Tennessee Regulatory Authority**

Docket No. 11-_____

**Petition of Piedmont Natural Gas Company, Inc. for an
Adjustment to its Rates, Approval of Changes to Its Rate Design,
Amortization of Certain Deferred Assets, Approval of New
Depreciation Rates, Approval of Revised Tariffs and Service
Regulations, and Approval of a New Energy Efficiency Program
and GTI Funding.**

**Testimony and Exhibits
of
Gary D. Shambaugh**

**On Behalf Of
Piedmont Natural Gas Company, Inc.**

September 2, 2011

TENNESSEE REGULATORY AUTHORITY

DOCKET NO. _____

APPLICATION OF PIEDMONT NATURAL GAS COMPANY

FOR A

RATE INCREASE

DIRECT TESTIMONY

OF

GARY D. SHAMBAUGH

ON BEHALF OF

PIEDMONT NATURAL GAS COMPANY

IN SUPPORT OF

CASH WORKING CAPITAL

1 || Q. Please state your name and business affiliation.

2 A. My name is Gary D. Shambaugh. I am a Principal and Director of AUS
3 Consultants with offices located in Camp Hill, Pennsylvania and Mt.
4 Laurel, New Jersey, Greenfield, Wisconsin and Albuquerque, New
5 Mexico. I am also an Executive Vice President of AUS Inc., the parent
6 company of AUS Consultants. My primary business focus is providing
7 traditional rate making services to all types of utilities.

8 Q. Please describe the services provided by AUS Consultants.

9 A. AUS Consultants provides financial consulting services to the
10 telecommunications, electric power, natural gas transmission and
11 distribution, water steam heat and chilled water, wastewater resource
12 recovery, solid waste disposal, and transportation industries. We also
13 provide independent counsel to governmental and regulatory bodies and
14 numerous industrial clients.

15 Our areas of expertise include economic and financial analysis, business
16 planning, rate of return, cost of service, tariff design, ratemaking
17 accounting, cash working capital, assistance in raising financing, capital
18 recovery and valuation of tangible and intangible assets. AUS Consultants
19 is a nationally and internationally recognized financial consulting firm.

20 Q. Please describe your educational and professional background.

21 A. I have an associate in arts degree in accounting from the Harrisburg Area
22 Community College and further studies in cost of service, customer tariff
23 design, and depreciation. I have over 39 years experience in preparing

1 various financial studies, including rate studies, for electric, gas, water,
2 wastewater, steam heat, chilled water, and telephone utilities. I have
3 provided service to and have testified before regulatory agencies regarding
4 both municipal and investor-owned utilities in many jurisdictions
5 including commonwealth courts, county courts, and federal bankruptcy
6 courts. I have been qualified as an expert and have provided expert
7 testimony in matters in several states including, but limited to, Florida,
8 Louisiana, Pennsylvania, Massachusetts, Michigan, Mississippi, New
9 Jersey, North Carolina, Rhode Island, South Carolina, and West Virginia.
10 Over the years, I have presented numerous papers relating to utility
11 management for various industry trade associations and the University of
12 Maine's Margaret Chase Smith Center for Public Policy. Additional
13 information relating to my background and experience is contained in
14 Exhibit _ (GDS-2) to this testimony.

15 **Q. Have you provided testimony in other regulatory proceedings
16 relating to natural gas utilities?**

17 A. I have participated in several natural gas general rate filings in
18 Connecticut, New York, Pennsylvania, and West Virginia. In those filings
19 I was responsible for various aspects of the filings including, but not
20 limited to, annual revenue requirements, annual depreciation expense, cost
21 of service, customer tariff rate design and various rate base elements.

22 **Q. Have you previously testified before this Authority?**

1 A. No. However, during my thirty-nine year career, I have testified before
2 numerous regulatory commissions and authorities in utility rate cases and
3 presented testimony relative to rate making principles, including cash
4 working capital requirements.

5 **Q. What is the purpose of your testimony in this proceeding?**

6 A. AUS Consultants was engaged by Piedmont Natural Gas (“PNG” or the
7 “Company”) to prepare a cash working capital study. The results of this
8 study will be used, in this proceeding to determine the appropriate daily
9 and annual cash requirements necessary to operate the Company.

10 I am responsible for the preparation of the cash working capital study and
11 my testimony will discuss the procedures employed in the study and
12 present the results of the cash working capital study for the Authority’s
13 consideration in this proceeding. The Cash Working Capital Study is
14 attached to my direct testimony and identified as Exhibit _ (GDS-1)
15 Supporting Schedule No. 1.

16 **Q. Why is it necessary to perform a cash working capital study?**

17 A. Cash working capital is the amount of funds provided by investors to
18 bridge the time gap between the payment of operating expenses by the
19 utility and the receipt of cash through customers’ rates. A cash working
20 capital study measures the amount of cash on hand necessary and required
21 to permit the utility to operate as a going concern.

22 **Q. What is the basis for including cash working capital in the Company’s**

1 **measures of value or rate base?**

2 A. In the utility industry, it is generally recognized that a utility needs a
3 certain level of cash to fund its day-to-day operations. A claim for cash
4 working capital in rate base simply compensates investors for funds
5 provided, in addition to the other elements of rate base, for day-to-day
6 operations. Traditional rate making practices and procedures include, cash
7 working capital as an element of the Company's rate base elements. Since
8 the Company's investors are supplying the funds necessary for the utility
9 to meet its daily cash requirements, a fair and reasonable return on this
10 investment is appropriate under rate making principles.

11 Q. **What methodology did you employ in performing the cash working
12 capital study?**

13 A. I performed a lead/lag study in analyzing the revenue and expense
14 components of the Company's daily operations. A lead/lag study
15 measures the approximate level of cash required on a daily basis for the
16 proper financial operation of a utility. The method employs the review
17 and analysis of Company billing procedures, actual customer receipts,
18 and an analysis of the accounts payable for the Company's major
19 operating expense components. The lead/lag method is very reliable in
20 that it uses actual financial data. This methodology is well established
21 and accepted by the Tennessee Regulatory Authority.

1 **Q. Are the Company's current rates based upon a cash working capital**
2 **study that was performed using a lead/lag methodology?**

3 A. Yes. In previous filings, the Authority approved an allowance for cash
4 working capital that was developed utilizing the lead/lag methodology.

5 **Q. Does the cash working capital study presented in this proceeding,**
6 **utilize a similar approach as the Company's most recent rate filing at**
7 **Docket No. 03-00313.**

8 A. Yes. With minor exceptions to the study categories, the lead/lag study is
9 similar to the study prepared in 2003.

10 **Q. Can a cash working capital allowance be developed utilizing other**
11 **methodologies?**

12 A. Yes. There are other methods that can be employed to develop a cash
13 working capital allowance, such as the balance sheet method. However, a
14 lead/lag study is a far superior method since it incorporates specific,
15 detailed and actual historical data with regard to the Company's billing
16 practices, receipt of revenue and the payment of invoices for vendor
17 supplies, materials and services. A lead/lag study represents the daily
18 activity of these expenses and revenues over an entire year and provides
19 365 days of sampling. In contrast, the balance sheet method completely
20 disregards the impact of daily ongoing utility operations and simply
21 averages monthly "snap shots" in time of the financial picture of the
22 Company. Because the balance sheet method represents only 12 days of
23 sampling, versus the 365 days represented in a lead/lag study, it is

1 inherently less reliable than the lead/lag method.

2 **Q. Please provide a general description of the lead/lag methodology.**

3 A. The lead/lag method quantifies the timing difference between the service
4 period and when payment is received (the “revenue lag”) versus when the
5 utility incurs the operating expenses and the date of payment of such
6 expenses (the “expense lag”).

7 The “net lag” is simply the difference between the revenue lag and the
8 expense lag. That result is multiplied by the daily operating expenses to
9 produce the cash working capital component to be included in rate base.

10 **Q. What was the basis used in completing a lead/lag study for the
11 Company in this proceeding?**

12 A. The basis for the lead/lag study was the Company’s statement of income
13 for the twelve months ended December 31, 2010.

14 **Q. Does the lead/lag study prepared by AUS Consultants include any
15 accruals for future cash expenditures, amortizations of previous costs
16 or claims for bad debt expense?**

17 A. No. By their nature, such costs do not require a daily cash outlay for the
18 Company and have not been included in our analysis.

19 **Q. Should the results developed in the lead/lag study be applied to the
20 Company’s results of operations and be included in the Company’s
21 proposed rate base?**

22 A. Yes. The Company’s rate base, as it is affected by cash working capital,
23 should reflect the consistent treatment of the operating expense proposals

1 in this proceeding.

2 **Q. Please explain how the revenue lag was determined.**

3 A. The definition of a “revenue lag” is the length of time the Company has
4 extended credit for services to its customers until the time payment is
5 received. The revenue lag is comprised of the following:

- 6 • Service Lag
7 • Billing Lag, and
8 • Collection Lag

9 The sum of the three (3) elements equals the revenue lag.

10 In developing the service lag, I first determined the midpoint of the period
11 for which service was rendered. Service is rendered to all customers on a
12 monthly basis. This methodology is employed throughout the study
13 period and results in a service lag of 15.21 days.

14 The next component of the revenue lag is referred to as the “billing lag”.
15 The billing lag reflects the period of time between reading the meter and
16 rendering the bill. Based upon PNG’s billing procedures, the billing lag is
17 approximately 4.55 days.

18 The collection lag is determined by a complete review of the accounts
19 receivable for the study period. A beginning balance is established and
20 daily billings are added, customer payments are deducted and
21 miscellaneous adjustments are reflected to develop a daily accounts
22 receivable balance for the twelve month period. Dividing the total

1 customer payments into the sum of the daily accounts receivable balances
2 produces the number of days before payment is received by the Company.
3 The collection lag for PNG is approximately 18.67 days.

4 The sum of the three (3) revenue lag components results in a revenue lag
5 for PNG of 38.43 days.

6 **Q. Did you investigate the Company's collection practices during the
7 course of your study?**

8 A. Yes. I interviewed PNG management briefly to ascertain that the
9 Company follows the rules and regulations relative to customer account
10 collections and to determine that the Company collection policies would
11 not adversely affect the results of the collection lag portion of the study. I
12 determined that the Company is following the rules and regulations
13 relative to the collection of customer accounts.

14 Q. **Based upon your experience, is this a reasonable result for the
15 revenue lag portion of the study?**

16 A. Yes. It is a reasonable result based upon the Company's billing
17 procedures and collection experience.

18 Q. **Please explain the nature of an expense lag.**

19 A. An "expense lag" is simply the amount of time the Company's creditors
20 have extended before payment for services is required by the Company's
21 vendors.

22 Q. **How did you select the expense categories to be included in the study
23 group?**

1 A. The expense categories selected comprise the largest dollar expense items
2 for the twelve months ended December 31, 2010. The major expense
3 items included, but were not limited to, salaries, wages and benefits,
4 purchased natural gas and taxes.

5 **Q. How many categories of expense items were included in your study?**

6 A. The lead/lag study included approximately 19 categories of operating
7 expenses exclusive of taxes and assessments. The analysis included
8 approximately 90% of the Company's twelve months ended December 31,
9 2010 operating costs (excluding Federal Income Taxes) included in this
10 study.

11 Q. **How were the lag days developed for the operating expense
12 categories?**

13 A. All transactions of the major operating expense categories included in the
14 study were analyzed individually to determine the expense lag days for
15 each category. As an example, purchased gas cost expenses for the twelve
16 months ended December 31, 2010 of \$112,351,402 were included in the
17 analysis. All invoices were analyzed to determine the service period, the
18 mid-point of the service period, the date paid and the number of lag days
19 for that invoice. The amount of the invoice was multiplied by the lag days
20 to develop the "Dollar Days" or a weighted amount relative to the actual
21 expense. The total "dollar days" was then divided by the total amounts of
22 all purchased gas invoices to determine the weighted lag days (38.00) for
23 purchased gas. The lag day (38.00) result was then applied to the actual

1 test year operating expense (\$111,508,702) claim for purchased gas.

2 This procedure was utilized for all the major operating expense
3 components as set forth in Exhibit _ (GDS-1) Supporting Schedule No 1.

4 In addition, "other expenses" were studied as a sampling of various
5 components of the remaining operating expenses not specifically studied.

6 The analysis of minor operating expense categories and the results were
7 insignificant to the overall study results.

8 **Q. What was the number of lag days developed for operating expenses?**

9 A. The number of lag days for operating and maintenance expenses is 32.80
10 for the twelve months ended December 31, 2010.

11 **Q. During the course of your review, did you encounter any results in
12 operating cost categories that need to be specifically addressed?**

13 A. Yes. There are several categories of costs that have unusual results that
14 should be noted as follows:

- 15 • Rent, and
16 • Postage

17 Rent

18 The Company pays rent on the first of the month for leasing its buildings
19 and facilities. Therefore, the prepayment of rent results in a negative 9.47
20 days for this category.

21

1 Postage

2 The Company purchases postage on an as needed basis and incurs a
3 negative 9.23 days for this expense.

4 **Q. How were the lag days developed for general taxes other than payroll
5 taxes?**

6 A. The Company paid property taxes, Tennessee Public Utilities Inspection
7 Fees and Gross Receipts tax of approximately \$8.4 million for the twelve
8 months ended December 31, 2010. AUS Consultants studied
9 approximately \$7.5 million in Company payments for the three categories
10 and determined that 95.79 days is reasonable for this expense category.

11 **Q. Did you use the statutory payment schedules relative to income taxes?**

12 A. Yes. The number of lag days for federal and state income taxes is
13 approximately 29.46 and 29.36, respectively. AUS Consultants used the
14 actual payment experience of the Company in our analysis.

15 **Q. How did you calculate the cash working capital claim in the
16 proceeding?**

17 A. The revenue lag of 38.43 days is reduced by the expense lag of 32.80 days
18 producing a net lag of 5.63 days for the test period. The revenue lag of
19 38.43 is reduced by the attrition period expense lag days of 31.64
20 producing a net lag of 6.79 days. The detailed calculations of these
21 elements are set forth in Exhibit _ (GDS-1), Schedule 1 and Schedule 2,
22 respectively. The average daily cash requirement is multiplied by 6.79
23 days to arrive at the proposed cash working capital in this proceeding.

1 **Q.** **In your opinion is this a fair, just and reasonable proposal?**

2 A. Yes.

3 **Q.** **For rate making purposes, is it appropriate to use the Company's**
4 **operating expense claims in calculating the cash working capital**
5 **claims for the Company?**

6 A. Yes. However, the cash working capital claims must be synchronized
7 with the Company's claims and any subsequent adjustments for rate
8 making purposes.

9 **Q.** **Does this conclude your testimony?**

10 A. Yes it does.

GARY D. SHAMBAUGH
AUS CONSULTANTS**

Has over thirty-nine years' experience as a consultant in the public utility field. Has provided services in the areas of valuation, depreciation, original cost, cost of service, tariff rate design, customer bill frequency analysis, accounting matters and rate case filings. Consultant to gas, electric, steam heat, chilled water, telephone, water and wastewater utilities in Connecticut, Delaware, District of Columbia, Florida, Illinois, Iowa, Louisiana, Maine, Massachusetts, Michigan, Mississippi, Missouri, New Hampshire, New Jersey, New York, North Carolina, Rhode Island, South Carolina, Pennsylvania, Virginia, and West Virginia.

EXPERIENCE

1972 to Date

AUS Consultants, Camp Hill, Pennsylvania - Principal & Director specializing in public utility matters. Has prepared studies and coordinated analysis related to business enterprise valuations, original and trended original cost studies, property inventories, depreciation studies, cost of service, tariff design, salvage value, financial, accounting matters and rate case filings for numerous municipal, authority and investor owned utilities. These studies have required the review of financial records, inspection of property, analysis of original cost data, the development and selection of cost indexes, selection of service lives, the determination of rate base elements, annual depreciation expense, preparation of rate filing data and the presentation of the final report and study results. Has testified before several regulatory agencies on measures of value, depreciation and valuation for gas, water and wastewater utilities. Has also testified on financial and accounting matters, original cost, cost of service, tariff design, revenues and expenses for water and wastewater utilities.
