

PETITIONER'S EXHIBIT LCB-1

TENNESSEE-AMERICAN WATER COMPANY, INC.

CASE NO. _____

DIRECT TESTIMONY

OF

LINDA C. BRIDWELL

ON

**CHANGES TO THE FILING FORMAT, ADJUSTMENTS TO EXPENSES FOR
SUPPORT SERVICES, REGULATORY EXPENSE, INSURANCE OTHER THAN
GROUP, AFUDC EXPENSE, DEPRECIATION AND AMORTIZATION AND RATE
BASE INCLUDING A DESCRIPTION OF CAPITAL EXPENDITURES**

SPONSORING PETITIONER'S EXHIBITS:

1 **Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.**

2 A. My name is Linda C. Bridwell and my business address is 2300 Richmond Road,
3 Lexington, Kentucky 40502.

4 **Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?**

5 A. I am employed by the Central Division of American Water Works Company (“AWW”)
6 as Manager of Rates and Regulation for Kentucky and Tennessee.

7 **Q. HAVE YOU PREVIOUSLY FILED TESTIMONY BEFORE THIS AUTHORITY?**

8 A. No.

9 **Q. HAVE YOU PREVIOUSLY FILED TESTIMONY BEFORE ANY OTHER**
10 **COMMISSION?**

11 A. Yes. I have provided both written and oral testimony in at least thirteen different
12 proceedings before the Kentucky Public Service Commission including rate cases,
13 special investigations, and applications for a Certificate of Public Convenience and
14 Necessity.

15 **Q. PLEASE STATE YOUR EDUCATIONAL AND PROFESSIONAL**
16 **BACKGROUND.**

17 A. I received a B.S. degree in Civil Engineering from the University of Kentucky in 1988
18 and I received a M.S. degree in Civil Engineering from the University of Kentucky in
19 1992 with an emphasis in water resources. I completed a Masters of Business
20 Administration from Xavier University in Cincinnati, Ohio in 2000. I am a registered
21 Professional Engineer in the Commonwealth of Kentucky.

22 I have been employed by AWW since 1989. I began as a distribution supervisor
23 for Kentucky American Water (“KAW”) until 1990 when I was promoted to Planning

1 Engineer, then Engineering Manager, and later Director of Engineering in 1998. In July
2 2004, I accepted the position of Project Delivery and Developer Services Manager for the
3 Southeast Region of AWW, responsible for Kentucky, Tennessee, and West Virginia. In
4 2008, I became the KAW Project Delivery Manager for the construction of a new water
5 treatment plant, booster station, and transmission main in Kentucky. This project was the
6 largest project completed by American Water, in any of its regulated businesses, at \$164
7 million. Upon completion of the project in October 2010, I became the Director of
8 Environmental Compliance and Water Quality for KAW and in February of this year I
9 accepted my current position. I am an active member of the American Water Works
10 Association (AWWA), served as president of the local chapter and state section of the
11 American Society of Civil Engineering (ASCE), and served as an officer in the local
12 chapter of the National Society of Professional Engineers (NSPE) and as a State officer.
13 I have served periodically as an Adjunct Professor at the University of Kentucky in the
14 Civil Engineering Department, teaching “Water Quality and Pollution Control” and the
15 “Introduction to Environmental Engineering.” I serve as a member of the
16 Civil Engineering Industrial Advisory Committee at the University of Kentucky. I served
17 as a Commissioner on the Kentucky Water Resources Development Commission
18 established by Governor Patton and currently serve on the Board of Directors for the
19 Kentucky Infrastructure Authority.

20 **Q. WHAT ARE YOUR DUTIES AS MANAGER OF RATES AND REGULATION?**

21 A. My primary responsibilities encompass the coordination of regulatory issues in
22 Tennessee and Kentucky. This includes coordinating all reports and filings, working
23 with regulatory staff to make sure that all information is produced addresses the

1 requirements or requests, and overseeing the preparation and filing of rate cases and tariff
2 changes. I also work with the senior management in both states on budget planning. I
3 am also responsible for keeping abreast of changes in regulation, or trends in regulatory
4 oversight across the United States that may impact our local operations. I report to the
5 Director of Rates for the Central Division of American Water and am accountable to the
6 Presidents of Tennessee American Water (“TAW”) and KAW. I am located in
7 Kentucky, but work closely with the staff in Tennessee.

8 **Q. WHAT WILL YOUR TESTIMONY ADDRESS?**

9 A. My testimony will 1) review the changes to the format of this filing from previous cases
10 which support the proposed revenue increase of \$10,586,344, 2) address the Company’s
11 attrition level of Support Services, Regulatory Expense, Insurance Other than Group
12 Expense, Regulatory Deferrals Expense, AFUDC Expense, Depreciation and
13 Amortization Expense, and Rate Base, and 3) describe the capital investment expense
14 proposed in the attrition year that makes up Rate Base.

15 **Q. WERE THE COMPANY’S ACCOUNTING EXHIBITS PREPARED BY YOU OR**
16 **UNDER YOUR SUPERVISION?**

17 A. Yes.

18 **Q. WHAT IS THE SOURCE OF INFORMATION USED IN THE COMPANY’S**
19 **ACCOUNTING EXHIBITS?**

20 A. The information contained in the Accounting Exhibits was prepared from the financial
21 and operational records of the company.

1 **Q. WHAT IS THE INCREASE IN RATES THAT THE COMPANY IS SEEKING IN**
2 **THIS PROCEEDING?**

3 A. The Company is seeking a rate increase that would produce additional annual revenues of
4 \$10,586,344 or 24.92%. The need for this increase is explained in detail in Mr. Allen's
5 and Mr. VerDouw's testimonies.

6 **Q. WHEN DID THE COMPANY LAST INCREASE RATES?**

7 A. The Company last filed for a rate increase on September 17, 2010, and the new rates from
8 that case became effective on April 5, 2011.

9 **Q. WHAT IS THE TEST PERIOD REFLECTED IN THIS CASE?**

10 A. The Company has used a historical test period of twelve months ending December 31,
11 2011 to reflect recent, actual expenses and revenues. The Company has adjusted the test
12 period for two levels of adjustments. The first adjustment normalizes the test year. This
13 takes out unusual items or exceptions that are unique to that year. An example might be a
14 generator rental expense following a power blackout. The second level adjusts the
15 normalized year to arrive at the attrition year which is the projected period on which
16 TAW proposes to base its rates.

17 **Q. WHAT IS THE ATTRITION YEAR PROPOSED IN THIS CASE?**

18 A. The twelve months ended November 30, 2013.

19 **Q. HAS TAW CHANGED THE EXHIBITS FILED IN THIS PETITION FROM**
20 **PREVIOUS CASES?**

21 A. Yes. TAW has attempted to overhaul the filing for this case from previous cases.
22 Accounting exhibits have been given a naming convention that will identify their purpose
23 within general categories. Schedules to support the Exhibits are named to indicate the

1 Exhibit they support and workpapers will also be more readily identified as to the
2 Schedule and Exhibit they support.

3 The naming convention is:

4 Exhibit (2 or 3 letter category)–(number)–(Descriptor)–(3 initials of
5 sponsoring witness)

6 The categories include:

7 FS – Financial Summary

8 REV – Revenues

9 EXP – Expense

10 RB – Rate Base

11 CS – Capital Structure

12 BT – Business Transformation

13 PPACC – Purchased Power and Chemical Charge

14 PN – Pension Recovery

15 EXH -- Exhibit

16 Exhibit names will be clearly marked on the paper version of the file. An
17 example of an exhibit name is:

18 Petitioner’s Exhibit EXP-10-Regulatory Expense – LCB

19 Schedules that support the Exhibits will also have names clearly marked on the
20 paper version of the files. The naming convention is:

21 Schedule (category) – (number).(X)

22 An example of a schedule supporting the Regulatory Expense Exhibit might be:

23 Schedule EXP-10.1

1 A listing of all of the accounting exhibits filed with the petition is attached to my
2 testimony as EXH-1-Exhibit List-LCB. Individual exhibits to support direct testimony
3 are attached to the appropriate witness and identified within the testimony.

4 **Q. WHY HAS TAW CHANGED THE FORMAT OF ITS FILING FROM PREVIOUS**
5 **CASES?**

6 A. TAW received feedback from intervenors and the TRA that it was at times difficult to
7 follow the analysis in previous filings which may have led to some confusion in the last
8 few rate cases. We recognize that reducing the level of confusion and resulting
9 disagreement among the parties of the case can result in a less expensive rate case
10 process for everyone involved which will ultimately and significantly benefit TAW
11 customers. This effort is one of the ways TAW hopes to establish some new areas of
12 common ground with all parties in this case.

13 **Q. CAN YOU DESCRIBE THE FOUR SUMMARY ACCOUNTING EXHIBITS?**

14 A. Yes, I would like to give a brief description of the accounting summary exhibits which
15 detail and support the rate base, revenues, expenses, capitalization and bill analysis for
16 the test year and attrition year.

17 Petitioner's Exhibit FS-1-Summary Revenue Requirement-GMV is a financial
18 summary of the filing which details how the Company arrived at the amount of the
19 requested revenue increase and will be discussed by Mr. VerDouw in his testimony.

20 Petitioner's Exhibit FS-2-Income Statement-GMV is an operating income
21 summary for the test year and attrition year with supporting schedules broken down by
22 major account group and will be discussed by Mr. VerDouw in his testimony.

1 Petitioner’s Exhibit REV-1-Summary-DJP provides a summary of the Operating
2 Revenues and will be discussed by Mr. Petry in his testimony.

3 Petitioner’s Exhibit RB-1-Summary-LCB is the summary of Rate Base changes in
4 the case and I will discuss further in my testimony.

5 **Q. HOW DID THE COMPANY DETERMINE THE OPERATING REVENUES**
6 **SHOWN IN ITS ACCOUNTING EXHIBITS?**

7 A. The Company’s operating revenues are obtained from (i) metered sales, (ii) private fire
8 service, and (iii) miscellaneous, service revenues, rents from property, and other water
9 revenues. The Company uses a bill analysis reflecting the actual billing determinants for
10 the historical test year, the twelve months ended December 31, 2011. Petitioner’s Exhibit
11 No. REV-1-Summary-DJP sets forth the individual bill analysis by customer class. The
12 historical test-year billing determinants are then adjusted to: (i) normalize any new
13 customers, loss of customers, or changes in usage (for large users) that occurred in the
14 historical test-year, (ii) include customer growth through the attrition year, and (iii) adjust
15 residential and commercial classes for declining usage trends for the attrition year. These
16 trends will be addressed by Mr. James Chelius of American Water. Mr. Donald Petry
17 will address the revenues and adjustments to customer accounting. The schedules then
18 multiply attrition year billing determinants by present and proposed rates.

19 **Q. HOW WERE THE OPERATING EXPENSE ADJUSTMENTS IN THE**
20 **SUMMARY EXPENSES EXHIBIT CALCULATED?**

21 A. The adjustments reflect an ongoing level of operating expenses consistent with the test
22 year matching principles. Known and measurable price adjustments have been reflected

1 to restate the consistent historical test year expense levels to rate year levels, in this case
2 the attrition year proposed by the Company.

3 Expense Adjustments

4 **Q. WHAT ARE SUPPORT SERVICES FEES?**

5 A. TAW, as a subsidiary of AWW, is able to realize significant savings to its customers
6 through collective utilization of corporate services. These services include the use of
7 centralized call centers, centralized water quality testing lab in Belleville, IL, IT support
8 services, centralized accounts payable and accounts receivable functions, centralized tax
9 support and insurance as well as corporate management and oversight. These fees have
10 been referred to as Management Fees in the past which is not a good description of the
11 support functions that are provided at great efficiency for TAW. These fees have been
12 discussed significantly in the last three rate cases. In 2008, TAW undertook a
13 management audit as ordered by the TRA that reviewed the level of support services
14 expenses and function.

15 **Q. PLEASE DESCRIBE THE COMPANY'S FILING REGARDING SUPPORT** 16 **SERVICES FEES.**

17 A. The Company's filing includes American Water Works Service Company ("AWWSC")
18 costs of \$5.817 million for Support Services expenses, previously referred to as
19 Management Fees. The Company started with the historical test-year expenses of \$5.081
20 million which are \$145,000 less than the attrition year in the last case, and adjusted non-
21 recurring expenses and other expenses that should not be recovered in rates totaling
22 \$48,178. The Company then increased the normalized historical test-year level based on
23 projected expenses through November 2013 to adjust until the end of the attrition year.
24 This included labor increases for 2012 merit increases and proposed 2013 merit

1 increases. It also included inflationary increases of 1.3% in 2012 and 1.2% in 2013 for
2 other expenses. This was a global assumption inflationary factor used in AWWSC
3 budgeting. This resulted in the \$5.817 million of AWWSC costs included in the
4 Company's filing. This is a difference from previous filings that used an inflationary
5 factor for Support Services labor and expenses. They are shown in the filing on
6 Petitioner's Exhibit EXP-6-Support Services-LCB.

7 **Q. WHAT HAS BEEN THE INCREASE IN SUPPORT SERVICES FEES FROM**
8 **THE COMPANY'S PREVIOUS RATE CASE TO THE LEVEL REQUESTED IN**
9 **THIS CASE?**

10 A. In Docket No. 2010-00189, TAW requested \$5.226 million based on an attrition year
11 ending December 31, 2011. The filing in this case represents an increase in requested
12 Support Services expenses of \$590,529, from the last case attrition year request.

13 **Q. WHAT ARE THE MAJOR DRIVERS OF THE INCREASE IN AWWSC COSTS**
14 **THROUGH THE ATTRITION YEAR ENDING NOVEMBER 30, 2013?**

15 A. There are two major changes in the Support Services fees between the test year and the
16 attrition year:

17 1. Labor and Labor Related Costs were \$3,142,933 in the base year and increased to
18 \$3,259,215 in the attrition year. This represents an increase of \$144,037 primarily
19 for merit increases in 2012 and 2013, and additional IT support for Business
20 Transformation ("BT") which is discussed in Mr. VerDouw's testimony. This is a
21 decrease of \$226,666 from the Docket 10-00189 filing of \$3,485,881.

22 2. Other Costs increased from \$1,916,799 in the test year to \$2,556,341 in the
23 attrition year or \$639,542 due to increases in Information Technology Systems

1 (“ITS”), of \$579,967 or 91% of the increase. This represents the increased
2 maintenance and depreciation expenses from the BT implementation. Other areas
3 are increased 1.3% for inflation in 2012 and 1.3% for inflation in 2013. The 2010
4 case projected \$1,740,153 in other expenses in the attrition year.

5 **Q. ARE THERE FUNCTIONS (AND COSTS) THAT HAVE SPECIFICALLY**
6 **SHIFTED FROM TAWC TO AWWSC SINCE THE LAST CASE THROUGH**
7 **THE ATTRITION YEAR?**

8 A. No, there have not been significant changes. Although TAW has gone through
9 organizational changes, as well as AWW, as a whole, the responsibilities have remained
10 essentially the same. One minor change is that TAW eliminated a Human Resource
11 Specialist and is supported by a shared Human Resources Manager through AWWSC.
12 However, this person is located in Chattanooga and splits her time between TAW and
13 KAW. There has been significant discussion in the last two TAW rate cases regarding
14 the appropriate level of Support Services expenses. In this filing, the labor expenses have
15 remained essentially flat, reflecting those organizational changes. TAW presented
16 testimony in the last case regarding the savings to its Company realized through the
17 Support Services provided, as well as the additional services directly impacting TAW’s
18 customers. The significant change in this case is the implementation of the BT project.
19 As noted above, in addition to the capital expenditures, there are increased expenses
20 related to maintenance and depreciation of this investment. This project will directly
21 impact and significantly improve customer service for TAW customers.

1 **Q. CAN YOU PLEASE DESCRIBE THE REGULATORY EXPENSE REQUEST IN**
2 **THIS CASE?**

3 A. Yes. The company is seeking recovery of \$626,950 of expenses in this case. The test
4 year period expenses were \$663,237 as reflected on Petitioner's Exhibit EXP-9-
5 Regulatory Expense-LCB. This was comprised of three months of amortization of the
6 2006 and 2008 rate costs and the cost of service study expenses authorized by the TRA in
7 the Company's 2008 rate case. In April 2011, in the test year, TAW implemented revised
8 amortization of the 2006 and 2008 expenses along with the authorized 2010 rate case
9 expenses. The expenses were then annualized. The Company has estimated the cost of
10 the preparation and presentation of this case to be \$1,109,263. The Company is
11 proposing to amortize these costs over a three year period resulting in an annual cost of
12 \$369,754. This includes in the attrition year the Cost of Service Study Expense in the
13 amount of \$52,850. Total attrition year expense of the current case is \$369,754 plus the
14 balance of \$257,195 resulting from the 2006 rate case, 2008 rate case , 2008 Cost of
15 Service Study, the 2008 Depreciation Study, the 2010 rate case, and the 2010 Cost of
16 Service Study that is currently being amortized through the attrition year. The costs of
17 the 2006/2008/2010 cases will be fully amortized in March 2014.

18 **Q. HOW DOES THE ESTIMATED COST OF \$1,109,263 FOR RATE CASE**
19 **EXPENSE IN THIS CASE COMPARE TO PRIOR COMPANY RATE CASES?**

20 A. The estimated cost is less than the actual costs of the fully litigated 2010 case, and is
21 similar to the cost of the 2006 and 2008 rate cases.

1 **Q. WHAT HAS THE COMPANY DONE TO LOWER THE ESTIMATED COST OF**
2 **THIS CASE?**

3 A. The biggest change is that the Company solicited proposals from qualified legal teams to
4 reduce legal expenses. Additionally, the Company expects to use fewer outside witnesses
5 than in previous cases, and manage its rate case costs carefully. One change from
6 previous cases is that the Service Company costs for preparing, filing, and supporting the
7 case are included in the rate case expense estimates rather than expensed. However, the
8 final cost of the case and the number of witnesses utilized will ultimately depend on the
9 amount of litigation required to appropriately present the case which can be impacted by
10 issues raised by other parties to the case.

11 **Q. WHY SHOULD THE FULL COST OF THE RATE CASE BE RECOVERED IN**
12 **RATES?**

13 A. The Company needs to continue to attract the capital necessary to address service issues,
14 replace aged plant and meet more stringent water quality regulations. It can only do so
15 through providing an appropriate rate of return. The Company has made extraordinary
16 efforts to minimize and reduce operating costs through efficiencies since the last rate
17 case, yet earnings are well below the authorized rate of return and are forecasted to drop
18 further in the attrition year without rate relief. The cost of the rate case is a necessary
19 part of establishing an appropriate level of revenues to meet expenses and providing a
20 rate of return that is reasonable and helps attract necessary capital. TAW does not like
21 the costs or frequency of rate cases any more than its customers. As mentioned
22 previously, TAW is attempting to shift its direction in rate case expenses through a
23 reduction in external witness and legal expenses as well as improving communication

1 with all stakeholders both during and between rate cases. Mr. Gary VerDouw will
2 discuss in his testimony some potential rate-making procedures that have the potential to
3 help provide for meeting increased replacement costs and operating expenses while
4 extending the time between rate cases. The Company must come before the TRA to seek
5 rate relief needed to cover the cost of service including providing an adequate return to
6 investors. Seeking rate relief is a necessary cost of the Company doing business as a
7 regulated utility and recovery of those costs is appropriate.

8 **Q. WHAT ARE TAW'S PROPOSED EXPENSES FOR INSURANCE OTHER THAN**
9 **GROUP?**

10 A. The Company's proposed level for this expense for the attrition year is \$365,057 and is
11 based on the Company's 2011 actual insurance premiums and adjusted for inflationary
12 increases for the attrition year. It is shown in Petitioner's Exhibit EXP-10-Insurance
13 Other than Group-LCB. This expense category includes costs for general liability,
14 workers compensation, and property insurance. This is a decrease from Docket 2010-
15 00189 due to a reduction in premiums.

16 **Q. WHAT ARE THE COMPANY'S PROPOSED ALLOWANCE FOR FUNDS USED**
17 **DURING CONSTRUCTION ("AFUDC") EXPENSES?**

18 A. The Company's proposed amount for AFUDC on the debt portion of capital spending is
19 \$156,984 and is based upon the capital spending levels and projects included in the
20 attrition year. It is shown on Petitioner's Exhibit EXP-14A-AFUDC-LCB. This
21 adjustment was made to reflect the AFUDC treatment in Docket No. 2010-00189 which
22 was a reduction to expenses.

1 **Q. WHAT IS THE DEPRECIATION EXPENSE IN THIS CASE?**

2 A. Petitioner’s Exhibit EXP-16-Depreciation Expense-LCB details the adjustments for
3 Depreciation expense. The key component of this is Utility Plant in Service (“UPIS”)
4 Depreciation. Every physical asset, when it is purchased or constructed, is assigned to a
5 utility plant account. From a ratemaking perspective, depreciation is the slow recovery,
6 over time, of these capital expenditures. UPIS depreciation expense is driven by two
7 factors: the remaining original cost of UPIS for each plant account, and the depreciation
8 rates assigned to those account. Each month, depreciation is recognized for 1/12th of
9 each account’s annual depreciation rate, multiplied by each account’s prior month UPIS
10 balance.

11 Depreciation expense is also influenced by the amortization of Contributions in
12 Aid of Construction (“CIAC”). These amortizations offset depreciation expense, and
13 thus reduce both recognition and recovery of UPIS. Like depreciation, amortization of
14 CIAC is based on two factors: the original value of CIAC for each CIAC account, and the
15 amortization rate for those accounts.

16 Cost of removal (“COR”) expense is also included in the Company’s
17 depreciation. COR is the slow recognition, over time, of the costs required to retire
18 certain UPIS infrastructure. From a ratemaking perspective, it also represents the slow
19 recovery, over time, of these costs. Like depreciation expense, it is driven by two factors:
20 the original cost of UPIS for each plant account, and the COR rates assigned to each
21 account.

1 **Q. CAN YOU DESCRIBE THE TEST YEAR AMOUNTS AND ADJUSTMENTS?**

2 A. Yes. Test year depreciation expense was equal to the net of \$4,776,846 in depreciation
3 accruals and (\$161,462) in CIAC amortization. The net test year amount was
4 \$4,615,384.

5 Four normalizing adjustments are made to the test year, as detailed on Petitioner's
6 Exhibit EXP-16-Depreciation Expense-LCB. The first is to annualize changes to utility
7 plant in service through 12/31/2011, which increases test year UPIS depreciation by
8 \$511,958. A second adjustment annualizes changes to CIAC balances through
9 12/31/2011. This adjustment increases the CIAC amortizations by (\$22,417). The third
10 adjustment adds in test year COR expenses per books, which increases test year
11 depreciation by \$285,592. These expenses were mapped to the "Amortization" line of
12 TAW's Income Statement in the test year. (A corresponding adjustment removes this
13 same amount from test year amortization expense, to be discussed shortly.) Annualizing
14 these COR expenses based on UPIS at 12/31/2011 results in an additional increase of
15 \$24,682. After these four adjustments, normalized test year depreciation equals
16 \$5,415,199.

17 **Q. DO THESE NORMALIZING ADJUSTMENTS REFLECT ANYTHING OTHER**
18 **THAN CHANGES TO UPIS AND CIAC THROUGH 12/31/2011?**

19 A. Yes. Also reflected within these adjustments is the restoration of a 4.11% depreciation
20 rate to two plant accounts (304310 and 304330) that had depreciation rates set at 0%
21 during the test year. This adjustment was made because, upon examination, the
22 Company's utility plant accountants found that these had been set to 0% in error. The

1 annualized effect of this change was \$4,068, and is embedded in the \$511,958
2 depreciation accrual adjustment described above.

3 **Q. WERE THERE ANY ADJUSTMENTS FOR THE ATTRITION YEAR?**

4 A. Certainly. Three attrition year adjustments are made to both annualize the November
5 2013 expenses associated with the Company's UPIS investments and CIAC balances, and
6 also to reflect the depreciation rate requested by the Company for account 340315 (our
7 Business Transformation assets). These adjustments are also detailed on Petitioner's
8 Exhibit EXP-16-Depreciation Expense-LCB.

9 The UPIS depreciation adjustment is derived by multiplying the November 2013
10 UPIS depreciation expense of \$584,689 by 12. This annualized amount equals
11 \$7,016,267, which represents a \$1,727,463 adjustment from the normalized test year.
12 The CIAC adjustment is derived by multiplying the November 2013 CIAC amortization
13 expense of (\$18,304) by 12. The annualized amount is (\$219,650), which represents an
14 adjustment of (\$35,770) from the normalized test year. Finally, the COR adjustment
15 annualizes November 2013 UPIS COR expense by multiplying the November 2013 COR
16 of \$28,033 by 12. The annualized amount is \$359,187, which represents a \$48,913
17 adjustment from the normalized test year.

18 The annualized November 2013 expense levels for these adjustments may be seen
19 on Schedule EXP-16.1 (Depreciation Expense Net of CIAC Amortization) and Schedule
20 EXP-16.2 (COR Expense). Because these schedules are driven by numbers developed in
21 the UPIS and CIAC Exhibits, those exhibits may be helpful references as well. Their
22 exhibit labels are Petitioner's Exhibit EXP-RB-2-UPIS-LCB and Petitioner's Exhibit
23 EXP-RB-11-CIAC-LCB.

1 **Q. WERE CHANGES TO UPIS AND CIAC THE ONLY CHANGES REFLECTED**
2 **IN THESE ATTRITION YEAR ADJUSTMENTS?**

3 A. No. Reflected in these adjustments is also a proposed depreciation rate for our BT assets,
4 which differs from available software depreciation rates. The relevant assets are in
5 account 340315 “Computer Software Special Dep” and the Company requests a
6 depreciation rate of 10%. Mr. VerDouw discusses BT depreciation further in his
7 testimony. This rate adjustment, compared to available software rates, increases the
8 depreciation expense by \$592,709, and is included within the \$1,727,463 attrition year
9 adjustment for depreciation accrual referred to above.

10 **Q. WHAT IS THE FINAL ATTRITION YEAR DEPRECIATION EXPENSE?**

11 A. After these four adjustments, the pro forma attrition year depreciation expense totals
12 \$7,155,805.

13 **Q. COULD YOU PLEASE DISCUSS THE COMPANY’S AMORTIZATION**
14 **EXPENSE ADJUSTMENT?**

15 A. Yes. Amortization Expense is the recovery of expenses over a set period of time.
16 Petitioner’s Exhibit EXP-17-Amortization-LCB details the adjustments to amortization
17 expense. Test year amortization expense was \$422,920. The first normalizing
18 adjustment is to remove COR expense, which was reclassified to depreciation expense
19 for this proceeding. Removing COR costs decreases test year amortization by
20 (\$285,592). The next normalizing adjustment is to remove amortization of the Utility
21 Plant Acquisition Adjustment (“UPAA”). This adjustment reduces the test year expense
22 by (\$7,488). After these two adjustments, the normalized test year is \$129,840.

1 A few adjustments are then made to annualize changes to the attrition year. The
2 first is to annualize changes to the Capital Lease amortization. Because this expires in
3 May 2013, the November 2013 expense level is \$0. Annualizing this essentially removes
4 all of the test year cost, resulting in a decreasing adjustment of (\$106,032). The second
5 adjustment is to annualize the November 2013 AFUDC Equity amortization. The
6 November 2013 amount of \$2,349 is multiplied by 12, to yield an annual figure of
7 \$28,191. This is \$5,415 higher than the test year amount of AFUDC Equity
8 Amortization, so an increasing adjustment of \$5,415 results. A third and final adjustment
9 is then made to annualize November 2013 AFUDC Debt amortization. The November
10 2013 level of \$93 is multiplied by 12, to yield an annual amortization of \$1,116. Because
11 the test year amount for this amortization was less, at \$1,032, an increasing adjustment of
12 \$84 is made.

13 The annualized November 2013 expense levels for these adjustments may be seen
14 on Schedule EXP-17.1 (Amortization Activity and Balances).

15 To summarize, test year amortization of \$422,920 is reduced by (\$293,080), to
16 adjust out cost of removal and UPAA amortizations, resulting in a normalized test year
17 amount of \$129,840. Attrition year adjustments then further decrease amortization
18 expense by (\$100,533), primarily to annualize out the Capital Lease amortization,
19 resulting in a total attrition year amount of \$29,307.

20 **Rate Base**

21 **Q. WHAT IS RATE BASE AND WHY IS IT IMPORTANT?**

22 A. Simply put, Rate Base is the total value of all of the used and useful facilities and
23 property of TAW. This represents all that TAW has had to spend to provide facilities to
24 withdraw, treat, and deliver potable water. It is funded partially through investment by

1 shareholders and partially from borrowing money. The cost of all construction is
2 assigned to an account of Utility Plant in Service, or “UPIS”, which is the fundamental
3 basis of Rate Base. Additions and deductions from that account occur regularly.
4 Additions include construction costs ongoing at the time of the rate case, capital lease
5 items of property, deferred maintenance, and working capital. Deductions include
6 accumulated depreciation, the accumulated amortization of capital leases, deferred taxes,
7 customers’ advances, and facilities paid for by others. The details of these are described
8 below. Establishing the level of Rate Base is important because this measurement
9 determines the amount of investment on which the company may earn a return.

10 **Q. CAN YOU DESCRIBE THE FACTORS USED IN THE PREPARATION OF THE**
11 **FORECAST PERIOD DATA AS IT RELATES TO RATE BASE OR THE**
12 **CAPITAL CONSTRUCTION?**

13 A. Yes. The Company’s capital investment plan can be divided into three distinct areas: 1)
14 normal recurring construction (RPs), 2) Centrally Sponsored Projects (CS), and 3) major
15 projects identified as investment projects (IPs). Normal recurring construction includes
16 water main installation for new development, smaller main projects for reinforcement and
17 replacement, service line and meter setting installation, meter purchases and the purchase
18 of tools, furniture, equipment and vehicles.

19 Recurring construction costs are trended from historical and forecasted data.
20 Estimates are prepared for the installation of new mains, service lines, meter settings and
21 the purchase of new meters based on preliminary plats from the appropriate governmental
22 planning agencies and consultations with developers, homebuilders, and engineering
23 firms.

1 Purchase of tools, furniture, equipment, and vehicles are based on needs. Each
2 item is reviewed independently and an itemized list of expenditures is prepared.
3 Estimates are made based on current year pricing.

4 The intent of the planning process is to provide a broad and comprehensive
5 review of facility needs that will allow us to then establish a general guide for needed
6 improvements over a short-term horizon. These improvements will enable TAW to:
7 provide safe, adequate, and reliable service to its customers to meet their domestic,
8 commercial, and industrial needs; provide flows adequate for fire protection; and satisfy
9 all regulatory requirements. The plan provides a general scope of each project along with
10 a preliminary design. The criteria for evaluating the various system improvements are
11 engineering requirements; consideration of national, state, and local trends;
12 environmental impact evaluations; and water resource management.

13 The engineering criteria used are accepted engineering standards and practices
14 that provide adequate capacity and appropriate levels of reliability to satisfy residential,
15 commercial, industrial, and public authority needs, and provide flows for fire protection.
16 The criteria are developed from regulations, professional standards, and company
17 engineering policies and procedures. Demand projections, based on historical data and
18 usage trends, are utilized in evaluating future system needs. Regionalization
19 opportunities are evaluated to determine if a consolidated solution to water problems in a
20 particular area is feasible or if management service opportunities are viable.

21 Sources of supply are evaluated based on quantity and quality. There must be
22 sufficient quantity to supply the system's needs. There must be sufficient quality to
23 provide, through treatment, finished water that meets all federal and state regulations.

1 Sources of supply must also have sufficient allocation rights to enable average and
2 maximum demands to be met.

3 Treatment and pumping facilities are designed to reliably meet projected
4 maximum day needs. Storage facilities are designed to provide the recommended
5 volume to equalize the plant's pumping rate on a maximum demand day. With this
6 approach, treatment facilities need only be designed to meet the projected maximum day
7 demand, although during that day, hourly demands will exceed the treatment capacity's
8 maximum rate. Storage facilities are also designed to provide the volume of water
9 necessary for fire protection up to the maximum flow and duration addressed in the most
10 recent Insurance Services Office ("ISO") municipal grading schedule and the volume
11 necessary for reliability.

12 Pipelines are designed to meet two conditions of service. They are expected to
13 deliver projected peak hour customer demands while maintaining system pressures at 30
14 psi or greater and to provide adequate fire flow identified by the ISO while maintaining
15 distribution system pressure at 20 psi or greater.

16 **Q. DOES TAW FOCUS ON COST CONTROL OF CAPITAL EXPENDITURES IN**
17 **ITS NORMAL DAY-TO-DAY ACTIVITIES?**

18 A. Yes. All significant construction work done by independent contractors and significant
19 purchases are completed pursuant to a bid solicitation process. We maintain a list of
20 qualified bidders and we believe that our construction costs are very reasonable.
21 American Water annually takes competitive bids for material and supplies that are either
22 manufactured or distributed regionally and nationally through its centralized procurement
23 group. We have the advantage of being able to purchase these materials and supplies on

1 an as-needed basis at favorable prices. In the past ten years, American Water also has
2 undertaken a number of procurement initiatives for services and materials to reduce costs
3 through either streamlined selection or utilization of large volume purchasing power.
4 Some of these initiatives that have directly impacted capital expenditures include the use
5 of master services agreements with pre-qualified engineering consultants, national
6 vehicle fleet procurement, and national preferred vendor identification.

7 **Q. HOW DOES TAW MANAGE ITS IMPLEMENTATION OF ITS CAPITAL**
8 **PLAN?**

9 A. Since 2003, the entire American Water system has used a process for the development
10 and review of capital expenditures that has incorporated industry best practices. TAW,
11 like its sister companies, has benefitted from that process. The process includes a
12 regional Capital Investment Management Committee (“CIMC”) to ensure capital
13 expenditure plans meet the strategic intent of the business, which intent includes
14 introduction of new technologies that result in efficiencies. In turn, this ensures that
15 capital expenditure plans are integrated with operating expense plans, and provides more
16 effective controls on budgets and individual capital projects.

17 The CIMC includes the TAW President, TAW Operations Manager, TAW
18 Engineering Project Manager, TAW Financial Analyst, and TAW Operations Specialist.
19 The CIMC receives capital expenditure plans from project managers and approves them
20 for submission to the Corporate CIMC. Once budgets are approved, the CIMC meets
21 monthly to review capital expenditures compared to budgeted levels. The process
22 includes five stages of project review: 1) a Preliminary Need Identification defining the
23 project at an early stage; 2) a Project Implementation Proposal that confirms all aspects of

1 the project are in a position to begin work; 3) Project Change Requests, if needed (if the
2 cost changes more than 5% or \$100,000); 4) a Post Project Review; and 5) Asset
3 Management. TAW personnel handle all of the stages, with oversight by the CIMC. All
4 projects, including normal recurring items, have an identified project manager
5 responsible for processing the stages of the project. The focus of the CIMC, along with
6 the monthly meetings, has allowed TAW to be more flexible with changes that inevitably
7 occur during the course of implementation of large construction projects. TAW made
8 tremendous progress in its delivery of capital expenditures over the last ten years in
9 regard to schedules, budgets, and quality of delivery.

10 As an added level of coordination a “Functional Sign-Off” Committee meets
11 monthly to sign-off on projects. This committee includes the TAW President, TAW
12 Operations Manager, the TAW Engineering Project Manager, TAW Financial Analyst,
13 TAW Operations Specialist and the appropriate Distribution and Operations supervisors
14 and project managers. The purpose of the committee is to review projects that are
15 moving forward in the next step of approval, or that require a change. This allows the
16 project manager and operational area supervisors to communicate about the project on a
17 monthly basis and help coordinate projects from initial development through in-service.

18 One of the most challenging aspects of planning capital expenditures continues to
19 be determining the amount of construction that is required for individual municipal and
20 state road projects. Some of these projects required significant capital expenditures on
21 the part of TAW, but the company has no control over the schedule. TAW would be
22 required to act promptly if the project is to stay on schedule, but sometimes would not be
23 informed of project delays until waterline relocation was underway or nearly complete. It

1 is a guessing game to determine which projects will be delayed and how long.
2 Investment project funding is requested early in case a project remains on the road
3 relocation schedule, but more often than not the project schedule will be delayed,
4 sometimes even for years. In reviewing historical spending, it appeared that a consistent
5 expenditure level proceeded each year, but it was difficult to determine which specific
6 project was going to be delayed. TAW creates an IP for each project to better track each
7 of the major highway relocations, and we annually estimate which projects will be built
8 during that year in the budget. These estimates are based on regular meetings with state
9 and local agencies in charge of road projects. This process allows flexible approval of
10 capital expenditures as unexpected projects arise, offsetting other projects that may be
11 postponed. The flexibility of the CIMC process allows TAW to immediately address an
12 increase or decrease in relocation projects due to highway work.

13 **Q. PLEASE EXPLAIN THE MAJOR PROJECTS PROPOSED FOR 2012 AND 2013.**

14 A. TAW has proposed capital construction expenditures of \$14,293,811 in 2012 net of
15 advances/refunds/contributions. The proposed budget for 2012 is as follows: Developer
16 (“DV”) Projects - \$2,000,000; Recurring Projects - \$8,671,681; Business Transformation
17 - \$2,629,512; Investment Projects - \$992,618. TAW has proposed capital expenditures in
18 2013 of \$14,592,032 net of advances/refunds/contributions. The proposed budget for
19 2013 is: DV Projects - \$2,000,000; RP - \$7,862,174; BT - \$1,183,561; IP - \$3,546,297.
20 A brief description of the projects as listed in the application included in Petitioner’s
21 Exhibit RB-2-UPIS-LCB follows.

22 **Item DV**

23 This investment plan item includes the installation of new main, valves and hydrants that
24 are funded entirely by others. This investment plan item may also include the

1 replacement of existing components of water supply, water treatment, water pumping,
2 water storage, and water pressure regulation facilities not funded by company
3 expenditures. The majority of these expenditures are made through deposit agreements
4 and as non-refundable contributions. The projected expenditure amount is developed
5 through discussions with homebuilders and developers as well as a review of plats.
6 Developers deposit projected expenditures based on average pipe installation costs from
7 the previous year pursuant to our on-site main extension agreement. This item also
8 includes fire services that are paid for by the requesting new customer, at the cost of
9 installation.

10 **Item A**

11 This investment plan item includes new water mains, valves, and other appurtenances
12 that are necessary to perform the work that is funded by the Company, including upsizing
13 of developer initiated extensions; Company initiated and funded new mains that are not
14 related to immediate growth, such as new mains that eliminate existing dead ends or
15 provide new transmission capacity; and new customer initiated extensions in accordance
16 with tariffs that may include some customer contribution (customer funded portion under
17 abovementioned Item DV). This item may also include new mains that parallel existing
18 mains to increase transmission capacity, provide reliability, or establish an additional
19 pressure gradient.

20 **Item B**

21 This investment plan item includes the scheduled replacement, renewal or improvement
22 of existing water mains including valves and other appurtenances that are necessary to
23 perform the work. This investment line item now includes replacement of services in

1 conjunction with those projects, which was previously budgeted in the cost of service
2 replacements.

3 **Item C**

4 This investment plan item includes the unscheduled replacement or restoration of existing
5 water mains, including valves and other appurtenances that are necessary to perform the
6 work. This investment line item now includes replacement of services in conjunction
7 with these projects, which was previously budgeted in the cost of service replacements.
8 This item is primarily used for emergency replacements.

9 **Item D**

10 This investment plan item includes the relocation of existing water mains, including
11 valves and other appurtenances that are necessary to perform the work, as required by
12 municipal or state agencies. This investment line item now includes replacement of
13 services in conjunctions with these projects, which was previously budgeted in the cost of
14 service replacements. These costs are not reimbursable.

15 **Item E**

16 This investment plan item includes the installation of new hydrants, including hydrant
17 assemblies and valves that are installed on existing mains or installed in conjunction with
18 main extension projects, which are company funded. This item generally includes all
19 public hydrants.

20 **Item F**

21 This investment plan item includes the replacement of leaking, failed or obsolete
22 hydrants, including hydrant assemblies and valves that are company funded.

1 **Item G**

2 This investment plan item includes the installation of new water services or
3 improvements, including corporation stops and shut-off valves.

4 **Item H**

5 This investment plan item includes the replacement of water services or improvements,
6 including the replacement of corporation stops, or shut-off valves. This budget item
7 shows a reduction from previous years because services previously scheduled in
8 conjunction with scheduled main replacement projects are now budgeted along with the
9 main replacement project in Item B, C or D.

10 **Item I**

11 This investment plan item includes the installation of new meters and meter settings.

12 **Item J**

13 This investment plan item includes the replacement or improvement of existing customer
14 meters and meter settings with or without technology changes. Again, the cost of
15 replacing the meter setting in conjunction with a main replacement project that may have
16 been previously budgeted separately is now budgeted under Item B, C or D.

17 **Item K**

18 This investment plan item is for the replacement of existing Information Technology
19 System Equipment and systems due to failure or obsolescence and new items to achieve
20 efficiency or address new requirements.

21 **Item L**

22 This investment item is a new division for the installation or replacement of existing
23 SCADA Equipment and Systems. The acronym SCADA can be defined in several
24 slightly different ways, but TAW generally prefers the definition as System Control and

1 Data Acquisition, which is the computerized system for monitoring and operating the
2 treatment plants and network facilities. AWW believes it more appropriate to further
3 subdivide these important investment costs from general Information Technology
4 Equipment costs.

5 **Item M**

6 This investment item is a division for Security Equipment and Systems that is separate
7 from generally office and Operation Center expenses. This may include fencing, alarm
8 systems, cameras, barricades, electronic detection or locking systems, software, or other
9 assets related directly to security.

10 **Item N**

11 This investment plan item is for the replacement or improvement of building systems,
12 equipment or furnishings for offices and operations centers, including copy machines, fax
13 machines, and phone systems.

14 **Item O**

15 This investment plan item is for purchase or replacement of vehicles, including utility
16 trucks, cars and light and medium trucks and accessories.

17 **Item P**

18 This investment plan item is for the replacement or purchase of construction, shop,
19 garage, meter reading, and storeroom equipment.

20 **Item Q**

21 This investment plan item is for the new purchase or replacement of existing components
22 of water supply water treatment, water pumping, water storage, and water pressure
23 regulation facilities, including associated building components and equipment.
24 Replacements may be planned or made because of failure, or may include improvements.

1 This item now also includes laboratory equipment and replacement of filter media used in
2 the treatment process if capitalized.

3 **Item S**

4 This investment item is for preliminary engineering studies primarily used for planning
5 purposes. At the initiation of a project, these capital dollars are transferred to the
6 appropriate construction project. If no project is developed as a result of the study, the
7 expenditures are then transferred from Construction Work in Progress (“CWIP”).
8 Additionally, the process includes investment plan items for capitalized tank painting.
9 However, TAW does not capitalize tank painting, and this line is used strictly for capital
10 improvements at the tanks as necessary.

11 **Centrally Sponsored Projects**

12 **CS-2602-1, CS-2602-3, CS-2602-4 Business Transformation**

13 This is for the design and the implementation of systems that American Water uses to
14 support many of our processes. It is broken into three projects representing the major
15 components, but is all part of the overall project. These systems are currently at the end
16 of their useful life cycle. They were designed to accommodate a much smaller customer
17 base than the company now serves and are increasingly costly and more difficult to
18 maintain and support since the vendors have issued newer versions that are not
19 compatible with our current systems. These estimated expenditures are \$2,629,512 in
20 2012 and \$1,183,561 in 2013.

21 **Investment Projects**

22 These projects are for facilities that are substantial in dollar amount.

1 **IP-2602-34 Citico Plant Improvements Phase 1B**

2 This project will include the upgrade of the existing 10 mgd Basin 3 with a completely
3 new structure to 28 mgd to increase a total upgraded plant capacity of 65mgd (with either
4 basin 1 or 2 on stand-by). The upgrade will include the addition of new flocculators and
5 plate settlers to improve basin performance and increase capacity. In addition, new sludge
6 collection equipment will be installed to allow for sludge disposal from the new basin 3.
7 \$180,000 is projected in 2013 to begin design work.

8 **IP-2602-6 Wastewater Treatment & Handling Improvement**

9 This project will include the installation of a new wastewater thickener above the 100-
10 year flood elevation in the vicinity of Clearwell #2. The project will replace the existing
11 sludge thickening tank, which floods frequently and renders solids handling within the
12 plant unavailable. This results in the potential interruptions in operations. \$400,000 is
13 projected in 2013.

14 **IP-2602-7 Convert ER Reservoir to Pump Storage**

15 This project will include the installation of a booster to convert the East Ridge Reservoir
16 to pumped storage. With the additional Jenkins road storage that was built to meet current
17 and future equalization and fire protection needs, the effectiveness of the existing East
18 Ridge Reservoir is limited and not fully utilized. Additional hydraulic head (pressure)
19 will be needed to fill the Jenkins road tank without submerging the reservoir. The
20 proposed project will include the installation of two pumps; each rated at 2,000 gpm and
21 quipped with VFDs. It is a projected \$250,000 in 2013.

22 **IP 2602-35 Filter House #2 Roof Replacement Project**

23 This project is for the design and replacement of the roof over the existing filters that are
24 located at the treatment facility located on Riverside Drive. A roof evaluation report

1 revealed a significant amount of problems from water infiltration at the parapet wall-roof
2 interface. The existing structure was experiencing roof deck decay, loose bricks along the
3 top of the interior and exterior wall, rusting trusses, and roof drainage problems due to
4 undersized drain spouts. The original roof system consisted of a five layered roof system.
5 Upon inspection, it was determined that 3 of the 5 layers contained asbestos. Knowing
6 that further deterioration could allow a potential contamination of the water filters, a
7 replacement of the entire roof system was undertaken. This project includes the
8 replacement of the existing roof system with a new fully adhered EPDM membrane roof
9 system (8,855 square feet), polyiso insulation, drains, down spouts and gutters, repainting
10 of the existing structural steel trusses components. The project will enable significant
11 extension of the useful life of the roof structure and the filter building facility as a whole.
12 The project will be completed in 2012 for \$410,118.

13 **IP-2602-4 6,000 linear feet of 24" Ringgold Rd. under I-75 Water Main**

14 This project includes the installation of approximately 6,000 feet of 24-inch ductile iron
15 main under I-75 for service reliability to areas south of Ringgold Road and Catoosa
16 County. This will also alleviate water shortages to customers in those areas during high
17 demand periods, improve operating pressures to East Ridge customers, and improve fire
18 protection service in that pressure zone. This project is scheduled to begin in 2012 and be
19 completed in 2013. The project is projected to have \$275,000 spent in 2012, and
20 \$1,800,000 in expenditures in 2013 for a total project cost of \$2,100,538.

21 **IP-2602-16 Meter Shop Building Addition**

22 This project is for the design and construction of an addition to the current meter shop
23 that will allow all of the management personnel to transfer to that office. This is
24 necessary because the lease on the current building on Broad Street will expire in 2013

1 and the new building owner has need for the space currently occupied by TAW. The
2 projected expenditure is \$750,000 in 2013 and the project will be completed in 2013.

3 **IP-2602-19 NRW Pressure Reduction**

4 This project is based on a non-revenue water loss reduction strategy analysis. The
5 analysis had a number of recommendations to address and reduce non-revenue water and
6 is as discussed in previous cases. Two of the five recommended strategies were sub-
7 metering zones and creating reduced pressure zones within the system. The
8 improvements will include installing flow meters at 8 pumping stations and 3 pressure
9 reduction stations on the St. Elmo and Lookout Mountain pressure zones. These
10 improvements will facilitate detailed monitoring of flows in and out of sub metering
11 zones, segment these zones to cut down on duration of leakage during emergency main
12 breaks and reduce the potential for catastrophic breaks and leaks in high pressure zones.
13 The project cost estimate is \$100,000 in 2012 and completed in 2012.

14 **IP-2602-22 TAW GIS DATA CONVERSION**

15 This project is the implementation of a Geographic Information System, which will
16 greatly enhance the ability to retrieve information and track assets in the distribution
17 system. It has a projected cost of \$175,000 in 2012.

18 **Q. ARE THERE ANY PROJECTS UNDER THE RECURRING PROJECTS THAT**
19 **YOU WANT TO DISCUSS?**

20 **A.** Yes. Under Item F in 2012, TAW is doing a large project to replace a number of valves.
21 This project will replace 23 inoperable valves, 16-inch in diameter, many of which have
22 been in the ground for sixty years or more. These valves are on critical and large
23 transmission mains and are essential to the control of flow through the system and the
24 ability to bypass and isolate sections of the system during main breaks and system

1 maintenance. The replacement is projected to have \$1,000,000 spent in 2012. Areas
 2 identified for the project are:

	Valve #	Size	Opens	Date Installed	Address	Age in Yrs
1	8122	16	R	Dec-57	White Oak N. from Memorial Dr.	54
2	18493	16	R	A-7558	Memorial Dr.	N/A

3

4 There are two are two additional significant projects under item Q:

1 **Clearwell #2 Tank Rehabilitation**

2 The tank is located on the northwest corner at the treatment facility off of Riverside Drive
3 with a capacity of 1,820,000 gallons. The tank is made of welded steel with diameter of
4 94 ft and height of 35 ft and is in need of interior and exterior repairs to address structural
5 and operational deficiencies. This project will include structural steel work, replacement
6 of tank appurtenances, and blasting and recoating of the tank. The rehabilitation project
7 will enable significant extension of the useful life of this water storage facility to provide
8 disinfection contact time and meet service area maximum day peak hour demands and
9 fire flow needs. The project is projected to have \$870,000 spent in 2012.

10 **Aldrich Units 1 and 2 Filter Improvements**

11 This project involves the replacement of damaged Robert’s bottoms and dislodged toggle
12 bolts in the existing monolithic wheeler underdrains. In addition, improvements will
13 include replacement of filter media and Granular Activated Carbon (“GAC”) and the
14 installation of a filter monitoring system which will be integrated into the existing
15 backwash flow control system and SCADA. The project is projected to have \$500,000
16 spent in 2012.

17 **Q. ARE THERE PROJECTS PLANNED AND CONSTRUCTED BY OR ON**
18 **BEHALF OF MUNICIPALITIES, HIGHWAY DEPARTMENTS, CITIES, OR**
19 **OTHER ENTITIES WHICH REQUIRE FUNDING FOR REPLACEMENT OR**
20 **RELOCATION OF EXISTING INFRASTRUCTURE FOR 2012 AND 2013?**

21 A. Yes. As in past years and addressed in past rates cases, there are ongoing road and
22 highway projects, storm water and sewer enhancement/replacements, and street
23 rehabilitations including street widening, sidewalks, curbs and gutters, paving, and other
24 projects that require TAW to undertake underground water utility asset relocation.

1 Several of these projects are federally or state funded highway projects by the Tennessee
2 Department of Transportation (“TDOT”). These projects require the Company to relocate
3 or replace existing infrastructure within the public right of way or in existing easements
4 where our water utility assets conflict with the proposed work. In the attrition year
5 December 2012 through November 2013, some of these projects will be reimbursable
6 through state, local, or federal project funds related to utility relocation projects or from
7 federal stimulus funding or local matching funds. However, many projects may not be
8 reimbursable under TDOT guidelines. For instance, if a TDOT project is constructed in
9 conjunction with a participating municipality and the municipality does not contribute
10 matching funds to TDOT for utility relocation, Company funding of the water facilities
11 relocation becomes necessary. Similarly, the cost TAW incurs to design the relocation of
12 our facilities is often not reimbursable from TDOT. In addition to highway projects, some
13 of the cities we serve are undertaking street, sidewalk and sewer improvements that
14 require funding for relocation or renewal of our infrastructure grid. In addition, we have
15 been notified of a relocation project in Chattanooga as part of the Shallowford Road from
16 Gunbarrel Rd to Jenkins Rd road widening project, which is being coordinated with
17 TDOT as construction schedule is being dictated by the state. Completed and ongoing
18 projects under construction include:

19 **Completed Projects**

20 Chapman Road 12" Main Relocation

21 Briarwood Circle 6" Main Relocation

22 Shallowford Road at Jenkins Road Intersection Main Relocation

23 Harbor Hills Road 6" Main Relocation

24 Old Pineville Road 8" and 12" Main Relocation

1 **Projects Under Construction**

2 Spears Avenue between Bell Street and Lawn Street - 2200' Main Relocation

3 Jersey Pike at Oakwood Drive Intersection Main Relocation

4 Shallowford Road between Jenkins Road and Gunbarrel Road Relocation

5 **Shallowford Road Main Relocation (From Gunbarrel rd to Jenkins Road)**

6 The City of Chattanooga in conjunction with TDOT is widening Shallowford
7 Road from Gunbarrel Road to Jenkins Road. As part of the road widening project
8 TAW is required to relocate its facilities that will be in conflict with the road
9 project. As such this project was initiated to include relocation of approximately
10 4,960 feet of existing 12–inch water main and related facilities. The new 12-inch
11 water main will continue to provide reliable water service and fire-flows to our
12 customers in the affected areas. The project is projected to have \$500,000 spent in
13 2012 under recurring project Item B.

14 **Q. PLEASE DISCUSS THE INVESTMENTS THE COMPANY MADE UNDER THE**
15 **MAIN REPLACEMENT PROGRAM IN 2011.**

16 A. During the 2011, TAWC spent \$1.8 million to replace approximately 19,800 feet of 2-
17 inch and 2.5-inch diameter mains, many of which were installed in the 1920s. The focus
18 of these projects is on strategically replacing cast iron and galvanized steel water mains in
19 different sections of the service area as the pipelines reach the end of their economic
20 useful life and to meet the service needs of our customers. Additionally, existing 2-inch
21 and 2.5-inch diameter water mains in the distribution system constituents 17% of the total
22 pipe represented on average approximately 70% of the actual main breaks of the system
23 from 1989 through 2006 (Source: Black & Veatch Report - 2007). These improvements

1 will provide adequate and reliable service to customers and adequate flows for fire
2 protection. Projects implemented in 2011 included:

Catoosa Street	Install 710' of 6" main and fire hydrant
CharMac Lane	Install 482' of 6" main and 303' of 4" main and fire hydrant
Parksdale Avenue	Install 475' of 6" main
Dunlap Avenue	Install 295' of 6" main
Mississippi Avenue	Install 730' of 4" main
Clemons Road	Install 635' of 8" main
David Street	Install 327' of 4" ductile iron main
Key West Avenue	Install 1,450' of 6" main
Wilcox Road	Install 420' of 4" ductile iron main
West End Avenue	Install 755' of 6" main
Roanoke Avenue	Install 385' of 4" main
Liberty Street	Install 1241' of 6" main and fire hydrant
Kelly Ferry Road	Install 1,400' of 6" main
Granada Drive	Install 1645' of 6" main
Elfin Road	Install 1,867' of 6" main
Valley View Road	Install 935' of 6" ductile iron main
Westonia Drive	Install 530' of 6" main and 740' of 4" main and fire hydrant
Summit Avenue	Install 1,370' of 6" main
Dorisa Avenue	Install 325' of 6" main
Fair Oak Place	Install 4" and 6" MAIN

3 **Q. HAS THE COMPANY CHANGED THE METHODOLOGY IN CALCULATING**
4 **REQUESTED RATE BASE FROM THE APPROACH ADVOCATED IN ITS**
5 **LAST CASE?**

6 A. No. The Company utilized a thirteen month average rate base calculation as approved in
7 Case No. 06-00290. Shown on Petitioner's Exhibit RB-1-Summary-LCB is the rate base
8 for the historical test year totaling \$124,500,927. In Column No. 2, the Company has

1 summarized its requested ratemaking adjustments to rate base totaling \$11,319,328. In
2 column 3, the Company has shown its requested rate base of \$135,820,256.

3 **Q. PLEASE DESCRIBE THE UTILITY PLANT IN SERVICE (UPIS) COMPONENT**
4 **THAT IS INCLUDED IN THE RATE BASE.**

5 A. UPIS includes the original cost of all land, land rights, easements, structures and
6 improvements, together with equipment in service at December 31, 2011. The Utility
7 Plant balance was calculated through November 30, 2013, by adding net additions and
8 retirements through the end of the attrition period. The 13 month average of the Utility
9 Plant balances from November 1, 2012 through November 30, 2013 was calculated to
10 arrive at the utility plant balance for the attrition period. The Utility Plan balances and
11 the 13-month average are detailed on Petitioner's Exhibit RB-2-UPIS-LCB. The monthly
12 in-service additions and monthly retirements which support these balances are also
13 detailed by project and/or account. The in-service additions are detailed on Schedule RB-
14 2.1 and the retirements on Schedule RB-2.2. These additions and retirements are
15 addressed in greater detail later in my testimony.

16 **Q. PLEASE DESCRIBE THE CONSTRUCTION WORK IN PROGRESS (CWIP)**
17 **INCLUDED IN THE RATE BASE.**

18 A. Certainly. This amount, shown in Petitioner's Exhibit RB-3-CWIP-LCB, is the
19 December 2011 actual balance adjusted for construction expenditures and transfers to
20 utility plant that occur through the attrition year. The 13-month average CWIP is
21 determined by totaling the monthly balances for November 1, 2012 to November 30,
22 2013 and dividing by 13 months. The monthly construction expenditure activity is
23 detailed by project on Schedule RB-3.1, and the monthly transfers to utility plant are also

1 detailed by project, on Schedule RB-2.1. This latter schedule is the same monthly in-
2 service schedule that supports the UPIS balances.

3 **Q. WHAT IS WORKING CAPITAL AS A RATE BASE ADJUSTMENT?**

4 A. Working capital is included in a utility's rate base to help compensate investors for the
5 lag between the time utility service is rendered to the customer and the time it takes to
6 collect revenues from the customer to pay for the service. In other words, investors had
7 to provide "upfront" capital to fund the daily operations of the business before customers
8 pay their bills. The working capital calculation can also properly reflect the impact of the
9 delay in receiving revenues from customers and the disbursement of cash for expenses.

10 **Q. WHAT LEVEL OF WORKING CAPITAL DID THE COMPANY INCLUDE IN**
11 **ITS REQUESTED RATE BASE?**

12 A. The calculated test year working capital is \$3,699,987. The Company is requesting
13 working capital of \$3,188,192. This amount was determined in a manner consistent with
14 the TRA's ruling on working capital in the 2010 Rate Case. The Company's working
15 capital calculation is included in the Company's filing on Petitioner's Exhibit RB-8-
16 Working Capital-LCB which is comprised of two schedules. The first, Schedule RB-8.1,
17 is the Test Year Working Capital and the second, Schedule RP-8.2, is the Attrition Year
18 Working Capital. The change is based on the reduction of other deferred debits, and a
19 reduction in the Lead/Lag Study offset by an increase in Incidental Collections.

20 **Q. WHAT ARE THE COMPONENTS OF WORKING CAPITAL?**

21 A. The Company's Working Capital includes the thirteen month average balance for the
22 attrition year for Prepaid Taxes, Materials and Supplies, Deferred Regulatory Expense,
23 Unamortized Debt Expense, Other Deferred Debits, and an offset for Incidental

1 Collections. The Working Capital also includes a provision determined by the Lead/Lag
2 Study prepared by the Company for this case. The Lead/Lag Study will be provided with
3 the Company's working papers on rate base.

4 **Q. HOW ARE THE VARIOUS COMPONENTS OF WORKING CAPITAL**
5 **CALCULATED?**

6 A. Prepaid Taxes represent an average of the thirteen month ending balances for the test year
7 ending December 31, 2011. This amount is \$577,696. Materials and Supplies represent
8 an average of the thirteen month ending balances for the attrition year ending November
9 30, 2013, or \$301,364. This assumes an average three year balance of materials and
10 supplies carried through the attrition period.

11 Deferred Regulatory Expense consists of a thirteen month average of the
12 unamortized balances at November 30, 2013, the attrition year end. The unamortized
13 balances are from the 2006, 2008, 2010 rates cases and an estimate for the 2012 rate case.
14 The amounts included in rate base include \$1,146,262 for rate case expense, \$8,838 for
15 the cost of service study expense, and \$1,449 for depreciation study expense, resulting in
16 a total Deferred Regulatory Expenses balance of \$1,138,715. Additional components are
17 described further below.

18 **Unamortized Debt Expense**

19 Unamortized Debt Expense was calculated by starting with December 31, 2011
20 unamortized debt expense, and subtracting the cumulative amortization to arrive at the
21 balance at the end of the attrition year. If there had been any new debt issuance, the
22 expense would have been added in. There will be a new debt issuance that is projected to
23 take place in November, 2013. The thirteen month average results in a balance of
24 \$885,503.

1 **Other Deferred Debits**

2 Other Deferred Debits consist of two items which include the thirteen month average of
3 the unamortized transition costs of the Customer Call Center totaling \$22,641 and the
4 unamortized transition costs of the Shared Services Center in the amount of \$8,483,
5 resulting in a total Other Deferred Debits balance of \$31,124. This is a reduction of
6 \$249,859 from the test year period.

7 **Lead-Lag Study**

8 The Company is utilizing a Lead/Lag Study that was performed based on historical data
9 for the twelve months ending December 31, 2011. The Lead/Lag Study will be discussed
10 below.

11 **Incidental Collections**

12 Incidental Collections are comprised of sales and use tax performed on behalf of taxing
13 authorities. This amount totals \$116,192. This is a significant reduction based on the
14 elimination of third party sewer billings.

15 The total Working Capital Requirement is calculated \$3,188,192. The detailed
16 calculation for each component is in the workpapers.

17 **Q. PLEASE DISCUSS THE LEAD/LAG STUDY.**

18 A. The Company has performed a Lead/Lag Study utilizing the attrition year expenses and
19 the lead/lag days determined in the lead/lag days study. The lead/lag calculation utilized
20 in this case came from a study performed this year. The Lead/Lag Study can be found in
21 the workpapers.

1 **Q. HOW WAS THE LEVEL OF LEAD/LAG WORKING CASH REQUIREMENT**
2 **DETERMINED?**

3 A. The determination of the amount of lead/lag working cash for a specific item is a
4 complex calculation. The daily Lead/Lag Factor is calculated by starting with Revenue
5 Lag Days, subtracting Expense Lag Days and Check Clear Time Days for each expense
6 category to arrive at the Net Lag Days. These Net Lag Days are divided by 365 (number
7 of days per year) to arrive at the Lead/Lag Factor. This Lead/Lag Factor is then
8 multiplied by the annual amount of attrition year expenses per expense category.

9 **Q. WHAT IS THE LEVEL OF ACCUMULATED DEPRECIATION IN THIS CASE?**

10 A. The accumulated depreciation balance as shown on Petitioner's Exhibit RB-6-
11 Accumulated Depreciation-LCB begins with the historical test year balance as of
12 December 31, 2011. This test year balance excludes the amortization of the capital lease
13 and the accumulated depreciation of the AFUDC regulatory asset, and is reduced by the
14 accumulated cost of removal. Accumulated depreciation and accumulated cost of
15 removal was then calculated through the end of the attrition period utilizing current
16 depreciation rates from the 2008 Depreciation Study. The monthly calculation of
17 depreciation is shown on Schedule EXP-16.1 and the monthly cost of removal is
18 calculated on Schedule EXP-16.2.

19 Additional monthly adjustments were made to the accumulated depreciation to
20 account for plant retirements, salvage credits and the cost of removals. Under utility
21 plant accounting, when an asset is retired, the UPIS is reduced by the original cost of the
22 asset and the accumulated depreciation account is reduced by an equal amount. The
23 retirements are detailed on Schedule RB-2.2. When scrap value is obtained from retired

1 plant, the salvage amount is added to the depreciation liability. The monthly average for
2 salvage credits is shown on Schedule RB-6.1. The cost of removal is based on an
3 average of the past two years by month and is also shown on Schedule RB-6.1.

4 The attrition year accumulated depreciation was then calculated by averaging the
5 month end accumulated depreciation balances from November 1, 2012 to November 30,
6 2013. Depreciation is calculated at \$81,011,226.

7 **Q. WERE THERE ANY DEPRECIATION RATES THAT VARIED FROM THE**
8 **2008 DEPRECIATION STUDY?**

9 A. Yes. The proposed implementation of the BT project represents a significant capital
10 investment in large software components. While AWW has previously invested in other
11 business software systems, they have either come with significant individual
12 programming or implemented on a much smaller scale. TAW does not believe that any
13 of the current utility plant accounts adequately represent the type of investment or
14 expected service life. Therefore, the investment has been allocated to an unused utility
15 plant account 340315 and assigned a depreciation rate of 10%. This assumes a 10-year
16 life of the software system. Considering the current systems are 12 and 15 years old, but
17 so antiquated they are very inefficient, this is an appropriate rate.

18 **Q. WHAT LEVEL OF ACCUMULATED DEFERRED INCOME TAX DID THE**
19 **COMPANY DEDUCT FROM RATE BASE?**

20 A. The Company deducted \$23,407,464 of accumulated deferred income taxes in arriving at
21 its rate base requested in this case. The determination of this amount is shown in
22 Petitioner's Exhibit RB-9-Deferred Taxes-LCB.

1 **Q. HOW DID THE COMPANY DETERMINE THIS AMOUNT?**

2 A. The amount consists of Accumulated Deferred Income Tax (“ADIT”) balances offset by
3 SFAS 109 regulatory assets recorded by the Company to account for timing differences
4 between book depreciation and accelerated tax depreciation per the Company’s books as
5 of the test year ended December 31, 2011. This presentation is consistent with methods
6 used by the TRA in determining the amount of ADIT to be deducted from rate base in its
7 Final Order dated April 27, 2012 in Docket No. 10-00189.

8 **Q. WHAT FACTORS WERE CONSIDERED IN DETERMINING THE AMOUNT**
9 **OF ADIT FOR THE CURRENT CASE?**

10 A. There was a significant disagreement between the Company and the consumer Advocate
11 and Protection Division (“CAPD”) in the Company’s 2008 Rate Case, particularly
12 concerning the impact of SFAS 109 on both the accumulated deferred income taxes and
13 the amount of current deferred income tax expense. In the Company’s opinion, the TRA
14 recognized SFAS 109 provisions as they related to accumulated deferred income taxes,
15 but failed to properly recognize SFAS 109 regulatory asset amortizations in the deferred
16 income tax expense. SFAS 109 regulatory assets arise under the provisions of SFAS 71,
17 which allows regulatory assets to be established so that temporary timing differences can
18 be properly included for rate making purposes over time, if future rate recovery is
19 probable. Because the TRA did not recognize the inclusion of regulatory asset
20 amortization in the determination of ADIT, CAPD did not feel compelled to do so either.
21 In response to this disagreement, the Company in its 2010 rate case calculated both its
22 accumulated deferred income taxes and deferred income tax expense on a consistent basis
23 using only the timing differences in tax and book depreciation which are required to be

1 normalized by IRS regulations, specifically only those differences arising from post-1980
2 assets. In addition, the Company also included a calculation of accumulated deferred
3 income tax and current deferred income tax expense related to a tax accounting change
4 governing the current deduction of certain expenditures for repairs and replacements of
5 plant property. This calculation method resulted in ADIT that was significantly lower
6 than ADIT recorded on the Company's books as of the test year date for the 2010 case.

7 **Q. HOW DID THE CAPD RESPOND TO THE COMPANY'S CALCULATION OF**
8 **ADIT IN THE 2010 RATE CASE?**

9 A. In its direct testimony, the CAPD disagreed with the Company's method of calculating
10 ADIT in the 2010 case because the method ignored book balances for ADIT as the
11 starting point for a forecast and limited temporary differences between book and tax
12 depreciation amounts to post-1980 assets only. The CAPD then forecasted ADIT by
13 using actual book balances as of September 30, 2010 and projected these balances to the
14 attrition year date of December 31, 2011. The forecasted ADIT balances did not include a
15 reduction for the SFAS 109 regulatory asset amortizations in its original direct testimony
16 because the TRA had yet to formally recognize the inclusion of regulatory asset
17 amortization in the determination of ADIT in any previous rate order. However, the
18 SFAS 109 regulatory asset amortizations were eventually included in its amended direct
19 testimony calculation of ADIT. The CAPD also included the tax effect of forecasted
20 temporary differences between book and tax depreciation, a FIN 48 adjustment related to
21 the new tax treatment of repair and replacement expenditures, and then calculated a 13-
22 month average of ADIT. The CAPD's resulting ADIT under this method was
23 significantly higher than the ADIT amount proposed by the Company.

1 **Q. WHAT WAS THE TRA’S FINAL RESOLUTION OF THE DISAGREEMENT IN**
2 **THE 2010 RATE CASE?**

3 A. In its Final Order for Docket No. 10-00189 dated April 27, 2012, the TRA recognized
4 that CAPD’s amended testimony did not reduce ADIT by the SFAS 109 regulatory
5 assets, and pronounced the following:

6 The TRA, therefore, agrees with both TAWC (Tennessee
7 American Water Company) and the CAPD that, consistent with
8 SFAS 109 and SFAS 71, regulatory asset accounts should be
9 recognized when computing ADIT, and adopts the SFAS 109
10 approach to calculating income taxes, which recognizes regulatory
11 assets in determining the ADIT balance. The TRA also agrees with
12 TAWC that FIN 48 amounts represent a tax that the Company
13 owes, with interest, as to previously filed tax returns.¹

14 The TRA then adopted an ADIT amount equal to the Company’s SFAS 109
15 ADIT offset by the SFAS 109 regulatory assets per books as of September 30, 2010. The
16 date is significant in that in its original direct testimony, the CAPD asserted that a more
17 appropriate test year date for the 2010 rate case would be September 30, 2010 (rather
18 than March 31, 2010) in an effort to eliminate outdated financial information and to
19 shorten the forecast window to the attrition year date of December 31, 2011.

20 **Q. WHAT ARE THE OTHER COMPONENTS OF RATE BASE?**

21 A. **Utility Plant Capital Lease**

22 This is the plant associated with the office building on Broad Street in Chattanooga. The
23 original cost of the lease is \$1,590,500, which remains unchanged through both the test
24 and attrition years.

¹ Order, Docket 10-10-00189, Page 118 (April 27, 2012)

1 **Accumulated Amortization of Utility Plant Capital Lease**

2 This is the accumulated amortization of the Utility Plant Capital Lease. The balance of
3 this category represents an average of the thirteen month end balances from November 1,
4 2012 through November 30, 2013. The 13-month average is \$1,576,226 which leaves
5 only \$14,274 of net capital lease in rate base. Monthly amortizations are reflected on
6 Schedule EXP-17.1.

7 **Customer Advances**

8 This is a reduction to rate base for money collected for new mains that are held in an
9 account and refunded to the original customer as new customers tap onto a main. This
10 prevents TAW from investing in speculative developments by having a developer pay the
11 initial investment upfront. But then it recognizes the benefit of the investment based on a
12 new customer by refunding a portion of the amount by contract for each bona fide new
13 customer TAW receives. The amount of advances was projected by month based on an
14 average of the previous two years, by utility plant account. Customer Advances are
15 detailed on Petitioner's Exhibit RB-10-Customer Advances-LCB. The monthly advances
16 and refunds that support these calculations are found on Schedules RB-10.1 and RB-10.2
17 respectively. The attrition year customer advances balance is based on an average of the
18 thirteen-month end balances from November 2012, through November 30, 2013. The
19 balance is \$4,473,724.

20 **Contribution in Aid of Construction**

21 This item is a reduction in rate base that recognizes the value of mains, meters, services
22 or hydrants that are paid for by a third party and thus are not an investment by TAW, but
23 fully owned and maintained by the Company. An example would be a portion of main
24 paid for by a developer that is not eligible for refunds under the contract, or a portion of

1 main that was relocated to accommodate road alignment changes and the relocation was
2 funded by the TDOT or a local municipality. The balance in the attrition year is
3 \$12,466,115.

4 CIAC balances are calculated by adjusting the prior months' account balances for
5 activity related to contributions received, and CIAC amortizations. Both of these types of
6 activity are detailed by month on Schedule RB-11.1. The resulting CIAC balances are
7 shown by Month and account on Petitioner's Exhibit RB-11-CIAC-LCB. The attrition
8 year CIAC balance is then is calculated as an average of the thirteen month end balance
9 for the attrition year ending November 30, 2013. The balance is \$12,466,115 and is an
10 increase from the test year of \$1,854,701.

11 **Unamortized Investment Tax Credit**

12 This item is calculated as an average of the thirteen month end balance of unamortized
13 investment tax credit at the end of the attrition year November 30, 2013. This calculation
14 is similar to previous rate cases. The amount in the attrition year is \$20,965. The
15 monthly balances are detailed on Schedule EXP-17.1.

16 **Utility Plant Acquisition Adjustment**

17 This item is calculated as an average of the thirteen month end balance of unamortized
18 acquisition adjustment for the acquisition of the Suck Creek system. The amount in the
19 attrition year rate base forecast is a reduction to rate base of \$39,920.17. The monthly
20 balances are detailed on Schedule EXP-17.1.

21 **Q. DOES THIS CONCLUDE YOUR DIRECT TESTIMONY?**

22 A. Yes.

STATE OF KENTUCKY

COUNTY OF FAYETTE

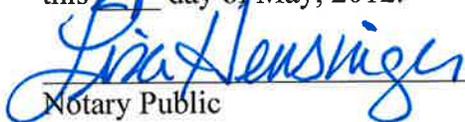

BEFORE ME, the undersigned authority, duly commissioned and qualified in and for the State and County aforesaid, personally came and appeared Linda Bridwell, being by me first duly sworn deposed and said that:

She is appearing as a witness on behalf of Tennessee-American Water Company before the Tennessee Regulatory Authority, and if present before the Authority and duly sworn, her testimony would set forth in the annexed transcript.

Linda Bridwell

Sworn to and subscribed before me
this 24th day of May, 2012.
