~~11, there was only one entity that was primarily responsible for the service.

Governance Practices Associated With Service Company Charges

There are several ways by which WV American exercises control over Service Company services and charges. The most important of these are described below.

- **President of Regulated Operations Oversight** – The President of Regulated Operations is on the Executive Management Team (EMT) of American Water. This position is responsible for the overall performance of each operating company in American Water. As part of the EMT, the President of Regulated Operations has equal say with other EMT members in major business decisions of American Water and has the ability to monitor Service Company performance quality and spending. The President of Regulated Operations also has dialogue with each operating company president to address local concerns.
- **Divisional Vice President & Treasurer** – The Divisional Vice President and Treasurer of the Eastern Division states is responsible for the financial reporting, performance and internal controls of each of the operating companies in the division. The Vice President and Treasurer monitors the performance and reporting from the Service Company and follows up on instances where the quality and timeliness of services are not as expected. The operating company interacts with the Divisional VP & Treasurer to discuss any concerns with billings, etc.
- **Operating Company Board Oversight** – WV American's board of directors includes members of American Water's EMT, members of the divisional management team and business and community leaders from outside the Company. WV American's president is Chairman of the KAWC board. This helps ensure that WV American's needs are a factor in the delivery of Service Company services.
- **Service Company Budget Review/Approval** – The President of Regulated Operations sits on the Service Company board and that board must formally approve the budget for Service Company charges for the next year. These budgeted charges are consolidated with the operating company's own spending into an overall budget which must be approved by the operating company's board of directors. WV American's president also sits on the Service Company board.
- **Major Project Review And Approval** – Major projects undertaken by the Service Company must first be reviewed by American Water's Executive Management Team, which includes the President of Regulated Operations. With input from the local presidents and Divisional Vice President & Treasurer, they have the ability to impact all new initiatives and projects before they are authorized.
- **Service Company Bill Scrutiny** – WV American Finance personnel review the monthly Service Company bill for accuracy and reasonableness on a monthly basis. WV American financial manager has dialogue with Shared Services Center office personnel concerning the monthly bill and any mistakes or overcharges are credited on a subsequent billing. The WV American Finance Manager prepares an actual to budget comparison of management fees each month for use in identifying unusual variances. Service Company actual to budget comparison is included in the monthly FRP. Unusual variances are researched, explanations are provided and any corrections are made, as necessary.
- **Service Company Budget Variance Reporting** – Each month, a summary variance analysis is prepared that explains differences between budgeted and actual Service Company spending. In addition, a more detailed monthly variance report, called the "Statement of Expenses and Billed Charges," is produced by Service Company location and shows actual spending for the month.

- **Operating Company Budget Variance Reporting** – The "Budget/Plan Analysis," produced monthly, has a line item for Management Fees (i.e., Service Company charges). In this way, Service Company budget versus actual charges can be monitored for the month and year-to-date. Additional information exists that allows more detailed analysis of "Divisional" and "Corporate" Management Fees.
- **Capital Investment Management ("CIM") –** CIM is one of American Water's primary business planning processes. It covers capital and asset planning and is employed throughout American Water. CIM provides a full range of governance practices, including a formal protocol for assessing system needs, prioritizing expenditures, managing the capital program, approving project spending, delivering projects and measuring outputs. CIM ensures that:
  - Capital expenditure plans are aligned with the strategic intent of the business
  - The impact of capital expenditure and income plans are fully reflected in operating expense plans
  - The impacts of these plans are understood and affordable, and
  - Effective controls are in place over budgets (through business plans) and individual capital projects (through appropriate authorization thresholds, management and reporting processes).

  The CIM process was designed to optimize the effectiveness of asset investment. The process is managed at two levels for all American Water companies, including all WV American Operating Units. Monthly meetings of the CIM are held to review capital spending compared to plan, review new project requests, and review updates or modifications to existing projects. The President of WV American and others participate as necessary (e.g. WV American operations managers and Rates Manager) and provide the data used in the monthly review schedules.

PUBLIC SERVICE COMMISSION
OF WEST VIRGINIA
CHARLESTON

Case No. XXXXXXXXXXXX

WEST VIRGINIA-AMERICAN WATER COMPANY

Rule 42T Tariff Filing to Increase
Rates and Charges

DIRECT TESTIMONY OF

PATRICK L. BARYENBRUCH

___ __, 2010

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. Patrick L. Baryenbruch, 2832 Claremont Road, Raleigh, North Carolina 27608.

Q. PLEASE DESCRIBE YOUR EDUCATIONAL AND PROFESSIONAL BACKGROUND.

A. I received a Bachelors degree in accounting from the University of Wisconsin-Oshkosh in 1974 and a Masters in Business Administration degree from the University of Michigan in 1979.

I am a financial consultant and a certified public accountant. I am a member of the American Institute of Certified Public Accountants and the North Carolina Association of Certified Public Accountants.

I began my career as a staff accountant with Arthur Andersen & Company where I performed financial audits of utilities, banks and finance companies. After three years I left to pursue an M.B.A. degree. Upon graduation from business school, I worked with the consulting firms of Theodore Barry & Associates and Scott, Madden & Associates.

During my consulting career, I have performed consulting assignments for approximately 50 utilities and 10 public service commissions. I have participated as project manager, lead or staff consultant for 24 commission-ordered management and prudence audits of public utilities. Of these, I have been

responsible for evaluating the area of affiliate charges and allocation of corporate expenses in the Commission-ordered audits of Connecticut Light and Power, Connecticut Natural Gas, General Water Corporation (Pennsylvania Operations), Philadelphia Suburban Water Company (now Aqua America), and Pacific Gas & Electric Company.

My firm has performed the commission-ordered audit of Southern California Edison's 2002, 2003, 2004 and 2005 transactions with its non-regulated affiliate companies.

Q. WHAT ARE YOUR DUTIES AND RESPONSIBILITIES IN YOUR CURRENT POSITION?

A. I am the President of my own consulting practice, Baryenbruch & Company, LLC, which was established in 1985. In that capacity, I provide consulting services to utilities and their regulators.

Q. PLEASE DESCRIBE THE REASON FOR YOUR TESTIMONY IN THIS CASE.

A. I am presenting the results of my study which evaluated the services provided by American Water Works Service Company ("Service Company") during 2009 to West Virginia-American Water Company ("WV American"). This study was

undertaken in conjunction with WV American's rate case and is true to the best of my knowledge and belief. The study is attached as Exhibit PLB-1.

Q. WHAT WERE THE OBJECTIVES OF YOUR STUDY?

A. This study was undertaken to answer four questions concerning the services provided by the Service Company to WV American, each of which bears on the reasonableness of those charges as incurred during the 12 months ended December 31, 2009. The four questions are as follows:

1. Were the Service Company's charges to WV American during the 12 months ended December 31, 2009 reasonable?

2. Was WV American charged the lower of cost or market for managerial and professional services provided by the Service Company during the 12 months ended December 31, 2009?

3. Were the 12 months ended December 31, 2009 costs of the Service Company's customer accounts services, including those of the National Call Centers, comparable to those of other utilities?

4. Are the services WV American receives from Service Company necessary?

Q. WHAT CONCLUSIONS WERE YOU ABLE TO DRAW CONCERNING QUESTION NUMBER 1, WHETHER THE SERVICE COMPANY

CHARGES TO WV AMERICAN DURING 2009 WERE REASONABLE?

A. I was able to draw the following conclusions about the reasonableness of those charges:

The Service Company's 12 months ended December 31, 2009 cost per WV American customer was very reasonable compared to cost per customer for electric and combination electric/gas service companies. During the 12 months ended December 31, 2009, WV American was charged $54 per customer for administrative and general (A&G)-related services provided by the Service Company. This compares to an average of $109 per customer for service companies reporting to the Federal Energy Regulatory Commission (FERC). In fact, only 3 of the 24 utility service companies that filed a FERC Form 60 for 2008 had a lower per customer A&G cost than WV American's charges from the Service Company.

Q. WHAT CONCLUSIONS WERE YOU ABLE TO DRAW CONCERNING QUESTION NUMBER 2, WHETHER WV AMERICAN WAS CHARGED THE LOWER OF COST OR MARKET SERVICES PROVIDED BY THE SERVICE COMPANY?

A. I was able to draw the following conclusions:

(1) WV American was charged the lower of cost or market for

managerial and professional services during the 12 months ended December 31, 2009.

(2) On average, the hourly rates for outside service providers are 48% higher than the Service Company's hourly rates.

(3) The managerial and professional services provided by the Service Company are vital and could not be procured externally by WV American without careful supervision on the part of WV American. If these services were contracted entirely to outside providers, then WV American would need to add at least one position to manage activities of outside firms. This position would be necessary to ensure the quality and timeliness of services provided.

(4) If all the managerial and professional services now provided by the Service Company had been outsourced during the 12 months ended December 31, 2009, then WV American and its customers would have incurred more than $4,100,000 in additional expenses. This amount includes the higher cost of outside providers and the cost of one WV American position needed to direct the outsourced work.

(5) This study's hourly rate comparison actually understates the cost advantages that accrue to WV American from its use of the Service Company. Outside service providers generally bill for every hour worked.

Service Company exempt personnel, on the other hand, charge a maximum of 8 hours per day even when they work more hours. If the overtime hours of Service Company personnel were factored into the hourly rate calculation, then the Service Company would have had an even greater annual dollar advantage than the $4,100,000 cited above. If Service Company overtime is conservatively estimated at 5% (2 hours per week), then that work would have added more than $200,000 in charges from outside providers.

(6) It would be difficult for WV American to find local service providers with the same specialized water industry expertise as that possessed by the Service Company staff. Service Company personnel spend substantially all their time serving operating water companies. This specialization brings with it a unique knowledge of water utility operations and regulation that is most likely unavailable from local service providers.

(7) Service Company fees do not include any profit markup. Only its actual cost of service is being recovered in the rates paid to WV American by its customers.

Q. WHAT IS YOUR CONCLUSION REGARDING THE REASONABLENESS OF THE COSTS OF THE NATIONAL CALL CENTER THAT PROVIDES

SERVICE TO WV AMERICAN?

A. I was able to determine that the cost of the Service Company's customer accounts services, including those provided by the National Call Center, is below the range of the average of the neighboring electric utility comparison group. This selected group of electric utilities provides a reasonable proxy group for comparison to a regulated utility of the size and scope of the Service Company and WV American. During the 12-months ended December 31, 2009, the customer accounts cost for WV American customers was $29.15 compared to the 2008 average of $32.23 for neighboring electric utilities. The highest comparison group per customer cost was $72.58 and the lowest $15.58.

Q. WHAT CONCLUSIONS WERE YOU ABLE TO DRAW CONCERNING THE NECESSITY OF THE SERVICES WV AMERICAN RECEIVES FROM THE SERVICE COMPANY?

A. I was able to draw the following conclusions:

(1) The services that the Service Company provides are necessary and would be required even if WV American were a stand-alone water utility.

(2) There is no redundancy or overlap in the services provided by the Service Company to WV American.

Q. DOES THIS COMPLETE YOUR TESTIMONY?

A. Yes.

I - Introduction

Purpose Of This Study

This study was undertaken to answer four questions concerning the services provided by American Water Works Service Company, Inc. ("Service Company") to West Virginia-American Water Company ("WV American"), each of which bears on the reasonableness of those charges as incurred during the 2007 test in Case No. 08-0900-W-42-T pending before the Public Service Commission of West Virginia:

1. Was WV American charged the lower of cost or market for managerial and professional services provided by the Service Company during 2007?

2. Was the 2007 cost of the Service Company's customer accounts services, including those of the National Call Centers, comparable to those of other utilities?

3. Are the services WV American receives from Service Company necessary?

4. Were the Service Company's charges to WV American during the 12-months ended December 31, 2007 reasonable by other comparative measures?

Study Results

Concerning question 1, the following conclusions can be drawn from this study:

- WV American was charged the lower of cost or market for managerial and professional services during the 12-months ended December 31, 2007.

- On average, the hourly rates for outside service providers are 44% higher than the Service Company's hourly rates.

- The managerial and professional services provided by the Service Company are vital and could not be procured externally by WV American without careful supervision on the part of WV American. If these services were contracted entirely to outside providers, WV American would have to add at least one position to manage activities of outside firms. This position would be necessary to ensure the quality and timeliness of services provided.

- If all the managerial and professional services now provided by the Service Company had been outsourced during the 12-months ended December 31, 2007, WV American and its ratepayers would have incurred more than $3,354,359 in additional expenses. This amount includes the higher cost of outside providers and the cost of an additional one half WV American position needed to direct the outsourced work.

- This study's hourly rate comparison actually understates the cost advantages that accrue to WV American from its use of the Service Company. Outside service providers generally bill for every hour worked. Service Company exempt personnel, on the other hand, charge a maximum of 8 hours per day even when they work more hours. If the overtime hours of Service Company personnel were factored into the hourly rate calculation, the Service Company would have had an even greater annual dollar advantage than the $3,354,359 cited above. For instance, if Service Company overtime is conservatively estimated at 5% (2 hours per week), then that work would have cost an estimated $160,000 in additional charges from outside providers.

- It would be difficult for WV American to find local service providers with the same specialized water industry expertise as that possessed by the Service Company staff. Service Company personnel spend substantially all their time serving operating water companies. This specialization brings with it a unique knowledge of water utility operations and regulation that is most likely unavailable from local service providers.

- Service Company fees do not include any profit markup. Only its actual cost of service is being recovered from WV American ratepayers.

Concerning question 2, it was determined that the cost of the Service Company's customer accounts services, including those provided by the National Call Center, is within a reasonable range of the average of the neighboring electric utility comparison group. As will be explained further herein, this group of companies provides a reasonable proxy group for comparison to a regulated utility of the size and scope of the Service Company and WV American. During the 12-months ended December 31, 2007, the customer accounts cost for WV American customers was $33.31 compared to the 2007 average of $31.27 for neighboring electric utilities. The highest comparison group per customer cost was $70.37 and the lowest $13.71.

Concerning question 3, the following conclusions can be drawn:

- The services that the Service Company provides are necessary and would be required even if WV American were a stand-alone water utility.

- There is no redundancy or overlap in the services provided by the Service Company to WV American. For all of the services listed in Schedule 10, there was only one entity that was primarily responsible for the service.

Concerning question 4, the following conclusions were reached:

- The Service Company provides WV American with services similar to those provided by other utility service companies. This was determined based on service company information included in the Form 60, which must be filed with the Federal Energy Regulatory Commission ("FERC") by electric and combination electric/gas utility holding companies.

- American Water's 2007 cost per WV American customer was reasonable compared to cost per customer for electric and combination electric/gas service companies. During 2007, WV American was charged an average of $55 per customer by the Service Company compared to an average of $122 per customer for service companies reporting to the FERC.

II - Background

Overview Of American Water Works Service Company

American Water's Service Company exists to provide certain shared services to American Water subsidiaries. It follows a service company model used by many utility holding companies that own multiple regulated utilities. By consolidating executive and professional services into a single service company, utility holding companies are able to realize the following benefits for ratepayers:

- Purchasing Economies – Common expenses (e.g., insurance, chemicals, piping) can be procured on a much larger scale thereby providing greater bargaining power for the combined entity compared to individual utility operating companies. A service company facilitates corporate-wide purchasing programs through its procurement and contract administration functions.

- Operating Economies of Scale – A service company is able to deliver services more efficiently because workloads can be balanced across more persons and facilities. For instance, American Water's Service Company is able to maintain one principal data center for the entire corporation. This is much more cost-efficient than each operating utility funding its own data center with its large fixed hardware, software and staffing costs.

- Continuity of Service – Centralizing service company personnel who perform similar services facilitates job cross-training and sharing of knowledge and expertise. This makes it easier to deal with staff turnover and absences and to sustain high levels of service to operating utilities. An individual operating utility might experience considerable disruption if a key professional left and it was necessary to hire outside to fill the vacancy.

- Maintenance of Corporate-Wide Standards – Personnel in American Water's Service Company establish standards for many functions (e.g., engineering designs, operating procedures and maintenance practices). It is easier to ensure these standards are followed by every operating utility because their implementation is overseen by the Service Company.

- Improved Governance – American Water's Service Company provides another dimension of management and financial oversight that supplements local operating utility management. The Service Company facilitates standard planning and reporting that help ensure operating utilities meet the requirements of their customers in a cost effective manner.

- Retention of Personnel – A service company organization provides operating utility personnel with another career path beyond what may be available on a local level. These opportunities tend to improve employee retention.

American Water follows the model for other utility service companies in another important regard. Its services are provided to affiliate operating utilities, like WV American, at cost. American Water's Service Company is not a profit-making entity. It assigns only its actual expenses to the American Water subsidiaries it services.

The Service Company provides services to American Water operating companies from the following locations:

- Corporate Office – Includes American Water's executive management and personnel from the various corporate support services. American Water's corporate office is located in Voorhees, New Jersey.

- National Call Centers – Perform customer service functions, including: customer call processing, service order processing, correspondence processing, credit and collections. American Water maintains two call centers: one in Alton, Illinois that went into operation in 2001 and a second in Pensacola, Florida that went into operation in 2005. Prior to the establishment of these national call centers, customer service functions were performed by employees of WV American, which incurred the expense on its books.

- National Shared Services Center – The Shared Services Center, located in Cherry Hill, New Jersey, provides various financial, accounting and treasury functions that had been performed by individual operating companies. This arrangement has improved and streamlined the Company's financial processes and allowed operating companies to focus on providing utility service.

- Regional Offices – Regional offices provide operating companies with certain support services that can be performed more effectively on a regional basis because individual operating company/center workloads are not sufficient to warrant a full-time staff for these activities. At the same time, these services require closer proximity to operating companies served so they are not provided by the National Shared Services Center. Examples of regional office services include rates and revenues, engineering and operations.

- Belleville Lab – The national trace substance laboratory is located in Belleville, Illinois, and performs testing for all American Water operating companies.

- Information Technology Service Centers – American Water's principal data center, located in Hershey, Pennsylvania, supports the IT infrastructure required to run corporate and operating company business applications and the communications systems. IT personnel rotate, as needed, throughout the regional offices and operating companies.

Service Company Expense Categories

The Service Company renders a monthly bill to American Water's operating companies. Charges are broken down into the following expense categories:

- Labor – base pay (salaries) of managerial and professional employees
- Labor-Related Overheads - employee benefit costs (payroll taxes, medical coverage, pensions, disability insurance) and other general expenses
- Support - wages and salaries of office support personnel, including secretaries, clerical personnel, telephone operators and mail clerks
- Office Expenses - office rent, equipment leases, telephone, electric, office supplies, property taxes, office maintenance
- Vouchers/Journal Entries – (1) travel expenses incurred by Service Company personnel, (2) other items submitted for reimbursement by employees, including professional association dues, (3) outside service contracts for such things as actuarial services, and (4) various other expenditures, including data center expenses for software licenses and hardware maintenance.

Service Company expenses are either assigned directly or allocated to operating companies, as shown in the table below.

Expense Category	Direct Charged	Allocated	Comments
Labor	X	X	Professional personnel working for one or several operating companies
Labor-Related Overheads	X	X	These are primarily employee benefit costs that relate directly to labor
Support		X	Administrative personnel support the professional staff, thus support costs are allocated on the basis of professional labor
Office Expense		X	Are all allocated on the basis of professional labor
Vouchers/Journals	X	X	May be either directly in support of one operating company (e.g., an engineer traveling from the Corporate Office to the operating company) or allocated to several operating companies

A direct charge occurs when Service Company work or expenses are incurred in support of only one operating company. Direct charge examples include work in support of an operating company's rate case, engineering design work on an operating company's project and the preparation of an operating company's financial statements.

Service Company expenses are allocated when more than one operating company benefits from the underlying work. Examples include assessments of new Federal water quality regulations, development of the company-wide materials procurement contracts and creation of company-wide engineering design standards.

Charging and Assignment Of Service Company Time and Expenses

Service Company transactions are assigned with the following information so there is a proper accounting and eventual charging to an operating company:

- Operating company number, if transaction is a direct charge
- Formula number if transaction is allocated
- Employee hours worked
- Account number for non-labor charges

Charges can originate from the following systems:

- Payroll System
- RVI System (outside vendor payments)
- PCard System (credit card payments)
- Internal Purchase Order System
- Journal entries

The Service Company's time reporting process enables labor and support charges to be assigned to the proper operating company. Labor charges are based on the time reported by managerial and professional Service Company employees. Every week, Service Company professional employees complete an electronic time sheet that shows:

- Operating company (for direct charge)
- Formula number (for allocation)
- Work order (where applicable)
- Authorization number (where applicable)

At month-end, time report information is processed and direct and allocated professional labor hours tabulated for each operating company. Dollar charges are then calculated using the hourly rate of each Service Company professional employee based upon their base salary (i.e., an employee's hours times their hourly rate of pay).

Support (administrative) personnel charge their time to the activity "General Admin." As described in the table on page 4, their labor charges are allocated to operating companies based upon how their office's professional personnel labor charges are assigned. For instance, if 20% of American Water's Southeast Region's professional labor is assigned to WV American during a month, then 20% of that office's monthly administrative labor charges also are assigned to the operating company.

The overhead cost category is next assigned based on professional and administrative labor costs. Thus, if 20% of the Southeast Region's accumulated professional and support labor is charged to WV American during the month, then 20% of that month's overhead expenses will be assigned to WV American.

Each Service Company location's office expenses are allocated to operating companies based on how professional labor charges for that office have been assigned. For instance, if 2% of professional labor from one Service Company office is assigned to WV American, then 2% of that office's office expenses would be assigned to WV American. Thus, office expenses are allocated in the very same way as administrative labor.

Vouchers/journal entries may be charged directly or allocated, depending on who benefits from the expenditure. For instance, the cost of a continuing professional education course taken by a professional in a regional office is allocated to the operating companies served by that office. Travel expenses by that same professional to a rate case proceeding are charged directly to the operating company whose case is being heard.

III – Service Company Cost Comparison Approach

During the 12 months ended December 31, 2007, the Service Company billed WV American $10,909,934 in O&M-related charges, $673,657 in capital-related charges and $11,283 in other charges. Included in the O&M amount are certain non-recurring expenses and non-Southeast Region charges which are excluded from this market study. As calculated in the table below, net Service Company charges of $9,909,212 were subjected to a market cost comparison.

	12 Months Ended December 31, 2007
Mgmt Fee Expense (O&M)	$ 10,909,934
Less: Non-Recurring Expenses	
Business Change	$ 3,590
Divestiture & SOX	$ (1,607,454)
Total Non-Recurring Expenses	$ (1,603,864)
Less: Non-Southeast Regions	$ (81,799)
Net Testable O&M	$ 9,224,272
Total Capital	$ 673,657
Total Other	$ 11,283
Total Testable SC Charges	**$ 9,909,212**

For purposes of comparing these charges to outside benchmarks, Service Company services were placed into two categories:

- Managerial and Professional Services – Includes such services as management, accounting, legal, human resources, information technology, and engineering.

- Customer Accounts Services – Includes customer-related services, such as call center, credit, billing, collection and payment processing.

Total test period Service Company charges break down between management/professional services and customer account services as follows:

	12 Months Ended Dec. 31, 2007	
	Amount	Hours
Management and Professional Services	$ 7,338,635	71,137
Customer Account Services	$ 2,570,577	73,349
Total Service Company Charges	$ 9,909,212	144,486

This study's first question—whether Service Company 2007 charges the lower of cost or market—was evaluated by comparing the cost per hour for managerial and professional services provided by Service Company personnel to hourly billing rates that would be charged by outside providers of equivalent services. Service Company costs per hour were based on actual charges to WV American during the 12 months ended December 31, 2007. Outside providers' billing rates came from surveys or other information from professionals that could perform the services now provided by the Service Company.

The second question—whether Service Company 2007 customer account services charges, including those of the National Call Center costs, were comparable to other utilities—was addressed by comparing WV American's customer accounts services expenses to those of neighboring electric utilities. This approach was selected because the costs of outside providers of call center services are not publicly available. However, electric utility customer account

services expenses can be obtained from the FERC Form 1. The availability and transparency of FERC data adds to the validity of its use in this comparison.

The third question—the necessity of Service Company services—was first investigated by determining the services provided to WV American. A determination was then made as to whether these services would be required if WV American were a stand-alone utility.

The fourth question—whether Service Company 2007 charges were reasonable by other comparative measures—was determined by comparing WV American's net testable O&M Service Company charges per customer to those of electric and combination electric/gas utilities that file FERC Form 60 – Annual Report of Service Companies.

IV – Managerial And Professional Services Hourly Rate Comparison

Methodology

The lower-of-cost-or-market comparison is accomplished by comparing the cost per hour for Service Company managerial and professional services to those of outside service providers to whom these duties could be assigned. Based on the nature of the Service Company services it was determined that the following outside providers could perform the categories of services indicated below:

- Management Consultants – executive and administrative management, risk management services, human resources and communications services
- Attorneys – legal services
- Certified Public Accountants – accounting, financial, information technology and rates and revenues services
- Professional Engineers – engineering, operations and water quality services.

The services provided by the Belleville lab are assumed to be transferable to professional engineers for purposes of this cost comparison. This was done for two reasons. First, there is no readily available survey of hourly billing rates for testing services such as those performed by Belleville. Second, Belleville personnel have similar, scientific educational backgrounds as Service Company engineering personnel. Thus, it is valid to compare the hourly rates of Belleville services to those of outside engineering firms.

The Service Company's hourly rate were calculated for each of the four outside service provider categories, based on the dollars and hours charged to WV American during the 12 months ended December 31, 2007. Hourly billing rates for outside service providers were developed using third party surveys or directly from information furnished by outside providers themselves.

It should be noted that by using the Service Company's hours charged WV American during 2007, its hourly rates are actually overstated because Service Company personnel charge a maximum 8 per day even when they work more. Outside service providers generally bill for every hour worked. If the overtime hours of Service Company personnel had been factored into the hourly rate calculation, then Service Company hourly rates would have been lower.

The last step in the market cost comparison was to compare the Service Company's average cost per hour to the average cost per hour for outside providers.

Service Company Hourly Rates

Schedule 1 (page 11) details the assignment of 12 months ended December 31, 2007 management and professional Service Company charges by outsider provider category. Schedule 2 (page 12) shows the same assignment for Service Company management and professional hours charged to WV American during the 12 months ended December 31, 2007.

Certain adjustments to these dollar amounts were necessary to calculate Service Company hourly rates that are directly comparable to those of outside providers. Adjustments were made to the following 2007 test period non-labor Service Company charges:

- Contract Services – 12 months ended December 31, 2007 Service Company charges to WV American include almost $432,000 in expenses associated with the use of outside

professional firms to perform certain corporate-wide services (e.g., legal, financial audit, actuarial services). These professional fees are excluded from the Service Company hourly rate calculation because the related services have effectively been out-sourced already.

- Travel Expenses – In general, client-related travel expenses are not recovered by outside service providers through their hourly billing rate. Rather, actual out-of-pocket travel expenses are billed to clients in addition to fees for professional services. Thus, it is appropriate to remove these Service Company charges from the hourly rate calculation.

- Computer Hardware and Software Expenses – Included in the 12 months ended December 31, 2007 Service Company charges to WV American are charges for outside expenses related to leases and maintenance fees related to mainframe, server and network infrastructure, corporate business applications and the communications systems. An outside provider that would take over operation of a data center would recover these expenses over and above the labor necessary to operate the data center.

Schedule 3 (page 13) shows how contract services, travel expenses and computer hardware/software-related Service Company charges are assigned among the four outside provider categories.

Based on the assignment of expenses and hours shown in Schedules 1 and 2 and the excludable items shown in Schedule 3, the Service Company's equivalent costs per hour for the 12 months ended December 31, 2007 are calculated below.

	Attorney	Management Consultant	Certified Public Accountant	Professional Engineer	Total
Total management, professional & technical services charges	$ 376,485	$ 2,443,080	$ 3,318,764	$ 1,200,306	$ 7,338,635
Less:					
Contract services	$ 9,241	$ 105,513	$ 303,907	$ 13,634	$ 432,295
Travel expenses	$ 6,090	$ 81,313	$ 51,406	$ 40,671	$ 179,480
Computer hardware/software	$ 1	$ 31,987	$ 56,482	$ 18,759	$ 107,229
Net Service Charges (A)	$ 361,154	$ 2,224,266	$ 2,906,968	$ 1,127,242	$ 6,619,630
Total Hours (B)	2,418	16,815	39,098	12,807	71,137
Average Hourly Rate (A / B)	**$ 149**	**$ 132**	**$ 74**	**$ 88**

Outside Service Provider Hourly Rates

The next step in the cost comparison was to obtain the average billing rates for each outside service provider. The source of this information and the determination of the average rates are described in the paragraphs below.

It should be noted that professionals working for 3 of the 4 outside providers may be licensed to practice by state regulatory bodies. However, not every professional working for these firms is licensed. For instance, among certified public accounting firms within West Virginia's region, only partner/owners are predominantly CPAs, as shown in the table below. Some employees of the Service Company also have professional licenses. Thus, it is valid to compare the Service Company's hourly rates to those of the outside professional service providers included in this study.

	Firm Size		
Position	Small	Medium	Large
Partners/Owners	90.1%	93.0%	98.4%
Directors (over 10 years experience)	42.9%	60.9%	78.6%
Managers (6-10 years experience)	37.5%	51.2%	86.6%
Sr Associates (4-5 years experience)	0.0%	60.9%	64.5%
Associates (1-3 years experience)	0.0%	17.9%	19.2%
New Professionals	0.0%	0.0%	7.9%

Attorneys

The West Virginia Bar Association does not survey its members as to their hourly billing rates. In addition, publicly available billing rate information could not be found for West Virginia attorneys. Therefore, an estimate of West Virginia attorney rates was developed from a survey of Michigan lawyers conducted annually by the Michigan Lawyers Weekly. As presented in Schedule 4, the average rate for each Michigan firm respondent was adjusted for the cost of living differential between their location and Charleston, West Virginia. The survey includes rates that were in effect during 2007.

Management Consultants

The cost per hour for management consultants was developed from the 2007 annual survey performed by the Association of Management Consulting Firms, an industry trade organization. The first step in the calculation, presented in Schedule 5, was to determine an average rate by consultant position level. From these rates, a single weighted average hourly rate was calculated based upon the percent of time that is typically applied to a consulting assignment by each consultant position level. This survey includes rates that were in effect during 2006 for firms in the United States. Consultants typically do not limit their practice to any one region and must travel to a client's location. Thus, the U.S. national average is appropriate for comparison. The survey includes rates that were in effect at December 31, 2006. Thus, the 2006 average rate was escalated to June 30, 2007—the midpoint of the 12 months ended December 31, 2007.

Certified Public Accountants

The average hourly rate for West Virginia certified public accountants was developed from a 2006 survey performed by the American Institute of Certified Public Accountants (AICPA). Hourly rates in the AICPA survey are the average of firms in the south Atlantic region. The average hourly rate was calculated for a set of typical accountant positions, as shown in Schedule 6. Based on a typical staff assignment by each accountant position, a weighted average hourly rate was calculated. This survey covered hourly rates in effect during 2005. Thus, the 2005 average rate was escalated to June 30, 2007, the midpoint of 2007.

Professional Engineers

The Service Company provided hourly rate information for outside engineering firms that could have been used by WV American in 2007. As presented in Schedule 7, an average rate was developed for each engineering position level. Then, using a typical percentage mix of project time by engineering position, a weighted average cost per hour was calculated.

Source: Information provided by American Water Works Service Company

Service Company Versus Outside Provider Cost Comparison

As shown in the table below, Service Company costs per hour are considerably lower than those of outside providers.

	12 Months Ended December 31, 2007		
Service Provider	Service Company	Outside Provider	Difference--Service Co. Greater(Less) Than Outside
Attorney	$ 149	$ 244	$ (95)
Management Consultant	$ 132	$ 219	$ (87)
Certified Public Accountant	$ 74	$ 109	$ (35)
Professional Engineer	$ 88	$ 99	$ (11)

Based on these cost per hour differentials and the number of managerial and professional services hours billed to WV American during the 12-months ended December 31, 2007, outside service providers would have cost $3,204,959 more than the Service Company (see table below). Thus, on average, outside provider's hourly rates are almost 44% higher than those of the Service Company ($3,204,959 / $ 1,031,624).

	12 Months Ended December 31, 2007		
Service Provider	Hourly Rate Difference--Service Co. Greater(Less) Than Outside	Service Company Hours Charged	Dollar Difference
Attorney	$ (95)	2,418	$ (228,648)
Management Consultant	$ (87)	16,815	$ (1,462,293)
Certified Public Accountant	$ (35)	39,098	$ (1,370,273)
Professional Engineer	$ (11)	12,807	$ (143,746)
Service Company Less Than Outside Providers			$ (3,204,959)

If WV American were to use outside service providers rather than the Service Company for managerial and professional services, it would incur other additional expenses besides those associated with higher hourly rates. Managing outside firms who would perform 71,137 hours of work (more than 47 full-time equivalents at 1,500 "billable" hours per FTE per year) would add a significant workload to the existing WV American management team. Thus, it would be necessary for WV American to add at least one half of one position to supervise the outside firms and ensure they delivered quality and timely services. The individuals that would fill this position would need a good understanding of each profession being managed. They must also have management experience and the authority necessary to give them credibility with the outside firms. As calculated in the table below, this position would add another $149,400 per year to WV American's personnel expenses.

Cost of Adding a Professional Position To WVA's Sta	Total
New Positions' Salary	$ 100,000
Benefits (at 49.4%)	$ 49,400
Office Expenses (15.2%)	$ 15,200
Total Cost of Full Time Position	$ 149,400

Thus, the total effect on the ratepayers of WV American of contracting all services now provided by the Service Company would be an increase in their costs of $3,354,359 ($3,204,959 + $149,400). Based on the results of this comparison, it is possible to conclude that the Service Company charged WV American at the lower of cost or market for services provided during 2007.

Other Cost Comparisons

Every year, the Belleville Lab conducts a comparison of its cost for performing major tests to the cost of using outside testing laboratories. Over the past several years, these surveys have shown the following results been as follows:

Year	Number of Major Tests Surveyed	Percent Belleville Lower Than Outside Labs
2000	26	15%
2001	25	19%
2002	24	16%
2003	23	10%
2004	24	9%
2005	24	25%
2006	24	31%

These studies provide additional evidence that the Service Company arrangement is the lowest-cost alternative for WV American.

V – Customer Account Services Cost Comparison

Background

It is difficult to compare the cost of American Water's National Call Centers with outside providers of the same call center-related services. Call center survey data is proprietary and expensive to obtain. For this reason, WV American's National Call Center costs are compared to those of neighboring electric utilities because the data necessary to make this comparison is readily available to the public.

Electric utility cost information comes from the FERC Form 1 that each must file. FERC's chart of accounts is defined in chapter 18, part 101 of Code of Federal Regulations. FERC accounts that contain call center-related expenses and are used in this study's comparison are:

- Account 903 Customer Accounts Expense – Records and Collection Expense
- Account 905 Customer Accounts Expense – Miscellaneous Customer Accounts Expense.

In addition, labor-related overheads charged to the following FERC accounts must be added to the labor components of Accounts 903 and 905.

- Account 926 Employee Pension and Benefits
- Account 408 Taxes Other Than Income (employer's portion of FICA).

Schedule 8 provides FERC's description of what should be charged to these accounts. In questioning the controller of a large Southeastern electric utility, it was determined that expenses of the activities described below are recorded in the designated FERC accounts.

903 Records and Collection Expense

- Customer Call Center – customer calls/contact, credit, order taking/disposition, bill collection efforts, outage calls
- Call Center IT – maintenance of phone banks, voice recognition units, call center software applications, telecommunications
- Customer billing – bill printing, stuffing and mailing
- Remittance processing – processing of customer payments received in the mail
- Bill payment centers – locations where customers can pay their bills in person

905 Miscellaneous Customer Accounts Expense

- Customer Information System IT – maintenance and support of the customer information system

This study assumes the FERC accounts for other electric and gas utilities contain expenses for the same activities.

West Virginia American Water Company
FERC Account Descriptions

903 – Customer Records and Collection Expenses

This account shall include the cost of labor, materials used and expenses incurred in work on customer applications, contracts, orders, credit investigations, billing and accounting, collections and complaints.

Labor

1. Receiving, preparing, recording and handling routine orders for service, disconnections, transfers or meter tests initiated by the customer, excluding the cost of carrying out such orders, which is chargeable to the account appropriate for the work called for by such orders.
2. Investigations of customers' credit and keeping of records pertaining thereto, including records of uncollectible accounts written off.
3. Receiving, refunding or applying customer deposits and maintaining customer deposit, line extension, and other miscellaneous records.
4. Checking consumption shown by meter readers' reports where incidental to preparation of billing data.
5. Preparing address plates and addressing bills and delinquent notices.
6. Preparing billing data.
7. Operating billing and bookkeeping machines.
8. Verifying billing records with contracts or rate schedules.
9. Preparing bills for delivery, and mailing or delivering bills.
10. Collecting revenues, including collection from prepayment meters unless incidental to meter reading operations.
11. Balancing collections, preparing collections for deposit, and preparing cash reports.
12. Posting collections and other credits or charges to customer accounts and extending unpaid balances.
13. Balancing customer accounts and controls.
14. Preparing, mailing, or delivering delinquent notices and preparing reports of delinquent accounts.
15. Final meter reading of delinquent accounts when done by collectors incidental to regular activities.
16. Disconnecting and reconnecting services because of nonpayment of bills.
17. Receiving, recording, and handling of inquiries, complaints, and requests for investigations from customers, including preparation of necessary orders, but excluding the cost of carrying out such orders, which is chargeable to the account appropriate for the work called for by such orders.
18. Statistical and tabulating work on customer accounts and revenues, but not including special analyses for sales department, rate department, or other general purposes, unless incidental to regular customer accounting routines.
19. Preparing and periodically rewriting meter reading sheets.
20. Determining consumption and computing estimated or average consumption when performed by employees other than those engaged in reading meters.

Materials and expenses

21. Address plates and supplies.
22. Cash overages and shortages.
23. Commissions or fees to others for collecting.
24. Payments to credit organizations for investigations and reports.
25. Postage.
26. Transportation expenses, including transportation of customer bills and meter books under centralized billing procedure.
27. Transportation, meals, and incidental expenses.
28. Bank charges, exchange, and other fees for cashing and depositing customers' checks.
29. Forms for recording orders for services, removals, etc.
30. Rent of mechanical equipment.

West Virginia American Water Company
FERC Account Descriptions

905 – Miscellaneous Customer Accounts Expenses
This account shall include the cost of labor, materials used and expenses incurred not provided for in other accounts.

Labor

1. General clerical and stenographic work.
2. Miscellaneous labor.

Materials and expenses

3. Communication service.
4. Miscellaneous office supplies and expenses and stationery and printing other than those specifically provided for in accounts 902 and 903.

Comparison Group

Electric utilities included in the comparison group are shown in the table below. These are companies whose FERC Form 1 shows amounts for accounts 903 and 905.

West Virginia	• Wheeling Power	
Kentucky	• Kentucky Power • Kentucky Utilities	• Louisville Gas & Electric • Union Light, Heat & Power
Virginia	• Appalachian Power	• Virginia Electric Power
Ohio	• Cincinnati Gas & Electric • Cleveland Electric • Columbus Southern Power • Dayton Power & Light	• Ohio Edison • Ohio Power • Toledo Edison
Pennsylvania	• Duquesne Light • PECO Energy • Pennsylvania Electric	• Pennsylvania Power • PPL Electric
Maryland	• Baltimore Gas & Electric • Delmarva Power & Light	• Potomac Electric

Comparison Approach

The basis for this comparison is customer account services expenses per customer. WV American's cost pool was developed to include the same expenses included in electric utility's FERC accounts 903 and 905. As shown in the graphic below, WV American's resultant cost pool contains the expenses of Service Company locations and certain operating company expenses.

American Water
Service Company
Pensacola & Alton Call Centers
a. Customer contact
b. Customer order processing
c. Billing information processing
d. Collections
e. Correspondence processing
f. Customer payment processing
Operating Company
a. Postage and forms

Electric Utilities
FERC Acct 903 - Records and Collection Expense and FERC Acct 905 - Misc Customer Accounts Expense
a. Customer contact
b. Customer order processing
c. Bill preparation and mailing
d. Collections
e. Payment processing
f. Correspondence processing

WV American Cost Per Customer

In order to make a valid comparison to neighboring electric utilities, certain adjustments had to be made to the applicable Service Company charges to WV American. It was necessary to adjust the National Call Center charges because electric utilities experience an average of 2.50 calls per customer compared to American Water's 1.33 calls per customer. Thus, National Call Center expenses had to be increased, for comparison purposes, to reflect its costs at a 2.50 calls per customer level. As shown below, WV American's adjusted annual expense per customer is $32.48—the number that can be compared to neighboring electric utilities' expenses. WV American's 2007 unadjusted annual expense per customer is $21.90.

West Virginia American Water Company

	Cost Component	Service Co Charges	Adjustment Fewer Calls For Water Cos. (A)	Adjusted	
Service Company					
Call Centers	Call processing, order processing, credit, bill collection	$ 2,174,942	$ 1,917,855	$ 4,092,797	
Regional Offices		$ 395,635		$ 395,635	
Service Company	Customer payment processing			$ 102,473	Note B
Operating Company	Postage & forms			$ 1,007,341	
			Cost Pool Total	$ 5,598,246	
			Total Customers	168,060	
	12 Months Ended December 31, 2007 Cost Per WV American Customer			**$ 33.31**	

Note A: Adjustment for American Water's fewer calls per customer

This adjustment is necessary because water utilities experience fewer calls per customer than do electric utilities

Test year annualized Call Center charges		$ 2,174,942
Electric utility industry's avg calls/customer	2.50	
American Water's avg calls/customer	1.33	
Percent different	88%	88%
Total Adjustment B		$ 1,917,855

Note B: Estimated customer payment processing expenses

Number of customers	168,060
Number of payments/customer/year	4.3
Total payments processed/year	722,658
Bank charge per item	$ 0.1418
Total estimated annual expense	$ 102,473

Electric Utility Group Cost Per Customer

Schedule 9 shows the actual 2007 customer accounts expense per customer calculation for the electric utility comparison group. All of the underlying data were taken from each utility's FERC Form 1.

Summary Of Results

As shown in the table below, WV American's cost per customer is within a reasonable range of the average of the neighboring electric utility comparison group. It can therefore be concluded that WV American's 2007 customer accounts-related expenses, including those of the Alton and Pensacola Call Centers, assigned by the Service Company to WV American were comparable to those of other utilities.

Average Customer Accounts Expense Per Customer		
Louisville Gas & Electric	$	13.71
Pennsylvania Electric	$	13.97
Virginia Electric Power	$	15.89
Duquesne Light	$	17.18
Pennsylvania Power	$	17.24

VI - Need For Service Company Services

Analysis Of Services

The third aspect of this study was an assessment of whether the services that are provided to WV American by the Service Company would be necessary if WV American were a stand-alone water utility. The first step in this evaluation was to determine specifically what the Service Company does for WV American. Based on discussions with Service Company personnel, the matrix in Schedule 10 was created showing which entity—WV American or a Service Company location—is responsible for each of the functions WV American requires to ultimately provide service to its customers. This matrix was reviewed to determine: (1) if there was redundancy or overlap in the services being provided by the Service Company and (2) if Service Company services are typical of those needed by a stand-alone water utility.

Upon review of Schedule 10, the following conclusions can be drawn:

- The services that the Service Company provides are necessary and would be required even if WV American were a stand-alone water utility.

- There is no redundancy or overlap in the services provided by the Service Company to WV American. For all of the services listed in Schedule 12, there was only one entity that was primarily responsible for the service.

Designation Of Responsibility For Water Utility Functions

Primarily Responsible P Provides Support S	Performed By:						
		American Water Service Company

Governance Practices Associated With Service Company Charges

There are several ways by which WV American exercises control over Service Company services and charges. The most important of these are described below.

- **Company President Oversight** – The Company President of the state utility is responsible for the overall performance of the each operating company or district in the state. Through the Executive Vice President of the Western Division, each state utility President in the division has a significant voice in major business decisions of American Water and has the ability to monitor Service Company quality and spending.

- **Vice President Finance** – The VP Finance of the Western states is responsible for the financial reporting, performance and internal controls of each of the operating companies in the region. The VP Finance monitors the performance and reporting from the Service Company. The VP Finance attends monthly Business Plan Review sessions with the WV American President and finance group to review actual results and address forecast modifications for the remainder of the year. The VP Finance reports on the quarterly financial results and forecast updates to WV American's Board of Directors. The rates function reports to the VP Finance, who reviews and authorizes the filing of WV American rate cases and regularly monitors the status of cases. The operating subsidiary interacts with the VP Finance to discuss various issues.

- **Operating Company Board Oversight** – WV American's board of directors includes members of American Water's senior executive team and members of the Division management team. This helps ensure that WV American's needs are a factor in the delivery of Service Company services.

- **Service Company Budget Review/Approval** – WV American's President and the Executive VP sit on the Service Company board and that board must formally approve the budget for Service Company charges for the next year. These budgeted charges are consolidated with the operating company's own spending into an overall budget which must be approved by the operating company's board of directors. WV American's president is also on the local board.

- **Major Project Review And Approval** – Major projects undertaken by the Service Company must first be reviewed by American Water's senior executive team, which includes the Executive VP. The Executive VP, with input from the Division management team (including the president of WV American), has the ability to impact all new initiatives and projects before they are authorized.

- **Service Company Bill Scrutiny** – Western Region Finance personnel review the monthly Service Company bill for accuracy and reasonableness on a monthly basis. WV American's financial analyst has dialogue with regional office personnel concerning the monthly bill and any mistakes or overcharges are credited on a subsequent billing. The Western Region Finance unit prepares an actual to budget comparison of management fees each month for use in identifying unusual variances. Service Company actual to budget comparison is included in the monthly FRP. Unusual variances are researched, explanations are provided and any corrections are made, as necessary.

- **Service Company Budget Variance Reporting** – Each month, a summary variance analysis is prepared that explains differences between budgeted and actual Service Company spending. In addition, a more detailed monthly variance report, called the "Statement of Expenses and Billed Charges," is produced by Service Company location and shows actual spending for the month.

- **Operating Company Budget Variance Reporting –** The "Budget/Plan Analysis," produced monthly, has a line item for Management Fees (i.e., Service Company charges). In this way, Service Company budget versus actual charges can be monitored for the month and year-to-date. Additional information exists that allows more detailed analysis of "Regional" and "Corporate" Management Fees.

- **Capital Investment Management ("CIM") –** CIM is one of American Water's primary business planning processes. It covers capital and asset planning and is employed throughout American Water. CIM provides a full range of governance practices, including a formal protocol for assessing system needs, prioritizing expenditures, managing the capital program, approving project spending, delivering projects and measuring outputs. CIM ensures that:

  - Capital expenditure plans are aligned with the strategic intent of the business
  - The impact of capital expenditure and income plans are fully reflected in operating expense plans
  - The impacts of these plans are understood and affordable, and
  - Effective controls are in place over budgets (through business plans) and individual capital projects (through appropriate authorization thresholds, management and reporting processes).

  The CIM process was designed to optimize the effectiveness of asset investment. The process is managed at three levels for all American Water companies, including all WV American Operating Units. Monthly meetings of the CIM are held to review capital spending compared to plan, review new project requests, and review updates or modifications to existing projects. The President of WV American, VP Finance, and others participate as necessary (e.g. WV American operations managers and Rates Manager) and provide the data used in the monthly review schedules.

VII – Other Comparative Measures Of Reasonableness Of Service Company Charges

WV American's Service Company Cost Per Customer

During 2007, WV American was charged $55 per customer in O&M expenses by the Service Company. As shown in the table below, this calculation is based on net testable O&M, which eliminates certain O&M items for which WV American has not requested cost recovery.

	2007
Net Testable Service Company O&M Expenses	$ 9,224,272
WV American Customers (12/31/07)	168,060
WV American Cost Per Customer	$ 55

Comparison Group Cost Per Customer

Every centralized service company in a holding company system must file a Form 60 in accordance with the Public Utility Holding Company Act of 2005, Section 1270, Section 390 of the Federal Power Act and 18 C.F.R. paragraph 366.23. This report is designed to collect financial information from service companies that are subject to regulation by the FERC.

Twenty-three utility holding companies filed a Form 60 for 2007. All but two were included in the comparison group. The service company for PNM Resources, Inc. was excluded because its 2007 service company cost per regulated utility customer was clearly an anomaly as a negative number. This result is likely due to the unique manner by which PNM's service company expenses are reported on Form 60. Duke Energy was also excluded from the comparison group because one of its two service companies did not provide numbers for its Form 60. Thus, it was not possible to develop Duke's consolidated service company cost per customer for 2007.

Schedule 11 compares the services provided by American Water's Service Company to the services provided by comparison group service companies. In general, the types of services provided by American Water's Service Company are similar to those provided by comparison group service companies.

O&M expenses charged to utility affiliates for the comparison group service companies were obtained from Schedule XVII – Schedule of Expense Distribution by Department or Service Function (p. 305 to 305c) of each entity's FERC Form 60. This schedule shows charges by category of service (e.g., accounting, information technology) and type of cost (e.g., labor, benefits, outside services). The following were eliminated from the comparison group's total expenses because they are not in American Water Service Company's 2007 charges to WV American:

- All electric- and gas-related services
- Income taxes (account 409), provision for deferred income taxes (account 410), provision for deferred income taxes – credit (account 411) and investment tax credit (account 411.5).
- Donations (account 426.1)
- Interest on long-term debt (account 427), interest on debt to associate companies (account 430) and other interest expense (account 431)

Comparison group service company 2007 expenses were also adjusted to remove charges to non-regulated affiliates from the cost pool used to calculate the cost per regulated service customer. This determination was made using information from the FERC Form 60 schedule: Account 457 – Analysis of Billing – Associate Companies.

Schedule 12 shows WV American's 2007 Service Company cost per customer of $55 to be considerably lower than the average of $122 per customer for the comparison group service companies. Only 2 of 21 comparison group service companies had a lower 2007 cost per customer than WV American. These results further support the conclusion that the Service Company's 2007 charges to WV American were reasonable.

WITNESS: P.BARYENBRUCH

LONG ISLAND AMERICAN WATER

1. Q. Please state your name and business address.

A. Patrick L. Baryenbruch, 302 East Park Drive, Raleigh, North Carolina 27605.

2. Q. Please describe your educational and professional background.

A. I received a Bachelors degree in accounting from the University of Wisconsin-Oshkosh in 1974 and a Masters in Business Administration degree from the University of Michigan in 1979.

I am a financial consultant and am a member of the American Institute of Certified Public Accountants and the North Carolina Association of Certified Public Accountants.

I began my career as a staff accountant with Arthur Andersen & Company where I performed financial audits of utilities, banks and finance companies. After three years I left to pursue an M.B.A. degree. Upon graduation from business school, I worked with the consulting firms of Theodore Barry & Associates and Scott, Madden & Associates.

During my consulting career, I have performed consulting assignments for approximately 50 utilities and 10 public service commissions. I have participated as project manager, lead or staff consultant for 24 commission-ordered management and prudence audits of public utilities. Of these, I have been responsible for evaluating the area of affiliate charges and allocation of corporate expenses in the Commission-ordered audits of Connecticut Light and Power, Connecticut Natural Gas, General Water Corporation (Pennsylvania Operations), Philadelphia Suburban Water Company (now Aqua America), Pacific Gas & Electric Company and Southern California Edison.

My firm has performed the commission-ordered audit of Southern California Edison's 2002, 2003, 2004 and 2005 transactions with its non-regulated affiliate companies.

3. Q. What are your duties and responsibilities in your current position?

A. I am the President of my own consulting practice, Baryenbruch & Company, which was established in 1985. In that capacity, I provide consulting services to utilities and their regulators.

4. Q. Please describe the reason for your testimony in this case.

A. I am presenting the results of my study which evaluated the services provided by American Water Service Company ("Service Company") during 2006 to Long Island American Water (LIAW). This study was undertaken in conjunction with LIAW's rate case and is accurate and realiable to the best of my knowledge and belief. The study is attached as Exhibit PLB-1.

5. Q. What were the objectives of your study?

A. This study was undertaken to answer three questions. First, was LIAW charged the lower of cost or market for managerial and professional services provided by the Service Company during 2006? Second, were the 2006 costs of the Service Company's customer accounts services, including those of the National Call Centers, reasonable? Third, are the services LIAW receives from Service Company necessary?

6. Q. What conclusions were you able to draw concerning question number 1, whether LIAW was charged the lower of cost or market services provided by the Service Company?

A. I was able to draw the following conclusions:

(1) LIAW was charged the lower of cost or market for managerial and professional services during the 12 months ended December 31, 2006.

(2) On average, the hourly rates for outside service providers are 59% higher than the Service Company's hourly rates.

(3) The managerial and professional services provided by the Service Company are vital and could not be procured externally by LIAW without careful supervision on the part of LIAW. If these services were contracted entirely to outside providers, LIAW would have to add at least one position to manage activities of outside firms. These positions would be necessary to ensure the quality and timeliness of services provided.

(4) If all the managerial and professional services now provided by the Service Company had been out-sourced during the 12-months ended December 31, 2006, LIAW and its ratepayers would have incurred an additional $1.8 million in expenses. This amount includes the higher cost of outside providers and the cost of a LIAW position needed to direct the outsourced work.

(5) This study's hourly rate comparison actually understates the cost advantages that accrue to LIAW from its use of the Service Company. Outside service providers generally bill for every hour worked. Service Company personnel, on the other hand, charge a maximum 8 per day even when they work more. If the overtime hours of Service Company personnel had been factored into the hourly rate calculation, the Service Company would have had an even greater annual dollar advantage than the $1.8 million cited above.

(6) It would be difficult for LIAW to find local service providers with the same specialized water industry expertise as that possessed by the Service Company staff. Service Company personnel spend substantially all their time serving operating water companies. This specialization brings with it a unique knowledge of water utility operations and regulation that is most likely unavailable from local service providers.

(7) Service Company fees do not include any profit markup. Only its actual cost of service is being recovered from LIAW ratepayers.

7. Q. What is your conclusion regarding the reasonableness of the costs of the National Call Center that provides service to LIAW?

A. I was able to determine that the cost of the Service Company's customer accounts services, including those provided by the National Call Center, is below the average of the comparison group of neighboring electric utilities. As will be explained further herein, this group of companies provides a reasonable proxy group for comparison to a regulated utility of the size and scope of LIAW. During the 12-months ended December 31, 2006, the customer accounts cost for LIAW customers was $26.98 compared to the 2005 average of $29.32 for neighboring electric utilities. The highest comparison group per customer cost was $77.79 and the lowest $13.83.

9. Q. What conclusions were you able to draw concerning the necessity of the services LIAW receives from the Service Company?

A. I was able to draw the following conclusions:

(1) The services that the Service Company provides are necessary and would be required even if LIAW were a stand-alone water utility.

(2) There is no redundancy or overlap in the services provided by the Service Company to LIAW. For all of the services listed in Schedule 11 of my study, there was only one entity that was primarily responsible for the service.

10. Q. Does this complete your testimony?

A. Yes.

Purpose Of This Study

This study was undertaken to answer three questions concerning the services provided by AGL Services Company (AGSC) to Atlanta Gas Light Company (AGLC), each of which bears on the reasonableness of those charges as incurred during the 12 months ended September 30, 2009:

1. Were AGSC's charges to AGLC during the 12-months ended September 30, 2009 reasonable compared to other utility service companies?

2. Was AGLC charged the lower of cost or market for managerial and professional services provided by the AGSC during the test period?

3. Are the services AGLC receives from AGSC necessary?

Study Results

Concerning question 1, the following conclusion was reached:

AGSC's costs for the 12 months ended September 30, 2009 per AGLC customer were reasonable. During that period, AGLC was charged $38 per customer for administrative and general ("A&G")-related services provided by the Services Company. This compares favorably to costs per customer for electric and combination electric/gas service companies that average $100 for service companies reporting to the Federal Energy Regulatory Commission ("FERC"). Only 2 of the 24 utility service companies that filed a FERC Form 60 for 2008 had a lower A&G cost per customer than AGLC's charges from AGSC.

Concerning question 2, the following conclusions can be drawn from this study:

- AGLC was charged the lower of cost or market for managerial and professional services during the 12-months ended September 30, 2009.

- On average, the hourly rates for outside service providers are 62% higher than the AGSC's hourly rates.

- If all the managerial and professional services now provided by AGSC had been outsourced during the 12-months ended September 30, 2009, AGLC and its ratepayers would have incurred $42 million in additional expenses.

- AGSC fees do not include any profit markup. Only its actual cost of service is being recovered from AGLC ratepayers.

Concerning question 3, the following conclusions were drawn:

- The services that AGSC provides are necessary and would be required even if AGLC were a stand-alone utility.

- In addition, there is no redundancy or overlap in the services provided by AGSC to AGLC. Based on an analysis of the structures and employee positions of AGSC and AGLC, it is clear that functions are distinctly organized with no duplication of activities.

Overview of AGL Resources Inc.

AGSC is a wholly owned subsidiary of AGL Resources Inc. (AGLR), an energy services holding company whose principle business is the distribution of natural gas to approximately 2.2 million end-use customers in Georgia, Virginia, Tennessee, New Jersey, Florida and Maryland. AGLR's principal subsidiaries are shown below.

Segment	Businesses
Distribution Operations	• Atlanta Gas Light Company • Chattanooga Gas Company • Elizabethtown Gas Company • Elkton Gas Company • Florida City Gas Company • Virginia Natural Gas, Inc.
Retail Energy Operations	• SouthStar Energy Services
Wholesale Energy Services	• Sequent Energy Management • Compass Energy Services
Energy Investments	• AGL Networks • Golden Triangle Storage • Jefferson Island Storage & Hub, LLC
Energy Services	• AGL Energy Services

Source: AGL Resources (http://www.aglresources.com)

AGSC follows a service company model used by many utility holding companies that own multiple regulated utilities. By consolidating executive, management and professional services into a single service company, utility holding companies are able to realize the following benefits for ratepayers:

- Purchasing Economies – Common expenses (e.g., insurance, piping) can be procured on a much larger scale thereby providing greater bargaining power for the combined entity compared to individual utility operating companies. A service company facilitates corporate-wide purchasing programs through its procurement and contract administration functions.

- Operating Economies of Scale – A service company is able to deliver services more efficiently because workloads can be balanced across more persons and facilities. For instance, AGSC is able to maintain one principal data center for the entire corporation. This is much more cost-efficient than each operating utility funding their own data center with its large fixed hardware, software and staffing costs.

- Continuity of Service – Centralizing service company personnel who perform similar services facilitates job cross-training and sharing of knowledge and expertise. This makes it easier to deal with staff turnover and absences and to sustain high levels of service to operating utilities. An individual operating utility might experience considerable disruption if a key professional left and it was necessary to hire outside to fill the vacancy.

- Maintenance of Corporate-Wide Standards – Personnel in AGSC establish standards for many functions (e.g., engineering designs, operating procedures and maintenance practices). It is easier to ensure these standards are followed by every operating utility because their implementation is overseen by AGSC.

- Improved Governance – AGSC provides another dimension of management and financial oversight that supplements local operating utility management. The Services Company facilitates standard planning and reporting that help ensure operating utilities meet the requirements of their customers in a cost effective manner.

- Retention of Personnel – A service company organization provides operating utility personnel with another career path beyond what may be available on a local level. These opportunities tend to improve employee retention.

AGSC follows the model for other utility service companies in another important regard. Its services are provided to affiliate operating utilities, like AGLC, at cost. AGSC is not a profit-making entity. It assigns only its actual expenses to the AGLR subsidiaries it serves.

AGSC provides affiliate companies, including AGLC, with management and administrative services listed below and defined in Schedule 1.

Rates and regulatory	Information systems and technology
Internal auditing	Executive
Strategic planning	Investor relations
External relations	Customer services
Gas supply and capacity management	Employee services
Legal services and risk management	Engineering
Marketing	Business support
Financial services	Other

Schedule 2 lists the regulated and non-regulated affiliate entities that are provided service by AGSC.

Services provided by AGSC to AGLC are governed by a services agreement executed on July 9, 2008.

Atlanta Gas Light Company
Definition Of AGL Services Company Services

Rates and Regulatory	AGSC assists the AGLR System Companies in the analysis of their rate structures and in the formulation of rate policies and advises and assists AGLR System Companies in proceedings before regulatory bodies involving the rates and operations of AGLR System Companies and of other competitors where such rates and operations directly or indirectly affect the AGLR System Companies. AGSC also assists AGLR System Companies by analyzing pipeline safety, environmental and safety regulations; writing the appropriate procedures to assist the system companies to stay in compliance with those regulations; providing internal reviews to assure operational, environmental and safety compliance; assisting in work with state and federal pipeline safety regulators and managing leak survey, pipeline integrity, locate and right of way contractors.
Internal Auditing	AGSC performs periodic reviews of operational, compliance, financial and information systems for AGLR System Companies.
Strategic Planning	AGSC advises and assists AGLR System Companies with the preparation of strategic business plans and corporate strategies.
External Relations	AGSC maintains relationships with government policy makers, conducts lobbying activities and provides community relations support.
Gas Supply and Capacity Management	AGSC provides gas control, scheduling, capacity planning and monitoring services. AGSC manages a centralized gas control center which provides natural gas delivery for natural gas distribution affiliates. AGSC also provides scheduling functions between the natural gas distribution affiliates and the pipelines for their daily supply. AGSC provides capacity planning services for each natural gas distribution affiliate including identifying present and future gas requirements to meet the needs of each natural gas distribution affiliate. AGSC provides monitoring of natural gas storage facilities and telecommunications networks. AGSC also coordinates the management of gas supply for natural gas distribution affiliates who offer retail services and coordinates gas transmission and storage services for all natural gas distribution affiliates to ensure the most efficient use of services and to capture economies of scale as a larger purchaser in the4 market. Individually, natural gas distribution affiliates may, however, remain as the contract party under any agreement.
Legal Services and Risk Management.	AGSC provides various legal services and general legal oversight. In addition, AGSC provides insurance, claims, security, environmental and safety related services and performs corporate secretarial functions.
Marketing	AGSC assists AGLR System Companies by providing analysis, implementation and maintenance of line extension policies, by providing analysis of tariff rates in response to customer needs and by developing marketing strategies and programs.
Financial Services	AGSC provides various services to AGLR System Companies including corporate tax, treasury, corporate accounting and reporting, general ledger maintenance and all accounting recordkeeping, processing certain accounts such as accounts payable, cash management, and others as may be deemed necessary, including hedging policy and oversight, financial planning and regulatory support (for all natural gas distribution affiliates and other AGLR System Company that interact with regulators or regulated companies) . Each AGLR System Company may also maintain its own corporate and accounting group and engage AGSC to provide advice and assistance on accounting matters, including the development of accounting practices, procedures and controls, the preparation and analysis of financial reports and the filing of financial reports with regulatory bodies, on a system-wide basis.

Atlanta Gas Light Company
Definition Of AGL Services Company Services

Information Systems and Technology	AGSC provides the AGLR System Companies with production support of web, mainframe and distributed computing applications, servers and networks. Also, provides deskside asset management, disaster recovery, data network, application security and voice communications services.
Executive	AGSC utilizes the executive staff of AGLR in order to assist the AGLR System Companies in formulating and executing general plans and policies, including operations, issuances of securities, appointment of executive personnel, budgets and financing plans, expansion of services, acquisitions and dispositions of property, public relationships and other related matters.
Investor Relations	AGSC maintains relationships with the financial community, provides shareholder services for the benefit of AGLR System Companies.
Customer Services	AGSC provides billing, mailing, remittance processing, call center and customer communication services for customers; by providing credit and collections support and analysis; by providing support for response to customer complaints and by providing customer service surveys to improve service and efficiency.
Employee Services	AGSC assists AGLR System Companies in developing employee relations policies and programs, and training personnel in a coordinated manner throughout the AGLR System Companies. Each AGLR System Company may maintain a human resources group to handle the individualized application of policies and programs. AGSC also provides payroll services, management of the employee benefit plans and employee communications
Engineering	AGSC provides engineering services for the AGLR System Companies. These services include infrastructure expansion and improvements, system analysis and modeling, GIS mapping and updates and maintenance and general engineering expertise.
Business Support – Purchasing	AGSC provides procurement services to AGLR System Companies.
Business Support – Facilities Management	AGSC provides facilities management services for offices owned by AGLR System Companies.
Business Support – Fleet	AGSC provides fleet services for vehicles owned or leased by AGLR System Companies.
Business Support – Other	AGSC provides other services to AGLR System companies such as records management, media and visual services and business process services.
Other	AGSC provides other services, such as business development, as requested by AGLR System Companies.

AGSC Cost Assignment Process

AGSC provides services to operating companies at cost, as stipulated in the current services agreement with AGLC. Within its accounting system, AGSC identifies its service costs through "account codes" including cost centers, account numbers, capital projects and O&M projects. This data enables AGSC to accumulate its expenses and properly assign them to the affiliate companies it serves.

To the extent practicable, AGSC expenses are assigned directly to affiliates being served. AGSC expenses that cannot be assigned directly are allocated among affiliates on a basis that is pertinent to the underlying services. The table shows the methods by which such costs of service are allocated to AGSC affiliates.

Service Category	Allocation Basis
Rates and Regulatory	End-Use Customers Ratio
Internal Auditing	Composite Ratio (employees, assets, operating expenses, operating margin)
Strategic Planning	Composite Ratio
External Relations	Composite Ratio
Gas Supply and Capacity Mgmt	End-Use Customers Ratio

- Call Center Services	Call/Phone Volume Ratio
- Non-Call Center Services	End-Use Customers Ratio
Employee Services	Employees Ratio
Engineering	End-Use Customers Ratio
Business Support	Composite Ratio

During the 12 months ended September 30, 2009, AGSC billed AGLC $73,953,032. The table below shows the breakdown of these charges by major service category.

Service Category	Year Ended Sep 30, 2008
Customer Services	$ 6,055,415
Employee Services	$ 3,858,581
Engineering	$ 5,649,925
Executive	$ 4,333,637
External Relations	$ 1,111,343
Facilities Mgt	$ 5,120,461
Financial Services	$ 4,844,139
Fleet	$ 481,945
Gas Supply & Capacity Mgmt	$ 8,956,667
Information Services	$ 22,116,724
Internal Audit	$ 615,067
Investor Relations	$ 136,415
Legal Services	$ 3,522,067
Marketing Services	$ 2,173,019
Other	$ 1,878,416
Rates and Regulatory	$ 2,644,645
Supply Chain Management	$ 454,569
Total AGSC Billings to AGL	**$ 73,953,032**

This study's first question question—whether AGSC 12 months ended September 30, 2009 charges were reasonable—was determined by comparing AGLC's A&G-related AGSC charges per customer to the same charges for utility companies that must file the FERC Form 60 – Annual Report of Service Companies. AGLC's per customer cost is compared to Form 60 data from 2008, the latest year available (service companies must file their 2009 Form 60s by May 1, 2010).

The second question—whether AGSC's 12 months ended September 30, 2009 charges were priced at the lower of cost or market—was evaluated by comparing the cost per hour for managerial and professional services provided by AGSC personnel to hourly billing rates that would be charged by outside providers of equivalent services. AGSC costs per hour were based on actual charges to AGLC during the 12 months ended September 30, 2009. Outside providers' billing rates came from surveys or other information from professionals that could perform the services now provided by AGSC.

The third question—the necessity of AGSC services—was investigated by defining the services provided to AGLC and determining if these services would be required if AGLC were a stand-alone utility.

AGLC's Service Company Cost Per Customer

During the 12 months ended September 30, 2009, AGLC was charged $38 per customer by AGSC for A&G-related services. As shown in the table below, total non-A&G items are eliminated from total AGSC charges to arrive at this per customer expense.

	12 Months Ended Sep. 30, 2008
Total AGSC Billings to AGL	$ 73,953,032
Less: Non-A&G charges	
Engineering	$ (5,649,925)
Gas Supply & Capacity Mgmt	$ (8,956,667)
Net A&G-related charges	$ 59,346,441
AGLC Customers (12/31/09)	1,549,000
AGSC A&G Per AGL Customer	$ 38

Comparison Group Cost Per Customer

Every centralized service company in a holding company system must file a Form 60, unless exempt, in accordance with the Public Utility Holding Company Act of 2005, Section 1270, Section 390 of the Federal Power Act and 18 C.F.R. paragraph 366.23. This report is designed to collect financial information from service companies that are subject to regulation by the FERC.

AGLR is a holding company solely because it owns several local distribution companies (LDCs), such as AGLC. However, since AGLR's LDCs are not regulated as natural gas companies under the natural gas act, it has been granted an exemption from filing the Form 60.

For 2008, a Form 60 was filed by 24 utility service companies, all of which serve utilities that provide regulated electric and, in some cases, gas service to retail customers. In order to make a valid comparison of this group's costs to those of AGSC, it was necessary to isolate expenses that that they have in common. These include A&G-related charges associated with the following FERC accounts:

901 – Supervision	923 – Outside services employed
907 – Supervision	926 – Employee pensions and benefits
910 – Misc customer service and info expenses	928 – Regulatory commission expenses
911 – Supervision	930.2 – Miscellaneous general expenses
920 - Administrative and general salaries	931 – Rents
921 – Office supplies and expenses	935 – Maintenance of structures and equipment

O&M expenses charged to utility affiliates for the comparison group service companies were obtained from Schedule XVI – Analysis of Charges for Service Associate and Non-Associate Companies (p. 303 to 306) of each entity's FERC Form 60. This schedule shows charges by FERC Account.

Comparison group service company 2008 expenses were also adjusted to remove charges to non-regulated affiliates from the cost pool used to calculate the cost per regulated service customer. This determination was made using information from the FERC Form 60 schedule: Account 457 – Analysis of Billing – Associate Companies.

IV – Question 1 – Reasonableness of Service Company Charges

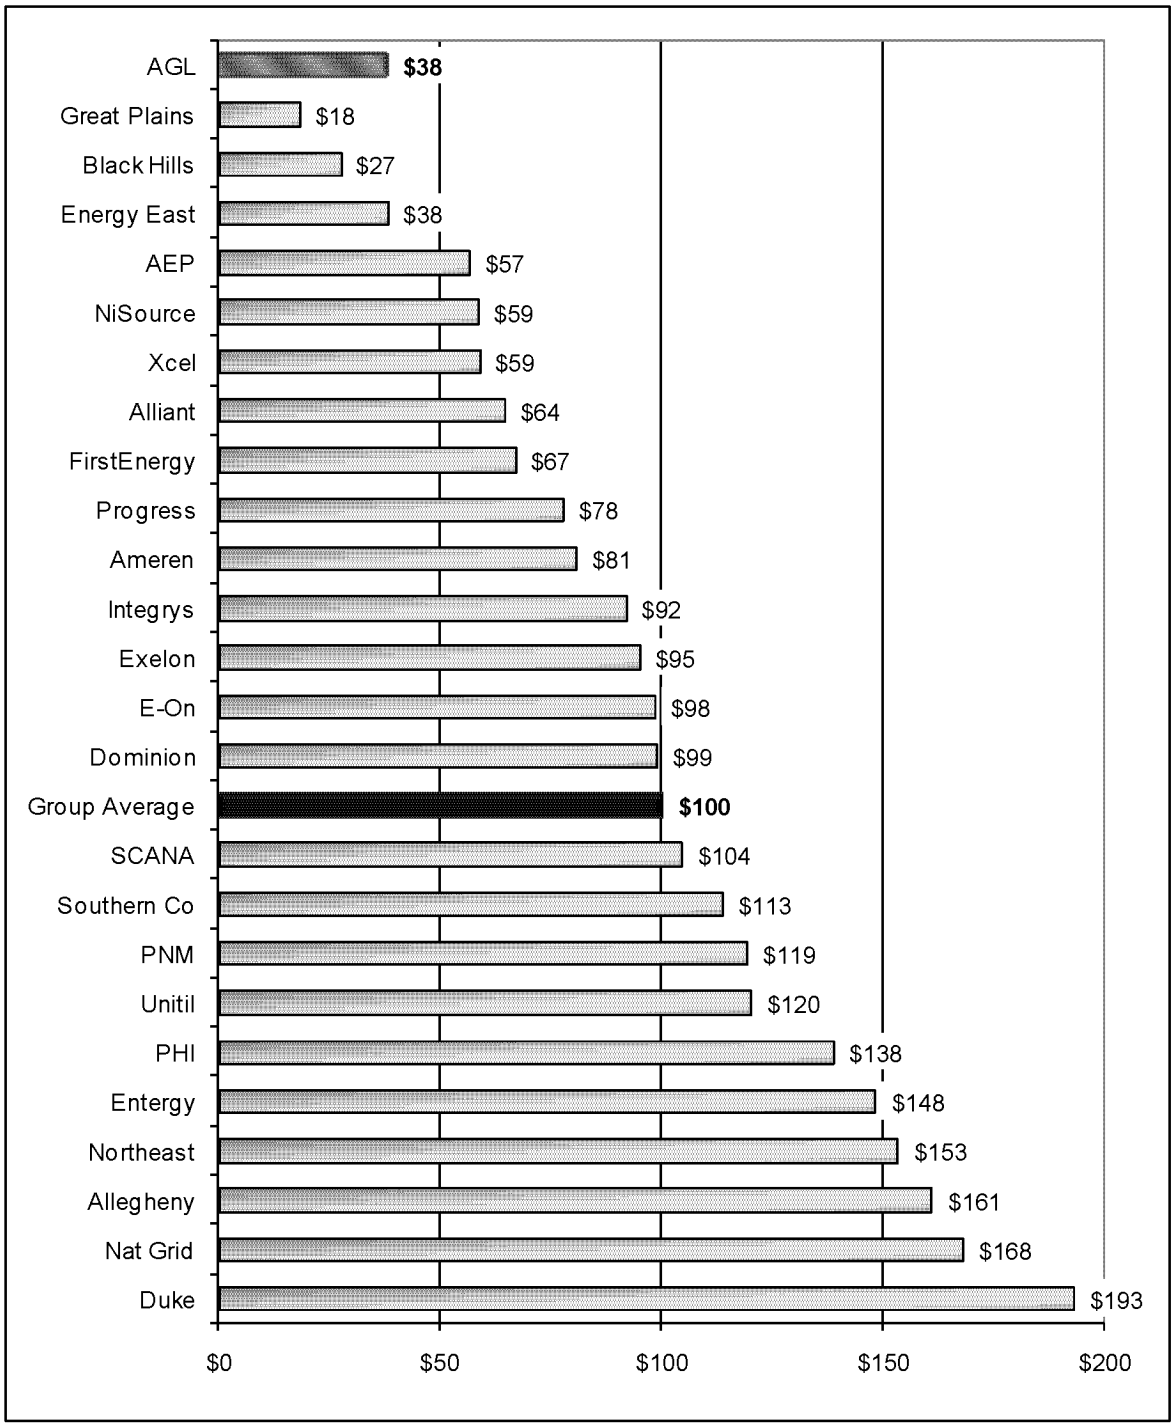
A&G expenses per regulated utility customer for the 24 utility companies that file Form 60 for 2008 are calculated below.

Utility Company	2008 Regulated Retail Service Company A&G Expenses	Regulated Retail Customers	Cost per Customer
AEP	$294,668,927	5,213,000	$ 57
Allegheny	$253,749,319	1,577,873	$ 161
Alliant	$193,490,730	3,000,000	$ 64
Ameren	$274,235,619	3,400,000	$ 81
Black Hills	$20,763,828	759,400	$ 27
Dominion	$354,805,541	3,588,500	$ 99
Duke	$867,637,977	4,500,000	$ 193
Energy East	$113,714,789	2,989,800	$ 38
Entergy	$399,824,223	2,700,000	$ 148
E-On	$124,335,091	1,263,000	$ 98
Exelon	$558,687,014	5,885,000	$ 95
FirstEnergy	$300,447,188	4,499,000	$ 67
Great Plains	$14,931,821	820,000	$ 18
Integrys	$198,122,209	2,157,000	$ 92
Nat Grid	$1,123,453,901	6,700,000	$ 168
NiSource	$219,382,936	3,750,000	$ 59
Northeast	$253,214,493	1,654,000	$ 153
PHI	$264,432,251	1,910,000	$ 138
Progress	$240,779,760	3,100,000	$ 78
PNM	$102,176,612	859,000	$ 119
SCANA	$148,519,468	1,424,300	$ 104
Southern Co	$499,423,962	4,402,000	$ 113
Unitil	$20,341,422	169,600	$ 120
Xcel	$313,962,261	5,345,000	$ 59
Group Total	**$7,155,101,344**	**71,666,473**	**$ 100**

Schedule 3 shows AGLC's 12 months ended September 30, 2009 AGSC A&G-related cost per customer of $38 is considerably lower than the average of $100 per customer for the comparison group service companies. Only 2 of 24 comparison group service companies had a lower cost per customer than AGLC. Based on this result, it is possible to conclude that AGSC's 12 months ended September 30, 2009 charges to AGLC were reasonable.

Schedule 3

Atlanta Light Gas Company
Comparison of Service Company Annual Costs Per Customer



Comparison Methodology

AGSC's billings to AGLC during the twelve months ended September 30, 2009 were market tested by comparing the cost per hour for AGSC services to those of outside service providers to whom AGSC services could be outsourced. The outside providers selected for comparison were:

- Attorneys – legal services
- Certified Public Accountants – accounting, finance, internal audit, investor relations, information technology and rates and regulatory services
- Professional Engineers – engineering, gas management and operations-related services
- Management Consultants - executive management, external relations, human resources, communications services, marketing

Calculation Of AGSC Hourly Rates

During the twelve months ended September 30, 2009, AGSC billed AGLC $67,897,617 for management and professional-related services. This amount represents all test year charges to AGLC except for Customer Services, which are performed to a large extent by non-exempt AGSC personnel. Schedule 4 shows the designation of the outside provider to which each category of service could be outsourced.

AGSC test year charges were compiled by each of the four outside provider category in Schedule 5. Test year AGSC hours charged to AGLC are compiled by outside provider category in Schedule 6.

Certain adjustments to AGSC test year charges were necessary to properly calculate Services Company hourly rates that are directly comparable to those of outside providers. Schedule 7 shows the amounts for the following three categories of adjustments:

- Outside Services – 12 months ended September 30, 2009 AGSC charges to AGLC include expenses associated with the use of outside professional firms to perform certain corporate-wide services (e.g., legal, financial audit, actuarial services). These professional fees are excluded from the AGSC hourly rate calculation because the related services have effectively been out-sourced already.

- Travel Expenses – In general, client-related travel expenses are not recovered by outside service providers through their hourly billing rate. Rather, actual out-of-pocket travel expenses are billed to clients in addition to fees for professional services. Thus, it is appropriate to remove these AGSC charges from the hourly rate calculation.

- Information Technology Infrastructure Expenses – Included in the 12 months ended September 30, 2009 AGSC charges to AGLC are leases, maintenance fees and depreciation related to AGL Resource's enterprise mainframe, server and network infrastructure and corporate business applications. An outside provider that would take over operation of this infrastructure would recover these expenses over and above the labor necessary to operate the data center.

V – Question 2 – Provision of Services at the Lower of Cost or Market

Based on previously described cost and hour data for the twelve months ended September 30, 2009, the AGSC's hourly rates by service provider category are calculated in the table below.

	Outside Provider Category				
	Management Consultant	Attorney	Certified Public Accountant	Professional Engineer	Total
Mgmt/Professional Service-Related AGSC Charges (Exhibit 4)	$ 13,354,995	$ 3,522,067	$ 30,811,557	$ 14,606,592	$ 62,295,211
Add: Overhead-Related AGSC Charges (A)	$ 1,198,915	$ 319,337	$ 2,773,191	$ 1,310,963	$ 5,602,406
Less: Excluded Charges (Exhibit 6)	(2,794,379)	(459,750)	(17,170,888)	(982,974)	(21,407,991)
Net Cost Pool Expenses	$ 11,759,531	$ 3,381,654	$ 16,413,860	$ 14,934,580	$ 46,489,626
Total Hours (Exhibit 5)	130,036	27,227	186,119	325,824	669,206
Average Hourly Rate	$ 90	$ 124	$ 88	$ 46	

Note A: Overheads are assigned to the outside provider categories on a prorata basis, as shown below:

	Management Consultant	Attorney	Certified Public Accountant	Professional Engineer	Total
Service-Related Charges	$ 13,354,995	$ 3,522,067	$ 30,811,557	$ 14,606,592	$ 62,295,211
Percent of Cost Pool Total	21.4%	5.7%	49.5%	23.4%	100.0%
Total Overhead	$ 5,602,406	$ 5,602,406	$ 5,602,406	$ 5,602,406	
Allocated Overhead	$ 1,198,915	$ 319,337	$ 2,773,191	$ 1,310,963	$ 5,602,406

Outside Service Provider Hourly Rates

The next step in the cost comparison was to calculate the average billing rates for each type of outside service provider. The source of this information and the determination of the average rates are described in the paragraphs that follow.

It should be noted that professionals working for 3 of the 4 outside provider categories may be licensed to practice by state regulatory bodies. However, not every professional working for these firms is licensed. For instance, among Georgia certified public accounting firms only more experienced staff are predominantly CPAs, as shown in the table below. Some employees of the AGSC also have professional licenses. Thus, it is valid to compare the AGSC's hourly rates to those of the outside professional service providers included in this study.

Position	% In Ga. Who Are CPAs
Partners/Owners	99%
Directors (over 10 years experience)	91%
Managers (6-10 years experience)	89%
Sr Associates (4-5 years experience)	50%
Associates (1-3 years experience)	16%
New Professionals	na

Source: AICPA's National PCPS/TSCPA Management of an Accounting Practice Survey (2008)

Management Consultants

The cost per hour for management consultants was developed from a 2009 survey performed by the Association of Management Consulting Firms—an industry trade organization. The survey includes rates that were in effect during 2008 for firms throughout the United States. Consultants typically do not limit their practice to any one region and must travel to a client's location. Thus, the U.S. national average is appropriate for comparison.

The first step in the calculation, presented in Schedule 8, was to determine an average rate by consultant position level. From these rates, a single weighted average hourly rate was calculated based upon the percent of time that is typically applied to a consulting assignment by each consultant position level. The 2008 average rate was escalated to March 31, 2009—the midpoint of the test year ended September 30, 2009.

Attorneys

The Georgia Bar Association does not survey its members as to their hourly billing rates. In addition, publicly available billing rate information could not be found for Georgia attorneys. Therefore, an estimate of Georgia attorney rates was developed from two surveys conducted by Lawyers Weekly in the states of Michigan and Massachusetts. As presented in Schedule 9, the average rate for each firm was adjusted for the cost of living differential between its location and Atlanta, Georgia. The Lawyers Weekly surveys included rates in effect at December 31, 2007. This average was escalated to March 31, 2009—the midpoint of the test year ended September 30, 2009.

V – Question 2 – Provision of Services at the Lower of Cost or Market

Certified Public Accountants

The average hourly rate for Georgia certified public accountants was developed from a 2008 survey performed by the American Institute of Certified Public Accountants (AICPA). Hourly rates in the AICPA survey come from member firms in Georgia.

As shown in Schedule 10, a weighted average hourly rate was developed based on a set of accountant positions and an assumed percent of time on a typical assignment. This survey includes rate information in effect during 2007. Thus the data had to be escalated to March 31, 2009—the test year's midpoint.

Professional Engineers

AGLC provided hourly rate information for an engineering firm that is sometimes used by the company when outside engineering services are required. As shown in Schedule 11, an average rate was developed for each engineering position. Then, using a typical percentage mix by position for a typical engineering project, a weighted average cost per hour was calculated.

AGSC Versus Outside Provider Cost Comparison

As shown in the table below, AGSC's costs per hour during the test year ended September 30, 2009 are considerably lower than those of outside providers.

	Test Year Cost Per Hour Difference		
Service Provider	AGSC	Outside Providers	Difference--AGSC Greater(Less) Than Outside
Management Consultant	$ 90	$ 227	$ (137)
Attorney	$ 124	$ 302	$ (178)
Certified Public Accountant	$ 88	$ 119	$ (31)
Professional Engineer	$ 46	$ 88	$ (42)

As calculated below, based on these cost per hour differentials and the number of hours AGSC billed AGLC during the test year, AGSC's services would have cost $42 million more from outside providers. This is 62% more than AGSC's management and professional services-related charges to AGLC during the test year ended September 30, 2009 ($42,071,875 / $67,897,617 = 62%).

	Test Year Total Cost Difference		
Service Provider	Hourly Rate Difference--AGSC Greater(Less) Than Outside	AGSC Hours Charged	Dollar Difference
Management Consultant	$ (137)	130,036	$ (17,758,746)
Attorney	$ (178)	27,227	$ (4,840,889)
Certified Public Accountant	$ (31)	186,119	$ (5,734,310)
Professional Engineer	$ (42)	325,824	$ (13,737,931)
Net AGSC Less Than Outside Providers			$ (42,071,875)

Analysis of Services

The services that AGSC provides AGLC, summarized in Schedule 12, are necessary and would be required even if AGLC were a stand-alone utility. In addition, there is no redundancy or overlap in the services provided by AGSC to AGLC. Based on that analysis of the structures and employee positions of AGSC and AGLC it is clear that functions are distinctly organized with no duplication of activities.

Governance Practices Associated With AGSC Charges

A number of management practices exist to ensure that AGSC charges to operating companies are appropriate. Specifically, certain review, approval and monitoring activities are performed by AGSC and AGLC personnel that work to control the on-going level of AGSC charges to AGLC. Examples of such governance activities include the following.

- AGSC Oversight – Every operating company president is an officer of AGLR. This gives them a say in major business decisions and the ability to monitor service quality and spending levels.

- AGSC Budget Review/Approval – Each year, AGLR presents its consolidated budget to its Board of Directors for approval. Every operating company president must formally approve its individual budget, which includes AGSC charges for the next year.

- Project Review And Approval – Major projects undertaken by AGSC must first be reviewed by the operating companies that will pay for the initiative. Consultants used on these projects who are hired by AGSC must also be approved by operating companies. This is accomplished by requiring projects be approved by the Management Committee, which includes the presidents of all AGLR operating companies.

- AGSC Budget Variance Reporting – A summary and explanation of year-to-date budget variances is prepared for the entire AGSC on a monthly basis. In addition, a monthly variance report is produced by AGSC budget managers and shows budget versus actual spending for the month and year-to-date by cost category.

- AGLC Budget Variance Reporting – AGLC's monthly budget variance report contains a line item for AGSC charges. In this way, AGSC budget versus actual charges can be monitored by AGLC personnel for the month and year-to-date.

BEFORE THE
GEORGIA PUBLIC SERVICE COMMISSION

PREFILED DIRECT TESTIMONY OF
PATRICK L. BARYENBRUCH

ON BEHALF OF
ATLANTA GAS LIGHT COMPANY
DOCKET NO. 31647-U

1. Q. Please state your name and business address.

A. Patrick L. Baryenbruch, 2832 Claremont Road, Raleigh, North Carolina 27608.

2. Q. Please describe your educational and professional background.

A. I received a Bachelors degree in accounting from the University of Wisconsin-Oshkosh in 1974 and a Masters in Business Administration degree from the University of Michigan in 1979. I am a financial consultant and a certified public accountant. I am a member of the American Institute of Certified Public Accountants and the North Carolina Association of Certified Public Accountants.

I began my career as a staff accountant with Arthur Andersen & Company where I performed financial audits of utilities, banks and finance companies. After three years I left to pursue an M.B.A. degree. Upon graduation from business school, I worked with the consulting firms of Theodore Barry & Associates and Scott, Madden & Associates.

During my consulting career, I have performed consulting assignments for approximately 50 utilities and 10 public service commissions. I have participated as project manager, lead or staff consultant for 24 commission-ordered management and prudence audits of public utilities. Of these, I have been responsible for evaluating the area of affiliate charges and allocation of corporate expenses in the Commission-ordered audits of Connecticut Light and Power, Connecticut Natural Gas, General Water Corporation (Pennsylvania Operations), Philadelphia Suburban Water Company (now Aqua America) and Pacific Gas & Electric Company.

My firm has performed the commission-ordered audit of Southern California Edison's 2002, 2003, 2004 and 2005 transactions with its non-regulated affiliate companies.

3. Q. What are your duties and responsibilities in your current position?

A. I am the President of my own consulting practice, Baryenbruch & Company, LLC, which was established in 1985. In that capacity, I provide consulting services to utilities and their regulators.

4. Q. Please describe the reason for your testimony in this case.

A. I am presenting the results of my study which evaluated the services provided by AGL Services Company (AGSC) during the 12 months ended September 30, 2009 to Atlanta Gas Light Company (AGLC). This study was undertaken in conjunction with AGLC's rate case and is true to the best of my knowledge and belief. It is included with my testimony as AGLC Exhibit No._____(PB-1).

5. Q. What were the objectives of your study?

A. This study was undertaken to answer three questions concerning the services provided by AGSC to AGLC, each of which bears on the reasonableness of those charges as incurred during the 12 months ended September 30, 2009. First, were AGSC's charges

to AGLC during the 12-months ended September 30, 2009 reasonable compared to other utility service companies? Second, was AGLC charged the lower of cost or market for managerial and professional services provided by AGSC during the 12 months ended September 30, 2009? Third, are the services AGLC receives from AGSC necessary?

6. Q. What conclusion were you able to draw concerning question number 1, whether the AGSC charges to AGLC were reasonable?

A. AGSC's costs for the 12 months ended September 30, 2009 per AGLC customer were reasonable. During that period, AGLC was charged $38 per customer for administrative and general ("A&G")-related services provided by the Services Company. As shown graphically in my AGLC Exhibit No.____(PB-2), this compares favorably to annual costs per customer for electric and combination electric/gas service companies that average $100 for service companies reporting to the Federal Energy Regulatory Commission ("FERC"). Only 2 of the 24 utility service companies that filed a FERC Form 60 for 2008 had a lower A&G cost per customer than AGLC's charges from AGSC.

7. Q. Please describe the two service companies that have a lower per customer costs than AGSC

A. The lowest cost service company at $18 per customer was Great Plains Energy Services Incorporated, a subsidiary of Great Plains Energy. This service company provides services to a single regulated electric utility, Kansas City Power & Light and to other non-regulated affiliate companies.

The second lowest cost service company at $27 per customer was Black Hills Service Company, LLC, which is part of Black Hills Energy. This service company provides services to three affiliated electric and gas utilities in Wyoming, Colorado, Iowa, Kansas and Nebraska.

Neither of these companies have been my clients in the past so I do not know the degree to which services have been concentrated into their service companies.

8. Q. Have you performed consulting work for any of the other comparison group service companies that have centralized services to the same extent as AGSC?

A. Corporate services are highly centralized within AGSC. I have performed consulting services for six comparison group utilities

whose service companies are similarly structured. Those utility companies are: Allegheny, Dominion, Duke Energy, Entergy, NiSource and Progress Energy. As shown in my AGLC Exhibit No.____(PB-3), AGSC's $38 annual cost per customer compares favorably to the $122 annual average for this group of similarly structured service companies.

8. Q. What conclusions were you able to draw concerning question number 2, whether AGLC was charged the lower of cost or market services provided by AGSC?

A. I was able to draw the following conclusions:

(1) AGLC was charged the lower of cost or market for managerial and professional services during the 12-months ended September 30, 2009.

(2) On average, the hourly rates for outside service providers are 62% higher than the AGSC's hourly rates.

(3) If all the managerial and professional services now provided by AGSC had been outsourced during the 12-months ended September 30, 2009, AGLC and its

ratepayers would have incurred $42 million in additional expenses.

(4) AGSC fees do not include any profit markup. Only its actual cost of service is being recovered from AGLC ratepayers.

9. Q. What conclusions were you able to draw concerning question number 3, whether the services AGLC receives from AGSC are necessary?

A. I was able to draw the following conclusions:

(1) The services that AGSC provides are necessary and would be required even if AGLC were a stand-alone utility.

(2) In addition, there is no redundancy or overlap in the services provided by AGSC to AGLC. Based on an analysis of the structures and employee positions of AGSC and AGLC, it is clear that functions are distinctly organized with no duplication of activities.

10. Q. Does this complete your testimony?

A. Yes.

I - Introduction

Purpose Of This Study

This study was undertaken to determine if the services provided to Columbia Gas of Virginia, Inc. ("CGV") by affiliate companies during 2006 were performed at the lower of cost or market. Affiliates that provide CGV with services include NiSource Corporate Services Company ("NCSC") and several NiSource operating companies. NCSC provides CGV with management, professional and technical services while the NiSource operating companies provide CGV with construction, operations and customer account services.

This study was also designed to address whether services provided by CGV to affiliates were priced at the higher of cost or market.

Study Conclusion

Outside service providers (i.e., market) were found to be 41% more expensive than NCSC. The services provided to CGV by NCSC during 2006 would have cost an additional $7.9 million if they had been performed by outside service providers.

Services from affiliate operating companies could not be compared to outside service providers due to a lack of publicly available outside service provider rate information. However, it was possible to compare CGV's customer accounts expense per customer to those of electric utilities in Virginia and neighboring states. This comparison showed CGV's cost to be considerably less than the electric utility group average. For 2006, the average cost per customer for customer accounts services from CGV affiliates was $25.83 compared to the 2005 average of $28.01 for neighboring electric utilities.

This study subjected all 2006 NCSC's service-related charges and 11% of affiliate operating companies' service-related charges to a market cost comparison. This sample size is sufficient to support the affiliate's total charges to CGV during 2006.

Based on this study's results, it is apparent that CGV's 2006 affiliate company charges are priced at the lower of cost or market.

CGV's service-related charges to affiliates are not significant (less than $300,000 in labor-related expenses). Affiliates are charged at CGV's fully loaded cost. The majority of these services are construction-related and not easily benchmarked to publicly available outside provider hourly rate information. For these reasons, no market testing was performed on these transactions.

II - Background

Overview Of CGV Affiliate Company Services

NCSC provides the following types of services to NiSource operating companies, including CGV:

- Accounting
- Payroll
- Auditing
- Employee benefits
- Planning
- Risk management
- Tax
- Legal
- Environmental
- Financial
- Information technology
- Telecommunications.

In June 2005, NCSC reached a definitive 10-year agreement with IBM under which IBM will provide a broad range of business transformation and support services to NiSource. Previously, employees of NCSC had performed many of these functions, including human resources, finance and accounting, supply chain (procurement), customer contact centers, meter-to-cash and information technology

NCSC Billing of Affiliate Companies

NiSource Corporate Services was regulated by the Security Exchange Commission ("SEC") under the Public Utility Holding Company Act of 1935 ("PUHCA") until February 8, 2006, when the Energy Policy Act of 2005 took effect. The 2005 Act transfers regulatory jurisdiction over public utility holding companies from the SEC to the Federal Energy Regulatory Commission ("FERC"). Corporate Services continues to follow the SEC Uniform System of Accounts for Mutual Service Companies and Subsidiary Service Companies, until January 1, 2008, after which FERC requires service companies to move to FERC's Uniform System of Accounts. In addition, Corporate Services uses a job order system to collect costs which are applicable and billable to affiliates, including Columbia Gas of Virginia. Each job order details the affiliate(s) to be charged for the specified services and the basis for allocating charges when more than one affiliate receives the same service. Allocations among affiliates are made when it is impractical to charge an affiliate directly.

NCSC is obligated to bill affiliates at cost in accordance with SEC Rules 90 and 91 under PUHCA. The service agreement between CGV and NCSC stipulates that all services will be provided at cost.

Two types of bills are issued to affiliates: contract billing and convenience billing. Contract billing, which is identified by job order, represents the labor and expenses billed to an affiliate. These are costs incurred by NCSC to render services at the affiliate's request. Contract charges may be direct or allocated depending on the nature of the expense.

Convenience billings are rendered when NCSC makes payment to one vendor for goods or services that benefit one or more affiliate. Convenience bills generally represent outside services that are routinely performed on behalf of affiliates on an ongoing basis, for which each affiliate is billed their proportional share.

The relationship between NCSC and CGV is set forth in a service agreement which was approved by the Virginia State Corporation Commission on September 21, 2005.

Affiliate Operating Company Billing of Other Affiliates

Besides NCSC, other affiliate entities charge CGV for various goods and services. These items are charged to CGV at fully loaded cost.

2006 Affiliate Entities Charges

During 2006, affiliate entities charged CGV approximately $144 million.

Affiliate Entity		Total
NiSource Corporate Services	$	102,313,768
Columbia Gulf Transmission	$	1,979,443
Columbia Network Services	$	8,208
Columbia Gas of Kentucky	$	379,067
Columbia Gas of Ohio	$	6,187,847
Columbia Gas of Maryland	$	4,041
Columbia Gas of Pennsylvania	$	286,085
Columbia Gas Transmission	$	19,781,657
NiSource, Inc.	$	4,727,996
NiSource Finance	$	7,183,590
Nisource Money Pool	$	1,608,727
Total	$	144,460,429

III – Market Cost Comparison Approach

Charges From Affiliates

CGV's 2006 charges from affiliate entities were analyzed to determine which could be subjected to a market cost comparison. The table below shows the amounts charged CGV during 2006 by type of transaction. The first three items—Interest on Debt and Taxes, Gas Purchase and Transportation Expense, and Convenience Billings and Payroll—do not involve the provision of services.

		Market Cost Testing Disposition		
Type of Transaction	2006 Affiliate Charges To CGV	Involves A Service?	Market Data Available?	Included In This Study?
Interest on Debt and Taxes	$ 8,792,317	No	na	No
Gas Purchase and Transportation Expenses	$ 21,521,840	No	na	No
Convenience Billings and Payroll	$ 81,098,862	No	na	No
Contract Services	$ 19,129,744	Yes	Yes	Yes
Billings From Other Affiliates - Balance Sheet Accts	$ 11,014,178	Limited	No	No
Billings From Other Affiliates - Income Statement Accts	$ 2,903,488	Limited	Yes	Yes/No
Total 2006 Affiliate Company Billings	**$ 144,460,429**			

Contract Services charges are for management, professional and technical services. Market cost information is available for outside providers of these services. Thus, it is possible to compare NCSC's cost of services to those of outside providers. This study converts NCSC's 2006 corporate services charges to costs per hour and compares those to the costs per hour charged by outside providers. See Chapter IV for this cost comparison.

NiSource regulated operating companies will sometimes support one another in times of emergency or when one's current backlog exceeds its available resources. This sharing arrangement is meant to reduce the cost of service for all ratepayers. The Billings From Other Affiliates line items in the table above relate to this shared support arrangement.

The majority of Billings From Other Affiliates – Balance Sheet charges are for the following:

- CGV's share of major IT project costs (e.g., PeopleSoft upgrade, time and labor reporting, expense reporting) charged by NCSC for $2.1 million
- Construction related costs charged by Columbia Gas of Ohio for $4.0 million
- CGV's portion of OPEB-costs charged by NiSource, Inc. for $4.7 million.

Of over $11 million in total Billings From Other Affiliates – Balance Sheet, only $341,000 was for labor-related services, most of which were construction-related. No publicly-available market rate information was found for outside providers of these construction services. Thus, this study could not subject these 2006 charges to a market cost comparison.

Billings From Other Affiliates - Income Statement-related transactions are for gas transportation expenses, and two categories of service expenses--operations services and customer account services. Of the $2.9 million in these charges, approximately $515,000 was for labor-related services. No publicly-available market rate information was found for providers of operations-related services (e.g., craft-type services performed by operators and technicians performing day-to-day activities or providing emergency assistance). Thus, this study did not subject 2006 operations-related charges to a market cost comparison. Publicly-available market rate data was also unavailable for customer account services (e.g., bill printing, collections). However, it was possible to assess the reasonableness of CGV's customer account services-related expenses by comparing them to those of neighboring electric utilities. Electric utility customer account expenses were obtained for this comparison from the FERC Form 1. See Chapter V for this cost comparison.

Charges To Affiliates

CGV charged affiliates approximately $3.1 million during 2006, as shown below.

	2006 Charges From CGV
Billings to Other Affiliates - Balance Sheet Accounts	$ 2,755,518
Billings to Other Affiliates - Income Statement Accounts	$ 328,277
Total Charges To Affiliates	**$ 3,083,795**

Balance Sheet-related billings consist of construction-related work CGV performed for affiliate operating companies. Approximately $193,000 of these charges was labor/service-related.

Income Statement-related billings consists of rent charged to NCSC for its employees located in CGV's Chester, Virginia offices and charges for a variety of services CGV provided to affiliate operating companies. This cost sharing arrangement ultimately provides system ratepayers with lower costs of service. Here too, a relatively small portion of these charges were labor related ($91,000).

CGV charges affiliates its fully loaded cost for these items. No market testing was performed on 2006 charges to affiliates because the costs that are service-related are not material.

IV – NiSource Corporate Services Company Market Cost Comparison

Methodology

NCSC's 2006 corporate services-related billings to CGV are market tested by comparing the cost per hour for NCSC services to those of outside service providers to whom these duties could be assigned.

The first step was to determine which types of outside providers could assume Service Company services. Based on the nature of these services it was determined that the following outside service providers could perform the categories of services indicated.

- Attorneys - corporate secretarial and legal services
- Certified Public Accountants - accounting, finance, information systems and rates and regulatory
- Professional Engineers – engineering and operations services
- Management Consultants - executive and administrative management, risk management services, human resources and communications services

The next step was to calculate NCSC's hourly rate for each of the four outside service provider categories, based on the dollars and hours charged to CGV during the 12-months ended December 31, 2006.

Hourly billing rates for outside service providers were next determined using information from pertinent surveys.

Finally, the NCSC's average cost per hour was compared to the average cost per hour for outside providers.

NCSC Hourly Rates

The first step in determining NCSC's hourly rates is to determine the appropriate expenses to be included in the calculation. As shown below, certain NCSC charges were excluded from the hourly rate calculations. Excluded cost elements are charges that are, in effect, already outsourced (e.g., IBM outsourcing, outside services expenses) or items that an outside provider would not typically recover in their hourly rates (e.g., travel expenses). The net result of these adjustments is the total applicable cost pool that is subjected to the lower-of-cost-or-market testing.

2006 Total Contract Billings from NCSC		$ 19,129,744
Less:	Excludable Cost Elements:	
	2504 - Expert Witness Fees	$ (24,537)
	3000 - Consulting Services	$ (138,160)
	3001 - Advertising Services	$ (7,518)
	3002 - Legal Services	$ (924,901)
	3003 - Auditing Services	$ (13,019)
	3007 - Laboratory Services	$ (9)
	3011 - Temporary Personnel Services	$ (101,344)
	3012 - Security Services	$ (8,991)
	3015 - Other Outside Services	$ (281,647)
	3016 - Other Maintenance Services	$ (63)
	3030 - Outsourcing - Est. Fixed Costs	$ (3,882,711)
	3031 - Outsourcing - Variable Costs	$ (255,386)
	3032 - Transition Costs	$ (659,396)
	3033 - Sales Tax	$ (92,829)
	3034 - Capitalized Portion - Inflights	$ 265,490
	3035 - Supplemental Contract Costs	$ (770,267)
	3036 - Service Level Agreements	$ 147,746
	3037 - Miscellaneous Reimbursements	$ 194,740
	3038 - Request for Service (RFS)	$ (141,011)
	3040 - Outsourcing - Act. Fixed Costs	$ (5,365,768)
	3044 - Capitalized Portion - Transfrm	$ 210,583
	3054 - Capitalized Portn-PCs &Laptops	$ 95,496
	3064 - Capitalized Portion - WMS	$ 521,291
	3074 - Capitalized Portion - RFS	$ 94,117
	3100 - Business Expenses	$ (164,015)
	3102 - Meals and Entertainment	$ (48,496)
	3103 - Non-Deductible Business Expens	$ (60)
	3357 - Vehicle Maint/Other Costs Clrd	$ (2)
	3645 - Sale of Property	$ (203,351)
	9604 - Income Taxes Federal	$ 850,070
	9605 - Income Taxes State	$ 78,972
	9606 - Deferred Income Taxes Federal	$ (879,996)
	9607 - Deferred Income Taxes State	$ (156,321)
	2006 Testable Contract Billings from NCSC (A)	$ 7,468,452

Note A: This total breaks down as following for later analysis:

Service-Related Charges	$ 6,668,442
Overhead-Related Charges	$ 800,810
2006 Testable Contract Billings from NCSC	$ 7,469,252

The next step was to assign NCSC's service-related charges to the four outside service provider cost pools—attorney, certified public accountant, engineer and management consultant. Among other things, NCSC assigns a "department" to all affiliate charges. Based on the nature of services performed by these departments, NCSC's charges were assigned to the four outside provider cost pools, as shown in Exhibit 1.

Exhibit 2 shows the assignment of staff hours by department to the four outside service provider cost pools. It should be noted that only exempt personnel hours

are included in Exhibit 2 because outside providers sometimes do not charge clients for administrative/secretarial support (i.e., non-exempt staff). Instead, they recover the cost of non-exempt staff through the hourly rates of the firm's professionals. Some outside providers bill customers for non-exempt personnel, but this study chose to be conservative in this regard. By excluding non-exempt hours from the hourly rate denominator, there are fewer hours to divide into the cost pool. Consequently, NCSC's hourly rates are somewhat higher using this approach.

Within the total 2006 NCSC charges are overhead-related items associated with sustaining NCSC personnel. Most of these expenses are depreciation expense and rent on various NCSC facilities and equipment. The 2006 amounts by department are shown below. Since these expenses would also be incurred by outside service providers, it is necessary to add them into the NCSC cost pools.

Department	2006
0005000 - Aviation Services	119,005
0017000 - TPC/NET	19,728
0071000 - Insurance - Premiums	78,161
0042000 - General	222,312
0047000 - Facilities Management	298,532
0049000 - Real Estate Management	30,414
0088000 - Fleet Management	31,858
Total	800,010

Based on the assignment of expenses and hours to outside provider categories, NCSC's 2006 equivalent cost per hour is calculated below.

	NCSC Hourly Rates				
	Attorney	Certified Public Accnt	Professional Engineer	Mgmt Consultant	Total
Service-Related Charges	$ 819,872	$ 1,826,851	$ 2,010,799	$ 2,010,919	$ 6,668,442
Overhead Expenses (A)	$ 98,401	$ 219,203	$ 241,603	$ 241,603	$ 800,810
Cost Pool Total	$ 918,273	$ 2,046,054	$ 2,252,402	$ 2,252,522	$ 7,469,252
Hours	12,043	36,331	36,190	27,788	112,352
Average Hourly Rate	**$ 76**	**$ 56**	**$ 62**	**$ 81**	

Note A: These expenses are assigned to the outside provider categories prorata based on the "direct" expenses as calculated below.

	Attorney	Certified Public Accnt	Professional Engineer	Mgmt Consultant	Total
Service-Related Charges	$ 819,872	$ 1,826,851	$ 2,010,799	$ 2,010,919	$ 6,668,442
Percent of Cost Pool Total	12.3%	27.4%	30.2%	30.2%	100.0%
Allocation Of Overhead Expenses	$ 98,401	$ 219,203	$ 241,603	$ 241,603	$ 800,810

Outside Service Provider Hourly Rates

The next step in the cost comparison was to calculate the average billing rates for each type of outside service provider. The source of this information and the determination of the average rates are described in the paragraphs that follow.

Attorneys

The Virginia Bar Association does not survey its members as to their hourly billing rates. In addition, publicly available billing rate information could not be found for Virginia attorneys (Virginia Lawyers Weekly used to ask for hourly rates in its annual survey but eliminated that question a few years ago). Therefore, an estimate of Virginia attorney rates was developed from a survey of Michigan lawyers conducted annually by the Michigan Lawyers Weekly. As presented in Schedule 3, the average rate for each Michigan firm respondent was adjusted for the cost of living differential between their location and Richmond, Virginia. The survey includes rates that were in effect at December 31, 2005. Thus, the 2005 average rate was escalated to June 30, 2006—the midpoint of 2006.

Certified Public Accountants

The average hourly rate for Virginia certified public accountants was developed from a 2006 survey conducted by the American Institute of Certified Public Accountants (AICPA) every two years. Hourly rates in the AICPA survey are the average of firms in Virginia. The average hourly rate was calculated for a set of typical accountant positions, as shown in Schedule 4. Based on a typical staff assignment by each accountant position, a weighted average hourly rate was calculated. This survey covered hourly rates in effect during 2005. Thus, the 2005 average rate was escalated to June 30, 2006—the midpoint of 2006.

Professional Engineers

CGV provided 2006 hourly rate information for four engineering firms that are periodically used by the company when outside engineering services are required. As shown in Exhibit 5, an average rate was developed for each engineering position. Then, using a typical percentage mix by position for a typical engineering project, a weighted average cost per hour was calculated.

Management Consultants

The cost per hour for management consultants was developed from the 2006 annual survey performed by the Association of Management Consulting Firms—an industry trade organization. The first step in the calculation, presented in Schedule 6, was to determine an average rate by consultant position level. From these rates, a single weighted average hourly rate was calculated based upon the percent of time that is typically applied to a consulting assignment by each consultant position level. This survey includes rates that were in effect during 2005 for firms in the United States. Consultants typically do not limit their

practice to any one region and must travel to a client's location. Thus, the U.S. national average is appropriate for comparison. The survey includes rates that were in effect at December 31, 2005. Thus, the 2005 average rate was escalated to June 30, 2006—the midpoint of 2006.

NCSC Versus Outside Provider Cost Comparison

As shown in the table below, NCSC's costs per hour are considerably lower than those of outside providers.

	2006 Cost/Hour Difference		
Service Provider	NCSC	Outside Providers	Difference-- NCSC Greater(Less) Than Outside
Attorney	$ 76	$ 246	$ (170)
Certified Public Accountant	$ 56	$ 107	$ (51)
Professional Engineer	$ 62	$ 69	$ (7)
Management Consultant	$ 81	$ 218	$ (137)

As calculated below, based on these cost per hour differentials and the number of hours that NCSC billed CGV during 2006, the services would cost over $7.9 million more from outside providers. This is 41% more ($7,930,757 / $19,129,744 = 41%) than NCSC's total 2006 contract billings to CGV.

	2006 Total Cost Difference		
Service Provider	Hourly Rate Difference-- NCSC Greater(Less) Than Outside	NCSC Hours Charged	Dollar Difference
Attorney	$ (170)	12,043	$ (2,044,277)
Certified Public Accountant	$ (51)	36,331	$ (1,841,451)
Professional Engineer	$ (7)	36,190	$ (239,351)
Management Consultant	$ (137)	27,788	$ (3,805,678)
Net NCSC Less Than Outside Providers			$ (7,930,757)

V – Affiliate Operating Company Market Cost Comparison

Background

As discussed earlier, customer account services were the only 2006 affiliate operating company charges that could be market tested. In 2006, charges for these services represented 11% of total affiliate operating company charges.

	2006 Charges	
Other Affiliate Customer Accts Expense Billings		
CG - Ohio	$ 25,339	
CG - Pennsylvania	$ 67,640	
Total Other Affiliate Customer Accts Expense Billings		$ 92,979
Billings From Other Affiliates - Bal Sheet & Inc Stmt		
Total Labor-Related Charges		$ 857,104
Coverage Percentage		11%

Definition Of Customer Accounts Services Expenses

The basis of comparison between CGV and neighboring electric utilities is customer accounts expense per customer. FERC's chart of accounts, (chapter 18, part 101 of Code of Federal Regulations) designates the following accounts contain customer accounts expenses:

- Account 903 Customer Accounts Expense – Records and Collection Expense
- Account 905 Customer Accounts Expense – Miscellaneous Customer Accounts Expense.

Exhibit 7 further details the services/activities whose costs are to be recorded in these. The graphic below shows which CGV cost components correspond to the contents of FERC accounts 903 and 905.

Electric Utilities
FERC Acct 903 - Records and Collection Expense and FERC Acct 905 - Misc Customer Accounts Expense
- Customer contact
- Customer order processing
- Bill preparation and mailing
- Collections
- Payment processing
- Correspondence processing

Columbia Gas - Virginia
NCSC Company (A)
- Bill preparation and mailing
- IT support for the various customer information system applications
CG - Ohio & Pennsylvania
- Customer contact
- Customer order processing
- Billing information processing
- Collections
- Correspondence processing
CG - Virginia
- Payment processing

Note A: All NCSC charges are primarily recorded in CGV's account 923.

FERC Account Descriptions

903 – Customer Records and Collection Expenses

This account shall include the cost of labor, materials used and expenses incurred in work on customer applications, contracts, orders, credit investigations, billing and accounting, collections and complaints.

Labor

1. Receiving, preparing, recording and handling routine orders for service, disconnections, transfers or meter tests initiated by the customer, excluding the cost of carrying out such orders, which is chargeable to the account appropriate for the work called for by such orders.
2. Investigations of customers' credit and keeping of records pertaining thereto, including records of uncollectible accounts written off.
3. Receiving, refunding or applying customer deposits and maintaining customer deposit, line extension, and other miscellaneous records.
4. Checking consumption shown by meter readers' reports where incidental to preparation of billing data.
5. Preparing address plates and addressing bills and delinquent notices.
6. Preparing billing data.
7. Operating billing and bookkeeping machines.
8. Verifying billing records with contracts or rate schedules.
9. Preparing bills for delivery, and mailing or delivering bills.
10. Collecting revenues, including collection from prepayment meters unless incidental to meter reading operations.
11. Balancing collections, preparing collections for deposit, and preparing cash reports.
12. Posting collections and other credits or charges to customer accounts and extending unpaid balances.
13. Balancing customer accounts and controls.
14. Preparing, mailing, or delivering delinquent notices and preparing reports of delinquent accounts.
15. Final meter reading of delinquent accounts when done by collectors incidental to regular activities.
16. Disconnecting and reconnecting services because of nonpayment of bills.
17. Receiving, recording, and handling of inquiries, complaints, and requests for investigations from customers, including preparation of necessary orders, but excluding the cost of carrying out such orders, which is chargeable to the account appropriate for the work called for by such orders.
18. Statistical and tabulating work on customer accounts and revenues, but not including special analyses for sales department, rate department, or other general purposes, unless incidental to regular customer accounting routines.
19. Preparing and periodically rewriting meter reading sheets.
20. Determining consumption and computing estimated or average consumption when performed by employees other than those engaged in reading meters.

Materials and expenses

21. Address plates and supplies.
22. Cash overages and shortages.
23. Commissions or fees to others for collecting.
24. Payments to credit organizations for investigations and reports.
25. Postage.
26. Transportation expenses, including transportation of customer bills and meter books under centralized billing procedure.
27. Transportation, meals, and incidental expenses.
28. Bank charges, exchange, and other fees for cashing and depositing customers' checks.
29. Forms for recording orders for services, removals, etc.
30. Rent of mechanical equipment.

905 – Miscellaneous Customer Accounts Expenses

This account shall include the cost of labor, materials used and expenses incurred not provided for in other accounts.

Labor

1. General clerical and stenographic work.
2. Miscellaneous labor.

Materials and expenses

3. Communication service.
4. Miscellaneous office supplies and expenses and stationery and printing other than those specifically provided for in accounts 902 and 903.

CGV Cost Per Customer

As calculated in Exhibit 8, CGV's annual customer accounts expense per customer is $25.83. CGV's cost pool includes the same expense items that are included in the neighboring electric utilities' customer accounts expenses.

Comparison Group Cost Per Customer

Electric utilities included in the comparison group are shown in the table below.

State	Electric Utilities Providing FERC Form 1 Information	
Virginia	• Appalachian Power	• Virginia Electric Power
Kentucky	• Kentucky Power • Kentucky Utilities	• Louisville Gas & Electric • Union Light, Heat & Power
Maryland	• Baltimore Gas & Electric • Delmarva Power & Light	• Potomac Electric
West Virginia	• Wheeling Power	
Tennessee	• Kingsport Power	
North Carolina	• Progress Energy - Carolinas	• Duke Power

Note: Some neighboring electric utilities were not included in the comparison group because they did not submit the necessary FERC Form 1 data.

Exhibit 9 shows the actual 2005 customer accounts expense per customer calculation for the electric utility comparison group (2006 data was not available at the time of this study). Besides the contents of FERC accounts 903 and 905, labor-related overheads charged to the following FERC accounts must be included in the cost per customer calculation.

- Account 926 Employee Pension and Benefits
- Account 408 Taxes Other Than Income (employer's portion of FICA).

Summary Of Results

As shown in the table below, CGV's cost per customer is below the electric utility comparison group average. Thus, it can be concluded that the customer accounts-related expenses assigned by affiliates to CGV are reasonable.

Customer Account Services Expenses/Customer	
Louisville Gas & Electric	$ 12.43
Virginia Electric Power	$ 15.77
Duke Power	$ 24.25
Kentucky Utilities	$ 24.87
Union Heat, Light & Power	$ 25.64
Columbia Gas of Virginia	**$ 25.83**
Progress Energy - Carolinas	$ 26.70
Baltimore Gas & Electric	$ 27.17
Comparison Group Average	**$ 28.01**
Wheeling Power	$ 29.20
Kingsport Power	$ 32.18
Appalachian Power	$ 32.40
Kentucky Power	$ 34.25
Delmarva Power & Light	$ 51.68
Potomac Electric	$ 68.26

I - Introduction

Purpose Of This Study

This study was undertaken to determine if the services provided to Columbia Gas of Virginia, Inc. ("CGV") by affiliate companies during 2007 were performed at the lower of cost or market. Affiliates that provide CGV with services include NiSource Corporate Services Company ("NCSC") and several NiSource operating companies. NCSC provides CGV with management, professional and technical services while the NiSource operating companies provide CGV with construction, operations and customer account services.

This study was also designed to address whether services provided by CGV to affiliates were priced at the higher of cost or market.

Study Conclusion

Outside service providers (i.e., market) were found to be 58% more expensive than NCSC. The services provided to CGV by NCSC during 2007 would have cost an additional $11 million if they had been performed by outside service providers.

Services from affiliate operating companies could not be compared to outside service providers due to a lack of publicly available outside service provider rate information. However, it was possible to compare CGV's customer accounts expense per customer to those of electric utilities in Virginia and neighboring states. This comparison showed CGV's cost to be considerably less than the electric utility group average. For 2007, the average cost per customer for customer accounts services from CGV affiliates was $25.08 compared to the 2006 average of $28.57 for neighboring electric utilities.

This study subjected all 2007 NCSC's service-related charges and 11% of affiliate operating companies' labor-related charges to a market cost comparison. This sample size is sufficient to support the affiliate's total charges to CGV during 2007.

Based on this study's results, it can be concluded that CGV's 2007 affiliate company charges are priced at the lower of cost or market.

CGV's service-related charges to affiliates are not significant (approximately $250,000 in labor-related expenses). Affiliates are charged at CGV's fully loaded cost. The majority of these services are construction-related and not easily benchmarked to publicly available outside provider hourly rate information. For these reasons, no market testing was performed on these transactions.

II - Background

Overview Of CGV Affiliate Company Services

NCSC provides the following types of services to NiSource operating companies, including CGV:

- Accounting
- Payroll
- Auditing
- Employee benefits
- Planning
- Risk management
- Tax
- Legal
- Environmental
- Financial
- Information technology
- Telecommunications.

In June 2005, NCSC signed a 10-year agreement with IBM under which IBM would provide a broad range of business process and support services to NiSource. In 2007, NCSC decided to change this agreement. NiSource Inc.'s 2007 10K describes the changes as follows:

> *In the first quarter of 2007, NiSource decided to bring certain finance and accounting functions back within the company. These functions included general accounting, fixed asset accounting, and budgeting. In December 2007, NiSource and IBM finalized a restructuring of their business services agreement. Under the restructured agreement, IBM will primarily provide information technology services, with a number of other business service functions to be transitioned back to the NiSource organization.*

NCSC Billing of Affiliate Companies

NiSource Corporate Services was regulated by the Security Exchange Commission ("SEC") under the Public Utility Holding Company Act of 1935 ("PUHCA") until February 8, 2006, when the Energy Policy Act of 2005 took effect. The 2005 Act transfers regulatory jurisdiction over public utility holding companies from the SEC to the Federal Energy Regulatory Commission ("FERC"). Corporate Services continues to follow the SEC Uniform System of Accounts for Mutual Service Companies and Subsidiary Service Companies, until January 1, 2008, after which FERC requires service companies to move to FERC's Uniform System of Accounts. In addition, Corporate Services uses a job order system to collect costs which are applicable and billable to affiliates,

including Columbia Gas of Virginia. Each job order details the affiliate(s) to be charged for the specified services and the basis for allocating charges when more than one affiliate receives the same service. Allocations among affiliates are made when it is impractical to charge an affiliate directly.

NCSC is obligated to bill affiliates at cost in accordance with SEC Rules 90 and 91 under PUHCA. The service agreement between CGV and NCSC stipulates that all services will be provided at cost.

Two types of bills are issued to affiliates: contract billing and convenience billing. Contract billing, which is identified by job order, represents the labor and expenses billed to an affiliate. These are costs incurred by NCSC to render services at the affiliate's request. Contract charges may be direct or allocated depending on the nature of the expense.

Convenience billings are rendered when NCSC makes payment to one vendor for goods or services that benefit one or more affiliate. Convenience bills generally represent outside services that are routinely performed on behalf of affiliates on an ongoing basis, for which each affiliate is billed their proportional share.

The relationship between NCSC and CGV is set forth in a service agreement which was approved by the Virginia State Corporation Commission on September 21, 2005 and amended on October 9, 2007.

Affiliate Operating Company Billing of Other Affiliates

Besides NCSC, other affiliate entities charge CGV for various goods and services. These items are charged to CGV at fully loaded cost.

2007 Affiliate Entities Charges

During 2007, affiliate entities charged CGV approximately $165 million.

Affiliate Entity		Total
NiSource Corporate Services	$	129,333,235
Columbia Gulf Transmission	$	1,967,318
Columbia Network Services	$	8,208
Columbia Gas of Kentucky	$	38,494
Columbia Gas of Ohio	$	1,962,052
Columbia Gas of Maryland	$	2,586
Columbia Gas of Pennsylvania	$	329,387
Columbia Gas Transmission	$	20,381,339
NiSource, Inc.	$	634,581
NiSource Finance	$	8,108,792
Nisource Money Pool	$	2,467,252
Total	$	165,233,244

III – Market Cost Comparison Approach

Charges From Affiliates

CGV's 2007 charges from affiliate entities were analyzed to determine which could be subjected to a market cost comparison. The table below shows the amounts charged CGV during 2007 by type of transaction. The first three items—Interest on Debt and Taxes, Gas Purchase and Transportation Expense, and Convenience Billings and Payroll—do not involve the provision of services.

		Market Cost Testing Disposition		
Type of Transaction	2007 Affiliate Charges To CGV	Involves A Service?	Market Data Available?	Included In This Study?
Interest on Debt and Taxes	$ 10,576,045	No	na	No
Gas Purchase and Transportation Expenses	$ 22,105,121	No	na	No
Convenience Billings and Payroll	$ 111,441,022	No	na	No
Contract Services	$ 18,914,049	Yes	Yes	Yes
Billings From Other Affiliates - Balance Sheet Accts	$ 918,251	Limited	No	No
Billings From Other Affiliates - Income Statement Accts	$ 1,278,756	Limited	Yes	Yes/No
Total 2007 Affiliate Company Billings	**$ 165,233,244**			

Contract Services charges are for management, professional and technical services. Market cost information is available for outside providers of these services. Thus, it is possible to compare NCSC's cost of services to those of outside providers. This study converts NCSC's 2007 corporate services charges to costs per hour and compares those to the costs per hour charged by outside providers. See Chapter IV for this cost comparison.

NiSource regulated operating companies will sometimes support one another in times of emergency or when one's current backlog exceeds its available resources. This sharing arrangement is meant to reduce the cost of service for all ratepayers. The Billings From Other Affiliates line items in the table above relate to this shared support arrangement.

Most of the total $918,000 in Billings From Other Affiliates – Balance Sheet was for construction costs charged by Columbia Gas of Ohio. Only $113,300 of these charges was labor-related. No publicly available market information was found for outside provider of construction services. Thus, this study could not subject these 2007 charges to a market cost comparison.

From Other Affiliates - Income Statement-related transactions are for various operations services and customer account services. Of the $1.3 million in these charges, approximately $508,000 was for labor-related services. No publicly-available market rate information was found for providers of operations-related services (e.g., craft-type services performed by operators and technicians performing day-to-day activities or providing emergency assistance). Thus, this study did not subject 2007 operations-related charges to a market cost comparison. Publicly-available market rate data was also unavailable for

customer account services. However, it was possible to assess the reasonableness of CGV's customer account services-related expenses by comparing them to those of neighboring electric utilities. Electric utility customer account expenses were obtained for this comparison from the FERC Form 1. See Chapter V for this cost comparison.

Charges To Affiliates

CGV charged affiliates $5.6 million during 2007, as shown below.

	2007 Charges From CGV
Billings to Other Affiliates - Balance Sheet Accounts	$ 5,390,267
Billings to Other Affiliates - Income Statement Accounts	$ 214,024
Total Charges To Affiliates	**$ 5,604,291**

Approximately $4.6 million in Balance Sheet-related billings is associated with entries made to reallocated pension and other post employment benefits (OPEB) liabilities among NiSource, Inc. companies based on a measurement by Hewitt, the corporation's compensation and benefits consultant. The remainder of Balance Sheet-related billings consists of construction work CGV performed for affiliate operating companies. Approximately $200,000 of these charges was labor-related.

Income Statement-related billings consists of rent charged to NCSC for its employees located in CGV's Chester, Virginia offices and charges for a variety of services CGV provided to affiliate operating companies. This cost sharing arrangement ultimately provides system ratepayers with lower costs of service. Here too, a relatively small portion of these charges were labor related ($53,000).

CGV charges affiliates its fully loaded cost for these items. No market testing was performed on 2007 charges to affiliates because the costs that are service-related are not material.

IV – NiSource Corporate Services Company Market Cost Comparison

Methodology

NCSC's 2007 corporate services-related billings to CGV are market tested by comparing the cost per hour for NCSC services to those of outside service providers to whom these duties could be assigned.

The first step was to determine which types of outside providers could assume Service Company services. Based on the nature of these services it was determined that the following outside service providers could perform the categories of services indicated.

- Attorneys - corporate secretarial and legal services
- Certified Public Accountants - accounting, finance, information systems and rates and regulatory
- Professional Engineers – engineering and operations services
- Management Consultants - executive and administrative management, risk management services, human resources and communications services

The next step was to calculate NCSC's hourly rate for each of the four outside service provider categories, based on the dollars and hours charged to CGV during the 12-months ended December 31, 2007.

Hourly billing rates for outside service providers were next determined using information from pertinent surveys.

Finally, the NCSC's average cost per hour was compared to the average cost per hour for outside providers.

NCSC Hourly Rates

The first step in determining NCSC's hourly rates is to determine the appropriate expenses to be included in the calculation. As shown below, certain NCSC charges were excluded from the hourly rate calculations. Excluded cost elements are charges that are, in effect, already outsourced (e.g., IBM outsourcing, outside services expenses) or items that an outside provider would not typically recover in their hourly rates (e.g., travel expenses). The net result of these adjustments is the total applicable cost pool that is subjected to the lower-of-cost-or-market testing.

2007 Total Contract Billings from NCSC		$ 18,914,049
Less:	Excludable Cost Elements:	
	2504 - Expert Witness Fees	$ (9,971)
	3000 - Consulting Services	$ (248,398)
	3001 - Advertising Services	$ (124,501)
	3002 - Legal Services	$ (324,807)

	3015 - Other Outside Services	$ (254,508)
	3016 - Other Maintenance Services	$ (28)
	3030 - Outsourcing - Est. Fixed Costs	$ (774,067)
	3031 - Outsourcing - Variable Costs	$ (661,846)
	3032 - Transition Costs	$ 79,766
	3033 - Sales Tax	$ (136,183)
	3034 - Capitalized Portion - Inflights	$ 94,033
	3035 - Supplemental Contract Costs	$ 28,651
	3036 - Service Level Agreements	$ 122,005
	3037 - Miscellaneous Reimbursements	$ 100,992
	3038 - Request for Service (RFS)	$ (158,577)
	3040 - Outsourcing - Act. Fixed Costs	$ (8,975,508)
	3041 - Outsourcing-Variable Csts-RRCs	$ 581,714
	3044 - Capitalized Portion - Transfrm	$ 322,904
	3054 - Capitalized Portn-PCs & Laptops	$ 81,890
	3064 - Capitalized Portion - WMS	$ (110,350)
	3074 - Capitalized Portion - RFS	$ 45,725
	3075 - Cap Portion - RFS Conv. Billed Total	$ 6,513
	3100 - Business Expenses	$ (209,379)
	3101 - Meals Special Cases Only	$ (230)
	3102 - Meals and Entertainment	$ (62,365)
	3103 - Non-Deductible Business Expens	$ (1)
	3357 - Vehicle Maint/Other Costs Clrd	$ (1)
	3645 - Sale of Property	$ (197,905)
	9604 - Income Taxes Federal	$ 98,024
	9605 - Income Taxes State	$ 76,173
	9606 - Deferred Income Taxes Federal	$ (128,329)
	9607 - Deferred Income Taxes State	$ (22,782)
	2007 Testable Contract Billings from NCSC (A)	$ 8,046,401

Note A: This total breaks down as following for later analysis:

Service-Related Charges	$ 7,087,530
Overhead-Related Charges	$ 958,870
2007 Testable Contract Billings from NCSC	$ 8,046,401

The next step was to assign NCSC's service-related charges to the four outside service provider cost pools—attorney, certified public accountant, engineer and management consultant. Among other things, NCSC assigns a "department" to all affiliate charges. Based on the nature of services performed by these departments, NCSC's charges were assigned to the four outside provider cost pools, as shown in Exhibit 1.

Exhibit 2 shows the assignment of staff hours by department to the four outside service provider cost pools. It should be noted that only exempt personnel hours are included in Exhibit 2 because outside providers sometimes do not charge clients for administrative/secretarial support (i.e., non-exempt staff). Instead, they recover the cost of non-exempt staff through the hourly rates of the firm's professionals. Some outside providers bill customers for non-exempt personnel, but this study chose to be conservative in this regard. By excluding non-exempt hours from the hourly rate denominator, there are fewer hours to divide into the cost pool. Consequently, NCSC's hourly rates are somewhat higher using this approach.

Within the total 2007 NCSC charges are overhead-related items associated with sustaining NCSC personnel. Most of these expenses are depreciation expense and rent on various NCSC facilities and equipment. The 2007 amounts by department are shown below. Since these expenses would also be incurred by outside service providers, it is necessary to add them into the NCSC cost pools.

Department	2007
0005000 - Aviation Services	176,141
0017000 - TPC/NET	(1,102)
0071000 - Insurance - Premiums	54,083
0042000 - General	304,876
0047000 - Facilities Management	351,024
0049000 - Real Estate Management	13,297
0087000 - Materials and Supplies	11,185
0088000 - Fleet Management	49,368
Total	**958,870**

Based on the assignment of expenses and hours to outside provider categories, NCSC's 2007 equivalent cost per hour is calculated below.

	NCSC Hourly Rates				
	Attorney	Certified Public Accnt	Professional Engineer	Mgmt Consultant	Total
Service-Related Charges	$ 655,874	$ 1,806,481	$ 2,143,455	$ 2,481,721	$ 7,087,530
Overhead Expenses (A)	$ 89,175	$ 244,512	$ 289,579	$ 335,605	$ 958,870
Cost Pool Total	$ 745,049	$ 2,050,993	$ 2,433,033	$ 2,817,325	$ 8,046,401
Hours	10,422	35,790	38,640	40,761	125,612
Average Hourly Rate	**$ 71**	**$ 57**	**$ 63**	**$ 69**	

Note A: These expenses are assigned to the outside provider categories prorata based on the "direct" expenses as calculated below.

	Attorney	Certified Public Accnt	Professional Engineer	Mgmt Consultant	Total
Service-Related Charges	$ 655,874	$ 1,806,481	$ 2,143,455	$ 2,481,721	$ 7,087,530
Percent of Cost Pool Total	9.3%	25.5%	30.2%	35.0%	100.0%
Allocation Of Overhead Expenses	$ 89,175	$ 244,512	$ 289,579	$ 335,605	$ 958,870

Outside Service Provider Hourly Rates

The next step in the cost comparison was to calculate the average billing rates for each type of outside service provider. The source of this information and the determination of the average rates are described in the paragraphs that follow.

Attorneys

The Virginia Bar Association does not survey its members as to their hourly billing rates. In addition, publicly available billing rate information could not be found for Virginia attorneys (Virginia Lawyers Weekly used to ask for hourly rates in its annual survey but eliminated that question a few years ago). Therefore, an estimate of Virginia attorney rates was developed from a survey of Michigan lawyers conducted annually by the Michigan Lawyers Weekly. As presented in Schedule 3, the average rate for each Michigan firm respondent was adjusted for the cost of living differential between their location and Richmond, Virginia. The survey includes rates that were in effect at December 31, 2006. Thus, the 2006 average rate was escalated to June 30, 2007—the midpoint of 2007.

Certified Public Accountants

The average hourly rate for Virginia certified public accountants was developed from a 2006 survey conducted by the American Institute of Certified Public Accountants (AICPA) every two years. Hourly rates in the AICPA survey are the average of firms in Virginia. The average hourly rate was calculated for a set of typical accountant positions, as shown in Schedule 4. Based on a typical staff assignment by each accountant position, a weighted average hourly rate was calculated. This survey covered hourly rates in effect during 2005. Thus, the 2005 average rate was escalated to June 30, 2007—the midpoint of 2007.

Professional Engineers

CGV provided 2007 hourly rate information for four engineering firms that are periodically used by the company when outside engineering services are required. As shown in Exhibit 5, an average rate was developed for each engineering position. Then, using a typical percentage mix by position for a typical engineering project, a weighted average cost per hour was calculated.

Management Consultants

The cost per hour for management consultants was developed from the 2007 annual survey performed by the Association of Management Consulting Firms—an industry trade organization. The first step in the calculation, presented in Schedule 6, was to determine an average rate by consultant position level. From these rates, a single weighted average hourly rate was calculated based upon the percent of time that is typically applied to a consulting assignment by each consultant position level. This survey includes rates that were in effect at December 31, 2006 for firms in the United States. Consultants typically do not

limit their practice to any one region and must travel to a client's location. Thus, the U.S. national average is appropriate for comparison. Thus, the 2006 average rate was escalated to June 30, 2007—the midpoint of 2007.

Columbia Gas of Virginia, Inc.

NCSC Versus Outside Provider Cost Comparison

As shown in the table below, NCSC's costs per hour are considerably lower than those of outside providers.

	2007 Cost/Hour Difference		
Service Provider	NCSC	Outside Providers	Difference-- NCSC Greater(Less) Than Outside
Attorney	$ 71	$ 280	$ (209)
Certified Public Accountant	$ 57	$ 110	$ (53)
Professional Engineer	$ 63	$ 83	$ (20)
Management Consultant	$ 69	$ 219	$ (150)

As calculated below, based on these cost per hour differentials and the number of hours that NCSC billed CGV during 2007, the services would cost almost $11 million more from outside providers. This is 58% more ($10,978,009 / $18,914,049 = 58%) than NCSC's total 2007 contract billings to CGV.

	2007 Total Cost Difference		
Service Provider	Hourly Rate Difference-- NCSC Greater(Less) Than Outside	NCSC Hours Charged	Dollar Difference
Attorney	$ (209)	10,422	$ (2,176,433)
Certified Public Accountant	$ (53)	35,790	$ (1,893,153)
Professional Engineer	$ (20)	38,640	$ (789,129)
Management Consultant	$ (150)	40,761	$ (6,119,294)
			$ (10,978,009)

V – Affiliate Operating Company Market Cost Comparison

Background

As discussed earlier, customer account services were the only 2007 affiliate operating company charges that could be market tested. In 2007, charges for these services represented 11% of total affiliate operating company charges.

	2007 Charges	
Other Affiliate Customer Accts Expense Billings		
CG - Ohio	$ 5,259	
CG - Pennsylvania	$ 60,611	
CG - Kentucky	$ 78	
Total Other Affiliate Customer Accts Expense Billings		$ 65,948
Billings From Other Affiliates - Balance Sheet & Income Stmt		
Total Labor-Related Charges		$ 621,668
Coverage Percentage		11%

Definition Of Customer Accounts Services Expenses

The basis of comparison between CGV and neighboring electric utilities is customer accounts expense per customer. FERC's chart of accounts, (chapter 18, part 101 of Code of Federal Regulations) designates the following accounts contain customer accounts expenses:

- Account 903 Customer Accounts Expense – Records and Collection Expense
- Account 905 Customer Accounts Expense – Miscellaneous Customer Accounts Expense.

Exhibit 7 further details the services/activities whose costs are to be recorded in these. The graphic below shows which CGV cost components correspond to the contents of FERC accounts 903 and 905.

Electric Utilities
FERC Acct 903 - Records and Collection Expense and FERC Acct 905 - Misc Customer Accounts Expense
- Customer contact
- Customer order processing
- Bill preparation and mailing
- Collections
- Payment processing
- Correspondence processing

Columbia Gas - Virginia
NCSC Company (A)
- Bill preparation and mailing
CG - Ohio & Pennsylvania
- Customer contact
- Customer order processing
- Billing information processing
- Collections
- Correspondence processing
CG - Virginia
- Payment processing

Note A: All NCSC charges are primarily recorded in CGV's account 923.

FERC Account Descriptions

903 – Customer Records and Collection Expenses

This account shall include the cost of labor, materials used and expenses incurred in work on customer applications, contracts, orders, credit investigations, billing and accounting, collections and complaints.

Labor

1. Receiving, preparing, recording and handling routine orders for service, disconnections, transfers or meter tests initiated by the customer, excluding the cost of carrying out such orders, which is chargeable to the account appropriate for the work called for by such orders.
2. Investigations of customers' credit and keeping of records pertaining thereto, including records of uncollectible accounts written off.
3. Receiving, refunding or applying customer deposits and maintaining customer deposit, line extension, and other miscellaneous records.
4. Checking consumption shown by meter readers' reports where incidental to preparation of billing data.
5. Preparing address plates and addressing bills and delinquent notices.
6. Preparing billing data.
7. Operating billing and bookkeeping machines.
8. Verifying billing records with contracts or rate schedules.
9. Preparing bills for delivery, and mailing or delivering bills.
10. Collecting revenues, including collection from prepayment meters unless incidental to meter reading operations.
11. Balancing collections, preparing collections for deposit, and preparing cash reports.
12. Posting collections and other credits or charges to customer accounts and extending unpaid balances.
13. Balancing customer accounts and controls.
14. Preparing, mailing, or delivering delinquent notices and preparing reports of delinquent accounts.
15. Final meter reading of delinquent accounts when done by collectors incidental to regular activities.
16. Disconnecting and reconnecting services because of nonpayment of bills.
17. Receiving, recording, and handling of inquiries, complaints, and requests for investigations from customers, including preparation of necessary orders, but excluding the cost of carrying out such orders, which is chargeable to the account appropriate for the work called for by such orders.
18. Statistical and tabulating work on customer accounts and revenues, but not including special analyses for sales department, rate department, or other general purposes, unless incidental to regular customer accounting routines.
19. Preparing and periodically rewriting meter reading sheets.
20. Determining consumption and computing estimated or average consumption when performed by employees other than those engaged in reading meters.

Materials and expenses

21. Address plates and supplies.
22. Cash overages and shortages.
23. Commissions or fees to others for collecting.
24. Payments to credit organizations for investigations and reports.
25. Postage.
26. Transportation expenses, including transportation of customer bills and meter books under centralized billing procedure.
27. Transportation, meals, and incidental expenses.
28. Bank charges, exchange, and other fees for cashing and depositing customers' checks.
29. Forms for recording orders for services, removals, etc.
30. Rent of mechanical equipment.

905 – Miscellaneous Customer Accounts Expenses

This account shall include the cost of labor, materials used and expenses incurred not provided for in other accounts.

Labor

1. General clerical and stenographic work.
2. Miscellaneous labor.

Materials and expenses

3. Communication service.
4. Miscellaneous office supplies and expenses and stationery and printing other than those specifically provided for in accounts 902 and 903.

CGV Cost Per Customer

As calculated in Exhibit 8, CGV's annual customer accounts expense per customer is $25.08. CGV's cost pool includes the same expense items that are included in the neighboring electric utilities' customer accounts expenses.

Comparison Group Cost Per Customer

Electric utilities included in the comparison group are shown in the table below.

State	Electric Utilities Providing FERC Form 1 Information	
Virginia	• Appalachian Power	• Virginia Electric Power
Kentucky	• Duke Energy Kentucky • Kentucky Power	• Kentucky Utilities • Louisville Gas & Electric
Maryland	• Baltimore Gas & Electric • Delmarva Power & Light	• Potomac Electric
Tennessee	• Kingsport Power	
West Virginia	• Wheeling Power	
North Carolina	• Progress Energy - Carolinas	• Duke Energy - Carolinas

Note: Some neighboring electric utilities were not included in the comparison group because they did not submit the necessary FERC Form 1 data.

Exhibit 9 shows the actual 2006 customer accounts expense per customer calculation for the electric utility comparison group (2007 data was not available at the time of this study). Besides the contents of FERC accounts 903 and 905, labor-related overheads charged to the following FERC accounts must be included in the cost per customer calculation.

- Account 926 Employee Pension and Benefits
- Account 408 Taxes Other Than Income (employer's portion of FICA).

Summary Of Results

As shown in the table below, CGV's cost per customer is below the electric utility comparison group average. Thus, it can be concluded that the customer accounts-related expenses assigned by affiliates to CGV are reasonable.

Customer Account Services Expenses/Customer	
Louisville Gas & Electric	$ 13.46
Virginia Electric Power	$ 14.89
Duke Energy Carolinas	$ 22.16
Progress Energy - Carolinas	$ 24.75
Columbia Gas of Virginia	**$ 25.08**
Kentucky Utilities	$ 27.14
Comparison Group Average	**$ 28.57**
Wheeling Power	$ 29.48
Baltimore Gas & Electric	$ 31.26
Kingsport Power	$ 33.56
Appalachian Power	$ 33.43
Kentucky Power	$ 35.75
Duke Energy Kentucky	$ 39.46

Summary of Results	

Purpose of This Study

This study was undertaken to determine the reasonableness of Columbia Gas of Virginia, Inc.'s ("CGV") charges from NiSource Corporate Services Company ("NCSC") and several NiSource operating companies for services provided during 2008. Reasonableness was determined by answering the following three questions:

1. Are 2008 service-related affiliate charges to CGV reasonable compared to other utility service companies?

2. Did NCSC provide services to CGV at the lower of cost or market during 2008?

3. Is the 2008 cost of NCSC's customer accounts services comparable to those of other utilities?

Study Results

Concerning question 1, the following conclusions were reached:

- NCSC and other affiliates provide CGV with services similar to those provided by other utility service companies.

- The cost per CGV customer for services from NCSC and other affiliates is reasonable and favorable as compared to the cost per customer for similar utility service companies. CGV was charged an average of $86 per customer by NCSC and other affiliates, approximately 27% lower than the average of $118 per customer for comparison group service companies. This determination was based on service company information included in Form 60, which must be annually filed with the Federal Energy Regulatory Commission ("FERC") by electric and combination electric/gas utility holding companies. The comparison is based on data from 2007, the latest year for which Form 60 information is currently available.

Concerning question 2, the following conclusions were reached:

- NCSC's services were provided to CGV during 2008 at the lower of cost or market.

- On average, the hourly rates for outside service providers are 60% higher than comparable hourly rates charged by NCSC.

- If all of the managerial and professional services now provided by its affiliates had been outsourced in 2008, CGV and its customers would have incurred $10.7 million in additional expenses.

- Affiliates' charges do not include any profit markup. Only the actual cost of the service provided is being charged CGV and its customers.

Concerning question 3, the cost of NCSC and other affiliate's customer accounts services is well below the average of the neighboring electric utility comparison group. During 2008, CGV's customer accounts cost per customers was $16.97 compared to the utility comparison group's 2007 average of $28.93.

Based on this study's results, it can be concluded that CGV's 2008 service-related charges from NCSC and other affiliates are reasonable.

CGV's service-related charges to affiliates are not significant (approximately $210,000 in labor-related expenses). Affiliates are charged at CGV's fully loaded cost. The majority of these services are construction-related and not easily benchmarked to publicly available outside provider hourly rate information. For these reasons, no market testing was performed on these transactions.

Overview of CGV Affiliate Company Services

NCSC provides the following types of services to NiSource operating companies, including CGV:

- Accounting
- Payroll
- Auditing
- Employee benefits
- Planning
- Risk management
- Tax
- Legal
- Environmental
- Financial
- Information technology
- Telecommunications.

In June 2005, NCSC signed a 10-year agreement with IBM under which IBM provided a broad range of business process and support services to NiSource. In 2007, NCSC decided to change this agreement. A NiSource Inc. 10Q issued describes the changes as follows:

> *In December 2007, NiSource and IBM finalized a restructuring of their business services agreement. Under the restructured agreement, IBM will primarily provide information technology services, with a number of other business service functions to be transitioned back to the NiSource organization. Through the third quarter of 2008, certain Meter to Cash, Human Resources, Sales Center, remaining Finance and Accounting (except for Accounts Payable) and Supply Chain Management support services transitioned back to the company. NiSource has made a decision to transition certain Accounts Payable functions to another Service Provider.*

NCSC Billing of Affiliate Companies

NiSource Corporate Services ("NCSC'') was regulated by the Securities and Exchange Commission ("SEC") under the Public Utility Holding Company Act of 1935 ("PUHCA") until February 8, 2006, when the Public Utility Holding Company Act ("PUHCA 2005") was enacted. PUHCA 2005 transferred regulatory jurisdiction over public utility holding companies from the SEC to the Federal Energy Regulatory Commission ("FERC"). NCSC continued to follow the SEC Uniform System of Accounts for Mutual Service Companies and Subsidiary Service Companies until January 1, 2008. Effective January 1, 2008, the FERC requires service companies to move to its Uniform System of Accounts.

Pursuant to FERC Order No. 684 issued October 19, 2006, Centralized Service Companies must use a cost accumulation system, provided such system supports the allocation of expenses to the services performed and readily identifies the source of the expense and the basis for the allocation. NCSC has long used a job order system to collect costs that are applicable and billable to all affiliates including Columbia Gas of Virginia. Each job order details the affiliate(s) to be charged for the specified services and the basis for allocating charges when more than one affiliate receives the same service.

The service agreement between CGV and NCSC stipulates that all services will be provided at cost. Allocations among affiliates are only made when it is impractical to charge an affiliate directly.

The Bases of Allocation, shown in Schedule 1, are used by the Corporate Services Accounting Department for apportioning Job Order charges to affiliates.

Categories of billings assigned by NCSC to affiliates include the following:

- Convenience Billings – Includes charges for expenses paid by NCSC on behalf of affiliates to third party providers of services. These charges are considered "pass-through" costs, flowing through NCSC for the convenience and benefit of all affiliates. Typical charges include external audit fees, employee benefits, vehicle leasing, corporate insurance and wire transfers for hedging margin accounts.

- Payroll Funding – Includes CGV payroll costs that are disbursed by NCSC. NCSC makes these payments on behalf of all subsidiaries and CGV wires the requisite cash to NCSC on a monthly basis.

- Contract billings - Includes charges for the costs incurred by NCSC to render the services that are agreed to be provided according to the Service Agreement. The charges may be direct or allocated, depending upon the nature of the expense.

The relationship between NCSC and CGV is set forth in a service agreement which was approved by the Virginia State Corporation Commission on September 21, 2005 and amended on October 9, 2007.

Affiliate Operating Company Billing of Other Affiliates

Besides NCSC, other affiliate entities charge CGV for various goods and services. These items are charged to CGV at fully loaded cost.

Schedule 1

Columbia Gas of Virginia, Inc.
Bases for Allocating Service Company Charges to Affiliates

Basis 1 - Gross Fixed Assets and Total Operating Expenses Fifty percent of the total job order charges will be allocated on the basis of the relation of the affiliate's gross fixed assets to the total gross fixed assets of all benefited affiliates; the remaining 50% will be allocated on the basis of the relation of the affiliate's total operating expenses to the total operating expenses of all benefited affiliates.
Basis 2 - Gross Fixed Assets Job order charges will be allocated to each benefited affiliate on the basis of the relation of its total gross fixed assets to the sum of the total gross fixed assets of all benefited affiliates.
Basis 7 - Gross Depreciable Property and Total Operating Expenses Fifty percent of the total job order charges will be allocated on the basis of the relation of the affiliate's total operating expenses to the total of all the benefited affiliates' total operating expense; the remaining 50% will be allocated on the basis of the relation of the affiliate's gross depreciable property to the gross depreciable property of all benefited affiliates.
Basis 8 - Gross Depreciable Property Job order charges will be allocated to each benefited affiliate on the basis of the relationship of its total depreciable property to the sum of the total depreciable property of all benefited affiliates.
Basis 9 - Automobile Units Job order charges will be allocated to each benefited affiliate on the basis of its number of automobile units to the total number of all automobile units of the benefited affiliates.
Basis 10 - Number of Retail Customers Job order charges will be allocated to each benefited affiliate on the basis of its number of retail customers to the total number of all retail customers of the benefited affiliates.
Basis 11 - Number of Regular Employees Job order charges will be allocated to each benefited affiliate on the basis of the relation of its number of regular employees to the total number of all regular employees of the benefited affiliates.
Basis 13 - Fixed Allocation Job order charges will be allocated to each benefited affiliate on the basis of fixed percentages on an individual project basis.
Basis 14 - Number of Transportation Customers Job order charges will be allocated to each benefited affiliate on the basis of the relation of its Transportation Customers to the total of all Transportation Customers of the benefited affiliates.
Basis 15 - Total Employees and Customers Job order charges will be allocated to each benefited affiliate on the basis of the relation of its number of employees and customers to the total of all employees and customers of the benefited affiliates.
Basis 16 - Total Plant, State Employees and Customers Job order charges will be allocated to each benefited affiliate on the basis of the relation of its Plant, State Employees and Customers to the total of all Plant, State Employees and Customers of the benefited affiliates.
Basis 17 - Total Tariff and Transportation Throughput Job order charges will be allocated to each benefited affiliate on the basis of the relation of its Tariff and Transportation Throughput to the total of all Tariff and Transportation Throughput of the benefited affiliates.
Basis 20 - Direct Costs Job order charges will be allocated to each benefited affiliate on the basis of the relation of its direct costs billed by Service Corporation to the total of all direct costs billed by Service Corporation.

Analysis of CGV Charges from Affiliates

During 2008, the following affiliate entities charged CGV approximately $232 million.

Affiliate Entity		Total
NiSource Corporate Services	$	195,984,880
Columbia Gulf Transmission	$	1,876,542
Columbia Network Services	$	8,208
Columbia Gas of Kentucky	$	275,872
Columbia Gas of Ohio	$	2,446,519
Columbia Gas of Maryland	$	1,583
Columbia Gas of Pennsylvania	$	505,092
Columbia Gas Transmission	$	20,063,823
NiSource, Inc.	$	417,000
NiSource Finance	$	9,402,129
Bay State Gas	$	5,270
NiSource Money Pool	$	1,262,111
Total	$	232,249,029

These charges were analyzed to determine which were service-related and could be subjected to a cost comparison. The table below shows the amounts charged CGV during 2008 by type of transaction. The first three items—Interest on Debt and Taxes, Gas Purchase and Transportation Expense, and Convenience Billings and Payroll—do not involve the provision of services.

			Cost Comparison Testing Disposition		
Type of Transaction		2008 Affiliate Charges To CGV	Involves A Service?	Comparative Data Available?	Evaluated In This Study?
Interest on Debt and Taxes	$	10,664,240	No	na	No
Gas Purchase and Transportation Expenses	$	21,679,092	No	na	No
Convenience Billings and Payroll	$	178,118,643	No	na	No
Contract Services	$	17,866,237	Yes	Yes	Yes
Billings From Other Affiliates - Balance Sheet Accts	$	1,814,465	Limited	No	No
Billings From Other Affiliates - Income Statement Accts	$	2,106,352	Limited	Yes	Yes
Total 2008 Affiliate Company Billings	**$**	**232,249,029**			

Contract Services charges are for management, professional and technical services. Comparative information is available for these charges, thus they were included in the scope of this study.

NiSource regulated operating companies will sometimes support one another in times of emergency or when one's backlog of work exceeds its available resources. This sharing arrangement is meant to reduce the cost of service for all ratepayers. The Billings From Other Affiliates line items in the table above relate to this shared support arrangement.

Much of the total $1.8 million in Billings From Other Affiliates – Balance Sheet was for construction costs charged by Columbia Gas of Ohio. Only $87,000 of

these charges was labor-related. No publicly available market information was found for outside provider of construction services. Thus, this study did not subject these 2008 charges to a cost comparison. Also included in these charges was $358,000 in billings associated with entries made to reallocated pension and other post employment benefits (OPEB) liabilities among NiSource, Inc. companies based on a measurement by Hewitt, the corporation's compensation and benefits consultant.

From Other Affiliates - Income Statement-related transactions are for various operations services and customer account services. Of the $2.1 million in these charges, approximately $688,000 was for labor-related services. Some comparison data was found for these services so, to the extent possible, they were included in the scope of this study.

Comparison Methodology for Charges from Affiliates

2008 affiliate charges that are included in the scope of this study are evaluated in connection with three questions, as shown in the table below.

			Study Question		
Type of Transaction		2008 Affiliate Charges To CGV	1 - Reasonableness	2 - LCM Pricing	3 - Cust Acct Services
Contract Services	$	17,866,237	X	X	X
Billings From Other Affiliates - Income Stmt. Accts	$	2,106,352	X		X

The first question—are affiliate charges for services reasonable—was answered by comparing CGV's affiliate charges per customer to those of utility service companies that file a FERC Form 60 – Annual Report of Service Companies. This comparison was made with 2007 Form 60 data, the latest year Form 60 data is available (the filing deadline for the Form 60 is May 1st).

This study's second question—whether NCSC's services were provided to CGV during 2008 at the lower of cost or market—was determined by comparing the cost per hour for managerial and professional services provided by NCSC personnel, to hourly billing rates that would be charged by outside providers of equivalent services. NCSC's costs per hour were based on actual charges to CGV during the 12 months ended December 31, 2008. Outside providers' billing rates came from surveys or other information from professionals that could perform the services now provided by NCSC.

The third question—whether affiliate customer account services charges were comparable to other utilities—was addressed by comparing CGV's total customer

accounts services expenses to those of neighboring electric utilities. This approach was selected because the costs of outside providers of call center services are not publicly available. However, electric utility customer account services expenses can be readily obtained from FERC Form 1 data. The availability and transparency of FERC data adds to the validity of its use in this comparison. The comparison was made using 2007 data, the latest year for which FERC Form 1 data is available (the filing deadline for FERC Form 1 is April 18th).

Analysis of CGV Charges to Affiliates

CGV charged affiliates $2.1 million during 2008, as shown below.

	2008 Charges From CGV
Billings to Other Affiliates - Balance Sheet Accounts	$ 1,910,099
Billings to Other Affiliates - Income Statement Accounts	$ 186,505
Total Charges To Affiliates	**$ 2,096,604**

Most Balance Sheet-related billings consist of construction work CGV performed for affiliate operating companies. Only $178,000 of these charges was labor-related.

Income Statement-related billings consists of rent charged to NCSC for its employees located in CGV's Chester, Virginia offices and charges for a variety of services CGV provided to affiliate operating companies. This cost sharing arrangement ultimately provides system ratepayers with lower costs of service. Here too, a relatively small portion of these charges were labor related ($32,000).

CGV charges affiliates its fully loaded cost for these items. No market testing was performed on 2008 charges to affiliates because the costs that are service-related are not material.

CGV's Cost per Customer

During 2008, CGV was charged $86 per customer in service-related charges from NCSC and other affiliates.

2008 NCSC Contract Charges			$ 17,866,237

Total CGV Customers at 12/31/08			236,823
2008 CGV Cost Per Customer			**$ 86**

Comparison Group Cost per Customer

Every centralized service company in a holding company system must file a Form 60 in accordance with the Public Utility Holding Company Act of 2005, Section 1270, Section 390 of the Federal Power Act and 18 C.F.R. paragraph 366.23. This report is designed to collect financial information from service companies that are subject to regulation by the FERC.

NCSC files a Form 60. Twenty-two other utility holding companies filed a Form 60 for 2007. All but two became part of the comparison group. The service company for PNM Resources, Inc. was excluded because its total 2007 service company cost per regulated utility customer was a negative amount, clearly an anomaly. This result is likely due to the unique manner by which PNM's service company expenses are reported on Form 60. Duke Energy was also excluded from the comparison group because one of its two service companies was not

required to provide data for its Form 60. Thus, it was not possible to develop Duke's consolidated service company cost per customer for 2007.

Schedule 2 compares the services provided by NCSC to the services provided by comparison group service companies. In general, the types of services provided by NCSC are similar to those provided by comparison group service companies.

Operating and maintenance expenses charged to utility affiliates for the comparison group service companies were obtained from Schedule XVII – Schedule of Expense Distribution by Department or Service Function (p. 305 to 305c) of each entity's FERC Form 60. This schedule shows charges by category of service (e.g., accounting, information technology) and type of cost (e.g., labor, benefits, outside services). The following were eliminated from the comparison group's total expenses because they are not in NCSC's 2008 charges to CGV:

- All electric-specific services
- Income taxes (account 409), provision for deferred income taxes (account 410), provision for deferred income taxes – credit (account 411) and investment tax credit (account 411.5).
- Donations (account 426.1)
- Interest on long-term debt (account 427), interest on debt to associate companies (account 430) and other interest expense (account 431)

Comparison group service company 2007 expenses were also adjusted to remove charges to non-regulated affiliates from the cost pool used to calculate the cost per regulated service customer. This determination was made using information from the FERC Form 60 schedule: Account 457 – Analysis of Billing – Associate Companies.

Schedule 3 shows CGV's 2008 Service Company cost per customer of $86 to be considerably lower than the average of $118 per customer for the comparison group service companies. Only 3 of 20 comparison group service companies had a lower 2007 cost per customer than CGV. These results further support the conclusion that the NCSC's 2008 charges to CGV were reasonable.

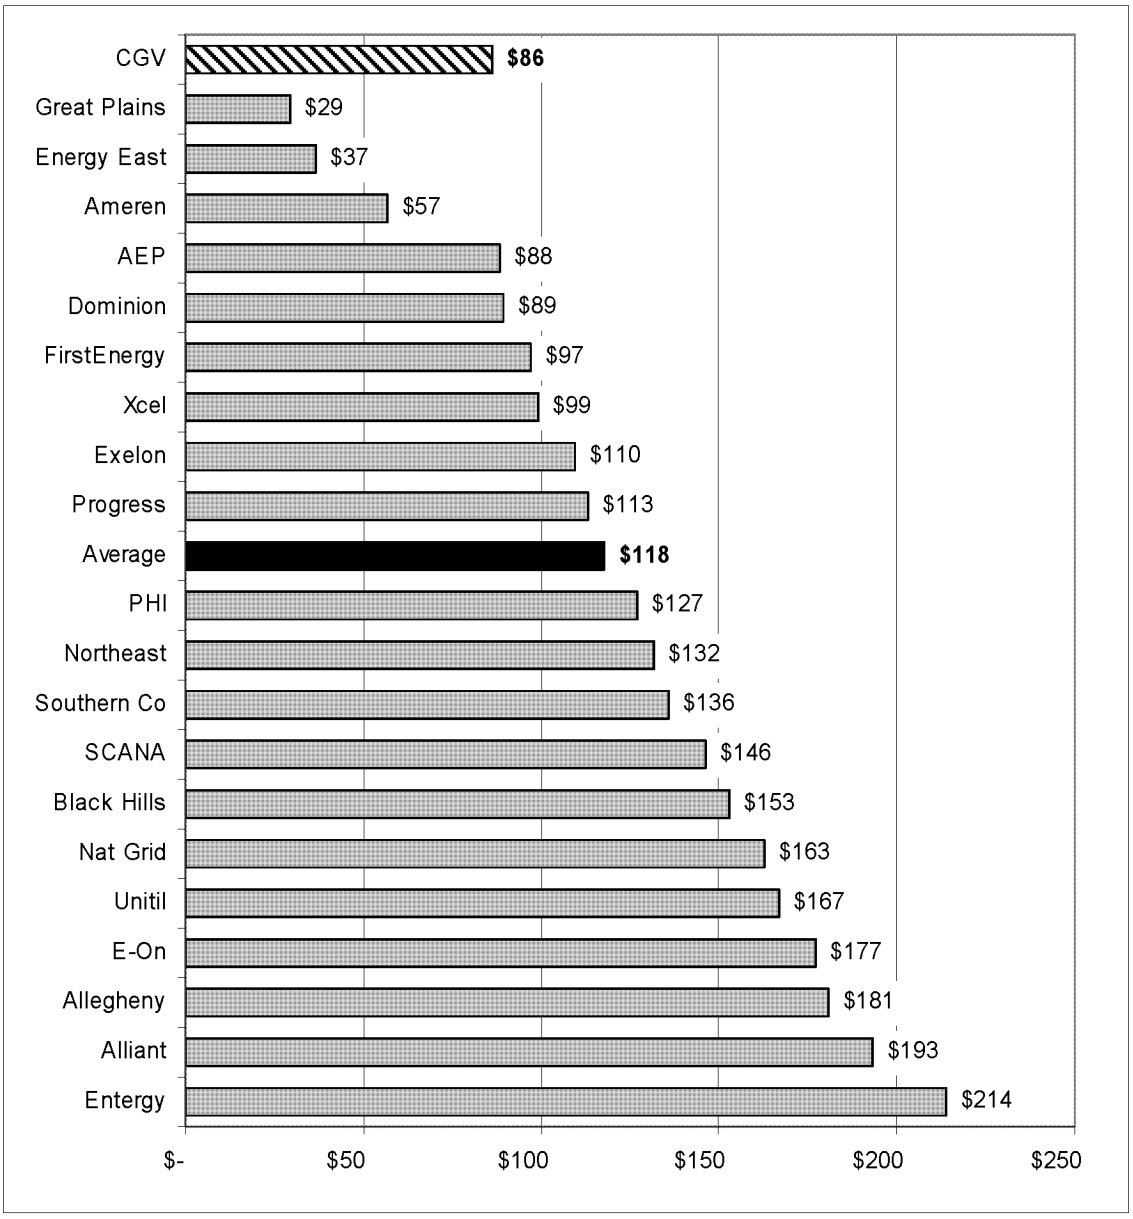
Comparison of Service Company Annual Costs Per Customer



Methodology

NCSC's 2008 corporate services-related billings to CGV are market tested by comparing the cost per hour for NCSC services to those of outside service providers to whom these duties could be assigned.

The first step was to determine which types of outside providers could assume Service Company services. Based on the nature of these services it was determined that the following outside service providers could perform the categories of services indicated.

- Attorneys - corporate secretarial and legal services
- Certified Public Accountants - accounting, finance, information systems and rates and regulatory
- Professional Engineers – engineering and operations services
- Management Consultants - executive and administrative management, risk management services, human resources and communications services

The next step was to calculate NCSC's hourly rate for each of the four outside service provider categories, based on the dollars and hours charged to CGV during the 12-months ended December 31, 2008.

Hourly billing rates for outside service providers were next determined using information from pertinent surveys.

Finally, the NCSC's average cost per hour was compared to the average cost per hour for outside providers.

NCSC Hourly Rates

The first step in determining NCSC's hourly rates is to determine the appropriate expenses to be included in the calculation. As shown below, certain NCSC charges were excluded from the hourly rate calculations. Excluded cost elements are charges that are, in effect, already outsourced (e.g., IBM outsourcing, outside services expenses) or items that an outside provider would not typically recover in their hourly rates (e.g., travel expenses). The net result of these adjustments is the total applicable cost pool that is subjected to the lower-of-cost-or-market testing.

V – Question 2 – Provision of Services at the Lower of Cost or Market

2008 Total Contract Billings from NCSC		$ 17,866,237
Less: Excludable Cost Elements:		
3000 - Consulting Services	$	608,556
3001 - Advertising Services	$	211,519
3002 - Legal Services	$	179,990
3003 - Auditing Services	$	6,214
3011 - Temporary Personnel Services	$	88,819
3012 - Security Services	$	2,432
3015 - Other Outside Services	$	368,280
3016 - Other Maintenance Services	$	677
3030 - Outsourcing - Est. Fixed Costs	$	(83,713)
3031 - Outsourcing - Variable Costs	$	325,569
3032 - Transition Costs	$	175,104
3033 - Sales Tax	$	112,153
3034 - Capitalized Portion - Inflights	$	(7,057)
3035 - Supplemental Contract Costs	$	230,505
3036 - Service Level Agreements	$	(68,617)
3037 - Miscellaneous Reimbursements	$	(34,669)
3038 - Request for Service (RFS)	$	52,260
3040 - Outsourcing - Act. Fixed Costs	$	6,850,993
3041 - Outsourcing-Variable Csts-RRCs	$	(196,698)
3043 - Outsourcing - Credits	$	(34,485)
3044 - Capitalized Portion - Transfrm	$	(122,062)
3054 - Capitalized Portn-PCs & Laptops	$	(94,905)
3064 - Capitalized Portion - WMS	$	27,626
3074 - Capitalized Portion - RFS	$	3,115
3100 - Business Expenses	$	255,884
3101 - Meals Special Cases Only	$	1,652
3102 - Meals and Entertainment	$	86,605
3357 - Vehicle Maint/Other Costs Clrd	$	186
3634 - Purchase of Property	$	54,200
3645 - Sale of Property	$	211,185
9604 - Income Taxes Federal	$	408,772
9605 - Income Taxes State	$	61,897
9606 - Deferred Income Taxes Federal	$	(369,087)
9607 - Deferred Income Taxes State	$	(58,514)
3065 - Cap Portion - WMS Conv. Billed	$	(296,923)
2008 Testable Contract Billings from NCSC (Note A)	$	8,908,776

Note A: This total breaks down as following for later analysis:

Service-Related Charges	$	7,818,360
Overhead-Related Charges	$	1,090,415
2008 Testable Contract Billings from NCSC	$	8,908,776

The next step was to assign NCSC's service-related charges to the four outside service provider cost pools—attorney, certified public accountant, engineer and management consultant. Among other things, NCSC assigns a "department" to all affiliate charges. Based on the nature of services performed by these departments, NCSC's charges were assigned to the four outside provider cost pools, as shown in Schedule 4.

V – Question 2 – Provision of Services at the Lower of Cost or Market

Schedule 5 shows the assignment of staff hours by department to the four outside service provider cost pools. It should be noted that only exempt personnel hours are included in Schedule 5 because outside providers sometimes do not charge clients for administrative/secretarial support (i.e., non-exempt staff). Instead, they recover the cost of non-exempt staff through the hourly rates of the firm's professionals. Some outside providers bill customers for non-exempt personnel, but this study chose to be conservative in this regard. By excluding non-exempt hours from the hourly rate denominator, there are fewer hours to divide into the cost pool. Consequently, NCSC's hourly rates are somewhat higher using this approach.

Within the total 2008 NCSC charges are overhead-related items associated with sustaining NCSC personnel. Most of these expenses are depreciation expense and rent on various NCSC facilities and equipment. The 2008 amounts by department are shown below. Since these expenses would also be incurred by outside service providers, it is necessary to add them into the NCSC cost pools.

Department	2008
0005000 - Aviation Services	187,329
0007100 - Insurance - Premiums	66,142
0017000 - TPC/NET	9
0042000 - General	511,085
0047000 - Facilities Management	275,048
0049000 - Real Estate Management	5,682
0087000 - Materials and Supplies	7,111
0088000 - Fleet Management	38,010
Total	1,090,416

Based on the assignment of expenses and hours to outside provider categories, NCSC's 2008 equivalent cost per hour is calculated below.

	NCSC Hourly Rates				
	Attorney	Certified Public Accnt	Professional Engineer	Mgmt Consultant	Total
Service-Related Charges	$ 656,671	$ 3,029,868	$ 2,087,416	$ 2,044,406	$ 7,818,360
Overhead Expenses (Note A)	$ 91,595	$ 423,081	$ 291,141	$ 284,599	$ 1,090,416
Cost Pool Total	$ 748,266	$ 3,452,949	$ 2,378,557	$ 2,329,004	$ 8,908,776
Hours	10,531	51,607	36,314	35,261	133,712
Average Hourly Rate	**$ 71**	**$ 67**	**$ 66**	**$ 66**	

Note A: These expenses are assigned to the outside provider categories prorata based on the "direct" expenses, as calculated below.

	Attorney	Certified Public Accnt	Professional Engineer	Mgmt Consultant	Total
Service-Related Charges	$ 656,671	$ 3,029,868	$ 2,087,416	$ 2,044,406	$ 7,818,360
Percent of Cost Pool Total	8.4%	38.8%	26.7%	26.1%	100.0%
Allocation Of Overhead Expenses	$ 91,595	$ 423,081	$ 291,141	$ 284,599	$ 1,090,416

Outside Service Provider Hourly Rates

The next step in the lower of cost or market comparison was to calculate the average billing rates for each type of outside service provider. The source of this information and the determination of the average rates are described in the paragraphs that follow.

Attorneys

The Virginia Bar Association does not survey its members as to their hourly billing rates. In addition, publicly available billing rate information could not be found for Virginia attorneys (Virginia Lawyers Weekly used to ask for hourly rates in its annual survey but eliminated that question a few years ago). Therefore, an estimate of Virginia attorney rates was developed from surveys of Michigan and Massachusetts lawyers conducted annually by the publications, Michigan Lawyers Weekly and Massachusetts Lawyers Weekly. As presented in Schedule 6, the average rate for each Michigan and Massachusetts firm respondent was adjusted for the cost of living differential between their location and Richmond, Virginia. The survey includes hourly rates that were in effect at December 31, 2007. Thus, the 2007 average rate was escalated to June 30, 2008—the midpoint of 2008.

Certified Public Accountants

The average hourly rate for Virginia certified public accountants was developed from a 2008 survey conducted by the American Institute of Certified Public Accountants (AICPA) every two years. Hourly rates in the AICPA survey are the average of firms in Virginia. The average hourly rate was calculated for a range of accountant positions, as shown in Schedule 7. Based on a typical staff assignment by each accountant position, a weighted average hourly rate was calculated. This survey covered hourly rates in effect during 2007. Thus, the 2007 average rate was escalated to June 30, 2008—the midpoint of 2008.

Professional Engineers

CGV provided 2008 hourly rate information for three engineering firms that are periodically used by the company when outside engineering services are required. As shown in Schedule 8, an average rate was developed for a range of engineering positions. Then, using a typical percentage mix by position for a typical engineering project, a weighted average cost per hour was calculated.

Management Consultants

The cost per hour for management consultants was developed from the 2008 annual survey performed by the Association of Management Consulting Firms—an industry trade organization. The first step in the calculation, presented in

Schedule 9, was to determine an average rate by consultant position. From these rates, a single weighted average hourly rate was calculated based upon the percent of time that is typically applied to a consulting assignment by each consultant position. Consultants typically do not limit their practice to any one region and must travel to a client's location. Thus, the U.S. national average is appropriate for comparison. This survey includes rates that were in effect at December 31, 2007 for firms in the United States. This 2007 average rate was escalated to June 30, 2008—the midpoint of 2008.

NCSC Versus Outside Provider Cost Comparison

As shown in the table below, NCSC's costs per hour are considerably lower than those of outside providers.

	2008 Cost/Hour Difference		
Service Provider	NCSC	Outside Providers	Difference-- NCSC Greater(Less) Than Outside
Attorney	$ 71	$ 264	$ (193)
Certified Public Accountant	$ 67	$ 122	$ (55)
Professional Engineer	$ 66	$ 83	$ (18)
Management Consultant	$ 66	$ 214	$ (148)

As calculated below, based on these cost per hour differentials and the number of hours that NCSC billed CGV during 2008, the services would cost $10.7 million more from outside providers. This is 60% more ($10,730,648 / $17,866,237 = 60%) than NCSC's total 2008 contract billings to CGV.

	2008 Total Cost Difference		
Service Provider	Hourly Rate Difference-- NCSC Greater(Less) Than Outside	NCSC Hours Charged	Dollar Difference
Attorney	$ (193)	10,531	$ (2,029,637)
Certified Public Accountant	$ (55)	51,607	$ (2,821,935)
Professional Engineer	$ (18)	36,314	$ (649,647)
Management Consultant	$ (148)	35,261	$ (5,229,429)
			$ (10,730,648)

Comparison Methodology

Customer Accounts Services covers the following utility functions:

- Customer Call Center – customer calls/contact, credit, order taking/disposition, bill collection efforts, outage calls
- Call Center IT – maintenance of phone banks, voice recognition units, call center software applications, telecommunications
- Customer billing – bill printing, stuffing, and mailing
- Remittance processing – processing customer payments received in the mail
- Bill payment centers – locations where customers can pay their bills in person

It is difficult to compare the cost of NCSC and other affiliate's customer accounts services-related charges to CGV with outside providers of the same services because survey data is proprietary and expensive to obtain. For this reason, CGV's charges from affiliates for customer accounts services are compared to those of neighboring electric utilities because the data necessary to make such comparison is available to the public.

Neighboring electric utility cost information comes from the FERC Form 1 that each utility must file. FERC's chart of accounts is defined in Chapter 18, Part 101 of the Code of Federal Regulations. FERC accounts that contain customer accounts services-related expenses are Account 903 Customer Accounts Expense – Records and Collection Expense and Account 905 Customer Accounts Expense – Miscellaneous Customer Accounts Expense. Schedule 10 provides FERC's definition of the type of expenses that should be recorded in these accounts.

In addition to the charges in these FERC accounts, labor-related overheads charged to the following FERC accounts must be added to the labor components of Accounts 903 and 905:

- Account 926 Employee Pension and Benefits
- Account 408 Taxes Other Than Income (employer's portion of FICA)

FERC Account Descriptions

903 – Customer Records and Collection Expenses

This account shall include the cost of labor, materials used and expenses incurred in work on customer applications, contracts, orders, credit investigations, billing and accounting, collections and complaints.

Labor

1. Receiving, preparing, recording and handling routine orders for service, disconnections, transfers or meter tests initiated by the customer, excluding the cost of carrying out such orders, which is chargeable to the account appropriate for the work called for by such orders.
2. Investigations of customers' credit and keeping of records pertaining thereto, including records of uncollectible accounts written off.
3. Receiving, refunding or applying customer deposits and maintaining customer deposit, line extension, and other miscellaneous records.
4. Checking consumption shown by meter readers' reports where incidental to preparation of billing data.
5. Preparing address plates and addressing bills and delinquent notices.
6. Preparing billing data.
7. Operating billing and bookkeeping machines.
8. Verifying billing records with contracts or rate schedules.
9. Preparing bills for delivery, and mailing or delivering bills.
10. Collecting revenues, including collection from prepayment meters unless incidental to meter reading operations.
11. Balancing collections, preparing collections for deposit, and preparing cash reports.
12. Posting collections and other credits or charges to customer accounts and extending unpaid balances.
13. Balancing customer accounts and controls.
14. Preparing, mailing, or delivering delinquent notices and preparing reports of delinquent accounts.
15. Final meter reading of delinquent accounts when done by collectors incidental to regular activities.
16. Disconnecting and reconnecting services because of nonpayment of bills.
17. Receiving, recording, and handling of inquiries, complaints, and requests for investigations from customers, including preparation of necessary orders, but excluding the cost of carrying out such orders, which is chargeable to the account appropriate for the work called for by such orders.
18. Statistical and tabulating work on customer accounts and revenues, but not including special analyses for sales department, rate department, or other general purposes, unless incidental to regular customer accounting routines.
19. Preparing and periodically rewriting meter reading sheets.
20. Determining consumption and computing estimated or average consumption when performed by employees other than those engaged in reading meters.

Materials and expenses

21. Address plates and supplies.
22. Cash overages and shortages.
23. Commissions or fees to others for collecting.
24. Payments to credit organizations for investigations and reports.
25. Postage.
26. Transportation expenses, including transportation of customer bills and meter books under centralized billing procedure.
27. Transportation, meals, and incidental expenses.
28. Bank charges, exchange, and other fees for cashing and depositing customers' checks.
29. Forms for recording orders for services, removals, etc.
30. Rent of mechanical equipment.

905 – Miscellaneous Customer Accounts Expenses

This account shall include the cost of labor, materials used and expenses incurred not provided for in other accounts.

Labor

1. General clerical and stenographic work.
2. Miscellaneous labor.

Materials and expenses

3. Communication service.
4. Miscellaneous office supplies and expenses and stationery and printing other than those specifically provided for in accounts 902 and 903.

Comparison Group

Neighboring electric utilities included in the comparison group are shown in the table below. These are companies whose FERC Form 1s show amounts for Accounts 903 and 905.

Virginia	• Appalachian Power	• Virginia Electric & Power
Kentucky	• Duke Energy Kentucky • Kentucky Power	• Kentucky Utilities • Louisville Gas & Electric
West Virginia	• Appalachian Power • Monongahela Power	• Wheeling Power
North Carolina	• Duke Energy Carolinas	• Progress Energy Carolinas
Maryland	• Baltimore Gas & Electric • Delmarva Power & Light	• Potomac Electric
Tennessee	• Kingsport Power	

CGV Cost per Customer

As calculated in Schedule 11, CGV's annual customer accounts expense per customer is $16.97. CGV's cost pool includes the same expense items that are included in the neighboring electric utilities' customer accounts expenses.

Comparison Group Cost per Customer

Schedule 12 shows the actual 2007 customer accounts expense per customer calculation for the electric utility comparison group. All of the underlying data were taken from each utility's FERC Form 1.

Summary of Results

As shown in the table below, CGV's cost per customer is below the electric utility comparison group average. Based upon this data, 2008 charges from NCSC and other affiliates for customer account services are reasonable.

Customer Account Services Expenses/Customer	
Louisville Gas & Electric	$ 13.71
Virginia Electric & Power	$ 15.89
Monongahela Power	$ 16.10
Columbia Gas of Virginia	**$ 16.97**
Duke Energy Carolinas	$ 23.98
Progress Energy Carolinas	$ 24.66
Kentucky Utilities	$ 25.91
Wheeling Power	$ 28.08
Comparison Group Average	**$ 28.93**
Kingsport Power	$ 32.31
Baltimore Gas & Electric	$ 32.50
Duke Energy Kentucky	$ 34.88
Appalachian Power	$ 34.99
Kentucky Power	$ 37.59
Delmarva Power & Light	$ 61.87
Potomac Electric	$ 70.37

Purpose of This Study

This study was undertaken to determine the reasonableness of Columbia Gas of Virginia, Inc.'s ("CGV") charges from NiSource Corporate Services Company ("NCSC") and several NiSource operating companies for services provided during 2009. Reasonableness was determined by answering the following three questions:

1. Are 2009 service-related affiliate charges to CGV reasonable compared to other utility service companies?

2. Did NCSC provide services to CGV at the lower of cost or market during 2009?

3. Is the 2009 cost of NCSC's customer accounts services comparable to those of other utilities?

Study Results

Concerning question 1, the following conclusions were reached:

- The cost per CGV customer for services from NCSC and other affiliates is reasonable and favorable as compared to the cost per customer for similar utility service companies. CGV was charged an average of $90 per customer by NCSC and other affiliates, approximately 24% lower than the average of $112 per customer for comparison group service companies. This determination was based on service company information included in Form 60, which must be annually filed with the Federal Energy Regulatory Commission ("FERC") by electric and combination electric/gas utility holding companies. The comparison is based on data from 2008, the latest year for which Form 60 information is currently available.

Concerning question 2, the following conclusions were reached:

- NCSC's services were provided to CGV during 2009 at the lower of cost or market.

- On average, the hourly rates for outside service providers are 82% higher than comparable hourly rates charged by NCSC.

- If all of the managerial and professional services now provided by its affiliates had been outsourced in 2009, CGV and its customers would have incurred $16.5 million in additional expenses.

- Affiliates' charges do not include any profit markup. Only the actual cost of the service provided is being charged CGV and its customers.

Concerning question 3, the cost of NCSC and other affiliate's customer accounts services is well below the average of the neighboring electric utility comparison group. During 2009, CGV's customer accounts cost per customers was $17.01 compared to the utility comparison group's 2008 average of $29.13.

Based on this study's results, it can be concluded that CGV's 2009 service-related charges from NCSC and other affiliates are reasonable.

CGV's service-related charges to affiliates are not significant (approximately $205,000 in labor-related expenses). Affiliates are charged at CGV's fully loaded cost. The majority of these services are construction-related and not easily benchmarked to publicly available outside provider hourly rate information. For these reasons, no market testing was performed on these transactions.

Overview of CGV Affiliate Company Services

NCSC provides the following types of services to NiSource operating companies, including CGV:

- Accounting
- Payroll
- Auditing
- Employee benefits
- Planning
- Risk management
- Tax
- Legal
- Environmental
- Financial
- Information technology
- Telecommunications.

NCSC Billing of Affiliate Companies

NiSource Corporate Services ("NCSC") was regulated by the Securities and Exchange Commission ("SEC") under the Public Utility Holding Company Act of 1935 ("PUHCA") until February 8, 2006, when the Public Utility Holding Company Act ("PUHCA 2005") was enacted. PUHCA 2005 transferred regulatory jurisdiction over public utility holding companies from the SEC to the Federal Energy Regulatory Commission ("FERC"). NCSC continued to follow the SEC Uniform System of Accounts for Mutual Service Companies and Subsidiary Service Companies until January 1, 2008. Effective January 1, 2008, the FERC requires service companies to move to its Uniform System of Accounts.

Pursuant to FERC Order No. 684 issued October 19, 2006, Centralized Service Companies must use a cost accumulation system, provided such system supports the allocation of expenses to the services performed and readily identifies the source of the expense and the basis for the allocation. NCSC has long used a job order system to collect costs that are applicable and billable to all affiliates including Columbia Gas of Virginia. Each job order details the affiliate(s) to be charged for the specified services and the basis for allocating charges when more than one affiliate receives the same service.

The service agreement between CGV and NCSC stipulates that all services will be provided at cost. Allocations among affiliates are only made when it is impractical to charge an affiliate directly.

The Bases of Allocation, shown in Schedule 1, are used by the Corporate Services Accounting Department for apportioning Job Order charges to affiliates.

Categories of billings assigned by NCSC to affiliates include the following:

- Convenience Billings – Includes charges for expenses paid by NCSC on behalf of affiliates to third party providers of services. These charges are considered "pass-through" costs, flowing through NCSC for the convenience and benefit of all affiliates. Typical charges include external audit fees, employee benefits, vehicle leasing, corporate insurance and wire transfers for hedging margin accounts.

- Payroll Funding – Includes CGV payroll costs that are disbursed by NCSC. NCSC makes these payments on behalf of all subsidiaries and CGV wires the requisite cash to NCSC on a monthly basis.

- Contract billings - Includes charges for the costs incurred by NCSC to render the services that are agreed to be provided according to the Service Agreement. The charges may be direct or allocated, depending upon the nature of the expense.

The relationship between NCSC and CGV is set forth in a Service Agreement dated September 21, 2005, as amended by an Amendment to the Service Agreement dated November 1, 2007, which was approved by the Virginia State Corporation Commission (VSCC) by Order dated September 25, 2009 in case No. PUE-2009-00063.

Affiliate Operating Company Billing of Other Affiliates

Besides NCSC, other affiliate entities charge CGV for various goods and services. These items are charged to CGV at fully loaded cost.

Schedule 1

Columbia Gas of Virginia, Inc.
Bases for Allocating Service Company Charges to Affiliates

Basis 1 - Gross Fixed Assets and Total Operating Expenses Fifty percent of the total job order charges will be allocated on the basis of the relation of the affiliate's gross fixed assets to the total gross fixed assets of all benefited affiliates; the remaining 50% will be allocated on the basis of the relation of the affiliate's total operating expenses to the total operating expenses of all benefited affiliates.
Basis 2 - Gross Fixed Assets Job order charges will be allocated to each benefited affiliate on the basis of the relation of its total gross fixed assets to the sum of the total gross fixed assets of all benefited affiliates.
Basis 7 - Gross Depreciable Property and Total Operating Expenses Fifty percent of the total job order charges will be allocated on the basis of the relation of the affiliate's total operating expenses to the total of all the benefited affiliates' total operating expense; the remaining 50% will be allocated on the basis of the relation of the affiliate's gross depreciable property to the gross depreciable property of all benefited affiliates.
Basis 8 - Gross Depreciable Property Job order charges will be allocated to each benefited affiliate on the basis of the relationship of its total depreciable property to the sum of the total depreciable property of all benefited affiliates.
Basis 9 - Automobile Units Job order charges will be allocated to each benefited affiliate on the basis of its number of automobile units to the total number of all automobile units of the benefited affiliates.
Basis 10 - Number of Retail Customers Job order charges will be allocated to each benefited affiliate on the basis of its number of retail customers to the total number of all retail customers of the benefited affiliates.
Basis 11 - Number of Regular Employees Job order charges will be allocated to each benefited affiliate on the basis of the relation of its number of regular employees to the total number of all regular employees of the benefited affiliates.
Basis 13 - Fixed Allocation Job order charges will be allocated to each benefited affiliate on the basis of fixed percentages on an individual project basis.
Basis 14 - Number of Transportation Customers Job order charges will be allocated to each benefited affiliate on the basis of the relation of its Transportation Customers to the total of all Transportation Customers of the benefited affiliates.
Basis 15 - Total Employees and Customers Job order charges will be allocated to each benefited affiliate on the basis of the relation of its number of employees and customers to the total of all employees and customers of the benefited affiliates.
Basis 16 - Total Plant, State Employees and Customers Job order charges will be allocated to each benefited affiliate on the basis of the relation of its Plant, State Employees and Customers to the total of all Plant, State Employees and Customers of the benefited affiliates.
Basis 17 - Total Tariff and Transportation Throughput Job order charges will be allocated to each benefited affiliate on the basis of the relation of its Tariff and Transportation Throughput to the total of all Tariff and Transportation Throughput of the benefited affiliates.
Basis 20 - Direct Costs Job order charges will be allocated to each benefited affiliate on the basis of the relation of its direct costs billed by Service Corporation to the total of all direct costs billed by Service Corporation.

Analysis of CGV Charges from Affiliates

During 2009, the following affiliate entities charged CGV approximately $211 million.

Affiliate Entity		Total
NiSource Corporate Services	$	172,588,469
Columbia Gulf Transmission	$	1,779,733
Columbia Network Services	$	8,208
Columbia Gas of Kentucky	$	7,108
Columbia Gas of Ohio	$	2,900,952
Columbia Gas of Maryland	$	8,848
Columbia Gas of Pennsylvania	$	619,759
Columbia Gas Transmission	$	23,233,767
NiSource, Inc.	$	355,575
NiSource Finance	$	9,376,440
Bay State Gas	$	-
NiSource Money Pool	$	281,424
Total	$	211,160,283

These charges were analyzed to determine which were service-related and could be subjected to a cost comparison. The table below shows the amounts charged CGV during 2009 by type of transaction. The first three items—Interest on Debt and Taxes, Gas Purchase and Transportation Expense, and Convenience Billings and Payroll—do not involve the provision of services.

			Cost Comparison Testing Disposition		
Type of Transaction		2009 Affiliate Charges To CGV	Involves A Service?	Comparative Data Available?	Evaluated In This Study?
Interest on Debt and Taxes	$	9,657,864	No	na	No
Gas Purchase and Transportation Expenses	$	24,785,322	No	na	No
Convenience Billings and Payroll	$	152,508,902	No	na	No
Contract Services	$	20,079,567	Yes	Yes	Yes
Billings From Other Affiliates - Balance Sheet Accts	$	1,692,170	Limited	No	No
Billings From Other Affiliates - Income Statement Accts	$	2,436,458	Limited	Yes	Yes
Total 2009 Affiliate Company Billings	**$**	**211,160,283**			

Contract Services charges are for management, professional and technical services. Comparative information is available for these charges, thus they were included in the scope of this study.

NiSource regulated operating companies will sometimes support one another in times of emergency or when one's backlog of work exceeds its available resources. This sharing arrangement is meant to reduce the cost of service for all ratepayers. The Billings From Other Affiliates line items in the table above relate to this shared support arrangement.

Much of the total $1.7 million in Billings From Other Affiliates – Balance Sheet was for construction costs charged by Columbia Gas of Ohio. Only $168,000 of these charges was labor-related. No publicly available market information was found for outside provider of construction services. Thus, this study did not subject these 2009 charges to a cost comparison.

Most From Other Affiliates - Income Statement-related transactions are for various operations services and customer account services. Of the $2.4 million in these charges, approximately $557,000 was for labor-related services. Some comparison data was found for these services so, to the extent possible, they were included in the scope of this study.

Comparison Methodology for Charges from Affiliates

2009 affiliate charges that are included in the scope of this study are evaluated in connection with three questions, as shown in the table below.

Type of Transaction	2009 Affiliate Charges To CGV	Study Question: 1 - Reasonableness	2 - LCM Pricing	3 - Cust Acct Services
Contract Services	$ 20,079,567	X	X	X
Billings From Other Affiliates - Income Stmt. Accts	$ 2,436,458	X		X

The first question—are affiliate charges for services reasonable—was answered by comparing CGV's affiliate charges per customer to those of utility service companies that file a FERC Form 60 – Annual Report of Service Companies. This comparison was made with 2008 Form 60 data, the latest year Form 60 data is available (the filing deadline for the Form 60 is May 1st).

This study's second question—whether NCSC's services were provided to CGV during 2009 at the lower of cost or market—was determined by comparing the cost per hour for managerial and professional services provided by NCSC personnel, to hourly billing rates that would be charged by outside providers of equivalent services. NCSC's costs per hour were based on actual charges to CGV during the 12 months ended December 31, 2009. Outside providers' billing rates came from surveys or other information from professionals that could perform the services now provided by NCSC.

The third question—whether affiliate customer account services charges were comparable to other utilities—was addressed by comparing CGV's total customer accounts services expenses to those of neighboring electric utilities. This approach was selected because the costs of outside providers of call center

services are not publicly available. However, electric utility customer account services expenses can be readily obtained from FERC Form 1 data. The availability and transparency of FERC data adds to the validity of its use in this comparison. The comparison was made using 2008 data, the latest year for which FERC Form 1 data is available (the filing deadline for FERC Form 1 is April 18th).

Analysis of CGV Charges to Affiliates

CGV charged affiliates approximately $1.5 million during 2009, as shown below.

	2009 Charges From CGV
Billings to Other Affiliates - Balance Sheet Accounts	$ 1,251,972
Billings to Other Affiliates - Income Statement Accounts	$ 213,217
Total Charges To Affiliates	**$ 1,465,189**

Most Balance Sheet-related billings consist of construction work CGV performed for affiliate operating companies. Only $166,000 of these charges was labor-related.

Income Statement-related billings consists of rent charged to NCSC for its employees located in CGV's Chester, Virginia offices and charges for a variety of services CGV provided to affiliate operating companies. This cost sharing arrangement ultimately provides system ratepayers with lower costs of service. Here too, a relatively small portion of these charges were labor related ($38,000).

CGV charges affiliates its fully loaded cost for these items. No market testing was performed on 2009 charges to affiliates because the costs that are service-related are not material.

CGV's Cost per Customer

During 2009, CGV was charged $90 per customer in service-related charges from NCSC and other affiliates.

2009 NCSC Contract Charges		$ 20,079,567
Non-A&G Functions Excluded from Comparison Group Cost Pool:		
0025200 - Distribution Operations - East	$ 108,666	
0053200 - Engineering Services	$ 266,732	
0019300 - Customer Engagement	$ 53,295	
0019400 - Columbus Gas Procurement	$ 240,678	
0019500 - Columbus Gas Operations	$ 266,455	
0019600 - Columbus Planning	$ 125,219

2009 CGV Cost Per Customer		**$ 90**

Comparison Group Cost per Customer

Every centralized service company in a holding company system must file a Form 60 in accordance with the Public Utility Holding Company Act of 2005, Section 1270, Section 390 of the Federal Power Act and 18 C.F.R. paragraph 366.23. This report is designed to collect financial information from service companies that are subject to regulation by the FERC.

NCSC files a Form 60. For 2008, 23 other utility service companies that serve utilities that provide regulated electric and, in some cases, gas service to retail customers. In order to make a valid comparison of this group's costs to NCSC's charges to CGV, it was necessary to isolate expenses that that they have in common. These include A&G/O&M-related charges associated with the following FERC accounts:

901 – Supervision	921 – Office supplies and expenses
903 – Customer records and collection expenses	923 – Outside services employed
905 – Miscellaneous customer accounts expenses	926 – Employee pensions and benefits
907 – Supervision	928 – Regulatory commission expenses
910 – Misc customer service and info expenses	930.2 – Miscellaneous general expenses
911 – Supervision	931 – Rents
920 - Administrative and general salaries	935 – Maintenance of structures and equipment

O&M expenses charged to utility affiliates for the comparison group service companies were obtained from Schedule XVI – Analysis of Charges for Service Associate and Non-Associate Companies (p. 303 to 306) of each entity's FERC Form 60. This schedule shows charges by FERC Account.

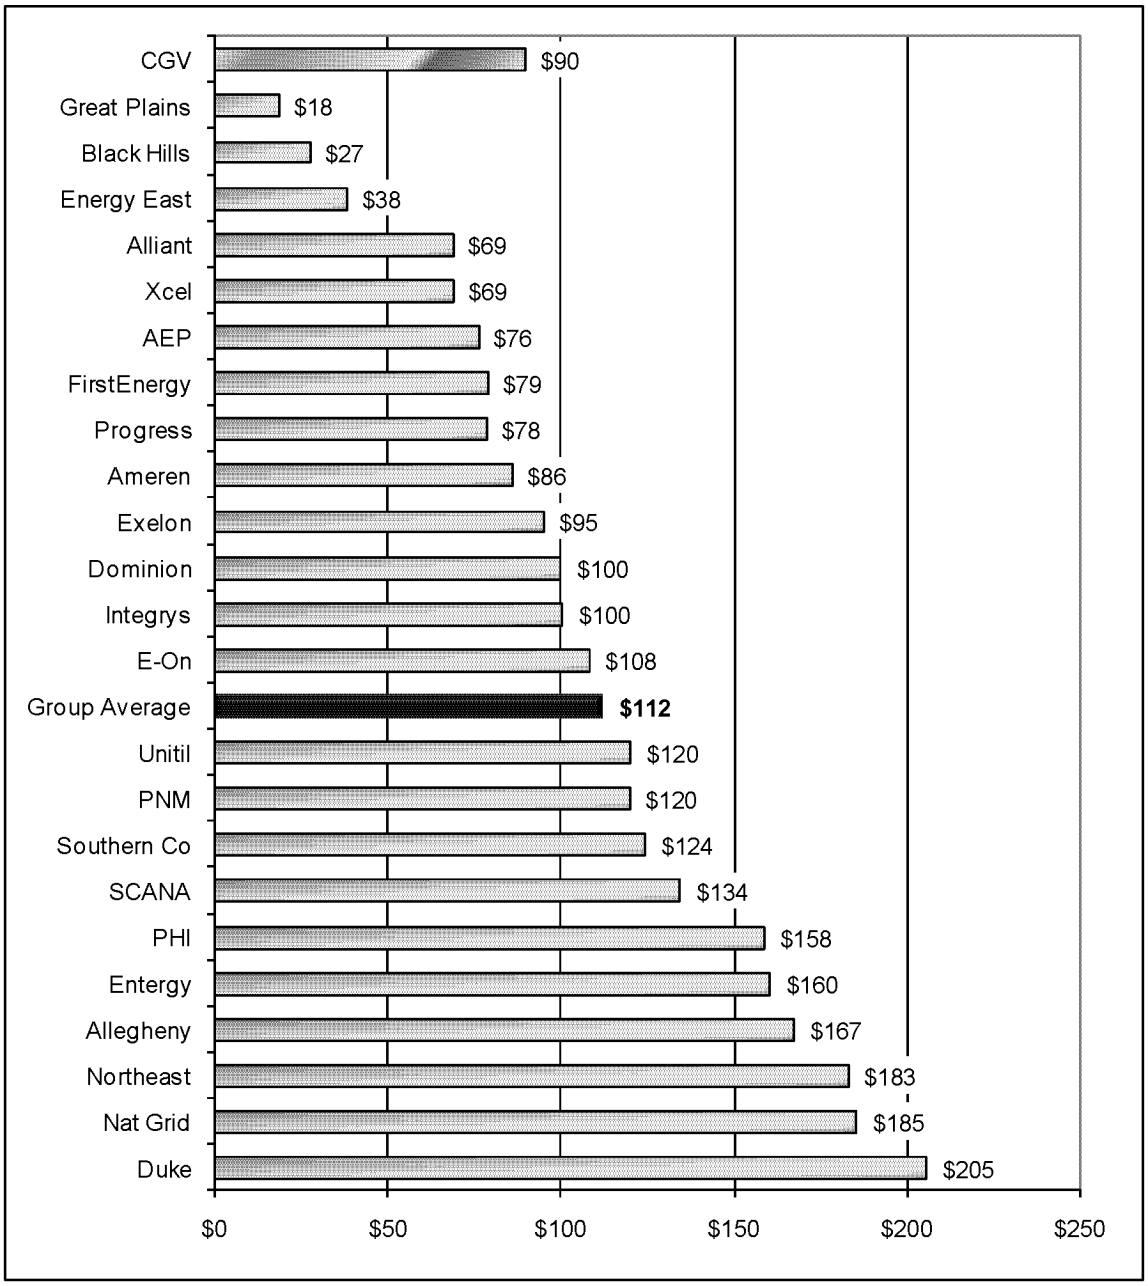
Comparison group service company 2008 expenses were also adjusted to remove charges to non-regulated affiliates from the cost pool used to calculate the cost per regulated service customer. This determination was made using information from the FERC Form 60 schedule: Account 457 – Analysis of Billing – Associate Companies.

A&G expenses per regulated utility customer for the 23 utility companies other than NCSC that file Form 60 for 2008 are calculated below.

Utility Company	2008 Regulated Retail Service Company A&G Expenses	Regulated Retail Customers	Cost per Customer
AEP	$396,340,118	5,213,000	$ 76
Allegheny	$263,588,707	1,577,873	$ 167
Alliant	$205,754,832	3,000,000	$ 69
Ameren	$291,684,710	3,400,000	$ 86
Black Hills	$20,763,828	759,400	$ 27
Dominion	$357,718,046	3,588,500	$ 100
Duke	$923,936,645	4,500,000	$ 205
Energy East	$113,714,789	2,989,800	$ 38
Entergy	$432,575,683	2,700,000	$ 160
E-On	$136,276,177	1,263,000	$ 108
Exelon	$558,687,014	5,885,000	$ 95
FirstEnergy	$354,028,109	4,499,000	$ 79
Great Plains	$15,000,708	820,000	$ 18
Integrys	$216,364,166	2,157,000	$ 100
Nat Grid	$1,240,706,398	6,700,000	$ 185
Northeast	$302,138,730	1,654,000	$ 183
PHI	$302,463,412	1,910,000	$ 158
Progress	$242,677,256	3,100,000	$ 78
PNM	$102,688,385	859,000	$ 120
SCANA	$191,207,825	1,424,300	$ 134
Southern Co	$546,498,605	4,402,000	$ 124
Unitil	$20,341,422	169,600	$ 120
Xcel	$367,626,617	5,345,000	$ 69
Group Total	**$7,602,782,182**	**67,916,473**	**$ 112**

Exhibit 2 shows CGV's 2009 NCSC cost per customer of $90 to be lower than the average of $112 per customer for the comparison group service companies. Based on this result, it is possible to conclude that 2009 affiliate charges to CGV were reasonable.

Comparison of Service Company Annual Costs Per Customer



Methodology

NCSC's 2009 corporate services-related billings to CGV are market tested by comparing the cost per hour for NCSC services to those of outside service providers to whom these duties could be assigned.

The first step was to determine which types of outside providers could assume Service Company services. Based on the nature of these services it was determined that the following outside service providers could perform the categories of services indicated.

- Attorneys - corporate secretarial and legal services
- Certified Public Accountants - accounting, finance, information systems and rates and regulatory
- Professional Engineers – engineering and operations services
- Management Consultants - executive and administrative management, risk management services, human resources and communications services

The next step was to calculate NCSC's hourly rate for each of the four outside service provider categories, based on the dollars and hours charged to CGV during the 12-months ended December 31, 2009.

Hourly billing rates for outside service providers were next determined using information from pertinent surveys.

Finally, the NCSC's average cost per hour was compared to the average cost per hour for outside providers.

NCSC Hourly Rates

The first step in determining NCSC's hourly rates is to determine the appropriate expenses to be included in the calculation. As shown below, certain NCSC charges were excluded from the hourly rate calculations. Excluded cost elements are charges that are, in effect, already outsourced (e.g., IBM outsourcing, outside services expenses) or items that an outside provider would not typically recover in their hourly rates (e.g., travel expenses). The net result of these adjustments is the total applicable cost pool that is subjected to the lower-of-cost-or-market testing.

V – Question 2 – Provision of Services at the Lower of Cost or Market

2009 Total Contract Billings from NCSC		$ 20,079,567
Less: Excludable Cost Elements:		
2504 - Expert Witness Fees	$	774
3000 - Consulting Services	$	485,847
3001 - Advertising Services	$	61,194
3002 - Legal Services	$	408,998
3003 - Auditing Services	$	(1,524)
3005 - Contract Retainages	$	11,626
3006 - Engineering Services	$	109
3007 - Laboratory Services	$	2,425
3009 - Operations Services	$	129,321
3011 - Temporary Personnel Services	$	75,221
3012 - Security Services	$	10,678
3015 - Other Outside Services	$	408,505
3016 - Other Maintenance Services	$	181
3019 - Tool & Equipment Repair	$	37
3021 - Env Health & Safety Services	$	5,347
3030 - Outsourcing - Est. Fixed Costs	$	(66,715)
3031 - Outsourcing - Variable Costs	$	476,849
3032 - Transition Costs	$	26,388
3033 - Sales Tax	$	94,187
3034 - Capitalized Portion - Inflights	$	(19,930)
3035 - Supplemental Contract Costs	$	42,916
3036 - Service Level Agreements	$	(164,972)
3037 - Miscellaneous Reimbursements	$	10,738
3038 - Request for Service (RFS)	$	74,670
3040 - Outsourcing - Act. Fixed Costs	$	5,957,717
3041 - Outsourcing-Variable Csts-RRCs	$	(121,782)
3048 - RFS - Variable Costs - ARCs	$	24,188
3054 - Capitalized Portn-PCs & Laptops	$	(122,301)
3064 - Capitalized Portion - WMS	$	(9,483)
3074 - Capitalized Portion - RFS	$	(45,937)
3100 - Business Expenses	$	238,698
3101 - Meals Special Cases Only	$	1,472
3102 - Meals and Entertainment	$	97,601
3357 - Vehicle Maint/Other Costs Clrd	$	1,652
3634 - Purchase of Property	$	184
3645 - Sale of Property	$	10,699
3065 - Cap Portion - WMS Conv. Billed	$	(41,498)
9604 - Income Taxes Federal	$	198,785
9605 - Income Taxes State	$	68,183
9606 - Deferred Income Taxes Federal	$	63,688
9607 - Deferred Income Taxes State	$	(20,040)
2009 Testable Contract Billings from NCSC (Note A)		$ 11,704,872

Note A: This total breaks down as following for later analysis:

Service-Related Charges	$ 10,610,139
Overhead-Related Charges	$ 1,094,733
2009 Testable Contract Billings from NCSC	$ 11,704,872

V – Question 2 – Provision of Services at the Lower of Cost or Market

The next step was to assign NCSC's service-related charges to the four outside service provider cost pools—attorney, certified public accountant, engineer and management consultant. Among other things, NCSC assigns a "department" to all affiliate charges. Based on the nature of services performed by these departments, NCSC's charges were assigned to the four outside provider cost pools, as shown in Schedule 3.

Schedule 4 shows the assignment of staff hours by department to the four outside service provider cost pools. It should be noted that only exempt personnel hours are included in Schedule 4 because outside providers sometimes do not charge clients for administrative/secretarial support (i.e., non-exempt staff). Instead, they recover the cost of non-exempt staff through the hourly rates of the firm's professionals. Some outside providers bill customers for non-exempt personnel, but this study chose to be conservative in this regard. By excluding non-exempt hours from the hourly rate denominator, there are fewer hours to divide into the cost pool. Consequently, NCSC's hourly rates are somewhat higher using this approach.

Within the total 2009 NCSC charges are overhead-related items associated with sustaining NCSC personnel. Most of these expenses are depreciation expense and rent on various NCSC facilities and equipment. The 2009 amounts by department are shown below. Since these expenses would also be incurred by outside service providers, it is necessary to add them into the NCSC cost pools.

Department	2009
0005000 - Aviation Services	138,877
0007100 - Insurance - Premiums	67,053
0042000 - General	533,005
0047000 - Facilities Management	306,464
0049000 - Real Estate Management	5,922
0087000 - Materials and Supplies	11,611
0088000 - Fleet Management	31,801
Total	1,094,733

Based on the assignment of expenses and hours to outside provider categories, NCSC's 2009 equivalent cost per hour is calculated below.

V – Question 2 – Provision of Services at the Lower of Cost or Market

	NCSC Hourly Rates				
	Attorney	Certified Public Accnt	Professional Engineer	Mgmt Consultant	Total
Service-Related Charges	$ 835,240	$ 3,656,659	$ 2,843,390	$ 3,274,849	$ 10,610,139
Overhead Expenses (Note A)	$ 86,177	$ 377,289	$ 293,377	$ 337,889	$ 1,094,733
Cost Pool Total	$ 921,417	$ 4,033,948	$ 3,136,768	$ 3,612,739	$ 11,704,872
Hours	11,634	63,688	53,567	56,676	185,565
Average Hourly Rate	**$ 79**	**$ 63**	**$ 59**	**$ 64**	

Note A: These expenses are assigned to the outside provider categories prorata based on the "direct" expenses, as calculated below.

	Attorney	Certified Public Accnt	Professional Engineer	Mgmt Consultant	Total
Service-Related Charges	$ 835,240	$ 3,656,659	$ 2,843,390	$ 3,274,849	$ 10,610,139
Percent of Cost Pool Total	7.9%	34.5%	26.8%	30.9%	100.0%
Allocation Of Overhead Expenses	$ 86,177	$ 377,289	$ 293,377	$ 337,889	$ 1,094,733

Outside Service Provider Hourly Rates

The next step in the lower of cost or market comparison was to calculate the average billing rates for each type of outside service provider. The source of this information and the determination of the average rates are described in the paragraphs that follow.

Attorneys

The Virginia Bar Association does not survey its members as to their hourly billing rates. In addition, publicly available billing rate information could not be found for Virginia attorneys (Virginia Lawyers Weekly used to ask for hourly rates in its annual survey but eliminated that question a few years ago). Therefore, an estimate of Virginia attorney rates was developed from surveys of Michigan and Massachusetts lawyers conducted annually by the publications, Michigan Lawyers Weekly and Massachusetts Lawyers Weekly. As presented in Schedule 5, the average rate for each Michigan and Massachusetts firm respondent was adjusted for the cost of living differential between their location and Richmond, Virginia. The survey includes hourly rates that were in effect at December 31, 2007. Thus, the 2007 average rate was escalated to June 30, 2009—the midpoint of 2009.

Certified Public Accountants

The average hourly rate for Virginia certified public accountants was developed from a 2008 survey conducted by the American Institute of Certified Public Accountants (AICPA) every two years. Hourly rates in the AICPA survey are the average of firms in Virginia. The average hourly rate was calculated for a range of accountant positions, as shown in Schedule 6. Based on a typical staff assignment by each accountant position, a weighted average hourly rate was calculated. This survey covered hourly rates in effect during 2007. Thus, the 2007 average rate was escalated to June 30, 2009—the midpoint of 2009.

Professional Engineers

CGV provided 2009 hourly rate information for three engineering firms that are periodically used by the company when outside engineering services are required. As shown in Schedule 7, an average rate was developed for a range of engineering positions. Then, using a typical percentage mix by position for a typical engineering project, a weighted average cost per hour was calculated.

Management Consultants

The cost per hour for management consultants was developed from the 2009 annual survey performed by the Association of Management Consulting Firms—an industry trade organization. The first step in the calculation, presented in

Schedule 8, was to determine an average rate by consultant position. From these rates, a single weighted average hourly rate was calculated based upon the percent of time that is typically applied to a consulting assignment by each consultant position. Consultants typically do not limit their practice to any one region and must travel to a client's location. Thus, the U.S. national average is appropriate for comparison. This survey includes rates that were in effect at December 31, 2008 for firms in the United States. This 2008 average rate was escalated to June 30, 2009—the midpoint of 2009.

Columbia Gas of Virginia, Inc.
Estimated 2009 Billing Rates For Virginia Attorneys Based On Michigan and Massachusetts Attorney Billing Rates

Billing rates as of December 31, 2007 (Note A)								Cost of	
		Number	Billing Rate Range					Living

NCSC Versus Outside Provider Cost Comparison

As shown in the table below, NCSC's costs per hour are considerably lower than those of outside providers.

	2009 Cost/Hour Difference		
Service Provider	NCSC	Outside Providers	Difference-- NCSC Greater(Less) Than Outside
Attorney	$ 79	$ 260	$ (181)
Certified Public Accountant	$ 63	$ 120	$ (57)
Professional Engineer	$ 59	$ 84	$ (26)
Management Consultant	$ 64	$ 230	$ (167)

As calculated below, based on these cost per hour differentials and the number of hours that NCSC billed CGV during 2009, the services would cost $16.5 million more from outside providers. This is 82% more ($16,534,801 / $ 20,079,567 = 82%) than NCSC's total 2009 contract billings to CGV.

	2009 Total Cost Difference		
Service Provider	Hourly Rate Difference-- NCSC Greater(Less) Than Outside	NCSC Hours Charged	Dollar Difference
Attorney	$ (181)	11,634	$ (2,103,955)
Certified Public Accountant	$ (57)	63,688	$ (3,600,141)
Professional Engineer	$ (26)	53,567	$ (1,388,540)
Management Consultant	$ (167)	56,676	$ (9,442,166)
			$(16,534,801)

Comparison Methodology

Customer Accounts Services covers the following utility functions:

- Customer Call Center – customer calls/contact, credit, order taking/disposition, bill collection efforts, outage calls
- Call Center IT – maintenance of phone banks, voice recognition units, call center software applications, telecommunications
- Customer billing – bill printing, stuffing, and mailing
- Remittance processing – processing customer payments received in the mail
- Bill payment centers – locations where customers can pay their bills in person

It is difficult to compare the cost of NCSC and other affiliate's customer accounts services-related charges to CGV with outside providers of the same services because survey data is proprietary and expensive to obtain. For this reason, CGV's charges from affiliates for customer accounts services are compared to those of neighboring electric utilities because the data necessary to make such comparison is available to the public.

Neighboring electric utility cost information comes from the FERC Form 1 that each utility must file. FERC's chart of accounts is defined in Chapter 18, Part 101 of the Code of Federal Regulations. FERC accounts that contain customer accounts services-related expenses are Account 903 Customer Accounts Expense – Records and Collection Expense and Account 905 Customer Accounts Expense – Miscellaneous Customer Accounts Expense. Schedule 9 provides FERC's definition of the type of expenses that should be recorded in these accounts.

In addition to the charges in these FERC accounts, labor-related overheads charged to the following FERC accounts must be added to the labor components of Accounts 903 and 905:

- Account 926 Employee Pension and Benefits
- Account 408 Taxes Other Than Income (employer's portion of FICA)

FERC Account Descriptions

903 – Customer Records and Collection Expenses

This account shall include the cost of labor, materials used and expenses incurred in work on customer applications, contracts, orders, credit investigations, billing and accounting, collections and complaints.

Labor

1. Receiving, preparing, recording and handling routine orders for service, disconnections, transfers or meter tests initiated by the customer, excluding the cost of carrying out such orders, which is chargeable to the account appropriate for the work called for by such orders.
2. Investigations of customers' credit and keeping of records pertaining thereto, including records of uncollectible accounts written off.
3. Receiving, refunding or applying customer deposits and maintaining customer deposit, line extension, and other miscellaneous records.
4. Checking consumption shown by meter readers' reports where incidental to preparation of billing data.
5. Preparing address plates and addressing bills and delinquent notices.
6. Preparing billing data.
7. Operating billing and bookkeeping machines.
8. Verifying billing records with contracts or rate schedules.
9. Preparing bills for delivery, and mailing or delivering bills.
10. Collecting revenues, including collection from prepayment meters unless incidental to meter reading operations.
11. Balancing collections, preparing collections for deposit, and preparing cash reports.
12. Posting collections and other credits or charges to customer accounts and extending unpaid balances.
13. Balancing customer accounts and controls.
14. Preparing, mailing, or delivering delinquent notices and preparing reports of delinquent accounts.
15. Final meter reading of delinquent accounts when done by collectors incidental to regular activities.
16. Disconnecting and reconnecting services because of nonpayment of bills.
17. Receiving, recording, and handling of inquiries, complaints, and requests for investigations from customers, including preparation of necessary orders, but excluding the cost of carrying out such orders, which is chargeable to the account appropriate for the work called for by such orders.
18. Statistical and tabulating work on customer accounts and revenues, but not including special analyses for sales department, rate department, or other general purposes, unless incidental to regular customer accounting routines.
19. Preparing and periodically rewriting meter reading sheets.
20. Determining consumption and computing estimated or average consumption when performed by employees other than those engaged in reading meters.

Materials and expenses

21. Address plates and supplies.
22. Cash overages and shortages.
23. Commissions or fees to others for collecting.
24. Payments to credit organizations for investigations and reports.
25. Postage.
26. Transportation expenses, including transportation of customer bills and meter books under centralized billing procedure.
27. Transportation, meals, and incidental expenses.
28. Bank charges, exchange, and other fees for cashing and depositing customers' checks.
29. Forms for recording orders for services, removals, etc.
30. Rent of mechanical equipment.

905 – Miscellaneous Customer Accounts Expenses

This account shall include the cost of labor, materials used and expenses incurred not provided for in other accounts.

Labor

1. General clerical and stenographic work.
2. Miscellaneous labor.

Materials and expenses

3. Communication service.
4. Miscellaneous office supplies and expenses and stationery and printing other than those specifically provided for in accounts 902 and 903.

Comparison Group

Neighboring electric utilities included in the comparison group are shown in the table below. These are companies whose FERC Form 1s show amounts for Accounts 903 and 905.

Virginia	• Appalachian Power	• Virginia Electric & Power
Kentucky	• Duke Energy Kentucky • Kentucky Power	• Kentucky Utilities • Louisville Gas & Electric
West Virginia	• Appalachian Power • Monongahela Power	• Wheeling Power
North Carolina	• Duke Energy Carolinas	• Progress Energy Carolinas
Maryland	• Baltimore Gas & Electric • Delmarva Power & Light	• Potomac Electric
Tennessee	• Kingsport Power	

CGV Cost per Customer

As calculated in Schedule 10, CGV's annual customer accounts expense per customer is $17.01. CGV's cost pool includes the same expense items that are included in the neighboring electric utilities' customer accounts expenses.

Comparison Group Cost per Customer

Schedule 11 shows the actual 2009 customer accounts expense per customer calculation for the electric utility comparison group. All of the underlying data were taken from each utility's FERC Form 1.

Summary of Results

As shown in the table below, CGV's cost per customer is below the electric utility comparison group average. Based upon this data, 2009 charges from NCSC and other affiliates for customer account services are reasonable.

Customer Account Services Expenses/Customer	
Louisville Gas & Electric	$ 15.67
Virginia Electric & Power	$ 16.15
Monongahela Power	$ 16.17
Columbia Gas of Virginia	**$ 17.01**
Duke Energy Carolinas	$ 21.65
Progress Energy Carolinas	$ 22.99
Wheeling Power	$ 26.12
Kentucky Utilities	$ 28.42
Comparison Group Average	**$ 29.13**
Duke Energy Kentucky	$ 29.65
Appalachian Power	$ 32.57
Kingsport Power	$ 32.60
Baltimore Gas & Electric	$ 35.46
Kentucky Power	$ 36.02
Delmarva Power & Light	$ 69.08
Potomac Electric	$ 76.47

**PRE-FILED DIRECT TESTIMONY OF
PATRICK L. BARYENBRUCH**

**ON BEHALF OF
COLUMBIA GAS OF VIRGINIA, INC.**

Q. Please state your name and business address.

A. Patrick L. Baryenbruch, 2832 Claremont Road, Raleigh, North Carolina 27608.

Q. Please describe your educational and professional background.

A. I received a Bachelors degree in accounting from the University of Wisconsin-Oshkosh in 1974 and a Masters in Business Administration degree from the University of Michigan in 1979.

I am a financial consultant and a certified public accountant. I am a member of the American Institute of Certified Public Accountants and the North Carolina Association of Certified Public Accountants.

I began my career as a staff accountant with Arthur Andersen & Company where I performed financial audits of utilities, banks and finance companies. After three years I left to pursue an M.B.A. degree. Upon graduation from business school, I worked with the consulting firms of Theodore Barry & Associates and Scott, Madden & Associates.

During my consulting career, I have performed consulting assignments for approximately 50 utilities and 10 public service commissions. I have participated as project manager, lead or staff consultant for 24 commission-ordered management and prudence audits of public utilities. Of these, I have been responsible for evaluating the area of affiliate charges and allocation of corporate expenses in the Commission-ordered audits of Connecticut Light and Power, Connecticut Natural Gas, General

Water Corporation (Pennsylvania Operations), Philadelphia Suburban Water Company (now Aqua America) and Pacific Gas & Electric Company.

My firm has performed the commission-ordered audit of Southern California Edison's 2002, 2003, 2004 and 2005 transactions with its non-regulated affiliate companies.

I have acted as an expert witness on affiliate transactions-related matters in almost 40 rate cases for utility clients. In the state of Virginia, these utilities include Columbia Gas of Virginia, Dominion Virginia Power, Virginia Natural Gas, Virginia American Water, Massanutten Public Service and Po River Water and Sewer

Q. What are your duties and responsibilities in your current position?

A. I am the President of my own consulting practice, Baryenbruch & Company, LLC, which was established in 1985. In that capacity, I provide consulting services to utilities and their regulators.

Q. Please describe the reason for your testimony in this case.

A. I am presenting the results of my study which evaluated the services provided by NiSource Corporate Services Company ("NCSC") and several NiSource operating companies during the 12 months ended December 31, 2009 to Columbia Gas of Virginia, Inc. ("CGV"). This study was undertaken in conjunction with CGV's rate case and is accurate to the best of my knowledge and belief. The study is attached as Attachment PLB-1.

Q. What were the objectives of your study?

A. This study was undertaken to determine the reasonableness of affiliate charges for services provided to CGV during 2009. Reasonableness was determined by answering the following three questions. First, are 2009 service-related affiliate charges to CGV reasonable compared to other utility service companies? Second, did NCSC provide

services to CGV at the lower of cost or market during 2009? Third, is the 2009 cost of NCSC's customer accounts services comparable to those of other utilities?

Q. What conclusions were you able to draw as to the reasonableness of 2009 charges from NCSC and other affiliates to CGV?

A. The cost per CGV customer for services from NCSC and other affiliates is reasonable and favorable as compared to the cost per customer for similar utility service companies. CGV was charged an average of $90 per customer by NCSC and other affiliates, approximately 24% lower than the average of $112 per customer for comparison group service companies. This determination was based on service company information included in Form 60, which must be annually filed with the Federal Energy Regulatory Commission ("FERC") by electric and combination electric/gas utility holding companies. The comparison is based on data from 2008, the latest year for which Form 60 information is currently available.

Q. What conclusions were you able to draw as to whether CGV was charged the lower of cost or market for the services provided by NCSC during 2009?

A. I was able to draw the following conclusions

(1) NCSC's services were provided to CGV during 2009 at the lower of cost or market.

(2) On average, the hourly rates for outside service providers are 82% higher than comparable hourly rates charged by NCSC.

(3) If all of the managerial and professional services now provided by its affiliates had been outsourced in 2009, CGV and its customers would have incurred $16.5 million in additional expenses.

(4) Affiliates' charges do not include any profit markup. Only the actual cost of the service provided is being charged to CGV and its customers.

Q. What conclusions were you able to draw concerning whether 2009 costs of NCSC's customer account services were reasonable?

A. The cost of NCSC and other affiliate's customer accounts services is well below the average of the neighboring electric utility comparison group. During 2009, CGV's customer accounts cost per customers was $17.01 compared to the utility comparison group's 2008 average of $29.13.

Q. Based on your work, can you conclude that CGV's 2009 affiliate charges for services are reasonable?

A. Yes, based on this study's results, it can be concluded that CGV's 2009 service-related charges from NCSC and other affiliates are reasonable.

Q. Does this complete your testimony?

A. Yes.

I – Introduction

Purpose Of This Study

This study was undertaken to answer three questions concerning the services provided by AGL Services Company (AGSC) to Elizabethtown Gas Company (ETG), each of which bears on the reasonableness of those charges as incurred during the 12 months ended September 30, 2008:

1. Was ETG charged the lower of cost or market for managerial and professional services provided by the AGSC during the test period?

2. Was the 12 months ended September 30, 2008 cost of the Service Company's customer accounts services comparable to those of other utilities?

3. Were AGSC's charges to ETG during the 12-months ended September 30, 2008 reasonable compared to other utility service companies?

Study Results

Concerning question 1, the following conclusions can be drawn from this study:

- ETG was charged the lower of cost or market for managerial and professional services during the 12-months ended September 30, 2008.

- On average, the hourly rates for outside service providers are 65% higher than the AGSC's hourly rates.

- If all the managerial and professional services now provided by AGSC had been outsourced during the 12-months ended September 30, 2008, ETG and its ratepayers would have incurred $12 million in additional expenses.

- AGSC fees do not include any profit markup. Only its actual cost of service is being recovered from ETG ratepayers.

Concerning question 2, it was determined that the cost of AGSC's customer accounts services, including those provided by the National Call Centers, is below the average of the neighboring electric utility comparison group. As will be explained further herein, this group of companies provides a reasonable proxy group for comparison to a regulated utility of the size and scope of AGSC and ETG. During the 12-months ended September 30, 2008, the customer accounts cost per ETG customers was $36.76 compared to the 2007 average of $38.95 for neighboring electric utilities. The highest comparison group per customer cost was $80.86 and the lowest $13.25.

Concerning question 3, the following conclusions were reached:

- AGSC provides ETG with services similar to those provided by other utility service companies. This determination was based on service company information included in the Form 60, which must be filed with the Federal Energy Regulatory Commission ("FERC") by electric and combination electric/gas utility holding companies.

- The Service Company's 12 months ended September 30, 2008 cost per ETG customer was reasonable compared to cost per customer for electric and combination electric/gas service companies. During the test period, ETG was charged an average of $68 per customer by the Service Company compared to an average of $127 per customer for service companies reporting to the FERC.

II - Background

Overview of AGL Resources, Inc.

ETG is a wholly owned subsidiary of AGL Resources, Inc. (AGLR), an energy services holding company whose principle business is the distribution of natural gas to approximately 2.2 million end-use customers in Georgia, Virginia, Tennessee, New Jersey, Florida and Maryland. AGLR is organized into four operating business segments and one corporate/non-operating segment, as shown below.

Segment	Subsidiaries
Distribution Operations	• Atlanta Gas Light Company • Chattanooga Gas Company • Elizabethtown Gas Company • Elkton Gas Company • Florida City Gas Company • Virginia Natural Gas, Inc.
Retail Energy Operations	• SouthStar Energy Services LLC
Wholesale Energy Services	• Sequent Energy Management, L.P.
Energy Investments	• AGL Networks, LLC • Pivotal Jefferson Island Storage & Hub, LLC • Pivotal Propane of Virginia, Inc.
Corporate	• AGL Capital Corporation • AGL Services Company

Source: AGL Resources (http://www.aglresources.com/investor/facts.aspx)

AGL Services Company (AGSC) provides affiliate companies, including ETG, with management and administrative services listed below and defined in Exhibit 1.

Rates and regulatory	Information systems and technology
Internal auditing	Executive
Strategic planning	Investor relations
External relations	Customer services
Gas supply and capacity management	Employee services
Legal services and risk management	Engineering
Marketing	Business support
Financial services	Other

Exhibit 2 lists the regulated and non-regulated affiliate entities that are provided service by AGSC.

Services provided by AGSC to ETG are governed by a services agreement executed on July 9, 2008 with an effective date of January 1, 2006.

Elizabethtown Gas Company
Definition Of AGSC Services

Rates and Regulatory	AGSC assists the AGLR System Companies in the analysis of their rate structures and in the formulation of rate policies and advises and assists AGLR System Companies in proceedings before regulatory bodies involving the rates and operations of AGLR System Companies and of other competitors where such rates and operations directly or indirectly affect the AGLR System Companies. AGSC also assists AGLR System Companies by analyzing pipeline safety, environmental and safety regulations; writing the appropriate procedures to assist the system companies to stay in compliance with those regulations; providing internal reviews to assure operational, environmental and safety compliance; assisting in work with state and federal pipeline safety regulators and managing leak survey, pipeline integrity, locate and right of way contractors.
Internal Auditing	AGSC performs periodic reviews of operational, compliance, financial and information systems for AGLR System Companies.
Strategic Planning	AGSC advises and assists AGLR System Companies with the preparation of strategic business plans and corporate strategies.
External Relations	AGSC maintains relationships with government policy makers, conducts lobbying activities and provides community relations support.
Gas Supply and Capacity Management	AGSC provides gas control, scheduling, capacity planning and monitoring services. AGSC manages a centralized gas control center which provides natural gas delivery for natural gas distribution affiliates. AGSC also provides scheduling functions between the natural gas distribution affiliates and the pipelines for their daily supply. AGSC provides capacity planning services for each natural gas distribution affiliate including identifying present and future gas requirements to meet the needs of each natural gas distribution affiliate. AGSC provides monitoring of natural gas storage facilities and telecommunications networks. AGSC also coordinates the management of gas supply for natural gas distribution affiliates who offer retail services and coordinates gas transmission and storage services for all natural gas distribution affiliates to ensure the most efficient use of services and to capture economies of scale as a larger purchaser in the4 market. Individually, natural gas distribution affiliates may, however, remain as the contract party under any agreement.
Legal Services and Risk Management.	AGSC provides various legal services and general legal oversight. In addition, AGSC provides insurance, claims, security, environmental and safety related services and performs corporate secretarial functions.
Marketing	AGSC assists AGLR System Companies by providing analysis, implementation and maintenance of line extension policies, by providing analysis of tariff rates in response to customer needs and by developing marketing strategies and programs.
Financial Services	AGSC provides various services to AGLR System Companies including corporate tax, treasury, corporate accounting and reporting, general ledger maintenance and all accounting recordkeeping, processing certain accounts such as accounts payable, cash management, and others as may be deemed necessary, including hedging policy and oversight, financial planning and regulatory support (for all natural gas distribution affiliates and other AGLR System Company that interact with regulators or regulated companies) . Each AGLR System Company may also maintain its own corporate and accounting group and engage AGSC to provide advice and assistance on accounting matters, including the development of accounting practices, procedures and controls, the preparation and analysis of financial reports and the filing of financial reports with regulatory bodies, on a system-wide basis.

Elizabethtown Gas Company
Definition Of AGL Services Company Services

Information Systems and Technology	AGSC provides the AGLR System Companies with production support of web, mainframe and distributed computing applications, servers and networks. Also, provides deskside asset management, disaster recovery, data network, application security and voice communications services.
Executive	AGSC utilizes the executive staff of AGLR in order to assist the AGLR System Companies in formulating and executing general plans and policies, including operations, issuances of securities, appointment of executive personnel, budgets and financing plans, expansion of services, acquisitions and dispositions of property, public relationships and other related matters.
Investor Relations	AGSC maintains relationships with the financial community, provides shareholder services for the benefit of AGLR System Companies.
Customer Services	AGSC provides billing, mailing, remittance processing, call center and customer communication services for customers; by providing credit and collections support and analysis; by providing support for response to customer complaints and by providing customer service surveys to improve service and efficiency.
Employee Services	AGSC assists AGLR System Companies in developing employee relations policies and programs, and training personnel in a coordinated manner throughout the AGLR System Companies. Each AGLR System Company may maintain a human resources group to handle the individualized application of policies and programs. AGSC also provides payroll services, management of the employee benefit plans and employee communications
Engineering	AGSC provides engineering services for the AGLR System Companies. These services include infrastructure expansion and improvements, system analysis and modeling, GIS mapping and updates and maintenance and general engineering expertise.
Business Support – Purchasing	AGSC provides procurement services to AGLR System Companies.
Business Support – Facilities Management	AGSC provides facilities management services for offices owned by AGLR System Companies.
Business Support – Fleet	AGSC provides fleet services for vehicles owned or leased by AGLR System Companies.
Business Support – Other	AGSC provides other services to AGLR System companies such as records management, media and visual services and business process services.
Other	AGSC provides other services, such as business development, as requested by AGLR System Companies.

AGSC Cost Assignment Process

AGSC provides services to operating companies at cost, as stipulated in the current service agreement with ETG. Within its accounting system, AGSC identifies its service costs through "account codes" including cost centers, account numbers, capital projects and O&M projects. This data enables AGSC to accumulate its expenses and properly assign them to the affiliate companies it serves.

To the extent practicable, AGSC expenses are assigned directly to affiliates being served. AGSC expenses that cannot be assigned directly are allocated among affiliates on a basis that is pertinent to the underlying services. The table shows the methods by which such costs of service are allocated to AGSC affiliates.

Service Category	Allocation Basis
Rates and Regulatory	End-Use Customers Ratio
Internal Auditing	Composite Ratio (employees, assets, operating expenses, operating margin)
Strategic Planning	Composite Ratio
External Relations	Composite Ratio
Gas Supply and Capacity Mgmt	End-Use Customers Ratio
Legal Services and Risk Mgmt	Composite Ratio
Marketing	End-Use Customers Ratio
Financial Services	Composite Ratio
Information Services	Composite Ratio
Executive	Composite Ratio
Investor Relations	Composite Ratio
Customer Services	
- Call Center Services	Call/Phone Volume Ratio
- Non-Call Center Services	End-Use Customers Ratio
Employee Services	Employees Ratio
Engineering	End-Use Customers Ratio
Business Support	Composite Ratio

III - Service Company Cost Comparison Approach

During the 12 months ended September 30, 2008, AGSC billed ETG $18,458,588. These charges were compared to outside benchmarks as shown in the table below.

Service Category	Year Ended Sep 30, 2008	Outside Cost Comparison Method
Customer Services	$ 3,759,288	Comparison to Neighboring Utilities
Employee Services	$ 1,259,355	
Engineering	$ 773,944	
Executive	$ 764,545	
External Relations	$ 422,847	
Facilities Mgt	$ 1,672,099	
Financial Services	$ 1,421,711	
Fleet	$ 124,934	
Gas Supply & Capacity Mgmt	$ 590,409	Comparison to Outside Service
Information Services	$ 4,606,750	Provider Hourly Billing Rates
Internal Audit	$ 129,143	
Investor Relations	$ 43,923	
Legal Services	$ 1,289,593	
Marketing Services	$ 325,736	
Other	$ 702,811	
Rates and Regulatory	$ 436,746	
Supply Chain Management	$ 134,724	
Outside Service Provider Total	$ 14,699,270	
Total AGSC Billings to ETG	**$ 18,458,558**	

This study's first question—whether AGSC's 12 months ended September 30, 2008 charges were priced at the lower of cost or market—was evaluated by comparing the cost per hour for managerial and professional services provided by AGSC personnel to hourly billing rates that would be charged by outside providers of equivalent services. AGSC costs per hour were based on actual charges to ETG during the 12 months ended September 30, 2008. Outside providers' billing rates came from surveys or other information from professionals that could perform the services now provided by AGSC.

The second question—whether AGSC 12 months ended September 30, 2008 customer services charges were comparable to other utilities—was addressed by comparing ETG's customer accounts services expenses to those of neighboring electric utilities. This approach was selected because the costs of outside providers of call center services are not publicly available. However, electric utility customer account services expenses can be readily obtained from the Federal Energy Regulatory Commission's (FERC) Form 1. The availability and transparency of FERC data adds to the validity of its use in this comparison.

The third question—whether AGSC 12 months ended September 30, 2008 charges were reasonable—was determined by comparing ETG's AGSC charges per customer to those of electric and combination electric/gas utilities that file FERC Form 60 – Annual Report of Service Companies.

IV - Management And Professional Services Hourly Rate Comparison

Comparison Methodology

AGSC's billings to ETG during the twelve months ended September 30, 2008 were market tested by comparing the cost per hour for AGSC services to those of outside service providers to whom AGSC services could be outsourced. The outside providers selected for comparison were:

- Attorneys – legal services
- Certified Public Accountants – accounting, finance, internal audit, investor relations, information technology and rates and regulatory services
- Professional Engineers – engineering, gas management and operations-related services
- Management Consultants - executive management, external relations, human resources, communications services, marketing

Calculation Of AGSC Hourly Rates

During the twelve months ended September 30, 2008, AGSC billed ETG approximately $14.7 million for management and professional services. Exhibit 3 shows the results of this analysis and the designation of the outside provider for each market-testable service.

AGSC test year charges were compiled by each of the four outside provider category in Exhibit 4. Test year AGSC hours charged to ETG are compiled by outside provider category in Exhibit 5.

In the process of analyzing AGSC's billings to ETG, some outside services charges were noted. These represent expenses that are, in effect, already outsourced by AGSC and could not be avoided by ETG if it were to receive services from someone other than AGSC. Therefore, the amounts in the pertinent accounts had to be excluded from the AGSC hourly rate calculation. Excluded accounts are shown in Exhibit 6.

Based on previously described cost and hour data for the twelve months ended September 30, 2008, the AGSC's hourly rates by service provider category are calculated in the table below.

	Outside Provider Category				
	Management Consultant	Attorney	Certified Public Accountant	Professional Engineer	Total
Mgmt/Professional Service-Related AGSC Charges (Exhibit 4)	$ 3,475,295	$ 1,289,593	$ 6,772,996	$ 1,364,353	$ 12,902,238
Add: Overhead-Related AGSC Charges (A)	$ 483,402	$ 179,703	$ 943,442	$ 190,485	$ 1,797,033
Less: Excluded Charges (Exhibit 6)	(816,652)	(195,692)	(2,207,962)	(268,851)	(3,489,156)
Net Cost Pool Expenses	$ 3,142,045	$ 1,273,604	$ 5,508,477	$ 1,285,988	$ 11,210,114
Total Hours (Exhibit 5)	38,281	7,904	58,453	39,502	144,140
Average Hourly Rate	$ 82	$ 161	$ 94	$ 33	

Note A: Overheads are assigned to the outside provider categories on a prorata basis, as shown below:

	Management Consultant	Attorney	Certified Public Accountant	Professional Engineer	Total
Service-Related Charges	$ 3,475,295	$ 1,289,593	$ 6,772,996	$ 1,364,353	$ 12,902,238
Percent of Cost Pool Total	26.9%	10.0%	52.5%	10.6%	100.0%
Total Overhead	$ 1,797,033	$ 1,797,033	$ 1,797,033	$ 1,797,033	
Allocated Overhead	$ 483,402	$ 179,703	$ 943,442	$ 190,485	$ 1,797,033

Outside Service Provider Hourly Rates

The next step in the cost comparison was to calculate the average billing rates for each type of outside service provider. The source of this information and the determination of the average rates are described in the paragraphs that follow.

It should be noted that professionals working for 3 of the 4 outside provider categories may be licensed to practice by state regulatory bodies. However, not every professional working for these firms is licensed. For instance, among New Jersey certified public accounting firms only more experienced staff are predominantly CPAs, as shown in the table below. Some employees of the AGSC also have professional licenses. Thus, it is valid to compare the AGSC's hourly rates to those of the outside professional service providers included in this study.

Position	% In NJ Who Are CPAs
Partners/Owners	98%
Directors (over 10 years experience)	82%
Managers (6-10 years experience)	82%
Sr Associates (4-5 years experience)	50%
Associates (1-3 years experience)	17%
New Professionals	4%

Source: AICPA's National PCPS/TSCPA Management of an Accounting Practice Survey (2008)

Management Consultants

The cost per hour for management consultants was developed from a 2008 survey performed by the Association of Management Consulting Firms—an industry trade organization. The survey includes rates that were in effect during 2007 for firms throughout the United States. Consultants typically do not limit their practice to any one region and must travel to a client's location. Thus, the U.S. national average is appropriate for comparison.

The first step in the calculation, presented in Exhibit 7, was to determine an average rate by consultant position level. From these rates, a single weighted average hourly rate was calculated based upon the percent of time that is typically applied to a consulting assignment by each consultant position level. The 2007 average rate was escalated to March 31, 2008—the midpoint of the test year ended September 30, 2008.

Attorneys

The New Jersey Bar Association does not survey its members as to their hourly billing rates. In addition, publicly available billing rate information could not be found for New Jersey attorneys. Therefore, an estimate of New Jersey attorney rates was developed from a survey of Massachusetts lawyers conducted annually by the Massachusetts Lawyers Weekly. As presented in Exhibit 8, the average rate for each Massachusetts firm respondent was adjusted for the cost of living differential between their location and Elizabeth, New Jersey. The survey includes rates that were in effect during 2007. This average was escalated to March 31, 2008—the midpoint of the test year ended September 30, 2008.

IV - Management And Professional Services Hourly Rate Comparison

Certified Public Accountants

The average hourly rate for New Jersey certified public accountants was developed from a 2008 survey performed by the American Institute of Certified Public Accountants (AICPA). Hourly rates in the AICPA survey come from member firms in New Jersey.

As shown in Exhibit 9, a weighted average hourly rate was developed based on a set of accountant positions and an assumed percent of time on a typical assignment. This survey includes rate information in effect during 2007. Thus the data had to be escalated to March 31, 2008—the test year's midpoint.

Professional Engineers

ETG provided hourly rate information for an engineering firm that is sometimes used by the company when outside engineering services are required. As shown in Exhibit 10, an average rate was developed for each engineering position. Then, using a typical percentage mix by position for a typical engineering project, a weighted average cost per hour was calculated.

IV - Management And Professional Services Hourly Rate Comparison

As shown in the table below, AGSC's costs per hour during the test year ended September 30, 2008 are considerably lower than those of outside providers.

	Test Year Cost Per Hour Difference		
Service Provider	AGSC	Outside Providers	Difference-- AGSC Greater(Less) Than Outside
Management Consultant	$ 82	$ 209	$ (127)
Attorney	$ 161	$ 298	$ (137)
Certified Public Accountant	$ 94	$ 145	$ (51)
Professional Engineer	$ 33	$ 111	$ (78)

As calculated below, based on these cost per hour differentials and the number of hours AGSC billed ETG during the test year, AGSC's services would have cost $12 million more from outside providers. This is 68% more than AGSC's total charges to ETG during the test year ended September 30, 2008 ($12,015,443 / $18,458,558 = 65%).

	Test Year Total Cost Difference		
Service Provider	Hourly Rate Difference-- AGSC Greater(Less) Than Outside	AGSC Hours Charged	Dollar Difference
Management Consultant	$ (127)	38,281	$ (4,858,765)
Attorney	$ (137)	7,904	$ (1,081,999)
Certified Public Accountant	$ (51)	58,453	$ (2,983,655)
Professional Engineer	$ (78)	39,502	$ (3,091,024)
Net AGSC Less Than Outside Providers			$ (12,015,443)

V - Customer Accounts Services Cost Comparison

Background

It is difficult to compare the cost of AGSC's customer services charges to ETG with outside providers of the same services because survey data is proprietary and expensive to obtain. For this reason, AGSC's test year customer services charges are compared to those of neighboring electric utilities because the data necessary to make this comparison is readily available to the public.

Electric utility cost information comes from the FERC Form 1 that each must file. FERC's chart of accounts is defined in chapter 18, part 101 of Code of Federal Regulations. FERC accounts that contain customer account-related expenses and are used in this study's comparison are:

- Account 903 Customer Accounts Expense – Records and Collection Expense
- Account 905 Customer Accounts Expense – Miscellaneous Customer Accounts Expense.

In addition, labor-related overheads charged to the following FERC accounts must be added to the labor components of Accounts 903 and 905.

- Account 926 Employee Pension and Benefits
- Account 408 Taxes Other Than Income (employer's portion of FICA).

Exhibit 11 provides FERC's description of what should be charged to these accounts. In questioning the controller of a large electric utility, it was determined that expenses of the activities described below are recorded in the designated FERC accounts.

903 Records and Collection Expense

- Customer Call Center – customer calls/contact, credit, order taking/disposition, bill collection efforts, outage calls
- Call Center IT – maintenance of phone banks, voice recognition units, call center software applications, telecommunications
- Customer billing – bill printing, stuffing and mailing
- Remittance processing – processing of customer payments received in the mail
- Bill payment centers – locations where customers can pay their bills in person

905 Miscellaneous Customer Accounts Expense

- Customer Information System IT – maintenance and support of the customer information system

This study assumes the FERC accounts for other electric and gas utilities contain expenses for the same activities.

Elizabethtown Gas Company
FERC Account Descriptions

903 – Customer Records and Collection Expenses

This account shall include the cost of labor, materials used and expenses incurred in work on customer applications, contracts, orders, credit investigations, billing and accounting, collections and complaints.

Labor

1. Receiving, preparing, recording and handling routine orders for service, disconnections, transfers or meter tests initiated by the customer, excluding the cost of carrying out such orders, which is chargeable to the account appropriate for the work called for by such orders.
2. Investigations of customers' credit and keeping of records pertaining thereto, including records of uncollectible accounts written off.
3. Receiving, refunding or applying customer deposits and maintaining customer deposit, line extension, and other miscellaneous records.
4. Checking consumption shown by meter readers' reports where incidental to preparation of billing data.
5. Preparing address plates and addressing bills and delinquent notices.
6. Preparing billing data.
7. Operating billing and bookkeeping machines.
8. Verifying billing records with contracts or rate schedules.
9. Preparing bills for delivery, and mailing or delivering bills.
10. Collecting revenues, including collection from prepayment meters unless incidental to meter reading operations.
11. Balancing collections, preparing collections for deposit, and preparing cash reports.
12. Posting collections and other credits or charges to customer accounts and extending unpaid balances.
13. Balancing customer accounts and controls.
14. Preparing, mailing, or delivering delinquent notices and preparing reports of delinquent accounts.
15. Final meter reading of delinquent accounts when done by collectors incidental to regular activities.
16. Disconnecting and reconnecting services because of nonpayment of bills.
17. Receiving, recording, and handling of inquiries, complaints, and requests for investigations from customers, including preparation of necessary orders, but excluding the cost of carrying out such orders, which is chargeable to the account appropriate for the work called for by such orders.
18. Statistical and tabulating work on customer accounts and revenues, but not including special analyses for sales department, rate department, or other general purposes, unless incidental to regular customer accounting routines.
19. Preparing and periodically rewriting meter reading sheets.
20. Determining consumption and computing estimated or average consumption when performed by employees other than those engaged in reading meters.

Materials and expenses

21. Address plates and supplies.
22. Cash overages and shortages.
23. Commissions or fees to others for collecting.
24. Payments to credit organizations for investigations and reports.
25. Postage.
26. Transportation expenses, including transportation of customer bills and meter books under centralized billing procedure.
27. Transportation, meals, and incidental expenses.
28. Bank charges, exchange, and other fees for cashing and depositing customers' checks.
29. Forms for recording orders for services, removals, etc.
30. Rent of mechanical equipment.

Elizabethtown Gas Company
FERC Account Descriptions

905 – Miscellaneous Customer Accounts Expenses
This account shall include the cost of labor, materials used and expenses incurred not provided for in other accounts.

Labor

1. General clerical and stenographic work.
2. Miscellaneous labor.

Materials and expenses

3. Communication service.
4. Miscellaneous office supplies and expenses and stationery and printing other than those specifically provided for in accounts 902 and 903.

V - Customer Accounts Services Cost Comparison

Comparison Group

Neighboring electric utilities included in the comparison group are shown in the table below. These are companies whose FERC Form 1 shows amounts for accounts 903 and 905.

New Jersey	• Atlantic City Electric • Jersey Central Power	• Public Service Electric & Gas • Rockland Electric
New York	• Central Hudson Gas & Electric • Consolidated Edison • New York State Electric & Gas	• Niagara Mohawk Electric Power • Rochester Gas & Electric
Pennsylvania	• Duquesne Light • Metropolitan Edison • PECO Energy • Pennsylvania Electric	• Pennsylvania Power • PPL Electric Utilities • West Penn Power
Delaware	• Delmarva Power & Light	

Comparison Approach

The basis for this comparison is customer account services expenses per customer. ETG's cost pool was developed to include the same expenses included in electric utility's FERC accounts 903 and 905. As shown in the graphic below, ETG's resultant cost pool contains the expenses of AGSC and certain expenses it incurs itself.

Elizabethtown Gas Company
AGSC
a. Customer contact
b. Customer order processing
c. Billing information processing
d. Collections
e. Correspondence processing
ETG
a. Postage and forms
b. Customer payment processing

Electric Utilities
FERC Acct 903 - Records and Collection Expense and FERC Acct 905 - Misc Customer Accounts Expense
a. Customer contact
b. Customer order processing
c. Bill preparation and mailing
d. Collections
e. Payment processing
f. Correspondence processing

ETG Cost Per Customer

In order to make a valid comparison to neighboring electric utilities, it was necessary to adjust the AGSC call center call handling charges because electric utilities experience an average of 2.50 calls per customer compared to ETG's 1.54 calls per customer. Thus, AGSC call center call handling charges had to be increased for comparison purposes, to reflect its costs at a 2.50 calls per customer level. As shown below, ETG's adjusted annual expense per customer is $36.76—the number that can be compared to neighboring electric utilities' expenses. Included in this amount are the estimated incremental charges from AGSC to establish a call center in New Jersey. ETG's 12 months ended September 30, 2008 unadjusted annual expense per customer is $21.46.

Elizabethtown Gas 12-Months Ended September 30, 2008 Cost Per Customer

	Cost Component	YE 9/30/08 Service Co Charges	Adjustment Fewer Calls For Gas Cos. (A)	Adjusted	
AGSC	Call processing, order processing, credit, bill collection	$ 6,634,153	$ 1,296,613	$ 7,930,766	
ETG	Customer payment processing			$ 475,046	(B)
ETG	Postage & forms			$ 1,617,199	
			Cost Pool Total	$ 10,023,011	
			Total ETG Customers	272,639	
	12 Months Ended September 30, 2008 Cost Per ETG Customer			**$ 36.76**	

Note A: Adjustment for AGSC's fewer calls per customer
This adjustment is necessary because gas utilities experience fewer calls per customer than do electric utilities

Call handling expenses		$ 2,080,564
Electric utility industry's avg calls/customer	2.50	
AGSC's avg calls/customer	1.54	
Percent different	62%	62%
Total Adjustment		$ 1,296,613

Note B: Estimated customer payment processing expenses

Number of customers	272,639
Number of payments/customer/year	12
Total payments processed/year	3,271,667
Bank charge per item	$ 0.1452
Total estimated annual expense	$ 475,046

Electric Utility Group Cost Per Customer

Exhibit 12 shows the actual 2007 customer accounts expense per customer calculation for the electric utility comparison group. All of the underlying data were taken from each utility's FERC Form 1.

V - Customer Accounts Services Cost Comparison

Summary Of Results

As shown in the table below, ETG's cost per customer is less than the average of the neighboring electric utility comparison group. It can therefore be concluded that ETG's 12 months ended September 30, 2008 customer accounts-related expenses that were assigned to ETG are reasonable compared to those of other utilities.

Customer Account Services Expenses Per Customer	
West Penn Power Company	$ 13.25
Pennsylvania Electric Company	$ 13.97

ETG's Service Company Cost Per Customer

During the 12 months ended September 30, 2008, ETG was charged $68 per customer in O&M expenses by the Service Company. As shown in the table below, this calculation is based on net testable O&M, which eliminates certain O&M items for which ETG has not requested cost recovery.

	12 Months Ended Sep. 30, 2008
AGSC Billings to ETG	$ 18,458,558
ETG Customers (average)	272,639
AGSC Cost Per ETG Customer	$ 68

Comparison Group Cost Per Customer

Every centralized service company in a holding company system must file a Form 60 in accordance with the Public Utility Holding Company Act of 2005, Section 1270, Section 390 of the Federal Power Act and 18 C.F.R. paragraph 366.23. This report is designed to collect financial information from service companies that are subject to regulation by the FERC.

Twenty-three utility holding companies filed a Form 60 for 2007. All but two were included in the comparison group. The service company for PNM Resources, Inc. was excluded because its 2007 service company cost per regulated utility customer was clearly an anomaly as a negative number. This result is likely due to the unique manner by which PNM's service company expenses are reported on Form 60. Duke Energy was also excluded from the comparison group because one of its two service companies did not provide numbers for its Form 60. Thus, it was not possible to develop Duke's consolidated service company cost per customer for 2007.

Exhibit 14 compares the services provided by AGSC to the services provided by comparison group service companies. In general, the types of services provided by AGSC are similar to those provided by comparison group service companies.

O&M expenses charged to utility affiliates for the comparison group service companies were obtained from Schedule XVII – Schedule of Expense Distribution by Department or Service Function (p. 305 to 305c) of each entity's FERC Form 60. This schedule shows charges by category of service (e.g., accounting, information technology) and type of cost (e.g., labor, benefits, outside services). The following were eliminated from the comparison group's total expenses because they are not in AGSC's 2008 charges to ETG:

- All electric-specific services
- Income taxes (account 409), provision for deferred income taxes (account 410), provision for deferred income taxes – credit (account 411) and investment tax credit (account 411.5).
- Donations (account 426.1)
- Interest on long-term debt (account 427), interest on debt to associate companies (account 430) and other interest expense (account 431)

VI – Cost Comparison To Other Utility Service Companies

Comparison group service company 2007 expenses were also adjusted to remove charges to non-regulated affiliates from the cost pool used to calculate the cost per regulated service customer. This determination was made using information from the FERC Form 60 schedule: Account 457 – Analysis of Billing – Associate Companies.

Exhibit 15 shows ETG's 12 months ended September 30, 2008 Service Company cost per customer of $68 to be considerably lower than the average of $127 per customer for the comparison group service companies. Only 3 of 20 comparison group service companies had a lower 2007 cost per customer than ETG. These results further support the conclusion that the Service Company's 2007 charges to ETG were reasonable.

Governance Practices Associated With AGSC Charges

A number of management practices exist to ensure that AGSC charges to operating companies are appropriate. Specifically, certain review, approval and monitoring activities are performed by AGSC and ETG personnel that work to control the on-going level of AGSC charges to ETG. Examples of such governance activities include the following.

- AGL Services Company Oversight – Every operating company president is an officer of AGL Resources. This gives them a say in major business decisions and the ability to monitor service quality and spending levels.

- AGL Services Budget Review/Approval – Each year, AGL Resources presents its consolidated budget to its Board of Directors for approval. Every operating company president must formally approve its individual budget, which includes AGL Services charges for the next year.

- Project Review And Approval – Major projects undertaken by AGL Services must first be reviewed by the operating companies that will pay for the initiative. Consultants used on these projects who are hired by AGL Services must also be approved by operating companies. This process is achieved through the process of having projects approved by the Management Committee, which includes the presidents of all AGLR operating companies.

- AGL Services Budget Variance Reporting – A summary and explanation of year-to-date budget variances is prepared for the entire AGL Services on a monthly basis. In addition, a monthly variance report is produced by AGL Services budget managers and shows budget versus actual spending for the month and year-to-date by cost category.

- ETG Budget Variance Reporting – ETG's monthly budget variance report contains a line item for AGL Services charges. In this way, AGL Services budget versus actual charges can be monitored by ETG personnel for the month and year-to-date.

AGSC Cost Saving Initiatives

ETG and its customers have realized cost savings due to ETG's association with AGSC. Described below are several examples where AGSC initiatives produced such savings for ETG. These examples provide further evidence that AGSC is the low-cost service provider.

- When ETG was acquired by AGLR, its materials were housed in several locations and a large portion was in the hands of construction contractors. At May 1, 2005, the value of that inventory was almost $2,500,000. By implementing several AGSC-initiated process improvements and putting into place new controls the value of ETG's material inventory has been reduced to $430,636 as of October 1, 2008. This has freed up over $2 million in capital and reduced the associated carrying costs and overheads.

- Process improvements that helped reduce materials inventory included materials standardization. This process converted ETG's old non-sequential numbered material items to AGLR's system-wide materials numbering scheme. This standardization reduced the number of ETG's SKUs and allowed AGSC's Supply Chain department to consolidate purchases and improve leverage with vendors. The move to material standardization will allow all AGLR operating utilities to take advantage of volume discounts associated with larger scale buying power.

- Part of the inventory reduction was accomplished by moving the materials and management of construction materials over to the construction contractor. Using their capital, the contractors are directed to purchase project materials direct from the AGLR third party materials supplier. The contractor must manage those materials required to complete their projects. They are allowed to invoice AGLR for only the materials used on the project. This forces the contractor to be more responsible and become better stewards of the materials thereby reducing waste and scrap.

- A recent process improvement which reduced inventory and will improve operating efficiency is the move to consignment material depots. These depots, situated in ETG's three service locations, are used to store 350-500 high turnover field service material item which are owned by a third party supplier. The quantities stored in the depot are managed to economical levels by the third party supplier and AGSC's Supply Chain department. ETG is billed for only the items withdrawn from the depot inventory. Because the ordering and replenishment of this inventory is managed by ETG internal staff, ETG is not charge a service fee for that service.

- A process improvement currently being implemented is the move to truck stock material kitting or the packaging of a specific set and quantity of material items. The kitting of materials will reduce material waste because there will be no excess materials to become damaged while being transported on trucks. Vehicle lives can be extended because fewer items and weight are being transported. This can add to the life of a vehicle and reduce maintenance. Kitting will enable trucks to be in a high state of readiness because the kits will contain items associated with the work requirements of the field service staff. Finally, kits are stored in the depots and owned by the third party supplier until they are withdrawn for use by ETG.

- Before it was acquired by AGLR, ETG utilized McJunkin Red Man as its partial third party materials integrator for approximately 600 SKUs. The mark-up on this arrangement was 22% on the cost of the materials. After the acquisition, this agreement was cancelled and ETG was brought underneath the AGLR enterprise agreement. As a result, McJunkin Red Man became the full third party integrator for ETG with approximately 2,200 SKUs under contract. At that time, the mark-up percentage to the third party integrator was established at 17%--a 5% savings on ETG's original 600 SKU. Since ETG has come underneath the AGLR enterprise agreement, it has saved approximately $313,000 on original 600 items from the mark-up percentage.

- Before it was acquired, ETG utilized ERT technology from Itron, Inc. to whom it paid $50.00 per residential ERT device and $70.00 per commercial ERT device. ETG was subsequently added to the AGLR enterprise Itron agreement, which brought down its prices to $46.00 per residential ERT device and $65.00 per commercial ERT Device. AGSC was subsequently able to negotiate even lower prices from Itron thus bringing down the price per residential ERT device to $34.75 and price per commercial ERT device to $58.00. Based on the volume of ERT devices procured for ETG since being acquired, it realized total savings of approximately $519,000.

Cost Comparison – Carlyle versus Outside Providers	

I - Introduction

Purpose of This Study

This study was undertaken to determine if Po River Water Company (Po River) was charged the lower of cost or market for services provided by its affiliate, The Carlyle Group (Carlyle) during the 12 months ended December 31, 2008.

Study Results

The following conclusions can be drawn from this study:

- Po River was charged the lower of cost or market for managerial, professional, and operations and maintenance services during the 12 months ended December 31, 2008.

- On average, the hourly rates for outside service providers are **74% greater** than the Carlyle's hourly rates.

- If all the managerial, professional, and operations and maintenance services now provided by Carlyle had been out-sourced during the 12 months ended December 31, 2008, Po River and its ratepayers would have incurred an **additional $304,200** in expenses.

- Carlyle charges do not include any profit markup. Only the Carlyle's actual cost of service is being recovered from Po River ratepayers.

II - Background

Overview of Po River and Carlyle

Po River is a Virginia public service corporation certificated by the State Corporation Commission (the Commission) to provide water and sewer services to individual lot owners and to the campground's common area facilities of Indian Acres Club of Thornburg, Inc in Spotsylvania County, Virginia.

Po River has no employees of its own. All personnel serving Po River are employees of its parent company, Carlyle. Employees located in Virginia are involved in operating and maintaining the water and sewer facilities and equipment. These on-site employees are overseen by Carlyle's Environmental Director, who works out of a Chapel Hill, North Carolina office.

Other Carlyle employees serving Po River are located in Carlyle's corporate headquarters in Los Angeles, California. Headquarters personnel provide the following services to operating utilities:

- Executive Management
- Regulatory
- Accounting
- Legal
- Billing and Customer Account Services
- Information Technology
- Human Resources

Schedule 1 shows the types of services to Po River performed by each Carlyle employee, who charged time to Po River during 2008.

Test Year Affiliate Charges to Po River

During the 12 months ended December 31, 2008, Carlyle charged Po River $684,615 for operating expenses incurred by Carlyle on Po River's behalf.

III – Market Cost Comparison for Affiliate Charges

Cost Comparison Methodology

Carlyle's charges to Po River were tested to determine if they were priced at the lower of cost or market. This was accomplished by comparing the cost per hour for Carlyle management, professional, operating and maintenance-related services to those of outside providers to whom this work could be outsourced. Based on the nature of the Carlyle services, it was determined that the following outside providers could perform the categories of services indicated below:

- Management Consultants – executive and administrative management and human resources services
- Certified Public Accountants – accounting, information technology and rates/regulatory services
- Professional Engineers – operations, engineering, construction management
- Labor Contractors – operating and maintenance services

Carlyle's hourly rates were calculated for each service provider category, based on the dollars and hours charged to Po River during 2008. Hourly billing rates for outside service providers were developed using third party surveys or directly from information furnished by outside providers themselves.

The last step in the market cost comparison was to compare Carlyle's average hourly costs to the average cost per hour for outside providers.

Carlyle Hourly Rates

Schedule 2 shows an analysis of Carlyle's 2008 charges to Po River. The total of $684,616 is broken down by account and designated as included or excluded from the market cost study. Accounts excluded from the study were for the following reasons:

- Professional Fees – These are expenditures on outside accounting, legal and engineering service providers. The associated work performed by these providers is already, in effect, out-sourced. Thus, they are not a cost of the services that Carlyle provides to Po River.
- System O&M/A&G Expenses – These are non-labor expenses associated with the operations and maintenance and administration of the water and sewer system and not with the provision of labor-related services from Carlyle. Carlyle's labor-related O&M expenses are included in this study.

Based on the analysis in Schedule 2, $409,642 in 2008 Carlyle charges to Po River was determined to be market testable.

Carlyle Hourly Rates (cont.)

Next, Carlyle's expenses and labor hours in account 4016011-Employee Payroll were assigned to the outside service provider to whom the work of the associated Carlyle employees could be outsourced. Schedule 3 shows the results of this analysis. It should be noted that $2,800 of payroll expenses are charges for a receptionist in Los Angeles who processes Po River-related mail, vendor invoices and customer payments. Outside providers generally recover the cost of such personnel in the hourly rates of their professional staff. Thus, in the calculation of Carlyle's hourly rates, the receptionist's charges are treated as an overhead item.

The remaining 2008 testable Carlyle charges—$116,552—are non-payroll expenses. As shown in the table below, these non-payroll expenses are 40.2% of payroll expenses.

Account Number and Description	2008 Includable Expenses	
Non-Payroll Expenses		
4016012 Employee - Payroll Taxes	$ 24,894	
4016013 Employee - Payroll 401k	$ 6,256	
4016014 Employee - Fringe Benefits	$ 34,772	
4016552 Workers Comp Insurance	$ 4,059	
4016754 Office Supplies	$ 15,940	
4016759 Postage & Shipping	$ 8,538	
4016762 Computer Expenses	$ 7,735	
6210000 Rent Expense	$ 14,358	
Total Non-Payroll Expenses	$ 116,552	A
Payroll Expenses		
Salaries to Outside Service Provider Pools	$ 289,952	B
Non-Payroll as a Percent of Payroll Exp (A / B)	**40.2%**	

The final step was to tabulate Carlyle costs and hours and calculate its cost per hour by outside provider category, as shown in the table below.

	Professional				
	Management Consultant	Certified Public Accountant	Professional Engineer	Maintenance Laborer	Total
Payroll					
Professional/Maintenance	$ 27,013	$ 49,157	$ 36,800	$ 176,982	$ 289,952

Outside Service Provider Hourly Rates

The next step in the cost comparison was to obtain the average billing rates for outside service providers. The source of this information and the determination of the average rates are described in the paragraphs that follow.

Management Consultants

The cost per hour for management consultants was developed from the 2008 annual survey performed by the Association of Management Consulting Firms—an industry trade organization. The first step in the calculation, presented in Schedule 4, was to determine an average rate by consultant position level. From these rates, a single weighted average hourly rate was calculated based upon the percent of time that is typically applied to a consulting assignment by each consultant position level. This survey includes rates that were in effect during 2006 for firms in the United States. Consultants typically do not limit their practice to any one region and must travel to a client's location. Thus, the U.S. national average is appropriate for comparison. The survey includes rates that were in effect at December 31, 2007. Thus, the 2007 average rate was escalated to June 30, 2008—the midpoint of the 12 months ended December 31, 2008.

Certified Public Accountants

The average hourly rate for Virginia certified public accountants was developed from a 2008 survey conducted by the American Institute of Certified Public Accountants (AICPA) every two years. Hourly rates in the AICPA survey are the average of firms in Virginia. The average hourly rate was calculated for a set of typical accountant positions, as shown in Schedule 5. Based on a typical staff assignment by each accountant position, a weighted average hourly rate was calculated. This survey covered hourly rates in effect during 2007. Thus, the 2007 average rate was escalated to June 30, 2008—the midpoint of the 12 months ended December 31, 2008.

Professional Engineer

The association for professional civil engineers, the American Society of Civil Engineers, does not survey its members' billing rates. Neither does the National Society of Professional Engineers, the association for the entire engineering profession. Thus, professional engineer hourly rates were developed from a previous study conducted by Baryenbruch & Company, LLC for a Virginia utility. As shown in Schedule 6, an average rate was developed for each engineering position. Then, using a typical percentage mix by position for a typical engineering project, a weighted average cost per hour was calculated.

Outside Service Provider Hourly Rates (cont.)

Maintenance Labor

Hourly billing rates for maintenance contractors are not widely available to the public. Baryenbruch & Company, LLC was able to locate the rate schedule for one Virginia labor contractor. The 2008 hourly rates for maintenance/laborer positions from Kaseman, LLC's temporary services GSA contract are shown in the table below. Based on these billing rates, an average of $35/hour is used as the outside provider rate for maintenance laborers.

Position	Hourly Billing Rates
Laborer	$22.20
Maintenance I	$30.86
General Maintenance Worker	$33.85
Maintenance II	$39.83
Maintenance III	$46.87
Average Hourly Rate	**$34.72**

Cost Comparison – Carlyle versus Outside Providers

As shown in the table below, Carlyle's costs per hour are considerably lower than those of outside providers during 2008.

	2008		
Service Provider	Carlyle	Outside Provider	Difference--Carlyle Greater(Less) Than Outside
Professional			
Management Consultant	$ 87	$ 214	$ (127)
Certified Public Accountant	$ 54	$ 122	$ (68)
Professional Engineer	$ 73	$ 119	$ (46)
Maintenance			
Laborer	$ 23	$ 35	$ (12)

Based on these cost per hour differentials and the number of hours billed to Po River, outside service providers would have charged $304,000 more than Carlyle personnel during 2008 (see table below). This is 74% greater than Carlyle's cost of providing services to Po River during 2008 ($304,252 / $409,642).

Cost Comparison – Carlyle versus Outside Providers (cont.)

	2008		
Service Provider	Hourly Rate Difference-- Carlyle Greater(Less) Than Outside	Carlyle Hours Charged	Dollar Difference
Professional			
Management Consultant	$ (127)	444	$ (56,475)
Certified Public Accountant	$ (68)	1,290	$ (87,245)

COMPANY'S PROPOSED REVISED	**) CASE NO. PUE-2009-00136**
RATES, RULES, AND REGULATIONS	**)**

DIRECT TESTIMONY OF

PATRICK L. BARYENBRUCH

ON BEHALF OF

PO RIVER WATER AND SEWER COMPANY

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. Patrick L. Baryenbruch, 2832 Claremont Road, Raleigh, North Carolina 27608.

Q. PLEASE DESCRIBE YOUR EDUCATIONAL AND PROFESSIONAL BACKGROUND.

A. I received a Bachelors degree in accounting from the University of Wisconsin-Oshkosh and a Masters in Business Administration degree from the University of Michigan.

I am a financial consultant and a certified public accountant. I am a member of the American Institute of Certified Public Accountants and the North Carolina Association of Certified Public Accountants.

I began my career as a staff accountant with Arthur Andersen & Company where I performed financial audits of utilities, banks and finance companies. After three years I left to pursue an M.B.A. degree. Upon graduation from business school, I worked with the consulting firms of Theodore Barry & Associates and Scott, Madden & Associates.

During my consulting career, I have performed consulting assignments for approximately 50 utilities and 10 public service commissions. I have participated as project manager, lead or staff consultant for 24 commission-ordered management and prudence audits of public utilities. Of these, I have been

responsible for evaluating the area of affiliate charges and allocation of corporate expenses in the Commission-ordered audits of Connecticut Light and Power, Connecticut Natural Gas, General Water Corporation (Pennsylvania Operations), Philadelphia Suburban Water Company (now Aqua America), and Pacific Gas & Electric Company.

My firm performed the commission-ordered audit of Southern California Edison's 2002, 2003, 2004 and 2005 transactions with its non-regulated affiliate companies.

Q. WHAT ARE YOUR DUTIES AND RESPONSIBILITIES IN YOUR CURRENT POSITION?

A. I am the President of my own consulting practice, Baryenbruch & Company, LLC, which was established in 1985. In that capacity, I provide consulting services to utilities and their regulators.

Q. PLEASE DESCRIBE THE REASON FOR YOUR TESTIMONY IN THIS CASE.

A. I am presenting the results of my study which evaluated the services provided by The Carlyle Group ("Carlyle") during 2008 to Po River Water and Sewer Company ("Po River"). This study was undertaken in conjunction with Po Rivers' rate case and is true to the best of my knowledge and belief. The study is attached

as Exhibit PLB-1.

Q. WHAT WAS THE OBJECTIVE OF YOUR STUDY?

A. This study was undertaken to determine if Po River was charged the lower of cost or market for managerial and professional services provided by Carlyle during 2008.

Q. WHAT CONCLUSION WERE YOU ABLE TO DRAW CONCERNING AS TO WHETHER PO RIVER WAS CHARGED THE LOWER OF COST OR MARKET SERVICES PROVIDED BY CARLYLE?

A. I was able to draw the following conclusions:

(1) Po River was charged the lower of cost or market for managerial, professional, and operations and maintenance services during the 12-months ended December 31, 2008.

(2) On average, the hourly rates for outside service providers are 74% greater than the Po Rivers' hourly rates.

(3) If all the managerial, professional, and operations and maintenance services now provided by Carlyle had been out-sourced during the 12 months ended December 31, 2008, Po River and its ratepayers would have incurred an **additional $304,200** in expenses.

(4) Carlyle charges do not include any profit markup. Only the Carlyle's actual cost of service is being recovered from Po River ratepayers.

Q. DOES THIS COMPLETE YOUR TESTIMONY?

A. Yes.

I - Introduction

Purpose Of This Study

This study was undertaken to determine if the services provided by Resources Resources, Inc. (Resources) to Roanoke Gas Company (Roanoke Gas) during the 12 months ended September 30, 2006 (Roanoke Gas' fiscal year) were priced at the lower of cost or market.

Study Results

The following conclusions can be drawn from this study:

- Roanoke Gas was charged the lower of cost or market for managerial and professional services during the 12 months ended September 30, 2006.

- On average, the hourly rates for outside service providers are approximately **56% higher** than the Resources' hourly rates.

- If all the managerial and professional services now provided by Resources had been out-sourced during the 12 months ended September 30, 2006, Roanoke Gas and its ratepayers would have incurred an **additional $1.6 million** in expenses.

II - Background

Overview of Principal Resources Entities

Resources is a holding company engaged in the sale and distribution of natural gas. Its principal operating subsidiaries are the following:

- Roanoke Gas – regulated gas distribution company operating in Virginia
- Bluefield Gas – regulated gas distribution company operating in Virginia and West Virginia
- RGC Ventures – unregulated affiliate that provides information technology services to non-affiliate utilities.

Affiliate transactions regularly occur among Resources, Roanoke Gas and Bluefield Gas. No affiliate transactions took place between RGC Ventures and Roanoke Gas during the 12-months ended September 30, 2006.

Total number of employees for these entities is shown below.

	As of 9/30/06
Resouces	23
Roanoke Gas	102
Bluefield Gas	11
	136

During the 12 months ended September 30, 2006, the following affiliate transactions took place among the principal operating affiliates.

	12 Months Ended 9/30/06
Charges To Roanoke Gas From:	
Resouces	$ 2,931,442
Bluefield Gas	$ 3,006,280
Total Affiliate Charges to Roanoke Gas	**$ 5,937,722**
Charges From Roanoke Gas To:	
Resouces	$ 314,140
Bluefield Gas	$ 187,491
Diversified Energy (A)	$ 121,883
Total Roanoke Gas Charges to Affiliates	**$ 623,514**

Note A: All of the companies in Diversified Energy were sold in mid-2006. At the time of this study, Roanoke Gas did not carry out transactions with this affiliate.

Affiliate Agreement

On May 1, 2006, Resources and Roanoke Gas entered into a services agreement, which was approved by the Virginia State Corporation Commission in an order dated June 20, 2006. The agreement describes the services that Resources will provide to Roanoke Gas and specifies how expenses/costs incurred by one affiliate on behalf of another will be assigned. The agreement describes the allocation methods for those expenses/costs that cannot be charged directly from one affiliate to another.

Resources Charges to Roanoke Gas

Resources provides Roanoke Gas with the following management and professional services:

- Executive management
- Legal
- Accounting
- Rates/Regulatory
- Human Resources

Bluefield Gas Charges to Roanoke Gas

These charges consist of expenses associated with the Bluefield division of Roanoke Gas. This division is adjacent to Bluefield Gas' West Virginia service territory, thus Bluefield Gas manages the division. In order to get the Bluefield division-related expenses into the Virginia jurisdiction, Bluefield Gas charges Roanoke Gas.

Roanoke Gas Charges to Resources

Roanoke Gas' charges to Resources represent the parent's prorata share of the cost of the following Roanoke Gas assets:

- Office Facilities – Roanoke Gas allocates to Resources its share of the expenses for the corporate office building at 519 Kimball Avenue in Roanoke. This allocation is based upon square footage occupied.
- Computer Hardware – Roanoke Gas owns the corporate mainframe computer and network system. Resources is charged for its share of the expense associated with this IT equipment based upon storage disk utilization.

- Financial System Software – Roanoke Gas owns the corporate financial systems, including general ledger, accounts payable, budgeting, accounts receivable, payroll, human resources and fixed assets. Resources is charged with the entire expense of the financial system software.

During fiscal 2006, Roanoke Gas did not provide services to Resources.

Roanoke Gas Charges to Bluefield Gas

Charges from Roanoke Gas to Bluefield are associated with shared customer service and operations, associated labor overheads, management fees from officers and senior staff, and department-related expenses associated with customer service, sales, operations and gas control.

Roanoke Gas Charges to Diversified Energy

The vast majority of charges from Roanoke Gas to Diversified Energy were for shared corporate expenses, such as corporate office building space and governance. A small amount of charges were for billing services performed for Diversified Energy. Diversified Energy provided non-regulated gas marketing services to a few large interruptible customers of Roanoke Gas. Roanoke Gas prepared Diversified Energy's monthly bills to these customers. On August 1, 2006, Diversified Energy's operations were sold to Atmos Energy. Since then, Diversified Energy has been inactive and no transactions have occurred between them and Roanoke Gas.

When preparing bills for Diversified Energy customers, Roanoke Gas employees direct charged their time to Diversified Energy. These hours were then billed to Diversified Energy at cost (rather than the higher of cost or market) because Roanoke Gas could not locate a local outside service provider that could perform the same service.

III – Resources Services To Roanoke Gas Cost Comparison

Cost Comparison Methodology

The lower-of-cost-or-market comparison is accomplished by comparing the cost per hour for Resources managerial and professional services to those of outside service providers to whom these duties could be assigned. Based on the nature of the Resources services, it was determined that the following outside providers could perform the categories of services indicated below:

- Management Consultants – executive and administrative management and human resources services
- Certified Public Accountants – accounting, information technology and rates/regulatory services

Resources' hourly rate was calculated for each service provider category, based on the dollars and hours charged to Roanoke Gas during the 12 months ended September 30, 2006. Hourly billing rates for outside service providers were developed using third party surveys or directly from information furnished by outside providers themselves.

The last step in the market cost comparison was to compare Resources' average cost per hour to the average cost per hour for outside providers.

Resources Hourly Rates

Schedule 2 (page 8) details the assignment of 12-months ended September 30, 2006 management and professional Resources charges and hours to outsider provider categories.

Based on the assignment of expenses and hours shown in Schedule 1, Resources' equivalent costs per hour for the 12 months ended September 30, 2006 are calculated below.

	Management Consultant	Certified Public Accountant	Total
Management/Professional Charges	$ 843,650	$ 1,515,239	$ 2,358,889
Support Expenses (A)	$ 61,286	$ 110,073	$ 171,359
Total RGC Charges to Roanoke Gas	$ 904,936	$ 1,625,312	$ 2,530,248
Total Hours	6,362	25,867	32,229
Average Hourly Rate	**$ 142**	**$ 63**	

Note A: This represents charges associated with administrative assistants, whose expense is allocated prorata to the outside provider categories.

Schedule 2

Total Mgmt Fee From Resources			5,662
Total Hours	**6,362**	**25,867**	**32,229**

Outside Service Provider Hourly Rates

The next step in the cost comparison was to obtain the average billing rates for each outside service provider. The source of this information and the determination of the average rates are described in the paragraphs that follow.

Management Consultants

The cost per hour for management consultants was developed from the 2006 annual survey performed by the Association of Management Consulting Firms—an industry trade organization. The first step in the calculation, presented in Schedule 2, was to determine an average rate by consultant position level. From these rates, a single weighted average hourly rate was calculated based upon the percent of time that is typically applied to a consulting assignment by each consultant position level. This survey includes rates that were in effect during 2005 for firms in the United States. Consultants typically do not limit their practice to any one region and must travel to a client's location. Thus, the U.S. national average is appropriate for comparison. The 2005 average rate was escalated to March 31, 2006—the midpoint of 12 months ended September 30, 2006.

Certified Public Accountants

The average hourly rate for Virginia certified public accountants was developed from a 2006 survey conducted by the American Institute of Certified Public Accountants (AICPA) every two years. Hourly rates in the AICPA survey are the average of firms in Virginia. The average hourly rate was calculated for a set of typical accountant positions, as shown in Schedule 3. Based on a typical staff assignment by each accountant position, a weighted average hourly rate was calculated. This survey covered hourly rates in effect during 2005, thus they had to be escalated to March 31, 2006—the midpoint of 12 months ended September 30, 2006.

Resources – Outside Provider Cost Comparison

As shown in the table below, Resources costs per hour are considerably lower than those of outside providers.

	12 Months Ended September 30, 2006		
Service Provider	Resources	Outside Provider	Difference--Resources Greater(Less) Than Outside
Management Consultant	$ 142	$ 218	$ (76)
Certified Public Accountant	$ 63	$ 107	$ (44)

Based on these cost per hour differentials and the number of managerial and professional services hours billed to Roanoke Gas during the 12 months ended September 30, 2006, outside service providers would have cost $1.6 million more than Resources (see table below). Thus, on average, outside provider's hourly rates are approximately 56% higher than those of Resources ($1,630,023 / $2,931,442).

	12 Months Ended September 30, 2006		
Service Provider	Hourly Rate Difference--Resources Greater(Less) Than Outside	Resources Hours Charged	Dollar Difference
Management Consultant	$ (76)	6,362	$ (482,632)
Certified Public Accountant	$ (44)	25,867	$ (1,147,390)
Resources Less Than Outside Providers			$ (1,630,023)

Governance Practices Associated With Resources Charges

Roanoke Gas' board of directors reviews the quality of services provided by Resources and is responsible for making changes in those services, if necessary. Given the size of Resources and Roanoke Gas, it would quickly be apparent to Roanoke Gas's board of directors if Resources' service levels were inadequate.

IV – Roanoke Gas Services to Diversified Energy Cost Comparison

Roanoke Gas charged Diversified Energy, a subsidiary of Diversified Energy approximately $3,100 for the preparation of bills for Diversified Energy customers. Diversified Energy was billed Roanoke Gas' actual cost for this service. An analysis of these charges is shown below.

	Number of Bills		Roanoke Gas Cost		
			Labor		Total
Month	Prepared	Hours	Dollars	Overheads	Charges
Oct 05	22	1.9	$ 45	$ 37	$ 83
Nov 05	20	1.8	$ 41	$ 34	$ 76
Dec 05	18	12.4	$ 212	$ 175	$ 387
Jan 06	21	7.3	$ 112	$ 93	$ 205
Feb 06	21	12.4	$ 234	$ 193	$ 428
Mar 06	21	14.2	$ 231	$ 190	$ 421
Apr 06	21	12.2	$ 226	$ 186	$ 412
May 06	21	13.7	$ 225	$ 186	$ 411
Jun 06	21	10.8	$ 193	$ 159	$ 352
Jul 06	20	9.3	$ 169	$ 139	$ 308
Aug 06		-	$ -	$ -	$ -
Sep 06		-	$ -	$ -	$ -
	Total	96.1	$ 1,689	$ 1,393	$ 3,083

The "market" rate for this work is calculated below and based on the average rate for Virginia CPA.

Market for Highland Energy Billing Services	
Average Hourly Rate - Virginia CPAs	$ 107
Hours Charged	96.1
Total Market Charges	$ 10,281

According to asymmetric pricing rules, Diversified Energy should have been charged the higher of cost or market, which would have resulted in an additional $7,200 of charges during fiscal 2006. However, there are several reasons why this is not a concern:

- Roanoke Gas no longer performs this service for Diversified Energy because its operations have been sold. Thus, there will be no such billings in the future.

- The difference between cost and market is not significant compared to total affiliate charges or total Roanoke Gas customers.

I – Introduction

Purpose of This Study

This study was undertaken to determine the reasonableness of Virginia Electric and Power Company's ("Dominion Virginia Power" or the "Company") charges from Dominion Resources Services, Inc. ("DRS") and other affiliates for services provided during 2008. Reasonableness was determined by answering the following four questions:

1. Are service-related affiliate charges to Dominion Virginia Power reasonable compared to other utility service companies?

2. Did affiliates provide services to Dominion Virginia Power at the lower of cost or market during 2008?

3. Is the cost of DRS' customer accounts services comparable to those of other utilities?

4. Are DRS' cost allocation methods reasonable?

Study Results

Concerning question 1, the following conclusions were reached:

- DRS and other affiliates provide Dominion Virginia Power with services similar to those provided by other utility service companies.

- DRS' cost per Dominion Virginia Power customer is reasonable and favorable as compared to the cost per customer for similar utility service companies. Dominion Virginia Power was charged an average of $145 per customer by DRS, approximately 16% lower than an average of $172 per customer for comparison group service companies. This determination was based on service company information included in Form 60, which must be annually filed with the Federal Energy Regulatory Commission ("FERC") by electric and combination electric/gas utility holding companies. The comparison is based on data from 2007, the latest year for which Form 60 information is currently available.

Concerning question 2, the following conclusions were reached:

- Affiliate services were provided to Dominion Virginia Power during 2008 at the lower of cost or market.

- On average, the hourly rates for outside service providers are 55% higher than comparable hourly rates charged by Dominion Virginia Power's affiliates.

- If all of the managerial and professional services now provided by its affiliates had been outsourced in 2008, Dominion Virginia Power and its customers would have incurred $167 million in additional expenses.

- Affiliates' charges do not include any profit markup. Only the actual cost of the service provided is being charged and proposed for recovery from Dominion Virginia Power customers.

Concerning question 3, cost of DRS' customer accounts services is well below the average of the neighboring electric utility comparison group. During 2007, Dominion Virginia Power's customer

accounts cost per customers was $19.52, or more than 32% below the comparison group's 2007 average of $28.93.

Regarding question 4, DRS' methods for allocating expenses to affiliates such as Dominion Virginia Power are both reasonable and related to the causation of the allocated expenses. For each of over 290 DRS cost centers that charged Dominion Virginia Power during 2008, the services of those cost centers were found to be necessary for a utility like Dominion Virginia Power to operate. The cost allocation methods employed during 2008 are in accordance with the current DRS Services Agreement dated January 1, 2003, which has been approved by the Virginia State Corporation Commission ("Commission").

Other important factors were noted that evidence the care with which DRS expenses are assigned to affiliates such as Dominion Virginia Power. These include the following:

- Governance Practices Associated With DRS Charges – Several management practices are in place to ensure that DRS' charges to Dominion Virginia Power are appropriate. These include DRS' budgeting and variance analysis processes, and the scrutiny given to DRS' monthly bill by Dominion Virginia Power personnel.

- Cost Allocation Manual – DRS maintains an Accounting Policy and Cost Allocation Manual (CAM) that documents the process by which it assigns costs to affiliate customers. Baryenbruch & Company, LLC's review of the CAM found it to be a comprehensive reference document that provides thorough directions to DRS personnel responsible for assigning expenses to Dominion Virginia Power. DRS' cost allocation methodologies comply with governing requirements in the CAM.

Overview of Dominion Resources, Inc.

Dominion Resources, Inc. ("DRI") is one of the nation's largest producers and transporters of energy, with a portfolio of approximately 26,500 megawatts of generation; 1.2 trillion cubic feet equivalent of proved natural gas and oil reserves; 14,000 miles of natural gas transmission, gathering, and storage pipeline; and 6,000 miles of electric transmission lines. Dominion operates the nation's largest natural gas storage facility with 975 billion cubic feet of storage capacity, and serves retail energy customers in 12 states.

DRI is organized into three operating business segments and one corporate/non-operating segment, as described below.

Segment	Business Lines
Dominion Virginia Power – operates regulated electric distribution and transmission facilities in most of Virginia and northeastern North Carolina and provides electric service to nearly 2.4 million customers in the two-state area	• Electric Transmission • Electric Distribution • Energy and Related Products and Services in Competitive Retail Markets
Dominion Generation – operates DRI's fleet of regulated and merchant power plants	• Utility Power Production • Merchant Power Production
Dominion Energy – operates regulated natural gas distribution, transmission, and storage businesses, included regulated liquefied natural gas (LNG) operations; also operates DRI's Appalachian-based natural gas and oil exploration business and producer services	• Natural Gas Transmission • Natural Gas Distribution • Natural Gas Storage • Gas and Oil Exploration and Production; Production Services
Corporate – Various other businesses not related to the above three major segments

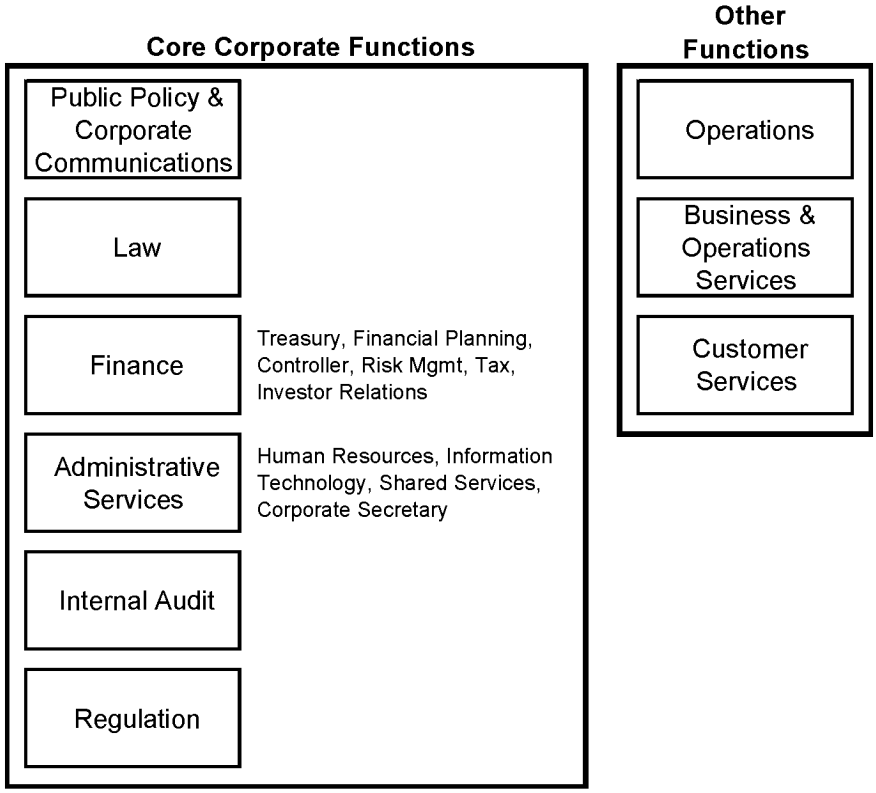
Overview of Affiliates Providing Services to Dominion Virginia Power

During 2008, Dominion Virginia Power was billed approximately $397 million for services provided by affiliates. As shown in the table below, the large majority of these services came from DRS.

Affiliate	2008 Service-Related Charges
Dominion Resources Services, Inc.	$ 350,456,982
Dominion Energy Inc.	$ 2,230,822
Dominion Energy Kewaunee Inc.	$ 76,003
Dominion Nuclear Connecticut Inc.	$ 353,077
Dominion Technical Solutions, Inc.	$ 37,220,958
Dominion Transmission Inc.	$ 737,386
VP Energy Marketing Inc.	$ 5,369,631
East Ohio Gas Company	$ 418,769
Total Affiliate Charges	**$ 396,863,627**

DRS was incorporated on October 14, 1999 to provide affiliate companies with the services described in Exhibit 1. Exhibit 2 lists the affiliate entities served by DRS. DRS is organized into the following major functional groups. As of December 31, 2008, DRS had 3,285 employees.



DRS is defined as a "centralized service company" and is regulated by FERC. The current Services Agreement between DRS and Dominion Virginia Power is dated January 1, 2003 and designates that DRS provide services at cost. The Commission approved the current Services Agreement in an order dated December 29, 1999 and required that DRS provide services to Dominion Virginia Power at the lower of cost or market. DRS has followed the Commission's lower of cost or market guideline.

Occasionally, DRS receives services from other DRI affiliates. Dominion Virginia Power has a services agreement with DRS dated January 1, 2003, that specifies it will be compensated for those services at cost. However, since the Commission's December 29, 1999 order applies to these transactions, services from other DRI affiliates are also provided at the lower of cost or market.

DRS' Cost Assignment Process

DRS utilizes a work order system (work orders are referred to internally as "projects" or "WBS Elements") by which to accumulate and distribute expenses in a fair and equitable manner to all affiliates that benefit from its services. Time records are maintained for all service company employees to support the costs that are assigned to each affiliate. DRS' costs are assigned in their entirety and no residual profit or loss remains on the books.

Virginia Electric and Power Company
Description of DRS Services

Service	Service Description
Accounting	Provide advice and assistance to Dominion Companies in accounting matters, including the development of accounting practices, procedures and controls, the maintenance of the general ledger and related subsidiary systems, the preparation and analysis of financial reports, and the processing of certain accounts such as accounts payable, accounts receivable and payroll.
Auditing	Periodically audit the accounting records and other records maintained by Dominion Companies and coordinating their examination, where applicable, with that of independent public accountants. The audit staff will report on their examination and submit recommendations, as appropriate, on improving methods of internal control and accounting procedures.
Legal and Regulatory Services	Provide advice and assistance with respect to legal and regulatory issues as well as regulatory compliance, including PUHCA 2005 authorizations and compliance and regulatory matters under other with Federal and State laws.
Information Technology	Provide the organization and resources for the operation of an information technology function including the development, implementation and operation of a centralized data processing facility and the management of a telecommunications network. This function includes the central processing of computerized applications and support of individual applications in Dominion Companies. Develop, implement, and process those computerized applications for Dominion Companies that can be economically best accomplished on a centralized basis.
Software Pooling	Accept from Dominion Companies ownership of and rights to use, assign, license or sublicense all software owned, acquired or developed by or for Dominion Companies which Dominion Companies can and do transfer or assign to it. Preserve and protect the rights to all such software to the extent reasonable and appropriate under the circumstances; license Dominion Companies, on a non-exclusive, no-charge or at-cost basis, to use all software which DRS has the right to sell, license or sub-license; and, at the relevant Dominion Companies' expense, permit Dominion Companies to enhance any such software and license others to use all such software and enhancements to the extent that DRS shall have the legal right to so permit.
Employee Benefits/ Pension Investment	Provide central accounting for employee benefit and pension plans of Dominion Companies. Advise and assist Dominion Companies in the administration of such plans and prepare and maintain records of employee and company accounts under the said plans, together with such statistical data and reports as are pertinent to the plans.
Human Resources	Advise and assist Dominion Companies in the formulation and administration of human resources policies and programs relating to the relevant Dominion Companies' labor relations, personnel administration, training, wage and salary administration and safety.
Operations	Advise and assist Dominion Companies in the study, planning, engineering and construction of energy plant facilities of each Dominion Company and of the Dominion Companies as a whole, and advise, assist and manage the planning, engineering (including maps and records) and construction operations of Dominion Companies. Develop long-range operational programs for all the Dominion Companies and advise and assist each such Dominion Company in the coordination of such programs with the programs of the other Dominion Companies.

Virginia Electric and Power Company
Description of DRS Services

Service	Service Description
Executive and Administrative	Advise and assist Dominion Companies in the solution of major problems and in the formulation and execution of the general plans and policies of Dominion Companies. Advise and assist Dominion Companies as to operations, the issuance of securities, the preparation of filings arising out of or required by the various Federal and State securities, business, public utilities and corporation laws, the selection of executive and administrative personnel, the representation of Dominion Companies before regulatory bodies, proposals for capital expenditures, budgets, financing, acquisition and disposition of properties, expansion of business, rate structures, public relationships and other related matters.
Business and Operations Services	Advise and assist Dominion Companies in all matters relating to operational capacity and the preparation and coordination of operating studies. Manage Dominion Companies' purchase, movement, transfer and accounting of fuel and gas volumes. Compile and communicate information relevant to company operation. Perform general business and operations support services, including business, plant and facilities operation, maintenance and management, travel, aviation, fleet and mail services.
Exploration and Development	Advise and assist Dominion Companies in all geological and exploration matters including the acquisition and surrender of acreage and the development of underground storage facilities. [note: Dominion Virginia Power is not charged for any of these services]
Risk Management	Advise and assist Dominion Companies in securing requisite insurance, in the purchase and administration of all property, casualty and marine insurance, in the settlement of insured claims and in providing risk prevention advice.
Marketing	Plan, formulate and implement marketing programs, as well as provide associated marketing services to assist Dominion Companies with improving customer satisfaction, load retention and shaping, growth of energy sales and deliveries, energy conservation and efficiency. Assist Dominion Companies in carrying out policies and programs for the development of plant locations and of industrial, commercial and wholesale markets and assist with community redevelopment and rehabilitation programs.
Medical	Direct and administer all medical and health activities of Dominion Companies. Provide systems of physical examination for employment and other purposes and direct and administer programs for the prevention of sickness.
Corporate Planning	Advise and assist Dominion Companies in the study and planning of operations, budgets, economic forecasts, capital expenditures and special projects.
Supply Chain	Advise and assist Dominion Companies in the procurement of real and personal property, materials, supplies and services, conduct purchase negotiations, prepare procurement agreements and administer programs of material control.
Rates	Advise and assist Dominion Companies in the analysis of their rate structure in the formulation of rate policies, and in the negotiation of large contracts. Advise and assist Dominion Companies in proceedings before regulatory bodies involving the rates and operations of Dominion Companies and of other competitors where such rates and operations directly or indirectly affect Dominion Companies.

Virginia Electric and Power Company
Description of DRS Services

Service	Service Description
Research	Investigate and conduct research into problems relating to production, utilization, testing, manufacture, transmission, storage and distribution of energy. Keep abreast of and evaluate for Dominion Companies all research developments and programs of significance affecting Dominion Companies and the energy industry, conduct research and development in promising areas and advise and assist in the solution of technical problems arising out of Dominion Companies' operations.
Tax	Advise and assist Dominion Companies in the preparation of Federal and other tax returns, and generally advise Dominion Companies as to any problems involving taxes including the provision of due diligence in connection with acquisitions.
Corporate Secretary	Provide all necessary functions required of a publicly held corporation. Coordinate information and activities among shareholders, the transfer agent, and Board of Directors. Provide direct services to security holders. Prepare and file required annual and interim reports to shareholders and the SEC. Conduct the annual meeting of shareholders and ensuring proper maintenance of corporate records.
Investor Relations	Provide fair and accurate analysis of DRI and its operating subsidiaries and its outlook within the financial community. Enhance Dominion's position in the energy industry. Balance and diversify shareholder investment in Dominion through a wide range of activities. Provide feedback to Dominion and its operating subsidiaries regarding investor concerns, trading and ownerships. Hold periodic analysts meetings, and provide various operating data as requested or required by investors.
Environmental Compliance	Provide consulting, cleanup, and other activities as required by Dominion Companies to ensure full compliance with applicable environmental statutes and regulations.
Customer Service	Provide services and systems dedicated to customer service, including billing, remittance, credit, collections, customer relations, call centers, energy conservation support and metering.
Energy Marketing	Provide services and systems dedicated to energy marketing, including marketing and trading of energy commodities, and energy price risk management and development of marketing and sales programs in physical and financial markets.
Treasury/Finance	Provide services related to managing all administrative activities associated with financing, including management of capital structure; cash, credit and risk management activities; investment and commercial banking relationships; oversight of decommissioning trust funds and general financing activities.
External Affairs	Provide services in support of corporate strategies for managing relationships with federal, state and local governments, agencies and legislative bodies. Formulate and assist with public relations, advertising, and external/internal communications programs and with the administration of corporate contribution and community affairs programs.

III - Affiliate Cost Comparison Approach

During the 12 months ended December 31, 2008, Dominion Virginia Power was billed approximately $397 million by affiliates for services provided by affiliates (Dominion Virginia Power was also charged by affiliates for various non-service expenses). These charges were evaluated in connection with this study's four questions, as shown in the table below.

Affiliate	2008 Service-Related Charges	Study Question: 1 - Reasonableness	2 - LCM Pricing	3 - Cust Acct Svcs Benchmarking	4 - Allocation Methods
Dominion Resources Services, Inc.	$ 350,456,982	X	X	X	X
Dominion Energy Inc.	$ 2,230,822	X			
Dominion Energy Kewaunee Inc.	$ 76,003	X			
Dominion Nuclear Connecticut Inc.	$ 353,077	X			
Dominion Technical Solutions Inc.	$ 37,220,958	X	X		
Dominion Transmission Inc.	$ 737,386	X			
VP Energy Marketing Inc.	$ 5,369,631	X			
East Ohio Gas Company	$ 418,769	X		X	
Total Affiliate Charges	**$ 396,863,627**				

The first question—are affiliate charges for services reasonable—was answered by comparing Dominion Virginia Power's affiliate charges per customer to those of utility service companies that file a FERC Form 60 – Annual Report of Service Companies. This comparison was made with 2007 Form 60 data, the latest year Form 60 data is available (the filing deadline for the Form 60 is May 1st).

This study's second question—whether affiliates' services were provided to Dominion Virginia Power during 2008 at the lower of cost or market—was determined by comparing the cost per hour for managerial and professional services provided by affiliate personnel, to hourly billing rates that would be charged by outside providers of equivalent services. Affiliates' costs per hour were based on actual charges to Dominion Virginia Power during the 12 months ended December 31, 2008. Outside providers' billing rates came from surveys or other information from professionals that could perform the services now provided by DRS.

The third question—whether DRS customer services charges were comparable to other utilities—was addressed by comparing Dominion Virginia Power's customer accounts services expenses to those of neighboring electric utilities. This approach was selected because the costs of outside providers of call center services are not publicly available. However, electric utility customer account services expenses can be readily obtained from FERC Form 1 data. The availability and transparency of FERC data adds to the validity of its use in this comparison. The comparison was made using 2007 data, the latest year for which FERC Form 1 data is available (the filing deadline for FERC Form 1 is April 18th).

The fourth question—whether DRS' cost allocation methods are reasonable—was answered by evaluating the basis by which each of the 293 DRS cost centers' charges to Dominion Virginia Power during 2008 were assigned. Reasonableness was determined when the allocation methods were related to the causation of the allocated expenses by cost centers providing services to Dominion Virginia Power. The allocation methods used in 2008 were also verified to

be those specified in the current Services Agreement between DRS and Dominion Virginia Power.

Dominion Virginia Power's Service Company Cost Per Customer

During the 12 months ended December 31, 2007, Dominion Virginia Power was charged $343 million by affiliates that provided it with various services. That equates to $145 per Dominion Virginia Power customer per year, as calculated below. This is the per customer cost that will be compared to the cost of other utility service companies.

Affiliate	2007
Dominion Resources Services, Inc.	$ 311,085,408
Dominion Energy Inc.	$ 1,535,781
Dominion Energy Kewaunee Inc.	$ 102,778
Dominion Nuclear Connecticut Inc.	$ 1,394,720
Dominion Retail Inc.	$ 1,633
Dominion Technical Solutions Inc.	$ 25,792,927
Dominion Transmission Inc.	$ 3,328
VP Energy Marketing Inc.	$ 2,753,010
East Ohio Gas Company	$ 351,031
Total Charges from Affiliates	$ 343,020,616
Dominion Virginia Power Customers (A)	2,362,318
Cost Per Customer	**$ 145**

Note A: Represents the number of retail (regulated) customers. Comparison group service company per customer costs are also based on the number retail customers served.

Comparison Group Cost Per Customer

Every centralized service company in a holding company system must file a Form 60 in accordance with Section 1270 of the Public Utility Holding Company Act of 2005, Section 390 of the Federal Power Act, and 18 C.F.R. §366.23. This report is designed to collect financial information from service companies that are subject to regulation by FERC.

DRS files a Form 60. Twenty-two other utility holding companies filed a Form 60 for 2007. All but two were considered for inclusion in the comparison group. The service company for PNM Resources, Inc. was excluded because its total 2007 service company cost per regulated utility customer was a negative amount, clearly an anomaly. This result is likely due to the unique manner by which PNM's service company expenses are reported on Form 60. Duke Energy was also excluded from the comparison group because one of its two service companies was not required to provide data for its Form 60. Thus, it was not possible to develop Duke's consolidated service company cost per customer for 2007.

The remaining twenty services companies were screened to develop a comparison group that is appropriately similar to Dominion Virginia Power. Two criteria were used to narrow this group:

- Proportion of Retail Electric Service – Dominion Virginia Power provides only electric service. The majority of service companies are owned by parents of utility companies that provide a combination of retail electric and gas service. The nature of service company services can differ between electric and gas service functions. In order to have a close alignment to Dominion Virginia Power, the service companies of utility companies with 90% or more electric customers were considered for comparison group inclusion.
- Number of Customers – Total retail customers of utilities served by the 20 service companies varies significantly from 115,000 for Unitil to 6,700,000 for National Grid. In

order to ensure a similar degree of complexity and breadth to that of Dominion Virginia Power, only utility companies with more than 1 million retail customers were considered for inclusion in the comparison group.

Exhibit 3 shows how 9 service companies were ultimately selected for the comparison group. Exhibit 4 compares the categories of services provided by DRS and the comparison group service companies.

Operating and maintenance expenses charged to utility affiliates for comparison group service companies were obtained from Schedule XVII – Schedule of Expense Distribution by Department or Service Function (P. 305 to 305c) of each entity's FERC Form 60. This schedule shows charges by category of service (*e.g.*, accounting, information technology) and type of cost (*e.g.*, labor, benefits, outside services). The following were eliminated from the comparison group's total expenses because they are not in DRS' 2008 charges to Dominion Virginia Power:

- Income taxes (account 409), provision for deferred income taxes (account 410), provision for deferred income taxes – credit (account 411), and investment tax credit (account 411.5)
- Donations (account 426.1)
- Interest on long-term debt (account 427), interest on debt to associate companies (account 430), and other interest expense (account 431)

Comparison group service company 2007 expenses were also adjusted to remove charges to non-retail affiliates from the cost pool used to calculate the cost per regulated service customer. This determination was made using information from FERC Form 60's schedule Account 457 – Analysis of Billing – Associate Companies.

Shown in the table below is the calculation of each comparison group service company's cost per retail customer. 2007 affiliate service-related charges to Dominion Virginia Power were $145 per customer compared to the comparison group's average of $172. Exhibit 5 shows graphically that Dominion Virginia Power's 2007 affiliate cost per customer is almost 16% or $27 per customer lower than the comparison group average.

Utility Service Company	Retail-Related Service Company Expenses	Total Retail Customers	Cost Per Customer
Progress	$351,126,895	3,100,000	$ 113
FirstEnergy	$511,129,366	4,500,000	$ 114
Exelon	$692,160,758	5,880,000	$ 118
PHI	$317,770,893	1,910,000	$ 166
Northeast	$356,196,611	2,101,000	$ 170
AEP	$928,871,896	5,191,000	$ 179
Southern Co	$940,731,642	4,377,000	$ 215
Entergy	$732,652,863	2,700,000	$ 271

IV – Question 1 – Reasonableness of Affiliate Charges

Form 60 data were further analyzed to compare the costs of categories of services. Services provided by the comparison group were assigned to 18 service categories shown in the table below.

Accounting	Finance
Auditing	Human Resources
Business Services	Information Technology
Corporate Planning	Legal
Customer Service	Operations
Energy Marketing	Regulatory Services
Environmental & Safety	Risk Management
Executive	Supply Chain
External Affairs	Treasury

Comparison group charges to regulated utility affiliates were assigned to service category cost pools, which were then divided by the number of retail customers. The resultant cost per customer for each service category is shown in Exhibit 6. This schedule, in effect, breaks down the service component of Dominion Virginia Power's and comparison group service companies' total cost per customer that was compared previously in Exhibit 5. Dominion Virginia Power's cost per customer is lower than the comparison group average for 16 of 18 service categories. Per customer cost results are also graphed in Exhibit 7, which shows Dominion Virginia Power's position within the range of comparison group per customer costs.

Further research into the two service categories in which Dominion Virginia Power is higher than average showed the following:

- Information Technology (IT) – DRI centralizes IT functions to the greatest extent possible in order to gain economies of scale. The IT functions for other utility companies typically are not centralized to the same extent. Depreciation and amortization expenses are included in the IT services charges to affiliates. IT assets in other utility companies are often owed by the regulated operating companies, thus their service companies charges would not include the associated depreciation and amortization expenses.

- External Affairs – DRS includes philanthropic-related expenses, including over $800,000 in charitable donations. As discussed earlier, donations were excluded from comparison group service companies' cost pools. Philanthropic expenses account for approximately $0.50 of DRS' $5.69 per customer. DRS' cost also includes $0.45 per customer in community affairs-related expenses. Most comparison group service companies do not include such expenses. It is possible these expenses are incurred directly by and recorded on the books of their regulated utility affiliates. These two items total $0.95 per customer for DRS. This is the approximate difference between DRS and the comparison group average.

Based on the results of this benchmarking to comparable service companies, Dominion Virginia Power's service-related charges from affiliates are reasonable.

Virginia Electric and Power Company

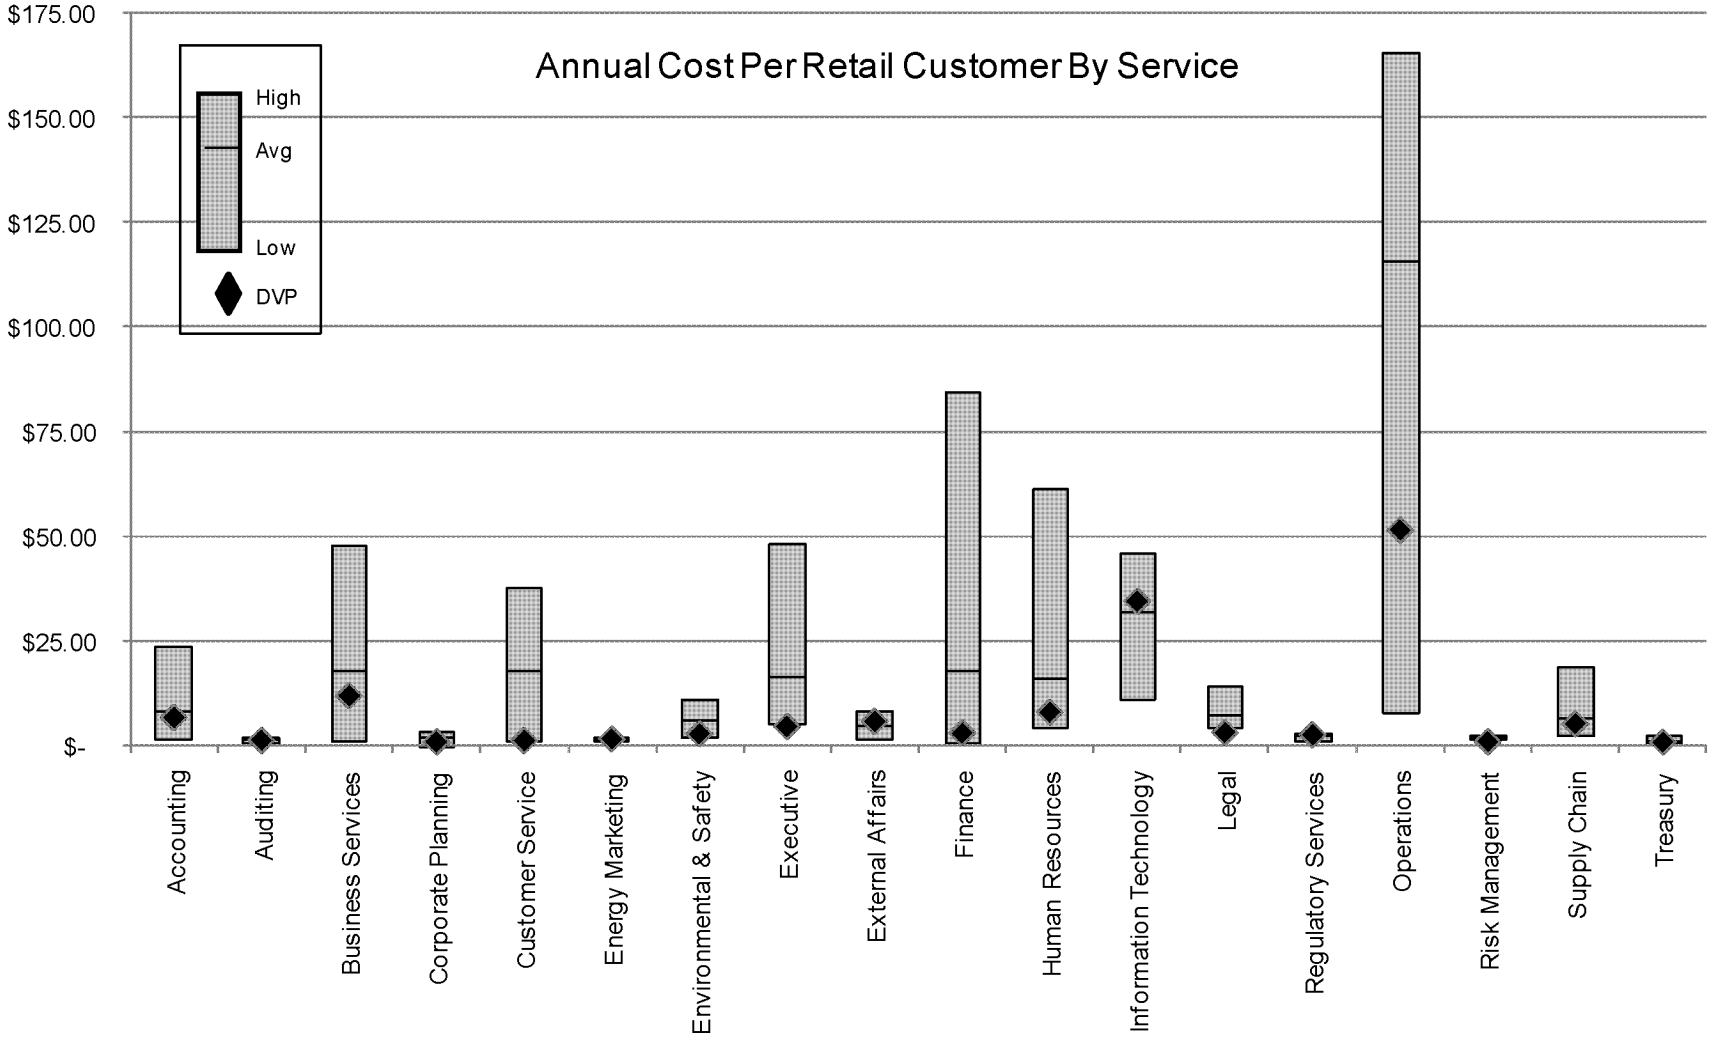
Annual Cost Per Customer by Service Category – Dominion Virginia Power's Position Relative to Comparison Group



TN-COC-01-Q36-ATTACHMENT 1
Page 1013 of 1175

V – Question 2 – Provision of Services at the Lower of Cost or Market

Comparison Methodology

During 2008, two affiliates, DRS and Dominion Technical Solutions, Inc. ("DTech") billed Dominion Virginia Power approximately $387.7 million in service-related charges. These represent 98% of affiliate's service-related charges to Dominion Virginia Power during 2008.

Dominion Virginia Power's billings from these affiliates were market-tested by comparing the cost per hour for DRS and DTech services to those of outside service providers to whom those services could be outsourced. The outside providers selected for comparison were:

- Attorneys – legal and corporate secretary services
- Management Consultants – executive management, external affairs, human resources, communications services
- Certified Public Accountants – accounting, tax, finance, treasury, internal audit, and rates and regulatory services
- Information Technology Consultants – information technology services
- Professional Engineers – engineering and operations-related services

Calculation of Affiliates' Hourly Rates

This study assigned DRS and DTech affiliate charges to one of the five outside provider categories (listed above) based on the specific nature of the service provided to Dominion Virginia Power. For instance, the charges from DRS' internal auditing cost center were assigned to the CPA cost pool.

Certain adjustments were necessary to construct the DRS/DTech-related cost pools that are reflective of how outside providers recover their costs.

- Travel Expenses – In general, client-related travel expenses are not recovered by outside service providers through their hourly billing rates. Rather, actual out-of-pocket travel expenses are billed to clients in addition to fees for professional services. Thus, it is appropriate to remove these charges from the DRS/DTech hourly rate calculation.
- Outside Services – These expenses are not associated with the cost of DRS/DTech personnel performing services for Dominion Virginia Power (outside firms perform the work under DRS and DTech direction). Charges from outside professional firms to perform certain corporate-wide services (*e.g.*, legal, financial audit, actuarial services) represent services that have, in effect, already been outsourced by DRS/DTech.
- Other Non-Service Expenses – These are various DRS/DTech-incurred fees and expenses to which Dominion Virginia Power is assigned its appropriate share. They are not related to the performance of services by DRS and DTech personnel for Dominion Virginia Power. An outside provider would not be expected to recover these costs in their hourly billing rates. Examples of these items include financing fees and material expenses.
- Enterprise Software Expenses – DRS arranges for enterprise-wide licenses for certain mainframe and server software. In doing so, DRS lowers the cost of this software through economies of scale. These savings are passed on to Dominion Virginia Power and affiliates who use the applications. Outside providers would expect to recover enterprise software expenses over and above their hourly rates. For instance, an outside provider that would take over support of the corporation's SAP applications,

would not try to recover the annual license fees paid to SAP in their hourly billing rates. Rather, a separate charge would be established for these costs.

- Transportation-Related Cost Centers – DRS provides aviation services to Dominion Virginia Power and its affiliates. This is a discrete service and not part of the cost of other services.
- Customer Accounts Services-Related Cost Centers – These are DRS services that would not be provided by any of the five outside professional service provider categories. Thus, these costs are tested in connection with the customer account services expense comparison in Chapter VI.

Exhibit 8 is an analysis of these adjustments from DRS/DTech 2008 service-related charges to Dominion Virginia Power. The net testable DRS charges of $301.5 million were subjected to a lower of cost or market pricing test.

Based on the nature of the services provided by each DRS cost center, testable charges were assigned to the five outside provider categories, as shown in Exhibit 9. A few cost centers provide general support for the DRS organization, and do not provide services directly to Dominion Virginia Power. For purposes of this study, these cost centers were designated as "overhead," and their expenses are later allocated to the five outside provider cost pools. Office facility cost centers are the largest and make up the majority of overhead charges. Test year DRS hours charged to Dominion Virginia Power are compiled by outside provider category in Exhibit 10. The categorization of hours was also based on the same cost center-by-cost center assignment used for DRS dollar charges.

Based on the cost and hour pools, DRS' 2008 hourly rates were developed for each of the five provider categories. Exhibit 11 shows the calculations involved in creating hourly rates that are compared to the rates of outside providers.

Outside Service Provider Hourly Rates

The next step in the cost comparison was to calculate the average billing rates for each type of outside service provider. The source of this information and the determination of the average rates are described below.

It should be noted that professionals working for three of the five outside provider categories may be licensed to practice by state regulatory bodies. However, not every professional working for these firms is licensed. For instance, among Virginia certified public accounting firms, only more experienced staff are predominantly CPAs, as shown in the table below. Some DRS employees also have professional licenses. Thus, it is valid to compare the DRS' hourly rates to those of the outside professional service providers included in this study.

Position	% In VA Who Are CPAs
Partners/Owners	98%
Directors (over 10 years experience)	86%
Managers (6-10 years experience)	88%
Sr Associates (4-5 years experience)	81%
Associates (1-3 years experience)	23%
New Professionals	0%

Attorneys

The Virginia State Bar does not survey its members as to their hourly billing rates. In addition, publicly available billing rate information could not be found for Virginia attorneys. Therefore, an estimate of Virginia attorney rates was developed from two surveys conducted by Lawyers Weekly in the states of Michigan and Massachusetts. As presented in Exhibit 12, the average rate for each firm was adjusted for the cost of living differential between its location and Richmond, Virginia. The Lawyers Weekly surveys included rates in effect at December 31, 2007. Thus, the 2007 average rate was escalated to June 30, 2008—the midpoint of the test year ended December 31, 2008.

Management Consultants

The cost per hour for management consultants was developed from a 2008 survey performed by the Association of Management Consulting Firms—an industry trade organization. The survey includes rates that were in effect during 2007 for firms throughout the United States. Consultants typically do not limit their practice to any one region and must travel to a client's location. Thus, the U.S. national average is appropriate for comparison.

The first step in the calculation, presented in Exhibit 13, was to determine an average rate by consultant position level. From these rates, a weighted average hourly rate was calculated based upon the percent of time that is typically applied to a consulting assignment, based on Baryenbruch & Company, LLC's experience, by each consultant position level. The 2007 average rate was escalated to June 30, 2008—the midpoint of the test year ended December 31, 2008.

Certified Public Accountants

The average hourly rate for Virginia CPAs was developed from a 2008 survey performed by the American Institute of Certified Public Accountants (AICPA). The Virginia version of this survey was used to develop hourly rates for member firms in Virginia.

As shown in Exhibit 14, a weighted average hourly rate was developed based on a set of accountant positions and a percent of time that is typically applied to an accounting assignment, based on Baryenbruch & Company, LLC's experience. This survey includes rate information in effect during 2007. Thus, the data had to be escalated to June 30, 2008—the test year's midpoint.

Information Technology Consultants

The average hourly rate for information technology consultants and contractors was developed from Baryenbruch & Company, LLC data and from information provided by DRS on hourly rates it actually paid to IT contractors during 2008. As shown in Exhibit 15, that data was compiled, and a weighted average was calculated based on a percent of time that is typically applied to an IT consulting assignment, based on Baryenbruch & Company, LLC's experience,

Professional Engineers

Hourly rate information for professional engineering firms was developed from Baryenbruch & Company, LLC data. As shown in Exhibit 16, an average rate was developed for each engineering position for 9 engineering firms. Then, using a typical percentage mix by position that is typically applied to an engineering assignment, based on Baryenbruch & Company, LLC's experience, a weighted average cost per hour was calculated.

Affiliates and Outside Providers Cost Comparison

As shown in the table below, DRS/DTech's costs per hour during 2008 are significantly lower than those of outside providers.

	Test Year Cost Per Hour Difference		
Service Provider	DRS	Outside Providers	Difference - DRS Greater(Less) Than Outside
Attorney	$ 147	$ 264	$ (116)
Management Consultant	$ 125	$ 214	$ (89)
Certified Public Accountant	$ 77	$ 122	$ (45)
IT Consultant	$ 90	$ 160	$ (70)
Professional Engineer	$ 93	$ 119	$ (26)

Based on these cost per hour differentials, and the number of hours DRS/DTech billed Dominion Virginia Power during the test year, DRS/DTech's services would have cost approximately $167 million more from outside providers, as calculated below. This is 55% more than DRS/DTech's total charges to Dominion Virginia Power during the test year ended December 31, 2008 ($167,068,813 / $301,515,727 = 55%).

	Test Year Total Cost Difference		
Service Provider	Hourly Rate Difference - DRS Greater(Less) Than Outside	DRS Hours Charged	Dollar Difference
Attorney	$ (116)	47,875	$ (5,577,233)
Management Consultant	$ (89)	650,861	$ (57,954,951)
Certified Public Accountant	$ (45)	451,339	$ (20,103,497)
IT Consultant	$ (70)	761,452	$ (53,145,057)
Professional Engineer	$ (26)	1,179,893	$ (30,288,076)
Net DRS Less Than Outside Providers			$ (167,068,813)

DRS and DTech are obligated to provide Dominion Virginia Power with services at the lower of cost or market according to the Commission's order approving the current Services Agreement. As a final step in this lower of cost or market pricing analysis, the 2008 income statements of both DRS and DTech were reviewed. Both were found to have no net income. This provides further evidence that Dominion Virginia Power received services from the two affiliates at their cost, which is below market as discussed above.

VI - Question 3 - Reasonableness of DRS' Customer Accounts Services Costs

Comparison Methodology

Customer Accounts Services covers the following utility functions:

- Customer Call Center – customer calls/contact, credit, order taking/disposition, bill collection efforts, outage calls
- Call Center IT – maintenance of phone banks, voice recognition units, call center software applications, telecommunications
- Customer billing – bill printing, stuffing, and mailing
- Remittance processing – processing customer payments received in the mail
- Bill payment centers – locations where customers can pay their bills in person

It is difficult to compare the cost of DRS' customer accounts services-related charges to Dominion Virginia Power with outside providers of the same services because survey data is proprietary and expensive to obtain. For this reason, Dominion Virginia Power's charges from DRS for customer accounts services are compared to those of neighboring electric utilities because the data necessary to make such comparison is available to the public.

Neighboring electric utility cost information comes from the FERC Form 1 that each utility must file. FERC's chart of accounts is defined in Chapter 18, Part 101 of the Code of Federal Regulations. FERC accounts that contain customer accounts services-related expenses are Account 903 Customer Accounts Expense – Records and Collection Expense and Account 905 Customer Accounts Expense – Miscellaneous Customer Accounts Expense. Exhibit 17 provides FERC's definition of the type of expenses that should be recorded in these accounts.

In addition to the charges in these FERC accounts, labor-related overheads charged to the following FERC accounts must be added to the labor components of Accounts 903 and 905:

- Account 926 Employee Pension and Benefits
- Account 408 Taxes Other Than Income (employer's portion of FICA)

Comparison Group

Neighboring electric utilities included in the comparison group are shown in the table below. These are companies whose FERC Form 1s show amounts for Accounts 903 and 905.

Virginia	• Appalachian Power	
Kentucky	• Duke Energy Kentucky • Kentucky Power	• Kentucky Utilities • Louisville Gas & Electric
West Virginia	• Appalachian Power • Monongahela Power	• Wheeling Power
North Carolina	• Duke Energy Carolinas	• Progress Energy Carolinas
Maryland	• Baltimore Gas & Electric • Delmarva Power & Light	• Potomac Electric
Tennessee	• Kingsport Power	

Virginia Electric and Power Company
FERC Account Descriptions

903 – Customer Records and Collection Expenses

This account shall include the cost of labor, materials used and expenses incurred in work on customer applications, contracts, orders, credit investigations, billing and accounting, collections and complaints.

Labor

1. Receiving, preparing, recording and handling routine orders for service, disconnections, transfers or meter tests initiated by the customer, excluding the cost of carrying out such orders, which is chargeable to the account appropriate for the work called for by such orders.
2. Investigations of customers' credit and keeping of records pertaining thereto, including records of uncollectible accounts written off.
3. Receiving, refunding or applying customer deposits and maintaining customer deposit, line extension, and other miscellaneous records.
4. Checking consumption shown by meter readers' reports where incidental to preparation of billing data.
5. Preparing address plates and addressing bills and delinquent notices.
6. Preparing billing data.
7. Operating billing and bookkeeping machines.
8. Verifying billing records with contracts or rate schedules.
9. Preparing bills for delivery, and mailing or delivering bills.
10. Collecting revenues, including collection from prepayment meters unless incidental to meter reading operations.
11. Balancing collections, preparing collections for deposit, and preparing cash reports.
12. Posting collections and other credits or charges to customer accounts and extending unpaid balances.
13. Balancing customer accounts and controls.
14. Preparing, mailing, or delivering delinquent notices and preparing reports of delinquent accounts.
15. Final meter reading of delinquent accounts when done by collectors incidental to regular activities.
16. Disconnecting and reconnecting services because of nonpayment of bills.
17. Receiving, recording, and handling of inquiries, complaints, and requests for investigations from customers, including preparation of necessary orders, but excluding the cost of carrying out such orders, which is chargeable to the account appropriate for the work called for by such orders.
18. Statistical and tabulating work on customer accounts and revenues, but not including special analyses for sales department, rate department, or other general purposes, unless incidental to regular customer accounting routines.
19. Preparing and periodically rewriting meter reading sheets.
20. Determining consumption and computing estimated or average consumption when performed by employees other than those engaged in reading meters.

Materials and expenses

21. Address plates and supplies.
22. Cash overages and shortages.
23. Commissions or fees to others for collecting.
24. Payments to credit organizations for investigations and reports.
25. Postage.
26. Transportation expenses, including transportation of customer bills and meter books under centralized billing procedure.
27. Transportation, meals, and incidental expenses.
28. Bank charges, exchange, and other fees for cashing and depositing customers' checks.
29. Forms for recording orders for services, removals, etc.
30. Rent of mechanical equipment.

Virginia Electric and Power Company
FERC Account Descriptions

905 – Miscellaneous Customer Accounts Expenses
This account shall include the cost of labor, materials used and expenses incurred not provided for in other accounts.
Labor
1. General clerical and stenographic work.
2. Miscellaneous labor.

Materials and expenses
3. Communication service.
4. Miscellaneous office supplies and expenses and stationery and printing other than those specifically provided for in accounts 902 and 903.

VI - Question 3 - Reasonableness of DRS' Customer Accounts Services Costs

Dominion Virginia Power Customer Account Services Cost Per Customer

As calculated below, Dominion Virginia Power's 2007 customer account services expense per customer was $19.52. Besides charges recorded to accounts 903 and 905 on Dominion Virginia Power's books, two other cost components were added into Dominion Virginia Power's cost pool: (1) the cost of postage for Dominion Virginia Power's customer bills printed by DRS and recorded in an administrative and general FERC account by Dominion Virginia Power, and (2) charges from East Ohio Gas for the cost of handling overflow Dominion Virginia Power customer calls to DRS.

Sources of Charges		2007 Amount
Dominion Virginia Power		
Acct 903 - Customer Records & Collection	$	32,253,336
Acct 905 - Miscellaneous Customer Accounts	$	-
Account 926 - Employee Pension & Benefits	$	3,831,664
Account 408 - Taxes Other Than Income (Employer's FICA)	$	1,451,975
Dominion Resources Services, Inc.		
DRS Cost Center 703227 - Inserting (postage)	$	8,224,414
East Ohio Gas Company	$	351,031
Total Dominion Virginia Power CAS Expenses	$	46,112,420
Total Dominion Virginia Power Customers		2,362,318
Average Cost per Customer	**$**	**19.52**

Comparison Group Cost Per Customer

Exhibit 18 shows the actual 2007 customer accounts expense per customer calculation for the electric utility comparison group. All of the underlying data were taken from each utility's FERC Form 1.

Summary of Results

As shown in the table below, Dominion Virginia Power's cost per customer is considerably less than the average of the neighboring electric utility comparison group. Based upon this data, DRS' 2007 customer accounts-related expenses charged to Dominion Virginia Power are reasonable.

VI - Question 3 - Reasonableness of DRS' Customer Accounts Services Costs

Average Customer Accounts Expense Per Customer		
Louisville Gas & Electric	$	13.71
Monongahela Power	$	16.10
Dominion Virginia Power	**$**	**19.52**

VII – Question 4 - Reasonableness of DRS' Cost Allocation Methods

Where possible, DRS directly charges affiliates for the cost of its services. In those instances where direct charging is not possible or practical because more than one affiliate is the recipient of a service, DRS allocated the associated expenses to the benefiting affiliates. Exhibit 19 shows the basis for allocation for each DRS service.

Baryenbruch & Company, LLC evaluated the allocation basis for each DRS cost center by answering following questions:

- Benefit Received – Does Dominion Virginia Power benefit from the cost center's services?
- Fairness of Allocation Bases – Does the basis by which the cost center's expenses are allocated relate to the causation of those expenses?
- Allocation Methods in Accordance with Services Agreement – Where the allocation bases those called for in the current Services Agreement between Dominion Virginia Power and DRS?

Exhibit 20 presents the results of the evaluation. For each of over 290 DRS cost centers that charged Dominion Virginia Power during 2008, the services of those cost centers were found to be pertinent to Dominion Virginia Power, and the allocation methods were found to be reasonable and related to the causation of the allocated expenses. The allocation methods used were also found to be those specified in the current Services Agreement.

Virginia Electric and Power Company
Allocation Bases for DRS Services

Service	Allocation Method
Accounting	• Payroll Accounting - Number of employees on the previous December 31 • Accounts Payable Processing - Number of accounts payable documents processed during the preceding year ended December 31 • Fixed Assets Accounting - Dominion Company fixed assets added, retired or transferred during the preceding year ended December 31 • Accounts Receivable Processing - Number of payments processed during the preceding year ended December 31
Auditing	• Total operating expenses, excluding purchase gas expense, purchase power expense (including fuel expense), other purchased products and royalties, for the preceding year ended December 31
Legal and Regulatory Services	• Total operating expenses, excluding purchase gas expense, purchase power expense (including fuel expense), other purchased products and royalties, for the preceding year ended December 31
Information Technology	• LDC/EDC Computer Applications - Number of customers at the end of the preceding year ended December 31 • Other Computer Applications - Number of users or usage of specific computer systems at the end of the preceding year ended December 31 • Network Computer Applications - Number of network devices at the end of the preceding year ended December 31 • Telecommunications Applications - Number of telecommunications units at the end of the preceding year ended December 31
Software Pooling	• Number of employees as of the preceding December 31 • Number of mainframe units as of the preceding December 31
Employee Benefits/ Pension Investment	• Number of employee and annuitant accounts as of the preceding December 31
Human Resources	• Number of employees as of the preceding December 31
Operations	• Total operating expenses, excluding purchase gas expense, purchase power expense (including fuel expense), other purchased products and royalties, for the preceding year ended December 31
Executive and Administrative	• Total operating expenses, excluding purchase gas expense, purchase power expense (including fuel expense), other purchased products and royalties, for the preceding year ended December 31
Business and Operations Services	• Energy Services - Energy sale and deliveries for the preceding year ended December 31 • Facility Services - Square footage of office space as of the preceding year ended December 31 • Fleet Administration - Number of vehicles as of the preceding December 31 • Security - The number of employees as of the preceding December 31 • Gas Supply - Gas volumes purchased for each Dominion Company for the preceding year ended December 31
Exploration and Development	• Not applicable to Dominion Virginia Power
Risk Management	• Insurance premiums for the preceding year ended December 31
Marketing	• Shared Projects - Annual marketing plan expenses for the preceding year ended December 31 • Other Indirect Costs - Total marketing direct and shared project costs billed to each Dominion Company for the preceding year ended December 31

Virginia Electric and Power Company
Allocation Bases for DRS Services

Service	Allocation Method
Medical	• Number of employees on the previous December 31
Corporate Planning	• Total capitalization recorded at preceding December 31
Supply Chain	• Purchasing - Dollar value of purchases for the preceding year ended December 31 • Materials Management - Material inventory assets as of the preceding year ended December 31
Rates	• Total regulated company operating expenses, excluding purchased gas expense, purchased power expense (including fuel expense), other purchased products and royalties, for the preceding year ended December 31
Research	• Gross revenues recorded during the preceding year ended December 31
Tax	• Sum of the total income and total deductions as reported for Federal Income Tax purposes on the last return filed.
Corporate Secretary	• Direct bill only, no allocation
Investor Relations	• Direct bill only, no allocation
Environmental Compliance	• Total operating expenses, excluding purchase gas expense, purchase power expense (including fuel expense), other purchased products and royalties, for the preceding year ended December 31
Customer Service	• Customer Payment (Remittance) Processing - Number of customer payments processed during the preceding year ended December 31 • Other Customer Services - For metering, the number of gas or electric meters for the preceding year ended December 31, otherwise the number of customers for the preceding year ended December 31

	703178 - DRSF - EMISSIONS MON	$2,626,291	Perform all operations and maintenance activities for VPREG assets.	Direct Bill (No Allocation)	Yes	Yes	Yes
	703179 - DRSF - F&H(Inact)	$1,787	Provide system ash, coal surveying, lime cost savings	Direct Bill (No Allocation)	Yes	Yes	Yes
	703184 - DRSF - Tech Svc Supp	$1,322,914	Oversee daily F&H System Operations	Direct Bill (No Allocation)	Yes	Yes	Yes
	703185 - DRSF-Tech Svc OpSupp	$1,555,396	Oversee daily F&H System Operations	Direct Bill (No Allocation)	Yes	Yes	Yes
	703186 - DRSF - Inactive	$43,275	Engineering construction to modify existing systems to utilize new synthetic fuel in place of coal	Direct Bill (No Allocation)	Yes	Yes	Yes
	703187 - DRSF-Proj Mgmt	$2,888,314	Provides process improvement, configuration management & business development support for F&H System stations	Direct Bill (No Allocation)	Yes	Yes	Yes
	704013 - DRS GEN PROJ MGT	$29	Perform all engineering services for Virginia Power & Dominion Energy Inc. assets.	Direct Bill (No Allocation)	Yes	Yes	Yes
	704050 - DRSF-CC PROJ UNREG	$0	Perform all project management & engineering services for combined cycle CT projects for VPDEI assets.				
	704052 - DRSF-F&H EXEC ADMIN	$297,603	Perform all long term planning & cost evaluations for new & replacement projects	Direct Bill (No Allocation)	Yes	Yes	Yes
	704064 - DRSN-NUC SPEC PROJ	$578,319	Oversee all regulated and unregulated nuclear six sigma projects	Direct Bill (No Allocation)	Yes	Yes	Yes
	704067 - DRSF-STA OPER MGT	$190,590	O&M Management/consulting to Merchant/System stations	Direct Bill (No Allocation)	Yes	Yes	Yes

Virginia Electric and Power Company
Evaluation of Allocation Methods for DRS Cost Centers

Service	Cost Center #-Description	$ to Dominion Virginia Power	Description of Services Provided	Cost Assignment Method	Benefit Received?	Is Allocation Method Fair?	Allocation Method in Service Agreement?
Generation Human Resources	701460 - DRSF - F&H TRAINING	$3,567,335	Provide training to all areas of Fossil & Hydro. In some cases, this group trains other business areas, but will direct bill in those circumstances.	Direct Bill (No Allocation)	Yes	Yes	Yes
	703296 - DRSF - F&H SAFETY	$1,132,791	Provide safety awareness to all areas of Fossil & Hydro. In some cases, this group trains other business areas, but will direct bill in those circumstances.	Direct Bill (No Allocation)	Yes	Yes	Yes
Generation Operations	700485 - DRSN -CIVIL ENG	$1,084,573	Provide general civil engineering support to nuclear sites	Direct Bill (No Allocation)	Yes	Yes	Yes
	700486 - DRSN-NPD SPS ICUP	$1,687,255	Manage the Surry I&C computer upgrade projects	Direct Bill (No Allocation)	Yes	Yes	Yes
	700487 - DRSN -ENG MECHANICS	$1,735,591	Provide general engineering support to nuclear sites on mechanical systems	Direct Bill (No Allocation)	Yes	Yes	Yes
	700496 - DRSN -ELEC ENG/I & C	$2,046,488	Provide general engineering support for I&C computers at nuclear sites	Direct Bill (No Allocation)	Yes	Yes	Yes
	700497 - DRSN - CONFIG CONTRL	$1,000,494	Maintain MOV/AOV program	Direct Bill (No Allocation)	Yes	Yes	Yes
	700499 - DRSN Nuc Spent Fuel	$901,233	Management of nuclear spent fuel and spent fuel storage facilities	Direct Bill (No Allocation)	Yes	Yes	Yes
	700501 - DRSN-NUC SAFETY M&M	$1,496,801	Provide engineering support for overall nuclear fuel safety	Direct Bill (No Allocation)	Yes	Yes	Yes
	700502 - DRSN -CORE DESIGN II	$2,016,345	Reactor engineers, maintain integrity of the reactor core design	Direct Bill (No Allocation)	Yes	Yes	Yes
	700503 - DRSN-FUEL PERF ANAL	$644,612	Monitor fuel performance, determine assemblies to be replaced during refueling outages	Direct Bill (No Allocation)	Yes	Yes	Yes
	700504 - DRSN -NUC SPENT FUEL	$961,251	Track used fuel, manage spent fuel storage facilities at nuclear sites, resolve storage issues	Direct Bill (No Allocation)	Yes	Yes	Yes
	700528 - DRSN -DESIGN DIR ADM	$564,320	Oversee all design engineering functions	Direct Bill (No Allocation)	Yes	Yes	Yes
	701156 - DRSN -NUC ANAL/FUEL	$996,265	Oversee nuclear fuel program	Direct Bill (No Allocation)	Yes	Yes	Yes
	701161 - DRSN - PPA APPS	$1,279,935	Nuclear Predictive Risk Analysis Support	Direct Bill (No Allocation)	Yes	Yes	Yes
	701456 - DRSF - F/H PROJ SUPP	$2,271,629	Perform all operations and maintenance activities for VPREG assets.	Direct Bill (No Allocation)	Yes	Yes	Yes
	701623 - DRSN-NPD TURB/RPUP	$2,889,274	Provide engineering support for the turbine upgrade and reactor power uprate projects	Direct Bill (No Allocation)	Yes	Yes	Yes
	701649 - DRSN-PRA Models	$1,011,931	Nuclear Predictive Risk Analysis Support	Direct Bill (No Allocation)	Yes	Yes	Yes
	701650 - DRSN-MECH ENG/PROC	$1,911,450	Provide general engineering support for process systems at nuclear sites	Direct Bill (No Allocation)	Yes	Yes	Yes
	701651 - DRSN-NUC ENG ADMIN	$1,805,875	Oversee nuclear engineering program	Direct Bill (No Allocation)	Yes	Yes	Yes
	701830 - DRSN-CONFIG MGMT	$5,335	Develop, implement and maintain UFSAR, and EDS/Q-list programs	Direct Bill (No Allocation)	Yes	Yes	Yes
	701831 - DRSN-NUCLEAR DBD	$1,493,514	Develop, implement and maintain nuclear design basis documents	Direct Bill (No Allocation)	Yes	Yes	Yes
	701832 - DRSN-Dir Nuc Eng Prg	$1,811,388	Address engineering issues that were identified during 2003 INPO evaluation.	Direct Bill (No Allocation)	Yes	Yes	Yes
	701833 - DRSN-NUCLEAR PROGMS	$791,614	Provide engineering support on valve, motor, etc programs.	Direct Bill (No Allocation)	Yes	Yes	Yes
	701850 - DRSN-NUC PROJS DEPT	$334,074	Director of nuclear projects department, oversee all large nuclear projects, project cost control and estimating	Direct Bill (No Allocation)	Yes	Yes	Yes
	701852 - DRSN-NPD CIVIL/MECH	$0	Provide engineering support for large civil and mechanical capital and O&M projects at nuclear sites				
	701853 - DRSN-NPD PROJECTS	$137,032	Manage nuclear license renewal projects - North Anna and Surry, Millstone, Surry ISFSI	Direct Bill (No Allocation)	Yes	Yes	Yes
	701854 - DRSN-NPD ELEC/I&C PR	$61,191	Provide lead engineering support on all electrical and I&C projects for nuclear	Direct Bill (No Allocation)	Yes	Yes	Yes
	701855 - DRSN-NPD CIVIL/MECH	$139,608	Provide lead engineering support on all civil/mech projects for nuclear	Direct Bill (No Allocation)	Yes	Yes	Yes
	701856 - DRSN-NPD PROJ CTLS	$864,210	Provide project cost estimating and reporting assistance to nuclear engineering groups	Direct Bill (No Allocation)	Yes	Yes	Yes
	701860 - DRSN-EARLY SITE PERM	$984,939	Evaluate sites for new nuclear construction	Direct Bill (No Allocation)	Yes	Yes	Yes
	703172 - DRSF - SYSTEM SUPP	$2,710,407	Perform all engineering services for both VPREG & VPDEI assets.	Direct Bill (No Allocation)	Yes	Yes	Yes
	703175 - DRSF-F&H	$0	Provide overall system asset management services for both capital and expense for VP approvals				
	703176 - DRSF - SYSTEM ENG	$2,267,203	Perform all engineering services for both VPREG & VPDEI assets.	Direct Bill (No Allocation)	Yes	Yes	Yes
	703179 - DRSF - F&H	$0	Provide system ash, coal surveying, lime cost savings				
	703180 - DRSF - ENGINEERING	$413,718	Perform all engineering services for both VPREG & VPDEI assets.	Direct Bill (No Allocation)	Yes	Yes	Yes
	703181 - DRSF - ELECTR I & C	$5,381,613	Perform all engineering services for both VPREG & VPDEI assets.	Direct Bill (No Allocation)	Yes	Yes	Yes
	703182 - DRSF - BOP SYSTEMS	$1,549,589	Perform all engineering services for both VPREG & VPDEI assets.	Direct Bill (No Allocation)	Yes	Yes	Yes
	703183 - DRSF - ENGR ENVIRON	$1,169,420	Perform all operations and maintenance activities for VPREG assets.	Direct Bill (No Allocation)	Yes	Yes	Yes
	703186 - DRSF	$0	Engineering and construction to modify existing systems to utilize new synthetic fuel in place of coal				
	703188 - DRSF - F&H GEN PROJ	$809,226	Engineer and build new coal facility in Southwest Virginia	Direct Bill (No Allocation)	Yes	Yes	Yes
	704088 - F&H Con- Engineering	$615,609	Project support for new business development & generation construction department	Direct Bill (No Allocation)	Yes	Yes	Yes
	704089 - Comb Turb & Renew	$1,013,735	Project support for new business development & generation construction department	Direct Bill (No Allocation)	Yes	Yes	Yes
General Services	703211 - DRS Off Svc Mgt	$170,657	Provide management/oversight to various general services functions across the enterprise, including Printing Services, Mailing Services, and Records Management	O&M expenses excluding cost of sales items	Yes	Yes	Yes
	703214 - DRS DOCUMENT SVCS	$1,151,913	Provide printing services across the entire enterprise.	O&M expenses excluding cost of sales items	Yes	Yes	Yes
	703226 - DRS MAIL	$446,116	Provide mailing services (except Inserting) across the entire enterprise -- excludes customer bills.	O&M expenses excluding cost of sales items	Yes	Yes	Yes
	703227 - INSERTING - DRS	$10,247,339	Provides inserting & mailing services for all customer bills for Virginia Power, EOG, PNG, and HGI.	O&M expenses excluding cost of sales items	Yes	Yes	Yes
	704036 - DRS Records Mgt	$206,631	Provides oversight & management of the Records Management function across the entire enterprise.	O&M expenses excluding cost of sales items	Yes	Yes	Yes
	704043 - DRS FORMS & PROC	$182,669	Provides support across the entire enterprise for company forms and procedures.	O&M expenses excluding cost of sales items	Yes	Yes	Yes

Virginia Electric and Power Company
Evaluation of Allocation Methods for DRS Cost Centers

Service	Cost Center #-Description	$ to Dominion Virginia Power	Description of Services Provided	Cost Assignment Method	Benefit Received?	Is Allocation Method Fair?	Allocation Method in Service Agreement?
Human Resources	700807 - Staffing	$2,985,216	Manages recruiting, staffing programs, Affirmative Action compliance program, and employee testing programs.	Headcount	Yes	Yes	Yes
	700808 - DRS HR Support	$904,201	Supports all of DRS management and employees in attracting, retaining, and motivating workforce. Ensure that DRS is in compliance with laws and regulations	Headcount	Yes	Yes	Yes
	700824 - HR Planning Admin	$797,968	Provide HR Planning dept support & administrative services, Six Sigma resources and project management	Headcount	Yes	Yes	Yes
	702001 - Compensation	$518,549	Manages corporate pay policy, salary structure, and incentive program development and administration for all Dominion	Headcount	Yes	Yes	Yes
	702002 - Exec Compensation	$0	Provide design, development and administration of executive compensation & benefit programs & employment agreements				
	702733 - Total Comp Admin	$193,242	Provides Mergers, Acquisitions, and Divestiture HR coordination for Dominion.	Headcount	Yes	Yes	Yes
	703243 - Employee Relations	$988,122	Responsible for Policy Development and Interpretation, investigate employee/management concerns, including possible violations of labor laws.	Headcount	Yes	Yes	Yes
	703244 - Employee Services	$480,998	Oversee administration of FML, STD, LTD, Workers' Comp and EAP programs and insure compliance with Federal Drug and Alcohol Programs (OSHA, DOT, NRC). Manage the Employee Service Center.	Headcount	Yes	Yes	Yes
	703245 - Workforce Admin	$337,192	Perform data analysis and track performance metrics. Overall dept administration and mgmt.	Headcount	Yes	Yes	Yes
	703246 - DOM VP Admin	$349,866	Supports Gas and Electric Delivery management and employees in HR policy administration.	Headcount	Yes	Yes	Yes
	703250 - Talent Management	$620,488	Provides leadership learning and development opportunities, consulting services focusing on team and business unit effectiveness, and employee performance management tools, and facilitates succession planning,	Headcount	Yes	Yes	Yes
	704053 - HR Dom Generation	$643,066	Supports all Generation (merchant and non-merchant) mgt & employees in HR policy administration.	Headcount	Yes	Yes	Yes
	704054 - HR Dom Energy	$38,860	Supports all Energy mgt & employees in HR policy administration.	Headcount	Yes	Yes	Yes
	704055 - HR F&H Generation	$1,004,635	Supports all merchant and regulated Fossil and Hydro Generation mgt & employees in HR policy administration.	Headcount	Yes	Yes	Yes
	704056 - HR Nuclear Generatio	$1,034,577	Supports all merchant and regulated Nuclear Generation mgt & employees in HR policy administration.	Headcount	Yes	Yes	Yes
	704057 - HR Communications	$178,677	Prepare & distribute all communications to employees on HR-related topics. Communications strategy/planning and change management support within HR and for business unit leadership and employees.	Headcount	Yes	Yes	Yes
	704058 - HR Del Elec Oper	$947,621	Supports Electric Transmission & Distribution mgt and employees in HR policy administration.	Headcount	Yes	Yes	Yes
	704059 - HR East Ohio Gas	$590	Supports EOG management and employees in HR policy administration.	Direct Bill (No Allocation)	Yes	Yes	Yes
	704060 - Divestiture Support	-$45,748	There were some billings to VP affiliates (using HR.Alloc1 so why is the amount charge to the VP affiliates a credit? Is this cost center trued up with other HR cost centers and through that process a piece is allocated to VP?	Direct Bill (No Allocation)	Yes	Yes	Yes
	704066 - Business Performance	$435,128	Develop HR metrics for business productivity and effectiveness, and manager HR data integrity.	Headcount	Yes	Yes	Yes
	704070 - Gas Labor Relations	$28,774	Conduct labor negotiations and track costs of labor practices for gas affiliates	Headcount	Yes	Yes	Yes
	704071 - HR Dom VP Cust Svc	$603,601	Supports Dominion Virginia Power management and employees in HR policy administration.	Headcount	Yes	Yes	Yes
	704072 - Loc 50 Labor Reln	$1,091,325	Conduct labor negotiations and track costs of labor practices for VA Power Local 50	Headcount	Yes	Yes	Yes
	704073 - Merc Labor Relations	$5,705	Conduct labor negotiations and track costs of labor practices for the Generation Merchant Plant companies.	Headcount	Yes	Yes	Yes
	704074 - WF Diversity/Plang	$390,271	Provide enhanced focus on employee diversity in support of the business units; manage the support of the business units for workforce planning research & best practice identification; take a leadership role with external organizations	Headcount	Yes	Yes	Yes
Information Technology	700221 - IT Virginia Powr T&D	$15,613,617	Labor and expenses for the support of Customer Service, Electric Distribution, Electric Transmission, and Retail	Direct Bill or IT Allocations (Mainframe, EIDs, etc.)	Yes	Yes	Yes
	701264 - CORP TELECOM	$4,181,314	Labor and expenses for operations and maintenance of the telecommunications department.	Direct Bill or IT Allocations (Mainframe, EIDs, etc.)	Yes	Yes	Yes
	701703 - IT BUS ACT-ADMIN/MGT	$1,808	Labor and expenses for the support of Application Systems	Direct Bill or IT Allocations (Mainframe, EIDs, etc.)	Yes	Yes	Yes
	701704 - IT Enterprise Svcs	$5,101,228	Labor and expenses for the support of Enterprise Applications (Web Services, General Applications, Business Intelligence)	Direct Bill or IT Allocations (Mainframe, EIDs, etc.)	Yes	Yes	Yes
	701705 - IT BUS ACCT - GEN	$6,887,490	Labor and expenses for the support of the Generation BU	Direct Bill or IT Allocations (Mainframe, EIDs, etc.)	Yes	Yes	Yes
	701707 - Production Control	$1,039,398	Labor and expenses for Production Control and Change Management	Direct Bill or IT Allocations (Mainframe, EIDs, etc.)	Yes	Yes	Yes
	701708 - IT Strategy	$805,809	Labor and expenses including consultants, for individuals who manage architecture and standard products	Direct Bill or IT Allocations (Mainframe, EIDs, etc.)	Yes	Yes	Yes
	701709 - NETWORK RELIAB	$0	Labor, hardware, and software expenses to provide improved and reliable network services.				
	701710 - Enterprise Tech Sys	$2,543,222	Labor and expenses for major network and computing software and hardware.	Direct Bill or IT Allocations (Mainframe, EIDs, etc.)	Yes	Yes	Yes
	701711 - IT Cust Svc & Retail	$5,987,755	Labor and expenses for the support of the Retail Business	Direct Bill or IT Allocations (Mainframe, EIDs, etc.)	Yes	Yes	Yes

Evaluation of Allocation Methods for DRS Cost Centers

Service	Cost Center #-Description	$ to Dominion Virginia Power	Description of Services Provided	Cost Assignment Method	Benefit Received?	Is Allocation Method Fair?	Allocation Method in Service Agreement?
Information Technology (cont.)	701712 - NETWORK OPERATIONS	$3,996,077	Labor and expenses for operations of Wide Area Network, including network command center				
	701713 - NETWORK OPERS CTR	$1,981,600	24x7 IT Network monitoring, troubleshooting, and dispatch. Primary contact for major internal customers such as SOC, Gas Control, ROC's, CCS	Direct Bill or IT Allocations (Mainframe, EIDs, etc.)	Yes	Yes	Yes
	701714 - ITBA - ENERGY	$2,762,969	Labor and expenses for managers, employees, and projects assigned to the business units of ITBA Energy. Business units are Dominion E&P, Clearinghouse, Gas Transmission, and Gas Delivery	Direct Bill or IT Allocations (Mainframe, EIDs, etc.)	Yes	Yes	Yes
	701730 - IT RISK MGMT	$2,161,500	Labor and expenses for IT Security Policy, Change/Problem Management, SAP Security and Business Resumption Planning	Direct Bill or IT Allocations (Mainframe, EIDs, etc.)	Yes	Yes	Yes
	701843 - ENTERPRISE ADMIN/MGT	$245,291	Labor and expenses for managers and directors who manage the enterprise operations and network	Direct Bill or IT Allocations (Mainframe, EIDs, etc.)	Yes	Yes	Yes
	701994 - HELPLINE SUPPORT	$1,172,126	Labor and expenses including contractors for the corporate IT Helpdesk	Direct Bill or IT Allocations (Mainframe, EIDs, etc.)	Yes	Yes	Yes
	702035 - IT END USER ACCTS	$702,698	Staff of employees who provide user computer accounts administration and manage wireless services vendors	Direct Bill or IT Allocations (Mainframe, EIDs, etc.)	Yes	Yes	Yes
	702041 - IT BUS ACCT - E&P	$486	Labor and expenses for TSA support associated with the E&P Divestiture				
	703012 - LAN GROUP ACTIVITIES	$7,117,078	Labor and expenses for all desktop support and local area network operations.	Direct Bill or IT Allocations (Mainframe, EIDs, etc.)	Yes	Yes	Yes
	703254 - MAINFRAME SYS ADMIN	$5,608,901	Labor, hardware, and software expenses to design, upgrade, and tune the mainframe	Direct Bill or IT Allocations (Mainframe, EIDs, etc.)	Yes	Yes	Yes
	703289 - DATA SERVICES	$2,562,517	Labor and expenses for central database management, data management, web and middleware management	Direct Bill or IT Allocations (Mainframe, EIDs, etc.)	Yes	Yes	Yes
	703357 - DISTR SYS ADMIN	$6,308,909	Total cost of ownership including labor, leases, depreciation of over 1400+ servers	Direct Bill or IT Allocations (Mainframe, EIDs, etc.)	Yes	Yes	Yes
	703359 - IT ASSET MGMT	$7,291,931	Hardware and software management including leasing program for all desktop, laptop and PC peripherals that are used by 17000 Dominion employees	Direct Bill or IT Allocations (Mainframe, EIDs, etc.)	Yes	Yes	Yes
	703385 - IT Enterprise System	$5,421,535	Labor and expenses for the support of Enterprise Applications (SAP, HR Systems, Lotus Notes, etc)	Direct Bill or IT Allocations (Mainframe, EIDs, etc.)	Yes	Yes	Yes
	703386 - Notes Solution Ctr	$930,936	Supports enterprise electronic mail and calendar services, including web mail access and instant messaging functionality.	Direct Bill or IT Allocations (Mainframe, EIDs, etc.)	Yes	Yes	Yes
	703640 - IT Process Systems	$882,506	Captures hardware, software, and labor costs for Enterprise applications specifically supporting the SAP application	Direct Bill or IT Allocations (Mainframe, EIDs, etc.)	Yes	Yes	Yes
Investor Relations	702034 - INVESTOR RELATIONS	$63,117	Responsible for maintaining communications between the Company and the entire Investment Community. In doing so, Investor Relations directly support senior management by keeping abreast of current equity market conditions and works with other departments in preparing material used to communicate to the investment community through various means.	Direct Bill (No Allocation)	Yes	Yes	Yes
Legal	703234 - LEGAL SERVICES	$6,713,991	Provides legal advice to all of the Dominion companies, including Dominion Services. Legal services addresses all matters typically confronted by a large corporation with both regulated and unregulated business units.	O&M expenses excluding cost of sales items	Yes	Yes	Yes
Operations	700214 - Gas Supply Area Acqu	$0	Responsible for gas supply planning, gas procurement, scheduling, nominations and regulatory support for the three LDCs. Develop and execute comprehensive short and long term plans dealing with appropriate levels of gas supply.				
	704079 - Conservatn Load Mgt	$1,173,147	Design, develop & evaluate conservation load management programs at the corporate level	O&M expenses excluding cost of sales items	Yes	Yes	Yes
	704083 - Integr Resource Pln	$1,904,701	Develop corporate level plans that integrate capacity options, transmission, and CLM programs in support of regulatory & strategic initiatives	O&M expenses excluding cost of sales items	Yes	Yes	Yes
Other	704039 - DRS FAC COST POOL	$0	Collects DRS facilities costs that are assessed to DRS cost centers				
	704040 - DRS INFRASTRUCT COST	$0	Collects DRS infrastructure costs that are assessed to DRS cost centers				
	704139 - DRS DEC BLDG	$0	Tredegar St. DEC building Cost Pool				
	709901 - DRS COMMON	$7,118,322	Collects miscellaneous expenses (vacation accruals, ST incentive accruals, etc.). Assess to DRS service cost centers	Allocated based on associated services	Yes	Yes	Yes
Payroll	703348 - Payroll	$1,169,000	Provides payroll administration and information for all Dominion Companies. Prints all checks for Payroll, A/P, Rental payments, Customer Refunds.	Headcount	Yes	Yes	Yes
Procurement	702043 - SCM DRS Sourcing	$449,015	Supply Chain Management Sourcing activiites for all non-IT groups				
	702048 - SUPP CH DEL SUPP	$500,542	Provides strategic sourcing; tactical procurement; inventory management and tracking; field logistics and order fulfillment; transportation services; rubbers goods management; transformer and switch refurbishment; hazardous and excess materials disposal for DOMVP.	Value of Purchases	Yes	Yes	Yes
	702049 - SUPP CH STRAT SRCG	$654,444	Develop & implement sourcing strategies to meet the business ojectives of all operating groups and corporate functions.	Value of Purchases	Yes	Yes	Yes
	702053 - SCM IT Sourcing	$443,767	Supply Chain Management Sourcing for IT groups	Value of Purchases	Yes	Yes	Yes
	703190 - SUPP CH GEN SUPP	$465,640	Advise and assist Dominion Energy in the procurement of materials, supplies and services, conduct purchase negotiations, prepare procurement agreements, and administer programs of material control	Value of Purchases	Yes	Yes	Yes

Governance Practices Associated With DRS Charges

Several management practices exist to ensure that DRS charges to Dominion Virginia Power are appropriate. The most important of these approval and monitoring activities are described below.

Budget Process

Every year, DRS prepares a 5-year spending plan, the first two years of which show spending by month for each DRS cost center. The budgeting process begins in mid-July with each DRS cost center manager developing his/her unit's budget. A significant factor in each cost center's budget is the discussions that occur between DRS cost center managers and their affiliate operating unit (*e.g.*, Dominion Virginia Power) customers regarding the level and nature of future services they will require. After cost center budgets have been prepared, they are subjected to DRS management review and approval through September. During September, affiliate operating units are formally presented with their portion of DRS' proposed budget. Affiliates review and approve their DRS budget after considering the levels of services they require from DRS.

Variance Analysis Process

On a monthly basis, DRS Financial & Business Services and DRS Accounting analyze and explain material variances from budget. This variance analysis is applied as follows:

- DRS' income statement line item
- Billings by each of DRS' 26 service categories
- Billings by affiliate (*e.g.*, Dominion Virginia Power)

Dominion Virginia Power's own variance analysis process requires material variances between budget and actual DRS charges be researched and explained.

Affiliate Review of DRS Monthly Bills

Every month, a bill is rendered by DRS to each affiliate customer. An email is sent to Dominion Virginia Power segment controllers notifying them the DRS bill is available for review on the third business day of the month following the applicable billing month. According to corporate policy, inter-company invoices will not be paid until they have been reviewed and approved by the affiliate being billed.

The bill provides sufficient detail for Dominion Virginia Power to use in its variance analysis process. Dominion Virginia Power personnel also have the ability to drill down into SAP's transaction detail to identify and scrutinize the source of charges from DRS cost centers.

After Dominion Virginia Power controllers review their portion of the Dominion Virginia Power bill, they notify DRS Accounting of their approval or any disputes. If the bill is not disputed by the 25th day of the month, the invoice is released for payment.

Cost Allocation Manual

DRS maintains an Accounting Policy and Cost Allocation Manual (CAM) that documents the process by which it assigns costs to affiliate customers. Baryenbruch & Company, LLC's review of the CAM found it to be a comprehensive reference document that provides thorough directions

to DRS personnel responsible for assigning expenses to Dominion Virginia Power. DRS' cost allocation methodologies comply with governing requirements in the CAM.

I – Introduction

Purpose of This Study

This study was undertaken to determine the reasonableness of Virginia Electric and Power Company's ("Dominion Virginia Power" or the "Company") charges from Dominion Resources Services, Inc. ("DRS") and other affiliates for services provided during 2008. Reasonableness was determined by answering the following four questions:

1. Are service-related affiliate charges to Dominion Virginia Power reasonable compared to other utility service companies?

2. Did affiliates provide services to Dominion Virginia Power at the lower of cost or market during 2008?

3. Is the cost of DRS' customer accounts services comparable to those of other utilities?

4. Are DRS' cost allocation methods reasonable?

Study Results

Concerning question 1, the following conclusions were reached:

- DRS and other affiliates provide Dominion Virginia Power with services similar to those provided by other utility service companies.

- DRS' cost per Dominion Virginia Power customer is reasonable and favorable as compared to the cost per customer for similar utility service companies. Dominion Virginia Power was charged an average of $145 per customer by DRS, approximately 16% lower than an average of $172 per customer for comparison group service companies. This determination was based on service company information included in Form 60, which must be annually filed with the Federal Energy Regulatory Commission ("FERC") by electric and combination electric/gas utility holding companies. The comparison is based on data from 2007, the latest year for which Form 60 information is currently available.

Concerning question 2, the following conclusions were reached:

- Affiliate services were provided to Dominion Virginia Power during 2008 at the lower of cost or market.

- On average, the hourly rates for outside service providers are 55% higher than comparable hourly rates charged by Dominion Virginia Power's affiliates.

- If all of the managerial and professional services now provided by its affiliates had been outsourced in 2008, Dominion Virginia Power and its customers would have incurred $167 million in additional expenses.

- Affiliates' charges do not include any profit markup. Only the actual cost of the service provided is being charged and proposed for recovery from Dominion Virginia Power customers.

Concerning question 3, cost of DRS' customer accounts services is well below the average of the neighboring electric utility comparison group. During 2007, Dominion Virginia Power's customer

accounts cost per customers was $19.52, or more than 32% below the comparison group's 2007 average of $28.93.
