Total	**$ 597,241**	**$ 165,640**	**$ 514,795**	**$ 1,277,676**

Outside Service Provider Hourly Rates

The next step in the cost comparison was to obtain the average billing rates for each outside service provider. The source of this information and the determination of the average rates are described in the paragraphs that follow.

It should be noted that professionals working for three of the five outside provider categories may be licensed to practice by state regulatory bodies. However, not every professional working for these firms is licensed. For instance, among Kentucky certified public accounting firms, only more experienced staff are predominantly CPAs (see table below). Some Service Company employees also have professional licenses. Thus, it is valid to compare the Service Company's hourly rates to those of the outside professional service providers included in this study.

	Firm Size		
Position	Small	Medium	Large
Partners/Owners	97%	98%	99%
Directors (11+ years experience)	na	100%	86%
Managers (6-10 years experience)	na	72%	88%
Sr Associates (4-5 years experience)	na	25%	69%
Associates (1-3 years experience)	na	0%	24%
New Professionals	na	8%	1%

Source: AICPA's National PCPS/TSCPA Management of an Accounting Practice Survey (2008)

Attorneys

The Kentucky State Bar does not survey its members as to their hourly billing rates. In addition, publicly available billing rate information could not be found for Kentucky attorneys. Therefore, an estimate of Kentucky attorney rates was developed from two surveys conducted by Lawyers Weekly in the states of Michigan and Massachusetts. As presented in Exhibit 5, the average rate for each firm was adjusted for the cost of living differential between its location and Lexington, Kentucky. The Lawyers Weekly surveys included rates in effect at December 31, 2007. Thus, the 2007 average rate was escalated to March 31, 2009—the midpoint of the test year ended September 30, 2009.

Management Consultants

The cost per hour for management consultants was developed from a 2009 survey performed by the Association of Management Consulting Firms—an industry trade organization. The survey includes rates that were in effect during 2008 for firms throughout the United States. Consultants typically do not limit their practice to any one region and must travel to a client's location. Thus, the U.S. national average is appropriate for comparison.

The first step in the calculation, presented in Exhibit 6, was to determine an average rate by consultant position level. From these rates, a single weighted average hourly rate was calculated based upon the percent of time that is typically applied to a consulting assignment by each consultant position level. The 2008 average rate was escalated to March 31, 2009—the midpoint of the 12 months ended September 30, 2009.

V – Question 2 – Provision of Services at the Lower of Cost or Market

Certified Public Accountants

The average hourly rate for Kentucky CPAs was developed from a 2008 survey performed by the American Institute of Certified Public Accountants (AICPA). The Kentucky version of this survey was used to develop hourly rates for member firms in Kentucky.

As shown in Exhibit 7, a weighted average hourly rate was developed based on a set of accountant positions and a percent of time that is typically applied to an accounting assignment. This survey includes rate information in effect during 2007. Thus, the data had to be escalated to March 31, 2009—the test year's midpoint.

Professional Engineers

The Company provided hourly rate information for outside engineering firms that could have been used by KAWC in 2009. As presented in Exhibit 8, an average rate was developed for each engineering position level. Then, using a typical percentage mix of project time by engineering position, a weighted average cost per hour was calculated.

V – Question 2 – Provision of Services at the Lower of Cost or Market

Service Company versus Outside Provider Cost Comparison

As shown in the table below, Service Company costs per hour are considerably lower than those of outside providers.

	12 Months Ended September 30, 2009		
Service Provider	Service Company	Outside Provider	Difference--Service Co. Greater(Less) Than Outside
Attorney	$ 73	$ 253	$ (180)
Management Consultant	$ 189	$ 227	$ (38)
Certified Public Accountant	$ 96	$ 103	$ (7)
Professional Engineer	$ 89	$ 105	$ (16)

Based on these cost per hour differentials and the number of managerial and professional services hours billed to KAWC during the 12-months ended September 30, 2009, outside service providers would have cost $1,409,800 more than the Service Company (see table below). Thus, on average, outside providers' hourly rates are 21% higher than those of the Service Company ($1,409,800 / $6,816,711).

	12 Months Ended September 30, 2009		
Service Provider	Hourly Rate Difference--Service Co. Greater(Less) Than Outside	Service Company Hours Charged	Dollar Difference
Attorney	$ (180)	4,166	$ (748,260)
Management Consultant	$ (38)	7,038	$ (270,282)
Certified Public Accountant	$ (7)	29,356	$ (192,538)
Professional Engineer	$ (16)	12,130	$ (198,720)
Service Company Less Than Outside Providers			$ (1,409,800)

It should be noted that the cost differential associated with using outside providers is even greater because Service Company personnel do not charge for more than 8 hours per day even when they work more. Outside providers generally charge clients for all hours worked. If, for instance, Service Company personnel worked 5% overtime (2 hours) per week on KAWC's behalf, that would have amounted to over 2,600 additional hours of work during the 12 months ended September 30, 2009. Based on the hourly rate differentials above, this overtime would have added another $70,000 to the cost of using outside providers.

If KAWC were to use outside service providers rather than the Service Company for managerial and professional services, it would incur other additional expenses besides those associated with higher hourly rates. Managing outside firms who would perform over 52,000 hours of work (more than 35 full-time equivalents at 1,500 "billable" hours per FTE per year) would add a significant workload to the existing KAWC management team. Thus, it would be necessary for KAWC to add at least one position to supervise the outside firms and ensure they delivered quality and timely services. The individual that would fill this position would need a good understanding of each profession being managed. He/she must also have management experience and the authority necessary to give them credibility with the outside firms. As calculated in the table below, this position would add almost $150,000 per year to KAWC's personnel expenses.

V – Question 2 – Provision of Services at the Lower of Cost or Market

Cost of Adding 1 Professional Position To KAWC's Staff

	Total
New Position's Salary	$ 100,000
Benefits (at 49.4%)	$ 49,400
Office Expenses (15.2%)	$ 15,200
Cost of One Position	$ 149,400

Thus, the total effect on the ratepayers of KAWC of contracting all services now provided by Service Company would be an increase in their costs of $1,559,200 ($1,409,800 + $149,400). Based on the results of this comparison, it is possible to conclude that the Service Company charged KAWC at the lower of cost or market for services provided during the 12 months ended September 30, 2009.

VI - Question 3 - Reasonableness of Customer Accounts Services Costs

Background

Customer Accounts Services covers the following utility functions:

- Customer Call Center – customer calls/contact, credit, order taking/disposition, bill collection efforts, outage calls
- Call Center IT – maintenance of phone banks, voice recognition units, call center software applications, telecommunications
- Customer billing – bill printing, stuffing, and mailing
- Remittance processing – processing customer payments received in the mail
- Bill payment centers – locations where customers can pay their bills in person

It is difficult to compare the cost of the Service Company's customer accounts services-related charges to KAWC with outside providers of the same services because survey data is proprietary and expensive to obtain. For this reason, KAWC's charges from the Service Company for customer accounts services are compared to those of neighboring electric utilities because the data necessary to make such comparison is available to the public.

Neighboring electric utility cost information comes from the FERC Form 1 that each utility must file. FERC's chart of accounts is defined in Chapter 18, Part 101 of the Code of Federal Regulations. FERC accounts that contain customer accounts services-related expenses are Account 903 Customer Accounts Expense – Records and Collection Expense and Account 905 Customer Accounts Expense – Miscellaneous Customer Accounts Expense. Exhibit 9 provides FERC's definition of the type of expenses that should be recorded in these accounts.

In addition to the charges in these FERC accounts, labor-related overheads charged to the following FERC accounts must be added to the labor components of Accounts 903 and 905:

- Account 926 Employee Pension and Benefits
- Account 408 Taxes Other Than Income (employer's portion of FICA)

Comparison Group

Electric utilities included in the comparison group are shown in the table below. These are companies whose FERC Form 1 show amounts for accounts 903 and 905.

Kentucky	• Duke Energy – Kentucky • Kentucky Power	• Kentucky Utilities • Louisville Gas & Electric
West Virginia	• Wheeling Power	
Virginia	• Appalachian Power	• Virginia Electric Power
Ohio	• Cleveland Electric • Columbus Southern Power • Dayton Power & Light • Duke Energy – Ohio	• Ohio Edison • Ohio Power • Toledo Edison
Missouri	• Aquila • Kansas City Power & Light	• Union Electric
Indiana	• Duke Energy – Indiana • Indiana Michigan Power	• Indianapolis Power & Light • NIPSCo
Illinois	• Central Illinois Light • Central Illinois Public Service • Commonwealth Edison	• Illinois Power • Interstate Power & Light • MidAmerica Energy
Tennessee	• Kingsport Power	

Kentucky-American Water Company
FERC Account Descriptions

903 – Customer Records and Collection Expenses

This account shall include the cost of labor, materials used and expenses incurred in work on customer applications, contracts, orders, credit investigations, billing and accounting, collections and complaints.

Labor

1. Receiving, preparing, recording and handling routine orders for service, disconnections, transfers or meter tests initiated by the customer, excluding the cost of carrying out such orders, which is chargeable to the account appropriate for the work called for by such orders.
2. Investigations of customers' credit and keeping of records pertaining thereto, including records of uncollectible accounts written off.
3. Receiving, refunding or applying customer deposits and maintaining customer deposit, line extension, and other miscellaneous records.
4. Checking consumption shown by meter readers' reports where incidental to preparation of billing data.
5. Preparing address plates and addressing bills and delinquent notices.
6. Preparing billing data.
7. Operating billing and bookkeeping machines.
8. Verifying billing records with contracts or rate schedules.
9. Preparing bills for delivery, and mailing or delivering bills.
10. Collecting revenues, including collection from prepayment meters unless incidental to meter reading operations.
11. Balancing collections, preparing collections for deposit, and preparing cash reports.
12. Posting collections and other credits or charges to customer accounts and extending unpaid balances.
13. Balancing customer accounts and controls.
14. Preparing, mailing, or delivering delinquent notices and preparing reports of delinquent accounts.
15. Final meter reading of delinquent accounts when done by collectors incidental to regular activities.
16. Disconnecting and reconnecting services because of nonpayment of bills.
17. Receiving, recording, and handling of inquiries, complaints, and requests for investigations from customers, including preparation of necessary orders, but excluding the cost of carrying out such orders, which is chargeable to the account appropriate for the work called for by such orders.
18. Statistical and tabulating work on customer accounts and revenues, but not including special analyses for sales department, rate department, or other general purposes, unless incidental to regular customer accounting routines.
19. Preparing and periodically rewriting meter reading sheets.
20. Determining consumption and computing estimated or average consumption when performed by employees other than those engaged in reading meters.

Materials and expenses

21. Address plates and supplies.
22. Cash overages and shortages.
23. Commissions or fees to others for collecting.
24. Payments to credit organizations for investigations and reports.
25. Postage.
26. Transportation expenses, including transportation of customer bills and meter books under centralized billing procedure.
27. Transportation, meals, and incidental expenses.
28. Bank charges, exchange, and other fees for cashing and depositing customers' checks.
29. Forms for recording orders for services, removals, etc.
30. Rent of mechanical equipment.

Kentucky-American Water Company
FERC Account Descriptions

905 – Miscellaneous Customer Accounts Expenses

This account shall include the cost of labor, materials used and expenses incurred not provided for in other accounts.

Labor

1. General clerical and stenographic work.
2. Miscellaneous labor.

Materials and expenses

3. Communication service.
4. Miscellaneous office supplies and expenses and stationery and printing other than those specifically provided for in accounts 902 and 903.

VI - Question 3 - Reasonableness of Customer Accounts Services Costs

KAWC Cost per Customer

As calculated below, KAWC's 12 months ended September 30, 2009 customer account services expense per customer was $28.35. The cost pool used to calculate this average includes charges for Service Company services (e.g., call center, billing, payment processing) and postage and forms expenses, which are incurred directly by KAWC. It was necessary to adjust the National Call Center charges because electric utilities experience an average of 2.50 calls per customer compared to American Water's 1.32 calls per customer. Thus, National Call Center expenses had to be increased, for comparison purposes, to reflect its costs at a 2.50 calls per customer level.

Kentucky American Cost Per Customer		Year Ended 9/30/2009 Service Co Charges	Adjustment Fewer Calls For Water Cos. (A)	Adjusted	
Service Company					
Call Centers	Call processing, order processing, credit, bill collection	$ 1,728,850	$ 688,295	$ 2,417,145	
Operating Company	Customer payment processing			$ 151,772	Note B
Operating Company	Postage & forms			$ 784,459	
			Cost Pool Total	$ 3,353,376	
			Total Customers	118,279	
	12 Months Ended September 30, 2009 Cost Per KAWC Customer			**$ 28.35**	

Note A: Adjustment for American Water's fewer calls per customer
This adjustment is necessary because water utilities experience fewer calls per customer than do electric utilities

Call handling expenses		$ 765,328
Electric utility industry's avg calls/customer	2.50	
American Water's avg calls/customer	1.32	
Percent different	90%	90%
Total Adjustment		$ 688,295

Note B: Estimated customer payment processing expenses

Number of customers	118,279
Number of payments/customer/year	12
Total payments processed/year	1,419,348
Bank charge per item	$ 0.1069
Total estimated annual expense	$ 151,772

Electric Utility Group Cost per Customer

Exhibit 10 shows the actual 2008 customer accounts expense per customer calculation for the electric utility comparison group. All of the underlying data was taken from the utilities' FERC Form 1.

VI - Question 3 - Reasonableness of Customer Accounts Services Costs

Summary of Results

As shown in the table below, KAWC's cost per customer within a reasonable range of the average cost of the neighboring electric utility comparison group. It can therefore be concluded that KAWC's 12 months ended September 30, 2009 customer accounts-related expenses, including those of the Alton and Pensacola Call Centers, assigned by the Service Company to KAWC were comparable to those of other utilities.

Average Customer Accounts Expense Per Customer		
Louisville Gas & Electric	$	15.67
Interstate Power & Light	$	15.79
Virginia Electric Power	$	16.15
Monongahela Power	$	16.17
Dayton Power & Light	$	18.51
Ohio Edison	$	19.13
Cleveland Electric Illuminating	$	20.60
Indianapolis Power & Light	$	21.64
Union Electric	$	22.95
Illinois Power	$	23.26
Aquila	$	24.53
Toledo Edison	$	24.81
Central Illinois Public Service	$	25.71
Wheeling Power	$	26.12
Duke Energy Indiana	$	26.22
Comparison Group Average	**$**	**27.07**
Kansas City Power & Light	$	27.15
MidAmerican Energy	$	27.66
Kentucky American Water	**$**	**28.35**
Kentucky Utilities	$	28.42
Indiana Michigan Power	$	29.17
Duke Energy Kentucky	$	29.65
Central Illinois Light	$	30.33
Northern Indiana Public Service	$	30.72
Duke Energy Ohio	$	31.20
Ohio Power	$	31.70
Appalachian Power	$	32.57
Kingsport Power	$	32.60
Columbus Southern Power	$	35.11
Kentucky Power	$	36.02
Commonwealth Edison	$	39.29

VI - Question 4 – Need for Service Company Services

Analysis of Services

The final aspect of this study was an assessment of whether the services that are provided to KAWC by the Service Company would be necessary if KAWC were a stand-alone water utility. The first step in this evaluation was to determine specifically what the Service Company does for KAWC. Based on discussions with Service Company personnel, the matrix in Exhibit 11 was created showing which entity—KAWC or a Service Company location—is responsible for each of the functions KAWC requires to ultimately provide service to its customers. This matrix was reviewed to determine: (1) if there was redundancy or overlap in the services being provided by the Service Company and (2) if Service Company services are typical of those needed by a stand-alone water utility.

Upon review of Exhibit 12, the following conclusions can be drawn:

- The services that the Service Company provides are necessary and would be required even if KAWC were a stand-alone water utility.

- There is no redundancy or overlap in the services provided by the Service Company to KAWC. For all of the services listed in Exhibit 12, there was only one entity that was primarily responsible for the service.

VI - Question 4 – Need for Service Company Services

Governance Practices Associated With Service Company Charges

There are several ways by which KAWC exercises control over Service Company services and charges. The most important of these are described below.

- **President of Regulated Operations Oversight** – The President of Regulated Operations is on the Executive Management Team (EMT) of American Water. This position is responsible for the overall performance of each operating company in American Water. As part of the EMT, the President of Regulated Operations has equal say with other EMT members in major business decisions of American Water and has the ability to monitor Service Company performance quality and spending. The President of Regulated Operations also has dialogue with each operating company president to address local concerns.
- **Divisional Vice President & Treasurer** – The Divisional Vice President and Treasurer of the Eastern Division states is responsible for the financial reporting, performance and internal controls of each of the operating companies in the division. The Vice President and Treasurer monitors the performance and reporting from the Service Company and follows up on instances where the quality and timeliness of services are not as expected. The operating company interacts with the Divisional VP & Treasurer to discuss any concerns with billings, etc.
- **Operating Company Board Oversight** – KAWC's board of directors includes members of American Water's EMT, members of the divisional management team and business and community leaders from outside the Company. KAWC's president is Chairman of the KAWC board. This helps ensure that KAWC's needs are a factor in the delivery of Service Company services.
- **Service Company Budget Review/Approval** – The President of Regulated Operations sits on the Service Company board and that board must formally approve the budget for Service Company charges for the next year. These budgeted charges are consolidated with the operating company's own spending into an overall budget which must be approved by the operating company's board of directors. KAWC's president also sits on the Service Company board.
- **Major Project Review And Approval** – Major projects undertaken by the Service Company must first be reviewed by American Water's Executive Management Team, which includes the President of Regulated Operations. With input from the local presidents and Divisional Vice President & Treasurer, they have the ability to impact all new initiatives and projects before they are authorized.
- **Service Company Bill Scrutiny** – KAWC Finance personnel review the monthly Service Company bill for accuracy and reasonableness on a monthly basis. KAWC's financial manager has dialogue with Shared Services Center office personnel concerning the monthly bill and any mistakes or overcharges are credited on a subsequent billing. The KAWC Finance Manager prepares an actual to budget comparison of management fees each month for use in identifying unusual variances. Service Company actual to budget comparison is included in the monthly FRP. Unusual variances are researched, explanations are provided and any corrections are made, as necessary.
- **Service Company Budget Variance Reporting** – Each month, a summary variance analysis is prepared that explains differences between budgeted and actual Service Company spending. In addition, a more detailed monthly variance report, called the "Statement of Expenses and Billed Charges," is produced by Service Company location and shows actual spending for the month.
- **Operating Company Budget Variance Reporting** – The "Budget/Plan Analysis," produced monthly, has a line item for Management Fees (i.e., Service Company charges). In this way, Service Company budget versus actual charges can be monitored for the month and year-to-date. Additional information exists that allows more detailed analysis of "Divisional" and "Corporate" Management Fees.

- **Capital Investment Management ("CIM") –** CIM is one of American Water's primary business planning processes. It covers capital and asset planning and is employed throughout American Water. CIM provides a full range of governance practices, including a formal protocol for assessing system needs, prioritizing expenditures, managing the capital program, approving project spending, delivering projects and measuring outputs. CIM ensures that:
  - Capital expenditure plans are aligned with the strategic intent of the business
  - The impact of capital expenditure and income plans are fully reflected in operating expense plans
  - The impacts of these plans are understood and affordable, and
  - Effective controls are in place over budgets (through business plans) and individual capital projects (through appropriate authorization thresholds, management and reporting processes).

  The CIM process was designed to optimize the effectiveness of asset investment. The process is managed at two levels for all American Water companies, including all KAWC Operating Units. Monthly meetings of the CIM are held to review capital spending compared to plan, review new project requests, and review updates or modifications to existing projects. The President of KAWC, VP Finance, and others participate as necessary (e.g. KAWC operations managers and Rates Manager) and provide the data used in the monthly review schedules.

Governance Practices Associated With Service Company Charges	

I – Introduction

Purpose of This Study

This study was undertaken to answer four questions concerning the services provided by American Water Works Service Company, Inc. (Service Company) to Long Island American Water Company (LIAW):

1. Are the Service Company's charges to LIAW during 2010 reasonable?

2. Was LIAW charged the lower of cost or market for managerial and professional services provided by the Service Company during 2010?

3. Were 2010 costs of the Service Company's customer accounts services, including those of the National Call Centers, comparable to those of other utilities?

4. Are the services LIAW receives from Service Company necessary?

Study Results

Concerning question 1, the following conclusion was reached:

- The Service Company's 2010 cost per LIAW customer was reasonable compared to cost per customer for electric and combination electric/gas service companies. During 2010, LIAW was charged $55 per customer for administrative and general (A&G)-related services provided by the Service Company. This compares to an average of $95 per customer for service companies reporting to the Federal Energy Regulatory Commission (FERC). Only 2 of the 24 comparison group utility service companies filed a FERC Form 60 for 2009 had a lower per customer A&G cost than LIAW's charges from the Service Company.

Concerning question 2, the following conclusions were drawn from this study:

- LIAW was charged the lower of cost or market for managerial and professional services during 2010.

- On average, the hourly rates for outside service providers are 54% higher than the Service Company's hourly rates.

- The managerial and professional services provided by the Service Company are vital and could not be procured externally by LIAW without careful supervision on the part of LIAW. If these services were contracted entirely to outside providers, LIAW would have to add at least one position to manage activities of outside firms. This position would be necessary to ensure the quality and timeliness of services provided.

- If all the managerial and professional services now provided by the Service Company had been outsourced during 2010, LIAW and its ratepayers would have incurred more than $2,500,000 in additional expenses. This amount includes the higher cost of outside providers and the cost of one LIAW position needed to direct the outsourced work.

- This study's hourly rate comparison actually understates the cost advantages that accrue to LIAW from its use of the Service Company. Outside service providers generally bill for every hour worked. Service Company exempt personnel, on the other hand, charge a maximum of 8 hours per day even when they work more hours. If all overtime hours of Service Company personnel were factored into the hourly rate calculation, the Service

Company would have had an even greater annual dollar advantage than the $2,500,000 cited above.

- It would be difficult for LIAW to find local service providers with the same specialized water industry expertise as that possessed by the Service Company staff. Service Company personnel spend substantially all their time serving operating water companies. This specialization brings with it a unique knowledge of water utility operations and regulation that is most likely unavailable from local service providers.

- Service Company fees do not include any profit markup. Only its actual cost of service is being recovered from LIAW ratepayers.

Concerning question 3, the following conclusion was reached:

- The cost of the Service Company's customer accounts services, including those provided by the National Call Center, is below the range of the average of the neighboring electric utility comparison group. As will be explained further herein, this group of companies provides a reasonable proxy group for comparison to a regulated utility of the size and scope of the Service Company and LIAW. During 2010, the customer accounts cost for LIAW customers was $24.96 compared to the 2009 average of $45.57 for neighboring electric utilities. The highest comparison group per customer cost was $94.95 and the lowest $12.90.

Concerning question 4, the following conclusions were drawn:

- The services that the Service Company provides are necessary and would be required even if LIAW were a stand-alone water utility.

- Furthermore, there is no redundancy or overlap in the services provided by the Service Company to LIAW. For all of the services listed in Exhibit 12, there was only one entity primarily responsible for the service.

II – Background

Overview of American Water Works Service Company

American Water's Service Company exists to provide certain shared services to American Water subsidiaries. It follows a service company model used by many utility holding companies that own multiple regulated utilities. By consolidating executive and professional services into a single service company, utility holding companies are able to realize the following benefits for ratepayers:

- Purchasing Economies – Common expenses (e.g., insurance, chemicals, piping) can be procured on a much larger scale thereby providing greater bargaining power for the combined entity compared to individual utility operating companies. A service company facilitates corporate-wide purchasing programs through its procurement and contract administration functions.

- Operating Economies of Scale – A service company is able to deliver services more efficiently because workloads can be balanced across more persons and facilities. For instance, American Water's Service Company is able to maintain one principal data center for the entire corporation. This is much more cost-efficient than each operating utility funding their own data center with its large fixed hardware, software and staffing costs.

- Continuity of Service – Centralizing service company personnel who perform similar services facilitates job cross-training and sharing of knowledge and expertise. This makes it easier to deal with staff turnover and absences and to sustain high levels of service to operating utilities. An individual operating utility might experience considerable disruption if a key professional left and it was necessary to hire outside to fill the vacancy.

- Maintenance of Corporate-Wide Standards – Personnel in American Water's Service Company establish standards for many functions (e.g., engineering designs, operating procedures and maintenance practices). It is easier to ensure these standards are followed by every operating utility because their implementation is overseen by the Service Company.

- Improved Governance – American Water's Service Company provides another dimension of management and financial oversight that supplements local operating utility management. The Service Company facilitates standard planning and reporting that help ensure operating utilities meet the requirements of their customers in a cost effective manner.

- Retention of Personnel – A service company organization provides operating utility personnel with another career path beyond what may be available on a local level. These opportunities tend to improve employee retention.

American Water follows the model for other utility service companies in another important regard. Its services are provided to affiliate operating utilities, like LIAW, at cost. American Water's Service Company is not a profit-making entity. It assigns only its actual expenses to the American Water subsidiaries it services.

The Service Company provides services to American Water operating companies from the following locations:

- Corporate Office – Includes American Water's executive management and personnel from the various corporate support services. American Water's corporate office is located in Voorhees, New Jersey.

- National Call Centers – Perform customer service functions, including: customer call processing, service order processing, correspondence processing, credit and collections. American Water maintains two call centers. One in Alton, Illinois that went into operation in 2001 and a second in Pensacola, Florida that went into operation in 2005. Prior to the establishment of these national call centers, customer service functions were performed by employees of LIAW, which incurred the expense on its books.

- National Shared Services Center – The Shared Services Center, located in Cherry Hill, New Jersey, provides various financial, accounting and treasury functions that had been performed by individual operating companies. This arrangement has improved and streamlined the Company's financial processes and allowed operating companies to focus on providing utility service.

- Divisional Offices – Divisional offices provide operating companies with certain support services that can be performed more effectively on a divisional basis because individual operating company/center workloads are not sufficient to warrant a full-time staff for these activities. At the same time, these services require closer proximity to operating companies served so they are not provided by the National Shared Services Center. Examples of divisional office services include rates and revenues, engineering, operations and field resource coordination.

- Belleville Lab – The national trace substance laboratory is located in Belleville, Illinois and performs testing for all American Water operating companies.

- Information Technology Service Centers – American Water's principal data center, located in Hershey, Pennsylvania, supports the IT infrastructure required to run corporate and operating company business applications and the communications systems. IT personnel rotate, as needed, throughout the divisional offices and operating companies.

Service Company Expense Categories

The Service Company renders a monthly bill to operating companies. Charges are broken down into the following expense categories:

- Labor – base pay (salaries) of managerial and professional employees
- Labor-Related Overheads - employee benefit costs (payroll taxes, medical coverage, pensions, disability insurance) and other general expenses
- Support - wages and salaries of office support personnel, including secretaries, clerical personnel, telephone operators and mail clerks
- Office Expenses - office rent, equipment leases, telephone, electric, office supplies, property taxes, office maintenance
- Vouchers/Journal Entries – (1) travel expenses incurred by Service Company personnel, (2) other items submitted for reimbursement by employees, including professional association dues, (3) outside service contracts for such things as actuarial services, and (4) various other expenditures, including data center expenses for software licenses and hardware maintenance.

Service Company expenses are either assigned directly or allocated to operating companies, as shown in the table below.

Expense Category	Direct Charged	Allocated	Comments
Labor	X	X	Professional personnel working for one or several operating companies
Labor-Related Overheads	X	X	These are primarily employee benefit costs that relate directly to labor
Support		X	Administrative personnel support the professional staff, thus support costs are allocated on the basis of professional labor
Office Expense		X	Are all allocated on the basis of professional labor
Vouchers/Journals	X	X	May be either directly in support of one operating company (e.g., an engineer traveling from the Corporate Office to the operating company) or allocated to several operating companies

A direct charge occurs when Service Company work or expenses are incurred in support of only one operating company. Direct charge examples include work in support of an operating company's rate case, engineering design work on an operating company's project and the preparation of an operating company's financial statements.

Service Company expenses are allocated when more than one operating company benefits from the underlying work. Examples include assessments of new Federal water quality regulations, development of the company-wide materials procurement contracts and creation of company-wide engineering design standards.

Charging and Assignment Of Service Company Time and Expenses

Service Company transactions are assigned with the following information so there is a proper accounting and eventual charging to an operating company:

- Operating company
- Formula number
- Work order (where applicable)
- Authorization number (where applicable)

Charges can originate from the following systems:

- Payroll System
- RVI System (outside vendor payments)
- PCard System (credit card payments)
- Internal Purchase Order System
- Journal entries

II – Background

The Service Company's time reporting process enables labor and support charges to be assigned to the proper operating company. Labor charges are based on the time reported by managerial and professional Service Company employees. Every week, Service Company professional employees complete an electronic time sheet that shows:

- Formula number (this is linked to operating company within American Water's financial system)
- Employee hours worked
- Account number for non-labor charges

At month-end, time report information is processed and direct and allocated professional labor hours tabulated for each operating company. Dollar charges are then calculated using the hourly rate of each Service Company professional employee based upon their base salary (i.e., an employee's hours times his/her hourly rate of pay).

Support (administrative) personnel charge their time to the activity "General Admin." As described in the table on page 4, their labor charges are allocated to operating companies based upon how their office's professional personnel labor charges are assigned. For instance, if 20% of American Water's Eastern Division's professional labor is assigned to LIAW during a month, then 20% of that office's monthly administrative labor charges also are assigned to the operating company.

The overhead cost category is next assigned based on professional and administrative labor costs. Thus, if 20% of the Eastern Division's accumulated professional and support labor is charged to LIAW during the month, then 20% of that month's overhead expenses will be assigned to LIAW.

Each Service Company location's office expenses are allocated to operating companies based on how professional labor charges for that office have been assigned. For instance, if 2% of professional labor from one Service Company office is assigned to LIAW, then 2% of that office's office expenses would be assigned to LIAW. Thus, office expenses are allocated in the very same way as administrative labor.

Vouchers/journal entries may be charged directly or allocated, depending on who benefits from the expenditure. For instance, the cost of a continuing professional education course taken by a professional in a divisional office is allocated to the operating companies served by that office. Travel expenses by that same professional to a rate case proceeding are charged directly to the operating company whose case is being heard.

III – Service Company Cost Comparison Approach

During 2010, the Service Company billed LIAW $4,590,695 in O&M-related charges and $864,628 in capital-related charges. These total charges of $5,455,323 were subjected to a market cost comparison.

	12 Months Ended Dec 30, 2010
Mgmt Fee Expense - O&M	$ 4,590,695
Mgmt Fees - Capital	$ 864,628
Total Testable AWWSC Charges	**$ 5,455,323**

For purposes of comparing these charges to certain outside benchmarks, Service Company services were placed into two categories:

- Managerial and Professional Services – Includes such services as management, accounting, legal, human resources, information technology and engineering.

- Customer Accounts Services – Includes customer-related services, such as call center, credit, billing, collection and payment processing.

Total test period Service Company charges break down between management/professional services, customer account services and field resource coordination as follows:

	12 Months Ended December 31, 2010	
	Amount	Hours
Management and Professional Services	$ 4,407,221	31,982
Customer Account Services	$ 1,048,102	20,646
Total Service Company Charges	**$ 5,455,323**	**52,628**

This study's first question—whether Service Company 2010 charges are reasonable—was determined by comparing LIAW's A&G-related Service Company charges per customer to the same charges for utility companies that must file the FERC Form 60 – Annual Report of Service Companies.

The second question—whether Service Company charges during 2010 were at the lower of cost or market—was evaluated by comparing the cost per hour for managerial and professional services provided by Service Company personnel to hourly billing rates that would be charged by outside providers of equivalent services. Service Company costs per hour were based on actual charges to LIAW during 2010. Outside providers' billing rates came from surveys or other information from professionals that could perform the services now provided by the Service Company.

III – Service Company Cost Comparison Approach

The third question—whether Service Company's 2010 customer account services charges, including those of the National Call Center costs, were comparable to other utilities—was addressed by comparing LIAW's customer accounts services expenses to those of neighboring electric utilities. This approach was selected because the costs of outside providers of call center services are not publicly available. However, electric utility customer account services expenses can be obtained from the FERC Form 1. The availability and transparency of FERC data adds to the validity of its use in this comparison.

The fourth question—the necessity of Service Company services—was investigated by defining the services provided to LIAW and determining if these services would be required if LIAW were a stand-alone utility.

IV – Question 1 – Reasonableness of Service Company Charges

LIAW's Service Company Cost per Customer

During 2010, LIAW was charged $55 per customer by the Service Company for A&G-related services. The calculation of this amount, shown in the table below, starts with total net testable Service Company charges and adjusts for capital and non-A&G functions (engineering, operations and water quality) charges. These adjustments are necessary to develop a per customer cost that is comparable to cost of utility service companies.

	2010 AWWSC Charges
Total Service Company charges	$ 5,455,323
Less: Capital charges	$ (864,628)
Less: Non-A&G function O&M charges	
Engineering	$ (5,548)
Operations	$ (402,414)
Water Quality	$ (144,595)
Net A&G/O&M-related charges	$ 4,038,138
LIAW customers	74,007
LIAW Cost Per Customer	**$ 55**

Comparison Group Cost Per Customer

Every centralized service company in a holding company system must file a Form 60 in accordance with the Public Utility Holding Company Act of 2005, Section 1270, Section 390 of the Federal Power Act and 18 C.F.R. paragraph 366.23. This report is designed to collect financial information from service companies that are subject to regulation by the FERC.

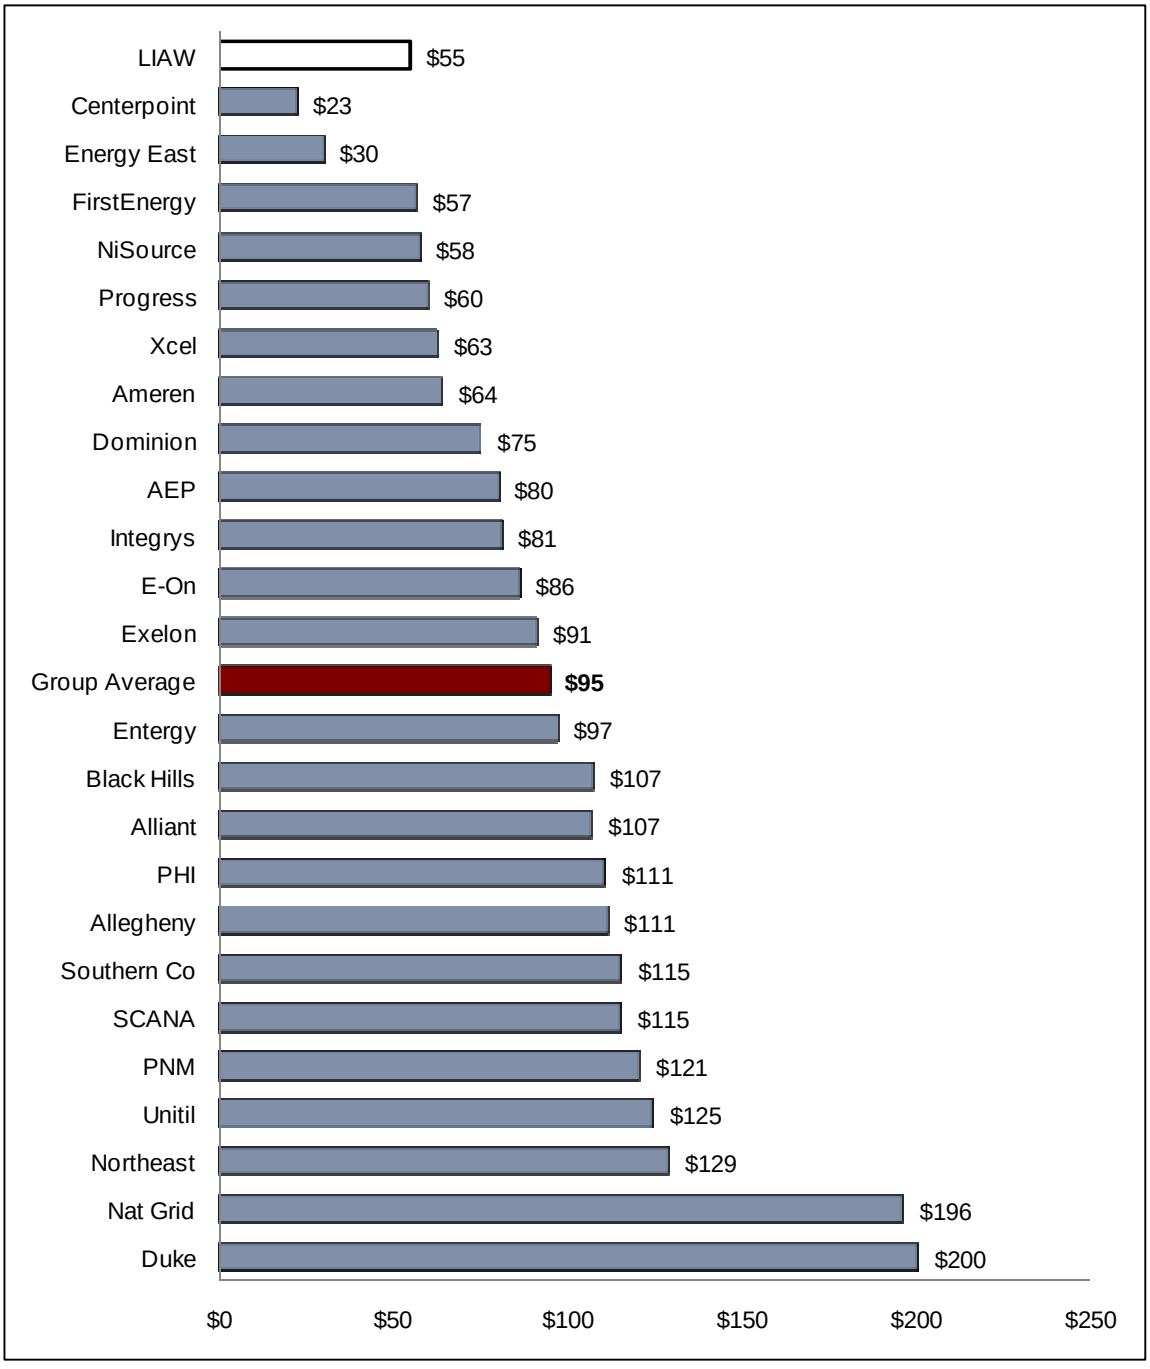
For 2009, a Form 60 was filed by service companies that are part of 25 utility holding companies that own utilities providing regulated electric and, in some cases, gas service to retail customers. In order to make a valid comparison of these service companies' costs to those of American Water Works Service Company, it was necessary to isolate expenses that that they have in common. These include A&G-related charges recorded in the following FERC accounts:

901 – Supervision	921 – Office supplies and expenses
903 – Customer records and collection expenses	923 – Outside services employed
905 – Miscellaneous customer accounts expenses	928 – Regulatory commission expenses
907 – Supervision	930.2 – Miscellaneous general expenses
910 – Misc customer service and info expenses	931 – Rents
911 – Supervision	935 – Maintenance of structures and equipment
920 - Administrative and general salaries	

Charges to utility affiliates for the comparison group service companies were obtained from Schedule XVI – Analysis of Charges for Service Associate and Non-Associate Companies (p. 303 to 306) of each entity's FERC Form 60. This schedule shows charges by FERC Account.

Comparison group service company 2009 expenses were also adjusted to remove charges to non-regulated affiliates from the cost pool used to calculate the cost per regulated service customer. This determination was made using information from the FERC Form 60 schedule: Account 457 – Analysis of Billing – Associate Companies.

IV – Question 1 – Reasonableness of Service Company Charges



One service company that filed a Form 60 was excluded from the comparison group because its Form 60 contained no data for 2009. That service company, Great Plains Energy Services Incorporated, became inactive in 2009 and had no charges to its regulated utility affiliate. The A&G expenses per regulated utility customer for the other 24 utility companies that filed a Form 60 for 2009 are calculated below.

Utility Company	2009 Regulated Retail Service Company A&G Expenses	Regulated Retail Customers	Cost per Customer
AEP	$418,484,117	5,213,000	$ 80
Allegheny	$176,685,245	1,585,700	$ 111
Alliant	$149,116,475	1,395,189	$ 107
Ameren	$212,036,412	3,300,000	$ 64
Black Hills	$81,484,333	759,400	$ 107
Centerpoint	$119,304,604	5,300,000	$ 23
Dominion	$279,128,940	3,700,000	$ 75
Duke	$901,762,388	4,500,000	$ 200
Energy East	$89,580,962	2,973,000	$ 30
Entergy	$262,596,172	2,700,000	$ 97
E-On	$105,893,093	1,226,000	$ 86
Exelon	$537,633,122	5,886,000	$ 91
FirstEnergy	$255,874,712	4,500,000	$ 57
Integrys	$175,423,352	2,157,700	$ 81
Nat Grid	$1,314,902,105	6,700,000	$ 196
NiSource	$216,480,637	3,750,000	$ 58
Northeast	$269,948,801	2,095,000	$ 129
PHI	$215,465,623	1,946,000	$ 111
Progress	$186,256,921	3,100,000	$ 60
PNM	$87,998,259	729,700	$ 121
SCANA	$166,555,883	1,445,000	$ 115
Southern Co	$508,130,523	4,402,000	$ 115
Unitil	$21,115,280	169,600	$ 125
Xcel	$333,389,459	5,300,000	$ 63
Group Total	**$7,085,247,416**	**74,833,289**	**$ 95**

Exhibit 1 (page 11) shows LIAW's 2010 Service Company cost per customer of $55 to be considerably lower than the average of $95 per customer for the comparison group service companies. Only 2 of 24 comparison group service companies had a lower cost per customer than LIAW. Based on this result, it is possible to conclude that the Service Company's 2010 charges to LIAW were reasonable.

Exhibit 1

Long Island American Water Company
Comparison of Service Company Annual Costs Per Customer

V – Question 2 – Provision of Services at the Lower of Cost or Market

Methodology

The lower-of-cost-or-market comparison is accomplished by comparing the cost per hour for Service Company managerial and professional services to those of outside service providers to whom these duties could be assigned. Based on the nature of the Service Company services it was determined that the following outside providers could perform the categories of services indicated below:

- Management Consultants – executive and administrative management, risk management, human resources and communications services
- Attorneys – legal services
- Certified Public Accountants – accounting, financial and rates and revenues services
- IT Professionals – information technology services
- Professional Engineers – engineering, operations and water quality services.

The services provided by the Belleville lab are assumed to be transferable to professional engineers for purposes of this cost comparison. This was done for two reasons. First, there is no readily available survey of hourly billing rates for testing services such as those performed by Belleville. Second, Belleville personnel have similar, scientific educational backgrounds as Service Company engineering personnel. Thus, it is valid to compare the hourly rates of Belleville services to those of outside engineering firms.

Service Company's hourly rate were calculated for each of the five outside service provider categories, based on the dollars and hours charged to LIAW during 2010. Hourly billing rates for outside service providers were developed using third party surveys or directly from information furnished by outside providers themselves.

It should be noted that by using the Service Company's hours charged LIAW during 2010, its hourly rates are actually overstated because some Service Company personnel charge a maximum 8 per day even when they work more. Outside service providers generally bill for every hour worked. If all overtime hours of Service Company personnel had been factored into the hourly rate calculation, Service Company hourly rates would have been lower.

The last step in the market cost comparison was to compare the Service Company's average cost per hour to the average cost per hour for outside providers.

Service Company Hourly Rates

Exhibit 2 (page 14) details the assignment of 2010 management and professional Service Company charges by outsider provider category. Exhibit 3 (page 15) shows the same assignment for Service Company management and professional hours charged to LIAW during 2010.

Certain adjustments to these dollar amounts were necessary to calculate Service Company hourly rates that are directly comparable to those of outside providers. Adjustments were made to the following 2010 test period non-labor Service Company charges:

- Contract Services – 2010 Service Company charges to LIAW include expenses associated with the use of outside professional firms to perform certain corporate-wide services (e.g., legal, financial audit, actuarial services). These professional fees are

excluded from the Service Company hourly rate calculation because the related services have effectively been out-sourced already.

- Travel Expenses – In general, client-related travel expenses are not recovered by outside service providers through their hourly billing rate. Rather, actual out-of-pocket travel expenses are billed to clients in addition to fees for professional services. Thus, it is appropriate to remove these Service Company charges from the hourly rate calculation.

- Information Technology Infrastructure Expenses – Included in 2010 Service Company charges to LIAW are leases, maintenance fees and depreciation related to American Water's enterprise mainframe, server and network infrastructure and corporate business applications. An outside provider that would take over operation of this infrastructure would recover these expenses over and above the labor necessary to operate the data center.

Exhibit 4 (page 16) shows how contract services, travel expenses and computer hardware/software-related Service Company charges are assigned among the five outside provider categories.

Based on the assignment of expenses and hours shown in Exhibits 2 and 3 and the excludable items shown in Exhibit 4, the Service Company's equivalent costs per hour for 2010 are calculated below.

	Attorney	Management Consultant	Certified Public Accountant	IT Professional	Professional Engineer	Total
Total management, professional & technical services charges	$ 128,600	$ 1,453,755	$ 1,122,849	$ 1,158,727	$ 543,287	$ 4,407,218
Less:						
Contract services	$ 10,780	$ 272,958	$ 108,025	$ 124,493	$ (5,892)	$ 510,364
Travel expenses	$ 2,277	$ 26,643	$ 14,262	$ 15,045	$ 17,159	$ 75,386
IT infrastructure expenses	$ 3,248	$ 430,185	$ 10,674	$ 214,432	$ 21,038	$ 679,577
Net Service Charges (A)	$ 112,295	$ 723,969	$ 989,888	$ 804,757	$ 510,982	$ 3,141,891
Total Hours (B)	511	4,765	13,276	5,480	7,949	31,982
Average Hourly Rate (A / B)	**$ 220**	**$ 152**	**$ 75**	**$ 147**	**$ 64**

IT Professional	$ 124,493	$ 15,045	$ 214,432	$ 353,970
Professional Engineer	$ (5,892)	$ 17,159	$ 21,038	$ 32,305
Total	**$ 510,364**	**$ 75,386**	**$ 679,577**	**$ 1,265,327**

Outside Service Provider Hourly Rates

The next step in the cost comparison was to obtain the average billing rates for each outside service provider. The source of this information and the determination of the average rates are described in the paragraphs that follow.

It should be noted that professionals working for three of the five outside provider categories may be licensed to practice by state regulatory bodies. However, not every professional working for these firms is licensed. For instance, among New York certified public accounting firms, only more experienced staff are predominantly CPAs (see table below). Some Service Company employees also have professional licenses. Thus, it is valid to compare the Service Company's hourly rates to those of the outside professional service providers included in this study.

Position	New York Average
Partners/Owners	94%
Directors (11+ years experience)	87%
Managers (6-10 years experience)	80%
Sr Associates (4-5 years experience)	39%
Associates (1-3 years experience)	13%
New Professionals	0%

Source: AICPA's National PCPS/TSCPA Management of an Accounting Practice Survey (2010)

Attorneys

The New York State Bar does not survey its members as to their hourly billing rates. As a result, an estimate of New York hourly rates was developed from two surveys conducted by Lawyers Weekly in the states of Michigan and Massachusetts. As presented in Exhibit 5 (page 19), the average rate for each firm in these surveys was adjusted for the cost of living differential between their locations and Lynbrook, New York. The cost of living indices utilized in this analysis were obtained from the Council for Community and Economic Research, a membership organization created in 1961 to develop high quality regional economic data and analytical methods. The Lawyers Weekly surveys included rates in effect at December 31, 2009. Thus, the 2009 average rate was escalated to June 30, 2010—the midpoint of 2010.

Management Consultants

The cost per hour for management consultants was developed from a 2010 survey performed by the Association of Management Consulting Firms—an industry trade organization. The survey includes rates that were in effect during 2009 for firms throughout the United States. Consultants typically do not limit their practice to any one region and must travel to a client's location. Thus, the U.S. national average is appropriate for comparison.

The first step in the calculation, presented in Exhibit 6 (page 20), was to determine an average rate by consultant position level. From these rates, a single weighted average hourly rate was calculated based upon the percent of time that is typically applied to a consulting assignment by each consultant position level. The 2009 average rate was escalated to June 30, 2010—the midpoint of 2010.

Certified Public Accountants

The average hourly rate for New York CPAs was developed from a 2010 survey performed by the American Institute of Certified Public Accountants (AICPA). The New York version of this survey was used to develop hourly rates for member firms in New York.

As shown in Exhibit 7 (page 21), a weighted average hourly rate was developed based on a set of accountant positions and a percent of time that is typically applied to an accounting assignment. This survey includes rate information in effect during 2009. Thus, the data had to be escalated to June 30, 2010—the midpoint of 2010.

Information Technology Professionals

The average hourly rate for information technology consultants and contractors was developed from Baryenbruch & Company, LLC IT industry hourly billing rate data. As shown in Exhibit 8 (page 22), that data was compiled and a weighted average was calculated based on a percent of time that is typically applied to an IT consulting assignment based on Baryenbruch & Company, LLC's experience.

Professional Engineers

The Company provided hourly rate information for outside engineering firms that could have been used by LIAW in 2010. As presented in Exhibit 9 (page 23), an average rate was developed for each engineering position level. Then, using a typical percentage mix of project time by engineering position, a weighted average cost per hour was calculated.

V – Question 2 – Provision of Services at the Lower of Cost or Market

Service Company versus Outside Provider Cost Comparison

As shown in the table below, Service Company costs per hour are considerably lower than those of outside providers.

	12 Months Ended December 31, 2010		
Service Provider	Service Company	Outside Provider	Difference--Service Co. Greater(Less) Than Outside
Attorney	$ 220	$ 338	$ (118)
Management Consultant	$ 152	$ 243	$ (91)
Certified Public Accountant	$ 75	$ 176	$ (102)
IT Professional	$ 147	$ 171	$ (24)
Professional Engineer	$ 64	$ 117	$ (53)

Based on these cost per hour differentials and the number of managerial and professional services hours billed to LIAW during 2010, outside service providers would have cost $2,391,733 more than the Service Company (see table below). Thus, on average, outside provider's hourly rates are 54% higher than those of the Service Company ($2,391,733 / $4,407,221).

	12 Months Ended December 31, 2010		
Service Provider	Hourly Rate Difference--Service Co. Greater(Less) Than Outside	Service Company Hours Charged	Dollar Difference
Attorney	$ (118)	511	$ (60,256)
Management Consultant	$ (91)	4,765	$ (432,764)
Certified Public Accountant	$ (102)	13,276	$ (1,348,508)
IT Professional	$ (24)	5,480	$ (130,667)
Professional Engineer	$ (53)	7,949	$ (419,538)
Service Company Less Than Outside Providers			$ (2,391,733)

It should be noted that the cost differential associated with using outside providers is even greater because exempt Service Company personnel do not charge more than 8 hours per day even when they work more. Outside providers generally charge clients for all hours worked. Thus, LIAW would have been charged by outside providers for overtime worked by Service Company personnel who are not paid for that time.

If LIAW were to use outside service providers rather than the Service Company for managerial and professional services, it would incur other additional expenses besides those associated with higher hourly rates. Managing outside firms who would perform almost 32,000 hours of work (more than 21 full-time equivalents at 1,500 "billable" hours per FTE per year) would add a significant workload to the existing LIAW management team. Thus, it would be necessary for LIAW to add at least one position to supervise the outside firms and ensure they delivered quality and timely services. The individuals that would fill this position would need a good understanding of each profession being managed. They must also have management experience and the authority necessary to give them credibility with the outside firms. As calculated in the table below, this position would add almost $165,000 per year to LIAW's personnel expenses.

V – Question 2 – Provision of Services at the Lower of Cost or Market

Cost of Adding 1 Professional Position To LIAW's St		Total
New Positions' Salary	$	100,000
Benefits (at 49.4%)	$	49,400
Office Expenses (15.2%)	$	15,200
Total Cost of One Position	$	164,600

Thus, the total effect on the ratepayers of LIAW of contracting all services now provided by Service Company would be an increase in their costs of $2,556,333 ($2,391,733 + $164,600). Based on the results of this comparison, it is possible to conclude that the Service Company charged LIAW at the lower of cost or market for services provided during 2010.

VI - Question 3 - Reasonableness of Customer Accounts Services Costs

Background

Customer Accounts Services covers the following utility functions:

- Customer Call Center – customer calls/contact, credit, order taking/disposition, bill collection efforts, outage calls
- Call Center IT – maintenance of phone banks, voice recognition units, call center software applications, telecommunications
- Customer billing – bill printing, stuffing, and mailing
- Remittance processing – processing customer payments received in the mail
- Bill payment centers – locations where customers can pay their bills in person

It is difficult to compare the cost of the Service Company's customer accounts services-related charges to LIAW with outside providers of the same services because survey data is proprietary and expensive to obtain. For this reason, LIAW's charges from the Service Company for customer accounts services are compared to those of neighboring electric utilities because the data necessary to make such comparison is available to the public.

Neighboring electric utility cost information comes from the 2009 FERC Form 1 that each utility must file. FERC's chart of accounts is defined in Chapter 18, Part 101 of the Code of Federal Regulations. FERC accounts that contain customer accounts services-related expenses are Account 903 Customer Accounts Expense – Records and Collection Expense and Account 905 Customer Accounts Expense – Miscellaneous Customer Accounts Expense. Exhibit 10 (pages 27-28) provides FERC's definition of the type of expenses that should be recorded in these accounts.

In addition to the charges in these FERC accounts, labor-related overheads charged to the following FERC accounts must be added to the labor components of Accounts 903 and 905:

- Account 926 Employee Pension and Benefits
- Account 408 Taxes Other Than Income (employer's portion of FICA)

Comparison Group

Electric utilities included in the comparison group are shown in the table below. These are companies whose FERC Form 1 show amounts for accounts 903 and 905.

New York	• Central Hudson Gas & Elect • Consolidated Edison • New York State Gas & Elect	• Niagra Mohawk Power • Orange & Rockland Utilities • Rochester Gas & Elect
Pennsylvania	• Duquesne Light • Metropolitan Edison • PECO Energy • Pennsylvania Electric	• Pennsylvania Power • PPL Electric Utilities • West Penn Power
New Jersey	• Atlantic City Electric • Jersey Central Power	• Public Service Elect & Gas
Connecticut	• Connecticut Light & Power	• United Illuminating
Massachusetts	• Fitchburg Gas & Electric • Massachusetts Electric	• Western Mass Electric
Vermont	• Central Vermont Pub Svc	• Green Mountain Power

Long Island American Water Company
FERC Account Descriptions

903 – Customer Records and Collection Expenses

This account shall include the cost of labor, materials used and expenses incurred in work on customer applications, contracts, orders, credit investigations, billing and accounting, collections and complaints.

Labor

1. Receiving, preparing, recording and handling routine orders for service, disconnections, transfers or meter tests initiated by the customer, excluding the cost of carrying out such orders, which is chargeable to the account appropriate for the work called for by such orders.
2. Investigations of customers' credit and keeping of records pertaining thereto, including records of uncollectible accounts written off.
3. Receiving, refunding or applying customer deposits and maintaining customer deposit, line extension, and other miscellaneous records.
4. Checking consumption shown by meter readers' reports where incidental to preparation of billing data.
5. Preparing address plates and addressing bills and delinquent notices.
6. Preparing billing data.
7. Operating billing and bookkeeping machines.
8. Verifying billing records with contracts or rate schedules.
9. Preparing bills for delivery, and mailing or delivering bills.
10. Collecting revenues, including collection from prepayment meters unless incidental to meter reading operations.
11. Balancing collections, preparing collections for deposit, and preparing cash reports.
12. Posting collections and other credits or charges to customer accounts and extending unpaid balances.
13. Balancing customer accounts and controls.
14. Preparing, mailing, or delivering delinquent notices and preparing reports of delinquent accounts.
15. Final meter reading of delinquent accounts when done by collectors incidental to regular activities.
16. Disconnecting and reconnecting services because of nonpayment of bills.
17. Receiving, recording, and handling of inquiries, complaints, and requests for investigations from customers, including preparation of necessary orders, but excluding the cost of carrying out such orders, which is chargeable to the account appropriate for the work called for by such orders.
18. Statistical and tabulating work on customer accounts and revenues, but not including special analyses for sales department, rate department, or other general purposes, unless incidental to regular customer accounting routines.
19. Preparing and periodically rewriting meter reading sheets.
20. Determining consumption and computing estimated or average consumption when performed by employees other than those engaged in reading meters.

Materials and expenses

21. Address plates and supplies.
22. Cash overages and shortages.
23. Commissions or fees to others for collecting.
24. Payments to credit organizations for investigations and reports.
25. Postage.
26. Transportation expenses, including transportation of customer bills and meter books under centralized billing procedure.
27. Transportation, meals, and incidental expenses.
28. Bank charges, exchange, and other fees for cashing and depositing customers' checks.
29. Forms for recording orders for services, removals, etc.
30. Rent of mechanical equipment.

Long Island American Water Company
FERC Account Descriptions

905 – Miscellaneous Customer Accounts Expenses

This account shall include the cost of labor, materials used and expenses incurred not provided for in other accounts.

Labor

1. General clerical and stenographic work.
2. Miscellaneous labor.

Materials and expenses

3. Communication service.
4. Miscellaneous office supplies and expenses and stationery and printing other than those specifically provided for in accounts 902 and 903.

VI - Question 3 - Reasonableness of Customer Accounts Services Costs

LIAW Cost per Customer

As calculated below, LIAW's 2010 customer account services expense per customer was $24.96. The cost pool used to calculate this average includes charges for Service Company services (e.g., call center, billing, payment processing) and postage and forms expenses, which are incurred directly by LIAW. It was necessary to adjust the National Call Center charges because electric utilities experience an average of 2.50 calls per customer compared to American Water's 1.54 calls per customer. Thus, National Call Center expenses had to be increased, for comparison purposes, to reflect its costs at a 2.50 calls per customer level.

Long Island American Cost Per Customer		Year Ended 12/31/2010 Service Co Charges	Adjustment Fewer Calls For Water Cos. (A)	Adjusted	
Cost Component					
Service Company					
Call Centers	Call processing, order processing, credit, bill collection	$ 1,041,448	$ 280,193	$ 1,321,642	
Regional Offices		$ 6,653		$ 6,653	
Operating Company	Customer payment processing			$ 95,025	Note B
Operating Company	Postage & forms			$ 423,805	
			Cost Pool Total	$ 1,847,125	
			Total Customers	74,007	
	12 Months Ended December 31, 2010 Cost Per LIAW Customer			**$ 24.96**	

Note A: Adjustment for American Water's fewer calls per customer
This adjustment is necessary because water utilities experience fewer calls per customer than do electric utilities

Call handling expenses		$ 450,139
Electric utility industry's avg calls/customer	2.50	
American Water's avg calls/customer	1.54	
Percent different	62%	62%
Total Adjustment		$ 280,193

Note B: Estimated customer payment processing expenses

Number of customers	74,007
Number of payments/customer/year	12
Total payments processed/year	888,084
Bank charge per item	$ 0.1070
Total estimated annual expense	$ 95,025

Electric Utility Group Cost per Customer

Exhibit 11 (pages 31-34) shows the actual 2009 customer accounts expense per customer calculation for the electric utility comparison group. All of the underlying data was obtained from the utilities' FERC Form 1.

VI - Question 3 - Reasonableness of Customer Accounts Services Costs

Summary of Results

As shown in the table below, LIAW's cost per customer is below the average cost of the neighboring electric utility comparison group. It can therefore be concluded that LIAW's 2010 customer accounts-related expenses, including those of the Alton and Pensacola Call Centers, assigned by the Service Company to LIAW were comparable to those of other utilities.

Average Customer Accounts Expense Per Customer	
West Penn Power	$ 12.90
Pennsylvania Electric	$ 15.59
Pennsylvania Power	$ 16.65
Duquesne Light	$ 16.83
Metropolitan Edison	$ 16.98

VI - Question 4 – Need for Service Company Services

Analysis of Services

The final aspect of this study was an assessment of whether the services that are provided to LIAW by the Service Company would be necessary if LIAW were a stand-alone water utility. The first step in this evaluation was to determine specifically what the Service Company does for LIAW. Based on discussions with Service Company personnel, the matrix in Exhibit 12 (pages 36-38) was created showing which entity—LIAW or a Service Company location—is responsible for each of the functions LIAW requires to ultimately provide service to its customers. This matrix was reviewed to determine: (1) if there was redundancy or overlap in the services being provided by the Service Company and (2) if Service Company services are typical of those needed by a stand-alone water utility.

Upon review of Exhibit 12, the following conclusions can be drawn:

- The services that the Service Company provides are necessary and would be required even if LIAW were a stand-alone water utility.

- There is no redundancy or overlap in the services provided by the Service Company to LIAW. For all of the services listed in Exhibit 12, there was only one entity that was primarily responsible for the service.

Governance Practices Associated With Service Company Charges

There are several ways by which LIAW exercises control over Service Company services and charges. The most important of these are described below.

- **LIAW Company Board Oversight** – The LIAW board of directors includes the Senior Vice President of Eastern Division, the Vice President of Finance for the Eastern Division, a member of the LIAW management team and an external business and community leader. This diverse board ensures that LIAW's needs are a factor in the delivery of Service Company services. The LIAW Board meets at a minimum of four times each year and at every meeting financial and operational reports and issues are discussed at length.
- **LIAW President Oversight** – The LIAW President is responsible for the overall performance of LIAW, including services and charges received from the American Water Service Company. The President of LIAW has previously served as a board member on the service company's board of directors (see the section for Service Company Board Oversight below for further discussion). In addition, as part of the overall management team of American Water through the President of Regulated Operations and the Senior Vice President of Eastern Division, LIAW's President has a significant voice in major business decisions of American Water and has the ability to monitor Service Company performance quality and spending as LIAW's President is one of seven direct reports to the Senior Vice President of Eastern Division.
- **LIAW Vice President and Treasurer** – The Vice President and Treasurer is responsible for the financial reporting, performance and regulatory matters of the LIAW. The Vice President and Treasurer monitors the performance, expense and reporting from the Service Company and verifies and validates the cost of services received. In addition, the Vice President and Treasurer through the Financial Planning and Analysis staff reviews the monthly charges and investigates whenever the amount, quality and/or services are appropriate.
- **Service Company Board Oversight** – The Service Company Board of Directors is comprised of 16 members, of which the President of the Eastern Division is on it. They typically meet four times a year to provide governance on the activities and bylaws of Service Company. Their primary responsibilities include:
  - Approve the Business Plan and Operating Budget
  - Review Financial Performance of the Service Center
  - Review performance metrics of certain functional groups
  - Approve policy, procedures and practices of AW as it relates to Service Company.
- **Service Company Budget Review/Approval** – Several state regulated water utility presidents serve on the Service Company board of directors and that board must formally approve the budget for Service Company charges for the next year. State presidents serve on a rotational basis and LIAW president served as a board member in 2009. These budgeted charges are consolidated with the operating company's own spending into an overall budget which must be approved by the individual operating company's board of directors (e.g., LIAW).
- **Major Project Review And Approval –** Major non-capital projects undertaken by the Service Company must first be reviewed by American Water's Executive Leadership Team, which includes the President of Regulated Operations. The President of Regulated Operations, with significant input from his direct reports (including the Senior Vice President of Eastern Division), has the ability to impact all new initiatives and projects before they are authorized. Major non-capital projects and initiatives for the Service Company are approved through the Business Plan. All significant business

initiatives (capital or non-capital) are required to be submitted to the "BATT" (Business and Technology Team) committee for final approval. The "BATT" team is comprised of C-level executive members (CEO, CFO, etc.).

- **Capital Investment Management** (CIM) – CIM covers capital and asset planning and is employed throughout American Water, including the Service Company. CIM provides a full range of governance practices, including a formal protocol for assessing system needs, prioritizing expenditures, managing the capital program, approving project spending, delivering projects and measuring outputs. CIM ensures that:
  - Capital expenditure plans are aligned with the strategic intent of the business
  - The impact of capital expenditure and income plans are fully reflected in operating expense plans
  - The impacts of these plans are understood and affordable
  - Effective controls are in place over budgets (through business plans) and individual capital projects (through appropriate authorization thresholds, management and reporting processes).

  The CIM process was designed to optimize the effectiveness of asset investment.

- **Accounting and Financial Reporting** – Similar to the states, the Service Company follows the same accounting and financial reporting processes. During the month accounting transactions are recorded. At month end, the SSC and Service Company Finance teams review all transactions. Variance analyses are performed based on month to month actual as well as actual to budget to ensure accuracy. Once completed, the service company bill is run and the actuals are "pushed down" based on direct charges and allocations to the states based on predetermined formulas. A conference call is schedule before the operating companies close their books each month to discuss Service Company performance. This is based at a functional level with explanation reported for those expense variances that meet or exceed certain thresholds. At this time, the operating companies may question expenses and spending for better understanding of results. LIAW Financial Performance and Analysis (FP&A) personnel review the monthly Service Company bill for accuracy and reasonableness on a monthly basis. Any mistakes or overcharges are credited on a subsequent billing.

- **LIAW Company Budget Variance Reporting** – The "Budget/Plan Analysis," produced monthly by each operating company, has line items for Management Fees and Shared Service Expense (i.e., IT, Call Center, etc.). In this way, Service Company budget versus actual charges as charged to the operating company can be monitored and reviewed for the month and year-to-date as compared to prior year, plan and reforecast.

I – Introduction

Purpose of This Study

This study was undertaken to answer four questions concerning the services provided by American Water Works Service Company, Inc. (Service Company) to New Jersey American Water Company (NJAWC):

1. Were the Service Company's charges to NJAWC during the 12 months ended June 30, 2009 reasonable?

2. Was NJAWC charged the lower of cost or market for managerial and professional services provided by the Service Company during the 12 months ended June 30, 2009?

3. Were the 12 months ended June 30, 2009 costs of the Service Company's customer accounts services, including those of the National Call Centers, comparable to those of other utilities?

4. Are the services NJAWC receives from Service Company necessary?

Study Results

Concerning question 1, the following conclusion was reached:

- The Service Company's 12 months ended June 30, 2009 cost per NJAWC customer was very reasonable compared to cost per customer for electric and combination electric/gas service companies. During the 12 months ended June 30, 2009, NJAWC was charged $49 per customer for administrative and general (A&G)-related services provided by the Service Company. This compares to an average of $109 per customer for service companies reporting to the Federal Energy Regulatory Commission (FERC). Only 3 of the 24 utility service companies that filed a FERC Form 60 for 2008 had a lower per customer A&G cost than NJAWC's charges from the Service Company.

Concerning question 2, the following conclusions were drawn from this study:

- NJAWC was charged the lower of cost or market for managerial and professional services during the 12 months ended June 30, 2009.

- On average, the hourly rates for outside service providers are 75% higher than the Service Company's hourly rates.

- The managerial and professional services provided by the Service Company are vital and could not be procured externally by NJAWC without careful supervision on the part of NJAWC. If these services were contracted entirely to outside providers, NJAWC would have to add at least two positions to manage activities of outside firms. These positions would be necessary to ensure the quality and timeliness of services provided.

- If all the managerial and professional services now provided by the Service Company had been outsourced during the 12 months ended June 30, 2009, NJAWC and its ratepayers would have incurred more than $20.6 million in additional expenses. This amount includes the higher cost of outside providers and the cost of two NJAWC positions needed to direct the outsourced work.

- This study's hourly rate comparison actually understates the cost advantages that accrue to NJAWC from its use of the Service Company. Outside service providers generally bill

for every hour worked. Service Company exempt personnel, on the other hand, charge a maximum of 8 hours per day even when they work more hours. If the overtime hours of Service Company personnel were factored into the hourly rate calculation, the Service Company would have had an even greater annual dollar advantage than the $20.6 million cited above. For instance, if Service Company overtime is conservatively estimated at 5% (2 hours per week), then that work would have cost an estimated $1.0 million in additional charges from outside providers.

- It would be difficult for NJAWC to find local service providers with the same specialized water industry expertise as that possessed by the Service Company staff. Service Company personnel spend substantially all their time serving operating water companies. This specialization brings with it a unique knowledge of water utility operations and regulation that is most likely unavailable from local service providers.

- Service Company fees do not include any profit markup. Only its actual cost of service is being recovered from NJAWC ratepayers.

Concerning question 3, the following conclusion was reached:

- The cost of the Service Company's customer accounts services, including those provided by the National Call Centers, is well below the average of the neighboring electric utility comparison group. As will be explained further herein, this group of companies provides a reasonable proxy group for comparison to a regulated utility of the size and scope of the Service Company and NJAWC. During the 12-months ended June 30, 2009, the customer accounts cost for NJAWC customers was $26.33 compared to the 2008 average of $43.23 for neighboring electric utilities. The highest comparison group per customer cost was $83.88 and the lowest $12.54.

Concerning question 4, the following conclusions was drawn:

- The services that the Service Company provides are necessary and would be required even if NJAWC were a stand-alone water utility.

- Furthermore, there is no redundancy or overlap in the services provided by the Service Company to NJAWC. For all of the services listed in Exhibit 11, there was only one entity primarily responsible for the service.

II – Background

Overview of American Water Works Service Company

American Water's Service Company exists to provide certain shared services to American Water subsidiaries. It follows a service company model used by many utility holding companies that own multiple regulated utilities. By consolidating executive and professional services into a single service company, utility holding companies are able to realize the following benefits for ratepayers:

- Purchasing Economies – Common expenses (e.g., insurance, chemicals, piping) can be procured on a much larger scale thereby providing greater bargaining power for the combined entity compared to individual utility operating companies. A service company facilitates corporate-wide purchasing programs through its procurement and contract administration functions.

- Operating Economies of Scale – A service company is able to deliver services more efficiently because workloads can be balanced across more persons and facilities. For instance, American Water's Service Company is able to maintain one principal data center for the entire corporation. This is much more cost-efficient than each operating utility funding their own data center with its large fixed hardware, software and staffing costs.

- Continuity of Service – Centralizing service company personnel who perform similar services facilitates job cross-training and sharing of knowledge and expertise. This makes it easier to deal with staff turnover and absences and to sustain high levels of service to operating utilities. An individual operating utility might experience considerable disruption if a key professional left and it was necessary to hire outside to fill the vacancy.

- Maintenance of Corporate-Wide Standards – Personnel in American Water's Service Company establish standards for many functions (e.g., engineering designs, operating procedures and maintenance practices). It is easier to ensure these standards are followed by every operating utility because their implementation is overseen by the Service Company.

- Improved Governance – American Water's Service Company provides another dimension of management and financial oversight that supplements local operating utility management. The Service Company facilitates standard planning and reporting that help ensure operating utilities meet the requirements of their customers in a cost effective manner.

- Retention of Personnel – A service company organization provides operating utility personnel with another career path beyond what may be available on a local level. These opportunities tend to improve employee retention.

American Water follows the model for other utility service companies in another important regard. Its services are provided to affiliate operating utilities, like NJAWC, at cost. American Water's Service Company is not a profit-making entity. It assigns only its actual expenses to the American Water subsidiaries it services.

The Service Company provides services to American Water operating companies from the following locations:

- Corporate Office – Includes American Water's executive management and personnel from the various corporate support services. American Water's corporate office is located in Voorhees, New Jersey.

- National Call Centers – Perform customer service functions, including: customer call processing, service order processing, correspondence processing, credit and collections. American Water maintains two call centers. One in Alton, Illinois that went into operation in 2001 and a second in Pensacola, Florida that went into operation in 2005. Prior to the establishment of these national call centers, customer service functions were performed by employees of NJAWC, which incurred the expense on its books.

- National Shared Services Center – The Shared Services Center, located in Cherry Hill, New Jersey, provides various financial, accounting and treasury functions that had been performed by individual operating companies. This arrangement has improved and streamlined the Company's financial processes and allowed operating companies to focus on providing utility service.

- Regional Offices – Regional offices provide operating companies with certain support services that can be performed more effectively on a regional basis because individual operating company/center workloads are not sufficient to warrant a full-time staff for these activities. At the same time, these services require closer proximity to operating companies served so they are not provided by the National Shared Services Center. Examples of regional office services include legal, communication, human resources and maintenance.

- Belleville Lab – The national trace substance laboratory is located in Belleville, Illinois and performs testing for all American Water operating companies.

- Information Technology Service Centers – American Water's principal data center, located in Hershey, Pennsylvania, supports the IT infrastructure required to run corporate and operating company business applications and the communications systems. IT personnel rotate, as needed, throughout the regional offices and operating companies.

Service Company Expense Categories

The Service Company renders a monthly bill to operating companies. Charges are broken down into the following expense categories:

- Labor – base pay (salaries) of managerial and professional employees
- Labor-Related Overheads - employee benefit costs (payroll taxes, medical coverage, pensions, disability insurance) and other general expenses
- Support - wages and salaries of office support personnel, including secretaries, clerical personnel, telephone operators and mail clerks
- Office Expenses - office rent, equipment leases, telephone, electric, office supplies, property taxes, office maintenance
- Vouchers/Journal Entries – (1) travel expenses incurred by Service Company personnel, (2) other items submitted for reimbursement by employees, including professional association dues, (3) outside service contracts for such things as actuarial services, and (4) various other expenditures, including data center expenses for software licenses and hardware maintenance.

Service Company expenses are either assigned directly or allocated to operating companies, as shown in the table below.

Expense Category	Direct Charged	Allocated	Comments
Labor	X	X	Professional personnel working for one or several operating companies
Labor-Related Overheads	X	X	These are primarily employee benefit costs that relate directly to labor
Support		X	Administrative personnel support the professional staff, thus support costs are allocated on the basis of professional labor
Office Expense		X	Are all allocated on the basis of professional labor
Vouchers/Journals	X	X	May be either directly in support of one operating company (e.g., an engineer traveling from the Corporate Office to the operating company) or allocated to several operating companies

A direct charge occurs when Service Company work or expenses are incurred in support of only one operating company. Direct charge examples include work in support of an operating company's rate case, engineering design work on an operating company's project and the preparation of an operating company's financial statements.

Service Company expenses are allocated when more than one operating company benefits from the underlying work. Examples include assessments of new Federal water quality regulations, development of the company-wide materials procurement contracts and creation of company-wide engineering design standards.

Charging and Assignment Of Service Company Time and Expenses

Service Company transactions are assigned with the following information so there is a proper accounting and eventual charging to an operating company:

- Operating company
- Formula number
- Work order (where applicable)
- Authorization number (where applicable)

Charges can originate from the following systems:

- Payroll System
- RVI System (outside vendor payments)
- PCard System (credit card payments)
- Internal Purchase Order System
- Journal entries

II – Background

The Service Company's time reporting process enables labor and support charges to be assigned to the proper operating company. Labor charges are based on the time reported by managerial and professional Service Company employees. Every week, Service Company professional employees complete an electronic time sheet that shows:

- Formula number (this is linked to operating company within American Water's financial system)
- Employee hours worked
- Account number for non-labor charges

At month-end, time report information is processed and direct and allocated professional labor hours tabulated for each operating company. Dollar charges are then calculated using the hourly rate of each Service Company professional employee based upon their base salary (i.e., an employee's hours times their hourly rate of pay).

Support (administrative) personnel charge their time to the activity "General Admin." As described in the table on page 4, their labor charges are allocated to operating companies based upon how their office's professional personnel labor charges are assigned. For instance, if 10% of American Water's Shared Services' professional labor is assigned to NJAWC during a month, then 10% of that office's monthly administrative labor charges also are assigned to the operating company.

The overhead cost category is next assigned based on professional and administrative labor costs. Thus, if 10% of the Shared Services' accumulated professional and support labor is charged to NJAWC during the month, then 10% of that month's overhead expenses will be assigned to NJAWC.

Each Service Company location's office expenses are allocated to operating companies based on how professional labor charges for that office have been assigned. For instance, if 2% of professional labor from one Service Company office is assigned to NJAWC, then 2% of that office's office expenses would be assigned to NJAWC. Thus, office expenses are allocated in the very same way as administrative labor.

Vouchers/journal entries may be charged directly or allocated, depending on who benefits from the expenditure. For instance, the cost of a continuing professional education course taken by a professional in a regional office is allocated to the operating companies served by that office. Travel expenses by that same professional to a rate case proceeding are charged directly to the operating company whose case is being heard.

III – Service Company Cost Comparison Approach

During the 12 months ended June 30, 2009, the Service Company billed NJAWC $34,094,415 in O&M-related charges and $2,541,741 in capital-related charges. Included in the O&M amount are certain non-recurring expenses which are excluded from this market study because NJAWC is not seeking their recovery. As calculated in the table below, net testable Service Company charges of $36,550,356 were subjected to a market cost comparison.

	12 Months Ended June 30, 2009
Mgmt Fee Expense (O&M)	$ 34,094,415
Add/Subtract: Non-Recurring Items	
Sarbanes-Oxley	$ 9,117
Divestiture Support	$ 19,012
Business Change	$ (113,929)
Net O&M Expenses	$ 34,008,615
Mgmt Fees - Capital	$ 2,541,741
Total Testable AWWSC Charges	**$ 36,550,356**

For purposes of comparing these charges to certain outside benchmarks, Service Company services were placed into two categories:

- Managerial and Professional Services – Includes such services as management, accounting, legal, human resources, information technology, and engineering.

- Customer Accounts Services – Includes customer-related services, such as call center, credit, billing, collection and payment processing.

Total test period Service Company charges break down between management/professional services and customer account services as follows:

	12 Months Ended June 30, 2009	
	Amount	Hours
Management and Professional Services	$ 26,876,116	261,863
Customer Account Services	$ 9,674,240	278,715
Total	$ 36,550,356	540,578

This study's first question—whether Service Company 12 months ended June 30, 2009 charges were reasonable—was determined by comparing NJAWC's A&G-related Service Company charges per customer to the same charges for utility companies that must file the FERC Form 60 – Annual Report of Service Companies.

The second question—whether Service Company charges during the 12 months ended June 30, 2009 were at the lower of cost or market—was evaluated by comparing the cost per hour for managerial and professional services provided by Service Company personnel to hourly billing rates that would be charged by outside providers of equivalent services. Service Company costs per hour were based on actual charges to NJAWC during the 12 months ended June 30, 2009. Outside providers' billing rates came from surveys or other information from professionals that could perform the services now provided by the Service Company.

The third question—whether Service Company's 12 months ended June 30, 2009 customer account services charges, including National Call Center costs, were comparable to other utilities—was addressed by comparing NJAWC's customer accounts services expenses to those of neighboring investor owned electric utilities. This utility comparison group was selected because the cost of outside providers of customer accounts services is proprietary and not publicly available. Comparison to electric utilities is appropriate because all utilities, regardless of service type, must perform customer account services activities, including updating customer records for meter reads, printing and mailing bills, and the collection and processing of customer payments. Electric utility costs are available from the Federal Energy Regulatory Commission (FERC) Form 1, thus there is appropriate data transparency. The selection of electric utilities from New Jersey and neighboring states provides a sufficiently sized comparison group.

The fourth question—the necessity of Service Company services—was investigated by defining the services provided to NJAWC and determining if these services would be required if NJAWC were a stand-alone utility.

IV – Question 1 – Reasonableness of Service Company Charges

NJAWC's Service Company Cost per Customer

During the 12 months ended June 30, 2009, NJAWC was charged $49 per customer by the Service Company for A&G/O&M-related services. The calculation of this amount, shown in the table below, starts with total net testable Service Company charges and adjusts for capital and non-A&G functions (engineering, operations and water quality) charges. These adjustments are necessary to develop a per customer cost that is comparable to cost of utility service companies.

	12 Months ended Jun 30, 2009 AWWSC Charges
Testable Service Company charges	$ 36,550,356
Less: Capital charges	$ (2,541,741)
Less: Non-A&G function O&M charges	
Engineering	$ (4,153)
Operations	$ (1,232,226)
Water Quality	$ (1,277,188)
Net A&G/O&M-related charges	$ 31,495,047
NJAWC customers	638,458
NJAWC Cost Per Customer	**$ 49**

Comparison Group Cost Per Customer

Every centralized service company in a holding company system subject to regulation by the FERC must file a Form 60 in accordance with the Public Utility Holding Company Act of 2005, Section 1270, Section 390 of the Federal Power Act and 18 C.F.R. paragraph 366.23. This report is designed to collect financial information from service companies that are subject to regulation by the FERC.

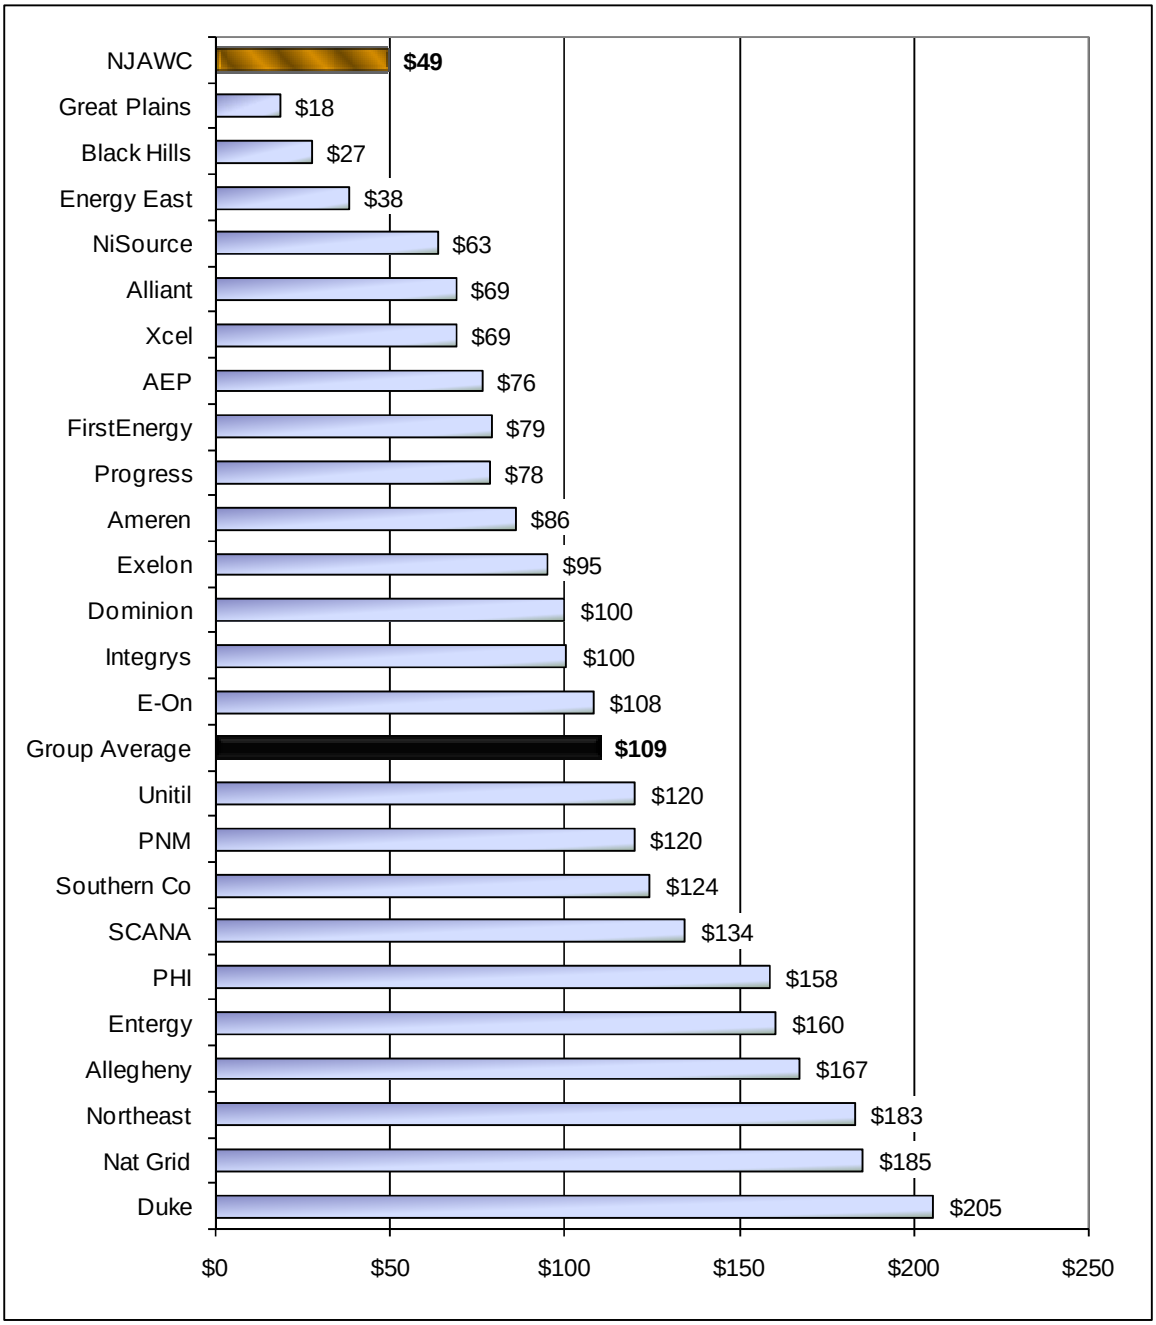
For 2008, a Form 60 was filed by 24 utility service companies, all of which serve utilities that provide regulated electric and, in some cases, gas service to retail customers. In order to make a valid comparison of this group's costs to those of American Water Works Service Company, it was necessary to isolate expenses that that they have in common. These include A&G-related charges associated with the following FERC accounts:

901 – Supervision	921 – Office supplies and expenses
903 – Customer records and collection expenses	923 – Outside services employed
905 – Miscellaneous customer accounts expenses	926 – Employee pensions and benefits
907 – Supervision	928 – Regulatory commission expenses
910 – Misc customer service and info expenses	930.2 – Miscellaneous general expenses
911 – Supervision	931 – Rents
920 - Administrative and general salaries	935 – Maintenance of structures and equipment

O&M expenses charged to utility affiliates for the comparison group service companies were obtained from Schedule XVI – Analysis of Charges for Service Associate and Non-Associate Companies (p. 303 to 306) of each entity's FERC Form 60. This schedule shows charges by FERC Account.

Comparison group service company 2008 expenses were also adjusted to remove charges to non-regulated affiliates from the cost pool used to calculate the cost per regulated service customer. This determination was made using information from the FERC Form 60 schedule: Account 457 – Analysis of Billing – Associate Companies.

IV – Question 1 – Reasonableness of Service Company Charges



A&G expenses per regulated utility customer for the 24 utility companies that file Form 60 for 2008 are calculated below.

Utility Company	2008 Regulated Retail Service Company A&G Expenses	Regulated Retail Customers	Cost per Customer
AEP	$396,340,118	5,213,000	$ 76
Allegheny	$263,588,707	1,577,873	$ 167
Alliant	$205,754,832	3,000,000	$ 69
Ameren	$291,684,710	3,400,000	$ 86
Black Hills	$20,763,828	759,400	$ 27
Dominion	$357,718,046	3,588,500	$ 100
Duke	$923,936,645	4,500,000	$ 205
Energy East	$113,714,789	2,989,800	$ 38
Entergy	$432,575,683	2,700,000	$ 160
E-On	$136,276,177	1,263,000	$ 108
Exelon	$558,687,014	5,885,000	$ 95
FirstEnergy	$354,028,109	4,499,000	$ 79
Great Plains	$15,000,708	820,000	$ 18
Integrys	$216,364,166	2,157,000	$ 100
Nat Grid	$1,240,706,398	6,700,000	$ 185
NiSource	$237,380,009	3,750,000	$ 63
Northeast	$302,138,730	1,654,000	$ 183

SCANA	$191,207,825	1,424,300	$ 134
Southern Co	$546,498,605	4,402,000	$ 124
Unitil	$20,341,422	169,600	$ 120
Xcel	$367,626,617	5,345,000	$ 69
Group Total	**$7,840,162,191**	**71,666,473**	**$ 109**

Exhibit 1 shows NJAWC's 12 months ended June 30, 2009 Service Company cost per customer of $49 to be considerably lower than the average of $109 per customer for the comparison group service companies. Only 3 of 24 comparison group service companies had a lower cost per customer than NJAWC. Based on this result, it is possible to conclude that the Service Company's 12 months ended June 30, 2009 charges to NJAWC were reasonable.

Exhibit 1

New Jersey American Water Company
Comparison of Service Company Annual Costs Per Customer

V – Question 2 – Provision of Services at the Lower of Cost or Market

Methodology

The lower-of-cost-or-market comparison is accomplished by comparing the cost per hour for Service Company managerial and professional services to those of outside service providers to whom these duties could be assigned. Based on the nature of the Service Company services it was determined that the following outside providers could perform the categories of services indicated below:

- Management Consultants – executive and administrative management, risk management services, human resources and communications services
- Attorneys – legal services
- Certified Public Accountants – accounting, financial, information technology and rates and revenues services
- Professional Engineers – engineering, operations and water quality services.

The services provided by the Belleville lab are assumed to be transferable to professional engineers for purposes of this cost comparison. This was done for two reasons. First, there is no readily available survey of hourly billing rates for testing services such as those performed by Belleville. Second, Belleville personnel have similar, scientific educational backgrounds as Service Company engineering personnel. Thus, it is valid to compare the hourly rates of Belleville services to those of outside engineering firms.

Service Company's hourly rate were calculated for each of the four outside service provider categories, based on the dollars and hours charged to NJAWC during the 12 months ended June 30, 2009. Hourly billing rates for outside service providers were developed using third party surveys or directly from information furnished by outside providers themselves.

It should be noted that by using the Service Company's hours charged NJAWC during the 12 months ended June 30, 2009, its hourly rates are actually overstated because Service Company personnel charge a maximum 8 per day even when they work more. Outside service providers generally bill for every hour worked. If the overtime hours of Service Company personnel had been factored into the hourly rate calculation, Service Company hourly rates would have been lower.

The last step in the market cost comparison was to compare the Service Company's average cost per hour to the average cost per hour for outside providers.

Service Company Hourly Rates

Exhibit 2 (page 14) details the assignment of 12 months ended June 30, 2009 management and professional Service Company charges by outsider provider category. Exhibit 3 (page 15) shows the same assignment for Service Company management and professional hours charged to NJAWC during the 12 months ended June 30, 2009.

Certain adjustments to these dollar amounts were necessary to calculate Service Company hourly rates that are directly comparable to those of outside providers. Adjustments were made to the following the 12 months ended June 30, 2009 test period non-labor Service Company charges:

- Contract Services – 12 months ended June 30, 2009 Service Company charges to NJAWC include expenses associated with the use of outside professional firms to perform certain corporate-wide services (e.g., legal, financial audit, actuarial services).

These professional fees are excluded from the Service Company hourly rate calculation because the related services have effectively been out-sourced already.

- Travel Expenses – In general, client-related travel expenses are not recovered by outside service providers through their hourly billing rate. Rather, actual out-of-pocket travel expenses are billed to clients in addition to fees for professional services. Thus, it is appropriate to remove these Service Company charges from the hourly rate calculation.

- Information Technology Infrastructure Expenses – Included in the 12 months ended June 30, 2009 Service Company charges to NJAWC are leases, maintenance fees and depreciation related to American Water's enterprise mainframe, server and network infrastructure and corporate business applications. An outside provider that would take over operation of this infrastructure would recover these expenses over and above the labor necessary to operate the data center.

Exhibit 4 (page 16) shows how contract services, travel expenses and computer hardware/software-related Service Company charges are assigned among the four outside provider categories.

Based on the assignment of expenses and hours shown in Exhibits 2 and 3 and the excludable items shown in Exhibit 4, the Service Company's equivalent costs per hour for the 12 months ended June 30, 2009 are calculated below.

	Attorney	Management Consultant	Certified Public Accountant	Professional Engineer	Total
Total management, professional & technical services charges	$ 1,289,713	$ 6,715,215	$ 15,836,670	$ 3,034,517	$ 26,876,116

V – Question 2 – Provision of Services at the Lower of Cost or Market

Outside Service Provider Hourly Rates

The next step in the cost comparison was to obtain the average billing rates for each outside service provider. The source of this information and the determination of the average rates are described in the paragraphs that follow.

It should be noted that professionals working for three of the five outside provider categories may be licensed to practice by state regulatory bodies. However, not every professional working for these firms is licensed. For instance, among New Jersey certified public accounting firms, only more experienced staff are predominantly CPAs (see table below). Some Service Company employees also have professional licenses. Thus, it is valid to compare the Service Company's hourly rates to those of the outside professional service providers included in this study.

Position	New Jersey Average
Partners/Owners	97%
Directors (11+ years experience)	73%
Managers (6-10 years experience)	97%
Sr Associates (4-5 years experience)	59%
Associates (1-3 years experience)	26%
New Professionals	na

Source: AICPA's National PCPS/TSCPA Management of an Accounting Practice Survey (2008)

Attorneys

The New Jersey State Bar does not survey its members as to their hourly billing rates. In addition, publicly available billing rate information could not be found for New Jersey attorneys. Therefore, an estimate of New Jersey attorney rates was developed from two surveys conducted by Lawyers Weekly in the states of Michigan and Massachusetts. As presented in Exhibit 5, the average rate for each firm was adjusted for the cost of living differential between its location and Trenton, New Jersey. The Lawyers Weekly surveys included rates in effect at December 31, 2007. Thus, the 2007 average rate was escalated to December 31, 2008—the midpoint of the test year ended June 30, 2009.

Management Consultants

The cost per hour for management consultants was developed from a 2009 survey performed by the Association of Management Consulting Firms—an industry trade organization. The survey includes rates that were in effect during 2008 for firms throughout the United States. Consultants typically do not limit their practice to any one region and must travel to a client's location. Thus, the U.S. national average is appropriate for comparison.

The first step in the calculation, presented in Exhibit 6, was to determine an average rate by consultant position level. From these rates, a single weighted average hourly rate was calculated based upon the percent of time that is typically applied to a consulting assignment by each consultant position level.

Certified Public Accountants

The average hourly rate for New Jersey CPAs was developed from a 2008 survey performed by the American Institute of Certified Public Accountants (AICPA). The New Jersey version of this survey was used to develop hourly rates for member firms in New Jersey.

As shown in Exhibit 7, a weighted average hourly rate was developed based on a set of accountant positions and a percent of time that is typically applied to an accounting assignment. This survey includes rate information in effect during 2007. Thus, the data had to be escalated to December 31, 2008—the midpoint of the test year ended June 30, 2009.

Professional Engineers

The Company provided hourly rate information for outside engineering firms that could have been used by NJAWC in 2009. As presented in Exhibit 8, an average rate was developed for each engineering position level. Then, using a typical percentage mix of project time by engineering position, a weighted average cost per hour was calculated.

A. Calculation of Average Hourly Rate by Engineer Position

	Average Hourly Billing Rates			
	Technician	Engineer Design Engineer	Project Manager	Officer
Name of Firm	Senior Technician	Project Engineer	Sr. Mgr. Engineer	Principal Engineer
Firm #1	$67	$81	$122	$162
Firm #2	$56	$70	$126	$163
Firm #3	$65	$93	$152	$200
Firm #4	$71	$89	$140	$175
Firm #5	$85	$98	$133	$200
Firm #6	$64	$86	$126	$175

B. Calculation of Overall Average Engineering Hourly Billing Rate

	Technician	Engineer Design Engineer	Project Manager	Officer	
	Senior Technician	Project Engineer	Sr. Mgr. Engineer	Principal Engineer	
Average Hourly Billing Rate (From Above)	$68	$86	$133	$179	
Typical Percent of Time on an Engineering Assignment	30%	35%	25%	10%	Weighted Average
	$20	$30	$33	$18	**$102**

Source: Information provided by American Water Works Service Company

V – Question 2 – Provision of Services at the Lower of Cost or Market

Service Company versus Outside Provider Cost Comparison

As shown in the table below, Service Company costs per hour are considerably lower than those of outside providers.

	12 Months Ended June 30, 2009		
Service Provider	Service Company	Outside Provider	Difference--Service Co. Greater(Less) Than Outside
Attorney	$ 97	$ 266	$ (170)
Management Consultant	$ 109	$ 224	$ (115)
Certified Public Accountant	$ 71	$ 143	$ (72)
Professional Engineer	$ 73	$ 102	$ (28)

Based on these cost per hour differentials and the number of managerial and professional services hours billed to NJAWC during the 12-months ended June 30, 2009, outside service providers would have cost $20,240,390 more than the Service Company (see table below). Thus, on average, outside provider's hourly rates are 75% higher than those of the Service Company ($20,240,390 / $26,876,116).

	12 Months Ended June 30, 2009		
Service Provider	Hourly Rate Difference--Service Co. Greater(Less) Than Outside	Service Company Hours Charged	Dollar Difference
Attorney	$ (170)	11,798	$ (2,002,519)
Management Consultant	$ (115)	43,874	$ (5,055,494)
Certified Public Accountant	$ (72)	170,127	$(12,165,996)
Professional Engineer	$ (28)	36,064	$ (1,016,381)
Service Company Less Than Outside Providers			$(20,240,390)

It should be noted that the cost differential associated with using outside providers is even greater because Service Company personnel do not charge for more than 8 hours per day even when they work more. Outside providers generally charge clients for all hours worked. If, for instance, Service Company personnel worked 5% overtime (2 hours) per week on NJAWC's behalf, that would have amounted to over 13,000 additional hours of work during the 12 months ended June 30, 2009. Based on the hourly rate differentials above, this overtime would have added another $1,012,000 to the cost of using outside provider.

If NJAWC were to use outside service providers rather than the Service Company for managerial and professional services, it would incur other additional expenses besides those associated with higher hourly rates. Managing outside firms who would perform over 264,000 hours of work (more than 176 full-time equivalents at 1,500 "billable" hours per FTE per year) would add a significant workload to the existing NJAWC management team. Thus, it would be necessary for NJAWC to add at least two positions to supervise the outside firms and ensure they delivered quality and timely services. The individuals that would fill these positions would need a good understanding of each profession being managed. They must also have management experience and the authority necessary to give them credibility with the outside firms. As calculated in the table below, this position would add more than $300,000 per year to NJAWC's personnel expenses.

V – Question 2 – Provision of Services at the Lower of Cost or Market

Cost of Adding 2 Professional Positions To NJAWC's Staff

	Total
New Positions' Salary	$ 100,000
Benefits (at 49.4%)	$ 49,400
Office Expenses (15.2%)	$ 15,200
Cost per Position	$ 164,600
Number of Positions	2
Total Cost of Two Positions	$ 329,200

Thus, the total effect on the ratepayers of NJAWC of contracting all services now provided by Service Company would be an increase in their costs of $20,569,590 ($20,240,390 + $329,200). Based on the results of this comparison, it is possible to conclude that the Service Company charged NJAWC at the lower of cost or market for services provided during the 12 months ended June 30, 2009.

VI - Question 3 - Reasonableness of Customer Accounts Services Costs

Background

Customer Accounts Services involve the processes that occur from the time meter read data is recorded in the customer information system through the printing and mailing of bills through the collection and processing of customer payments. Customer Accounts Services are accomplished by the following utility functions:

- Customer Call Center Operations – customer calls/contact, credit, order taking/disposition, bill collection efforts and outage calls
- Customer Call Center Maintenance – support of phone banks, voice recognition units, call center software applications and telecommunications
- Customer billing – bill printing, stuffing, and mailing
- Remittance processing – processing customer payments received in the mail
- Bill payment centers – processing customer payments at locations where customers can pay their bills in person

Neighboring electric utility cost information comes from the FERC Form 1 that each utility that is subject to FERC regulation, must file. FERC's chart of accounts is defined in Chapter 18, Part 101 of the Code of Federal Regulations. FERC accounts that contain customer accounts services-related expenses are Account 903 Customer Accounts Expense – Records and Collection Expense and Account 905 Customer Accounts Expense – Miscellaneous Customer Accounts Expense. Exhibit 9 provides FERC's definition of the type of expenses that should be recorded in these accounts.

In addition to the charges in these FERC accounts, labor-related overheads charged to the following FERC accounts must be added to the labor components of Accounts 903 and 905:

- Account 926 Employee Pension and Benefits
- Account 408 Taxes Other Than Income (employer's portion of FICA)

Comparison Group

Electric utilities included in the comparison group are shown in the table below. These are companies whose FERC Form 1 show amounts for accounts 903 and 905.

New York	• Central Hudson Gas & Elect • Consolidated Edison • New York State Elect & Gas	• Niagra Mohawk Power • Orange & Rockland Utilities • Rochester Gas & Electric
Pennsylvania	• Duquesne Light • Metropolitan Edison • PECO Energy • Pennsylvania Electric	• Pennsylvania Power • PPL Electric Utilities • West Penn Power
New Jersey	• Atlantic City Electric • Jersey Central Power	• Public Service Electric & Gas
Maryland	• Delmarva Power & Light	

New Jersey American Water Company
FERC Account Descriptions

903 – Customer Records and Collection Expenses

This account shall include the cost of labor, materials used and expenses incurred in work on customer applications, contracts, orders, credit investigations, billing and accounting, collections and complaints.

Labor

1. Receiving, preparing, recording and handling routine orders for service, disconnections, transfers or meter tests initiated by the customer, excluding the cost of carrying out such orders, which is chargeable to the account appropriate for the work called for by such orders.
2. Investigations of customers' credit and keeping of records pertaining thereto, including records of uncollectible accounts written off.
3. Receiving, refunding or applying customer deposits and maintaining customer deposit, line extension, and other miscellaneous records.
4. Checking consumption shown by meter readers' reports where incidental to preparation of billing data.
5. Preparing address plates and addressing bills and delinquent notices.
6. Preparing billing data.
7. Operating billing and bookkeeping machines.
8. Verifying billing records with contracts or rate schedules.
9. Preparing bills for delivery, and mailing or delivering bills.
10. Collecting revenues, including collection from prepayment meters unless incidental to meter reading operations.
11. Balancing collections, preparing collections for deposit, and preparing cash reports.
12. Posting collections and other credits or charges to customer accounts and extending unpaid balances.
13. Balancing customer accounts and controls.
14. Preparing, mailing, or delivering delinquent notices and preparing reports of delinquent accounts.
15. Final meter reading of delinquent accounts when done by collectors incidental to regular activities.
16. Disconnecting and reconnecting services because of nonpayment of bills.
17. Receiving, recording, and handling of inquiries, complaints, and requests for investigations from customers, including preparation of necessary orders, but excluding the cost of carrying out such orders, which is chargeable to the account appropriate for the work called for by such orders.
18. Statistical and tabulating work on customer accounts and revenues, but not including special analyses for sales department, rate department, or other general purposes, unless incidental to regular customer accounting routines.
19. Preparing and periodically rewriting meter reading sheets.
20. Determining consumption and computing estimated or average consumption when performed by employees other than those engaged in reading meters.

Materials and expenses

21. Address plates and supplies.
22. Cash overages and shortages.
23. Commissions or fees to others for collecting.
24. Payments to credit organizations for investigations and reports.
25. Postage.
26. Transportation expenses, including transportation of customer bills and meter books under centralized billing procedure.
27. Transportation, meals, and incidental expenses.
28. Bank charges, exchange, and other fees for cashing and depositing customers' checks.
29. Forms for recording orders for services, removals, etc.
30. Rent of mechanical equipment.

New Jersey American Water Company
FERC Account Descriptions

905 – Miscellaneous Customer Accounts Expenses

This account shall include the cost of labor, materials used and expenses incurred not provided for in other accounts.

Labor

1. General clerical and stenographic work.
2. Miscellaneous labor.

Materials and expenses

3. Communication service.
4. Miscellaneous office supplies and expenses and stationery and printing other than those specifically provided for in accounts 902 and 903.

VI - Question 3 - Reasonableness of Customer Accounts Services Costs

NJAWC Cost per Customer

As calculated below, NJAWC's 12 months ended June 30, 2009 customer account services expense per customer was $26.33. The cost pool used to calculate this average includes charges for Service Company services (e.g., call center, billing, payment processing) and postage and forms expenses, which are incurred directly by NJAWC. It was necessary to adjust the National Call Center charges because electric utilities experience an average of 2.50 calls per customer compared to American Water's 1.32 calls per customer. Thus, National Call Center expenses had to be increased, for comparison purposes, to reflect its costs at a 2.50 calls per customer level.

New Jersey American Water Company

Cost Component		Service Co Charges	Adjustment Fewer Calls For Water Cos. (A)	Adjusted	
Service Company					
Call Centers	Call processing, order processing, credit, bill collection	$ 9,663,854	$ 3,513,016	$13,176,870	
Regional Offices		$ 10,386		$ 10,386	
Service Company	Customer payment processing			$ 819,780	(B)
Operating Company	Postage & forms			$ 2,806,407	
			Cost Pool Total	$16,813,442	
			Total Customers	638,458	
	Year Ended June 30, 2009 Cost Per New Jersey American Customer			**$ 26.33**	

Note A: Adjustment for American Water's fewer calls per customer

This adjustment is necessary because water utilities experience fewer calls per customer than do electric utilities

Call handling expenses		$ 3,906,184
Electric utility industry's avg calls/customer	2.50	
American Water's avg calls/customer	1.32	
Percent different	90%	90%
Total Adjustment		$ 3,513,016

Note B: Estimated customer payment processing expenses

Number of customer bills	7,661,496
Bank charge per item	$ 0.1070
Total estimated annual expense	$ 819,780

Electric Utility Group Cost per Customer

Exhibit 10 shows the actual 2008 customer accounts expense per customer calculation for the electric utility comparison group. All of the underlying data was taken from the utilities' FERC Form 1.

VI - Question 3 - Reasonableness of Customer Accounts Services Costs

Summary of Results

As shown in the table below, NJAWC's cost per customer is well below the average cost of the neighboring electric utility comparison group. It can therefore be concluded that NJAWC's 12 months ended June 30, 2009 customer accounts-related expenses, including those of the Alton and Pensacola Call Centers, assigned by the Service Company to NJAWC were comparable to those of other utilities.

Customer Account Services Expenses Per Customer	
West Penn Power Company	$12.54
Pennsylvania Electric Company	$14.28
Pennsylvania Power Company	$15.69
Metropolitan Edison Company	$15.79
Jersey Central Power & Light Company	$15.99
Duquesne Light Company	$17.17
New Jersey American Water	**$26.33**
Rochester Gas & Electric Corporation	$26.62
PPL Electric Utilities Corporation	$28.02
Niagra Mohawk Power Corporation	$31.14
New York State Electric & Gas Corporation	$33.75
Comparison Group Average	**$43.23**
Central Hudson Gas & Electric Company	$43.79
Consolidated Edison Company	$46.64
Orange & Rockland Utilities, Inc.	$56.57
PECO Energy Company	$60.18
Delmarva Power & Light Company	$69.08
Atlantic City Electric Company	$70.72
Public Service Electric & Gas Company	$83.88

VI - Question 4 – Need for Service Company Services

Analysis of Services

The final aspect of this study was an assessment of whether the services that are provided to NJAWC by the Service Company would be necessary if NJAWC were a stand-alone water utility. The first step in this evaluation was to determine specifically what the Service Company does for NJAWC. Based on discussions with Service Company personnel, the matrix in Exhibit 11 was created showing which entity—NJAWC or a Service Company location—is responsible for each of the functions NJAWC requires to ultimately provide service to its customers. This matrix was reviewed to determine: (1) if there was redundancy or overlap in the services being provided by the Service Company and (2) if Service Company services are typical of those needed by a stand-alone water utility.

Upon review of Exhibit 12, the following conclusions can be drawn:

- The services that the Service Company provides are necessary and would be required even if NJAWC were a stand-alone water utility.

- There is no redundancy or overlap in the services provided by the Service Company to NJAWC. For all of the services listed in Exhibit 12, there was only one entity that was primarily responsible for the service.

Governance Practices Associated With Service Company Charges

There are several ways by which NJAWC exercises control over Service Company services and charges. The most important of these are described below.

- **NJAWC Company Board Oversight** – The NJAWC board of directors includes members of American Water's Executive Management Team, members of the NJAWC management team and external business and community leaders. This diverse board ensures that NJAWC's needs are a factor in the delivery of Service Company services. The NJAWC Board meets at a minimum of four times each year and at every meeting financial and operational reports and issues are discussed at length.
- **NJAWC President Oversight** – The NJAWC President is responsible for the overall performance of NJAWC, including services and charges received from the American Water Service Company. The President of NJAW is also a board member on the Service Company's Board of Directors (see below for further discussion). In addition, as part of the overall management team of American Water through the President of Regulated Operations, NJAWC's President has a significant voice in major business decisions of American Water and has the ability to monitor Service Company performance quality and spending as NJAWC's President is one of five direct reports to the President of Regulated Operations.
- **NJAWC Vice President and Treasurer** – The Vice President and Treasurer is responsible for the financial reporting, performance and internal controls of the NJAWC. The Vice President and Treasurer monitors the performance, expense and reporting from the Service Company and verifies and validates the cost of services received. In addition, the Vice President and Treasurer through the Financial Planning and Analysis staff reviews the monthly charges and investigates whenever the amount, quality and/or services are appropriate.
- **Service Company Board Oversight** – The Service Company Board of Directors is comprised of 16 members, of which NJAWC President is one of the members. They typically meet four times a year to provide governance on the activities and bylaws of Service Company. Their primary responsibilities include:
  - Approve the Business Plan and Operating Budget
  - Review Financial Performance of the Service Center
  - Review performance metrics of certain functional groups
  - Approve policy, procedures and practices of AW as it relates to Service Company.
- **Service Company Budget Review/Approval** – the NJAWC president and several other state regulated water utility presidents serve on the Service Company board of directors and that board must formally approve the budget for Service Company charges for the next year. These budgeted charges are consolidated with the operating company's own spending into an overall budget which must be approved by the individual operating company's board of directors (e.g., NJAWC).
- **Major Project Review And Approval –** Major non-capital projects undertaken by the Service Company must first be reviewed by American Water's Executive Management Team, which includes the President of Regulated Operations. The President of Regulated Operations, with significant input from his direct reports (including the NJAWC president), has the ability to impact all new initiatives and projects before they are authorized. Major non-capital projects and initiatives for the Service Company are approved through the Business Plan. All significant business initiatives (capital or non-capital) are required to be submitted to the "BATT" (Business and Technology Team) committee for final approval. The "BATT" team is comprised of C-level executive members (CEO, CFO, etc.).

- **Capital Investment Management** (CIM) – CIM covers capital and asset planning and is employed throughout American Water, including the Service Company. CIM provides a full range of governance practices, including a formal protocol for assessing system needs, prioritizing expenditures, managing the capital program, approving project spending, delivering projects and measuring outputs. CIM ensures that:
  - Capital expenditure plans are aligned with the strategic intent of the business
  - The impact of capital expenditure and income plans are fully reflected in operating expense plans
  - The impacts of these plans are understood and affordable
  - Effective controls are in place over budgets (through business plans) and individual capital projects (through appropriate authorization thresholds, management and reporting processes).

  The CIM process was designed to optimize the effectiveness of asset investment.
- **Accounting and Financial Reporting** – Similar to the states, the Service Company follows the same accounting and financial reporting processes. During the month accounting transactions are recorded. At month end, the SSC and Service Company Finance teams review all transactions. Variance analyses are performed based on month to month actual as well as actual to budget to ensure accuracy. Once completed, the service company bill is run and the actuals are "pushed down" and allocated to the states based on predetermined formulas. A conference call is schedule before the operating companies close their books each month to discuss Service Company performance. This is based at a functional level with explanation reported for those expense variances that meet or exceed certain thresholds. At this time, the operating companies may question expenses and spending for better understanding of results. NJAWC Financial Performance and Analysis (FP&A) personnel review the monthly Service Company bill for accuracy and reasonableness on a monthly basis. Any mistakes or overcharges are credited on a subsequent billing.
- **NJAWC Company Budget Variance Reporting** – The "Budget/Plan Analysis," produced monthly by each operating company, has line items for Management Fees and Shared Service Expense (i.e., IT, Call Center, etc.). In this way, Service Company budget versus actual charges as charged to the operating company can be monitored and reviewed for the month and year-to-date as compared to prior year, plan and reforecast.

I – Introduction

Purpose of This Study

This study was undertaken to answer four questions concerning the services provided by American Water Works Service Company, Inc. (Service Company) to New Jersey American Water Company (NJAWC):

1. Were the Service Company's charges to NJAWC during the 2010 reasonable?

2. Was NJAWC charged the lower of cost or market for managerial and professional services provided by the Service Company during the 2010?

3. Were the 2010 costs of the Service Company's customer accounts services, including those of the National Call Centers, comparable to those of other utilities?

4. Are the services NJAWC receives from Service Company necessary?

Study Results

Concerning question 1, the following conclusion was reached:

- The Service Company's 2010 cost per NJAWC customer is reasonable compared to cost per customer for electric and combination electric/gas service companies. During the 2010, NJAWC was charged $48 per customer for administrative and general (A&G)-related services provided by the Service Company. This compares to an average of $111 per customer for service companies reporting to the Federal Energy Regulatory Commission (FERC). Only 2 of the 24 utility service companies that filed a FERC Form 60 for 2010 had a lower per customer A&G cost than NJAWC's charges from the Service Company.

Concerning question 2, the following conclusions were drawn from this study:

- NJAWC was charged the lower of cost or market for managerial and professional services during the 2010.

- On average, the hourly rates for outside service providers are 45% higher than the Service Company's hourly rates.

- The managerial and professional services provided by the Service Company are vital and could not be procured externally by NJAWC without careful supervision on the part of NJAWC. If these services were contracted entirely to outside providers, NJAWC would have to add at least two positions to manage activities of outside firms. These positions would be necessary to ensure the quality and timeliness of services provided.

- If all the managerial and professional services now provided by the Service Company had been outsourced during the 2010, NJAWC and its ratepayers would have incurred more than $14.3 million in additional expenses. This amount includes the higher cost of outside providers and the cost of two NJAWC positions needed to direct the outsourced work.

- This study's hourly rate comparison actually understates the cost advantages that accrue to NJAWC from its use of the Service Company. Outside service providers generally bill for every hour worked. Service Company exempt personnel, on the other hand, charge a maximum of 8 hours per day even when they work more hours. If all overtime hours of

Service Company personnel were factored into the hourly rate calculation, the Service Company would have had an even greater annual dollar advantage than the $14.3 cited above.

- It would be difficult for NJAWC to find local service providers with the same specialized water industry expertise as that possessed by the Service Company staff. Service Company personnel spend substantially all their time serving operating water companies. This specialization brings with it a unique knowledge of water utility operations and regulation that is most likely unavailable from local service providers.

- Service Company fees do not include any profit markup. Only its actual cost of service is being recovered from NJAWC ratepayers.

Concerning question 3, the following conclusion was reached:

- The cost of the Service Company's customer accounts services, including those provided by the National Call Centers, is well below the average of the neighboring electric utility comparison group. As will be explained further herein, this group of companies provides a reasonable proxy group for comparison to a regulated utility of the size and scope of the Service Company and NJAWC. During 2010, the customer accounts cost for NJAWC customers was $24.32 compared to the 2010 average of $50.51 for neighboring electric utilities. The highest comparison group per customer cost was $97.07 and the lowest $13.30.

Concerning question 4, the following conclusions was drawn:

- The services that the Service Company provides are necessary and would be required even if NJAWC were a stand-alone water utility.

- Furthermore, there is no redundancy or overlap in the services provided by the Service Company to NJAWC. For all of the services listed in Exhibit 12, there was only one entity primarily responsible for the service.

II – Background

Overview of American Water Works Service Company

American Water's Service Company exists to provide certain shared services to American Water subsidiaries. It follows a service company model used by many utility holding companies that own multiple regulated utilities. By consolidating executive and professional services into a single service company, utility holding companies are able to realize the following benefits for ratepayers:

- Purchasing Economies – Common expenses (e.g., insurance, chemicals, piping) can be procured on a much larger scale thereby providing greater bargaining power for the combined entity compared to individual utility operating companies. A service company facilitates corporate-wide purchasing programs through its procurement and contract administration functions.

- Operating Economies of Scale – A service company is able to deliver services more efficiently because workloads can be balanced across more persons and facilities. For instance, American Water's Service Company is able to maintain one principal data center for the entire corporation. This is much more cost-efficient than each operating utility funding their own data center with its large fixed hardware, software and staffing costs.

- Continuity of Service – Centralizing service company personnel who perform similar services facilitates job cross-training and sharing of knowledge and expertise. This makes it easier to deal with staff turnover and absences and to sustain high levels of service to operating utilities. An individual operating utility might experience considerable disruption if a key professional left and it was necessary to hire outside to fill the vacancy.

- Maintenance of Corporate-Wide Standards – Personnel in American Water's Service Company establish standards for many functions (e.g., engineering designs, operating procedures and maintenance practices). It is easier to ensure these standards are followed by every operating utility because their implementation is overseen by the Service Company.

- Improved Governance – American Water's Service Company provides another dimension of management and financial oversight that supplements local operating utility management. The Service Company facilitates standard planning and reporting that help ensure operating utilities meet the requirements of their customers in a cost effective manner.

- Retention of Personnel – A service company organization provides operating utility personnel with another career path beyond what may be available on a local level. These opportunities tend to improve employee retention.

American Water follows the model for other utility service companies in another important regard. Its services are provided to affiliate operating utilities, like NJAWC, at cost. American Water's Service Company is not a profit-making entity. It assigns only its actual expenses to the American Water subsidiaries it services.

The Service Company provides services to American Water operating companies from the following locations:

- Corporate Office – Includes American Water's executive management and personnel from the various corporate support services. American Water's corporate office is located in Voorhees, New Jersey.

- National Call Centers – Perform customer service functions, including: customer call processing, service order processing, correspondence processing, credit and collections. American Water maintains two call centers. One in Alton, Illinois that went into operation in 2001 and a second in Pensacola, Florida that went into operation in 2005. Prior to the establishment of these national call centers, customer service functions were performed by employees of NJAWC, which incurred the expense on its books.

- National Shared Services Center – The Shared Services Center, located in Cherry Hill, New Jersey, provides various financial, accounting and treasury functions that had been performed by individual operating companies. This arrangement has improved and streamlined the Company's financial processes and allowed operating companies to focus on providing utility service.

- Regional Offices – Regional offices provide operating companies with certain support services that can be performed more effectively on a regional basis because individual operating company/center workloads are not sufficient to warrant a full-time staff for these activities. At the same time, these services require closer proximity to operating companies served so they are not provided by the National Shared Services Center. Examples of regional office services include legal, communication, human resources and maintenance.

- Belleville Lab – The national trace substance laboratory is located in Belleville, Illinois and performs testing for all American Water operating companies.

- Information Technology Service Centers – American Water's principal data center, located in Hershey, Pennsylvania, supports the IT infrastructure required to run corporate and operating company business applications and the communications systems. IT personnel rotate, as needed, throughout the regional offices and operating companies.

Service Company Expense Categories

The Service Company renders a monthly bill to operating companies. Charges are broken down into the following expense categories:

- Labor – base pay (salaries) of managerial and professional employees
- Labor-Related Overheads - employee benefit costs (payroll taxes, medical coverage, pensions, disability insurance) and other general expenses
- Support - wages and salaries of office support personnel, including secretaries, clerical personnel, telephone operators and mail clerks
- Office Expenses - office rent, equipment leases, telephone, electric, office supplies, property taxes, office maintenance
- Vouchers/Journal Entries – (1) travel expenses incurred by Service Company personnel, (2) other items submitted for reimbursement by employees, including professional association dues, (3) outside service contracts for such things as actuarial

services, and (4) various other expenditures, including data center expenses for software licenses and hardware maintenance.

Service Company expenses are either assigned directly or allocated to operating companies, as shown in the table below.

Expense Category	Direct Charged	Allocated	Comments
Labor	X	X	Professional personnel working for one or several operating companies
Labor-Related Overheads	X	X	These are primarily employee benefit costs that relate directly to labor
Support		X	Administrative personnel support the professional staff, thus support costs are allocated on the basis of professional labor
Office Expense		X	Are all allocated on the basis of professional labor
Vouchers/Journals	X	X	May be either directly in support of one operating company (e.g., an engineer traveling from the Corporate Office to the operating company) or allocated to several operating companies

A direct charge occurs when Service Company work or expenses are incurred in support of only one operating company. Direct charge examples include work in support of an operating company's rate case, engineering design work on an operating company's project and the preparation of an operating company's financial statements.

Service Company expenses are allocated when more than one operating company benefits from the underlying work. Examples include assessments of new Federal water quality regulations, development of the company-wide materials procurement contracts and creation of company-wide engineering design standards.

Charging and Assignment Of Service Company Time and Expenses

Service Company transactions are assigned with the following information so there is a proper accounting and eventual charging to an operating company:

- Operating company
- Formula number
- Work order (where applicable)
- Authorization number (where applicable)

Charges can originate from the following systems:

- Payroll System
- RVI System (outside vendor payments)
- PCard System (credit card payments)
- Internal Purchase Order System
- Journal entries

II – Background

The Service Company's time reporting process enables labor and support charges to be assigned to the proper operating company. Labor charges are based on the time reported by managerial and professional Service Company employees. Every week, Service Company professional employees complete an electronic time sheet that shows:

- Formula number (this is linked to operating company within American Water's financial system)
- Employee hours worked
- Account number for non-labor charges

At month-end, time report information is processed and direct and allocated professional labor hours tabulated for each operating company. Dollar charges are then calculated using the hourly rate of each Service Company professional employee based upon their base salary (i.e., an employee's hours times their hourly rate of pay).

Support (administrative) personnel charge their time to the activity "General Admin." As described in the table on page 4, their labor charges are allocated to operating companies based upon how their office's professional personnel labor charges are assigned. For instance, if 10% of American Water's Shared Services' professional labor is assigned to NJAWC during a month, then 10% of that office's monthly administrative labor charges also are assigned to the operating company.

The overhead cost category is next assigned based on professional and administrative labor costs. Thus, if 10% of the Shared Services' accumulated professional and support labor is charged to NJAWC during the month, then 10% of that month's overhead expenses will be assigned to NJAWC.

Each Service Company location's office expenses are allocated to operating companies based on how professional labor charges for that office have been assigned. For instance, if 2% of professional labor from one Service Company office is assigned to NJAWC, then 2% of that office's office expenses would be assigned to NJAWC. Thus, office expenses are allocated in the very same way as administrative labor.

Vouchers/journal entries may be charged directly or allocated, depending on who benefits from the expenditure. For instance, the cost of a continuing professional education course taken by a professional in a regional office is allocated to the operating companies served by that office. Travel expenses by that same professional to a rate case proceeding are charged directly to the operating company whose case is being heard.

III – Service Company Cost Comparison Approach

During the 2010, the Service Company billed NJAWC a total of $40.8 million, as shown in the table below. These charges were subjected to a market cost comparison.

	2010
Management Fees - O&M	$ 33,228,943
Management Fees - Capital	$ 7,583,315
Total AWSC Charges	**$ 40,812,258**

For purposes of comparing these charges to certain outside benchmarks, Service Company services were placed into two categories:

- Managerial and Professional Services – Includes such services as management, accounting, legal, human resources, information technology, and engineering.

- Customer Accounts Services – Includes customer-related services, such as call center, credit, billing, collection and payment processing.

Total 2010 Service Company charges break down between management/professional services and customer account services as follows:

	2010	
	Amount	Hours
Management and Professional Services	$ 31,703,175	191,382
Customer Account Services	$ 9,109,084	177,965
Total Service Company Charges	**$ 40,812,258**	**369,347**

This study's first question—whether Service Company 2010 charges were reasonable—was determined by comparing NJAWC's A&G-related Service Company charges per customer to the same charges for utility companies that must file the FERC Form 60 – Annual Report of Service Companies.

The second question—whether Service Company charges during the 2010 were at the lower of cost or market—was evaluated by comparing the cost per hour for managerial and professional services provided by Service Company personnel to hourly billing rates that would be charged by outside providers of equivalent services. Service Company costs per hour were based on actual charges to NJAWC during the 2010. Outside providers' billing rates came from surveys or other information from professionals that could perform the services now provided by the Service Company.

III – Service Company Cost Comparison Approach

The third question—whether Service Company's 2010 customer account services charges, including National Call Center costs, were comparable to other utilities—was addressed by comparing NJAWC's customer accounts services expenses to those of neighboring investor owned electric utilities. This utility comparison group was selected because the cost of outside providers of customer accounts services is proprietary and not publicly available. Comparison to electric utilities is appropriate because all utilities, regardless of service type, must perform customer account services activities, including updating customer records for meter reads, printing and mailing bills, and the collection and processing of customer payments. Electric utility costs are available from the Federal Energy Regulatory Commission (FERC) Form 1, thus there is appropriate data transparency. The selection of electric utilities from New Jersey and neighboring states provides a sufficiently sized comparison group.

The fourth question—the necessity of Service Company services—was investigated by defining the services provided to NJAWC and determining if these services would be required if NJAWC were a stand-alone utility.

IV – Question 1 – Reasonableness of Service Company Charges

NJAWC's Service Company Cost per Customer

During the 2010, NJAWC was charged $48 per customer by the Service Company for A&G-related services. The calculation of this amount, shown in the table below, starts with total net testable Service Company charges and adjusts for capital and non-A&G functions (engineering, operations and water quality) charges. These adjustments are necessary to develop a per customer cost that is comparable to cost of utility service companies.

	2010
Testable Service Company charges	$ 40,812,258
Less: Capital charges	$ (7,583,315)
Less: Non-A&G function charges	
Engineering	$ (15,785)
Operations	$ (1,555,590)
Water Quality	$ (1,295,307)
Net A&G-related charges	$ 30,362,261
NJAWC customers	638,458
NJAWC Cost Per Customer	**$ 48**

Comparison Group Cost Per Customer

Every centralized service company in a holding company system subject to regulation by the FERC must file a Form 60 in accordance with the Public Utility Holding Company Act of 2005, Section 1270, Section 390 of the Federal Power Act and 18 C.F.R. paragraph 366.23. This report is designed to collect financial information from service companies that are subject to regulation by the FERC.

For 2010, a Form 60 was filed by 25 utility service companies, all of which serve utilities that provide regulated electric and, in some cases, gas service to retail customers. In order to make a valid comparison of this group's costs to those of American Water Works Service Company, it was necessary to isolate expenses that that they have in common. These include A&G-related charges associated with the following FERC accounts:

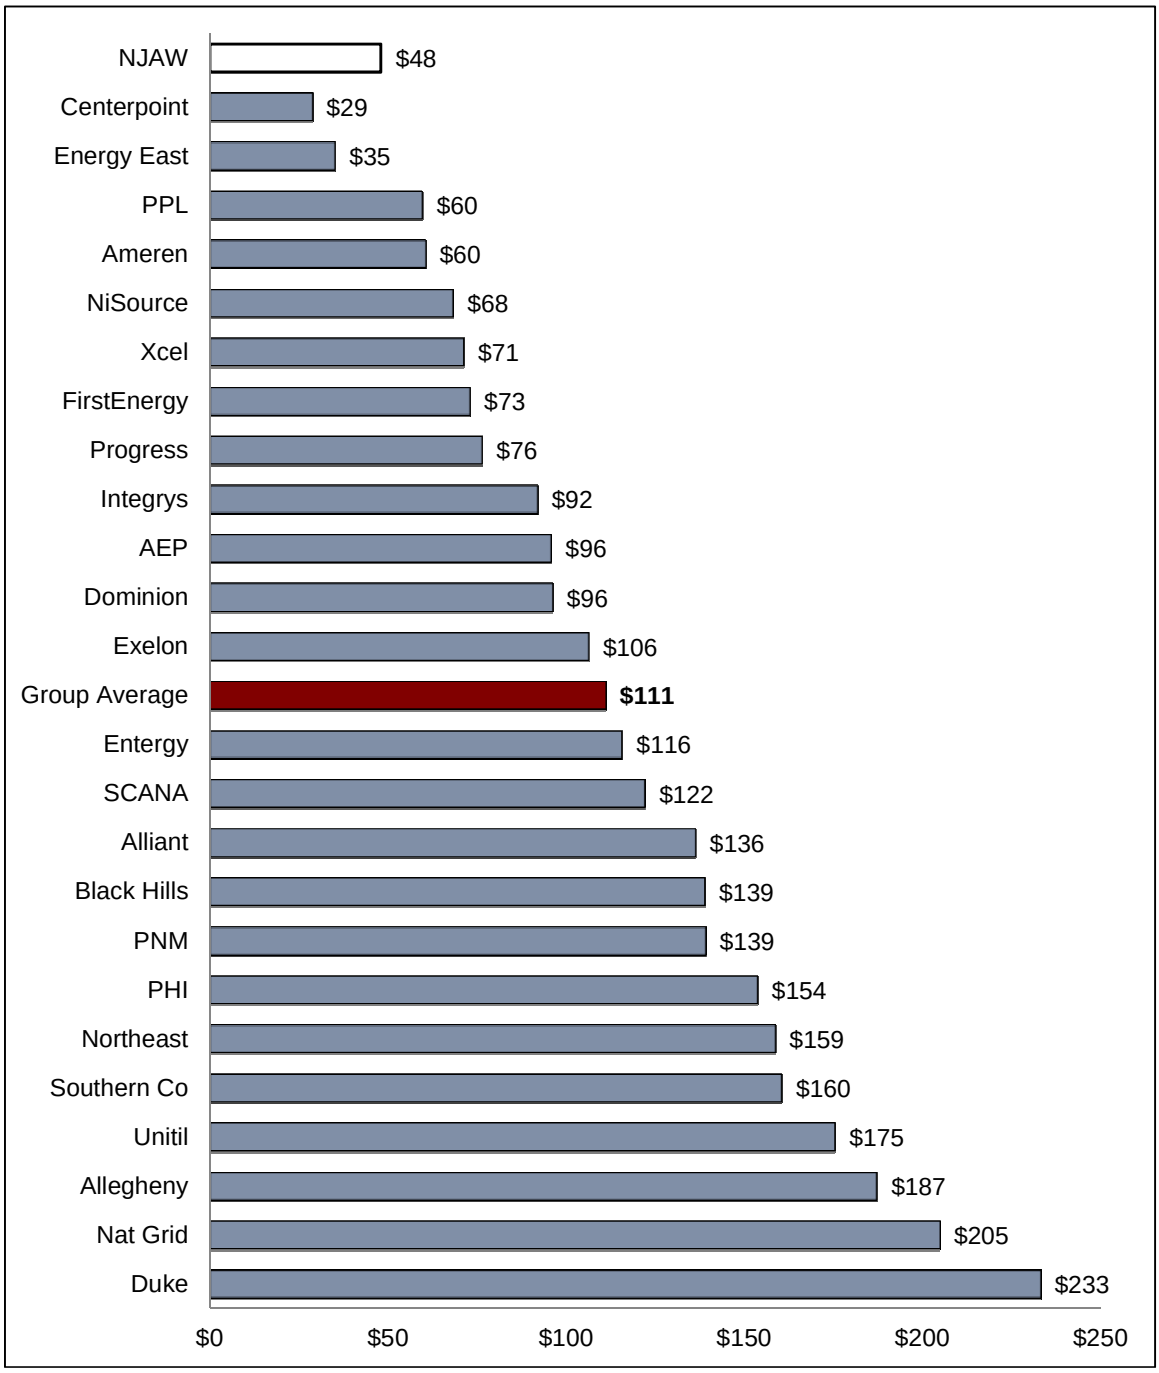
901 – Supervision	921 – Office supplies and expenses
903 – Customer records and collection expenses	923 – Outside services employed
905 – Miscellaneous customer accounts expenses	926 – Employee pensions and benefits
907 – Supervision	928 – Regulatory commission expenses
910 – Misc customer service and info expenses	930.2 – Miscellaneous general expenses
911 – Supervision	931 – Rents
920 - Administrative and general salaries	935 – Maintenance of structures and equipment

Charges to utility affiliates for the comparison group service companies were obtained from Schedule XVI – Analysis of Charges for Service Associate and Non-Associate Companies (p. 303 to 306) of each entity's FERC Form 60. This schedule shows charges by FERC Account.

Comparison group service company 2010 expenses were also adjusted to remove charges to non-regulated affiliates from the cost pool used to calculate the cost per regulated service customer. This determination was made using information from the FERC Form 60 schedule: Account 457 – Analysis of Billing – Associate Companies.

One service company that filed a Form 60 was excluded from the comparison group because its Form 60 contained no data for 2010. That service company, Great Plains Energy Services Incorporated, became inactive in 2010 and had no charges to its regulated utility affiliate. The

IV – Question 1 – Reasonableness of Service Company Charges



A&G expenses per regulated utility customer for the other 24 utility companies that filed a Form 60 for 2010 are calculated below.

Utility Company	2010 Regulated Retail Service Company A&G Expenses	Regulated Retail Customers	Cost per Customer
AEP	$504,470,290	5,270,000	$ 96
Allegheny	$280,648,832	1,500,000	$ 187
Alliant	$190,279,242	1,397,000	$ 136
Ameren	$199,214,264	3,300,000	$ 60
Black Hills	$101,069,342	728,000	$ 139
Centerpoint	$154,637,102	5,400,000	$ 29
Dominion	$355,526,659	3,700,000	$ 96
Duke	$1,050,793,575	4,510,000	$ 233
Energy East	$104,272,025	2,973,000	$ 35
Entergy	$312,275,947	2,700,000	$ 116
Exelon	$625,208,791	5,890,000	$ 106
FirstEnergy	$328,067,979	4,500,000	$ 73
Integrys	$201,979,742	2,200,000	$ 92
Nat Grid	$1,412,608,875	6,900,000	$ 205
NiSource	$255,900,005	3,755,000	$ 68
Northeast	$332,151,577	2,095,000	$ 159
PHI	$298,918,585	1,946,000	$ 154
Progress	$236,500,882	3,100,000	$ 76
PNM	$101,288,510	728,700	$ 139
PPL	$158,366,212	2,659,000	$ 60
SCANA	$177,720,204	1,457,000	$ 122
Southern Co	$708,564,089	4,417,000	$ 160
Unitil	$30,113,132	171,700	$ 175
Xcel	$376,977,165	5,300,000	$ 71
Group Total	**$8,497,553,025**	**76,597,400**	**$ 111**

Exhibit 1 (page 11) shows NJAWC's 2010 Service Company cost per customer of $48 to be considerably lower than the average of $111 per customer for the comparison group service companies. Only 2 of 24 comparison group service companies had a lower cost per customer than NJAWC. Based on this result, it is possible to conclude that the Service Company's 2010 charges to NJAWC were reasonable.

Exhibit 1

New Jersey American Water Company
Comparison of Service Company Annual Costs Per Customer

V – Question 2 – Provision of Services at the Lower of Cost or Market

Methodology

The lower-of-cost-or-market comparison is accomplished by comparing the cost per hour for Service Company managerial and professional services to those of outside service providers to whom these duties could be assigned. Based on the nature of the Service Company services it was determined that the following outside providers could perform the categories of services indicated below:

- Management Consultants – executive and administrative management, risk management, human resources and communications services
- Attorneys – legal services
- Certified Public Accountants – accounting, financial and rates and revenues services
- IT Professionals – information technology services
- Professional Engineers – engineering, operations and water quality services.

The services provided by the Belleville lab are assumed to be transferable to professional engineers for purposes of this cost comparison. This was done for two reasons. First, there is no readily available survey of hourly billing rates for testing services such as those performed by Belleville. Second, Belleville personnel have similar, scientific educational backgrounds as Service Company engineering personnel. Thus, it is valid to compare the hourly rates of Belleville services to those of outside engineering firms.

Service Company's hourly rate were calculated for each of the five outside service provider categories, based on the dollars and hours charged to NJAWC during the 2010. Hourly billing rates for outside service providers were developed using third party surveys or directly from information furnished by outside providers themselves.

It should be noted that by using the Service Company's hours charged NJAWC during 2010, its hourly rates are actually overstated because some Service Company personnel charge a maximum 8 per day even when they work more. Outside service providers generally bill for every hour worked. If all overtime hours of Service Company personnel had been factored into the hourly rate calculation, Service Company hourly rates would have been lower.

The last step in the market cost comparison was to compare the Service Company's average cost per hour to the average cost per hour for outside providers.

Service Company Hourly Rates

Exhibit 2 (page 14) details the assignment of 2010 management and professional Service Company charges by outsider provider category. Exhibit 3 (page 15) shows the same assignment for Service Company management and professional hours charged to NJAWC during the 2010.

Certain adjustments to these dollar amounts were necessary to calculate Service Company hourly rates that are directly comparable to those of outside providers. Adjustments were made to the following the 2010 test period non-labor Service Company charges:

- Contract Services – 2010 Service Company charges to NJAWC include expenses associated with the use of outside professional firms to perform certain corporate-wide

services (e.g., legal, financial audit, actuarial services). These professional fees are excluded from the Service Company hourly rate calculation because the related services have effectively been out-sourced already.

- Travel Expenses – In general, client-related travel expenses are not recovered by outside service providers through their hourly billing rate. Rather, actual out-of-pocket travel expenses are billed to clients in addition to fees for professional services. Thus, it is appropriate to remove these Service Company charges from the hourly rate calculation.

- Information Technology Infrastructure Expenses – Included in the 2010 Service Company charges to NJAWC are leases, maintenance fees and depreciation related to American Water's enterprise mainframe, server and network infrastructure and corporate business applications. An outside provider that would take over operation of this infrastructure would recover these expenses over and above the labor necessary to operate the data center.

Exhibit 4 (page 16) shows how contract services, travel expenses and computer hardware/software-related Service Company charges are assigned among the four outside provider categories.

Based on the assignment of expenses and hours shown in Exhibits 2 and 3 and the excludable items shown in Exhibit 4, the Service Company's equivalent costs per hour for the 2010 are calculated below.

	Attorney	Management Consultant	Certified Public Accountant	IT Professional	Professional Engineer	Total
Total management, professional & technical services charges	$ 962,056	$ 9,665,151	$ 7,119,857	$ 10,080,984	$ 3,875,127	$ 31,703,175
Less:						
Contract services	$ 91,664	$ 2,232,640	$ 805,626	$ 1,077,821	$ 416,537	$ 4,624,289
Travel expenses	$ 18,636	$ 176,334	$ 53,903	$ 124,852	$ 62,389	$ 436,114
IT infrastructure expenses	$ 22,375	$ 3,444,466	$ 42,925	$ 2,107,067	$ 205,063	$ 5,821,896
Net Service Charges (A)	$ 829,382	$ 3,811,711	$ 6,217,403	$ 6,771,243	$ 3,191,138	$ 20,820,876
Total Hours (B)	4,031	29,032	76,795	48,078	33,446	191,382
Average Hourly Rate (A / B)	**$ 206**	**$ 131**	**$ 81**	**$ 141**	**$ 95**

Total	**$ 4,624,289**	**$ 436,114**	**$ 5,821,896**	**$ 10,882,299**

Outside Service Provider Hourly Rates

The next step in the cost comparison was to obtain the average billing rates for each outside service provider. The source of this information and the determination of the average rates are described in the paragraphs that follow.

It should be noted that professionals working for three of the five outside provider categories may be licensed to practice by state regulatory bodies. However, not every professional working for these firms is licensed. For instance, among New Jersey certified public accounting firms, only more experienced staff are predominantly CPAs (see table below). Some Service Company employees also have professional licenses. Thus, it is valid to compare the Service Company's hourly rates to those of the outside professional service providers included in this study.

Position	New Jersey Average
Partners/Owners	100%
Directors (11+ years experience)	82%
Managers (6-10 years experience)	70%
Sr Associates (4-5 years experience)	36%
Associates (1-3 years experience)	9%
New Professionals	7%

Source: AICPA's National PCPS/TSCPA Management of an Accounting Practice Survey (2010)

Attorneys

The New Jersey State Bar does not survey its members as to their hourly billing rates. In addition, publicly available billing rate information could not be found for New Jersey attorneys. Therefore, an estimate of New Jersey attorney rates was developed from two surveys conducted by Lawyers Weekly in the states of Michigan and Massachusetts. As presented in Exhibit 5 (page 19), the average rate for each firm was adjusted for the cost of living differential between its location and Trenton, New Jersey. The Lawyers Weekly surveys included rates in effect at December 31, 2009. Thus, the 2009 average rate was escalated to June 30, 2010—the midpoint of the test year ended December 31, 2010.

Management Consultants

The cost per hour for management consultants was developed from a 2010 survey performed by the Association of Management Consulting Firms—an industry trade organization. The survey includes rates that were in effect during 2009 for firms throughout the United States. Consultants typically do not limit their practice to any one region and must travel to a client's location. Thus, the U.S. national average is appropriate for comparison.

The first step in the calculation, presented in Exhibit 6 (page 20), was to determine an average rate by consultant position level. From these rates, a single weighted average hourly rate was calculated based upon the percent of time that is typically applied to a consulting assignment by each consultant position level.

Certified Public Accountants

The average hourly rate for New Jersey CPAs was developed from a 2010 survey performed by the American Institute of Certified Public Accountants (AICPA). The New Jersey version of this survey was used to develop hourly rates for member firms in New Jersey.

As shown in Exhibit 7 (page 21), a weighted average hourly rate was developed based on a set of accountant positions and a percent of time that is typically applied to an accounting assignment. This survey includes rate information in effect during 2009. Thus, the data had to be escalated to June 30, 2010—the midpoint of the test year ended December 31, 2010.

Information Technology Professionals

The average hourly rate for information technology consultants and contractors was developed from Baryenbruch & Company, LLC IT industry hourly billing rate data. As shown in Exhibit 8 (page 22), that data was compiled and a weighted average was calculated based on a percent of time that is typically applied to an IT consulting assignment based on Baryenbruch & Company, LLC's experience.

Professional Engineers

The Company provided hourly rate information for outside engineering firms that could have been used by NJAWC in 2010. As presented in Exhibit 9 (page 23), an average rate was developed for each engineering position level. Then, using a typical percentage mix of project time by engineering position, a weighted average cost per hour was calculated.

V – Question 2 – Provision of Services at the Lower of Cost or Market

Service Company versus Outside Provider Cost Comparison

As shown in the table below, Service Company costs per hour are considerably lower than those of outside providers.

	12 Months Ended December 31, 2010		
Service Provider	Service Company	Outside Provider	Difference--Service Co. Greater(Less) Than Outside
Attorney	$ 206	$ 357	$ (152)
Management Consultant	$ 131	$ 243	$ (111)
Certified Public Accountant	$ 81	$ 189	$ (108)
IT Professional	$ 141	$ 172	$ (31)
Professional Engineer	$ 95	$ 117	$ (22)

Based on these cost per hour differentials and the number of managerial and professional services hours billed to NJAWC during 2010, outside service providers would have cost $14,337,415 more than the Service Company (see table below). Thus, on average, outside provider's hourly rates are 45% higher than those of the Service Company ($14,337,415 / $31,703,175).

	12 Months Ended December 31, 2010		
Service Provider	Hourly Rate Difference--Service Co. Greater(Less) Than Outside	Service Company Hours Charged	Dollar Difference
Attorney	$ (152)	4,031	$ (610,703)
Management Consultant	$ (111)	29,032	$ (3,235,351)
Certified Public Accountant	$ (108)	76,795	$ (8,285,355)
IT Professional	$ (31)	48,078	$ (1,481,950)
Professional Engineer	$ (22)	33,446	$ (724,055)
Service Company Less Than Outside Providers			$(14,337,415)

It should be noted that the cost differential associated with using outside providers is even greater because exempt Service Company personnel do not charge more than 8 hours per day even when they work more. Outside providers generally charge clients for all hours worked. Thus, NJAWC would have been charged by outside providers for overtime worked by Service Company personnel who are not paid for that time.

If NJAWC were to use outside service providers rather than the Service Company for managerial and professional services, it would incur other additional expenses besides those associated with higher hourly rates. Managing outside firms who would perform over 191,300 hours of work (more than 128 full-time equivalents at 1,500 "billable" hours per FTE per year) would add a significant workload to the existing NJAWC management team. Thus, it would be necessary for NJAWC to add at least two positions to supervise the outside firms and ensure they delivered quality and timely services. The individuals that would fill these positions would need a good understanding of each profession being managed. They must also have management experience and the authority necessary to give them credibility with the outside firms. As

calculated in the table below, this position would add more than $300,000 per year to NJAWC's personnel expenses.

Cost of Adding 2 Professional Positions To NJAWC's Staff

	Total
New Positions' Salary	$ 100,000
Benefits (at 49.4%)	$ 49,400
Office Expenses (15.2%)	$ 15,200
Cost per Position	$ 164,600
Number of Positions	2
Total Cost of Two Positions	$ 329,200

Thus, the total effect on the ratepayers of NJAWC of contracting all services now provided by Service Company would be an increase in their costs of $14,337,415 ($14,337,415 + $329,200). Based on the results of this comparison, it is possible to conclude that the Service Company charged NJAWC at the lower of cost or market for services provided during the 2010.

VI - Question 3 - Reasonableness of Customer Accounts Services Costs

Background

Customer Accounts Services involve the processes that occur from the time meter read data is recorded in the customer information system through the printing and mailing of bills through the collection and processing of customer payments. Customer Accounts Services are accomplished by the following utility functions:

- Customer Call Center Operations – customer calls/contact, credit, order taking/disposition, bill collection efforts and outage calls
- Customer Call Center Maintenance – support of phone banks, voice recognition units, call center software applications and telecommunications
- Customer billing – bill printing, stuffing and mailing
- Remittance processing – processing customer payments received in the mail
- Bill payment centers – processing customer payments at locations where customers can pay their bills in person

Neighboring electric utility cost information comes from the FERC Form 1 that each utility that is subject to FERC regulation, must file. FERC's chart of accounts is defined in Chapter 18, Part 101 of the Code of Federal Regulations. FERC accounts that contain customer accounts services-related expenses are Account 903 Customer Accounts Expense – Records and Collection Expense and Account 905 Customer Accounts Expense – Miscellaneous Customer Accounts Expense. Exhibit 9 provides FERC's definition of the type of expenses that should be recorded in these accounts.

In addition to the charges in these FERC accounts, labor-related overheads charged to the following FERC accounts must be added to the labor components of Accounts 903 and 905:

- Account 926 Employee Pension and Benefits
- Account 408 Taxes Other Than Income (employer's portion of FICA)

Comparison Group

Electric utilities included in the comparison group are shown in the table below. These are companies whose FERC Form 1 show amounts for accounts 903 and 905.

New York	• Central Hudson Gas & Elect • Consolidated Edison • New York State Elect & Gas	• Niagra Mohawk Power • Orange & Rockland Utilities • Rochester Gas & Electric
Pennsylvania	• Duquesne Light • Metropolitan Edison • PECO Energy • Pennsylvania Electric	• Pennsylvania Power • PPL Electric Utilities • West Penn Power
New Jersey	• Atlantic City Electric • Jersey Central Power	• Public Svc Electric & Gas • Rockland Electric
Maryland	• Baltimore Gas & Electric • Delmarva Power & Light	• Potomac Electric

New Jersey American Water Company
FERC Account Descriptions

903 – Customer Records and Collection Expenses

This account shall include the cost of labor, materials used and expenses incurred in work on customer applications, contracts, orders, credit investigations, billing and accounting, collections and complaints.

Labor

1. Receiving, preparing, recording and handling routine orders for service, disconnections, transfers or meter tests initiated by the customer, excluding the cost of carrying out such orders, which is chargeable to the account appropriate for the work called for by such orders.
2. Investigations of customers' credit and keeping of records pertaining thereto, including records of uncollectible accounts written off.
3. Receiving, refunding or applying customer deposits and maintaining customer deposit, line extension, and other miscellaneous records.
4. Checking consumption shown by meter readers' reports where incidental to preparation of billing data.
5. Preparing address plates and addressing bills and delinquent notices.
6. Preparing billing data.
7. Operating billing and bookkeeping machines.
8. Verifying billing records with contracts or rate schedules.
9. Preparing bills for delivery, and mailing or delivering bills.
10. Collecting revenues, including collection from prepayment meters unless incidental to meter reading operations.
11. Balancing collections, preparing collections for deposit, and preparing cash reports.
12. Posting collections and other credits or charges to customer accounts and extending unpaid balances.
13. Balancing customer accounts and controls.
14. Preparing, mailing, or delivering delinquent notices and preparing reports of delinquent accounts.
15. Final meter reading of delinquent accounts when done by collectors incidental to regular activities.
16. Disconnecting and reconnecting services because of nonpayment of bills.
17. Receiving, recording, and handling of inquiries, complaints, and requests for investigations from customers, including preparation of necessary orders, but excluding the cost of carrying out such orders, which is chargeable to the account appropriate for the work called for by such orders.
18. Statistical and tabulating work on customer accounts and revenues, but not including special analyses for sales department, rate department, or other general purposes, unless incidental to regular customer accounting routines.
19. Preparing and periodically rewriting meter reading sheets.
20. Determining consumption and computing estimated or average consumption when performed by employees other than those engaged in reading meters.

Materials and expenses

21. Address plates and supplies.
22. Cash overages and shortages.
23. Commissions or fees to others for collecting.
24. Payments to credit organizations for investigations and reports.
25. Postage.
26. Transportation expenses, including transportation of customer bills and meter books under centralized billing procedure.
27. Transportation, meals, and incidental expenses.
28. Bank charges, exchange, and other fees for cashing and depositing customers' checks.
29. Forms for recording orders for services, removals, etc.
30. Rent of mechanical equipment.

New Jersey American Water Company
FERC Account Descriptions

905 – Miscellaneous Customer Accounts Expenses

This account shall include the cost of labor, materials used and expenses incurred not provided for in other accounts.

Labor

1. General clerical and stenographic work.
2. Miscellaneous labor.

Materials and expenses

3. Communication service.
4. Miscellaneous office supplies and expenses and stationery and printing other than those specifically provided for in accounts 902 and 903.

VI - Question 3 - Reasonableness of Customer Accounts Services Costs

NJAWC Cost per Customer

As calculated below, NJAWC's 2010 customer account services expense per customer was $24.32. The cost pool used to calculate this average includes charges for Service Company services (e.g., call center, billing, payment processing) and postage and forms expenses, which are incurred directly by NJAWC. It was necessary to adjust the National Call Center charges because electric utilities experience an average of 2.50 calls per customer compared to American Water's 1.57 calls per customer. Thus, National Call Center expenses had to be increased, for comparison purposes, to reflect its costs at a 2.50 calls per customer level.

New Jersey American Water Company		Year Ended 12/31/2010 Service Co Charges	Adjustment Fewer Calls For Water Cos. (A)	Adjusted	
Cost Component					
Service Company					
Call Centers	Call processing, order processing, credit, bill collection	$ 9,074,719	$ 2,287,706	$11,362,425	
Regional Offices		$ 34,364		$ 34,364	
Service Company	Customer payment processing			$ 829,386	(B)
Operating Company	Postage & forms			$ 3,483,087	
			Cost Pool Total	$15,709,262	
			Total Customers	645,939	
	Year Ended 2010 Cost Per New Jersey American Customer			**$ 24.32**	

Note A: Adjustment for American Water's fewer calls per customer

This adjustment is necessary because water utilities experience fewer calls per customer than do electric utilities

Call handling expenses		$ 3,892,201
Electric utility industry's avg calls/customer	2.50	
American Water's avg calls/customer	1.57	
Percent different	59%	59%
Total Adjustment		$ 2,287,706

Note B: Estimated customer payment processing expenses

Number of customer bills	7,751,268
Bank charge per item	$ 0.1070
Total estimated annual expense	$ 829,386

Electric Utility Group Cost per Customer

Exhibit 11 (page 31) shows the actual 2010 customer accounts expense per customer calculation for the electric utility comparison group. All of the underlying data was taken from the utilities' FERC Form 1.

VI - Question 3 - Reasonableness of Customer Accounts Services Costs

Summary of Results

As shown in the table below, NJAWC's cost per customer is well below the average cost of the neighboring electric utility comparison group. It can therefore be concluded that NJAWC's 2010 customer accounts-related expenses, including those of the Alton and Pensacola Call Centers, assigned by the Service Company to NJAWC were comparable to those of other utilities.

Customer Account Services Expenses Per Customer	
Pennsylvania Power Company	$ 13.30
Metropolitan Edison Company	$ 13.75
Pennsylvania Electric Company	$ 13.81
West Penn Power Company	$ 16.01

VI - Question 4 – Need for Service Company Services

Analysis of Services

The final aspect of this study was an assessment of whether the services that are provided to NJAWC by the Service Company would be necessary if NJAWC were a stand-alone water utility. The first step in this evaluation was to determine specifically what the Service Company does for NJAWC. Based on discussions with Service Company personnel, the matrix in Exhibit 12 (page 35) was created showing which entity—NJAWC or a Service Company location—is responsible for each of the functions NJAWC requires to ultimately provide service to its customers. This matrix was reviewed to determine: (1) if there was redundancy or overlap in the services being provided by the Service Company and (2) if Service Company services are typical of those needed by a stand-alone water utility.

Upon review of Exhibit 12, the following conclusions can be drawn:

- The services that the Service Company provides are necessary and would be required even if NJAWC were a stand-alone water utility.

- There is no redundancy or overlap in the services provided by the Service Company to NJAWC. For all of the services listed in Exhibit 12, there was only one entity that was primarily responsible for the service.

Governance Practices Associated With Service Company Charges

There are several ways by which NJAWC exercises control over Service Company services and charges. The most important of these are described below.

- **NJAWC Company Board Oversight** – The NJAWC board of directors includes members of American Water's Executive Management Team, members of the NJAWC management team and external business and community leaders. This diverse board ensures that NJAWC's needs are a factor in the delivery of Service Company services. The NJAWC Board meets at a minimum of four times each year and at every meeting financial and operational reports and issues are discussed at length.
- **NJAWC President Oversight** – The NJAWC President is responsible for the overall performance of NJAWC, including services and charges received from the American Water Service Company. The President of NJAW is also a board member on the Service Company's Board of Directors (see below for further discussion). In addition, as part of the overall management team of American Water through the President of Regulated Operations, NJAWC's President has a significant voice in major business decisions of American Water and has the ability to monitor Service Company performance quality and spending as NJAWC's President is one of five direct reports to the President of Regulated Operations.
- **NJAWC Vice President and Treasurer** – The Vice President and Treasurer is responsible for the financial reporting and performance, as well as the internal control performance of the NJAWC. The Vice President and Treasurer monitors the performance, expense and reporting from the Service Company and verifies and validates the cost of services received. In addition, the Vice President and Treasurer through the Financial Planning and Analysis staff reviews the monthly charges and investigates whenever the amount, quality and/or services are appropriate.
- **Service Company Board Oversight** – The Service Company Board of Directors is comprised of 17 members, of which NJAWC President is one of the members. They typically meet four times a year to provide governance on the activities and bylaws of Service Company. Their primary responsibilities include:
  - Approve the Business Plan and Operating Budget
  - Review Financial Performance of the Service Center
  - Review performance metrics of certain functional groups
  - Approve policy, procedures and practices of AW as it relates to Service Company.
- **Service Company Budget Review/Approval** – the NJAWC president and several other state regulated water utility presidents serve on the Service Company board of directors and that board must formally approve the budget for Service Company charges for the next year. These budgeted charges are consolidated with the operating company's own spending into an overall budget which must be approved by the individual operating company's board of directors (e.g., NJAWC).
- **Major Project Review And Approval –** Major non-capital projects undertaken by the Service Company must first be reviewed by American Water's Executive Management Team, which includes the President of Regulated Operations. The President of Regulated Operations, with significant input from his direct reports (including the NJAWC president), has the ability to impact all new initiatives and projects before they are authorized. Major non-capital projects and initiatives for the Service Company are approved through the Business Plan. All significant business initiatives (capital or non-capital) are required to be submitted to the "BATT" (Business and Technology Team) committee for final approval. The "BATT" team is comprised of C-level executive members (CEO, CFO, etc.).

- **Capital Investment Management** (CIM) – CIM covers capital and asset planning and is employed throughout American Water, including the Service Company. CIM provides a full range of governance practices, including a formal protocol for assessing system needs, prioritizing expenditures, managing the capital program, approving project spending, delivering projects and measuring outputs. CIM ensures that:
  - Capital expenditure plans are aligned with the strategic intent of the business
  - The impact of capital expenditure and income plans are fully reflected in operating expense plans
  - The impacts of these plans are understood and affordable
  - Effective controls are in place over budgets (through business plans) and individual capital projects (through appropriate authorization thresholds, management and reporting processes).

  The CIM process was designed to optimize the effectiveness of asset investment.
- **Accounting and Financial Reporting** – Similar to the states, the Service Company follows the same accounting and financial reporting processes. During the month accounting transactions are recorded. At month end, the SSC and Service Company Finance teams review all transactions. Variance analyses are performed based on month to month actual as well as actual to budget to ensure accuracy. Once completed, the service company bill is run and the actuals are "pushed down" and allocated to the states based on predetermined formulas. A conference call is scheduled before the operating companies close their books each month to discuss Service Company performance. This is based at a functional level with explanation reported for those expense variances that meet or exceed certain thresholds. At this time, the operating companies may question expenses and spending for better understanding of results. NJAWC Financial Performance and Analysis (FP&A) personnel review the monthly Service Company bill for accuracy and reasonableness on a monthly basis. Any mistakes or overcharges are credited on a subsequent billing.
- **NJAWC Company Budget Variance Reporting** – The "Budget/Plan Analysis," produced monthly by each operating company, has line items for Management Fees and Shared Service Expense (i.e., IT, Call Center, etc.). In this way, Service Company budget versus actual charges as charged to the operating company can be monitored and reviewed for the month and year-to-date as compared to prior year, plan and reforecast.

I – Introduction

Purpose of This Study

This study was undertaken to answer four questions concerning the services provided by American Water Works Service Company, Inc. (Service Company) to Pennsylvania-American Water Company (PAWC):

1. Were the Service Company's charges to PAWC during the 12 months ended December 31, 2008 reasonable?

2. Was PAWC charged the lower of cost or market for managerial and professional services provided by the Service Company during 2008?

3. Were the 2008 costs of the Service Company's customer accounts services, including those of the National Call Centers, comparable to those of other utilities?

4. Are the services PAWC receives from Service Company necessary?

Study Results

Concerning question 1, the following conclusion was reached:

- The Service Company's 2008 cost per PAWC customer was very reasonable compared to cost per customer for electric and combination electric/gas service companies. During 2008, PAWC was charged $54 per customer for administrative and general (A&G)-related services provided by the Service Company. This compares to an average of $109 per customer for service companies reporting to the Federal Energy Regulatory Commission (FERC). Only 3 of the 24 utility service companies that filed a FERC Form 60 for 2008 had a lower per customer A&G cost than PAWC's charges from the Service Company.

Concerning question 2, the following conclusions were drawn from this study:

- PAWC was charged the lower of cost or market for managerial and professional services during the 12 months ended December 31, 2008.

- On average, the hourly rates for outside service providers are 18% higher than the Service Company's hourly rates.

- The managerial and professional services provided by the Service Company are vital and could not be procured externally by PAWC without careful supervision on the part of PAWC. If these services were contracted to outside providers, PAWC would have to add at least two positions to manage activities of outside firms. These positions would be necessary to ensure the quality and timeliness of services provided.

- If all the managerial and professional services now provided by the Service Company had been outsourced during the 12 months ended December 31, 2008, PAWC and its ratepayers would have incurred more than $5.5 million in additional expenses. This amount includes the higher cost of outside providers and the cost of two PAWC positions needed to direct the outsourced work.

- This study's hourly rate comparison actually understates the cost advantages that accrue to PAWC from its use of the Service Company. Outside service providers generally bill for every hour worked. Service Company exempt personnel, on the other hand, charge a maximum of 8 hours per day even when they work more hours. If the overtime hours of

Service Company personnel were factored into the hourly rate calculation, the Service Company would have had an even greater annual dollar advantage than the $5.5 million cited above. For instance, if Service Company overtime is conservatively estimated at 5% (2 hours per week), then that work would have cost an estimated $0.25 million in additional charges from outside providers.

- It would be difficult for PAWC to find local service providers with the same specialized water industry expertise as that possessed by the Service Company staff. Service Company personnel spend substantially all their time serving operating water companies. This specialization brings with it a unique knowledge of water utility operations and regulation that is most likely unavailable from local service providers.

- Service Company fees do not include any profit markup. Only its actual cost of service is being recovered from PAWC ratepayers.

Concerning question 3, the following conclusion was reached:

- The cost of the Service Company's customer accounts services, including those provided by the National Call Center, is well below the average of the neighboring electric utility comparison group. As will be explained further herein, this group of companies provides a reasonable proxy group for comparison to a regulated utility of the size and scope of the Service Company and PAWC. During the 12-months ended December 31, 2008, the customer accounts cost for PAWC customers was $27.06 compared to the 2008 average of $38.97 for neighboring electric utilities. The highest comparison group per customer cost was $83.88 and the lowest $12.54.

Concerning question 4, the following conclusions was drawn:

- The services that the Service Company provides are necessary and would be required even if PAWC were a stand-alone water utility.

- Furthermore, there is no redundancy or overlap in the services provided by the Service Company to PAWC. For all of the services listed in Exhibit 11, there was only one entity primarily responsible for the service.

II – Background

Overview of American Water Works Service Company

American Water's Service Company exists to provide certain shared services to American Water subsidiaries. It follows a service company model used by many utility holding companies that own multiple regulated utilities. By consolidating executive and professional services into a single service company, utility holding companies are able to realize the following benefits for ratepayers:

- Purchasing Economies – Common expenses (e.g., insurance, chemicals, piping) can be procured on a much larger scale thereby providing greater bargaining power for the combined entity compared to individual utility operating companies. A service company facilitates corporate-wide purchasing programs through its procurement and contract administration functions.

- Operating Economies of Scale – A service company is able to deliver services more efficiently because workloads can be balanced across more persons and facilities. For instance, American Water's Service Company is able to maintain one principal data center for the entire corporation. This is much more cost-efficient than each operating utility funding their own data center with its large fixed hardware, software and staffing costs.

- Continuity of Service – Centralizing service company personnel who perform similar services facilitates job cross-training and sharing of knowledge and expertise. This makes it easier to deal with staff turnover and absences and to sustain high levels of service to operating utilities. An individual operating utility might experience considerable disruption if a key professional left and it was necessary to hire outside to fill the vacancy.

- Maintenance of Corporate-Wide Standards – Personnel in American Water's Service Company establish standards for many functions (e.g., engineering designs, operating procedures and maintenance practices). It is easier to ensure these standards are followed by every operating utility because their implementation is overseen by the Service Company.

- Improved Governance – American Water's Service Company provides another dimension of management and financial oversight that supplements local operating utility management. The Service Company facilitates standard planning and reporting that help ensure operating utilities meet the requirements of their customers in a cost effective manner.

- Retention of Personnel – A service company organization provides operating utility personnel with another career path beyond what may be available on a local level. These opportunities tend to improve employee retention.

American Water follows the model for other utility service companies in another important regard. Its services are provided to affiliate operating utilities, like PAWC, at cost. American Water's Service Company is not a profit-making entity. It assigns only its actual expenses to the American Water subsidiaries it services.

The Service Company provides services to American Water operating companies from the following locations:

- Corporate Office – Includes American Water's executive management and personnel from the various corporate support services. American Water's corporate office is located in Voorhees, New Jersey.

- National Call Centers – Perform customer service functions, including: customer call processing, service order processing, correspondence processing, credit and collections. American Water maintains two call centers. One in Alton, Illinois that went into operation in 2001 and a second in Pensacola, Florida that went into operation in 2005. Prior to the establishment of these national call centers, customer service functions were performed by employees of PAWC, which incurred the expense on its books.

- National Shared Services Center – The Shared Services Center, located in Cherry Hill, New Jersey, provides various financial, accounting and treasury functions that had been performed by individual operating companies. This arrangement has improved and streamlined the Company's financial processes and allowed operating companies to focus on providing utility service.

- Regional Offices – Regional offices provide operating companies with certain support services that can be performed more effectively on a regional basis because individual operating company/center workloads are not sufficient to warrant a full-time staff for these activities. At the same time, these services require closer proximity to operating companies served so they are not provided by the National Shared Services Center. Examples of regional office services include rates and revenues, engineering, operations and field resource coordination.

- Belleville Lab – The national trace substance laboratory is located in Belleville, Illinois and performs testing for all American Water operating companies.

- Information Technology Service Centers – American Water's principal data center, located in Hershey, Pennsylvania, supports the IT infrastructure required to run corporate and operating company business applications and the communications systems. IT personnel rotate, as needed, throughout the regional offices and operating companies.

Service Company Expense Categories

The Service Company renders a monthly bill to operating companies. Charges are broken down into the following expense categories:

- Labor – base pay (salaries) of managerial and professional employees
- Labor-Related Overheads - employee benefit costs (payroll taxes, medical coverage, pensions, disability insurance) and other general expenses
- Support - wages and salaries of office support personnel, including secretaries, clerical personnel, telephone operators and mail clerks
- Office Expenses - office rent, equipment leases, telephone, electric, office supplies, property taxes, office maintenance
- Vouchers/Journal Entries – (1) travel expenses incurred by Service Company personnel, (2) other items submitted for reimbursement by employees, including professional association dues, (3) outside service contracts for such things as actuarial services, and (4) various other expenditures, including data center expenses for software licenses and hardware maintenance.

Service Company expenses are either assigned directly or allocated to operating companies, as shown in the table below.

Expense Category	Direct Charged	Allocated	Comments
Labor	X	X	Professional personnel working for one or several operating companies
Labor-Related Overheads	X	X	These are primarily employee benefit costs that relate directly to labor
Support		X	Administrative personnel support the professional staff, thus support costs are allocated on the basis of professional labor
Office Expense		X	Are all allocated on the basis of professional labor
Vouchers/Journals	X	X	May be either directly in support of one operating company (e.g., an engineer traveling from the Corporate Office to the operating company) or allocated to several operating companies

A direct charge occurs when Service Company work or expenses are incurred in support of only one operating company. Direct charge examples include work in support of an operating company's rate case, engineering design work on an operating company's project and the preparation of an operating company's financial statements.

Service Company expenses are allocated when more than one operating company benefits from the underlying work. Examples include assessments of new Federal water quality regulations, development of the company-wide materials procurement contracts and creation of company-wide engineering design standards.

Charging and Assignment Of Service Company Time and Expenses

Service Company transactions are assigned with the following information so there is a proper accounting and eventual charging to an operating company:

- Operating company
- Formula number
- Work order (where applicable)
- Authorization number (where applicable)

Charges can originate from the following systems:

- Payroll System
- RVI System (outside vendor payments)
- PCard System (credit card payments)
- Internal Purchase Order System
- Journal entries

II – Background

The Service Company's time reporting process enables labor and support charges to be assigned to the proper operating company. Labor charges are based on the time reported by managerial and professional Service Company employees. Every week, Service Company professional employees complete an electronic time sheet that shows:

- Formula number (this is linked to operating company within American Water's financial system)
- Employee hours worked
- Account number for non-labor charges

At month-end, time report information is processed and direct and allocated professional labor hours tabulated for each operating company. Dollar charges are then calculated using the hourly rate of each Service Company professional employee based upon their base salary (i.e., an employee's hours times their hourly rate of pay).

Support (administrative) personnel charge their time to the activity "General Admin." As described in the table on page 4, their labor charges are allocated to operating companies based upon how their office's professional personnel labor charges are assigned. For instance, if 20% of American Water's Western Region's professional labor is assigned to PAWC during a month, then 20% of that office's monthly administrative labor charges also are assigned to the operating company.

The overhead cost category is next assigned based on professional and administrative labor costs. Thus, if 20% of the Western Region's accumulated professional and support labor is charged to PAWC during the month, then 20% of that month's overhead expenses will be assigned to PAWC.

Each Service Company location's office expenses are allocated to operating companies based on how professional labor charges for that office have been assigned. For instance, if 2% of professional labor from one Service Company office is assigned to PAWC, then 2% of that office's office expenses would be assigned to PAWC. Thus, office expenses are allocated in the very same way as administrative labor.

Vouchers/journal entries may be charged directly or allocated, depending on who benefits from the expenditure. For instance, the cost of a continuing professional education course taken by a professional in a regional office is allocated to the operating companies served by that office. Travel expenses by that same professional to a rate case proceeding are charged directly to the operating company whose case is being heard.

III – Service Company Cost Comparison Approach

During the 12 months ended December 31, 2008, the Service Company billed PAWC $40,008,443 in O&M-related charges, $2,010,948 in capital-related charges and $39 other charges. Included in the O&M amount are certain non-recurring expenses which are excluded from this market study. As calculated in the table below, net testable Service Company charges of $40,147,774 were subjected to a market cost comparison.

	12 Months Ended December 31, 2008
Mgmt Fee Expense (O&M)	$ 40,008,443
Less: Non-Recurring Items	
Sarbanes-Oxley	$ (1,730,784)
Divestiture Support	$ (140,872)
Net O&M Expenses	$ 38,136,786
Mgmt Fees - Capital	$ 2,010,948
Mgmt Fees - Other	$ 39
Total Testable AWWSC Charges	**$ 40,147,774**

For purposes of comparing these charges to certain outside benchmarks, Service Company services were placed into two categories:

- Managerial and Professional Services – Includes such services as management, accounting, legal, human resources, information technology, and engineering.

- Customer Accounts Services – Includes customer-related services, such as call center, credit, billing, collection and payment processing.

Total test period Service Company charges break down between management/professional services and customer account services as follows:

	12 Months Ended Dec. 31, 2008	
	Amount	Hours
Management and Professional Services	$ 28,707,056	230,685
Customer Account Services	$ 11,440,717	275,540
Total Service Company Charges	**$ 40,147,774**	**506,225**

This study's first question—whether Service Company 2008 charges were reasonable—was determined by comparing PAWC's A&G-related Service Company charges per customer to the same charges for utility companies that must file the FERC Form 60 – Annual Report of Service Companies.

The second question—whether 2008 Service Company charges were at the lower of cost or market—was evaluated by comparing the cost per hour for managerial and professional services provided by Service Company personnel to hourly billing rates that would be charged by outside providers of equivalent services. Service Company costs per hour were based on actual charges to PAWC during the 12 months ended December 31, 2008. Outside providers' billing rates came from surveys or other information from professionals that could perform the services now provided by the Service Company.

III – Service Company Cost Comparison Approach

The third question—whether Service Company 2008 customer account services charges, including those of the National Call Center costs, were comparable to other utilities—was addressed by comparing PAWC's customer accounts services expenses to those of neighboring electric utilities. This approach was selected because the costs of outside providers of call center services are not publicly available. However, electric utility customer account services expenses can be obtained from the FERC Form 1. The availability and transparency of FERC data adds to the validity of its use in this comparison.

The fourth question—the necessity of Service Company services—was investigated by defining the services provided to PAWC and determining if these services would be required if PAWC were a stand-alone utility.

IV – Question 1 – Reasonableness of Service Company Charges

PAWC's Service Company Cost per Customer

During 2008, PAWC was charged $54 per customer by the Service Company for A&G-related services. As shown in the table below, this calculation is made using net testable O&M, which eliminates certain O&M items for which PAWC has not requested cost recovery.

	2008 AWWSC Charges
Testable AWWSC Charges	$ 40,147,774
Less: Non-A&G Charges:	
Engineering	$ (39,393)
Operations	$ (3,444,442)
Water Quality	$ (1,535,320)
Net A&G-Related Charges	$ 35,128,618
PAWC Customers (12/31/08)	648,953
PAWC Cost Per Customer	**$ 54**

Comparison Group Cost Per Customer

Every centralized service company in a holding company system must file a Form 60 in accordance with the Public Utility Holding Company Act of 2005, Section 1270, Section 390 of the Federal Power Act and 18 C.F.R. paragraph 366.23. This report is designed to collect financial information from service companies that are subject to regulation by the FERC.

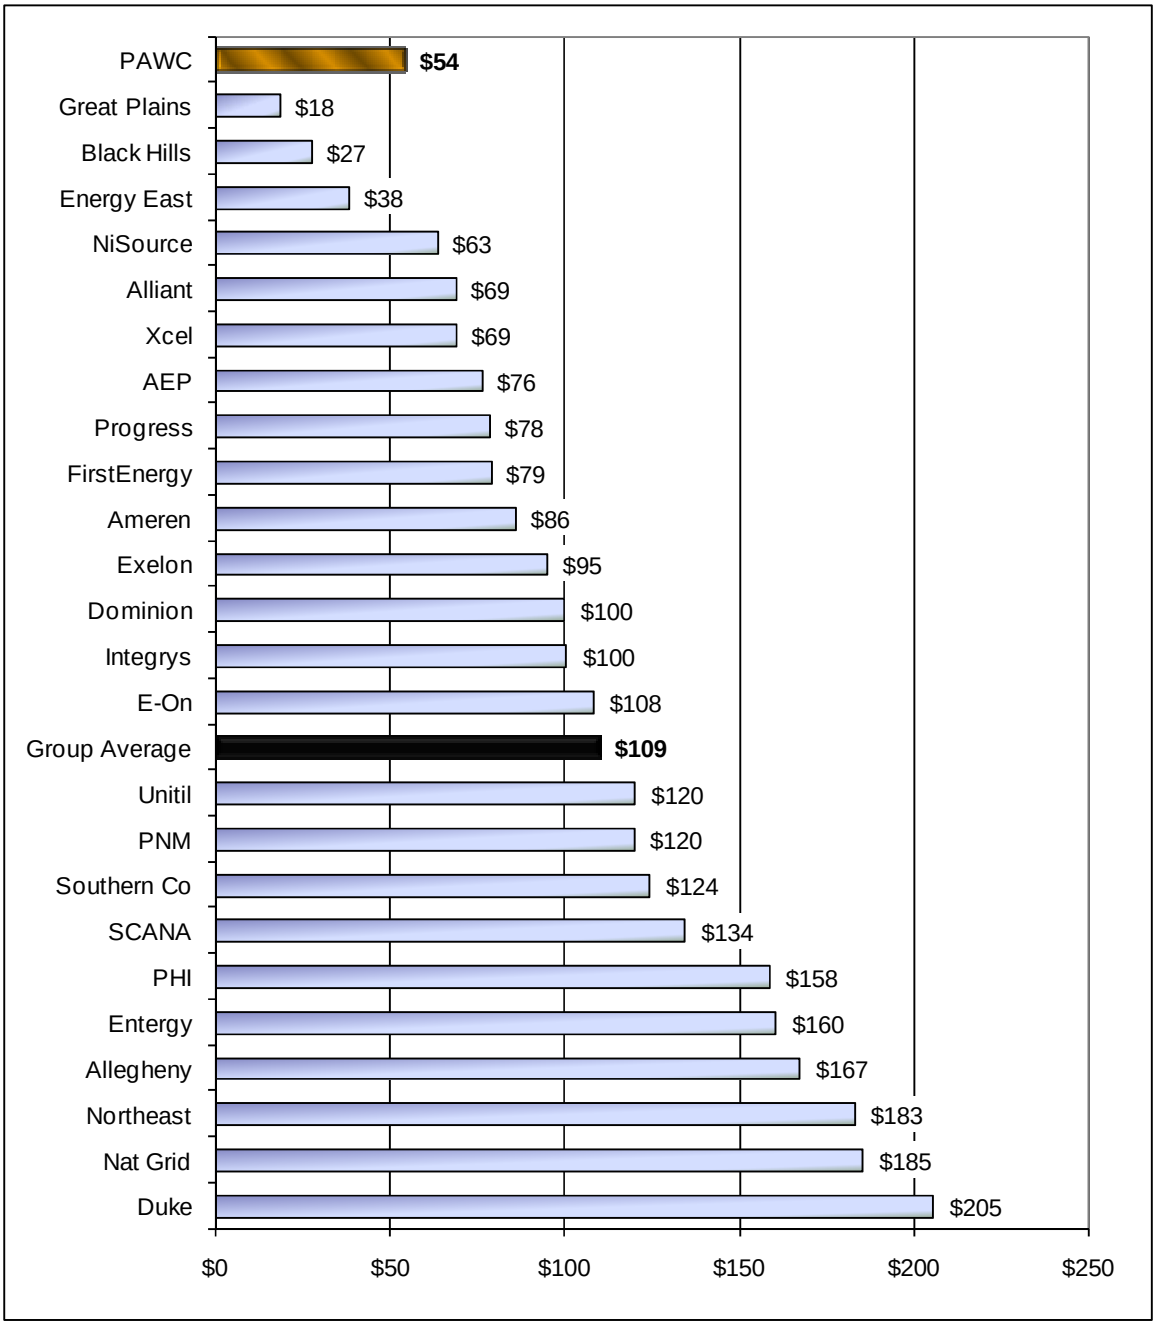
For 2008, a Form 60 was filed by 24 utility service companies, all of which serve utilities that provide regulated electric and, in some cases, gas service to retail customers. In order to make a valid comparison of this group's costs to those of American Water Works Service Company, it was necessary to isolate expenses that that they have in common. These include A&G-related charges associated with the following FERC accounts:

901 – Supervision	921 – Office supplies and expenses
903 – Customer records and collection expenses	923 – Outside services employed
905 – Miscellaneous customer accounts expenses	926 – Employee pensions and benefits
907 – Supervision	928 – Regulatory commission expenses
910 – Misc customer service and info expenses	930.2 – Miscellaneous general expenses
911 – Supervision	931 – Rents
920 - Administrative and general salaries	935 – Maintenance of structures and equipment

O&M expenses charged to utility affiliates for the comparison group service companies were obtained from Schedule XVI – Analysis of Charges for Service Associate and Non-Associate Companies (p. 303 to 306) of each entity's FERC Form 60. This schedule shows charges by FERC Account.

Comparison group service company 2008 expenses were also adjusted to remove charges to non-regulated affiliates from the cost pool used to calculate the cost per regulated service customer. This determination was made using information from the FERC Form 60 schedule: Account 457 – Analysis of Billing – Associate Companies.

IV – Question 1 – Reasonableness of Service Company Charges



A&G expenses per regulated utility customer for the 24 utility companies that file Form 60 for 2008 are calculated below.

Utility Company	2008 Regulated Retail Service Company A&G Expenses	Regulated Retail Customers	Cost per Customer
AEP	$396,340,118	5,213,000	$ 76
Allegheny	$263,588,707	1,577,873	$ 167
Alliant	$205,754,832	3,000,000	$ 69
Ameren	$291,684,710	3,400,000	$ 86
Black Hills	$20,763,828	759,400	$ 27
Dominion	$357,718,046	3,588,500	$ 100
Duke	$923,936,645	4,500,000	$ 205
Energy East	$113,714,789	2,989,800	$ 38
Entergy	$432,575,683	2,700,000	$ 160
E-On	$136,276,177	1,263,000	$ 108
Exelon	$558,687,014	5,885,000	$ 95
FirstEnergy	$354,028,109	4,499,000	$ 79
Great Plains	$15,000,708	820,000	$ 18
Integrys	$216,364,166	2,157,000	$ 100
Nat Grid	$1,240,706,398	6,700,000	$ 185
NiSource	$237,380,009	3,750,000	$ 63
Northeast	$302,138,730	1,654,000	$ 183
PHI	$302,463,412	1,910,000	$ 158
Progress	$242,677,256	3,100,000	$ 78
PNM	$102,688,385	859,000	$ 120
SCANA	$191,207,825	1,424,300	$ 134
Southern Co	$546,498,605	4,402,000	$ 124
Unitil	$20,341,422	169,600	$ 120
Xcel	$367,626,617	5,345,000	$ 69
Group Total	**$7,840,162,191**	**71,666,473**	**$ 109**

Exhibit 1 shows PAWC's 2008 Service Company cost per customer of $54 to be considerably lower than the average of $109 per customer for the comparison group service companies. Only 3 of 24 comparison group service companies had a lower 2008 cost per customer than PAWC. Based on this result, it is possible to conclude that the Service Company's 2008 charges to PAWC were reasonable.

Exhibit 1

Pennsylvania-American Water Company
Comparison of Service Company Annual Costs Per Customer

V – Question 2 – Provision of Services at the Lower of Cost or Market

Methodology

The lower-of-cost-or-market comparison is accomplished by comparing the cost per hour for Service Company managerial and professional services to those of outside service providers to whom these duties could be assigned. Based on the nature of the Service Company services it was determined that the following outside providers could perform the categories of services indicated below:

- Management Consultants – executive and administrative management, risk management services, human resources and communications services
- Attorneys – legal services
- Certified Public Accountants – accounting, financial, information technology and rates and revenues services
- Professional Engineers – engineering, operations and water quality services.

The services provided by the Belleville lab are assumed to be transferable to professional engineers for purposes of this cost comparison. This was done for two reasons. First, there is no readily available survey of hourly billing rates for testing services such as those performed by Belleville. Second, Belleville personnel have similar, scientific educational backgrounds as Service Company engineering personnel. Thus, it is valid to compare the hourly rates of Belleville services to those of outside engineering firms.

Service Company's hourly rate were calculated for each of the four outside service provider categories, based on the dollars and hours charged to PAWC during the 12 months ended December 31, 2008. Hourly billing rates for outside service providers were developed using third party surveys or directly from information furnished by outside providers themselves.

It should be noted that by using the Service Company's hours charged PAWC during 2008, its hourly rates are actually overstated because Service Company personnel charge a maximum 8 per day even when they work more. Outside service providers generally bill for every hour worked. If the overtime hours of Service Company personnel had been factored into the hourly rate calculation, Service Company hourly rates would have been lower.

The last step in the market cost comparison was to compare the Service Company's average cost per hour to the average cost per hour for outside providers.

Service Company Hourly Rates

Exhibit 2 (page 14) details the assignment of 12 months ended December 31, 2008 management and professional Service Company charges by outsider provider category. Exhibit 3 (page 15) shows the same assignment for Service Company management and professional hours charged to PAWC during the 12 months ended December 31, 2008.

Certain adjustments to these dollar amounts were necessary to calculate Service Company hourly rates that are directly comparable to those of outside providers. Adjustments were made to the following 2008 test period non-labor Service Company charges:

- Contract Services – 12 months ended December 31, 2008 Service Company charges to PAWC include almost $2,665,000 in expenses associated with the use of outside professional firms to perform certain corporate-wide services (e.g., legal, financial audit, actuarial services). These professional fees are excluded from the Service Company

hourly rate calculation because the related services have effectively been out-sourced already.

- Travel Expenses – In general, client-related travel expenses are not recovered by outside service providers through their hourly billing rate. Rather, actual out-of-pocket travel expenses are billed to clients in addition to fees for professional services. Thus, it is appropriate to remove these Service Company charges from the hourly rate calculation.

- Computer Hardware and Software Expenses – Included in the 12 months ended December 31, 2008 Service Company charges to PAWC are charges for outside expenses related to leases and maintenance fees related to mainframe, server and network infrastructure, corporate business applications and the communications systems. An outside provider that would take over operation of a data center would recover these expenses over and above the labor necessary to operate the data center.

Exhibit 4 (page 16) shows how contract services, travel expenses and computer hardware/software-related Service Company charges are assigned among the four outside provider categories.

Based on the assignment of expenses and hours shown in Exhibits 2 and 3 and the excludable items shown in Exhibit 4, the Service Company's equivalent costs per hour for the 12 months ended December 31, 2008 are calculated below.

	Attorney	Management Consultant	Certified Public Accountant	Professional Engineer	Total
Total management, professional & technical services charges	$ 862,288	$ 7,833,805	$ 15,855,078	$ 4,155,862	$ 28,707,033
Less:					
Contract services	$ 80,381	$ 583,168	$ 1,858,877	$ 142,652	$ 2,665,078
Travel expenses	$ 24,401	$ 221,487	$ 249,834	$ 237,561	$ 733,283
Computer hardware/software	$ -	$ 84,853	$ 78,486	$ 94,156	$ 257,495
Net Service Charges (A)	$ 757,505	$ 6,944,297	$ 13,667,881	$ 3,681,493	$ 25,051,177
Total Hours (B)	5,189	38,558	147,824	39,115	230,685
Average Hourly Rate (A / B)	**$ 146**	**$ 180**	**$ 92**	**$ 94**	

Exhibit 2

Outside Service Provider Hourly Rates

The next step in the cost comparison was to obtain the average billing rates for each outside service provider. The source of this information and the determination of the average rates are described in the paragraphs that follow.

It should be noted that professionals working for three of the five outside provider categories may be licensed to practice by state regulatory bodies. However, not every professional working for these firms is licensed. For instance, among Pennsylvania certified public accounting firms, only more experienced staff are predominantly CPAs (see table below). Some Service Company employees also have professional licenses. Thus, it is valid to compare the Service Company's hourly rates to those of the outside professional service providers included in this study.

Position	% In PA Who Are CPAs
Partners/Owners	100%
Directors (11+ years experience)	76%
Managers (6-10 years experience)	84%
Sr Associates (4-5 years experience)	53%
Associates (1-3 years experience)	10%
New Professionals	0%

Source: AICPA's National PCPS/TSCPA Management of an Accounting Practice Survey (2008)

Attorneys

The Pennsylvania State Bar does not survey its members as to their hourly billing rates. In addition, publicly available billing rate information could not be found for Pennsylvania attorneys. Therefore, an estimate of Pennsylvania attorney rates was developed from two surveys conducted by Lawyers Weekly in the states of Michigan and Massachusetts. As presented in Exhibit 5, the average rate for each firm was adjusted for the cost of living differential between its location and Hershey, Pennsylvania. The Lawyers Weekly surveys included rates in effect at December 31, 2007. Thus, the 2008 average rate was escalated to June 30, 2008—the midpoint of the test year ended December 31, 2008.

Management Consultants

The cost per hour for management consultants was developed from a 2008 survey performed by the Association of Management Consulting Firms—an industry trade organization. The survey includes rates that were in effect during 2007 for firms throughout the United States. Consultants typically do not limit their practice to any one region and must travel to a client's location. Thus, the U.S. national average is appropriate for comparison.

The first step in the calculation, presented in Exhibit 6, was to determine an average rate by consultant position level. From these rates, a single weighted average hourly rate was calculated based upon the percent of time that is typically applied to a consulting assignment by each consultant position level. The 2007 average rate was escalated to June 30, 2008—the midpoint of the 12 months ended December 31, 2008.

Certified Public Accountants

The average hourly rate for Pennsylvania CPAs was developed from a 2008 survey performed by the American Institute of Certified Public Accountants (AICPA). The Pennsylvania version of this survey was used to develop hourly rates for member firms in Pennsylvania.

As shown in Exhibit 7, a weighted average hourly rate was developed based on a set of accountant positions and a percent of time that is typically applied to an accounting assignment. This survey includes rate information in effect during 2007. Thus, the data had to be escalated to June 30, 2008—the test year's midpoint.

Professional Engineers

The Company provided hourly rate information for outside engineering firms that could have been used by PAWC in 2008. As presented in Exhibit 8, an average rate was developed for each engineering position level. Then, using a typical percentage mix of project time by engineering position, a weighted average cost per hour was calculated.

V – Question 2 – Provision of Services at the Lower of Cost or Market

Service Company versus Outside Provider Cost Comparison

As shown in the table below, Service Company costs per hour are considerably lower than those of outside providers.

	12 Months Ended December 31, 2008		
Service Provider	Service Company	Outside Provider	Difference--Service Co. Greater(Less) Than Outside
Attorney	$ 146	$ 278	$ (132)
Management Consultant	$ 180	$ 214	$ (34)
Certified Public Accountant	$ 92	$ 112	$ (20)
Professional Engineer	$ 94	$ 101	$ (7)

Based on these cost per hour differentials and the number of managerial and professional services hours billed to PAWC during the 12-months ended December 31, 2008, outside service providers would have cost $5,218,274 more than the Service Company (see table below). Thus, on average, outside provider's hourly rates are 18% higher than those of the Service Company ($5,218,274 / $ 29,432,558).

	12 Months Ended December 31, 2008		
Service Provider	Hourly Rate Difference--Service Co. Greater(Less) Than Outside	Service Company Hours Charged	Dollar Difference
Attorney	$ (132)	5,189	$ (685,112)
Management Consultant	$ (34)	38,558	$ (1,320,850)
Certified Public Accountant	$ (20)	147,824	$ (2,935,364)
Professional Engineer	$ (7)	39,115	$ (276,947)
Service Company Less Than Outside Providers			$ (5,218,274)

It should be noted that the cost differential associated with using outside providers is even greater because Service Company personnel do not charge for more than 8 hours per day even when they work more. Outside providers generally charge clients for all hours worked. If, for instance, Service Company personnel worked 5% overtime (2 hours) per week on PAWC's behalf, that would have amounted to over 14,000 additional hours of work during 2008. Based on the hourly rate differentials above, this overtime would have added another $716,000 to the cost of using outside provider.

If PAWC were to use outside service providers rather than the Service Company for managerial and professional services, it would incur other additional expenses besides those associated with higher hourly rates. Managing outside firms who would perform over 230,000 hours of work (more than 153 full-time equivalents at 1,500 "billable" hours per FTE per year) would add a significant workload to the existing PAWC management team. Thus, it would be necessary for PAWC to add at least two positions to supervise the outside firms and ensure they delivered quality and timely services. The individuals that would fill these positions would need a good understanding of each profession being managed. They must also have management experience and the authority necessary to give them credibility with the outside firms. As calculated in the table below, this position would add almost $300,000 per year to PAWC's personnel expenses.

V – Question 2 – Provision of Services at the Lower of Cost or Market

Cost of Adding 2 Professional Positions To PAWC's Staff

	Total
New Positions' Salary	$ 100,000
Benefits (at 49.4%)	$ 49,400
Office Expenses (15.2%)	$ 15,200
Total Cost of Full Time Position	$ 149,400
Number of Positions	2
Half Time Cost of Position	$ 298,800

Thus, the total effect on the ratepayers of PAWC of contracting all services now provided by Service Company would be an increase in their costs of $5,517,074 ($5,218,274 + $298,800). Based on the results of this comparison, it is possible to conclude that the Service Company charged PAWC at the lower of cost or market for services provided during 2008.

VI - Question 3 - Reasonableness of Customer Accounts Services Costs

Background

Customer Accounts Services covers the following utility functions:

- Customer Call Center – customer calls/contact, credit, order taking/disposition, bill collection efforts, outage calls
- Call Center IT – maintenance of phone banks, voice recognition units, call center software applications, telecommunications
- Customer billing – bill printing, stuffing, and mailing
- Remittance processing – processing customer payments received in the mail
- Bill payment centers – locations where customers can pay their bills in person

It is difficult to compare the cost of the Service Company's customer accounts services-related charges to PAWC with outside providers of the same services because survey data is proprietary and expensive to obtain. For this reason, PAWC's charges from the Service Company for customer accounts services are compared to those of neighboring electric utilities because the data necessary to make such comparison is available to the public.

Neighboring electric utility cost information comes from the FERC Form 1 that each utility must file. FERC's chart of accounts is defined in Chapter 18, Part 101 of the Code of Federal Regulations. FERC accounts that contain customer accounts services-related expenses are Account 903 Customer Accounts Expense – Records and Collection Expense and Account 905 Customer Accounts Expense – Miscellaneous Customer Accounts Expense. Exhibit 9 provides FERC's definition of the type of expenses that should be recorded in these accounts.

In addition to the charges in these FERC accounts, labor-related overheads charged to the following FERC accounts must be added to the labor components of Accounts 903 and 905:

- Account 926 Employee Pension and Benefits
- Account 408 Taxes Other Than Income (employer's portion of FICA)

Comparison Group

Electric utilities included in the comparison group are shown in the table below. These are companies whose FERC Form 1 show amounts for accounts 903 and 905.

Pennsylvania	• Duquesne Light • Metropolitan Edison • PECO Energy • Pennsylvania Electric	• Pennsylvania Power • PPL Electric Utilities • West Penn Power
New York	• Central Hudson Gas & Electric • Consolidated Edison • New York State Electric & Gas	• Niagara Mohawk Power • Orange & Rockland Utilities • Rochester Gas & Electric
Delaware	• Delmarva Power & Light	
Ohio	• Cleveland Electric Illuminating • Columbus Southern Power • Dayton Power & Light • Duke Energy Ohio	• Ohio Edison • Ohio Power • Toledo Edison
New Jersey	• Atlantic City Electric • Jersey Central Power	• Public Service Electric & Gas
Maryland	• Baltimore Gas & Electric • Delmarva Power & Light	• Potomac Edison • Potomac Electric
West Virginia	• Appalachian Power • Monongahela Power	• Wheeling Power

Pennsylvania-American Water Company
FERC Account Descriptions

903 – Customer Records and Collection Expenses

This account shall include the cost of labor, materials used and expenses incurred in work on customer applications, contracts, orders, credit investigations, billing and accounting, collections and complaints.

Labor

1. Receiving, preparing, recording and handling routine orders for service, disconnections, transfers or meter tests initiated by the customer, excluding the cost of carrying out such orders, which is chargeable to the account appropriate for the work called for by such orders.
2. Investigations of customers' credit and keeping of records pertaining thereto, including records of uncollectible accounts written off.
3. Receiving, refunding or applying customer deposits and maintaining customer deposit, line extension, and other miscellaneous records.
4. Checking consumption shown by meter readers' reports where incidental to preparation of billing data.
5. Preparing address plates and addressing bills and delinquent notices.
6. Preparing billing data.
7. Operating billing and bookkeeping machines.
8. Verifying billing records with contracts or rate schedules.
9. Preparing bills for delivery, and mailing or delivering bills.
10. Collecting revenues, including collection from prepayment meters unless incidental to meter reading operations.
11. Balancing collections, preparing collections for deposit, and preparing cash reports.
12. Posting collections and other credits or charges to customer accounts and extending unpaid balances.
13. Balancing customer accounts and controls.
14. Preparing, mailing, or delivering delinquent notices and preparing reports of delinquent accounts.
15. Final meter reading of delinquent accounts when done by collectors incidental to regular activities.
16. Disconnecting and reconnecting services because of nonpayment of bills.
17. Receiving, recording, and handling of inquiries, complaints, and requests for investigations from customers, including preparation of necessary orders, but excluding the cost of carrying out such orders, which is chargeable to the account appropriate for the work called for by such orders.
18. Statistical and tabulating work on customer accounts and revenues, but not including special analyses for sales department, rate department, or other general purposes, unless incidental to regular customer accounting routines.
19. Preparing and periodically rewriting meter reading sheets.
20. Determining consumption and computing estimated or average consumption when performed by employees other than those engaged in reading meters.

Materials and expenses

21. Address plates and supplies.
22. Cash overages and shortages.
23. Commissions or fees to others for collecting.
24. Payments to credit organizations for investigations and reports.
25. Postage.
26. Transportation expenses, including transportation of customer bills and meter books under centralized billing procedure.
27. Transportation, meals, and incidental expenses.
28. Bank charges, exchange, and other fees for cashing and depositing customers' checks.
29. Forms for recording orders for services, removals, etc.
30. Rent of mechanical equipment.

Pennsylvania-American Water Company
FERC Account Descriptions

905 – Miscellaneous Customer Accounts Expenses

This account shall include the cost of labor, materials used and expenses incurred not provided for in other accounts.

Labor

1. General clerical and stenographic work.
2. Miscellaneous labor.

Materials and expenses

3. Communication service.
4. Miscellaneous office supplies and expenses and stationery and printing other than those specifically provided for in accounts 902 and 903.

VI - Question 3 - Reasonableness of Customer Accounts Services Costs

PAWC Cost per Customer

As calculated below, PAWC's 2008 customer account services expense per customer was $27.06. The cost pool used to calculate this average includes charges for Service Company services (e.g., call center, billing, payment processing) and postage and forms expenses, which are incurred directly by PAWC. It was necessary to adjust the National Call Center charges because electric utilities experience an average of 2.50 calls per customer compared to American Water's 1.32 calls per customer. Thus, National Call Center expenses had to be increased, for comparison purposes, to reflect its costs at a 2.50 calls per customer level.

Pennsylvania American Water Company			Adjustment Fewer Calls For		
Cost Component		Service Co Charges	Water Cos. (A)	Adjusted	
Service Company					
Call Centers	Call processing, order processing, credit, bill collection	$ 9,980,441	$ 1,553,373	$11,533,814	
Regional Offices		$ 1,460,276		$ 1,460,276	
Service Company	Customer payment processing			$ 754,603	(B)
Operating Company	Postage & forms			$ 3,811,233	
			Cost Pool Total	$17,559,926	
			Total Customers	648,953	
	2008 Cost Per Pennsylvania American Customer			**$ 27.06**	

Note A: Adjustment for American Water's fewer calls per customer

This adjustment is necessary because water utilities experience fewer calls per customer than do electric utilities

Call handling expenses		$ 1,727,223	
Electric utility industry's avg calls/customer	2.50		
American Water's avg calls/customer	1.32		
Percent different	90%		90%
Total Adjustment		$ 1,553,373	

Note B: Estimated customer payment processing expenses

Number of customer bills	7,787,436
Bank charge per item	$ 0.0969
Total estimated annual expense	$ 754,603

Electric Utility Group Cost per Customer

Exhibit 10 shows the actual 2008 customer accounts expense per customer calculation for the electric utility comparison group. All of the underlying data was taken from the utilities' FERC Form 1.

VI - Question 3 - Reasonableness of Customer Accounts Services Costs

Summary of Results

As shown in the table below, PAWC's cost per customer is well below the average cost of the neighboring electric utility comparison group. It can therefore be concluded that PAWC's 2008 customer accounts-related expenses, including those of the Alton and Pensacola Call Centers, assigned by the Service Company to PAWC were comparable to those of other utilities.

VI - Question 4 – Need for Service Company Services

Analysis of Services

The final aspect of this study was an assessment of whether the services that are provided to PAWC by the Service Company would be necessary if PAWC were a stand-alone water utility. The first step in this evaluation was to determine specifically what the Service Company does for PAWC. Based on discussions with Service Company personnel, the matrix in Exhibit 11 was created showing which entity—PAWC or a Service Company location—is responsible for each of the functions PAWC requires to ultimately provide service to its customers. This matrix was reviewed to determine: (1) if there was redundancy or overlap in the services being provided by the Service Company and (2) if Service Company services are typical of those needed by a stand-alone water utility.

Upon review of Exhibit 12, the following conclusions can be drawn:

- The services that the Service Company provides are necessary and would be required even if PAWC were a stand-alone water utility.

- There is no redundancy or overlap in the services provided by the Service Company to PAWC. For all of the services listed in Exhibit 12, there was only one entity that was primarily responsible for the service.

Governance Practices Associated With Service Company Charges

There are several ways by which PAWC exercises control over Service Company services and charges. The most important of these are described below.

- **Company President Oversight** – The Company President of the state utility is responsible for the overall performance of the each operating company or district in the state. The state President has a significant voice in major business decisions of American Water and has the ability to monitor Service Company quality and spending.
- **Vice President Finance** – The VP Finance is responsible for the financial reporting, performance and internal controls of PAWC. The VP Finance through designees monitors the performance and reporting from the Service Company. The VP Finance attends quarterly Business Performance Review sessions with the PAWC President and finance group to review actual results and address forecast modifications for the remainder of the year. The VP Finance reports on the quarterly financial results and forecast updates to PAWC's Board of Directors. The rates function reports to the VP Finance, who in conjunction with the State President reviews and authorizes the filing of PAWC rate cases and regularly monitors the status of cases.
- **Operating Company Board Oversight** – PAWC's board of directors includes members of American Water's senior executive team and the President of PAWC. This helps ensure that PA American's needs are a factor in the delivery of Service Company services.
- **Service Company Budget Review/Approval** – PAWC's President and members of the American Water's senior executive team sit on the Service Company board and that board must formally approve the budget for Service Company charges for the next year. These budgeted charges are combined with the operating company's own spending into an overall budget which must be approved by the operating company's board of directors. PA American's president is also on the local board.
- **Major Project Review And Approval** – Major projects undertaken by the Service Company must first be reviewed by American Water's senior executive team. American Water's senior executive team, with input from the President of PAWC has the ability to impact all new initiatives and projects before they are authorized.
- **Service Company Bill Scrutiny** – Finance personnel review the Service Company bill for accuracy and reasonableness on a monthly basis. The financial team has dialogue with regional and corporate office personnel concerning the monthly bill and any mistakes or overcharges are credited on a subsequent billing. The finance unit prepares an actual to budget comparison of service company fees each month for use in identifying unusual variances. Service Company actual to budget comparison is included in the monthly FRP. Unusual variances are researched, explanations are provided and any corrections are made, as necessary.
- **Service Company Budget Variance Reporting** – Each month, a summary variance analysis is prepared that explains differences between budgeted and actual Service Company spending. In addition, a more detailed monthly variance report is produced by Service Company location and shows actual spending for the month.
- **Operating Company Budget Variance Reporting** – The "Financial Review Package" produced monthly, has multiple line items for Service Company spending. In this way, Service Company budget versus actual charges can be monitored for the month and year-to-date. Additional information exists that allows more detailed analysis of "Regional" and "Corporate" Service Company Fees.

- **Capital Investment Management (CIM) –** CIMC is one of American Water's primary business planning processes. It covers capital and asset planning and is employed throughout American Water. CIMC provides a full range of governance practices, including a formal protocol for assessing system needs, prioritizing expenditures, managing the capital program, approving project spending, delivering projects and measuring outputs. CIMC ensures that:
  - Capital expenditure plans are aligned with the strategic intent of the business
  - The impact of capital expenditure and income plans are fully reflected in operating expense plans
  - The impacts of these plans are understood and affordable, and
  - Effective controls are in place over budgets (through business plans) and individual capital projects (through appropriate authorization thresholds, management and reporting processes).

  The CIMC process was designed to optimize the effectiveness of asset investment. The process is managed at two levels for all PAWC Operating Units. Monthly meetings of the CIMC are held to review capital spending compared to plan, review new project requests, and review updates or modifications to existing projects. The President of PAWC, VP Finance, and others participate as necessary (e.g. VP Engineering and VP Operations) and provide the data used in the monthly review schedules.

Governance Practices Associated With Service Company Charges	

I – Introduction

Purpose of This Study

This study was undertaken to answer four questions concerning the services provided by American Water Works Service Company, Inc. (Service Company) to Tennessee American Water Company (TAWC):

1. Are the Service Company's charges to TAWC during the 12 months ended March 31, 2010 reasonable?

2. Was TAWC charged the lower of cost or market for managerial and professional services provided by the Service Company during the 12 months ended March 31, 2010?

3. Were the 12 months ended March 31, 2010 costs of the Service Company's customer accounts services, including those of the National Call Centers, comparable to those of other utilities?

4. Are the services TAWC receives from Service Company necessary?

Study Results

Concerning question 1, the following conclusion was reached:

- The Service Company's 12 months ended March 31, 2010 cost per TAWC customer was reasonable compared to cost per customer for electric and combination electric/gas service companies. During the 12 months ended March 31, 2010, TAWC was charged $59 per customer for administrative and general (A&G)-related services provided by the Service Company. This compares to an average of $95 per customer for service companies reporting to the Federal Energy Regulatory Commission (FERC). Only 4 of the 24 comparison group utility service companies filed a FERC Form 60 for 2009 had a lower per customer A&G cost than TAWC's charges from the Service Company.

Concerning question 2, the following conclusions were drawn from this study:

- TAWC was charged the lower of cost or market for managerial and professional services during the 12 months ended March 31, 2010.

- On average, the hourly rates for outside service providers are 45% higher than the Service Company's hourly rates.

- The managerial and professional services provided by the Service Company are vital and could not be procured externally by TAWC without careful supervision on the part of TAWC. If these services were contracted entirely to outside providers, TAWC would have to add at least one position to manage activities of outside firms. This position would be necessary to ensure the quality and timeliness of services provided.

- If all the managerial and professional services now provided by the Service Company had been outsourced during the 12 months ended March 31, 2010, TAWC and its ratepayers would have incurred $2,000,000 in additional expenses. This amount includes the higher cost of outside providers and the cost of one TAWC position needed to direct the outsourced work.

- This study's hourly rate comparison actually understates the cost advantages that accrue to TAWC from its use of the Service Company. Outside service providers generally bill

for every hour worked. Service Company exempt personnel, on the other hand, charge a maximum of 8 hours per day even when they work more hours. If the overtime hours of Service Company personnel were factored into the hourly rate calculation, the Service Company would have had an even greater annual dollar advantage than the $2,000,000 cited above. For instance, if Service Company overtime is conservatively estimated at 5% (2 hours per week) then that work would have added more than $92,000 in charges from outside providers.

- It would be difficult for TAWC to find local service providers with the same specialized water industry expertise as that possessed by the Service Company staff. Service Company personnel spend substantially all their time serving operating water companies. This specialization brings with it a unique knowledge of water utility operations and regulation that is most likely unavailable from local service providers.

- Service Company fees do not include any profit markup. Only its actual cost of service is being recovered from TAWC ratepayers.

Concerning question 3, the following conclusion was reached:

- The cost of the Service Company's customer accounts services, including those provided by the National Call Center, is below the range of the average of the neighboring electric utility comparison group. As will be explained further herein, this group of companies provides a reasonable proxy group for comparison to a regulated utility of the size and scope of the Service Company and TAWC. During the 12-months ended March 31, 2010, the customer accounts cost for TAWC customers was $29.08 compared to the 2009 average of $32.01 for neighboring electric utilities. The highest comparison group per customer cost was $67.39 and the lowest $17.53.

Concerning question 4, the following conclusions were drawn:

- The services that the Service Company provides are necessary and would be required even if TAWC were a stand-alone water utility.

- Furthermore, there is no redundancy or overlap in the services provided by the Service Company to TAWC. For all of the services listed in Exhibit 11, there was only one entity primarily responsible for the service.

II – Background

Overview of American Water Works Service Company

American Water's Service Company exists to provide certain shared services to American Water subsidiaries. It follows a service company model used by many utility holding companies that own multiple regulated utilities. By consolidating executive and professional services into a single service company, utility holding companies are able to realize the following benefits for ratepayers:

- Purchasing Economies – Common expenses (e.g., insurance, chemicals, piping) can be procured on a much larger scale thereby providing greater bargaining power for the combined entity compared to individual utility operating companies. A service company facilitates corporate-wide purchasing programs through its procurement and contract administration functions.

- Operating Economies of Scale – A service company is able to deliver services more efficiently because workloads can be balanced across more persons and facilities. For instance, American Water's Service Company is able to maintain one principal data center for the entire corporation. This is much more cost-efficient than each operating utility funding their own data center with its large fixed hardware, software and staffing costs.

- Continuity of Service – Centralizing service company personnel who perform similar services facilitates job cross-training and sharing of knowledge and expertise. This makes it easier to deal with staff turnover and absences and to sustain high levels of service to operating utilities. An individual operating utility might experience considerable disruption if a key professional left and it was necessary to hire outside to fill the vacancy.

- Maintenance of Corporate-Wide Standards – Personnel in American Water's Service Company establish standards for many functions (e.g., engineering designs, operating procedures and maintenance practices). It is easier to ensure these standards are followed by every operating utility because their implementation is overseen by the Service Company.

- Improved Governance – American Water's Service Company provides another dimension of management and financial oversight that supplements local operating utility management. The Service Company facilitates standard planning and reporting that help ensure operating utilities meet the requirements of their customers in a cost effective manner.

- Retention of Personnel – A service company organization provides operating utility personnel with another career path beyond what may be available on a local level. These opportunities tend to improve employee retention.

American Water follows the model for other utility service companies in another important regard. Its services are provided to affiliate operating utilities, like TAWC, at cost. American Water's Service Company is not a profit-making entity. It assigns only its actual expenses to the American Water subsidiaries it services.

The Service Company provides services to American Water operating companies from the following locations:

- Corporate Office – Includes American Water's executive management and personnel from the various corporate support services. American Water's corporate office is located in Voorhees, New Jersey.

- National Call Centers – Perform customer service functions, including: customer call processing, service order processing, correspondence processing, credit and collections. American Water maintains two call centers. One in Alton, Illinois that went into operation in 2001 and a second in Pensacola, Florida that went into operation in 2005. Prior to the establishment of these national call centers, customer service functions were performed by employees of TAWC, which incurred the expense on its books.

- National Shared Services Center – The Shared Services Center, located in Cherry Hill, New Jersey, provides various financial, accounting and treasury functions that had been performed by individual operating companies. This arrangement has improved and streamlined the Company's financial processes and allowed operating companies to focus on providing utility service.

- Regional Offices – Regional offices provide operating companies with certain support services that can be performed more effectively on a regional basis because individual operating company/center workloads are not sufficient to warrant a full-time staff for these activities. At the same time, these services require closer proximity to operating companies served so they are not provided by the National Shared Services Center. Examples of regional office services include rates and revenues, engineering, operations and field resource coordination.

- Belleville Lab – The national trace substance laboratory is located in Belleville, Illinois and performs testing for all American Water operating companies.

- Information Technology Service Centers – American Water's principal data center, located in Hershey, Pennsylvania, supports the IT infrastructure required to run corporate and operating company business applications and the communications systems. IT personnel rotate, as needed, throughout the regional offices and operating companies.

Service Company Expense Categories

The Service Company renders a monthly bill to operating companies. Charges are broken down into the following expense categories:

- Labor – base pay (salaries) of managerial and professional employees
- Labor-Related Overheads - employee benefit costs (payroll taxes, medical coverage, pensions, disability insurance) and other general expenses
- Support - wages and salaries of office support personnel, including secretaries, clerical personnel, telephone operators and mail clerks
- Office Expenses - office rent, equipment leases, telephone, electric, office supplies, property taxes, office maintenance
- Vouchers/Journal Entries – (1) travel expenses incurred by Service Company personnel, (2) other items submitted for reimbursement by employees, including professional association dues, (3) outside service contracts for such things as actuarial services, and (4) various other expenditures, including data center expenses for software licenses and hardware maintenance.

Service Company expenses are either assigned directly or allocated to operating companies, as shown in the table below.

Expense Category	Direct Charged	Allocated	Comments
Labor	X	X	Professional personnel working for one or several operating companies
Labor-Related Overheads	X	X	These are primarily employee benefit costs that relate directly to labor
Support		X	Administrative personnel support the professional staff, thus support costs are allocated on the basis of professional labor
Office Expense		X	Are all allocated on the basis of professional labor
Vouchers/Journals	X	X	May be either directly in support of one operating company (e.g., an engineer traveling from the Corporate Office to the operating company) or allocated to several operating companies

A direct charge occurs when Service Company work or expenses are incurred in support of only one operating company. Direct charge examples include work in support of an operating company's rate case, engineering design work on an operating company's project and the preparation of an operating company's financial statements.

Service Company expenses are allocated when more than one operating company benefits from the underlying work. Examples include assessments of new Federal water quality regulations, development of the company-wide materials procurement contracts and creation of company-wide engineering design standards.

Charging and Assignment Of Service Company Time and Expenses

Service Company transactions are assigned with the following information so there is a proper accounting and eventual charging to an operating company:

- Operating company
- Formula number
- Work order (where applicable)
- Authorization number (where applicable)

Charges can originate from the following systems:

- Payroll System
- RVI System (outside vendor payments)
- PCard System (credit card payments)
- Internal Purchase Order System
- Journal entries

II – Background

The Service Company's time reporting process enables labor and support charges to be assigned to the proper operating company. Labor charges are based on the time reported by managerial and professional Service Company employees. Every week, Service Company professional employees complete an electronic time sheet that shows:

- Formula number (this is linked to operating company within American Water's financial system)
- Employee hours worked
- Account number for non-labor charges

At month-end, time report information is processed and direct and allocated professional labor hours tabulated for each operating company. Dollar charges are then calculated using the hourly rate of each Service Company professional employee based upon their base salary (i.e., an employee's hours times his/her hourly rate of pay).

Support (administrative) personnel charge their time to the activity "General Admin." As described in the table on page 4, their labor charges are allocated to operating companies based upon how their office's professional personnel labor charges are assigned. For instance, if 20% of American Water's Southeast Region's professional labor is assigned to TAWC during a month, then 20% of that office's monthly administrative labor charges also are assigned to the operating company.

The overhead cost category is next assigned based on professional and administrative labor costs. Thus, if 20% of the Southeast Region's accumulated professional and support labor is charged to TAWC during the month, then 20% of that month's overhead expenses will be assigned to TAWC.

Each Service Company location's office expenses are allocated to operating companies based on how professional labor charges for that office have been assigned. For instance, if 2% of professional labor from one Service Company office is assigned to TAWC, then 2% of that office's office expenses would be assigned to TAWC. Thus, office expenses are allocated in the very same way as administrative labor.

Vouchers/journal entries may be charged directly or allocated, depending on who benefits from the expenditure. For instance, the cost of a continuing professional education course taken by a professional in a regional office is allocated to the operating companies served by that office. Travel expenses by that same professional to a rate case proceeding are charged directly to the operating company whose case is being heard.

III – Service Company Cost Comparison Approach

During the 12 months ended March 31, 2010, the Service Company billed TAWC $5,008,401 in O&M-related charges and $311,927 in capital-related charges. These total charges of $5,320,328 were subjected to a market cost comparison.

Service Company Charges	12 Months Ended March 31, 2010
Management Fees - O&M	$ 5,008,401
Management Fees - Capital	$ 311,927
Total Testable SC Charges	**$ 5,320,328**

For purposes of comparing these charges to certain outside benchmarks, Service Company services were placed into three categories:

- Managerial and Professional Services – Includes such services as management, accounting, legal, human resources, information technology and engineering.
- Customer Accounts Services – Includes customer-related services, such as call center, credit, billing, collection and payment processing.
- Field Resource Coordination Services – Includes the dispatching and oversight of work to operating company field crews.

Total test period Service Company charges break down between management/professional services, customer account services and field resource coordination as follows:

	12 Months Ended Mar. 31, 2010	
	Amount	Hours
Management and Professional Services	$ 4,099,018	39,973
Customer Account Services	$ 1,120,113	29,545
Field Resource Coordination	$ 101,197	1,640
Total Service Company Charges	**$ 5,320,328**	**71,158**

This study's first question—whether Service Company 12 months ended March 31, 2010 charges are reasonable—was determined by comparing TAWC's A&G-related Service Company charges per customer to the same charges for utility companies that must file the FERC Form 60 – Annual Report of Service Companies.

The second question—whether Service Company charges during the 12 months ended March 31, 2009 were at the lower of cost or market—was evaluated by comparing the cost per hour for managerial and professional services provided by Service Company personnel to hourly billing rates that would be charged by outside providers of equivalent services. Service Company costs per hour were based on actual charges to TAWC during the 12 months ended March 31, 2010. Outside providers' billing rates came from surveys or other information from professionals that could perform the services now provided by the Service Company.

III – Service Company Cost Comparison Approach

The third question—whether Service Company's 12 months ended March 31, 2010 customer account services charges, including those of the National Call Center costs, were comparable to other utilities—was addressed by comparing TAWC's customer accounts services expenses to those of neighboring electric utilities. This approach was selected because the costs of outside providers of call center services are not publicly available. However, electric utility customer account services expenses can be obtained from the FERC Form 1. The availability and transparency of FERC data adds to the validity of its use in this comparison.

The fourth question—the necessity of Service Company services—was investigated by defining the services provided to TAWC and determining if these services would be required if TAWC were a stand-alone utility.

IV – Question 1 – Reasonableness of Service Company Charges

TAWC's Service Company Cost per Customer

During the 12 months ended March 31, 2010, TAWC was charged $59 per customer by the Service Company for A&G-related services. The calculation of this amount, shown in the table below, starts with total net testable Service Company charges and adjusts for capital and non-A&G functions (engineering, operations and water quality) charges. These adjustments are necessary to develop a per customer cost that is comparable to cost of utility service companies.

	12 Months ended Mar 31, 2010 Svc. Co. Charges
Testable Service Company charges	$ 5,320,328
Less: Capital charges	$ (311,927)
Less: Non-A&G function O&M charges	
Engineering	$ (10,568)
Operations	$ (541,144)
Water Quality	$ (97,262)
Net A&G/O&M-related charges	$ 4,359,427
TAWC customers	74,475
TAWC Cost Per Customer	**$ 59**

Comparison Group Cost Per Customer

Every centralized service company in a holding company system must file a Form 60 in accordance with the Public Utility Holding Company Act of 2005, Section 1270, Section 390 of the Federal Power Act and 18 C.F.R. paragraph 366.23. This report is designed to collect financial information from service companies that are subject to regulation by the FERC.

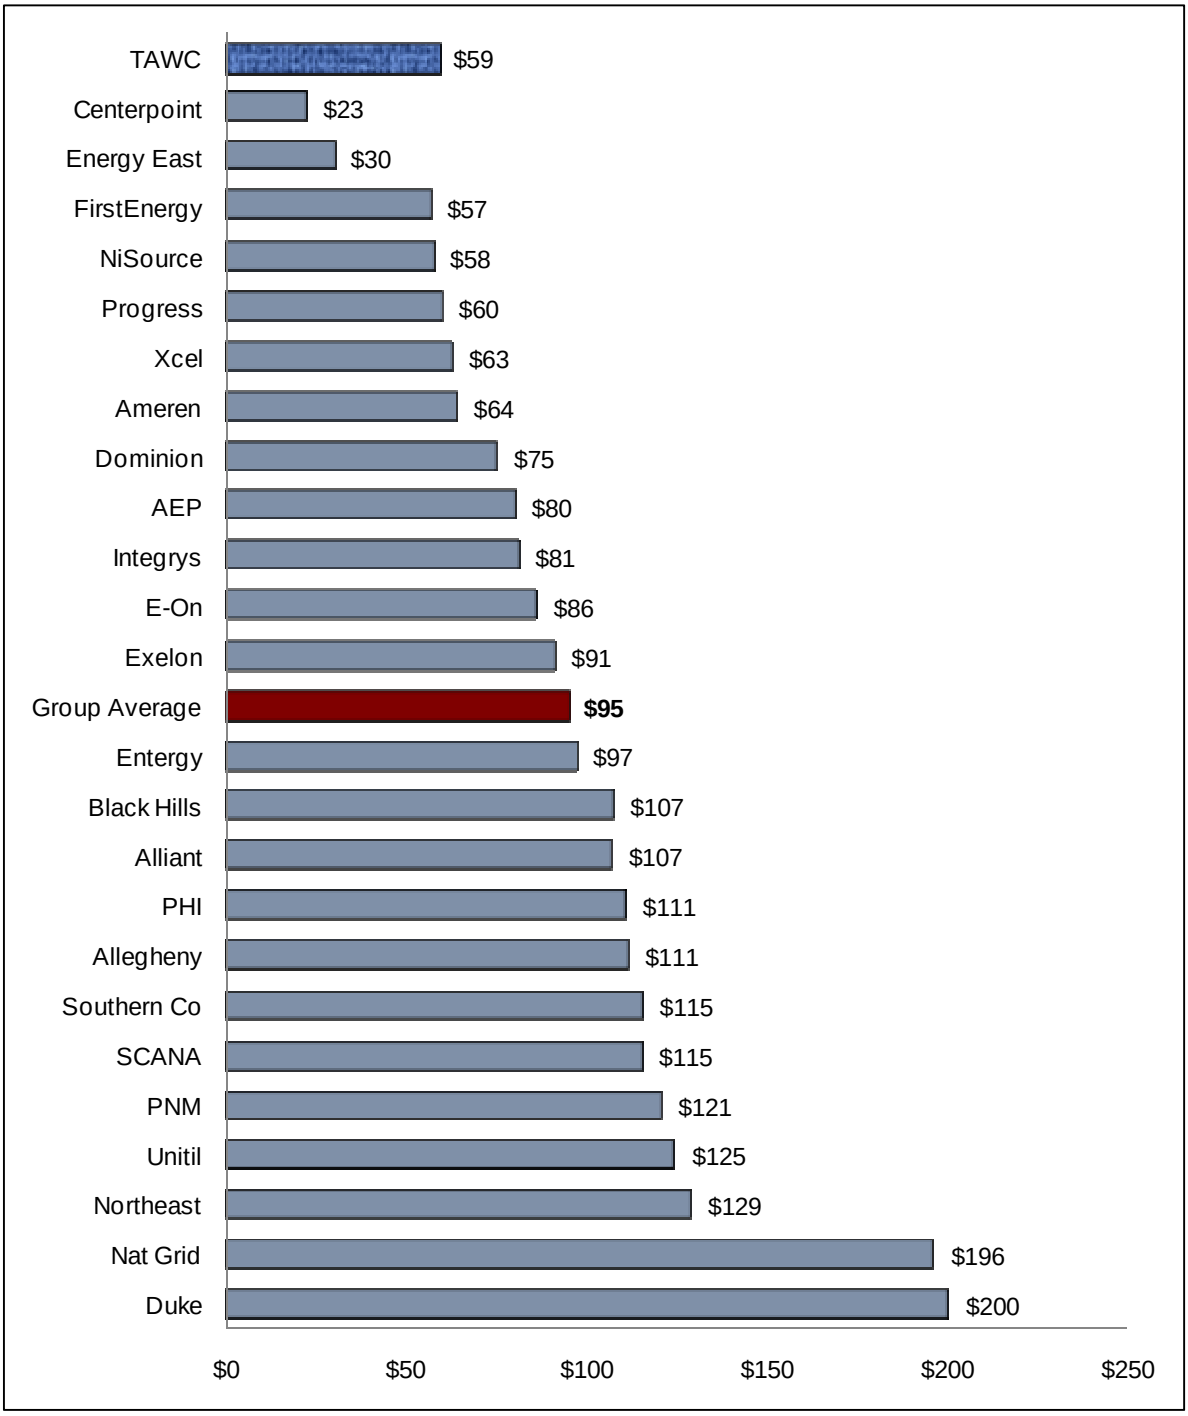
For 2009, a Form 60 was filed by service companies that are part of 25 utility holding companies that own utilities providing regulated electric and, in some cases, gas service to retail customers. In order to make a valid comparison of these service companies' costs to those of American Water Works Service Company, it was necessary to isolate expenses that that they have in common. These include A&G-related charges recorded in the following FERC accounts:

901 – Supervision	921 – Office supplies and expenses
903 – Customer records and collection expenses	923 – Outside services employed
905 – Miscellaneous customer accounts expenses	928 – Regulatory commission expenses
907 – Supervision	930.2 – Miscellaneous general expenses
910 – Misc customer service and info expenses	931 – Rents
911 – Supervision	935 – Maintenance of structures and equipment
920 - Administrative and general salaries	

Charges to utility affiliates for the comparison group service companies were obtained from Schedule XVI – Analysis of Charges for Service Associate and Non-Associate Companies (p. 303 to 306) of each entity's FERC Form 60. This schedule shows charges by FERC Account.

Comparison group service company 2009 expenses were also adjusted to remove charges to non-regulated affiliates from the cost pool used to calculate the cost per regulated service customer. This determination was made using information from the FERC Form 60 schedule: Account 457 – Analysis of Billing – Associate Companies.

IV – Question 1 – Reasonableness of Service Company Charges



One service company that filed a Form 60 was excluded from the comparison group because its Form 60 contained no data for 2009. That service company, Great Plains Energy Services Incorporated, became inactive in 2009 and had no charges to its regulated utility affiliate. The A&G expenses per regulated utility customer for the other 24 utility companies that filed a Form 60 for 2009 are calculated below.

Utility Company	2009 Regulated Retail Service Company A&G Expenses	Regulated Retail Customers	Cost per Customer
AEP	$418,484,117	5,213,000	$ 80
Allegheny	$176,685,245	1,585,700	$ 111
Alliant	$149,116,475	1,395,189	$ 107
Ameren	$212,036,412	3,300,000	$ 64
Black Hills	$81,484,333	759,400	$ 107
Centerpoint	$119,304,604	5,300,000	$ 23
Dominion	$279,128,940	3,700,000	$ 75
Duke	$901,762,388	4,500,000	$ 200
Energy East	$89,580,962	2,973,000	$ 30
Entergy	$262,596,172	2,700,000	$ 97
E-On	$105,893,093	1,226,000	$ 86
Exelon	$537,633,122	5,886,000	$ 91
FirstEnergy	$255,874,712	4,500,000	$ 57
Integrys	$175,423,352	2,157,700	$ 81
Nat Grid	$1,314,902,105	6,700,000	$ 196
NiSource	$216,480,637	3,750,000	$ 58
Northeast	$269,948,801	2,095,000	$ 129
PHI	$215,465,623	1,946,000	$ 111
Progress	$186,256,921	3,100,000	$ 60
PNM	$87,998,259	729,700	$ 121
SCANA	$166,555,883	1,445,000	$ 115
Southern Co	$508,130,523	4,402,000	$ 115
Unitil	$21,115,280	169,600	$ 125
Xcel	$333,389,459	5,300,000	$ 63
Group Total	**$7,085,247,416**	**74,833,289**	**$ 95**

Exhibit 1 shows TAWC's 12 months ended March 31, 2010 Service Company cost per customer of $59 to be considerably lower than the average of $95 per customer for the comparison group service companies. Only 4 of 24 comparison group service companies had a lower cost per customer than TAWC. Based on this result, it is possible to conclude that the Service Company's 12 months ended March 31, 2010 charges to TAWC were reasonable.

Exhibit 1

Tennessee American Water Company
Comparison of Service Company Annual Costs Per Customer

V – Question 2 – Provision of Services at the Lower of Cost or Market

Methodology

The lower-of-cost-or-market comparison is accomplished by comparing the cost per hour for Service Company managerial and professional services to those of outside service providers to whom these duties could be assigned. Based on the nature of the Service Company services it was determined that the following outside providers could perform the categories of services indicated below:

- Management Consultants – executive and administrative management, risk management services, human resources and communications services
- Attorneys – legal services
- Certified Public Accountants – accounting, financial, information technology and rates and revenues services
- Professional Engineers – engineering, operations and water quality services.

The services provided by the Belleville lab are assumed to be transferable to professional engineers for purposes of this cost comparison. This was done for two reasons. First, there is no readily available survey of hourly billing rates for testing services such as those performed by Belleville. Second, Belleville personnel have similar, scientific educational backgrounds as Service Company engineering personnel. Thus, it is valid to compare the hourly rates of Belleville services to those of outside engineering firms.

Service Company's hourly rate were calculated for each of the four outside service provider categories, based on the dollars and hours charged to TAWC during the 12 months ended March 31, 2010. Hourly billing rates for outside service providers were developed using third party surveys or directly from information furnished by outside providers themselves.

It should be noted that by using the Service Company's hours charged TAWC during the 12 months ended March 31, 2010, its hourly rates are actually overstated because Service Company personnel charge a maximum 8 per day even when they work more. Outside service providers generally bill for every hour worked. If the overtime hours of Service Company personnel had been factored into the hourly rate calculation, Service Company hourly rates would have been lower.

The last step in the market cost comparison was to compare the Service Company's average cost per hour to the average cost per hour for outside providers.

Service Company Hourly Rates

Exhibit 2 (page 14) details the assignment of 12 months ended March 31, 2010 management and professional Service Company charges by outsider provider category. Exhibit 3 (page 15) shows the same assignment for Service Company management and professional hours charged to TAWC during the 12 months ended March 31, 2010.

Certain adjustments to these dollar amounts were necessary to calculate Service Company hourly rates that are directly comparable to those of outside providers. Adjustments were made to the following 12 months ended March 31, 2010 test period non-labor Service Company charges:

- Contract Services – 12 months ended March 31, 2010 Service Company charges to TAWC include expenses associated with the use of outside professional firms to perform certain corporate-wide services (e.g., legal, financial audit, actuarial services).

These professional fees are excluded from the Service Company hourly rate calculation because the related services have effectively been out-sourced already.

- Travel Expenses – In general, client-related travel expenses are not recovered by outside service providers through their hourly billing rate. Rather, actual out-of-pocket travel expenses are billed to clients in addition to fees for professional services. Thus, it is appropriate to remove these Service Company charges from the hourly rate calculation.

- Information Technology Infrastructure Expenses – Included in the 12 months ended March 31, 2010 Service Company charges to TAWC are leases, maintenance fees and depreciation related to American Water's enterprise mainframe, server and network infrastructure and corporate business applications. An outside provider that would take over operation of this infrastructure would recover these expenses over and above the labor necessary to operate the data center.

Exhibit 4 (page 16) shows how contract services, travel expenses and computer hardware/software-related Service Company charges are assigned among the four outside provider categories.

Based on the assignment of expenses and hours shown in Exhibits 2 and 3 and the excludable items shown in Exhibit 4, the Service Company's equivalent costs per hour for the 12 months ended March 31, 2010 are calculated below.

	Attorney	Management Consultant	Certified Public Accountant	Professional Engineer	Total
Total management, professional & technical services charges	$ 132,906	$ 1,030,160	$ 2,395,210	$ 540,742	$ 4,099,018
Less:					
Contract services	$ 11,816	$ 62,591	$ 236,246	$ (8,429)	$ 302,224
Travel expenses	$ 1,529	$ 40,905	$ 28,441	$ 6,670	$ 77,545
Computer hardware/software	$ 3,397	$ 143,421	$ 156,874	$ 17,524	$ 321,216
Net Service Charges (A)	$ 116,164	$ 783,244	$ 1,973,648	$ 524,977	$ 3,398,033
Total Hours (B)	899	6,118	24,293	8,664	39,973
Average Hourly Rate (A / B)	**$ 129**	**$ 128**	**$ 81**	**$ 61**

V – Question 2 – Provision of Services at the Lower of Cost or Market

Outside Service Provider Hourly Rates

The next step in the cost comparison was to obtain the average billing rates for each outside service provider. The source of this information and the determination of the average rates are described in the paragraphs that follow.

It should be noted that professionals working for three of the five outside provider categories may be licensed to practice by state regulatory bodies. However, not every professional working for these firms is licensed. For instance, among Tennessee certified public accounting firms, only more experienced staff are predominantly CPAs (see table below). Some Service Company employees also have professional licenses. Thus, it is valid to compare the Service Company's hourly rates to those of the outside professional service providers included in this study.

Position	Tennessee Average
Partners/Owners	97%
Managers (6+ years experience)	83%
Sr Associates (4-5 years experience)	60%
Associates (1-3 years experience)	19%
New Professionals	6%

Source: AICPA's National PCPS/TSCPA Management of an Accounting Practice Survey

Attorneys

The Tennessee State Bar does not survey its members as to their hourly billing rates. The Chattanooga Bar Association maintains a service called Chattanooga Lawyers Information Providers Service (CLIPS) to assist the public in finding a lawyer. CLIPS' website presents background information on a relatively small number of Chattanooga attorneys. Unfortunately, only 60% of the attorneys featured in CLIPS revealed their hourly billing rates. With this small sample size and incomplete hourly rate data, it was impossible to develop a valid set of Chattanooga attorney billing rates for comparison to the cost of the Service Company's legal services.

As a result, an estimate of Chattanooga hourly rates was developed from two surveys conducted by Lawyers Weekly in the states of Michigan and Missouri. The 2009 average rate for each firm in the surveys was adjusted for the cost of living differential between their locations and Chattanooga, Tennessee. The cost of living indices utilized in this analysis were obtained from the Council for Community and Economic Research, a membership organization created in 1961 to develop high quality regional economic data and analytical methods.

The resultant 2009 average hourly rate calculated in Exhibit 5 is in line with the few hourly billing rates shown on the CLIPS website. For instance, the following attorneys from the Chattanooga firm of Chambliss Bahner & Stophel were listed in the CLIP website. Their billing rates are relatively close to this study's cost-of-living-adjusted estimated average of $265 per hour for Chattanooga attorneys.

- Mr. Robert Addison - $260/hour
- Ms. Alicia Oliver - $250/hour

Management Consultants

The cost per hour for management consultants was developed from a 2009 survey performed by the Association of Management Consulting Firms—an industry trade organization. The survey includes rates that were in effect during 2008 for firms throughout the United States. Consultants typically do not limit their practice to any one region and must travel to a client's location. Thus, the U.S. national average is appropriate for comparison.

The first step in the calculation, presented in Exhibit 6, was to determine an average rate by consultant position level. From these rates, a single weighted average hourly rate was calculated based upon the percent of time that is typically applied to a consulting assignment by each consultant position level. The 2008 average rate was escalated to September 30, 2010—the midpoint of the 12 months ended March 31, 2010.

Certified Public Accountants

The average hourly rate for Tennessee CPAs was developed from a 2008 survey performed by the American Institute of Certified Public Accountants (AICPA). The Tennessee version of this survey was used to develop hourly rates for member firms in Tennessee.

As shown in Exhibit 7, a weighted average hourly rate was developed based on a set of accountant positions and a percent of time that is typically applied to an accounting assignment. This survey includes rate information in effect during 2007. Thus, the data had to be escalated to September 30, 2009—the test year's midpoint.

Professional Engineers

The Company provided hourly rate information for outside engineering firms that could have been used by TAWC in 2009. As presented in Exhibit 8, an average rate was developed for each engineering position level. Then, using a typical percentage mix of project time by engineering position, a weighted average cost per hour was calculated.

Exhibit 5

V – Question 2 – Provision of Services at the Lower of Cost or Market

Service Company versus Outside Provider Cost Comparison

As shown in the table below, Service Company costs per hour are considerably lower than those of outside providers.

	12 Months Ended March 31, 2010		
Service Provider	Service Company	Outside Provider	Difference--Service Co. Greater(Less) Than Outside
Attorney	$ 129	$ 265	$ (136)
Management Consultant	$ 128	$ 231	$ (103)
Certified Public Accountant	$ 81	$ 108	$ (27)
Professional Engineer	$ 61	$ 111	$ (50)

Based on these cost per hour differentials and the number of managerial and professional services hours billed to TAWC during the 12-months ended March 31, 2010, outside service providers would have cost $1,838,669 more than the Service Company (see table below). Thus, on average, outside provider's hourly rates are 45% higher than those of the Service Company ($1,838,669 / $4,099,018).

	12 Months Ended March 31, 2010		
Service Provider	Hourly Rate Difference--Service Co. Greater(Less) Than Outside	Service Company Hours Charged	Dollar Difference
Attorney	$ (136)	899	$ (121,947)
Management Consultant	$ (103)	6,118	$ (630,010)
Certified Public Accountant	$ (27)	24,293	$ (650,038)
Professional Engineer	$ (50)	8,664	$ (436,675)
Service Company Less Than Outside Providers			$ (1,838,669)

It should be noted that the cost differential associated with using outside providers is even greater because Service Company personnel do not charge for more than 8 hours per day even when they work more. Outside providers generally charge clients for all hours worked. If, for instance, Service Company personnel worked 5% overtime (2 hours) per week on TAWC's behalf, that would have amounted to 2,000 additional hours of work during the 12 months ended March 31, 2010. Based on the hourly rate differentials above, this overtime would have added another $92,000 to the cost of using outside provider.

If TAWC were to use outside service providers rather than the Service Company for managerial and professional services, it would incur other additional expenses besides those associated with higher hourly rates. Managing outside firms who would perform almost 40,000 hours of work (more than 26 full-time equivalents at 1,500 "billable" hours per FTE per year) would add a significant workload to the existing TAWC management team. Thus, it would be necessary for TAWC to add at least one position to supervise the outside firms and ensure they delivered quality and timely services. The individuals that would fill this position would need a good understanding of each profession being managed. They must also have management experience and the authority necessary to give them credibility with the outside firms. As calculated in the table below, this position would add almost $165,000 per year to TAWC's personnel expenses.

V – Question 2 – Provision of Services at the Lower of Cost or Market

Cost of Adding a Professional Position To TAWC's Staff

	Total
New Positions' Salary	$ 100,000
Benefits (at 49.4%)	$ 49,400
Office Expenses (15.2%)	$ 15,200
Total Cost of Full Time Position	$ 164,600

Thus, the total effect on the ratepayers of TAWC of contracting all services now provided by Service Company would be an increase in their costs of $2,003,269 ($1,838,669 + $164,600). Based on the results of this comparison, it is possible to conclude that the Service Company charged TAWC at the lower of cost or market for services provided during the 12 months ended March 31, 2010.

VI - Question 3 - Reasonableness of Customer Accounts Services Costs

Background

Customer Accounts Services covers the following utility functions:

- Customer Call Center – customer calls/contact, credit, order taking/disposition, bill collection efforts, outage calls
- Call Center IT – maintenance of phone banks, voice recognition units, call center software applications, telecommunications
- Customer billing – bill printing, stuffing, and mailing
- Remittance processing – processing customer payments received in the mail
- Bill payment centers – locations where customers can pay their bills in person

It is difficult to compare the cost of the Service Company's customer accounts services-related charges to TAWC with outside providers of the same services because survey data is proprietary and expensive to obtain. For this reason, TAWC's charges from the Service Company for customer accounts services are compared to those of neighboring electric utilities because the data necessary to make such comparison is available to the public.

Neighboring electric utility cost information comes from the FERC Form 1 that each utility must file. FERC's chart of accounts is defined in Chapter 18, Part 101 of the Code of Federal Regulations. FERC accounts that contain customer accounts services-related expenses are Account 903 Customer Accounts Expense – Records and Collection Expense and Account 905 Customer Accounts Expense – Miscellaneous Customer Accounts Expense. Exhibit 9 provides FERC's definition of the type of expenses that should be recorded in these accounts.

In addition to the charges in these FERC accounts, labor-related overheads charged to the following FERC accounts must be added to the labor components of Accounts 903 and 905:

- Account 926 Employee Pension and Benefits
- Account 408 Taxes Other Than Income (employer's portion of FICA)

Comparison Group

Electric utilities included in the comparison group are shown in the table below. These are companies whose FERC Form 1 show amounts for accounts 903 and 905.

Tennessee	• Kingsport Power	
North Carolina	• Duke Energy Carolinas	• Progress Energy Carolinas
Kentucky	• Duke Energy Kentucky • Kentucky Power	• Kentucky Utilities • Louisville Gas & Electric
Mississippi	• Entergy Mississippi	• Mississippi Power
Virginia	• Appalachian Power	• Virginia Electric Power
Georgia	• Georgia Power	
Alabama	• Alabama Power	
Arkansas	• Entergy Arkansas	
Missouri	• Empire District Electric • Kansas City Power & Light	• Union Electric

Tennessee American Water Company
FERC Account Descriptions

903 – Customer Records and Collection Expenses

This account shall include the cost of labor, materials used and expenses incurred in work on customer applications, contracts, orders, credit investigations, billing and accounting, collections and complaints.

Labor

1. Receiving, preparing, recording and handling routine orders for service, disconnections, transfers or meter tests initiated by the customer, excluding the cost of carrying out such orders, which is chargeable to the account appropriate for the work called for by such orders.
2. Investigations of customers' credit and keeping of records pertaining thereto, including records of uncollectible accounts written off.
3. Receiving, refunding or applying customer deposits and maintaining customer deposit, line extension, and other miscellaneous records.
4. Checking consumption shown by meter readers' reports where incidental to preparation of billing data.
5. Preparing address plates and addressing bills and delinquent notices.
6. Preparing billing data.
7. Operating billing and bookkeeping machines.
8. Verifying billing records with contracts or rate schedules.
9. Preparing bills for delivery, and mailing or delivering bills.
10. Collecting revenues, including collection from prepayment meters unless incidental to meter reading operations.
11. Balancing collections, preparing collections for deposit, and preparing cash reports.
12. Posting collections and other credits or charges to customer accounts and extending unpaid balances.
13. Balancing customer accounts and controls.
14. Preparing, mailing, or delivering delinquent notices and preparing reports of delinquent accounts.
15. Final meter reading of delinquent accounts when done by collectors incidental to regular activities.
16. Disconnecting and reconnecting services because of nonpayment of bills.
17. Receiving, recording, and handling of inquiries, complaints, and requests for investigations from customers, including preparation of necessary orders, but excluding the cost of carrying out such orders, which is chargeable to the account appropriate for the work called for by such orders.
18. Statistical and tabulating work on customer accounts and revenues, but not including special analyses for sales department, rate department, or other general purposes, unless incidental to regular customer accounting routines.
19. Preparing and periodically rewriting meter reading sheets.
20. Determining consumption and computing estimated or average consumption when performed by employees other than those engaged in reading meters.

Materials and expenses

21. Address plates and supplies.
22. Cash overages and shortages.
23. Commissions or fees to others for collecting.
24. Payments to credit organizations for investigations and reports.
25. Postage.
26. Transportation expenses, including transportation of customer bills and meter books under centralized billing procedure.
27. Transportation, meals, and incidental expenses.
28. Bank charges, exchange, and other fees for cashing and depositing customers' checks.
29. Forms for recording orders for services, removals, etc.
30. Rent of mechanical equipment.

Tennessee American Water Company
FERC Account Descriptions

905 – Miscellaneous Customer Accounts Expenses

This account shall include the cost of labor, materials used and expenses incurred not provided for in other accounts.

Labor

1. General clerical and stenographic work.
2. Miscellaneous labor.

Materials and expenses

3. Communication service.
4. Miscellaneous office supplies and expenses and stationery and printing other than those specifically provided for in accounts 902 and 903.

VI - Question 3 - Reasonableness of Customer Accounts Services Costs

TAWC Cost per Customer

As calculated below, TAWC's 12 months ended March 31, 2010 customer account services expense per customer was $29.08. The cost pool used to calculate this average includes charges for Service Company services (e.g., call center, billing, payment processing) and postage and forms expenses, which are incurred directly by TAWC. It was necessary to adjust the National Call Center charges because electric utilities experience an average of 2.50 calls per customer compared to American Water's 1.32 calls per customer. Thus, National Call Center expenses had to be increased, for comparison purposes, to reflect its costs at a 2.50 calls per customer level.

Tennessee American Water Company

	Cost Component	Service Co Charges	Adjustment Fewer Calls For Water Cos. (A)	Adjusted	
Service Company					
Call Centers	Call processing, order processing, credit, bill collection	$ 1,120,113	$ 450,805	$ 1,570,918	
Service Company	Customer payment processing			$ 130,927	Note B
Operating Company	Postage & forms			$ 464,130	
			Cost Pool Total	$ 2,165,975	
			Total Customers	74,475	
	12 Months Ended March 31, 2010 Cost Per Customer			**$ 29.08**	

Note A: Adjustment for American Water's fewer calls per customer

This adjustment is necessary because water utilities experience fewer calls per customer than do electric utilities

Test year Call Handling charges		$ 502,486
Electric utility industry's avg calls/customer	2.50	
American Water's avg calls/customer	1.32	
Percent different	90%	90%
Total Adjustment		$ 450,805

Note B: Estimated customer payment processing expenses

Number of customers	74,475
Number of payments/customer/year	12.0
Total payments processed/year	893,700
Bank charge per item	$ 0.1465
Total estimated annual expense	$ 130,927

Electric Utility Group Cost per Customer

Exhibit 10 shows the actual 2009 customer accounts expense per customer calculation for the electric utility comparison group. All of the underlying data was obtained from the utilities' FERC Form 1.

VI - Question 3 - Reasonableness of Customer Accounts Services Costs

Summary of Results

As shown in the table below, TAWC's cost per customer is below the average cost of the neighboring electric utility comparison group. It can therefore be concluded that TAWC's 12 months ended March 31, 2010 customer accounts-related expenses, including those of the Alton and Pensacola Call Centers, assigned by the Service Company to TAWC were comparable to those of other utilities.

Customer Account Services Expenses Per Customer	
Virginia Electric Power	$ 17.53
Louisville Gas & Electric	$ 20.40
Union Electric	$ 21.87
Progress Energy Carolinas	$ 22.96
Duke Energy Carolinas	$ 26.96
Tennessee American Water	**$ 29.08**
Kansas City Power & Light	$ 29.64
Comparison Group Average	**$ 32.01**
Appalachian Power	$ 32.70
Kingsport Power	$ 32.78
Duke Energy Kentucky	$ 34.65
Kentucky Utilities	$ 35.47
Kentucky Power	$ 36.03
Empire District Electric	$ 37.79
Georgia Power	$ 42.84
Entergy Mississippi	$ 45.84
Entergy Arkansas	$ 47.60
Alabama Power	$ 49.05
Mississippi Power	$ 67.39

VI - Question 4 – Need for Service Company Services

Analysis of Services

The final aspect of this study was an assessment of whether the services that are provided to TAWC by the Service Company would be necessary if TAWC were a stand-alone water utility. The first step in this evaluation was to determine specifically what the Service Company does for TAWC. Based on discussions with Service Company personnel, the matrix in Exhibit 11 was created showing which entity—TAWC or a Service Company location—is responsible for each of the functions TAWC requires to ultimately provide service to its customers. This matrix was reviewed to determine: (1) if there was redundancy or overlap in the services being provided by the Service Company and (2) if Service Company services are typical of those needed by a stand-alone water utility.

Upon review of Exhibit 11, the following conclusions can be drawn:

- The services that the Service Company provides are necessary and would be required even if TAWC were a stand-alone water utility.

- There is no redundancy or overlap in the services provided by the Service Company to TAWC. For all of the services listed in Exhibit 11, there was only one entity that was primarily responsible for the service.

Governance Practices Associated With Service Company Charges

There are several ways by which TAWC exercises control over Service Company services and charges. The most important of these are described below.

- **Divisional Sr. Vice President Oversight** – The Eastern Division Senior Vice President is on the Executive Management Team (EMT) of American Water. The Divisional Sr. Vice President is responsible for the overall performance of each operating company in the Division, including Long Island Water Corp., Indiana American Water Company, Ohio American Water Company, Virginia American Water Company, West Virginia American Water Company, Kentucky American Water Company, Tennessee American Water Company, Michigan American Water Company, and Maryland American Water Company. As part of the EMT, each Divisional Senior Vice President has equal say with other EMT members in major business decisions of American Water and has the ability to monitor Service Company performance quality and spending.
- **Divisional Vice President & Treasurer** – The Divisional Vice President and Treasurer of the Eastern Division is responsible for the financial reporting, performance and internal controls of each of the operating companies in the division. The Vice President and Treasurer monitors the performance and expense levels of the Service Company and validates the cost of services received. Also, the Vice President and Treasurer reviews the monthly charges and investigates whenever the amount, quality and/or services are appropriate.
- **Operating Company Board Oversight** – TAWC board of directors includes members of American Water's EMT, members of the Eastern Division's management team, TAWC's Management team and business and community leaders from outside the Company. This diverse board ensures that TAWC's needs are a factor in the delivery of Service Company services. The TAWC Board meets at a minimum of four times each year and at every meeting financial and operational reports and issues are discussed at length.
- **Service Company Board Oversight** – The Service Company Board of Directors is comprised of 16 members, some of whom are the presidents of state operating companies. They typically meet four times a year to provide governance on the activities and bylaws of Service Company. Their primary responsibilities include:
  - Approve the Business Plan and Operating Budget
  - Review Financial Performance of the Service Center
  - Review performance metrics of certain functional groups
  - Approve policy, procedures and practices of AW as it relates to Service Company
- **Service Company Budget Review/Approval** – Several operating company presidents sit on the Service Company board and that board must formally approve the budget for Service Company charges for the next year. These budgeted charges are consolidated with the operating company's own spending into an overall budget which must be approved by the operating company's board of directors (e.g., TAWC).
- **Major Project Review And Approval** – Major projects undertaken by the Service Company must first be reviewed by American Water's Executive Management Team, which includes the Divisional Senior Vice President. The Divisional Senior Vice President, with input from the divisional and state management teams (including TAWC) has the ability to impact all new initiatives and projects before they are authorized. Major non-capital projects and initiatives for the Service Company are approved through the Business Plan. All significant business initiatives (capital or non-capital) are required to be submitted to the "BATT" (Business and Technology Team) committee for final approval. The "BATT" team is comprised of C-level executive members (CEO, CFO, etc.).

- **Accounting and Financial Reporting** – Similar to the states, the Service Company follows the same accounting and financial reporting processes. During the month accounting transactions are recorded. At month end, the SSC and Service Company Finance teams review all transactions. Variance analyses are performed based on month to month actual as well as actual to budget to ensure accuracy. Once completed, the service company bill is run and the actuals are "pushed down" and allocated to the states based on predetermined formulas. A conference call is schedule before the operating companies close their books each month to discuss Service Company performance. This is based at a functional level with explanation reported for those expense variances that meet or exceed certain thresholds. At this time, the operating companies may question expenses and spending for better understanding of results. Finance personnel review the monthly Service Company bill for accuracy and reasonableness on a monthly basis. Any mistakes or overcharges are credited on a subsequent billing.
- **Operating Company Budget Variance Reporting** – The "Budget/Plan Analysis," produced monthly by each operating company, has line items for Management Fees and Shared Service Expense (i.e., IT, Call Center, etc.). In this way, Service Company budget versus actual charges as charged to the operating company can be monitored and reviewed for the month and year-to-date as compared to prior year, plan and reforecast.
- Capital Investment Management (CIM) – CIM covers capital and asset planning and is employed throughout American Water, including the Service Company. CIM provides a full range of governance practices, including a formal protocol for assessing system needs, prioritizing expenditures, managing the capital program, approving project spending, delivering projects and measuring outputs. CIM ensures that:
  - Capital expenditure plans are aligned with the strategic intent of the business,
  - The impact of capital expenditure and income plans are fully reflected in operating expense plans,
  - The impacts of these plans are understood and affordable, and
  - Effective controls are in place over budgets (through business plans) and individual capital projects (through appropriate authorization thresholds, management and reporting processes).

  The CIM process was designed to optimize the effectiveness of asset investment. The process is managed at three levels (state, divisional, and national (corporate) for all American Water companies, including all Tennessee American Operating Units.

I – Introduction

Purpose of This Study

This study was undertaken to answer four questions concerning the services provided by American Water Works Service Company, Inc. (Service Company) to Virginia American Water Company (VAWC):

1. Were the Service Company's charges to VAWC during the 12 months ended September 30, 2009 reasonable?

2. Was VAWC charged the lower of cost or market for managerial and professional services provided by the Service Company during the 12 months ended September 30, 2009?

3. Were the 12 months ended September 30, 2009 costs of the Service Company's customer accounts services, including those of the National Call Centers, comparable to those of other utilities?

4. Are the services VAWC receives from the Service Company necessary?

Study Results

Concerning question 1, the following conclusion was reached:

- The Service Company's costs for the 12 months ended September 30, 2009 per VAWC customer was very reasonable. For example, during the 12 months ended September 30, 2009, VAWC was charged $58 per customer for administrative and general ('A&G")-related services provided by the Service Company. This compares favorably to costs per customer for electric and combination electric/gas service companies that average $109 for service companies reporting to the Federal Energy Regulatory Commission ("FERC"). Only 3 of the 24 utility service companies that filed a FERC Form 60 for 2008 had a lower A&G cost per customer than VAWC's charges from the Service Company.

Concerning question 2, the following conclusions were drawn from this study:

- VAWC was charged the lower of cost or market for managerial and professional services during the 12 months ended September 30, 2009.

- On average, the hourly rates for outside service providers are 60% higher than the Service Company's hourly rates.

- The managerial and professional services provided by the Service Company are vital and could only be procured effectively by VAWC from outside professionals if it provided careful supervision to those service providers. If these services were contracted entirely to outside providers, VAWC would have to add at least one position to manage activities of outside firms. This position would be necessary to ensure the quality and timeliness of services provided.

- If all the managerial and professional services now provided by the Service Company had been outsourced during the 12 months ended September 30, 2009, VAWC and its ratepayers would have incurred more than $2.2 million in additional expenses. This amount includes the higher cost of outside providers and the cost of one VAWC position needed to direct the outsourced work.

- This study's hourly rate comparison actually understates the cost advantages that accrue to VAWC from its use of the Service Company. Outside service providers generally bill for every hour worked. Service Company exempt personnel, on the other hand, charge a maximum of 8 hours per day even when they work more hours. If the overtime hours of Service Company personnel were factored into the hourly rate calculation, the Service Company would have had an even greater annual dollar advantage than the $2.2 million cited above. For instance, if Service Company overtime is conservatively estimated at 5% (2 hours per week), then that work would have cost an estimated $100,000 in additional charges from outside providers.

- It would be difficult for VAWC to find local service providers with the same specialized water industry expertise as that possessed by the Service Company staff. Service Company personnel spend substantially all their time serving operating water companies. This specialization brings with it a unique knowledge of water utility operations and regulation that is most likely unavailable from local service providers.

- Service Company fees do not include any profit markup. Only its actual cost of service is being recovered from VAWC customers.

Concerning question 3, the following conclusion was reached:

- The cost of the Service Company's customer accounts services, including those provided by the National Call Center, is below the average of the neighboring electric utility comparison group. As will be explained further , this group of companies provides a reasonable proxy group for comparison to a regulated utility of the size and scope of the Service Company and VAWC. During the 12-months ended September 30, 2009, the customer accounts cost for VAWC customers was $27.58 compared to the 2008 average of $29.13 for neighboring electric utilities. The highest comparison group per customer cost was $76.47 and the lowest $15.67.

Concerning question 4, the following conclusions was drawn:

- The services that the Service Company provides are necessary and would be required even if VAWC were a stand-alone water utility.

- Furthermore, there is no redundancy or overlap in the services provided by the Service Company to VAWC. For all of the services listed in Exhibit 11, there was only one entity primarily responsible for the service and thus no duplication of efforts between the Service Company and VAWC.

II – Background

Overview of American Water Works Service Company

American Water's Service Company exists to provide certain shared services to American Water subsidiaries. It follows a service company model used by many utility holding companies that own multiple regulated utilities. By consolidating executive and professional services into a single service company, utility holding companies are able to realize the following benefits for ratepayers:

- Purchasing Economies – Common expenses (e.g., insurance, chemicals, piping) can be procured on a much larger scale thereby providing greater bargaining power for the combined entity compared to individual utility operating companies. A service company facilitates corporate-wide purchasing programs through its procurement and contract administration functions.

- Operating Economies of Scale – A service company is able to deliver services more efficiently because workloads can be balanced across more persons and facilities. For instance, American Water's Service Company is able to maintain one principal data center for the entire corporation. This is much more cost-efficient than each operating utility funding its own data center with its large fixed hardware, software and staffing costs.

- Continuity of Service – Centralizing service company personnel who perform similar services facilitates job cross-training and sharing of knowledge and expertise. This makes it easier to deal with staff turnover and absences and to sustain high levels of service to operating utilities. An individual operating utility might experience considerable disruption if a key professional left and it was necessary to hire outside to fill the vacancy.

- Maintenance of Corporate-Wide Standards – Personnel in American Water's Service Company establish standards for many functions (e.g., engineering designs, operating procedures and maintenance practices). It is easier to ensure these standards are followed by every operating utility because their implementation is overseen by the Service Company.

- Improved Governance – American Water's Service Company provides another dimension of management and financial oversight that supplements local operating utility management. The Service Company facilitates standard planning and reporting that help ensure operating utilities meet the requirements of their customers in a cost effective manner.

- Retention of Personnel – A service company organization provides operating utility personnel with another career path beyond what may be available on a local level. These opportunities tend to improve employee retention.

American Water follows the model for other utility service companies in another important regard. Its services are provided to affiliate operating utilities, like VAWC, at cost. American Water's Service Company is not a profit-making entity. It assigns only its actual expenses to the American Water subsidiaries it services.

The Service Company provides services to American Water operating companies from the following locations:

- Corporate Office – Includes American Water's executive management and personnel from the various corporate support services. American Water's corporate office is located in Voorhees, New Jersey.

- National Call Centers – Perform customer service functions, including: customer call processing, service order processing, correspondence processing, credit and collections. American Water maintains two call centers. One is in Alton, Illinois that went into operation in 2001 and a second is in Pensacola, Florida that went into operation in 2005. Prior to the establishment of these national call centers, customer service functions were performed by employees of VAWC in a manner that was not as .comprehensive as that now provided by the national call centers.

- National Shared Services Center – The Shared Services Center, located in Cherry Hill, New Jersey, provides financial, accounting and treasury functions that had been performed by individual operating companies. This arrangement has improved and streamlined the Company's financial processes and allowed operating companies to focus on providing utility service.

- Regional Offices – Regional offices provide operating companies with certain support services that can be performed more effectively on a regional basis because individual operating company/center workloads are not sufficient to warrant a full-time staff for these activities. At the same time, these services require closer proximity to operating companies served so they are not provided by the National Shared Services Center. Examples of regional office services include rates and revenues, engineering, operations and field resource coordination.

- Belleville Lab – The national trace substance laboratory is located in Belleville, Illinois and performs testing for all American Water operating companies.

- Information Technology ("IT") Service Centers – American Water's principal data center, located in Hershey, Pennsylvania, supports the IT infrastructure required to run corporate and operating company business applications and the communications systems. IT personnel rotate, as needed, throughout the regional offices and operating companies.

Service Company Expense Categories

The Service Company renders a monthly bill to operating companies. Charges are broken down into the following expense categories:

- Labor – base pay (salaries) of managerial and professional employees
- Labor-Related Overheads - employee benefit costs (payroll taxes, medical coverage, pensions, disability insurance) and other general expenses
- Support - wages and salaries of office support personnel, including secretaries, clerical personnel, telephone operators and mail clerks
- Office Expenses - office rent, equipment leases, telephone, electric, office supplies, property taxes, office maintenance
- Vouchers/Journal Entries – (1) travel expenses incurred by Service Company personnel, (2) other items submitted for reimbursement by employees, including professional association dues, (3) outside service contracts for such things as actuarial services, and (4) various other expenditures, including data center expenses for software licenses and hardware maintenance.

Service Company expenses are either assigned directly or allocated to operating companies, as shown in the table below.

Expense Category	Direct Charged	Allocated	Comments
Labor	X	X	Professional personnel working for one or several operating companies
Labor-Related Overheads	X	X	These are primarily employee benefit costs that relate directly to labor
Support		X	Administrative personnel support the professional staff, thus support costs are allocated on the basis of professional labor
Office Expense		X	Are all allocated on the basis of professional labor
Vouchers/Journals	X	X	May be either directly in support of one operating company (e.g., an engineer traveling from the Corporate Office to the operating company) or allocated to several operating companies

A direct charge occurs when Service Company work or expenses are incurred in support of only one operating company. Direct charge examples include work in support of an operating company's rate case, engineering design work on an operating company's project and the preparation of an operating company's financial statements.

Service Company expenses are allocated when more than one operating company benefits from the underlying work. Examples include assessments of new Federal water quality regulations, development of the company-wide materials procurement contracts and creation of company-wide engineering design standards.

Charging and Assignment Of Service Company Time and Expenses

Service Company transactions are assigned with the following information so there is a proper accounting and eventual charging to an operating company:

- Operating company
- Formula number
- Work order (where applicable)
- Authorization number (where applicable)

Charges can originate from the following systems:

- Payroll System
- RVI System (outside vendor payments)
- PCard System (credit card payments)
- Internal Purchase Order System
- Journal entries

II – Background

The Service Company's time reporting process enables labor and support charges to be assigned to the proper operating company. Labor charges are based on the time reported by managerial and professional Service Company employees. Every week, Service Company professional employees complete an electronic time sheet that shows:

- Formula number (this is linked to operating company within American Water's financial system)
- Employee hours worked
- Account number for non-labor charges

At month-end, time report information is processed and direct and allocated professional labor hours tabulated for each operating company. Dollar charges are then calculated using the hourly rate of each Service Company professional employee based upon their base salary (i.e., an employee's hours times their hourly rate of pay).

Support (administrative) personnel charge their time to the activity "General Admin." As described in the table on page 5, their labor charges are allocated to operating companies based upon how their office's professional personnel labor charges are assigned. For instance, if 2% of American Water's Shared Services' professional labor is assigned to VAWC during a month, then 2% of that office's monthly administrative labor charges also are assigned to the operating company.

The overhead cost category is next assigned based on professional and administrative labor costs. Thus, if 2% of the Shared Services' accumulated professional and support labor is charged to VAWC during the month, then 2% of that month's overhead expenses will be assigned to VAWC.

Each Service Company location's office expenses are allocated to operating companies based on how professional labor charges for that office have been assigned. For instance, if 2% of professional labor from one Service Company office is assigned to VAWC, then 2% of that office's office expenses would be assigned to VAWC. Thus, office expenses are allocated in the very same way as administrative labor.

Vouchers/journal entries may be charged directly or allocated, depending on who benefits from the expenditure. For instance, the cost of a continuing professional education course taken by a professional in a regional office is allocated to the operating companies served by that office. Travel expenses by that same professional to a rate case proceeding are charged directly to the operating company whose case is being heard.

III – Service Company Cost Comparison Approach

During the 12 months ended September 30, 2009, the Service Company billed VAWC $3,814,848 in O&M-related charges and $645,553 in capital-related charges. Included in the O&M amount are certain non-recurring expenses which are excluded from this market study. As calculated in the table below, net testable Service Company charges of $4,467,146 were subjected to a market cost comparison.

	12 Months Ended Sep. 30, 2009
Mgmt Fee Expense (O&M)	$ 3,814,848
Add(Subtract): Non-Recurring Items	
Sarbanes-Oxley	$ 6,745
Net O&M Expenses	$ 3,821,593
Mgmt Fees - Capital	$ 645,553
Total Testable AWWSC Charges	**$ 4,467,146**

For purposes of comparing these charges to certain outside benchmarks, Service Company services were placed into two categories:

- Managerial and Professional Services – Includes such services as management, accounting, legal, human resources, information technology, and engineering.

- Customer Accounts Services – Includes customer-related services, such as call center, credit, billing, collection and payment processing.

Total test period Service Company charges break down between management/professional services and customer account services as follows:

	12 Months Ended Sep 30, 2009	
	Amount	Hours
Management and Professional Services	$ 3,485,883	37,564
Customer Account Services	$ 981,263	25,779
Total Service Company Charges	**$ 4,467,146**	**63,343**

This study's first question—whether Service Company 12 months ended September 30, 2009 charges were reasonable—was determined by comparing VAWC's A&G-related Service Company charges per customer to the same charges for utility companies that must file the FERC Form 60 – Annual Report of Service Companies.

The second question—whether Service Company charges during the 12 months ended September 3, 2009 were at the lower of cost or market—was evaluated by comparing the cost per hour for managerial and professional services provided by Service Company personnel to hourly billing rates that would be charged by outside providers of equivalent services. Service Company costs per hour were based on actual charges to VAWC during the 12 months ended September 30, 2009. Outside providers' billing rates came from surveys or other information from professionals that could perform the services now provided by the Service Company.

III – Service Company Cost Comparison Approach

The third question—whether Service Company's 12 months ended September 30, 2009 customer account services charges, including those of the National Call Center costs, were comparable to other utilities—was addressed by comparing VAWC's customer accounts services expenses to those of neighboring electric utilities. This approach was selected because the costs of outside providers of call center services are not publicly available. However, electric utility customer account services expenses can be obtained from the FERC Form 1. The availability and transparency of FERC data adds to the validity of its use in this comparison.

The fourth question—the necessity of Service Company services—was investigated by defining the services provided to VAWC and determining if these services would be required if VAWC were a stand-alone utility.

IV – Question 1 – Reasonableness of Service Company Charges

VAWC's Service Company Cost per Customer

During the 12 months ended September 30, 2009, VAWC was charged $58 per customer by the Service Company for A&G/O&M-related services. The calculation of this amount, shown in the table below, starts with total net testable Service Company charges and adjusts for capital and non-A&G functions (engineering, operations and water quality) charges. These adjustments are necessary to develop a per customer cost that is comparable to cost of utility service companies.

	12 Months ended Sep 30, 2009 Svc. Co. Charges
Testable Service Company charges	$ 4,467,146
Less: Capital charges	$ (645,553)
Less: Non-A&G function O&M charges	
Engineering	$ (5,905)
Operations	$ (511,757)
Water Quality	$ (128,477)
Net A&G/O&M-related charges	$ 3,175,454
VAWC customers	54,437
VAWC Cost Per Customer	**$ 58**

Comparison Group Cost Per Customer

Every centralized service company in a holding company system must file a Form 60 in accordance with the Public Utility Holding Company Act of 2005, Section 1270, Section 390 of the Federal Power Act and 18 C.F.R. paragraph 366.23. This report is designed to collect financial information from service companies that are subject to regulation by the FERC.

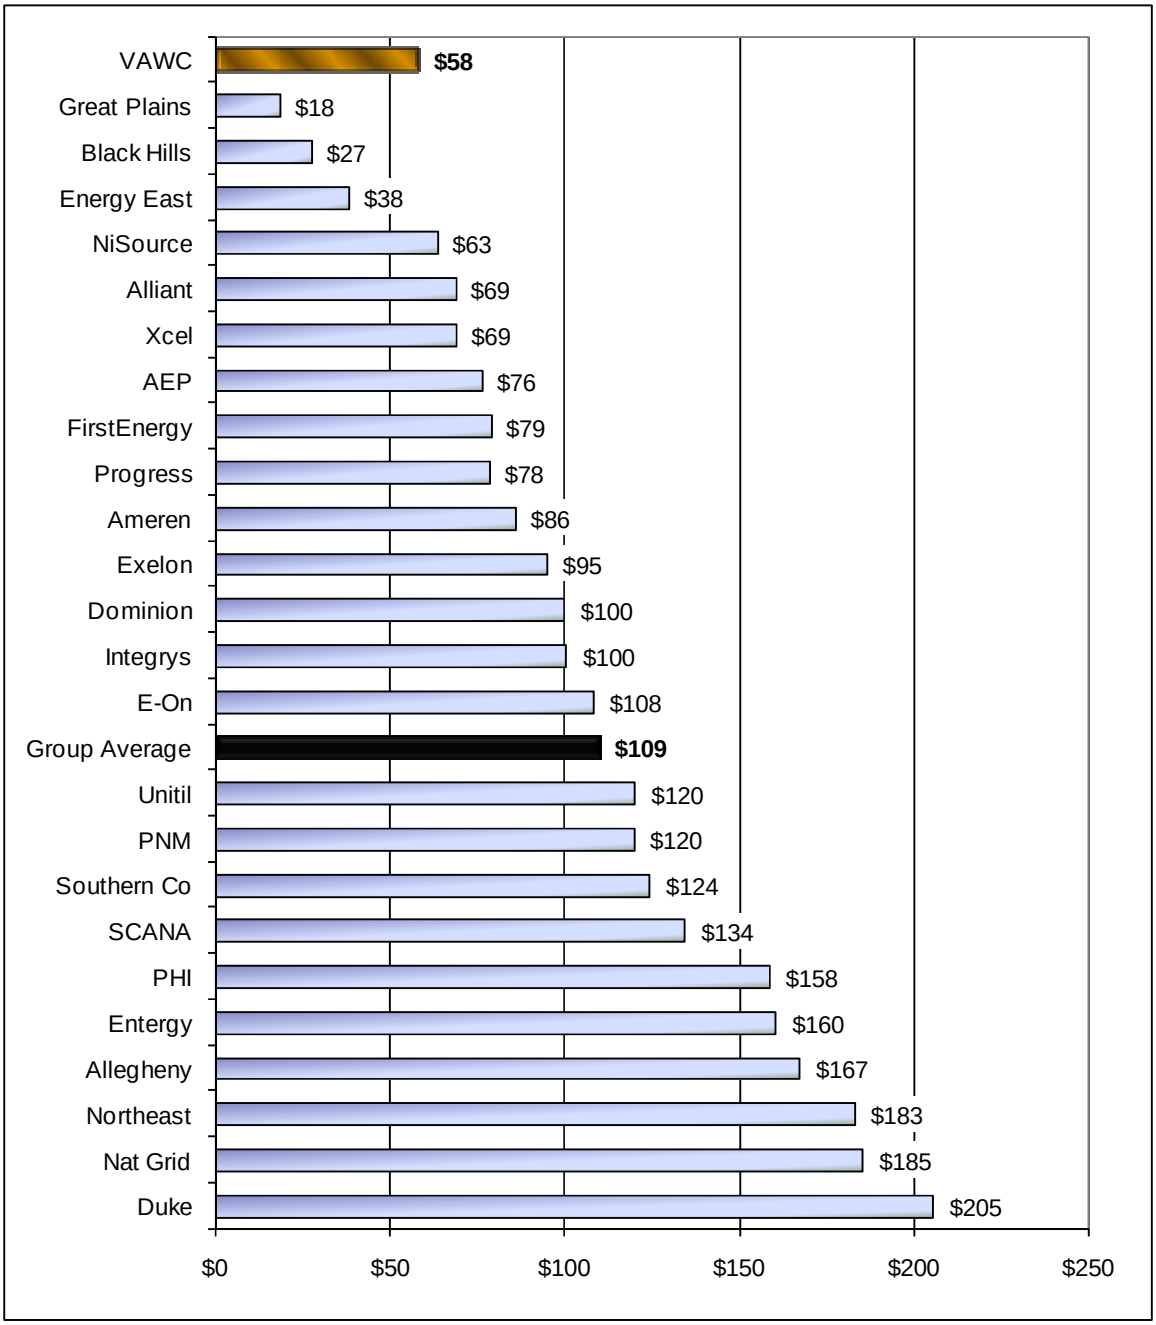
For 2008, a Form 60 was filed by 24 utility service companies, all of which serve utilities that provide regulated electric and, in some cases, gas service to retail customers. In order to make a valid comparison of this group's costs to those of American Water Works Service Company, it was necessary to isolate expenses that that they have in common. These include A&G/O&M-related charges associated with the following FERC accounts:

901 – Supervision	921 – Office supplies and expenses
903 – Customer records and collection expenses	923 – Outside services employed
905 – Miscellaneous customer accounts expenses	926 – Employee pensions and benefits
907 – Supervision	928 – Regulatory commission expenses
910 – Misc customer service and info expenses	930.2 – Miscellaneous general expenses
911 – Supervision	931 – Rents
920 - Administrative and general salaries	935 – Maintenance of structures and equipment

O&M expenses charged to utility affiliates for the comparison group service companies were obtained from Schedule XVI – Analysis of Charges for Service Associate and Non-Associate Companies (p. 303 to 306) of each entity's FERC Form 60. This schedule shows charges by FERC Account.

Comparison group service company 2008 expenses were also adjusted to remove charges to non-regulated affiliates from the cost pool used to calculate the cost per regulated service customer. This determination was made using information from the FERC Form 60 schedule: Account 457 – Analysis of Billing – Associate Companies.

IV – Question 1 – Reasonableness of Service Company Charges



A&G expenses per regulated utility customer for the 24 utility companies that file Form 60 for 2008 are calculated below.

Utility Company	2008 Regulated Retail Service Company A&G Expenses	Regulated Retail Customers	Cost per Customer
AEP	$396,340,118	5,213,000	$ 76
Allegheny	$263,588,707	1,577,873	$ 167
Alliant	$205,754,832	3,000,000	$ 69
Ameren	$291,684,710	3,400,000	$ 86
Black Hills	$20,763,828	759,400	$ 27
Dominion	$357,718,046	3,588,500	$ 100
Duke	$923,936,645	4,500,000	$ 205
Energy East	$113,714,789	2,989,800	$ 38
Entergy	$432,575,683	2,700,000	$ 160
E-On	$136,276,177	1,263,000	$ 108
Exelon	$558,687,014	5,885,000	$ 95
FirstEnergy	$354,028,109	4,499,000	$ 79
Great Plains	$15,000,708	820,000	$ 18
Integrys	$216,364,166	2,157,000	$ 100
Nat Grid	$1,240,706,398	6,700,000	$ 185
NiSource	$237,380,009	3,750,000	$ 63
Northeast	$302,138,730	1,654,000	$ 183
PHI	$302,463,412	1,910,000	$ 158
Progress	$242,677,256	3,100,000	$ 78
PNM	$102,688,385	859,000	$ 120
SCANA	$191,207,825	1,424,300	$ 134
Southern Co	$546,498,605	4,402,000	$ 124
Unitil	$20,341,422	169,600	$ 120
Xcel	$367,626,617	5,345,000	$ 69
Group Total	**$7,840,162,191**	**71,666,473**	**$ 109**

Exhibit 1 shows VAWC's 12 months ended September 30, 2009 Service Company cost per customer of $58 to be considerably lower than the average of $109 per customer for the comparison group service companies. Only 3 of 24 comparison group service companies had a lower cost per customer than VAWC. Based on this result, it is possible to conclude that the Service Company's 12 months ended September 30, 2009 charges to VAWC were reasonable.

Exhibit 1

Virginia-American Water Company
Comparison of Service Company Annual Costs Per Customer

V – Question 2 – Provision of Services at the Lower of Cost or Market

Methodology

The lower-of-cost-or-market comparison is accomplished by comparing the cost per hour for Service Company managerial and professional services to those of outside service providers to whom these duties could be assigned. Based on the nature of the Service Company services it was determined that the following outside providers could perform the categories of services indicated below:

- Management Consultants – executive and administrative management, risk management services, human resources and communications services
- Attorneys – legal services
- Certified Public Accountants – accounting, financial, information technology and rates and revenues services
- Professional Engineers – engineering, operations and water quality services.

The services provided by the Belleville lab are assumed to be transferable to professional engineers for purposes of this cost comparison. This was done for two reasons. First, there is no readily available survey of hourly billing rates for testing services such as those performed by Belleville. Second, Belleville personnel have similar, scientific educational backgrounds as Service Company engineering personnel. Thus, it is valid to compare the hourly rates of Belleville services to those of outside engineering firms.

Service Company's hourly rate were calculated for each of the four outside service provider categories, based on the dollars and hours charged to VAWC during the 12 months ended September 30, 2009. Hourly billing rates for outside service providers were developed using third party surveys or directly from information furnished by outside providers themselves.

It should be noted that by using the Service Company's hours charged VAWC during the 12 months ended September 30, 2009, its hourly rates are actually overstated because Service Company personnel charge a maximum 8 per day even when they work more. Outside service providers generally bill for every hour worked. If the overtime hours of Service Company personnel had been factored into the hourly rate calculation, Service Company hourly rates would have been lower.

The last step in the market cost comparison was to compare the Service Company's average cost per hour to the average cost per hour for outside providers.

Service Company Hourly Rates

Exhibit 2 (page 14) details the assignment of 12 months ended September 30, 2009 management and professional Service Company charges by outsider provider category. Exhibit 3 (page 15) shows the same assignment for Service Company management and professional hours charged to VAWC during the 12 months ended September 30, 2009.

Certain adjustments to these dollar amounts were necessary to calculate Service Company hourly rates that are directly comparable to those of outside providers. Adjustments were made to the following 12 months ended September 30, 2009 test period non-labor Service Company charges:

- Contract Services – 12 months ended September 30, 2009 Service Company charges to VAWC include expenses associated with the use of outside professional firms to perform certain corporate-wide services (e.g., legal, financial audit, actuarial services).

These professional fees are excluded from the Service Company hourly rate calculation because the related services have effectively been out-sourced already.

- Travel Expenses – In general, client-related travel expenses are not recovered by outside service providers through their hourly billing rate. Rather, actual out-of-pocket travel expenses are billed to clients in addition to fees for professional services. Thus, it is appropriate to remove these Service Company charges from the hourly rate calculation.

- Information Technology Infrastructure Expenses – Included in the 12 months ended September 30, 2009 Service Company charges to VAWC are leases, maintenance fees and depreciation related to American Water's enterprise mainframe, server and network infrastructure and corporate business applications. An outside provider that would take over operation of this infrastructure would recover these expenses over and above the labor necessary to operate the data center.

Exhibit 4 (page 16) shows how contract services, travel expenses and computer hardware/software-related Service Company charges are assigned among the four outside provider categories.

Based on the assignment of expenses and hours shown in Exhibits 2 and 3 and the excludable items shown in Exhibit 4, the Service Company's equivalent costs per hour for the 12 months ended September 30, 2009 are calculated below.

	Attorney	Management Consultant	Certified Public Accountant	Professional Engineer	Total
Total management, professional & technical services charges	$ 92,848	$ 1,008,025	$ 1,672,626	$ 712,384	$ 3,485,883
Less:					
Contract services	$ 9,381	$ 43,756	$ 174,947	$ 4,570	$ 232,653
Travel expenses	$ 1,204	$ 28,146	$ 21,502	$ 25,144	$ 75,996
IT infrastructure expenses	$ 2,957	$ 116,455	$ 98,265	$ 21,465	$ 239,141
Net Service Charges (A)	$ 79,306	$ 819,669	$ 1,377,912	$ 661,205	$ 2,938,092
Total Hours (B)	443	7,391	18,771	10,960	37,564
Average Hourly Rate (A / B)	**$ 179**	**$ 111**	**$ 73**	**$ 60**

Outside Service Provider Hourly Rates

The next step in the cost comparison was to obtain the average billing rates for each outside service provider. The source of this information and the determination of the average rates are described in the paragraphs that follow.

It should be noted that professionals working for three of the five outside provider categories may be licensed to practice by state regulatory bodies. However, not every professional working for these firms is licensed. For instance, among Virginia certified public accounting firms, only more experienced staff are predominantly CPAs (see table below). Some Service Company employees also have professional licenses. Thus, it is valid to compare the Service Company's hourly rates to those of the outside professional service providers included in this study.

Position	Virginia Average
Partners/Owners	98%
Directors (11+ years experience)	86%
Managers (6-10 years experience)	88%
Sr Associates (4-5 years experience)	81%
Associates (1-3 years experience)	23%
New Professionals	0%

Source: AICPA's National PCPS/TSCPA Management of an Accounting Practice Survey (2008)

Attorneys

The Virginia State Bar does not survey its members as to their hourly billing rates. In addition, publicly available billing rate information could not be found for Virginia attorneys. Therefore, an estimate of Virginia attorney rates was developed from two surveys conducted by Lawyers Weekly in the states of Michigan and Massachusetts. As presented in Exhibit 5, the average rate for each firm was adjusted for the cost of living differential between its location and Richmond, Virginia. The Lawyers Weekly surveys included rates in effect at December 31, 2007. Thus, the 2007 average rate was escalated to March 31, 2009—the midpoint of the test year ended September 30, 2009.

Management Consultants

The cost per hour for management consultants was developed from a 2009 survey performed by the Association of Management Consulting Firms—an industry trade organization. The survey includes rates that were in effect during 2008 for firms throughout the United States. Consultants typically do not limit their practice to any one region and must travel to a client's location. Thus, the U.S. national average is appropriate for comparison.

The first step in the calculation, presented in Exhibit 6, was to determine an average rate by consultant position level. From these rates, a single weighted average hourly rate was calculated based upon the percent of time that is typically applied to a consulting assignment by each consultant position level. The 2008 average rate was escalated to March 31, 2009—the midpoint of the 12 months ended September 30, 2009.

Certified Public Accountants

The average hourly rate for Virginia CPAs was developed from a 2008 survey performed by the American Institute of Certified Public Accountants (AICPA). The Virginia version of this survey was used to develop hourly rates for member firms in Virginia.

As shown in Exhibit 7, a weighted average hourly rate was developed based on a set of accountant positions and a percent of time that is typically applied to an accounting assignment. This survey includes rate information in effect during 2007. Thus, the data had to be escalated to March 31, 2009—the test year's midpoint.

Professional Engineers

The Company provided hourly rate information for outside engineering firms that could have been used by VAWC in 2009. As presented in Exhibit 8, an average rate was developed for each engineering position level. Then, using a typical percentage mix of project time by engineering position, a weighted average cost per hour was calculated.

V – Question 2 – Provision of Services at the Lower of Cost or Market

Service Company versus Outside Provider Cost Comparison

As shown in the table below, Service Company costs per hour are considerably lower than those of outside providers.

	12 Months Ended September 30, 2009		
Service Provider	Service Company	Outside Provider	Difference--Service Co. Greater(Less) Than Outside
Attorney	$ 179	$ 256	$ (77)
Management Consultant	$ 111	$ 227	$ (116)
Certified Public Accountant	$ 73	$ 118	$ (45)
Professional Engineer	$ 60	$ 93	$ (33)

Based on these cost per hour differentials and the number of managerial and professional services hours billed to VAWC during the 12-months ended September 30, 2009, outside service providers would have cost $2,094,318 more than the Service Company (see table below). Thus, on average, outside provider's hourly rates are 60% higher than those of the Service Company ($2,094,318 / $3,485,883).

	12 Months Ended September 30, 2009		
Service Provider	Hourly Rate Difference--Service Co. Greater(Less) Than Outside	Service Company Hours Charged	Dollar Difference
Attorney	$ (77)	443	$ (34,228)
Management Consultant	$ (116)	7,391	$ (859,040)
Certified Public Accountant	$ (45)	18,771	$ (837,603)
Professional Engineer	$ (33)	10,960	$ (363,447)
Service Company Less Than Outside Providers			$ (2,094,318)

It should be noted that the cost differential associated with using outside providers is even greater because Service Company personnel do not charge for more than 8 hours per day even when they work more. Outside providers generally charge clients for all hours worked. If, for instance, Service Company personnel worked 5% overtime (2 hours) per week on VAWC's behalf, that would have amounted to over 1,800 additional hours of work during the 12 months ended September 30, 2009. Based on the hourly rate differentials above, this overtime would have added another $104,000 to the cost of using outside provider.

If VAWC were to use outside service providers rather than the Service Company for managerial and professional services, it would incur other additional expenses besides those associated with higher hourly rates. Managing outside firms who would perform over 37,000 hours of work (more than 25 full-time equivalents at 1,500 "billable" hours per FTE per year) would add a significant workload to the existing VAWC management team. Thus, it would be necessary for VAWC to add at least one position to supervise the outside firms and ensure they delivered quality and timely services. The individuals that would fill this position would need a good understanding of each profession being managed. They must also have management experience and the authority necessary to give them credibility with the outside firms. As calculated in the table below, this position would add almost $150,000 per year to VAWC's personnel expenses.

V – Question 2 – Provision of Services at the Lower of Cost or Market

Cost of Adding 1 Professional Position To VAWC's Staff

	Total
New Positions' Salary	$ 100,000
Benefits (at 49.4%)	$ 49,400
Office Expenses (15.2%)	$ 15,200
Cost of One Position	$ 149,400

Thus, the total effect on the ratepayers of VAWC of contracting all services now provided by Service Company would be an increase in their costs of $2,243,718 ($2,094,318 + $149,400). Based on the results of this comparison, it is possible to conclude that the Service Company charged VAWC at the lower of cost or market for services provided during the 12 months ended September 30, 2009.

VI - Question 3 - Reasonableness of Customer Accounts Services Costs

Background

Customer Accounts Services covers the following utility functions:

- Customer Call Center – customer calls/contact, credit, order taking/disposition, bill collection efforts, outage calls
- Call Center IT – maintenance of phone banks, voice recognition units, call center software applications, telecommunications
- Customer billing – bill printing, stuffing, and mailing
- Remittance processing – processing customer payments received in the mail
- Bill payment centers – locations where customers can pay their bills in person

It is difficult to compare the cost of the Service Company's customer accounts services-related charges to VAWC with outside providers of the same services because survey data is proprietary and expensive to obtain. For this reason, VAWC's charges from the Service Company for customer accounts services are compared to those of neighboring electric utilities because the data necessary to make such comparison is available to the public.

Neighboring electric utility cost information comes from the FERC Form 1 that each utility must file. FERC's chart of accounts is defined in Chapter 18, Part 101 of the Code of Federal Regulations. FERC accounts that contain customer accounts services-related expenses are Account 903 Customer Accounts Expense – Records and Collection Expense and Account 905 Customer Accounts Expense – Miscellaneous Customer Accounts Expense. Exhibit 9 provides FERC's definition of the type of expenses that should be recorded in these accounts.

In addition to the charges in these FERC accounts, labor-related overheads charged to the following FERC accounts must be added to the labor components of Accounts 903 and 905:

- Account 926 Employee Pension and Benefits
- Account 408 Taxes Other Than Income (employer's portion of FICA)

Comparison Group

Electric utilities included in the comparison group are shown in the table below. These are companies whose FERC Form 1 show amounts for accounts 903 and 905.

Virginia	• Appalachian Power	• Virginia Electric Power
West Virginia	• Appalachian Power • Monongahela Power	• Wheeling Power
Maryland	• Baltimore Gas & Electric • Delmarva Power & Light	• Potomac Electric
North Carolina	• Duke Energy Carolinas	• Progress Energy Carolinas
Kentucky	• Duke Energy Kentucky • Kentucky Power	• Kentucky Utilities • Louisville Gas & Electric
Tennessee	• Kingsport Power	

Virginia-American Water Company
FERC Account Descriptions

903 – Customer Records and Collection Expenses

This account shall include the cost of labor, materials used and expenses incurred in work on customer applications, contracts, orders, credit investigations, billing and accounting, collections and complaints.

Labor

1. Receiving, preparing, recording and handling routine orders for service, disconnections, transfers or meter tests initiated by the customer, excluding the cost of carrying out such orders, which is chargeable to the account appropriate for the work called for by such orders.
2. Investigations of customers' credit and keeping of records pertaining thereto, including records of uncollectible accounts written off.
3. Receiving, refunding or applying customer deposits and maintaining customer deposit, line extension, and other miscellaneous records.
4. Checking consumption shown by meter readers' reports where incidental to preparation of billing data.
5. Preparing address plates and addressing bills and delinquent notices.
6. Preparing billing data.
7. Operating billing and bookkeeping machines.
8. Verifying billing records with contracts or rate schedules.
9. Preparing bills for delivery, and mailing or delivering bills.
10. Collecting revenues, including collection from prepayment meters unless incidental to meter reading operations.
11. Balancing collections, preparing collections for deposit, and preparing cash reports.
12. Posting collections and other credits or charges to customer accounts and extending unpaid balances.
13. Balancing customer accounts and controls.
14. Preparing, mailing, or delivering delinquent notices and preparing reports of delinquent accounts.
15. Final meter reading of delinquent accounts when done by collectors incidental to regular activities.
16. Disconnecting and reconnecting services because of nonpayment of bills.
17. Receiving, recording, and handling of inquiries, complaints, and requests for investigations from customers, including preparation of necessary orders, but excluding the cost of carrying out such orders, which is chargeable to the account appropriate for the work called for by such orders.
18. Statistical and tabulating work on customer accounts and revenues, but not including special analyses for sales department, rate department, or other general purposes, unless incidental to regular customer accounting routines.
19. Preparing and periodically rewriting meter reading sheets.
20. Determining consumption and computing estimated or average consumption when performed by employees other than those engaged in reading meters.

Materials and expenses

21. Address plates and supplies.
22. Cash overages and shortages.
23. Commissions or fees to others for collecting.
24. Payments to credit organizations for investigations and reports.
25. Postage.
26. Transportation expenses, including transportation of customer bills and meter books under centralized billing procedure.
27. Transportation, meals, and incidental expenses.
28. Bank charges, exchange, and other fees for cashing and depositing customers' checks.
29. Forms for recording orders for services, removals, etc.
30. Rent of mechanical equipment.

Virginia-American Water Company
FERC Account Descriptions

905 – Miscellaneous Customer Accounts Expenses

This account shall include the cost of labor, materials used and expenses incurred not provided for in other accounts.

Labor

1. General clerical and stenographic work.
2. Miscellaneous labor.

Materials and expenses

3. Communication service.
4. Miscellaneous office supplies and expenses and stationery and printing other than those specifically provided for in accounts 902 and 903.

VI - Question 3 - Reasonableness of Customer Accounts Services Costs

VAWC Cost per Customer

As calculated below, VAWC's 12 months ended September 30, 2009 customer account services expense per customer was $27.58. The cost pool used to calculate this average includes charges for Service Company services (e.g., call center, billing, payment processing) and postage and forms expenses, which are incurred directly by VAWC. It was necessary to adjust the National Call Center charges because electric utilities experience an average of 2.50 calls per customer compared to American Water's 1.32 calls per customer. Thus, National Call Center expenses had to be increased, for comparison purposes, to reflect its costs at a 2.50 calls per customer level.

Virginia-American Cost Per Customer		Year Ended 9/30/2009 Service Co Charges	Adjustment Fewer Calls For Water Cos. (A)	Adjusted	
Cost Component					
Service Company					
Call Centers	Call processing, order processing, credit, bill collection	$ 833,451	$ 316,716	$ 1,150,168	
Regional Offices		$ 147,812		$ 147,812	
Operating Company	Customer payment processing			$ 38,868	Note B
Operating Company	Postage & forms			$ 164,723	
			Cost Pool Total	$ 1,501,570	
			Total Customers	54,437	
	12 Months Ended September 30, 2009 Cost Per VAWC Customer			**$ 27.58**	

Note A: Adjustment for American Water's fewer calls per customer

This adjustment is necessary because water utilities experience fewer calls per customer than do electric utilities

Call handling expenses		$ 352,162	
Electric utility industry's avg calls/customer	2.50		
American Water's avg calls/customer	1.32		
Percent different	90%	90%	
Total Adjustment		$ 316,716	

Note B: Estimated customer payment processing expenses

Number of customers	54,437	
Number of payments/customer/year	4.2	
Total payments processed/year	228,635	
Bank charge per item	$ 0.1700	(subject to check)
Total estimated annual expense	$ 38,868	

Electric Utility Group Cost per Customer

Exhibit 10 shows the actual 2008 customer accounts expense per customer calculation for the electric utility comparison group. All of the underlying data was taken from the utilities' FERC Form 1.

VI - Question 3 - Reasonableness of Customer Accounts Services Costs

Summary of Results

As shown in the table below, VAWC's cost per customer is below the average cost of the neighboring electric utility comparison group. It can therefore be concluded that VAWC's 12 months ended September 30, 2009 customer accounts-related expenses, including those of the Alton and Pensacola Call Centers, assigned by the Service Company to VAWC were comparable to those of other utilities.

Average Customer Accounts Expense Per Customer	
Louisville Gas & Electric	$ 15.67
Virginia Electric Power	$ 16.15
Monongahela Power	$ 16.17
Duke Power	$ 22.99
Prog Energy - Carolinas	$ 21.65
Wheeling Power	$ 26.12
Virginia American Water	**$ 27.58**
Kentucky Utilities	$ 28.42
Comparison Group Average	**$ 29.13**
Duke Energy Kentucky	$ 29.65
Appalachian Power	$ 32.57
Kingsport Power	$ 32.60
Baltimore Gas & Electric	$ 35.46
Kentucky Power	$ 36.02
Delmarva Power & Light	$ 69.08
Potomac Electric	$ 76.47

VI - Question 4 – Need for Service Company Services

Analysis of Services

The final aspect of this study was an assessment of whether the services that are provided to VAWC by the Service Company would be necessary if VAWC were a stand-alone water utility. The first step in this evaluation was to determine specifically what the Service Company does for VAWC. Based on discussions with Service Company personnel, the matrix in Exhibit 11 was created showing which entity—VAWC or a Service Company location—is responsible for each of the functions VAWC requires to ultimately provide service to its customers. This matrix was reviewed to determine: (1) if there was redundancy or overlap in the services being provided by the Service Company and (2) if Service Company services are typical of those needed by a stand-alone water utility.

Upon review of Exhibit 12, the following conclusions can be drawn:

- The services that the Service Company provides are necessary and would be required even if VAWC were a stand-alone water utility.

- There is no redundancy or overlap in the services provided by the Service Company to VAWC. For all of the services listed in Exhibit 12, there was only one entity that was primarily responsible for the service.

VI - Question 4 – Need for Service Company Services

Governance Practices Associated With Service Company Charges

There are several ways by which VAWC exercises control over Service Company services and charges. The most important of these are described below.

- **President of Regulated Operations Oversight** – The President of Regulated Operations is on the Executive Management Team (EMT) of American Water. This position is responsible for the overall performance of each operating company in American Water. As part of the EMT, the President of Regulated Operations has equal say with other EMT members in major business decisions of American Water and has the ability to monitor Service Company performance quality and spending. The President of Regulated Operations also addresses local concerns with each operating company president.
- **Divisional Vice President & Treasurer** – The Divisional Vice President and Treasurer of the Eastern Division is responsible for the financial reporting, performance and internal controls of each of the operating companies in the division. The Vice President and Treasurer monitors the performance and reporting from the Service Company and follows up on instances where the quality and timeliness of services are not as expected. The operating company interacts with the Divisional VP & Treasurer to discuss any concerns with billings, etc.
- **Operating Company Board Oversight** – VAWC board of directors includes members of American Water's EMT, members of the divisional management team and business and community leaders from outside the Company. VAWC's president is Chairman of the VAWC board. This helps ensure that VAWC's needs are a factor in the delivery of Service Company services.
- **Service Company Budget Review/Approval** – The President of Regulated Operations sits on the Service Company board and that board must formally approve the budget for Service Company charges for the next year. These budgeted charges are consolidated with the operating company's own spending into an overall budget which must be approved by the operating company's board of directors. VAWC's president also sits on the Service Company board.
- **Major Project Review And Approval** – Major projects undertaken by the Service Company must first be reviewed by American Water's Executive Management Team, which includes the President of Regulated Operations. With input from the local presidents and Divisional Vice President & Treasurer, they have the ability to impact all new initiatives and projects before they are authorized.
- **Service Company Bill Scrutiny** – VAWC Finance personnel review the monthly Service Company bill for accuracy and reasonableness on a monthly basis. VAWC's financial manager discusses the monthly bill with Shared Services Center office personnel and any mistakes or overcharges are credited on a subsequent billing. The VAWC Finance Manager prepares an actual-to-budget comparison of management fees each month for use in identifying unusual variances. Service Company actual-to-budget comparison is included in the monthly Financial Review Package (FRP). Unusual variances are researched, explanations are provided and any necessary corrections are made.
- **Service Company Budget Variance Reporting** – Each month, a summary variance analysis is prepared that explains differences between budgeted and actual Service Company spending. In addition, a more detailed monthly variance report, called the "Statement of Expenses and Billed Charges," is produced by Service Company location and shows actual spending for the month.

- **Operating Company Budget Variance Reporting** – The "Budget/Plan Analysis," produced monthly, has a line item for Management Fees (i.e., Service Company charges). In this way, Service Company budget versus actual charges can be monitored for the month and year-to-date. Additional information exists that allows more detailed analysis of "Divisional" and "Corporate" Management Fees.
- **Capital Investment Management ("CIM") –** CIM is one of American Water's primary business planning processes. It covers capital and asset planning and is employed throughout American Water. CIM provides a full range of governance practices, including a formal protocol for assessing system needs, prioritizing expenditures, managing the capital program, approving project spending, delivering projects and measuring outputs. CIM ensures that:
  - Capital expenditure plans are aligned with the strategic intent of the business
  - The impact of capital expenditure and income plans are fully reflected in operating expense plans
  - The impacts of these plans are understood and affordable, and
  - Effective controls are in place over budgets (through business plans) and individual capital projects (through appropriate authorization thresholds, management and reporting processes).

  The CIM process was designed to optimize the effectiveness of asset investment. The process is managed at two levels for all American Water companies, including all VAWC Operating Units. Monthly meetings of the CIM are held to review capital spending compared to plan, review new project requests, and review updates or modifications to existing projects. The President of VAWC and others participate as necessary (e.g. VAWC operations managers and Rates Manager) and provide the data used in the monthly review schedules.

I – Introduction

Purpose of This Study

This study was undertaken to answer four questions concerning the services provided by American Water Works Service Company, Inc. (Service Company) to Virginia American Water Company (VAWC):

1. Were the Service Company's charges to VAWC during the 12 months ended September 30, 2011 reasonable?

2. Was VAWC charged the lower of cost or market for managerial and professional services provided by the Service Company during the 12 months ended September 30, 2011?

3. Were the 12 months ended September 30, 2011 costs of the Service Company's customer accounts services, including those of the National Call Centers, comparable to those of other utilities?

4. Are the services VAWC receives from the Service Company necessary?

Study Results

Concerning question 1, the following conclusion was reached:

- The Service Company's costs for the 12 months ended September 30, 2011 per VAWC customer are very reasonable. For example, during the 12 months ended September 30, 2011, VAWC was charged $66 per customer for administrative and general ('A&G")-related services provided by the Service Company. This compares favorably to costs per customer for electric and combination electric/gas service companies that average $111 for service companies reporting to the Federal Energy Regulatory Commission ("FERC"). Only 4 of the 24 utility service companies that filed a FERC Form 60 for 2010 had a lower A&G cost per customer than VAWC's charges from the Service Company.

Concerning question 2, the following conclusions were drawn from this study:

- VAWC was charged the lower of cost or market for managerial and professional services during the 12 months ended September 30, 2011.

- On average, the hourly rates for outside service providers are 40% higher than the Service Company's hourly rates.

- The managerial and professional services provided by the Service Company are vital and could only be procured effectively by VAWC from outside professionals if it provided careful supervision to those service providers. If these services were contracted entirely from outside providers, VAWC would have to add at least one position to manage activities of outside firms. This position would be necessary to ensure the quality and timeliness of services provided.

- If all the managerial and professional services now provided by the Service Company had been outsourced during the 12 months ended September 30, 2011, VAWC and its ratepayers would have incurred almost $2.4 million in additional expenses. This amount includes the higher cost of outside providers and the cost of one VAWC position needed to direct the outsourced work.

- This study's hourly rate comparison actually understates the cost advantages that accrue to VAWC from its use of the Service Company. Outside service providers generally bill for every hour worked. Service Company exempt personnel, on the other hand, charge a maximum of 8 hours per day even when they work more hours. If all overtime hours of Service Company personnel were factored into the hourly rate calculation, the Service Company would have had an even greater annual dollar advantage than the $2.4 million cited above.

- It would be difficult for VAWC to find local service providers with the same specialized water industry expertise as that possessed by the Service Company staff. Service Company personnel spend substantially all their time serving operating water companies. This specialization brings with it a unique knowledge of water utility operations and regulation that is most likely unavailable from local service providers.

- Service Company fees do not include any profit markup. Only its actual cost of service is being recovered from VAWC customers.

Concerning question 3, the following conclusion was reached:

- The cost of the Service Company's customer accounts services, including those provided by the National Call Center, is below the average of the neighboring electric utility comparison group. As will be explained further, this group of companies provides a reasonable proxy group for comparison to a regulated utility of the size and scope of the Service Company and VAWC. During the 12-months ended September 30, 2011, the customer accounts cost for VAWC customers was $22.69 compared to the 2010 average of $32.87 for neighboring electric utilities. The highest comparison group per customer cost was $75.43 and the lowest $16.81.

Concerning question 4, the following conclusions was drawn:

- The services that the Service Company provides are necessary and would be required even if VAWC were a stand-alone water utility.

- Furthermore, there is no redundancy or overlap in the services provided by the Service Company to VAWC. For all of the services listed in Exhibit 12, there was only one entity primarily responsible for the service and thus no duplication of efforts between the Service Company and VAWC.

II – Background

Overview of American Water Works Service Company

American Water's Service Company exists to provide certain shared services to American Water subsidiaries. It follows a service company model used by many utility holding companies that own multiple regulated utilities. By consolidating executive and professional services into a single service company, utility holding companies are able to realize the following benefits for ratepayers:

- Purchasing Economies – Common expenses (e.g., insurance, chemicals, piping) can be procured on a much larger scale thereby providing greater bargaining power for the combined entity compared to individual utility operating companies. A service company facilitates corporate-wide purchasing programs through its procurement and contract administration functions.

- Operating Economies of Scale – A service company is able to deliver services more efficiently because workloads can be balanced across more persons and facilities. For instance, American Water's Service Company is able to maintain one principal data center for the entire corporation. This is much more cost-efficient than each operating utility funding its own data center with its large fixed hardware, software and staffing costs.

- Continuity of Service – Centralizing service company personnel who perform similar services facilitates job cross-training and sharing of knowledge and expertise. This makes it easier to deal with staff turnover and absences and to sustain high levels of service to operating utilities. An individual operating utility might experience considerable disruption if a key professional left and it was necessary to hire outside to fill the vacancy.

- Maintenance of Corporate-Wide Standards – Personnel in American Water's Service Company establish standards for many functions (e.g., engineering designs, operating procedures and maintenance practices). It is easier to ensure these standards are followed by every operating utility because their implementation is overseen by the Service Company.

- Improved Governance – American Water's Service Company provides another dimension of management and financial oversight that supplements local operating utility management. The Service Company facilitates standard planning and reporting that help ensure operating utilities meet the requirements of their customers in a cost effective manner.

- Retention of Personnel – A service company organization provides operating utility personnel with another career path beyond what may be available on a local level. These opportunities tend to improve employee retention.

American Water follows the model for other utility service companies in another important regard. Its services are provided to affiliate operating utilities, like VAWC, at cost. American Water's Service Company is not a profit-making entity. It assigns only its actual expenses to the American Water subsidiaries it services.

The Service Company provides services to American Water operating companies from the following locations:

- Corporate Office – Includes American Water's executive management and personnel from the various corporate support services. American Water's corporate office is located in Voorhees, New Jersey.

- National Call Centers – Perform customer service functions, including: customer call processing, service order processing, correspondence processing, credit and collections. American Water maintains two call centers. One in Alton, Illinois that went into operation in 2001 and a second in Pensacola, Florida that went into operation in 2005. Prior to the establishment of these national call centers, customer service functions were performed by employees of NJAWC, which incurred the expense on its books.

- National Shared Services Center – The Shared Services Center, located in Cherry Hill, New Jersey, provides various financial, accounting and treasury functions that had been performed by individual operating companies. This arrangement has improved and streamlined the Company's financial processes and allowed operating companies to focus on providing utility service.

- Regional Offices – Regional offices provide operating companies with certain support services that can be performed more effectively on a regional basis because individual operating company/center workloads are not sufficient to warrant a full-time staff for these activities. At the same time, these services require closer proximity to operating companies served so they are not provided by the National Shared Services Center. Examples of regional office services include legal, communication, human resources and maintenance.

- Belleville Lab – The national trace substance laboratory is located in Belleville, Illinois and performs testing for all American Water operating companies.

- Information Technology Service Centers – American Water's principal data center, located in Hershey, Pennsylvania, supports the IT infrastructure required to run corporate and operating company business applications and the communications systems. IT personnel rotate, as needed, throughout the regional offices and operating companies.

Service Company Expense Categories

The Service Company renders a monthly bill to operating companies. Charges are broken down into the following expense categories:

- Labor – base pay (salaries) of managerial and professional employees
- Labor-Related Overheads - employee benefit costs (payroll taxes, medical coverage, pensions, disability insurance) and other general expenses
- Support - wages and salaries of office support personnel, including secretaries, clerical personnel, telephone operators and mail clerks
- Office Expenses - office rent, equipment leases, telephone, electric, office supplies, property taxes, office maintenance
- Vouchers/Journal Entries – (1) travel expenses incurred by Service Company personnel, (2) other items submitted for reimbursement by employees, including professional association dues, (3) outside service contracts for such things as actuarial

services, and (4) various other expenditures, including data center expenses for software licenses and hardware maintenance.

Service Company expenses are either assigned directly or allocated to operating companies, as shown in the table below.

Expense Category	Direct Charged	Allocated	Comments
Labor	X	X	Professional personnel working for one or several operating companies
Labor-Related Overheads	X	X	These are primarily employee benefit costs that relate directly to labor
Support		X	Administrative personnel support the professional staff, thus support costs are allocated on the basis of professional labor
Office Expense		X	Are all allocated on the basis of professional labor
Vouchers/Journals	X	X	May be either directly in support of one operating company (e.g., an engineer traveling from the Corporate Office to the operating company) or allocated to several operating companies

A direct charge occurs when Service Company work or expenses are incurred in support of only one operating company. Direct charge examples include work in support of an operating company's rate case, engineering design work on an operating company's project and the preparation of an operating company's financial statements.

Service Company expenses are allocated when more than one operating company benefits from the underlying work. Examples include assessments of new Federal water quality regulations, development of the company-wide materials procurement contracts and creation of company-wide engineering design standards.

Charging and Assignment Of Service Company Time and Expenses

Service Company transactions are assigned with the following information so there is a proper accounting and eventual charging to an operating company:

- Operating company
- Formula number
- Work order (where applicable)
- Authorization number (where applicable)

Charges can originate from the following systems:

- Payroll System
- RVI System (outside vendor payments)
- PCard System (credit card payments)
- Internal Purchase Order System
- Journal entries

II – Background

The Service Company's time reporting process enables labor and support charges to be assigned to the proper operating company. Labor charges are based on the time reported by managerial and professional Service Company employees. Every week, Service Company professional employees complete an electronic time sheet that shows:

- Formula number (this is linked to operating company within American Water's financial system)
- Employee hours worked
- Account number for non-labor charges

At month-end, time report information is processed and direct and allocated professional labor hours tabulated for each operating company. Dollar charges are then calculated using the hourly rate of each Service Company professional employee based upon their base salary (i.e., an employee's hours times their hourly rate of pay).

Support (administrative) personnel charge their time to the activity "General Admin." As described in the table on page 5, their labor charges are allocated to operating companies based upon how their office's professional personnel labor charges are assigned. For instance, if 2% of American Water's Shared Services' professional labor is assigned to VAWC during a month, then 2% of that office's monthly administrative labor charges also are assigned to the operating company.

The overhead cost category is next assigned based on professional and administrative labor costs. Thus, if 2% of the Shared Services' accumulated professional and support labor is charged to VAWC during the month, then 2% of that month's overhead expenses will be assigned to VAWC.

Each Service Company location's office expenses are allocated to operating companies based on how professional labor charges for that office have been assigned. For instance, if 2% of professional labor from one Service Company office is assigned to VAWC, then 2% of that office's office expenses would be assigned to VAWC. Thus, office expenses are allocated in the very same way as administrative labor.

Vouchers/journal entries may be charged directly or allocated, depending on who benefits from the expenditure. For instance, the cost of a continuing professional education course taken by a professional in a regional office is allocated to the operating companies served by that office. Travel expenses by that same professional to a rate case proceeding are charged directly to the operating company whose case is being heard.

III – Service Company Cost Comparison Approach

During the 12 months ended September 30, 2011, the Service Company billed VAWC approximately $6.455 million. As shown in the table below, certain adjustments are made to per books O&M management fees to arrive at total proforma O&M management fees of $5.156 million for purposes of VAWC's rate case. VAWC's per books management fees were subjected to analysis in this market cost comparison.

	12 Months Ended Sep. 30, 2011		
Management Fees	O&M	Capital	Total
Per Books Total	$ 4,605,478	$ 1,849,875	$ 6,455,353
Rate Case Adjustments:			
Projected Increase	$ 588,507		
Non-Recurring Items	$ (55,582)		
Other Adjustments	$ 17,527		
Proforma Total	$ 5,155,930		

For purposes of comparing these charges to certain outside benchmarks, Service Company services were placed into two categories:

- Managerial and Professional Services – Includes such services as management, accounting, legal, human resources, information technology, and engineering.

- Customer Accounts Services – Includes customer-related services, such as call center, credit, billing, collection and payment processing.

Total test period Service Company charges break down between management/professional services and customer account services as follows:

	12 Months Ended Sep 30, 2011	
	Amount	Hours
Management and Professional Services	$ 5,657,728	39,475
Customer Account Services	$ 797,625	15,851
Total Service Company Charges	**$ 6,455,353**	**55,326**

This study's first question—whether Service Company 12 months ended September 30, 2011 charges were reasonable—was determined by comparing VAWC's A&G-related Service Company charges per customer to the same charges for utility companies that must file the FERC Form 60 – Annual Report of Service Companies.

The second question—whether Service Company charges during the 12 months ended September 30, 2011 were at the lower of cost or market—was evaluated by comparing the cost per hour for managerial and professional services provided by Service Company personnel to hourly billing rates that would be charged by outside providers of equivalent services. Service Company costs per hour were based on actual charges to VAWC during the 12 months ended September 30, 2011. Outside providers' billing rates came from surveys or other information from professionals that could perform the services now provided by the Service Company.

III – Service Company Cost Comparison Approach

The third question—whether Service Company's 12 months ended September 30, 2011 customer account services charges, including those of the National Call Center costs, were comparable to other utilities—was addressed by comparing VAWC's customer accounts services expenses to those of neighboring electric utilities. This utility comparison group was selected because the cost of outside providers of customer accounts services is proprietary and not publicly available. Comparison to electric utilities is appropriate because all utilities, regardless of service type, must perform customer account services activities, including updating customer records for meter reads, printing and mailing bills, and the collection and processing of customer payments. Electric utility costs are available from the Federal Energy Regulatory Commission (FERC) Form 1, thus there is appropriate data transparency. The selection of electric utilities from Virginia and neighboring states provides a sufficiently sized comparison group.

The fourth question—the necessity of Service Company services—was investigated by defining the services provided to VAWC and determining if these services would be required if VAWC were a stand-alone utility.

IV – Question 1 – Reasonableness of Service Company Charges

VAWC's Service Company Cost per Customer

During the 12 months ended September 30, 2011, VAWC was charged $66 per customer by the Service Company for A&G/O&M-related services. The calculation of this amount, shown in the table below, starts with total net testable Service Company charges and adjusts for capital and non-A&G functions (engineering, operations and water quality) charges. These adjustments are necessary to develop a per customer cost that is comparable to cost of utility service companies.

	12 Months ended Sep 30, 2011 Svc. Co. Charges
Testable Service Company charges	$ 6,455,353
Less: Capital charges	$ (1,849,875)
Less: Non-A&G function O&M charges	
Engineering	$ (34,682)
Operations	$ (609,740)
Water Quality	$ (136,175)
Net A&G/O&M-related charges	$ 3,824,882
VAWC customers	57,928
VAWC Cost Per Customer	**$ 66**

Comparison Group Cost Per Customer

Every centralized service company in a holding company system subject to regulation by the FERC must file a Form 60 in accordance with the Public Utility Holding Company Act of 2005, Section 1270, Section 390 of the Federal Power Act and 18 C.F.R. paragraph 366.23. This report is designed to collect financial information from service companies that are subject to regulation by the FERC.

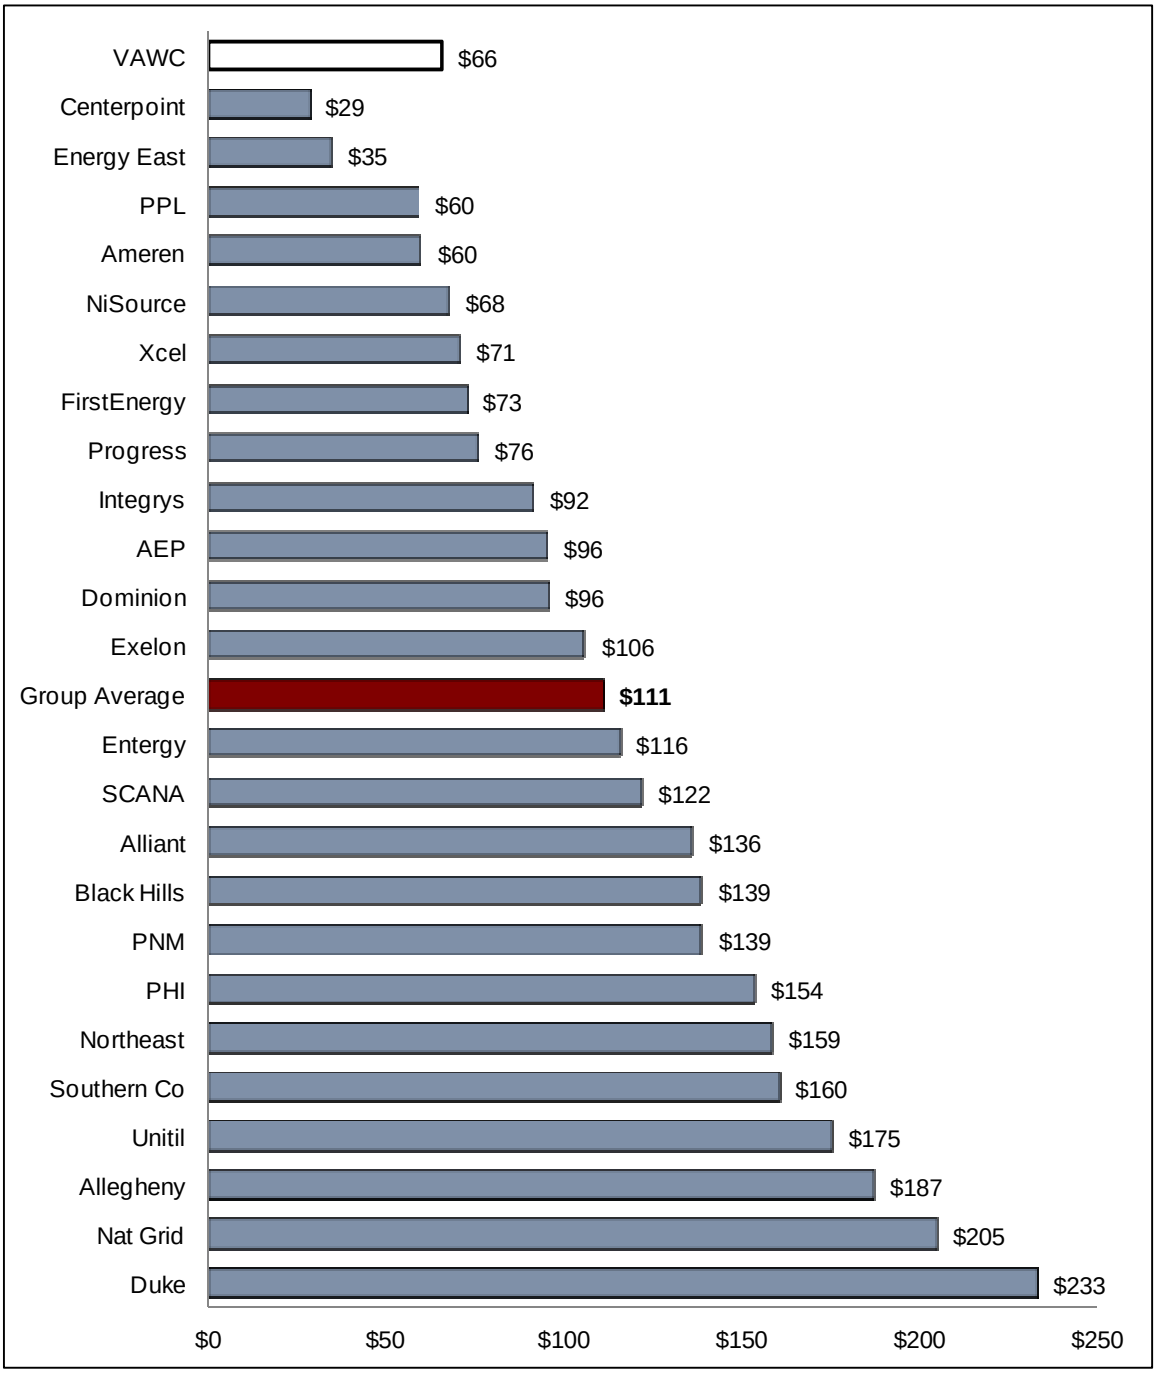
For 2010, a Form 60 was filed by 25 utility service companies, all of which serve utilities that provide regulated electric and, in some cases, gas service to retail customers. In order to make a valid comparison of this group's costs to those of American Water Works Service Company, it was necessary to isolate expenses that that they have in common. These include A&G-related charges associated with the following FERC accounts:

901 – Supervision	921 – Office supplies and expenses
903 – Customer records and collection expenses	923 – Outside services employed
905 – Miscellaneous customer accounts expenses	926 – Employee pensions and benefits
907 – Supervision	928 – Regulatory commission expenses
910 – Misc customer service and info expenses	930.2 – Miscellaneous general expenses
911 – Supervision	931 – Rents
920 - Administrative and general salaries	935 – Maintenance of structures and equipment

Charges to utility affiliates for the comparison group service companies were obtained from Schedule XVI – Analysis of Charges for Service Associate and Non-Associate Companies (p. 303 to 306) of each entity's FERC Form 60. This schedule shows charges by FERC Account.

Comparison group service company 2010 expenses were also adjusted to remove charges to non-regulated affiliates from the cost pool used to calculate the cost per regulated service customer. This determination was made using information from the FERC Form 60 schedule: Account 457 – Analysis of Billing – Associate Companies.

IV – Question 1 – Reasonableness of Service Company Charges



One service company that filed a Form 60 was excluded from the comparison group because its Form 60 contained no data for 2010. That service company, Great Plains Energy Services Incorporated, became inactive in 2010 and had no charges to its regulated utility affiliate. The A&G expenses per regulated utility customer for the other 24 utility companies that filed a Form 60 for 2010 are calculated below.

Utility Company	2010 Regulated Retail Service Company A&G Expenses	Regulated Retail Customers	Cost per Customer
AEP	$504,470,290	5,270,000	$ 96
Allegheny	$280,648,832	1,500,000	$ 187
Alliant	$190,279,242	1,397,000	$ 136
Ameren	$199,214,264	3,300,000	$ 60
Black Hills	$101,069,342	728,000	$ 139
Centerpoint	$154,637,102	5,400,000	$ 29
Dominion	$355,526,659	3,700,000	$ 96
Duke	$1,050,793,575	4,510,000	$ 233
Energy East	$104,272,025	2,973,000	$ 35
Entergy	$312,275,947	2,700,000	$ 116
Exelon	$625,208,791	5,890,000	$ 106
FirstEnergy	$328,067,979	4,500,000	$ 73
Integrys	$201,979,742	2,200,000	$ 92
Nat Grid	$1,412,608,875	6,900,000	$ 205
NiSource	$255,900,005	3,755,000	$ 68

Exhibit 1 shows VAWC's 12 months ended September 30, 2011 Service Company cost per customer of $66 to be considerably lower than the average of $111 per customer for the comparison group service companies. Only 4 of 24 comparison group service companies had a lower cost per customer than VAWC. Based on this result, it is possible to conclude that the Service Company's 12 months ended September 30, 2011 charges to VAWC were reasonable.

Exhibit 1

Virginia-American Water Company
Comparison of Service Company Annual Costs Per Customer

V – Question 2 – Provision of Services at the Lower of Cost or Market

Methodology

The lower-of-cost-or-market comparison is accomplished by comparing the cost per hour for Service Company managerial and professional services to those of outside service providers to whom these duties could be assigned. Based on the nature of the Service Company services it was determined that the following outside providers could perform the categories of services indicated below:

- Management Consultants – executive and administrative management, risk management services, human resources and communications services
- Attorneys – legal services
- Certified Public Accountants – accounting, financial and rates and revenues services
- Information Technology Professional – information technology services
- Professional Engineers – engineering, operations and water quality services.

The services provided by the Belleville lab are assumed to be transferable to professional engineers for purposes of this cost comparison. This was done for two reasons. First, there is no readily available survey of hourly billing rates for testing services such as those performed by Belleville. Second, Belleville personnel have similar, scientific educational backgrounds as Service Company engineering personnel. Thus, it is valid to compare the hourly rates of Belleville services to those of outside engineering firms.

Service Company's hourly rate were calculated for each of the five outside service provider categories, based on the dollars and hours charged to VAWC during the 12 months ended September 30, 2011. Hourly billing rates for outside service providers were developed using third party surveys or directly from information furnished by outside providers themselves.

It should be noted that by using the Service Company's hours charged VAWC during the 12 months ended September 30, 2011, its hourly rates are actually overstated because some Service Company personnel charge a maximum 8 per day even when they work more. Outside service providers generally bill for every hour worked. If all overtime hours of Service Company personnel had been factored into the hourly rate calculation, Service Company hourly rates would have been lower.

The last step in the market cost comparison was to compare the Service Company's average cost per hour to the average cost per hour for outside providers.

Service Company Hourly Rates

Exhibit 2 (page 14) details the assignment of 12 months ended September 30, 2011 management and professional Service Company charges by outsider provider category. Exhibit 3 (page 15) shows the same assignment for Service Company management and professional hours charged to VAWC during the 12 months ended September 30, 2011.

Certain adjustments to these dollar amounts were necessary to calculate Service Company hourly rates that are directly comparable to those of outside providers. Adjustments were made to the following 12 months ended September 30, 2011 test period non-labor Service Company charges:

V – Question 2 – Provision of Services at the Lower of Cost or Market

- Contract Services – 12 months ended September 30, 2011 Service Company charges to VAWC include expenses associated with the use of outside professional firms to perform certain corporate-wide services (e.g., legal, financial audit, actuarial services). These professional fees are excluded from the Service Company hourly rate calculation because the related services have effectively been out-sourced already.

- Travel Expenses – In general, client-related travel expenses are not recovered by outside service providers through their hourly billing rate. Rather, actual out-of-pocket travel expenses are billed to clients in addition to fees for professional services. Thus, it is appropriate to remove these Service Company charges from the hourly rate calculation.

- Information Technology Infrastructure Expenses – Included in the 12 months ended September 30, 2011 Service Company charges to VAWC are leases, maintenance fees and depreciation related to American Water's enterprise mainframe, server and network infrastructure and corporate business applications. An outside provider that would take over operation of this infrastructure would recover these expenses over and above the labor necessary to operate the data center.

Exhibit 4 (page 16) shows how contract services, travel expenses and computer hardware/software-related Service Company charges are assigned among the four outside provider categories.

Based on the assignment of expenses and hours shown in Exhibits 2 and 3 and the excludable items shown in Exhibit 4, the Service Company's equivalent costs per hour for the 12 months ended September 30, 2011 are calculated below.

	Attorney	Management Consultant	Certified Public Accountant	IT Professional	Professional Engineer	Total
Total management, professional & technical services charges	$ 131,772	$ 2,015,125	$ 1,283,252	$ 1,126,275	$ 1,101,305	$ 5,657,728
Less:

Outside Service Provider Hourly Rates

The next step in the cost comparison was to obtain the average billing rates for each outside service provider. The source of this information and the determination of the average rates are described in the paragraphs that follow.

It should be noted that professionals working for three of the five outside provider categories may be licensed to practice by state regulatory bodies. However, not every professional working for these firms is licensed. For instance, among Virginia certified public accounting firms, only more experienced staff are predominantly CPAs (see table below). Some Service Company employees also have professional licenses. Thus, it is valid to compare the Service Company's hourly rates to those of the outside professional service providers included in this study.

Position	Virginia Average
Partners/Owners	98%
Directors (11+ years experience)	90%
Managers (6-10 years experience)	72%
Sr Associates (4-5 years experience)	61%
Associates (1-3 years experience)	17%
New Professionals	8%

Source: AICPA's National PCPS/TSCPA Management of an Accounting Practice Survey (2010)

Attorneys

The Virginia State Bar does not survey its members as to their hourly billing rates. In addition, publicly available billing rate information could not be found for Virginia attorneys. Therefore, an estimate of Virginia attorney rates was developed from surveys conducted by Lawyers Weekly in the states of Michigan, Missouri and Massachusetts. As presented in Exhibit 5 (page 19), the average rate for each firm was adjusted for the cost of living differential between its location and Richmond, Virginia. The Lawyers Weekly surveys included rates in effect at December 31, 2010. Thus, the 2010 average rate was escalated to March 31, 2011—the midpoint of the test year ended September 30, 2011.

Management Consultants

The cost per hour for management consultants was developed from a 2011 survey performed by the Association of Management Consulting Firms—an industry trade organization. The survey includes rates that were in effect during 2010 for firms throughout the United States. Consultants typically do not limit their practice to any one region and must travel to a client's location. Thus, the U.S. national average is appropriate for comparison.

The first step in the calculation, presented in Exhibit 6 (page 20), was to determine an average rate by consultant position level. From these rates, a single weighted average hourly rate was calculated based upon the percent of time that is typically applied to a consulting assignment by each consultant position level. The 2010 average rate was escalated to March 31, 2011—the midpoint of the 12 months ended September 30, 2011.

Certified Public Accountants

The average hourly rate for Virginia CPAs was developed from a 2010 survey performed by the American Institute of Certified Public Accountants (AICPA). The Virginia version of this survey was used to develop hourly rates for member firms in Virginia.

As shown in Exhibit 7 (page 21), a weighted average hourly rate was developed based on a set of accountant positions and a percent of time that is typically applied to an accounting assignment. This survey includes rate information in effect during 2009. The 2010 average rate was escalated to March 31, 2011—the midpoint of the 12 months ended September 30, 2011.

Information Technology Professionals

The average hourly rate for information technology consultants and contractors was developed from Baryenbruch & Company, LLC IT industry hourly billing rate data. As shown in Exhibit 8 (page 22), that data was compiled and a weighted average was calculated based on a percent of time that is typically applied to an IT consulting assignment based on Baryenbruch & Company, LLC's experience.

Professional Engineers

The Company provided hourly rate information for outside engineering firms that could have been used by VAWC in 2011. As presented in Exhibit 9 (page 23), an average rate was developed for each engineering position level. Then, using a typical percentage mix of project time by engineering position, a weighted average cost per hour was calculated.

V – Question 2 – Provision of Services at the Lower of Cost or Market

Service Company versus Outside Provider Cost Comparison

As shown in the table below, Service Company costs per hour are considerably lower than those of outside providers.

	12 Months Ended September 30, 2011		
Service Provider	Service Company	Outside Provider	Difference--Service Co. Greater(Less) Than Outside
Attorney	$ 229	$ 317	$ (88)
Management Consultant	$ 129	$ 267	$ (138)
Certified Public Accountant	$ 72	$ 136	$ (64)
IT Professional	$ 158	$ 180	$ (23)
Professional Engineer	$ 82	$ 99	$ (17)

Based on these cost per hour differentials and the number of managerial and professional services hours billed to VAWC during the 12-months ended September 30, 2011, outside service providers would have cost $2,242,566 more than the Service Company (see table below). Thus, on average, outside provider's hourly rates are 40% higher than those of the Service Company ($2,242,566 / $5,657,728).

	12 Months Ended September 30, 2011		
Service Provider	Hourly Rate Difference--Service Co. Greater(Less) Than Outside	Service Company Hours Charged	Dollar Difference
Attorney	$ (88)	499	$ (43,973)
Management Consultant	$ (138)	6,448	$ (888,648)
Certified Public Accountant	$ (64)	15,320	$ (983,614)
IT Professional	$ (23)	4,798	$ (109,178)
Professional Engineer	$ (17)	12,410	$ (217,153)
Service Company Less Than Outside Providers			$ (2,242,566)

It should be noted that the cost differential associated with using outside providers is even greater because exempt Service Company personnel do not charge more than 8 hours per day even when they work more. Outside providers generally charge clients for all hours worked. Thus, VAWC would have been charged by outside providers for overtime worked by Service Company personnel who are not paid for that time.

If VAWC were to use outside service providers rather than the Service Company for managerial and professional services, it would incur other additional expenses besides those associated with higher hourly rates. Managing outside firms who would perform over 39,000 hours of work (more than 26 full-time equivalents at 1,500 "billable" hours per FTE per year) would add a significant workload to the existing VAWC management team. Thus, it would be necessary for VAWC to add at least one position to supervise the outside firms and ensure they delivered quality and timely services. The individuals that would fill this position would need a good understanding of each profession being managed. They must also have management experience and the authority necessary to give them credibility with the outside firms. As calculated in the table below, this position would add almost $150,000 per year to VAWC's personnel expenses.

V – Question 2 – Provision of Services at the Lower of Cost or Market

Cost of Adding 1 Professional Position To VAWC's Staff

	Total
New Positions' Salary	$ 100,000
Benefits (at 49.4%)	$ 49,400
Office Expenses (15.2%)	$ 15,200
Cost of One Position	$ 149,400

Thus, the total effect on the ratepayers of VAWC of contracting all services now provided by Service Company would be an increase in their costs of $2,391,966 ($2,242,566 + $149,400). Based on the results of this comparison, it is possible to conclude that the Service Company charged VAWC at the lower of cost or market for services provided during the 12 months ended September 30, 2011.

VI - Question 3 - Reasonableness of Customer Accounts Services Costs

Background

Customer Accounts Services covers the following utility functions:

- Customer Call Center – customer calls/contact, credit, order taking/disposition, bill collection efforts, outage calls
- Customer Call Center Maintenance – support of phone banks, voice recognition units, call center software applications and telecommunications
- Customer billing – bill printing, stuffing, and mailing
- Remittance processing – processing customer payments received in the mail
- Bill payment centers – processing customer payments at locations where customers can pay their bills in person

It is difficult to compare the cost of the Service Company's customer accounts services-related charges to VAWC with outside providers of the same services because survey data is proprietary and expensive to obtain. For this reason, VAWC's charges from the Service Company for customer accounts services are compared to those of neighboring electric utilities because the data necessary to make such comparison is available to the public.

Neighboring electric utility cost information comes from the FERC Form 1 that each utility must file. FERC's chart of accounts is defined in Chapter 18, Part 101 of the Code of Federal Regulations. FERC accounts that contain customer accounts services-related expenses are Account 903 Customer Accounts Expense – Records and Collection Expense and Account 905 Customer Accounts Expense – Miscellaneous Customer Accounts Expense. Exhibit 10 provides FERC's definition of the type of expenses that should be recorded in these accounts.

In addition to the charges in these FERC accounts, labor-related overheads charged to the following FERC accounts must be added to the labor components of Accounts 903 and 905:

- Account 926 Employee Pension and Benefits
- Account 408 Taxes Other Than Income (employer's portion of FICA)

Comparison Group

Electric utilities included in the comparison group are shown in the table below. These are companies whose FERC Form 1 show amounts for accounts 903 and 905.

Virginia	• Appalachian Power	• Virginia Electric Power
West Virginia	• Appalachian Power • Monongahela Power	• Wheeling Power
Maryland	• Baltimore Gas & Electric • Delmarva Power & Light	• Potomac Electric
North Carolina	• Duke Energy Carolinas	• Progress Energy Carolinas
Kentucky	• Duke Energy Kentucky • Kentucky Power	• Kentucky Utilities • Louisville Gas & Electric
Tennessee	• Kingsport Power	

Virginia-American Water Company
FERC Account Descriptions

903 – Customer Records and Collection Expenses

This account shall include the cost of labor, materials used and expenses incurred in work on customer applications, contracts, orders, credit investigations, billing and accounting, collections and complaints.

Labor

1. Receiving, preparing, recording and handling routine orders for service, disconnections, transfers or meter tests initiated by the customer, excluding the cost of carrying out such orders, which is chargeable to the account appropriate for the work called for by such orders.
2. Investigations of customers' credit and keeping of records pertaining thereto, including records of uncollectible accounts written off.
3. Receiving, refunding or applying customer deposits and maintaining customer deposit, line extension, and other miscellaneous records.
4. Checking consumption shown by meter readers' reports where incidental to preparation of billing data.
5. Preparing address plates and addressing bills and delinquent notices.
6. Preparing billing data.
7. Operating billing and bookkeeping machines.
8. Verifying billing records with contracts or rate schedules.
9. Preparing bills for delivery, and mailing or delivering bills.
10. Collecting revenues, including collection from prepayment meters unless incidental to meter reading operations.
11. Balancing collections, preparing collections for deposit, and preparing cash reports.
12. Posting collections and other credits or charges to customer accounts and extending unpaid balances.
13. Balancing customer accounts and controls.
14. Preparing, mailing, or delivering delinquent notices and preparing reports of delinquent accounts.
15. Final meter reading of delinquent accounts when done by collectors incidental to regular activities.
16. Disconnecting and reconnecting services because of nonpayment of bills.
17. Receiving, recording, and handling of inquiries, complaints, and requests for investigations from customers, including preparation of necessary orders, but excluding the cost of carrying out such orders, which is chargeable to the account appropriate for the work called for by such orders.
18. Statistical and tabulating work on customer accounts and revenues, but not including special analyses for sales department, rate department, or other general purposes, unless incidental to regular customer accounting routines.
19. Preparing and periodically rewriting meter reading sheets.
20. Determining consumption and computing estimated or average consumption when performed by employees other than those engaged in reading meters.

Materials and expenses

21. Address plates and supplies.
22. Cash overages and shortages.
23. Commissions or fees to others for collecting.
24. Payments to credit organizations for investigations and reports.
25. Postage.
26. Transportation expenses, including transportation of customer bills and meter books under centralized billing procedure.
27. Transportation, meals, and incidental expenses.
28. Bank charges, exchange, and other fees for cashing and depositing customers' checks.
29. Forms for recording orders for services, removals, etc.
30. Rent of mechanical equipment.

Virginia-American Water Company
FERC Account Descriptions

905 – Miscellaneous Customer Accounts Expenses

This account shall include the cost of labor, materials used and expenses incurred not provided for in other accounts.

Labor

1. General clerical and stenographic work.
2. Miscellaneous labor.

Materials and expenses

3. Communication service.
4. Miscellaneous office supplies and expenses and stationery and printing other than those specifically provided for in accounts 902 and 903.

VI - Question 3 - Reasonableness of Customer Accounts Services Costs

VAWC Cost per Customer

As calculated below, VAWC's 12 months ended September 30, 2011 customer account services expense per customer was $22.69. The cost pool used to calculate this average includes charges for Service Company services (e.g., call center, billing, payment processing) and postage and forms expenses, which are incurred directly by VAWC. It was necessary to adjust the National Call Center charges because electric utilities experience an average of 2.50 calls per customer compared to American Water's 1.32 calls per customer. Thus, National Call Center expenses have to be increased, for comparison purposes, to reflect its costs at a 2.50 calls per customer level.

Virginia-American Cost Per Customer		Year Ended 9/30/2011 Service Co Charges	Adjustment Fewer Calls For Water Cos. (A)	Adjusted	
Cost Component					
Service Company					
Call Centers	Call processing, order processing, credit, bill collection	$ 797,625	$ 319,456	$ 1,117,081	
Operating Company	Customer payment processing			$ 32,310	Note B
Operating Company	Postage & forms			$ 164,723	
			Cost Pool Total	$ 1,314,114	
			Total Customers	57,928	
	12 Months Ended September 30, 2011 Cost Per VAWC Customer			**$ 22.69**	

Note A: Adjustment for American Water's fewer calls per customer

This adjustment is necessary because water utilities experience fewer calls per customer than do electric utilities

Call handling expenses		$ 325,053
Electric utility industry's avg calls/customer	2.50	
American Water's avg calls/customer	1.26	
Percent different	98%	98%
Total Adjustment		$ 319,456

Note B: Estimated customer payment processing expenses

Number of customers	57,928
Number of payments/customer/year	5.6
Total payments processed/year	324,397
Bank charge per item	$ 0.0996
Total estimated annual expense	$ 32,310

Electric Utility Group Cost per Customer

Exhibit 11 shows the actual 12 months ending September 30, 2011 customer accounts expense per customer calculation for the electric utility comparison group. All of the underlying data was taken from the utilities' FERC Form 1.

VI - Question 3 - Reasonableness of Customer Accounts Services Costs

Summary of Results

As shown in the table below, VAWC's cost per customer is below the average cost of the neighboring electric utility comparison group. It can therefore be concluded that VAWC's 12 months ended September 30, 2011 customer accounts-related expenses, including those of the Alton and Pensacola Call Centers, assigned by the Service Company to VAWC were comparable to those of other utilities.

Average Customer Accounts Expense Per Customer	
Monongahela Power	$ 16.81
Virginia Electric Power	$ 17.69
Louisville Gas & Electric	$ 20.01
Duke Power	$ 21.19
Virginia American Water	**$ 22.69**

Estimated Employer's Portion of FICA		$ 292,961	$ 91,123	$ 502,613	$ 329,174	$ 15,271	

VI - Question 4 – Need for Service Company Services

Analysis of Services

The final aspect of this study was an assessment of whether the services that are provided to VAWC by the Service Company would be necessary if VAWC were a stand-alone water utility. The first step in this evaluation was to determine specifically what the Service Company does for VAWC. Based on discussions with Service Company personnel, the matrix in Exhibit 12 was created showing which entity—VAWC or a Service Company location—is responsible for each of the functions VAWC requires to ultimately provide service to its customers. This matrix was reviewed to determine: (1) if there was redundancy or overlap in the services being provided by the Service Company and (2) if Service Company services are typical of those needed by a stand-alone water utility.

Upon review of Exhibit 12, the following conclusions can be drawn:

- The services that the Service Company provides are necessary and would be required even if VAWC were a stand-alone water utility.

- There is no redundancy or overlap in the services provided by the Service Company to VAWC. For all of the services listed in Exhibit 12, there was only one entity that was primarily responsible for the service.

Governance Practices Associated With Service Company Charges

There are several ways by which VAWC exercises control over Service Company services and charges. The most important of these are described below.

- **President of Regulated Operations Oversight** – The President of Regulated Operations is on the Executive Leadership Team (ELT) of American Water. This position is responsible for the overall performance of each operating company in American Water. As part of the ELT, the President of Regulated Operations has equal say with other ELT members in major business decisions of American Water and has the ability to monitor Service Company performance quality and spending. The President of Regulated Operations also addresses local concerns with each operating company president.
- **Operating Company Board Oversight** – VAWC board of directors includes members of American Water's ELT, members of the divisional management team and business and community leaders from outside the Company. VAWC's president is Chairman of the VAWC board. This helps ensure that VAWC's needs are a factor in the delivery of Service Company services.
- **Service Company Budget Review/Approval** – The ELT serves as the Board of Directors for the Service Company and must formally approve the budget for Service Company charges for the next year. These budgeted charges are consolidated with the operating company's own spending into an overall budget which must be approved by the operating company's board of directors. VAWC's president also acts as ex officio and attends the Service Company board meetings.
- **Major Project Review And Approval** – Major projects undertaken by the Service Company must first be reviewed by American Water's ELT, which includes the President of Regulated Operations. With input from the local presidents and Divisional Vice President & Treasurer, they have the ability to impact all new initiatives and projects before they are authorized.
- **Service Company Bill Scrutiny** – VAWC Finance personnel review the monthly Service Company bill for accuracy and reasonableness on a monthly basis. VAWC's financial manager discusses the monthly bill with Shared Services Center office personnel and any mistakes or overcharges are credited on a subsequent billing. The VAWC Finance Manager prepares an actual-to-budget comparison of management fees each month for use in identifying unusual variances. Service Company actual-to-budget comparison is included in the monthly Financial Review Package (FRP). Unusual variances are researched, explanations are provided and any necessary corrections are made.
- **Service Company Budget Variance Reporting** – Each month, a summary variance analysis is prepared that explains differences between budgeted and actual Service Company spending. In addition, a more detailed monthly variance report, called the "Statement of Expenses and Billed Charges," is produced by Service Company location and shows actual spending for the month.
- **Operating Company Budget Variance Reporting** – The "Budget/Plan Analysis," produced monthly, has a line item for Management Fees (i.e., Service Company charges). In this way, Service Company budget versus actual charges can be monitored for the month and year-to-date. Additional information exists that allows more detailed analysis of "Divisional" and "Corporate" Management Fees.
- **Capital Investment Management (CIM) –** CIM is one of American Water's primary business planning processes. It covers capital and asset planning and is employed throughout American Water. CIM provides a full range of governance practices, including a formal protocol for assessing system needs, prioritizing expenditures, managing the

capital program, approving project spending, delivering projects and measuring outputs. CIM ensures that:

- Capital expenditure plans are aligned with the strategic intent of the business
- The impact of capital expenditure and income plans are fully reflected in operating expense plans
- The impacts of these plans are understood and affordable, and
- Effective controls are in place over budgets (through business plans) and individual capital projects (through appropriate authorization thresholds, management and reporting processes).

The CIM process was designed to optimize the effectiveness of asset investment. The process is managed at two levels for all American Water companies, including all VAWC Operating Units. Monthly meetings of the CIM are held to review capital spending compared to plan, review new project requests, and review updates or modifications to existing projects. The President of VAWC and others participate as necessary (e.g. VAWC operations managers and Rates Manager) and provide the data used in the monthly review schedules.

Governance Practices Associated With Service Company Charges	

I – Introduction

Purpose of This Study

This study was undertaken to answer four questions concerning the services provided by American Water Works Service Company, Inc. (Service Company) to West Virginia American Water Company (WV American):

1. Were the Service Company's charges to WV American during the 12 months ended December 31, 2009 reasonable?

2. Was WV American charged the lower of cost or market for managerial and professional services provided by the Service Company during the 12 months ended December 31, 2009?

3. Were the 12 months ended December 31, 2009 costs of the Service Company's customer accounts services, including those of the National Call Centers, comparable to those of other utilities?

4. Are the services WV American receives from Service Company necessary?

Study Results

Concerning question 1, the following conclusion was reached:

- The Service Company's 12 months ended December 31, 2009 cost per WV American customer was very reasonable compared to cost per customer for electric and combination electric/gas service companies. During the 12 months ended December 31, 2009, WV American was charged $54 per customer for administrative and general (A&G)-related services provided by the Service Company. This compares to an average of $109 per customer for service companies reporting to the Federal Energy Regulatory Commission (FERC). Only 3 of the 24 utility service companies that filed a FERC Form 60 for 2008 had a lower per customer A&G cost than WV American's charges from the Service Company.

Concerning question 2, the following conclusions were drawn from this study:

- WV American was charged the lower of cost or market for managerial and professional services during the 12 months ended December 31, 2009.

- On average, the hourly rates for outside service providers are 48% higher than the Service Company's hourly rates.

- The managerial and professional services provided by the Service Company are vital and could not be procured externally by WV American without careful supervision on the part of WV American. If these services were contracted entirely to outside providers, WV American would have to add at least one position to manage activities of outside firms. This position would be necessary to ensure the quality and timeliness of services provided.

- If all the managerial and professional services now provided by the Service Company had been outsourced during the 12 months ended December 31, 2009, WV American and its ratepayers would have incurred more than $4,100,000 in additional expenses. This amount includes the higher cost of outside providers and the cost of one WV American position needed to direct the outsourced work.

- This study's hourly rate comparison actually understates the cost advantages that accrue to WV American from its use of the Service Company. Outside service providers generally bill for every hour worked. Service Company exempt personnel, on the other hand, charge a maximum of 8 hours per day even when they work more hours. If the overtime hours of Service Company personnel were factored into the hourly rate calculation, the Service Company would have had an even greater annual dollar advantage than the $4,100,000 cited above. For instance, if Service Company overtime is conservatively estimated at 5% (2 hours per week), then that work would have added more than $200,000 in charges from outside providers.

- It would be difficult for WV American to find local service providers with the same specialized water industry expertise as that possessed by the Service Company staff. Service Company personnel spend substantially all their time serving operating water companies. This specialization brings with it a unique knowledge of water utility operations and regulation that is most likely unavailable from local service providers.

- Service Company fees do not include any profit markup. Only its actual cost of service is being recovered from WV American ratepayers.

Concerning question 3, the following conclusion was reached:

- The cost of the Service Company's customer accounts services, including those provided by the National Call Center, is below the range of the average of the neighboring electric utility comparison group. As will be explained further herein, this group of companies provides a reasonable proxy group for comparison to a regulated utility of the size and scope of the Service Company and WV American. During the 12-months ended December 31, 2009, the customer accounts cost for WV American customers was $29.15 compared to the 2008 average of $32.23 for neighboring electric utilities. The highest comparison group per customer cost was $72.58 and the lowest $15.58.

Concerning question 4, the following conclusions were drawn:

- The services that the Service Company provides are necessary and would be required even if WV American were a stand-alone water utility.

- Furthermore, there is no redundancy or overlap in the services provided by the Service Company to WV American. For all of the services listed in Exhibit 11, there was only one entity primarily responsible for the service.

II – Background

Overview of American Water Works Service Company

American Water's Service Company exists to provide certain shared services to American Water subsidiaries. It follows a service company model used by many utility holding companies that own multiple regulated utilities. By consolidating executive and professional services into a single service company, utility holding companies are able to realize the following benefits for ratepayers:

- Purchasing Economies – Common expenses (e.g., insurance, chemicals, piping) can be procured on a much larger scale thereby providing greater bargaining power for the combined entity compared to individual utility operating companies. A service company facilitates corporate-wide purchasing programs through its procurement and contract administration functions.

- Operating Economies of Scale – A service company is able to deliver services more efficiently because workloads can be balanced across more persons and facilities. For instance, American Water's Service Company is able to maintain one principal data center for the entire corporation. This is much more cost-efficient than each operating utility funding their own data center with its large fixed hardware, software and staffing costs.

- Continuity of Service – Centralizing service company personnel who perform similar services facilitates job cross-training and sharing of knowledge and expertise. This makes it easier to deal with staff turnover and absences and to sustain high levels of service to operating utilities. An individual operating utility might experience considerable disruption if a key professional left and it was necessary to hire outside to fill the vacancy.

- Maintenance of Corporate-Wide Standards – Personnel in American Water's Service Company establish standards for many functions (e.g., engineering designs, operating procedures and maintenance practices). It is easier to ensure these standards are followed by every operating utility because their implementation is overseen by the Service Company.

- Improved Governance – American Water's Service Company provides another dimension of management and financial oversight that supplements local operating utility management. The Service Company facilitates standard planning and reporting that help ensure operating utilities meet the requirements of their customers in a cost effective manner.

- Retention of Personnel – A service company organization provides operating utility personnel with another career path beyond what may be available on a local level. These opportunities tend to improve employee retention.

American Water follows the model for other utility service companies in another important regard. Its services are provided to affiliate operating utilities, like WV American, at cost. American Water's Service Company is not a profit-making entity. It assigns only its actual expenses to the American Water subsidiaries it services.

The Service Company provides services to American Water operating companies from the following locations:

- Corporate Office – Includes American Water's executive management and personnel from the various corporate support services. American Water's corporate office is located in Voorhees, New Jersey.

- National Call Centers – Perform customer service functions, including: customer call processing, service order processing, correspondence processing, credit and collections. American Water maintains two call centers. One in Alton, Illinois that went into operation in 2001 and a second in Pensacola, Florida that went into operation in 2005. Prior to the establishment of these national call centers, customer service functions were performed by employees of WV American, which incurred the expense on its books.

- National Shared Services Center – The Shared Services Center, located in Cherry Hill, New Jersey, provides various financial, accounting and treasury functions that had been performed by individual operating companies. This arrangement has improved and streamlined the Company's financial processes and allowed operating companies to focus on providing utility service.

- Regional Offices – Regional offices provide operating companies with certain support services that can be performed more effectively on a regional basis because individual operating company/center workloads are not sufficient to warrant a full-time staff for these activities. At the same time, these services require closer proximity to operating companies served so they are not provided by the National Shared Services Center. Examples of regional office services include rates and revenues, engineering, operations and field resource coordination.

- Belleville Lab – The national trace substance laboratory is located in Belleville, Illinois and performs testing for all American Water operating companies.

- Information Technology Service Centers – American Water's principal data center, located in Hershey, Pennsylvania, supports the IT infrastructure required to run corporate and operating company business applications and the communications systems. IT personnel rotate, as needed, throughout the regional offices and operating companies.

Service Company Expense Categories

The Service Company renders a monthly bill to operating companies. Charges are broken down into the following expense categories:

- Labor – base pay (salaries) of managerial and professional employees
- Labor-Related Overheads - employee benefit costs (payroll taxes, medical coverage, pensions, disability insurance) and other general expenses
- Support - wages and salaries of office support personnel, including secretaries, clerical personnel, telephone operators and mail clerks
- Office Expenses - office rent, equipment leases, telephone, electric, office supplies, property taxes, office maintenance
- Vouchers/Journal Entries – (1) travel expenses incurred by Service Company personnel, (2) other items submitted for reimbursement by employees, including professional association dues, (3) outside service contracts for such things as actuarial

services, and (4) various other expenditures, including data center expenses for software licenses and hardware maintenance.

Service Company expenses are either assigned directly or allocated to operating companies, as shown in the table below.

Expense Category	Direct Charged	Allocated	Comments
Labor	X	X	Professional personnel working for one or several operating companies
Labor-Related Overheads	X	X	These are primarily employee benefit costs that relate directly to labor
Support		X	Administrative personnel support the professional staff, thus support costs are allocated on the basis of professional labor
Office Expense		X	Are all allocated on the basis of professional labor
Vouchers/Journals	X	X	May be either directly in support of one operating company (e.g., an engineer traveling from the Corporate Office to the operating company) or allocated to several operating companies

A direct charge occurs when Service Company work or expenses are incurred in support of only one operating company. Direct charge examples include work in support of an operating company's rate case, engineering design work on an operating company's project and the preparation of an operating company's financial statements.

Service Company expenses are allocated when more than one operating company benefits from the underlying work. Examples include assessments of new Federal water quality regulations, development of the company-wide materials procurement contracts and creation of company-wide engineering design standards.

Charging and Assignment Of Service Company Time and Expenses

Service Company transactions are assigned with the following information so there is a proper accounting and eventual charging to an operating company:

- Operating company
- Formula number
- Work order (where applicable)
- Authorization number (where applicable)

Charges can originate from the following systems:

- Payroll System
- RVI System (outside vendor payments)
- PCard System (credit card payments)
- Internal Purchase Order System
- Journal entries

II – Background

The Service Company's time reporting process enables labor and support charges to be assigned to the proper operating company. Labor charges are based on the time reported by managerial and professional Service Company employees. Every week, Service Company professional employees complete an electronic time sheet that shows:

- Formula number (this is linked to operating company within American Water's financial system)
- Employee hours worked
- Account number for non-labor charges

At month-end, time report information is processed and direct and allocated professional labor hours tabulated for each operating company. Dollar charges are then calculated using the hourly rate of each Service Company professional employee based upon their base salary (i.e., an employee's hours times his/her hourly rate of pay).

Support (administrative) personnel charge their time to the activity "General Admin." As described in the table on page 4, their labor charges are allocated to operating companies based upon how their office's professional personnel labor charges are assigned. For instance, if 20% of American Water's Southeast Region's professional labor is assigned to WV American during a month, then 20% of that office's monthly administrative labor charges also are assigned to the operating company.

The overhead cost category is next assigned based on professional and administrative labor costs. Thus, if 20% of the Southeast Region's accumulated professional and support labor is charged to WV American during the month, then 20% of that month's overhead expenses will be assigned to WV American.

Each Service Company location's office expenses are allocated to operating companies based on how professional labor charges for that office have been assigned. For instance, if 2% of professional labor from one Service Company office is assigned to WV American, then 2% of that office's office expenses would be assigned to WV American. Thus, office expenses are allocated in the very same way as administrative labor.

Vouchers/journal entries may be charged directly or allocated, depending on who benefits from the expenditure. For instance, the cost of a continuing professional education course taken by a professional in a regional office is allocated to the operating companies served by that office. Travel expenses by that same professional to a rate case proceeding are charged directly to the operating company whose case is being heard.

III – Service Company Cost Comparison Approach

During the 12 months ended December 31, 2009, the Service Company billed WV American $10,565,539 in O&M-related charges and $803,376 in capital-related charges. These total charges of $11,368,915 were subjected to a market cost comparison.

Service Company Charges	12 Months Ended December 31, 2009
Management Fees - O&M	$ 10,565,539
Management Fees - Capital	$ 803,376
Total Testable SC Charges	**$ 11,368,915**

For purposes of comparing these charges to certain outside benchmarks, Service Company services were placed into three categories:

- Managerial and Professional Services – Includes such services as management, accounting, legal, human resources, information technology and engineering.
- Customer Accounts Services – Includes customer-related services, such as call center, credit, billing, collection and payment processing.
- Field Resource Coordination Services – Includes the dispatching and oversight of work to operating company field crews.

Total test period Service Company charges break down between management/professional services, customer account services and field resource coordination as follows:

	12 Months Ended Dec. 31, 2009	
	Amount	Hours
Management and Professional Services	$ 8,433,389	77,663
Customer Account Services	$ 2,592,450	68,701
Field Resource Coordination	$ 343,076	7,906
Total Service Company Charges	**$ 11,368,915**	**154,270**

This study's first question—whether Service Company 12 months ended December 31, 2009 charges were reasonable—was determined by comparing WV American's A&G-related Service Company charges per customer to the same charges for utility companies that must file the FERC Form 60 – Annual Report of Service Companies.

The second question—whether Service Company charges during the 12 months ended September 3, 2009 were at the lower of cost or market—was evaluated by comparing the cost per hour for managerial and professional services provided by Service Company personnel to hourly billing rates that would be charged by outside providers of equivalent services. Service Company costs per hour were based on actual charges to WV American during the 12 months ended December 31, 2009. Outside providers' billing rates came from surveys or other information from professionals that could perform the services now provided by the Service Company.

III – Service Company Cost Comparison Approach

The third question—whether Service Company's 12 months ended December 31, 2009 customer account services charges, including those of the National Call Center costs, were comparable to other utilities—was addressed by comparing WV American's customer accounts services expenses to those of neighboring electric utilities. This approach was selected because the costs of outside providers of call center services are not publicly available. However, electric utility customer account services expenses can be obtained from the FERC Form 1. The availability and transparency of FERC data adds to the validity of its use in this comparison.

The fourth question—the necessity of Service Company services—was investigated by defining the services provided to WV American and determining if these services would be required if WV American were a stand-alone utility.

WV American's Service Company Cost per Customer

During the 12 months ended December 31, 2009, WV American was charged $54 per customer by the Service Company for A&G/O&M-related services. The calculation of this amount, shown in the table below, starts with total net testable Service Company charges and adjusts for capital and non-A&G functions (engineering, operations and water quality) charges. These adjustments are necessary to develop a per customer cost that is comparable to cost of utility service companies.

	12 Months ended Dec 31, 2009 Svc. Co. Charges
Testable Service Company charges	$ 11,368,915
Less: Capital charges	$ (803,376)
Less: Non-A&G function O&M charges	
Engineering	$ (17,086)
Operations	$ (989,038)
Water Quality	$ (326,125)
Net A&G/O&M-related charges	$ 9,233,290
WV American customers	172,006
WV American Cost Per Customer	**$ 54**

Comparison Group Cost Per Customer

Every centralized service company in a holding company system must file a Form 60 in accordance with the Public Utility Holding Company Act of 2005, Section 1270, Section 390 of the Federal Power Act and 18 C.F.R. paragraph 366.23. This report is designed to collect financial information from service companies that are subject to regulation by the FERC.

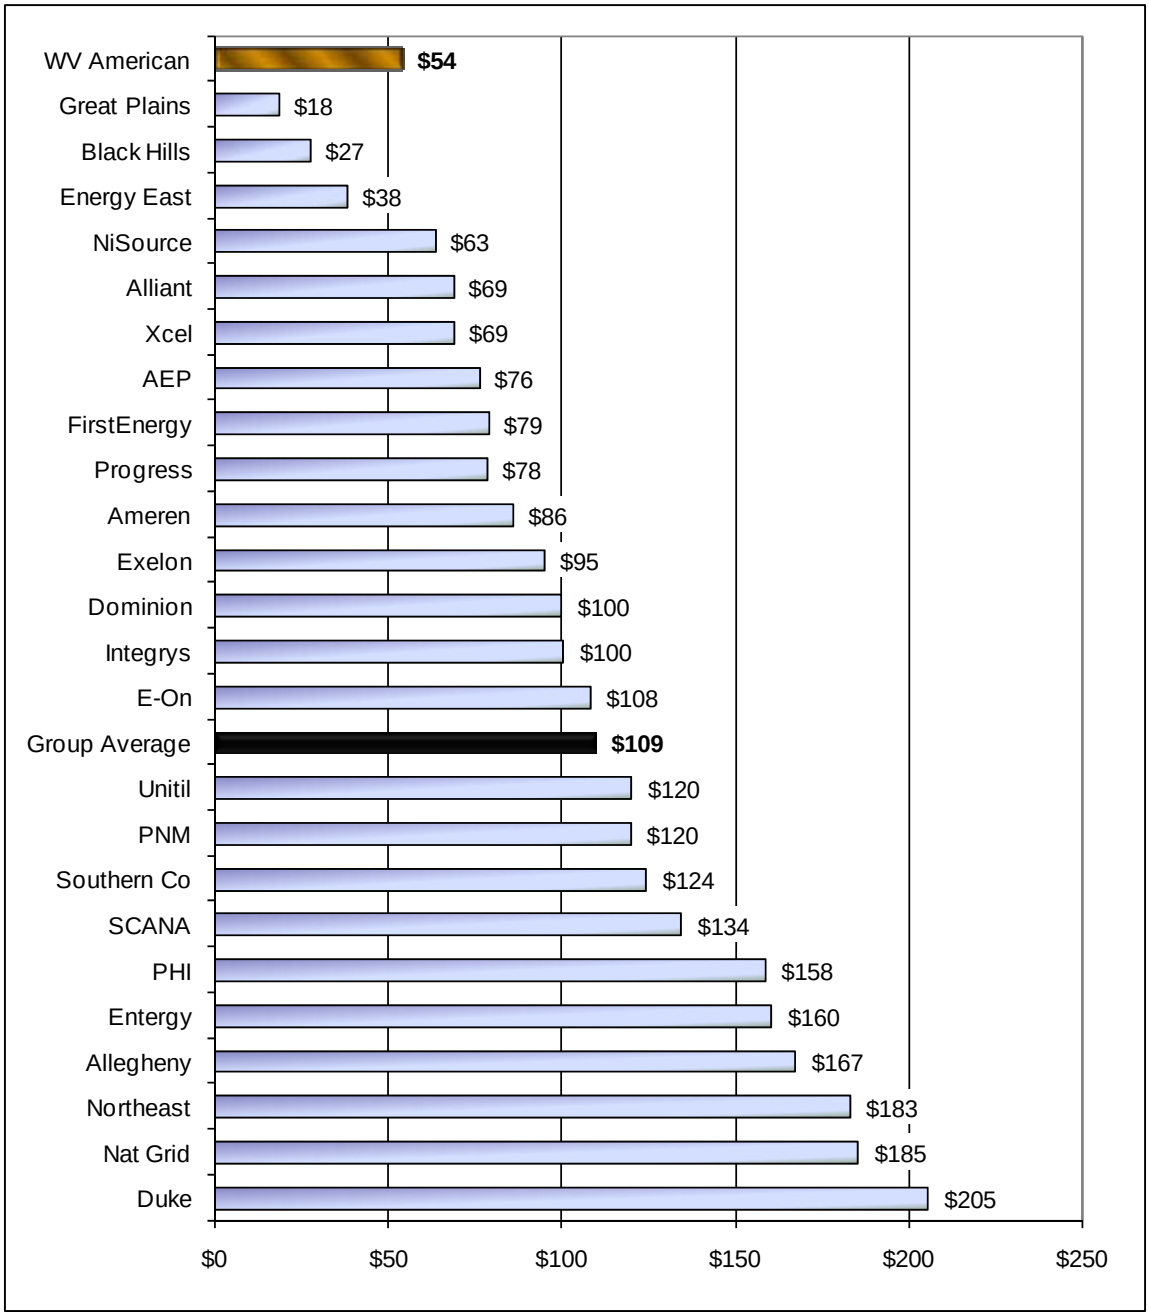
For 2008, a Form 60 was filed by 24 utility service companies, all of which serve utilities that provide regulated electric and, in some cases, gas service to retail customers. In order to make a valid comparison of this group's costs to those of American Water Works Service Company, it was necessary to isolate expenses that that they have in common. These include A&G/O&M-related charges associated with the following FERC accounts:

901 – Supervision	921 – Office supplies and expenses
903 – Customer records and collection expenses	923 – Outside services employed
905 – Miscellaneous customer accounts expenses	926 – Employee pensions and benefits
907 – Supervision	928 – Regulatory commission expenses
910 – Misc customer service and info expenses	930.2 – Miscellaneous general expenses
911 – Supervision	931 – Rents
920 - Administrative and general salaries	935 – Maintenance of structures and equipment

O&M expenses charged to utility affiliates for the comparison group service companies were obtained from Schedule XVI – Analysis of Charges for Service Associate and Non-Associate Companies (p. 303 to 306) of each entity's FERC Form 60. This schedule shows charges by FERC Account.

Comparison group service company 2008 expenses were also adjusted to remove charges to non-regulated affiliates from the cost pool used to calculate the cost per regulated service customer. This determination was made using information from the FERC Form 60 schedule: Account 457 – Analysis of Billing – Associate Companies.

IV – Question 1 – Reasonableness of Service Company Charges



A&G expenses per regulated utility customer for the 24 utility companies that file Form 60 for 2008 are calculated below.

Utility Company	2008 Regulated Retail Service Company A&G Expenses	Regulated Retail Customers	Cost per Customer
AEP	$396,340,118	5,213,000	$ 76
Allegheny	$263,588,707	1,577,873	$ 167
Alliant	$205,754,832	3,000,000	$ 69
Ameren	$291,684,710	3,400,000	$ 86
Black Hills	$20,763,828	759,400	$ 27
Dominion	$357,718,046	3,588,500	$ 100
Duke	$923,936,645	4,500,000	$ 205
Energy East	$113,714,789	2,989,800	$ 38
Entergy	$432,575,683	2,700,000	$ 160
E-On	$136,276,177	1,263,000	$ 108
Exelon	$558,687,014	5,885,000	$ 95
FirstEnergy	$354,028,109	4,499,000	$ 79
Great Plains	$15,000,708	820,000	$ 18
Integrys	$216,364,166	2,157,000	$ 100
Nat Grid	$1,240,706,398	6,700,000	$ 185
NiSource	$237,380,009	3,750,000	$ 63
Northeast	$302,138,730	1,654,000	$ 183
PHI	$302,463,412	1,910,000	$ 158
Progress	$242,677,256	3,100,000	$ 78
PNM	$102,688,385	859,000	$ 120
SCANA	$191,207,825	1,424,300	$ 134
Southern Co	$546,498,605	4,402,000	$ 124
Unitil	$20,341,422	169,600	$ 120
Xcel	$367,626,617	5,345,000	$ 69
Group Total	**$7,840,162,191**	**71,666,473**	**$ 109**

Exhibit 1 shows WV American's 12 months ended December 31, 2009 Service Company cost per customer of $54 to be considerably lower than the average of $109 per customer for the comparison group service companies. Only 3 of 24 comparison group service companies had a lower cost per customer than WV American. Based on this result, it is possible to conclude that the Service Company's 12 months ended December 31, 2009 charges to WV American were reasonable.

Exhibit 1

West Virginia American Water Company
Comparison of Service Company Annual Costs Per Customer

V – Question 2 – Provision of Services at the Lower of Cost or Market

Methodology

The lower-of-cost-or-market comparison is accomplished by comparing the cost per hour for Service Company managerial and professional services to those of outside service providers to whom these duties could be assigned. Based on the nature of the Service Company services it was determined that the following outside providers could perform the categories of services indicated below:

- Management Consultants – executive and administrative management, risk management services, human resources and communications services
- Attorneys – legal services
- Certified Public Accountants – accounting, financial, information technology and rates and revenues services
- Professional Engineers – engineering, operations and water quality services.

The services provided by the Belleville lab are assumed to be transferable to professional engineers for purposes of this cost comparison. This was done for two reasons. First, there is no readily available survey of hourly billing rates for testing services such as those performed by Belleville. Second, Belleville personnel have similar, scientific educational backgrounds as Service Company engineering personnel. Thus, it is valid to compare the hourly rates of Belleville services to those of outside engineering firms.

Service Company's hourly rate were calculated for each of the four outside service provider categories, based on the dollars and hours charged to WV American during the 12 months ended December 31, 2009. Hourly billing rates for outside service providers were developed using third party surveys or directly from information furnished by outside providers themselves.

It should be noted that by using the Service Company's hours charged WV American during the 12 months ended December 31, 2009, its hourly rates are actually overstated because Service Company personnel charge a maximum 8 per day even when they work more. Outside service providers generally bill for every hour worked. If the overtime hours of Service Company personnel had been factored into the hourly rate calculation, Service Company hourly rates would have been lower.

The last step in the market cost comparison was to compare the Service Company's average cost per hour to the average cost per hour for outside providers.

Service Company Hourly Rates

Exhibit 2 (page 14) details the assignment of 12 months ended December 31, 2009 management and professional Service Company charges by outsider provider category. Exhibit 3 (page 15) shows the same assignment for Service Company management and professional hours charged to WV American during the 12 months ended December 31, 2009.

Certain adjustments to these dollar amounts were necessary to calculate Service Company hourly rates that are directly comparable to those of outside providers. Adjustments were made to the following 12 months ended December 31, 2009 test period non-labor Service Company charges:

V – Question 2 – Provision of Services at the Lower of Cost or Market

- Contract Services – 12 months ended December 31, 2009 Service Company charges to WV American include expenses associated with the use of outside professional firms to perform certain corporate-wide services (e.g., legal, financial audit, actuarial services). These professional fees are excluded from the Service Company hourly rate calculation because the related services have effectively been out-sourced already.

- Travel Expenses – In general, client-related travel expenses are not recovered by outside service providers through their hourly billing rate. Rather, actual out-of-pocket travel expenses are billed to clients in addition to fees for professional services. Thus, it is appropriate to remove these Service Company charges from the hourly rate calculation.

- Information Technology Infrastructure Expenses – Included in the 12 months ended December 31, 2009 Service Company charges to WV American are leases, maintenance fees and depreciation related to American Water's enterprise mainframe, server and network infrastructure and corporate business applications. An outside provider that would take over operation of this infrastructure would recover these expenses over and above the labor necessary to operate the data center.

Exhibit 4 (page 16) shows how contract services, travel expenses and computer hardware/software-related Service Company charges are assigned among the four outside provider categories.

Based on the assignment of expenses and hours shown in Exhibits 2 and 3 and the excludable items shown in Exhibit 4, the Service Company's equivalent costs per hour for the 12 months ended December 31, 2009 are calculated below.

	Attorney	Management Consultant	Certified Public Accountant	Professional Engineer	Total
Total management, professional & technical services charges	$ 368,301	$ 2,223,797	$ 4,849,695	$ 991,596	$ 8,433,389
Less:					
Contract services	$ 29,441	$ 160,875	$ 580,482	$ (10,241)	$ 760,557
Travel expenses	$ 4,710	$ 78,075	$ 64,442	$ 37,016	$ 184,244
Computer hardware/software	$ 8,155	$ 342,854	$ 338,007	$ 55,363	$ 744,379
Net Service Charges (A)	$ 325,994	$ 1,641,993	$ 3,866,763	$ 909,459	$ 6,744,209
Total Hours (B)	2,472	13,138	48,051	14,002	77,663
Average Hourly Rate (A / B)	**$ 132**	**$ 125**	**$ 80**	**$ 65**

Outside Service Provider Hourly Rates

The next step in the cost comparison was to obtain the average billing rates for each outside service provider. The source of this information and the determination of the average rates are described in the paragraphs that follow.

It should be noted that professionals working for three of the five outside provider categories may be licensed to practice by state regulatory bodies. However, not every professional working for these firms is licensed. For instance, among West Virginia certified public accounting firms, only more experienced staff are predominantly CPAs (see table below). Some Service Company employees also have professional licenses. Thus, it is valid to compare the Service Company's hourly rates to those of the outside professional service providers included in this study.

Position	WVa Average
Partners/Owners	98%
Directors (11+ years experience)	81%
Managers (6-10 years experience)	66%
Sr Associates (4-5 years experience)	44%
Associates (1-3 years experience)	16%
New Professionals	7%

Source: AICPA's National PCPS/TSCPA Management of an Accounting Practice Survey (2008)

Attorneys

The West Virginia State Bar does not survey its members as to their hourly billing rates. In addition, publicly available billing rate information could not be found for West Virginia attorneys. Therefore, an estimate of West Virginia attorney rates was developed from two surveys conducted by Lawyers Weekly in the states of Michigan and Massachusetts. As presented in Exhibit 5, the average rate for each firm was adjusted for the cost of living differential between its location and Charleston, West Virginia. The Lawyers Weekly surveys included rates in effect at December 31, 2007. Thus, the 2007 average rate was escalated to June 30, 2009—the midpoint of the test year ended December 31, 2009.

Management Consultants

The cost per hour for management consultants was developed from a 2009 survey performed by the Association of Management Consulting Firms—an industry trade organization. The survey includes rates that were in effect during 2008 for firms throughout the United States. Consultants typically do not limit their practice to any one region and must travel to a client's location. Thus, the U.S. national average is appropriate for comparison.

The first step in the calculation, presented in Exhibit 6, was to determine an average rate by consultant position level. From these rates, a single weighted average hourly rate was calculated based upon the percent of time that is typically applied to a consulting assignment by each consultant position level. The 2008 average rate was escalated to June 30, 2009—the midpoint of the 12 months ended December 31, 2009.

Certified Public Accountants

The average hourly rate for West Virginia CPAs was developed from a 2008 survey performed by the American Institute of Certified Public Accountants (AICPA). The West Virginia version of this survey was used to develop hourly rates for member firms in West Virginia.

As shown in Exhibit 7, a weighted average hourly rate was developed based on a set of accountant positions and a percent of time that is typically applied to an accounting assignment. This survey includes rate information in effect during 2007. Thus, the data had to be escalated to June 30, 2009—the test year's midpoint.

Professional Engineers

The Company provided hourly rate information for outside engineering firms that could have been used by WV American in 2009. As presented in Exhibit 8, an average rate was developed for each engineering position level. Then, using a typical percentage mix of project time by engineering position, a weighted average cost per hour was calculated.

Source: Information provided by American Water Works Service Company

V – Question 2 – Provision of Services at the Lower of Cost or Market

Service Company versus Outside Provider Cost Comparison

As shown in the table below, Service Company costs per hour are considerably lower than those of outside providers.

	12 Months Ended December 31, 2009		
Service Provider	Service Company	Outside Provider	Difference--Service Co. Greater(Less) Than Outside
Attorney	$ 132	$ 225	$ (93)
Management Consultant	$ 125	$ 230	$ (105)
Certified Public Accountant	$ 80	$ 117	$ (36)
Professional Engineer	$ 65	$ 112	$ (47)

Based on these cost per hour differentials and the number of managerial and professional services hours billed to WV American during the 12-months ended December 31, 2009, outside service providers would have cost $4,019,121 more than the Service Company (see table below). Thus, on average, outside provider's hourly rates are 48% higher than those of the Service Company ($4,019,121 / $8,433,389).

	12 Months Ended December 31, 2009		
Service Provider	Hourly Rate Difference--Service Co. Greater(Less) Than Outside	Service Company Hours Charged	Dollar Difference
Attorney	$ (93)	2,472	$ (228,950)
Management Consultant	$ (105)	13,138	$ (1,384,160)
Certified Public Accountant	$ (36)	48,051	$ (1,745,758)
Professional Engineer	$ (47)	14,002	$ (660,253)
Service Company Less Than Outside Providers			$ (4,019,121)

It should be noted that the cost differential associated with using outside providers is even greater because Service Company personnel do not charge for more than 8 hours per day even when they work more. Outside providers generally charge clients for all hours worked. If, for instance, Service Company personnel worked 5% overtime (2 hours) per week on WV American's behalf, that would have amounted to over 3,800 additional hours of work during the 12 months ended December 31, 2009. Based on the hourly rate differentials above, this overtime would have added another $200,000 to the cost of using outside provider.

If WV American were to use outside service providers rather than the Service Company for managerial and professional services, it would incur other additional expenses besides those associated with higher hourly rates. Managing outside firms who would perform approximately 77,600 hours of work (more than 51 full-time equivalents at 1,500 "billable" hours per FTE per year) would add a significant workload to the existing WV American management team. Thus, it would be necessary for WV American to add at least one position to supervise the outside firms and ensure they delivered quality and timely services. The individuals that would fill this position would need a good understanding of each profession being managed. They must also have management experience and the authority necessary to give them credibility with the outside firms. As calculated in the table below, this position would add almost $165,000 per year to WV American's personnel expenses.

V – Question 2 – Provision of Services at the Lower of Cost or Market

Cost of Adding a Professional Position To WVA's S	Total
New Positions' Salary	$ 100,000
Benefits (at 49.4%)	$ 49,400
Office Expenses (15.2%)	$ 15,200
Total Cost of Full Time Position	$ 164,600

Thus, the total effect on the ratepayers of WV American of contracting all services now provided by Service Company would be an increase in their costs of $4,183,721 ($4,019,121 + $164,600). Based on the results of this comparison, it is possible to conclude that the Service Company charged WV American at the lower of cost or market for services provided during the 12 months ended December 31, 2009.

VI - Question 3 - Reasonableness of Customer Accounts Services Costs

Background

Customer Accounts Services covers the following utility functions:

- Customer Call Center – customer calls/contact, credit, order taking/disposition, bill collection efforts, outage calls
- Call Center IT – maintenance of phone banks, voice recognition units, call center software applications, telecommunications
- Customer billing – bill printing, stuffing, and mailing
- Remittance processing – processing customer payments received in the mail
- Bill payment centers – locations where customers can pay their bills in person

It is difficult to compare the cost of the Service Company's customer accounts services-related charges to WV American with outside providers of the same services because survey data is proprietary and expensive to obtain. For this reason, WV American's charges from the Service Company for customer accounts services are compared to those of neighboring electric utilities because the data necessary to make such comparison is available to the public.

Neighboring electric utility cost information comes from the FERC Form 1 that each utility must file. FERC's chart of accounts is defined in Chapter 18, Part 101 of the Code of Federal Regulations. FERC accounts that contain customer accounts services-related expenses are Account 903 Customer Accounts Expense – Records and Collection Expense and Account 905 Customer Accounts Expense – Miscellaneous Customer Accounts Expense. Exhibit 9 provides FERC's definition of the type of expenses that should be recorded in these accounts.

In addition to the charges in these FERC accounts, labor-related overheads charged to the following FERC accounts must be added to the labor components of Accounts 903 and 905:

- Account 926 Employee Pension and Benefits
- Account 408 Taxes Other Than Income (employer's portion of FICA)

Comparison Group

Electric utilities included in the comparison group are shown in the table below. These are companies whose FERC Form 1 show amounts for accounts 903 and 905.

West Virginia	• Appalachian Power • Monongahela Power	• Wheeling Power
Kentucky	• Duke Energy Kentucky • Kentucky Power	• Kentucky Utilities • Louisville Gas & Electric
Maryland	• Baltimore Gas & Electric • Delmarva Power & Light	• Potomac Electric
Ohio	• Cleveland Elect Illuminating • Columbus Southern Electric • Dayton Power & Light • Duke Energy Ohio	• Ohio Edison • Ohio Power • Toledo Edison
Virginia	• Appalachian Power	• Virginia Electric Power
Pennsylvania	• Duquesne Light • PECO Energy • Pennsylvania Electric	• Pennsylvania Power • PPL Electric

Virginia-American Water Company
FERC Account Descriptions

903 – Customer Records and Collection Expenses

This account shall include the cost of labor, materials used and expenses incurred in work on customer applications, contracts, orders, credit investigations, billing and accounting, collections and complaints.

Labor

1. Receiving, preparing, recording and handling routine orders for service, disconnections, transfers or meter tests initiated by the customer, excluding the cost of carrying out such orders, which is chargeable to the account appropriate for the work called for by such orders.
2. Investigations of customers' credit and keeping of records pertaining thereto, including records of uncollectible accounts written off.
3. Receiving, refunding or applying customer deposits and maintaining customer deposit, line extension, and other miscellaneous records.
4. Checking consumption shown by meter readers' reports where incidental to preparation of billing data.
5. Preparing address plates and addressing bills and delinquent notices.
6. Preparing billing data.
7. Operating billing and bookkeeping machines.
8. Verifying billing records with contracts or rate schedules.
9. Preparing bills for delivery, and mailing or delivering bills.
10. Collecting revenues, including collection from prepayment meters unless incidental to meter reading operations.
11. Balancing collections, preparing collections for deposit, and preparing cash reports.
12. Posting collections and other credits or charges to customer accounts and extending unpaid balances.
13. Balancing customer accounts and controls.
14. Preparing, mailing, or delivering delinquent notices and preparing reports of delinquent accounts.
15. Final meter reading of delinquent accounts when done by collectors incidental to regular activities.
16. Disconnecting and reconnecting services because of nonpayment of bills.
17. Receiving, recording, and handling of inquiries, complaints, and requests for investigations from customers, including preparation of necessary orders, but excluding the cost of carrying out such orders, which is chargeable to the account appropriate for the work called for by such orders.
18. Statistical and tabulating work on customer accounts and revenues, but not including special analyses for sales department, rate department, or other general purposes, unless incidental to regular customer accounting routines.
19. Preparing and periodically rewriting meter reading sheets.
20. Determining consumption and computing estimated or average consumption when performed by employees other than those engaged in reading meters.

Materials and expenses

21. Address plates and supplies.
22. Cash overages and shortages.
23. Commissions or fees to others for collecting.
24. Payments to credit organizations for investigations and reports.
25. Postage.
26. Transportation expenses, including transportation of customer bills and meter books under centralized billing procedure.
27. Transportation, meals, and incidental expenses.
28. Bank charges, exchange, and other fees for cashing and depositing customers' checks.
29. Forms for recording orders for services, removals, etc.
30. Rent of mechanical equipment.

West Virginia American Water Company
FERC Account Descriptions

905 – Miscellaneous Customer Accounts Expenses

This account shall include the cost of labor, materials used and expenses incurred not provided for in other accounts.

Labor

1. General clerical and stenographic work.
2. Miscellaneous labor.

Materials and expenses

3. Communication service.
4. Miscellaneous office supplies and expenses and stationery and printing other than those specifically provided for in accounts 902 and 903.

VI - Question 3 - Reasonableness of Customer Accounts Services Costs

WV American Cost per Customer

As calculated below, WV American's 12 months ended December 31, 2009 customer account services expense per customer was $29.15. The cost pool used to calculate this average includes charges for Service Company services (e.g., call center, billing, payment processing) and postage and forms expenses, which are incurred directly by WV American. It was necessary to adjust the National Call Center charges because electric utilities experience an average of 2.50 calls per customer compared to American Water's 1.32 calls per customer. Thus, National Call Center expenses had to be increased, for comparison purposes, to reflect its costs at a 2.50 calls per customer level.

West Virginia American Water Company

	Cost Component	Service Co Charges	Adjustment Fewer Calls For Water Cos. (A)	Adjusted	
Service Company					
Call Centers	Call processing, order processing, credit, bill collection	$ 2,592,450	$ 1,035,507	$ 3,627,957	
Service Company	Customer payment processing			$ 251,817	Note B
Operating Company	Postage & forms			$ 1,134,869	
			Cost Pool Total	$ 5,014,643	
			Total Customers	172,006	
	12 Months Ended December 31, 2009 Cost Per WV American Customer			**$ 29.15**	

Note A: Adjustment for American Water's fewer calls per customer

This adjustment is necessary because water utilities experience fewer calls per customer than do electric utilities

Test year Call Handling charges		$ 1,154,220
Electric utility industry's avg calls/customer	2.50	
American Water's avg calls/customer	1.32	
Percent different	90%	90%
Total Adjustment B		$ 1,035,507

Note B: Estimated customer payment processing expenses

Number of customers	172,006
Number of payments/customer/year	12.0
Total payments processed/year	2,064,072
Bank charge per item	$ 0.1220
Total estimated annual expense	$ 251,817

Electric Utility Group Cost per Customer

Exhibit 10 shows the actual 2008 customer accounts expense per customer calculation for the electric utility comparison group. All of the underlying data was taken from the utilities' FERC Form 1.

VI - Question 3 - Reasonableness of Customer Accounts Services Costs

Summary of Results

As shown in the table below, WV American's cost per customer is below the average cost of the neighboring electric utility comparison group. It can therefore be concluded that WV American's 12 months ended December 31, 2009 customer accounts-related expenses, including those of the Alton and Pensacola Call Centers, assigned by the Service Company to WV American were comparable to those of other utilities.

Average Customer Accounts Expense Per Customer		
Monongahela Power	$	15.58
Pennsylvania Electric	$	15.59
Pennsylvania Power	$	16.65
Duquesne Light	$	16.83

VI - Question 4 – Need for Service Company Services

Analysis of Services

The final aspect of this study was an assessment of whether the services that are provided to WV American by the Service Company would be necessary if WV American were a stand-alone water utility. The first step in this evaluation was to determine specifically what the Service Company does for WV American. Based on discussions with Service Company personnel, the matrix in Exhibit 11 was created showing which entity—WV American or a Service Company location—is responsible for each of the functions WV American requires to ultimately provide service to its customers. This matrix was reviewed to determine: (1) if there was redundancy or overlap in the services being provided by the Service Company and (2) if Service Company services are typical of those needed by a stand-alone water utility.

Upon review of Exhibit 12, the following conclusions can be drawn:

- The services that the Service Company provides are necessary and would be required even if WV American were a stand-alone water utility.

- There is no redundancy or overlap in the services provided by the Service Company to WV American. For all of the services listed in Exhibit 12, there was only one entity that was primarily responsible for the service.

Governance Practices Associated With Service Company Charges

There are several ways by which WV American exercises control over Service Company services and charges. The most important of these are described below.

- **President of Regulated Operations Oversight** – The President of Regulated Operations is on the Executive Management Team (EMT) of American Water. This position is responsible for the overall performance of each operating company in American Water. As part of the EMT, the President of Regulated Operations has equal say with other EMT members in major business decisions of American Water and has the ability to monitor Service Company performance quality and spending. The President of Regulated Operations also has dialogue with each operating company president to address local concerns.
- **Divisional Vice President & Treasurer** – The Divisional Vice President and Treasurer of the Eastern Division states is responsible for the financial reporting, performance and internal controls of each of the operating companies in the division. The Vice President and Treasurer monitors the performance and reporting from the Service Company and follows up on instances where the quality and timeliness of services are not as expected. The operating company interacts with the Divisional VP & Treasurer to discuss any concerns with billings, etc.
- **Operating Company Board Oversight** – WV American's board of directors includes members of American Water's EMT, members of the divisional management team and business and community leaders from outside the Company. WV American's president is Chairman of the KAWC board. This helps ensure that WV American's needs are a factor in the delivery of Service Company services.
- **Service Company Budget Review/Approval** – The President of Regulated Operations sits on the Service Company board and that board must formally approve the budget for Service Company charges for the next year. These budgeted charges are consolidated with the operating company's own spending into an overall budget which must be approved by the operating company's board of directors. WV American's president also sits on the Service Company board.
- **Major Project Review And Approval** – Major projects undertaken by the Service Company must first be reviewed by American Water's Executive Management Team, which includes the President of Regulated Operations. With input from the local presidents and Divisional Vice President & Treasurer, they have the ability to impact all new initiatives and projects before they are authorized.
- **Service Company Bill Scrutiny** – WV American Finance personnel review the monthly Service Company bill for accuracy and reasonableness on a monthly basis. WV American financial manager has dialogue with Shared Services Center office personnel concerning the monthly bill and any mistakes or overcharges are credited on a subsequent billing. The WV American Finance Manager prepares an actual to budget comparison of management fees each month for use in identifying unusual variances. Service Company actual to budget comparison is included in the monthly FRP. Unusual variances are researched, explanations are provided and any corrections are made, as necessary.
- **Service Company Budget Variance Reporting** – Each month, a summary variance analysis is prepared that explains differences between budgeted and actual Service Company spending. In addition, a more detailed monthly variance report, called the "Statement of Expenses and Billed Charges," is produced by Service Company location and shows actual spending for the month.

- **Operating Company Budget Variance Reporting** – The "Budget/Plan Analysis," produced monthly, has a line item for Management Fees (i.e., Service Company charges). In this way, Service Company budget versus actual charges can be monitored for the month and year-to-date. Additional information exists that allows more detailed analysis of "Divisional" and "Corporate" Management Fees.

- **Capital Investment Management ("CIM") –** CIM is one of American Water's primary business planning processes. It covers capital and asset planning and is employed throughout American Water. CIM provides a full range of governance practices, including a formal protocol for assessing system needs, prioritizing expenditures, managing the capital program, approving project spending, delivering projects and measuring outputs. CIM ensures that:
  - Capital expenditure plans are aligned with the strategic intent of the business
  - The impact of capital expenditure and income plans are fully reflected in operating expense plans
  - The impacts of these plans are understood and affordable, and
  - Effective controls are in place over budgets (through business plans) and individual capital projects (through appropriate authorization thresholds, management and reporting processes).

  The CIM process was designed to optimize the effectiveness of asset investment. The process is managed at two levels for all American Water companies, including all WV American Operating Units. Monthly meetings of the CIM are held to review capital spending compared to plan, review new project requests, and review updates or modifications to existing projects. The President of WV American and others participate as necessary (e.g. WV American operations managers and Rates Manager) and provide the data used in the monthly review schedules.

I. INTRODUCTION

Deloitte & Touche LLP ("Deloitte & Touche") was engaged by Illinois-American Water Company ("IAWC") to conduct a Service Company Cost Study ("Study") comparing the cost of certain services expected to be obtained by IAWC from American Water Works Service Company, Inc. ("AWWSC" or "Service Company") to the costs that would be incurred if such services were obtained in the open market. This Study is prepared in response to the Illinois Commerce Commission's ("Commission") Order of July 30, 2008 in Docket 07-0507 that IAWC

> "…conduct a study comparing the cost of each service obtained from the Service Company to the costs of such services had they been obtained through competitive bidding on the open market. As part of the study, IAWC must also provide an analysis of the services provided by the Service Company to all of IAWC's affiliates. The analysis must provide details on the specific services provided to IAWC and how costs are allocated among affiliates of IAWC. IAWC shall include the study in its next rate filing."[1]

As the testimony of IAWC's President, Ms. Teasley, discusses, in response to this requirement, IAWC has presented the testimony of five witnesses, including the testimony of Messrs. Mark Young of Deloitte & Touche and Bernard L. Uffelman of Uffelman Advisory Services, LLC, who sponsor this Study. As Ms. Teasley explains, Mr. John Young, President of AWWSC discusses each service that AWWSC performs. Mr. Edward Grubb addresses the cost assignment and allocation process, and other matters related to AWWSC services.

As Ms. Teasley explains, in procuring services, IAWC's practice is to provide support for utility operations based on considerations of cost-effectiveness, timeliness, reliability and adequacy. For certain services, IAWC is able to maintain adequate service quality and achieve efficiencies through the use of qualified third-party providers (i.e., AWWSC or a non-affiliate provider). As Ms. Teasley indicates, for certain services that can be outsourced, IAWC has determined that use of a non-affiliate provider is not feasible. For the reasons Ms. Teasley discusses, the services in this category include corporate governance, the customer service center and the employee benefits service center. For the reasons given by Ms. Teasley, IAWC believes that these services should be performed only by employees of IAWC or those of an affiliated company. Ms. Teasley sponsors a study that compares the cost incurred by IAWC in obtaining these, and other services, from AWWSC to the market cost that IAWC would incur if it were to itself retain the personnel needed to provide these services on a stand-alone basis ("Self Provision Study"). Thus the Self Provision Study provides the applicable market comparison for services that cannot be

[1] Illinois Commerce Commission Docket 07-0507, Section IV. B. 6. d

outsourced to non-affiliates. The required market comparison for services that IAWC can effectively outsource to an affiliate or non-affiliate provider are the subject of this Study. This Study also provides an analysis of IAWC's customer service center costs which supports the Self Provision Study sponsored by Ms. Teasley.

The remainder of this Study is comprised of the following seven sections:

- Overview of AWWSC
- Study Methodology
- Market Cost Comparison Survey Information
- Market Analysis
- Customer Accounts Analysis
- Study Conclusions
- Professional Standards

The Service Company provided Deloitte & Touche with information pertaining to AWWSC and IAWC to perform the Study, including but not limited to information related to the projected level of service costs for the fully forecasted 2010 test year. The analysis also relied on market information obtained directly by Deloitte & Touche. The sources of information used in developing the analysis are noted throughout this Study and supporting schedules.

The methodology used by Deloitte & Touche for comparing the cost of each service expected to be obtained from the Service Company that can be performed by a non-affiliate to the costs of such services that would be incurred if such services were obtained through competitive bidding on the open market is described in greater detail in the following sections of this Study. The methodology incorporates a comparison of the forecasted cost of certain services expected to be obtained by IAWC from the Service Company during the forecast period to the expected cost or market price for the services in the future period if such services were obtained on the open market. The results of the analysis show either the cost savings expected to be realized (i.e., Service Company costs lower than market) or the excess costs expected to be incurred (i.e., Service Company costs higher than market) by IAWC from obtaining professional and managerial services through the Service Company when compared to the costs of acquiring such services in the open market from third-party service providers.

As discussed above, the Self Provision Study provides the applicable market comparison for IAWC's customer service related cost (comparing the cost incurred by IAWC to obtain this service from AWWSC to the cost to self provision, i.e., the cost to IAWC of retaining the needed personnel in the market to provide this service on a stand-alone basis). As Ms. Teasley discusses, the Self Provision Study demonstrates that the cost incurred by IAWC to obtain this service through AWWSC is significantly below the cost that would be incurred to self-provide the services.

This Study provides an additional analysis of customer service costs that supports the Self Provision Study sponsored by Ms. Teasley. The analysis performed by Deloitte & Touche includes a comparison of IAWC's customer service cost to the customer service costs reported by other utilities in narrowly defined customer accounts for providing comparable services. Although not a market cost comparison for this type of service, the additional analysis demonstrates that IAWC's customer service cost to obtain this service through AWWSC is below the average level of cost incurred by other utilities for this function.

II. OVERVIEW OF AWWSC

AWWSC is a subsidiary of American Water Works Company, Inc. ("AWWC" or "American Water") and is organized as a services organization to provide governance and support services to AWWC affiliates, including IAWC. Service companies are common in the utility industry and provide support services to affiliates in a centralized manner resulting in cost efficiencies to affiliates by eliminating the need for affiliates to perform support services on a stand-alone basis.

A. **AWWSC Locations**

AWWSC is a collection of organizations (i.e., functions) that provide managerial and professional support services to AWWC affiliates including IAWC from a number of locations. The AWWSC locations are described below.

Belleville Lab – personnel at this location perform water quality testing for all AWWC operating water utility affiliates. The Belleville Lab is located in Belleville, Illinois.

National Call Centers – AWWSC personnel perform the following customer service activities: customer call processing, service order processing, customer payment processing, credit and collection, customer billing and other customer related activities. AWWSC operates two call centers located in Alton, Illinois and Pensacola, Florida. AWWSC's call centers respond to customer inquiries nationwide from AWWC's regulated operations, including customers in Illinois served by IAWC.

Corporate – personnel located in Voorhees, New Jersey include AWWC's executive management group as well as AWWSC functional leadership who provide corporate oversight and support services to AWWC affiliates. Corporate operations personnel are also located in Mt. Laurel, New Jersey.

Information Technology Service Centers ("ITS") – this function consists of a principal data center located in Hershey, Pennsylvania to support AWWC's information technology infrastructure required to operate AWWSC and operating company business applications and computer systems. A second data center is

located in Haddon Heights, New Jersey. ITS administrative personnel are located in Voorhees, New Jersey.

Shared Service Center ("SSC") – personnel at this location in Cherry Hill, New Jersey provide financial, accounting and treasury services to AWWC's operating companies.

B. **AWWSC Business Functions**

As discussed in Mr. John Young's testimony, AWWSC services are provided to American Water affiliates by AWWSC personnel in the following functions:

- **Communications and External Affairs**
- **Corporate Finance**
  - Treasury
  - Controller
  - Planning & Reporting
- **Customer Service Center**
- **Human Resources**
- **Information Technology Services**
- **Legal**
- **Operations Services**
  - Engineering
  - Maintenance & SCADA
  - Innovation & Environmental Stewardship
  - Central Laboratory Services
  - Supply Chain
  - Best Operating Practices
  - Operations Risk Management
- **Divisional Operations Support and Regulated Operations**
- **Shared Services Center**
- **Other**
  - Business Development
  - Internal Audit
  - Investor Relations
  - Regulatory Programs

C. **AWWSC Costs**

The types of costs incurred by AWWSC in providing service to affiliates including IAWC include the following:

- **Compensation costs** – this cost category includes the salaries and wages of AWWSC professional and managerial and administrative personnel who provide services to AWWC affiliates, and

- **Overhead costs** – this cost category includes labor-related overhead costs, building/office costs, and other overhead costs. Labor-related overhead costs include but are not limited to: employee benefits, pensions and payroll taxes. Building/office and other overhead costs include but are not limited to: depreciation expense, property and equipment rental, transportation lease and maintenance costs, property and liability insurance, utility and miscellaneous general office costs.

Labor loading rates are developed by AWWSC and applied to AWWSC employee compensation costs to recover the overhead costs referenced above. The "fully-loaded" AWWSC costs are billed to affiliates for services provided. Charges for services provided by AWWSC to affiliates are therefore billed "at cost" and do not include a profit or mark-up.

III. STUDY METHODOLOGY

This section of the Study provides an overview of the methodology used by Deloitte & Touche for comparing the cost of certain services expected to be obtained by IAWC from the Service Company to the costs of such services that would be incurred if the services were obtained through competitive bidding on the open market. This section of the Study also provides an overview of the methodology used by Deloitte & Touche for comparing IAWC's customer service related costs to those of other utilities. Sections V and VI of the Study provide additional detailed information including schedules summarizing the results of the market and customer accounts analyses discussed below.

A. Market Analysis

1. Primary Analysis

This section describes the primary analysis used by Deloitte & Touche to compare the cost of each service expected to be obtained from the Service Company that can be effectively outsourced to an affiliate or non-affiliate provider to the cost that would be incurred for the service if it were obtained on the open market ("Market Analysis"). To develop the analysis, the Service Company provided Deloitte & Touche with test year forecast information regarding IAWC's fully forecasted test year including the services expected to be utilized by IAWC during the forecast period and the costs expected to be incurred in the provision of such services. Information provided by the Service Company related to the test year included, but was not limited to, the business units and locations providing the services (e.g., Belleville Lab, Corporate, SSC); the functions providing the services (e.g., accounting, audit, finance, treasury); the categories

of services to be provided within each function (e.g., accounting, engineering, legal); the job titles of the personnel expected to provide the services and the number of positions in each job title; the number of hours expected to be worked in providing the services; and the costs expected to be incurred in providing the services (e.g., labor, labor overheads, building and office costs, and other overheads). This information provided Deloitte & Touche with an understanding of the services and costs expected to be incurred by the Service Company at the service level (i.e., business unit and function) in providing services to IAWC during the test year for comparison to an expected market price if such services were obtained from third-party providers through a competitive bidding process.

In providing professional and managerial services to affiliates, including IAWC, the Service Company incurs similar types of costs as shown in Section II above as do third-party providers. However, unlike charges or billing rates established by third-party vendors to bill for services provided that include a profit component, services provided by AWWSC to affiliates are billed at cost. Services provided by the Service Company and their related fully-loaded costs can be grouped or categorized for an “apples-to-apples” comparison to the services and costs that would result from obtaining such services from outside service providers in the open market.

To develop the market service categories and cost information to compare to the IAWC test year services and costs, Deloitte & Touche obtained and used market survey cost information as described in Section IV of this Study for the following professional and managerial service categories:

- Accounting Services,
- Engineering Services,
- Information Technology Services,
- Legal Services, and
- Management Consulting Services.

The market surveys corresponding to the above five service categories contain external market survey hourly billing rate (“Market Rate”) information or, in the case of information technology services, compensation information for computing a Market Rate for the professional service classifications listed in the market surveys. For example, as explained in greater detail in Section IV of this Study, the Market Rate information for accounting services was reported by accounting firms for the following professional service classifications:

- Partner,
- Director,
- Manager,
- Senior Associate, and
- Associate.

To assist Deloitte & Touche with the comparison of the 2010 forecasted cost for each type of service expected to be obtained by IAWC from the Service Company to an expected market price for the service in the future period (for those services that can be effectively outsourced to a non-affiliate provider), the Service Company provided Deloitte & Touche with a summary by business unit location and function of the test year costs and hours expected to be incurred during the test year. The summary also included the Service Company's expected unitized cost per hour ("Service Company Rate") for providing each service. The Service Company Rate was calculated by dividing the expected test year costs to provide the service by the projected number of hours required to provide the service. This information was mapped to the professional and managerial personnel classifications contained in the market surveys as provided to the Service Company by Deloitte & Touche for each of the five service categories listed above and resulted in comparative data for comparing the fully-loaded cost of certain services expected to be obtained from the Service Company to the cost of such services if they were obtained through competitive bidding on the open market.

Since professional services firms typically recover the cost of administrative personnel and executive assistants through the hourly billing rates they charge for their professional personnel, the Service Company's cost of its administrative personnel and executive assistants were included in the calculation of the Service Company Rates for its professional and managerial personnel. This adjustment resulted in the recognition of the Service Company's costs for administrative personnel and executive assistants in the fully-loaded cost of each service expected to be provided by the Service Company to IAWC for comparison to the market survey costs charged by outside providers.

To compare IAWC's costs for the services expected to be provided by the Service Company during the forecasted 2010 test year to the costs for such services had they been provided by outside third-party service providers, it was necessary to exclude employee meals and travel expenses. This adjustment was necessary since professional services firms typically charge clients directly for meals and travel expenses and therefore, travel-related costs are not recovered through the firms' hourly billing rates. In addition, an adjustment was made by IAWC to exclude certain software and hardware related costs (e.g., computer software applications and maintenance, computer hardware costs, depreciation and amortization, license fees and annual updates) from Service Company costs. To the extent a professional services firm incurs costs related to specialized hardware and software applications required to perform services on behalf of a specific client, such as American Water, such costs would typically be charged directly to the client as an expense and therefore would not be included in the firm's hourly billing rates.

Based on the professional service classifications defined by Deloitte & Touche, Deloitte & Touche and the Service Company developed for each of the five service categories a time distribution of the expected test year Service Company

hours for each professional service classification within each of the service categories. The time distributions were used by Deloitte & Touche to apply to the Market Rate for each professional classification to compute a weighted average Market Rate for each service category and professional classification. Because the market surveys contained 2007 or, in the case of information technology services, 2008 price information, the Market Rates for each service category were escalated using the consumer price index – all urban consumers ("CPI") to 2010 expected cost levels.[2]

The weighted average Market Rate for each service category and professional classification was compared to the Service Company Rate for each service category and professional classification as computed by the Service Company for IAWC's test year. The differences between the Service Company Rates and the Market Rates were then multiplied by the number of budgeted hours contained in IAWC's forecast period to calculate either the cost savings expected to be realized (i.e., Service Company costs lower than market) or the excess costs expected to be incurred (i.e., Service Company costs higher than market) by IAWC from obtaining professional and managerial services through the Service Company when compared to the costs of such professional services if they were acquired in the open market from third-party service providers.

To supplement the Market Rates used in the analyses, and to verify that the Market Rates are an appropriate measure for comparing to the Service Company Rates, Deloitte & Touche requested information from American Water regarding rates quoted or charged by third-party vendors ("Supplemental Rates") to American Water for services provided. American Water provided information relating to the Supplemental Rates charged for services provided to it or subsidiaries by third-party vendors in relevant markets. Section V of this Study contains the analysis and discussion of the comparison of the Service Company's fully-loaded Service Company Rates to the Market Rates and the Supplemental Rates.

2. Secondary Analysis

In addition to the primary Market Analysis described above which included analysis of the Service Company Rates for Belleville Lab employees, IAWC witness Edward Grubb performed an analysis of the Belleville Lab costs. As described in Mr. Grubb's testimony, the Service Company performed a cost study comparing the Belleville Lab's cost to perform certain tests on a "per test" basis to the cost for use of outside commercial testing labs to perform the same tests. The analysis recognizes that laboratory services of the type utilized by IAWC are available in the market on a "per test" basis (while the primary Market

[2] United States Department Of Labor, Bureau Of Labor Statistics for changes in CPI-U through 2008. Congressional Budget Office *The Budget and Economic Outlook: Fiscal Years 2009 to 2019*, January 8, 2009, economic projection of percentage changes in CPI-U for calendar years 2009 and 2010.

Analysis recognizes that personnel qualified to perform the tests can be retained in the market on an hourly basis).

B. **Customer Accounts Analysis**

This section describes the Customer Accounts Analysis performed by Deloitte & Touche which supports the market comparison for customer service related costs contained in the Self Provision Study sponsored by Ms. Teasley. AWWSC's National Call Centers and IAWC perform numerous customer-related activities, the costs of which are charged or allocated to IAWC. Customer-related activities performed and costs incurred by AWWSC and IAWC include but are not limited to:

- Customer billing inquiries,
- Customer order processing,
- Billing information processing,
- Customer payment processing,
- Correspondence processing,
- Bank service charges,
- Postage, and
- Bill forms.

In most circumstances, the reasonableness of costs incurred by a specific utility cannot properly be assessed based solely on a comparison of the utility's costs with those incurred by other entities. This is because the needs, activities and cost structures of the entities involved may differ with the result that a cost comparison is meaningless. Where, however, a comparison is narrowly focused on a process reasonably expected to involve similar activities, and there is an applicable standardized accounting process, a cost comparison may provide an indication of reasonableness.

In the case of customer service, such activities among utilities are sufficiently similar to allow cost comparisons among regulated utilities that apply an established regulatory accounting framework. In these circumstances, there is some basis to expect reasonable accuracy and consistency of approach among the entities involved. United States electric utilities perform similar customer-related activities and incur similar types of customer-related costs in providing services to customers as does IAWC, therefore a Customer Accounts Analysis using information from regulatory filings was performed. Deloitte & Touche selected 13 electric utilities, 7 of which are combination electric and gas utilities, operating in the central region of the United States (i.e., Illinois, Indiana, Iowa, Missouri, and Ohio) for purposes of the Customer Accounts Analysis. Of the 13 utilities, 11 receive support services from a centralized service company affiliate.[3]

[3] *FERC Financial Report FERC Form No. 60: Annual Report of Centralized Service Companies.* Form No. 60 is an annual regulatory support filing under 18 CFR 366.23

The number of customers served by the electric utilities ranges from approximately 166 thousand to over 3.8 million.

The results of Deloitte & Touche's Customer Accounts Analysis are discussed in greater detail in Section VI of this Study.

IV. MARKET COST COMPARISON SURVEY INFORMATION

This section of the Study provides a discussion of the market surveys from which Deloitte & Touche obtained the service classifications and Market Rates used to calculate the weighted average hourly billing rates for each of the five service categories used in the Market Analysis. The market surveys contain information relating to the compensation, fee and billing practices for the five categories of professional services firms. The market surveys were identified by Deloitte & Touche through research based on selection criteria, which included the following: availability of survey information to member firms or through purchase; reliability of survey information for use in determining the price of services in relevant markets; reputation of the organization that conducted the survey and published the survey data; if the organization conducting the survey was a trade organization, the number and types of member firms; the purpose of the survey; the number of information requests sent and responses received; number and frequency of presentations of the survey by the organization in past years; type of categorization in the survey of the market information; and the amount of information provided regarding educational and experience requirements for identified market categories. The selection criteria are discussed as applicable below in connection with each survey selected. Based on the research conducted, Deloitte & Touche concluded that the surveys selected each provide a reliable indication of a market price for services covered by the survey.

The Market Rates and professional service classifications for each of the five service categories are provided in schedules of the Study, which will be discussed below. The discussion below highlights certain information relative to the Study.

A. **Accounting Services**

Deloitte & Touche used the results of the AICPA's *2008 PCPS/TSCPA National Management of an Accounting Practice Survey ("MAP Survey")*[4] for the accounting services classifications. The 2008 MAP Survey was conducted by Intelli-Service, an independent market research company.

The AICPA has approximately 339,000 members ranging from sole practitioners to the largest U.S. accounting firms. Surveys were sent to 80,000 members and

[4] AICPA refers to the American Institute of Certified Public Accountants, PCPS refers to the Private Companies Practice Section of the AICPA, and TSCPA refers to the Texas Society of Certified Public Accountants

responses were received from 2,808 firms who provided information regarding their last fiscal year, which for most respondents was December, 2007. Average billing rate information was provided on both a regional and national basis. The survey respondents represented firms comprised of sole practitioners, single-office firms or regional firms. The MAP Survey has been conducted on an annual basis for 5 years and addresses key metrics that firms rely on to gauge their performance and profitability. For purposes of the analysis, Deloitte & Touche used the average billing rates reported by accounting firms in the Midwest Region having net client fees of two million dollars or more per year. Such firms typically have lower billing rates than national or "Big 4" firms (i.e., Deloitte, PricewaterhouseCoopers, KPMG or Ernst & Young). Therefore the accounting services Market Rates used in the Study are lower than those of the larger firms (as confirmed by Supplemental Rates that will be discussed) and are therefore conservative for purposes of the Study.

According to the MAP Survey, average billing rates for accounting services range from 1.84 times for partners to 4.43 times for associates of the professional's hourly compensation. For example, using a 4.43 times multiplier, an associate making $20 per hour would have a billing rate of approximately $89 per hour. Professional services firms that establish hourly billing rates based on a multiple of employees' salaries, use a multiplier, which, when applied to the employee's hourly compensation, is intended to cover the employee's salary and benefits, a portion of overhead costs, and a profit for the owners of the firm.

The MAP Survey also identifies the types of accounting firm costs and overheads (e.g., salaries, employee benefits, professional dues and licenses, library costs, continuing education, insurance, rent and other company costs, interest, computer and technology, promotion and marketing, payroll taxes, phone and web connectivity, and depreciation) incurred in providing service to clients. In general, the hourly billing rates of professional services providers are set at a level to recover all expenses (i.e., fully-loaded) and earn a profit for the owners.

B. **Engineering Services**

Deloitte & Touche used the results of the ZweigWhite Information Services, LLC *2008 Fee & Billing Survey of Architecture, Engineering, Planning & Environmental Consulting Firms* ("ZweigWhite Survey") for developing the engineering services classifications. The purpose of the eleventh annual ZweigWhite Survey is to gather, analyze, and publish information on the fee and billing practices of engineering, architecture, planning and environmental consulting firms. Survey responses to an 83-item questionnaire were received from 102 firms regarding their 2007 operations and represents a diverse cross-section of the design and consulting industry. Of the respondents, 85% have standard billing rates for each position or status level. Firms that use a multiple of employees' salaries to determine billing rates use a median of 3.0 times the employee's hourly wage rate.

The majority of firms (67%) mark up reimbursable expenses using a standard median markup of 10%, although a quarter of the firms mark up reimbursables by 15%. Average billing rate information was provided on both a national and regional basis. For analysis purposes, Deloitte & Touche used the average billing rates reported in the ZweigWhite Survey by firms for the North Central region including Illinois, Ohio, Indiana, Iowa and Missouri).

C. **Information Technology Services**

Deloitte & Touche used the *2008 IT Salary Report* published by Computer Economics, Inc. ("Computer Economics Report") and the *2008 IT Market Compensation Study* published by Gartner, Inc. ("Gartner Study") for developing information applicable to technology services classifications. The Computer Economics Report draws on a survey of information technology managers based on actual salaries paid to their employees in 2007 as well as their estimates of projected pay raises for 2008. The Computer Economics Report provides base salary projections for 78 specific job titles in 78 metropolitan areas of the United States. Computer Economics has been publishing salary data since 1990. The Gartner Study, which has been conducted annually for the past ten years, provided compensation data based on survey responses from 283 enterprises effective as of March 1, 2008. The Gartner Study data was utilized for six AWWSC positions for which no corresponding market compensation information was provided by the Computer Economics Report.

Unlike the other market survey data obtained by Deloitte & Touche, the Computer Economics Report and the Gartner Study provide average salary information, rather than average billing rate information, by position or service classification. For this reason, Deloitte & Touche calculated an hourly compensation rate and applied a billing rate multiplier of 3.0 times to develop a Market Rate for the job titles listed in the Computer Economics Report and the Gartner Study. Use of a billing rate multiplier of 3.0 times to develop a Market Rate for the job titles listed in the Computer Economics Report and the Gartner Study is both appropriate and conservative, as the 3.0 times multiplier is within the range of the other multipliers listed in the market rate surveys (i.e., 1.84 times to 4.43 times for accountants and 3.0 times for engineers as previously discussed in the Accounting Services and Engineering Services sections above, and 5.0 times for management consultants as discussed in the Management Consulting Services section below).

For developing the calculated Market Rates for each job title, Deloitte & Touche used the Middle Atlantic (i.e., Philadelphia, Pennsylvania / Atlantic City, New Jersey Metropolitan Area) median salary information for large companies (i.e., annual revenues greater than $750 million) listed in the Computer Economics Report. For developing the calculated Market Rates for the six job titles matched to the Gartner Study, Deloitte & Touche used the Northeast Region salary information listed in the Gartner Study.

D. **Legal Services**

Deloitte & Touche used the results of the Incisive Legal Intelligence *2008 NLJ Billing Survey* ("NLJ Survey") of the 250 largest law firms in the United States based on number of lawyers for developing the legal services classifications. The National Law Journal ("NLJ") surveyed approximately 300 law firms to determine the largest firms. The NLJ's thirty-first annual survey contains billing information for 216 large law firms regarding their 2007 billing practices. The NLJ is a subsidiary of Incisive Legal Intelligence, an Incisive Media US Properties, LLC company. Of the 216 firms, 127 firms provided specific hourly billing rate information for partners and associates. Some of the 127 firms provided their average partner and associate billing rates. For those firms that did not provide an average hourly billing rate, but did report high and low hourly billing rates, Deloitte & Touche used the reported partner and associate high and low hourly billing rates to develop an average partner and associate billing rate for the market comparison.

The NLJ Survey provides partner and associate billing rate information for the law firms listed by name and location. Deloitte & Touche used the NLJ Survey Midwest firm information (i.e., law firms operating in the states of Illinois, Missouri, Michigan, and Ohio) for developing the Market Rates for comparison to the Service Company Rates.

E. **Management Consulting Services**

Deloitte & Touche used the results of the Association of Management Consulting Firms' ("AMCF") 2008 Edition of the *Operating Ratios for Management Consulting Firms: A Resource for Benchmarking* ("AMCF Survey") for the management consulting services classifications.

The twenty-second annual AMCF Survey is based on 2007 consulting industry results including industry billing rates and procedures and was compiled by Industry Insights, Inc. AMCF distributed questionnaires to all 31 AMCF members as well as to other U.S. management consulting firms. Requests to participate in the AMCF Survey were primarily targeted to larger volume consulting businesses rather than single practitioners. In all, 49 responses were received and included in the AMCF Survey data.

Among survey respondents, billing rates on an overall staff basis for 2007 were set at a multiplier of approximately 5.0 times employee earnings. In other words, if an employee effectively earns $50 per hour, a 5.0 times earnings multiplier for billing rate determination would translate into a billing rate of $250 per hour.

V. MARKET ANALYSIS

This section of the Study provides the results of the Deloitte & Touche Market Analysis comparing the cost of each service expected to be obtained from the Service Company during the test year that can be performed by an affiliate or

non-affiliate provider to the cost that would be incurred for the service if it were obtained from a non-affiliate provider through competitive bidding in the open market. The Market Analysis provides a reasonable estimate of the cost savings realized, or the excess costs incurred by IAWC from obtaining professional and managerial services through AWWSC as compared to the cost of obtaining the services from non-affiliate providers. As shown on Schedule 8, the expected test year net cost savings realized by IAWC from obtaining each category of service from the Service Company rather than through outside third-party service providers totals $7.692 million.

The test year savings expected to be realized by IAWC, as shown on Schedule 8, are effectively understated due to the fact that Service Company managerial and professional personnel are “exempt employees” and, as such, only report a maximum time worked of eight hours per day even though they may actually work more than an eight-hour day. Since outside third-party vendors typically charge for all time incurred associated with the services provided, had the market analysis comparison recognized the additional time worked by Service Company employees, the Service Company Rates used in the market analysis would have been lower and the expected test year savings to IAWC would be greater than $7.692 million.

A. **Accounting Services**

Schedules 1 through 1.2 show the Market Analysis of accounting services. Schedule 1 Column A shows the accounting professional classifications contained in the MAP Survey as used in the analysis. Columns B and C show respectively the Market Rates from the MAP Survey for all participant firms and for Midwest Region firms having net client fees of $2 million or more per year. The adjusted 2010 Market Rates resulting from application of the cost escalator, as shown on Schedule 6 to adjust the Market Rates from the MAP Survey to a 2010 level, are shown in Column D. Column E shows the time distribution for each professional classification as provided by the Service Company on Schedule 1.1. Column F of Schedule 1 shows the weighted average Market Rate by professional classification resulting from applying the time distributions to the adjusted 2010 MAP Survey Market Rates. The weighted average Market Rate from Schedule 1 is used on Schedule 8 for comparison to the AWWSC average internal rate per hour for accounting services as provided by the Service Company on Schedule 1.1.

The table at the bottom of Schedule 1 provides a comparison of the Service Company Rates by professional classification as provided by the Service Company on Schedule 1.1 to the MAP Survey adjusted 2010 Market Rates for accounting services as shown at the top of Schedule 1. Schedule 1 also quantifies the hourly rate difference between the Service Company Rate and the MAP Survey Market Rate for each professional classification and whether the Service Company Rate is above or below the Market Rate. As shown on

Schedule 8, the cost savings realized by IAWC for accounting-related services obtained through the Service Company is projected to be $1.773 million.

Schedule 1.2 contains Supplemental Rate information regarding hourly billing rates for a “Big 4” accounting firm from information provided by American Water. As shown on Schedule 1.2, the Supplemental Rates, as adjusted to 2010 test year levels, range from a low of $254 per hour for staff accountants to a high of $489 per hour for partners. The Supplemental Rates shown on Schedule 1.2 are substantially higher than the MAP Survey Market Rates shown at the bottom of Schedule 1. As previously stated in the Study, this is to be expected as the larger accounting firms typically have higher billing rates than smaller firms. Since the Study compares the Service Company Rates to the average MAP Survey Market Rates of smaller accounting firms, the projected level of cost savings realized by IAWC for accounting related services obtained through the Service Company of $1.773 million is a conservative estimate.

B. **Engineering Services**

Schedules 2 through 2.2 show the Market Analysis of engineering services. Schedule 2 Column A shows the engineering professional classifications contained in the ZweigWhite Survey. Columns B and C show respectively the Market Rates from the ZweigWhite Survey for all firms and for North Central Region firms. The adjusted 2010 Market Rates from application of the cost escalator, as shown on Schedule 6 to adjust the ZweigWhite Survey Market Rates to a 2010 level, are shown in Column D. Column E of Schedule 2 shows the time distribution for each professional classification as provided by the Service Company on Schedule 2.1. Column F of Schedule 2 shows the weighted average Market Rate by professional classification resulting from applying the time distributions to the adjusted 2010 ZweigWhite Survey Market Rates. The weighted average Market Rate from Schedule 2 is used on Schedule 8 for comparison to the AWWSC average internal rate per hour for engineering services as provided by the Service Company on Schedule 2.1.

The table at the bottom of Schedule 2 provides a comparison of the Service Company Rates by professional classification as provided by the Service Company on Schedule 2.1 to the ZweigWhite Survey adjusted 2010 Market Rates for engineering services as shown at the top of Schedule 2. Schedule 2 also quantifies the hourly rate difference between the Service Company Rate and the ZweigWhite Survey Market Rate for each professional classification and whether the Service Company Rate is above or below the Market Rate. As shown on Schedule 8 the cost savings realized by IAWC for engineering-related services obtained through the Service Company is projected to be $1.167 million.

Schedule 2.2 contains Supplemental Rate information regarding hourly billing rates for engineering firms that provide service to American Water. Schedule 2.2 was prepared from information provided by the Service Company for contracted services with eight outside engineering firms. As shown on Schedule 2.2, the

Supplemental Rates, as adjusted to 2010 test year levels, range from a low of $66 per hour for technicians to a high of $211 per hour for principals. The Market Rates adjusted to 2010 test year levels, as shown in Column D of Schedule 2, range from a low of $70 per hour for drafters to a high of $142 for department heads. The Supplemental Rate information supports the reasonableness of the Market Rates as a comparative measure for use in the Market Analysis.

C. **Information Technology Services**

Schedules 3 through 3.3 show the Market Analysis for information technology services. Schedule 3 Column A shows the information technology services professional classifications contained in the Computer Economics Report or the Gartner Study. Columns B and C show, respectively, the national and Middle Atlantic information technology services Market Rates as calculated from the Computer Economics Report, or the national and Northeast Region Market Rates as calculated from the Gartner Study, as shown on Schedule 3.2. The adjusted 2010 Market Rates from application of the cost escalator, as shown on Schedule 6 to adjust the Market Rates to a 2010 level, are shown in Column D. Column E of Schedule 3 shows the time distribution for each professional classification as provided by the Service Company on Schedule 3.1. Column F of Schedule 3 shows the weighted average Market Rate by professional classification resulting from applying the time distributions to the adjusted 2010 Computer Economics Report or the Gartner Study Market Rates. The weighted average Market Rate from Schedule 3 is used on Schedule 8 for comparison to the AWWSC average internal rate per hour for information technology services as provided by the Service Company on Schedule 3.1.

The table at the bottom of Schedule 3 provides a comparison of the Service Company Rates by professional classification as provided by the Service Company on Schedule 3.1 to the Market Rates from the Computer Economics Report or the Gartner Study as adjusted to reflect 2010 Market Rates for information technology services. Schedule 3 also quantifies the hourly rate difference between the Service Company Rate and the calculated Computer Economics Report or the Gartner Study Market Rate for each professional classification and whether the Service Company Rate is above or below the Market Rate. As shown on Schedule 8, the cost savings realized by IAWC for information technology services obtained through the Service Company is projected to be $1.468 million.

Schedule 3.3 contains Supplemental Rate information regarding hourly billing rates for information technology firms that provide service to American Water. Schedule 3.3 was prepared from information provided by the Service Company for contracted services with outside information technology services vendors. As shown on Schedule 3.3 the Supplemental Rates, as adjusted to 2010 test year levels, range from a low of $87 per hour for analysts to a high of $741 per hour for business sponsors. The Market Rates adjusted to 2010 test year levels as shown in Column C of Schedule 3 range from a low of $57 for a computer

operator to a high of $223 for a director of client services. The Supplemental Rate information supports the reasonableness of the Market Rates as a measure for use in the Market Analysis.

D. **Legal Services**

Schedules 4 through 4.4 show the Market Analysis of legal services. Schedule 4 Column A shows the legal professional classifications used in the Market Analysis. The partner and associate professional classifications are from the NLJ Survey. The paralegal classification was included for the analysis although paralegal information is not contained in the NLJ Survey. Including the paralegal classification was necessary since the Service Company employs several paralegals. Schedules 4.2 and 4.3 show the Midwest Region law firms from the NLJ Survey and the average Market Rates for the partner and associate professional classifications respectively. The billing rate for the paralegal classification is shown on Schedule 4.4 and is discussed below. The adjusted 2010 Market Rates resulting from application of the cost escalator, as shown on Schedule 6 to adjust the NLJ Survey partner and associate Market Rates as well as the paralegal billing rate are shown in Column C of Schedule 4. Column D shows the time distribution for each professional classification as provided by the Service Company on Schedule 4.1. Column E of Schedule 4 shows the weighted average Market Rate by professional classification resulting from applying the time distributions to the adjusted Market Rates shown in Column C. The weighted average Market Rate from Schedule 4 is used on Schedule 8 for comparison to the AWWSC average internal rate per hour for legal services as provided by the Service Company on Schedule 4.1.

The table at the bottom of Schedule 4 provides a comparison of the Service Company Rates by professional classification as provided by the Service Company on Schedule 4.1 to the adjusted 2010 Market Rates for legal services as shown at the top of Schedule 4. Schedule 4 also quantifies the hourly rate difference between the Service Company Rate and the Market Rate for each professional classification and whether the Service Company Rate is above or below the Market Rate. As shown on Schedule 8 the cost savings realized by IAWC for legal services obtained through the Service Company is projected to be $0.668 million.

Schedule 4.4 contains Supplemental Rate information for law firms that provide service to American Water. Schedule 4.4 was prepared from information provided by the Service Company for contracted services with eleven outside law firms. As shown on Schedule 4.4, the Supplemental Rates, as adjusted to 2010 test year levels, range from a low of $143 per hour for paralegals to a high of $534 per hour for partners. As shown on Schedule 4.4, paralegal billing rates range from $143 per hour to $193 per hour. Deloitte & Touche used the $143 per hour paralegal billing rate as the Market Rate to compare to the Service Company Rate for the paralegal classification. The Market Rates adjusted to 2010 test year levels as shown in Column C of Schedule 4 range from a low of

$143 for paralegals to a high of $435 for partners. The reasonableness of the Market Rates for use in the Market Analysis is supported by the Supplemental Rate information.

E. **Management Consulting Services**

Schedules 5 through 5.2 show the Market Analysis of management consulting services. Schedule 5 Column A shows the management consulting professional classifications contained in the AMCF Survey as used in the analysis. Column B shows the Market Rates from the AMCF Survey. The adjusted 2010 Market Rates resulting from application of the cost escalator, as shown on Schedule 6 to adjust the AMCF Survey Market Rates to a 2010 level, are shown in Column C. Column D shows the time distribution for each professional classification as provided by the Service Company on Schedule 5.1. Column E of Schedule 5 shows the weighted average Market rate by professional classification resulting from applying the time distributions to the adjusted 2010 AMCF Survey Market Rates. The weighted average Market Rate from Schedule 5 is used on Schedule 8 for comparison to the AWWSC average internal rate per hour for management consulting services as provided by the Service Company on Schedule 5.1.

The table at the bottom of Schedule 5 provides a comparison of the Service Company Rates by professional classification as provided by the Service Company on Schedule 5.1 to the AMCF Survey adjusted 2010 Market Rates for management consulting services as shown at the top of Schedule 5. Schedule 5 also quantifies the hourly rate difference between the Service Company Rate and the AMCF Survey Market Rate for each professional classification and whether the Service Company Rate is above or below the Market Rate. As shown on Schedule 8 the cost savings realized by IAWC for management consulting services obtained through the Service Company is projected to be $2.616 million.

Schedule 5.2 contains Supplemental Rate information regarding hourly billing rates for management consulting firms that provide service to American Water. Schedule 5.2 was prepared from information provided by the Service Company for contracted services with outside consulting firms. As shown on Schedule 5.2, the Supplemental Rates, as adjusted to 2010 test year levels, range from a low of $81 per hour for technicians to a high of $763 per hour for principals. The Market Rates adjusted to 2010 test year levels as shown in Column C of Schedule 5 range from a low of $137 for research associates to a high of $301 for junior partners. The Supplemental Rate information supports the reasonableness of the Market Rates for use in the Market Analysis.

VI. CUSTOMER ACCOUNTS ANALYSIS

As discussed in Section IV of the Study, Deloitte & Touche performed a Customer Accounts Analysis of the 2007 customer accounts expenses of 13 electric utilities operating in the states of Illinois, Indiana, Iowa, Missouri, and Ohio. For electric and combination utilities, customer accounts expenses are

recorded to specific accounts as defined in the Federal Energy Regulatory Commission ("FERC") Uniform System of Accounts.[5] The utilities file annual financial reports with the FERC[6] which contain customer accounts information which can be used to compare to IAWC's customer service related costs.

The Customer Accounts Analysis is based on 2007 FERC Form 1 amounts reported for Accounts 901, 903 and 905, as well as computations of employee benefits and payroll taxes associated with customer accounts activities recorded to FERC Accounts 926 and 402, respectively. The Customer Accounts Analysis computes a 2007 customer accounts "expense per customer" for the 13 utilities which was escalated to a 2010 level for comparison to IAWC's 2010 test year customer service expense per customer.

The 13 utilities included in the Customer Accounts Analysis as shown on Schedule 7 include:

Iowa:
- Interstate Power and Light Company
- MidAmerican Energy Company

Illinois:
- Central Illinois Light Company (Ameren-CILCO)
- Central Illinois Public Service Company (Ameren-CIPS)
- Commonwealth Edison
- Illinois Power Company (Ameren-IP)

Indiana:
- Duke Energy Indiana
- Indiana Michigan Power Company

Missouri:
- The Empire District Electric Company
- Kansas City Power & Light Company
- Union Electric Company (Ameren UE)

Ohio:
- Duke Energy Ohio
- Ohio Power Company

The following provides a brief discussion of the FERC accounts for reporting costs associated with customer accounts activities. The complete account

[5] 18 CFR Part 101

[6] *FERC Financial Report FERC Form No. 1: Annual Report of Major Electric Utilities, Licensees and Others and Supplemental Form 3-Q: Quarterly Financial Report*

descriptions and types of expenses recorded to FERC accounts 901, 903 and 905 are provided in Appendix 1 of the Study.

Account 901 – Supervision – this account shall include the cost of labor and expenses incurred in the general direction and supervision of customer accounting and collecting activities. Direct supervision of a specific activity shall be charged to Account 902, Meter Reading Expenses, or Account 903, Customer Records and Collection Expenses.

Because the general supervision expenses recorded to Account 901 relate to both Accounts 902 and 903, a portion of the total Account 901 expense amount related to Account 903 was included in the Customer Accounts Analysis.

Account 903 – Customer Records and Collection Expenses – this account shall include the cost of labor, materials used and expenses incurred in work on customer applications, contracts, orders, credit investigations, billing and accounting, collections and complaints.

Account 905 – Miscellaneous Customer Accounts Expenses – this account shall include the cost of labor, materials used and expenses incurred not provided for in other accounts.

The types of electric utility customer accounts activities whose costs are recorded to Accounts 903 and 905 include but are not limited to:

- Customer account inquiries,
- Customer order processing,
- Verifying billing with contracts or rate schedules,
- Customer bill preparation and mailing,
- Collections,
- Payment processing,
- Receiving, refunding, or applying customer deposits, and
- Correspondence processing.

Utility employee labor is charged to Accounts 901, 903, or 905, however, employee pension and benefit expenses as well as payroll tax expenses are recorded to Account 926 – Employee Pensions and Benefits and Account 408 – Taxes Other Than Income Taxes, Other Income and Deductions respectively. To properly compare the customer accounts expenses incurred by the utilities to those incurred by IAWC, calculated amounts of pension and benefits and payroll tax expense were included in the Customer Accounts Analysis as shown on Schedule 7.

The 2007 customer accounts expense per customer for the utilities shown on Schedule 7 were escalated to a 2010 level using the CPI cost escalator as previously discussed in the Study for comparison to IAWC's 2010 test year

forecasted customer service cost per customer. IAWC's 2010 test year forecasted customer service costs were prepared by IAWC and are shown on Schedule 7.1.

The IAWC forecasted 2010 test year customer service expense expected to be incurred for customer service activities performed by AWWSC, Regional Offices, and IAWC is $7.286 million as shown on Schedule 7.1. IAWC's forecasted 2010 test year customer services expense per customer is $23.33 as shown on Schedule 7.1.

The results of the Deloitte & Touche Customer Accounts Analysis are summarized on Schedule 7.2. As shown on Schedule 7.2, the customer accounts expense per customer for the 13 utilities range from $16.75 to $41.38 with a group average cost per customer of $33.98. IAWC's forecasted test year 2010 customer service expense per customer is $23.33 per customer as shown on Schedule 7.1. IAWC's customer service expense per customer is below the average expense per customer of the utility group included in the analysis.

VII. STUDY CONCLUSIONS

The provision of services to IAWC through the Service Company results in significant cost benefits to IAWC. Based on the Market Analysis, and as shown on Schedule 8, the cost savings expected to be realized by IAWC from obtaining services through the Service Company during the forecast period when compared to the costs of acquiring such services in the open market from third-party service providers amount to $ 7.692 million. The net savings expected to be realized by IAWC results from the Service Company's ability to provide services at a cost which is lower than the market cost of such services. As mentioned previously in the Study, had the Market Analysis recognized the fact that Service Company managerial and professional employees actually work more time than the maximum reportable time of eight hours per day, the expected net savings of $7.692 million would be larger.

The results of the Customer Accounts Analysis show that IAWC's forecasted 2010 test year customer service expense compares favorably with the customer accounts expenses reported by the group of utilities. The customer accounts expense per customer for the utilities ranges from $16.75 to $41.38. IAWC's test year customer service expense per customer of $23.33 is below the $33.98 average expense per customer of the other utilities included in the comparison.

VIII. PROFESSIONAL STANDARDS

The services provided by Deloitte & Touche for this Study were performed under the Standards for Consulting Services of the American Institute of Certified Public Accountants ("AICPA"). Consulting services differ fundamentally from attestation services provided in an attestation engagement. Consulting services may include consultations, advisory services such as this Study, implementation services, transaction services, staff and other support services, and product services. However, consulting services exclude services subject to other AICPA Technical Standards, such as Statements on Auditing Standards, Statements on Standards for Attestation Engagements, or Statements on Standards for Accounting and Review Services.

.

Illinois-American Water Company
FERC Account Descriptions

901 – Supervision (Major only).
This account shall include the cost of labor and expenses incurred in the general direction and supervision of customer accounting and collecting activities. Direct supervision of a specific activity shall be charged to account 902, Meter Reading Expenses, or account 903, Customer Records and Collection Expenses, as appropriate. (See operating expense instruction 1.)

903 – Customer Records and Collection Expenses.
This account shall include the cost of labor, materials used and expenses incurred in work on customer applications, contracts, orders, credit investigations, billing and accounting, collections and complaints.
Labor
1. Receiving, preparing, recording and handling routine orders for service, disconnections, transfers or meter tests initiated by the customer, excluding the cost of carrying out such orders, which is chargeable to the account appropriate for the work called for by such orders.
2. Investigations of customers' credit and keeping of records pertaining thereto, including records of uncollectible accounts written off.
3. Receiving, refunding or applying customer deposits and maintaining customer deposit, line extension, and other miscellaneous records.
4. Checking consumption shown by meter readers' reports where incidental to preparation of billing data.
5. Preparing address plates and addressing bills and delinquent notices.
6. Preparing billing data.
7. Operating billing and bookkeeping machines.
8. Verifying billing records with contracts or rate schedules.
9. Preparing bills for delivery, and mailing or delivering bills.
10. Collecting revenues, including collection from prepayment meters unless incidental to meter-reading operations.
11. Balancing collections, preparing collections for deposit, and preparing cash reports.
12. Posting collections and other credits or charges to customer accounts and extending unpaid balances.
13. Balancing customer accounts and controls.
14. Preparing, mailing, or delivering delinquent notices and preparing reports of delinquent accounts.
15. Final meter reading of delinquent accounts when done by collectors incidental to regular activities.
16. Disconnecting and reconnecting service because of nonpayment of bills.
17. Receiving, recording, and handling of inquiries, complaints, and requests for investigations from customers, including preparation of necessary orders, but

Illinois-American Water Company
FERC Account Descriptions

excluding the cost of carrying out such orders, which is chargeable to the account appropriate for the work called for by such orders.
18. Statistical and tabulating work on customer accounts and revenues, but not including special analyses for sales department, rate department, or other general purposes, unless incidental to regular customer accounting routines.
19. Preparing and periodically rewriting meter reading sheets.
20. Determining consumption and computing estimated or average consumption when performed by employees other than those engaged in reading meters.

Materials and Expenses

21. Address plates and supplies.
22. Cash overages and shortages.
23. Commissions or fees to others for collecting.
24. Payments to credit organizations for investigations and reports.
25. Postage.
26. Transportation expenses (Major only), including transportation of customer bills and meter books under centralized billing procedure.
27. Transportation, meals, and incidental expenses.
28. Bank charges, exchange, and other fees for cashing and depositing customers' checks.
29. Forms for recording orders for services removals, etc.
30. Rent of mechanical equipment.
31. Communication service (Nonmajor only).

905 – Miscellaneous Customer Accounts Expenses (Major only).

This account shall include the cost of labor, materials used and expenses incurred not provided for in other accounts.

Labor

1. General clerical and stenographic work.
2. Miscellaneous labor.

Materials and Expenses

3. Communication service.
4. Miscellaneous office supplies and expenses and stationery and printing other than those specifically provided for in accounts 902 and 903.

THE REMAINDER OF THIS ATTACHMENT IS CONFIDENTIAL AND HAS BEEN PROVIDED IN A SEALED ENVELOPE

TENNESSEE AMERICAN WATER COMPANY
DOCKET NO. 12-00049
FIRST DISCOVERY REQUEST OF THE
CITY OF CHATTANOOGA

Responsible Witness: Gary M. VerDouw/Deron Allen

Other Participating Employees: Linda C. Bridwell

Question:

73. Provide all ***Documents*** constituting, containing, referring to, or relating to recommendations contained in the ***Schumaker Report***.

Response:

Several recommendations in the Schumaker report will be addressed by the BT program. Because the BT efforts are ongoing and have not been fully implemented, the level of documentation available to support ongoing efforts that address the recommendations is limited. However, in response to the recommendations in the Schumaker Report listed under "Internal Controls Review,"

> Recommendation III-1 Continue to reduce the use of outside contractors for SOX compliance tasks. (Refer to Finding III-2)
>
> Recommendation III-4 Improve documentation for purchase card transactions in order for a third party to determine the business purpose of the transaction and to evaluate if the appropriate formula was used to allocate the cost. (Refer to Finding III-6)

TAWC states as follows. American Water currently maintains a control environment in which the majority of internal controls are manual due to limitations of systems and processes. The manually intensive nature of internal controls and processes requires the increased need for compensating activities to achieve process objectives. Through its BT program, American Water is updating and modernizing its business processes, upgrading its information technology systems, and automating manual tasks. The increased capabilities of BT systems to enable our processes, when considered with the abilities of internal control, will improve the operation and effectiveness controls.

As we improve our processes, clean up our data, upgrade our technology through the implementation of SAP Enterprise Resource Planning (ERP), Enterprise Asset Management (EAM), and Customer Information System (CIS), American Water is optimizing its control environment to support more effective and efficient processes. Process and system enhancements enabled a significant redesign of the Company's financial (including Sarbanes-Oxley related controls), operational and regulatory controls. By leveraging American Water internal resources with control experience and external resources with specialized knowledge of the complexities of SAP and other related systems, we are optimizing our control environment and related activities and increasing the automation of many internal controls.

In response to the recommendation in the Schumaker Report listed under "Organizational & Operations Assessment Review,"

> Recommendation IV-1 Place greater emphasis on measuring internal business processes that could foretell customer satisfaction issues. (Refer to Finding IV-2, Finding IV-4, Finding IV-7, and Finding IV-8)

TAWC states as follows. The BT program aims to improve workflow throughout our field, back-office, and customer service operations, as well as to enhance our field, back office, and customer service capabilities. SAP CIS will provide a companywide software application that assists in the management of every aspect of the customer relationship – from customer inquiry to billing and collecting for services provided. Customer information will be captured and stored in a centralized database that is integrated with other systems throughout the company. The SAP EAM system will provide a platform for connecting people, processes, assets, industry-based knowledge, and decision support capabilities based on quality information. It allows for a holistic view of an organization's asset base, better enabling managers to manage operations for quality and efficiency. The following are some of the anticipated benefits of the integrated CIS and EAM system:

- Greater first contact resolution because of greater automation in the billing process and redirected resources providing the opportunity to resolve customer requests in a timely manner
- Improved scheduling between field service representatives and customers that will increase customer convenience and service that could lead to offering a smaller window of time for service call appointments. Currently, all appointments are offered in three-hour blocks.

- More integrated systems (and fewer manual processes) leading to the timely closure of service orders and efficient handling of customer requests. Some examples of the manual processes that will be improved include the creation, dispatching, and execution of service orders as well as researching various items such as water quality information and business rules.
- Fewer repeat calls into the call center since the new system will better equip Customer Service Representatives with the information they need to resolve customer inquiries. Currently, business rules and state-specific data reside in multiple databases that are needed to support customer inquiries. These databases are difficult to navigate and can limit Customer Service Representatives' timely resolution of customer issues.
- More efficiently dispatch service orders by bundling work and improving visibility of outstanding orders to enable the offloading of excess work to contractors (better way to manage peaks and valleys).
- Improved complaint resolution effectiveness by attaching a timer on escalated utility contacts. For example, if a customer has a billing inquiry and the Call Service Representative cannot resolve it, the Customer Service Representative would set up a utility contact and route the question to the billing department. Currently, there is no timer on the utility contact, thus no aging report that highlights how long an escalated customer inquiry has gone unresolved.
- Better asset reliability and fewer unexpected outages by improving American Water's reliability centered maintenance programs.
- Improved customer solutions and response times through more visible data that will improve employee dispatch.

In response to the recommendations in the Schumaker Report listed under “Affiliate Relationships and Transactions Review,”

> Recommendation II-2 Perform a detailed analysis to verify that the use of the number of customers for allocating AWWSC costs among regulated utilities reasonably approximates the use of cost-causative factors; subsequently make modifications, as appropriate. (Refer to Finding II-2)

TAWC states that it had an analysis completed that was provided in the last proceeding and is attached to this response.

As for the following recommendation,

> Recommendation II-3 Continue to regularly evaluate the cost of services provided to TAWC by its affiliates, specifically AWWSC, so as to verify that TAWC ratepayers are not being harmed by charging these services at cost rather than market. (Refer to Finding II-3)

TAWC states that American Water has undertaken a number of different reviews of the cost of services provided that are provided in response to Item 72 of this same data request.

Finally, as to the following recommendation,

> Recommendation II-6 Update corporate tax allocation documentation to reflect the current American Water organization structure. (Refer to Finding II-6)

TAWC states that American Water adopted a new taxing policy which is attached.

Re: ***Tennessee American Water Company's Management Audit***
Docket No. 09-00086

Dear Chairman Freeman:

Attached you will find an original and five (5) copies of Tennessee American Water Company's Customer Based Cost Allocation Analysis with appendices. This document is also being filed today by way of email with the Tennessee Regulatory Authority Docket Manager, Ms. Sharla Dillon.

Please file the original and four copies of this material and stamp the additional copy as "filed," and return the file-stamped copies to me by way of our courier.

Should you have any questions concerning this matter, please do not hesitate to contact me at the email address or telephone number listed above.

With kindest regards, I remain

Very truly yours,

R. D. Grimes

Customer Based Cost Allocation Study

Introduction and Scope:

In the rate order in proceeding No 08-00039, the Tennessee Regulatory Authority ("TRA") ordered Tennessee American Water Company ("TAWC", or "the Company") to have a management audit performed of the affiliate relationship between TAWC and American Water Works Service Company, Inc. ("AWWSC"). The Authority said, "The panel ordered the Company to develop a Request For Proposal ("RFP") for a comprehensive management audit by an independent certified public accountant. The RFP for the audit shall include, but not be limited to, an investigation of AWWSC's management performance and decisions relating to internal processes and internal controls with and attestation and recommendation of any needed management changes and implementation thereof. Further, the audit shall evaluate and attest to the charges allocated to TAWC, including the efficiency of processes and /or functions performed on behalf of TAWC, as well as the accuracy and reasonableness of the allocation factors utilized (68). This RFP should be filed in this docket no later than six months from September 22, 2008, for approval by the Authority. The issuance of the RFP shall occur subsequent to an approval of the RFP by the Authority." [1]

In response to this requirement, on March 23, 2009 the Company filed the proposed RFP with the TRA. This filing started a chain of events that led to a motion by Director Roberson issued on June 11, 2009. The TRA panel acted on this motion in their regularly scheduled meeting on June 15, 2009, issuing an Order on the matter on July 16, 2009. At the Director's conference on August 14, no party to the 08-00039 docket made comment and the TRA approved the RFP submitted on June 11, 2009 with minor changes that included adding the language "TAWC may

[1] TRA Order in Docket No. 08-00039, at page 21-22.

enter directly into a contract with said firms subsequent to TRA approval." The Company was directed to issue the RFP as soon as possible and to file the RFP with the list of recipients in this docket file (new docket number 09-00086). On September 8, 2009 the TRA issued its written Order approving the RFP. The Company issued the RFP to 14 firms considered to be qualified to perform the management audit. On September 8, 2009 the Company filed a letter of clarification concerning the RFP based upon several inquiries about the RFP from the vendors who were invited to bid. On September 11, 2009 the TRA issued an Order approving the Clarification Letter to be provided to the potential bidders. On October 27, 2009 the Company filed the three responses to the RFP received by the Company from (1) Northstar-TCBA-MFSG, (ii) WHN-Liberty, and (iii) Schumaker-Work & Greer. On October 28, 2009 the Company provided a filing to the TRA recommending that Schumaker-Work & Greer be selected as the firm to perform the Management Audit. This was followed by a number of discovery requests regarding the selection of the management auditor issued by the TRA Staff. On January 4, 2010 the Company filed a copy of the executed contract with the TRA. The TRA at its conference on January 25, 2010 authorized the Company to move forward with the management audit and the contract with Schumaker-Work & Greer.

The Company filed the completed Management Audit with the TRA on September 10, 2010 in Docket No. 09-00086. One of the key findings set forth in the audit report suggested further analysis on the use of relative number of customers as a basis for allocation of "common costs" as defined in the agreement between TAWC and AWWSC. Finding II-2 said "The cost-allocation methodologies impacting TAWC are generally reasonable, although the use of number of customers for allocating AWWSC costs among regulated utilities is essentially a simplification mechanism that is not necessarily based on cost-causative factors."

The related recommendation (Recommendation II-2) in the audit report was for TAWC to "perform a detailed analysis to verify that the use of the number of customers for allocating AWWSC costs among regulated utilities reasonably approximates the use of cost-causative factors; subsequently make modifications, as appropriate." TAWC has accepted this recommendation and has performed the requested analysis. This Study reflects the results of the detailed analysis performed. The Company conducted the analysis in conjunction with American Water Works Service Company personnel and Mr. Bernard L. Uffelman, of Uffelman Advisory Services LLC, a recognized expert in the field of public utility cost allocation issues, who provided guidance and support with regard to appropriate cost causative allocation methodologies and the analysis utilized in this Study. Mr. Uffelman's credentials are attached to the Study as Appendix 1. A letter from Mr. Uffelman describing his involvement in the Study and his conclusions is attached hereto as Appendix 2.

Background:

In providing public utility water and wastewater services to its customers, the Company utilizes the AWWSC, which provides centralized services to the Company and its affiliates in numerous areas that are essential to the provision of high quality, reliable service to customers. The Company receives services from the AWWSC in the following functional areas:

1. Internal Audit
2. Business Development
3. Business Transformation Project
4. External Affairs (Communications)
5. Finance
6. Human Resources (including Benefits Service Center)

7. Information Technology Services
8. Investor Relations
9. Legal
10. Regulatory Services
11. Regulated Operations Management
12. Shared Services Center
13. Operation Services (including Lab, Supply Chain, Property)

The AWWSC provides these services to the Company pursuant to a contract between the Company and the Service Company (the "Service Company Contract") *which was effective January 1, 1989*. The Service Company Agreement is attached hereto as Appendix 3. This contract is substantially the same as the contract the Service Company utilizes to provide similar services to all of American Water's regulated subsidiaries.

The AWWSC also provides certain limited services to American Water's non regulated subsidiaries. The non regulated entities do not take the same level of services as the regulated utilities for a number of reasons. For example, because the AWWSC primarily provides services to utilities regulated by state public utility commissions, it is structured to provide services that are commonly required by these commissions, such as accounting records and procedures maintained pursuant to versions of the Uniform System of Accounts as adopted by the National Association of Regulatory Utility Commissioners ("NARUC") as well as state requirements pertaining to customer service, the filing of annual reports, etc. The non regulated entities, therefore, will often have their own departments to provide services designed to meet their own business needs.

Billing and Cost Allocation:

Billing and allocation of costs among the regulated subsidiaries is done pursuant to the approved Service Company Agreement. Under this agreement, a direct charge to the utility receiving the service is the preferred method of billing. That is, where possible, a regulated subsidiary is directly charged based on the time spent to provide the services directly to that regulated subsidiary. Where services are provided in common to more than one regulated subsidiary, costs are apportioned among the regulated subsidiaries on the basis of the number of customers. Common overheads then follow the primary allocations.

Allocations of common costs based on the number of customers served by a utility represent a rational and reasonable way to allocate these costs for a number of reasons. For example, the types of services required by the regulated utilities are in large part driven by regulatory requirements, which, while not necessarily uniform, are often very similar. For example, all the regulated utilities need to perform regular laboratory testing of water quality as a requirement of state and federal law, as noted below. These requirements may vary slightly from state to state but are very similar in nature, varying most significantly in the number of tests required. The result of the laboratory testing services provided by the Belleville Laboratory is that each customer has the same assurance that his water service has met federal and state water quality requirements whether he is served by a small, medium or large water system.

The water and wastewater services that the regulated utilities provide to their customers are also substantially similar and encompass a full range of activities and responsibilities necessary to provide reliable, high quality end use service to customers, including securing reliable supplies and providing all necessary treatment, distribution, and other operating requirements

necessary to comply with water quality and other regulatory standards and mandates. These include, among others, requirements established by the United States Environmental Protection Agency ("USEPA") and local state environmental agencies pursuant to the Safe Drinking Water and Clean Water Acts.

Allocations to the regulated utilities based on customer counts are also highly transparent and administratively efficient. Utilities routinely keep track of their customer counts, and allocations can readily be modified in response to changes in these counts, either on an annual basis or in response to a particular event, such as a significant acquisition or divestiture.

In comparing the merits of a customer versus more cost-causative based method of allocating common costs, it is also relevant to consider the potential for introducing greater volatility into the process of allocating common costs, which could result from factors that may bear little or no relationship to underlying cost causation, thereby causing unwarranted year-to-year differences in state utility cost responsibility. For example, cost responsibility based on revenues may be appropriate for some purposes but could be significantly impacted year-to-year by fluctuating weather conditions in the various states or the timing of rate case orders, neither of which bears any clear relationship to underlying cost responsibility. Such volatility could also significantly impede planning and budgeting processes.

It is also relevant to consider the potential for the use of numerous factors that may arguably be more "cost causative" to induce parties in regulatory proceedings in the various states to propose the use of different factors which advantage their state in a particular year, to the disadvantage of other states. This would jeopardize the full recovery of all appropriate AWWSC

costs and therefore the continued existence of the AWWSC structure with potentially very negative impacts on total costs and customer service.

As with the regulated entities, the preferred method of charging the non regulated companies is through direct charging for the services, where the services can be specifically associated with a particular company. Where services are provided in common with regulated companies, however, allocation of AWWSC costs on a customer basis to the non regulated entities would not make sense and would not allocate to them a fair share of the costs for the services they receive. This is primarily because, in many instances, such as with operation and maintenance contracts an unregulated entity may have with a government entity, there is only one customer, the contracting municipality.

For these reasons, approximately five years ago, the AWWSC developed a set of cost causative metrics designed to insure that a fair share of the costs of providing services to the non regulated entities was charged to those entities. These metrics were developed with the guidance and assistance of Mr. Bernie Uffelman, then a partner with Deloitte & Touche LLP and the U.S. Regulatory Services Leader for Deloitte's Energy & Resources Practice, recognized experts in the field of utility cost allocations, and were designed to be based on cost causative factors relevant to the nature of the services being provided. For example, the Human Resources Benefits Call Center allocation factor includes the number of employees as the primary cost driver for services associated with employee benefit plans that are dedicated to regulated business units versus non-regulated business units. This is referred to as the "Tier 1" allocation of AWWSC costs to the non regulated entities that receive services. These costs are removed from the pool of AWWSC costs that are allocated to the regulated utilities on the basis

of customer counts, as are the direct charges to both the regulated and non regulated companies.

In summary, the process for allocating AWWSC costs is as follows:

1. Where services are amenable to direct billing, it is applicable to both regulated and non regulated entities.
2. Services provided to the non regulated entities that are not direct billed are allocated to those entities based on the Tier 1 metrics.
3. The AWWSC charges that remain after direct billing and Tier 1 allocations are allocated to the regulated utilities on the basis of customer counts.
4. Overheads follow the direct bills and allocations described above.

The process of billing and cost allocation is more fully described in the Cost Allocation Manual attached hereto as Appendix 4. Compiled in 2009 and approved by the Service Company Board of Directors in February 2010, this Manual consolidated a number of sources in the AWWSC to reflect in one place the billing and allocation process being followed in the AWWSC, pursuant to another recommendation contained in the Pennsylvania-American Management Audit.[2]

[2] Recommendation VIII-1 recommended that the Company develop formal, comprehensive documentation for affiliate relationships and cost allocations, and assign the responsibility for affiliate transactions to the appropriate manager.

Study Methodology:

Examined Costs

This study examined 2009 total actual AWWSC billed charges of $248,211,987. Business Transformation project charges of $5,689,095 were excluded from the Study. These charges represented one-time capitalized charges for a comprehensive planning study and were not part of normal operating expenses. Non-regulated direct and allocated charges of $20,111,078 were also excluded, since AWWSC is currently utilizing cost-causative factors to allocate common costs to the non-regulated business. The remaining $222,411,814 of charges billed to TAWC and the other regulated companies were then used to compare total actual AWWSC billed charges to the total produced using a cost-causative factor approach. AWWSC direct costs of $34,819,151 billed to the regulated companies were kept constant. Only the regulated company common costs billed in the amount of $187,592,663 were reallocated using cost-causative factors. The total bill to Tennessee American, including both direct costs and reallocated costs, was then compared to the 2009 actual charges in order to determine if there was a significant difference in the resultant bill for TAWC.

Cost-Causative Factor Selection

Cost-causative factors used in the Study were selected from the factors used in AWWSC Tier 1 allocations and are noted below. The one additional cost causative factor selected for this Study beyond those already used for Tier 1 allocations is "customers', given that costs of several functions are partially or fully driven by numbers of customers. Generally, there are many possible factors which could be related in some way to various business unit functions, but in determining the factors to be utilized in this Study, several evaluation criteria were considered. These are listed below:

1. To be considered cost-causative, a relationship must exist between the selected factor and the cost structure of the Service Co. business unit.
2. Factor metric must be measurable, repeatable and readily available from Company records or reports.
3. Factor utilization must create a relatively non-volatile cost allocation to affiliates from year to year.
4. Factor must be understandable to AWWSC management, affiliate management, and other stakeholders.
5. Affiliates must be able to exercise a reasonable degree of control over the factor metric to utilize AWWSC services/costs most efficiently.
6. Factor should minimize potential for manipulation which could improperly distort cost relationships

The selected factors were applied at the AWWSC business unit level. A cost-causative factor was assigned to each business unit if a direct relationship between the business unit and a causative factor could clearly be established. The causative factors used in the Study are listed below. Please see **Appendix 7** for a list of the AWWSC business units, causative factor assigned and reason for the factor assignment.

Causative Factors:

Customers

Employees

Invoices

Net Plant

Premises

Revenues

50% Customers 50% Revenue

50% Employees & 50% Customers

33% Customers 33% Employees 33% Residual

For some business units more than one causative factor was identified. Therefore, a weighted-average of factors was utilized based upon an evaluation of the business unit's activities. For business units where there was no clear assignable causative factor or combination of factors, a "residual" allocation factor was assigned to the AWWSC business unit. As noted in "Cost Allocation and Affiliate Transactions", residual costs are "...costs which cannot be specifically attributed to a product, service or affiliate for which there are no cost causative relationships, (and) are typically accumulated or "pooled" and then allocated in the same ratio as all other costs are assigned or allocated."[3] The residual factor was calculated by totaling the AWWSC charges for each regulated company after all other causative factors had been applied to the common charges. Cost-causative factors were identified for 77 of the 153 (50%) AWWSC business units that were examined in the study. The common costs of these 77 business units accounted for $114,021,979 or 61% of the $187,592,663 of total common costs charged to the regulated companies. The remaining $73,570,684 or 39% of the common costs allocated to regulated companies was classified as residual.

Cost-Causative Reallocation Method

The following further describes the method used to reallocate AWWSC costs that were examined in the study:

[3] COST ALLOCATION AND AFFILIATE TRANSACTIONS, Edison Electric Institute, Washington, D.C., (1999), page 9

- The formulas charged by business units were not changed in reallocation. Only the allocation basis was changed from a customer-based allocation factor to a cost-causative based factor. Please note that "customers" was determined to be the cost-causative factor for certain business units as mentioned above.
- All charges from business unit 032580 SSC-AWE and 032089 CORP-AWE Pass-Through were allocated to the non-regulated business (AWE), since these groups provide service only to the non-regulated business.
- Overheads were distributed by overhead location based on the redistribution of allocated charges using the new cost-causative factors.
- Residual allocation was computed by summing for each regulated subsidiary all costs which could be allocated using the selected cost causative factors, and dividing by the total of all costs allocated to all the regulated subsidiaries by these factors. This created a residual percentage for each subsidiary, which was then utilized to distribute the remaining residual costs not previously allocated.
- Each company received a percentage of the residual costs based on the overall regulated company allocated amounts after allocated charges and allocated overheads (excluding residual factors). In other words, each regulated utility received the same pro-rata amount of residual costs as it received of allocated common costs.

RESULTS:

Appendix 5 shows a summary of the actual and reallocated 2009 charges for TAWC and all other regulated and non-regulated companies. Column A shows the actual AWWSC charges for 2009. Column B shows the removal of Business Transformation charges. Column C shows a minor adjustment made to the non-regulated charges. Column D shows the resultant total of

charges to the regulated business that was examined in the study. Columns E through G show the segregation of the actual 2009 charges into direct and allocated. Columns H through J show the direct, allocated and total charges after applying the cost-causative factors. Columns K and L show the amount and percentage difference between the actual amounts billed (Col. G) and the re-allocated amounts based upon causative (Col. J).

Appendix 6 is a detailed view of all the 2009 AWWSC charges for TAWC by functional location and business unit. Columns A, B and C show the original breakdown of the charges as billed to TAWC during 2009. Column A shows the direct charges, column B shows the original allocated charges and column C contains the total charges for the business unit. Columns D, E and F represent the charges after reallocation using the causative factors and assumptions mentioned above. Column D shows the direct charges and equals column A. Column E represents the reallocated causative charges, and column F is the adjusted total for the business unit. Columns, G and H represent the difference between the original and causative allocations.

Conclusion:

After reallocation using the cost-causative factors mentioned above, the net difference to TAWC was a decrease of $120,501 out of a total charge of $5,067,078, or (2.38%) compared to the original customer-based allocation methodology. This relatively small overall difference verifies that the use of the number of customers for allocating AWWSC costs reasonably approximates the use of cost causative factors and does not justify changes in the current customer-based allocation methodology for allocating common costs. The customer-based method reflects the fact that the types of services the AWWSC provides to all the regulated utilities are largely driven by similar regulatory and operational requirements. This method is

also highly transparent, administratively efficient, and less susceptible to timing and volatility issues which may be unrelated to underlying cost causation, but which may unduly complicate planning and budgeting process and increase overall costs. It also reduces the potential that a variety of allegedly more "cost causative" factors used in various states could result in failure to achieve full recovery of legitimate AWWSC costs.

Professional Experience

Mr. Uffelman is President of Uffelman Advisory Services, LLC, a firm that specializes in energy and utility regulatory and litigation support services. Prior to his retirement from Deloitte & Touche LLP, Mr. Uffelman was a Partner and the U.S. Regulatory Services Leader for Deloitte & Touche's Energy & Resources Practice. Mr. Uffelman has been associated with the regulated utilities industry for over 38 years, including experience as an employee of major investor-owned utilities. Mr. Uffelman also served as Chief Accountant of the Illinois Commerce Commission and Director of Accounting for the Public Utility Commission of Texas. His primary responsibilities have included regulatory accounting, revenue requirements development, regulatory and litigation support, financial and business planning, and strategic services. Mr. Uffelman has testified on utility industry issues before public utility commissions and courts in 20 states and in over 60 different proceedings.

Major Projects

- Managed the accounting divisions of two state public utility regulatory commissions. Directed the staff's review of rate filing packages of electric, gas, telephone, and water utilities. Managed the preparation of staff's case in such areas as accounting, tax, rate of return, depreciation, fuel, cost allocation, rate design, forecasted test periods, and financial integrity. Presented testimony as a commission witness in rate cases and other dockets. Recommended accounting, financial and tax policy to commissioners and prescribed ratemaking treatment for complex regulatory issues.

- Participated as a member of a multi-disciplinary team of consultants and attorneys in developing the regulatory strategy and approach for the combination of two large multi-state electric utilities. Addressed the affiliate transaction and cost allocation issues associated with the merger of two electric registered public utility holding companies. Testified to the regulatory treatment for the gain resulting from the sale of a utility's jurisdictional operations. Testified to the proper accounting and ratemaking treatment for production maintenance costs of a large public power association. Developed the price-cap ratemaking methodology for privatization of a government owned island electric utility. Reviewed internal controls related to an electric utility's fuel procurement, trading operations and fuel adjustment clause filings.

- Testified to a gas company's rate case revenue requirement levels and proposed ratemaking for adoption of Statement of Financial Accounting Standards No. 106 - "Employers' Accounting for Postretirement Benefits Other Than Pensions." Testified to the reasonableness of a gas company's and a water utility's postretirement benefits. Presented a seminar on SFAS 106 to the parties to Hawaii Public Utilities Commission Docket No. 7243.

- Managed the review of a State Uniform System of Accounts (USOA) and recommended changes to comply with the FERC USOA. Worked with utilities to modify their accounting systems to track specific costs as required by public utility commissions. Represented the NARUC accounting committee in developing a USOA for the cellular telecommunications industry. Assisted utilities with regulatory filings with the FERC.

- Testified to deferred accounting treatment (DAT) for plant costs until such time as the generating unit was recognized as plant in service for cost of service and ratemaking purposes. Reviewed the DAT used by a large municipal power agency and the effects of the accounting deferrals on the agency's future rates. Participated in the analysis and implementation of a phase-in plan to rate base a major electric generating station. Chaired the revenue requirements committee of a major electric utility's rate moderation task force responsible for moderating the rate effect of rate basing the utility's three nuclear generating units. Participated as a commission staff member in the prudency reviews of nuclear generating stations. Analyzed and testified to the financial impact on shareholders and rate payers of deregulating a utility's nuclear generating facilities. Researched and reported on the costs associated with nuclear decommissioning for a foreign government.

- Assisted Cable TV operators to respond with reply comments to the FCC's Notice of Proposed Rule making regarding re-regulation of cable service and cost-of-service standards resulting from the Cable Television Act of 1992. Assisted operators with calculating permitted rates for regulated cable programming services and equipment charges. Testified in Cable TV franchise renewal and late fee proceedings.

- Conducted a national survey and analysis of state commission cost allocation issues and transfer pricing policies. Analyzed the appropriate capital structure to support the utility related operations of a major electric utility's fuel subsidiary. Analyzed and testified to an electric utility's financial reorganization plan and the prudence of its coal contracts. Performed affiliate transaction and cost allocation reviews for major electric, gas, and water utilities. Testified to affiliate transactions, cost allocations, transfer pricing, and accounting control systems for several major electric and gas utilities. Testified to the reasonable and prudently incurred costs of a major gas distribution company's customer information system. Performed a service company cost study for a major investor-owned water utility comparing the cost of each service obtained from the service company to the costs of such services had they been obtained through competitive bidding on the open market. Provided testimony related to the cost study findings and conclusions. Analyzed and reported on the appropriate cost allocation methodology for allocating shared services, corporate overheads, and administrative and general costs to the business units of a multinational power marketer.

- Responded to a public utility commission's request for information regarding the effects of the Tax Reform Act of 1986 on a major electric utility. Conducted a nationwide survey of U.S. public utility regulators to determine the predominant practice of each of the nation's public utility regulatory commissions regarding the use of certain non-traditional approaches to the calculation of federal income taxes for ratemaking purposes. Testified to the continued use and application of the traditional "stand-alone" method (as opposed to a consolidated effective tax rate method) for computing the income tax component of cost of service. Responded to a public utility commission's request for comments regarding the commission's rules on depreciation methods. Developed a white paper related to capital recovery issues for an independent systems operator.

- Directed the review of the outside customer accounts collection function for a large multi-state gas distribution company including the review of the use of third party collection agencies. Directed the regulatory and ratemaking assessment related to the acquisition of electric, gas, telecommunications, and water and wastewater properties by potential acquirers. Testified on behalf of a major real estate developer in support of the developer's request to finance water and wastewater utility plant additions. Reviewed a major gas and electric utility's legal services function and made recommendations as to the appropriate use of in-house and outside counsel to achieve cost reductions. Analyzed the financial and regulatory effects of an innovative marketing/financing arrangement for a major electric utility. Performed an analysis and comparison of a major utility's present and projected electric rates to those of other utilities. Testified to a comparison of the rates charged by an investor-owned water utility to the rates charged by surrounding municipal-owned utilities.

- Provided litigation support in electric, gas, and water contract rate disputes. Provided litigation support in an electric utility property tax dispute and a mining company lignite contract dispute. Prepared rate filing packages for major electric and gas distribution companies. These filings included revenue requirements, cost of service studies, testimony, exhibits and financial statements. Conducted a management audit of a large southwestern electric utility. Testified to the reliability of a company's GRC filings for ratemaking purposes. Prepared and testified to lead-lag studies for major electric and gas utilities.

- Assisted a Regional Bell Operating Company (RBOC) in responding to a state commission mandated regulatory audit. Regulatory assistance included direct and reply testimony responding to various issues raised by the audit. Managed the review of internal controls to prevent customer "slamming" for a large long-distance reseller and assisted the Company in obtaining an operating license to provide local service.

- Directed the accounting, budgeting, and financial functions associated with project accounting as a member of the project construction team of a major electric utility. Directed the cash accounting and cash management functions of a major utility, including investments, borrowings, and commercial bank relations. Supervised internal audits of a major electric and gas utility, prepared audit reports and conducted management audit conferences.

Mr. Uffelman has provided client services to a number of regulated and non-regulated entities including:

AGL Resources
American Electric Power Co., Inc.
American Water
AT&T Broadband/Tele-Communications, Inc.
Atmos Energy
Austin Energy
Brazos River Authority
Cablevision Systems Corporation
Cayman Island Government
Centel (Electric Utility Business)
Chugach Electric Association, Inc.
Citizens Utilities Company
City of Garland, Texas
City Utilities, Springfield, Missouri

Xcel Energy

Testimony

- Testified before the Alaska, Arizona, California, Georgia, Illinois, Indiana, Iowa, Kansas, Kentucky, Louisiana, Nevada, New Jersey, New Mexico, New York, Oklahoma, Oregon and Texas public utility commissions. Testified before the Illinois Legislature; the Texas Railroad Commission; the Supreme Court of the State of New York; the Superior Court of the State of California; the Circuit Courts for Baltimore, Maryland and Cook County, Illinois; the US District Court for Colorado; the King County, Seattle, Washington franchise authority; the City Council of Garland, Texas; and the Board of Water and Power Commissioners, the Commerce, Energy and Natural Resources Committee, and the City Council of the City of Los Angeles, California.

Certifications and Memberships

- Certified Public Accountant and member of the American Institute of Certified Public Accountants and the Texas Society of Certified Public Accountants
- Licensed Certified Public Accountant in Illinois and Texas
- Completed the National Association of Regulatory Utility Commissioners (NARUC) Annual Regulatory Studies Program
- Served as a member of the NARUC Staff Subcommittee on Accounts
- Served as Chairman of the Texas Society of Certified Public Accountants Natural Gas, Telecommunications, and Electric Industries Committee
- Served on the University of Texas Regulatory Institute Advisory Committee and as an instructor for the University of Texas Regulatory Institute
- Served on the Advisory Council for the Center for Public Utilities at New Mexico State University
- Moderated and participated in panel discussions on numerous industry topics

Education

- Illinois State University (MBA - Finance)
- Southern Illinois University (BS - Accounting)

Presentations

- *Regulated Utility Training*, Vectren Corporation, Evansville, Indiana, November 29, 2007
- *Ratemaking and Rate Proceeding Seminar*, WBI Holdings, Inc./MDU Resources Group, Inc., Bismarck, North Dakota, November 13-14, 2007
- *Ratemaking and Rate Proceeding Training,* Deloitte Training Seminar, Dallas, Texas, March 27-29, 2007
- *Rate Case Training*, Public Utility Commission of Texas, Austin, Texas, February 14, 2006
- *Rate Case Training*, Kansas City Power & Light, Kansas City, Missouri, August 29-31, 2005
- *Rate Case Challenges*, Southeastern Electric Exchange, Baltimore, Maryland, June 30, 2005
- *FERC Update*, Southeast Public Utility Accounting Workshop, Tampa, Florida, March 29-30, 2004

- *Regulatory Compliance Infrastructure Assessment for the Energy Industry*, Deloitte & Touche Energy Conference, Washington, D.C., June 18-20, 2003
- *Ratemaking Overview*, Sierra Pacific Power Company and Nevada Power Company, Las Vegas and Reno, Nevada, June 26-27, 2001
- *Public Utility Training*, California Public Utilities Commission, San Francisco, California, November 9, 2000
- *Shared Service Organizations*, EEI/AGA Accounting Committees, Savannah, Georgia, May 23, 2000

Publications

- *Cost Allocation and Affiliate Transactions: A Survey and Analysis of State Cost Allocation Issues and Transfer Pricing Policies*, June 1999. Mr. Uffelman co-authored this Deloitte & Touche report on behalf of the Edison Electric Institute.

- *Federal, State and Local Tax Implications of Electric Utility Industry Restructuring*, October 1996. Mr. Uffelman co-authored Deloitte & Touche's analysis for The National Council on Competition and the Electric Industry.

- *Survey of Federal Income Taxes in Regulation*, March 1994. Mr. Uffelman co-authored this report on how public utility regulatory commissions determine federal income tax expense for ratemaking purposes.

- *Accounting for Public Utilities* published by Matthew Bender and updated annually. Mr. Uffelman served as a contributing author on this work which provides a basic, but comprehensive, analysis of accounting for public utilities.

Testimony

Alaska
Alaska Public Utilities Commission

- APUC Docket No. U-93-1, Rate Case; direct testimony on behalf of Chugach Electric Association, Inc., January 1993; Rebuttal testimony on behalf of Chugach Electric Association, Inc., February 1993; testified to the proper accounting and ratemaking treatment for production maintenance costs.

Regulatory Commission of Alaska

- RCA Docket No. U-02-47, Revenue Requirements Study; prefiled testimony on behalf of Waste Management of Alaska, Inc., March 2003; testified to the functioning of WMA's revenue requirements models and the input of test year data, both financial and statistical, into the models for each of WMA's regulated service areas; prefiled reply testimony on behalf of Waste Management of Alaska, Inc., May 2004 .

Arizona - Arizona Corporation Commission

- ACC Docket No. E-1032-93-111, Rate Case; rebuttal testimony on behalf of Citizens Utilities Company's Arizona Gas Division, January 1994, regarding the effects of adoption of SFAS No. 106 - "Employers' Accounting for Postretirement Benefits Other Than Pensions".

- ACC Docket No. E-1032-92-073, Application for approval of the accounting method used to record AFUDC. Direct testimony on behalf of Citizens Utilities Company, May 1994.

- ACC Docket No. U-1551-93-272, Rate Case; rebuttal testimony, May 1994 on behalf of Southwest Gas Corporation regarding the prudence of costs associated with the development of the Company's customer information system.

- ACC Docket No. U-2199-94-439, Application for approval of financing and accounting orders. Direct testimony on behalf of Pima Utility Company (Robson Communities), December 1994; rebuttal testimony on behalf of Pima Utility Company (Robson Communities), May 1995.

- ACC Docket No. U-2492-94-448, Application for approval of financing and accounting orders. Direct testimony on behalf of SaddleBrooke Development Company (Robson Communities), December 1994. Rebuttal testimony on behalf of SaddleBrooke Development Company (Robson Communities), May 1995.

- ACC Docket No. U-2849, Application of SaddleBrooke Utility Company for a rate increase. Direct testimony (cost of capital) on behalf of SaddleBrooke Utility Company, (Robson Communities), November 1995.

- ACC Docket No. E-1032-95-433, Application of Citizens Utilities Company, Arizona Electric Division, for a hearing to determine the fair value of its properties for ratemaking purposes. Rebuttal testimony on behalf of Citizens Utilities Company, July 1996. Rejoinder testimony on behalf of Citizens Utilities Company, August 1996. (Accounting method used to record AFUDC)

- ACC Docket No. E-1032-95-473, Application of Citizens Utilities Company, Northern Arizona Gas Division, for a hearing to determine the fair value of its properties for ratemaking purposes. Rebuttal testimony on behalf of Citizens Utilities Company, August 1996. Rejoinder testimony on behalf of Citizens Utilities Company, September 1996. (Accounting method used to record AFUDC)

- ACC Docket No. E-1032-95-417, Application of Citizens Utilities Company, Maricopa Water/Wastewater Division, for a hearing to determine the fair value of its properties for ratemaking purposes. Rebuttal testimony on behalf of Citizens Utilities Company, September 1996. Rejoinder testimony on behalf of Citizens Utilities Company, October 1996. (Accounting method used to record AFUDC)

- ACC Docket No. U-1944-92-261, Application of Lago Del Oro Water Company (Robson Communities) for financing authorization. Rebuttal testimony on behalf of Robson Communities, December 1996. (Capital structure and use of Advances and Contributions in Aid of Construction)

- ACC Docket No. U-2849-97-383, Application of SaddleBrooke Utility Company (Robson Communities) for a rate increase; direct testimony (cost of capital) on behalf of SaddleBrooke Utility Company, June 1997.

- ACC Docket No. G-01551A-00-0309, Earnings Determination; supplemental testimony, May 2001, on behalf of Southwest Gas Corporation regarding the appropriateness of the inclusion of certain items in the rate case test year.

California
California Public Utilities Commission

- Order Instituting Rulemaking/Investigation on the Commission's Own Motion to Assess and Revise the New Regulatory Framework for Pacific Bell and Verizon California Inc. (R. 01-09-001/I. 01-09-002)

- Direct testimony on behalf of SBC Pacific Bell in Phase 2A, May 2002, in response to Overland Consulting's regulatory audit of Pacific Bell relating to various issues including depreciation reserve deficiency amortization and postretirement benefits other than pensions; reply testimony on behalf of SBC Pacific Bell in Phase 2A, May 2002.

- Direct testimony on behalf of SBC Pacific Bell in Phase 2B, June 2002, relating to local competition costs, software buy-out agreement, local number portability costs, and contingent liabilities; reply testimony on behalf of SBC Pacific Bell in Phase 2B, July 2002.

- California-American Water Company Compliance Filing Regarding Review By Deloitte & Touche LLP In CPUC Case Nos. A.05-02-012 And A.05-02-013; direct testimony on behalf of California-American Water Company regarding the reliability of the Company's General Rate Case filings for ratemaking purposes, April 2005; rebuttal testimony on behalf of California-American Water Company, July 2005.

City of Los Angeles

- Direct testimony on behalf of the Los Angeles Department of Water and Power regarding Water System Rate Proposal (Proposed Amendments to Water Rates Ordinance No. 170435) to the Board of Water and Power Commissioners; the Commerce, Energy and Natural Resources Committee of the City Council; and the City Council, April 2004.

Superior Court of the State of California

- Testimony on behalf of the Los Angeles Department of Water and Power in the Superior Court of the State of California in and for the County of San Bernardino. Civil Action No. SCVSS 100293, State of California, ex rel. Barakat Consulting Incorporated, et al., Plaintiffs, vs. Los Angeles Department of Water and Power, et al., Defendants, December 2006.

Colorado - US District Court for Colorado

- Civil Action No. 01-BB-1546(PAC) Western Retail Energy Company, Plaintiff, v. TXU Energy Services Company, Defendant; expert report and testimony on behalf of TXU Energy Services regarding natural gas pricing, June 2002.

Georgia - Georgia Public Service Commission

- Docket No. 14311-U, Atlanta Gas Light Company, Rate Case; direct testimony on behalf of AGL regarding AGL's cash working capital requirement and lead-lag study, January 2002.

Hawaii - Hawaii Public Utilities Commission

- Parties to HPUC Docket No. 7243; seminar on SFAS No. 106 - "Employers' Accounting for Postretirement Benefits Other Than Pensions," May 1992.

Illinois
Illinois Commerce Commission

- Docket Nos. 87-0043, 87-0044, 87-0057, 87-0096, consolidated ; Commonwealth Edison Company, Rate Case; direct testimony regarding spin-off of nuclear generation assets, April 1987, on behalf of:
  - The People of the State of Illinois, by Neil F. Hartigan, Attorney General
  - The Governor of the State of Illinois, James R. Thompson, by the Governor's Office of Consumer Services
  - The People of Cook County, by Richard M. Daley, Cook County State's Attorney
  - William G. Shephard, Small Business Utility Advocate

- Approximately twelve cases as ICC Staff witness. (Mr. Uffelman testified in approximately twelve cases as a Staff witness of the Illinois Commerce Commission. Mr. Uffelman does not have copies of his testimony which he filed on behalf of the ICC Staff, but copies can be obtained from the ICC.)

- Docket No. 07-0507, Illinois-American Water Company ("IAWC") Rate Case. Direct testimony regarding *Analysis of Water Rates, Fees and Charges For Selected Cities In The Vicinity Of The Chicago Metro District Of Illinois-American Water Company* on behalf of IAWC, August, 2007.
  Rebuttal testimony on behalf of IAWC, February, 2008. Surrebuttal testimony on behalf of IAWC, March, 2008.

- Docket No. 09-0319, Illinois-American Water Company ("IAWC") Rate Case. Direct testimony regarding the *Service Company Cost Study* ("Study") performed by Deloitte & Touche on behalf of IAWC, May 2009. The Study was prepared in response to Illinois Commerce Commission Order in Docket 07-0507 that IAWC conduct a study comparing the cost of each service obtained from the Service Company to the costs of such services had they been obtained through competitive bidding on the open market. Supplemental direct testimony on behalf of IAWC, August 2009. Rebuttal testimony on behalf of IAWC, October 2009.

Joint Committee on Public Utility Regulation of the Illinois Legislature

- Direct testimony regarding "Management Audits of Public Utilities" on behalf of the Illinois Commerce Commission, February 1985.

Circuit Court of Cook County, Illinois

- Case No. 95CH11993; BOE AND DEBRA CHMIL, Plaintiff, v. TELE-COMMUNICATIONS, INC., ET AL., Defendant; direct testimony on behalf of Defendant, August 1998.

Tennessee-American Water Company
Attn: Michael A. Miller, Director of Rates
1600 Pennsylvania Avenue
Charleston, WV 25302

Dear Mr. Miller:

Subject: AWWSC Cost-Causative Factor Analysis Study

Introduction and Background

This letter provides information regarding the services, findings and conclusions provided by Uffelman Advisory Services, LLC ("UAS") to Tennessee-American Water Company ("TAWC") related to the AWWSC Cost-Causative Factor Analysis Study ("Study") and should be read in conjunction with the attached Study. The services provided by UAS were performed in accordance with the Statement on Standards for Consulting Services issued by the American Institute of Certified Public Accountants. The Study was performed in response to the August 31, 2010 Affiliate Audit Report Of Tennessee-American Water Company For The Tennessee Regulatory Authority issued by Schumaker & Company, Inc. (the "Auditor").

Among the findings and recommendations of the Auditor's Affiliate Audit Report are the following:
"Finding II-2: The cost-allocation methodologies impacting TAWC are generally reasonable, although the use of number of customers for allocating AWWSC costs among regulated utilities is essentially a simplification mechanism that is not necessarily based on cost-causative factors."
"Recommendation II-2: Perform a detailed analysis to verify that the use of the number of customers for allocating AWWSC costs among regulated utilities reasonably approximates the use of cost-causative factors; subsequently make modifications, as appropriate."

Services Provided by UAS to TAWC

UAS assisted TAWC with the Study design and detailed analysis to comply with the Auditor's recommendation to verify that the customer based allocation methodology used to allocate common costs among the regulated affiliated utilities for the services provided by American Water Works Service Company, Inc. ("AWWSC" or the "Service Company") reasonably approximates the use of cost-causative factors, and to determine if modifications are appropriate. AWWSC provides services to the regulated utilities pursuant to a contract between AWWSC and the regulated utilities (the "Service Company Contract"). Billing and allocation of costs among the regulated subsidiaries is performed pursuant to the approved Service Company Contract. Each regulated operating company pays its proportional share of

all common costs that remain after all direct charges and Tier 1 assignments to non regulated companies have been made. In accordance with this contract, a direct charge to the utility receiving the service is the preferred method of billing. Where practicable, a regulated utility is therefore directly charged on the basis of the time spent to provide the services directly to the regulated subsidiary. The Service Company Contract provides that where services are provided in common to more than one regulated subsidiary, and the costs for such services are not directly charged, costs are apportioned among the regulated utilities on the basis of the number of customers served by the regulated operating company relative to the total number of customers served by all of the regulated operating companies (i.e., Tier 2 allocation). In addition to the Service Company Contract, the American Water Works Service Company, Inc. Accounting and Service Fee Billing Manual (the "Cost Allocation Manual") documents the methods by which AWWSC costs are accounted for and billed to affiliates. Assistance provided by UAS to representatives of TAWC and AWWSC related to the Study included, but was not limited to: providing advice, assistance and guidance to TAWC and AWWSC representatives that performed the Study; consulting with TAWC and AWWSC representatives as to the identification and use of alternative allocation methodologies for allocating AWWSC common costs (i.e., Tier 2 charges) among the regulated utilities; and reviewing the Study results including the appropriateness of the alternative allocation methodologies used to determine if the use of the customer allocator reasonably approximates the use of cost-causative factors.

Study Methodology and Analysis

As shown on Appendix 5 of the Study, the total actual 2009 Service Company charges examined for the Study were $222,411,814, including total direct charges of $34,819,151 and total allocated costs of $187,592,663, based on the Original Allocation Factor (i.e., allocation of Service Company common costs to the regulated utilities based on number of customers). TAWC's direct and allocated costs billed by the Service Company for the period were $820,284 and $4,246,794 respectively which total $5,067,078. As shown on Appendix 5, reallocation of TAWC's common costs based on the Cost-Causative Allocations used in the Study results in a decrease of $120,501 in TAWC's allocated costs resulting in total TAWC costs of $4,946,578 ($820,284 of direct costs and $4,126,294 of allocated costs), a decrease in TAWC's total costs of 2.38%.

Appendix 6 of the Study provides the detailed cost analysis by AWWSC Business Unit and the resulting cost allocations to TAWC using the Original Allocation methodology based on number of customers and the allocations based on the Cost-Causative Allocations methodology. Appendix 6 shows the Cost-Causative Allocation factors used to allocate the common costs to TAWC and provides a comparison by Business Unit and in total of the costs allocated to TAWC using the Cost-Causative Allocation methodology to the costs allocated to TAWC using the customer allocation methodology. As shown on Appendix 6, use of the Cost-Causative Allocations methodology results in a reduction of $120,501 of Service Company costs allocated to TAWC.

Appendix 7 of the Study shows the cost-causative allocation factors used, and the reason for such assignments, for allocating Service Company common costs by Business Unit and function to the regulated utilities. The cost-causative allocation factors used in the analysis for comparing the allocation of Service Company common costs based on the alternative cost-causative allocation methodology to the customer allocation methodology (i.e., Tier 2 methodology) are listed in the Study along with the criteria used to determine the selection of the cost-causative factors and the metrics (i.e., values) used to develop the alternative cost-causative allocators. As noted in the Study, a customer allocator was identified and is used as the allocation factor for allocating Service Company common costs to the

regulated utilities where the Business Units provide services and incur costs on behalf of the regulated utility customers. For some Business Units and functional activities more than one cost-causative factor was identified for cost allocation purposes. In such cases, the analysis utilized a multifactor allocation formula for allocating common costs based on the weighted-average of a combination of two or three cost-causative factors as described in the Study. For Business Units and functional activities where no clear cost causative factor, or a combination of factors, could be identified for allocating Service Company common costs to the regulated subsidiaries, the residual common costs were allocated based on the residual allocation factor as discussed in the Study. Residual costs were allocated on the basis of how all of the other common costs were allocated using identified cost-causative allocation factors. As a result, the residual common costs follow the allocation of the other common costs allocated to the regulated subsidiaries which is an acceptable method (i.e., "Residual Factor") for allocating residual costs.

Appendix 8 of the Study shows for each Business Unit the Service Company common costs allocated to the regulated subsidiaries using either an assigned cost-causative allocator or the Residual Factor. For 77 of the 153 Business Units a cost-causative factor was identified and used. For the other 76 Business Units the common costs were allocated on the basis of the Residual Factor. As shown on Appendix 8, $114,021,979 or 61% of the total Service Company common costs of $187,592,663 were allocated to the regulated utilities using cost-causative factors, and $73,570,684 or 39% of the common costs were identified as residual costs and allocated on the basis of the Residual Factor.

Cost Accounting and Allocation Methodologies

Many different cost allocation methodologies exist, each with potentially different impacts on allocated costs in multiple regulatory jurisdictions. For purposes of the Study, certain cost accounting principles and regulatory guidelines for allocating shared common costs were considered for selecting appropriate alternative cost allocation factors for comparing to the customer allocation factor used in the Tier 2 allocation process for allocating Service Company common costs to the regulated utilities. The services provided by the Service Company to the regulated operating companies, for which the associated costs are currently allocated using the Tier 2 customer allocation factor, are essentially the same for each service recipient. Cost accounting principles dictate that cost allocation factors should be based on "cost drivers" or "cost-causation", which means that they should reflect the underlying costs associated with the activities, resources and investment devoted to managing the business. Another goal of cost accounting and the selection of cost allocation factors is to achieve increased uniformity and consistency in cost accounting practices.[1] This is important in the regulated utility industry to insure the appropriate allocation of service company support services rather than the selective use of allocation factors that are simply intended to reduce the recovery of appropriate shared service costs.

Other goals that were considered for selecting appropriate cost allocation factors for comparing to the customer allocation factor included the cost-benefit associated with application of the allocation methodology selected. For example, paragraph B of the National Association of Regulatory Utility Commissioners ("NARUC") Guidelines for Cost Allocations provides that to the maximum extent practicable, in consideration of administrative costs, cost should be collected and classified on a direct basis for each asset, service or product provided. The primary cost driver of common costs, or a relevant proxy in the absence of a primary cost driver, should be identified and used to allocate the cost

[1] See Accounting For Public Utilities, LexisNexis, Cost Allocations, page 19-8 and 48 CFR Chapter 99

between regulated and non-regulated services and products.[2] Cost allocation factors should result in administratively efficient application based on readily available data or metrics. Overly detailed or complex systems can increase the cost of providing services and diminish cost benefits obtained through operations of shared service providers. Time and expense necessary to audit transactions is also an important criterion for selecting common cost allocation factors. Similar to accounting and reporting for shared service transactions, routine auditing of intercompany transactions in conjunction with regulatory proceedings should not impose an extreme cost burden or be so time consuming as to prevent effective system testing.

Overly detailed and complex systems and allocation methods may also result in resistance from regulators or the temptation for constructive confiscation through "cherry picking" cost allocation factors and metrics which produce the lowest regulatory cost of service through the elimination of reasonable and necessary operation and maintenance expense and capital expenditures. This is especially true for service companies that provide services to many regulated utilities in multiple regulatory jurisdictions. Such practices could prevent total cost recovery and subvert the shared services concept, which is designed to prevent duplication of services necessary to provide high quality, reliable service and achieve economies of scope and scale.

Findings and Conclusions

The Study provides the detailed cost analysis by AWWSC Business Unit and function for comparing the use of the number of customers for allocating Service Company costs among the regulated utilities (i.e., the Tier 2 allocations) to the use of alternative cost-causative factors for allocating such costs to the regulated utilities. The selection and use of alternative cost-causative allocation factors, including the use of single and multi-factor allocation factors for allocating common costs when cost-causative relationships were identified during the analysis, and the use of the residual allocation factor as a relevant proxy when a cost-causative relationship or primary cost driver could not be identified for residual costs, are reasonable. As noted in the Study, number of customers was used as a metric for developing alternative allocation factors, both single and multi-factor allocation formulas, for allocating Service Company common costs when the costs to be allocated were incurred primarily due to the number of customers served by the regulated utilities. The services provided by the Service Company to the regulated utilities are essentially the same for each regulated operating company; therefore the application of the alternative allocation factors used in the Study can be applied for allocating Service Company costs to the regulated utilities for comparing to the original cost allocations resulting from application of the customer allocator.

As shown in the Study, reallocation of TAWC's common costs based on the alternative cost-causative factors used in the comparative analysis results in a decrease of $120,501 in TAWC's allocated costs resulting in total TAWC costs of $4,946,578, a decrease in TAWC's total cost of 2.38%. Based on the small decrease in TAWC total Service Company costs resulting from application of the alternative cost-causative factors when compared to the customer allocator, the Study verifies that the use of the number of customers for allocating AWWSC costs among regulated utilities closely approximates the use of cost-causative factors and modifications to the customer allocation methodology are not warranted. Cost allocations to the regulated subsidiaries resulting from the use of the alternative cost allocation factors as described in the Study that result in differences in the amount of allocated common costs of 10% or less when compared to the allocation of such costs based on the number of customers,

[2] See Accounting For Public Utilities, pages 19-7 and 19-8

would be in a "range of reasonableness" and would not warrant changing the existing methodology for allocating Service Company common costs.

Continued use of the customer allocator meets the goal of cost accounting and the selection of cost allocation factors to achieve increased uniformity and consistency in cost accounting practices and should result in lower administrative costs when compared to the more complex and administratively costly application of the alternative cost-causative allocation factors. Continued use of the customer allocator provides not only greater transparency and ease of application but it may result in reducing the time and expense necessary to audit transactions in conjunction with regulatory proceedings and to test the accounting and reporting for shared service transactions resulting from the use of more complex cost allocations.

Continued use of the customer allocator should also result in less volatility in the level of Service Company common costs allocated and charged to the regulated subsidiaries for rate making purposes as compared to other alternative cost allocation factors. This is because the number of customers served by each of the regulated utilities typically varies less on a relative basis from period to period than other more volatile metrics (e.g., number of employees, investment in net plant, revenues) which may fluctuate more due to changes in organizational structure, system operations and maintenance, use of outside services and contractors, capital expenditures, rate structures and sales volumes. In addition, continued use of the customer allocator which reasonably approximates the use of cost-causative factors may lessen the resistance from regulators associated with more complex allocation factors or the temptation for constructive confiscation through "cherry picking" cost allocation factors and metrics which produce the lowest regulatory cost of service through the elimination of reasonable and necessary shared service costs.

Very truly yours,

Bernard L. Uffelman
President
Uffelman Advisory Services, LLC

AGREEMENT

Agreement dated January 1, 1989, between AMERICAN WATER WORKS SERVICE COMPANY, INC., a Delaware corporation (hereinafter "Service Company"), and TENNESSEE-AMERICAN WATER COMPANY, a Tennessee corporation (hereinafter "Water Company").

The background of this Agreement is that:

1. Both Service Company and Water Company are subsidiaries of American Water Works Company, Inc., a Delaware corporation (hereinafter "American").

2. Water Company has been organized for and is presently engaged in the business of providing potable water as a public utility in the State of Tennessee.

3. Service Company maintains an organization whose officers and employees are familiar with all facets of the water utility business, including the development, business and property of Water Company, and are experienced in the efficient management, financing, accounting and operation of water utility properties and the extension and improvement thereof. The officers and employees of Service Company are qualified to aid, assist and advise Water Company in its business operations through the services to be performed under this Agreement.

4. Service Company has provided administrative and operating services to Water Company for many years, the past 17 years pursuant to an agreement dated January 1,

1971. Because Water Company is of the opinion that it cannot obtain the same quality and diversification of services on a comparable economic basis elsewhere, it proposes to enter into a new agreement with Service Company more specifically defining the types of services available to it.

5. Service Company has entered or proposes to enter into agreements similar to this agreement with other affiliated water companies (hereinafter collectively "Water Companies").

6. The services to be rendered under this agreement are to be rendered by Service Company to Water Companies at their cost to Service Company, as hereinafter provided.

NOW, THEREFORE, in consideration of the premises and mutual agreements herein contained, the Water Company and Service Company agree that:

ARTICLE 1. PERSONNEL AND SERVICES TO BE PROVIDED

1.1 During the term of this agreement and upon the terms and conditions hereinafter set forth, Service Company shall provide corporate guidance for Water Company. In addition to the guidance provided by the officers and employees of Service Company through the coordination of functional activities for all subsidiaries of American, the officers and employees of Service Company shall furnish and Water Company shall purchase from Service Company, the following services: Accounting, Administration, Communication, Corporate Secretarial, Engineering, Financial, Human Resources,

Information Systems, Operation, Rates and Revenue, Risk Management and Water Quality, together with such other services as Water Company and Service Company may agree; provided, however, that Water Company may perform the service with its own personnel or engage another company or person to provide those services on its behalf. Service Company by mutual consent may engage another Company or person to provide such services on its behalf.

1.2 Service Company shall employ qualified officers and employees and those persons shall be available for election by Water Company to serve as officers of Water Company.

1.3 Without limitation, services to be provided by the Service Company shall be rendered as follows:

A. **Accounting**: Service Company shall assist in the preparation and implementation of accounting methods and procedures to determine that they conform fully to the requirements, rules and regulations of governmental authorities having jurisdiction and review Water Company's monthly financial reports, annual reports and other reports to stockholders and to any governmental authorities. It shall advise and assist in the establishment and maintenance of current record keeping techniques; review accounting procedures, methods and forms; and evaluate systems of internal control for receipt and disbursement of funds, materials and supplies, and other assets. Service Company shall maintain accounting records as required by Water Company. When appropriate, Service Company shall cooperate and consult with Water Company's independent certified public accountants.

Service Company shall assist in the preparation of operating and construction budgets and monitor the control over such budgets by comparing experienced costs to the projections.

Service Company shall prepare or assist in the preparation of federal, state and local tax returns for and to the extent required by Water Company.

B. **Administration**: Service Company shall make qualified employees available to perform or assist in the performance of Water Company's corporate activities. Those employees shall keep themselves informed on all aspects of Water Company's operations and shall regularly visit Water Company's facilities. They shall make recommendations to Water Company for operating expenditures and for additions to and improvements of property, plant and equipment. They shall keep abreast of economic, regulatory, governmental and operational developments and conditions that may affect Water Company; and advise Water Company of any such developments and conditions to the extent that they may be important to Water Company. Service Company shall provide an internal audit staff for periodic audits of accounts, records, policies and procedures of Water Company and submit reports thereon.

C. **Communications**: Service Company shall recommend procedures to promote satisfactory relations with employees, customers, communities and the general public and assist in the preparation of communication materials, (including press releases, brochures, audio visual presentations and speeches) plant tours, public exhibits and displays and other related services to inform the public.

D. Corporate Secretarial: Service Company shall maintain, in such places and manner as may be required by applicable law, documents of Water Company, such as minute books, charters, by-laws, contracts, deeds and other corporate records, and shall administer an orderly program of records retention. It shall maintain, or arrange for the maintenance of, records of stockholders of Water Company, prepare or arrange for the preparation of stock certificates, perform duties relating to the transfer of stock and perform other corporate secretarial functions as required including preparation of notices of stockholder and director meetings and the minutes thereof.

Service Company shall review and may assist in the preparation of documents and reports required by Water Company such as deeds, easements, contracts, charters, franchises, trust indentures and regulatory reports and filings.

E. Engineering: Service Company shall advise, and provide engineering services to assist Water Company in planning for, operating, maintaining and constructing its facilities.

It shall conduct distribution system surveys and hydraulic analyses and prepare or review maps, charts, operating statistics, reports and other pertinent data.

It shall assist Water Company in the proper maintenance and protection of Water Company properties by periodic inspection of its structures, tanks, reservoirs, dams, wells and electrical and mechanical equipment.

The engineering services provided by Service Company shall also include the conduct of field investigations as necessary to

obtain engineering information and, when required, the preparation of studies, reports, designs, drawings, cost estimates, specifications, and contracts for the construction of additions to or improvements of Water Company's source of supply, treatment plant, pumping stations, distribution system, and such other facilities as Water Company may request. Service Company shall provide a Materials Management Program to arrange for the purchase of equipment, materials, and supplies in volume on a basis advantageous to Water Company and assist in the evaluation of new and existing products and application procedures.

F. **Financial**: Service Company shall assist in the development and implementation of financing programs for Water Company, including the furnishing of advice from time to time on securities market conditions and the form and timing of financing; advise concerning arrangements for the sale of its securities; and assist in the preparation of necessary papers, documents, registration statements, prospectuses, petitions, applications and declarations. It shall prepare reports to be filed with, and reply to inquiries made by, security holders and bond and mortgage trustees.

Service Company shall assist Water Company in cash management including arrangements for bank credit lines, establishment of collection policies, and development of temporary investment programs.

Service Company shall provide assistance to Water Company in the preparation of all financial reports.

G. Human Resources: Service Company shall assist in obtaining qualified personnel for Water Company; in establishing appropriate rates of pay for those employees; and in negotiating with bargaining units representing Water Company employees. It shall carry out training programs for the development of personnel and advise and assist Water Company regarding personnel. It shall also advise and assist Water Company in regard to group employee insurance, pension and benefit plans and in the drafting or revising of those plans when required. It will keep Water Company apprised of all employment laws and develop procedures and controls to assure compliance.

H. Information Systems: Service Company shall make available to Water Company electronic data processing services. Those services shall include customer billing and accounting, preparation of financial statements and other reports including those required by Federal and State agencies.

I. Operation: Service Company shall develop and assist in the implementation of operating procedures to promote the efficient and economic operation of Water Company. Periodic operational reviews will be performed by Service Company personnel and any deviations from adopted procedures will be reported to Water Company.

J. Rates and Revenue: Service Company personnel shall make recommendations for changes in rates, rules and regulations and shall assist Water Company in the conduct of proceedings before, and in its compliance with the rulings of, regulatory bodies having jurisdiction over its operation. These personnel

shall keep abreast of economic and regulatory developments and conditions that may affect Water Company; and advise Water Company of any such developments and conditions to the extent that they may be important to Water Company. Rates and Revenue personnel shall assist in the preparation of rate filings or applications and the supporting documents and exhibits requested or required by the Water Company and their respective regulatory commissions. Service Company shall also provide qualified personnel to testify on Water Company's behalf as required during any regulatory proceedings.

K. **Risk Management**: Service Company shall provide a Risk Management Program to review the exposures to accidental loss of the Water Company, recommend efficient methods of protection either through the purchase of insurance, self-insurance or other risk management techniques and arrange for the purchase of insurance coverage. It shall also supervise investigation procedures; review claims; and negotiate and assist in, and evaluate proposals for, settlement at the request of Water Company. It shall assist in the establishment of safety and security programs to avoid or minimize risk and loss.

L. **Water Quality**: Service Company shall assist Water Company to comply with standards of governmental agencies and establish and attain water quality objectives of the Water Company. It shall assist in providing design criteria for processes, coordinating with public agencies, developing approaches and solutions to water quality problems, and providing

technical assistance and general direction for Water Company personnel.

It shall also provide laboratory services for programmed analyses as required by drinking water regulations, and special analyses as required by Water Company.

ARTICLE II. PAYMENT FOR SERVICES

2.1 In consideration for the services to be rendered by Service Company as hereinabove provided, Water Company agrees to pay to Service Company the cost thereof determined as provided in this Article II and in Article III.

2.2 All costs of service rendered by Service Company personnel for Water Company or in common with other Water Companies shall be charged to Water Company based on actual time spent by those personnel as reflected in their daily time sheets or other mutually acceptable means of determination.

2.3 All costs of Service Company incurred in connection with services rendered by Service Company which can be identified and related exclusively to Water Company, shall be charged directly to Water Company.

2.4 All costs incurred in rendering services to Water Company in common with similar services to other Water Companies which cannot be identified and related exclusively to services rendered to a particular Water Company, shall be allocated among all Water Companies so served, or, in the case of costs incurred with respect to services rendered to a particular group of Water

Companies, among the members of such group, based on the number of customers served at the immediately preceding calendar year end.

2.5 Cost for support personnel (secretaries, clerical personnel, clerks, messengers, telephone operators, mail clerks, and other incidental support personnel of the Service Company) as well as the cost of lease payments, depreciation, utilities and other costs associated with leasing office space and equipment by Service Company shall be allocated among the Water Companies on the basis of the proportion of the aggregate cost allocated under Sections 2.3 and 2.4.

ARTICLE III. ALLOWANCE FOR OVERHEAD

3.1 In determining the cost to be assessed by Service Company for the rendering of services to Water Company as herein provided, there shall be added to the salaries of all officers and employees for whose services charges are to be made, a percentage sufficient to cover the general overhead of Service Company, as defined below, properly allocable thereto. Such percentage shall be calculated each month and shall be the ratio of the total general overhead of the Service Company for the month to the total salaries of the employees for whose service charges are to be made to the Water Companies. No general overhead of Service Company shall be added to costs incurred for services of non-affiliated consultants employed by Service Company.

3.2 The term "general overhead" shall include:

(a) pension and insurance premiums paid for the benefit of Service Company employees,

(b) legal and other fees for services rendered to the Service Company,

(c) taxes,

(d) other general office supplies and other similar expenses, and

(e) interest on working capital.

ARTICLE IV. BILLING PROCEDURES AND BOOKS AND RECORDS

4.1 As soon as practicable after the last day of each month, Service Company shall render a bill to Water Company for all amounts due from Water Company for services and expenses for such month plus an amount equal to the estimated cost of such services and expenses for the current month, all computed pursuant to Articles II and III. Such bill shall be in sufficient detail to show separately the charge for each class of service rendered. All amounts so billed shall reflect the credit for payments made on the estimated portion of the prior bill and shall be paid by Water Company within a reasonable time after receipt of the bill therefore.

4.2 Service Company agrees to keep its books and records available at all times for inspection by representatives of Water Company or by regulatory bodies having jurisdiction over Water Company.

4.3 Service Company shall at any time, upon request of Water Company, furnish any and all information required by Water Company with respect to the services rendered by Service Company

hereunder, the costs thereof, and the allocation of such costs among Water Companies.

ARTICLE V. OTHER AGREEMENTS

5.1 It is understood by Water Company that Service Company has entered or may enter into similar agreements with other Water Companies that are affiliated with American to which similar services are to be furnished. Service Company will not enter into agreements to perform similar services for other companies on terms more favorable than those provided herein.

5.2 It is understood by Water Company that Service Company has entered or may enter into an agreement or agreements with American and certain other companies not engaged in the water or sewer service business to which limited services are to be furnished; Water Company consents to such additional agreements, provided, however, that no part of the cost of furnishing such services will be charged to Water Company.

ARTICLE VI. TERM OF AGREEMENT

This agreement shall become effective as of the later of (a) the date first mentioned above or (b) the date the parties receive the last of any necessary approvals of governmental regulatory agencies having jurisdiction in the premises. Upon becoming effective, this agreement shall be the sole agreement between the parties concerning the subject matter hereof and shall supersede all prior agreements, written or oral, including the agreement dated January 1, 1971, which shall terminate on the date this

agreement becomes effective. This agreement shall continue in full force and effect until terminated by either of the parties hereto giving the other party hereto ninety day's notice in writing; provided, however, that this agreement shall terminate as of the date Water Company or Service Company ceases to be an affiliate of American.

IN WITNESS WHEREOF, Service Company and Water Company have caused this agreement to be signed in their respective corporate names by their respective Presidents or Vice Presidents, and impressed with their respective corporate seals attested by their respective Secretaries or Assistant Secretaries, all as of the day and year first above written.

Accounting and Service Fee Billing Manual
I-Introduction

Purpose of Accounting and Service Fee Billing Manual

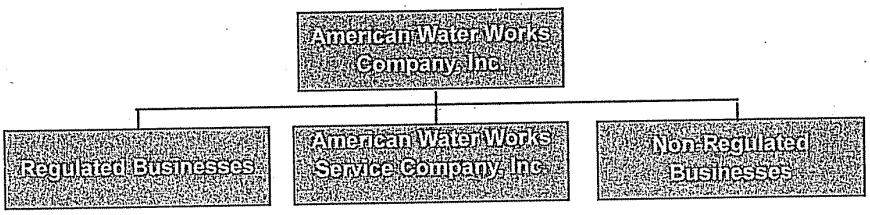
This manual documents the methods by which American Water Works Service Company, Inc. ("Service Company") expenses are accounted for and billed to American Water (AW) subsidiary companies ("Affiliates").

Cost Assignment Principles

Service Company follows certain cost assignment principles, including:

- **Services at Cost** – The Service Company provides its services at cost. There is no profit included in the charges billed to affiliates.

- **Direct Charging of Expenses** – Whenever possible, Service Company expenses are charged directly to the specific affiliate (regulated or non-regulated) that benefits from the underlying work.



- **Charging common costs** – Service Company expenses that cannot be direct charged to a specific affiliate are allocated via formulas used by Service Company employees for coding all time and expenses.

- **Billing Accuracy** – All efforts are made to ensure that billings are correct. The Service Company performs monthly reviews of costs and allocations for accuracy. Affiliates have the opportunity to review Service Company billings and, where necessary, request adjustment for inaccurate charges.

Accounting and Service Fee Billing Manual
II – Overview of American Water Works Company, Inc.

Organizational Structure

American Water Works Company, Inc. is a publicly traded company listed on the NYSE as "AWK." The following chart sets forth the company's organizational structure:

Regulated Businesses

AW provides water and wastewater services to more than 3.3 million customers (regulated), or connections to our water and wastewater networks in 19 states (as of 12/31/09) through the following operating companies:

Arizona-American Water Company
California-American Water Company
Hawaii-American Water Company
Illinois-American Water Company
Indiana-American Water Company
Iowa-American Water Company
Kentucky-American Water Company
Long Island Water Corporation
Maryland-American Water Company
Michigan-American Water Company
Missouri-American Water Company
New Jersey-American Water Company
New Mexico-American Water Company
Ohio-American Water Company
Pennsylvania-American Water Company
Tennessee-American Water Company
Texas-American Water Company
United Water Virginia, Inc.
Virginia-American Water Company
West Virginia-American Water Company

Non-Regulated Businesses

American Water also provides services that are not subject to economic regulation by state PUCs through Non-Regulated Businesses. Non-Regulated Businesses include:

- Contract Operations Group which enters into public/private partnerships, including O&M, and DBO contracts for the provision of services to water and wastewater facilities for municipalities, the United States military and other customers;

- Applied Water Management Group which works with customers to design, build and operate small water and wastewater treatment plants;

- Homeowner Services Group which provides services to domestic homeowners to protect against the cost of repairing broken or leaking pipes inside and outside their homes; and

- Terratec Environmental Services Inc., which primarily provides wastewater, residuals, transport, disposal and management services to municipal and industrial customers in Ontario, Canada.

Accounting and Service Fee Billing Manual
III – Overview of American Water Works Service Company, Inc.

The Service Company provides the following services to AW affiliates: Internal Audit, Business Development, Business Transformation, Customer Service Center, Communications, Finance, Human Resources, Information Technology, Investor Relations, Legal, Operation Services, Property, Regulatory Services, and Regulated Operations Management. A description of each function is listed below:

Internal Audit – Responsible for performing a broad, comprehensive program of internal auditing within American Water its subsidiaries and affiliates. Internal audit examines and evaluates the adequacy and effectiveness of the system of management controls implemented by American Water management, performs reviews of operational efficiencies and financial accounting to assist the Company in achieving its objectives in accordance with approved policies and organizational goals.

Business Development - Provides coordination, tools, training, and support to American Water subsidiaries by assisting in identifying acquisition opportunities that facilitate the orderly and continued growth of the Company in addition to seeking opportunities that create synergies that benefit customers.

Business Transformation Project – Optimizes and enhance process design and development of new technologies to include training and implementation. After process assessment and re-engineering is complete, the Business Transformation Program will ultimately focus on three areas:

- Business Applications – the software used to manage data (hire/retire, procure to pay, records/reports, asset management, etc.);
- Infrastructure – the foundation of information technology such as servers, storage, security, and disaster recovery;
- Customer Service – projects that enhance customer satisfaction.

External Affairs (Communications) - Produce written and electronic information about American Water and affiliates to include press releases, internal announcements, company advertisements, etc. to customers, employees, communities, investors, and the media.

Finance - Include accounting, treasury, financial planning and reporting, compliance (Sarbanes-Oxley), risk management, income tax department, and Shared Services Center. These groups provide support, guidance and coordination in the preparation of financial statements, tax filings, etc.

Human Resources - Responsible for governance of recruiting, hiring, labor and employee relations, managing compensation and benefits, training, organizational development including involvement in negotiations for new contracts with bargaining units, consistent application of employee discipline, preparation of required reports

to governmental agencies at the state and federal level regarding employees, and development and promulgation of policies and practices affecting employees of American Water.

Benefits Service Center - Provides administrative and operating support for medical, dental, life, flexible spending, COBRA, and pension plans.

Information Technology Services – Responsible for all corporate and regulated subsidiaries technology systems. These hardware and software systems support numerous business processes such as meter reading, customer billing, bill payment management, bill collection, and customer information systems (customer service systems), Enterprise Reporting and Planning systems (back office operation, planning and reporting), communication systems (telephone, cell phones and Blackberrys), field workforce management systems (Service First) and personal computer (PC) networks as well as connectivity systems for all employees using personal computers in the performance of their day-to-day activities.

Investor Relations – Responsible for preparation and distribution of financial information that is periodically released to current or potential holders of financial securities of American Water and/or its subsidiaries.

Legal - Provides legal guidance and support for Corporate and all subsidiaries of American Water. When specialized legal advice or counsel is required, members of the Legal function arrange for and retain qualified legal experts to participate in legal matters.

Regulatory Services – Provides strategic oversight in the preparation of rate applications to ensure adequate revenues, on a timely basis, to recover operating costs, taxes, and financing on capital invested in facilities used by regulated affiliates.

Regulated Operations Management

Provides corporate governance for the Company's regulated affiliates, and the Customer Service Center, organized as follows:

Eastern Division: Provides governance of the following affiliates: Long Island, Edison, Liberty, ETown Services, ETown Properties, Kentucky, Maryland, Tennessee, Virginia, West Virginia, and United Water Virginia. Managed by an Executive VP with direct reporting to the president of Regulated Operations.

Western Division: Provides governance of the following affiliates: California, New Mexico, Arizona, Hawaii, Texas, Illinois, Indiana, Iowa Michigan, Missouri, Ohio, and Texas. Managed by an Executive VP with direct reporting to the president of Regulated Operations.

Stand alone (not in division): New Jersey American Water and Pennsylvania American Water, which combined account for approximately 50% of all regulated revenue, have a direct reporting relationship to the president of Regulated Operations.

Customer Service Center (CSC): Two centers located in Alton, Illinois and Pensacola, FL performs customer service functions for all regulated customers except Michigan. Services include: customer call processing, service order processing, correspondence processing, credit and collections. The CSC also supports billing, collection, and call handling support for a number of O&M contracts.

Shared Services Center - Supports American Water affiliates by performing essential back office services such as accounting, financial reporting, payroll processing and reporting, accounts payable and purchase card services, invoice payments, fixed asset processing, cash management, tax related services including, but not limited to, income and property taxes and additional rates and regulation support in rate cases.

Operation Services – Responsible for developing and implementing a cost-effective capital improvement program, procurement, best operating practices, environmental management and compliance, maintenance services, network (pipe network operation and maintenance), production and water quality support for all subsidiaries. The Office of Risk Management provides physical security, employee health and safety, business continuity, event management and claims management support.

Lab: Employs chemists, lab technicians, analysts, and support employees to perform water quality testing and research. The lab, which is EPA and state certified, uses state of the art water testing equipment to test water, source water, and finished waters from all subsidiaries and is located in Belleville, Illinois.

Supply Chain - Provides purchasing support using strategic sourcing methods to procure products and services for American Water subsidiaries. The function consists of a national team with team members located in various portions of the United States.

Property – Provides facility management services for owned and leased buildings in the Voorhees Corporate Campus. This includes directing and administering facility and space planning and utilization, developing and administering capital and expense budgets for facilities, negotiating leases, completing large scale fit-outs of office space, housekeeping, utilities, mail distribution, reprographics and related functions in addition to providing direction and capital program management to other Service Company locations.

Accounting and Service Fee Billing Manual
IV – Service Company Accounting

The Service Company maintains an accounting ledger in JDEdwards ("JDE") for recording all transactions (labor, expenses, capital assets, and overhead) in a company ledger separate from all other AW affiliates. Monthly financials statements are prepared that summarize MTD and YTD costs, budgets, and reforecasts, with variances and explanations, by category and function – a function will have one or more business units (See Appendix for listings). Accounting details by transaction type are listed below:

Labor: Service Company uses a JDE payroll application "JDE Time and Approval" to track time and attendance by week. Employee's electronically enter hours worked (including vacation, sick, FMLA, etc) and accounting information (i.e. business unit; formula; pay type) and electronically submit the timesheet for approval. Submitted timesheets are electronically routed to authorized approvers via JDE. All time sheets require approval (hours and coding) from an authorized timesheet approver in the employee's home business unit. JDE posts all labor and labor related expenses, in aggregate, in selected business unit's bi-weekly.

Expenses: All expenditures (i.e. standard invoices, purchase orders, electronic disbursements, and p-cards) and journal entries require a preparer to enter coding details (i.e. business unit, object account, and formula) and a reviewer to approve such in accordance with the Company's Delegation of Authority Policy. All expenditures are processed electronically and are automatically routed to the employee's supervisor for approval. All expenses are posted many times daily, in detail, in the business unit selected.

Capital assets: Service Company capitalizes labor and expenses as Non-Utility Plant in accordance with GAAP. The Company requires that all capital projects receive advance approval from a capital committee which requires submission of a business case. For approved capital projects, a "Funding Project" is authorized in PowerPlant (Application used as subsidiary ledger for utility and non-utility plant) by the Capital Management department. The designated project manager can create work orders against the funding project that can be used by Service Company employees to charge time and expenses. Project Manager's also record monthly accruals in PowerPlant for work incurred but not billed or processed. These accruals are posted in the Service Company balance sheet monthly. All expenditures for capital assets (see labor and expense sections above) are posted, in detail, in the ledger of the business unit selected.

Overhead: Expenses for support personnel (administrative assistants, mailroom clerks, etc), pension, medical insurance, taxes, general office supplies, and other similar expenses are recorded in the ledger of the business unit responsible for incurring the charge. All overhead expenditures are posted using the labor and expense processes noted above, and are recorded, in detail, in the ledger of the business unit responsible for the charge using an overhead formula.

Accounting and Service Fee Billing Manual
V – Service Company Planning and Budgeting

Long-Term Plans:

Service Company financial analysts prepare a long-term plan annually. The plans are reviewed by functional leads and the board of directors.

The long-term plans are loaded into Hyperion System 9 and are distributed to affiliates using the same process described in "Annual Budgets" above for use in their long-term plan preparation.

Annual Budgets:

Service Company financial analysts prepare, functional leads review, and the board approves the company's annual budget. Once the budget is approved, it is loaded into JDE and Hyperion System 9 by month in detail (by business unit and object account). Each business unit's total budgeted charges are separated into two types of fees: Capital Fees (each business unit's estimate of expenses that will be billed as capital fees based on historical results and future projections) and Management/Service Fees (difference between total budgeted costs and Capital Fees).

The Service Company finance group prepares and distributes the annual budgeted fees to each affiliate, by function by month, for their use in preparing their annual budgets. The budgeted fees for each affiliate are calculated by business unit using historical results (i.e. percent of business unit charges to each affiliate over prior 12 months) updated for future projections, as necessary. Monthly and YTD reporting (See Section VI for details) provide for comparisons to budget, variances, and material variance explanations.

Quarterly Reforecasts:

Three quarterly reforecasts are prepared every year by Service Company financial analysts and functional leads. The reforecasts are prepared during the last month of each quarter (December excluded) and includes a mix of actual results for previous months and reforecasts for future months – see below for details.

Quarter	Month Prepared	Actual Months	Forecast Months
Q1	Mar	Jan-Feb	Mar-Dec
Q2	Jun	Jan-May	Jun-Dec
Q3	Sep	Jan-Aug	Sep-Dec

Service Company quarterly reforecasts are loaded into JDE and Hyperion System 9 by month and are distributed to affiliates using the same process described in "Annual Budgets" above. Monthly and YTD reporting (See Section VI for details) provide for comparisons to reforecasts, variances, and material variance explanations.

Accounting and Service Fee Billing Manual
VI – Service Company Reporting

On a monthly basis, all functional analysts / leads are provided with reporting of actual expenses (MTD and YTD) compared against plan (original budget) and the most recent reforecast (original budget adjusted quarterly with more current estimates) by function and business unit. All expenditures whether billed as Opex or Capex are included in the report with exception of capital expenditures for Service Company which are charged to a capital work order and charged to CWIP. All functional variances in excess of predefined materiality amounts (determined by the Controller's office annually) must be explained by the functional analyst (coordinated with functional lead when necessary) in the monthly Financial Reporting Package (FRP) and Business Performance Package (BPR). The FRP's require monthly sign-off from the VP of Finance and the BPR's require quarterly sign-off from the president.

After Service Company closes its books each month, all Service Company analysts (along with representation from affiliates) attend a debrief call to review and comment on material variance explanations.

After the monthly debrief call Service Company management presents the FRP to the corporate management team. Financial results, material variances, and other issues are discussed in detail.

Service Company management presents the BPR to the senior management team and board of directors (comprised of Affiliate presidents) quarterly where financial results, KPI's, material variances, and other issues are discussed in detail.

Accounting and Service Fee Billing Manual
VII – Service Company Billing and Clearing

Overview:

Service Company has developed a billing system which direct charges or allocates costs for services provided to both regulated and non-regulated affiliates. The Service Company billing is processed monthly by the general accounting department in the Shared Services Center. This billing includes all Service Company expenses (Opex and Capex), at cost, to affiliates using the "formula" selected for each transaction – See Section IV "Service Company Accounting."

Formulas:

All Service Company transactions (vouchers, journal entries, etc) require a "formula" (also known as "subledger" code) in the account coding. Each "formula" is configured in JDE with the following: affiliate(s) to be charged, percent of charge to be billed to each affiliate (total must equal 100%), and affiliate's account code block.

"Formulas" are also entered in JDE with an end date (month/year). JDE is configured to prevent transactions from using an expired formula during data input.

Three different types of "formulas" exist:

Formulas – Used to bill labor, expenses, and/or overhead* to one or more affiliates with an estimated end date of greater than one year. Formulas can be configured to allocate costs to work order(s) and/or affiliated company GL accounts.

* Formulas can be set to <u>not</u> bill overheads. This would apply to time entry only.

Authorizations – Used to bill and track costs for specific tasks or projects that benefit one or more affiliates (e.g. water quality research for surface water treatment plants, specific rate case, etc) with an estimated end date of approximately one year or less. Authorizations can be configured to allocate costs to work order(s) and/or affiliated company GL accounts.

Work Orders – Used for recording expenditures for approved capital projects that allocate charges to only one affiliate. Work Order numbers are auto-generated by PowerPlant and are created only by a project manager, with supervisor approval, against authorized funding projects. Service Company can only use work orders that the project manager denotes "eligible" for Service Company.

A Formula or Authorization can be configured to allocate costs across regulated and/or unregulated affiliates [See Appendix for listing] (Tier One factor) and/or to one or more regulated affiliates [See Appendix for listing] (Tier Two factor).

Tier One factors represent the split of costs to be allocated to regulated and non-regulated affiliates. These factors (available factors listed below) are based on a review of primary cost drivers for a particular service.

3-Factor Formula (#1) – Includes the primary cost drivers of operating revenues, net property, plant and equipment and employees which are common to the operation of regulated and non-regulated affiliates. The metrics are equally weighted within the formula. Also, these metrics will only include affiliates that are receiving service.

2-Factor Financial Services Formula (#2) – Includes the primary cost drivers of operating revenues and employees. The metrics are equally weighted within the formula. Also, these metrics will only include affiliates that are receiving service.

Revenue Factor (#3) – Use operating revenues as a surrogate for customers counts due to the relative size differences of customers (e.g. two O&M contracts may support significantly different sized customer bases). Factor includes only affiliates that are receiving service.

Personal Computer Factor (#4) – Includes the primary cost driver for ITS services associated with acquiring and supporting PC's. Metric: number of personal computers.

Total Premises Factor (#5) – Includes the primary cost driver for ITS services associated with the operation of AS 400 computers. Metric: number of premises maintained on the AS 400 database.

Employee Factor (#6) – Uses count of active employees for all affiliates receiving services.

Budgeted Capital Projects and Engineering Project Management Factor (#7) - Includes the primary cost driver for services associated with capital projects and costs not directly assignable to task orders. Metric: dollar value of budgeted capital expenditures for the year.

Research Authorization Project Factor (#8) – Includes the primary cost driver for services associated with water quality research projects. Metric: dollar value of budgeted research projects for the year. This metric will only include affiliates that are receiving service.

Purchase Orders and Purchasing Card (P-Card) Factor (#9) – Includes the primary cost driver for transactional services associated with purchasing and

paying invoices for goods and services. Metric: number of purchase orders and P-Card transactions on an annual basis.

Employee and Retiree Factor (#10) – Uses count of active employees and retiree's by affiliate as an allocation basis.

100% Non-regulated Company (#11) – Factor allocates expenses to non-regulated affiliate(s). Specific non-regulated affiliate(s) charged are per request from formula requester.

100% Regulated Company (#12) – Factor allocates all expenses to regulated affiliate(s). Specific regulated affiliate(s) charged are dependent on Tier Two factors (see below).

Tier Two factors are used to allocate regulated company costs (via Tier One factors above) to the regulated affiliates that benefit from the expense. Tier two factors are primarily based on the number of customers served (water and wastewater) at the immediately preceding calendar year end. However, Tier Two allocation factors can be based on other more direct factors such as time worked for an affiliate (e.g. an employee may support two affiliates equally -- 50% for New Jersey American and 50% for Pennsylvania American).

Formula Types:

Direct charge: "Formulas" that charge 100% of all time and expenses to a single affiliate exist for all affiliates. These formulas are used for time/expenses which can be identified and related exclusively to a single company or affiliate -- examples include work in support of an operating company's rate case, engineering design work on an operating company's project and/or the preparation of an operating company's financial statements.

Indirect charge: "Formulas" that allocate costs to more than one affiliate (i.e. costs which cannot be identified and related exclusively to a single affiliate). Examples include employee labor for work supporting multiple affiliates, assessments of new Federal water quality regulations, development of the company-wide materials procurement contracts, creation of company-wide engineering design standards, etc.

Capital of Affiliates: "Formulas" (either direct or indirect) that allocate costs to capital projects. Indirect allocations (i.e. not to a specific workorder) are billed to the "Engineering Dist Clearing O/H" account 18410X on the affiliate's ledger(s) charged (including Service Company). The balance in the Clearing O/H account is allocated to all work orders that received charges for the month using an allocation rate that is revised quarterly. Any balance remaining in the Clearing O/H account at year end (12/31), if any, is fully allocated in December.

Overhead: Include employee benefits (Formula 888888) such as group insurance, pension/PBOP, payroll taxes and general overhead (Formula 999999) such as depreciation, rents, capital lease interest, etc. The benefit and general overheads are tracked separately; however, both types are combined for allocation.

Overhead expenses are "pooled" by physical location (See Appendix for a list of all business units grouped by physical location) for billing. All overhead expenses in each "pool" are separately allocated to affiliates as fees and capital (including Service Company for capital) based on the proportion of direct labor charges (GL account 501200) billed by each "cost pool" (i.e. physical location) monthly.

Billing Process:

Service Company billing is a two-step process that first calculates allocations for all "non-overhead formulas" (all formulas other than 888888 "benefits overhead" and 999999 "general overhead"). The second process calculates overhead allocations using the ratio of direct labor (Object account 501200) allocations (obtained via the first step above) to affiliates multiplied by the pool of overhead expenses by physical location.

The sum of all allocations (via steps one and two above) are system posted directly in affiliate ledgers, detail suppressed, with the exception of AWE which must be manually entered via journal entry because they use a different accounting system. Service fees are posted in JDE by object account that denotes the source of the charge as follows:

Shared Business Service Fees:	Object Acct:
Shared Services Center	534615.16
Customer Services Center	534625.16
Information Technology Services	534635.16
Procurement / Supply Chain	534645.16
Laboratory	534655.16
Benefits Service Center	534665.16

Management Fees:	Object Acct:
Corporate	534600.16
External Affairs / Communications	534601.16
Finance	534602.16
Human Resources	534603.16
Legal	534604.16
Operation Services	534605.16
Property	534606.16
Business Development	534607.16
Business Transformation	534608.16
Audit	534609.16
Regulatory Services	534610.16
Investor Relations	534611.16
Regulated Operations Management	534701.16

Bill Clearing Process:

Service Company billings are cleared through American Water Capital Corporation, Inc. (an affiliate) monthly via an intercompany journal entry to GL Account 231200 (Notes Payable – Cap Corp) posted on the last day of the month. Payments are estimated, for each affiliate, using the prior month actual billing (current month estimate) with adjustment for prior month actual to estimate (previous month funding) true up. For example, on 11/30/08 Service Company received funding from Arizona American of $924k calculated as follows:

Oct08 billing	$973,488
Less: Oct08 estimate (funded on 10/31/08)	(1,022,694)
Net adjustment	(49,206)
Nov08 estimated billings (equal to Oct08 billing)	973,488
Funding on 11/30/08	$924,282

Accounting and Service Fee Billing Manual
VIII - Accounting/Billing for select Service Company expense categories

- **Pension**

The Company maintains noncontributory defined benefit pension plans covering eligible non-union employees. Benefits under the plans are based on the employee's years of service and compensation. The pension plans have been closed for any employees hired on or after January 1, 2006. Union employees hired on or after January 1, 2001 had their accrued benefit frozen and will be able to receive this benefit as a lump sum upon termination or retirement. Union employees (CSC only for Service Company) hired on or after January 1, 2001 and non-union employees hired on or after January 1, 2006 are provided with a 5.25% of base pay defined contribution plan.

The Company's funding policy is to contribute at least the minimum amount required by the Employee Retirement Income Security Act of 1974. Pension plan assets are invested in a number of investments including equity and bond mutual funds, fixed income securities and guaranteed interest contracts with insurance companies.

How budgeted: The actuary prepares projection of annual plan costs using FAS87. The sum of all Service Company pension costs are aggregated in a single cost pool and allocated to the "administrative" business unit for each location in the actuarial report (2008 and prior) changed to function (effective 2009) using the proportion of direct labor dollars budgeted for all employees by function.

How actuals recorded: The annual projected Pension expenses for Service Company (via actuarial report) is allocated to each business unit using the proportion of budgeted direct labor dollars for each business unit for all employees with hire date prior to 1/1/06. The annualized expense is divided by 12 and recorded monthly in GL account 505100.16 "PBOP Operating AG." All PBOP expenses are charged to overhead formula 888888.

- **PBOP (Postretirement benefits other than pensions)**

Service Company maintains postretirement benefit plans providing varying levels of medical and life insurance to eligible retirees. The retiree welfare plans are closed for union employees hired on or after January 1, 2006. The plans had previously closed for non-union employees hired on or after January 1, 2002.

The Company's policy is to fund postretirement benefit costs accrued.

How budgeted: The actuary prepares projection of annual plan costs using FAS106. The sum of all Service Company PBOP costs are aggregated in a single cost pool and allocated to the "administrative" business unit for each physical location in the actuarial report (2008 and prior) changed to function (effective 2009) using the proportion of direct labor dollars for all employees by function.

How actuals recorded: The annual projected PBOP expenses for Service Company (via actuarial report) is allocated to each business unit using the proportion of budgeted direct labor dollars for each business unit for all employees with hire date prior to 1/1/06. The annualized expense is divided by 12 and recorded monthly in GL account 505100.16 "PBOP Operating AG." All PBOP expenses are charged to overhead formula 888888.

- **LTIP "Long-term Incentive Program"**

Service Company participates in a long-term incentive plan for designated employees (currently defined as employees in the salary band L05 and higher) to receive grants (stock options, stock units, stock awards, stock appreciation rights "SARs," or other awards) of equity-based awards. The Compensation Committee of American Water Works Company, Inc. selects the participants to receive grants and determines the number of shares subject to each grant.

How budgeted: Effective in 2009 LTIP costs were budgeted by Service Company – previous to 2009 these costs were budgeted by American Water Works Company, Inc. The sum of all Service Company LTIP costs are aggregated in a single cost pool and allocated to the "administrative" business unit for each function using the proportion of direct labor dollars for employees in the L5 salary band and above by function. Two active cycles are included: 2007-2009 and 2008-2010 (referred to as First and Second grant respectively).

How actuals recorded: Effective in Jun08, LTIP expenses are recorded in two GL accounts: 501716.16 "Comp Exp – Options" and 501718.16 "Comp Exp – RSU's." These expenses are posted to an employee's home business unit (effective Jan09) based on analysis prepared by corporate accounting.

LTIP expenses are charged to formulas allocating time to regulated affiliates (primarily) in the states supported by region/division or all states for corporate.

- **AIP "Annual Incentive Program"**

Annual incentive compensation is made available to all managerial, professional and supervisory employees (including executives but excluding CSC union employees). It is designed to provide incentives for achieving short-term financial and operational goals of the Company.

The target payout (bonus amounts that would be paid assuming 100% achievement of company performance measures) is calculated as a percentage of an employee's annual base salary depending on his/her salary band.

How budgeted: AIP is budgeted for each eligible employee using the rate assigned for their salary level assuming 100% achievement of company performance measures. AIP is budgeted in the employee's assigned business unit. Effective with 2009 budget, FICA tax estimates have also been budgeted for AIP at rate of 6.2% (actual rate Employee Services used on FICA accrual for AIP which started in 2008) to Business Unit 032098 -- CORP-Non-Dept Costs.

How actuals recorded: AIP is posted to the employee's home business unit after each payroll batch is processed in GL account 501711 "IP-Off-Annual-P/R JE." AIP expenses are charged to the formula(s) that the employee charged which can include general overhead (i.e. 999999), non-overhead formulas, and/or work orders.

Quarterly, the SSC Employee Services department reconciles AIP accruals for each employee against an active employee listing calculating AIP earned (employee's salary multiplied by the AIP rate for salary level). A journal entry for any severed/transferred employees and other corrections/adjustments are posted to Business Unit 032098 "Corporate Non-Dept Costs" in GL account 501711 "IP-Off-Annual-P/R JE." FICA tax is also accrued quarterly via manual JE to Business Unit 039998 "Benefits O/H Clearing" in GL account 685325 "FICA."

- **Group Insurance**

Service Company participates in the American Water Voluntary Employee Benefit Association Trust (VEBA) that was established to provide health and welfare benefits to its employees.

Wachovia bank is the recordkeeper for the Group Insurance VEBA trust account.

How budgeted: A global blended group insurance rate is calculated and budgeted monthly in the home business unit for each full-time employee in GL account 504100 "Group Insurance." Budget dollars begin in the hiring month for non-union employees; however, union employees (CSC only) have a three-month budgetary lag from the employee's hire date due to a three-month wait for group insurance benefits to begin.

How actuals recorded: Actual Group Insurance costs by employee are charged to the employee's home business unit (Object 504100 "Group Insurance") each payroll cycle. All Group Insurance expenses are charged to overhead formula 888888.

- **Bypass expenses:**

Select Service Company vendor payments are charged directly to affiliates and are excluded from Service Company cost accounting and billing. These payments are typically for large dollar expenditures such as liability insurance premiums, external financial audit fees, service quality and strategic surveys, ECIS/JDE support and licensing, etc.

Bypass expenses are processed via a single check funded by Service Company that is settled via inter-company clearing monthly.

AMERICAN WATER

Title: **Tax Sharing Policy**

Functional Area: **Corporate Tax**

Policy Number: **AW Policy Template.doc**

SCOPE

This policy applies to American Water Works Company, Inc. ("Parent") and its Subsidiaries (together "American Water" or the "Company") as members of an "Affiliated Group" that files a U.S. consolidated income tax return and in certain states they file a combined, consolidated or unitary return ("Combined Filing").

To the extent its members were members of another Affiliated Group prior to the one existing as of 2007 ("prior Affiliated Group") and the Parent of such Prior Affiliated Group is a member of the Affiliated Group, the policy will apply to the Parent and other members of the Prior Affiliated Group as required to compute any allocation not covered by any Tax Sharing Agreement it had in place for previous taxable year.

POLICY STATEMENT

Business Objective: The objective of this policy is to establish a method for allocating consolidated or combined tax liabilities of the Affiliated Group among its members, for reimbursing the Parent for payment of such liability, for compensating any party for use of its losses or tax credits, and provide for the allocation and payment of any addition to tax, refund arising from a carry back of losses, or tax credits from subsequent tax year. The consolidated or combined tax liability for a taxable period shall include the estimated tax installments due for such taxable period.

Section:

1. Each Subsidiary shall be required to pay to Parent an amount equal to the federal income tax liability that would have been payable by the Subsidiary for such year if it had filed a separate income tax return for such year and all prior years. In computing separate return tax liability, no account shall be taken of any deduction, loss or credit of any member to the extent that such member has previously received payment or to any lower tax rate available to the Subsidiary.

2. The Parent will compensate each Subsidiary for any tax benefits (e.g., losses, tax credits, etc.) computed using the Percentage Method. The compensation will be limited to the reduction in federal income tax that the Subsidiaries with taxable income achieved. Loss companies will be compensated in full unless the sum of separate taxable losses exceeds the sum of separate taxable incomes, in which case compensation will be prorated based on the ratio that the separate taxable loss bears to the sum of all taxable losses, multiplied against the sum of taxable incomes.

3. Parent shall calculate each member's federal income tax payable on a separate company basis for the purposes of determining any payment due under Section 1 in a manner consistent with the tax elections, methods of accounting and other positions taken on the consolidated federal income tax return. Parent shall additionally determine the extent of any compensation payable to a Subsidiary under Section 2.

4. Federal income tax payable by each member calculated in accordance with Sections 1 and 2 inclusive (above) represents federal income tax computed on a regular basis. The amount of consolidated Alternative Minimum Tax ("AMT") allocated to a member is determined by multiplying the consolidated AMT by a fraction, the numerator of which is the separate adjusted AMT of the member for the year, and the denominator of which is the sum of each member's separate adjusted AMT for the year. The separate adjusted AMT of a member for a consolidated return year for this purpose is the excess (if any) of: (1) The consolidated AMT for the year; over (2) The consolidated AMT for the year, computed by excluding the member's items of income, gain, deduction, and loss, and the member's credits. If, in computing a member's separate adjusted AMT, there is no consolidated AMT when computed without that member's items, the AMT allocation must be increased by the excess (if any) of the consolidated regular tax computed without the member's items, over consolidated Tentative Minimum Tax ("TMT") computed without the member's items.

5. The amount of the consolidated Minimum Tax Credit ("MTC") allocated to a member is determined by reducing a member's allocable share of the consolidated adjusted net minimum tax by any amount allowed in a subsequent consolidated return year as a consolidated MTC. The member's allocable share of consolidated adjusted net minimum tax for a year that is allowable as a consolidated MTC in a subsequent taxable year is determined by multiplying the consolidated adjusted net minimum tax for the year allowable as a consolidated MTC by a fraction, the numerator of which is the member's allocable share of that consolidated adjusted net minimum tax and the denominator of which is the total amount of that consolidated adjusted net minimum tax.

6. All state and local income and franchise tax liabilities will be computed on a separate company basis with the exception of those states where the Affiliated Group files a combined, consolidated or unitary return ("Combined Filing"). If there is a Combined Filing or there are consolidated additional taxes then the tax liabilities will be allocated following the same method(s) covered by this policy, unless their use is not reasonable due to either the method of computing the tax or it is not appropriate for purposes of financial reporting for regulatory purposes.

7. If the consolidated or combined tax liability is adjusted for any taxable period, whether by means of an amended return, claim for refund, after a tax audit, or otherwise, the liability of each member shall be recomputed to give effect to such adjustments. In the case of a refund, the Parent shall make payment to each Subsidiary for its share of the refund, and in the case of an increase in tax liability; each Subsidiary shall pay to the Parent its allocable share of such increased tax liability. To the extent the adjustment results in interest and/or penalties being imposed, they will also be allocated in accordance with Sections 1 and 2 above. The interest or penalty will be computed using the effective rate actually applied to the adjustment. The differences in rates applied to payments and refunds by the Internal Revenue Service or other taxing jurisdiction will be ignored for this purpose.

8. The Parent will collect payments due and make payments to Subsidiaries by the use of withdrawals and deposits directly from each Subsidiaries bank account or by adjusting balances due to or from members of the Affiliated Group. Any amounts paid by a Subsidiary on account of a separate return or separate estimated tax payments that are

AMERICAN WATER

credited against the consolidated tax liability of the Affiliated Group shall be included in determining the payments due from such subsidiary. Any overpayment of estimated tax should be refunded to the subsidiary. Parent will have the sole responsibility of making any required payments to the Internal Revenue Service or state in satisfaction of the consolidated or combined income tax liability of the Affiliated Group for each fiscal year.

9. If part or all of an unused loss or tax credit is allocated to a member of the Affiliated Group and is carried back or carried forward to a year in which such member filed a separate return or a consolidated return with a Prior Affiliated Group, any refund or reduction in tax liability arising from the carry back or carryover shall be retained by such member. Notwithstanding the above, only the Parent shall determine whether an election shall be made not to carry back part or all of a Consolidated Net Operating Loss ("CNOL") for any tax year.

10. In the event that a member is to leave the group through a sale of its stock, any outstanding intercompany amount receivable or payable relating to federal income taxes will be adjusted to reflect that member's economic tax position as reflected under federal tax rules (e.g., if a departing member would be allocated tax losses under the tax rules which would leave with that member, then to the extent that the departing member has been paid either in cash or through the creation of a receivable for those losses, such prior settlement will be reversed).

11. If any party ceases to be a member of the same affiliated group, or if the Affiliated Group to which the Parent and Subsidiaries belong elects not to file a consolidated federal return for any taxable year, this policy shall continue to be effective with respect to any period during the tax year in which termination occurred for which the income of the Subsidiaries are includable in a consolidated return.

MONITORING

Corporate Tax Department is responsible for compliance monitoring, implementation, calculation, and revisions to this policy.

REPORTING/METRICS

Tax Sharing adjustments will be calculated twice a year unless cash flow needs require additional adjustments not to exceed 4 times a year. The Corporate Tax Department will monitor the needs on a quarterly basis. An increase in the frequency will be determined by the Chief Financial Officer.

CONSEQUENCE OF NON-COMPLIANCE

Any employee who violates or circumvents this policy may be subject to disciplinary action up to and including termination

WAIVER

Any deviation or waiver from or exception to this policy requires the prior, written approval of the Senior Vice President and Chief Financial Officer, or his or her designee

DEFINITIONS

Percentage Method: Method used to determine the amount of tax benefits each subsidiary will receive, based on each subsidiary's portion of taxable income.

Alternative Minimum Tax ("AMT"): A tax calculation that adds certain tax preference items back into adjusted gross income.

Tentative Minimum Tax ("TMT"): Tentative minimum tax is the AMT rate of tax multiplied by alternative minimum taxable income, less the AMT foreign tax credit.

Minimum Tax Credit ("MTC"): Adjusted net minimum tax imposed for all prior taxable years.

REVIEW/UPDATE

This policy will be reviewed and revised as necessary, not to exceed 3 year intervals.

Approved by: American Water Board or Functional Executive(s)

Original Adopted: _____

Revised Adopted: N/A

Date of Last Review: N/A

Effective Date: _____

Question:

74. Please ***Identify*** and provide a copy of all management audits completed since January 1, 2010, including any directed by the TRA or any other state regulatory agency, performed by or for ***TAWC***, ***AWWSC***, ***AWWC*** or any subsidiary or affiliate of ***AWWC*** other than the ***Schumaker Report.***

Response:

Other than the Schumaker Report for TAW filed in Docket 09-00086 and 10-00189, there have not been any other completed management audits for TAWC or any affiliate, or the Service Company since January 1, 2010.

TENNESSEE AMERICAN WATER COMPANY
DOCKET NO. 12-00049
FIRST DISCOVERY REQUEST OF THE
CITY OF CHATTANOOGA

Responsible Witness: Linda C. Bridwell

Other Participating Employees: SSC Rates, AWWSC

Question:

75. Provide all ***Documents*** that constitute, relate to, or refer to the terms of any contracts (including all attachments and amendments thereto) in effect at any time since January 1, 2006 between ***TAWC*** and ***AWWC***, ***AWWSC***, ***AWR***, ***AWCC***, or any subsidiary or affiliate of any of them.

Response:

Please refer to the attachment.

FINANCIAL SERVICES AGREEMENT

THIS AGREEMENT, dated as of June 15, 2000, by and between Tennessee-American Water Company (the "Company") and American Water Capital Corp. ("AWCC").

BACKGROUND

The Company currently performs its own financial services.

However, the Company has determined that it can obtain these services more efficiently through the consolidation of certain necessary management and staff functions with those performed for other entities that may enter into agreement with AWCC substantially similar to this one ("Co-Participants").

AWCC is dedicated to performing such consolidated functions.

Accordingly, the parties have determined to enter into this Agreement for the provision of financial services by AWCC to the Company and for the proper determination and allocation of the costs of providing such services.

Therefore, the parties agree as follows:

AGREEMENT

1. Services. AWCC will provide, either directly or through arrangements with third parties for the benefit of the Company, such financial services as the Company and AWCC may from time to time agree, including but not limited to those more fully described in Appendix I attached to this Agreement.

2. Costs. In consideration of the provision of the services contemplated by paragraph 1, the Company agrees to pay AWCC a portion of the costs and appropriate overhead incurred by AWCC in providing those services, as follows. The costs incurred by AWCC in connection with its bank credit lines and short-term public borrowings will be divided among the Co-Participants in proportion to the maximum principal amount that each Co-Participant requests be made available to it during the course of a year. The costs incurred by AWCC in connection with each long-term borrowing by AWCC will be divided among each Co-Participant in proportion to the principal amount of that borrowing that is loaned to that Co-Participant. AWCC's overhead will be allocated among the Co-Participants in the same proportion as each Co-Participant's long-term and maximum, requested short-term borrowings and investments in a calendar year bear to all of the long and maximum short-term borrowings and investments by all Co-Participants during the same year.

3. Statements. AWCC will prepare and deliver to the Company monthly statements of the services provided by AWCC and amounts payable to AWCC, giving effect to

all the provisions of this Agreement. The Company shall pay the net amount shown on its statement within thirty (30) days after the billing date.

4. Inspection. Upon reasonable notice, AWCC will make available to the Company for its inspection AWCC's books, records, bills, accounts and any other documents which describe or support the costs allocated to the Company under this Agreement.

5. Obligations Not Joint. AWCC and the Company expressly agree: (a) that the obligations of the Company and each Co-Participant to AWCC are several and not joint; (b) that the Company will not be responsible to any Co-Participant, to AWCC or to any assignee or creditor of AWCC for any payment in excess of payments due by the Company to AWCC under this Agreement or a Note in the form attached to this Agreement; and (c) that no Co-Participant will be responsible to the Company, to any other Co-Participant, to AWCC or to any assignee or creditor of AWCC for any payment in excess of payments due by that Co-Participant to AWCC under any agreement substantially similar to this Agreement or under any Note attached to that other agreement. AWCC covenants and agrees that it will require, as a condition to its entering into any such other agreement with a Co-Participant, that such other agreement contains the same provision as that contained in the immediately preceding sentence.

6. Notes. The Company's borrowings under this Agreement will be evidenced by one or more promissory notes in the form of Exhibit A or Exhibit B attached to this Agreement.

7. Non-Exclusivity. Nothing in this Agreement prohibits or restricts the Company from borrowing from third parties, or obtaining services described in this Agreement from third parties, whenever and on whatever terms it deems appropriate.

8. Effectiveness. This Agreement shall be effective as of June 15, 2000, provided that, if prior approval by the regulatory commission of any jurisdiction is required before this Agreement may become effective as to the Company, or before AWCC may provide a particular service hereunder to the Company, this Agreement shall not be effective as to the Company or as to that service, as the case may be, unless and until the required approval has been obtained. Unless and until this Agreement becomes effective as to the Company in whole or in part, the Company shall not be entitled to the benefits of, nor shall it have any rights or duties under, this Agreement. This Agreement may be amended or rescinded only by written instrument signed by the Company and AWCC.

9. Termination. The Company may terminate its participation in this Agreement by giving ten (10) days prior written notice of such termination to AWCC; and (b) AWCC may terminate this Agreement by giving ninety (90) days prior written notice of such termination to the Company. Termination of this Agreement will not affect: (a) the Company's obligations under any Promissory Notes; (b) any party's obligations with respect to any amounts owing under Sections 2 and 3 of this Agreement (including such amounts attributable to obligations of any terminating party under any Promissory Notes that remain outstanding after this Agreement is terminated as to that party); or (c) AWCC's obligations to repay any investments made by a Company pursuant to Appendix I.

10. Copies. This Agreement may be executed by the parties in one or more copies and each executed copy shall be considered an original.

In witness of the foregoing, each of the Company and AWCC has caused its respective corporate seal to be affixed to this Agreement and has caused this Agreement to be signed on its behalf by its duly authorized officers.

APPENDIX I

DESCRIPTION OF FINANCIAL SERVICES

Set forth below is a list of the services which AWCC agrees to provide to the Company upon its request pursuant to the Agreement to which this Appendix is attached.

1. Short-Term Loans. AWCC will provide Short-Term Loans to the Company pursuant to the terms set forth in the promissory notes to be issued by the Company to AWCC, each substantially in the form attached to this Agreement as Exhibit A.

2. Long-Term Borrowings. AWCC will provide loans other than Short-Term Loans to the Company pursuant to the terms set forth in the promissory notes to be issued by the Company to AWCC, each substantially in the form attached hereto as Exhibit B.

3. Cash Management. Cash not required by the Company to pay its daily disbursements or to pay when due the principal of and interest on, the Company's borrowings from AWCC other than Short-Term Loans will be used by AWCC first to reduce the outstanding principal balance of the Company's Short-Term Loans owing to AWCC and any excess will be deemed to be invested with AWCC and will earn a daily rate of interest that is equal to the interest income earned by AWCC on those funds. Upon the request of that Company, AWCC shall execute one or more promissory notes in favor of the Company, in form and substance substantially similar to the Promissory Note attached as Exhibit A to the Agreement as evidence of such investment.

EXHIBIT A
PROMISSORY NOTE
FOR SHORT-TERM LOANS

$_____ _____, 2000

FOR VALUE RECEIVED, [NAME OF COMPANY], a _____ corporation (herein "Borrower") hereby promises to pay ON DEMAND to the order of American Water Capital Corp., a Delaware corporation ("Lender"), in same day funds at its offices at Voorhees, New Jersey or such other place as Lender may from time to time designate, the principal sum of _____ dollars ($_____) (the "Maximum Principal Sum"), or such lesser amount as shall equal the aggregate unpaid principal amount of the loans made by Lender to Borrower (other than loans evidenced by a promissory note under which the principal amount is due and payable in one or more scheduled installments more than one year after the date of its issue), together with interest thereon from the date hereof until paid in full. Interest will be charged on the unpaid outstanding principal balance of this Note at a rate per annum equal to Lender's actual cost of funds to make such loan, such rate to change as Lender's actual cost of funds changes. Interest on borrowings shall be due and payable on the first business day of each month, commencing with the first business day of the month after the month in which this Note is executed. In the absence of manifest error, the records maintained by Lender of the amount and term, if any, of borrowings hereunder shall be deemed conclusive.

Borrower may borrow, repay and reborrow hereunder in amounts which do not, in the aggregate outstanding at any time, exceed the Maximum Principal Sum.

The occurrence of one or more of any of the following shall constitute an event of default hereunder:

(a) Borrower shall fail to make any payment of principal and/or interest due hereunder or under any other promissory note between Lender and Borrower within five business days after the same shall become due and payable, whether at maturity or by acceleration or otherwise;

(b) Borrower shall apply for or consent to the appointment of a receiver, trustee or liquidator of itself or any of its property, admit in writing its inability to pay its debts as they mature, make a general assignment for the benefit of creditors, be adjudicated a bankrupt or insolvent or file a voluntary petition in bankruptcy or a petition or an answer seeking reorganization or an arrangement with creditors or to take advantage of any bankruptcy, reorganization, insolvency, readjustment of debt, dissolution or liquidation of law or statute, or an answer admitting the material allegations of a petition filed against it in any proceeding under any such law, or if action shall be taken by Borrower for the purposes of effecting any of the foregoing; or

(c) Any order, judgment or decree shall be entered by any court of competent jurisdiction, approving a petition seeking reorganization of Borrower or all or a substantial part of the assets of Borrower, or appointing a receiver, trustee or liquidator of

Borrower or any of its property, and such order, judgment or decree shall continue unstayed and in effect for any period of sixty (60) days.

Upon the occurrence of any event of default, the entire unpaid principal sum hereunder plus all interest accrued thereon plus all other sums due and payable to Lender hereunder shall, at the option of Lender, become due and payable immediately. In addition to the foregoing, upon the occurrence of any event of default, Lender may forthwith exercise singly, concurrently, successively or otherwise any and all rights and remedies available to Lender by law, equity, statute or otherwise.

Borrower hereby waivers presentment, demand, notice of nonpayment, protest, notice of protest or other notice of dishonor in connection with any default in the payment of, or any enforcement of the payment of, all amounts due hereunder. To the extent permitted by law, Borrower waives the right to any stay of execution and the benefit of all exemption laws now or hereafter in effect.

Following the occurrence of any event of default, Borrower will pay upon demand all costs and expenses (including all amounts paid to attorneys, accountants, and other advisors employed by Lender), incurred by Lender in the exercise of any of its rights, remedies or powers hereunder with respect to such event of default, and any amount thereof not paid promptly following demand therefor shall be added to the principal sum hereunder and will bear interest at the contract rate set forth herein from the date of such demand until paid in full. In connection with and as part of the foregoing, in the event that this Note is placed in the hands of an attorney for the collection of any sum payable hereunder, Borrower agrees to pay reasonable attorneys' fees for the collection of the amount being claimed hereunder, as well as all costs, disbursements and allowances provided by law.

If for any reason one or more of the provisions of this Note or their application to any entity or circumstances shall be held to be invalid, illegal or unenforceable in any respect or to any extent, such provisions shall nevertheless remain valid, legal and enforceable in all such other respects and to such extent as may be permissible. In addition, any such invalidity, illegality or unenforceability shall not affect any other provisions of this Note, but this Note shall be construed as if such invalid, illegal or unenforceable provision had never been contained herein.

This Note inures to the benefit of Lender and binds Borrower and Lender's and Borrower's respective successors and assigns, and the words "Lender" and "Borrower" whenever occurring herein shall be deemed and construed to include such respective successors and assigns.

This Promissory Note is one of the promissory notes referred to in the Financial Services Agreement dated as of June 15, 2000 between Borrower and Lender to which reference is made for a statement of additional rights and obligations of the parties hereto.

IN WITNESS WHEREOF, Borrower has executed this Promissory Note the day and year first written above.

EXHIBIT B
PROMISSORY NOTE
FOR LONG-TERM BORROWINGS

$_____ _____, 2000

FOR VALUE RECEIVED, [NAME OF COMPANY], a _____ corporation (herein "Borrower") hereby promises to pay to the order of American Water Capital Corp., a Delaware corporation ("Lender"), in same day funds at its offices at _____ or such other place as Lender may from time to time designate, the principal sum of _____ dollars ($_____), together with interest thereon from the date hereof until paid in full. Interest shall be charged on the unpaid outstanding principal balance hereof at a rate per annum equal to the rate paid and to be paid by Lender with respect to the borrowings it made in order to provide funds to Borrower hereunder. Interest on borrowings shall be due and payable in immediately available funds on the same business day on which the Lender must pay interest on the borrowings it made in order to provide funds to the Borrower hereunder. The principal amount hereof shall be due and payable hereunder at such times and in such amounts and in such installments hereunder as the Lender must pay with respect to the borrowings it made in order to provide funds to the Borrower hereunder. Lender has provided Borrower with a copy of the documentation evidencing the borrowings made by Lender in order to provide funds to Borrower hereunder. In the absence of manifest error, such documentation and the records maintained by Lender of the amount and term, if any, of borrowings hereunder shall be deemed conclusive.

The occurrence of one or more of any of the following shall constitute an event of default hereunder:

(a) Borrower shall fail to make any payment of principal and/or interest due hereunder or under any other promissory note between Lender and Borrower within five business days after the same shall become due and payable, whether at maturity or by acceleration or otherwise;

(b) Borrower shall apply for or consent to the appointment of a receiver, trustee or liquidator of itself or any of its property, admit in writing its inability to pay its debts as they mature, make a general assignment for the benefit of creditors, be adjudicated a bankrupt or insolvent or file a voluntary petition in bankruptcy or a petition or an answer seeking reorganization or an arrangement with creditors or to take advantage of any bankruptcy, reorganization, insolvency, readjustment of debt, dissolution or liquidation of law or statute, or an answer admitting the material allegations of a petition filed against it in any proceeding under any such law, or if action shall be taken by Borrower for the purposes of effecting any of the foregoing; or

(c) Any order, judgment or decree shall be entered by any court of competent jurisdiction, approving a petition seeking reorganization of Borrower or all or a substantial part of the assets of Borrower, or appointing a receiver, trustee or liquidator of Borrower or any of its property, and such order, judgment or decree shall continue unstayed and in effect for any period of sixty (60) days.

Upon the occurrence of any event of default, the entire unpaid principal sum hereunder plus all interest accrued thereon plus all other sums due and payable to Lender hereunder shall, at the option of Lender, become due and payable immediately. In addition to the foregoing, upon the occurrence of any event of default, Lender may forthwith exercise singly, concurrently, successively or otherwise any and all rights and remedies available to Lender by law, equity, statute or otherwise.

Borrower hereby waivers presentment, demand, notice of nonpayment, protest, notice of protest or other notice of dishonor in connection with any default in the payment of, or any enforcement of the payment of, all amounts due hereunder. To the extent permitted by law, Borrower waives the right to any stay of execution and the benefit of all exemption laws now or hereafter in effect.

Following the occurrence of any event of default, Borrower will pay upon demand all costs and expenses (including all amounts paid to attorneys, accountants, and other advisors employed by Lender), incurred by Lender in the exercise of any of its rights, remedies or powers hereunder with respect to such event of default, and any amount thereof not paid promptly following demand therefor shall be added to the principal sum hereunder and will bear interest at the contract rate set forth herein from the date of such demand until paid in full. In connection with and as part of the foregoing, in the event that this Note is placed in the hands of an attorney for the collection of any sum payable hereunder, Borrower agrees to pay reasonable attorneys' fees for the collection of the amount being claimed hereunder, as well as all costs, disbursements and allowances provided by law.

If for any reason one or more of the provisions of this Note or their application to any entity or circumstances shall be held to be invalid, illegal or unenforceable in any respect or to any extent, such provisions shall nevertheless remain valid, legal and enforceable in all such other respects and to such extent as may be permissible. In addition, any such invalidity, illegality or unenforceability shall not affect any other provisions of this Note, but this Note shall be construed as if such invalid, illegal or unenforceable provision had never been contained herein.

This Note inures to the benefit of Lender and binds Borrower and Lender's and Borrower's respective successors and assigns, and the words "Lender" and "Borrower" whenever occurring herein shall be deemed and construed to include such respective successors and assigns.

This Promissory Note is one of the promissory notes referred to in the Financial Services Agreement dated as of June 15, 2000 between Borrower and Lender to which reference is made for a statement of additional rights and obligations of Lender and Borrower.

IN WITNESS WHEREOF, Borrower has executed this Promissory Note the day and year first written above.

PROMISSORY NOTE
FOR SHORT-TERM LOANS

$10,910,000.00 June 15, 2000

FOR VALUE RECEIVED, TENNESSEE-AMERICAN WATER COMPANY, a Tennessee corporation (herein "Borrower") hereby promises to pay ON DEMAND to the order of American Water Capital Corp., a Delaware corporation ("Lender"), in same day funds at its offices at Voorhees, New Jersey or such other place as Lender may from time to time designate, the principal sum of TEN MILLION NINE-HUNDRED TEN THOUSAND dollars ($10,910,000.00) (the "Maximum Principal Sum"), or such lesser amount as shall equal the aggregate unpaid principal amount of the loans made by Lender to Borrower (other than loans evidenced by a promissory note under which the principal amount is due and payable in one or more scheduled installments more than one year after the date of its issue), together with interest thereon from the date hereof until paid in full. Interest will be charged on the unpaid outstanding principal balance of this Note at a rate per annum equal to Lender's actual cost of funds to make such loan, such rate to change as Lender's actual cost of funds changes. Interest on borrowings shall be due and payable on the first business day of each month, commencing with the first business day of the month after the month in which this Note is executed. In the absence of manifest error, the records maintained by Lender of the amount and term, if any, of borrowings hereunder shall be deemed conclusive.

Borrower may borrow, repay and reborrow hereunder in amounts which do not, in the aggregate outstanding at any time, exceed the Maximum Principal Sum.

The occurrence of one or more of any of the following shall constitute an event of default hereunder:

(a) Borrower shall fail to make any payment of principal and/or interest due hereunder or under any other promissory note between Lender and Borrower within five business days after the same shall become due and payable, whether at maturity or by acceleration or otherwise;

(b) Borrower shall apply for or consent to the appointment of a receiver, trustee or liquidator of itself or any of its property, admit in writing its inability to pay its debts as they mature, make a general assignment for the benefit of creditors, be adjudicated a bankrupt or insolvent or file a voluntary petition in bankruptcy or a petition or an answer seeking reorganization or an arrangement with creditors or to take advantage of any bankruptcy, reorganization, insolvency, readjustment of debt, dissolution or liquidation of law or statute, or an answer admitting the material allegations of a petition filed against it in any proceeding under any such

law, or if action shall be taken by Borrower for the purposes of effecting any of the foregoing; or

(c) Any order, judgment or decree shall be entered by any court of competent jurisdiction, approving a petition seeking reorganization of Borrower or all or a substantial part of the assets of Borrower, or appointing a receiver, trustee or liquidator of Borrower or any of its property, and such order, judgment or decree shall continue unstayed and in effect for any period of sixty (60) days.

Upon the occurrence of any event of default, the entire unpaid principal sum hereunder plus all interest accrued thereon plus all other sums due and payable to Lender hereunder shall, at the option of Lender, become due and payable immediately. In addition to the foregoing, upon the occurrence of any event of default, Lender may forthwith exercise singly, concurrently, successively or otherwise any and all rights and remedies available to Lender by law, equity, statute or otherwise.

Borrower hereby waivers presentment, demand, notice of nonpayment, protest, notice of protest or other notice of dishonor in connection with any default in the payment of, or any enforcement of the payment of, all amounts due hereunder. To the extent permitted by law, Borrower waives the right to any stay of execution and the benefit of all exemption laws now or hereafter in effect.

Following the occurrence of any event of default, Borrower will pay upon demand all costs and expenses (including all amounts paid to attorneys, accountants, and other advisors employed by Lender), incurred by Lender in the exercise of any of its rights, remedies or powers hereunder with respect to such event of default, and any amount thereof not paid promptly following demand therefor shall be added to the principal sum hereunder and will bear interest at the contract rate set forth herein from the date of such demand until paid in full. In connection with and as part of the foregoing, in the event that this Note is placed in the hands of an attorney for the collection of any sum payable hereunder, Borrower agrees to pay reasonable attorneys' fees for the collection of the amount being claimed hereunder, as well as all costs, disbursements and allowances provided by law.

If for any reason one or more of the provisions of this Note or their application to any entity or circumstances shall be held to be invalid, illegal or unenforceable in any respect or to any extent, such provisions shall nevertheless remain valid, legal and enforceable in all such other respects and to such extent as may be permissible. In addition, any such invalidity, illegality or unenforceability shall not affect any other provisions of this Note, but this Note shall be construed as if such invalid, illegal or unenforceable provision had never been contained herein.

This Note inures to the benefit of Lender and binds Borrower and Lender's and Borrower's respective successors and assigns, and the words "Lender" and

"Borrower" whenever occurring herein shall be deemed and construed to include such respective successors and assigns.

This Promissory Note is one of the promissory notes referred to in the Financial Services Agreement dated as of June 15, 2000, between Borrower and Lender to which reference is made for a statement of additional rights and obligations of the parties hereto.

IN WITNESS WHEREOF, Borrower has executed this Promissory Note the day and year first written above.

AGREEMENT FOR SUPPORT SERVICES

BETWEEN

AMERICAN WATER RESOURCES, INC.
AND
TENNESSEE AMERICAN WATER COMPANY

This Service Agreement, dated as of the 1st day of May, 2004 (the "Agreement"), is by and between the AMERICAN WATER RESOURCES, INC. (AWR), a corporation organized and existing under the laws of the Commonwealth of Virginia, with its principal office located at 1025 Laurel Oak Road, Voorhees, New Jersey 08043, and TENNESSEE AMERICAN WATER COMPANY (Utility), a corporation organized and existing under the laws of the State of Tennessee, with its principal office located at 1101 Broad Street, Chattanooga, Tennessee, 37401.

WHEREAS, AWR provides certain services to utility customers, as more particularly described on Appendix A which is attached hereto and incorporated herein by reference, which list may be modified or amended from time to time by AWR (hereinafter the "Programs"); and

WHEREAS, Utility is the owner of a public water supply system; and

WHEREAS, many of Utility's residential customers may desire to and qualify to participate in one or more of AWR's Programs; and

WHEREAS, Utility desires to make certain or all of the Programs available to its customers upon the terms and conditions contained herein; and

WHEREAS, AWR desires to contract with Utility for certain customer support services for the Programs; and

WHEREAS, Utility possesses the necessary ability and experience to provide such customer support services and is willing to provide such services for the Programs upon the

terms and conditions contained herein; and

WHEREAS, it is the mutual desire of the parties to enter into this Agreement providing for the customer support for the Programs;

NOW, THEREFORE, for and in consideration of the mutual promises set forth herein, and subject to the terms and conditions herein stated, AWR and Utility agree as follows:

SECTION 1. Definitions.

The following words and phrases when used in this Agreement shall have the following meaning:

"Agreement" means this Agreement between AWR and Utility.

"Force Majeure" means those events set forth in Section 13 of this Agreement.

"Fully Distributed Costs" means costs determined in a manner that complies with the standards and procedures for the apportionment of special, joint, and common costs between the Utility and any non-regulated entity in accordance with applicable regulations of the State commission or board having jurisdiction over the operations of Utility, except taxes as discussed in Section 5. A fully distributed costing methodology apportions the total costs of a group of services or products, including the authorized rate of return, among the individual services or products in that group.

Should the commission or board having jurisdiction over operations of Utility assign different costs than Utility has assigned, such commission or board assigned costs, once such assignment is final and non-appealable, shall be the Fully Distributed Costs, until such time as such commission or board assigns different costs, at which time such newly assigned costs shall be the Fully Distributed Costs. Whether to appeal a decision of the commission or board shall be in Utility's sole discretion.

"Services" means all of the duties, obligations, and services as defined herein to be provided by Utility that are related to the performance and operation of AWR's Programs.

SECTION 2. Appointment of Utility.

AWR hereby engages and appoints Utility to provide certain customer support services for the Programs.

SECTION 3. Term; Termination.

3.1 Term. The term of this Agreement shall commence on April 15, 2004, and be for a period of one (1) year unless sooner terminated or extended as hereinafter provided.

3.2 Renewal. The Agreement will automatically renew itself for periods of one (1) year, each following one after the other, unless either party gives written notice of termination to the other party in accordance with Section 3.3.1.1.

3.3 Termination.

3.3.1 Termination Without Cause:

3.3.1.1 Procedure - After the initial one (1) year term, this Agreement may be terminated without cause or penalty by either party upon giving the other party sixty (60) days written notice in advance of the date upon which the termination becomes effective. This Agreement shall automatically terminate at such time as either party, or its successor is no longer an affiliate of American Water Works Company, Inc.

3.3.1.2 Transition Services Following Termination Without Cause - Upon termination of the Agreement without cause, Utility shall continue to provide services to AWR, at AWR's request, for a period of not longer than sixty (60) days during AWR's transition to another service provider. Such transition services shall be provided under and subject to the same terms and provisions of this Agreement, including compensation.

3.3.2 Termination Upon Material Breach - Either party to the Agreement may terminate this Agreement upon material breach by the other party. The non-breaching party shall provide written notice of such breach to the other party, setting forth in detail the alleged failure and/or deficiency, and, if such breach is not corrected within thirty (30) days from receipt of written notice by certified mail, this Agreement shall be terminated.

SECTION 4. Compensation.

4.1 Fee. The fee paid to Utility by AWR for Services rendered pursuant to this Agreement shall be equal to one hundred and fifteen (115%) percent of the Fully Distributed Costs incurred by Utility in providing the Services except for billing and collection services. The Fee for billing and collection services rendered by Utility as set forth in Paragraph 6.1.3 below shall be at a rate of $.405 per customer per billing period and apply in the aggregate to customers participating in one or more of AWR's Programs. The $.405 rate may be adjusted from time to time as determined by the agency having regulatory authority over Utility to be consistent with any other such billing and collection service rates charged by Utility, under tariff, to others.

4.2 Allocation by Regulating Authority. Notwithstanding the fee schedule contained in Section 4.1, should the agency having regulatory authority over Utility disallow any cost of the Utility in excess of the Fully Distributed Costs as a result of the services provided to AWR pursuant hereto, AWR shall reimburse Utility for such disallowed costs, within thirty (30) days of receipt of notice of same and the fees due pursuant hereto shall be adjusted to reflect such allocation by such regulatory authority.

4.3 Reporting and Payments.

4.3.1 Utility shall maintain detailed records of all costs incurred in providing services to AWR. Utility will make such detailed records available for AWR's periodic review upon request by AWR, during normal business hours, at Utility's principal office.

4.3.2 Utility shall invoice AWR monthly or quarterly, at Utility's discretion, for the fee for services on or about the tenth business day of each billing period during the term of this Agreement. The invoice shall detail the services provided and the costs incurred. AWR shall pay such fee to Utility within fifteen (15) days of the date of the invoice.

SECTION 5. Taxes.

Any tax or other amount which Utility may be required to pay to or collect for a government agency upon or with respect to the Services rendered hereunder, or the use or delivery of any products or parts thereof on behalf of AWR, except income taxes, will be billed to AWR as separately stated charges and will be paid by AWR in addition to the fees paid pursuant to Section 4. In the event AWR disputes the taxability of an item hereunder, Utility will continue to collect such tax unless and until AWR provides Utility with documentation authorized and prescribed by the taxing authority, such as a certificate of exemption, relieving Utility from liability for the collection and payment of such tax.

SECTION 6. Scope of Services.

6.1 Utility agrees that it shall provide the following customer support services for the Programs in accordance with the terms and provisions of this Agreement:

6.1.1 Distribution of Promotional Materials. Upon request of AWR, Utility shall manage and direct the distribution of informational and promotional materials regarding the Program to its customers. Such materials shall be developed by AWR and provided to Utility in

sufficient quantities and in a timely manner so as not to impede any planned distribution efforts by Utility. The materials shall be distributed as a part of Utility's normal billing process, unless arrangements are made, at least sixty (60) days in advance, for a special mailing. The materials provided by AWR must be satisfactory in form and content to Utility, and nothing in this Agreement shall require Utility to distribute any materials that are not satisfactory to Utility. Utility shall make all reasonable efforts to promptly notify AWR when additional quantities of promotional materials are needed. Utility shall have the sole discretion to determine the customers who will receive the informational and promotional materials for the Program.

6.1.2 Notification of Claim. Should a Utility associate, as a part of his/her normal duties, determine that a Utility customer has a covered occurrence with the Customer's water or sewer service line, the Utility associate shall notify AWR by calling a toll-free telephone number to be supplied by AWR. AWR shall then engage a qualified contractor to provide the covered services to the customer. AWR shall timely provide the necessary information to cause Utility's customer records to reflect when coverage is available.

6.1.3 Billing and Collection. AWR shall provide Utility with a list of enrolled customers in its Programs who have chosen to have charges from AWR included on their bill from Utility, and shall keep such list up to date. Utility shall include such charges on the customer's bill and collect such charges from the customer until such time as the customer or AWR notifies Utility that the customer is no longer receiving service from AWR or has elected a different payment option. Utility shall forward collected payments from enrolled customers to AWR within fifteen days following the end of each calendar month for amounts collected during such month. All payments made by the customer shall be credited first to payment of any amount owed for utility service furnished by Utility; any remainder shall first be credited to

payment of any amount owed for utility service furnished by someone other than Utility but shown as a line item on the bill sent to the customer by Utility; and any remainder shall then be credited to payment of any amount owed to AWR. Utility shall not interrupt, cease or refuse utility service to a customer for non-payment of amounts owed to AWR. AWR shall be responsible for all collection efforts for non-payment by Utility customers for AWR Programs.

6.1.4 Other Services. Utility shall perform such other and further services as are agreed to in a Service Order in the form attached hereto as **Exhibit 1** executed by the parties during the Term hereof.

SECTION 7. Provision of Information.

Except as provided herein, any specifications, diagrams, sketches, models, examples, tools, computer or other apparatus, programs, software, technical or business information, written, oral or otherwise (all thereinafter collectively referred to as "Confidential Information"), furnished by one party (hereinafter referred to as the "Disclosing Party") to the other party (hereinafter referred to as the "Receiving Party") under this Agreement or in contemplation of this Agreement will remain the property of the Disclosing Party and will be held Confidential by the Receiving Party. All copies of such information will be returned to the Disclosing Party upon request. The Receiving Party, and any individual assigned by the Receiving Party will not permit the duplication, use or disclosure of the Confidential Information whether such disclosure be oral, written, in the form of computer tapes, drawings or other medium to any person other than the Receiving Party's employees, agents or representatives who must have such information to provide the Services, unless otherwise specifically authorized in writing by the Disclosing Party.

Confidential Information does not include any information which, at the time of disclosure, is generally known by the public, is rightfully obtained from third parties, is independently developed by the Receiving Party and any individual assigned by the Receiving Party outside the scope of its performance herein, or had been in the possession of the Receiving Party and any individual assigned by the Receiving Party prior to its commencement of the performance of its services.

The Receiving Party and any individual assigned by the Receiving Party agrees that: (1) this covenant not to disclose our use Confidential Information shall survive termination of this Agreement; and (2) it shall be liable for any and all breaches of such covenant by the Receiving Party, it employees, agents or representatives, whether such breach occurs during or after the term of this Agreement.

The Receiving Party shall take such steps as may be necessary in order to limit access to the Confidential Information on a need-to-know basis and assure compliance by the employees, agents and representatives to whom such information is given.

The provisions of this section shall survive termination of this Agreement.

It is understood that the Receiving Party may be required to furnish information to judicial, regulatory, or administrative bodies. In such an event, the Receiving Party will promptly notify the Disclosing Party of such requirement and will cooperate with the Disclosing Party should the Disclosing Party desire to seek a protective order to prevent the public disclosure of its information.

SECTION 8. Compliance with Laws.

Both parties agree to comply with the provisions of the Fair Labor Standards Act of 1938, as amended, and all other applicable federal and state laws, rules, regulations and codes with

which they are obligated to comply in the performance of this Agreement, including the procurement of permits and certificates where needed. Both parties further agree not to discriminate against any employee or applicant for employment because of race, color, religion, sex, national origin, age or handicap, and to comply with all applicable federal and state laws, orders, rules and regulations on this subject during the performance of this Agreement.

This Agreement shall be subject to any and all applicable federal, state and local laws, regulations, and ordinances, as well as any applicable tariffs. To the extent necessary, the parties agree to amend this Agreement to conform to the requirements of any such laws, regulations, ordinances, or tariffs.

AWR shall provide Utility with evidence reasonably requested by Utility to demonstrate compliance herewith.

SECTION 9. Insurance.

9.1 AWR shall, during the term of this Agreement, maintain the following insurance coverages with respect to the Programs, and shall include Utility as an Additional Insured:

9.1.1 Comprehensive General Liability, including Products and Completed Operations, and Contractual Liability with limit of $2,000,000, combined single limit.

9.1.2 Comprehensive Automobile Liability with limit of $2,000,000, combined single limit.

9.1.3 Excess Comprehensive General and Automobile Liability with limit of $2,000,000, excess of $2,000,000.

9.2 AWR shall cause each contractor it engages to perform services under the Programs (collectively "Repair Contractors"), during the term of this Agreement, to maintain the

following insurance coverages with respect to the Programs, which coverages in subsections 9.2.1-9.2.3 shall include Utility as an Additional Insured:

9.2.1 Comprehensive General Liability, including Products and Completed Operations, and Contractual Liability with limit of $1,000,000, combined single limit.

9.2.2 Comprehensive Automobile Liability with limit of $1,000,000, combined single limit.

9.2.3 Excess Comprehensive General and Automobile Liability with limit of $1,000,000, excess of $1,000,000.

9.2.4 Workers Compensation coverage with Statutory Limits.

9.3 AWR shall, and shall cause its Repair Contractors to, furnish Utility with certificates of insurance evidencing coverage as required by this Paragraph.

SECTION 10. Obligations of AWR.

10.1 Development of Informational Materials. AWR shall be responsible for developing, producing, and printing all informational materials for the Programs, and supplying such materials to Utility. AWR shall provide Utility with the opportunity to review and approve all such materials in advance of any distribution to Utility's customers.

10.2 Training. AWR shall provide all necessary training and information to Utility personnel as is necessary to allow Utility to fully perform hereunder. Such training will be specific to educating Utility employees in the operation, terms, and conditions of the Programs. Utility shall make the necessary arrangements to provide a location for such training at or near Utility's facilities.

10.3 Contractors. AWR shall be responsible for engaging qualified independent contractors to perform the services included in the Programs. AWR shall contract with and

maintain a sufficient number of contractors to perform promised services under the Programs, during the term of this Agreement. The cost of all services provided by such contractors shall be paid by AWR. Nothing in this Agreement shall be deemed to create any obligation on the part of Utility to undertake performance of any such services or pay for such services by the contractors engaged by AWR.

10.4 Administration. AWR shall be responsible for coordinating all administrative activities for the Programs and its customers including, but not limited to, enrollments, billings, accounting, marketing, financial analysis and reporting. AWR shall promptly notify Utility of customer enrollments in the Programs, including any changes in enrollment or billing status.

SECTION 11. Joint Obligations of the Parties.

11.1 AWR and Utility agree to cooperate to review existing planning, management and operations practices for the Programs.

SECTION 12. Arbitration.

It is the stated intent and purpose of both parties at all times to reach agreement by negotiation between AWR and Utility, without recourse to arbitration. In the event, however, that such dispute or difference is not settled, either party may request that the matter be referred to arbitration. The demand for arbitration must be submitted to the American Arbitration Association within sixty (60) calendar days after the date of such request, in which case the arbitration shall cover and resolve any then existing controversy or claim between the parties hereto which directly or indirectly arises out of or relates to this Agreement. The arbitration shall be conducted in the Chattanooga, Tennessee in accordance with the rules and procedures then existing under the Commercial Arbitration Rules of the American Arbitration Association, provided that notwithstanding anything to the contrary contained in such Rules the following

shall apply: The arbitration board shall consist of three arbitrators. AWR shall choose one arbitrator and Utility shall choose one arbitrator. If the two arbitrators appointed by the parties fail to agree within five (5) business days upon the selection of a third arbitrator, the third arbitrator shall be selected from a list of arbitrators supplied by the American Arbitration Association or otherwise in accordance with such Rules. After the appointments of the third arbitrator, the arbitration board shall meet as necessary for the purpose of reaching a determination in the dispute or difference, and the decision of the majority of the board, submitted in writing, to AWR and Utility shall be final and binding upon both parties. Judgment upon any decision rendered by such arbitration board may be entered in any court having jurisdiction. Each party shall bear the expense of its own arbitrators and witnesses, and the expenses of the third arbitrator and any general expenses of the arbitration shall be born equally by both parties.

SECTION 13. Force Majeure.

If, because of any act or occurrence beyond the reasonable control of either party, including, without limitation, acts of God, legislation or lawful regulations of any governmental body, court orders, fire, flood, explosion, strikes, labor disputes or shortage, wars or civil commotion, either party is reasonably prevented from performing any or all of its obligations hereunder, and if the party unable to perform shall be required to resume performance of its obligations under this Agreement upon the termination of the aforementioned Force Majeure, any time or date limitations shall be extended to the extent such party is so prevented.

SECTION 14. Assignments.

This Agreement shall not be assigned by either party without the prior written consent of the other party unless such assignment shall be to an affiliate or successor of either party.

SECTION 15. Amendments.

This Agreement may be modified only by a written amendment signed by both parties.

SECTION 16. Notices.

All notices provided for in this Agreement shall be in writing and shall be deemed to have been given when hand delivered or deposited in the U.S. mail, postage prepaid, registered or certified, return receipt requested, as follows:

If to AWR:

American Water Resources, Inc.
1025 Laurel Oak Road
Voorhees, New Jersey 08043
Attention: Walter Lynch, President

If to Utility:

Tennessee American Water Company
1101 Broad Street
Chattanooga, Tennessee 37401
Attention: David B. Schultz, President

SECTION 17. Governing Law.

This Agreement, including the validity thereof and the rights and obligations of the parties thereunder, shall be construed in accordance with, and governed by the laws of the State of Tennessee.

SECTION 18. Indemnification.

18.1 AWR shall, and shall cause its Repair Contractors to, defend, indemnify and hold harmless Utility, its officers, directors, employees and agents from and against any and all liability, including liability to third parties, for personal injury, including death, property damage, or other actions, damages, fines, penalties, claims, demands, judgments, losses, costs, expenses, suits and actions (including reasonable attorney's fees), for personal injury, including death, property damage or other injury, to the extent caused by or arising out of negligence or wrongful or willful misconduct on the part of AWR, its Repair Contractors, or their respective officers, employees, agents, contractors, and subcontractors in connection with the services rendered to Utility by AWR pursuant to the terms of this Agreement.

18.2 Utility shall defend, indemnify and hold harmless AWR, its officers, directors, employees and agents from and against any and all liability, including liability to third parties, for personal injury, including death, property damage, or other actions, damages, fines, penalties, claims, demands, judgments, losses, costs, expenses, suits and actions (including reasonable attorney's fees), for personal injury, including death, property damage or other injury, to the extent caused by or arising out of negligence or wrongful or willful misconduct on the part of Utility, its officers, employees, agents, contractors, and subcontractors in connection with the services rendered to AWR by Utility pursuant to the terms of this Agreement.

SECTION 19. No Waiver.

The failure of a party to insist on strict performance of any or all of the terms of this Agreement, or to exercise any right or remedy under this Agreement, shall not constitute a waiver or relinquishment of any nature regarding such right or remedy or any other right or remedy. No waiver of any breach or default hereunder shall be considered valid unless in writing and signed by the party giving such waiver, and no such waiver shall be deemed a waiver of any subsequent breach or default of the same or similar nature.

SECTION 20. Severability.

In case one or more of the covenants, terms or provisions contained in this Agreement shall be held invalid, illegal, or unenforceable in any respect, the validity of the remaining covenants, terms, and provisions contained herein shall be in no way affected, prejudiced, or disturbed and the remaining covenants, terms, and provisions shall remain in full force and effect.

SECTION 21. No Third-Party Beneficiaries.

No customer of the Programs, contractors of AWR, or any other third party shall be deemed a third-party beneficiary of this Agreement.

SECTION 22. Independent Contractor.

It is understood that the relationship of Utility to AWR is that of an independent contractor and not that of an employee and or agent of AWR. None of the employees or agents of Utility shall be considered employees of AWR. None of the employees or agents of AWR shall be considered employees of Utility. Each party shall be wholly responsible and liable for the employment taxes and withholdings due as a result of their performance hereunder.

SECTION 23. Complete Agreement.

This Agreement sets forth the entire understanding of the parties, which supersedes and merges all prior proposals, understandings and all other agreements, oral or written, between the parties relating to the subject matter hereof and my not be modified except in a writing executed by both parties.

SECTION 24. Titles and Headings.

Titles and headings to sections or paragraphs herein are inserted merely for convenience of reference and are not intended to be a part of or to affect the meaning or interpretation of this Agreement.

SECTION 25. Counterparts.

This Agreement may be executed in one or more counterparts, each of which shall be deemed an original, but all of which together shall constitute one and the same instrument.

SECTION 26. Condition Precedent.

This Agreement may be conditioned upon any necessary approval of the Tennessee Regulatory Authority.

SECTION 27. Limitation of Liability.

NEITHER PARTY WILL BE LIABLE FOR ANY INCIDENTAL, CONSEQUENTIAL, SPECIAL OR INDIRECT DAMAGES, WHETHER ARISING OUT

OF BREACH OF WARRANTY, BREACH OF CONTRACT, NEGLIGENCE, STRICT LIABILITY OR OTHERWISE, ATTRIBUTABLE TO OR RESULTING FROM ITS PERFORMANCE HEREUNDER. In no event will Utility's liability for damages caused by its failure to supply material or perform services in a proper or timely manner exceed the amount paid by AWR to Utility for such materials or services.

IN WITNESS WHEREOF, the parties have caused this Agreement to be executed by their duly authorized representatives, as of the day and year first above written.

APPENDIX A

Water Line Protection Program:

For a periodic fee, Utility customers may enroll in the Water Line Protection Program that, subject to its terms and conditions, provides a service to repair customer-owned water lines that leak or break due to normal wear and tear.

Sewer Line Protection Program:

For a periodic fee, Utility customers may enroll in the Sewer Line Protection Program that, subject to its terms and conditions, provides a service to clear or repair blocked customer-owned sewer lines that become clogged or blocked due to normal wear and usage.

Exhibit 1

SERVICE ORDER

American Water Resources, Inc. (AWR) hereby engages Tennessee American Water Company (Utility) to perform the following services, pursuant to the Agreement for Support Services executed between the parties on May 1, 2004:

Water and Sewer Line Protection Programs:

1. Distribution of Promotional Materials. See Section 6.1.1 for scope of services.

2. Repair Service Initiation. See Section 6.1.2 for scope of services.

3. Distribution of Customer Surveys. From time to time, AWR may develop customer surveys designed to measure customer satisfaction with the Programs, and if necessary, make Program enhancements. AWR shall submit such survey materials to Utility for review and comment prior to distribution to customers.

4. Billing and Collecting. Utility shall bill each of its customers who AWR identifies as having requested service and billing from Utility by a line item on the customer's water bill. AWR shall furnish reasonable evidence that a customer has requested the service to Utility upon Utility's request. Utility shall collect payments from the enrolled customers and forward same to AWR within fifteen days following the end of each calendar month for amounts collected during such month. All payments made by the customer shall be credited first to payment of any amount owed for utility service furnished by Utility; any remainder shall first be credited to payment of any amount owed for utility service furnished by someone other than Utility but shown as a line item on the bill sent to the customer by Utility; and any remainder shall then be credited to payment of any amount owed to AWR. Utility shall not interrupt, cease or refuse utility service to a customer for non-payment of amounts owed to AWR. AWR shall be responsible for all collection efforts for non-payment by Utility customers for AWR Programs.

AGREEMENT

Agreement dated January 1, 1989, between AMERICAN WATER WORKS SERVICE COMPANY, INC., a Delaware corporation (hereinafter "Service Company"), and TENNESSEE-AMERICAN WATER COMPANY, a Tennessee corporation (hereinafter "Water Company").

The background of this Agreement is that:

1. Both Service Company and Water Company are subsidiaries of American Water Works Company, Inc., a Delaware corporation (hereinafter "American").
2. Water Company has been organized for and is presently engaged in the business of providing potable water as a public utility in the State of Tennessee.
3. Service Company maintains an organization whose officers and employees are familiar with all facets of the water utility business, including the development, business and property of Water Company, and are experienced in the efficient management, financing, accounting and operation of water utility properties and the extension and improvement thereof. The officers and employees of Service Company are qualified to aid, assist and advise Water Company in its business operations through the services to be performed under this Agreement.
4. Service Company has provided administrative and operating services to Water Company for many years, the past 17 years pursuant to an agreement dated January 1,

1971. Because Water Company is of the opinion that it cannot obtain the same quality and diversification of services on a comparable economic basis elsewhere, it proposes to enter into a new agreement with Service Company more specifically defining the types of services available to it.

5. Service Company has entered or proposes to enter into agreements similar to this agreement with other affiliated water companies (hereinafter collectively "Water Companies").

6. The services to be rendered under this agreement are to be rendered by Service Company to Water Companies at their cost to Service Company, as hereinafter provided.

NOW, THEREFORE, in consideration of the premises and mutual agreements herein contained, the Water Company and Service Company agree that:

ARTICLE 1. PERSONNEL AND SERVICES TO BE PROVIDED

1.1 During the term of this agreement and upon the terms and conditions hereinafter set forth, Service Company shall provide corporate guidance for Water Company. In addition to the guidance provided by the officers and employees of Service Company through the coordination of functional activities for all subsidiaries of American, the officers and employees of Service Company shall furnish and Water Company shall purchase from Service Company, the following services: Accounting, Administration, Communication, Corporate Secretarial, Engineering, Financial, Human Resources,

Information Systems, Operation, Rates and Revenue, Risk Management and Water Quality, together with such other services as Water Company and Service Company may agree; provided, however, that Water Company may perform the service with its own personnel or engage another company or person to provide those services on its behalf. Service Company by mutual consent may engage another Company or person to provide such services on its behalf.

1.2 Service Company shall employ qualified officers and employees and those persons shall be available for election by Water Company to serve as officers of Water Company.

1.3 Without limitation, services to be provided by the Service Company shall be rendered as follows:

A. **Accounting**: Service Company shall assist in the preparation and implementation of accounting methods and procedures to determine that they conform fully to the requirements, rules and regulations of governmental authorities having jurisdiction and review Water Company's monthly financial reports, annual reports and other reports to stockholders and to any governmental authorities. It shall advise and assist in the establishment and maintenance of current record keeping techniques; review accounting procedures, methods and forms; and evaluate systems of internal control for receipt and disbursement of funds, materials and supplies, and other assets. Service Company shall maintain accounting records as required by Water Company. When appropriate, Service Company shall cooperate and consult with Water Company's independent certified public accountants.

Service Company shall assist in the preparation of operating and construction budgets and monitor the control over such budgets by comparing experienced costs to the projections.

Service Company shall prepare or assist in the preparation of federal, state and local tax returns for and to the extent required by Water Company.

B. **Administration**: Service Company shall make qualified employees available to perform or assist in the performance of Water Company's corporate activities. Those employees shall keep themselves informed on all aspects of Water Company's operations and shall regularly visit Water Company's facilities. They shall make recommendations to Water Company for operating expenditures and for additions to and improvements of property, plant and equipment. They shall keep abreast of economic, regulatory, governmental and operational developments and conditions that may affect Water Company; and advise Water Company of any such developments and conditions to the extent that they may be important to Water Company. Service Company shall provide an internal audit staff for periodic audits of accounts, records, policies and procedures of Water Company and submit reports thereon.

C. **Communications**: Service Company shall recommend procedures to promote satisfactory relations with employees, customers, communities and the general public and assist in the preparation of communication materials, (including press releases, brochures, audio visual presentations and speeches) plant tours, public exhibits and displays and other related services to inform the public.

D. **Corporate Secretarial**: Service Company shall maintain, in such places and manner as may be required by applicable law, documents of Water Company, such as minute books, charters, by-laws, contracts, deeds and other corporate records, and shall administer an orderly program of records retention. It shall maintain, or arrange for the maintenance of, records of stockholders of Water Company, prepare or arrange for the preparation of stock certificates, perform duties relating to the transfer of stock and perform other corporate secretarial functions as required including preparation of notices of stockholder and director meetings and the minutes thereof.

Service Company shall review and may assist in the preparation of documents and reports required by Water Company such as deeds, easements, contracts, charters, franchises, trust indentures and regulatory reports and filings.

E. **Engineering**: Service Company shall advise, and provide engineering services to assist Water Company in planning for, operating, maintaining and constructing its facilities.

It shall conduct distribution system surveys and hydraulic analyses and prepare or review maps, charts, operating statistics, reports and other pertinent data.

It shall assist Water Company in the proper maintenance and protection of Water Company properties by periodic inspection of its structures, tanks, reservoirs, dams, wells and electrical and mechanical equipment.

The engineering services provided by Service Company shall also include the conduct of field investigations as necessary to

obtain engineering information and, when required, the preparation of studies, reports, designs, drawings, cost estimates, specifications, and contracts for the construction of additions to or improvements of Water Company's source of supply, treatment plant, pumping stations, distribution system, and such other facilities as Water Company may request. Service Company shall provide a Materials Management Program to arrange for the purchase of equipment, materials, and supplies in volume on a basis advantageous to Water Company and assist in the evaluation of new and existing products and application procedures.

F. **Financial**: Service Company shall assist in the development and implementation of financing programs for Water Company, including the furnishing of advice from time to time on securities market conditions and the form and timing of financing; advise concerning arrangements for the sale of its securities; and assist in the preparation of necessary papers, documents, registration statements, prospectuses, petitions, applications and declarations. It shall prepare reports to be filed with, and reply to inquiries made by, security holders and bond and mortgage trustees.

Service Company shall assist Water Company in cash management including arrangements for bank credit lines, establishment of collection policies, and development of temporary investment programs.

Service Company shall provide assistance to Water Company in the preparation of all financial reports.

G. **Human Resources**: Service Company shall assist in obtaining qualified personnel for Water Company; in establishing appropriate rates of pay for those employees; and in negotiating with bargaining units representing Water Company employees. It shall carry out training programs for the development of personnel and advise and assist Water Company regarding personnel. It shall also advise and assist Water Company in regard to group employee insurance, pension and benefit plans and in the drafting or revising of those plans when required. It will keep Water Company apprised of all employment laws and develop procedures and controls to assure compliance.

H. **Information Systems**: Service Company shall make available to Water Company electronic data processing services. Those services shall include customer billing and accounting, preparation of financial statements and other reports including those required by Federal and State agencies.

I. Operation: Service Company shall develop and assist in the implementation of operating procedures to promote the efficient and economic operation of Water Company. Periodic operational reviews will be performed by Service Company personnel and any deviations from adopted procedures will be reported to Water Company.

J. **Rates and Revenue**: Service Company personnel shall make recommendations for changes in rates, rules and regulations and shall assist Water Company in the conduct of proceedings before, and in its compliance with the rulings of, regulatory bodies having jurisdiction over its operation. These personnel

shall keep abreast of economic and regulatory developments and conditions that may affect Water Company; and advise Water Company of any such developments and conditions to the extent that they may be important to Water Company. Rates and Revenue personnel shall assist in the preparation of rate filings or applications and the supporting documents and exhibits requested or required by the Water Company and their respective regulatory commissions. Service Company shall also provide qualified personnel to testify on Water Company's behalf as required during any regulatory proceedings.

K. **Risk Management**: Service Company shall provide a Risk Management Program to review the exposures to accidental loss of the Water Company, recommend efficient methods of protection either through the purchase of insurance, self-insurance or other risk management techniques and arrange for the purchase of insurance coverage. It shall also supervise investigation procedures; review claims; and negotiate and assist in, and evaluate proposals for, settlement at the request of Water Company. It shall assist in the establishment of safety and security programs to avoid or minimize risk and loss.

L. **Water Quality**: Service Company shall assist Water Company to comply with standards of governmental agencies and establish and attain water quality objectives of the Water Company. It shall assist in providing design criteria for processes, coordinating with public agencies, developing approaches and solutions to water quality problems, and providing

technical assistance and general direction for Water Company personnel.

It shall also provide laboratory services for programmed analyses as required by drinking water regulations, and special analyses as required by Water Company.

ARTICLE II. PAYMENT FOR SERVICES

2.1 In consideration for the services to be rendered by Service Company as hereinabove provided, Water Company agrees to pay to Service Company the cost thereof determined as provided in this Article II and in Article III.

2.2 All costs of service rendered by Service Company personnel for Water Company or in common with other Water Companies shall be charged to Water Company based on actual time spent by those personnel as reflected in their daily time sheets or other mutually acceptable means of determination.

2.3 All costs of Service Company incurred in connection with services rendered by Service Company which can be identified and related exclusively to Water Company, shall be charged directly to Water Company.

2.4 All costs incurred in rendering services to Water Company in common with similar services to other Water Companies which cannot be identified and related exclusively to services rendered to a particular Water Company, shall be allocated among all Water Companies so served, or, in the case of costs incurred with respect to services rendered to a particular group of Water

Companies, among the members of such group, based on the number of customers served at the immediately preceding calendar year end.

2.5 Cost for support personnel (secretaries, clerical personnel, clerks, messengers, telephone operators, mail clerks, and other incidental support personnel of the Service Company) as well as the cost of lease payments, depreciation, utilities and other costs associated with leasing office space and equipment by Service Company shall be allocated among the Water Companies on the basis of the proportion of the aggregate cost allocated under Sections 2.3 and 2.4.

ARTICLE III. ALLOWANCE FOR OVERHEAD

3.1 In determining the cost to be assessed by Service Company for the rendering of services to Water Company as herein provided, there shall be added to the salaries of all officers and employees for whose services charges are to be made, a percentage sufficient to cover the general overhead of Service Company, as defined below, properly allocable thereto. Such percentage shall be calculated each month and shall be the ratio of the total general overhead of the Service Company for the month to the total salaries of the employees for whose service charges are to be made to the Water Companies. No general overhead of Service Company shall be added to costs incurred for services of non-affiliated consultants employed by Service Company.

3.2 The term "general overhead" shall include:

(a) pension and insurance premiums paid for the benefit of Service Company employees,

(b) legal and other fees for services rendered to the Service Company,

(c) taxes,

(d) other general office supplies and other similar expenses, and

(e) interest on working capital.

ARTICLE IV. BILLING PROCEDURES AND BOOKS AND RECORDS

4.1 As soon as practicable after the last day of each month, Service Company shall render a bill to Water Company for all amounts due from Water Company for services and expenses for such month plus an amount equal to the estimated cost of such services and expenses for the current month, all computed pursuant to Articles II and III. Such bill shall be in sufficient detail to show separately the charge for each class of service rendered. All amounts so billed shall reflect the credit for payments made on the estimated portion of the prior bill and shall be paid by Water Company within a reasonable time after receipt of the bill therefore.

4.2 Service Company agrees to keep its books and records available at all times for inspection by representatives of Water Company or by regulatory bodies having jurisdiction over Water Company.

4.3 Service Company shall at any time, upon request of Water Company, furnish any and all information required by Water Company with respect to the services rendered by Service Company

hereunder, the costs thereof, and the allocation of such costs among Water Companies.

ARTICLE V. OTHER AGREEMENTS

5.1 It is understood by Water Company that Service Company has entered or may enter into similar agreements with other Water Companies that are affiliated with American to which similar services are to be furnished. Service Company will not enter into agreements to perform similar services for other companies on terms more favorable than those provided herein.

5.2 It is understood by Water Company that Service Company has entered or may enter into an agreement or agreements with American and certain other companies not engaged in the water or sewer service business to which limited services are to be furnished; Water Company consents to such additional agreements, provided, however, that no part of the cost of furnishing such services will be charged to Water Company.

ARTICLE VI. TERM OF AGREEMENT

This agreement shall become effective as of the later of (a) the date first mentioned above or (b) the date the parties receive the last of any necessary approvals of governmental regulatory agencies having jurisdiction in the premises. Upon becoming effective, this agreement shall be the sole agreement between the parties concerning the subject matter hereof and shall supersede all prior agreements, written or oral, including the agreement dated January 1, 1971, which shall terminate on the date this

agreement becomes effective. This agreement shall continue in full force and effect until terminated by either of the parties hereto giving the other party hereto ninety day's notice in writing; provided, however, that this agreement shall terminate as of the date Water Company or Service Company ceases to be an affiliate of American.

IN WITNESS WHEREOF, Service Company and Water Company have caused this agreement to be signed in their respective corporate names by their respective Presidents or Vice Presidents, and impressed with their respective corporate seals attested by their respective Secretaries or Assistant Secretaries, all as of the day and year first above written.

TENNESSEE
AMERICAN WATER

A QUALITY ACHIEVEMENT

Tennessee American Water is 100% compliant in meeting federal and state water quality standards.
At Tennessee American Water, we conduct more than 5,800 water quality tests each year. We think about the quality of your drinking water every day...so you don't have to.

WE CARE ABOUT WATER. IT'S WHAT WE DO.

TENNESSEE AMERICAN WATER

The Delivery of Drinking Water

THE CONVENIENCE OF DRINKING WATER DELIVERED DIRECTLY TO THE HOME HAS BEEN A FACT OF LIFE IN CHATTANOOGA SINCE 1850, when pipes were installed to bring water from artesian wells to the homes of Chattanooga's 2,500 inhabitants.

In 1856 the area's first water company, Chattanooga Water Corporation, was established and in 1863 the Union Army took possession of the existing system. Under the direction of General Ulysses S. Grant, a steam boiler and pump were built at the foot of Pine Street to take water from the Tennessee River. Wooden storage tanks were built on the side of Cameron Hill and approximately two miles of six-inch pipes were installed.

After the war, a group of local business people purchased the system at public auction and formed the Chattanooga Water Company. On March 11, 1868, Chattanooga Water Company was granted a charter of incorporation by the Tennessee legislature. Later, the firm was sold to Colonel George H. Hazelhurst and became the Lookout Water Company. It supplied most of the city's water. A nine million gallon reservoir on Cameron Hill and a pumping station at the corner of Water and Pine Streets were erected. Water was pumped from the river to the reservoir. It then flowed into the distribution system by gravity. Water mains were installed and Chattanooga had its first fire protection service.

Water quality concerns associated with the city runoff forced the water company to relocate its intakes upstream of the city. Unable to finance such a major project, Lookout Water Company, as well as another local company, Mountain Springs Water Company, were sold in 1887 to the American Water Works and Guarantee Company, the forerunner of American Water Works Company, Inc. Both systems were

CHATTANOOGA WATER TIMELINE

- 1856 Chattanooga's first water company established
- 1863 Union forces seize water system, install first storage tanks
- 1868 First pumping station built
- 1892 Filtered water service begins
- 1973 Water provider becomes known as Tennessee American Water
- 2009 9-year recipient of the Director's Award by the Partnership for safe drinking water

consolidated to become the City Water Company of Chattanooga and rapid progress was made. A new pumping station was built at the mouth of Citico Creek, miles of water mains were installed and new storage facilities and filters were added. In 1892, Chattanooga became the second city in the south to have filtered water. The name was changed once again in 1973 to Tennessee American Water Company.

Many improvements have been made since the 1850s. Today, Tennessee American Water's system includes 1,280 miles of water main, 23 water storage tanks, 5,065 fire hydrants, 29 pumping stations and a 65 mgd award-winning water treatment facility ensuring that safe, reliable water service is available to the residents of Chattanooga.

Service

On any given day, a typical single-family home in Chattanooga will use approximately 70 gallons of water for daily activities, such as drinking, cooking and washing. When people turn on the faucet, they expect to have clean water they can drink or use at any time. Having access to safe, reliable water service is a cornerstone of our modern way of life. So just how does the water get from the Tennessee River to the tap?

Chattanooga's water source is the Tennessee River, which provides Tennessee American Water with an adequate water supply throughout the year. The water in the Tennessee River comes from watersheds throughout the Tennessee Valley. Watersheds serve as natural funnels delivering water to the river. Watersheds are comprised of rivers, creeks and streams transported by forests, hills and mountains, eventually ending up in the Tennessee River. As water travels through watersheds, it picks up natural and manmade contaminants.

The untreated water in the river, while safe for recreational activities like swimming and fishing, does not meet Safe Drinking Water standards for human consumption set by the federal government; therefore, consuming water straight from the Tennessee River is not recommended.

The Safe Drinking Water Act (SDWA) is the federal law that imposes regulations on the quality of drinking water which water suppliers must adhere to. The United States Environmental Protection Agency (USEPA) is responsible for administering the SDWA. Tennessee American Water ensures that the drinking water our customers receive is as good as, or better than, EPA standards. We are regulated by the US EPA and the Tennessee Department of Environment and Conservation (TDEC).

To ensure the water collected from the Tennessee River is free of contaminants and meets stringent water quality standards set by the US Environmental Protection Agency, Tennessee American Water must employ a complex water treatment process that involves clarification and filtration.

TENNESSEE AMERICAN WATER TODAY

- 1,280 miles of water main
- 23 Water Storage Tanks
- Over 5,000 fire hydrants
- 29 pumping stations
- 65 mgd treatment facility

Quality

From the moment water is collected from the Tennessee River at Tennessee American Water's treatment plant on Citico Drive the process of creating quality water for its customers begins. Everyday Tennessee American Water tests the water before and after it is treated to ensure it meets USEPA and TDEC standards. In the treatment facility, water goes through six basic treatment steps:

1. Disinfection - Chlorine is added to kill bacteria or other microorganisms in the water.

2. Coagulation - Special compounds are added to the water to help accumulate the silt and other particles from the water.

3. Sedimentation - The particles accumulated during coagulation become heavy and settle to the

bottom of the sedimentation vessel.

4. Filtration - Following sedimentation, the clarified water passes through filters containing fine sand and granular activated carbon to remove very small particles and unpleasant taste and odor-causing compounds.

5. Final Chemical Treatment - Following filtration, and before water is distributed to customers, the water is treated with approved chemicals in accordance with state and federal regulations. Chlorine is added as a disinfectant for the water during distribution; fluoride is added for dental health; and corrosion control chemicals are added to help prevent corrosion of home plumbing.

6. Storage - Water is placed in a closed tank or reservoir to be used in meeting the constantly changing water needs of the community.

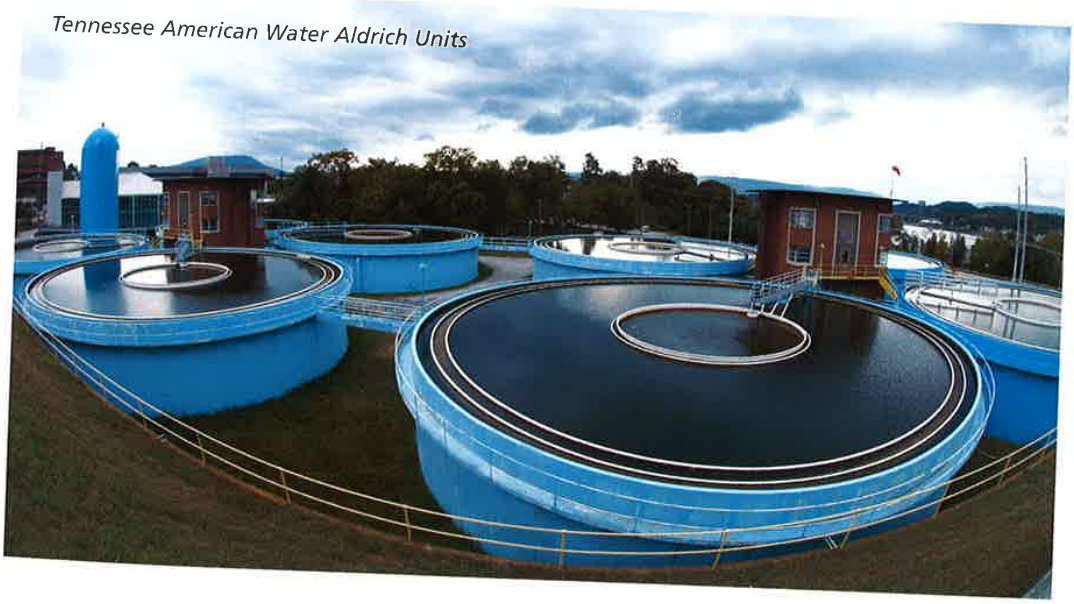
Once the water is treated, Tennessee American Water will either store the water in a variety of elevated and ground storage tanks or it is immediately delivered to homes and businesses.

Tennessee American Water has been an active participant in the Partnership for Safe Water program from the American Water Works Association (AWWA). The Partnership's mission is to "improve the quality of drinking water delivered to customers of public water supplies by optimizing system operations." Tennessee American Water's Citico treatment facility has received the Director's Award for the last nine years for the facilities' adherence to the high operating standards of the Partnership. The commitment to producing the highest quality water available, strenuous attention to controlling costs, and human necessity makes water service the most valuable utility service available to the citizens of Chattanooga.

Value

Investor-owned utilities are closely regulated by public utility commissions. They are the subject of a long, open and transparent process and in the end, the rates are set by the regulator. This formal process for hearing rate requests includes informing the public; intervention by interested parties; presentation of evidence and hearings, testimony and rebuttal; orders from administrative law judges and rights to appeal.

A main driver of increasing rates is capital investment, or the money water providers need to repair and upgrade the water supply infrastructure.



Replacing aging infrastructure is a challenge the whole water industry faces. The EPA estimates that approximately $335 billion of capital spending will be necessary between 2007 and 2026 to replace aging infrastructure and to comply with quality standards to ensure quality water systems across the United States. In addition, another $300 to $400 billion will be required for wastewater.

American Water is committed to consistently providing customers with high-quality drinking water, as well as reliable water and wastewater services. For the foreseeable future, the company estimates it will invest nearly a billion dollars annually to replace aging infrastructure.

Even though there is a significant cost to bring water to customers' taps, water is typically the cheapest commodity in the American household. To put this in perspective, in most of the states American Water serves, the water costs about or is less than one penny per gallon. Compared with other utilities or bottled water, it is a great value.

FIRST DISCOVERY REQUEST OF THE
CITY OF CHATTANOOGA

Responsible Witness: Linda C. Bridwell

Other Participating Employees: CSC

Question:

78. Please ***Identify*** for each year since January 1, 2010, the number of employees by position at the National Call Centers and for each position set forth the unburdened base hourly wage or salary rate (without overheads). In the event there is more than one base hourly rate for each position, provide the average and median base hourly rates for each such position.

Response:

Please refer to the confidential attachment.

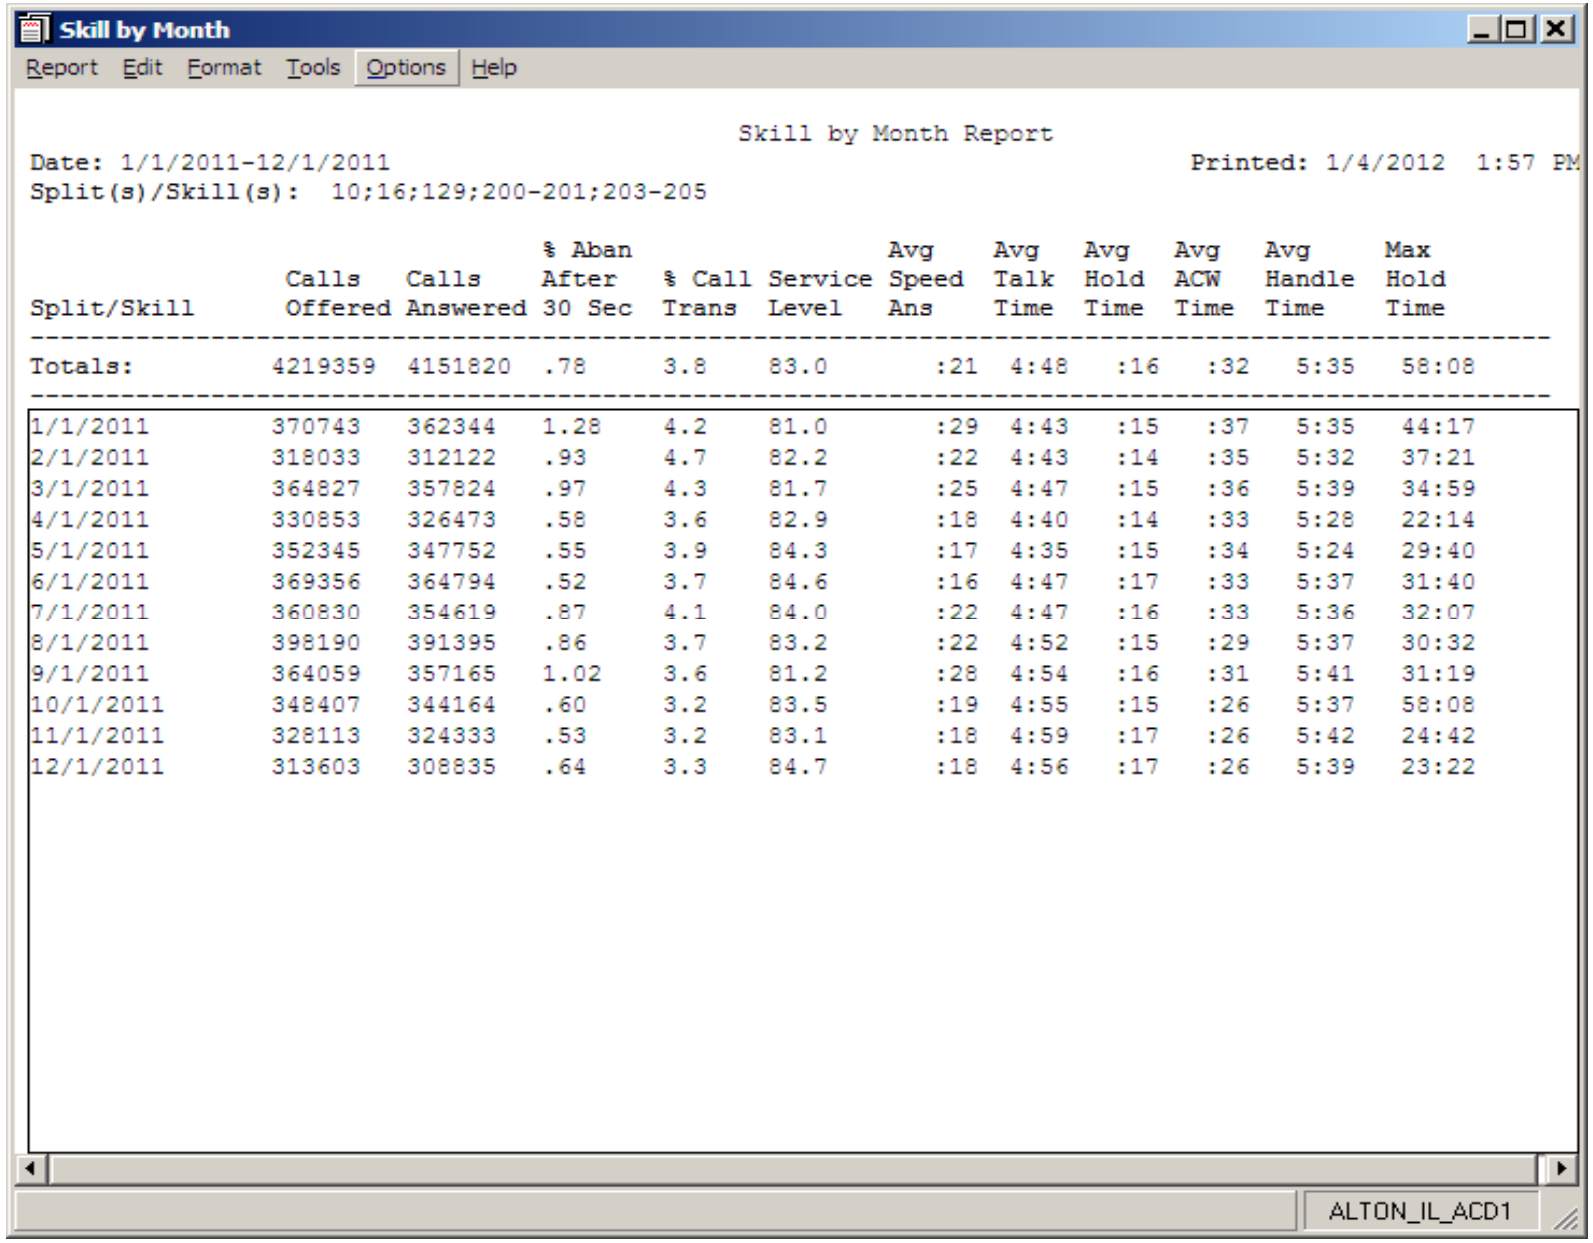
TENNESSEE AMERICAN WATER COMPANY
DOCKET NO. 12-00049
FIRST DISCOVERY REQUEST OF THE
CITY OF CHATTANOOGA

Responsible Witness: Linda Bridwell

Other Participating Employees: Karen Cooper, CSC

Question:

79. ***Identify*** and provide all ***Documents*** constituting, reporting, or referring to call center operating statistics and reports that are prepared for management of ***TAWC***, ***AWWSC***, or any other subsidiary or affiliate of ***AWWC*** relating to, referring to, or concerning the efficiency, effectiveness, or other aspects of the operations of the call centers, including, without limitation, such information for operations related to ***Non-Regulated Service***s or other activities of non-regulated operations and companies served by the call centers.



Response:

There are three primary documents to monitor and track operational productivity and service quality at the call centers: 1) CSC Managing Directors Report, 2) Service Level Targets Report, and 3) Call Handling Data - Skill by Month Report. These three reports are attached to this response.

Customer Service Indicators	Definition
Calls Offered to Queue	The number of inbound customer calls offered to queue. A call enters the queue once it is passed from the automated system and is placed in line to speak with a CSR.
1st Call Effectiveness	First call effectiveness is achieved by the CSR when the selected utility contact type is closed on the same day it was created, it is not transferred to another CSR or supervisor and no other contact of the same type for the same account is created within the period of the report. Excludes contact types - BNKRT, CONST, RJPMT, PUC and OUTCL.
% Service Level < 30 seconds	The percentage of calls answered within 30 seconds.
% Customer Inquire Response within 3 day	The percentage of utility contacts closed within three days of creation. Does not include auto close utility contacts.
Avg Speed to Answer	The average amount of time a caller waits in queue before connecting to an agent.
Avg Handle Time	The average amount of time it takes a CSR to handle a call. Avg. Talk Time + Avg. Hold Time + Avg. ACW Time
IVR Self-Service Calls	The percentage of calls handled successfully by the IVR.
Written Correspondence Answered w/in 3 days	The percentage of correspondence that is completed within 3 days.
Public Utility Commissions Complaints Opened	The number of PUC complaints opened in a month.
Service Orders Completed as Scheduled	The percentage of service orders completed before the expiration date.
Shut Offs Worked as % of Issued	The percentage of Shut Off service orders completed before the assigned expiry period.
% Unscheduled Est. Readings	The percentage of estimated reads that were unscheduled. Unscheduled estimates/ total reads. (Est. read type codes E & O) (MO - E,O,C,T)
% Scheduled Est. Readings	The percentage of estimated reads that were scheduled. Scheduled estimates/ total reads.
# Executive Complaints Opened	The number of executive complaints opened in a month.

TENNESSEE AMERICAN WATER COMPANY
DOCKET NO. 12-00049
FIRST DISCOVERY REQUEST OF THE
CITY OF CHATTANOOGA

Responsible Witness: Gary VerDouw

Other Participating Employees: Linda C. Bridwell

Question:

80. Please produce a copy of all trade articles, journals, treatises, speeches and publications of any kind in any way utilized or relied upon by any of ***TAWC***'s proposed expert witnesses in evaluating, reaching conclusions, or formulating an opinion in the captioned matter as well as all articles, journals, speeches, or books written or co-written by any of the ***TAWC*** witnesses.

Response:

Information relied upon by Gary M. VerDouw in his testimony:

Pension Tracker:

1) CRS Report for Congress, Summary of the Pension Protection Act of 2006
2) Technical Explanation of H.R. 4, the "Pension Protection Act of 2006," as passed by the House on July 28, 2006, and considered by the Senate on August 3, 2006. Document can also be found at the following web address: http://www.jct.gov/x-38-06.pdf

DSIC:

1) The American Society of Civil Engineers 2009 Report Card for America's Drinking Water Infrastructure.
2) Two USEPA Reports discussed in VerDouw testimony on Page 45, which already references applicable websites footnoted therein. No copies are attached.
3) Various state DSIC statutes or regulations or Commission/Authority Orders that provide for recovery of operating cost increases/decreases occurring between base rate cases. These documents have been provided in response to Item 28 and Item 30 of this same data request, respectively.
4) TRA Director Roberson Concurrence and Dissent of September 30, 2011.

Purchased Power and Chemical Charge:

1) Various state statutes or regulations or Commission/Authority Orders that provide for recovery of operating cost increases/decreases occurring between base rate cases. These documents have been provided in response to Item 31 and Item 33 of this same data request, respectively.
2) Review of Company Witness Kerry A. Heid submitted in Indiana American rate case docketed as Cause No. 43187.

The relevant pages of articles relied upon by Dr. Vander Weide have been provided in response to Item 7 and Item 8 of the Consumer Advocate and Protection Division First Data Request in this proceeding. Articles published by Dr. Vander Weide, to the extent they are available, are attached and are detailed in the curriculum vitae attached to his testimony.

Articles published by Linda Bridwell are attached to this response.

Mr. Herbert has not published any articles. He has relied upon the American Water Works Association Manuals M1 and M31 which are available on their website.

Information relied upon by Mr. Chelius are provided in response to Item 32 of the Tennessee Regulatory Authority's First Data Request in this proceeding. Articles published by Mr. Chelius are not in possession of the Company but will be made available at a supplemental filing if they are received.

Mr Allen published a number of manuals when he was an instructor that are not in his possession and are no longer available as updated editions have been published of which he is not an author.

Mr. Keathley, Mr. Petry, Ms. Schwarzell, and Mr. Rogers have not published any articles, journals or speeches.

Summary of the Pension Protection Act of 2006

Summary

On July 28, 2006, the House of Representatives passed H.R. 4, the Pension Protection Act, by a vote of 279-131. The bill was passed by the Senate on August 3 by a vote of 93-5 and was signed into law by the President as P.L. 109-280 on August 17, 2006. The Pension Protection Act is the most comprehensive reform of the nation's pension laws since the enactment of the Employee Retirement Income Security Act of 1974 (ERISA, P.L. 93-406). It establishes new funding requirements for defined benefit pensions and includes reforms that will affect cash balance pension plans, defined contribution plans, and deferred compensation plans for executives and highly compensated employees.

Prompted by the default in recent years of several large defined benefit pension plans and the increasing deficit of Pension Benefit Guaranty Corporation (PBGC), the Bush Administration in January 2005 advanced a proposal for pension funding reform, which was designed to increase the minimum funding requirements for pension plans and strengthen the pension insurance system.

In 2005, major pension reform bills were introduced in both the Senate and the House of Representatives. In the Senate, Senator Charles Grassley, Chairman of the Finance Committee, introduced S. 1783, the Pension Security and Transparency Act. In the House, Representative John Boehner, then Chairman of the Committee on Education and the Workforce, introduced H.R. 2830, the Pension Protection Act, which subsequently was renumbered as H.R. 4. The legislation ultimately passed by the House and Senate and signed into law by the President on August 17, 2006, was based mainly on these two bills, with the final version being the result of conference negotiations between the House and Senate that began in March 2006 and continued through July.

This report summarizes the main provisions of the Pension Protection Act (PPA) as they affect single-employer defined benefit plans, multiemployer defined benefit plans, and defined contribution plans. It will not be updated.

Summary of the Pension Protection Act of 2006

On July 28, 2006, the House of Representatives passed H.R. 4, the Pension Protection Act, by a vote of 279-131. The bill was passed by the Senate on August 3 by a vote of 93-5 and was signed into law by the President as P.L. 109-280 on August 17, 2006. The Pension Protection Act is the most comprehensive reform of the nation's pension laws since the enactment of the Employee Retirement Income Security Act of 1974 (ERISA, P.L. 93-406). It establishes new funding requirements for defined benefit pensions and includes reforms that will affect cash balance pension plans, defined contribution plans, and deferred compensation plans for executives and highly compensated employees.

Prompted by the default in recent years of several large defined benefit pension plans and the increasing deficit of Pension Benefit Guaranty Corporation (PBGC), the Bush Administration in January 2005 advanced a proposal for pension funding reform, which was designed to increase the minimum funding requirements for pension plans and strengthen the pension insurance system. The Administration pointed out several weaknesses of the rules that were then in place:

- Sponsors of underfunded plans were not required to make additional contributions — called *deficit reduction contributions* — as long as their plans were at least 90% funded.

- Because the interest rates used to calculate current pension plan liabilities were averaged over a four-year period and asset values used to calculate minimum funding requirements could be averaged over five years, neither plan assets nor liabilities were measured accurately.

- Plans that were underfunded were sometimes able to amortize their funding shortfalls over periods as long as 30 years.[1]

- Some sponsors of underfunded pensions were able to avoid making contributions to their plans for several years because they had made contributions beyond the required minimum in the past. The use of these so-called "credit balances" led to greater underfunding of pension plans, according to the Administration's analysis.

The possibility that the termination of defined benefit pension plans with large unfunded liabilities might eventually lead to the insolvency of PBGC — created by

---

[1] Liabilities arising from plan amendments that increased benefits under the plan could be amortized over 30 years.

Congress in 1974 to insure defined benefit pension plans of private-sector employers — lent a particular urgency to the effort to mandate improved pension plan funding. Although the PBGC receives no appropriations from Congress, it is generally acknowledged that if the agency were to become financially insolvent — threatening the retirement income of the 44 million Americans who have earned benefits under defined benefit pension plans — Congress would have little choice but to step in and engineer a financial bailout of the agency.[2] In 2000, the PBGC recorded a $9.7 billion surplus, but several years of falling interest rates and declining stock prices and the termination of several large, underfunded pension plans led to a rapid deterioration in the PBGC's financial position. Nine of the ten largest pension plan claims for PBGC insurance occurred between 2001 and 2005. (See **Table 1**.) These nine claims accounted for 63% of the total dollar value of claims made on the PBGC since the agency began operating in 1975. By 2005, the PBGC had a funding deficit of $22.7 billion, only slightly lower than the record deficit of $23.3 billion that the agency posted in 2004.

Table 1. Ten Largest Claims Against the PBGC, 1975-2005

Name of firm	Year of termination	Claim, in millions	Vested participants	Percentage of all PBGC claims
United Airlines	2005	$7,094	122,541	22.7%
Bethlehem Steel	2003	3,654	97,015	11.5

In 2005, major pension reform bills were introduced in both the Senate and the House of Representatives. In the Senate, Senator Charles Grassley, Chairman of the Finance Committee, introduced S. 1783, the Pension Security and Transparency Act.

[2] The PBGC receives revenue mainly from the premiums paid to it by companies that sponsor defined benefit pensions and investment returns on the assets in its trust fund.

In the House, Representative John Boehner, then Chairman of the Committee on Education and the Workforce, introduced H.R. 2830, the Pension Protection Act, which subsequently was renumbered as H.R. 4. The legislation ultimately passed by the House and Senate and signed into law by the President on August 17, 2006, was based mainly on these two bills, with the final version being the result of conference negotiations between the House and Senate that began in March 2006 and continued through July. This report summarizes the main provisions of the Pension Protection Act (PPA) as they affect single-employer defined benefit plans, multiemployer defined benefit plans, and defined contribution plans.

Single-Employer Plans

Since the passage of the Employee Retirement Income Security Act (ERISA) in 1974, federal law has required companies that sponsor defined benefit pension plans for their employees to prefund the pension benefits that the plan participants earn each year. If a plan is underfunded, the plan sponsor must amortize (pay off with interest) this unfunded liability over a period of years. The Pension Protection Act (PPA) establishes new rules for determining whether a defined benefit pension plan is fully funded, the contribution needed to fund the benefits that plan participants will earn in the current year, and the contribution to the plan that is required if previously earned benefits are not fully funded. In general, the new rules become effective in 2008, but many provisions of the law will be phased in over several years.

Minimum funding standards for single-employer plans. Pension plan liabilities extend many years into the future. Determining whether a pension is adequately funded requires converting a future stream of pension payments into the amount that would be needed today to pay off those liabilities all at once. This amount — the "present value" of the plan's liabilities — is then compared with the value of the plan's assets. An underfunded plan is one in which the value of the plan's assets falls short of the present value of its liabilities by more than the percentage allowed under law. Converting a future stream of payments (or income) into a present value requires the future payments (or income) to be discounted using an appropriate interest rate. Other things being equal, the *higher* the interest rate, the *smaller* the present value of the future payments (or income), and vice versa.

Beginning in 2008, the PPA introduces new funding requirements for single-employer defined benefit pension plans. The law establishes new rules for calculating plan assets and liabilities, and it eliminates deficit-reduction contributions for underfunded plans. When it is fully phased in, the law will require plan funding to be equal to 100% of the plan's liabilities. Any unfunded liability will have to be amortized over seven years. Sponsors of severely underfunded plans that are at risk of defaulting on their obligations will be required to fund their plans according to special rules that will result in higher employer contributions to the plan. Plan sponsors will continue to be allowed to use credit balances to offset required contributions, but only if the plan is funded at 80% or more. The value of credit balances will have to be adjusted to reflect changes in the market value of plan assets since the date the contributions that created the credit balances were made.

Under the PPA, a plan sponsor's minimum required contribution will be based on the plan's *target normal cost* and the difference between the plan's *funding target* and the value of the plan's assets. The plan's target normal cost is the present value of all benefits that plan participants will accrue during the year. The funding target is the present value of all benefits, including early retirement benefits, already accrued by plan participants as of the beginning of the plan year. If a plan's assets are less than the funding target, the plan has an *unfunded liability*. This liability, less any permissible credit balances, must be amortized in annual installments over seven years. The plan sponsor's minimum required annual contribution is the plan's target normal cost for the plan year, but not less than zero. The 100% funding target will be phased in at 92% in 2008, 94% in 2009, 96% in 2010, and 100% in 2011 and later years. The phase-in will not apply to plans that are already underfunded to the extent that they are subject to the deficit reduction contribution rules in 2007. Those plans will have a 100% funding target beginning in 2008.

Federal law prescribes the interest rate that pension plans must use to calculate the present value of plan liabilities. The PPA requires plans to discount future liabilities using three different interest rates, depending on the length of time until the liabilities must be paid. The interest rates correspond to the length of time until the obligations are due to be paid. A short-term interest rate will be used to calculate the present value of liabilities that will come due within five years. A mid-term interest rate will be used for liabilities that will come due in 5 to 15 years, and a long-term interest rate will be applied to liabilities that will come due in more than 15 years. The Secretary of the Treasury will determine these rates, which will be derived from a "yield curve" of investment-grade corporate bonds averaged over the most recent 24 months.[3] The yield curve requirement will be phased in over three years beginning in 2007. It will replace the four-year average of corporate bond rates established under Pension Funding Equity Act of 2004 (P.L. 108-218), which expired on December 31, 2005.[4]

"At risk" plans. The PPA introduces a new concept to be applied in determining a plan sponsor's required contribution to the plan. Pension plans that are determined to be at risk of defaulting on their liabilities will be required to use specific actuarial assumptions in determining plan liabilities that will increase the plan sponsor's required contributions to the plan. A plan will be deemed at-risk if it is unable to pass either of two tests. Under the first test, a plan is deemed to be at-risk if it is less than 70% funded under the "worst-case scenario" assumptions that (1) the employer is not permitted to use credit balances to reduce its cash contribution and (2) employees will retire at the earliest possible date and will choose to take the most expensive form of benefit. If a plan does not pass this test, it will be deemed to be at-risk *unless* it is at least 80% funded under standard actuarial assumptions. This latter test will be phased in over four years, with the minimum funding

---

[3] A yield curve is a graph that shows interest rates on bonds plotted against the maturity date of the bond. Normally, long-term bonds have higher yields than short-term bonds because both credit risk and inflation risk rise as the maturity dates extend further into the future. Consequently, the yield curve usually slopes upward from left to right.

[4] The PPA extends the interest rates permissible under P.L. 108-218 through 2007 for purposes of the current liability calculation.

requirement starting at 65% in 2008 and rising to 70% in 2009, 75% in 2010, and 80% in 2011. If a plan passes either of these two tests, it will not be deemed to be at-risk; however, it will still be required to make up its funding shortfall over no more than seven years. Plans that have been in at-risk status for at least two of the last four years also will be subject to an additional "loading factor" of 4% of the plan's liabilities plus $700 per participant, which will be added to the plan sponsor's required contribution to the plan. Plan years prior to 2008 will not count for this determination. Plans with 500 or fewer participants in the preceding year would be exempt from the at-risk funding requirements.

Mortality tables. To estimate a pension plan's future obligations, the plan's actuaries use mortality tables to project the number of participants who will claim benefits and the average length of time that participants and their surviving beneficiaries will receive pension payments. Under the PPA, the Secretary of the Treasury will prescribe the mortality tables to be used for these estimates. Large plans may petition the IRS to use a plan-specific mortality table.

Valuation of plan assets. Under prior law, a plan sponsor could determine the value of a plan's assets using actuarial valuations, which can differ from the current market value of those assets. For example, in an actuarial valuation, the plan's investment returns could be "smoothed" (averaged) over a five-year period, and the average asset value could range from 80% to 120% of the fair market value. Averaging asset values over a period of years is permitted because pension plans are considered long-term commitments, and averaging reduces volatility in the measurement of plan assets that can be caused by year-to-year fluctuations in interest rates and the rate of return on investments. Averaging asset values therefore reduces the year-to-year volatility in the plan sponsor's required minimum contributions to a defined benefit pension plan. The PPA narrows the range for actuarial valuations to no less than 90% and no more than 110% of fair market value, and it reduces the maximum smoothing period to two years. Plans with more than 100 participants will be required to use the first day of the plan year as the basis for calculations of plan assets and liabilities. Plans with 100 or fewer participants can choose another date.

Plan contributions and credit balances. Within certain limits, plan sponsors will continue to be able to offset required current contributions with previous contributions. However, these so-called "credit balances" can be used to reduce the plan sponsor's minimum required contribution to the plan only if the plan's assets are at least 80% of the funding target, not counting prefunding balances that have arisen since the new law became effective. Existing credit balances and new prefunding balances must both be subtracted from assets in determining the "adjusted funding target attainment" percentage that is used to determine whether certain benefits can be paid and whether benefit increases are allowed. Credit balances also have to be adjusted for investment gains and losses since the date of the original contribution that created the credit balance. Credit balances must be separated into two categories: balances carried over from 2007 and balances resulting from contributions in 2008 and later years.

Benefit limitations in underfunded plans. The PPA places limits on (1) plan amendments that would increase benefits, (2) benefit accruals, and (3) benefit

distribution options (such as lump sums) in single-employer defined benefit plans that fail to meet specific funding thresholds.

Shutdown benefits. Shutdown benefits are payments made to employees when a plant or factory is shut down. These benefits typically are negotiated between employers and labor unions, and usually they are not prefunded. The PPA prohibits shut-down benefits and other "contingent event benefits" from being paid by pension plans that are funded at less than 60% of full funding unless the employer makes a prescribed additional contribution.[5] The PBGC guarantee for such benefits will be phased in over a five-year period commencing when the event occurs, but this provision is not applicable for the first five years of a plan's existence.

Restrictions on benefit accruals. The PPA requires benefit accruals to cease in plans funded at less than 60%. Once a plan is funded above 60%, the employer — and the union in a collectively bargained plan — must then decide how to credit past service accruals. This provision does not apply during the first five years of a plan's existence, or if the employer makes an additional contribution prescribed by the statute.

Restrictions on benefit increases. Plan amendments that increase benefits are prohibited if the plan is funded at less than 80% of the full funding level, unless the employer makes additional contributions to fully fund the new benefits. Benefit increases include increases in the rate of benefit accrual or a change in the rate at which benefits become vested. This provision is not applicable for the first five years of a plan's existence.

Restrictions on lump-sum distributions. Lump-sum distributions are prohibited if the plan is funded at less than 60% of the full funding level or if the plan sponsor is in bankruptcy and the plan is less than 100% funded. If the plan is funded at more than 60% but less than 80%, the plan may distribute as a lump sum no more than half of the participant's accrued benefit.

Nonqualified deferred compensation. Executives and other highly compensated employees are sometimes covered under employer-sponsored retirement plans that are separate from those that cover rank-and-file employees. Because the benefits under these plans often exceed the limits prescribed by ERISA, they do not qualify for the favorable tax treatment that most pensions covering rank-and-file employees are qualified to receive. Thus, these deferred compensation plans for executives are commonly referred to as "nonqualified plans." Provided that they meet certain requirements under the Internal Revenue Code (IRC), nonqualified plans are sometimes permitted to set aside funds to prefund deferred compensation for executives without the funds being treated as income to the plan participants in the

---

[5] In 2004, the 6th U.S. Circuit Court of Appeals ruled that the PBGC could set a plan termination date that would prevent the agency from being liable for shutdown benefits. In March 2005, the U.S. Supreme Court declined to hear the case, leaving the Circuit Court's decision in place.

year that the contribution to the trust is made.[6] The PPA establishes rules for taxing amounts set aside to prefund nonqualified deferred compensation for executives during a "restricted period." A restricted period occurs if (1) the plan sponsor's defined benefit plan is in at-risk status, (2) the plan sponsor is in bankruptcy, or (3) the plan sponsor's defined benefit plan is terminated in an involuntary or distress termination. Amounts set aside to prefund nonqualified deferred compensation for the plan sponsor's chief executive officer and four highest-compensated officers during a restricted period will be treated as taxable income to these individuals and will be subject to a 20% excise tax.

Notice to participants. The PPA requires plan sponsors to notify participants of restrictions on shutdown benefits, lump-sum distributions, or suspension of benefit accruals within 30 days of the plan being subject to any of these restrictions. The restrictions on benefits in underfunded plans are effective in 2008, but not before 2010 for collectively bargained plans.

Calculating lump-sum distributions. Federal law requires defined benefit pensions to offer participants the option to receive their accrued benefits in the form of an annuity — a series of monthly payments guaranteed for life. Many defined benefit plans also offer participants the option to take their accrued benefits as a single lump sum at the time they separate from the employer. The amount of a lump-sum distribution from a defined benefit pension is inversely related to the interest used to calculate the present value of the benefit that has been accrued under the plan: the higher the interest rate, the smaller the lump sum, and vice versa. Under prior law, lump-sum distributions were calculated using the average interest rate on 30-year Treasury bonds. The PPA replaces the 30-year Treasury bond interest rate as the interest rate for calculating lump-sum distributions from defined benefit plans.[7]

Beginning in 2008, plan sponsors must calculate lump-sum distributions using a three-segment interest rate yield curve, derived from the rates of return on investment-grade corporate bonds of varying maturities. Plan participants of different ages will have their lump-sum distributions calculated using different interest rates. Other things being equal, a lump-sum distribution paid to a worker who is near the plan's normal retirement age will be calculated using a lower interest rate than will be used for a younger worker. As a result, all else being equal, an older worker will receive a larger lump sum than a similarly situated younger worker. The interest rates used to calculate lump sums will be based on *current* bond rates rather than the three-year *weighted average* rate used to calculate the plan's funding target. The new rules for calculating lump sums will be phased in over five years. Plans funded at less than 60% will be prohibited from paying lump-sum distributions. Plans funded at 60% to 80% can pay no more than half of an accrued benefit as a lump-sum distribution.

---

[6] Unlike the pension trusts established for qualified plans, which are protected from the claims of creditors if the plan sponsor enters bankruptcy, trusts established to prefund nonqualified deferred compensation arrangements usually are not protected in bankruptcy.

[7] This is also sometimes referred to as the "417(e)" rate after IRC §417(e).

The PPA also establishes a new interest rate floor for testing whether a lump sum paid from a defined benefit plan complies with the limitations under IRC §415(b). In general, IRC §415(b) limits the annual single-life annuity payable from a defined benefit plan to the lesser of 100% of average compensation or $175,000 (in 2006). Benefits paid as a lump sum or other optional form must be converted to an equivalent annuity value for purposes of applying this limit. The PPA requires plans making this calculation to use an interest rate that is no lower than the highest of (1) 5.5%, (2) the rate that results in a benefit of no more than 105% of the benefit that would be provided if the interest rate required for determining a lump-sum distribution were used, or (3) the interest rate specified in the plan documents. This provision is effective for plan years beginning after 2005.

Cash balance plans and other hybrid plans. The PPA clarifies that cash balance plans do not discriminate against older workers as long as benefits are fully vested after three years of service and interest credits do not exceed a market rate of return.[8] The law also provides that the age discrimination test is met if a participant's accrued benefit is not less than the accrued benefit of any other employee similarly situated in all respects except age.[9] The accrued benefit can be tested on the basis of an annuity payable at normal retirement age, a hypothetical account balance, or the current value of the accumulated percentage of the employee's final average pay. The law prohibits *wear-away* of benefits accrued before the conversion of a plan to a cash balance plan if the conversion occurred after June 29, 2005.[10] Earlier conversions may still be subject to legal challenge under the laws in effect at the time of the conversion. These provisions are effective beginning in 2008.

Under prior law, there were circumstances under which the employer that sponsored a cash balance plan was required to pay a departing employee an amount that exceeded the nominal value of the employee's cash balance account.[11] The PPA eliminates this requirement (called "whipsaw") by allowing lump-sum distributions from cash balance plans to be equal to the hypothetical account balances. This is effective for distributions made after the date of enactment. Beginning in 2008, cash balance plans and other hybrid plans would be required to fully vest participants in their accrued benefits after no more than three years of service. With respect to cash

---

[8] See CRS Report RL30196, *Pension Issues: Cash-Balance Plans*, by Patrick Purcell, and CRS Report RS22214, *Cash Balance Pension Plans: Selected Legal Issues and the Pension Protection Act of 2006*, by Erika Lunder and Jennifer Staman.

[9] To be "similarly situated" means that the employees are identical with respect to length of service, compensation, and other factors that would affect accrued pension benefits.

[10] A "wear-away" period or "benefit plateau" occurs if a plan participant accrues no new benefits for a period of time after the conversion to a cash balance plan. This can occur if the employer establishes the employee's initial benefit under the cash balance plan at an amount that is less than the value of the benefit he or she had accrued prior to the conversion. If the employee terminates service prior to the end of the wear-away period, he or she is entitled to the benefit amount accrued before the conversion if it exceeds the nominal value of the employee's cash balance account.

[11] This occurs when the interest rate credited to amounts in the cash balance plan is higher than the interest rate required for calculating lump-sum distributions under IRC §417(e).

balance plans and other hybrid plans, the PPA is prospective only and would not affect the legal status of hybrid plans established before the law was enacted.

Pension Benefit Guaranty Corporation. The Pension Benefit Guaranty Corporation (PBGC) was established by the Employee Retirement Income Security Act of 1974 (ERISA) to insure pension benefits under private-sector defined benefit pension plans. The PBGC receives no appropriations from Congress. It is funded by premiums paid by plan sponsors and investment returns on the assets held in its trust fund. The PBGC does not have the legal authority to set its own premiums, which are set in law by Congress. The PBGC receives two types of premiums from plans sponsored by individual employers: a per-capita premium that is charged to all single-employer defined benefit plans and a variable premium charged to underfunded plans equal to $9 per $1,000 of underfunding (0.9%). The Deficit Reduction Act of 2005 (P.L. 109-171) increased the per capita premium from $19 per year to $30 per year, beginning in 2007. Future premiums will be indexed to average national wage growth. The flat-rate premium for multiemployer plans is $8 per person and will be indexed to wage growth in future years.

Under prior law, an underfunded plan was exempted from the variable-rate premium of $9 per $1,000 of underfunding if it was not underfunded in any two consecutive years out of the previous three years. Under the PPA, the variable premium will be assessed on all underfunded plans, regardless of the plan's funding status in earlier years. For employers with 25 or fewer employees, the variable premium is capped at $5. The variable-rate premium must be computed using a three-segment yield curve beginning in 2008. The PPA makes permanent a surcharge premium for certain distress terminations, which was added by the Deficit Reduction Act of 2005 and was to expire in 2010. A surcharge of $1,250 per participant will be assessed for three years against any firm that terminates an underfunded pension plan during bankruptcy if it later emerges from bankruptcy. The PPA also authorizes the PBGC to pay interest on overpayment of premiums, effective upon enactment.

The PPA requires the director of the Pension Benefit Guaranty Corporation to be appointed by the President, subject to confirmation by the Senate Committee on Finance and Senate Committee on Health, Education, Labor and Pensions.

Limit on tax deductions for employer contributions. Beginning in 2008, the maximum deductible employer contribution to a defined benefit plan will be (1) the plan's target normal cost plus (2) 150% of the funding target plus (3) an allowance for future pay or benefit increases minus (4) the value of the plan's assets. In 2006 and 2007, the deduction limit will be to 150% of the plan's current liability minus the value of the plan's assets. Contributions in excess of this limit are subject to a 10% excise tax. The PPA also repeals the alternative maximum deductible contribution as determined using an interest rate of 90% to 105% of the four-year weighted average rate on 30-year Treasury bonds.

Combined limit under IRC §404(a)(7). Section 404(a)(7) of the Internal Revenue Code establishes limits on employer tax deductions for contributions made in connection with one or more defined contribution plans *and* one or more defined benefit plans. One effect of these limits is that large contributions to a defined benefit plan can result in the employer's contributions to the defined contribution

plan being nondeductible for that year. The PPA revises the law such that the combined contribution limit under §404(a)(7) will be determined without regard to defined benefit plans that are insured by the PBGC. In addition, only employer contributions to a defined contribution plan that exceed 6% of participant compensation will be subject to the limit. Employees' elective deferrals will continue to be disregarded from the deduction limits.

Multiemployer Plans

Multiemployer plans are collectively bargained plans maintained by several employers — usually within the same industry — and a labor union. Multiemployer defined benefit plans are subject to funding requirements that differ from those for single-employer plans. Most of the funding requirements for multiemployer plans that were in effect before enactment of the PPA remain in effect under the new law. The PPA establishes a new set of rules for improving the funding of multiemployer plans that the law defines as being in "endangered" or "critical" status. These new requirements will remain in effect through 2014.

The PPA establishes new requirements for multiemployer plans that are seriously underfunded. A plan's actuaries will have 90 days after the start of the plan year to certify the funding status of the plan for that year and to project its funding status for the following six years. If the plan is underfunded, it will have 30 days after the actuarial certification to notify participants and approximately eight months to develop a funding schedule to present to the parties of the plan's collective bargaining agreement. The schedule must be designed to meet the statutory funding requirements before the end of the funding improvement period. For multiemployer plans in "critical status," the law makes changes in the *anti-cutback rules* of ERISA to give plans the right to eliminate or reduce some benefit payment options and early retirement benefits for plan participants who have not yet retired. The law also establishes new disclosure requirements for multiemployer plans.

Funding requirements for multiemployer plans. The PPA requires plans to amortize over 15 years (rather than 30 years, as under prior law) any increases in plan liabilities that are due to benefit increases or to changes in the actuarial assumptions used by the plan. Amounts already being amortized under the old amortization schedule need not be recalculated.

The PPA increases the limit on tax-deductible employer contributions to multiemployer plans to 140% of the plan's current liability (up from 100%), and it eliminates the 25%-of-compensation combined limit on contributions to defined benefit and defined contribution plans. These provisions are effective beginning with the 2006 tax year. The law will allow the Internal Revenue Service (IRS) to permit multiemployer plans that project a funding deficiency within 10 years to extend the amortization schedule for paying off its liabilities by five years, with a further five-year extension permissible. It requires such plans to adopt a recovery plan and to use specific interest rates for plan funding calculations.

Requirements for underfunded multiemployer plans. The PPA establishes mandatory procedures, effective through 2014, to improve the funding of seriously underfunded multiemployer plans. Under the PPA, a plan is considered

to be *endangered* if it is less than 80% funded *or* if the plan is projected to have a funding deficiency within seven years. A plan that is less than 80% funded *and* is projected to have a funding deficiency within seven years is considered to be *seriously endangered*. An endangered plan has one year to implement a "funding improvement plan" designed to reduce the amount of under-funding. Endangered plans have 10 years to improve their funding. They must improve their funding percentage by one-third of the difference between 100% funding and the plan's funded percentage from the earlier of (1) two years after the adoption of the funding improvement plan or (2) the first plan year after the expiration of collective bargaining agreements that cover at least 75% of the plan's active participants.

Seriously endangered plans that are less than 70% funded will have 15 years to improve their funding. They must improve their funding percentage by one-fifth of the difference between 100% funding and the plan's funded percentage from the earlier of (1) two years after the adoption of the funding improvement plan or (2) the first plan year after the expiration of collective bargaining agreements that cover at least 75% of the plan's active participants. A plan that is endangered or seriously endangered may not increase benefits. If the parties to the collective bargaining agreement are not able to agree on a funding improvement plan, a default funding schedule will apply. This schedule would reduce future benefit accruals. Additional contribution requirements will apply only if they are needed to achieve the funding improvement required by the law. A plan is not endangered in any plan year in which the required funding percentages are met.

A multiemployer plan is considered to be in *critical status* if (1) it is less than 65% funded and has a projected funding deficiency within five years or will be unable to pay benefits within seven years; (2) it has a projected funding deficiency within four years or will be unable to pay benefits within five years (regardless of its funded percentage); or (3) its liabilities for inactive participants are greater than its liabilities for active participants, its contributions are less than carrying costs, and a funding deficiency is projected within five years. A plan in critical status has one year to develop a rehabilitation plan designed to reduce the amount of underfunding. The plan sponsors will not be required to make "lump-sum" contributions that normally are required to meet the minimum funding standard when a plan has an accumulated funding deficiency. Employers will not be subject to an excise tax if a funding deficiency occurs as long as the plan is meeting its obligations under the rehabilitation plan and under the collective bargaining agreements negotiated to improve plan funding.

Reductions in adjustable benefits. In general, ERISA prohibits reductions in accrued, vested benefits. These provisions of ERISA are commonly called "anti-cutback" rules. The PPA changes the ERISA anti-cutback rules so that plans in critical status are permitted to reduce or eliminate early retirement subsidies and other "adjustable benefits" to help improve their funding status *if* this is agreed to by the bargaining parties. Benefits payable at normal retirement age *cannot* be reduced, and plans are not permitted to cut any benefits of participants who retired before they were notified that the plan is in critical status. Adjustable benefits include certain optional forms of benefit payment, disability benefits, early retirement benefits, joint and survivor annuities (if the survivor benefit exceeds 50%), and

benefit increases adopted or effective less than five years before the plan entered critical status.

The plan must notify all affected parties within 30 days after a determination is made that the plan is in critical status. Beginning 30 days after this notification, a 5% employer surcharge will apply to keep plan funding from deteriorating while the rehabilitation plan is being developed. This surcharge increases to 10% in the second year and stays in effect until the rehabilitation plan has been approved. During this period, increases in benefits and reductions in contributions are prohibited. The surcharge is no longer required beginning on the effective date of a collective bargaining agreement that includes a rehabilitation plan.

A plan has 10 years to move out of critical status from the earlier of (1) two years after adoption of the rehabilitation plan or (2) the first plan year after the beginning of collective bargaining agreements covering 75% of active participants. If the parties to the collective bargaining agreements fail to agree on a funding improvement plan, a default schedule will apply that assumes no increases in contributions — unless necessary to exit critical status — after benefit accruals and adjustable benefits have been reduced to the extent permitted by law. A plan exits critical status if it no longer projects a funding deficiency within 10 years.

Disclosure requirements. The PPA requires annual funding notices to be sent out 120 days after the end of the plan year, rather than within 11½ months after the end of the plan year, as under prior law. The Department of Labor will post information from plans' annual reports on its website, and plans will be required to provide certain information to participants on request. For plans in endangered or critical status, the plan actuary must certify that the funding improvement is on schedule. Annual reports must contain information on funding improvement plans or rehabilitation plans. Notification must be provided to participants, beneficiaries, bargaining parties, the PBGC, and the Secretary of Labor within 30 days after the plan determines that it is in endangered or critical status.

Defined Contribution Plans

Economic Growth and Tax Relief Reconciliation Act of 2001. The PPA makes permanent the higher benefit limits in defined benefit plans, higher contribution limits for individual retirement accounts and defined contribution plans, and catch-up contributions for workers 50 and older that were included in the Economic Growth and Tax Relief Reconciliation Act of 2001 (P.L. 107-16). These provisions had been scheduled to expire on December 31, 2010.

Coverage and nondiscrimination. Federal law prohibits tax-qualified retirement plans from discriminating in favor of highly compensated employees (HCEs) with regard to coverage, amount of benefits, or availability of benefits. A "highly compensated employee" is defined in law as any employee who owns 5% or more of the company or whose compensation exceeds $100,000 (indexed to inflation). An employer can elect to count as HCEs only those employees who rank in the top 20% of compensation in the firm, but it must include all 5% owners.

To be tax-qualified, a §401(k) plan must satisfy one of two tests: either the proportion of non-highly compensated employees (NHCEs) covered by the plan must be at least 70% of the proportion of highly compensated employees (HCEs) covered by the plan, or the average contribution percentage for NHCEs must be at least 70% of the average contribution percentage for HCEs.[12] Contributions to a plan cannot discriminate in favor of HCEs. Plans that have after-tax contributions or matching contributions are subject to the "actual contribution percentage" (ACP) test, which measures the contribution rate to HCE accounts relative to the contribution rate to NHCE accounts. Some §403(b) plans are subject to nondiscrimination rules; §457 plans generally are not. The actual contribution percentage of HCEs in a §401(k) plan generally cannot exceed the limits shown in **Table 2**.

Table 2. Maximum Average 401(k) Contributions for Highly Compensated Employees

Non-highly compensated employees (NHCEs)	Highly compensated employees (HCEs)
Maximum average deferral and match	*Maximum average deferral and match*
2% of pay or less	NHCE percentage x 2
2% to 8% of pay	NHCE percentage + 2%
8% of pay or more	NHCE percentage x 1.25

Note: "Deferral and match" equals the sum of employer and employee contributions.

Any of three "safe-harbor" designs are deemed to satisfy the ACP test automatically for employer matching contributions (up to 6% of compensation):

- The employer matches 100% of employee elective deferrals up to 3% of compensation, and 50% of elective deferrals between 3% and 5% of compensation, and all employer matching contributions are fully vested.

- Employer-matching contributions can follow any other matching formula that results in total matching contributions that are no less than under the first design. All employer-matching contributions vest immediately.

- The employer automatically contributes an amount equal to at least 3% of pay for all eligible NHCEs. Employer contributions vest immediately.

All §401(k) plans must satisfy an "actual deferral percentage" (ADP) test, which measures employees' elective-deferral rates. The same numerical limits are used as

[12] For the purposes of the latter test, the average contribution percentage is defined as all employer contributions divided by total compensation. A third test — that at least 70% of NHCEs must be covered by the plan — will automatically satisfy the first test listed above.

under the ACP test. Three "safe-harbor" designs, similar to the safe-harbor designs for the ACP test, are deemed to satisfy the ADP test automatically. In addition, "cross-testing" allows defined contribution plans to satisfy the nondiscrimination tests based on projected account balances at retirement age, rather than current contribution rates. This permits bigger contributions for older workers. Because higher-paid employees receive proportionally smaller Social Security benefits relative to earnings than lower-paid workers, employers are permitted to make larger contributions on earnings in excess of the Social Security wage base ($94,200 in 2006). Regulations limit the size of the *permitted disparity* in favor of workers whose earnings are above the wage base.

Automatic enrollment "safe harbor". The PPA creates a "safe harbor" from nondiscrimination testing for plans that adopt automatic enrollment, provided the plans meet certain requirements. The requirements include notifying employees of the amount of pay to be deferred, the investments into which the deferrals will be deposited, and that the employee has the right to change the amount deferred or the investments into which the money is deferred or to opt out of the arrangement altogether.[13] A plan with automatic enrollment will be deemed to satisfy the nondiscrimination rules for elective deferrals and matching contributions if it provides a minimum matching contribution of 100% of elective deferrals up to 1% of compensation, plus 50% of elective deferrals between 1% and 6% percent of compensation.

The nondiscrimination safe harbor that existed prior to the PPA (described above) will continue to be available for all §401(k) plans, including those with automatic enrollment. To qualify for the automatic enrollment safe harbor, the contribution rate for automatic enrollees must be at least 3% during the first year of participation, 4% during the second year, 5% during the third year, and 6% thereafter. The plan may specify a higher contribution up to a maximum of 10%. The automatic enrollment arrangement will not have to apply to employees already participating in the plan. Employees must be fully vested in employer contributions after no more than two years, rather than the immediate vesting rule for other safe harbor §401(k) plans. The distribution restrictions under IRC §401(k)(2) also will apply to automatic contribution plans.

An employee who is automatically enrolled will have 90 days to opt out of the plan and withdraw any contributions made on his or her behalf, plus the earnings on those contributions. These amounts will be taxed in the year the employee receives them, but they will not be subject to the 10% extra tax that ordinarily would apply to distributions received before age 59½. This rule also will apply to §403(b) plans and §457(b) plans that adopt automatic enrollment.

Plans that opt for automatic enrollment must choose a set of default investments for participants who have not designated their specific investment choices. Under the PPA, an automatic enrollment plan will be granted protection from fiduciary

---

[13] Specifically, a plan with an automatic enrollment feature would be deemed to satisfy the average deferral percentage (ADP) and average contribution percentages (ACP) tests. Qualified automatic enrollment plans also would be deemed not to be "top heavy" plans.

liability under ERISA §404(c) for its default investments, provided that automatic contributions are invested in accordance with regulations to be issued by the Department of Labor and that the plan notifies employees of their right to change the investments or to opt out of the plan. The PPA clarifies that ERISA preempts any state law that would prohibit automatic enrollment, provided that the plan notifies affected employees annually of their rights in the plan.[14] The automatic enrollment provisions of the PPA are effective for plan years starting in 2008, except the ERISA preemption of state law, which is effective on the date of enactment.

Investment advice. The PPA permits certain fiduciaries of a retirement plan to receive compensation in exchange for providing investment advice to plan participants without violating the ban on "prohibited transactions" established by ERISA. Different rules for investment advice will apply for employer-sponsored plans and individual retirement accounts (IRAs). A fiduciary that is a registered investment company, bank, insurance company, or registered broker-dealer will be allowed to provide investment advice to participants without engaging in a prohibited transaction, provided that the advisor charges a flat fee or if its recommendations are based on a computer model that has been certified by an independent third party. An annual audit of the investment advice arrangement will be required. The advisors must disclose their fee arrangements to plan participants and inform them of their affiliations with investments they recommend and with the developer of the computer model. These provisions of the PPA will be effective after December 31, 2006.

With respect to individual retirement accounts, investment advice that is based on a computer model will be exempted from the prohibited transaction rules only if the model complies with guidelines to be developed by the Department of Labor. If the Secretary of Labor determines that no suitable computer models exist, he or she is directed to write regulations that will allow investment professionals to provide objective and unbiased investment advice to IRA owners.

Hedge funds. The PPA provides that investment funds and limited partnerships (including hedge funds) will not be treated as plan fiduciaries under ERISA if investments by ERISA-covered plans account for less than 25% of assets of the investment fund or limited partnership. Investments of governmental and foreign plans, which are not subject to ERISA, will not be taken into account in this calculation, as they were under prior law.[15]

Miscellaneous Provisions

"DB(k)"plans. Beginning in 2010, the PPA authorizes a new "eligible combined plan" for employers with fewer than 500 employees that would contain a 401(k) component and a defined benefit component. The defined benefit component must provide either a benefit equal to 1% of final average pay for each year of service

---

[14] This preemption applies only to ERISA plans. Since state and local plans are not subject to ERISA, they remain bound by any state laws prohibiting automatic payroll deductions.

[15] The PPA adds §3(42) to ERISA adopting a 25% threshold to determine if the underlying assets of an entity are plan assets subject to Title I of ERISA. Certain interests held by foreign or governmental plans are excluded when determining if the 25% threshold is met.

up to 20 years or a cash balance plan that increases its benefit with the participant's age. The 401(k) component must include automatic enrollment with a contribution of 4% of pay and a fully vested employer matching contribution equal to 50% of the first 4% of employee pay deferred. Nonelective employer contributions will be permitted but are not required. Benefits under the defined benefit component and nonelective employer contributions under the defined contribution component would have to be vested after no more than three years of service, and matching contributions would have to be 100% vested immediately. Coverage and nondiscrimination tests would have to be satisfied without regard to contributions or benefits under any other plan and without regard to the permitted disparity between highly compensated employees and non-highly compensated employees. The ACP and ADP tests would be deemed satisfied for these plans. Cash balance plans would also have to meet the vesting requirements for those types of plans under IRC §411(a)(13)(B) and the interest credit requirements under IRC §411(b)(5)(B)(I), as added to the tax code by the PPA.

Spousal protections. The PPA directs the Department of Labor to issue regulations to clarify that a court order does not fail to be a Qualified Domestic Relations Order (QDRO) merely because of the time it was issued, or because it modified a prior court order or QDRO. The PPA also requires plans to offer a 75% survivor annuity option if the plan's survivor annuity is less than 75%, and to offer a 50% survivor annuity option if the plan's survivor annuity is greater than 75%.

Rollovers of accrued benefits. Effective in 2008, plan distributions can be rolled over directly to a Roth IRA. Any taxable portion of the rollover amount will be taxed at the time of the rollover. Rollovers are subject to the Roth IRA conversion rules, which restrict conversions of traditional IRAs to Roth IRAs to taxpayers with adjusted gross income of no more than $100,000, whether single or married filing jointly. Effective in 2007, the PPA permits a non-spouse beneficiary of a qualified plan to roll over benefits to an IRA so that the IRA can satisfy the minimum distribution requirements applicable to inherited IRAs. The law also expands the portability of after-tax amounts by allowing rollovers between different types of employer-sponsored plans. The PPA also permits after-tax contributions to a qualified plan to be rolled over into another qualified plan or into a §403(b) plan.

The EGTRRA of 2001 accelerated the vesting schedule of employer matching contributions to defined contribution plans so that they must be fully vested in no more than three years under cliff vesting or no more than six years under graded vesting. The PPA applies these same vesting schedules to all employer contributions made in plan years after 2006 for employees who have at least one hour of service after the effective date.

Permissive service credits. Employees of state and local governments sometimes are permitted to purchase service credit in a public employee pension plan. By making a contribution to the pension plan, they are granted credit for a period of service under the plan, just as if they had contributed to the plan during that period. These contributions to fund the benefit attributable to the period of service are in addition to any regular employee contributions under the plan. The PPA expands the provisions of the Internal Revenue Code regarding permissive service credits under state and local governmental plans to include the purchase of additional

credits for years where service credit already has been given and for other periods, regardless of whether service was performed.

Reporting and disclosure. The PPA requires all single-employer defined benefit plans to distribute an annual funding notice to participants no later than 120 days after the end of the plan year. Small plans with 100 or fewer participants can distribute the notice when they file the annual Form 5500 with the IRS. Effective in 2008, the Department of Labor will be required to display information from the Form 5500 annual report in electronic form within 90 days after receiving it, and companies that maintain an intranet site for employees must display the Form 5500 information on that site. A simplified Form 5500 will be made available for plans with 25 or fewer participants.

Under prior law, employers were required to file an additional form (called a "4010 filing," after ERISA §4010) if the plan's aggregate unfunded vested benefits exceeded $50 million. Beginning in 2008, the PPA amends ERISA §4010(b)(1) to require this filing of financial and actuarial information for any PBGC-insured plan that has a funding percentage of less than 80%.

The PPA requires plan sponsors to provide participants in defined contribution plans with quarterly benefits statements if the investments are participant-directed and annual statements if the investments are not participant-directed. Participants in defined benefit plans must receive a benefit statement at least once every three years.

Distress and involuntary terminations. In the event that a defined benefit plan terminates while it is underfunded (a distress termination under ERISA §4041(c)) or is subject to an involuntary termination under ERISA §4042, the plan sponsor must provide to plan participants the same information that the plan is required to submit to the PBGC — subject to confidentiality limitations — within 15 days of the PBGC filing. This requirement applies to notices of intent to terminate and involuntary termination determinations.

Diversification requirements. The PPA requires defined contribution plans that hold publicly traded employer securities to allow participants to diversify account balances invested in those securities and to offer participants at least three alternative investments. All participants must be allowed to diversify out of employer stock purchased through their own elective deferrals and after-tax contributions. Participants with three or more years of service must be allowed to diversify the investment of employer contributions made on their behalf. This rule will be phased in over three years for securities acquired before 2007, except for participants who are age 55 or older and who have three years of service, for whom it applies immediately. These provisions do not apply to employee stock ownership plans (ESOPs) that have no elective deferrals, after-tax employee contributions, or matching contributions and that are not part of another qualified plan. The new diversification rules are effective for plan years beginning after 2006, or a later date for collectively bargained plans.

Indian tribal governments. The PPA provides that a plan is to be treated as a governmental plan if it is maintained by an Indian tribal government or a subdivision, agency, or instrumentality of a tribal government. To be treated as a

governmental plan, and thus not subject to ERISA, all of the participants must be employees whose services are substantially in the performance of essential governmental functions, but not in the performance of commercial activities, whether or not those activities are essential government functions.

Saver's credit. The Retirement Savings Tax Credit — also called the "saver's credit" — is a nonrefundable tax credit available to low- and middle-income taxpayers who contribute to a qualified retirement savings plan. The maximum credit is 50% of contributions up to $2,000, which would result in a tax credit of $1,000. The saver's credit was created by the EGTRRA of 2001 and was scheduled to expire after 2006. Section 812 of PPA bill makes the Retirement Savings Tax Credit permanent and section 833 of the law amends IRC §25B to index the eligible income levels to inflation in increments of $500.[16]

Phased retirement. The PPA provides that, beginning in 2007, a defined benefit plan may allow in-service distributions to a participant who has reached age 62, even if normal retirement age is later than age 62.

Hardship distributions. The PPA requires the Secretary of the Treasury to issue regulations permitting hardship withdrawals for a person who is the participant's beneficiary under the plan, even if that beneficiary is not the participant's spouse or dependent.

Distributions to qualified reservists. The PPA allows IRAs and §401(k) plans to make distributions to "qualified reservists" called up to active duty for 180 days or longer. The 10% tax on distributions before age 59½ would not apply to these distributions. During the two years immediately following the period of active duty, the reservist can redeposit into an IRA an amount equal to the qualified reservist distribution. This provision applies only if the reservist is called up to active duty after September 11, 2001, and before December 31, 2007.

Distributions to public safety employees. Effective on enactment of the new law, public safety employees are exempt from the 10% tax on distributions before age 59½ if the distribution is made after a separation from service that occurs at age 50 or later. In addition, after 2006, retired public safety employees can exclude from income up to $3,000 per year in distributions from governmental plans used to purchase health insurance or long-term care insurance.

Nondiscrimination testing for governmental plans. Effective upon enactment, all governmental plans, including federal, state, and local plans, are exempt from nondiscrimination testing. Under prior law, only state and local governmental plans were exempted.

Retiree health benefits. The PPA amends IRC §420 to expand the ability of defined benefit plan sponsors to transfer surplus plan assets to retiree health plans.

---

[16] For more information, see CRS Report RS21795, *The Retirement Savings Tax Credit: A Fact Sheet*, by Patrick Purcell.

Split tax refunds. The PPA provides that beginning in 2007, taxpayers can direct the IRS to deposit tax refunds directly into an IRA, subject to the annual maximum contribution.

Indexing of IRA limits. The PPA indexes to inflation the gross income levels for making deductible IRA contributions and for making contributions to a Roth IRA.

Tax-free IRA distributions for charitable contributions. In 2006 and 2007, IRA owners age 70½ and older can receive up to $100,000 tax-free from an IRA if it is contributed to a charitable organization.

Plan amendments. Plan amendments to implement the PPA are to be made by the end of the 2009 plan year. Governmental plans have an additional two years to make amendments.

Glossary

At-risk plan. Under the Pension Protection Act, a plan is considered to be at risk of default on its obligations if it fails to meet at least one of two tests. Under the first test, a plan is deemed to be at risk if it is less than 70% funded under the "worst case scenario" assumptions that (1) the sponsor is not permitted to use credit balances to reduce its cash contributions and (2) employees will retire at the earliest date they are eligible and will choose the form of benefit that is most expensive to the plan. If a plan does not pass this test, it will be deemed at risk of default unless it is at least 80% funded under standard actuarial assumptions.

Cash balance plan. A cash balance plan is an employer-sponsored retirement plan that has some characteristics of both defined benefit and defined contribution (DC) plans. The employer credits each employee with a specific percentage of pay each year and applies interest to these amounts at a rate of interest that the employer chooses. The benefit is therefore defined as an "account balance," as in a DC plan. A cash balance plan differs from a DC plan, however, in that the employer retains control of the funds held by the plan and chooses how to invest these funds. The account balance in a cash balance plan is merely an accounting of the employee's accrued benefit under the plan. It is not an individual account owned by the employee. Because the employee is required to receive a benefit that is no less than the amount of pay credits and interest credits that have been applied to his or her "account," cash balance plans are legally defined benefit plans and are insured by the Pension Benefit Guaranty Corporation.

Credit balance. A credit balance is a credit against a plan sponsor's required minimum contribution to a defined benefit plan in the current year as a result of having contributed more than the required minimum amount in a past year.

Critical status. Under the Pension Protection Act (PPA), a multiemployer plan is considered to be in critical status if (1) it is less than 65% funded and is projected to have a funding deficiency within five years or to be unable to pay benefits within seven years; (2) it is projected to have a funding deficiency within four years or to be unable to pay benefits within five years, regardless of its funding percentage; or (3)

it has liabilities for inactive participants that exceed its liabilities for active participants, its contributions are less than carrying costs, and a funding deficiency is projected within five years. Plans in critical status are subject to special requirements under the PPA to ensure that they improve their funding.

Defined benefit plan. A defined benefit (DB) plan is an employer-sponsored retirement plan in which employee benefits are based on factors such as length of service and average salary. Benefits in a DB plan are prefunded and pension assets are held in a trust fund under the control of the employer. By law, defined benefit plans must offer benefits in the form of an annuity, although they also may offer optional forms of payment, such as a lump-sum distribution. In a DB plan, the employer bears the investment risk. If the pension trust is not adequately funded to pay the benefits promised, the employer may be required to contribute more money to the plan. Defined benefit plans are insured by the Pension Benefit Guaranty Corporation.

Defined contribution plan. A defined contribution (DC) plan is an employer-sponsored retirement plan in which the employer contributes a specific dollar amount or percentage of pay into a retirement account for the employee. In some DC plans, such as §401(k) plans, the employee also defers some of his or her salary into the account. In participant-directed plans, the employee controls how the money in the retirement account is invested. In a DC plan, the employee bears the investment risk. The benefit under the plan is whatever amount is held in the retirement account, which depends on the amounts contributed and investment gains and losses. Defined contribution plans are *not* insured by the Pension Benefit Guaranty Corporation.

Distress termination. The sponsor of a defined benefit plan that does not have enough money to pay the full benefits it owes to participants and beneficiaries may terminate the plan if the sponsor is financially distressed and is unable to fund the plan. The PBGC will then take over the plan as trustee and use its own assets and any remaining assets in the plan to pay pension benefits to current and future retirees within the legal limits. The PBGC also will try to collect additional funds from the employer and will share a portion of its recoveries with participants and beneficiaries. The PBGC has legal authority to perfect liens on property of sponsors that are not in bankruptcy, but it does not have preferred standing among creditors of plan sponsors that have entered bankruptcy proceedings.

Endangered status. Under the Pension Protection Act, a multiemployer plan is considered to be endangered if it is less than 80% funded *or* if the plan is projected to have a funding deficiency within seven years. A plan that is less than 80% funded *and* is projected to have a funding deficiency within seven years is considered to be seriously endangered. Endangered and seriously endangered plans are subject to special requirements under the PPA to ensure that they improve their funding.

Funding target. Under the Pension Protection Act, a plan's funding target is equal to the present value of all benefits already accrued by plan participants as of the beginning of the plan year. A fully funded plan is one in which the plan's assets are at least equal to the funding target plus the plan's target normal cost for the current year.

Involuntary termination. An involuntary termination is a termination of an underfunded pension plan that is initiated by the PBGC to protect the interests of plan participants.

Multiemployer plan. A multiemployer plan is a collectively bargained plan maintained by more than one employer, usually within the same or related industries, and a labor union. These plans also are sometimes referred to as "Taft-Hartley plans," after the Taft-Hartley Act of 1947 (P.L. 80-101).

Nonqualified retirement plan. Nonqualified plans are designed to provide benefits to company owners, executives, and highly compensated employees. Unlike qualified plans, nonqualified plans are not required to cover rank-and-file employees, and neither the amount that can be contributed to the plan nor the amount of benefits that they can pay are limited by law. Because nonqualified plans are not required to meet the standards set in law for qualified plans, they do not receive the preferential tax treatment that is accorded to qualified plans. Moreover, any assets that are set aside to prefund benefits under a nonqualified plan are subject to the claims of the plan sponsor's creditors in the event that the plan sponsor enters bankruptcy.

Pension Benefit Guaranty Corporation (PBGC). The PBGC is a government-sponsored corporation created by the Employee Retirement Income Security Act (ERISA) of 1974 to insure the benefits promised to workers in private-sector defined benefit pension plans. The PBGC receives no appropriations from Congress. It is funded by mandatory insurance premiums paid by private-sector employers that sponsor defined benefit pensions and by investment earnings on the assets it holds in its trust fund. The PBGC has no authority to establish the amount of its premiums, which are set in law by Congress. The maximum benefit guaranteed by the PBGC also is established by law and is indexed annually to national average wage growth.

Qualified retirement plan. A plan that meets requirements specified in the Internal Revenue Code with respect to eligibility, participation, and benefits is qualified to receive preferential tax treatment. Specifically, in a qualified plan (1) the employer can deduct from income the amount that it contributes to the plan as a business expense, (2) the amount that the employer contributes to the plan on behalf of plan participants is not treated as income to the participants, and (3) the investment earnings of a qualified pension trust are not taxed as income to either the employer or the plan participants. A qualified retirement plan may be either a defined benefit plan or a defined contribution plan. Assets held in trust by a qualified retirement plan are protected from creditors' claims if the plan sponsor enters bankruptcy.

Smoothing. Plan sponsors attempt to reduce year-to-year fluctuations in the value of plan assets and plan liabilities by averaging ("smoothing") asset values and the interest rate used to calculate plan liabilities over longer periods. Under the Pension Protection Act (PPA), asset values may be averaged over a 24-month period, but the resulting value may be no less than 90% and no more than 110% of the assets' current market value. Under the PPA, the interest rates used to calculate the present value of plan liabilities will be derived from a two-year weighted average of interest rates on investment-grade corporate bonds.

Standard termination. ERISA allows the sponsor of a fully funded defined benefit pension plan to terminate the plan if the sponsor wishes to do so. A termination of a fully funded plan is called a standard termination. As of the date of the termination, benefit accruals cease and all participants are fully vested in their accrued benefits. The sponsor purchases annuities from an insurer to pay benefits under the plan and the PBGC's insurance coverage of the plan ends.

Target normal cost. Under the Pension Protection Act, a defined benefit plan's target normal cost for a year is the present value of benefits expected to be accrued in the current year, including benefits that are attributable to increases in compensation.

Yield curve. A yield curve is a graph showing the relationship between the interest rate of a bond and the time to maturity, when the lender must be repaid. Long-term interest rates usually are higher than short-term interest rates because the lender is taking on the risks of default by the borrower and devaluation of currency through the effects of inflation for a longer period. Therefore, if interest rates are plotted on the vertical axis and time to maturity is plotted on the horizontal axis, the yield curve typically slopes upward, moving from left to right.

TECHNICAL EXPLANATION OF H.R. 4, THE "PENSION PROTECTION ACT OF 2006," AS PASSED BY THE HOUSE ON JULY 28, 2006, AND AS CONSIDERED BY THE SENATE ON AUGUST 3, 2006

Prepared by the Staff
of the
JOINT COMMITTEE ON TAXATION

August 3, 2006

INTRODUCTION 1

TITLE I: REFORM OF FUNDING RULES FOR SINGLE-EMPLOYER DEFINED BENEFIT PENSION PLANS 2

A. Minimum Funding Standards for Single-Employer Defined Benefit Pension Plans (secs. 302-308 of ERISA, and sec. 412 and new sec. 430 of the Code) 2

B. Benefit Limitations Under Single-Employer Defined Benefit Pension Plans (new secs. 101(j) and 206(g) and (h) of ERISA, and new secs. 436-437 of the Code) 24

C. Special Rules for Multiple-Employer Plans of Certain Cooperatives 32

D. Temporary Relief for Certain PBGC Settlement Plans 34

E. Special Rules for Plans of Certain Government Contractors 35

F. Modification of Transition Rule to Pension Funding Requirements for Interstate Bus Company (769(c) of the Retirement Protection Act, as added by sec. 1508 of the Taxpayer Relief Act of 1997) 37

G. Restrictions on Funding of Nonqualified Deferred Compensation Plans by Employers Maintaining Underfunded or Terminated Single-Employer Plans (sec. 409A of the Code) 39

TITLE II: FUNDING RULES FOR MULTIEMPLOYER DEFINED BENEFIT PLANS 42

A. Funding Rules for Multiemployer Defined Benefit Plans (new sec. 304 of ERISA and new sec. 431 of the Code) 42

B. Additional Funding Rules for Multiemployer Plans in Endangered or Critical Status (new sec. 305 of ERISA and new sec. 432 of the Code) 48

C. Measures to Forestall Insolvency of Multiemployer Plans (sec. 4245 of ERISA and sec. 418E of the Code) 63

D. Withdrawal Liability Reforms (secs. 4203, 4205, 4210, 4219, 4221 and 4225 of ERISA) 64

1. Repeal of limitation on withdrawal liability in certain cases 64
2. Withdrawal liability continues if work contracted out 65
3. Application of forgiveness rule to plans primarily covering employees in building and construction 66
4. Procedures applicable to disputes involving withdrawal liability 67

E. Prohibition on Retaliation against Employers Exercising their Rights to Petition the Federal Government (sec. 510 of ERISA) 69

F. Special Rule for Certain Benefits Funded under an Agreement Approved by the PBGC 70

G. Exception from Excise Tax for Certain Multiemployer Pension Plans (sec. 4971 of the Code) 71

H. Sunset of Multiemployer Plan Funding Provisions 72

TITLE III: INTEREST RATE ASSUMPTIONS 73

A. Extension of Replacement of 30-Year Treasury Rates (secs. 302 and 4006 of ERISA, and sec. 412 of the Code) 73

B. Interest Rate Assumption for Determination of Lump-Sum Distributions (sec. 205(g) of ERISA and sec. 417(e) of the Code) 74

C. Interest Rate Assumption for Applying Benefit Limitations to Lump-Sum Distributions (sec. 415(b) of the Code) 76

TITLE IV: PBGC GUARANTEE AND RELATED PROVISIONS 78

A. PBGC Premiums (sec. 4006 of ERISA) 78

B. Special Funding Rules for Plans Maintained by Commercial Airlines 82

C. Limitations on PBGC Guarantee of Shutdown and Other Benefits (sec. 4022 of ERISA) 90

D. Rules Relating to Bankruptcy of the Employer (secs. 4022 and 4044 of ERISA) 92

E. PBGC Premiums for Small Plans (sec. 4006 of ERISA) 95

F. Authorization for PBGC to Pay Interest on Premium Overpayment Refunds (sec. 4007(b) of ERISA) 96

G. Rules for Substantial Owner Benefits in Terminated Plans (secs. 4021, 4022, 4043, and 4044 of ERISA) 97

H. Acceleration of PBGC Computation of Benefits Attributable to Recoveries from Employers (secs. 4022(c) and 4062(c) of ERISA) 98

I. Treatment of Certain Plans Where There is a Cessation or Change in Membership of a Controlled Group (sec. 4041(b) of ERISA) 100

J. Missing Participants (sec. 4050 of ERISA) 102

K. Director of the PBGC (secs. 4002 and 4003 of ERISA)..... 103

L. Inclusion of Information in the PBGC Annual Report (sec. 4008 of ERISA) 105

TITLE V: DISCLOSURE..... 106

A. Defined Benefit Plan Funding Notice (secs. 101(f) and 4011 of ERISA)..... 106

B. Access to Multiemployer Pension Plan Information (secs. 101, 204(h), and 502(c) of ERISA and sec. 4980F of the Code)..... 109

C. Additional Annual Reporting Requirements and Electronic Display of Annual Report Information (secs. 103 and 104 of ERISA)..... 111

D. Section 4010 Filings with the PBGC (sec. 4010 of ERISA) 115

E. Disclosure of Plan Termination Information to Plan Participants (secs. 4041 and 4042 of ERISA)..... 117

F. Notice of Freedom to Divest Employer Securities (new sec. 101(m) of ERISA) 119

G. Periodic Pension Benefit Statements (secs. 105(a) and 502(c)(1) of ERISA)..... 121

H. Notice to Participants or Beneficiaries of Blackout Periods (sec. 101(i) of ERISA) . 124

TITLE VI: INVESTMENT ADVICE, PROHIBITED TRANSACTIONS, AND FIDUCIARY RULES 127

A. Investment Advice (sec. 408 of ERISA and sec. 4975 of the Code)..... 127

B. Prohibited Transaction Rules Relating to Financial Investments (secs. 408, 412(a), and 502(i) and new sec. 3(42) of ERISA, and sec. 4975 of the Code)..... 133

1. Exemption for block trading 133
2. Bonding relief 134
3. Exemption for electronic communication network..... 134
4. Exemption for service providers..... 135
5. Relief for foreign exchange transactions 136
6. Definition of plan asset vehicle..... 137
7. Exemption for cross trading..... 138

C. Correction Period for Certain Transactions Involving Securities and Commodities (sec. 408 of ERISA, and sec. 4975 of the Code)..... 140

D. Inapplicability of Relief from Fiduciary Liability During Suspension of Ability of Participant or Beneficiary to Direct Investments (sec. 404(c) of ERISA) 142

E. Increase in Maximum Bond Amount (sec. 412(a) of ERISA)..... 146

F. Increase in Penalties for Coercive Interference with Exercise of ERISA Rights (sec. 511 of ERISA) 147

G. Treatment of Investment of Assets By Plan Where Participant Fails to Exercise Investment Election (sec. 404(c) of ERISA) 148

H. Clarification of Fiduciary Rules 149

TITLE VII: BENEFIT ACCRUAL STANDARDS (secs. 203, 204, and 205 of ERISA, secs. 411 and 417 of the Code, and sec. 4(i)(2) of ADEA) 150

TITLE VIII: PENSION RELATED REVENUE PROVISIONS 159

A. Deduction Limitations 159

1. Increase in deduction limits applicable to single-employer and multiemployer defined benefit pension plans (sec. 404 of the Code) 159
2. Updating deduction rules for combination of plans (secs. 404(a)(7) and 4972 of the Code) 162

B. Certain Pension Provisions Made Permanent 164

1. Permanency of EGTRRA pension and IRA provisions (Title X of EGTRRA) 164
2. Saver's credit made permanent (sec. 25B of the Code) 167

C. Improvements in Portability, Distribution, and Contribution Rules 169

1. Purchase of permissive service credit (secs. 403(b)(13), 415(n)(3), and 457(e)(17) of the Code) 169
2. Rollover of after-tax amounts in annuity contracts (sec. 402(c)(2) of the Code) 171
3. Application of minimum distribution rules to governmental plans 172
4. Allow direct rollovers from retirement plans to Roth IRAs (sec. 408A(e) of the Code) 173
5. Eligibility for participation in eligible deferred compensation plans (sec. 457 of the Code) 175
6. Modifications of rules governing hardships and unforeseen financial emergencies 175
7. Treatment of distributions to individuals called to active duty for at least 179 days (sec. 72(t) of the Code) 176
8. Inapplicability of 10-percent additional tax on early distributions of pension plans of public safety employees (sec. 72(t) of the Code) 177
9. Rollovers by nonspouse beneficiaries (sec. 402 of the Code) 178
10. Direct deposit of tax refunds in an IRA 179
11. Additional IRA contributions for certain employees (secs. 25B and 219 of the Code) 180
12. Special rule for computing high-three average compensation for benefit limitation purposes (sec. 415(b)(3) of the Code) 181

13. Inflation indexing of gross income limitations on certain retirement savings incentives (secs. 25A and 219 of the Code) 182

D. Health and Medical Benefits 185

1. Ability to use excess pension assets for future retiree health benefits and collectively bargained retiree health benefits (sec. 420 of the Code) 185
2. Transfer of excess pension assets to multiemployer health plans (sec. 420 of the Code) 189
3. Allowance of reserve for medical benefits of plans sponsored by bona fide associations (sec. 419A of the Code) 191
4. Tax treatment of combined annuity or life insurance contracts with a long-term care insurance feature (secs. 72. 1035, and 7702B and new sec. 6050U of the Code) 192
5. Permit tax-free distributions from governmental retirement plans for premiums for health and long-term care insurance for public safety officers (sec. 402 of the Code) 197

E. United States Tax Court Modernization 199

1. Judges of the Tax Court (secs. 7447, 7448, and 7472 of the Code) 199
2. Special trial judges of the Tax Court (sec. 7448 and new sec. 7443C of the Code) 200
3. Consolidate review of collection due process cases in the Tax Court (sec. 6330(d) of the Code) 201
4. Extend authority for special trial judges to hear and decide certain employment status cases (sec. 7443A of the Code) 202
5. Confirmation of Tax Court authority to apply equitable recoupment (sec. 6214(b) of the Code) 203
6. Tax Court filing fee (sec. 7451 of the Code) 204
7. Use of practitioner fee (sec. 7475(b) of the Code) 204

F. Other Provisions 206

1. Extension to all governmental plans of moratorium on application of certain nondiscrimination rules (sec. 1505 of the Taxpayer Relief Act of 1997, and secs. 401(a) and 401(k) of the Code) 206
2. Eliminate aggregate limit for usage of excess funds from black lung disability trusts to pay for retiree health (secs. 501(c)(21) and 9705 of the Code) 206
3. Tax treatment of company-owned life insurance ("COLI") (new secs. 101(j) and 6039I of the Code) 208
4. Treatment of test room supervisors and proctors who assist in the administration of college entrance and placement exams (sec. 530 of the Revenue Reconciliation Act of 1978) 213
5. Rule for church plans which self-annuitize (sec. 401(a)(9) of the Code) 214
6. Exemption for income from leveraged real estate held by church plans (sec. 514(c)(9) of the Code) 214

7. Church plan rule for benefit limitations (sec. 415 of the Code) 215
8. Gratuitous transfers for the benefit of employees (sec. 664 of the Code) 215

TITLE IX: INCREASE IN PENSION PLAN DIVERSIFICATION AND PARTICIPATION 217

A. Defined Contribution Plans Required to Provide Employees with Freedom to Invest Their Plan Assets (new sec. 401(a)(35) of the Code and new sec. 204(j) of ERISA) 217

B. Increasing Participation Through Automatic Enrollment Arrangements (secs. 404(c) and 514 of ERISA and secs. 401(k), 401(m), 414 and 4979 of the Code) 224

C. Treatment of Eligible Combined Defined Benefit Plans and Qualified Cash or Deferred Arrangements (new sec. 414(x) of the Code and new sec. 210(e) of ERISA) 231

D. Faster Vesting of Employer Nonelective Contributions (sec. 203 of ERISA, and sec. 411 of the Code) 240

E. Distributions During Working Retirement (sec. 3(2) of ERISA and new sec. 401(a)(35) of the Code) 242

F. Treatment of Plans Maintained by Indian Tribes (sec. 414(d) of the Code and sec. 3(32) of ERISA) 244

TITLE X: SPOUSAL PENSION PROTECTION 245

A. Regulations on Time and Order of Issuance of Domestic Relations Orders 245

B. Benefits Under the Railroad Retirement System for Former Spouses (secs. 2 and 5 of the Railroad Retirement Act of 1974) 247

C. Requirement for Additional Survivor Annuity Option (sec. 417 of the Code and sec. 205 of ERISA) 248

TITLE XI: ADMINISTRATIVE PROVISIONS 250

A. Updating of Employee Plans Compliance Resolution System 250

B. Notice and Consent Period Regarding Distributions (sec. 417(a) of the Code, and sec. 205(c) of ERISA) 252

C. Pension Plan Reporting Simplification 254

D. Voluntary Early Retirement Incentive and Employment Retention Plans Maintained by Local Educational Agencies and Other Entities (secs. 457(e)(11) and 457(f) of the Code, sec. 3(2)(B) of ERISA, and sec. 4(l)(1) of the ADEA) 256

E. No Reduction in Unemployment Compensation as a Result of Pension Rollovers (sec. 3304(a)(15) of the Code) 259

F. Revocation of Election Relating to Treatment as Multiemployer Plan (sec. 3(37) of ERISA and sec. 414(f) of the Code) 260

G. Provisions Relating to Plan Amendments 262

TITLE XII: PROVISIONS RELATING TO EXEMPT ORGANIZATIONS 263

A. Charitable Giving Incentives 263

1. Tax-free distributions from individual retirement plans for charitable purposes (secs. 408, 6034, 6104, and 6652 of the Code) 263
2. Charitable deduction for contributions of food inventory (sec. 170 of the Code) 269
3. Basis adjustment to stock of s corporation contributing property (sec. 1367 of the Code) 271
4. Charitable deduction for contributions of book inventory (sec. 170 of the Code) 272
5. Modify tax treatment of certain payments to controlling exempt organizations (secs. 512 and 6033 of the Code) 273
6. Encourage contributions of real property made for conservation purposes (sec. 170 of the Code) 274
7. Excise tax exemptions for blood collector organizations (secs. 4041, 4221, 4253, 4483, 6416, and 7701 of the Code) 277

B. Reforming Exempt Organizations 283

1. Reporting on certain acquisitions of interests in insurance contracts in which certain exempt organizations hold interests (new sec. 6050V of the Code) 283
2. Increase the amounts of excise taxes imposed relating to public charities, social welfare organizations, and private foundations (secs. 4941, 4942, 4943, 4944, 4945, and 4958 of the Code) 286
3. Reform rules for charitable contributions of easements in registered historic districts and take account of rehabilitation credit in easement donations (sec. 170 of the Code) 291
4. Reform rules relating to charitable contributions of taxidermy (sec. 170 of the Code) 296
5. Recapture of tax benefit on property not used for an exempt use (secs. 170, 6050L, and new sec. 6720B of the Code) 298
6. Limit charitable deduction for contributions of clothing and household items (sec. 170 of the Code) 302
7. Modify recordkeeping and substantiation requirements for certain charitable contributions (sec. 170 of the Code) 305
8. Contributions of fractional interests in tangible personal property (secs. 170, 2055, and 2522 of the Code) 306

9. Proposals relating to appraisers and substantial and gross overstatement of valuations of property (secs. 170, 6662, 6664, 6696 and new sec. 6695A of the Code) 308
10. Establish additional exemption standards for credit counseling organizations (secs. 501 and 513 of the Code) 312
11. Expand the base of the tax on private foundation net investment income (and sec. 4940 of the Code) 320
12. Definition of convention or association of churches (sec. 7701 of the Code) 324
13. Notification requirement for exempt entities not currently required to file an annual information return (secs. 6033, 6652, and 7428 of the Code) 325
14. Disclosure to State officials relating to section 501(c) organizations (secs. 6103, 6104, 7213, 7213A, and 7431 of the Code) 327
15. Require that unrelated business income tax returns of section 501(c)(3) organizations be made publicly available (sec. 6104 of the Code) 329
16. Treasury study on donor advised funds and supporting organizations 330
17. Improve accountability of donor advised funds (secs. 170, 508, 2055, 2522, 4958, 6033 and new secs. 4966 and 4967 of the Code) 334
18. Improve accountability of supporting organizations (secs. 509, 4942, 4943, 4945, 4958, and 6033 of the Code) 351

TITLE XIII: OTHER PROVISIONS 364

A. Technical Corrections to Mine Safety Act 364

H. CAFTA-DR Provisions Related to Agreement Implementation 376

INTRODUCTION

This document,[1] prepared by the staff of the Joint Committee on Taxation, provides a technical explanation of the "Pension Protection Act of 2006," as passed by the House of Representatives on July 28, 2006, and as considered by the Senate on August 3, 2006.

[1] This document may be cited as follows: Joint Committee on Taxation, *Technical Explanation of H.R. 4, the "Pension Protection Act of 2006," as Passed by the House on July 28, 2006, and as Considered by the Senate on August 3, 2006* (JCX-38-06), August 3, 2006.

TITLE I: REFORM OF FUNDING RULES FOR SINGLE-EMPLOYER DEFINED BENEFIT PENSION PLANS[2]

A. Minimum Funding Standards for Single-Employer Defined Benefit Pension Plans (secs. 302-308 of ERISA, and sec. 412 and new sec. 430 of the Code)

Present Law

In general

Single-employer defined benefit pension plans are subject to minimum funding requirements under the Employee Retirement Income Security Act of 1974 ("ERISA") and the Internal Revenue Code (the "Code").[3] The amount of contributions required for a plan year under the minimum funding rules is generally the amount needed to fund benefits earned during that year plus that year's portion of other liabilities that are amortized over a period of years, such as benefits resulting from a grant of past service credit. The amount of required annual contributions is determined under one of a number of acceptable actuarial cost methods. Additional contributions are required under the deficit reduction contribution rules in the case of certain underfunded plans. No contribution is required under the minimum funding rules in excess of the full funding limit (described below).

General minimum funding rules

Funding standard account

As an administrative aid in the application of the funding requirements, a defined benefit pension plan is required to maintain a special account called a "funding standard account" to which specified charges and credits are made for each plan year, including a charge for normal cost and credits for contributions to the plan. Other charges or credits may apply as a result of decreases or increases in past service liability as a result of plan amendments, experience gains or losses, gains or losses resulting from a change in actuarial assumptions, or a waiver of minimum required contributions.

In determining plan funding under an actuarial cost method, a plan's actuary generally makes certain assumptions regarding the future experience of a plan. These assumptions

---

[2] Some provisions that are identical or similar to the pension provisions in the bill were contained in other bills reported by the House Committees on Ways and Means and Education and the Workforce and the Senate Committees on Finance and Health, Education, Labor and Pensions, or passed by the House or the Senate during the 109th Congress. These bills include H.R. 2830, S. 1953, and S. 1783.

[3] Multiemployer defined benefit pension plans are also subject to the minimum funding requirements, but the rules for multiemployer plans differ in various respects from the rules applicable to single-employer plans. Governmental plans and church plans are generally exempt from the minimum funding requirements.

typically involve rates of interest, mortality, disability, salary increases, and other factors affecting the value of assets and liabilities. If the plan's actual unfunded liabilities are less than those anticipated by the actuary on the basis of these assumptions, then the excess is an experience gain. If the actual unfunded liabilities are greater than those anticipated, then the difference is an experience loss. Experience gains and losses for a year are generally amortized as credits or charges to the funding standard account over five years.

If the actuarial assumptions used for funding a plan are revised and, under the new assumptions, the accrued liability of a plan is less than the accrued liability computed under the previous assumptions, the decrease is a gain from changes in actuarial assumptions. If the new assumptions result in an increase in the plan's accrued liability, the plan has a loss from changes in actuarial assumptions. The accrued liability of a plan is the actuarial present value of projected pension benefits under the plan that will not be funded by future contributions to meet normal cost or future employee contributions. The gain or loss for a year from changes in actuarial assumptions is amortized as credits or charges to the funding standard account over ten years.

If minimum required contributions are waived (as discussed below), the waived amount (referred to as a "waived funding deficiency") is credited to the funding standard account. The waived funding deficiency is then amortized over a period of five years, beginning with the year following the year in which the waiver is granted. Each year, the funding standard account is charged with the amortization amount for that year unless the plan becomes fully funded.

If, as of the close of a plan year, the funding standard account reflects credits at least equal to charges, the plan is generally treated as meeting the minimum funding standard for the year. If, as of the close of the plan year, charges to the funding standard account exceed credits to the account, then the excess is referred to as an "accumulated funding deficiency." Thus, as a general rule, the minimum contribution for a plan year is determined as the amount by which the charges to the funding standard account would exceed credits to the account if no contribution were made to the plan. For example, if the balance of charges to the funding standard account of a plan for a year would be $200,000 without any contributions, then a minimum contribution equal to that amount would be required to meet the minimum funding standard for the year to prevent an accumulated funding deficiency.

Credit balances

If credits to the funding standard account exceed charges, a "credit balance" results. A credit balance results, for example, if contributions in excess of minimum required contributions are made. Similarly, a credit balance may result from large net experience gains. The amount of the credit balance, increased with interest at the rate used under the plan to determine costs, is applied against charges to the funding standard account, thus reducing required contributions.

Funding methods and general concepts

A defined benefit pension plan is required to use an acceptable actuarial cost method to determine the elements included in its funding standard account for a year. Generally, an actuarial cost method breaks up the cost of benefits under the plan into annual charges consisting

of two elements for each plan year. These elements are referred to as: (1) normal cost; and (2) supplemental cost.

The plan's normal cost for a plan year generally represents the cost of future benefits allocated to the year by the funding method used by the plan for current employees and, under some funding methods, for separated employees. Specifically, it is the amount actuarially determined that would be required as a contribution by the employer for the plan year in order to maintain the plan if the plan had been in effect from the beginning of service of the included employees and if the costs for prior years had been paid, and all assumptions as to interest, mortality, time of payment, etc., had been fulfilled. The normal cost will be funded by future contributions to the plan: (1) in level dollar amounts; (2) as a uniform percentage of payroll; (3) as a uniform amount per unit of service (e.g., $1 per hour); or (4) on the basis of the actuarial present values of benefits considered accruing in particular plan years.

The supplemental cost for a plan year is the cost of future benefits that would not be met by future normal costs, future employee contributions, or plan assets. The most common supplemental cost is that attributable to past service liability, which represents the cost of future benefits under the plan: (1) on the date the plan is first effective; or (2) on the date a plan amendment increasing plan benefits is first effective. Other supplemental costs may be attributable to net experience losses, changes in actuarial assumptions, and amounts necessary to make up funding deficiencies for which a waiver was obtained. Supplemental costs must be amortized (i.e., recognized for funding purposes) over a specified number of years, depending on the source. For example, the cost attributable to a past service liability is generally amortized over 30 years.

Normal costs and supplemental costs under a plan are computed on the basis of an actuarial valuation of the assets and liabilities of a plan. An actuarial valuation is generally required annually and is made as of a date within the plan year or within one month before the beginning of the plan year. However, a valuation date within the preceding plan year may be used if, as of that date, the value of the plan's assets is at least 100 percent of the plan's current liability (i.e., the present value of benefits under the plan, as described below).

For funding purposes, the actuarial value of plan assets may be used, rather than fair market value. The actuarial value of plan assets is the value determined on the basis of a reasonable actuarial valuation method that takes into account fair market value and is permitted under Treasury regulations. Any actuarial valuation method used must result in a value of plan assets that is not less than 80 percent of the fair market value of the assets and not more than 120 percent of the fair market value. In addition, if the valuation method uses average value of the plan assets, values may be used for a stated period not to exceed the five most recent plan years, including the current year.

In applying the funding rules, all costs, liabilities, interest rates, and other factors are required to be determined on the basis of actuarial assumptions and methods, each of which is reasonable (taking into account the experience of the plan and reasonable expectations), or which, in the aggregate, result in a total plan contribution equivalent to a contribution that would

be determined if each assumption and method were reasonable. In addition, the assumptions are required to offer the actuary's best estimate of anticipated experience under the plan.[4]

Additional contributions for underfunded plans

In general

Under special funding rules (referred to as the "deficit reduction contribution" rules),[5] an additional charge to a plan's funding standard account is generally required for a plan year if the plan's funded current liability percentage for the plan year is less than 90 percent.[6] A plan's "funded current liability percentage" is generally the actuarial value of plan assets as a percentage of the plan's current liability.[7] In general, a plan's current liability means all liabilities to employees and their beneficiaries under the plan, determined on a present-value basis.

The amount of the additional charge required under the deficit reduction contribution rules is the sum of two amounts: (1) the excess, if any, of (a) the deficit reduction contribution (as described below), over (b) the contribution required under the normal funding rules; and (2) the amount (if any) required with respect to unpredictable contingent event benefits. The amount of the additional charge cannot exceed the amount needed to increase the plan's funded current liability percentage to 100 percent (taking into account the expected increase in current liability due to benefits accruing during the plan year).

The deficit reduction contribution is generally the sum of (1) the "unfunded old liability amount," (2) the "unfunded new liability amount," and (3) the expected increase in current

[4] Under present law, certain changes in actuarial assumptions that decrease the liabilities of an underfunded single-employer plan must be approved by the Secretary of the Treasury.

[5] The deficit reduction contribution rules apply to single-employer plans, other than single-employer plans with no more than 100 participants on any day in the preceding plan year. Single-employer plans with more than 100 but not more than 150 participants are generally subject to lower contribution requirements under these rules.

[6] Under an alternative test, a plan is not subject to the deficit reduction contribution rules for a plan year if (1) the plan's funded current liability percentage for the plan year is at least 80 percent, and (2) the plan's funded current liability percentage was at least 90 percent for each of the two immediately preceding plan years or each of the second and third immediately preceding plan years.

[7] In determining a plan's funded current liability percentage for a plan year, the value of the plan's assets is generally reduced by the amount of any credit balance under the plan's funding standard account. However, this reduction does not apply in determining the plan's funded current liability percentage for purposes of whether an additional charge is required under the deficit reduction contribution rules.

liability due to benefits accruing during the plan year.[8] The "unfunded old liability amount" is the amount needed to amortize certain unfunded liabilities under 1987 and 1994 transition rules. The "unfunded new liability amount" is the applicable percentage of the plan's unfunded new liability. Unfunded new liability generally means the unfunded current liability of the plan (i.e., the amount by which the plan's current liability exceeds the actuarial value of plan assets), but determined without regard to certain liabilities (such as the plan's unfunded old liability and unpredictable contingent event benefits). The applicable percentage is generally 30 percent, but decreases by .40 of one percentage point for each percentage point by which the plan's funded current liability percentage exceeds 60 percent. For example, if a plan's funded current liability percentage is 85 percent (i.e., it exceeds 60 percent by 25 percentage points), the applicable percentage is 20 percent (30 percent minus 10 percentage points (25 multiplied by .4)).[9]

A plan may provide for unpredictable contingent event benefits, which are benefits that depend on contingencies that are not reliably and reasonably predictable, such as facility shutdowns or reductions in workforce. The value of any unpredictable contingent event benefit is not considered in determining additional contributions until the event has occurred. The event on which an unpredictable contingent event benefit is contingent is generally not considered to have occurred until all events on which the benefit is contingent have occurred.

Required interest rate and mortality table

Specific interest rate and mortality assumptions must be used in determining a plan's current liability for purposes of the special funding rule. For plans years beginning before January 1, 2004, and after December 31, 2005, the interest rate used to determine a plan's current liability must be within a permissible range of the weighted average of the interest rates on 30-year Treasury securities for the four-year period ending on the last day before the plan year begins.[10] The permissible range is generally from 90 percent to 105 percent (120 percent for plan years beginning in 2002 or 2003).[11] The interest rate used under the plan generally must be consistent with the assumptions which reflect the purchase rates that would be used by insurance companies to satisfy the liabilities under the plan.[12]

---

[8] The deficit reduction contribution may also include an additional amount as a result of the use of a new mortality table prescribed by the Secretary of the Treasury in determining current liability for plan years beginning after 2006, as described below.

[9] In making these computations, the value of the plan's assets is reduced by the amount of any credit balance under the plan's funding standard account.

[10] The weighting used for this purpose is 40 percent, 30 percent, 20 percent and 10 percent, starting with the most recent year in the four-year period. Notice 88-73, 1988-2 C.B. 383.

[11] If the Secretary of the Treasury determines that the lowest permissible interest rate in this range is unreasonably high, the Secretary may prescribe a lower rate, but not less than 80 percent of the weighted average of the 30-year Treasury rate.

[12] Code sec. 412(b)(5)(B)(iii)(II); ERISA sec. 302(b)(5)(B)(iii)(II). Under Notice 90-11, 1990-1 C.B. 319, the interest rates in the permissible range are deemed to be consistent with the assumptions

Under the Pension Funding Equity Act of 2004 ("PFEA 2004"),[13] a special interest rate applies in determining current liability for plan years beginning in 2004 or 2005.[14] For these years, the interest rate used must be within a permissible range of the weighted average of the rates of interest on amounts invested conservatively in long-term investment-grade corporate bonds during the four-year period ending on the last day before the plan year begins. The permissible range for these years is from 90 percent to 100 percent. The interest rate is to be determined by the Secretary of the Treasury on the basis of two or more indices that are selected periodically by the Secretary and are in the top three quality levels available.

In determining current liability, the 1983 Group Annuity Mortality Table has been used since 1995.[15] Under present law, the Secretary of the Treasury may prescribe other tables to be used based on the actual experience of pension plans and projected trends in such experience. In addition, the Secretary of the Treasury is required to periodically review (at least every five years) any tables in effect and, to the extent the Secretary determines necessary, update such tables to reflect the actuarial experience of pension plans and projected trends in such experience.[16] Under Prop. Treas. Reg. 1.412(l)(7)-1, beginning in 2007, RP-2000 Mortality Tables are used with improvements in mortality (including future improvements) projected to the current year and with separate tables for annuitants and nonannuitants.[17]

Other rules

Full funding limitation

No contributions are required under the minimum funding rules in excess of the full funding limitation. The full funding limitation is the excess, if any, of (1) the accrued liability under the plan (including normal cost), over (2) the lesser of (a) the market value of plan assets or (b) the actuarial value of plan assets.[18] However, the full funding limitation may not be less

---

reflecting the purchase rates that would be used by insurance companies to satisfy the liabilities under the plan.

[13] Pub. L. No. 108-218 (2004).

[14] In addition, under PFEA 2004, if certain requirements are met, reduced contributions under the deficit reduction contribution rules apply for plan years beginning after December 27, 2003, and before December 28, 2005, in the case of plans maintained by commercial passenger airlines, employers primarily engaged in the production or manufacture of a steel mill product or in the processing of iron ore pellets, or a certain labor organization.

[15] Rev. Rul. 95-28, 1995-1 C.B. 74. Separate mortality tables are required to be used with respect to disabled participants.

[16] Code sec. 412(l)(7)(C)(ii)(III); ERISA sec. 302(d)(7)(C)(ii)(III).

[17] Separate tables continue to apply with respect to disabled participants.

[18] For plan years beginning before 2004, the full funding limitation was generally defined as the excess, if any, of (1) the lesser of (a) the accrued liability under the plan (including normal cost) or (b) a

than the excess, if any, of 90 percent of the plan's current liability (including the expected increase in current liability due to benefits accruing during the plan year) over the actuarial value of plan assets. In general, current liability is all liabilities to plan participants and beneficiaries accrued to date, whereas the accrued liability under the full funding limitation may be based on projected future benefits, including future salary increases.

Timing of plan contributions

In general, plan contributions required to satisfy the funding rules must be made within 8½ months after the end of the plan year. If the contribution is made by such due date, the contribution is treated as if it were made on the last day of the plan year.

In the case of a plan with a funded current liability percentage of less than 100 percent for the preceding plan year, estimated contributions for the current plan year must be made in quarterly installments during the current plan year.[19] The amount of each required installment is generally 25 percent of the lesser of (1) 90 percent of the amount required to be contributed for the current plan year or (2) 100 percent of the amount required to be contributed for the preceding plan year.[20] If a required installment is not made, interest applies for the period of underpayment at a rate of the greater of (1) 175 percent of the Federal mid-term rate, or (2) the plan rate.

Funding waivers

Within limits, the Secretary of the Treasury is permitted to waive all or a portion of the contributions required under the minimum funding standard for a plan year (a "waived funding deficiency").[21] A waiver may be granted if the employer (or employers) responsible for the contribution could not make the required contribution without temporary substantial business hardship and if requiring the contribution would be adverse to the interests of plan participants in the aggregate. Generally, no more than three waivers may be granted within any period of 15 consecutive plan years.

---

percentage (170 percent for 2003) of the plan's current liability (including the current liability normal cost), over (2) the lesser of (a) the market value of plan assets or (b) the actuarial value of plan assets, but in no case less than the excess, if any, of 90 percent of the plan's current liability over the actuarial value of plan assets. Under the Economic Growth and Tax Relief Reconciliation Act of 2001 ("EGTRRA"), the full funding limitation based on 170 percent of current liability is repealed for plan years beginning in 2004 and thereafter. The provisions of EGTRRA generally do not apply for years beginning after December 31, 2010.

[19] Code sec. 412(m); ERISA sec. 302(e).

[20] If quarterly contributions are required with respect to a plan, the amount of a quarterly installment must also be sufficient to cover any shortfall in the plan's liquid assets (a "liquidity shortfall").

[21] Code sec. 412(d); ERISA sec. 303. Under similar rules, the amortization period applicable to an unfunded past service liability or loss may also be extended.

The IRS is authorized to require security to be provided as a condition of granting a waiver of the minimum funding standard if the sum of the plan's accumulated funding deficiency and the balance of any outstanding waived funding deficiencies exceeds $1 million.

Failure to make required contributions

An employer is generally subject to an excise tax if it fails to make minimum required contributions and fails to obtain a waiver from the IRS.[22] The excise tax is 10 percent of the amount of the accumulated funding deficiency. In addition, a tax of 100 percent may be imposed if the accumulated funding deficiency is not corrected within a certain period.

If the total of the contributions the employer fails to make (plus interest) exceeds $1 million and the plan's funded current liability percentage is less than 100 percent, a lien arises in favor of the plan with respect to all property of the employer and the members of the employer's controlled group. The amount of the lien is the total amount of the missed contributions (plus interest).

Explanation of Provision

Interest rate required for plan years beginning in 2006 and 2007

For plan years beginning after December 31, 2005, and before January 1, 2008, the provision applies the present-law funding rules, with an extension of the interest rate applicable in determining current liability for plan years beginning in 2004 and 2005. Thus, in determining current liability for funding purposes for plan years beginning in 2006 and 2007, the interest rate used must be within the permissible range (90 to 100 percent) of the weighted average of the rates of interest on amounts invested conservatively in long-term investment-grade corporate bonds during the four-year period ending on the last day before the plan year begins.

Funding rules for plan years beginning after 2007 - in general

For plan years beginning after December 31, 2007, in the case of single-employer defined benefit plans, the provision repeals the present-law funding rules (including the requirement that a funding standard account be maintained) and provides a new set of rules for determining minimum required contributions.[23] Under the provision, the minimum required contribution to a single-employer defined benefit pension plan for a plan year generally depends on a comparison of the value of the plan's assets with the plan's funding target and target normal cost. As described in more detail below, under the provision, credit balances generated under present law

[22] Code sec. 4971. An excise tax applies also if a quarterly installment is less than the amount required to cover the plan's liquidity shortfall.

[23] A delayed effective date applies to certain plans as discussed in Items C, D and E below. Changes to the funding rules for multiemployer plans are discussed in Title II below. Governmental plans and church plans continue to be exempt from the funding rules to the extent provided under present law.

are carried over (into a "funding standard carryover balance") and generally may be used in certain circumstances to reduce otherwise required minimum contributions. In addition, as described more fully below, contributions in excess of the minimum contributions required under the provision for plan years beginning after 2007 generally are credited to a prefunding balance that may be used in certain circumstances to reduce otherwise required minimum contributions. To facilitate the use of such balances to reduce minimum required contributions, while avoiding use of such balances for more than one purpose, in some circumstances the value of plan assets is reduced by the prefunding balance and/or the funding standard carryover balance.

The minimum required contribution for a plan year, based on the value of plan assets (reduced by any prefunding balance and funding standard carryover balance) compared to the funding target, is shown in the following table:

If:	***The minimum required contribution is:***
the value of plan assets (reduced by any prefunding balance and funding standard carryover balance) is less than the funding target,	the sum of: (1) target normal cost; (2) any shortfall amortization charge; and (3) any waiver amortization charge.
the value of plan assets (reduced by any prefunding balance and funding standard carryover balance) equals or exceeds the funding target,	the target normal cost, reduced (but not below zero) by the excess of (1) the value of plan assets (reduced by any prefunding balance and funding standard carryover balance), over (2) the funding target.

Under the provision, a plan's funding target is the present value of all benefits accrued or earned as of the beginning of the plan year. A plan's target normal cost for a plan year is the present value of benefits expected to accrue or be earned during the plan year. A shortfall amortization charge is generally the sum of the amounts required to amortize any shortfall amortization bases for the plan year and the six preceding plan years. A shortfall amortization base is generally required to be established for a plan year if the plan has a funding shortfall for a plan year.[24] A shortfall amortization base may be positive or negative, i.e., an offsetting amortization base is established for gains. In general, a plan has a funding shortfall if the plan's funding target for the year exceeds the value of the plan's assets (reduced by any prefunding balance and funding standard carryover balance). A waiver amortization charge is the amount required to amortize a waived funding deficiency.

The provision specifies the interest rates and mortality table that must be used in determining a plan's target normal cost and funding target, as well as certain other actuarial

[24] Under a special rule, discussed below, a shortfall amortization base does not have to be established if the value of a plan's assets (reduced by any prefunding balance, but only if the employer elects to use any portion of the prefunding balance to reduce required contributions for the year) is at least equal to the plan's funding target for the plan year.

assumptions, including special assumptions ("at-risk" assumptions) for a plan in at-risk status. A plan is in at-risk status for a year if the value of the plan's assets (reduced by any prefunding and funding standard carryover balances) for the preceding year was less than (1) 80 percent of the plan's funding target determined without regard to the at-risk assumptions, and (2) 70 percent of the plan's funding target determined using the at-risk assumptions. Under a transition rule, instead of 80 percent, the following percentages apply: 65 percent for 2008, 70 percent for 2009, and 75 percent for 2010.

Target normal cost

Under the provision, the minimum required contribution for a plan year generally includes the plan's target normal cost for the plan year. A plan's target normal cost is the present value of all benefits expected to accrue or be earned under the plan during the plan year (the "current" year). For this purpose, an increase in any benefit attributable to services performed in a preceding year by reason of a compensation increase during the current year is treated as having accrued during the current year.

If the value of a plan's assets (reduced by any funding standard carryover balance and prefunding balance) exceeds the plan's funding target for a plan year, the minimum required contribution for the plan year is target normal cost reduced by such excess (but not below zero).

Funding target and shortfall amortization charges

In general

If the value of a plan's assets (reduced by any funding standard carryover balance and prefunding balance) is less than the plan's funding target for a plan year, so that the plan has a funding shortfall,[25] the minimum required contribution is generally increased by a shortfall amortization charge. As discussed more fully below, the shortfall amortization charge is the aggregate total (not less than zero) of the shortfall amortization installments for the plan year with respect to any shortfall amortization bases for the plan year and the six preceding plan years.

Funding target

A plan's funding target for a plan year is the present value of all benefits accrued or earned under the plan as of the beginning of the plan year. For this purpose, all benefits (including early retirement or similar benefits) are taken into account. Benefits accruing in the

[25] Under a special rule, in determining a plan's funding shortfall, the value of plan assets is not reduced by any funding standard carryover balance or prefunding balance if, with respect to the funding standard carryover balance or prefunding balance, there is in effect for the year a binding written with the Pension Benefit Guaranty Corporation which provides that such balance is not available to reduce the minimum required contribution for the plan year.

plan year are not taken into account in determining the plan's funding target, regardless of whether the valuation date for the plan year is later than the first day of the plan year.[26]

Shortfall amortization charge

The shortfall amortization charge for a plan year is the aggregate total (not less than zero) of the shortfall amortization installments for the plan year with respect to any shortfall amortization bases for that plan year and the six preceding plan years. The shortfall amortization installments with respect to a shortfall amortization base for a plan year are the amounts necessary to amortize the shortfall amortization base in level annual installments over the seven-plan-year period beginning with the plan year. The shortfall amortization installment with respect to a shortfall amortization base for any plan year in the seven-year period is the annual installment determined for that year for that shortfall amortization base. Shortfall amortization installments are determined using the appropriate segment interest rates (discussed below).

Shortfall amortization base and phase-in of funding target

A shortfall amortization base is determined for a plan year based on the plan's funding shortfall for the plan year. The funding shortfall is the amount (if any) by which the plan's funding target for the year exceeds the value of the plan's assets (reduced by any funding standard carryover balance and prefunding balance).

The shortfall amortization base for a plan year is (1) the plan's funding shortfall, minus (2) the present value, determined using the segment interest rates (discussed below), of the aggregate total of the shortfall amortization installments and waiver amortization installments that have been determined for the plan year and any succeeding plan year with respect to any shortfall amortization bases and waiver amortization bases for preceding plan years.

A shortfall amortization base may be positive or negative, depending on whether the present value of remaining installments with respect to prior year amortization bases is more or less than the plan's funding shortfall. In either case, the shortfall amortization base is amortized over seven years. Shortfall amortization installments for a particular plan year with respect to positive and negative shortfall amortization bases are netted in determining the shortfall amortization charge for the plan year, but the resulting shortfall amortization charge cannot be less than zero. Thus, negative amortization installments may not offset waiver amortization installments or normal cost.

Under a special rule, a shortfall amortization base does not have to be established for a plan year if the value of a plan's assets (reduced by any prefunding balance, but only if the employer elects to use any portion of the prefunding balance to reduce required contributions for the year) is at least equal to the plan's funding target for the plan year. For purposes of the special rule, a transition rule applies for plan years beginning after 2007 and before 2011. The transition rule does not apply to a plan that (1) is not in effect for 2007, or (2) is subject to the

[26] Benefits accruing during the plan year are taken into account in determining normal cost for the plan year.

present-law deficit reduction contribution rules for 2007 (i.e., a plan covering more than 100 participants and with a funded current liability below the applicable threshold).

Under the transition rule, a shortfall amortization base does not have to be established for a plan year during the transition period if the value of plan assets (reduced by any prefunding balance, but only if the employer elects to use the prefunding balance to reduce required contributions for the year) for the plan year is at least equal to the applicable percentage of the plan's funding target for the year. The applicable percentage is 92 percent for 2008, 94 percent for 2009, and 96 percent for 2010. However, the transition rule does not apply to a plan for any plan year after 2008 unless, for each preceding plan year after 2007, the plan's shortfall amortization base was zero (i.e., the plan was eligible for the special rule each preceding year).

Early deemed amortization of funding shortfalls for preceding years

If a plan's funding shortfall for a plan year is zero (i.e., the value of the plan's assets, reduced by any funding standard carryover balance and prefunding balance, is at least equal to the plan's funding target for the year), any shortfall amortization bases for preceding plan years are eliminated. That is, for purposes of determining any shortfall amortization charges for that year and succeeding years, the shortfall amortization bases for all preceding years (and all shortfall amortization installments determined with respect to such bases) are reduced to zero.

Waiver amortization charges

The provision retains the present-law rules under which the Secretary of the Treasury may waive all or a portion of the contributions required under the minimum funding standard for a plan year (referred to as a "waived funding deficiency").[27] If a plan has a waived funding deficiency for any of the five preceding plan years, the minimum required contribution for the plan year is increased by the waiver amortization charge for the plan year.

The waiver amortization charge for a plan year is the aggregate total of the waiver amortization installments for the plan year with respect to any waiver amortization bases for the five preceding plan years. The waiver amortization installments with respect to a waiver amortization base for a plan year are the amounts necessary to amortize the waiver amortization base in level annual installments over the five-year plan period beginning with the succeeding plan year. The waiver amortization installment with respect to that waiver amortization base for any plan year in the five-year period is the annual installment determined for the shortfall amortization base. Waiver amortization installments are determined using the appropriate segment interest rates (discussed below). The waiver amortization base for a plan year is the amount of the waived funding deficiency (if any) for the plan year.

If a plan's funding shortfall for a plan year is zero (i.e., the value of the plan's assets, reduced by any funding standard carryover balance and prefunding balance, is at least equal to the plan's funding target for the year), any waiver amortization bases for preceding plan years

[27] In the case of single-employer plans, the provision repeals the present-law rules under which the amortization period applicable to an unfunded past service liability or loss may be extended.

are eliminated. That is, for purposes of determining any waiver amortization charges for that year and succeeding years, the waiver amortization bases for all preceding years (and all waiver amortization installments determined with respect to such bases) are reduced to zero.

Actuarial assumptions used in determining a plan's target normal cost and funding target

Interest rates

The provision specifies the interest rates that must be used in determining a plan's target normal cost and funding target. Under the provision, present value is determined using three interest rates ("segment" rates), each of which applies to benefit payments expected to be made from the plan during a certain period. The first segment rate applies to benefits reasonably determined to be payable during the five-year period beginning on the first day of the plan year; the second segment rate applies to benefits reasonably determined to be payable during the 15-year period following the initial five-year period; and the third segment rate applies to benefits reasonably determined to be payable the end of the 15-year period. Each segment rate is a single interest rate determined monthly by the Secretary of the Treasury on the basis of a corporate bond yield curve, taking into account only the portion of the yield curve based on corporate bonds maturing during the particular segment rate period.

The corporate bond yield curve used for this purpose is to be prescribed on a monthly basis by the Secretary of the Treasury and reflect the average, for the 24-month period ending with the preceding month, of yields on investment grade corporate bonds with varying maturities and that are in the top three quality levels available. The yield curve should reflect the average of the rates on all bonds in the top three quality levels on which the yield curve is based.

The Secretary of the Treasury is directed to publish each month the corporate bond yield curve and each of the segment rates for the month. In addition, such Secretary is directed to publish a description of the methodology used to determine the yield curve and segment rates, which is sufficiently detailed to enable plans to make reasonable projections regarding the yield curve and segment rates for future months, based on a plan's projection of future interest rates.

Under the provision, the present value of liabilities under a plan is determined using the segment rates for the "applicable month" for the plan year. The applicable month is the month that includes the plan's valuation date for the plan year, or, at the election of the plan sponsor, any of the four months preceding the month that includes the valuation date. An election of a preceding month applies to the plan year for which it is made and all succeeding plan years unless revoked with the consent of the Secretary of the Treasury.

Solely for purposes of determining minimum required contributions, in lieu of the segment rates described above, an employer may elect to use interest rates on a yield curve based on the yields on investment grade corporate bonds for the month preceding the month in which the plan year begins (i.e., without regard to the 24-month averaging described above). Such an election may be revoked only with consent of the Secretary of the Treasury.

The provision provides a transition rule for plan years beginning in 2008 and 2009 (other than for plans first effective after December 31, 2007). Under this rule, for plan years beginning in 2008, the first, second, or third segment rate with respect to any month is the sum of: (1) the

product of the segment rate otherwise determined for the month, multiplied by 33-⅓ percent; and (2) the product of the applicable long-term corporate bond rate,[28] multiplied by 66-⅔ percent. For plan years beginning in 2009, the first, second, or third segment rate with respect to any month is the sum of: (1) the product of the segment rate otherwise determined for the month, multiplied by 66⅔ percent; and (2) the product of applicable long-term corporate bond rate multiplied by 33⅓ percent. An employer may elect not to have the transition rule apply with respect to a plan. Such an election may be revoked only with consent of the Secretary of the Treasury.

Under the provision, certain amounts are determined using the plan's "effective interest rate" for a plan year. The effective interest rate with respect to a plan for a plan year is the single rate of interest which, if used to determine the present value of the benefits taken into account in determining the plan's funding target for the year, would result in an amount equal to the plan's funding target (as determined using the first, second, and third segment rates).

Mortality table

Under the provision, the Secretary of the Treasury is directed to prescribe by regulation the mortality tables to be used in determining present value or making any computation under the funding rules.[29] Such tables are to be based on the actual experience of pension plans and projected trends in such experience. In prescribing tables, the Secretary is to take into account results of available independent studies of mortality of individuals covered by pension plans. In addition, the Secretary is required (at least every 10 years) to revise any table in effect to reflect the actual experience of pension plans and projected trends in such experience.

The provision also provides for the use of a separate mortality table upon request of the plan sponsor and approval by the Secretary of the Treasury in accordance with procedures described below. In order for the table to be used: (1) the table must reflect the actual experience of the pension plans maintained by the plan sponsor and projected trends in general mortality experience, and (2) there must be a sufficient number of plan participants, and the pension plans must have been maintained for a sufficient period of time, to have credible information necessary for that purpose. A separate mortality table can be a mortality table constructed by the plan's enrolled actuary from the plan's own experience or a table that is an adjustment to the table prescribed by the Secretary which sufficiently reflects the plan's experience. Except as provided by the Secretary, a separate table may not be used for any plan unless (1) a separate table is established and used for each other plan maintained by the plan sponsor and, if the plan sponsor is a member of a controlled group, each member of the

[28] The applicable long-term corporate bond rate is a rate that is from 90 to 100 percent of the weighted average of the rates of interest on amounts invested conservatively in long-term investment-grade corporate bonds during the four-year period ending on the last day before the plan year begins as determined by the Secretary under the method in effect for 2007.

[29] As under present law, separate mortality tables are required to be used with respect to disabled participants.

controlled group,[30] and (2) the requirements for using a separate table are met with respect to the table established for each plan, taking into account only the participants of that plan, the time that plan has been in existence, and the actual experience of that plan. In general, a separate plan may be used during the period of consecutive year plan years (not to exceed 10) specified in the request. However, a separate mortality table ceases to be in effect as of the earlier of (1) the date on which there is a significant change in the participants in the plan by reason of a plan spinoff or merger or otherwise, or (2) the date on which the plan actuary determines that the table does not meet the requirements for being used.

A plan sponsor must submit a separate mortality table to the Secretary for approval at least seven months before the first day of the period for which the table is to be used. A mortality table submitted to the Secretary for approval is treated as in effect as of the first day of the period unless the Secretary, during the 180-day period beginning on the date of the submission, disapproves of the table and provides the reasons that the table fails to meet the applicable criteria. The 180-day period is to be extended upon mutual agreement of the Secretary and the plan sponsor.

Other assumptions

Under the provision, in determining any present value or making any computation, the probability that future benefits will be paid in optional forms of benefit provided under the plan must be taken into account (including the probability of lump-sum distributions determined on the basis of the plan's experience and other related assumptions). The assumptions used to determine optional forms of benefit under a plan may differ from the assumptions used to determine present value for purposes of the funding rules under the provision. Differences in the present value of future benefit payments that result from the different assumptions used to determine optional forms of benefit under a plan must be taken into account in determining any present value or making any computation for purposes of the funding rules.

The provision generally does not require other specified assumptions to be used in determining the plan's target normal cost and funding target except in the case of at-risk plans (discussed below). However, similar to present law, the determination of present value or other computation must be made on the basis of actuarial assumptions and methods, each of which is reasonable (taking into account the experience of the plan and reasonable expectations), and which, in combination, offer the actuary's best estimate of anticipated experience under the plan.[31]

[30] For example, the Secretary may deem it appropriate to provide an exception in the case of a small plan.

[31] The provision retains the present-law rule under which certain changes in actuarial assumptions that decrease the liabilities of an underfunded single-employer plan must be approved by the Secretary of the Treasury.

Special assumptions for at-risk plans

The provision applies special assumptions ("at-risk" assumptions) in determining the funding target and normal cost of a plan in at-risk status. Whether a plan is in at-risk status for a plan year depends on its funding target attainment percentage for the preceding year. A plan's funding target attainment percentage for a plan year is the ratio, expressed as a percentage, that the value of the plan's assets (reduced by any funding standard carryover balance and prefunding balance) bears to the plan's funding target for the year. For this purpose, the plan's funding target is determined using the actuarial assumptions for plans that are not at-risk.

Under the provision, a plan is in at-risk status for a year if, for the preceding year: (1) the plan's funding target attainment percentage, determined without regard to the at-risk assumptions, was less than 80 percent (with a transition rule discussed below), and (2) the plan's funding target attainment percentage, determined using the at-risk assumptions (without regard to whether the plan was in at-risk status for the preceding year), was less than 70 percent. Under a transition rule applicable for plan years beginning in 2008, 2009, and 2010, instead of 80 percent, the following percentages apply: 65 percent for 2008, 70 percent for 2009, and 75 percent for 2010. In the case of plan years beginning in 2008, the plan's funding target attainment percentage for the preceding plan year may be determined using such methods of estimation as the Secretary of Treasury may provide.

Under the provision, the at-risk rules do not apply if a plan had 500 or fewer participants on each day during the preceding plan year. For this purpose, all defined benefit pension plans (other than multiemployer plans) maintained by the same employer (or a predecessor employer), or by any member of such employer's controlled group, are treated as a single plan, but only participants with respect to such employer or controlled group member are taken into account.

If a plan is in at-risk status, the plan's funding target and normal cost are determined using the assumptions that: (1) all employees who are not otherwise assumed to retire as of the valuation date, but who will be eligible to elect benefits in the current and 10 succeeding years, are assumed to retire at the earliest retirement date under plan, but not before the end of the plan year; and (2) all employees are assumed to elect the retirement benefit available under the plan at the assumed retirement age that results in the highest present value. In some cases, a loading factor also applies.

The at-risk assumptions are not applied to certain employees of specified automobile manufacturers for purposes of determining whether a plan is in at-risk status, i.e., whether the plan's funding target attainment percentage, determined using the at-risk assumptions, was less than 70 percent for the preceding plan year. An employee is disregarded for this purpose if: (1) the employee is employed by a specified automobile manufacturer; (2) the employee is offered, pursuant to a bona fide retirement incentive program, a substantial amount of additional cash compensation, substantially enhanced retirement benefits under the plan, or materially reduced employment duties, on the condition that by a specified date no later than December 31, 2010, the employee retires (as defined under the terms of the plan; (3) the offer is made during 2006 pursuant to a bona fide retirement incentive program and requires that the offer can be accepted no later than a specified date (not later than December 31, 2006); and (4) the employee does not accept the offer before the specified date on which the offer expires. For this purpose, a

specified automobile manufacturer is (1) any automobile manufacturer and (2) any manufacturer of automobile parts that supplies parts directly to an automobile manufacturer and which, after a transaction or series of transactions ending in 1999, ceased to be a member of the automobile manufacturer's controlled group.

The funding target of a plan in at-risk status for a plan year is generally the sum of: (1) the present value of all benefits accrued or earned as of the beginning of the plan year, determined using the at-risk assumptions described above, and (2) in the case of a plan that has also been in at-risk status for at least two of the four preceding plans years, a loading factor. The loading factor is the sum of (1) $700 times the number of participants in the plan, plus (2) four percent of the funding target determined without regard to the loading factor.[32] The at-risk funding target is in no event less than the funding target determined without regard to the at-risk rules.

The target normal cost of a plan in at-risk status for a plan year is generally the sum of: (1) the present value of benefits expected to accrue or be earned under the plan during the plan year, determined using the special assumptions described above, and (2) in the case of a plan that has also been in at-risk status for at least two of the four preceding plans years, a loading factor of four percent of the target normal cost determined without regard to the loading factor.[33] The at-risk target normal is in no event less than at-risk normal cost determined without regard to the at-risk rules.

If a plan has been in at-risk status for fewer than five consecutive plan years, the amount of a plan's funding target for a plan year is the sum of: (1) the amount of the funding target determined without regard to the at-risk rules, plus (2) the transition percentage for the plan year of the excess of the amount of the funding target determined under the at-risk rules over the amount determined without regard to the at-risk rules. Similarly, if a plan has been in at-risk status for fewer than five consecutive plan years, the amount of a plan's target normal cost for a plan year is the sum of: (1) the amount of the target normal cost determined without regard to the at-risk rules, plus (2) the transition percentage for the plan year of the excess of the amount of the target normal cost determined under the at-risk rules over the amount determined without regard to the at-risk rules. The transition percentage is the product of 20 percent times the number of consecutive plan years for which the plan has been in at-risk status. In applying this rule, plan years beginning before 2008 are not taken into account.

[32] This loading factor is intended to reflect the cost of purchasing group annuity contracts in the case of termination of the plan.

[33] Target normal cost for a plan in at-risk status does not include a loading factor of $700 per plan participant.

Funding standard carryover balance or prefunding balance

In general

The provision preserves credit balances that have accumulated under present law (referred to as "funding standard carryover balances"). In addition, for plan years beginning after 2007, new credit balances (referred to as "prefunding balances") result if an employer makes contributions greater than those required under the new funding rules. In general, under the bill, employers may choose whether to count funding standard carryover balances and prefunding balances in determining the value of plan assets or to use the balances to reduce required contributions, but not both. In this regard, the provision provides more favorable rules with respect to the use of funding standard carryover balances.

Under the provision, if the value of a plan's assets (reduced by any prefunding balance) is at least 80 percent of the plan's funding target (determined without regard to the at-risk rules) for the preceding plan year,[34] the plan sponsor may elect to credit all or a portion of the funding standard carryover balance or prefunding balance against the minimum required contribution for the current plan year (determined after any funding waiver), thus reducing the amount that must be contributed for the current plan year.

The value of plan assets is generally reduced by any funding standard carryover balance or prefunding balance for purposes of determining minimum required contributions, including a plan's funding shortfall, and a plan's funding target attainment percentage (discussed above). However, the plan sponsor may elect to permanently reduce a funding standard carryover balance or prefunding balance, so that the value of plan assets is not required to be reduced by that amount in determining the minimum required contribution for the plan year. Any reduction of a funding standard carryover balance or prefunding balance applies before determining the balance that is available for crediting against minimum required contributions for the plan year.

Funding standard carryover balance

In the case of a single-employer plan that is in effect for a plan year beginning in 2007 and, as of the end of the 2007 plan year, has a positive balance in the funding standard account maintained under the funding rules as in effect for 2007, the plan sponsor may elect to maintain a funding standard carryover balance. The funding standard carryover balance consists of a beginning balance in the amount of the positive balance in the funding standard account as of the end of the 2007 plan year, decreased (as described below) and adjusted to reflect the rate of net gain or loss on plan assets.

For subsequent years (i.e., as of the first day of each plan year beginning after 2008), the funding standard carryover balance of a plan is decreased (but not below zero) by the sum of: (1) any amount credited to reduce the minimum required contribution for the preceding plan year, plus (2) any amount elected by the plan sponsor as a reduction in the funding standard carryover

[34] In the case of plan years beginning in 2008, the percentage for the preceding plan year may be determined using such methods of estimation as the Secretary of Treasury may provide.

balance (thus reducing the amount by which the value of plan assets must be reduced in determining minimum required contributions).

Prefunding balance

The plan sponsor may elect to maintain a prefunding balance, which consists of a beginning balance of zero for the 2008 plan year, increased and decreased (as described below) and adjusted to reflect the rate of net gain or loss on plan assets.

For subsequent years, i.e., as of the first day of plan year beginning after 2008 (the "current" plan year), the plan sponsor may increase the prefunding balance by an amount, not to exceed (1) the excess (if any) of the aggregate total employer contributions for the preceding plan year, over (2) the minimum required contribution for the preceding plan year. For this purpose, any excess contribution for the preceding plan year is adjusted for interest accruing for the periods between the first day of the current plan year and the dates on which the excess contributions were made, determined using the effective interest rate of the plan for the preceding plan year and treating contributions as being first used to satisfy the minimum required contribution.

The amount by which the aggregate total employer contributions for the preceding plan year exceeds the minimum required contribution for the preceding plan year is reduced (but not below zero) by the amount of contributions an employer would need to make to avoid a benefit limitation that would otherwise be imposed for the preceding plan year under the provisions of the provision relating to benefit limitations for single-employer plans.[35] Thus, contributions needed to avoid a benefit limitation do not result in an increase in the plan's prefunding balance.[36]

As of the first day of each plan year beginning after 2008, the prefunding balance of a plan is decreased (but not below zero) by the sum of: (1) any amount credited to reduce the minimum required contribution for the preceding plan year, plus (2) any amount elected by the plan sponsor as a reduction in the prefunding balance (thus reducing the amount by which the value of plan assets must be reduced in determining minimum required contributions). As discussed above, if any portion of the prefunding balance is used to reduce a minimum required contribution, the value of plan assets must be reduced by the prefunding balance in determining whether a shortfall amortization base must be established for the plan year (i.e., whether the value of plan assets for a plan year is less than the plan's funding target for the plan year). Thus, the prefunding balance may not be included in the value of plan assets in order to avoid a shortfall amortization base for a plan year and also used to reduce the minimum required contribution for the same year.

---

[35] Any contribution that may be taken into account in satisfying the requirement to make additional contributions with respect to more than one type of benefit limitation is taken into account only once for purposes of this reduction.

[36] The benefit limitations are discussed in Part B below.

Other rules

In determining the prefunding balance or funding standard carryover balance as of the first day of a plan year, the plan sponsor must adjust the balance in accordance with regulations prescribed by the Secretary of the Treasury to reflect the rate of return on plan assets for the preceding year. The rate of return is determined on the basis of the fair market value of the plan assets and must properly take into account, in accordance with regulations, all contributions, distributions, and other plan payments made during the period.

To the extent that a plan has a funding standard carryover balance of more than zero for a plan year, none of the plan's prefunding balance may be credited to reduce a minimum required contribution, nor may an election be made to reduce the prefunding balance for purposes of determining the value of plan assets. Thus, the funding standard carryover balance must be used for these purposes before the prefunding balance may be used.

Any election relating to the prefunding balance and funding standard carryover balance is to be made in such form and manner as the Secretary of the Treasury prescribes.

Other rules and definitions

Valuation date

Under the provision, all determinations made with respect to minimum required contributions for a plan year (such as the value of plan assets and liabilities) must be made as of the plan's valuation date for the plan year. In general, the valuation date for a plan year must be the first day of the plan year. However, any day in the plan year may be designated as the plan's valuation date if, on each day during the preceding plan year, the plan had 100 or fewer participants.[37] For this purpose, all defined benefit pension plans (other than multiemployer plans) maintained by the same employer (or a predecessor employer), or by any member of such employer's controlled group, are treated as a single plan, but only participants with respect to such employer or controlled group member are taken into account.

Value of plan assets

Under the provision, the value of plan assets is generally fair market value. However, the value of plan assets may be determined on the basis of the averaging of fair market values, but only if such method: (1) is permitted under regulations; (2) does not provide for averaging of fair market values over more than the period beginning on the last day of the 25th month preceding the month in which the plan's valuation date occurs and ending on the valuation date (or similar period in the case of a valuation date that's not the first day of a month); and (3) does not result in a determination of the value of plan assets that at any time is less than 90 percent or

[37] In the case of a plan's first plan year, the ability to use a valuation date other than the first day of the plan year is determined by taking into account the number of participants the plan is reasonably expected to have on each day during that first plan year.

more than 110 percent of the fair market value of the assets at that time. Any averaging must be adjusted for contributions and distributions as provided by the Secretary of the Treasury.

If a required contribution for a preceding plan year is made after the valuation date for the current year, the contribution is taken into account in determining the value of plan assets for the current plan year. For plan years beginning after 2008, only the present value of the contribution is taken into account, determined as of the valuation date for the current plan year, using the plan's effective interest rate for the preceding plan year. In addition, any required contribution for the current plan year is not taken into account in determining the value of plan assets. If any contributions for the current plan year are made before the valuation date, plan assets as of the valuation date does not include (1) the contributions, and (2) interest on the contributions for the period between the date of the contributions and the valuation date, determined using the plan's effective interest rate for the current plan year.

Timing rules for contributions

As under present law, the due date for the payment of a minimum required contribution for a plan year is generally 8½ months after the end of the plan year. Any payment made on a date other than the valuation date for the plan year must be adjusted for interest accruing at the plan's effective interest rate for the plan year for the period between the valuation date and the payment date. Quarterly contributions must be made during a plan year if the plan had a funding shortfall for the preceding plan year (that is, if the value of the plan's assets, reduced by the funding standard carryover balance and prefunding balance, was less than the plan's funding target for the preceding plan year).[38] If a quarterly installment is not made, interest applies for the period of underpayment at the rate of interest otherwise applicable (i.e., the plan's effective interest rate) plus 5 percentage points.

Excise tax on failure to make minimum required contributions

The provision retains the present-law rules under which an employer is generally subject to an excise tax if it fails to make minimum required contributions and fails to obtain a waiver from the IRS.[39] The excise tax is 10 percent of the aggregate unpaid minimum required contributions for all plan years remaining unpaid as of the end of any plan year. In addition, a tax of 100 percent may be imposed if any unpaid minimum required contributions remain unpaid after a certain period.

[38] The provision retains the present-law rules under which the amount of any quarterly installment must be sufficient to cover any liquidity shortfall.

[39] The provision retains the present-law rules under which a lien in favor of the plan with respect to property of the employer (and members of the employer's controlled group) arises in certain circumstances in which the employer fails to make required contributions.

Conforming changes

The provision makes various technical and conforming changes to reflect the new funding requirements.

Effective Date

The extension of the interest rate applicable in determining current liability for plan years beginning in 2004 and 2005 is effective for plan years beginning after December 31, 2005, and before January 1, 2008. The modifications to the single-employer plan funding rules are effective for plan years beginning after December 31, 2007.

B. Benefit Limitations Under Single-Employer Defined Benefit Pension Plans (new secs. 101(j) and 206(g) and (h) of ERISA, and new secs. 436-437 of the Code)

Present Law

Plant shutdown and other unpredictable contingent event benefits

A plan may provide for unpredictable contingent event benefits, which are benefits that depend on contingencies other than age, service, compensation, death or disability or that are not reliably and reasonably predictable as determined by the Secretary. Some of these benefits are commonly referred to as "plant shutdown" benefits. Under present law, unpredictable contingent event benefits generally are not taken into account for funding purposes until the event has occurred.

Defined benefit pension plans are not permitted to provide "layoff" benefits (i.e., severance benefits).[40] However, defined benefit pension plans may provide subsidized early retirement benefits, including early retirement window benefits.[41]

Limitation on certain benefit increases while funding waivers in effect

Within limits, the IRS is permitted to waive all or a portion of the contributions required under the minimum funding standard for a plan year.[42] In the case of a single-employer plan, a waiver may be granted if the employer responsible for the contribution could not make the required contribution without temporary substantial business hardship for the employer (and members of the employer's controlled group) and if requiring the contribution would be adverse to the interests of plan participants in the aggregate.

If a funding waiver is in effect for a plan, subject to certain exceptions, no plan amendment may be adopted that increases the liabilities of the plan by reason of any increase in benefits, any change in the accrual of benefits, or any change in the rate at which benefits vest under the plan.[43]

Security for certain plan amendments

In the case of a single-employer defined benefit pension plan, if a plan amendment increasing current liability is adopted and the plan's funded current liability percentage is less than 60 percent (taking into account the effect of the amendment, but disregarding any

[42] Code sec. 412(d); ERISA sec. 303.

[43] Code sec. 412(f); ERISA sec. 304(b)(1).

unamortized unfunded old liability), the employer and members of the employer's controlled group must provide security in favor of the plan.[44] The amount of security required is the excess of: (1) the lesser of (a) the amount by which the plan's assets are less than 60 percent of current liability, taking into account the benefit increase, or (b) the amount of the benefit increase and prior benefit increases after December 22, 1987, over (2) $10 million. The amendment is not effective until the security is provided.

The security must be in the form of a surety bond, cash, certain U.S. government obligations, or such other form as is satisfactory to the Secretary of the Treasury and the parties involved. The security is released after the funded liability of the plan reaches 60 percent.

Prohibition on benefit increases during bankruptcy

Subject to certain exceptions, if an employer maintaining a single-employer defined benefit pension plan is involved in bankruptcy proceedings, no plan amendment may be adopted that increases the liabilities of the plan by reason of any increase in benefits, any change in the accrual of benefits, or any change in the rate at which benefits vest under the plan.[45] This limitation does not apply if the plan's funded current liability percentage is at least 100 percent, taking into account the amendment.

Restrictions on benefit payments due to liquidity shortfalls

In the case of a single-employer plan with a funded current liability percentage of less than 100 percent for the preceding plan year, estimated contributions for the current plan year must be made in quarterly installments during the current plan year. If quarterly contributions are required with respect to a plan, the amount of a quarterly installment must also be sufficient to cover any shortfall in the plan's liquid assets (a "liquidity shortfall"). In general, a plan has a liquidity shortfall for a quarter if the plan's liquid assets (such as cash and marketable securities) are less than a certain amount (generally determined by reference to disbursements from the plan in the preceding 12 months).

If a quarterly installment is less than the amount required to cover the plan's liquidity shortfall, limits apply to the benefits that can be paid from a plan during the period of underpayment. During that period, the plan may not make any prohibited payment, defined as: (1) any payment in excess of the monthly amount paid under a single life annuity (plus any social security supplement provided under the plan) to a participant or beneficiary whose annuity starting date occurs during the period; (2) any payment for the purchase of an irrevocable commitment from an insurer to pay benefits (e.g., an annuity contract); or (3) any other payment specified by the Secretary of the Treasury by regulations.[46]

[45] Code sec. 401(a)(33); ERISA sec. 204(i).

[46] Code sec. 401(a)(32); ERISA sec. 206(e).

Explanation of Provision

Plant shutdown and other unpredictable contingent event benefits

Under the provision, if a participant is entitled to an unpredictable contingent event benefit payable with respect to any event occurring during any plan year, the plan must provide that such benefits may not be provided if the plan's adjusted funding target attainment percentage for that plan year: (1) is less than 60 percent; or (2) would be less than 60 percent taking into account the occurrence of the event. For this purpose, the term unpredictable contingent event benefit means any benefit payable solely by reason of: (1) a plant shutdown (or similar event, as determined by the Secretary of the Treasury); or (2) any event other than attainment of any age, performance of any service, receipt or derivation of any compensation, or the occurrence of death or disability.

The determination of whether the limitation applies is made in the year the unpredictable contingent event occurs. For example, suppose a plan provides for benefits upon the occurrence of a plant shutdown, and a plant shut down occurs in 2010. Taking into account the plan shutdown, the plan's adjusted funding target attainment percentage is less than 60 percent. Thus, the limitation applies, and benefits payable solely by reason of the plant shutdown may not be paid (unless the employer makes contributions to the plan as described below), regardless of whether the benefits will be paid in the 2010 plan year or a later plan year.[47]

The limitation ceases to apply with respect to any plan year, effective as of the first day of the plan year, if the plan sponsor makes a contribution (in addition to any minimum required contribution for the plan year) equal to: (1) if the plan's adjusted funding target attainment percentage is less than 60 percent, the amount of the increase in the plan's funding target for the plan year attributable to the occurrence of the event; or (2) if the plan's adjusted funding target attainment percentage would be less than 60 percent taking into account the occurrence of the event, the amount sufficient to result in a adjusted funding target attainment percentage of 60 percent.

The limitation does not apply for the first five years a plan (or a predecessor plan) is in effect.

Plan amendments increasing benefit liabilities

Certain plan amendments may not take effect during a plan year if the plan's adjusted funding target attainment percentage for the plan year: (1) is less than 80 percent; or (2) would be less than 80 percent taking into account the amendment.[48] In such a case, no amendment may take effect if it has the effect of increasing the liabilities of the plan by reason of any increase in

[47] Benefits already being paid as a result of a plant shutdown or other event that occurred in a preceding year are not affected by the limitation.

[48] Under the provision, the present-law rules limiting benefit increases while an employer is in bankruptcy continue to apply.

benefits, the establishment of new benefits, any change in the rate of benefit accrual, or any change in the rate at which benefits vest under the plan. The limitation does not apply to an amendment that provides for an increase in benefits under a formula which is not based on compensation, but only if the rate of increase does not exceed the contemporaneous rate of increase in average wages of the participants covered by the amendment.

The limitation ceases to apply with respect to any plan year, effective as of the first day of the plan year (or, if later, the effective date of the amendment), if the plan sponsor makes a contribution (in addition to any minimum required contribution for the plan year) equal to: (1) if the plan's adjusted funding target attainment percentage is less than 80 percent, the amount of the increase in the plan's funding target for the plan year attributable to the amendment; or (2) if the plan's adjusted funding target attainment percentage would be less than 80 percent taking into account the amendment, the amount sufficient to result in a adjusted funding target attainment percentage of 80 percent.

The limitation does not apply for the first five years a plan (or a predecessor plan) is in effect.

Prohibited payments

A plan must provide that, if the plan's adjusted funding target attainment percentage for a plan year is less than 60 percent, the plan will not make any prohibited payments after the valuation date for the plan year.

A plan must also provide that, if the plan's adjusted funding target attainment percentage for a plan year is 60 percent or greater, but less than 80 percent, the plan may not pay any prohibited payments exceeding the lesser of: (1) 50 percent of the amount otherwise payable under the plan, and (2) the present value of the maximum PBGC guarantee with respect to the participant (determined under guidance prescribed by the PBGC, using the interest rates and mortality table applicable in determining minimum lump-sum benefits). The plan must provide that only one payment under this exception may be made with respect to any participant during any period of consecutive plan years to which the limitation applies. For this purpose, a participant and any beneficiary of the participant (including an alternate payee) is treated as one participant. If the participant's accrued benefit is allocated to an alternate payee and one or more other persons, the amount that may be distributed is allocated in the same manner unless the applicable qualified domestic relations order provides otherwise.

In addition, a plan must provide that, during any period in which the plan sponsor is in bankruptcy proceedings, the plan may not pay any prohibited payment. However, this limitation does not apply on or after the date the plan's enrolled actuary certifies that the adjusted funding target attainment percentage of the plan is not less than 100 percent.

For purposes of these limitations, "prohibited payment" is defined as under the present-law rule restricting distributions during a period of a liquidity shortfall and means (1) any payment in excess of the monthly amount paid under a single life annuity (plus any social security supplement provided under the plan) to a participant or beneficiary whose annuity starting date occurs during the period, (2) any payment for the purchase of an irrevocable

commitment from an insurer to pay benefits (e.g., an annuity contract), or (3) any other payment specified by the Secretary of the Treasury by regulations.

The prohibited payment limitation does not apply to a plan for any plan year if the terms of the plan (as in effect for the period beginning on September 1, 2005, and ending with the plan year) provide for no benefit accruals with respect to any participant during the period.

Cessation of benefit accruals

A plan must provide that, if the plan's adjusted funding target attainment percentage is less than 60 percent for a plan year, all future benefit accruals under the plan must cease as of the valuation date for the plan year. The limitation applies only for purposes of the accrual of benefits; service during the freeze period is counted for other purposes. For example, if accruals are frozen under the provision, service earned during the freeze period still counts for vesting purposes. Or, as another example, suppose a plan provides that payment of benefits begins when a participant terminates employment after age 55 and with 25 years of service. Under this example, if a participant who is age 55 and has 23 years of service when the freeze on accruals becomes applicable terminates employment two years later, the participant has 25 years of service for this purpose and thus can begin receiving benefits. However (assuming the freeze on accruals is still in effect), the amount of the benefit is based on the benefit accrued before the freeze (i.e., counting only 23 years of service).

The limitation ceases to apply with respect to any plan year, effective as of the first day of the plan year, if the plan sponsor makes a contribution (in addition to any minimum required contribution for the plan year) equal to the amount sufficient to result in an adjusted funding target attainment percentage of 60 percent.

The limitation does not apply for the first five years a plan (or a predecessor plan) is in effect.

Adjusted funding target attainment percentage

In general

The term "funding target attainment percentage" is defined as under the minimum funding rules, i.e., the ratio, expressed as a percentage, that the value of the plan's assets (reduced by any funding standard carryover balance and prefunding balance) bears to the plan's funding target for the year (determined without regard to at-risk status). A plan's adjusted funding target attainment percentage is determined in the same way, except that the value of the plan's assets and the plan's funding target are both increased by the aggregate amount of purchases of annuities for employees other than highly compensated employees made by the plan during the two preceding plan years.

Special rule for fully funded plans

Under a special rule, if a plan's funding target attainment percentage is at least 100 percent, determined by not reducing the value of the plan's assets by any funding standard carryover balance or prefunding balance, the value of the plan's assets is not so reduced in

determining the plan's funding target attainment percentage for purposes of whether the benefit limitations apply. Under a transition rule for a plan year beginning after 2007 and before 2011, the "applicable percentage" for the plan year is substituted for 100 percent in applying the special rule. For this purpose, the applicable percentage is 92 percent for 2007, 94 percent for 2008, 96 percent for 2009, and 98 percent for 2010. However, for any plan year beginning after 2008, the transition rule does not apply unless the plan's funding target attainment percentage (determined by not reducing the value of the plan's assets by any funding standard carryover balance or prefunding balance) for each preceding plan year in the transition period is at least equal to the applicable percentage for the preceding year.

Presumptions as to funded status

Under the provision, certain presumptions apply in determining whether limitations apply with respect to a plan, subject to certification of the plan's adjusted funding target attainment percentage by the plan's enrolled actuary.

If a plan was subject to a limitation for the preceding year, the plan's adjusted funding target attainment percentage for the current year is presumed to be the same as for the preceding year until the plan actuary certifies the plan's actual adjusted funding target attainment percentage for the current year.

If (1) a plan was not subject to a limitation for the preceding year, but its adjusted funding target attainment percentage for the preceding year was not more than 10 percentage points greater than the threshold for a limitation, and (2) as of the first day of the fourth month of the current plan year, the plan actuary has not certified the plan's actual adjusted funding target attainment percentage for the current year, the plan's funding target attainment percentage is presumed to be reduced by 10 percentage points as of that day and that day is deemed to be the plan's valuation date for purposes of applying the benefit limitation. As a result, the limitation applies as of that date until the actuary certifies the plan's actual adjusted funding target attainment percentage.

In any other case, if the plan actuary has not certified the plan's actual adjusted funding target attainment percentage by the first day of the tenth month of the current plan year, for purposes of the limitations, the plan's adjusted funding target attainment percentage is conclusively presumed to be less than 60 percent as of that day and that day is deemed to be the valuation date for purposes of applying the benefit limitations.[49]

[49] For purposes of applying the presumptions to plan years beginning in 2008, the funding target attainment percentage for the preceding year may be determined using such methods of estimation as the Secretary of Treasury may provide.

Reduction of funding standard carryover and prefunding balances

Election to reduce balances

As discussed above, the value of plan assets is generally reduced by any funding standard carryover or prefunding in determining a plan's funding target attainment percentage. As provided for under the funding rules applicable to single-employer plans, a plan sponsor may elect to reduce a funding standard carryover balance or prefunding balance, so that the value of plan assets is not required to be reduced by that amount in determining the plan's funding target attainment percentage.

Deemed reduction of balances in the case of collectively bargained plans

If a benefit limitation would otherwise apply to a plan maintained pursuant to one or more collective bargaining agreements between employee representatives and one or more employers, the plan sponsor is treated as having made an election to reduce any prefunding balance or funding standard carryover balance by the amount necessary to prevent the benefit limitation from applying. However, the employer is not treated as having made such an election if the election would not prevent the benefit limitation from applying to the plan.

Deemed reduction of balances in the case of other plans

If the prohibited payment limitation would otherwise apply to a plan that is not maintained pursuant to a collective bargaining agreement, the plan sponsor is treated as having made an election to reduce any prefunding balance or funding standard carryover balance by the amount necessary to prevent the benefit limitation from applying. However, the employer is not treated as having made such an election if the election would not prevent the benefit limitation from applying to the plan.

Contributions made to avoid a benefit limitation

Under the provision, an employer may make contributions (in addition to any minimum required contribution) in an amount sufficient to increase the plan's adjusted funding target attainment percentage to a level to avoid a limitation on unpredictable contingent event benefits, a plan amendment increasing benefits, or additional accruals. An employer may not use a prefunding balance or funding standard carryover balance in lieu of such a contribution, and such a contribution does not result in an increase in any prefunding balance.

Instead of making additional contributions to avoid a benefit limitation, an employer may provide security in the form of a surety bond, cash, certain U.S. government obligations, or such other form as is satisfactory to the Secretary of the Treasury and the parties involved. In such a case, the plan's adjusted funding target attainment percentage is determined by treating the security as a plan asset. Any such security may be perfected and enforced at any time after the earlier of: (1) the date on which the plan terminates; (2) if the plan sponsor fails to make a required contribution for any subsequent plan year, the due date for the contribution; or (3) if the plan's adjusted funding target attainment percentage is less than 60 percent for a consecutive period of seven years, the valuation date for the last year in the period. The security will be released (and any related amounts will be refunded with any accrued interest) at such time as the

Secretary of the Treasury may prescribe in regulations (including partial releases by reason of increases in the plan's funding target attainment percentage).

Treatment of plan as of close of prohibited or cessation period

Under the provision, if a limitation on prohibited payments or future benefit accruals ceases to apply to a plan, all such payments and benefit accruals resume, effective as of the day following the close of the period for which the limitation applies.[50] Nothing in this rule is to be construed as affecting a plan's treatment of benefits which would have been paid or accrued but for the limitation.

Notice to participants

The plan administrator must provide written notice to participants and beneficiaries within 30 days: (1) after the plan has become subject to the limitation on unpredictable uncontingent event benefits or prohibited payments; (2) in the case of a plan to which the limitation on benefit accruals applies, after the valuation date for the plan year in which the plan's adjusted target attainment percentage is less than 60 percent (or, if earlier, the date the adjusted target attainment percentage is deemed to be less than 60 percent). Notice must also be provided at such other times as may be determined by the Secretary of the Treasury. The notice may be in electronic or other form to the extent such form is reasonably accessible to the recipient.

If the plan administrator fails to provide the required notice, the Secretary of Labor may impose a civil penalty of up to $1,000 a day from the time of the failure.

Effective Date

The provision generally applies with respect to plan years beginning after December 31, 2007.

In the case of a plan maintained pursuant to one or more collective bargaining agreements between employee representatives and one or more employers ratified before January 1, 2008, the provision does not apply to plan years beginning before the earlier of: (1) the later of (a) the date on which the last collective bargaining agreement relating to the plan terminates (determined without regard to any extension thereof agreed to after the date of enactment), or (b) the first day of the first plan year to which the provision would otherwise apply; or (2) January 1, 2010. For this purpose, any plan amendment made pursuant to a collective bargaining agreement relating to the plan that amends the plan solely to conform to any requirement under the provision is not to be treated as a termination of the collective bargaining agreement.

[50] This rule does not apply to limitations on unpredictable contingent event benefits and plan amendments increasing liabilities.

C. Special Rules for Multiple-Employer Plans of Certain Cooperatives

Present Law

Defined benefit pension plans are required to meet certain minimum funding rules. In some cases, additional contributions are required under the deficit reduction contribution rules if a single-employer defined benefit pension plan is underfunded. Additional contributions generally are not required in the case of a plan with a funded current liability percentage of at least 90 percent. A plan's funded current liability percentage is the value of plan assets as a percentage of current liability. In general, a plan's current liability means all liabilities to employees and their beneficiaries under the plan, determined using specified interest and mortality assumptions. In the case of a plan with a funded current liability percentage of less than 100 percent for the preceding plan year, estimated contributions for the current plan year must be made in quarterly installments during the current plan year.

The PBGC insures benefits under most single-employer defined benefit pension plans in the event the plan is terminated with insufficient assets to pay for plan benefits. The PBGC is funded in part by a flat-rate premium per plan participant, and variable-rate premiums based on the amount of unfunded vested benefits under the plan. A specified interest rate and a specified mortality table apply in determining unfunded vested benefits for this purpose.

A multiple-employer plan is a plan that is maintained by more than one employer and is not maintained pursuant to a collective bargaining agreement.[51] A multiple-employer plan is subject to the minimum funding rules for single-employer plans and to PBGC variable-rate premiums.

Explanation of Provision

The provision provides a delayed effective date for the new single-employer plan funding rules in the case of a plan that was in existence on July 26, 2005, and was an eligible cooperative plan for the plan year including that date. The new funding rules do not apply with respect to such a plan for plan years beginning before the earlier of: (1) the first plan year for which the plan ceases to be an eligible cooperative plan, or (2) January 1, 2017. In addition, in applying the present-law funding rules to an eligible cooperative plan to such a plan for plan years beginning after December 31, 2007, and before the first plan year for which the new funding rules apply, the interest rate used is the interest rate applicable under the new funding rules with respect to payments expected to be made from the plan after the 20-year period beginning on the first day of the plan year (i.e., the third segment rate under the new funding rules).

A plan is treated as an eligible cooperative plan for a plan year if it is maintained by more than one employer and at least 85 percent of the employers are: (1) certain rural cooperatives;[52]

---

[51] A plan maintained by more than one employer pursuant to a collective bargaining agreement is referred to as a multiemployer plan.

[52] This is as defined in Code section 401(k)(7)(B) without regard to (iv) thereof and includes (1) organizations engaged primarily in providing electric service on a mutual or cooperative basis, or

or (2) certain cooperative organizations that are more than 50-percent owned by agricultural producers or by cooperatives owned by agricultural producers, or organizations that are more than 50-percent owned, or controlled by, one or more such cooperative organizations. A plan is also treated as an eligible cooperative plan for any plan year for which it is maintained by more than one employer and is maintained by a rural telephone cooperative association.

Effective Date

The provision is effective on the date of enactment.

engaged primarily in providing electric service to the public in its service area and which is exempt from tax or which is a State or local government, other than a municipality; (2) certain civic leagues and business leagues exempt from tax 80 percent of the members of which are described in (1); (3) certain cooperative telephone companies; and (4) any organization that is a national association of organizations described above.

D. Temporary Relief for Certain PBGC Settlement Plans

Present Law

Defined benefit pension plans are required to meet certain minimum funding rules. In some cases, additional contributions are required under the deficit reduction contribution rules if a single-employer defined benefit pension plan is underfunded. Additional contributions generally are not required in the case of a plan with a funded current liability percentage of at least 90 percent. A plan's funded current liability percentage is the value of plan assets as a percentage of current liability. In general, a plan's current liability means all liabilities to employees and their beneficiaries under the plan, determined using specified interest and mortality assumptions. In the case of a plan with a funded current liability percentage of less than 100 percent for the preceding plan year, estimated contributions for the current plan year must be made in quarterly installments during the current plan year.

The PBGC insures benefits under most single-employer defined benefit pension plans in the event the plan is terminated with insufficient assets to pay for plan benefits. The PBGC is funded in part by a flat-rate premium per plan participant, and variable-rate premiums based on the amount of unfunded vested benefits under the plan. A specified interest rate and a specified mortality table apply in determining unfunded vested benefits for this purpose.

Explanation of Provision

The provision agreement provides a delayed effective date for the new single-employer plan funding rules in the case of a plan that was in existence on July 26, 2005, and was a "PBGC settlement plan" as of that date. The new funding rules do not apply with respect to such a plan for plan years beginning before January 1, 2014. In addition, in applying the present-law funding rules to a such a plan for plan years beginning after December 31, 2007, and before January 1, 2014, the interest rate used is the interest rate applicable under the new funding rules with respect to payments expected to be made from the plan after the 20-year period beginning on the first day of the plan year (i.e., the third segment rate under the new funding rules).

Under the provision, the term "PBGC settlement plan" means a single-employer defined benefit plan: (1) that was sponsored by an employer in bankruptcy proceedings giving rise to a claim by the PBGC of not greater than $150 million, and the sponsorship of which was assumed by another employer (not a member of the same controlled group as the bankrupt sponsor) and the PBGC's claim was settled or withdrawn in connection with the assumption of the sponsorship; or (2) that, by agreement with the PBGC, was spun off from a plan subsequently terminated by the PBGC in an involuntary termination.

Effective Date

The provision is effective on the date of enactment.

E. Special Rules for Plans of Certain Government Contractors

Present Law

Defined benefit pension plans are required to meet certain minimum funding rules. In some cases, additional contributions are required under the deficit reduction contribution rules if a single-employer defined benefit pension plan is underfunded. Additional contributions generally are not required in the case of a plan with a funded current liability percentage of at least 90 percent. A plan's funded current liability percentage is the value of plan assets as a percentage of current liability. In general, a plan's current liability means all liabilities to employees and their beneficiaries under the plan, determined using specified interest and mortality assumptions. In the case of a plan with a funded current liability percentage of less than 100 percent for the preceding plan year, estimated contributions for the current plan year must be made in quarterly installments during the current plan year.

The PBGC insures benefits under most single-employer defined benefit pension plans in the event the plan is terminated with insufficient assets to pay for plan benefits. The PBGC is funded in part by a flat-rate premium per plan participant, and variable-rate premiums based on the amount of unfunded vested benefits under the plan. A specified interest rate and a specified mortality table apply in determining unfunded vested benefits for this purpose.

Explanation of Provision

The provision provides a delayed effective date for the new single-employer plan funding rules in the case of an eligible government contractor plan. The new funding rules do not apply with respect to such a plan for plan years beginning before the earliest of: (1) the first plan year for which the plan ceases to be an eligible government contractor plan, (2) the effective date of the Cost Accounting Standards Pension Harmonization Rule, and (3) the first plan year beginning after December 31, 2010. In addition, in applying the present-law funding rules to a such a plan for plan years beginning after December 31, 2007, and before the first plan year for which the new funding rules apply, the interest rate used is the interest rate applicable under the new funding rules with respect to payments expected to be made from the plan after the 20-year period beginning on the first day of the plan year (i.e., the third segment rate under the new funding rules).

Under the provision, a plan is treated as an eligible government contractor plan if it is maintained by a corporation (or member of the same affiliated group): (1) whose primary source of revenue is derived from business performed under contracts with the United States that are subject to the Federal Acquisition Regulations and also to the Defense Federal Acquisition Regulation Supplement; (2) whose revenue derived from such business in the previous fiscal year exceeded $5 billion; and (3) whose pension plan costs that are assignable under those contracts are subject to certain provisions of the Cost Accounting Standards.

The provision also requires the Cost Accounting Standards Board, not later than January 1, 2010, to review and revise the relevant provisions of the Cost Accounting Standards to harmonize minimum contributions required under ERISA of eligible government contractor plans and government reimbursable pension plan costs. Any final rule adopted by the Cost

Accounting Standards Board shall be deemed the Cost Accounting Standards Pension Harmonization Rule.

Effective Date

The provision is effective on the date of enactment.

F. Modification of Transition Rule to Pension Funding Requirements for Interstate Bus Company (769(c) of the Retirement Protection Act, as added by sec. 1508 of the Taxpayer Relief Act of 1997)

Present Law

Defined benefit pension plans are required to meet certain minimum funding rules. In some cases, additional contributions are required under the deficit reduction contribution rules if a single-employer defined benefit pension plan is underfunded. Additional contributions generally are not required in the case of a plan with a funded current liability percentage of at least 90 percent. A plan's funded current liability percentage is the value of plan assets as a percentage of current liability. In general, a plan's current liability means all liabilities to employees and their beneficiaries under the plan, determined using specified interest and mortality assumptions. In the case of a plan with a funded current liability percentage of less than 100 percent for the preceding plan year, estimated contributions for the current plan year must be made in quarterly installments during the current plan year.

The PBGC insures benefits under most single-employer defined benefit pension plans in the event the plan is terminated with insufficient assets to pay for plan benefits. The PBGC is funded in part by a flat-rate premium per plan participant, and variable rate premiums based on the amount of unfunded vested benefits under the plan. A specified interest rate and a specified mortality table apply in determining unfunded vested benefits for this purpose.

A special rule modifies the minimum funding requirements in the case of certain plans. The special rule applies in the case of plans that: (1) were not required to pay a variable rate PBGC premium for the plan year beginning in 1996; (2) do not, in plan years beginning after 1995 and before 2009, merge with another plan (other than a plan sponsored by an employer that was a member of the controlled group of the employer in 1996); and (3) are sponsored by a company that is engaged primarily in interurban or interstate passenger bus service.

The special rule generally treats a plan to which it applies as having a funded current liability percentage of at least 90 percent for plan years beginning after 1996 and before 2004 if for such plan year the funded current liability percentage is at least 85 percent. If the funded current liability of the plan is less than 85 percent for any plan year beginning after 1996 and before 2004, the relief from the minimum funding requirements generally applies only if certain specified contributions are made.

For plan years beginning in 2004 and 2005, the funded current liability percentage of the plan is treated as at least 90 percent for purposes of determining the amount of required contributions (100 percent for purposes of determining whether quarterly contributions are required). As a result, for these years, additional contributions under the deficit reduction contribution rules and quarterly contributions are not required with respect to the plan. In addition, for these years, the mortality table used under the plan is used in calculating PBGC variable rate premiums.

For plan years beginning after 2005 and before 2010, the funded current liability percentage generally will be deemed to be at least 90 percent if the actual funded current liability percentage is at least at certain specified levels. The relief from the minimum funding requirements generally applies for a plan year beginning in 2006, 2007, or 2008 only if contributions to the plan for the plan year equal at least the expected increase in current liability due to benefits accruing during the plan year.

Explanation of Provision

The provision revises the special rule for a plan that is sponsored by a company engaged primarily in interurban or interstate passenger bus service and that meets the other requirements for the special rule under present law. The provision extends the application of the special rule under present law for plan years beginning in 2004 and 2005 to plan years beginning in 2006 and 2007. The provision also provides several special rules relating to determining minimum required contributions and variable rate premiums for plan years beginning after 2007 when the new funding rules for single-employer plans apply.

Under the provision, for the plan year beginning in 2006 or 2007, a plan's funded current liability percentage of a plan is treated as at least 90 percent for purposes of determining the amount of required contributions (100 percent for purposes of determining whether quarterly contributions are required). As a result, for the 2006 and 2007 plan years, additional contributions under the deficit reduction contribution rules and quarterly contributions are not required with respect to the plan. In addition, the mortality table used under the plan is used in calculating PBGC variable rate premiums.

Under the provision, for plan years beginning after 2007, the mortality table used under the plan is used in: (1) determining any present value or making any computation under the minimum funding rules applicable to the plan; and (2) calculating PBGC variable rate premiums. Under a special phase-in (in lieu of the phase-in otherwise applicable under the provision relating to funding rules for single-employer plans), for purposes of determining whether a shortfall amortization base is required for plan years beginning after 2007 and before 2012, the applicable percentage of the plan's funding shortfall is the following: 90 percent for 2008, 92 percent for 2009, 94 percent for 2010, and 96 percent for 2011. In addition, for purposes of the quarterly contributions requirement, the plan is treated as not having a funding shortfall for any plan year. As a result, quarterly contributions are not required with respect to the plan.

Effective Date

The provision is effective for plan years beginning after December 31, 2005.

G. Restrictions on Funding of Nonqualified Deferred Compensation Plans by Employers Maintaining Underfunded or Terminated Single-Employer Plans (sec. 409A of the Code)

Present Law

Amounts deferred under a nonqualified deferred compensation plan for all taxable years are currently includible in gross income to the extent not subject to a substantial risk of forfeiture and not previously included in gross income, unless certain requirements are satisfied.[53] For example, distributions from a nonqualified deferred compensation plan may be allowed only upon certain times and events. Rules also apply for the timing of elections. If the requirements are not satisfied, in addition to current income inclusion, interest at the underpayment rate plus one percentage point is imposed on the underpayments that would have occurred had the compensation been includible in income when first deferred, or if later, when not subject to a substantial risk of forfeiture. The amount required to be included in income is also subject to a 20-percent additional tax.

In the case of assets set aside in a trust (or other arrangement) for purposes of paying nonqualified deferred compensation, such assets are treated as property transferred in connection with the performance of services under Code section 83 at the time set aside if such assets (or trust or other arrangement) are located outside of the United States or at the time transferred if such assets (or trust or other arrangement) are subsequently transferred outside of the United States. A transfer of property in connection with the performance of services under Code section 83 also occurs with respect to compensation deferred under a nonqualified deferred compensation plan if the plan provides that upon a change in the employer's financial health, assets will be restricted to the payment of nonqualified deferred compensation.

Explanation of Provision

Under the provision, if during any restricted period in which a defined benefit pension plan of an employer is in at-risk status,[54] assets are set aside (directly or indirectly) in a trust (or other arrangement as determined by the Secretary of the Treasury), or transferred to such a trust or other arrangement, for purposes of paying deferred compensation of an applicable covered employee, such transferred assets are treated as property transferred in connection with the performance of services (whether or not such assets are available to satisfy the claims of general creditors) under Code section 83. The rule does not apply in the case of assets that are set aside before the defined benefit pension plan is in at-risk status.

If a nonqualified deferred compensation plan of an employer provides that assets will be restricted to the provision of benefits under the plan in connection with a restricted period (or

---

[53] Code sec. 409A.

[54] At-risk status is defined as under the provision relating to funding rules for single-employer defined benefit pension plans and applies if a plan's funding target attainment percentage for the preceding year was less than 60 percent.

other similar financial measure determined by the Secretary of Treasury) of any defined benefit pension plan of the employer, or assets are so restricted, such assets are treated as property transferred in connection with the performance of services (whether or not such assets are available to satisfy the claims of general creditors) under Code section 83.

A restricted period is (1) any period in which a single-employer defined benefit pension plan of an employer is in at risk-status, (2) any period in which the employer is in bankruptcy, and (3) the period that begins six months before and ends six months after the date any defined benefit pension plan of the employer is terminated in an involuntary or distress termination. The provision does not apply with respect to assets set aside before a restricted period.

In general, applicable covered employees include the chief executive officer (or individual acting in such capacity), the four highest compensated officers for the taxable year (other than the chief executive officer), and individuals subject to section 16(a) of the Securities Exchange Act of 1934. An applicable covered employee includes any (1) covered employee of a plan sponsor; (2) covered employee of a member of a controlled group which includes the plan sponsor; and (3) former employee who was a covered employee at the time of termination of employment with the plan sponsor or a member of a controlled group which includes the plan sponsor.

A nonqualified deferred compensation plan is any plan that provides for the deferral of compensation other than a qualified employer plan or any bona fide vacation leave, sick leave, compensatory time, disability pay, or death benefit plan. A qualified employer plan means a qualified retirement plan, tax-deferred annuity, simplified employee pension, and SIMPLE.[55] A qualified governmental excess benefit arrangement (sec. 415(m)) is a qualified employer plan. An eligible deferred compensation plan (sec. 457(b)) is also a qualified employer plan under the provision. The term plan includes any agreement or arrangement, including an agreement or arrangement that includes one person.

Any subsequent increases in the value of, or any earnings with respect to, transferred or restricted assets are treated as additional transfers of property. Interest at the underpayment rate plus one percentage point is imposed on the underpayments that would have occurred had the amounts been includible in income for the taxable year in which first deferred or, if later, the first taxable year not subject to a substantial risk of forfeiture. The amount required to be included in income is also subject to an additional 20-percent tax.

Under the provision, if an employer provides directly or indirectly for the payment of any Federal, State or local income taxes with respect to any compensation required to be included in income under the provision, interest is imposed on the amount of such payment in the same manner as if the payment were part of the deferred compensation to which it related. As under present law, such payment is included in income; in addition, under the provision, such payment is subject to a 20 percent additional tax. The payment is also nondeductible by the employer.

[55] A qualified employer plan also includes a section 501(c)(18) trust.

Effective Date

The provision is effective for transfers or other reservations of assets after date of enactment.

TITLE II: FUNDING RULES FOR MULTIEMPLOYER DEFINED BENEFIT PLANS

A. Funding Rules for Multiemployer Defined Benefit Plans (new sec. 304 of ERISA and new sec. 431 of the Code)

Present Law

Multiemployer plans

A multiemployer plan is a plan to which more than one unrelated employer contributes, which is established pursuant to one or more collective bargaining agreements, and which meets such other requirements as specified by the Secretary of Labor. Multiemployer plans are governed by a board of trustees consisting of an equal number of employer and employee representatives. In general, the level of contributions to a multiemployer plan is specified in the applicable collective bargaining agreements, and the level of plan benefits is established by the plan trustees.

Defined benefit multiemployer plans are subject to the same general minimum funding rules as single-employer plans, except that different rules apply in some cases. For example, different amortization periods apply for some costs in the case of multiemployer plans. In addition, the deficit reduction contribution rules do not apply to multiemployer plans.

Funding standard account

As an administrative aid in the application of the funding requirements, a defined benefit pension plan is required to maintain a special account called a "funding standard account" to which specified charges and credits are made for each plan year, including a charge for normal cost and credits for contributions to the plan. Other credits or charges or credits may apply as a result of decreases or increases in past service liability as a result of plan amendments or experience gains or losses, gains or losses resulting from a change in actuarial assumptions, or a waiver of minimum required contributions.

If, as of the close of the plan year, charges to the funding standard account exceed credits to the account, then the excess is referred to as an "accumulated funding deficiency." For example, if the balance of charges to the funding standard account of a plan for a year would be $200,000 without any contributions, then a minimum contribution equal to that amount would be required to meet the minimum funding standard for the year to prevent an accumulated funding deficiency. If credits to the funding standard account exceed charges, a "credit balance" results. The amount of the credit balance, increased with interest, can be used to reduce future required contributions.

Funding methods and general concepts

In general

A defined benefit pension plan is required to use an acceptable actuarial cost method to determine the elements included in its funding standard account for a year. Generally, an actuarial cost method breaks up the cost of benefits under the plan into annual charges consisting

of two elements for each plan year. These elements are referred to as: (1) normal cost; and (2) supplemental cost.

Normal cost

The plan's normal cost for a plan year generally represents the cost of future benefits allocated to the year by the funding method used by the plan for current employees and, under some funding methods, for separated employees. Specifically, it is the amount actuarially determined that would be required as a contribution by the employer for the plan year in order to maintain the plan if the plan had been in effect from the beginning of service of the included employees and if the costs for prior years had been paid, and all assumptions as to interest, mortality, time of payment, etc., had been fulfilled.

Supplemental cost

The supplemental cost for a plan year is the cost of future benefits that would not be met by future normal costs, future employee contributions, or plan assets. The most common supplemental cost is that attributable to past service liability, which represents the cost of future benefits under the plan: (1) on the date the plan is first effective; or (2) on the date a plan amendment increasing plan benefits is first effective. Other supplemental costs may be attributable to net experience losses, changes in actuarial assumptions, and amounts necessary to make up funding deficiencies for which a waiver was obtained. Supplemental costs must be amortized (i.e., recognized for funding purposes) over a specified number of years, depending on the source.

Valuation of assets

For funding purposes, the actuarial value of plan assets may be used, rather than fair market value. The actuarial value of plan assets is the value determined under a reasonable actuarial valuation method that takes into account fair market value and is permitted under Treasury regulations. Any actuarial valuation method used must result in a value of plan assets that is not less than 80 percent of the fair market value of the assets and not more than 120 percent of the fair market value. In addition, if the valuation method uses average value of the plan assets, values may be used for a stated period not to exceed the five most recent plan years, including the current year.

Reasonableness of assumptions

In applying the funding rules, all costs, liabilities, interest rates, and other factors are required to be determined on the basis of actuarial assumptions and methods, each of which is reasonable (taking into account the experience of the plan and reasonable expectations), or which, in the aggregate, result in a total plan contribution equivalent to a contribution that would be obtained if each assumption and method were reasonable. In addition, the assumptions are required to offer the actuary's best estimate of anticipated experience under the plan.

Charges and credits to the funding standard account

In general

Under the minimum funding standard, the portion of the cost of a plan that is required to be paid for a particular year depends upon the nature of the cost. For example, the normal cost for a year is generally required to be funded currently. Other costs are spread (or amortized) over a period of years. In the case of a multiemployer plan, past service liability is amortized over 40 or 30 years depending on how the liability arose, experience gains and losses are amortized over 15 years, gains and losses from changes in actuarial assumptions are amortized over 30 years, and waived funding deficiencies are amortized over 15 years.

Normal cost

Each plan year, a plan's funding standard account is charged with the normal cost assigned to that year under the particular acceptable actuarial cost method adopted by the plan. The charge for normal cost will require an offsetting credit in the funding standard account. Usually, an employer contribution is required to create the credit. For example, if the normal cost for a plan year is $150,000, the funding standard account would be charged with that amount for the year. Assuming that there are no other credits in the account to offset the charge for normal cost, an employer contribution of $150,000 will be required for the year to avoid an accumulated funding deficiency.

Past service liability

There are three separate charges to the funding standard account one or more of which may apply to a multiemployer plan as the result of past service liabilities. In the case of a plan in existence on January 1, 1974, past service liability under the plan on the first day on which the plan was first subject to ERISA is amortized over 40 years. In the case of a plan which was not in existence on January 1, 1974, past service liability under the plan on the first day on which the plan was first subject to ERISA is amortized over 30 years. Past service liability due to plan amendments is amortized over 30 years.

Experience gains and losses

In determining plan funding under an actuarial cost method, a plan's actuary generally makes certain assumptions regarding the future experience of a plan. These assumptions typically involve rates of interest, mortality, disability, salary increases, and other factors affecting the value of assets and liabilities. The actuarial assumptions are required to be reasonable, as discussed above. If the plan's actual unfunded liabilities are less than those anticipated by the actuary on the basis of these assumptions, then the excess is an experience gain. If the actual unfunded liabilities are greater than those anticipated, then the difference is an experience loss. In the case of a multiemployer plan, experience gains and losses for a year are generally amortized over a 15-year period, resulting in credits or charges to the funding standard account.

Gains and losses from changes in assumptions

If the actuarial assumptions used for funding a plan are revised and, under the new assumptions, the accrued liability of a plan is less than the accrued liability computed under the previous assumptions, the decrease is a gain from changes in actuarial assumptions. If the new assumptions result in an increase in the accrued liability, the plan has a loss from changes in actuarial assumptions. The accrued liability of a plan is the actuarial present value of projected pension benefits under the plan that will not be funded by future contributions to meet normal cost or future employee contributions. In the case of a multiemployer plan, the gain or loss for a year from changes in actuarial assumptions is amortized over a period of 30 years, resulting in credits or charges to the funding standard account.

Shortfall funding method

Certain plans may elect to determine the required charges to the funding standard account under the shortfall method. Under such method, the charges are computed on the basis of an estimated number of units of service or production for which a certain amount per unit is to be charged. The difference between the net amount charged under this method and the net amount that otherwise would have been charged for the same period is a shortfall loss or gain that is amortized over subsequent plan years. The use of the shortfall method and changes to use of the shortfall method are generally subject to IRS approval.

Funding waivers and amortization of waived funding deficiencies

Within limits, the Secretary of the Treasury is permitted to waive all or a portion of the contributions required under the minimum funding standard for the year (a "waived funding deficiency"). In the case of a multiemployer plan, a waiver may be granted if 10 percent or more of the number of employers contributing to the plan could not make the required contribution without temporary substantial business hardship and if requiring the contribution would be adverse to the interests of plan participants in the aggregate. The minimum funding requirements may not be waived with respect to a multiemployer plan for more five out of any 15 consecutive years.

If a funding deficiency is waived, the waived amount is credited to the funding standard account. In the case of a multiemployer plan, the waived amount is then amortized over a period of 15 years, beginning with the year following the year in which the waiver is granted. Each year, the funding standard account is charged with the amortization amount for that year unless the plan becomes fully funded. In the case of a multiemployer plan, the interest rate used for purposes of determining the amortization on the waived amount is the rate determined under section 6621(b) of the Internal Revenue Code (relating to the Federal short-term rate).

Extension of amortization periods

Amortization periods may be extended for up to 10 years by the Secretary of the Treasury if the Secretary finds that the extension would carry out the purposes of ERISA and would provide adequate protection for participants under the plan and if such Secretary determines that the failure to permit such an extension would (1) result in a substantial risk to the voluntary continuation of the plan or a substantial curtailment of pension benefit levels or employee

compensation, and (2) be adverse to the interests of plan participants in the aggregate. The interest rate with respect to extensions of amortization periods is the same as that used with respect to waived funding deficiencies.

Alternative funding standard account

As an alternative to applying the rules described above, a plan which uses the entry age normal cost method may satisfy an alternative minimum funding standard. Under the alternative, the minimum required contribution for the year is generally based on the amount necessary to bring the plan's assets up to the present value of accrued benefits, determine using the actuarial assumptions that apply when a plan terminates. The alternative standard has been rarely used.

Controlled group liability for required contributions

Unlike the rule for single-employer plans which imposes liability for minimum required contributions to all members of the employer's controlled group, controlled-group liability does not apply to contributions an employer is required to make to a multiemployer plan.

Explanation of Provision

Amortization periods

The provision modifies the amortization periods applicable to multiemployer plans so that the amortization period for most charges is 15 years. Under the provision, past service liability under the plan is amortized over 15 years (rather than 30); past service liability due to plan amendments is amortized over 15 years (rather than 30); and experience gains and losses resulting from a change in actuarial assumptions are amortized over 15 years (rather than 30). As under present law, experience gains and losses and waived funding deficiencies are amortized over 15 years. The new amortization periods do not apply to amounts being amortized under present-law amortization periods, that is, no recalculation of amortization schedules already in effect is required under the provision. The provision eliminates the alternative funding standard account.

Actuarial assumptions

The provision provides that in applying the funding rules, all costs, liabilities, interest rates, and other factors are required to be determined on the basis of actuarial assumptions and methods, each of which is reasonable (taking into account the experience of the plan and reasonable expectations). In addition, as under present law, the assumptions are required to offer the actuary's best estimate of anticipated experience under the plan.

Extension of amortization periods

The provision provides that, upon application to the Secretary of the Treasury, the Secretary is required to grant an extension of the amortization period for up to five years with respect to any unfunded past service liability, investment loss, or experience loss. Included with the application must be a certification by the plan's actuary that (1) absent the extension, the plan

would have an accumulated funding deficiency in the current plan year and any of the nine succeeding plan years, (2) the plan sponsor has adopted a plan to improve the plan's funding status, (3) taking into account the extension, the plan is projected to have sufficient assets to timely pay its expected benefit liabilities and other anticipated expenditures, and (4) that required notice is provided. The automatic extension provision does not apply with respect to any application submitted after December 31, 2014.

The Secretary of the Treasury may also grant an additional extension of such amortization periods for an additional five years. The standards for determining whether such an extension may be granted are the same as under present law. In addition, the provision requires the Secretary of the Treasury to act upon an application for an additional extension within 180 days after submission. If the Secretary rejects the application, the Secretary must provide notice to the plan detailing the specific reasons for the rejection.

As under present law, these extensions do not apply unless the applicant demonstrates to the satisfaction of the Treasury Secretary that notice of the application has been provided to each affected party (as defined in ERISA section 4001(a)(21)).

Interest rate applicable to funding waivers and extension of amortization periods

The provision eliminates the special interest rate rule for funding waivers and extensions of amortization periods so that the plan rate applies.

Additional provisions

Controlled group liability for required contributions

The provision imposes joint and several liability to all members of the employer's controlled group for minimum required contributions to single-employer or multiemployer plans.

Shortfall funding method

The provision provides that, for plan years beginning before January 1, 2015, certain multiemployer plans may adopt, use or cease using the shortfall funding method and such adoption, use, or cessation of use is deemed approved by the Secretary of the Treasury. Plans are eligible if (1) the plan has not used the shortfall funding method during the five-year period ending on the day before the date the plan is to use the shortfall funding method; and (2) the plan is not operating under an amortization period extension and did not operate under such an extension during such five-year period. Benefit restrictions apply during a period that a multiemployer plan is using the shortfall funding method. In general, plan amendments increasing benefits cannot be adopted while the shortfall funding method is in use. The provision is not intended to affect a plan's ability to adopt the shortfall funding method with IRS approval or to affect a plan's right to change funding methods as otherwise permitted.

Effective Date

The provision is effective for plan years beginning after 2007.

B. Additional Funding Rules for Multiemployer Plans in Endangered or Critical Status (new sec. 305 of ERISA and new sec. 432 of the Code)

Present Law

In general

Multiemployer defined benefit plans are subject to minimum funding rules similar to those applicable to single-employer plans.[56] If a multiemployer plan has an accumulated funding deficiency for a year, an excise tax of five percent generally applies, increasing to 100 percent if contributions sufficient to eliminate the funding deficiency are not made within a certain period.

Additional required contributions and benefit reductions may apply if a multiemployer plan is in reorganization status or is insolvent.

Reorganization status

Certain modifications to the single-employer plan funding rules apply to multiemployer plans that experience financial difficulties, referred to as "reorganization status." A plan is in reorganization status for a year if the contribution needed to balance the charges and credits to its funding standard account exceeds its "vested benefits charge."[57] The plan's vested benefits charge is generally the amount needed to amortize, in equal annual installments, unfunded vested benefits under the plan over: (1) 10 years in the case of obligations attributable to participants in pay status; and (2) 25 years in the case of obligations attributable to other participants. A plan in reorganization status is eligible for a special funding credit. In addition, a cap on year-to-year contribution increases and other relief is available to employers that continue to contribute to the plan.

Subject to certain requirements, a multiemployer plan in reorganization status may also be amended to reduce or eliminate accrued benefits in excess of the amount of benefits guaranteed by the PBGC.[58] In order for accrued benefits to be reduced, at least six months before the beginning of the plan year in which the amendment is adopted, notice must be given that the plan is in reorganization status and that, if contributions to the plan are not increased, accrued benefits will be reduced or an excise tax will be imposed on employers obligated to contribute to the plan. The notice must be provided to plan participants and beneficiaries, any

---

[56] See the explanation of the preceding provision for a discussion of the minimum funding rules for multiemployer defined benefit plans. Under Treasury regulations, certain noncollectively bargained employees covered by a multiemployer plan may be treated as collectively bargained employees for purposes of applying the minimum coverage rules of the Code. Treas. Reg. sec. 1.410(b)-6(d)(2)(ii)(D).

[57] ERISA sec. 4241.

[58] ERISA sec. 4244A.

employer who has an obligation to contribute to the plan, and any employee organization representing employees in the plan.

Insolvency

In the case of multiemployer plans, the PBGC insures plan insolvency, rather than plan termination. A plan is insolvent when its available resources are not sufficient to pay the plan benefits for the plan year in question, or when the sponsor of a plan in reorganization reasonably determines, taking into account the plan's recent and anticipated financial experience, that the plan's available resources will not be sufficient to pay benefits that come due in the next plan year.[59] An insolvent plan is required to reduce benefits to the level that can be covered by the plan's assets. However, benefits cannot be reduced below the level guaranteed by the PBGC.[60] If a multiemployer plan is insolvent, the PBGC guarantee is provided in the form of loans to the plan trustees. If the plan recovers from insolvency status, loans from the PBGC can be repaid. Plans in reorganization status are required to compare assets and liabilities to determine if the plan will become insolvent in the future.

Explanation of Provision

In general

The provision provides additional funding rules for multiemployer defined benefit plans in effect on July 16, 2006, that are in endangered or critical status. The provision requires the adoption of and compliance with (1) a funding improvement plan in the case of a multiemployer plan in endangered status, and (2) a rehabilitation plan in the case of a multiemployer plan in critical status.

Under the provision, in the case of a plan in critical status, additional required contributions and benefit reductions apply and employers are relieved of liability for minimum required contributions under the otherwise applicable funding rules, provided that a rehabilitation plan is adopted and followed.

Annual certification of status; notice; annual reports

Not later than the 90th day of each plan year, the plan actuary must certify to the Secretary of the Treasury and to the plan sponsor whether or not the plan is in endangered or critical status for the plan year. In the case of a plan that is in a funding improvement or rehabilitation period, the actuary must certify whether or not the plan is making scheduled progress in meeting the requirements of its funding improvement or rehabilitation plan.

---

[59] ERISA sec. 4245.

[60] The limit of benefits that the PBGC guarantees under a multiemployer plan is the sum of 100 percent of the first $11 of monthly benefits and 75 percent of the next $33 of monthly benefits for each year of service. ERISA sec. 4022A(c).

In making the determinations and projections applicable under the endangered and critical status rules, the plan actuary must make projections for the current and succeeding plan years of the current value of the assets of the plan and the present value of all liabilities to participants and beneficiaries under the plan for the current plan year as of the beginning of such year. The actuary's projections must be based on reasonable actuarial estimates, assumptions, and methods that offer the actuary's best estimate of anticipated experience under the plan. An exception to this rule applies in the case of projected industry activity. Any projection of activity in the industry or industries covered by the plan, including future covered employment and contribution levels, must be based on information provided by the plan sponsor, which shall act reasonably and in good faith. The projected present value of liabilities as of the beginning of the year must be based on the most recent actuarial statement required with respect to the most recently filed annual report or the actuarial valuation for the preceding plan year.

Any actuarial projection of plan assets must assume (1) reasonably anticipated employer contributions for the current and succeeding plan years, assuming that the terms of one or more collective bargaining agreements pursuant to which the plan is maintained for the current plan year continue in effect for the succeeding plan years, or (2) that employer contributions for the most recent plan year will continue indefinitely, but only if the plan actuary determines that there have been no significant demographic changes that would make continued application of such terms unreasonable.

Failure of the plan's actuary to certify the status of the plan is treated as a failure to file the annual report (thus, an ERISA penalty of up to $1,100 per day applies).

If a plan is certified to be in endangered or critical status, notification of the endangered or critical status must be provided within 30 days after the date of certification to the participants and beneficiaries, the bargaining parties, the PBGC and the Secretary of Labor.[61] If it is certified that a plan is or will be in critical status, the plan sponsor must included in the notice an explanation of the possibility that (1) adjustable benefits may be reduced and (2) such reductions may apply to participants and beneficiaries whose benefit commencement date is on or after the date such notice is provided for the first plan year in which the plan is in critical status. The Secretary of Labor is required to prescribe a model notice to satisfy these requirements.

The plan sponsor must annually update the funding improvement or rehabilitation plan. Updates are required to be filed with the plan's annual report.

Endangered status

Definition of endangered status

A multiemployer plan is in endangered status if the plan is not in critical status and, as of the beginning of the plan year, (1) the plan's funded percentage for the plan year is less than 80

[61] If a plan actuary certifies that it is reasonably expected that a plan will be in critical status with respect to the first plan year after 2007, notice may be provided at any time after date of enactment, as long as it is provided on or before the date otherwise required.

percent, or (2) the plan has an accumulated funding deficiency for the plan year or is projected to have an accumulated funding deficiency in any of the six succeeding plan years (taking into account amortization extensions). A plan's funded percentage is the percentage of plan assets over accrued liability of the plan. A plan that meets the requirements of both (1) and (2) is treated as in seriously endangered status.

Information to be provided to bargaining parties

Within 30 days of the adoption of a funding improvement plan, the plan sponsor must provide to the bargaining parties schedules showing revised benefit structures, revised contribution structures, or both, which, if adopted, may reasonably be expected to enable the multiemployer plan to meet the applicable benchmarks in accordance with the funding improvement plan, including (1) one proposal for reductions in the amount of future benefit accruals necessary to achieve the applicable benchmarks, assuming no amendments increasing contributions under the plan (other than amendments increasing contributions necessary to achieve the applicable benchmarks after amendments have reduced future benefit accruals to the maximum extent permitted by law) (the "default schedule"), and (2) one proposal for increases in contributions under the plan necessary to achieve the applicable benchmarks, assuming no amendments reducing future benefit accruals under the plan. The applicable benchmarks are the requirements of the funding improvement plan (discussed below). The plan sponsor may provide the bargaining parties with additional information if deemed appropriate.

The plan sponsor must annually update any schedule of contribution rates to reflect the experience of the plan.

Funding improvement plan and funding improvement period

In the case of a multiemployer plan in endangered status, a funding improvement plan must be adopted within 240 days following the deadline for certifying a plan's status.[62] A funding improvement plan is a plan which consists of the actions, including options or a range of options, to be proposed to the bargaining parties, formulated to provide, based on reasonably anticipated experience and reasonable actuarial assumptions, for the attainment by the plan of certain requirements.

The funding improvement plan must provide that during the funding improvement period, the plan will have a certain required increase in the funded percentage and no accumulated funding deficiency for any plan year during the funding improvement period, taking into account amortization extensions (the "applicable benchmarks"). In the case of a plan that is not in seriously endangered status, under the applicable benchmarks, the plan's funded percentage must increase such that the funded percentage as of the close of the funding improvement period equals or exceeds a percentage equal to the sum of (1) the funded percentage at the beginning of the period, plus (2) 33 percent of the difference between 100 percent and the percentage in (1). Thus, the difference between 100 percent and the plan's

[62] This requirement applies for the initial determination year (i.e., the first plan year that the plan is in endangered status).

funded percentage at the beginning of the period must be reduced by at least one-third during the funding improvement period.

The funding improvement period is the 10-year period beginning on the first day of the first plan year beginning after the earlier of (1) the second anniversary of the date of adoption of the funding improvement plan, or (2) the expiration of collective bargaining agreements that were in effect on the due date for the actuarial certification of endangered status for the initial determination year and covering, as of such date, at least 75 percent of the plan's active participants. The period ends if the plan is no longer in endangered status or if the plan enters critical status.

In the case of a plan in seriously endangered status that is funded 70 percent or less, under the applicable benchmarks, the difference between 100 percent and the plan's funded percentage at the beginning of the period must be reduced by at least one-fifth during the funding improvement period. In the case of such plans, a 15-year funding improvement period is used.

In the case of a seriously endangered plan that is more than 70 percent funded as of the beginning of the initial determination year, the same benchmarks apply for plan years beginning on or before the date on which the last collective bargaining agreements in effect on the date for actuarial certification for the initial determination year and covering at least 75 percent of active employees in the multiemployer plan have expired if the plan actuary certifies within 30 days after certification of endangered status that the plan is not projected to attain the funding percentage increase otherwise required by the provision. Thus, for such plans, the difference between 100 percent and the plan's funded percentage at the beginning of the period must be reduced by at least one-fifth during the 15-year funding improvement period. For subsequent years for such plans, if the plan actuary certifies that the plan is not able to attain the increase generally required under the provision, the same benchmarks continue to apply.

As previously discussed, the plan sponsor must annually update the funding improvement plan and must file the update with the plan's annual report.

If, for the first plan year following the close of the funding improvement period, the plan's actuary certifies that the plan is in endangered status, such year is treated as an initial determination year. Thus, a new funding improvement plan must be adopted within 240 days of the required certification date. In such case, the plan may not be amended in a manner inconsistent with the funding improvement plan in effect for the preceding plan year until a new funding improvement plan is adopted.

Requirements pending approval of plan and during funding improvement period

Certain restrictions apply during the period beginning on the date of certification for the initial determination year and ending on the day before the first day of the funding improvement period (the "funding plan adoption period").

During the funding plan adoption period, the plan sponsor may not accept a collective bargaining agreement or participation agreement that provides for (1) a reduction in the level of contributions for any participants; (2) a suspension of contributions with respect to any period of

service; or (3) any new or indirect exclusion of younger or newly hired employees from plan participation.

In addition, during the funding plan adoption period, except in the case of amendments required as a condition of qualification under the Internal Revenue Code or to apply with other applicable law, no amendment may be adopted which increases liabilities of the plan by reason of any increase in benefits, any change in accrual of benefits, or any change in the rate at which benefits become nonforfeitable under the plan.

In the case of a plan in seriously endangered status, during the funding plan adoption period, the plan sponsor must take all reasonable actions (consistent with the terms of the plan and present law) which are expected, based on reasonable assumptions, to achieve an increase in the plan's funded percentage and a postponement of an accumulated funding deficiency for at least one additional plan year. These actions include applications for extensions of amortization periods, use of the shortfall funding method in making funding standard account computations, amendments to the plan's benefit structure, reductions in future benefit accruals, and other reasonable actions.

Upon adoption of a funding improvement plan, the plan may not be amended to be inconsistent with the funding improvement plan. During the funding improvement period, a plan sponsor may not accept a collective bargaining agreement or participation agreement with respect to the multiemployer plan that provides for (1) a reduction in the level of contributions for any participants; (2) a suspension of contributions with respect to any period of service, or (3) any new direct or indirect exclusion of younger or newly hired employees from plan participation.

After the adoption of a funding improvement plan, a plan may not be amended to increase benefits, including future benefit accruals, unless the plan actuary certifies that the benefit increase is consistent with the funding improvement plan and is paid for out of contributions not required by the funding improvement plan to meet the applicable benchmark in accordance with the schedule contemplated in the funding improvement plan.

Effect of and penalty for failure to adopt a funding improvement plan

If a collective bargaining agreement providing for contributions under a multiemployer plan that was in effect at the time the plan entered endangered status expires, and after receiving one or more schedules from the plan sponsor, the bargaining parties fail to agree on changes to contribution or benefit schedules necessary to meet the applicable benchmarks, the plan sponsor must implement the default schedule. The schedule must be implemented on the earlier of the date (1) on which the Secretary of Labor certifies that the parties are at an impasse, or (2) which is 180 days after the date on which the collective bargaining agreement expires.

In the case of the failure of a plan sponsor to adopt a funding improvement plan by the end of the 240-day period after the required certification date, an ERISA penalty of up to $1,100 a day applies.

Excise tax on employers failing to meet required contributions

If the funding improvement plan requires an employer to make contributions to the plan, an excise tax applies upon the failure of the employer to make such required contributions within the time required under the plan. The amount of tax is equal to the amount of the required contribution the employer failed to make in a timely manner.

Application of excise tax to plans in endangered status/penalty for failure to achieve benchmarks

In the case of a plan in endangered status, which is not in seriously endangered status, a civil penalty of $1,100 a day applies for the failure of the plan to meet the applicable benchmarks by the end of the funding improvement period.

In the case of a plan in seriously endangered status, an excise tax applies for the failure to meet the benchmarks by the end of the funding improvement period. In such case, an excise tax applies based on the greater of (1) the amount of the contributions necessary to meet such benchmarks or (2) the plan's accumulated funding deficiency. The excise tax applies for each succeeding plan year until the benchmarks are met.

Waiver of excise tax

In the case of a failure which is due to reasonable cause and not to willful neglect, the Secretary of the Treasury may waive all or part of the excise tax on employers failing to make required contributions and the excise tax for failure to achieve the applicable benchmarks. The party against whom the tax is imposed has the burden of establishing that the failure was due to reasonable cause and not willful neglect. Reasonable cause includes unanticipated and material market fluctuations, the loss of a significant contributing employer, or other factors to the extent that the payment of tax would be excessive or otherwise inequitable relative to the failure involved. The determination of reasonable cause is based on the facts and circumstances of each case and requires the parties to act with ordinary business care and prudence. The standard requires the funding improvement plan to be based on reasonably foreseeable events. It is expected that reasonable cause would include instances in which the plan experiences a net equity loss of at least ten percent during the funding improvement period, a change in plan demographics such as the bankruptcy of a significant contributing employer, a legal change (including the outcome of litigation) that unexpectedly increases the plan's benefit obligations, or a strike or lockout for a significant period.

Critical status

Definition of critical status

A multiemployer plan is in critical status for a plan year if as of the beginning of the plan year:

1. The funded percentage of the plan is less than 65 percent and the sum of (A) the market value of plan assets, plus (B) the present value of reasonably anticipated employer and employee contributions for the current plan year and each of the six

succeeding plan years (assuming that the terms of the collective bargaining agreements continue in effect) is less than the present value of all benefits projected to be payable under the plan during the current plan year and each of the six succeeding plan years (plus administrative expenses),

2. (A) The plan has an accumulated funding deficiency for the current plan year, not taking into account any amortization extension, or (B) the plan is projected to have an accumulated funding deficiency for any of the three succeeding plan years (four succeeding plan years if the funded percentage of the plan is 65 percent or less), not taking into account any amortization extension,

3. (A) The plan's normal cost for the current plan year, plus interest for the current plan year on the amount of unfunded benefit liabilities under the plan as of the last day of the preceding year, exceeds the present value of the reasonably anticipated employer contributions for the current plan year, (B) the present value of nonforfeitable benefits of inactive participants is greater than the present value of nonforfeitable benefits of active participants, and (C) the plan has an accumulated funding deficiency for the current plan year, or is projected to have an accumulated funding deficiency for any of the four succeeding plan years (not taking into account amortization period extensions), or

4. The sum of (A) the market value of plan assets, plus (B) the present value of the reasonably anticipated employer contributions for the current plan year and each of the four succeeding plan years (assuming that the terms of the collective bargaining agreements continue in effect) is less than the present value of all benefits projected to be payable under the plan during the current plan year and each of the four succeeding plan years (plus administrative expenses).

Additional contributions during critical status

In the case of a plan in critical status, the provision imposes an additional required contribution ("surcharge") on employers otherwise obligated to make a contribution in the initial critical year, i.e., the first plan year for which the plan is in critical status. The amount of the surcharge is five percent of the contribution otherwise required to be made under the applicable collective bargaining agreement. The surcharge is 10 percent of contributions otherwise required in the case of succeeding plan years in which the plan is in critical status. The surcharge applies 30 days after the employer is notified by the plan sponsor that the plan is in critical status and the surcharge is in effect. The surcharges are due and payable on the same schedule as the contributions on which the surcharges are based. Failure to make the surcharge payment is treated as a delinquent contribution. The surcharge is not required with respect to employees covered by a collective bargaining agreement (or other agreement pursuant to which the employer contributes), beginning on the effective date of a collective bargaining agreement (or other agreement) that includes terms consistent with a schedule presented by the plan sponsor. The amount of the surcharge may not be the basis for any benefit accrual under the plan.

Surcharges are disregarded in determining an employer's withdrawal liability except for purposes of determining the unfunded vested benefits attributable to an employer under ERISA section 4211(c)(4) or a comparable method approved under ERISA section 4211(c)(5).[63]

Reductions to previously earned benefits

Notwithstanding the anti-cutback rules, the plan sponsor may make any reductions to adjustable benefits which the plan sponsor deems appropriate, based upon the outcome of collective bargaining over the schedules required to be provided by the plan sponsor as discussed below. Adjustable benefits means (1) benefits, rights, and features under the plan, including post-retirement death benefits, 60-month guarantees, disability benefits not yet in pay status, and similar benefits; (2) any early retirement benefit or retirement-type subsidy and any benefit payment option (other than the qualified joint-and-survivor annuity); and (3) benefit increase that would not be eligible for PBGC guarantee on the first day of the initial critical year because the increases were adopted (or, if later, took effect) less than 60 months before such first day. Except as provided in (3), nothing should be construed to permit a plan to reduce the level of a participant's accrued benefit payable at normal retirement age.

The plan sponsor may not reduce adjustable benefits of any participant or beneficiary whose benefit commencement date is before the date on which the plan provides notice to the participant or beneficiary that the plan is in critical status and that benefits may be reduced. An exception applies in the case of benefit increases that would not be eligible for PBGC guarantee because the increases were adopted less than 60 months before the first day of the initial critical year.

The plan sponsor must include in the schedules provided to the bargaining parties an allowance for funding the benefits of participants with respect to whom contributions are not currently required to be made, and shall reduce their benefits to the extent permitted under the Code and ERISA and considered appropriate by the plan sponsor based on the plan's then current overall funding status.

Notice of any reduction of adjustable benefits must be provided at least 30 days before the general effective date of the reduction for all participants and beneficiaries. Benefits may not be reduced until the notice requirement is satisfied. Notice must be provided to (1) plan participants and beneficiaries; (2) each employer who has an obligation to contribute under the plans; and (3) each employee organization which, for purposes of collective bargaining, represents plan participants employed by such employer. The notice must contain (1) sufficient information to enable participants and beneficiaries to understand the effect of any reduction of their benefits, including an estimate (on an annual or monthly basis) of any affected adjustable benefit that a participant or beneficiary would otherwise have been eligible for as of the general effective date for benefit reductions; and (2) information as to the rights and remedies of plan participants and beneficiaries as well as how to contact the Department of Labor for further

[63] The PBGC is directed to prescribe simplified methods for determining withdrawal liability in this case.

information and assistance where appropriate. The notice must be provided in a form and manner prescribed in regulations of the Secretary of Labor. In such regulations, the Secretary of Labor must establish a model notice.

Benefit reduction are disregarded in determining a plan's unfunded vested benefits for purposes of determining an employer's withdrawal liability.[64]

Information to be provided to bargaining parties

Within 30 days after adoption of the rehabilitation plan, the plan sponsor must provide to the bargaining parties schedules showing revised benefit structures, revised contribution structures, or both which, if adopted, may reasonably be expected to enable the multiemployer plan to emerge from critical status in accordance with the rehabilitation plan.[65] The schedules must reflect reductions in future benefit accruals and adjustable benefits and increases in contributions that the plan sponsor determined are reasonably necessary to emerge from critical status. One schedule must be designated as the default schedule and must assume no increases in contributions other than increases necessary to emerge from critical status after future benefit accruals and other benefits (other than benefits the reduction or elimination of which are not permitted under the anti-cutback rules) have been reduced. The plan sponsor may also provide additional information as appropriate.

The plan sponsor must periodically update any schedule of contributions rates to reflect the experience of the plan.

Rehabilitation plan

If a plan is in critical status for a plan year, the plan sponsor must adopt a rehabilitation plan within 240 days following the required date for the actuarial certification of critical status.[66]

A rehabilitation plan is a plan which consists of actions, including options or a range of options to be proposed to the bargaining parties, formulated, based on reasonable anticipated experience and reasonable actuarial assumptions, to enable the plan to cease to be in critical status by the end of the rehabilitation period and may include reductions in plan expenditures (including plan mergers and consolidations), reductions in future benefits accruals or increases in contributions, if agreed to by the bargaining parties, or any combination of such actions.

---

[64] The PBGC is directed to prescribe simplified methods for determining withdrawal liability in this case.

[65] A schedule of contribution rates provided by the plan sponsor and relied upon by bargaining parties in negotiating a collective bargaining agreement must remain in effect for the duration of the collective bargaining agreement.

[66] The requirement applies with respect to the initial critical year.

A rehabilitation plan must provide annual standards for meeting the requirements of the rehabilitation. The plan must also include the schedules required to be provided to the bargaining parties.

If the plan sponsor determines that, based on reasonable actuarial assumptions and upon exhaustion of all reasonable measures, the plan cannot reasonably be expected to emerge from critical status by the end of the rehabilitation period, the plan must include reasonable measures to emerge from critical status at a later time or to forestall possible insolvency. In such case, the plan must set forth alternatives considered, explain why the plan is not reasonable expected to emerge from critical status by the end of the rehabilitation period, and specify when, if ever, the plan is expected to emerge from critical status in accordance with the rehabilitation plan.

As previously discussed, the plan sponsor must annually update the rehabilitation plan and must file the update with the plan's annual report.

Rehabilitation period

The rehabilitation period is the 10-year period beginning on the first day of the first plan year following the earlier of (1) the second anniversary of the date of adoption of the rehabilitation plan or (2) the expiration of collective bargaining agreements that were in effect on the due date for the actuarial certification of critical status for the initial critical year and covering at least 75 percent of the active participants in the plan.

The rehabilitation period ends if the plan emerges from critical status. A plan in critical status remains in critical status until a plan year for which the plan actuary certifies that the plan is not projected to have an accumulated funding deficiency for the plan year or any of the nine succeeding plan years, without regard to the use of the shortfall method and taking into account amortization period extensions.

Rules for reductions in future benefit accrual rates

Any schedule including reductions in future benefit accruals forming part of a rehabilitation plan must not reduce the rate of benefit accruals below (1) a monthly benefit (payable as a single life annuity commencing at the participant's normal retirement age) equal to one percent of the contributions required to be made with respect to a participant or the equivalent standard accrual rate for a participant or group of participants under the collective bargaining agreements in effect as of the first day of the initial critical year, or (2) if lower, the accrual rate under the plan on such first day.

The equivalent standard accrual rate is determined by the plan sponsor based on the standard or average contribution base units which the plan sponsor determines to be representative for active participants and such other factors that the plan sponsor determines to be relevant.

Benefit reductions are disregarded in determining an employer's withdrawal liability.

Requirements pending approval and during rehabilitation period

Rehabilitation plan adoption period.−Certain restrictions apply during the period beginning on the date of certification and ending on the day before the first day of the rehabilitation period (defined as the "rehabilitation plan adoption period").

During the rehabilitation plan adoption period, the plan sponsor may not accept a collective bargaining agreement or participation agreement that provides for (1) a reduction in the level of contributions for any participants; (2) a suspension of contributions with respect to any period of service; or (3) any new direct or indirect exclusion of younger or newly hired employees from plan participation. Except in the case of amendments required as a condition of qualification under the Internal Revenue Code or to comply with other applicable law, during the rehabilitation plan adoption period, no amendments that increase the liabilities of the plan by reason of any increase in benefits, any change in the accrual of benefits, or any change in the rate at which benefits become nonforfeitable may be adopted.

During rehabilitation period.−A plan may not be amended after the date of adoption of a rehabilitation plan to be inconsistent with the rehabilitation plan.

A plan may not be amended after the date of adoption of a rehabilitation plan to increase benefits (including future benefit accruals) unless the plan actuary certifies that such increase is paid for out of additional contributions not contemplated by the rehabilitation plan and, after taking into account the benefit increases, the plan is still reasonably expected to emerge from critical status by the end of the rehabilitation period on the schedule contemplated by the rehabilitation plan.

Beginning on the date that notice of certification of the plan's critical status is sent, lump sum and other similar benefits may not be paid. The restriction does not apply if the present value of the participant's accrued benefit does not exceed $5,000. The restriction also does not apply to any makeup payment in the case of a retroactive annuity starting date or any similar payment of benefits owed with respect to a prior period.

The plan sponsor must annually update the plan and must file updates with the plan's annual report. Schedules must be annually updated to reflect experience of the plan.

Effect and penalty for failure to adopt a rehabilitation plan

If a collective bargaining agreement providing for contributions under a multiemployer plan that was in effect at the time the plan entered endangered status expires, and after receiving one of more schedules from the plan sponsor, the bargaining parties fail to adopt a contribution or benefit schedule with terms consistent with the rehabilitation plan and the scheduled from the plan sponsor, the plan sponsor must implement the default schedule. The schedule must be implemented on the earlier of the date (1) on which the Secretary of Labor certifies that the parties are at an impasse, or (2) which is 180 days after the date on which the collective bargaining agreement expires.

Upon the failure of a plan sponsor to adopt a rehabilitation plan within 240 days after the date required for certification, an ERISA penalty of $1,100 a day applies. In addition, upon the

failure to timely adopt a rehabilitation plan, an excise tax is imposed on the plan sponsor equal to the greater of (1) the present law excise tax or (2) $1,100 per day. The tax must be paid by the plan sponsor.

Excise tax on employers failing to meet required contributions

If the rehabilitation plan requires an employer to make contributions to the plan, an excise tax applies upon the failure of the employer to make such required contributions within the time required under the plan. The amount of tax is equal to the amount of the required contribution the employer failed to make in a timely manner.

Application of excise tax to plans in critical status/penalty for failure to meet benchmarks or make scheduled progress

In the case of a plan in critical status, if a rehabilitation plan is adopted and complied with, employers are not liable for contributions otherwise required under the general funding rules. In addition, the present-law excise tax does not apply.

If a plan fails to leave critical status at the end of the rehabilitation period or fails to make scheduled progress in meeting its requirements under the rehabilitation plan for three consecutive years, the present law excise tax applies based on the greater of (1) the amount of the contributions necessary to leave critical status or make scheduled progress or (2) the plan's accumulated funding deficiency. The excise tax applies for each succeeding plan year until the requirements are met.

Waiver of excise tax

In the case of a failure which is due to reasonable cause and not to willful neglect, the Secretary of the Treasury may waive all or part of the excise tax on employers failing to make required contributions and the excise tax for failure to meet the rehabilitation plan requirements or make scheduled progress. The standards applicable to waivers of the excise tax for plans in endangered status apply to waivers of plans in critical status.

Additional rules

In general

The actuary's determination with respect to a plan's normal cost, actuarial accrued liability, and improvements in a plan's funded percentage must be based on the unit credit funding method (whether or not that method is used for the plan's actuarial valuation).

In the case of a plan sponsor described under section 404(c) of the Code, the term "plan sponsor" means the bargaining parties.

Expedited resolution of plan sponsor decisions

If, within 60 days of the due date for the adoption of a funding improvement plan or a rehabilitation plan, the plan sponsor has not agreed on a funding improvement plan or a

rehabilitation plan, any member of the board or group that constitutes the plan sponsor may require that the plan sponsor enter into an expedited dispute resolution procedure for the development and adoption of a funding improvement plan or rehabilitation plan.

Nonbargained participation

In the case of an employer who contributes to a multiemployer plan with respect to both employees who are covered by one or more collective bargaining agreements and to employees who are not so covered, if the plan is in endangered or critical status, benefits of and contributions for the nonbargained employees, including surcharges on those contributions, must be determined as if the nonbargained employees were covered under the first to expire of the employer's collective bargaining agreements in effect when the plan entered endangered or critical status.[67] In the case of an employer who contributes to a multiemployer plan only with respect to employees who are not covered by a collective bargaining agreement, the additional funding rules apply as if the employer were the bargaining party, and its participation agreement with the plan was a collective bargaining agreement with a term ending on the first day of the plan year beginning after the employer is provided the schedule requires to be provided by the plan sponsor.

Special rule for certain restored benefits

In the case of benefits which were reduced pursuant to a plan amendment adopted on or after January 1, 2002, and before June 30, 2005, if, pursuant to the plan document, the trust agreement, or a formal written communication from the plan sponsor to participants provided before June 30, 2005, such benefits were restored, the rules under the provision do not apply to such benefit restorations to the extent that any restriction on the providing or accrual of such benefits would otherwise apply by reason of the provision.

Cause of action to compel adoption of funding improvement or rehabilitation plan

The provision creates a cause of action under ERISA in the case that the plan sponsor of a plan certified to be endangered or critical (1) has not adopted a funding improvement or rehabilitation plan within 240 days of certification of endangered or critical or (2) fails to update or comply with the terms of the funding improvement or rehabilitation plan. In such case, a civil action may be brought by an employer that has an obligation to contribute with respect to the plan, or an employee organization that represents active participants, for an order compelling the plan sponsor to adopt a funding improvement or rehabilitation plan or to update or comply with the terms of the funding improvement or rehabilitation plan.

[67] Treasury regulations allowing certain noncollectively bargained employees covered by a multiemployer plan to be treated as collectively bargained employees for purposes of the minimum coverage rules of the Code do not apply in making determinations under the provision.

Effective Date

The provision is effective for plan years beginning after 2007. The additional funding rules for plans in endangered or critical status do not apply to plan years beginning after December 31, 2014.

If a plan is operating under a funding improvement or rehabilitation plan for its last year beginning before January 1, 2015, the plan shall continue to operate under such funding improvement or rehabilitation plan during any period after December 31, 2014, that such funding improvement or rehabilitation plan is in effect.

C. Measures to Forestall Insolvency of Multiemployer Plans (sec. 4245 of ERISA and sec. 418E of the Code)

Present Law

In the case of multiemployer plans, the PBGC insures plan insolvency, rather than plan termination. A plan is insolvent when its available resources are not sufficient to pay the plan benefits for the plan year in question, or when the sponsor of a plan in reorganization reasonably determines, taking into account the plan's recent and anticipated financial experience, that the plan's available resources will not be sufficient to pay benefits that come due in the next plan year.

In order to anticipate future insolvencies, at the end of the first plan year in which a plan is in reorganization and at least every three plans year thereafter, the plan sponsor must compare the value of plan assets for the plan year with the total amount of benefit payments made under the plan for the plan year.[68] Unless the plan sponsor determines that the value of plan assets exceeds three times the total amount of benefit payments, the plan sponsor must determine whether the plan will be insolvent for any of the next three plan years.

Explanation of Provision

The provision modifies the requirements for anticipating future insolvencies of plans in reorganization status. Under the provision, unless the plan sponsor determines that the value of plan assets exceeds three times the total amount of benefit payments, the plan sponsor must determine whether the plan will be insolvent for any of the next five plan years, rather than three plan years as under present law. If the plan sponsor makes a determination that the plan will be insolvent for any of the next five plan years, the plan sponsor must make the comparison of plan assets and benefit payments under the plan at least annually until the plan sponsor makes a determination that the plan will not be insolvent in any of the next five plan years.

Effective Date

The provision is effective with respect to determinations made in plan years beginning after 2007.

[68] Code sec. 418E(d)(1); ERISA sec. 4245(d)(1).

D. Withdrawal Liability Reforms (secs. 4203, 4205, 4210, 4219, 4221 and 4225 of ERISA)

1. Repeal of limitation on withdrawal liability in certain cases

Present Law

Under ERISA, an employer which withdraws from a multiemployer plan in a complete or partial withdrawal is liable to the plan in the amount determined to be the employer's withdrawal liability.[69] In general, a "complete withdrawal" means the employer has permanently ceased operations under the plan or has permanently ceased to have an obligation to contribute.[70] A "partial withdrawal" generally occurs if, on the last day of a plan year, there is a 70-percent contribution decline for such plan year or there is a partial cessation of the employer's contribution obligation.[71]

When an employer withdraws from a multiemployer plan, the plan sponsor is required to determine the amount of the employer's withdrawal liability, notify the employer of the amount of the withdrawal liability, and collect the amount of the withdrawal liability from the employer.[72] The employer's withdrawal liability generally is based on the extent of the plan's unfunded vested benefits for the plan years preceding the withdrawal.[73]

ERISA section 4225 provides rules limiting or subordinating withdrawal liability in certain cases. The amount of unfunded vested benefits allocable to an employer is limited in the case of certain sales of all or substantially all of the employer's assets and in the case of an insolvent employer undergoing liquidation or dissolution.

In the case of a bona fide sale of all or substantially all of the employer's assets in an arm's length transaction to an unrelated party, the unfunded vested benefits allocable to an employer is limited to the greater of (1) a portion of the liquidation or dissolution value of the employer (determined after the sale or exchange of such assets), or (2) the unfunded vested benefits attributable to the employees of the employer. The portion to be used in (1) is determined in accordance with a table described in ERISA section 4225(a)(2). Other limitations on withdrawal liability also apply.

---

[69] ERISA sec. 4201.

[70] ERISA sec. 4203.

[71] ERISA sec. 4205.

[72] ERISA sec. 4202.

[73] ERISA secs. 4209 and 4211.

Explanation of Provision

The provision prescribes a new table under ERISA section 4225(a)(2) to be used in determining the portion of the liquidation or dissolution value of the employer for the calculation of the limitation of unfunded vested benefits allocable to an employer in the case of a bona fide sale of all or substantially all of the employer's assets in an arm's length transaction to an unrelated party. The provision also modifies the calculation of the limit so that the unfunded vested benefits allocable to an employer do not exceed the greater of (1) a portion of the liquidation or dissolution value of the employer (determined after the sale or exchange of such assets), or (2) in the case of a plan using the attributable method of allocating withdrawal liability, the unfunded vested benefits attributable to the employees of the employer. Present law ERISA section 4225(b) is not amended by the provision.

Effective Date

The provisions are effective for sales occurring on or after January 1, 2007.

2. Withdrawal liability continues if work contracted out

Present Law

Under ERISA, an employer which withdraws from a multiemployer plan in a complete or partial withdrawal is liable to the plan in the amount determined to be the employer's withdrawal liability.[74] In general, a "complete withdrawal" means the employer has permanently ceased operations under the plan or has permanently ceased to have an obligation to contribute.[75]

A "partial withdrawal" generally occurs if, on the last day of a plan year, there is a 70-percent contribution decline for such plan year or there is a partial cessation of the employer's contribution obligation.[76] A partial cessation of the employer's obligation occurs if (1) the employer permanently ceases to have an obligation to contribute under one or more, but fewer than all collective bargaining agreements under which obligated to contribute, but the employer continues to perform work in the jurisdiction of the collective bargaining agreement or transfers such work to another location or (2) an employer permanently ceases to have an obligation to contribute under the plan with respect to work performed at one or more, but fewer than all of its facilities, but continues to perform work at the facility of the type for which the obligation to contribute ceased.[77]

---

[74] ERISA sec. 4201.

[75] ERISA sec. 4203.

[76] ERISA sec. 4205.

[77] ERISA sec. 4205(b)(2).

Explanation of Provision

Under the provision, a partial withdrawal also occurs if the employer permanently ceases to have an obligation to contribute under one or more, but fewer than all collective bargaining agreements under which obligated to contribute, but the employer transfers such work to an entity or entities owned or controlled by the employer.

Effective Date

The provision is effective with respect to work transferred on or after the date of enactment.

3. Application of forgiveness rule to plans primarily covering employees in building and construction

Present Law

Under ERISA, an employer which withdraws from a multiemployer plan in a complete or partial withdrawal is liable to the plan in the amount determined to be the employer's withdrawal liability.[78] A multiemployer plan, other than a plan which primarily covers employees in the building and construction industry, may adopt a rule that an employer who withdraws from the plan is not subject to withdrawal liability if certain requirements are satisfied.[79] In general, the employer is not liable if the employer (1) first had an obligation to contribute to the plan after the date of enactment of the Multiemployer Pension Plan Amendments Act of 1980; (2) contributed to the plan for no more than the lesser of six plan years or the number of years required for vesting under the plan; (3) was required to make contributions to the plan for each year in an amount equal to less than two percent of all employer contributions for the year; and (4) never avoided withdrawal liability because of the special rule.

A multiemployer plan, other than a plan that primarily covers employees in the building and construction industry, may be amended to provide that the amount of unfunded benefits allocable to an employer that withdraws from the plan is determined under an alternative method.[80]

Explanation of Provision

The provision extends the rule allowing plans to exempt certain employers from withdrawal liability to plans primarily covering employees in the building and construction industries. In addition, the provision also provides that a plan (including a plan which primarily covers employees in the building and construction industry) may be amended to provide that the

---

[78] ERISA sec. 4201.

[79] ERISA sec. 4210.

[80] ERISA sec. 4211(c)(1).

withdrawal liability method otherwise applicable shall be applied by substituting the plan year which is specified in the amendment and for which the plan has no unfunded vested benefits for the plan year ending before September 26, 1980.

Effective Date

The provision is effective with respect to plan withdrawals occurring on or after January 1, 2007.

4. Procedures applicable to disputes involving withdrawal liability

Present Law

Under ERISA, when an employer withdraws from a multiemployer plan, the employer is generally liable for its share of unfunded vested benefits, determined as of the date of withdrawal (generally referred to as the "withdrawal liability"). Whether and when a withdrawal has occurred and the amount of the withdrawal liability is determined by the plan sponsor. The plan sponsor's assessment of withdrawal liability is presumed correct unless the employer shows by a preponderance of the evidence that the plan sponsor's determination of withdrawal liability was unreasonable or clearly erroneous. A similar standard applies in the event the amount of the plan's unfunded vested benefits is challenged.

The first payment of withdrawal liability determined by the plan sponsor is generally due no later than 60 days after demand, even if the employer contests the determination of liability. Disputes between an employer and plan sponsor concerning withdrawal liability are resolved through arbitration, which can be initiated by either party. Even if the employer contests the determination, payments of withdrawal liability must be made by the employer until the arbitrator issues a final decision with respect to the determination submitted for arbitration.

For purposes of withdrawal liability, all trades or businesses under common control are treated as a single employer. In addition, the plan sponsor may disregard a transaction in order to assess withdrawal liability if the sponsor determines that the principal purpose of the transaction was to avoid or evade withdrawal liability. For example, if a subsidiary of a parent company is sold and the subsidiary then withdraws from a multiemployer plan, the plan sponsor may assess withdrawal liability as if the subsidiary were still part of the parent company's controlled group if the sponsor determines that a principal purpose of the sale of the subsidiary was to evade or avoid withdrawal liability.

In the case of an employer that receives a notification of withdrawal liability and demand for payment after October 31, 2003, a special rule may apply if a transaction is disregarded by a plan sponsor in determining that a withdrawal has occurred or that an employer is liable for withdrawal liability. If the transaction that is disregarded by the plan sponsor occurred before January 1, 1999, and at least five years before the date of the withdrawal, then (1) the determination by the plan sponsor that a principal purpose of the transaction was to evade or avoid withdrawal liability is not be presumed to be correct, (2) the plan sponsor, rather than the employer, has the burden to establish, by a preponderance of the evidence, the elements of the claim that a principal purpose of the transaction was to evade or avoid withdrawal liability, and (3) if an employer contests the plan sponsor's determination through an arbitration proceeding,

or through a claim brought in a court of competent jurisdiction, the employer is not obligated to make any withdrawal liability payments until a final decision in the arbitration proceeding, or in court, upholds the plan sponsor's determination.

Explanation of Provision

Under the provision, if (1) a plan sponsor determines that a complete or partial withdrawal of an employer has occurred or an employer is liable for withdrawal liability payments with respect to the complete or partial withdrawal from the plan and (2) such determination is based in whole or in part on a finding by the plan sponsor that a principal purpose of any transaction that occurred after December 31, 1998, and at least five years (two years in the case of a small employer) before the date of complete or partial withdrawal was to evade or avoid withdrawal liability, the person against which the withdrawal liability is assessed may elect to use a special rule relating to required payments. Under the special rule, if the electing person contests the plan sponsor's determination with respect to withdrawal liability payments through an arbitration proceeding, through a claim brought in a court of competent jurisdiction, or as otherwise permitted by law, the electing person is not obligated to make the withdrawal liability payments until a final decision in the arbitration proceeding, or in court, upholds the plan sponsor's determination. The special rule applies only if the electing person (1) provides notice to the plan sponsor of its election to apply the special rule within 90 days after the plan sponsor notifies the electing person of its liability, and (2) if a final decision on the arbitration proceeding, or in court, of the withdrawal liability dispute has not been rendered within 12 months from the date of such notice, the electing person provides to the plan, effective as of the first day following the 12-month period, a bond issued by a corporate surety, or an amount held on escrow by a bank or similar financial institution satisfactory to the plan, in an amount equal to the sum of the withdrawal liability payments that would otherwise be due for the 12-month period beginning with the first anniversary of such notice. The bond or escrow must remain in effect until there is a final decision in the arbitration proceeding, or on court, of the withdrawal liability dispute. At such time, the bond or escrow must be paid to the plan if the final decision upholds the plan sponsor's determination. If the withdrawal liability dispute is not concluded by 12 months after the electing person posts the bond or escrow, the electing person must, at the start of each succeeding 12-month period, provide an additional bond or amount held in escrow equal to the sum of the withdrawal liability payments that would otherwise be payable to the plan during that period.

A small employer is an employer which, for the calendar year in which the transaction occurred, and for each of the three preceding years, on average (1) employs no more than 500 employees, and (2) is required to make contributions to the plan on behalf of not more than 250 employees.

Effective Date

The provision is effective for any person that receives a notification of withdrawal liability and demand for payment on or after the date of enactment with respect to a transaction that occurred after December 31, 1998.

E. Prohibition on Retaliation against Employers Exercising their Rights to Petition the Federal Government (sec. 510 of ERISA)

Present Law

Under ERISA section 510, it is unlawful for any person to discharge, fine, suspend, expel, discipline, or discriminate against a participant or beneficiary for exercising any right to which he is entitled under the provisions of an employee benefit plan, Title I or section 3001 of ERISA, or the Welfare and Pension Plans Disclosure Act, or for the purpose of interfering with the attainment of any right to which a participant may become entitled. It is also unlawful for any person to discharge, fine, suspend, expel or discriminate against any person because he has given information or has testified or is about to testify in any inquiry or proceeding relating to ERISA or the Welfare and Pension Plans Disclosure Act. The civil enforcement provisions under ERISA section 503 are applicable in the enforcement of such provisions.

Explanation of Provision

The provision provides that in the case of a multiemployer plan, it is unlawful for the plan sponsor or any other person to discriminate against any contributing employer for exercising rights under ERISA or for giving information or testifying in an inquiry or proceedings relating to ERISA before Congress. The provision amends the anti-retaliation section of ERISA to provide protection for employers who contribute to multiemployer plans and others. The provision is intended to close a loophole in the existing whistleblower protections. In June 2005, a witness who appeared on behalf of several other companies testified before the Retirement Security & Aging Subcommittee of the Senate Health, Education, Labor & Pensions Committee. Subsequent to that testimony there was an allegation that some of these companies may have been targeted for possible audits.

It is intended that retaliation against any employer who has an obligation to contribute to a plan due to testifying before Congress or exercising his or her rights to petition for redress of grievances would amount to unlawful retaliation under ERISA as amended by the provision. Exercising rights under ERISA, testifying before Congress, and giving information in any inquiry or proceeding relating to this Act are intended to be protected under the provision.

Effective Date

The provision is effective on the date of enactment.

F. Special Rule for Certain Benefits Funded under an Agreement Approved by the PBGC

Present Law

No provision.

Explanation of Provision

The provision provides that in the case of a multiemployer plan that is a party to an agreement that was approved by the PBGC before June 30, 2005, that increases benefits and provides for special withdrawal liability rules, certain benefit increases funded pursuant to the agreement are not subject to the multiemployer plan funding rules under the provision (including the additional funding rules for plans in endangered or critical status) if the multiemployer plan is funded in compliance with the agreement (or any amendment thereto).

Effective Date

The provision is effective on the date of enactment.

G. Exception from Excise Tax for Certain Multiemployer Pension Plans (sec. 4971 of the Code)

Present Law

If a multiemployer plan has an accumulated funding deficiency for a year, an excise tax of five percent generally applies, increasing to 100 percent if contributions sufficient to eliminate the funding deficiency are not made within a certain period.[81]

Explanation of Provision

Under the provision, the present-law excise tax does not apply with respect to any accumulated funding deficiency of a multiemployer plan (1) with less than 100 participants; (2) with respect to which the contributing employers participated in a Federal fishery capacity reduction program; (3) with respect to which employers under the plan participated in the Northeast Fisheries Assistance Program; and (4) with respect to which the annual normal cost is less than $100,000 and the plan is experiencing a funding deficiency on the date of enactment. The tax does not apply to any taxable year beginning before the earlier of (1) the taxable year in which the plan sponsor adopts a rehabilitation plan, or (2) the taxable year that contains January 1, 2009.

Effective Date

The provision is effective for any taxable year beginning before the earlier of (1) the taxable year in which the plan sponsor adopts a rehabilitation plan, or (2) the taxable year that contains January 1, 2009.

[81] Code sec. 4971.

H. Sunset of Multiemployer Plan Funding Provisions

Present Law

No provision.

Explanation of Provision

The provision directs the Secretary of Labor, the Secretary of Treasury, and the Executive Director of the PBGC, not later than December 31, 2011, to conduct a study of the effect of the changes made by the provision on the operation and funding status of multiemployer plans and report the results of the study, including recommendations for legislation, to Congress. The study must include (1) the effect of funding difficulties, funding rules in effect before the date of enactment, and the changes made by the provision on small businesses participating in multiemployer plans; (2) the effect on the financial status of small employers of funding targets set in funding improvement and rehabilitation plans and associated contribution increases, funding deficiencies, excise taxes, withdrawal liability, the possibility of alternative schedules and procedures for financially-troubled employers, and other aspects of the multiemployer system; and (3) the role of the multiemployer pension plan system in helping small employers to offer pension benefits.

The provision provides that the rules applicable to plans in endangered and critical status and the rules relating to the automatic amortization extension and shortfall funding method under the general funding rules for multiemployer plans do not apply to plan years beginning after December 31, 2014. The present-law rules are reinstated for such years except that funding improvement and rehabilitation plans and amortization schedules in effect at the time of the sunset continue.

Effective Date

The provision is effective on the date of enactment.

TITLE III: INTEREST RATE ASSUMPTIONS

A. Extension of Replacement of 30-Year Treasury Rates (secs. 302 and 4006 of ERISA, and sec. 412 of the Code)

The provisions relating to extension of the replacement of the 30-year Treasury rate for purposes of single-employer funding rules are described above, under Title I. The provision relating to extension of the replacement of the 30-year Treasury rate for PBGC premium purposes is described below, under Title IV.

B. Interest Rate Assumption for Determination of Lump-Sum Distributions (sec. 205(g) of ERISA and sec. 417(e) of the Code)

Present law

Accrued benefits under a defined benefit pension plan generally must be paid in the form of an annuity for the life of the participant unless the participant consents to a distribution in another form. Defined benefit pension plans generally provide that a participant may choose among other forms of benefit offered under the plan, such as a lump-sum distribution. These optional forms of benefit generally must be actuarially equivalent to the life annuity benefit payable to the participant.

A defined benefit pension plan must specify the actuarial assumptions that will be used in determining optional forms of benefit under the plan in a manner that precludes employer discretion in the assumptions to be used. For example, a plan may specify that a variable interest rate will be used in determining actuarial equivalent forms of benefit, but may not give the employer discretion to choose the interest rate.

Statutory interest and mortality assumptions must be used in determining the minimum value of certain optional forms of benefit, such as a lump sum. That is, the lump sum payable under the plan may not be less than the amount of the lump sum that is actuarially equivalent to the life annuity payable to the participant, determined using the statutory assumptions. The statutory assumptions consist of an applicable interest rate and an applicable mortality table (as published by the IRS).

The applicable interest rate is the annual interest rate on 30-year Treasury securities for the month before the date of distribution or such other time as prescribed by Treasury regulations. The regulations provide various options for determining the interest rate to be used under the plan, such as the period for which the interest rate will remain constant ("stability period") and the use of averaging.

The applicable mortality table is a mortality table based on the 1994 Group Annuity Reserving Table ("94 GAR"), projected through 2002.

An amendment of a qualified retirement plan may not decrease the accrued benefit of a plan participant.[82] This restriction is sometimes referred to as the "anticutback" rule and applies to benefits that have already accrued. For purposes of the anticutback rule, an amendment is also treated as reducing an accrued benefit if, with respect to benefits accrued before the amendment is adopted, the amendment has the effect of either (1) eliminating or reducing an early retirement benefit or a retirement-type subsidy, or (2) except as provided by Treasury regulations, eliminating an optional form of benefit.

[82] Code sec. 411(d)(6); ERISA sec. 204(g).

Explanation of Provision

The provision changes the interest rate and mortality table used in calculating the minimum value of certain optional forms of benefit, such as lump sums.[83]

Minimum value is calculated using the first, second, and third segment rates as applied under the funding rules, with certain adjustments, for the month before the date of distribution or such other time as prescribed by Treasury regulations. The adjusted first, second, and third segment rates are derived from a corporate bond yield curve prescribed by the Secretary of the Treasury for such month which reflects the yields on investment grade corporate bonds with varying maturities (rather than a 24-month average, as under the minimum funding rules). Thus, the interest rate that applies depends upon how many years in the future a participant's annuity payment will be made. Typically, a higher interest applies for payments made further out in the future.

A transition rule applies for distributions in 2008 through 2011. For distributions in 2008 through 2011, minimum lump-sum values are determined as the weighted average of two values: (1) the value of the lump sum determined under the methodology under present law (the "old" methodology); and (2) the value of the lump sum determined using the methodology applicable for 2008 and thereafter (the "new" methodology). For distributions in 2008, the weighting factor is 80 percent for the lump-sum value determined under the old methodology and 20 percent for the lump-sum determined under the new methodology. For distributions in 2009, the weighting factor is 60 percent for the lump-sum value determined under the old methodology and 40 percent for the lump-sum determined under the new methodology. For distributions in 2010, the weighting factor is 40 percent for the lump-sum value determined under the old methodology and 60 percent for the lump-sum determined under the new methodology. For distributions in 2011, the weighting factor is 20 percent for the lump-sum value determined under the old methodology and 80 percent for the lump-sum determined under the new methodology.

The mortality table that must be used for calculating lump sums under the bill is based on the mortality table required for minimum funding purposes under the bill, modified as appropriate by the Secretary of the Treasury. The Secretary is to prescribe gender-neutral tables for use in determining minimum lump sums.

Effective Date

The provision is effective for plan years beginning after December 31, 2007.

[83] Under the provision of the bill relating to plan amendments, if certain requirements are met, a plan amendment to implement the changes made to the minimum value requirements may be made retroactively and without violating the anticutback rule.

C. Interest Rate Assumption for Applying Benefit Limitations to Lump-Sum Distributions (sec. 415(b) of the Code)

Present Law

Annual benefits payable under a defined benefit pension plan generally may not exceed the lesser of (1) 100 percent of average compensation, or (2) $175,000 (for 2006). The dollar limit generally applies to a benefit payable in the form of a straight life annuity. If the benefit is not in the form of a straight life annuity (e.g., a lump sum), the benefit generally is adjusted to an equivalent straight life annuity. For purposes of adjusting a benefit in a form that is subject to the minimum value rules, such as a lump-sum benefit, the interest rate used generally must be not less than the greater of: (1) the rate applicable in determining minimum lump sums, i.e., the interest rate on 30-year Treasury securities; or (2) the interest rate specified in the plan. In the case of plan years beginning in 2004 or 2005, the interest rate used generally must be not less than the greater of: (1) 5.5 percent; or (2) the interest rate specified in the plan.[84]

An amendment of a qualified retirement plan may not decrease the accrued benefit of a plan participant.[85] This restriction is sometimes referred to as the "anticutback" rule and applies to benefits that have already accrued. For purposes of the anticutback rule, an amendment is also treated as reducing an accrued benefit if, with respect to benefits accrued before the amendment is adopted, the amendment has the effect of either (1) eliminating or reducing an early retirement benefit or a retirement-type subsidy, or (2) except as provided by Treasury regulations, eliminating an optional form of benefit.

Explanation of Provision

Under the bill, for purposes of adjusting a benefit in a form that is subject to the minimum value rules, such as a lump-sum benefit, the interest rate used generally must be not less than the greater of: (1) 5.5 percent; (2) the rate that provides a benefit of not more than 105 percent of the benefit that would be provided if the rate (or rates) applicable in determining minimum lump sums were used; or (3) the interest rate specified in the plan.[86]

---

[84] In the case of a plan under which lump-sum benefits are determined solely as required under the minimum value rules (rather than using an interest rate that results in larger lump-sum benefits), the interest rate specified in the plan is the interest rate applicable under the minimum value rules. Thus, for purposes of applying the benefit limits to lump-sum benefits under the plan, the interest rate used must be not less than the greater of: (1) 5.5 percent; or (2) the interest rate applicable under the minimum value rules.

[85] Code sec. 411(d)(6); ERISA sec. 204(g).

[86] Under the provision of the bill relating to plan amendments, if certain requirements are met, a plan amendment to implement the change made to the interest rate used in adjusting a benefit in a form that is subject to the minimum value rules may be made retroactively and without violating the anticutback rule.

Effective Date

The provision is effective for years beginning after December 31, 2005.

TITLE IV: PBGC GUARANTEE AND RELATED PROVISIONS

A. PBGC Premiums (sec. 4006 of ERISA)

Present Law

The PBGC

The minimum funding requirements permit an employer to fund defined benefit plan benefits over a period of time. Thus, it is possible that a plan may be terminated at a time when plan assets are not sufficient to provide all benefits accrued by employees under the plan. In order to protect plan participants from losing retirement benefits in such circumstances, the Pension Benefit Guaranty Corporation ("PBGC"), a corporation within the Department of Labor, was created in 1974 under ERISA to provide an insurance program for benefits under most defined benefit plans maintained by private employers.

Termination of single-employer defined benefit plans

An employer may voluntarily terminate a single-employer plan only in a standard termination or a distress termination. The PBGC may also involuntarily terminate a plan (that is, the termination is not voluntary on the part of the employer).

A standard termination is permitted only if plan assets are sufficient to cover benefit liabilities. If assets in a defined benefit plan are not sufficient to cover benefit liabilities, the employer may not terminate the plan unless the employer (and members of the employer's controlled group) meets one of four criteria of financial distress.[87]

The PBGC may institute proceedings to terminate a plan if it determines that the plan in question has not met the minimum funding standards, will be unable to pay benefits when due, has a substantial owner who has received a distribution greater than $10,000 (other than by reason of death) while the plan has unfunded nonforfeitable benefits, or may reasonably be expected to increase PBGC's long-run loss unreasonably. The PBGC must institute proceedings to terminate a plan if the plan is unable to pay benefits that are currently due.

[87] The four criteria for a distress termination are: (1) the contributing sponsor, and every member of the controlled group of which the sponsor is a member, is being liquidated in bankruptcy or any similar Federal law or other similar State insolvency proceedings; (2) the contributing sponsor and every member of the sponsor's controlled group is being reorganized in bankruptcy or similar State proceeding; (3) the PBGC determines that termination is necessary to allow the employer to pay its debts when due; or (4) the PBGC determines that termination is necessary to avoid unreasonably burdensome pension costs caused solely by a decline in the employer's work force.

Guaranteed benefits

When an underfunded plan terminates, the amount of benefits that the PBGC will pay depends on legal limits, asset allocation, and recovery on the PBGC's employer liability claim. The PBGC guarantee applies to "basic benefits." Basic benefits generally are benefits accrued before a plan terminates, including (1) benefits at normal retirement age; (2) most early retirement benefits; (3) disability benefits for disabilities that occurred before the plan was terminated; and (4) certain benefits for survivors of plan participants. Generally only that part of the retirement benefit that is payable in monthly installments (rather than, for example, lump-sum benefits payable to encourage early retirement) is guaranteed.[88]

Retirement benefits that begin before normal retirement age are guaranteed, provided they meet the other conditions of guarantee (such as that before the date the plan terminates, the participant had satisfied the conditions of the plan necessary to establish the right to receive the benefit other than application for the benefit). Contingent benefits (for example, subsidized early retirement benefits) are guaranteed only if the triggering event occurs before plan termination.

For plans terminating in 2006, the maximum guaranteed benefit for an individual retiring at age 65 and receiving a single life annuity is $3,971.59 per month or $47,659.08 per year.[89] The dollar limit is indexed annually for inflation. The guaranteed amount is reduced for benefits starting before age 65.

The dollar limit is indexed annually for wage inflation. The guaranteed amount is reduced for benefits starting before age 65.

In the case of a plan or a plan amendment that has been in effect for less than five years before a plan termination, the amount guaranteed is phased in by 20 percent a year.[90]

---

[88] ERISA sec. 4022(b) and (c).

[89] The PBGC generally pays the greater of the guaranteed benefit amount and the amount that was covered by plan assets when it terminated. Thus, depending on the amount of assets in the terminating plan, participants may receive more than the amount guaranteed by PBGC.

Special rules limit the guaranteed benefits of individuals who are substantial owners covered by a plans whose benefits have not been increased by reason of any plan amendment. A substantial owner generally is an individual who: (1) owns the entire interest in an unincorporated trade or business; (2) in the case of a partnership, is a partner who owns, directly or indirectly, more than 10 percent of either the capital interest or the profits interest in the partnership; (3) in the case of a corporation, owns, directly or indirectly, more than 10 percent in value of either the voting stock of the corporation or all the stock of the corporation; or (4) at any time within the preceding 60 months was a substantial owner under the plan. ERISA sec. 4022(b)(5).

[90] The phase in does not apply if the benefit is less than $20 per month.

PBGC premiums

In general

The PBGC is funded by assets in terminated plans, amounts recovered from employers who terminate underfunded plans, premiums paid with respect to covered plans, and investment earnings. All covered single-employer plans are required to pay a flat per-participant premium and underfunded plans are subject to an additional variable rate premium based on the level of underfunding. The amount of both the flat rate premium and the variable rate premium are set by statute; the premiums are not indexed for inflation.

Flat rate premium

Under the Deficit Reduction Act of 2005,[91] the flat-rate premium is $30 for plan years beginning after December, 31, 2005, with indexing after 2006 based on increases in average wages.

Variable rate premium

The variable rate premium is equal to $9 per $1,000 of unfunded vested benefits. "Unfunded vested benefits" is the amount which would be the unfunded current liability (as defined under the minimum funding rules) if only vested benefits were taken into account and if benefits were valued at the variable premium interest rate. No variable rate premium is imposed for a year if contributions to the plan for the prior year were at least equal to the full funding limit for that year.

In determining the amount of unfunded vested benefits, the interest rate used is generally 85 percent of the interest rate on 30 year Treasury securities for the month preceding the month in which the plan year begins (100 percent of the interest rate on 30 year Treasury securities for plan years beginning in 2002 and 2003). Under the Pension Funding Equity Act of 2004, in determining the amount of unfunded vested benefits for plan years beginning after December 31, 2003, and before January 1, 2006, the interest rate used is 85 percent of the annual rate of interest determined by the Secretary of the Treasury on amounts invested conservatively in long term investment-grade corporate bonds for the month preceding the month in which the plan year begins.

Termination premium

Under the Deficit Reduction Act of 2005, a new premium generally applies in the case of certain plan terminations occurring after 2005 and before 2011. A premium of $1,250 per participant is imposed generally for the year of the termination and each of the following two years. The premium applies in the case of a plan termination by the PBGC or a distress termination due to reorganization in bankruptcy, the inability of the employer to pay its debts when due, or a determination that a termination is necessary to avoid unreasonably burdensome

[91] Pub. L. No. 109-171, enacted February 8, 2006.

pension costs caused solely by a decline in the workforce. In the case of a termination due to reorganization, the liability for the premium does not arise until the employer is discharged from the reorganization proceeding. The premium does not apply with respect to a plan terminated during bankruptcy reorganization proceedings pursuant to a bankruptcy filing before October 18, 2005.

Explanation of Provision

Variable rate premium

For 2006 and 2007, the bill extends the present-law rule under which, in determining the amount of unfunded vested benefits for variable rate premium purposes, the interest rate used is 85 percent of the annual rate of interest determined by the Secretary of the Treasury on amounts invested conservatively in long term investment-grade corporate bonds for the month preceding the month in which the plan year begins.

Beginning in 2008, the determination of unfunded vested benefits for purposes of the variable rate premium is modified to reflect the changes to the funding rules of the provision. Thus, under the provision, unfunded vested benefits are equal to the excess (if any) of (1) the plan's funding target[92] for the year determined as under the minimum funding rules, but taking into account only vested benefits over (2) the fair market value of plan assets. In valuing unfunded vested benefits the interest rate is the first, second, and third segment rates which would be determined under the funding rules of the provision, if the segment rates were based on the yields of corporate bond rates, rather than a 24-month average of such rates. Under the bill, deductible contributions are no longer limited by the full funding limit; thus, the rule providing that no variable rate premium is required if contributions for the prior plan year were at least equal to the full funding limit no longer applies under the provision.

Termination premium

The bill makes permanent the termination premium enacted in the Deficit Reduction Act of 2005.

Effective Date

The extension of the present-law interest rate for purposes of calculating the variable rate premium is effective for plan years beginning in 2006 and 2007. The modifications to the variable rate premium are effective for plan years beginning after December 31, 2007. The provision extending the termination premium is effective on the date of enactment.

[92] The assumptions used in determining funded target are the same as under the minimum funding rules. Thus, for a plan in at-risk status, the at-risk assumptions are used.

B. Special Funding Rules for Plans Maintained by Commercial Airlines

Present Law

Minimum funding rules in general

Single-employer defined benefit pension plans are subject to minimum funding requirements under the Employee Retirement Income Security Act of 1974 ("ERISA") and the Internal Revenue Code (the "Code").[93] The amount of contributions required for a plan year under the minimum funding rules is generally the amount needed to fund benefits earned during that year plus that year's portion of other liabilities that are amortized over a period of years, such as benefits resulting from a grant of past service credit. The amount of required annual contributions is determined under one of a number of acceptable actuarial cost methods. Additional contributions are required under the deficit reduction contribution rules in the case of certain underfunded plans. No contribution is required under the minimum funding rules in excess of the full funding limit. A detailed description of the present-law funding rules is provided in Title I, above.

Notice of certain plan amendments

A notice requirement must be met if an amendment to a defined benefit pension plan provides for a significant reduction in the rate of future benefit accrual. In that case, the plan administrator must furnish a written notice concerning the amendment. Notice may also be required if a plan amendment eliminates or reduces an early retirement benefit or retirement-type subsidy. The plan administrator is required to provide the notice to any participant or alternate payee whose rate of future benefit accrual may reasonably be expected to be significantly reduced by the plan amendment (and to any employee organization representing affected participants). The notice must be written in a manner calculated to be understood by the average plan participant and must provide sufficient information to allow recipients to understand the effect of the amendment. In the case of a single-employer plan, the plan administrator is generally required to provide the notice at least 45 days before the effective date of the plan amendment. In the case of a multiemployer plan, the notice is generally required to be provided 15 days before the effective date of the plan amendment.

PBGC termination insurance program

The minimum funding requirements permit an employer to fund defined benefit plan benefits over a period of time. Thus, it is possible that a plan may be terminated at a time when plan assets are not sufficient to provide all benefits accrued by employees under the plan. In order to protect plan participants from losing retirement benefits in such circumstances, the PBGC guarantees basic benefits under most defined benefit plans. When an underfunded plan terminates, the amount of benefits that the PBGC will pay depends on legal limits, asset

[93] Code sec. 412. The minimum funding rules also apply to multiemployer plans, but the rules for multiemployer plans differ in various respects from the rules applicable to single-employer plans.

allocation, and recovery on the PBGC's employer liability claim. There is a dollar limit on the amount of otherwise guaranteed benefits based on the year in which the plan terminates. For plans terminating in 2006, the maximum guaranteed benefit for an individual retiring at age 65 and receiving a single life annuity is $3,971.59 per month or $47,659.08 per year.[94] The dollar limit is indexed annually for inflation. The guaranteed amount is reduced for benefits starting before age 65. In the case of a plan or a plan amendment that has been in effect for less than five years before a plan termination, the amount guaranteed is phased in by 20 percent a year.[95]

Termination premiums

Under the Deficit Reduction Act of 2005, a new premium generally applies in the case of certain plan terminations occurring after 2005 and before 2011. A premium of $1,250 per participant is imposed generally for the year of the termination and each of the following two years. The premium applies in the case of a plan termination by the PBGC or a distress termination due to reorganization in bankruptcy, the inability of the employer to pay its debts when due, or a determination that a termination is necessary to avoid unreasonably burdensome pension costs caused solely by a decline in the workforce. In the case of a termination due to reorganization, the liability for the premium does not arise until the employer is discharged from the reorganization proceeding. The premium does not apply with respect to a plan terminated during bankruptcy reorganization proceedings pursuant to a bankruptcy filing before October 18, 2005.

Minimum coverage requirements

The Code imposes minimum coverage requirements on qualified retirement plans in order to ensure that plans cover a broad cross section of employees.[96] In general, the minimum coverage requirements are satisfied if one of the following criteria are met: (1) the plan benefits at least 70 percent of employees who are not highly compensated employees; (2) the plan benefits a percentage of employees who are not highly compensated employees which is at least

---

[94] The PBGC generally pays the greater of the guaranteed benefit amount and the amount that was covered by plan assets when it terminated. Thus, depending on the amount of assets in the terminating plan, participants may receive more than the amount guaranteed by PBGC.

Special rules limit the guaranteed benefits of individuals who are substantial owners covered by a plans whose benefits have not been increased by reason of any plan amendment. A substantial owner generally is an individual who: (1) owns the entire interest in an unincorporated trade or business; (2) in the case of a partnership, is a partner who owns, directly or indirectly, more than 10 percent of either the capital interest or the profits interest in the partnership; (3) in the case of a corporation, owns, directly or indirectly, more than 10 percent in value of either the voting stock of the corporation or all the stock of the corporation; or (4) at any time within the preceding 60 months was a substantial owner under the plan. ERISA sec. 4022(b)(5).

[95] The phase in does not apply if the benefit is less than $20 per month.

[96] Code sec. 410(b).

70 percent of the percentage of highly compensated employees participating under the plan; or (3) the plan meets the average benefits test.

Certain employees may be disregarded in applying the minimum coverage requirements. Under one exclusion, in the case of a plan established or maintained pursuant to an agreement which the Secretary of Labor finds to be a collective bargaining agreement between air pilots represented in accordance with title II of the Railway Labor Act and one or more employers, all employees not covered by such agreement may be disregarded. This exclusion does not apply in the case of a plan which provides contributions or benefits for employees whose principal duties are not customarily performed aboard aircraft in flight.

Alternative deficit reduction contribution for certain plans

Under present law, certain employers ("applicable employers") may elect a reduced amount of additional required contribution under the deficit reduction contribution rules (an "alternative deficit reduction contribution") with respect to certain plans for applicable plan years. An applicable plan year is a plan year beginning after December 27, 2003, and before December 28, 2005, for which the employer elects a reduced contribution. If an employer so elects, the amount of the additional deficit reduction contribution for an applicable plan year is the greater of: (1) 20 percent of the amount of the additional contribution that would otherwise be required; or (2) the additional contribution that would be required if the deficit reduction contribution for the plan year were determined as the expected increase in current liability due to benefits accruing during the plan year.

An applicable employer is an employer that is: (1) a commercial passenger airline; (2) primarily engaged in the production or manufacture of a steel mill product, or the processing of iron ore pellets; or (3) an organization described in section 501(c)(5) that established the plan for which an alternative deficit reduction contribution is elected on June 30, 1955.

Explanation of Provision

In general

The provision provides special funding rules for certain eligible plans. For purposes of the provision, an eligible plan is a single-employer defined benefit pension plan sponsored by an employer that is a commercial passenger airline or the principal business of which is providing catering services to a commercial passenger airline.

The plan sponsor of an eligible plan may make one of two alternative elections. In the case of a plan that meets certain benefit accrual and benefit increase restrictions, an election allowing a 17-year amortization of the plan's unfunded liability is available. A plan that does not meet such requirements may elect to use a 10-year amortization period in amortizing the plan's shortfall amortization base for the first taxable year beginning in 2008.

Election for plans that meet benefit accrual and benefit increase restriction requirements

In general

Under the provision, if an election of a 17-year amortization period is made with respect to an eligible plan for a plan year (an "applicable" plan year), the minimum required contribution is determined under a special method.[97] If minimum required contributions as determined under the provision are made: (1) for an applicable plan year beginning before January 1, 2008 (for which the present-law funding rules apply), the plan does not have an accumulated funding deficiency; and (2) for an applicable plan year beginning on or after January 1, 2008 (for which the funding rules under the provision apply), the minimum required contribution is the contribution determined under the provision.

The employer may select either a plan year beginning in 2006 or 2007 as the first plan year to which the election applies. The election applies to such plan year and all subsequent plan years, unless the election is revoked with the approval of the Secretary of the Treasury. The election must be made (1) no later than December 31, 2006, in the case of an election for a plan year beginning in 2006, or (2) not later than December 31, 2007, in the case of a plan year beginning in 2007. An election under the provision must be made in such manner as prescribed by the Secretary of the Treasury. The employer may change the plan year with respect to the plan by specifying a new plan year in the election. Such a change in plan year does not require approval of the Secretary of the Treasury.

Determination of required contribution

Under the provision, the minimum required contribution for any applicable plan year during the amortization period is the amount required to amortize the plan's unfunded liability, determined as of the first day of the plan year, in equal annual installments over the remaining amortization period. For this purpose, the amortization period is the 17-plan-year period beginning with the first applicable plan year. Thus, the annual amortization amount is redetermined each year, based on the plan's unfunded liability at that time and the remainder of the amortization period. For any plan years beginning after the end of the amortization period, the plan is subject to the generally applicable minimum funding rules (as provided under the bill, including the benefit limitations applicable to underfunded plans). The plan's prefunding balance and funding standard carryover balance as of the first day of the first year beginning after the end of the amortization period is zero.[98]

---

[97] Any charge or credit in the funding standard account determined under the present-law rules or any prefunding balance or funding standard carryover balance (determined under the funding provisions of the bill) as of the end of the last year preceding the first applicable year is reduced to zero.

[98] If an election to use the special method is revoked before the end of the amortization period, the plan is subject to the generally applicable minimum funding rules beginning with the first plan year for which the election is revoked, and the plan's prefunding balance as of the beginning of that year is zero.

Any waived funding deficiency as of the day before the first day of the first applicable plan year is deemed satisfied and the amount of such waived funding deficiency must be taken into account in determining the plan's unfunded liability under the provision. Any plan amendment adopted to satisfy the benefit accrual restrictions of the provision (discussed below) or any increase in benefits provided to such plan's participants under a defined contribution or multiemployer plan will not be deemed to violate the prohibition against benefit increases during a waiver period.[99]

For purposes of the provision, a plan's unfunded liability is the unfunded accrued liability under the plan, determined under the unit credit funding method. As under present law, minimum required contributions (including the annual amortization amount) under the provision must be determined using actuarial assumptions and methods, each of which is reasonable (taking into account the experience of the plan and reasonable expectations), or which, in the aggregate, result in a total plan contribution equivalent to a contribution that would be obtained if each assumption and method were reasonable. The assumptions are required also to offer the actuary's best estimate of anticipated experience under the plan. Under the election, a rate of interest of 8.85 percent is used in determining the plan's accrued liability. The value of plan assets used must be the fair market value.

If any applicable plan year with respect to an eligible plan using the special method includes the date of enactment of the provision and a plan was spun off from such eligible plan during the plan year, but before the date of enactment, the minimum required contribution under the special method for the applicable plan year is an aggregate amount determined as if the plans were a single plan for that plan year (based on the full 12-month plan year in effect prior to the spin off). The employer is to designate the allocation of the aggregate amount between the plans for the applicable plan year.

Benefit accrual and benefit increase restrictions

Benefit accrual restrictions. - Under the provision, effective as of the first day of the first applicable plan year and at all times thereafter while an election under the provision is in effect, an eligible plan must include two accrual restrictions. First, the plan must provide that, with respect to each participant: (1) the accrued benefit, any death or disability benefit, and any social security supplement are frozen at the amount of the benefit or supplement immediately before such first day; and (2) all other benefits under the plan are eliminated. However, such freezing or elimination of benefits or supplements is required only to the extent that it would be permitted under the anticutback rule if implemented by a plan amendment adopted immediately before such first day.

Second, if an accrued benefit of a participant has been subject to the limitations on benefits under section 415 of the Code and would otherwise be increased if such limitation is increased, the plan must provide that, effective as of the first day of the first applicable plan year

[99] ERISA sec. 304(b); Code sec. 412(f).

(or, if later, the date of enactment) any such increase will not take effect. The plan does not fail to meet the anticutback rule solely because the plan is amended to meet this requirement.

Benefit increase restriction. – No applicable benefit increase under an eligible plan may take effect at any time during the period beginning on July 26, 2005, and ending on the day before the first day of the first applicable plan year. For this purpose, an applicable benefit increase is any increase in liabilities of the plan by plan amendment (or otherwise as specified by the Secretary) which would occur by reason of: (1) any increase in benefits; (2) any change in the accrual of benefits; or (3) any change in the rate at which benefits become nonforfeitable under the plan.

Exception for imputed disability service.– The benefit accrual and benefit increase restrictions do not apply to any accrual or increase with respect to imputed serviced provided to a participant during any period of the participant's disability occurring on or after the effective date of the plan amendment providing for the benefit accrual restrictions (on or after July 26, 2005, in the case of benefit increase restrictions) if the participant was: (1) was receiving disability benefits as of such date or (2) was receiving sick pay and subsequently determined to be eligible for disability benefits as of such date.

Rules relating to PBGC guarantee and plan terminations

Under the provision, if a plan to which an election applies is terminated before the end of the 10-year period beginning on the first day of the first applicable plan year, certain aspects of the PBGC guarantee provisions are applied as if the plan terminated on the first day of the first applicable plan year. Specifically, the amount of guaranteed benefits payable by the PBGC is determined based on plan assets and liabilities as of the assumed termination date. The difference between the amount of guaranteed benefits determined as of the assumed termination date and the amount of guaranteed benefits determined as of the actual termination date is to be paid from plan assets before other benefits.

The provision of the bill under which defined benefit plans that are covered by the PBGC insurance program are not taken into account in applying the overall limit on deductions for contributions to combinations of defined benefit and defined contribution plans, does not apply to an eligible plan to which the special method applies. Thus, the overall deduction limit applies.

In the case of notice required with respect to an amendment that is made to an eligible plan maintained pursuant to one or more collective bargaining agreements in order to comply with the benefit accrual and benefit increase restrictions under the provision, the provision allows the notice to be provided 15 days before the effective date of the plan amendment.

Termination premiums

If a plan terminates during the five-year period beginning on the first day of the first applicable plan year, termination premiums are imposed at a rate of $2,500 per participant (in lieu of the present-law $1,250 amount). The increased termination premium applies notwithstanding that a plan was terminated during bankruptcy reorganization proceedings pursuant to a bankruptcy filing before October 18, 2005 (i.e., the present-law grandfather rule does not apply).

The Secretary of Labor may waive the additional termination premium if the Secretary determines that the termination occurred as the result of extraordinary circumstances such as a terrorist attack or other similar event. It is intended that extraordinary circumstances means a substantial, system-wide adverse effect on the airline industry such as the terrorist attack which occurred on September 11, 2001. It is intended that the waiver of the additional premiums occur only in rare and unpredictable events. Extraordinary circumstances would not include a mere economic event such as the high price of oil or fuel, or a downturn in the market.

Alternative election in the case of plans not meeting benefit accrual and benefit increase restrictions

In lieu of the election above, a plan sponsor may elect, for the first taxable year beginning in 2008, to amortize the shortfall amortization base for such taxable year over a period of 10 plan years (rather than seven plan years) beginning with such plan year. Under such election, the benefit accrual, benefit increase and other restrictions discussed above do not apply. This 10-year amortization election must be made by December 31, 2007.

Authority of Treasury to disqualify successor plans

If either election is made under the provision and the eligible plan is maintained by an employer that establishes or maintains one or more other single-employer defined benefit plans, and such other plans in combination provide benefit accruals to any substantial number of successor employees, the Secretary of Treasury may disqualify such successor plans unless all benefit obligations of the eligible plan have been satisfied. Successor employees include any employee who is or was covered by the eligible plan and any employee who performs substantially the same type of work with respect to the same business operations as an employee covered by the eligible plan.

Alternative deficit reduction contribution for certain plans

In the case of an employer which is a commercial passenger airline, the provision extends the alternative deficit reduction contributions rules to plan years beginning before December 28, 2007.

Application of minimum coverage rules

In applying the minimum coverage rules to a plan, management pilots who are not represented in accordance with title II of the Railway Labor Act are treated as covered by a collective bargaining agreement if the management pilots manage the flight operations of air pilots who are so represented and the management pilots are, pursuant to the terms of the agreement, included in the group of employees benefiting under the plan.

The exclusion under the minimum coverage rules for air pilots represented in accordance with title II of the Railway Labor Act does not apply in the case of a plan which provides contributions or benefits for employees whose principal duties are not customarily performed aboard an aircraft in flight (other than management pilots described above).

Effective Date

The provision is effective for plan years ending after the date of enactment except that the modifications to the minimum coverage rules apply to years beginning before, on, or after the date of enactment.

C. Limitations on PBGC Guarantee of Shutdown and Other Benefits (sec. 4022 of ERISA)

Present Law

A plan may provide for unpredictable contingent event benefits, which are benefits that depend on contingencies that are not reliably and reasonably predictable, such as facility shutdowns or reductions in workforce. Under present law, unpredictable contingent event benefits generally are not taken into account for funding purposes until the event has occurred.

Under present law, defined benefit pension plans are not permitted to provide "layoff" benefits (i.e., severance benefits).[100] However, defined benefit pension plans may provide subsidized early retirement benefits, including early retirement window benefits.[101]

Within certain limits, the PBGC guarantees any retirement benefit that was vested on the date of plan termination (other than benefits that vest solely on account of the termination), and any survivor or disability benefit that was owed or was in payment status at the date of plan termination.[102] Generally only that part of the retirement benefit that is payable in monthly installments is guaranteed.[103]

Retirement benefits that begin before normal retirement age are guaranteed, provided they meet the other conditions of guarantee (such as that, before the date the plan terminates, the participant had satisfied the conditions of the plan necessary to establish the right to receive the benefit other than application for the benefit). Contingent benefits (for example, early retirement benefits provided only if a plant shuts down) are guaranteed only if the triggering event occurs before plan termination.

In the case of a plan or a plan amendment that has been in effect for less than five years before a plan termination, the amount guaranteed is phased in by 20 percent a year.

Explanation of Provision

Under the bill, the PBGC guarantee applies to unpredictable contingent event benefits as if a plan amendment had been adopted on the date the event giving rise to the benefits occurred. An unpredictable contingent event benefit is defined as under the benefit limitations applicable to single-employer plans (described above) and means a benefit payable solely by reason of (1) a plant shutdown (or similar event as determined by the Secretary of the Treasury), or (2) an event other than the attainment of any age, performance of any service, receipt or derivation of any compensation, or occurrence of death or disability.

---

[100] Treas. Reg. sec. 1.401-1(b)(1)(i).

[101] Treas. Reg. secs. 1.401(a)(4)-3(f)(4) and 1.411(a)-7(c).

[102] ERISA sec. 4022(a).

[103] ERISA sec. 4022(b) and (c).

Effective Date

The provision applies to benefits that become payable as a result of an event which occurs after July 26, 2005.

D. Rules Relating to Bankruptcy of the Employer (secs. 4022 and 4044 of ERISA)

Present Law

Guaranteed benefits

When an underfunded plan terminates, the amount of benefits that the PBGC will pay depends on legal limits, asset allocation, and recovery on the PBGC's employer liability claim. The PBGC guarantee applies to "basic benefits." Basic benefits generally are benefits accrued before a plan terminates, including (1) benefits at normal retirement age; (2) most early retirement benefits; (3) disability benefits for disabilities that occurred before the plan was terminated; and (4) certain benefits for survivors of plan participants. Generally only that part of the retirement benefit that is payable in monthly installments is guaranteed.[104]

Retirement benefits that begin before normal retirement age are guaranteed, provided they meet the other conditions of guarantee (such as that before the date the plan terminates, the participant had satisfied the conditions of the plan necessary to establish the right to receive the benefit other than application for the benefit). Contingent benefits (for example, subsidized early retirement benefits) are guaranteed only if the triggering event occurs before plan termination.

For plans terminating in 2006, the maximum guaranteed benefit for an individual retiring at age 65 and receiving a single life annuity is $3,971.59 per month or $47,659.08 per year.[105] The dollar limit is indexed annually for inflation. The guaranteed amount is reduced for benefits starting before age 65.

In the case of a plan or a plan amendment that has been in effect for less than five years before a plan termination, the amount guaranteed is phased in by 20 percent a year.[106]

---

[104] ERISA sec. 4022(b) and (c).

[105] The PBGC generally pays the greater of the guaranteed benefit amount and the amount that was covered by plan assets when it terminated. Thus, depending on the amount of assets in the terminating plan, participants may receive more than the amount guaranteed by PBGC.

Special rules limit the guaranteed benefits of individuals who are substantial owners covered by a plans whose benefits have not been increased by reason of any plan amendment. A substantial owner generally is an individual who: (1) owns the entire interest in an unincorporated trade or business; (2) in the case of a partnership, is a partner who owns, directly or indirectly, more than 10 percent of either the capital interest or the profits interest in the partnership; (3) in the case of a corporation, owns, directly or indirectly, more than 10 percent in value of either the voting stock of the corporation or all the stock of the corporation; or (4) at any time within the preceding 60 months was a substantial owner under the plan. ERISA sec. 4022(b)(5).

[106] The phase in does not apply if the benefit is less than $20 per month.

Asset allocation

ERISA contains rules for allocating the assets of a single-employer plan when the plan terminates. Plan assets available to pay for benefits under a terminating plan include all plan assets remaining after subtracting all liabilities (other than liabilities for future benefit payments), paid or payable from plan assets under the provisions of the plan. On termination, the plan administrator must allocate plan assets available to pay for benefits under the plan in the manner prescribed by ERISA. In general, plan assets available to pay for benefits under the plan are allocated to six priority categories. If the plan has sufficient assets to pay for all benefits in a particular priority category, the remaining assets are allocated to the next lower priority category. This process is repeated until all benefits in the priority categories are provided or until all available plan assets have been allocated.

Explanation of Provision

Under the bill, the amount of guaranteed benefits payable by the PBGC is frozen when a contributing sponsor enters bankruptcy or a similar proceeding.[107] If the plan terminates during the contributing sponsor's bankruptcy, the amount of guaranteed benefits payable by the PBGC is determined based on plan provisions, salary, service, and the guarantee in effect on the date the employer entered bankruptcy. The priority among participants for purposes of allocating plan assets and employer recoveries to non-guaranteed benefits in the event of plan termination is determined as of the date the sponsor enters bankruptcy or a similar proceeding.

A contributing sponsor of a single-employer plan is required to notify the plan administrator when the sponsor enters bankruptcy or a similar proceeding. Within a reasonable time after a plan administrator knows or has reason to know that a contributing sponsor has entered bankruptcy (or similar proceeding), the administrator is required to notify plan participants and beneficiaries of the bankruptcy and the limitations on benefit guarantees if the plan is terminated while underfunded, taking into account the bankruptcy.

The Secretary of Labor is to prescribe the form and manner of notices required under this provision. The notice is to be written in a manner calculated to be understood by the average plan participant and may be delivered in written, electronic, or other appropriate form to the extent that such form is reasonably accessible to the applicable individual.

The Secretary of Labor may assess a civil penalty of up to $100 a day for each failure to provide the notice required by the provision. Each violation with respect to any single participant or beneficiary is treated as a separate violation.

[107] For purposes of the provision, a contributing sponsor is considered to have entered bankruptcy if the sponsor files or has had filed against it a petition seeking liquidation or reorganization in a case under title 11 of the United States Code or under any similar Federal law or law of a State or political subdivision.

Effective Date

The provision is effective with respect to Federal bankruptcy or similar proceedings or arrangements for the benefit of creditors which are initiated on or after the date that is 30 days after enactment.

E. PBGC Premiums for Small Plans (sec. 4006 of ERISA)

Present Law

Under present law, the Pension Benefit Guaranty Corporation ("PBGC") provides insurance protection for participants and beneficiaries under certain defined benefit pension plans by guaranteeing certain basic benefits under the plan in the event the plan is terminated with insufficient assets to pay benefits promised under the plan. The guaranteed benefits are funded in part by premium payments from employers who sponsor defined benefit pension plans. The amount of the required annual PBGC premium for a single-employer plan is generally a flat rate premium of $19 per participant and an additional variable-rate premium based on a charge of $9 per $1,000 of unfunded vested benefits. Unfunded vested benefits under a plan generally means (1) the unfunded current liability for vested benefits under the plan, over (2) the value of the plan's assets, reduced by any credit balance in the funding standard account. No variable-rate premium is imposed for a year if contributions to the plan were at least equal to the full funding limit.

The PBGC guarantee is phased in ratably in the case of plans that have been in effect for less than five years, and with respect to benefit increases from a plan amendment that was in effect for less than five years before termination of the plan.

Explanation of Provision

In the case of a plan of a small employer, the per participant variable-rate premium is no more than $5 multiplied by the number of plan participants in the plan at the end of the preceding plan year. For purposes of the provision, a small employer is a contributing sponsor that, on the first day of the plan year, has 25 or fewer employees. For this purpose, all employees of the members of the controlled group of the contributing sponsor are to be taken into account. In the case of a plan to which more than one unrelated contributing sponsor contributed, employees of all contributing sponsors (and their controlled group members) are to be taken into account in determining whether the plan was a plan of a small employer. For example, under the provision, in the case of a plan with 20 participants, the total variable rate premium is not more than $2,000, that is, (20 x $5) x 20.

Effective Date

The provision applies to plan years beginning after December 31, 2006.

F. Authorization for PBGC to Pay Interest on Premium Overpayment Refunds (sec. 4007(b) of ERISA)

Present Law

The PBGC charges interest on underpayments of premiums, but is not authorized to pay interest on overpayments.

Explanation of Provision

The provision allows the PBGC to pay interest on overpayments made by premium payors. Interest paid on overpayments is to be calculated at the same rate and in the same manner as interest charged on premium underpayments.

Effective Date

The provision is effective with respect to interest accruing for periods beginning not earlier than the date of enactment.

G. Rules for Substantial Owner Benefits in Terminated Plans (secs. 4021, 4022, 4043, and 4044 of ERISA)

Present Law

Under present law, the Pension Benefit Guaranty Corporation ("PBGC") provides participants and beneficiaries in a defined benefit pension plan with certain minimal guarantees as to the receipt of benefits under the plan in case of plan termination. The employer sponsoring the defined benefit pension plan is required to pay premiums to the PBGC to provide insurance for the guaranteed benefits. In general, the PBGC will guarantee all basic benefits which are payable in periodic installments for the life (or lives) of the participant and his or her beneficiaries and are non-forfeitable at the time of plan termination. The amount of the guaranteed benefit is subject to certain limitations. One limitation is that the plan (or an amendment to the plan which increases benefits) must be in effect for 60 months before termination for the PBGC to guarantee the full amount of basic benefits for a plan participant, other than a substantial owner. In the case of a substantial owner, the guaranteed basic benefit is phased in over 30 years beginning with participation in the plan. A substantial owner is one who owns, directly or indirectly, more than 10 percent of the voting stock of a corporation or all the stock of a corporation. Special rules restricting the amount of benefit guaranteed and the allocation of assets also apply to substantial owners.

Explanation of Provision

The provision provides that the 60-month phase-in of guaranteed benefits applies to a substantial owner with less than 50 percent ownership interest. For a substantial owner with a 50 percent or more ownership interest ("majority owner"), the phase-in occurs over a 10-year period and depends on the number of years the plan has been in effect. The majority owner's guaranteed benefit is limited so that it cannot be more than the amount phased in over 60 months for other participants. The rules regarding allocation of assets apply to substantial owners, other than majority owners, in the same manner as other participants.

Effective Date

The provision is effective for plan terminations with respect to which notices of intent to terminate are provided, or for which proceedings for termination are instituted by the PBGC, after December 31, 2005.

H. Acceleration of PBGC Computation of Benefits Attributable to Recoveries from Employers (secs. 4022(c) and 4062(c) of ERISA)

Present Law

In general

The Pension Benefit Guaranty Corporation ("PBGC") provides insurance protection for participants and beneficiaries under certain defined benefit pension plans by guaranteeing certain basic benefits under the plan in the event the plan is terminated with insufficient assets to pay promised benefits.[108] The guaranteed benefits are funded in part by premium payments from employers who sponsor defined benefit plans. In general, the PBGC guarantees all basic benefits which are payable in periodic installments for the life (or lives) of the participant and his or her beneficiaries and are non-forfeitable at the time of plan termination. For plans terminating in 2006, the maximum guaranteed benefit for an individual retiring at age 65 and receiving a straight life annuity is $3971.59 per month, or $47,659.08 per year.

The PBGC pays plan benefits, subject to the guarantee limits, when it becomes trustee of a terminated plan. The PBGC also pays amounts in addition to the guarantee limits ("additional benefits") if there are sufficient plan assets, including amounts recovered from the employer for unfunded benefit liabilities and contributions owed to the plan. The employer (including members of its controlled group) is statutorily liable for these amounts.

Plan underfunding recoveries

The PBGC's recoveries on its claims for unfunded benefit liabilities are shared between the PBGC and plan participants. The amounts recovered are allocated partly to the PBGC to help cover its losses for paying unfunded guaranteed benefits and partly to participants to help cover the loss of benefits that are above the PBGC's guarantees and are not funded. In determining the portion of the recovered amounts that will be allocated to participants, present law specifies the use of a recovery ratio based on plan terminations during a specified period, rather than the actual amount recovered for each specific plan. The recovery ratio that applies to a plan includes the PBGC's actual recovery experience for plan terminations in the five-Federal fiscal year period immediately preceding the Federal fiscal year in which falls the notice of intent to terminate for the particular plan.

The recovery ratio is used for all but very large plans taken over by the PBGC. For a very large plan (i.e., a plan for which participants' benefit losses exceed $20 million) actual recovery amounts with respect to the specific plan are used to determine the portion of the amounts recovered that will be allocated to participants.

---

[108] The PBGC termination insurance program does not cover plans of professional service employers that have fewer than 25 participants.

Recoveries for due and unpaid employer contributions

Amounts recovered from an employer for contributions owed to the plan are treated as plan assets and are allocated to plan benefits in the same manner as other assets in the plan's trust on the plan termination date. The amounts recovered are determined on a plan-specific basis rather than based on an historical average recovery ratio.

Explanation of Provision

The bill changes the five-year period used to determine the recovery ratio for unfunded benefit liabilities so that the period begins two years earlier. Thus, under the bill, the recovery ratio that applies to a plan includes the PBGC's actual recovery experience for plan terminations in the five-Federal fiscal year period ending with the third fiscal year preceding the fiscal year in which falls the notice of intent to terminate for the particular plan.

In addition, the provision creates a recovery ratio for determining amounts recovered for contributions owed to the plan, based on the PBGC's recovery experience over the same five-year period.

The provision does not apply to very large plans (i.e., plans for which participants' benefit losses exceed $20 million). As under present law, in the case of a very large plan, actual amounts recovered for unfunded benefit liabilities and for contributions owed to the plan are used to determine the amount available to provide additional benefits to participants.

Effective Date

The provision is effective for any plan termination for which notices of intent to terminate are provided (or, in the case of a termination by the PBGC, a notice of determination that the plan must be terminated is issued) on or after the date that is 30 days after the date of enactment.

I. Treatment of Certain Plans Where There is a Cessation or Change in Membership of a Controlled Group (sec. 4041(b) of ERISA)

Present Law

An employer may voluntarily terminate a single-employer plan only in a standard termination or a distress termination. A standard termination is permitted only if plan assets are sufficient to cover benefit liabilities. Benefit liabilities are defined generally as the present value of all benefits due under the plan (this amount is referred to as "termination liability"). This present value is determined using interest and mortality assumptions prescribed by the PBGC.

Explanation of Provision

Under the bill, if: (1) there is a transaction or series of transactions which result in a person ceasing to be a member of a controlled group; (2) such person, immediately before the transaction or series of transactions maintained a single-employer defined benefit plan which is fully funded then the interest rate used in determining whether the plan is sufficient for benefit liabilities or to otherwise assess plan liabilities for purposes of section 4041(b) or section 4042(a)(4) shall not be less than the interest rate used in determining whether the plan is fully funded.

The provision does not apply to any transaction or series of transactions unless (1) any employer maintaining the plan immediately before or after such transactions or series of transactions (a) has a outstanding senior unsecured debt instrument which is rated investment grade by each of the nationally recognized statistical rating organizations for corporate bonds that has issued a credit rating for such instrument, or (b) if no such debt instrument of such employer has been rated by such an organization but one or more of such organizations has made an issuer credit rating for such employer, all such organizations which have so rated the employer have rated such employer investment grade and (2) the employer maintaining the plan after the transaction or series of transaction employs at least 20 percent of the employees located within United States who were employed by such employer immediately before the transaction or series of transactions.

The provision does not apply in the case of determinations of liabilities by the PBGC or a court if the plan is terminated within two years of the transaction (or first transaction in a series of transactions).

For purposes of the provision, a plan is considered fully funded with respect to a transaction or series of transactions if (1) in the case of a transaction or series of transactions which occur in a plan year beginning before January 1, 2008, the funded current liability percentage for the plan year (determined under the minimum funding rules) is at least 100 percent, or (2) in the case of a transaction or series of transactions which occur on or after January 1, 2008, the funding target attainment percentage (as determined under the minimum funding rules) as of the valuation date for the plan year is at least 100 percent.

Effective Date

The provision applies to transactions or series of transactions occurring on or after the date of enactment.

J. Missing Participants (sec. 4050 of ERISA)

Present Law

In the case of a defined benefit pension plan that is subject to the plan termination insurance program under Title IV of the Employee Retirement Income Security Act of 1974 ("ERISA"), is maintained by a single employer, and terminates under a standard termination, the plan administrator generally must purchase annuity contracts from a private insurer to provide the benefits to which participants are entitled and distribute the annuity contracts to the participants.

If the plan administrator of a terminating single employer plan cannot locate a participant after a diligent search (a "missing participant"), the plan administrator may satisfy the distribution requirement only by purchasing an annuity from an insurer or transferring the participant's designated benefit to the Pension Benefit Guaranty Corporation ("PBGC"), which holds the benefit of the missing participant as trustee until the PBGC locates the missing participant and distributes the benefit.[109]

The PBGC missing participant program is not available to multiemployer plans or defined contribution plans and other plans not covered by Title IV of ERISA.

Explanation of Provision

Under the bill, the PBGC is directed to prescribe rules for terminating multiemployer plans similar to the present-law missing participant rules applicable to terminating single-employer plans that are subject to Title IV of ERISA.

In addition, under the bill, plan administrators of certain types of plans not subject to the PBGC termination insurance program under present law are permitted, but not required, to elect to transfer missing participants' benefits to the PBGC upon plan termination. Specifically, the provision extends the missing participants program (in accordance with regulations) to defined contribution plans, defined benefit pension plans that have no more than 25 active participants and are maintained by professional service employers, and the portion of defined benefit pension plans that provide benefits based upon the separate accounts of participants and therefore are treated as defined contribution plans under ERISA.

Effective Date

The provision is effective for distributions made after final regulations implementing the provision are prescribed.

---

[109] Secs. 4041(b)(3)(A) and 4050 of ERISA.

K. Director of the PBGC (secs. 4002 and 4003 of ERISA)

Present Law

The PBGC is a corporation within the Department of Labor. In carrying out its functions, the PBGC is administered by the chairman of the board of directors in accordance with the policies established by the board. The board of directors consists of the Secretaries of Labor, Treasury and Commerce.[110] The Secretary of Labor is the chairman of the board. The executive director of the PBGC is selected by the chairman of the board.

The PBGC is authorized to make such investigations as it deems necessary to enforce any provisions of title IV of ERISA or any rule or regulation thereunder. For the purpose of any such investigation (or any other proceeding under title IV or ERISA), any member of the board of directors or any officer designated by the chairman of the board may administer oaths, subpoena witnesses and take other actions as provided by ERISA as the corporation deems relevant or material to the inquiry.[111]

Explanation of Provision

The bill provides that, in carrying out its functions, the PBGC will be administered by a Director, who is appointed by the President by and with the advice and consent of the Senate. The Director is to act in accordance with the policies established by the PBGC board. The Senate Committees on Finance and on Health, Education, Labor, and Pensions are given joint jurisdiction over the nomination of a person nominated by the President to be Director of the PBGC. If one of such Committees votes to order reported such a nomination, the other such Committee is to report on the nomination within 30 calendar days, or it is automatically discharged.[112]

The Director, and any officer designated by the chairman, is given the authority with respect to investigations that is provided under present law to members of the PBGC board and officers designated by the chairman of the board.

---

[110] ERISA sec. 4002.

[111] ERISA sec. 4003.

[112] The provision relating to the Senate committees is treated as an exercise of rulemaking power of the Senate and is deemed a part of the rules of the Senate. It is applicable only with respect to the procedure to be followed in the case of a nomination of the Director of the PBGC and it supersedes other Senate rules only to the extent that it is inconsistent with such rules. The provision does not change the constitutional right of the Senate to change its rules (so far as relating to the procedure of the Senate) at any time, in the same manner and to the same extent as in the case of any other rule of the Senate.

The Director is to be compensated at the rate of compensation provided under Level III of the Executive Schedule.[113] Effective January 1, 2006, such annual rate of pay is $152,000.

Effective Date

The provision is effective on the date of enactment. The term of the individual serving as Executive Director of the PBGC on the date of enactment expires on the date of enactment. Such individual, or any other individual, may serve as interim Director of the PBGC until an individual is appointed as Director in accordance with the provision.

[113] 5 U.S.C. sec. 5314.

L. Inclusion of Information in the PBGC Annual Report (sec. 4008 of ERISA)

Present Law

As soon as practicable after the close of each fiscal year, the PBGC is required to transmit to the President and Congress a report relative to the conduct of its business for the year. The report must include (1) financial statements setting forth its finances and the result of its operations and (2) an actuarial evaluation of the expected operations and status of the four revolving funds used by the PBGC in carrying out its operations.

Explanation of Provision

Under the bill, additional information is required to be provided in the PBGC's annual report. The report must include (1) a summary of the Pension Insurance Modeling System microsimulation model, including the specific simulation parameters, specific initial values, temporal parameters, and policy parameters used to calculate the PBGC's financial statements; (2) a comparison of (a) the average return on investments earned with respect to assets invested by the PBGC for the year to which the report relates and (b) an amount equal to 60 percent of the average return on investment for the year in the Standard & Poor's 500 Index, plus 40 percent of the average return on investment for such year in the Lehman Aggregate Bond Index (or in a similar fixed income index), and (3) a statement regarding the deficit or surplus for the year that the PBGC would have had if it had earned the return described in (2) with respect to its invested assets.

Effective Date

The provision is effective on the date of enactment.

TITLE V: DISCLOSURE

A. Defined Benefit Plan Funding Notice (secs. 101(f) and 4011 of ERISA)

Present Law

Defined benefit pension plans are generally required to meet certain minimum funding requirements. These requirements are designed to help ensure that such plans are adequately funded. In addition, the Pension Benefit Guaranty Corporation ("PBGC") guarantees benefits under defined benefit pension plans, subject to limits.

Certain notices must be provided to participants in a single-employer defined benefit pension plan relating to the funding status of the plan. For example, ERISA requires an employer of a single-employer defined benefit plan to notify plan participants if the employer fails to make required contributions (unless a request for a funding waiver is pending).[114] In addition, in the case of an underfunded single-employer plan for which PBGC variable rate premiums are required, the plan administrator generally must notify plan participants of the plan's funding status and the limits on the PBGC benefit guarantee if the plan terminates while underfunded.[115]

Effective for plan years beginning after December 31, 2004, the plan administrator of a multiemployer defined benefit pension plan must provide an annual funding notice to: (1) each participant and beneficiary; (2) each labor organization representing such participants or beneficiaries; (3) each employer that has an obligation to contribute under the plan; and (4) the PBGC.

Such a notice must include: (1) identifying information, including the name of the plan, the address and phone number of the plan administrator and the plan's principal administrative officer, each plan sponsor's employer identification number, and the plan identification number; (2) a statement as to whether the plan's funded current liability percentage for the plan year to which the notice relates is at least 100 percent (and if not, a statement of the percentage); (3) a statement of the value of the plan's assets, the amount of benefit payments, and the ratio of the assets to the payments for the plan year to which the notice relates; (4) a summary of the rules governing insolvent multiemployer plans, including the limitations on benefit payments and any potential benefit reductions and suspensions (and the potential effects of such limitations, reductions, and suspensions on the plan); (5) a general description of the benefits under the plan that are eligible to be guaranteed by the PBGC and the limitations of the guarantee and circumstances in which such limitations apply; and (6) any additional information the plan administrator elects to include to the extent it is not inconsistent with regulations prescribed by the Secretary of Labor.

---

[114] ERISA sec. 101(d).

[115] ERISA sec. 4011.

The annual funding notice must be provided no later than two months after the deadline (including extensions) for filing the plan's annual report for the plan year to which the notice relates (i.e., nine months after the end of the plan year unless the due date for the annual report is extended). The funding notice must be provided in a form and manner prescribed in regulations by the Secretary of Labor. Additionally, it must be written so as to be understood by the average plan participant and may be provided in written, electronic, or some other appropriate form to the extent that it is reasonably accessible to persons to whom the notice is required to be provided.

A plan administrator that fails to provide the required notice to a participant or beneficiary may be liable to the participant or beneficiary in the amount of up to $100 a day from the time of the failure and for such other relief as a court may deem proper.

Explanation of Provision

The provision expands the annual funding notice requirement that applies under present law to multiemployer plans, so that it applies also to single-employer plans and, in the case of a single-employer plan, includes a summary of the PBGC rules governing plan termination. The provision also changes the information that must be provided in the notice and accelerates the time when the notice must be provided.

In addition to the information required under present law, an annual funding notice with respect to either a single-employer or multiemployer plan must include the following additional information, as of the end of the plan year to which the notice relates: (1) a statement of the number of participants who are retired or separated from service and receiving benefits, retired or separated participants who are entitled to future benefits, and active participants); (2) a statement setting forth the funding policy of the plan and the asset allocation of investments under the plan (expressed as percentages of total assets); (3) an explanation containing specific information of any plan amendment, scheduled benefit increase or reduction, or other known event taking effect in the current plan year and having a material effect on plan liabilities or assets for the year (as defined in regulations by the Secretary); and (4) a statement that a person may obtain a copy of the plan's annual report upon request, through the Department of Labor Internet website, or through an Intranet website maintained by the applicable plan sponsor.

In the case of a single-employer plan, the notice must provide: (1) a statement as to whether the plan's funding target attainment percentage (as defined under the minimum funding rules for single-employer plans) for the plan year to which the notice relates and the two preceding plan years, is at least 100 percent (and, if not, the actual percentages); (2) a statement of (a) the total assets (separately stating any funding standard carryover or prefunding balance) and the plan's liabilities for the plan year and the two preceding years, determined in the same manner as under the funding rules, and (b) the value of the plan's assets and liabilities as of the last day of the plan year to which the notice relates, determined using fair market value and the interest rate used in determining variable rate premiums; and (3) if applicable, a statement that each contributing sponsor, and each member of the sponsor's controlled group, was required to provide the information under section 4010 for the plan year to which the notice relates.

In the case of a multiemployer plan, the notice must provide: (1) a statement as to whether the plan's funded percentage (as defined under the minimum funding rules for

multiemployer plans) for the plan year to which the notice relates and the two preceding plan years, is at least 100 percent (and, if not, the actual percentages); (2) a statement of the value of the plan's assets and liabilities for the plan year to which the notice relates and the two preceding plan years; (3) whether the plan was in endangered or critical status and, if so, a summary of the plan's funding improvement or rehabilitation plan and a statement describing how a person can obtain a copy of the plan's funding improvement or rehabilitation plan and the actuarial or financial data that demonstrate any action taken by the plan toward fiscal improvement; and (4) a statement that the plan administrator will provide, on written request, a copy of the plan's annual report to any labor organization representing participants and beneficiaries and any employer that has an obligation to contribute to the plan.

The annual funding notice must be provided within 120 days after the end of the plan year to which it relates. In the case of a plan covering not more than 100 employees for the preceding year, the annual funding notice must be provided upon filing of the annual report with respect to the plan (i.e., within seven months after the end of the plan year unless the due date for the annual report is extended).

The Secretary of Labor is required to publish a model notice not later than one year after the date of enactment. In addition, the Secretary of Labor is given the authority to promulgate any interim final rules as appropriate to carry out the requirement that a model notice be published.

Under the provision, the annual funding notice includes the information provided in the notice required under present law in the case of a single-employer plan that is subject to PBGC variable rate premiums. Accordingly, that present-law notice requirement is repealed under the provision.

Effective Date

The provision is effective for plan years beginning after December 31, 2007, except that the repeal of the notice required under present law in the case of a single-employer plan that is subject to PBGC variable rate premiums is effective for plan years beginning after December 31, 2006. Under a transition rule, any requirement to report a plan's funding target attainment percentage or funded percentage for a plan year beginning before January 1, 2008, is met if (1) in the case of a plan year beginning in 2006, the plan's funded current liability percentage is reported, and (2) in the case of a plan year beginning in 2007, the funding target attainment percentage or funded percentage as determined using such methods of estimation as the Secretary of the Treasury may provide is reported.

B. Access to Multiemployer Pension Plan Information (secs. 101, 204(h), and 502(c) of ERISA and sec. 4980F of the Code)

Present Law

Annual report

The plan administrator of a pension plan generally must file an annual return with the Secretary of the Treasury, an annual report with the Secretary of Labor, and certain information with the Pension Benefit Guaranty Corporation ("PBGC"). Form 5500, which consists of a primary form and various schedules, includes the information required to be filed with all three agencies. The plan administrator satisfies the reporting requirement with respect to each agency by filing the Form 5500 with the Department of Labor.

In the case of a defined benefit pension plan, the annual report must include an actuarial statement. The actuarial statement must include, for example, information as to the value of plan assets, the plan's accrued and current liabilities, the plan's actuarial cost method and actuarial assumptions, and plan contributions. The report must be signed by an actuary enrolled to practice before the IRS, Department of Labor and the PBGC.

The Form 5500 is due by the last day of the seventh month following the close of the plan year. The due date generally may be extended up to two and one-half months. Copies of filed Form 5500s are available for public examination at the U.S. Department of Labor.

Notice of significant reduction in benefit accruals

If an amendment to a defined benefit pension plan provides for a significant reduction in the rate of future benefit accrual, the plan administrator must furnish a written notice concerning the amendment. Notice may also be required if a plan amendment eliminates or reduces an early retirement benefit or retirement-type subsidy. The plan administrator is required to provide the notice to any participant or alternate payee whose rate of future benefit accrual may reasonably be expected to be significantly reduced by the plan amendment (and to any employee organization representing affected participants). The notice must be written in a manner calculated to be understood by the average plan participant and must provide sufficient information to allow recipients to understand the effect of the amendment. The plan administrator is generally required to provide the notice at least 45 days before the effective date of the plan amendment.

Explanation of Provision

Under the provision, a plan administrator of a multiemployer plan must, within 30 days of a written request, provide a plan participant or beneficiary, employee organization or employer that has an obligation to contribute to the plan with a copy of: (1) any periodic actuarial report (including any sensitivity testing) for any plan year that has been in the plan's possession for at least 30 days; (2) a copy of any quarterly, semi-annual, or annual financial report prepared for the plan by any plan investment manager or advisor or other person who is a plan fiduciary that has been in the plan's possession for at least 30 days; and (3) a copy of any application for an amortization extension filed with the Secretary of the Treasury. Any actuarial

report or financial report provided to a participant, beneficiary, or employer must not include any individually identifiable information regarding any participant, beneficiary, employee, fiduciary, or contributing employer, or reveal any proprietary information regarding the plan, any contributing employer, or any entity providing services to the plan. Regulations relating to the requirement to provide actuarial or financial reports on request must be issued within one year after the date of enactment.

In addition, the plan sponsor or administrator of a multiemployer plan must provide to any employer having an obligation to contribute to the plan, within 180 days of a written request, notice of: (1) the estimated amount that would be the employer's withdrawal liability with respect to the plan if the employer withdrew from the plan on the last day of the year preceding the date of the request; and (2) an explanation of how the estimated liability amount was determined, including the actuarial assumptions and methods used to determine the value of plan liabilities and assets, the data regarding employer contributions, unfunded vested benefits, annual changes in the plan's unfunded vested benefits, and the application of any relevant limitations on the estimated withdrawal liability. Regulations may permit a longer time than 180 days as may be necessary in the case of a plan that determines withdrawal liability using certain methods.

A person is not entitled to receive more than one copy of any actuary or financial report or more than one notice of withdrawal liability during any 12-month period. The plan administrator may make a reasonable charge to cover copying, mailing, and other costs of furnishing copies or notices, subject to a maximum amount that may be prescribed by regulations. Any information required to be provided under the provision may be provided in written, electronic, or other appropriate form to the extent such form is reasonably available to the persons to whom the information is required to be provided.

In the case of a failure to comply with these requirements, the Secretary of Labor may assess a civil penalty of up to $1,000 per day for each failure to provide a notice.

Under the provision, notice of an amendment that provides for a significant reduction in the rate of future benefit accrual must be provided also to each employer that has an obligation to contribute to the plan.

Effective Date

The provision is effective for plan years beginning after December 31, 2007.

C. Additional Annual Reporting Requirements and Electronic Display of Annual Report Information (secs. 103 and 104 of ERISA)

Present Law

Annual report

The plan administrator of a pension plan generally must file an annual return with the Secretary of the Treasury, an annual report with the Secretary of Labor, and certain information with the Pension Benefit Guaranty Corporation ("PBGC"). Form 5500, which consists of a primary form and various schedules, includes the information required to be filed with all three agencies. The plan administrator satisfies the reporting requirement with respect to each agency by filing the Form 5500 with the Department of Labor.

In the case of a defined benefit pension plan, the annual report must include an actuarial statement. The actuarial statement must include, for example, information as to the value of plan assets, the plan's accrued and current liabilities, the plan's actuarial cost method and actuarial assumptions, and plan contributions. The report must be signed by an actuary enrolled to practice before the IRS, Department of Labor and the PBGC.

The Form 5500 is due by the last day of the seventh month following the close of the plan year. The due date generally may be extended up to two and one-half months. Copies of filed Form 5500s are available for public examination at the U.S. Department of Labor.

Summary annual report

A participant must be provided with a copy of the full annual report on written request. In addition, the plan administrator must automatically provide participants with a summary of the annual report within two months after the due date of the annual report (i.e., by the end of the ninth month after the end of the plan year unless an extension applies). The summary annual report must include a statement whether contributions were made to keep the plan funded in accordance with minimum funding requirements, or whether contributions were not made and the amount of the deficit. The current value of plan assets is also required to be disclosed. If an extension applies for the Form 5500, the summary annual report must be provided within two months after the extended due date. A plan administrator who fails to provide a summary annual report to a participant within 30 days of the participant making a request for the report may be liable to the participant for a civil penalty of up to $100 a day from the date of the failure.

Explanation of Provision

Annual report

The provision requires additional information to be provided in the annual report filed with respect to a defined benefit pension plan. In a case in which the liabilities under the plan as of the end of a plan year consist (in whole or in part) of liabilities under two or more other pension plans as of immediately before the plan year, the annual report must include the plan's funded percentage as of the last day of the plan year and the funded percentage of each of such

other plans. Funded percentage is defined as: (1) in the case of a single-employer plan, the plan's funded target attainment percentage (as defined under the minimum funding rules for single-employer plans); and (2) in the case of a multiemployer plan, the plan's funded percentage (as defined under the minimum funding rules for multiemployer plans).

An annual report filed with respect to a multiemployer plan must include, as of the end of the plan year, the following additional information: (1) the number of employers obligated to contribute to the plan; (2) a list of the employers that contributed more than five percent of the total contributions to the plan during the plan year; (3) the number of participants on whose behalf no contributions were made by an employer as an employer of the participant for the plan year and two preceding years; (4) the ratio of the number of participants under the plan on whose behalf no employer had an obligation to make an employer contribution during the plan year, to the number of participants under the plan on whose behalf no employer had an obligation to make an employer contribution during each of the two preceding plan years; (5) whether the plan received an amortization extension for the plan year and, if so, the amount by which it changed the minimum required contribution for the year, what minimum contribution would have been required without the extension, and the period of the extension; (6) whether the plan used the shortfall funding method and, if so, the amount by which it changed the minimum required contribution for the year, what minimum contribution would have been required without the use of this method, and the period for which the method is used; (7) whether the plan was in critical or endangered status for the plan year, and if so, a summary of any funding improvement or rehabilitation plan (or modification thereto) adopted during the plan year, and the funding percentage of the plan; (8) the number of employers that withdrew from the plan during the preceding plan year and the aggregate amount of withdrawal liability assessed, or estimated to be assessed, against the withdrawn employers; (9) if the plan that has merged with another plan or if assets and liabilities have been transferred to the plan, the actuarial valuation of the assets and liabilities of each affected plan during the year preceding the effective date of the merger or transfer, based upon the most recent data available as of the day before the first day of the plan year, or other valuation method performed under standards and procedures as prescribed by regulation.

The Secretary of Labor is required, not later than one year after the date of enactment, to publish guidance to assist multiemployer plans to identify and enumerate plan participants for whom there is no employer with an obligation to make an employer contribution under the plan and report such information in the annual report. The Secretary may provide rules as needed to apply this requirement with respect to contributions made on a basis other than hours worked, such as on the basis of units of production.

The actuarial statement filed with the annual return must include a statement explaining the actuarial assumptions and methods used in projecting future retirements and asset distributions under the plan.

Electronic display of annual report

Identification and basic plan information and actuarial information included in the annual report must be filed with the Secretary of Labor in an electronic format that accommodates display on the Internet (in accordance with regulations). The Secretary of Labor is to provide for

the display of such information, within 90 days after the filing of the annual report, on a website maintained by the Secretary of Labor on the Internet and other appropriate media. Such information is also required to be displayed on any Intranet website maintained by the plan sponsor (or by the plan administrator on behalf of the plan sponsor) in accordance with regulations.

Summary annual report

Under the provision, the requirement to provide a summary annual report to participants applies does not apply to defined benefit pension plans.[116]

Multiemployer plan summary report

The provision requires the plan administrator of a multiemployer plan to provide a report containing certain summary plan information to each employee organization and each employer with an obligation to contribute to the plan within 30 days after the due date of the plan's annual report. The report must contain: (1) a description of the contribution schedules and benefit formulas under the plan, and any modification to such schedules and formulas, during such plan year; (2) the number of employers obligated to contribute to the plan; (3) a list of the employers that contributed more than 5 percent of the total contributions to the plan during such plan year; (4) the number of participants under the plan on whose behalf no employer contributions have been made to the plan for such plan year and for each of the two preceding plan years; (5) whether the plan was in critical or endangered status for the plan year and, if so, a list of the actions taken by the plan to improve its funding status and a statement describing how to obtain a copy of the plan's improvement or rehabilitation plan, as appropriate, and the actuarial and financial data that demonstrate any action taken by the plan toward fiscal improvement; (6) the number of employers that withdrew from the plan during the preceding plan year and the aggregate amount of withdrawal liability assessed, or estimated to be assessed, against such withdrawn employers, as reported on the annual report for the plan year; (7) if the plan that has merged with another plan or if assets and liabilities have been transferred to the plan, the actuarial valuation of the assets and liabilities of each affected plan during the year preceding the effective date of the merger or transfer, based upon the most recent data available as of the day before the first day of the plan year, or other valuation method performed under standards and procedures as prescribed by regulation; (8) a description as to whether the plan sought or received an amortization extension or used the shortfall funding method for the plan year; and (9) notification of the right to obtain upon written request a copy of the annual report filed with respect to the plan, the summary annual report, the summary plan description, and the summary of any material modification of the plan, subject to a limitation of one copy of any such document in any 12-month period and any reasonable charge to cover copying, mailing, and other costs of furnishing the document. Nothing in this report requirement waives any other ERISA provision requiring plan administrators to provide, upon request, information to employers that have an obligation to contribute under the plan.

[116] As discussed in Part A above, detailed information about a defined benefit pension plan must be provided to participants in an annual funding notice.

Effective Date

The provisions are effective for plan years beginning after December 31, 2007.

D. Section 4010 Filings with the PBGC (sec. 4010 of ERISA)

Present Law

Present law provides that, in certain circumstances, the contributing sponsor of a single-employer plan defined benefit pension plan covered by the PBGC (and members of the contributing sponsor's controlled group) must provide certain information to the PBGC (referred to as "section 4010 reporting"). This information includes financial information with respect to the contributing sponsor (and controlled group members) and actuarial information with respect to single-employer plans maintained by the sponsor (and controlled group members).[117] Section 4010 reporting is required if: (1) the aggregate unfunded vested benefits (determined using the interest rate used in determining variable-rate premiums) as of the end of the preceding plan year under all plans maintained by members of the controlled group exceed $50 million (disregarding plans with no unfunded vested benefits); (2) the conditions for imposition of a lien (i.e., required contributions totaling more than $1 million have not been made) have occurred with respect to an underfunded plan maintained by a member of the controlled group; or (3) minimum funding waivers in excess of $1 million have been granted with respect to a plan maintained by any member of the controlled group and any portion of the waived amount is still outstanding. Information provided to the PBGC in accordance with these requirements is not available to the public.

The PBGC may assess a penalty for a failure to provide the required information in the amount of up to $1,000 a day for each day the failure continues.[118]

Explanation of Provision

Under the provision, the requirement of section 4010 reporting applicable under present law if aggregate unfunded vested benefits exceed $50 million is replaced with a requirement of section 4010 reporting if: (1) the funding target attainment percentage at the end of the preceding plan year of a plan maintained by a contributing sponsor or any member of its controlled group is less than 80 percent. It is intended that the PBGC may waive the requirement in appropriate circumstances, such as in the case of small plans.

The provision also requires the information provided to the PBGC to include the following: (1) the amount of benefit liabilities under the plan determined using the assumptions used by the PBGC in determining liabilities; (2) the funding target of the plan determined as if the plan has been in at-risk status for at least 5 plan years; and (3) the funding target attainment percentage of the plan.

The value of plan assets, a plan's funding target, a plan's funding target attainment percentage, and at-risk status are determined under the provision relating to funding rules

---

[117] ERISA sec. 4010.

[118] ERISA sec. 4071.

applicable to single-employer plans under the provision. Thus, a plan's funding target for a plan year is the present value of the benefits earned or accrued under the plan as of the beginning of the plan year. A plan's "funding target attainment percentage" means the ratio, expressed as a percentage, that the value of the plan's assets (reduced by any funding standard carryover balance and prefunding balance) bears to the plan's funding target for the year (determined without regard to the special assumptions that apply to at-risk plans). A plan is in at-risk status for a plan year if the plan's funding target attainment percentage for the preceding year was less than (1) 80 percent, determined without regard to the special at-risk assumptions, and (2) 70 percent, determined using the special at-risk assumptions.

The provision requires the PBGC to provide the Senate Committees on Health, Education, Labor, and Pensions and Finance and the House Committees on Education and the Workforce and Ways and Means with a summary report in the aggregate of the information submitted to the PBGC under section 4010.

Effective Date

The provision is effective for filings for years beginning after December 31, 2007.

E. Disclosure of Plan Termination Information to Plan Participants (secs. 4041 and 4042 of ERISA)

Present Law

In the case of a single-employer defined benefit pension plan covered under the PBGC insurance program, the plan sponsor may voluntarily terminate the plan in a standard termination or a distress termination.[119] A standard termination is permitted only if plan assets are sufficient to cover benefit liabilities.

If assets in a defined benefit plan are not sufficient to cover benefit liabilities, the plan sponsor may not terminate the plan unless the plan sponsor (and members of the plan sponsor's controlled group) meets one of four criteria of financial distress. The four criteria for a distress termination are: (1) the plan sponsor, and every member of the controlled group of which the sponsor is a member, is being liquidated in bankruptcy or any similar Federal law or other similar State insolvency proceedings; (2) the plan sponsor and every member of the sponsor's controlled group is being reorganized in bankruptcy or similar State proceeding; (3) the PBGC determines that termination is necessary to allow the plan sponsor to pay its debts when due; or (4) the PBGC determines that termination is necessary to avoid unreasonably burdensome pension costs caused solely by a decline in the plan sponsor's work force.

In order for a plan sponsor to terminate a plan, the plan administrator must provide each affected party with advance written notice of the intent to terminate at least 60 days before the proposed termination date. Additional information must be included as required by the PBGC. For this purpose, an affected party is: (1) a plan participant; (2) a beneficiary of a deceased participant or an alternate payee under a qualified domestic relations order; (3) any employee organization representing plan participants; and (4) the PBGC (except in the case of a standard termination). In the case of a proposed distress termination, as soon as practicable after providing notice, the plan administrator must provide the PBGC with certain information, including information necessary for the PBGC to determine whether any of the criteria for a distress termination is met.

The PBGC may institute proceedings to terminate a single-employer plan if it determines that the plan in question: (1) has not met the minimum funding standards; (2) will be unable to pay benefits when due; (3) has a substantial owner who has received a distribution greater than $10,000 (other than by reason of death) while the plan has unfunded vested benefits; or (4) may reasonably be expected to increase the PBGC's long-run loss with respect to the plan unreasonably if the plan is not terminated. The PBGC must institute proceedings to terminate a plan if the plan is unable to pay benefits that are currently due.

If the PBGC determines that the requirements for an involuntary plan termination are met, it must provide notice to the plan.

---

[119] The PBGC may not proceed with a voluntary termination if the termination would violate an existing collective bargaining agreement.

Explanation of Provision

The provision revises the rules applicable in the case of a distress termination to require a plan administrator to provide an affected party with any information provided to the PBGC in connection with the proposed plan termination. The plan administrator must provide the information not later than 15 days after: (1) the receipt of a request for the information from the affected party; or (2) the provision of new information to the PBGC relating to a previous request.

The provision also requires the plan sponsor or plan administrator of a plan that has received notice from the PBGC of a determination that the plan should be involuntarily terminated to provide an affected party with any information provided to the PBGC in connection with the plan termination. In addition, the PBGC is required to provide a copy of the administrative record, including the trusteeship decision record in connection with a plan termination. The plan sponsor, plan administrator, or PBGC must provide the required information not later than 15 days after: (1) the receipt of a request for the information from the affected party; or (2) in the case of information provided to the PBGC, the provision of new information to the PBGC relating to a previous request.

The PBGC may prescribe the form and manner in which information is to be provided, which is to include delivery in written, electronic, or other appropriate form to the extent such form is reasonably accessible to individuals to whom the information is required to be provided. A plan administrator or plan sponsor may charge a reasonable fee for any information provided under this subparagraph in other than electronic form.

A plan administrator or plan sponsor may not provide the relevant information in a form that includes any information that may directly or indirectly be associated with, or otherwise identify, an individual participant or beneficiary. In addition, a court may limit disclosure of confidential information (as described under the Freedom of Information Act) to any authorized representative of the participants or beneficiaries that agrees to ensure the confidentiality of such information. For this purposes, an authorized representative means any employee organization representing participants in the pension plan.

Effective Date

The provision generally applies with respect to any plan termination, with respect to which the notice of intent to terminate, or notice that the PBGC has determined that the requirements for an involuntary plan termination are met, occurs after the date of enactment. Under a transition rule, if notice under the provision would otherwise be required before the 90th day after the date of enactment, such notice is not required to be provided until the 90th day.

F. Notice of Freedom to Divest Employer Securities (new sec. 101(m) of ERISA)

Present Law

Under ERISA, a plan administrator is required to furnish participants with certain notices and information about the plan. This information includes, for example, a summary plan description that includes certain information, including administrative information about the plan, the plan's requirements as to eligibility for participation and benefits, the plan's vesting provisions, and the procedures for claiming benefits under the plan. Under ERISA, if a plan administrator fails or refuses to furnish to a participant information required to be provided to the participant within 30 days of the participant's written request, the participant generally may bring a civil action to recover from the plan administrator $100 a day, within the court's discretion, or other relief that the court deems proper.

Explanation of Provision

The provision requires a new notice in connection with the right of an applicable individual to divest his or her account under an applicable defined contribution plan of employer securities, as required under the provision of the provision relating to diversification rights with respect to amounts invested in employer securities. Not later than 30 days before the first date on which an applicable individual is eligible to exercise such right with respect to any type of contribution, the administrator of the plan must provide the individual with a notice setting forth such right and describing the importance of diversifying the investment of retirement account assets. Under the diversification provision, an applicable individual's right to divest his or her account of employer securities attributable to elective deferrals and employee after-tax contributions and the right to divest his or her account of employer securities attributable to other contributions (i.e., nonelective employer contributions and employer matching contributions) may become exercisable at different times. Thus, to the extent the applicable individual is first eligible to exercise such rights at different times, separate notices are required.

The notice must be written in a manner calculated to be understood by the average plan participant and may be delivered in written, electronic, or other appropriate form to the extent such form is reasonably accessible to the applicable individual. The Secretary of Treasury has regulatory authority over the required notice and is directed to prescribe a model notice to be used for this purpose within 180 days of the date of enactment of the provision. It is expected that the Secretary of Treasury will consult with the Secretary of Labor on the description of the importance of diversifying the investment of retirement account assets. In addition, it is intended that the Secretary of Treasury will prescribe rules to enable the notice to be provided at reduced administrative expense, such as allowing the notice to be provided with the summary plan description, with a reminder of these rights within a reasonable period before they become exercisable.

In the case of a failure to provide a required notice of diversification rights, the Secretary of Labor may assess a civil penalty against the plan administrator of up to $100 a day from the date of the failure. For this purpose, each violation with respect to any single applicable individual is treated as a separate violation.

Effective Date

The provision generally applies to plan years beginning after December 31, 2006. Under a transition rule, if notice would otherwise be required to be provided before 90 days after the date of enactment, notice is not required until 90 days after the date of enactment.

G. Periodic Pension Benefit Statements (secs. 105(a) and 502(c)(1) of ERISA)

Present Law

ERISA provides that the administrator of a defined contribution or defined benefit pension plan must furnish a benefit statement to any participant or beneficiary who makes a written request for such a statement. The benefit statement must indicate, on the basis of the latest available information: (1) the participant's or beneficiary's total accrued benefit; and (2) the participant's or beneficiary's vested accrued benefit or the earliest date on which the accrued benefit will become vested. A participant or beneficiary is not entitled to receive more than one benefit statement during any 12-month period. If a plan administrator fails or refuses to furnish a benefit statement to a participant or beneficiary within 30 days of a written request, the participant or beneficiary may bring a civil action to recover from the plan administrator $100 a day, within the court's discretion, or other relief that the court deems proper.

Explanation of Provision

In general

The provision revises the benefit statement requirements under ERISA. The new requirements depend in part on the type of plan and the individual to whom the statement is provided. The benefit statement requirements do not apply to a one-participant retirement plan.[120]

A benefit statement is required to indicate, on the basis of the latest available information: (1) the total benefits accrued; (2) the vested accrued benefit or the earliest date on which the accrued benefit will become vested; and (3) an explanation of any permitted disparity or floor-offset arrangement that may be applied in determining accrued benefits under the plan.[121] With respect to information on vested benefits, the Secretary of Labor is required to provide that the requirements are met if, at least annually, the plan: (1) updates the information on vested benefits that is provided in the benefit statement; or (2) provides in a separate statement information as is necessary to enable participants and beneficiaries to determine their vested benefits.

If a plan administrator fails to provide a required benefit statement to a participant or beneficiary, the participant or beneficiary may bring a civil action to recover from the plan

---

[120] A one-participant retirement plan is defined as under the provision of ERISA that requires advance notice of a blackout period to be provided to participants and beneficiaries affected by the blackout period, as discussed in Part H below.

[121] Under the permitted disparity rules, contributions or benefits may be provided at a higher rate with respect to compensation above a specified level and at a lower rate with respect to compensation up to the specified level. In addition, benefits under a defined benefit plan may be offset by a portion of a participant's expected social security benefits. Under a floor-offset arrangement, benefits under a defined benefit pension plan are reduced by benefits under a defined contribution plan.

administrator $100 a day, within the court's discretion, or other relief that the court deems proper.

Requirements for defined contribution plans

The administrator of a defined contribution plan is required to provide a benefit statement (1) to a participant or beneficiary who has the right to direct the investment of the assets in his or her account, at least quarterly, (2) to any other participant or other beneficiary who has his or her own account under the plan, at least annually, and (3) to other beneficiaries, upon written request, but limited to one request during any 12-month period.

A benefit statement provided with respect to a defined contribution plan must include the value of each investment to which assets in the individual's account are allocated (determined as of the plan's most recent valuation date), including the value of any assets held in the form of employer securities (without regard to whether the securities were contributed by the employer or acquired at the direction of the individual). A quarterly benefit statement provided to a participant or beneficiary who has the right to direct investments must also provide: (1) an explanation of any limitations or restrictions on any right of the individual to direct an investment; (2) an explanation, written in a manner calculated to be understood by the average plan participant, of the importance, for the long-term retirement security of participants and beneficiaries, of a well-balanced and diversified investment portfolio, including a statement of the risk that holding more than 20 percent of a portfolio in the security of one entity (such as employer securities) may not be adequately diversified; and (3) a notice directing the participant or beneficiary to the Internet website of the Department of Labor for sources of information on individual investing and diversification.

Requirements for defined benefit plans

The administrator of a defined benefit plan is required either: (1) to furnish a benefit statement at least once every three years to each participant who has a vested accrued benefit under the plan and who is employed by the employer at the time the benefit statements are furnished to participants; or (2) to furnish at least annually to each such participant notice of the availability of a benefit statement and the manner in which the participant can obtain it. The Secretary of Labor is authorized to provide that years in which no employee or former employee benefits under the plan need not be taken into account in determining the three-year period. It is intended that the annual notice of the availability of a benefit statement may be included with other communications to the participant if done in a manner reasonably designed to attract the attention of the participant.

The administrator of a defined benefit pension plan is also required to furnish a benefit statement to a participant or beneficiary upon written request, limited to one request during any 12–month period.

In the case of a statement provided to a participant with respect to a defined benefit plan (other than at the participant's request), information may be based on reasonable estimates determined under regulations prescribed by the Secretary of Labor in consultation with the Pension Benefit Guaranty Corporation.

Form of benefit statement

A benefit statement must be written in a manner calculated to be understood by the average plan participant. It may be delivered in written, electronic, or other appropriate form to the extent such form is reasonably accessible to the recipient. For example, regulations could permit current benefit statements to be provided on a continuous basis through a secure plan website for a participant or beneficiary who has access to the website.

The Secretary of Labor is directed, within one year after the date of enactment, to develop one or more model benefit statements that may be used by plan administrators in complying with the benefit statement requirements. The use of the model statement is optional. It is intended that the model statement include items such as the amount of vested accrued benefits as of the statement date that are payable at normal retirement age under the plan, the amount of accrued benefits that are forfeitable but that may become vested under the terms of the plan, information on how to contact the Social Security Administration to obtain a participant's personal earnings and benefit estimate statement, and other information that may be important to understanding benefits earned under the plan. The Secretary of Labor is also given the authority to promulgate any interim final rules as determined appropriate to carry out the benefit statement requirements.

Effective Date

The provision is generally effective for plan years beginning after December 31, 2006. In the case of a plan maintained pursuant to one or more collective bargaining agreements, the provision is effective for plan years beginning after the earlier of (1) the later of December 31, 2007, or the date on which the last of such collective bargaining agreements terminates (determined without regard to any extension thereof after the date of enactment), or (2) December 31, 2008.

H. Notice to Participants or Beneficiaries of Blackout Periods (sec. 101(i) of ERISA)

Present Law

In general

The Sarbanes-Oxley Act of 2002[122] amended ERISA to require that the plan administrator of an individual account plan[123] provide advance notice of a blackout period (a "blackout notice") to plan participants and beneficiaries to whom the blackout period applies.[124] Generally, notice must be provided at least 30 days before the beginning of the blackout period. In the case of a blackout period that applies with respect to employer securities, the plan administrator must also provide timely notice of the blackout period to the employer (or the affiliate of the employer that issued the securities, if applicable).

The blackout notice requirement does not apply to a one-participant retirement plan, which is defined as a plan that (1) on the first day of the plan year, covered only the employer (and the employer's spouse) and the employer owns the entire business (whether or not incorporated) or covers only one or more partners (and their spouses) in a business partnership (including partners in an S or C corporation as defined in section 1361(a) of the Code), (2) meets the minimum coverage requirements without being combined with any other plan that covers employees of the business, (3) does not provide benefits to anyone except the employer (and the employer's spouse) or the partners (and their spouses), (4) does not cover a business that is a member of an affiliated service group, a controlled group of corporations, or a group of corporations under common control, and (5) does not cover a business that leases employees.[125]

Definition of blackout period

A blackout period is any period during which any ability of participants or beneficiaries under the plan, which is otherwise available under the terms of the plan, to direct or diversify assets credited to their accounts, or to obtain loans or distributions from the plan, is temporarily suspended, limited, or restricted if the suspension, limitation, or restriction is for any period of more than three consecutive business days. However, a blackout period does not include a suspension, limitation, or restriction that (1) occurs by reason of the application of securities

---

[122] Pub. L. No. 107-204 (2002).

[123] An "individual account plan" is the term generally used under ERISA for a defined contribution plan.

[124] ERISA sec. 101(i), as enacted by section 306(b) of the Sarbanes-Oxley Act of 2002. Under section 306(a), a director or executive officer of a publicly-traded corporation is prohibited from trading in employer stock during blackout periods in certain circumstances. Section 306 is effective 180 days after enactment.

[125] Governmental plans and church plans are exempt from ERISA. Accordingly, the blackout notice requirement does not apply to these plans.

laws, (2) is a change to the plan providing for a regularly scheduled suspension, limitation, or restriction that is disclosed through a summary of material modifications to the plan or materials describing specific investment options under the plan, or changes thereto, or (3) applies only to one or more individuals, each of whom is a participant, alternate payee, or other beneficiary under a qualified domestic relations order.

Timing of notice

Notice of a blackout period is generally required at least 30 days before the beginning of the period. The 30-day notice requirement does not apply if (1) deferral of the blackout period would violate the fiduciary duty requirements of ERISA and a plan fiduciary so determines in writing, or (2) the inability to provide the 30-day advance notice is due to events that were unforeseeable or circumstances beyond the reasonable control of the plan administrator and a plan fiduciary so determines in writing. In those cases, notice must be provided as soon as reasonably practicable under the circumstances unless notice in advance of the termination of the blackout period is impracticable.

Another exception to the 30-day period applies in the case of a blackout period that applies only to one or more participants or beneficiaries in connection with a merger, acquisition, divestiture, or similar transaction involving the plan or the employer and that occurs solely in connection with becoming or ceasing to be a participant or beneficiary under the plan by reason of the merger, acquisition, divestiture, or similar transaction. Under the exception, the blackout notice requirement is treated as met if notice is provided to the participants or beneficiaries to whom the blackout period applies as soon as reasonably practicable.

The Secretary of Labor may provide additional exceptions to the notice requirement that the Secretary determines are in the interests of participants and beneficiaries.

Form and content of notice

A blackout notice must be written in a manner calculated to be understood by the average plan participant and must include (1) the reasons for the blackout period, (2) an identification of the investments and other rights affected, (3) the expected beginning date and length of the blackout period, and (4) in the case of a blackout period affecting investments, a statement that the participant or beneficiary should evaluate the appropriateness of current investment decisions in light of the inability to direct or diversify assets during the blackout period, and (5) other matters as required by regulations. If the expected beginning date or length of the blackout period changes after notice has been provided, the plan administrator must provide notice of the change (and specify any material change in other matters related to the blackout) to affected participants and beneficiaries as soon as reasonably practicable.

Notices provided in connection with a blackout period (or changes thereto) must be provided in writing and may be delivered in electronic or other form to the extent that the form is reasonably accessible to the recipient. The Secretary of Labor is required to issue guidance regarding the notice requirement and a model blackout notice.

Penalty for failure to provide notice

In the case of a failure to provide notice of a blackout period, the Secretary of Labor may assess a civil penalty against a plan administrator of up to $100 per day for each failure to provide a blackout notice. For this purpose, each violation with respect to a single participant or beneficiary is treated as a separate violation.

Explanation of Provision

The provision modifies the definition of a one-participant retirement plan to be consistent with Department of Labor regulations under which certain business owners and their spouses are not treated as employees.[126] As modified, a one-participant retirement plan is a plan that: (1) on the first day of the plan year, either covered only one individual (or the individual and his or her spouse) and the individual owned 100 percent of the plan sponsor, whether or not incorporated, or covered only one or more partners (or partners and their spouses) in the plan sponsor; and (2) does not cover a business that leases employees.

Effective Date

The provision is effective as if included in section 306 of the Sarbanes-Oxley Act of 2002.

[126] 29 C.F.R. sec. 2510.3-3(c) (2006).

TITLE VI: INVESTMENT ADVICE, PROHIBITED TRANSACTIONS, AND FIDUCIARY RULES

A. Investment Advice (sec. 408 of ERISA and sec. 4975 of the Code)

Present Law

ERISA and the Code prohibit certain transactions between an employer-sponsored retirement plan and a disqualified person (referred to as a "party in interest" under ERISA).[127] Under ERISA, the prohibited transaction rules apply to employer-sponsored retirement plans and welfare benefit plans. Under the Code, the prohibited transaction rules apply to qualified retirement plans and qualified retirement annuities, as well as individual retirement accounts and annuities ("IRAs"), health savings accounts ("HSAs"), Archer MSAs, and Coverdell education savings accounts.[128]

Disqualified persons include a fiduciary of the plan, a person providing services to the plan, and an employer with employees covered by the plan. For this purpose, a fiduciary includes any person who (1) exercises any authority or control respecting management or disposition of the plan's assets, (2) renders investment advice for a fee or other compensation with respect to any plan moneys or property, or has the authority or responsibility to do so, or (3) has any discretionary authority or responsibility in the administration of the plan.

Prohibited transactions include (1) the sale, exchange or leasing of property, (2) the lending of money or other extension of credit, (3) the furnishing of goods, services or facilities, (4) the transfer to, or use by or for the benefit of, the income or assets of the plan, (5) in the case of a fiduciary, any act that deals with the plan's income or assets for the fiduciary's own interest or account, and (6) the receipt by a fiduciary of any consideration for the fiduciary's own personal account from any party dealing with the plan in connection with a transaction involving the income or assets of the plan. However, certain transactions are exempt from prohibited transaction treatment, for example, certain loans to plan participants.

Under ERISA, the Secretary of Labor may assess a civil penalty against a person who engages in a prohibited transaction, other than a transaction with a plan covered by the prohibited transaction rules of the Code. The penalty may not exceed five percent of the amount involved in the transaction for each year or part of a year that the prohibited transaction continues. If the prohibited transaction is not corrected within 90 days after notice from the Secretary of Labor, the penalty may be up to 100 percent of the amount involved in the transaction. Under the Code, if a prohibited transaction occurs, the disqualified person who participates in the transaction is subject to a two-tier excise tax. The first level tax is 15 percent of the amount involved in the

---

[127] ERISA sec. 406; Code sec. 4975.

[128] The prohibited transaction rules under ERISA and the Code generally do not apply to governmental plans or church plans.

transaction. The second level tax is imposed if the prohibited transaction is not corrected within a certain period and is 100 percent of the amount involved.

Explanation of Provision

In general

The provision adds a new category of prohibited transaction exemption under ERISA and the Code in connection with the provision of investment advice through an "eligible investment advice arrangement" to participants and beneficiaries of a defined contribution plan who direct the investment of their accounts under the plan and to beneficiaries of IRAs.[129] If the requirements under the provision are met, the following are exempt from prohibited transaction treatment: (1) the provision of investment advice; (2) an investment transaction (i.e., a sale, acquisition, or holding of a security or other property) pursuant to the advice; and (3) the direct or indirect receipt of fees or other compensation in connection with the provision of the advice or an investment transaction pursuant to the advice. The prohibited transaction exemptions provided under the provision do not in any manner alter existing individual or class exemptions provided by statute or administrative action.

The provision also directs the Secretary of Labor, in consultation with the Secretary of the Treasury, to determine, based on certain information to be solicited by the Secretary of Labor, whether there is any computer model investment advice program that meets the requirements of the provision and may be used by IRAs. The determination is to be made by December 31, 2007. If the Secretary of Labor determines there is such a program, the exemptions described above apply in connection with the use of the program with respect to IRA beneficiaries. If the Secretary of Labor determines that there is not such a program, such Secretary is directed to grant a class exemption from prohibited transaction treatment (as discussed below) for the provision of investment advice, investment transactions pursuant to such advice, and related fees to beneficiaries of such arrangements.

Eligible investment advice arrangements

In general

The exemptions provided under the provision apply in connection with the provision of investment advice by a fiduciary adviser under an eligible investment advice arrangement. An eligible investment advice arrangement is an arrangement (1) meeting certain requirements (discussed below) and (2) which either (a) provides that any fees (including any commission or compensation) received by the fiduciary adviser for investment advice or with respect to an investment transaction with respect to plan assets do not vary depending on the basis of any investment option selected, or (b) uses a computer model under an investment advice program as described below in connection with the provision of investment advice to a participant or beneficiary. In the case of an eligible investment advice arrangement with respect to a defined

[129] The portions of the provision relating to IRAs apply to HSAs, Archer MSAs, and Coverdell education savings accounts. References here to IRAs include such other arrangements as well.

contribution plan, the arrangement must be expressly authorized by a plan fiduciary other than (1) the person offering the investment advice program, (2) any person providing investment options under the plan, or (3) any affiliate of (1) or (2).

Investment advice program using computer model

If an eligible investment advice arrangement provides investment advice pursuant to a computer model, the model must (1) apply generally accepted investment theories that take into account the historic returns of different asset classes over defined periods of time, (2) use relevant information about the participant or beneficiary, (3) use prescribed objective criteria to provide asset allocation portfolios comprised of investment options under the plan, (4) operate in a manner that is not biased in favor of any investment options offered by the fiduciary adviser or related person, and (5) take into account all the investment options under the plan in specifying how a participant's or beneficiary's account should be invested without inappropriate weighting of any investment option. An eligible investment expert must certify, before the model is used and in accordance with rules prescribed by the Secretary, that the model meets these requirements. The certification must be renewed if there are material changes to the model as determined under regulations. For this purpose, an eligible investment expert is a person who meets requirements prescribed by the Secretary and who does not bear any material affiliation or contractual relationship with any investment adviser or related person.

In addition, if a computer model is used, the only investment advice that may be provided under the arrangement is the advice generated by the computer model, and any investment transaction pursuant the advice must occur solely at the direction of the participant or beneficiary. This requirement does not preclude the participant or beneficiary from requesting other investment advice, but only if the request has not been solicited by any person connected with carrying out the investment advice arrangement.

Audit requirements

In the case of an eligible investment advice arrangement with respect to a defined contribution plan, an annual audit of the arrangement for compliance with applicable requirements must be conducted by an independent auditor (i.e., unrelated to the person offering the investment advice arrangement or any person providing investment options under the plan) who has appropriate technical training or experience and proficiency and who so represents in writing. The auditor must issue a report of the audit results to the fiduciary that authorized use of the arrangement. In the case of an eligible investment advice arrangement with respect to IRAs, an audit is required at such times and in such manner as prescribed by the Secretary of Labor.

Notice requirements

Before the initial provision of investment advice, the fiduciary adviser must provide written notice (which may be in electronic form) containing various information to the recipient of the advice, including information relating to: (1) the role of any related party in the development of the investment advice program or the selection of investment options under the plan; (2) past performance and rates of return for each investment option offered under the plan; (3) any fees or other compensation to be received by the fiduciary adviser or affiliate; (4) any

material affiliation or contractual relationship of the fiduciary adviser or affiliates in the security or other property involved in the investment transaction; (5) the manner and under what circumstances any participant or beneficiary information will be used or disclosed; (6) the types of services provided by the fiduciary adviser in connection with the provision of investment advice; (7) the adviser's status as a fiduciary of the plan in connection with the provision of the advice; and (8) the ability of the recipient of the advice separately to arrange for the provision of advice by another adviser that could have no material affiliation with and receive no fees or other compensation in connection with the security or other property. This information must be maintained in accurate form and must be provided to the recipient of the investment advice, without charge, on an annual basis, on request, or in the case of any material change.

Any notification must be written in a clear and conspicuous manner, calculated to be understood by the average plan participant, and sufficiently accurate and comprehensive so as to reasonably apprise participants and beneficiaries of the required information. The Secretary is directed to issue a model form for the disclosure of fees and other compensation as required by the provision. The fiduciary adviser must maintain for at least six years any records necessary for determining whether the requirements for the prohibited transaction exemption were met. A prohibited transaction will not be considered to have occurred solely because records were lost or destroyed before the end of six years due to circumstances beyond the adviser's control.

Other requirements

In order for the exemption to apply, the following additional requirements must be satisfied: (1) the fiduciary adviser must provide disclosures applicable under securities laws; (2) an investment transaction must occur solely at the direction of the recipient of the advice; (3) compensation received by the fiduciary adviser or affiliates in connection with an investment transaction must be reasonable; and (4) the terms of the investment transaction must be at least as favorable to the plan as an arm's length transaction would be.

Fiduciary adviser

For purposes of the provision, "fiduciary adviser" is defined as a person who is a fiduciary of the plan by reason of the provision of investment advice to a participant or beneficiary and who is also: (1) registered as an investment adviser under the Investment Advisers Act of 1940 or under State laws; (2) a bank, a similar financial institution supervised by the United States or a State, or a savings association (as defined under the Federal Deposit Insurance Act), but only if the advice is provided through a trust department that is subject to periodic examination and review by Federal or State banking authorities; (3) an insurance company qualified to do business under State law; (4) registered as a broker or dealer under the Securities Exchange Act of 1934; (5) an affiliate of any of the preceding; or (6) an employee, agent or registered representative of any of the preceding who satisfies the requirements of applicable insurance, banking and securities laws relating to the provision of advice. A person who develops the computer model or markets the investment advice program or computer model is treated as a person who is a plan fiduciary by reason of the provision of investment advice and is treated as a fiduciary adviser, except that the Secretary may prescribe rules under which only one fiduciary adviser may elect treatment as a plan fiduciary. "Affiliate" means an affiliated person as defined under section 2(a)(3) of the Investment Company Act of 1940. "Registered

representative" means a person described in section 3(a)(18) of the Securities Exchange Act of 1934 or a person described in section 202(a)(17) of the Investment Advisers Act of 1940.

Fiduciary rules

Subject to certain requirements, an employer or other person who is a plan fiduciary, other than a fiduciary adviser, is not treated as failing to meet the fiduciary requirements of ERISA, solely by reason of the provision of investment advice as permitted under the provision or of contracting for or otherwise arranging for the provision of the advice. This rule applies if: (1) the advice is provided under an arrangement between the employer or plan fiduciary and the fiduciary adviser for the provision of investment advice by the fiduciary adviser as permitted under the provision; (2) the terms of the arrangement require compliance by the fiduciary adviser with the requirements of the provision; and (3) the terms of the arrangement include a written acknowledgement by the fiduciary adviser that the fiduciary adviser is a plan fiduciary with respect to the provision of the advice.

The provision does not exempt the employer or a plan fiduciary from fiduciary responsibility under ERISA for the prudent selection and periodic review of a fiduciary adviser with whom the employer or plan fiduciary has arranged for the provision of investment advice. The employer or plan fiduciary does not have the duty to monitor the specific investment advice given by a fiduciary adviser. The provision also provides that nothing in the fiduciary responsibility provisions of ERISA is to be construed to preclude the use of plan assets to pay for reasonable expenses in providing investment advice.

Study and determination by the Secretary of Labor; class exemption

Under the provision, the Secretary of Labor must determine, in consultation with the Secretary of the Treasury, whether there is any computer model investment advice program that can be used by IRAs and that meets the requirements of the provision. The determination is to be made on the basis of information to be solicited by the Secretary of Labor as described below. Under the provision, a computer model investment advice program must (1) use relevant information about the beneficiary, (2) take into account the full range of investments, including equities and bonds, in determining the options for the investment portfolio of the beneficiary, and (3) allow the account beneficiary, in directing the investment of assets, sufficient flexibility in obtaining advice to evaluate and select options. The Secretary of Labor must report the results of this determination to the House Committees on Ways and Means and Education and the Workforce and the Senate Committees on Finance and Health, Education, Labor, and Pensions no later than December 31, 2007.

As soon as practicable after the date of enactment, the Secretary of Labor, in consultation with the Secretary of the Treasury, must solicit information as to the feasibility of the application of computer model investment advice programs for IRAs, including from (1) at least the top 50 trustees of IRAs, determined on the basis of assets held by such trustees, and (2) other persons offering such programs based on nonproprietary products. The information solicited by the Secretary of Labor from such trustees and other persons is to include information on their computer modeling capabilities with respect to the current year and the preceding year, including their capabilities for investment accounts they maintain. If a person from whom the Secretary of

Labor solicits information does not provide such information within 60 days after the solicitation, the person is not entitled to use any class exemption granted by the Secretary of Labor as required under the provision (as discussed below) unless such failure is due to reasonable cause and not willful neglect.

The exemptions provided under the provision with respect to an eligible investment advice arrangement involving a computer model do not apply to IRAs. If the Secretary of Labor determines that there is a computer model investment advice program that can be used by IRAs, the exemptions provided under the provision with respect to an eligible investment advice arrangement involving a computer model can apply to IRAs.

If, as a result of the study of this issue as directed by the provision, the Secretary of Labor determines that there is not such a program, the Secretary of Labor must grant a class exemption from prohibited transaction treatment for (1) the provision of investment advice by a fiduciary adviser to beneficiaries of IRAs; (2) investment transactions pursuant to the advice; and (3) the direct or indirect receipt of fees or other compensation in connection with the provision of the advice or an investment transaction pursuant to the advice. Application of the exemptions are to be subject to conditions as are set forth in the class exemption and as are (1) in the interests of the IRA and its beneficiary and protective of the rights of the beneficiary, and (2) necessary to ensure the requirements of the applicable exemptions and the investment advice provided utilizes prescribed objective criteria to provide asset allocation portfolios comprised of securities or other property available as investments under the IRA. Such conditions could require that the fiduciary adviser providing the advice (1) adopt written policies and procedures that ensure the advice provided is not biased in favor of investments offered by the fiduciary adviser or a related person, and (2) appoint an individual responsible for annually reviewing the advice provided to determine that the advice is provided in accordance with the policies and procedures in (1).

If the Secretary of Labor later determines that there is any computer model investment advice program that can be used by IRAs, the class exemption ceases to apply after the later of (1) the date two years after the Secretary's later determination, or (2) the date three years after the date the exemption first took effect.

Any person may request the Secretary of Labor to make a determination with respect to any computer model investment advice program as to whether it can be used by IRAs, and the Secretary must make such determination within 90 days of the request. If the Secretary determines that the program cannot be so used, within 10 days of the determination, the Secretary must notify the House Committees on Ways and Means and Education and the Workforce and the Senate Committees on Finance and Health, Education, Labor, and Pensions thereof and the reasons for the determination.

Effective Date

The provisions are effective with respect to investment advice provided after December 31, 2006. The provision relating to the study by the Secretary of Labor is effective on the date of enactment.

B. Prohibited Transaction Rules Relating to Financial Investments (secs. 408, 412(a), and 502(i) and new sec. 3(42) of ERISA, and sec. 4975 of the Code)

1. Exemption for block trading

Present Law

Present law provides statutory exemptions from the prohibited transaction rules for certain transactions.[130] Present law does not provide a statutory prohibited transaction exemption for block trades. For purposes of the prohibited transaction rules, a fiduciary means any person who (1) exercises any authority or control respecting management or disposition of the plan's assets, (2) renders investment advice for a fee or other compensation with respect to any plan moneys or property, or has the authority or responsibility to do so, or (3) has any discretionary authority or responsibility in the administration of the plan.

Explanation of Provision

The provision provides prohibited transaction exemptions under ERISA and the Code for a purchase or sale of securities or other property (as determined by the Secretary of Labor) between a plan and a disqualified person (other than a fiduciary) involving a block trade if: (1) the transaction involves a block trade; (2) at the time of the transaction, the interest of the plan (together with the interests of any other plans maintained by the same plan sponsor) does not exceed 10 percent of the aggregate size of the block trade; (3) the terms of the transaction, including the price, are at least as favorable to the plan as an arm's length transaction with an unrelated party; and (4) the compensation associated with the transaction must be no greater than the compensation associated with an arm's length transaction with an unrelated party. For purposes of the provision, block trade is defined as any trade of at least 10,000 shares or with a market value of at least $200,000 that will be allocated across two or more unrelated client accounts of a fiduciary. Examples of property other than securities that the Secretary of labor may apply the exemption to include (but are not limited to) future contracts and currency.

Effective Date

The provision is effective with respect to transactions occurring after the date of enactment.

---

[130] In addition, under ERISA section 408(a), the Secretary of Labor may grant exemptions with respect to particular transactions or classes of transactions after consultation and coordination with the Secretary of Treasury. An exemption may not be granted unless the Secretary of Labor finds that the exemption is administratively feasible, in the interests of the plan and its participants and beneficiaries, and protective of the rights of plan participants and beneficiaries.

2. Bonding relief

Present Law

Subject to certain exceptions, ERISA requires a plan fiduciary and any person handling plan assets to be bonded, generally in an amount between $1,000 and $500,000. An exception to the bonding requirement generally applies for a fiduciary (or a director, officer, or employee of the fiduciary) that is a corporation authorized to exercise trust powers or conduct an insurance business if the corporation is subject to supervision or examination by Federal or State regulators and meets certain financial requirements.

Explanation of Provision

The provision provides an exception to the ERISA bonding requirement for an entity registered as a broker or a dealer under the Securities Exchange Act of 1934 if the broker or dealer is subject to the fidelity bond requirements of a self-regulatory organization (within the meaning of the Securities Exchange Act of 1934).

Effective Date

The provision is effective for plan years beginning after the date of enactment.

3. Exemption for electronic communication network

Present Law

Present law provides statutory exemptions from the prohibited transaction rules for certain transactions.[131] Present law does not provide a statutory prohibited transaction exemption for transactions made through an electronic communication network, but such transactions may be permitted if the parties are not known to each other (a "blind" transaction).

Explanation of Provision

The provision provides a prohibited transaction exemption under ERISA and the Code for a transaction involving the purchase or sale of securities (or other property as determined under regulations) between a plan and a party in interest if: (1) the transaction is executed through an electronic communication network, alternative trading system, or similar execution system or trading venue that is subject to regulation and oversight by (a) the applicable Federal regulating entity or (b) a foreign regulatory entity as the Secretary may determine under regulations; (2) either (a) neither the execution system nor the parties to the transaction take into account the identity of the parties in the execution of trades, or (b) the transaction is effected

[131] In addition, under ERISA section 408(a), the Secretary of Labor may grant exemptions with respect to particular transactions or classes of transactions after consultation and coordination with the Secretary of Treasury. An exemption may not be granted unless the Secretary of Labor finds that the exemption is administratively feasible, in the interests of the plan and its participants and beneficiaries, and protective of the rights of plan participants and beneficiaries.

under rules designed to match purchases and sales at the best price available through the execution system in accordance with applicable rules of the SEC or other relevant governmental authority; (3) the price and compensation associated with the purchase and sale are not greater than an arm's length transaction with an unrelated party; (4) if the disqualified person has an ownership interest in the system or venue, the system or venue has been authorized by the plan sponsor or other independent fiduciary for this type of transaction; and (5) not less than 30 days before the first transaction of this type executed through any such system or venue, a plan fiduciary is provided written notice of the execution of the transaction through the system or venue.

Examples of other property for purposes of the exemption include (but are not limited to) futures contracts and currency.

Effective Date

The provision is effective with respect to transactions occurring after the date of enactment.

4. Exemption for service providers

Present Law

Certain transactions are exempt from prohibited transaction treatment if made for adequate consideration. For this purpose, adequate consideration means: (1) in the case of a security for which there is a generally recognized market, either the price of the security prevailing on a national securities exchange registered under the Securities Exchange Act of 1934, or, if the security is not traded on such a national securities exchange, a price not less favorable to the plan than the offering price for the security as established by the current bid and asked prices quoted by persons independent of the issuer and of any disqualified person; and (2) in the case of an asset other than a security for which there is a generally recognized market, the fair market value of the asset as determined in good faith by a trustee or named fiduciary pursuant to the terms of the plan and in accordance with regulations.[132]

Explanation of Provision

The provision provides a prohibited transaction exemption under ERISA for certain transactions (such as sales of property, loans, and transfers or use of plan assets) between a plan and a person that is a party in interest solely by reason of providing services (or solely by reason of having certain relationships with a service provider), but only if, in connection with the transaction, the plan receives no less, nor pays no more, than adequate consideration. For this purpose, adequate consideration means: (1) in the case of a security for which there is a generally recognized market, the price of the security prevailing on a national securities exchange registered under the Securities Exchange Act of 1934, taking into account factors such as the size of the transaction and marketability of the security, or, if the security is not traded on

[132] ERISA sec. 3(18).

such a national securities exchange, a price not less favorable to the plan than the offering price for the security as established by the current bid and asked prices quoted by persons independent of the issuer and of any disqualified person, taking into account factors such as the size of the transaction and marketability of the security; and (2) in the case of an asset other than a security for which there is a generally recognized market, the fair market value of the asset as determined in good faith by a fiduciary or named fiduciaries in accordance with regulations. The exemption does not apply to a fiduciary (or an affiliate) who has or exercises any discretionary authority or control with respect to the investment of the assets involved in the transaction or provides investment advice with respect to the assets.

Effective Date

The provision is effective with respect to transactions occurring after the date of enactment.

5. Relief for foreign exchange transactions

Present Law

Present law provides statutory exemptions from the prohibited transaction rules for certain transactions.[133] Present law does not provide a statutory prohibited transaction exemption for foreign exchange transactions.

Explanation of Provision

The provision provides a prohibited transaction exemption under ERISA and the Code for foreign exchange transactions between a bank or broker-dealer (or an affiliate of either) and a plan in connection with the sale, purchase, or holding of securities or other investment assets (other than a foreign exchange transaction unrelated to any other investment in securities or other investment assets) if: (1) at the time the foreign exchange transaction is entered into, the terms of the transaction are not less favorable to the plan than the terms generally available in comparable arm's length foreign exchange transactions between unrelated parties or the terms afforded by the bank or the broker-dealer (or any affiliate thereof) in comparable arm's-length foreign exchange transactions involving unrelated parties; (2) the exchange rate used for a particular foreign exchange transaction may not deviate by more than three percent from the interbank bid and asked rates at the time of the transaction for transactions of comparable size and maturity as displayed on an independent service that reports rates of exchange in the foreign currency market for such currency; and (3) the bank, broker-dealer (and any affiliate of either) does not have investment discretion or provide investment advice with respect to the transaction.

[133] In addition, under ERISA section 408(a), the Secretary of Labor may grant exemptions with respect to particular transactions or classes of transactions after consultation and coordination with the Secretary of Treasury. An exemption may not be granted unless the Secretary of Labor finds that the exemption is administratively feasible, in the interests of the plan and its participants and beneficiaries, and protective of the rights of plan participants and beneficiaries.

Effective Date

The provision is effective with respect to transactions occurring after the date of enactment.

6. Definition of plan asset vehicle

Present Law

Under ERISA regulations, applicable also for purposes of the prohibited transaction rules of the Code, when a plan holds a non-publicly-traded equity interest in an entity, the assets of the entity may be considered plan assets in certain circumstances unless equity participation in the entity by benefit plan inventors is not significant.[134] In general, such equity participation is significant if, immediately after the most recent acquisition of any equity interest in the entity, 25 percent or more of the value of any class of equity interest in the entity (disregarding certain interests) is held by benefit plan investors, defined as (1) employer-sponsored plans (including those exempt from ERISA, such as governmental plans), (2) other arrangements, such as IRAs, that are subject only to the prohibited transaction rules of the Code, and (3) any entity whose assets are plan assets by reason of a plan's investment in the entity.[135] In that case, unless an exception applies, plan assets include the plan's equity interest in the entity and an undivided interest in each of the underlying assets of the entity.

Explanation of Provision

Under the provision, the term "plan assets" means plan assets as defined under regulations prescribed by the Secretary of Labor. Under the regulations, the assets of any entity are not to be treated as plan assets if, immediately after the most recent acquisition of any equity interest in the entity, less than 25 percent of the total value of each class of equity interest in the entity (disregarding certain interests) is held by benefit plan investors. For this purpose, an entity is considered to hold plan assets only to the extent of the percentage of the equity interest held by benefit plan investors, which means an employee benefit plan subject to the fiduciary rules of ERISA, any plan to which the prohibited transaction rules of the Code applies, and any entity whose underlying assets include plan assets by reason of a plan's investment in such entity.

Effective Date

The provision is effective with respect to transactions occurring after the date of enactment.

---

[134] 29 C.F.R. sec. 2510.3-101(a) (2005). As a result, a person who exercises authority or control respecting management or disposition of the assets of the entity or renders investment advice with respect to the assets for a fee (direct or indirect) is a plan fiduciary.

[135] 29 C.F.R. sec. 2510.3-101(f) (2005).

7. Exemption for cross trading

Present Law

Present law provides statutory exemptions from the prohibited transaction rules for certain transactions.[136] Present law does not provide a statutory prohibited transaction exemption for cross trades.

Explanation of Provision

The provision provides prohibited transaction exemptions under ERISA and the Code for a transaction involving the purchase and sale of a security between a plan and any other account managed by the same investment manager if certain requirements are met. These requirements are–

- the transaction is a purchase or sale, for no consideration other than cash payment against prompt delivery of a security for which market quotations are readily available;
- the transaction is effected at the independent current market price of the security;
- no brokerage commission fee (except for customary transfer fees, the fact of which is disclosed) or other remuneration is paid in connection with the transaction;
- a fiduciary (other than the investment manager engaging in the cross trades or any affiliate) for each plan participating in the transaction authorizes in advance of any cross-trades (in a document that is separate from any other written agreement of the parties) the investment manager to engage in cross trades at the investment manager's discretion, after the fiduciary has received disclosure regarding the conditions under which cross trades may take place (but only if the disclosure is separate from any other agreement or disclosure involving the asset management relationship), including the written policies and procedures of the investment manager;
- each plan participating in the transaction has assets of at least $100,000,000, except that, if the assets of a plan are invested in a master trust containing the assets of plans maintained by employers in the same controlled group, the master trust has assets of at least $100,000,000;
- the investment manager provides to the plan fiduciary who has authorized cross trading a quarterly report detailing all cross trades executed by the investment manager in which the plan participated during such quarter, including the following information as applicable: the identity of each security bought or sold, the number of

[136] In addition, under ERISA section 408(a), the Secretary of Labor may grant exemptions with respect to particular transactions or classes of transactions after consultation and coordination with the Secretary of Treasury. An exemption may not be granted unless the Secretary of Labor finds that the exemption is administratively feasible, in the interests of the plan and its participants and beneficiaries, and protective of the rights of plan participants and beneficiaries.

shares or units traded, the parties involved in the cross trade, and the trade price and the method used to establish the trade price;

- the investment manager does not base its fee schedule on the plan's consent to cross trading and no other service (other than the investment opportunities and cost savings available through a cross trade) is conditioned on the plan's consent to cross trading;
- the investment manager has adopted, and cross trades are effected in accordance with, written cross-trading policies and procedures that are fair and equitable to all accounts participating in the cross-trading program and that include a description of the manager's pricing policies and procedures, and the manager's policies and procedures for allocating cross trades in an objective manner among accounts participating in the cross-trading program; and
- the investment manager has designated an individual responsible for periodically reviewing purchases and sales to ensure compliance with the written policies and procedures and, following such review, the individual must issue an annual written report no later than 90 days following the period to which it relates, signed under penalty of perjury, to the plan fiduciary who authorized the cross trading, describing the steps performed during the course of the review, the level of compliance, and any specific instances of noncompliance.

The written report must also notify the plan fiduciary of the plan's right to terminate participation in the investment manager's cross-trading program at any time.

No later than 180 days after the date of enactment, the Secretary of Labor, after consultation with the Securities and Exchange Commission, is directed to issue regulations regarding the content of policies and procedures required to be adopted by an investment manager under the requirements for the exemption.

Effective Date

The provision is effective with respect to transactions occurring after the date of enactment.

C. Correction Period for Certain Transactions Involving Securities and Commodities (sec. 408 of ERISA, and sec. 4975 of the Code)

Present Law

ERISA and the Code prohibit certain transactions between an employer-sponsored retirement plan and a disqualified person (referred to as a "party in interest" under ERISA).[137] Disqualified persons include a fiduciary of the plan, a person providing services to the plan, and an employer with employees covered by the plan. For this purpose, a fiduciary includes any person who (1) exercises any authority or control respecting management or disposition of the plan's assets, (2) renders investment advice for a fee or other compensation with respect to any plan moneys or property, or has the authority or responsibility to do so, or (3) has any discretionary authority or responsibility in the administration of the plan.

Prohibited transactions include (1) the sale, exchange or leasing of property, (2) the lending of money or other extension of credit, (3) the furnishing of goods, services or facilities, (4) the transfer to, or use by or for the benefit of, the income or assets of the plan, (5) in the case of a fiduciary, any act that deals with the plan's income or assets for the fiduciary's own interest or account, and (6) the receipt by a fiduciary of any consideration for the fiduciary's own personal account from any party dealing with the plan in connection with a transaction involving the income or assets of the plan. However, certain transactions are exempt from prohibited transaction treatment, for example, certain loans to plan participants.

Under the Code, if a prohibited transaction occurs, the disqualified person who participates in the transaction is subject to a two-tier excise tax. The first level tax is 15 percent of the amount involved in the transaction. The second level tax is imposed if the prohibited transaction is not corrected within a certain period and is 100 percent of the amount involved. Under ERISA, the Secretary of Labor may assess a civil penalty against a person who engages in a prohibited transaction, other than a transaction with a plan covered by the prohibited transaction rules of the Code (i.e., involving a qualified retirement plan or annuity). The penalty may not exceed five percent of the amount involved in the transaction. If the prohibited transaction is not corrected within 90 days after notice from the Secretary of Labor, the penalty may be up to 100 percent of the amount involved in the transaction.[138] For purposes of these

[137] Under ERISA, the prohibited transaction rules apply to employer-sponsored retirement plans and welfare benefit plans. Under the Code, the prohibited transaction rules apply to qualified retirement plans and qualified retirement annuities, as well as individual retirement accounts and annuities, Archer MSAs, health savings accounts, and Coverdell education savings accounts. The prohibited transaction rules under ERISA and the Code generally do not apply to governmental plans or church plans.

[138] A prohibited transaction violates the fiduciary responsibility provisions of ERISA. Under section 502(l) of ERISA, in the case of a violation of fiduciary responsibility, a civil penalty is generally imposed of 20 percent of the amount recovered from a person with respect to the violation in a settlement agreement with the Department of Labor or a judicial proceeding, but the penalty is reduced by the amount of any excise tax or other civil penalty with respect to a prohibited transaction.

rules, the "amount involved" generally means the greater of (1) the amount of money and the fair market value of the other property given, or (2) the amount of money and the fair market value of other property received by the plan. The terms "correction" and "correct" mean, with respect to a prohibited transaction, undoing the transaction to the extent possible, but in any case placing the plan in a financial position not worse than the position in which it would be if the disqualified person were acting under the highest fiduciary standards.

For purposes of the prohibited transaction rules of the Code and ERISA, a transaction involving the sale of securities is considered to occur when the transaction is settled (that is, an actual change in ownership of the securities). Under current practice, securities transactions are commonly settled 3 days after the agreement to sell is made. Present law does not provide a statutory prohibited transaction exemption that is based solely on correction of the transaction.

Explanation of Provision

The bill provides a prohibited transaction exemption under ERISA and the Code for a transaction in connection with the acquisition, holding, or disposition of any security or commodity if the transaction is corrected within a certain period, generally within 14 days of the date the disqualified person (or other person knowingly participating in the transaction) discovers, or reasonably should have discovered, the transaction was a prohibited transaction. For this purpose, the term "correct" means, with respect to a transaction: (1) to undo the transaction to the extent possible and in any case to make good to the plan or affected account any losses resulting from the transaction; and (2) to restore to the plan or affected account any profits made through the use of assets of the plan. If the exemption applies, no excise tax is to be assessed with the transaction, any tax assessed is to be abated, and any tax collected is to be credited or refunded as a tax overpayment.

The exemption does not apply to any transaction between a plan and a plan sponsor or its affiliates that involves the acquisition or sale of an employer security or the acquisition, sale, or lease of employer real property. In addition, in the case of a disqualified person (or other person knowingly participating in the transaction), the exemption does not apply if, at the time of the transaction, the person knew (or reasonably should have known) that the transaction would constitute a prohibited transaction.

Effective Date

The provision is effective with respect to any transaction that a fiduciary or other person discovers, or reasonably should have discovered, after the date of enactment constitutes a prohibited transaction.

D. Inapplicability of Relief from Fiduciary Liability During Suspension of Ability of Participant or Beneficiary to Direct Investments (sec. 404(c) of ERISA)

Present Law

Fiduciary rules under ERISA

ERISA contains general fiduciary duty standards that apply to all fiduciary actions, including investment decisions. ERISA requires that a plan fiduciary generally must discharge its duties solely in the interests of participants and beneficiaries and with the care, skill, prudence, and diligence under the circumstances then prevailing that a prudent man acting in a like capacity and familiar with such matters would use in the conduct of an enterprise of a like character and with like aims. With respect to plan assets, ERISA requires a fiduciary to diversify the investments of the plan so as to minimize the risk of large losses, unless under the circumstances it is clearly prudent not to do so.

A plan fiduciary that breaches any of the fiduciary responsibilities, obligations, or duties imposed by ERISA is personally liable to make good to the plan any losses to the plan resulting from such breach and to restore to the plan any profits the fiduciary has made through the use of plan assets. A plan fiduciary may be liable also for a breach of responsibility by another fiduciary (a "co-fiduciary") in certain circumstances.

Special rule for participant control of assets

ERISA provides a special rule in the case of a defined contribution plan that permits participants to exercise control over the assets in their individual accounts. Under the special rule, if a participant exercises control over the assets in his or her account (as determined under regulations), the participant is not deemed to be a fiduciary by reason of such exercise and no person who is otherwise a fiduciary is liable for any loss, or by reason of any breach, that results from the participant's exercise of control.

Regulations issued by the Department of Labor describe the requirements that must be met in order for a participant to be treated as exercising control over the assets in his or her account. With respect to investment options, the regulations provide in part:

- the plan must provide at least three different investment options, each of which is diversified and has materially different risk and return characteristics;
- the plan must allow participants to give investment instructions with respect to each investment option under the plan with a frequency that is appropriate in light of the reasonably expected market volatility of the investment option (the general volatility rule);
- at a minimum, participants must be allowed to give investment instructions at least every three months with respect to least three of the investment options, and those investment options must constitute a broad range of options (the three-month minimum rule);

- participants must be provided with detailed information about the investment options, information regarding fees, investment instructions and limitations, and copies of financial data and prospectuses; and
- specific requirements must be satisfied with respect to investments in employer stock to ensure that employees' buying, selling, and voting decisions are confidential and free from employer influence.

If these and the other requirements under the regulations are met, a plan fiduciary may be liable for the investment options made available under the plan, but not for the specific investment decisions made by participants.

Blackout notice

Under ERISA, the plan administrator of a defined contribution plan generally must provide at least 30 days advance notice of a blackout period (a "blackout notice") to plan participants and beneficiaries to whom the blackout period applies.[139] Failure to provide a blackout notice may result in a civil penalty up to $100 per day for each failure with respect to a single participant or beneficiary.

A blackout period is any period during which any ability of participants or beneficiaries under the plan, which is otherwise available under the terms of the plan, to direct or diversify assets credited to their accounts, or to obtain loans or distributions from the plan, is temporarily suspended, limited, or restricted if the suspension, limitation, or restriction is for any period of more than three consecutive business days. However, a blackout period does not include a suspension, limitation, or restriction that (1) occurs by reason of the application of securities laws, (2) is a change to the plan providing for a regularly scheduled suspension, limitation, or restriction that is disclosed through a summary of material modifications to the plan or materials describing specific investment options under the plan, or changes thereto, or (3) applies only to one or more individuals, each of whom is a participant, alternate payee, or other beneficiary under a qualified domestic relations order.

A blackout notice must be written in a manner calculated to be understood by the average plan participant and must include (1) the reasons for the blackout period, (2) an identification of the investments and other rights affected, (3) the expected beginning date and length of the blackout period, and (4) in the case of a blackout period affecting investments, a statement that the participant or beneficiary should evaluate the appropriateness of current investment decisions in light of the inability to direct or diversify assets during the blackout period, and (5) other matters as required by regulations. If the expected beginning date or length of the blackout period changes after notice has been provided, the plan administrator must provide notice of the change (and specify any material change in other matters related to the blackout) to affected participants and beneficiaries as soon as reasonably practicable.

[139] ERISA sec. 101(i).

Explanation of Provision

The bill amends the special rule applicable if a participant exercises control over the assets in his or her account with respect to a case in which a qualified change in investment options offered under the defined contribution plan occurs. In such a case, for purposes of the special rule, a participant or beneficiary who has exercised control over the assets in his or her account before a change in investment options is not treated as not exercising control over such assets in connection with the change if certain requirements are met.

For this purpose, a qualified change in investment options means a change in the investment options offered to a participant or beneficiary under the terms of the plan, under which: (1) the participant's account is reallocated among one or more new investment options offered instead of one or more investment options that were offered immediately before the effective date of the change; and (2) the characteristics of the new investment options, including characteristics relating to risk and rate of return, are, immediately after the change, reasonably similar to the characteristics of the investment options offered immediately before the change.

The following requirements must be met in order for the rule to apply: (1) at least 30 but not more than 60 days before the effective date of the change in investment options, the plan administrator furnishes written notice of the change to participants and beneficiaries, including information comparing the existing and new investment options and an explanation that, in the absence of affirmative investment instructions from the participant or beneficiary to the contrary, the account of the participant or beneficiary will be invested in new options with characteristics reasonably similar to the characteristics of the existing investment options; (2) the participant or beneficiary has not provided to the plan administrator, in advance of the effective date of the change, affirmative investment instructions contrary to the proposed reinvestment of the participant's or beneficiary's account; and (3) the investment of the participant's or beneficiary's account as in effect immediately before the effective date of the change was the product of the exercise by such participant or beneficiary of control over the assets of the account.

In addition, the provision amends the special rule applicable if a participant or beneficiary exercises control over the assets in his or her account so that the provision under which no person who is otherwise a fiduciary is liable for any loss, or by reason of any breach, that results from the participant's or beneficiary's exercise of control does not apply in connection with a blackout period[140] in which the participant's or beneficiary's ability to direct the assets in his or her account is suspended by a plan sponsor or fiduciary. However, if a plan sponsor or fiduciary meets the requirements of ERISA in connection with authorizing and implementing a blackout period, any person who is otherwise a fiduciary is not liable under ERISA for any loss occurring during the blackout period.

Not later than one year after the date of enactment, the Secretary of Labor is to issue interim final regulations providing guidance, including safe harbors, on how plan sponsors or other affected fiduciaries can satisfy their fiduciary responsibilities during any blackout period.

[140] For this purpose, blackout period is defined as under the present-law provision requiring advance notice of a blackout period.

Effective Date

The provision generally applies to plan years beginning after December 31, 2007. In the case of a plan maintained pursuant to one or more collective bargaining agreements, the provision is effective for plan years beginning after the earlier of (1) the later of December 31, 2008 or the date on which the last of such collective bargaining agreements terminates (determined without regard to any extension thereof after the date of enactment), or (2) December 31, 2009.

E. Increase in Maximum Bond Amount (sec. 412(a) of ERISA)

Present Law

ERISA generally requires every plan fiduciary and every person who handles funds or other property of a plan (a "plan official") to be bonded. The amount of the bond is fixed annually at no less than ten percent of the funds handled, but must be at least $1,000 and not more than $500,000 (unless the Secretary of Labor prescribes a larger amount after notice and an opportunity to be heard). The bond is intended to protect plans against loss from acts of fraud or dishonesty by plan officials. Qualifying bonds must have as surety a corporate surety company that is an acceptable surety on Federal bonds.

Explanation of Provision

The provision raises the maximum bond amount to $1 million in the case of a plan that holds employer securities. The provision raises the maximum bond amount to $1 million in the case of a plan that holds employer securities. A plan would not be considered to hold employer securities within the meaning of this section where the only securities held by the plan are part of a broadly diversified fund of assets, such as mutual or index funds.

Effective Date

The provision is effective for plan years beginning after December 31, 2007.

F. Increase in Penalties for Coercive Interference with Exercise of ERISA Rights (sec. 511 of ERISA)

Present Law

ERISA prohibits any person from using fraud, force or violence (or threatening force or violence) to restrain, coerce, or intimidate (or attempt to) any plan participant or beneficiary in order to interfere with or prevent the exercise of their rights under the plan, ERISA, or the Welfare and Pension Plans Disclosure Act ("WPPDA"). Willful violation of this prohibition is a criminal offense subject to a $10,000 fine or imprisonment of up to one year, or both.

Explanation of Provision

The provision increases the penalties for willful acts of coercive interference with participants' rights under a plan, ERISA, or the WPPDA. The amount of the fine is increased to $100,000, and the maximum term of imprisonment is increased to 10 years.

Effective Date

The provision is effective for violations occurring on and after the date of enactment.

G. Treatment of Investment of Assets By Plan Where Participant Fails to Exercise Investment Election (sec. 404(c) of ERISA)

Present Law

ERISA imposes standards on the conduct of plan fiduciaries, including persons who make investment decisions with respect to plan assets. Fiduciaries are personally liable for any losses to the plan due to a violation of fiduciary standards.

An individual account plan may permit participants to make investment decisions with respect to their accounts. ERISA fiduciary liability does not apply to investment decisions made by plan participants if participants exercise control over the investment of their individual accounts, as determined under ERISA regulations. In that case, a plan fiduciary may be responsible for the investment alternatives made available, but not for the specific investment decisions made by participants.

Explanation of Provision

Under the bill, a participant is treated as exercising control with respect to assets in an individual account plan if such amounts are invested in a default arrangement in accordance with Department of Labor regulations until the participant makes an affirmative election regarding investments. Such regulations must provide guidance on the appropriateness of certain investments for designation as default investments under the arrangement, including guidance regarding appropriate mixes of default investments and asset classes which the Secretary considers consistent with long-term capital appreciation or long-term capital preservation (or both), and the designation of other default investments. The Secretary of Labor is directed to issue regulations under the provision within six months of the date of enactment.

In order for this treatment to apply, notice of the participant's rights and obligations under the arrangement must be provided. Under the notice requirement, within a reasonable period before the plan year, the plan administrator must give each participant notice of the rights and obligations under the arrangement which is sufficiently accurate and comprehensive to apprise the participant of such rights and obligations and is written in a manner to be understood by the average participant. The notice must include an explanation of the participant's rights under the arrangement to specifically elect to exercise control over the assets in the participant's account. In addition, the participant must have a reasonable period of time after receipt of the notice and before the assets are first invested to make such an election. The notice must also explain how contributions made under the arrangement will be invested in the absence of any investment election by the employee.

Effective Date

The provision is effective for plan years beginning after December 31, 2006.

H. Clarification of Fiduciary Rules

Present Law

ERISA imposes standards on the conduct of plan fiduciaries. Fiduciaries are personally liable for any losses to the plan due to a violation of fiduciary standards.

An ERISA interpretive bulletin requires a fiduciary choosing an annuity provider for purposes of distributions from a plan (whether on separation or retirement of a participant or on termination of the plan) to take steps calculated to obtain the safest available annuity, based on the annuity provider's claims paying ability and creditworthiness, unless under the circumstances it would be in the interest of participants to do otherwise.[141]

Explanation of Provision

The bill directs the Secretary of Labor to issue final regulations within one year of the date of enactment, clarifying that the selection of an annuity contract as an optional form of distribution from a defined contribution plan is not subject to the safest available annuity requirement under the ERISA interpretive bulletin and is subject to all otherwise applicable fiduciary standards.

The regulations to be issued by the Secretary of Labor are intended to clarify that the plan sponsor or other applicable plan fiduciary is required to act in accordance with the prudence standards of ERISA section 404(a). It is not intended that there be a single safest available annuity contract since the plan fiduciary must select the most prudent option specific to its plan and its participants and beneficiaries. Furthermore, it is not intended that the regulations restate all of the factors contained in the interpretive bulletin.

Effective Date

The provision is effective on the date of enactment.

[141] 29 C.F.R. sec. 2509.95-1 (2005).

TITLE VII: BENEFIT ACCRUAL STANDARDS
(Secs. 203, 204, and 205 of ERISA, secs. 411 and 417 of the Code, and sec. 4(i)(2) of ADEA)

Present Law

Prohibition on age discrimination

In general

A prohibition on age discrimination applies to benefit accruals under a defined benefit pension plan.[142] Specifically, an employee's benefit accrual may not cease, and the rate of an employee's benefit accrual may not be reduced, because of the attainment of any age. However, this prohibition is not violated solely because the plan imposes (without regard to age) a limit on the amount of benefits that the plan provides or a limit on the number of years of service or years of participation that are taken into account for purposes of determining benefit accrual under the plan. Moreover, for purposes of this requirement, the subsidized portion of any early retirement benefit may be disregarded in determining benefit accruals.

In December 2002, the IRS issued proposed regulations that dealt with the application of the age discrimination rules.[143] The proposed regulations included rules for applying the age discrimination rules with respect to accrued benefits, optional forms of benefit, ancillary benefits, and other rights and features provided under a plan. Under the proposed regulations, for purposes of applying the prohibition on age discrimination to defined benefit pension plans, an employee's rate of benefit accrual for a year is generally the increase in the employee's accrued normal retirement benefit (i.e., the benefit payable at normal retirement age) for the plan year. In the preamble to the proposed regulations, the IRS requested comments on other approaches to determining the rate of benefit accrual, such as allowing accrual rates to be averaged over multiple years (for example, to accommodate plans that provide a higher rate of accrual in earlier years) or, in the case of a plan that applies an offset, determining accrual rates before application of the offset. As discussed below, in June 2004, the IRS announced the withdrawal of the proposed regulations.

Cash balance and other hybrid plans

Certain types of defined benefit pension plans, such as cash balance plans and pension equity plans, are referred to as "hybrid" plans because they combine features of a defined benefit pension plan and a defined contribution plan.

Under a cash balance plan, benefits are determined by reference to a hypothetical account balance. An employee's hypothetical account balance is determined by reference to hypothetical annual allocations to the account ("pay credits") (e.g., a certain percentage of the employee's compensation for the year) and hypothetical earnings on the account ("interest credits"). Cash

[142] Code sec. 411(b)(1)(H); ERISA sec. 204(b)(1)(H).

[143] 67 Fed. Reg. 76123.

balance plans are generally designed so that, when a participant receives a pay credit for a year of service, the participant also receives the right to future interest on the pay credit, regardless of whether the participant continues employment (referred to as "front-loaded" interest credits). That is, the participant's hypothetical account continues to be credited with interest after the participant stops working for the employer. As a result, if an employee terminates employment and defers distribution to a later date, interest credits will continue to be credited to that employee's hypothetical account.

Another type of hybrid plan is a pension equity plan (sometimes referred to as a "PEP"). Under a pension equity plan, benefits are generally described as a percentage of final average pay, with the percentage determined on the basis of points received for each year of service, which are often weighted for older or longer service employees. Pension equity plans commonly provide interest credits for the period between a participant's termination of employment and commencement of benefits.

Because of the front-loaded nature of accruals under cash balance plans, there is a longer time for interest credits to accrue on a pay credit to the account of a younger employee. Thus, a pay credit received at a younger age may provide a larger annuity benefit at normal retirement age than the same pay credit received at an older age. A similar effect may occur with respect to other types of hybrid plan designs, including pension equity plans.

IRS consideration of cash balance plans began in the early 1990s.[144] At that time, the focus was on the question of whether such plans satisfied the nondiscrimination requirements under section 401(a)(4), which requires that benefits or contributions not discriminate in favor of highly compensated employees. Treasury regulations issued in 1991 under section 401(a)(4) provided a safe harbor for cash balance plans that provide frontloaded interest credits and meet certain other requirements. In connection with the issuance of these regulations, Treasury spoke to the cash balance age discrimination issue. The preamble to the final regulations stated "[t]he fact that interest adjustments through normal retirement age are accrued in the year of the related hypothetical allocation will not cause a cash balance plan to fail to satisfy the requirements of section 411(b)(1)(H), relating to age-based reductions in the rate at which benefits accrue under a plan."[145] Many interpreted this language as Treasury's position that cash balance plan designs do not violate the prohibitions on age discrimination. The IRS has not to date asserted that hybrid plan formulas result in per se violations of age discrimination requirements. In 1999, Treasury and the IRS issued an announcement and a Federal Register notice stating that the question of whether cash balance conversions were age discriminatory or otherwise inconsistent with plan qualification rules was under active consideration, that further IRS determination letters on conversions to cash balance plans would therefore be suspected be referral to the IRS National Office until the IRS and Treasury had resolved the issues, and inviting public comment on the issues. Hundreds of comments were submitted. The December 2002 proposed regulations, noted above, provided that an employee's rate of benefit accrual for a year is

[144] Statement of Stuart L. Brown, Chief Counsel Internal Revenue Service, before the Senate Committee on Health, Education, Labor, and Pensions (Sept. 21, 1999).

[145] 56 Fed. Reg. 47528 (Sept. 19, 1991).

generally the increase in the employee's accrued normal retirement benefit (i.e., the benefit payable at normal retirement age) for the plan year. However, the proposed regulations provided a special rule under which an employee's rate of benefit accrual under a cash balance plan meeting certain requirements (an "eligible" cash balance plan) was based on the rate of pay credit provided under the plan. Thus, under the proposed regulations, an eligible cash balance plan would not violate the prohibition on age discrimination solely because pay credits for younger employees earn interest credits for a longer period.

Section 205 of the Consolidated Appropriations Act, 2004 (the "2004 Appropriations Act"), enacted January 24, 2004, provides that none of the funds made available in the 2004 Appropriations Act may be used by the Secretary of the Treasury, or his designee, to issue any rule or regulation implementing the 2002 proposed Treasury age discrimination regulations or any regulation reaching similar results.[146] The 2004 Appropriations Act also required the Secretary of the Treasury within 180 days of enactment to present to Congress a legislative proposal for providing transition relief for older and longer-service participants affected by conversions of their employers' traditional pension plans to cash balance plans. The Treasury Department complied with this requirement by including in the President's budget for fiscal year 2005 a proposal relating to cash balance and other hybrid plans that specifically addresses conversions to such plans, the application of the age discrimination rules to such plans, and the determination of minimum lump sums under such plans.[147] In June 2004, the IRS announced the withdrawal of the proposed age discrimination regulations, including the special rules for eligible cash balance plans.[148] According to the Announcement, "[t]his will provide Congress an opportunity to . . . address cash balance and other hybrid plan issues through legislation."

The application of the age discrimination rules to hybrid plans has been the subject of litigation. The decisions are divided on how ERISA requires courts to calculate the rate of benefit accrual.[149]

Calculating minimum lump-sum distributions under hybrid plans

Defined benefit pension plans, including cash balance plans and other hybrid plans, are required to provide benefits in the form of a life annuity commencing at a participant's normal retirement age. If the plan permits benefits to be paid in certain other forms, such as a lump sum,

minimum present value rules apply, under which the alternative form of benefit cannot be less than the present value of the life annuity payable at normal retirement age, determined using certain statutorily prescribed interest and mortality assumptions.[150]

Most cash balance plans are designed to permit a lump-sum distribution of a participant's hypothetical account balance upon termination of employment. This raises an issue as to the whether a distribution of a participant's hypothetical account balance satisfies the minimum present value rules. In 1996, the IRS issued proposed guidance (Notice 96-8) on the application of the minimum present value rules to lump-sum distributions under cash balance plans and requested public comments in anticipation of proposed regulations incorporating the proposed guidance.[151]

Under the proposed guidance, a lump-sum distribution from a cash balance plan cannot be less than the present value of the benefit payable at normal retirement age, determined using the statutory interest and mortality assumptions. For this purpose, a participant's normal retirement benefit under a cash balance plan is generally determined by projecting the participant's hypothetical account balance to normal retirement age by crediting to the account future interest credits at the plan rate, the right to which has already accrued, and converting the projected account balance to an actuarially equivalent life annuity payable at normal retirement age, using the interest and mortality assumptions specified in the plan. The proposed guidance also included rules under which cash balance plans can provide lump-sum distributions in the amount of participants' hypothetical account balances if the rate at which interest credits are provided under the plan is not greater (or is assumed not to be greater) than the statutory interest rate.

Under the approach in the proposed guidance, a difference in the rate of interest credits provided under the plan, which is used to project the account balance forward to normal retirement age, and the statutory rate used to determine the lump-sum value (i.e., present value) of the accrued benefit can cause a discrepancy between the value of the minimum lump-sum and the employee's hypothetical account balance. This effect is sometimes referred to as "whipsaw." In particular, if the plan's interest crediting rate is higher than the statutory interest rate, then the resulting lump-sum amount will generally be greater than the hypothetical account balance.

---

[150] Code sec. 417(e); ERISA sec. 205(g)(3). For years before 1995, these provisions required the use of an interest rate based on interest rates determined by the PBGC. For years after 1994, these provisions require the use of an interest rate based on interest rates on 30-year Treasury securities and a mortality table specified by the IRS.

[151] Notice 96-8, 1996-1996-1 C.B. 359. The Notice provides that regulations will be effective prospectively and, for plan years before regulations are effective, allows lump-sum distributions from cash balance plans that provide front-loaded interest credits to be based on a reasonable, good-faith interpretation of the minimum present value rules, taking into account preexisting guidance. The Notice further provides that plans that comply with the guidance in the Notice are deemed to be applying a reasonable, good-faith interpretation.

Several courts, but not all, have applied an approach similar to the approach in the proposed guidance in cases involving the determination of lump sums under cash balance plans.[152] Regulations addressing the application of the minimum present value rules to cash balance plans have not been issued.[153]

Explanation of Provision

Age discrimination rules in general

Under the provision, a plan is not treated as violating the prohibition on age discrimination under ERISA, the Code, and ADEA if a participant's accrued benefit,[154] as determined as of any date under the terms of the plan would be equal to or greater than that of any similarly situated, younger individual who is or could be a participant. For this purpose, an individual is similarly situated to a participant if the individual and the participant are (and always have been) identical in every respect (including period of service, compensation, position, date of hire, work history, and any other respect) except for age. Under the provision, the comparison of benefits for older and younger participants applies to all possible participants under all possible dates under the plan, in the same manner as the present-law application of the backloading and accrual rules.

In addition, in determining a participant's accrued benefit for this purpose, the subsidized portion of any early retirement benefit or any retirement type subsidy is disregarded. In some cases the value of an early retirement subsidy may be difficult to determine; it is therefore intended that a reasonable approximation of such value may be used for this purpose. In calculating the accrued benefit, the benefit may, under the terms of the plan, be calculated as an annuity payable at normal retirement age, the balance of a hypothetical account, or the current value of the accumulated percentage of the employee's final average compensation. That is, the

---

[152] *Berger v. Xerox Corp. Retirement Income Guarantee Plan*, 338 F.3d 755 (7th Cir. 2003); *Esden v. Bank of Boston*, 229 F.3d 154 (2d Cir. 2000), cert. dismissed, 531 U.S. 1061 (2001); *Lyons v. Georgia Pacific Salaried Employees Retirement Plan*, 221 F.3d 1235 (11th Cir. 2000) ("*Lyons II*"), cert. denied, 532 U.S. 967 (2001); and *West v. AK Steel Corp. Retirement Accumulation Plan*, 318 F. Supp.2d 579 (S.D. Ohio 2004). In *Lyons II*, the court reversed a lower court holding in *Lyons v. Georgia Pacific Salaried Employees Retirement Plan*, 66 F. Supp.2d 1328 (N.D. Ga. 1999) ("*Lyons I*"), relating to the application of the minimum present value rules in effect before 1995. The *Lyons II* court limited its analysis to the minimum present value rules in effect as of 1993 when Mr. Lyons received his lump-sum distribution; however, the court indicated that a different result could apply under the law in effect after 1994. On remand, in *Lyons v. Georgia Pacific Salaried Employees Retirement Plan*, 196 F. Supp.2d 1260 (N.D. Ga. 2002) ("*Lyons III*"), the lower court determined that payment of the hypothetical account balance did not violate the minimum present value rules in effect for years after 1994.

[153] As mentioned above, the President's budgets for fiscal years 2005 and 2006 include a proposal relating to cash balance plans that specifically addresses the determination of minimum lump sums under such plans. The President's proposal would eliminate the whipsaw effect and allow the plan to pay the hypothetical account balance, if certain requirements are satisfied.

[154] For purposes of this rule, the accrued benefit means such benefit accrued to date.

age discrimination rules may be applied on the basis of the balance of the a hypothetical account or the current value of the accumulated percentage of the employee's final average compensation, but only if the plan terms provide the accrued benefit in such form. The provision is intended to apply to hybrid plans, including pension equity plans.

The provision makes it clear that a plan is not treated as age discriminatory solely because the plan provides offsets of benefits under the plan to the extent such offsets are allowable in applying the requirements under section 401(a) of the Code. It is intended that such offsets also comply with ERISA and the ADEA.

A plan is not treated as failing to meet the age discrimination requirements solely because the plan provides a disparity in contributions and benefits with respect to which the requirements of section 401(l) of the Code are met.

A plan is not treated as failing to meet the age discrimination requirements solely because the plan provides for indexing of accrued benefits under the plan. Except in the case of any benefit provided in the form of a variable annuity, this rule does not apply with respect to any indexing which results in an accrued benefit less than the accrued benefit determined without regard to such indexing. Indexing for this purpose means, with respect to an accrued benefit, the periodic adjustment of the accrued benefit by means of the application of a recognized investment index or methodology. Under the provision, in no event may indexing be reduced or cease because of age.

Rules for applicable defined benefit plans

In general

Under the provision, an applicable defined benefit plan fails to satisfy the age discrimination rules unless the plan meets certain requirements with respect to interest credits and, in the case of a conversion, certain additional requirements. Applicable defined benefit plans must also satisfy certain vesting requirements.

Interest requirement

A plan satisfies the interest requirement if the terms of the plan provide that any interest credit (or equivalent amount) for any plan year is at a rate that is not less than zero and is not greater than a market rate of return. A plan does not fail to meet the interest requirement merely because the plan provides for a reasonable minimum guaranteed rate of return or for a rate or return that is equal to the greater of a fixed or variable rate of return. An interest credit (or an equivalent amount) of less than zero cannot result in the account balance or similar amount being less than the aggregate amount of contributions credited to the account. The Secretary of the Treasury may provide rules governing the calculation of a market rate of return and for permissible methods of crediting interest to the account (including fixed or variable interest rates) resulting in effective rates of return that meet the requirements of the provision.

If the interest credit rate (or equivalent amount) is a variable rate, the plan must provide that, upon termination of the plan, the rate of interest used to determine accrued benefits under

the plan is equal to the average of the rates of interest used under the plan during the five-year period ending on the termination date.

Conversion rules

Under the provision, special rules apply if an amendment to a defined benefit plan is adopted which would have the effect of converting the plan into an applicable defined benefit plan (an "applicable plan amendment").[155] If an applicable plan amendment is adopted after June 29, 2005, the plan fails to satisfy the age discrimination rules unless the plan provides that the accrued benefit of any individual who was a participant immediately before the adoption of the amendment is not less than the sum of (1) the participant's accrued benefit for years of service before the effective date of the amendment, determined under the terms of the plan as in effect before the amendment; plus (2) the participant's accrued benefit for years of service after the effective date of the amendment, determined under the terms of the plan as in effect after the terms of the amendment.

For purposes of determining the amount in (1) above, the plan must credit the accumulation account or similar amount with the amount of any early retirement benefit or retirement-type subsidy for the plan year in which the participant retires if, as of such time, the participant has met the age, years of service, and other requirements under the plan for entitlement to such benefit or subsidy.

Vesting rules

The provision amends the ERISA and Code rules relating to vesting to provide that an applicable defined benefit plan must provide that each employee who has completed at least three years of serves has a nonforfeitable right to 100 percent of the employee's accrued benefit derived from employer contributions.

Minimum present value rules

The provision provides that an applicable defined benefit plan is not treated as failing to meet the minimum present value rules[156] solely because of the present value of the accrued benefit (or any portion thereof) of any participant is, under the terms of the plan, equal to the

[155] If the benefits under two or more defined benefit plans established by an employer are coordinated in such a manner as to have the effect of the adoption of an applicable plan amendment, the sponsor of the defined benefit plan or plans providing for the coordination is treated as having adopted an applicable plan amendment as of the date the coordination begins. In addition, the Secretary of Treasury is directed to issue regulations to prevent the avoidance of the requirements with respect to an applicable plan amendment through the use of two or more plan amendments rather than a single amendment.

[156] ERISA sec. 205(g), Code sec. 417(e). A plan complying with the provision also does not violate certain rules relating to vesting (ERISA sec. 203(a)(2) and Code sec. 411(a)(2)) and the determination of the accrued benefit (in the case of a plan which does not provide for employee contributions) (ERISA sec. 204(c) and Code sec. 411(c)).

amount expressed as the balance in the hypothetical account or as an accumulated percentage of the participant's final average compensation.

Rules on plan termination

The provision provides rules for making determinations of benefits upon termination of an applicable defined benefit plan. Such a plan must provide that, upon plan termination, (1) if the interest credit rate (or equivalent amount) under the plan is a variable rate, the rate of interest used to determine accrued benefits under the plan shall be equal to the average of the rates of interest used under the plan during the five-year period ending on the termination date and (2) the interest rate and mortality table used to determine the amount of any benefit under the plan payable in the form of an annuity payable at normal retirement age is the rate and table specified under the plan for such purposes as of the termination date. For purposes of (2), if the rate of interest is a variable rate, then the rate is the average of such rates during the five-year period ending on the termination date.

Definition of applicable defined benefit plan

An applicable defined benefit plan is a defined benefit plan under which the accrued benefit (or any portion thereof) is calculated as the balance of a hypothetical account maintained for the participant or as an accumulated percentage of the participant's final average compensation. The Secretary of the Treasury is to provide rules which include in the definition of an applicable defined benefit plan any defined benefit plan (or portion of such a plan) which has an effect similar to an applicable defined benefit plan.

No inference

Nothing in the provision is to be construed to infer the treatment of applicable defined benefit plans or conversions to such plans under the rules in ERISA, ADEA and the Code prohibiting age discrimination[157] as in effect before the provision is effective. In addition, no inference is to be drawn with respect to the application of the minimum benefit rules to applicable defined benefit plans before the provision is effective.

Regulations relating to mergers and acquisitions

The Secretary of the Treasury is directed to prescribe regulations for the application of the provisions relating to applicable defined benefit plans in cases where the conversion of a plan to a cash balance or similar plan is made with respect to a group of employees who become employees by reason of a merger, acquisition, or similar treatment. The regulations are to be issued not later than 12 months after the date of enactment.

Effective Date

In general, the provision is effective for periods beginning on or after June 29, 2005.

[157] ERISA sec. 204(b)(1)(H), ADEA sec. 4(i)(1), and Code sec. 411(b)(1)(H).

The provision relating to the minimum value rules is effective for distributions after the date of enactment.

In the case of a plan in existence on June 29, 2005, the interest credit and vesting requirements for an applicable defined benefit plan generally apply to years beginning after December 31, 2007, except that the plan sponsor may elect to have such requirements apply for any period after June 29, 2005, and before the first plan year beginning after December 31, 2007. In the case of a plan maintained pursuant to one or more collective bargaining agreements, a delayed effective date applies with respect to the interest credit and vesting requirements for an applicable defined benefit plan.

The provision relating to conversions of plans applies to plan amendments adopted after and taking effect after June 29, 2005, except that a plan sponsor may elect to have such amendments apply to plan amendments adopted before and taking affect after such date.

The direction to the Secretary of the Treasury to issue regulations relating to mergers and acquisitions is effective on the date of enactment.

TITLE VIII: PENSION RELATED REVENUE PROVISIONS

A. Deduction Limitations

1. Increase in deduction limits applicable to single-employer and multiemployer defined benefit pension plans (sec. 404 of the Code)

Present Law

In general

Employer contributions to qualified retirement plans are deductible subject to certain limits.

In the case of contributions to a defined benefit pension plan (including both single-employer and multiemployer plans), the employer generally may deduct the greater of: (1) the amount necessary to satisfy the minimum funding requirement of the plan for the year; or (2) the amount of the plan's normal cost for the year plus the amount necessary to amortize certain unfunded liabilities over 10 years, but limited to the full funding limitation for the year.[158] The maximum amount otherwise deductible generally is not less than the plan's unfunded current liability.[159] In the case of a single-employer plan covered by the PBGC insurance program that terminates during the year, the maximum deductible amount is generally not less than the amount needed to make the plan assets sufficient to fund benefit liabilities as defined for purposes of plan termination under the PBGC insurance program ("unfunded termination liability"). In applying these limits, future increases in the limits on compensation taken into account under a qualified retirement plan and on benefits payable under a defined benefit pension plan may not be taken into account.

In the case of a defined contribution plan, the employer generally may deduct contributions in an amount up to 25 percent of compensation paid or accrued during the employer's taxable year.

Overall deduction limit

If an employer sponsors one or more defined benefit pension plans and one or more defined contribution plans that cover at least one of the same employees, an overall deduction limit applies to the total contributions to all plans for a plan year. The overall deduction limit is

---

[158] The full funding limitation is the excess, if any, of (1) the accrued liability of the plan (including normal cost), over (2) the lesser of (a) the market value of plan assets or (b) the actuarial value of plan assets. However, the full funding limit is not less than the excess, if any, of 90 percent of the plan's current liability (including the current liability normal cost) over the actuarial value of plan assets.

[159] In the case of a plan with 100 or fewer participants, unfunded current liability for this purpose does not include the liability attributable to benefit increases for highly compensated employees resulting from a plan amendment that is made or becomes effective, whichever is later, within the last two years.

the greater of (1) 25 percent of compensation, or (2) the amount necessary to meet the minimum funding requirement with respect to the defined benefit plan for the year. For this purpose, the amount necessary to meet the minimum funding requirement with respect to the defined benefit plan is treated as not less than the amount of the plan's unfunded current liability.

Subject to certain exceptions, an employer that makes nondeductible contributions to a plan is subject to an excise tax equal to 10 percent of the amount of the nondeductible contributions for the year.

Explanation of Provision

Single-employer defined benefit pension plans

General deduction limit

Under the bill, for taxable years beginning in 2006 and 2007, in the case of contributions to a single-employer defined benefit plan, the maximum deductible amount is not less than the excess (if any) of (1) 150 percent of the plan's current liability, over (2) the value of plan assets.

For taxable years beginning after 2007, in the case of contributions to a single-employer defined benefit pension plan, the maximum deductible amount is equal to the greater of: (1) the excess (if any) of the sum of the plan's funding target, the plan's target normal cost, and a cushion amount for a plan year, over the value of plan assets (as determined under the minimum funding rules[160]); and (2) the minimum required contribution for the plan year.[161]

However, in the case of a plan that is not in at-risk status, the first amount above is not less than the excess (if any) of the sum of the plan's funding target and target normal cost, determined as if the plan was in at-risk status, over the value of plan assets.

The cushion amount for a plan year is the sum of (1) 50 percent of the plan's funding target for the plan year; and (2) the amount by which the plan's funding target would increase if determined by taking into account increases in participants' compensation for future years or, if the plan does not base benefits attributable to past service on compensation, increases in benefits that are expected to occur in succeeding plans year, determined on the basis of average annual benefit increases over the previous six years.[162] For this purpose, the dollar limits on benefits

[160] In determining the maximum deductible amount, the value of plan assets is not reduced by any pre-funding balance or funding standard account carryover balance.

[161] The bill retains the present-law rule, under which, in the case of a single-employer plan covered by the PBGC that terminates during the year, the maximum deductible amount is generally not less than the amount needed to make the plan assets sufficient to fund benefit liabilities as defined for purposes of the PBGC termination insurance program.

[162] In determining the cushion amount for a plan with 100 or fewer participants, a plan's funding target does not include the liability attributable to benefit increases for highly compensated employees resulting from a plan amendment that is made or becomes effective, whichever is later, within the last two years.

and on compensation apply, but, in the case of a plan that is covered by the PBGC insurance program, increases in the compensation limit (under sec. 401(a)(17)) that are expected to occur in succeeding plan years may be taken into account.[163] The rules relating to projecting compensation for future years are intended solely to enable employers to reduce volatility in pension contributions; the rules are not intended to create any inference that employees have any protected interest with respect to such projected increases.

Overall deduction limit

Under the bill, in applying the overall deduction limit to contributions to one or more defined benefit pension plans and one or more defined contribution plans for years beginning after December 31, 2007, single-employer defined benefit pension plans that are covered by the PBGC insurance program are not taken into account. Thus, the deduction for contributions to a defined benefit pension plan or a defined contribution plan is not affected by the overall deduction limit merely because employees are covered by both plans if the defined benefit plan is covered by the PBGC insurance program (i.e., the separate deduction limits for contributions to defined contribution plans and defined benefit pension plans apply). In addition, in applying the overall deduction limit, the amount necessary to meet the minimum funding requirement with respect to a single-employer defined benefit pension plan that is not covered by the PBGC insurance program is treated as not less than the plan's funding shortfall (as determined under the minimum funding rules).

Multiemployer defined benefit pension plans

General deduction limit

Under the bill, for taxable years beginning after 2005, in the case of contributions to a multiemployer defined benefit pension plan, the maximum deductible amount is not less than the excess (if any) of (1) 140 percent of the plan's current liability, over (2) the value of plan assets.

Overall deduction limit

Under the bill, for taxable years beginning after December 31, 2005, in applying the overall deduction limit to contributions to one or more defined benefit pension plans and one or more defined contribution plans, multiemployer plans are not taken into account. Thus, the deduction for contributions to a defined benefit pension plan or a defined contribution plan is not affected by the overall deduction limit merely because employees are covered by both plans if either plan is a multiemployer plan (i.e., the separate deduction limits for contributions to defined contribution plans and defined benefit pension plans apply).

[163] Expected increases in the limitations on benefits under section 415, however, may not be taken into account.

Effective Date

The effective dates of the provisions regarding deductions are described above under each provision.

2. Updating deduction rules for combination of plans (secs. 404(a)(7) and 4972 of the Code)

Present Law

Employer contributions to qualified retirement plans are deductible subject to certain limits.[164] In general, the deduction limit depends on the kind of plan.[165]

If an employer sponsors one or more defined benefit pension plans and one or more defined contribution plans that cover at least one of the same employees, an overall deduction limit applies to the total contributions to all plans for a plan year. The overall deduction limit is the greater of (1) 25 percent of compensation, or (2) the amount necessary to meet the minimum funding requirements of the defined benefit plan for the year, but not less than the amount of the plan's unfunded current liability.

Under EGTRRA, elective deferrals are not subject to the limits on deductions and are not taken into account in applying the limits to other employer contributions. The combined deduction limit of 25 percent of compensation for defined benefit and defined contribution plans does not apply if the only amounts contributed to the defined contribution plan are elective deferrals.[166]

Subject to certain exceptions, an employer that makes nondeductible contributions to a plan is subject to an excise tax equal to 10 percent of the amount of the nondeductible contributions for the year. Certain contributions to a defined contribution plan that are nondeductible solely because of the overall deduction limit are disregarded in determining the amount of nondeductible contributions for purposes of the excise tax. Contributions that are disregarded are the greater of (1) the amount of contributions not in excess of six percent of the compensation of the employees covered by the defined contribution plan, or (2) the amount of matching contributions.

Explanation of Provision

Under the bill, the overall limit on employer deductions for contributions to combinations of defined benefit and defined contribution plans applies to contributions to one or more defined contribution plans only to the extent that such contributions exceed six percent of compensation

---

[164] Code sec. 404.

[165] See the discussion under A., above, for a description of the deduction rules for defined benefit and defined contribution plans.

[166] Under the general EGTRRA sunset, this rule expires for plan years beginning after 2010.

otherwise paid or accrued during the taxable year to the beneficiaries under the plans. As under present law, for purposes of determining the excise tax on nondeductible contributions, matching contributions to a defined contribution plan that are nondeductible solely because of the overall deduction limit are disregarded.

Effective Date

The provision is effective for contributions for taxable years beginning after December 31, 2005.

B. Certain Pension Provisions Made Permanent

1. Permanency of EGTRRA pension and IRA provisions (Title X of EGTRRA)

Present Law

In general

The Economic Growth and Tax Relief Reconciliation Act of 2001 ("EGTRRA") made a number of changes to the Federal tax laws, including a variety of provisions relating to pensions and individual retirement arrangements ("IRAs"). However, in order to comply with reconciliation procedures under the Congressional Budget Act of 1974 (e.g., section 313 of the Budget Act, under which a point of order may be lodged in the Senate), EGTRRA included a "sunset" provision, pursuant to which the provisions of EGTRRA expire at the end of 2010. Specifically, EGTRRA's provisions do not apply for taxable, plan, or limitation years beginning after December 31, 2010, or to estates of decedents dying after, or gifts or generation-skipping transfers made after, December 31, 2010. EGTRRA provides that, as of the effective date of the sunset, both the Internal Revenue Code and the Employee Retirement Income Security Act of 1974 ("ERISA") will be applied as though EGTRRA had never been enacted.

Certain provisions contained in EGTRRA expire before the general sunset date of 2010.[167]

List of affected provisions

Following is a list of the provisions affected by the general EGTRRA sunset.

Individual retirement arrangements ("IRAs")

- Increases in the IRA contribution limits, including the ability to make catch-up contributions (secs. 219, 408, and 408A of the Code and sec. 601 of EGTRRA); and
- Rules relating to deemed IRAs under employer plans (sec. 408(q) of the Code and sec. 602 of EGTRRA).

Expanding coverage

- Increases in the limits on contributions, benefits, and compensation under qualified retirement plans, tax-sheltered annuities, and eligible deferred compensation plans (secs. 401(a)(17), 402(g), 408(p), 414(v), 415, and 457 of the Code and sec. 611 of EGTRRA);
- Application of prohibited transaction rules to plan loans of S corporation owners, partners, and sole proprietors (sec. 4975 of the Code and sec. 612 of EGTRRA);

[167] The saver's credit (sec. 25B) expires at the end of 2006. Another provision of the bill makes the saver's credit permanent.

- Modification of the top-heavy rules (sec. 416 of the Code and sec. 613 of EGTRRA);
- Elective deferrals not taken into account for purposes of deduction limits (sec. 404 of the Code and sec. 614 of EGTRRA);
- Repeal of coordination requirements for deferred compensation plans of state and local governments and tax-exempt organizations (sec. 457 of the Code and sec. 615 of EGTRRA);
- Modifications to deduction limits (sec. 404 of the Code and sec. 616 of EGTRRA);
- Option to treat elective deferrals as after-tax Roth contributions (sec. 402A of the Code and sec. 617 of EGTRRA);
- Credit for pension plan start-up costs (sec. 45E of the Code and sec. 619 of EGTRRA); and
- Certain nonresident aliens excluded in applying minimum coverage requirements (secs. 410(b)(3) and 861(a)(3) of the Code).

Enhancing fairness

- Catch-up contributions for individuals age 50 and older (sec. 414 of the Code and sec. 631 of EGTRRA);
- Equitable treatment for contributions of employees to defined contribution plans (secs. 403(b), 415, and 457 of the Code and sec. 632 of EGTRRA);
- Faster vesting of employer matching contributions (sec. 411 of the Code and sec. 633 of EGTRRA);
- Modifications to minimum distribution rules (sec. 401(a)(9) of the Code and sec. 634 of EGTRRA);
- Clarification of tax treatment of division of section 457 plan benefits upon divorce (secs. 414(p) and 457 of the Code and sec. 635 of EGTRRA);
- Provisions relating to hardship withdrawals (secs. 401(k) and 402 of the Code and sec. 636 of EGTRRA); and
- Waiver of tax on nondeductible contributions for domestic and similar workers (sec. 4972(c)(6) of the Code and sec. 637 of EGTRRA).

Increasing portability

- Rollovers of retirement plan and IRA distributions (secs. 401, 402, 403(b), 408, 457, and 3405 of the Code and secs. 641-644 of EGTRRA);
- Treatment of forms of distribution (sec. 411(d)(6) of the Code and sec. 645 of EGTRRA);
- Rationalization of restrictions on distributions (secs. 401(k), 403(b), and 457 of the Code and sec. 646 of EGTRRA):

- Purchase of service credit under governmental pension plans (secs. 403(b) and 457 of the Code and sec. 647 of EGTRRA):
- Employers may disregard rollovers for purposes of cash-out rules (sec. 411(a)(11) of the Code and sec. 648 of EGTRRA); and
- Minimum distribution and inclusion requirements for section 457 plans (sec. 457 of the Code and sec. 649 of EGTRRA).

Strengthening pension security and enforcement

- Phase in repeal of 160 percent of current liability funding limit; maximum deduction rules (secs. 404(a)(1), 412(c)(7), and 4972(c) of the Code and secs. 651-652 of EGTRRA);
- Excise tax relief for sound pension funding (sec. 4972 of the Code and sec. 653 of EGTRRA);
- Modifications to section 415 limits for multiemployer plans (sec. 415 of the Code and sec. 654 of EGTRRA);
- Investment of employee contributions in 401(k) plans (sec. 655 of EGTRRA);
- Prohibited allocations of stock in an S corporation ESOP (secs. 409 and 4979A of the Code and sec. 656 of EGTRRA);
- Automatic rollovers of certain mandatory distributions (secs. 401(a)(31) and 402(f)(1) of the Code and sec. 657 of EGTRRA);
- Clarification of treatment of contributions to a multiemployer plan (sec. 446 of the Code and sec. 658 of EGTRRA); and
- Treatment of plan amendments reducing future benefit accruals (sec. 4980F of the Code and sec. 659 of EGTRRA).

Reducing regulatory burdens

- Modification of timing of plan valuations (sec. 412 of the Code and sec. 661 of EGTRRA);
- ESOP dividends may be reinvested without loss of dividend deduction (sec. 404 of the Code and sec. 662 of EGTRRA);
- Repeal transition rule relating to certain highly compensated employees (sec. 663 of EGTRRA);
- Treatment of employees of tax-exempt entities for purposes of nondiscrimination rules (secs. 410, 401(k), and 401(m) of the Code and sec. 664 of EGTRRA);
- Treatment of employer-provided retirement advice (sec. 132 of the Code and sec. 665 of EGTRRA); and
- Repeal of the multiple use test (sec. 401(m) of the Code and sec. 666 of EGTRRA).

Explanation of Provision

The provision repeals the sunset provision of EGTRRA as applied to the provisions relating to pensions and IRAs.

Effective Date

The provision is effective on the date of enactment.

2. Saver's credit made permanent (sec. 25B of the Code)

Present Law

Present law provides a temporary nonrefundable tax credit for eligible taxpayers for qualified retirement savings contributions. The maximum annual contribution eligible for the credit is $2,000. The credit rate depends on the adjusted gross income ("AGI") of the taxpayer. Joint returns with AGI of $50,000 or less, head of household returns of $37,500 or less, and single returns of $25,000 or less are eligible for the credit. The AGI limits applicable to single taxpayers apply to married taxpayers filing separate returns. The credit is in addition to any deduction or exclusion that would otherwise apply with respect to the contribution. The credit offsets minimum tax liability as well as regular tax liability. The credit is available to individuals who are 18 or older, other than individuals who are full-time students or claimed as a dependent on another taxpayer's return.

The credit is available with respect to: (1) elective deferrals to a qualified cash or deferred arrangement (a "section 401(k) plan"), a tax-sheltered annuity (a "section 403(b)" annuity), an eligible deferred compensation arrangement of a State or local government (a "section 457 plan"), a SIMPLE, or a simplified employee pension ("SEP"); (2) contributions to a traditional or Roth IRA; and (3) voluntary after-tax employee contributions to a tax-sheltered annuity or qualified retirement plan.

The amount of any contribution eligible for the credit is reduced by distributions received by the taxpayer (or by the taxpayer's spouse if the taxpayer filed a joint return with the spouse) from any plan or IRA to which eligible contributions can be made during the taxable year for which the credit is claimed, the two taxable years prior to the year the credit is claimed, and during the period after the end of the taxable year for which the credit is claimed and prior to the due date for filing the taxpayer's return for the year. Distributions that are rolled over to another retirement plan do not affect the credit.

The credit rates based on AGI are provided in Table 1, below.

Table 1.–Credit Rates for Saver's Credit

Joint Filers	Heads of Households	All Other Filers	Credit Rate
$0 – $30,000	$0 – $22,500	$0 – $15,000	50 percent
$30,001 – $32,500	$22,501 – $24,375	$15,001 – $16,250	20 percent
$32,501 – $50,000	$24,376 – $37,500	$16,251 – $25,000	10 percent
Over $50,000	Over $37,500	Over $25,000	0 percent

The credit does not apply to taxable years beginning after December 31, 2006.

Explanation of Provision

The provision makes the saver's credit permanent.

The provision also provides that an individual may direct that the amount of any refund attributable to the saver's credit be directly deposited by the Federal government into an applicable retirement plan, meaning an IRA, qualified retirement plan, section 403(b) annuity, or governmental section 457 plan designated by the individual (if the plan or other arrangement agrees to accept such direct deposits). In the case of a joint return, each spouse is entitled to designate an applicable retirement plan with respect to payments attributable to such spouse. The provision does not change the rules relating to the tax treatment of contributions to such plans or other arrangements.

Effective Date

The extension of the saver's credit is effective on enactment. The provision relating to direct deposit of refunds relating to the saver's credit is effective for taxable years beginning after December 31, 2006. (In addition, another provision of bill, described below, provides for indexing of the income limits on the saver's credit.)

C. Improvements in Portability, Distribution, and Contribution Rules

1. Purchase of permissive service credit (secs. 403(b)(13), 415(n)(3), and 457(e)(17) of the Code)

Present Law

In general

Present law imposes limits on contributions and benefits under qualified plans.[168] The limits on contributions and benefits under qualified plans are based on the type of plan. Under a defined benefit plan, the maximum annual benefit payable at retirement is generally the lesser of (1) a certain dollar amount ($175,000 for 2006) or (2) 100 percent of the participant's average compensation for his or her high three years.

A qualified retirement plan maintained by a State or local government employer may provide that a participant may make after-tax employee contributions in order to purchase permissive service credit, subject to certain limits.[169]

In the case of any repayment of contributions and earnings to a governmental plan with respect to an amount previously refunded upon a forfeiture of service credit under the plan (or another plan maintained by a State or local government employer within the same State), any such repayment is not taken into account for purposes of the section 415 limits on contributions and benefits. Also, service credit obtained as a result of such a repayment is not considered permissive service credit for purposes of the section 415 limits.

Permissive service credit

Definition of permissive service credit

Permissive service credit means credit for a period of service recognized by the governmental plan which the participant has not received under the plan and which the employee receives only if the employee voluntarily contributes to the plan an amount (as determined by the plan) that does not exceed the amount necessary to fund the benefit attributable to the period of service and that is in addition to the regular employee contributions, if any, under the plan.

The IRS has ruled that credit is not permissive service credit where it is purchased to provide enhanced retirement benefits for a period of service already credited under the plan, as the enhanced benefit is treated as credit for service already received.[170]

---

[168] Sec. 415.

[169] Sec. 415(n)(3).

[170] Priv. Ltr. Rul. 200229051 (April 26, 2002).

Nonqualified service

Service credit is not permissive service credit if more than five years of permissive service credit is purchased for nonqualified service or if nonqualified service is taken into account for an employee who has less than five years of participation under the plan. Nonqualified service is service other than service (1) as a Federal, State or local government employee, (2) as an employee of an association representing Federal, State or local government employees, (3) as an employee of an educational institution which provides elementary or secondary education, as determined under State law, or (4) for military service. Service under (1), (2) and (3) is nonqualified service if it enables a participant to receive a retirement benefit for the same service under more than one plan.

Trustee-to-trustee transfers to purchase permissive service credit

Under EGTRRA, a participant is not required to include in gross income a direct trustee-to-trustee transfer to a governmental defined benefit plan from a section 403(b) annuity or a section 457 plan if the transferred amount is used (1) to purchase permissive service credit under the plan, or (2) to repay contributions and earnings with respect to an amount previously refunded under a forfeiture of service credit under the plan (or another plan maintained by a State or local government employer within the same State).[171]

Explanation of Provision

Permissive service credit

The provision modifies the definition of permissive service credit by providing that permissive service credit means service credit which relates to benefits to which the participant is not otherwise entitled under such governmental plan, rather than service credit which such participant has not received under the plan. Credit qualifies as permissive service credit if it is purchased to provide an increased benefit for a period of service already credited under the plan (e.g., if a lower level of benefit is converted to a higher benefit level otherwise offered under the same plan) as long as it relates to benefits to which the participant is not otherwise entitled.

The provision allows participants to purchase credit for periods regardless of whether service is performed, subject to the limits on nonqualified service.

Under the provision, service as an employee of an educational organization providing elementary or secondary education can be determined under the law of the jurisdiction in which the service was performed. Thus, for example, permissive service credit can be granted for time spent teaching outside of the United States without being considered nonqualified service credit.

[171] Secs. 403(b)(13) and 457(e)(17).

Trustee-to-trustee transfers to purchase permissive service credit

The provision provides that the limits regarding nonqualified service are not applicable in determining whether a trustee-to-trustee transfer from a section 403(b) annuity or a section 457 plan to a governmental defined benefit plan is for the purchase of permissive service credit. Thus, failure of the transferee plan to satisfy the limits does not cause the transferred amounts to be included in the participant's income. As under present law, the transferee plan must satisfy the limits in providing permissive service credit as a result of the transfer.

The provision provides that trustee-to-trustee transfers under sections 457(e)(17) and 403(b)(13) may be made regardless of whether the transfer is made between plans maintained by the same employer. The provision also provides that amounts transferred from a section 403(b) annuity or a section 457 plan to a governmental defined benefit plan to purchase permissive service credit are subject to the distribution rules applicable under the Internal Revenue Code to the defined benefit plan.

Effective Date

The provision is generally effective as if included in the amendments made by section 1526 of the Taxpayer Relief Act of 1997, except that the provision regarding trustee-to-trustee transfers is effective as if included in the amendments made by section 647 of the Economic Growth and Tax Relief Reconciliation Act of 2001.

2. Rollover of after-tax amounts in annuity contracts (sec. 402(c)(2) of the Code)

Present Law

Employee after-tax contributions may be rolled over from a tax-qualified retirement plan into another tax-qualified retirement plan, if the plan to which the rollover is made is a defined contribution plan, the rollover is accomplished through a direct rollover, and the plan to which the rollover is made provides for separate accounting for such contributions (and earnings thereon). After-tax contributions can also be rolled over from a tax-sheltered annuity (a "section 403(b) annuity") to another tax-sheltered annuity if the rollover is a direct rollover, and the annuity to which the rollover is made provides for separate accounting for such contributions (and earnings thereon). After-tax contributions may also be rolled over to an IRA. If the rollover is to an IRA, the rollover need not be a direct rollover and the IRA owner has the responsibility to keep track of the amount of after-tax contributions.[172]

Explanation of Provision

The provision allows after-tax contributions to be rolled over from a qualified retirement plan to another qualified retirement plan (either a defined contribution or a defined benefit plan) or to a tax-sheltered annuity. As under present law, the rollover must be a direct rollover, and

[172] Sec. 402(c)(2); IRS Notice 2002-3, 2002-2 I.R.B. 289.

the plan to which the rollover is made must separately account for after-tax contributions (and earnings thereon).

Effective Date

The provision is effective for taxable years beginning after December 31, 2006.

3. Application of minimum distribution rules to governmental plans

Present Law

Minimum distribution rules apply to tax-favored retirement arrangements, including governmental plans. In general, under these rules, distribution of minimum benefits must begin no later than the required beginning date. Minimum distribution rules also apply to benefits payable with respect to a plan participant who has died. Failure to comply with the minimum distribution rules results in an excise tax imposed on the plan participant equal to 50 percent of the required minimum distribution not distributed for the year. The excise tax may be waived in certain cases.

In the case of distributions prior to the death of the plan participant, the minimum distribution rules are satisfied if either (1) the participant's entire interest in the plan is distributed by the required beginning date, or (2) the participant's interest in the plan is to be distributed (in accordance with regulations) beginning not later than the required beginning date, over a permissible period. The permissible periods are (1) the life of the participant, (2) the lives of the participant and a designated beneficiary, (3) the life expectancy of the participant, or (4) the joint life and last survivor expectancy of the participant and a designated beneficiary. In calculating minimum required distributions from account-type arrangements (e.g., a defined contribution plan or an individual retirement arrangement), life expectancies of the participant and the participant's spouse generally may be recomputed annually.

The required beginning date generally is April 1 of the calendar year following the later of (1) the calendar year in which the participant attains age 70½ or (2) the calendar year in which the participant retires.

The minimum distribution rules also apply to distributions to beneficiaries of deceased participants. In general, if the participant dies after minimum distributions have begun, the remaining interest must be distributed at least as rapidly as under the minimum distribution method being used as of the date of death. If the participant dies before minimum distributions have begun, then the entire remaining interest must generally be distributed within five years of the participant's death. The five-year rule does not apply if distributions begin within one year of the participant's death and are payable over the life of a designated beneficiary or over the life expectancy of a designated beneficiary. A surviving spouse beneficiary is not required to begin distributions until the date the deceased participant would have attained age 70½. In addition, if the surviving spouse makes a rollover from the plan into a plan or IRA of his or her own, the minimum distribution rules apply separately to the surviving spouse.

Explanation of Provision

The provision directs the Secretary of the Treasury to issue regulations under which a governmental plan is treated as complying with the minimum distribution requirements, for all years to which such requirements apply, if the plan complies with a reasonable, good faith interpretation of the statutory requirements. It is intended that the regulations apply for periods before the date of enactment.

Effective Date

The provision is effective on the date of enactment.

4. Allow direct rollovers from retirement plans to Roth IRAs (sec. 408A(e) of the Code)

Present Law

IRAs in general

There are two general types of individual retirement arrangements ("IRAs"): traditional IRAs, to which both deductible and nondeductible contributions may be made, and Roth IRAs.

Traditional IRAs

An individual may make deductible contributions to an IRA up to the lesser of a dollar limit (generally $4,000 for 2006)[173] or the individual's compensation if neither the individual nor the individual's spouse is an active participant in an employer-sponsored retirement plan.[174] If the individual (or the individual's spouse) is an active participant in an employer-sponsored retirement plan, the deduction limit is phased out for taxpayers with adjusted gross income ("AGI") over certain levels for the taxable year. A different, higher, income phaseout applies in the case of an individual who is not an active participant in an employer sponsored plan but whose spouse is.

To the extent an individual cannot or does not make deductible contributions to an IRA or contributions to a Roth IRA, the individual may make nondeductible contributions to a traditional IRA.

Amounts held in a traditional IRA are includible in income when withdrawn (except to the extent the withdrawal is a return of nondeductible contributions). Includible amounts withdrawn prior to attainment of age 59½ are subject to an additional 10-percent early

[173] The dollar limit is scheduled to increase until it is $5,000 in 2008-2010. Individuals age 50 and older may make additional, catch-up contributions.

[174] In the case of a married couple, deductible IRA contributions of up to the dollar limit can be made for each spouse (including, for example, a homemaker who does not work outside the home), if the combined compensation of both spouses is at least equal to the contributed amount.

withdrawal tax, unless the withdrawal is due to death or disability, is made in the form of certain periodic payments, or is used for certain specified purposes.

Roth IRAs

Individuals with AGI below certain levels may make nondeductible contributions to a Roth IRA. The maximum annual contributions that can be made to all of an individuals IRAs (both traditional and Roth) cannot exceed the maximum deductible IRA contribution limit. The maximum annual contribution that can be made to a Roth IRA is phased out for taxpayers with income above certain levels.

Amounts held in a Roth IRA that are withdrawn as a qualified distribution are not includible in income, or subject to the additional 10-percent tax on early withdrawals. A qualified distribution is a distribution that (1) is made after the five-taxable year period beginning with the first taxable year for which the individual made a contribution to a Roth IRA, and (2) which is made after attainment of age 59½, on account of death or disability, or is made for first-time homebuyer expenses of up to $10,000.

Distributions from a Roth IRA that are not qualified distributions are includible in income to the extent attributable to earnings, and subject to the 10-percent early withdrawal tax (unless an exception applies). The same exceptions to the early withdrawal tax that apply to IRAs apply to Roth IRAs.

Rollover contributions

If certain requirements are satisfied, a participant in a tax-qualified retirement plan, a tax-sheltered annuity (sec. 403(b)), or a governmental section 457 plan may roll over distributions from the plan or annuity into a traditional IRA. Distributions from such plans may not be rolled over into a Roth IRA.

Taxpayers with modified AGI of $100,000 or less generally may roll over amounts in a traditional IRA into a Roth IRA. The amount rolled over is includible in income as if a withdrawal had been made, except that the 10-percent early withdrawal tax does not apply. Married taxpayers who file separate returns cannot roll over amounts in a traditional IRA into a Roth IRA. Amounts that have been distributed from a tax-qualified retirement plan, a tax-sheltered annuity, or a governmental section 457 plan may be rolled over into a traditional IRA, and then rolled over from the traditional IRA into a Roth IRA.

Explanation of Provision

The provision allows distributions from tax-qualified retirement plans, tax-sheltered annuities, and governmental 457 plans to be rolled over directly from such plan into a Roth IRA, subject to the present law rules that apply to rollovers from a traditional IRA into a Roth IRA. For example, a rollover from a tax-qualified retirement plan into a Roth IRA is includible in gross income (except to the extent it represents a return of after-tax contributions), and the 10-percent early distribution tax does not apply. Similarly, an individual with AGI of $100,000 or more could not roll over amounts from a tax-qualified retirement plan directly into a Roth IRA.

Effective Date

The provision is effective for distributions made after December 31, 2007.

5. Eligibility for participation in eligible deferred compensation plans (sec. 457 of the Code)

Present Law

A section 457 plan is an eligible deferred compensation plan of a State or local government or tax-exempt employer that meets certain requirements. In some cases, different rules apply under section 457 to governmental plans and plans of tax-exempt employers.

Amounts deferred under an eligible deferred compensation plan of a non-governmental tax-exempt organization are includible in gross income for the year in which amounts are paid or made available. Under present law, if the amount payable to a participant does not exceed $5,000, a plan may allow a distribution up to $5,000 without such amount being treated as made available if the distribution can be made only if no amount has been deferred under the plan by the participant during the two-year period ending on the date of the distribution and there has been no prior distribution under the plan. Prior to the Small Business Job Protection Act of 1996, under former section 457(e)(9), benefits were not treated as made available because a participant could elect to receive a lump sum payable after separation from service and within 60 days of the election if (1) the total amount payable under the plan did not exceed $3,500 and (2) no additional amounts could be deferred under the plan.

Explanation of Provision

Under the provision, an individual is not precluded from participating in an eligible deferred compensation plan by reason of having received a distribution under section 457(e)(9) as in effect before the Small Business Job Protection Act of 1996.

Effective Date

The provision is effective on the date of enactment.

6. Modifications of rules governing hardships and unforeseen financial emergencies

Present Law

Distributions from a qualified cash or deferred arrangement (a "section 401(k) plan"), a tax-shelter annuity, section 457 plan, or nonqualified deferred compensation plan subject to section 409A may not be made prior to the occurrence of one or more specified events. In the case of a section 401(k) plan or tax-sheltered annuity, one event upon which distribution is permitted is the case of a hardship. Similarly, distributions from section 457 plans and nonqualified deferred compensation plans subject to section 409A may be made in the case of an unforeseeable emergency. Under regulations, a hardship or unforeseeable emergency includes a hardship or unforeseeable emergency of a participant's spouse or dependent.

Explanation of Provision

The provision directs the Secretary of the Treasury to revise the rules for determining whether a participant has had a hardship or unforeseeable emergency to provide that if an event would constitute a hardship or unforeseeable emergency under the plan if it occurred with respect to the participant's spouse or dependent, such event shall, to the extent permitted under the plan, constitute a hardship or unforeseeable emergency if it occurs with respect to a beneficiary under the plan. The provision requires that the revised rules be issued within 180 days after the date of enactment.

Effective Date

The provision is effective on the date of enactment.

7. Treatment of distributions to individuals called to active duty for at least 179 days (sec. 72(t) of the Code)

Present Law

Under present law, a taxpayer who receives a distribution from a qualified retirement plan prior to age 59½, death, or disability generally is subject to a 10-percent early withdrawal tax on the amount includible in income, unless an exception to the tax applies. Among other exceptions, the early distribution tax does not apply to distributions made to an employee who separates from service after age 55, or to distributions that are part of a series of substantially equal periodic payments made for the life (or life expectancy) of the employee or the joint lives (or life expectancies) of the employee and his or her beneficiary.

Certain amounts held in a qualified cash or deferred arrangement (a "401(k) plan") or in a tax-sheltered annuity (a "403(b) annuity") may not be distributed before severance from employment, age 59½, death, disability, or financial hardship of the employee.

Explanation of Provision

Under the provision, the 10-percent early withdrawal tax does not apply to a qualified reservist distribution. A qualified reservist distribution is a distribution (1) from an IRA or attributable to elective deferrals under a 401(k) plan, 403(b) annuity, or certain similar arrangements, (2) made to an individual who (by reason of being a member of a reserve component as defined in section 101 of title 37 of the U.S. Code) was ordered or called to active duty for a period in excess of 179 days or for an indefinite period, and (3) that is made during the period beginning on the date of such order or call to duty and ending at the close of the active duty period. A 401(k) plan or 403(b) annuity does not violate the distribution restrictions applicable to such plans by reason of making a qualified reservist distribution.

An individual who receives a qualified reservist distribution may, at any time during the two-year period beginning on the day after the end of the active duty period, make one or more contributions to an IRA of such individual in an aggregate amount not to exceed the amount of such distribution. The dollar limitations otherwise applicable to contributions to IRAs do not

apply to any contribution made pursuant to the provision. No deduction is allowed for any contribution made under the provision.

This provision applies to individuals ordered or called to active duty after September 11, 2001, and before December 31, 2007. The two-year period for making recontributions of qualified reservist distributions does not end before the date that is two years after the date of enactment.

Effective Date

The provision applies to distributions after September 11, 2001. If refund or credit of any overpayment of tax resulting from the provision would be prevented at any time before the close of the one-year period beginning on the date of the enactment by the operation of any law or rule of law (including res judicata), such refund or credit may nevertheless be made or allowed if claim therefor is filed before the close of such period.

8. Inapplicability of 10-percent additional tax on early distributions of pension plans of public safety employees (sec. 72(t) of the Code)

Present Law

Under present law, a taxpayer who receives a distribution from a qualified retirement plan prior to age 59½, death, or disability generally is subject to a 10-percent early withdrawal tax on the amount includible in income, unless an exception to the tax applies. Among other exceptions, the early distribution tax does not apply to distributions made to an employee who separates from service after age 55, or to distributions that are part of a series of substantially equal periodic payments made for the life (or life expectancy) of the employee or the joint lives (or life expectancies) of the employee and his or her beneficiary.

Explanation of Provision

Under the provision, the 10-percent early withdrawal tax does not apply to distributions from a governmental defined benefit pension plan to a qualified public safety employee who separates from service after age 50. A qualified public safety employee is an employee of a State or political subdivision of a State if the employee provides police protection, firefighting services, or emergency medical services for any area within the jurisdiction of such State or political subdivision.

Effective Date

The provision is effective for distributions made after the date of enactment.

9. Rollovers by nonspouse beneficiaries (sec. 402 of the Code)

Present Law

Tax-free rollovers

Under present law, a distribution from a qualified retirement plan, a tax-sheltered annuity ("section 403(b) annuity"), an eligible deferred compensation plan of a State or local government employer (a "governmental section 457 plan"), or an individual retirement arrangement (an "IRA") generally is included in income for the year distributed. However, eligible rollover distributions may be rolled over tax free within 60 days to another plan, annuity, or IRA.[175]

In general, an eligible rollover distribution includes any distribution to the plan participant or IRA owner other than certain periodic distributions, minimum required distributions, and distributions made on account of hardship.[176] Distributions to a participant from a qualified retirement plan, a tax-sheltered annuity, or a governmental section 457 plan generally can be rolled over to any of such plans or an IRA.[177] Similarly, distributions from an IRA to the IRA owner generally are permitted to be rolled over into a qualified retirement plan, a tax-sheltered annuity, a governmental section 457 plan, or another IRA.

Similar rollovers are permitted in the case of a distribution to the surviving spouse of the plan participant or IRA owner, but not to other persons.

If an individual inherits an IRA from the individual's deceased spouse, the IRA may be treated as the IRA of the surviving spouse. This treatment does not apply to IRAs inherited from someone other than the deceased spouse. In such cases, the IRA is not treated as the IRA of the beneficiary. Thus, for example, the beneficiary may not make contributions to the IRA and cannot roll over any amounts out of the inherited IRA. Like the original IRA owner, no amount is generally included in income until distributions are made from the IRA. Distributions from the inherited IRA must be made under the rules that apply to distributions to beneficiaries, as described below.

Minimum distribution rules

Minimum distribution rules apply to tax-favored retirement arrangements. In the case of distributions prior to the death of the participant, distributions generally must begin by the April

---

[175] The IRS has the authority to waive the 60-day requirement if failure to waive the requirement would be against equity or good conscience, including cases of casualty, disaster, or other events beyond the reasonable control of the individual. Sec. 402(c)(3)(B).

[176] Sec. 402(c)(4). Certain other distributions also are not eligible rollover distributions, e.g., corrective distributions of elective deferrals in excess of the elective deferral limits and loans that are treated as deemed distributions.

[177] Some restrictions or special rules may apply to certain distributions. For example, after-tax amounts distributed from a plan can be rolled over only to a plan of the same type or to an IRA.

1 of the calendar year following the later of the calendar year in which the participant (1) attains age 70½ or (2) retires.[178] The minimum distribution rules also apply to distributions following the death of the participant. If minimum distributions have begun prior to the participant's death, the remaining interest generally must be distributed at least as rapidly as under the minimum distribution method being used prior to the date of death. If the participant dies before minimum distributions have begun, then either (1) the entire remaining interest must be distributed within five years of the death, or (2) distributions must begin within one year of the death over the life (or life expectancy) of the designated beneficiary. A beneficiary who is the surviving spouse of the participant is not required to begin distributions until the date the deceased participant would have attained age 70½. Alternatively, if the surviving spouse makes a rollover from the plan into a plan or IRA of his or her own, minimum distributions generally would not need to begin until the surviving spouse attains age 70½.

Explanation of Provision

The provision provides that benefits of a beneficiary other than a surviving spouse may be transferred directly to an IRA. The IRA is treated as an inherited IRA of the nonspouse beneficiary. Thus, for example, distributions from the inherited IRA are subject to the distribution rules applicable to beneficiaries. The provision applies to amounts payable to a beneficiary under a qualified retirement plan, governmental section 457 plan, or a tax-sheltered annuity. To the extent provided by the Secretary, the provision applies to benefits payable to a trust maintained for a designated beneficiary to the same extent it applies to the beneficiary.

Effective Date

The provision is effective for distributions after December 31, 2006.

10. Direct deposit of tax refunds in an IRA

Present Law

Under current IRS procedures, a taxpayer may direct that his or her tax refund be deposited into a checking or savings account with a bank or other financial institution (such as a mutual fund, brokerage firm, or credit union) rather than having the refund sent to the taxpayer in the form of a check.

Explanation of Provision

The Secretary is directed to develop forms under which all or a portion of a taxpayer's refund may be deposited in an IRA of the taxpayer (or the spouse of the taxpayer in the case of a joint return). The provision does not modify the rules relating to IRAs, including the rules relating to timing and deductibility of contributions.

[178] In the case of five-percent owners and distributions from an IRA, distributions must begin by the April 1 of the calendar year following the year in which the individual attains age 70½.

Effective Date

The form required by the provision is to be available for taxable years beginning after December 31, 2006.

11. Additional IRA contributions for certain employees (secs. 25B and 219 of the Code)

Present Law

Under present law, favored tax treatment applies to qualified retirement plans maintained by employers and to individual retirement arrangements ("IRAs").

Qualified defined contribution plans may permit both employees and employers to make contributions to the plan. Under a qualified cash or deferred arrangement (commonly referred to as a "section 401(k) plan"), employees may elect to make pretax contributions to a plan, referred to as elective deferrals. Employees may also be permitted to make after-tax contributions to a plan. In addition, a plan may provide for employer nonelective contributions or matching contributions. Nonelective contributions are employer contributions that are made without regard to whether the employee makes elective deferrals or after-tax contributions. Matching contributions are employer contributions that are made only if the employee makes elective deferrals or after-tax contributions. Matching contributions are sometimes made in the form of employer stock.

Under present law, an individual may generally make contributions to an IRA for a taxable year up to the lesser of a certain dollar amount or the individual's compensation. The maximum annual dollar limit on IRA contributions to IRAs is $4,000 for 2005-2007 and $5,000 for 2008, with indexing thereafter. Individuals who have attained age 50 may make additional "catch-up" contributions to an IRA for a taxable year of up to $500 for 2005 and $1,000 for 2006 and thereafter.[179]

Present law provides a temporary nonrefundable tax credit for eligible taxpayers for qualified retirement savings contributions ("saver's" credit). The maximum annual contribution eligible for the credit is $2,000. The credit rate depends on the adjusted gross income ("AGI") of the taxpayer. Taxpayers filing joint returns with AGI of $50,000 or less, head of household returns of $37,500 or less, and single returns of $25,000 or less are eligible for the credit. The AGI limits applicable to single taxpayers apply to married taxpayers filing separate returns. The credit is in addition to any deduction or exclusion that would otherwise apply with respect to the contribution. The credit offsets minimum tax liability as well as regular tax liability. The credit is available to individuals who are 18 or over, other than individuals who are full-time students or claimed as a dependent on another taxpayer's return. The credit is available with respect to contributions to various types of retirement savings arrangements, including contributions to a

[179] These IRA limits were enacted as part of the Economic Growth and Tax Relief Reconciliation Act of 2001 ("EGTRRA"), Pub. L. No. 107-16. The provisions of EGTRRA generally do not apply for years beginning after December 31, 2010.

traditional or Roth IRA. The saver's credit does not apply to taxable years beginning after December 31, 2006.

Explanation of Provision

Under the provision, an applicable individual may elect to make additional IRA contributions of up to $3,000 per year for 2006-2009. An applicable individual must have been a participant in a section 401(k) plan under which the employer matched at least 50 percent of the employee's contributions to the plan with stock of the employer. In addition, in a taxable year preceding the taxable year of an additional contribution: (1) the employer (or any controlling corporation of the employer) must have been a debtor in a bankruptcy case, and (2) the employer or any other person must have been subject to an indictment or conviction resulting from business transactions related to the bankruptcy. The individual must also have been a participant in the section 401(k) plan on the date six months before the bankruptcy case was filed. An applicable individual who elects to make these additional IRA contributions is not permitted to make IRA catch-up contributions that apply to individuals age 50 and older.

Effective Date

The provision is effective for taxable years beginning after December 31, 2006, and before January 1, 2010.

12. Special rule for computing high-three average compensation for benefit limitation purposes (sec. 415(b)(3) of the Code)

Present Law

Annual benefits payable to a participant under a defined benefit pension plan generally may not exceed the lesser of (1) 100 percent of average compensation for the participant's high three years, or (2) $175,000 (for 2006). The dollar limit is reduced proportionately for individuals with less than 10 years of participation in the plan. The compensation limit is reduced proportionately for individuals with less than 10 years of service.

For purposes of determining average compensation for a participant's high three years, the high three years are the period of consecutive calendar years (not more than three) during which the participant was both an active participant in the plan and had the greatest aggregate compensation from the employer.

Explanation of Provision

Under the bill, for purposes of determining average compensation for a participant's high three years, the high three years are the period of consecutive calendar years (not more than three) during which the participant had the greatest aggregate compensation from the employer.

Effective Date

The provision is effective for years beginning after December 31, 2005.

13. Inflation indexing of gross income limitations on certain retirement savings incentives (secs. 25A and 219 of the Code)

Present Law

Saver's credit

Present law provides a temporary nonrefundable tax credit for eligible taxpayers for qualified retirement savings contributions. The maximum annual contribution eligible for the credit is $2,000. The credit rate depends on the adjusted gross income ("AGI") of the taxpayer. Joint returns with AGI of $50,000 or less, head of household returns of $37,500 or less, and single returns of $25,000 or less are eligible for the credit. The AGI limits applicable to single taxpayers apply to married taxpayers filing separate returns. The credit is in addition to any deduction or exclusion that would otherwise apply with respect to the contribution. The credit offsets minimum tax liability as well as regular tax liability. The credit is available to individuals who are 18 or older, other than individuals who are full-time students or claimed as a dependent on another taxpayer's return.

Under present law, the saver's credit expires after 2006.

Individual retirement arrangements

In general

There are two general types of individual retirement arrangements ("IRAs") under present law: traditional IRAs,[180] to which both deductible and nondeductible contributions may be made,[181] and Roth IRAs.[182]

The maximum annual deductible and nondeductible contributions that can be made to a traditional IRA and the maximum contribution that can be made to a Roth IRA by or on behalf of an individual varies depending on the particular circumstances, including the individual's income. However, the contribution limits for IRAs are coordinated so that the maximum annual contribution that can be made to all of an individual's IRAs is the lesser of a certain dollar amount ($4,000 for 2006) or the individual's compensation. In the case of a married couple, contributions can be made up to the dollar limit for each spouse if the combined compensation of the spouses is at least equal to the contributed amount. An individual who has attained age 50 before the end of the taxable year may also make catch-up contributions to an IRA. For this purpose, the dollar limit is increased by a certain dollar amount ($1,000 for 2006).[183]

---

[180] Sec. 408.

[181] Sec. 219.

[182] Sec. 408A.

[183] Under the Economic Growth and Tax Relief Reconciliation Act of 2001 ("EGTRRA"), the dollar limit on IRA contributions increases to $5,000 in 2008, with indexing for inflation thereafter. The

Traditional IRAs

An individual may make deductible contributions to a traditional IRA up to the IRA contribution limit if neither the individual nor the individual's spouse is an active participant in an employer-sponsored retirement plan. If an individual (or the individual's spouse) is an active participant in an employer-sponsored retirement plan, the deduction is phased out for taxpayers with adjusted gross income over certain levels for the taxable year. The adjusted gross income phase-out ranges are: (1) for single taxpayers, $50,000 to $60,000; (2) for married taxpayers filing joint returns, $75,000 to $85,000 for 2006 and $80,000 to $100,000 for years after 2006; and (3) for married taxpayers filing separate returns, $0 to $10,000. If an individual is not an active participant in an employer-sponsored retirement plan, but the individual's spouse is, the deduction is phased out for taxpayers with adjusted gross income between $150,000 and $160,000.

To the extent an individual cannot or does not make deductible contributions to an IRA or contributions to a Roth IRA, the individual may make nondeductible contributions to a traditional IRA, subject to the same limits as deductible contributions. An individual who has attained age 50 before the end of the taxable year may also make nondeductible catch-up contributions to an IRA.

Amounts held in a traditional IRA are includible in income when withdrawn, except to the extent the withdrawal is a return of nondeductible contributions. Withdrawals from an IRA before age 70½, death, or disability are subject to an additional 10-percent tax unless an exception applies.[184]

Roth IRAs

Individuals with adjusted gross income below certain levels may make nondeductible contributions to a Roth IRA, subject to the overall limit on IRA contributions described above. The maximum annual contribution that can be made to a Roth IRA is phased out for taxpayers with adjusted gross income over certain levels for the taxable year. The adjusted gross income phase-out ranges are: (1) for single taxpayers, $95,000 to $110,000; (2) for married taxpayers filing joint returns, $150,000 to $160,000; and (3) for married taxpayers filing separate returns, $0 to $10,000.

Taxpayers generally may convert a traditional IRA into a Roth IRA, except for married taxpayers filing separate returns. The amount converted is includible in income as if a withdrawal had been made, except that the 10-percent early withdrawal tax does not apply.

---

provisions of EGTRRA generally do not apply for years beginning after December 31, 2010. As a result, the dollar limit on annual IRA contributions is $2,000 for years after 2010, and catch-ups contributions are not permitted.

[184] Sec. 72(t).

Amounts held in a Roth IRA that are withdrawn as a qualified distribution are not includible in income, or subject to the additional 10-percent tax on early withdrawals. A qualified distribution is a distribution that (1) is made after the five-taxable year period beginning with the first taxable year for which the individual made a contribution to a Roth IRA, and (2) is made after attainment of age 59½, on account of death or disability, or is made for first-time homebuyer expenses of up to $10,000.

Distributions from a Roth IRA that are not qualified distributions are includible in income to the extent attributable to earnings. The amount includible in income is also subject to the 10-percent early withdrawal tax described above.

Explanation of Provision

The bill indexes the income limits applicable to the saver's credit beginning in 2007. (Another provision of the bill, described above, permanently extends the saver's credit.) Indexed amounts are rounded to the nearest multiple of $500. Under the indexed income limits, as under present law, the income limits for single taxpayers is one-half that for married taxpayers filing a joint return and the limits for heads of household are three-fourths that for married taxpayers filing a joint return.

The bill also indexes the income limits for IRA contributions beginning in 2007. The indexing applies to the income limits for deductible contributions for active participants in an employer-sponsored plan,[185] the income limits for deductible contributions if the individual is not an active participant but the individual's spouse is, and the income limits for Roth IRA contributions. Indexed amounts are rounded to the nearest multiple of $1,000. The provision does not affect the phase-out ranges under present law. Thus, for example, in the case of an active participant in an employer-sponsored plan, the phase-out range is $20,000 in the case of a married taxpayer filing a joint return and $10,000 in the case of an individual taxpayer.

Effective Date

The provision is effective for taxable years beginning after December 31, 2006.

[185] Under the bill, for 2007, the lower end of the income phase out for active participants filing a joint return is $80,000 as adjusted to reflect inflation.

D. Health and Medical Benefits

1. Ability to use excess pension assets for future retiree health benefits and collectively bargained retiree health benefits (sec. 420 of the Code)

Present Law

Transfer of pension assets

Defined benefit plan assets generally may not revert to an employer prior to termination of the plan and satisfaction of all plan liabilities. In addition, a reversion may occur only if the plan so provides. A reversion prior to plan termination may constitute a prohibited transaction and may result in plan disqualification. Any assets that revert to the employer upon plan termination are includible in the gross income of the employer and subject to an excise tax. The excise tax rate is 20 percent if the employer maintains a replacement plan or makes certain benefit increases in connection with the termination; if not, the excise tax rate is 50 percent. Upon plan termination, the accrued benefits of all plan participants are required to be 100-percent vested.

A pension plan may provide medical benefits to retired employees through a separate account that is part of such plan ("retiree medical accounts"). A qualified transfer of excess assets of a defined benefit plan to such a separate account within the plan may be made in order to fund retiree health benefits.[186] A qualified transfer does not result in plan disqualification, is not a prohibited transaction, and is not treated as a reversion. Thus, transferred assets are not includible in the gross income of the employer and are not subject to the excise tax on reversions. No more than one qualified transfer may be made in any taxable year. A qualified transfer may not be made from a multiemployer plan. No qualified transfer may be made after December 31, 2013.

Excess assets generally means the excess, if any, of the value of the plan's assets[187] over the greater of (1) the accrued liability under the plan (including normal cost) or (2) 125 percent of the plan's current liability.[188] In addition, excess assets transferred in a qualified transfer may not exceed the amount reasonably estimated to be the amount that the employer will pay out of such account during the taxable year of the transfer for qualified current retiree health liabilities. No deduction is allowed to the employer for (1) a qualified transfer or (2) the payment of qualified current retiree health liabilities out of transferred funds (and any income thereon). In

---

[186] Sec. 420.

[187] The value of plan assets for this purpose is the lesser of fair market value or actuarial value.

[188] In the case of plan years beginning before January 1, 2004, excess assets generally means the excess, if any, of the value of the plan's assets over the greater of (1) the lesser of (a) the accrued liability under the plan (including normal cost) or (b) 170 percent of the plan's current liability (for 2003), or (2) 125 percent of the plan's current liability. The current liability full funding limit was repealed for years beginning after 2003. Under the general sunset provision of EGTRRA, the limit is reinstated for years after 2010.

addition, no deduction is allowed for amounts paid other than from transferred funds for qualified current retiree health liabilities to the extent such amounts are not greater than the excess of (1) the amount transferred (and any income thereon), over (2) qualified current retiree health liabilities paid out of transferred assets (and any income thereon). An employer may not contribute any amount to a health benefits account or welfare benefit fund with respect to qualified current retiree health liabilities for which transferred assets are required to be used.

Transferred assets (and any income thereon) must be used to pay qualified current retiree health liabilities for the taxable year of the transfer. Transferred amounts generally must benefit pension plan participants, other than key employees, who are entitled upon retirement to receive retiree medical benefits through the separate account. Retiree health benefits of key employees may not be paid out of transferred assets.

Amounts not used to pay qualified current retiree health liabilities for the taxable year of the transfer are to be returned to the general assets of the plan. These amounts are not includible in the gross income of the employer, but are treated as an employer reversion and are subject to a 20-percent excise tax.

In order for the transfer to be qualified, accrued retirement benefits under the pension plan generally must be 100-percent vested as if the plan terminated immediately before the transfer (or in the case of a participant who separated in the one-year period ending on the date of the transfer, immediately before the separation).

In order to a transfer to be qualified, the employer generally must maintain retiree health benefits at the same level for the taxable year of the transfer and the following four years.

In addition, ERISA provides that, at least 60 days before the date of a qualified transfer, the employer must notify the Secretary of Labor, the Secretary of the Treasury, employee representatives, and the plan administrator of the transfer, and the plan administrator must notify each plan participant and beneficiary of the transfer.[189]

Deductions for contributions

Deductions for contributions to qualified retirement plans are subject to certain limits. Deductions for contributions to funded welfare benefit plans are generally also subject to limits, including limits on the amount that may be contributed to an account to fund the expected cost of retiree medical benefits for future years. The limit on the amount that may be contributed to an account to fund the expected cost of retiree medical benefits for future years does not apply to a separate fund established under a collective bargaining agreement.

[189] ERISA sec. 101(e). ERISA also provides that a qualified transfer is not a prohibited transaction under ERISA or a prohibited reversion.

Explanation of Provision

In general

If certain requirements are satisfied, the bill permits transfers of excess pension assets under a single-employer plan to retiree medical accounts to fund the expected cost of retiree medical benefits for the current and future years (a "qualified future transfer") and also allows such transfers in the case of benefits provided under a collective bargaining agreement (a "collectively bargained transfer"). Transfers must be made for at least a two-year period. An employer can elect to make a qualified future transfer or a collectively bargained transfer rather than a qualified transfer. A qualified future transfer or collectively bargained transfer must meet the requirements applicable to qualified transfers, except that the provision modifies the rules relating to (1) the determination of excess pension assets; (2) the limitation on the amount transferred; and (3) the minimum cost requirement. Additional requirements apply in the case of collectively bargained transfer.

The general sunset applicable to qualified transfer applies (i.e., transfers can be made only before January 1, 2014).

Rule applicable to qualified future transfers and collectively bargained transfers

Qualified future transfers and collectively bargained transfers can be made to the extent that plan assets exceed the greater of (1) accrued liability, or (2) 120 percent of current liability.[190] The provision requires that, during the transfer period, the plan's funded status must be maintained at the minimum level required to make transfers. If the minimum level is not maintained, the employer must make contributions to the plan to meet the minimum level or an amount required to meet the minimum level must be transferred from the health benefits account. The transfer period is the period not to exceed a total of ten consecutive taxable years beginning with the taxable year of the transfer. As previously discussed, the period must be not less than two consecutive years.

A limit applies on the amount that can be transferred. In the case of a qualified future transfer, the amount of excess pension assets that may be transferred is limited to the sum of (1) the amount that is reasonably estimated to be the amount the employer will pay out of the account during the taxable year of the transfer for current retiree health liabilities, and (2) the sum of the qualified current retiree health liabilities which the plan reasonably estimates, in accordance with guidance issued by the Secretary, will be incurred for each additional year in the transfer period. The amount that can be transferred under a collectively bargained transfer cannot exceed the amount which is reasonably estimated, in accordance with the provisions of the collective bargaining agreement and generally accepted accounting principles, to be the amount the employer maintaining the plan will pay out of such account during the collectively bargained cost maintenance period for collectively bargained retiree health liabilities.

[190] The single-employer plan funding concepts are updated after 2007 to reflect the changes to the single-employer plan funding rules under the bill.

The provision also modifies the minimum cost requirement which requires retiree medical benefits to be maintained at a certain level. In the case of a qualified future transfer, the minimum cost requirement will be satisfied if, during the transfer period and the four subsequent years, the annual average amount of employer costs is not less than applicable employer cost determined with respect to the transfer. An employer may elect to meet this minimum cost requirement by meeting the requirements as in effect before the amendments made by section 535 of the Tax Relief Extension Act of 1999 for each year during the transfer period and the four subsequent years. In the case of a collectively bargained transfer, the minimum cost requirements is satisfied if each collectively bargained group health plan under which collectively bargained health benefits are provided provides that the collectively bargained employer cost for each table year during the collectively bargained cost maintenance period is not less than the amount specified by the collective bargaining agreement. The collectively bargained employer cost is the average cost per covered individual of providing collectively bargained retiree health benefits as determined in accordance with the applicable collective bargaining agreement. Thus, retiree medical benefits must be provided at the level determined under the collective bargaining agreement for the shorter of (1) the remaining lifetime of each covered retiree (and any covered spouse and dependent), or (2) the period of coverage provided under the collectively bargained health plan for such covered retiree (and any covered spouse and dependent).

Additional requirements for collectively bargained transfers

As previously discussed, the bill imposes certain additional requirements in the case of a collectively bargained transfer. Collectively bargained transfers can be made only if (1) for the employer's taxable year ending in 2005, medical benefits are provided to retirees (and spouses and dependents) under all the employer's benefit plans, and (2) the aggregate cost of benefits for such year is at least five percent of the employer's gross receipts. The provision also applies to successors of such employers. Before a collectively bargained transfer, the employer must designate in writing to each employee organization that is a party to the collective bargaining agreement that the transfer is a collectively bargained transfer.

Collectively bargained retiree health liabilities means the present value, as of the beginning of a taxable year and determined in accordance with the applicable collective bargaining agreement, of all collectively bargained health benefits (including administrative expenses) for such taxable year and all subsequent taxable years during the collectively bargained cost maintenance period (with the exclusion of certain key employees) reduced by the value of assets in all health benefits accounts or welfare benefit funds set aside to pay for the collectively bargained retiree health liabilities. Collectively bargained health benefits are health benefits or coverage provided to retired employees who, immediately before the collectively bargained transfer, are entitled to receive such benefits upon retirement and who are entitled to pension benefits under the plan (and their spouses and dependents). If specified by the provisions of the collective bargaining agreement, collectively bargained health benefits also include active employees who, following their retirement, are entitled to receive such benefits and who are entitled to pension benefits under the plan (and their spouse and dependents).

Assets transferred in a collectively bargained transfer can be used to pay collectively bargained retiree health liabilities (other than liabilities of certain key employees not taken into

account) for the taxable year of the transfer and for any subsequent taxable year during the collectively bargained cost maintenance period. The collectively bargained cost maintenance period (with respect to a retiree) is the shorter of (1) the remaining lifetime of the covered retiree (and any covered spouse and dependents) or (2) the period of coverage provided by the collectively bargained health plan with respect to such covered retiree (and any covered spouse and dependents).

The limit on deductions in the case of certain amounts paid for qualified current retiree health liabilities other than from the health benefits account does not apply in the case of a collectively bargained transfer.

An employer may contribute additional amounts to a health benefits account or welfare benefit fund with respect to collectively bargained health liabilities for which transferred assets are required to be used. The deductibility of such contributions are subject to the limits that otherwise apply to a welfare benefit fund under a collective bargaining agreements without regard to whether such contributions are made to a health benefits account or a welfare benefit fund and without regard to the limits on deductions for contributions to qualified retirement plans (under Code section 404). The Secretary of the Treasury is directed to provide rules to prevent duplicate deductions for the same contributions or for duplicate contributions to fund the same benefits.

Effective Date

The provision is effective for transfers after the date of enactment.

2. Transfer of excess pension assets to multiemployer health plans (sec. 420 of the Code)

Present Law

Defined benefit plan assets generally may not revert to an employer prior to termination of the plan and satisfaction of all plan liabilities. In addition, a reversion may occur only if the plan so provides. A reversion prior to plan termination may constitute a prohibited transaction and may result in plan disqualification. Any assets that revert to the employer upon plan termination are includible in the gross income of the employer and subject to an excise tax. The excise tax rate is 20 percent if the employer maintains a replacement plan or makes certain benefit increases in connection with the termination; if not, the excise tax rate is 50 percent. Upon plan termination, the accrued benefits of all plan participants are required to be 100-percent vested.

A pension plan may provide medical benefits to retired employees through a separate account that is part of such plan. A qualified transfer of excess assets of a defined benefit plan to such a separate account within the plan may be made in order to fund retiree health benefits.[191] A qualified transfer does not result in plan disqualification, is not a prohibited transaction, and is not treated as a reversion. Thus, transferred assets are not includible in the gross income of the

[191] Sec. 420.

employer and are not subject to the excise tax on reversions. No more than one qualified transfer may be made in any taxable year. A qualified transfer may not be made from a multiemployer plan. No qualified transfer may be made after December 31, 2013.

Excess assets generally means the excess, if any, of the value of the plan's assets[192] over the greater of (1) the accrued liability under the plan (including normal cost) or (2) 125 percent of the plan's current liability.[193] In addition, excess assets transferred in a qualified transfer may not exceed the amount reasonably estimated to be the amount that the employer will pay out of such account during the taxable year of the transfer for qualified current retiree health liabilities. No deduction is allowed to the employer for (1) a qualified transfer or (2) the payment of qualified current retiree health liabilities out of transferred funds (and any income thereon).

Transferred assets (and any income thereon) must be used to pay qualified current retiree health liabilities for the taxable year of the transfer. Transferred amounts generally must benefit pension plan participants, other than key employees, who are entitled upon retirement to receive retiree medical benefits through the separate account. Retiree health benefits of key employees may not be paid out of transferred assets.

Amounts not used to pay qualified current retiree health liabilities for the taxable year of the transfer are to be returned to the general assets of the plan. These amounts are not includible in the gross income of the employer, but are treated as an employer reversion and are subject to a 20-percent excise tax.

In order for the transfer to be qualified, accrued retirement benefits under the pension plan generally must be 100-percent vested as if the plan terminated immediately before the transfer (or in the case of a participant who separated in the one-year period ending on the date of the transfer, immediately before the separation).

In order to a transfer to be qualified, the employer generally must maintain retiree health benefits at the same level for the taxable year of the transfer and the following four years.

In addition, ERISA provides that, at least 60 days before the date of a qualified transfer, the employer must notify the Secretary of Labor, the Secretary of the Treasury, employee representatives, and the plan administrator of the transfer, and the plan administrator must notify each plan participant and beneficiary of the transfer.[194]

---

[192] The value of plan assets for this purpose is the lesser of fair market value or actuarial value.

[193] In the case of plan years beginning before January 1, 2004, excess assets generally means the excess, if any, of the value of the plan's assets over the greater of (1) the lesser of (a) the accrued liability under the plan (including normal cost) or (b) 170 percent of the plan's current liability (for 2003), or (2) 125 percent of the plan's current liability. The current liability full funding limit was repealed for years beginning after 2003. Under the general sunset provision of EGTRRA, the limit is reinstated for years after 2010.

[194] ERISA sec. 101(e). ERISA also provides that a qualified transfer is not a prohibited transaction under ERISA or a prohibited reversion.

Under present law, special deduction rules apply to a multiemployer defined benefit plan established before January 1, 1954, under an agreement between the Federal government and employee representatives in a certain industry.[195]

Explanation of Provision

The bill allows qualified transfers of excess defined benefit plan assets to be made by multiemployer defined benefit plans.

Effective Date

The provision is effective for transfer made in taxable years beginning after December 31, 2006.

3. Allowance of reserve for medical benefits of plans sponsored by bona fide associations (sec. 419A of the Code)

Present Law

Under present law, deductions for contributions to funded welfare benefit plans are generally subject to limits, including limits on the amount that may be contributed to an account to fund medical benefits (other than retiree medical benefits) for future years. Deductions for contributions to a welfare benefit fund are limited to the fund's qualified cost for the taxable year. The qualified cost is the sum of (1) the qualified direct cost for the taxable year, and (2) permissible additions to a qualified asset account.

The qualified direct costs are the amount which would have been allowable as a deduction to the employer with respect to the benefits provided during the taxable year if the benefits were provided directly by the employer and the employer used the cash receipts and disbursements method of accounting. Additions to the qualified asset account are limited to the account limit. The account limit is the amount reasonably and actuarially necessary to fund claims uncured but unpaid (as of the close of the taxable year) and administrative costs with respect to such claims.

These limits do not apply to a welfare benefit fund that is part of a plan (referred to a "10-or-more employer" plan), to which (1) more than one employer contributes, and (2) no employer normally contributes more than 10 percent of the total contributions, provided that the plan may not maintain experience rating arrangements with respect to individual employers.

Explanation of Provision

The bill allows deductions for contributions to fund a reserve for medical benefits (other than retiree medical benefits) for future years provided through a bona fide association as defined in section 2791(d)(3) of the Public Health Service Act. In such case, the account limit may

[195] Code sec. 404(c).

include a reserve not to exceed 35 percent of the sum of (1) qualified direct costs, and (2) the change in claims incurred, but unpaid for such taxable year with respect to medical benefits (other than post-retirement medical benefits).

Effective Date

The provision is effective for taxable years ending after December 31, 2006.

4. Tax treatment of combined annuity or life insurance contracts with a long-term care insurance feature (secs. 72. 1035, and 7702B and new sec. 6050U of the Code)

Present Law

Annuity contracts

In general, earnings and gains on amounts invested in a deferred annuity contract held by an individual are not subject to tax during the deferral period in the hands of the holder of the contract. When payout commences under a deferred annuity contract, the tax treatment of amounts distributed depends on whether the amount is received "as an annuity" (generally, as periodic payments under contract terms) or not.

For amounts received as an annuity by an individual, an "exclusion ratio" is provided for determining the taxable portion of each payment (sec. 72(b)). The portion of each payment that is attributable to recovery of the taxpayer's investment in the contract is not taxed. The taxable portion of each payment is ordinary income. The exclusion ratio is the ratio of the taxpayer's investment in the contract to the expected return under the contract, that is, the total of the payments expected to be received under the contract. The ratio is determined as of the taxpayer's annuity starting date. Once the taxpayer has recovered his or her investment in the contract, all further payments are included in income. If the taxpayer dies before the full investment in the contract is recovered, a deduction is allowed on the final return for the remaining investment in the contract (sec. 72(b)(3)).

Amounts not received as an annuity generally are included as ordinary income if received on or after the annuity starting date. Amounts not received as an annuity are included in income to the extent allocable to income on the contract if received before the annuity starting date, i.e., as income first (sec. 72(e)(2)). In general, loans under the annuity contract, partial withdrawals and partial surrenders are treated as amounts not received as an annuity and are subject to tax as income first (sec. 72(e)(4)). Exceptions are provided in some circumstances, such as for certain grandfathered contracts, certain life insurance and endowment contracts (other than modified endowment contracts), and contracts under qualified plans (sec. 72(e)(5)). Under these exceptions, the amount received is included in income, but only to the extent it exceeds the investment in the contract, i.e., as basis recovery first.

Long-term care insurance contracts

Tax treatment

Present law provides favorable tax treatment for qualified long-term care insurance contracts meeting the requirements of section 7702B.

A qualified long-term care insurance contract is treated as an accident and health insurance contract (sec. 7702B(a)(1)). Amounts received under the contract generally are excludable from income as amounts received for personal injuries or sickness (sec. 104(a)(3)). The excludable amount is subject to a dollar cap of $250 per day or $91,250 annually (for 2006), as indexed, on per diem contracts only (sec. 7702B(d)). If payments under such contracts exceed the dollar cap, then the excess is excludable only to the extent of costs in excess of the dollar cap that are incurred for long-term care services. Amounts in excess of the dollar cap, with respect to which no actual costs were incurred for long-term care services, are fully includable in income without regard to the rules relating to return of basis under section 72.

A plan of an employer providing coverage under a long-term care insurance contract generally is treated as an accident and health plan (benefits under which generally are excludable from the recipient's income under section 105).

Premiums paid for a qualified long-term care insurance contract are deductible as medical expenses, subject to a dollar cap on the deductible amount of the premium per year based on the insured person's age at the end of the taxable year (sec. 213(d)(10)). Medical expenses generally are allowed as a deduction only to the extent they exceed 7.5 percent of adjusted gross income (sec. 213(a)).

Unreimbursed expenses for qualified long-term care services provided to the taxpayer or the taxpayer's spouse or dependent are treated as medical expenses for purposes of the itemized deduction for medical expenses (subject to the floor of 7.5 percent of adjusted gross income). Amounts received under a qualified long-term care insurance contract (regardless of whether the contract reimburses expenses or pays benefits on a per diem or other periodic basis) are treated as reimbursement for expense actually incurred for medical care (sec. 7702B(a)(2)).

Definitions

A qualified long-term care insurance contract is defined as any insurance contract that provides only coverage of qualified long-term care services, and that meets additional requirements (sec. 7702B(b)). The contract is not permitted to provide for a cash surrender value or other money that can paid, assigned or pledged as collateral for a loan, or borrowed (and premium refunds are to be applied as a reduction in future premiums or to increase future benefits). Per diem-type and reimbursement-type contracts are permitted.

Qualified long-term care services are necessary diagnostic, preventive, therapeutic, curing treating, mitigating, and rehabilitative services, and maintenance or personal care services that are required by a chronically ill individual and that are provided pursuant to a plan of care prescribed by a licensed health care practitioner (sec. 7702B(c)(1)).

A chronically ill individual is generally one who has been certified within the previous 12 months by a licensed health care practitioner as being unable to perform (without substantial assistance) at least 2 activities of daily (ADLs) for at least 90 days due to a loss of functional capacity (or meeting other definitional requirements) (sec. 7702B(c)(2)).

Long-term care riders on life insurance contracts

In the case of long-term care insurance coverage provided by a rider on or as part of a life insurance contract, the requirements applicable to long-term care insurance contracts apply as if the portion of the contract providing such coverage were a separate contract (sec. 7702B(e)). The term "portion" means only the terms and benefits that are in addition to the terms and benefits under the life insurance contract without regard to long-term care coverage. As a result, if the applicable requirements are met by the long-term care portion of the contract, amounts received under the contract as provided by the rider are treated in the same manner as long-term care insurance benefits, whether or not the payment of such amounts causes a reduction in the contract's death benefit or cash surrender value.

The guideline premium limitation applicable under section 7702(c)(2) is increased by the sum of charges (but not premium payments) against the life insurance contract's cash surrender value, the imposition of which reduces premiums paid for the contract (within the meaning of sec. 7702(f)(1)). Thus, a policyholder can pre-fund to a greater degree a life insurance policy with a long-term care rider without causing the policy to lose its tax-favored treatment as life insurance.

No medical expense deduction generally is allowed under section 213 for charges against the life insurance contract's cash surrender value, unless such charges are includible in income because the life insurance contract is treated as a "modified endowment contract" under section 72(e)(10) and 7702A (sec. 7702B(e)((3)).

Tax-free exchanges of insurance contracts

Present law provides for the exchange of certain insurance contracts without recognition of gain or loss (sec. 1035). No gain or loss is recognized on the exchange of: (1) a life insurance contract for another life insurance contract or for an endowment or annuity contract; or (2) an endowment contract for another endowment contract (that provides for regular payments beginning no later than under the exchanged contract) or for an annuity contract; or (3) an annuity contract for an annuity contract. The basis of the contract received in the exchange generally is the same as the basis of the contract exchanged (sec. 1031(d)). Tax-free exchanges of long-term care insurance contracts are not permitted.

Capitalization of certain policy acquisition expenses of insurance companies

In the case of an insurance company, specified policy acquisition expenses for any taxable year are required to be capitalized, and are amortized generally over the 120-month period beginning with the first month in the second half of the taxable year (sec. 848). Specified policy acquisition expenses are determined as that portion of the insurance company's general deductions for the taxable year that does not exceed a specific percentage of the net premiums for the taxable year on each of three categories of insurance contracts. For annuity contracts, the

percentage is 1.75; for group life insurance contracts, the percentage is 2.05; and for all other specified insurance contracts, the percentage is 7.7. With certain exceptions, a specified insurance contract is any life insurance, annuity, or noncancellable accident and health insurance contract or combination thereof.

Explanation of Provision

The provision provides tax rules for long-term care insurance that is provided by a rider on or as part of an annuity contract, and modifies the tax rules for long-term care insurance coverage provided by a rider on or as part of a life insurance contract.

Under the provision, any charge against the cash value of an annuity contract or the cash surrender value of a life insurance contract made as payment for coverage under a qualified long-term care insurance contract that is part of or a rider on the annuity or life insurance contract is not includable in income. The investment in the contract is reduced (but not below zero) by the charge.

The provision expands the rules for tax-free exchanges of certain insurance contracts. The provision provides that no gain or loss is recognized on the exchange of a life insurance contract, an endowment contract, an annuity contract, or a qualified long-term care insurance contract for a qualified long-term care insurance contract. The provision provides that a contract does not fail to be treated as an annuity contract, or as a life insurance contract, solely because a qualified long-term care insurance contract is a part of or a rider on such contract, for purposes of the rules for tax-free exchanges of certain insurance contracts.

The provision provides that, except as otherwise provided in regulations, for Federal tax purposes, in the case of a long-term care insurance contract (whether or not qualified) provided by a rider on or as part of a life insurance contract or an annuity contract, the portion of the contract providing long-term care insurance coverage is treated as a separate contract. The term "portion" means only the terms and benefits under a life insurance contract or annuity contract that are in addition to the terms and benefits under the contract without regard to long-term care coverage. As a result, if the applicable requirements are met by the long-term care portion of the contract, amounts received under the contract as provided by the rider are treated in the same manner as long-term care insurance benefits, whether or not the payment of such amounts causes a reduction in the life insurance contract's death benefit or cash surrender value or in the annuity contract's cash value.

No deduction as a medical expense is allowed for any payment made for coverage under a qualified long-term care insurance contract if the payment is made as a charge against the cash value of an annuity contract or the cash surrender value of a life insurance contract.

The provision provides that, for taxable years beginning after December 31, 2009, the guideline premium limitation is not directly increased by charges against a life insurance contract's cash surrender value for coverage under the qualified long-term care insurance portion of the contract. Rather, because such charges are not included in the holder's income by reason

of new section 72(e)(11),[196] the charges reduce premiums paid under section 7702(f)(1), for purposes of the guideline premium limitation of section 7702. The amount by which premiums paid (under 7702(f)(1)) are reduced under this rule is intended to be the sum of any charges (but not premium payments) against the life insurance contract's cash surrender value (within the meaning of section 7702(f)(2)(a)) for long-term care coverage made to that date under the contract. For taxable years beginning before January 1, 2010, the present-law rule of section 7702B(e)(2) before amendment by the bill (the so-called "pay-as-you-go" rule) increases the guideline premium limitation by this same amount, reduced by charges the imposition of which reduces the premiums paid under the contract. Thus, the provision of the bill recreates the result of the "pay-as-you-go" rule (which is repealed by the provision) as a reduction in premiums paid rather than as an increase in the guideline premium limitation.

The provision provides that certain retirement-related arrangements are not treated as annuity contracts, for purposes of the provision.

The provision requires information reporting by any person who makes a charge against the cash value of an annuity contract, or the cash surrender value of a life insurance contract, that is excludible from gross income under the provision. The information required to be reported includes the amount of the aggregate of such charges against each such contract for the calendar year, the amount of the reduction in the investment in the contract by reason of the charges, and the name, address, and taxpayer identification number of the holder of the contract. A statement is required to be furnished to each individual identified in the information report. Penalties apply for failure to file the information report or furnish the statement required under the provision.

The provision modifies the application of the rules relating to capitalization of policy acquisition expenses of insurance companies. In the case of an annuity or life insurance contract that includes a qualified long-term care insurance contract as a part of or rider on the annuity or life insurance contract, the specified policy acquisition expenses that must be capitalized is determined using 7.7 percent of the net premiums for the taxable year on such contracts.

The provision clarifies that, effective as if included in the Health Insurance Portability and Accountability Act of 1996 (when section 7702B was enacted), except as otherwise provided in regulations, for Federal tax purposes (not just for purposes of section 7702B), in the case of a long-term care insurance contract (whether or not qualified) provided by a rider on or as part of a life insurance contract, the portion of the contract providing long-term care insurance coverage is treated as a separate contract.

---

[196] Because such charges are not included in the holder's income under new section 72(e)(11), the effect would be to increase the guideline premium limitation under present-law section 7702B(e)(2)(A) by the amount of the charges and simultaneously to reduce it by the same charges under section 7702B(e)(2)(B). Such charges that are not included in income serve to reduce premiums paid under section 7702(f)(1), and therefore would cancel each other out under 7702B(e)(2)(A) and (B).

Effective Date

The provisions are effective generally for contracts issued after December 31, 1996, but only with respect to taxable years beginning after December 31, 200**9**. The provisions relating to tax-free exchanges apply with respect to exchanges occurring after December 31, 2009. The provision relating to information reporting applies to charges made after December 31, 2009. The provision relating to policy acquisition expenses applies to specified policy acquisition expenses determined for taxable years beginning after December 31, 2009. The technical amendment relating to long-term care insurance coverage under section 7702B(e) is effective as if included with the underlying provisions of the Health Insurance Portability and Accountability Act of 1996.

5. Permit tax-free distributions from governmental retirement plans for premiums for health and long-term care insurance for public safety officers (sec. 402 of the Code)

Present Law

Under present law, a distribution from a qualified retirement plan under section 401(a), a qualified annuity plan under section 403(a), a tax-sheltered annuity under section 403(b) (a "403(b) annuity"), an eligible deferred compensation plan maintained by a State or local government under section 457 (a "governmental 457 plan"), or an individual retirement arrangement under section 408 (an "IRA") generally is included in income for the year distributed (except to the extent the amount received constitutes a return of after-tax contributions or a qualified distribution from a Roth IRA).[197] In addition, a distribution from a qualified retirement or annuity plan, a 403(b) annuity, or an IRA received before age 59½, death, or disability generally is subject to a 10-percent early withdrawal tax on the amount includible in income, unless an exception applies.[198]

Explanation of Provision

The bill provides that certain pension distributions from an eligible retirement plan used to pay for qualified health insurance premiums are excludible from income, up to a maximum exclusion of $3,000 annually. An eligible retirement plan includes a governmental qualified retirement or annuity plan, 403(b) annuity, or 457 plan. The exclusion applies with respect to eligible retired public safety officers who make an election to have qualified health insurance premiums deducted from amounts distributed from an eligible retirement plan and paid directly to the insurer. An eligible retired public safety officer is an individual who, by reason of disability or attainment of normal retirement age, is separated from service as a public safety

[197] Secs. 402(a), 403(a), 403(b), 408(d), and 457(a).

[198] Sec. 72(t).

officer[199] with the employer who maintains the eligible retirement plan from which pension distributions are made.

Qualified health insurance premiums include premiums for accident or health insurance or qualified long-term care insurance contracts covering the taxpayer, the taxpayer's spouse, and the taxpayer's dependents. The qualified health insurance premiums do not have to be for a plan sponsored by the employer; however, the exclusion does not apply to premiums paid by the employee and reimbursed with pension distributions. Amounts excluded from income under the provision are not taken into account in determining the itemized deduction for medical expenses under section 213 or the deduction for health insurance of self-employed individuals under section 162.

Effective Date

The provision is effective for distributions in taxable years beginning after December 31, 2006.

[199] The term "public safety officer" has the same meaning as under section 1204(8)(A) of the Omnibus Crime Control and Safe Streets Act of 1986.

E. United States Tax Court Modernization

1. Judges of the Tax Court (secs. 7447, 7448, and 7472 of the Code)

Present Law

The Tax Court is established by the Congress pursuant to Article I of the U.S. Constitution.[200] The salary of a Tax Court judge is the same salary as received by a U.S. District Court judge.[201] Present law also provides Tax Court judges with some benefits that correspond to benefits provided to U.S. District Court judges, including specific retirement and survivor benefit programs for Tax Court judges.[202]

Under the retirement program, a Tax Court judge may elect to receive retirement pay from the Tax Court in lieu of benefits under another Federal retirement program. A Tax Court judge may also elect to participate in a plan providing annuity benefits for the judge's surviving spouse and dependent children (the "survivors' annuity plan"). Generally, benefits under the survivors' annuity plan are payable only if the judge has performed at least five years of service. Cost-of-living increases in benefits under the survivors' annuity plan are generally based on increases in pay for active judges.

Tax Court judges participate in the Federal Employees Group Life Insurance program (the "FEGLI" program). Retired Tax Court judges are eligible to participate in the FEGLI program as the result of an administrative determination of their eligibility, rather than a specific statutory provision.

Tax Court judges are not covered by the leave system for Federal Executive Branch employees. As a result, an individual who works in the Federal Executive Branch before being appointed to the Tax Court does not continue to accrue annual leave under the same leave program and may not use leave accrued prior to his or her appointment to the Tax Court.

Tax Court judges are not eligible to participate in the Thrift Savings Plan.

Under the retirement program for Tax Court judges, retired judges generally receive retired pay equal to the rate of salary of an active judge and must be available for recall to perform judicial duties as needed by the court for up to 90 days a year (unless the judge consents to more). However, retired judges may elect to freeze the amount of their retired pay, and those who do so are not available for recall.

Retired Tax Court judges on recall are subject to the limitations on outside earned income that apply to active Federal employees under the Ethics in Government Act of 1978. However, retired District Court judges on recall may receive compensation for teaching without regard to

---

[200] Sec. 7441.

[201] Sec. 7443(c).

[202] Secs. 7447 and 7448.

the limitations on outside earned income. Retired Tax Court judges who elect to freeze the amount of their retired pay (thus making themselves unavailable for recall) are not subject to the limitations on outside earned income.

Explanation of Provision

Cost-of-living adjustments for survivor annuities

The bill provides that cost–of–living increases in benefits under the survivors' annuity plan are generally based on cost–of–living increases in benefits paid under the Civil Service Retirement System.

Life insurance coverage

In the case of a Tax Court judge age 65 or over, the Tax Court is authorized to pay on behalf of the judge any increase in employee premiums under the FEGLI program that occur after the date of enactment, including expenses generated by such payment, as authorized by the chief judge of the Tax Court in a manner consistent with payments authorized by the Judicial Conference of the United States (i.e., the body with policy-making authority over the administration of the courts of the Federal judicial branch).

Thrift Savings Plan participation

Under the provision, Tax Court judges are permitted to participate in the Thrift Savings Plan. A Tax Court judge is not eligible for agency contributions to the Thrift Savings Plan.

Effective Date

The provisions are effective on the date of enactment, except that the provision relating to cost-of-living increases in benefits under the survivors' annuity plan applies with respect to increases in Civil Service Retirement benefits taking effect after the date of enactment.

2. Special trial judges of the Tax Court (sec. 7448 and new sec. 7443C of the Code)

Present Law

The Tax Court is established by the Congress pursuant to Article I of the U.S. Constitution.[203] The chief judge of the Tax Court may appoint special trial judges to handle certain cases.[204] Special trial judges serve for an indefinite term. Special trial judges receive a salary of 90 percent of the salary of a Tax Court judge and are generally covered by the benefit programs that apply to Federal executive branch employees, including the Civil Service Retirement System or the Federal Employees' Retirement System.

[203] Sec. 7441.

[204] Sec. 7443A.

Explanation of Provision

Survivors' annuity plan

Under the provision, magistrate judges of the Tax Court may elect to participate in the survivors' annuity plan for Tax Court judges. An election to participate in the survivors' annuity plan must be filed not later than the latest of: (1) twelve months after the date of enactment of the provision; (2) six months after the date the judge takes office; or (3) six months after the date the judge marries.

Recall of retired special trial judges

The provision provides rules under which a retired special trial judge may be recalled to perform services for up to 90 days a year.

Effective Date

The provisions are effective on the date of enactment.

3. Consolidate review of collection due process cases in the Tax Court (sec. 6330(d) of the Code)

Present Law

In general, the IRS is required to notify taxpayers that they have a right to a fair and impartial hearing before levy may be made on any property or right to property.[205] Similar rules apply with respect to liens.[206] The hearing is held by an impartial officer from the IRS Office of Appeals, who is required to issue a determination with respect to the issues raised by the taxpayer at the hearing. The taxpayer is entitled to appeal that determination to a court. The appeal must be brought to the Tax Court, unless the Tax Court does not have jurisdiction over the underlying tax liability. If that is the case, then the appeal must be brought in the district court of the United States.[207] If a court determines that an appeal was not made to the correct court, the taxpayer has 30 days after such determination to file with the correct court.

The Tax Court is established under Article I of the United States Constitution[208] and is a court of limited jurisdiction.[209] The Tax Court only has the jurisdiction that is expressly

---

[205] Sec. 6330(a).

[206] Sec. 6320.

[207] Sec. 6330(d).

[208] Sec. 7441.

[209] Sec. 7442.

conferred on it by statute.[210] For example, the jurisdiction of the Tax Court includes the authority to hear disputes concerning notices of income tax deficiency, certain types of declaratory judgment, and worker classification status, among others, but does not include jurisdiction over most excise taxes imposed by the Internal Revenue Code. Thus, the Tax Court may not have jurisdiction over the underlying tax liability with respect to an appeal of a due process hearing relating to a collections matter. As a practical matter, many cases involving appeals of a due process hearing (whether within the jurisdiction of the Tax Court or a district court) do not involve the underlying tax liability.

Explanation of Provision

The provision modifies the jurisdiction of the Tax Court by providing that all appeals of collection due process determinations are to be made to the United States Tax Court.

Effective Date

The provision applies to determinations made after the date which is 60 days after the date of enactment.

4. Extend authority for special trial judges to hear and decide certain employment status cases (sec. 7443A of the Code)

Present Law

In connection with the audit of any person, if there is an actual controversy involving a determination by the IRS as part of an examination that (1) one or more individuals performing services for that person are employees of that person or (2) that person is not entitled to relief under section 530 of the Revenue Act of 1978, the Tax Court has jurisdiction to determine whether the IRS is correct and the proper amount of employment tax under such determination.[211] Any redetermination by the Tax Court has the force and effect of a decision of the Tax Court and is reviewable.

An election may be made by the taxpayer for small case procedures if the amount of the employment taxes in dispute is $50,000 or less for each calendar quarter involved.[212] The decision entered under the small case procedure is not reviewable in any other court and should not be cited as authority.

The chief judge of the Tax Court may assign proceedings to special trial judges. The Code enumerates certain types of proceedings that may be so assigned and may be decided by a

[210] Sec. 7442.

[211] Sec. 7436.

[212] Sec. 7436(c).

special trial judge. In addition, the chief judge may designate any other proceeding to be heard by a special trial judge.[213]

Explanation of Provision

The provision clarifies that the chief judge of the Tax Court may assign to special trial judges any employment tax cases that are subject to the small case procedure and may authorize special trial judges to decide such small tax cases.

Effective Date

The provision is effective for any action or proceeding in the Tax Court with respect to which a decision has not become final as of the date of enactment.

5. Confirmation of Tax Court authority to apply equitable recoupment (sec. 6214(b) of the Code)

Present Law

Equitable recoupment is a common-law equitable principle that permits the defensive use of an otherwise time-barred claim to reduce or defeat an opponent's claim if both claims arise from the same transaction. U.S. District Courts and the U.S. Court of Federal Claims, the two Federal tax refund forums, may apply equitable recoupment in deciding tax refund cases.[214] In Estate of Mueller v. Commissioner,[215] the Court of Appeals for the Sixth Circuit held that the United States Tax Court (the "Tax Court") may not apply the doctrine of equitable recoupment. More recently, the Court of Appeals for the Ninth Circuit, in Branson v. Commissioner,[216] held that the Tax Court may apply the doctrine of equitable recoupment.

Explanation of Provision

The provision confirms that the Tax Court may apply the principle of equitable recoupment to the same extent that it may be applied in Federal civil tax cases by the U.S. District Courts or the U.S. Court of Claims. No implication is intended as to whether the Tax Court has the authority to continue to apply other equitable principles in deciding matters over which it has jurisdiction.

---

[213] Sec. 7443A.

[214] *See Stone v. White*, 301 U.S. 532 (1937); *Bull v. United States*, 295 U.S. 247 (1935).

[215] 153 F.3d 302 (6th Cir.), *cert. den.*, 525 U.S. 1140 (1999).

[216] 264 F.3d 904 (9th Cir.), *cert. den.*, 2002 U.S. LEXIS 1545 (U.S. Mar. 18, 2002).

Effective Date

The provision is effective for any action or proceeding in the Tax Court with respect to which a decision has not become final as of the date of enactment.

6. Tax Court filing fee (sec. 7451 of the Code)

Present Law

The Tax Court is authorized to impose a fee of up to $60 for the filing of any petition for the redetermination of a deficiency or for declaratory judgments relating to the status and classification of 501(c)(3) organizations, the judicial review of final partnership administrative adjustments, and the judicial review of partnership items if an administrative adjustment request is not allowed in full.[217] The statute does not specifically authorize the Tax Court to impose a filing fee for the filing of a petition for review of the IRS's failure to abate interest or for failure to award administrative costs and other areas of jurisdiction for which a petition may be filed. The practice of the Tax Court is to impose a $60 filing fee in all cases commenced by petition.[218]

Explanation of Provision

The provision provides that the Tax Court is authorized to charge a filing fee of up to $60 in all cases commenced by the filing of a petition. No negative inference is to be drawn as to whether the Tax Court has the authority under present law to impose a filing fee for any case commenced by the filing of a petition.

Effective Date

The provision is effective on the date of enactment.

7. Use of practitioner fee (sec. 7475(b) of the Code)

Present Law

The Tax Court is authorized to impose a fee of up to $30 per year on practitioners admitted to practice before the Tax Court.[219] These fees are to be used to employ independent counsel to pursue disciplinary matters.

Explanation of Provision

The provision provides that Tax Court fees imposed on practitioners also are available to provide services to pro se taxpayers (i.e., a taxpayer representing himself) that will assist such

---

[217] Sec. 7451.

[218] *See* Rule 20(b) of the Tax Court Rules of Practice and Procedure.

[219] Sec. 7475.

taxpayers in controversies before the Court. For example, fees could be used for programs to educate pro se taxpayers on the procedural requirements for contesting a tax deficiency before the Tax Court.

Effective Date

The provision is effective on the date of enactment.

F. Other Provisions

1. Extension to all governmental plans of moratorium on application of certain nondiscrimination rules (sec. 1505 of the Taxpayer Relief Act of 1997, and secs. 401(a) and 401(k) of the Code)

Present Law

A qualified retirement plan maintained by a State or local government is exempt from the nondiscrimination and minimum participation requirements. A cash or deferred arrangement maintained by a State or local government is also treated as meeting the participation and nondiscrimination requirements applicable to such a qualified cash or deferred arrangement. Other governmental plans are subject to these requirements.[220]

Explanation of Provision

The provision exempts all governmental plans from the nondiscrimination and minimum participation rules. The provision also treats all governmental cash or deferred arrangements as meeting the participation and nondiscrimination requirements applicable to a qualified cash or deferred arrangement.

Effective Date

The provision is effective for any year beginning after the date of enactment.

2. Eliminate aggregate limit for usage of excess funds from black lung disability trusts to pay for retiree health (secs. 501(c)(21) and 9705 of the Code)

Present Law

Qualified black lung benefit trusts

A qualified black lung benefit trust is exempt from Federal income taxation. Contributions to a qualified black lung benefit trust generally are deductible to the extent such contributions are necessary to fund the trust.

Under present law, no assets of a qualified black lung benefit trust may be used for, or diverted to, any purpose other than (1) to satisfy liabilities, or pay insurance premiums to cover liabilities, arising under the Black Lung Acts, (2) to pay administrative costs of operating the trust, (3) to pay accident and health benefits or premiums for insurance exclusively covering such benefits (including administrative and other incidental expenses relating to such benefits) for retired coal miners and their spouses and dependents (within certain limits) or (4) investment in Federal, State, or local securities and obligations, or in time demand deposits in a bank or

[220] The IRS has announced that governmental plans that are subject to the nondiscrimination requirements are deemed to satisfy such requirements pending the issuance of final regulations addressing this issue. Notice 2003-6, 2003-3 I.R.B. 298; Notice 2001-46, 2001-2 C.B. 122.

insured credit union. Additionally, trust assets may be paid into the national Black Lung Disability Trust Fund, or into the general fund of the U.S. Treasury.

The amount of assets in qualified black lung benefit trusts available to pay accident and health benefits or premiums for insurance exclusively covering such benefits (including administrative and other incidental expenses relating to such benefits) for retired coal miners and their spouses and dependents may not exceed a yearly limit or an aggregate limit, whichever is less. The yearly limit is the amount of trust assets in excess of 110 percent of the present value of the liability for black lung benefits determined as of the close of the preceding taxable year of the trust. The aggregate limit is the excess of the sum of the yearly limit as of the close of the last taxable year ending before October 24, 1992, plus earnings thereon as of the close of the taxable year preceding the taxable year involved over the aggregate payments for accident of health benefits for retired coal miners and their spouses and dependents made from the trust since October 24, 1992. Each of these determinations is required to be made by an independent actuary.

In general, amounts used to pay retiree accident or health benefits are not includible in the income of the company, nor is a deduction allowed for such amounts.

United Mine Workers of America Combined Benefit Fund

The United Mine Workers of America ("UMWA") Combined Benefit Fund was established by the Coal Industry Retiree Health Benefit Act of 1992 to assume responsibility of payments for medical care expenses of retired miners and their dependents who were eligible for heath care from the private 1950 and 1974 UMWA Benefit Plans. The UMWA Combined Benefit Fund is financed by assessments on current and former signatories to labor agreements with the UMWA, past transfers from an overfunded United Mine Workers pension fund, and transfers from the Abandoned Mine Reclamation Fund.

Explanation of Provision

The provision eliminates the aggregate limit on the amount of excess black lung benefit trust assets that may be used to pay accident and health benefits or premiums for insurance exclusively covering such benefits (including administrative and other incidental expenses relating to such benefits) for retired coal miners and their spouses and dependents.

Effective Date

The provision is effective for taxable years beginning after December 31, 2006.

3. Tax treatment of company-owned life insurance ("COLI") (new secs. 101(j) and 6039I of the Code)

Present Law

Amounts received under a life insurance contract

Amounts received under a life insurance contract paid by reason of the death of the insured are not includible in gross income for Federal tax purposes.[221] No Federal income tax generally is imposed on a policyholder with respect to the earnings under a life insurance contract (inside buildup). [222]

Distributions from a life insurance contract (other than a modified endowment contract) that are made prior to the death of the insured generally are includible in income to the extent that the amounts distributed exceed the taxpayer's investment in the contract (i.e., basis). Such distributions generally are treated first as a tax-free recovery of basis, and then as income.[223]

Premium and interest deduction limitations[224]

Premiums

Under present law, no deduction is permitted for premiums paid on any life insurance, annuity or endowment contract, if the taxpayer is directly or indirectly a beneficiary under the contract.[225]

---

[221] Sec. 101(a).

[222] This favorable tax treatment is available only if a life insurance contract meets certain requirements designed to limit the investment character of the contract (sec. 7702).

[223] Sec. 72(e). In the case of a modified endowment contract, however, in general, distributions are treated as income first, loans are treated as distributions (i.e., income rather than basis recovery first), and an additional 10-percent tax is imposed on the income portion of distributions made before age 59½ and in certain other circumstances (secs. 72(e) and (v)). A modified endowment contract is a life insurance contract that does not meet a statutory "7-pay" test, i.e., generally is funded more rapidly than seven annual level premiums (sec. 7702A).

[224] In addition to the statutory limitations described below, interest deductions under company-owned life insurance arrangements have also been limited by recent cases applying general principles of tax law. See *Winn-Dixie Stores, Inc. v. Commissioner*, 113 T.C. 254 (1999), aff'd 254 F.3d 1313 (11th Cir. 2001), cert. denied, April 15, 2002; *Internal Revenue Service v. CM Holdings, Inc.*, 254 B.R. 578 (D. Del. 2000), aff'd, 301 F.3d 96 (3d Cir. 2002); *American Electric Power, Inc. v. U.S.*, 136 F. Supp. 2d 762 (S. D. Ohio 2001), aff'd, 326 F.3d 737 (6th Cir. 2003), reh. denied, 338 F.3d 534 (6th Cir. 2003), cert. denied, U.S. No. 03-529 (Jan. 12, 2004); *Dow Chemical Company v. U.S.*, 435 F.3d 594 (6th Cir. 2006), rev'g 250 F. Supp. 2d 748 (E.D. Mich. 2003) as modified, 278 F. Supp. 2d 844 (E.D. Mich. 2003).

[225] Sec. 264(a)(1).

Interest paid or accrued with respect to the contract

No deduction generally is allowed for interest paid or accrued on any debt with respect to a life insurance, annuity or endowment contract covering the life of any individual.[226] An exception is provided under this provision for insurance of key persons.

Interest that is otherwise deductible (e.g., is not disallowed under other applicable rules or general principles of tax law) may be deductible under the key person exception, to the extent that the aggregate amount of the debt does not exceed $50,000 per insured individual. The deductible interest may not exceed the amount determined by applying a rate based on a Moody's Corporate Bond Yield Average-Monthly Average Corporates. A key person is an individual who is either an officer or a 20-percent owner of the taxpayer. The number of individuals that can be treated as key persons may not exceed the greater of (1) five individuals, or (2) the lesser of five percent of the total number of officers and employees of the taxpayer, or 20 individuals.[227]

Pro rata interest limitation

A pro rata interest deduction disallowance rule also applies. Under this rule, in the case of a taxpayer other than a natural person, no deduction is allowed for the portion of the taxpayer's interest expense that is allocable to unborrowed policy cash surrender values.[228] Interest expense is allocable to unborrowed policy cash values based on the ratio of (1) the taxpayer's average unborrowed policy cash values of life insurance, annuity and endowment contracts, to (2) the sum of the average unborrowed cash values (or average adjusted bases, for other assets) of all the taxpayer's assets.

Under the pro rata interest disallowance rule, an exception is provided for any contract owned by an entity engaged in a trade or business, if the contract covers an individual who is a 20-percent owner of the entity, or an officer, director, or employee of the trade or business. The exception also applies to a joint-life contract covering a 20-percent owner and his or her spouse.

"Single premium" and "4-out-of-7" limitations

Other interest deduction limitation rules also apply with respect to life insurance, annuity and endowment contracts. Present law provides that no deduction is allowed for any amount paid or accrued on debt incurred or continued to purchase or carry a single premium life insurance, annuity or endowment contract.[229] In addition, present law provides that no deduction is allowed for any amount paid or accrued on debt incurred or continued to purchase or carry a

[226] Sec. 264(a)(4).

[227] Sec. 264(e)(3).

[228] Sec. 264(f). This applies to any life insurance, annuity or endowment contract issued after June 8, 1997.

[229] Sec. 264(a)(2).

life insurance, annuity or endowment contract pursuant to a plan of purchase that contemplates the systematic direct or indirect borrowing of part or all of the increases in the cash value of the contract (either from the insurer or otherwise).[230] Under this rule, several exceptions are provided, including an exception if no part of four of the annual premiums due during the initial seven-year period is paid by means of such debt (known as the "4-out-of-7 rule").

Definitions of highly compensated employee

Present law defines highly compensated employees and individuals for various purposes. For purposes of nondiscrimination rules relating to qualified retirement plans, an employee, including a self-employed individual, is treated as highly compensated with respect to a year if the employee (1) was a five-percent owner of the employer at any time during the year or the preceding year or (2) either (a) had compensation for the preceding year in excess of $95,000 (for 2005) or (b) at the election of the employer had compensation in excess of $95,000 (for 2005) and was in the highest paid 20 percent of employees for such year.[231] The $95,000 dollar amount is indexed for inflation.

For purposes of nondiscrimination rules relating to self-insured medical reimbursement plans, a highly compensated individual is an employee who is one of the five highest paid officers of the employer, a shareholder who owns more than 10 percent of the value of the stock of the employer, or is among the highest paid 25 percent of all employees.[232]

Explanation of Provision

The provision provides generally that, in the case of an employer-owned life insurance contract, the amount excluded from the applicable policyholder's income as a death benefit cannot exceed the premiums and other amounts paid by such applicable policyholder for the contract. The excess death benefit is included in income.

Exceptions to this income inclusion rule are provided. In the case of an employer-owned life insurance contract with respect to which the notice and consent requirements of the provision are met, the income inclusion rule does not apply to an amount received by reason of the death of an insured individual who, with respect to the applicable policyholder, was an employee at any time during the 12-month period before the insured's death, or who, at the time the contract was issued, was a director or highly compensated employee or highly compensated individual. For this purpose, such a person is one who is either: (1) a highly compensated employee as defined under the rules relating to qualified retirement plans, determined without regard to the election regarding the top-paid 20 percent of employees; or (2) a highly compensated individual as

---

[230] Sec. 264(a)(3).

[231] Sec. 414(q). For purposes of determining the top-paid 20 percent of employees, certain employees, such as employees subject to a collective bargaining agreement, are disregarded.

[232] Sec. 105(h)(5). For purposes of determining the top-paid 25 percent of employees, certain employees, such as employees subject to a collective bargaining agreement, are disregarded.

defined under the rules relating to self-insured medical reimbursement plans, determined by substituting the highest-paid 35 percent of employees for the highest-paid 25 percent of employees.[233]

In the case of an employer-owned life insurance contract with respect to which the notice and consent requirements of the provision are met, the income inclusion rule does not apply to an amount received by reason of the death of an insured, to the extent the amount is (1) paid to a member of the family[234] of the insured, to an individual who is the designated beneficiary of the insured under the contract (other than an applicable policyholder), to a trust established for the benefit of any such member of the family or designated beneficiary, or to the estate of the insured; or (2) used to purchase an equity (or partnership capital or profits) interest in the applicable policyholder from such a family member, beneficiary, trust or estate. It is intended that such amounts be so paid or used by the due date of the tax return for the taxable year of the applicable policyholder in which they are received as a death benefit under the insurance contract, so that the payment of the amount to such a person or persons, or the use of the amount to make such a purchase, is known in the taxable year for which the exception from the income inclusion rule is claimed.

An employer-owned life insurance contract is defined for purposes of the provision as a life insurance contract which (1) is owned by a person engaged in a trade or business and under which such person (or a related person) is directly or indirectly a beneficiary, and (2) covers the life of an individual who is an employee with respect to the trade or business of the applicable policyholder on the date the contract is issued.

An applicable policyholder means, with respect to an employer-owned life insurance contract, the person (including related persons) that owns the contract, if the person is engaged in a trade or business, and if the person (or a related person) is directly or indirectly a beneficiary under the contract.

For purposes of the provision, a related person includes any person that bears a relationship specified in section 267(b) or 707(b)(1)[235] or is engaged in trades or businesses that are under common control (within the meaning of section 52(a) or (b)).

---

[233] As under present law, certain employees are disregarded in making the determinations regarding the top-paid groups.

[234] For this purpose, a member of the family is defined in section 267(c)(4) to include only the individual's brothers and sisters (whether by the whole or half blood), spouse, ancestors, and lineal descendants.

[235] The relationships include specified relationships among family members, shareholders and corporations, corporations that are members of a controlled group, trust grantors and fiduciaries, tax-exempt organizations and persons that control such organizations, commonly controlled S corporations, partnerships and C corporations, estates and beneficiaries, commonly controlled partnerships, and partners and partnerships. Detailed rules apply to determine the specific relationships.

The notice and consent requirements of the provision are met if, before the issuance of the contract, (1) the employee is notified in writing that the applicable policyholder intends to insure the employee's life, and is notified of the maximum face amount at issue of the life insurance contract that the employer might take out on the life of the employee, (2) the employee provides written consent to being insured under the contract and that such coverage may continue after the insured terminates employment, and (3) the employee is informed in writing that an applicable policyholder will be a beneficiary of any proceeds payable on the death of the employee.

For purposes of the provision, an employee includes an officer, a director, and a highly compensated employee; an insured means, with respect to an employer-owned life insurance contract, an individual covered by the contract who is a U.S. citizen or resident. In the case of a contract covering the joint lives of two individuals, references to an insured include both of the individuals.

The provision requires annual reporting and recordkeeping by applicable policyholders that own one or more employer-owned life insurance contracts. The information to be reported is (1) the number of employees of the applicable policyholder at the end of the year, (2) the number of employees insured under employer-owned life insurance contracts at the end of the year, (3) the total amount of insurance in force at the end of the year under such contracts, (4) the name, address, and taxpayer identification number of the applicable policyholder and the type of business in which it is engaged, and (5) a statement that the applicable policyholder has a valid consent (in accordance with the consent requirements under the provision) for each insured employee and, if all such consents were not obtained, the total number of insured employees for whom such consent was not obtained. The applicable policyholder is required to keep records necessary to determine whether the requirements of the reporting rule and the income inclusion rule of new section 101(j) are met.

Effective Date

The provision generally appleis to contracts issued after the date of enactment, except for contracts issued after such date pursuant to an exchange described in section 1035 of the Code. In addition, certain material increases in the death benefit or other material changes will generally cause a contract to be treated as a new contract, with an exception for existing lives under a master contract. Increases in the death benefit that occur as a result of the operation of section 7702 of the Code or the terms of the existing contract, provided that the insurer's consent to the increase is not required, will not cause a contract to be treated as a new contract. In addition, certain changes to a contract will not be considered material changes so as to cause a contract to be treated as a new contract. These changes include administrative changes, changes from general to separate account, or changes as a result of the exercise of an option or right granted under the contract as originally issued.

Examples of situations in which death benefit increases would not cause a contract to be treated as a new contract include the following:

1. Section 7702 provides that life insurance contracts need to either meet the cash value accumulation test of section 7702(b) or the guideline premium requirements of section

7702(c) and the cash value corridor of section 7702(d). Under the corridor test, the amount of the death benefit may not be less than the applicable percentage of the cash surrender value. Contracts may be written to comply with the corridor requirement by providing for automatic increases in the death benefit based on the cash surrender value. Death benefit increases required by the corridor test or the cash value accumulation test do not require the insurer's consent at the time of increase and occur in order to keep the contact in compliance with section 7702.

2. Death benefits may also increase due to normal operation of the contract. For example, for some contracts, policyholder dividends paid under the contract may be applied to purchase paid-up additions, which increase the death benefits. The insurer's consent is not required for these death benefit increases.

3. For variable contacts and universal life contracts, the death benefit may increase as a result of market performance or the contract design. For example, some contracts provide that the death benefit will equal the cash value plus a specified amount at risk. With these contracts, the amount of the death benefit at any time will vary depending on changes in the cash value of the contract. The insurance company's consent is not required for these death benefit increases.

4. Treatment of test room supervisors and proctors who assist in the administration of college entrance and placement exams (sec. 530 of the Revenue Reconciliation Act of 1978)

Present Law

Section 530 of the Revenue Act of 1978 prohibits the Internal Revenue Service from challenging a taxpayer's treatment of an individual as an independent contractor for employment tax purposes if the taxpayer (1) has a reasonable basis for such treatment and (2) consistently treats the individual, and any other individual holding a substantially similar position, as an independent contractor.

Explanation of Provision

Under the bill, section 530 of the Revenue Act of 1978 is amended to provide that in the case of an individual providing services as a test proctor or room supervisor by assisting in the administration of college entrance or placements examinations, the consistency requirement does not apply with respect to services performed after December 31, 2006 (and remuneration paid with respect to such services). The provision applies if the individual (1) is performing the services for a tax-exempt organization, and (2) is not otherwise treated as an employee of such organization for purposes of employment taxes. Thus, under the bill, if the requirements are satisfied, the IRS is prohibited from challenging the treatment of such individuals as independent contractors for employment tax purposes, even if the organization previously treated such individuals as employees.

Effective Date

The provision is effective for remuneration paid for services performed after December 31, 2006.

5. Rule for church plans which self-annuitize (sec. 401(a)(9) of the Code)

Present Law

Minimum distribution rules apply to qualified retirement plans (sec. 401(a)(9)). Special rules apply in the case of payments under an annuity contract purchased with the employee's benefit by the plan from an insurance company.[236] If certain requirements are satisfied, these special rules apply to annuity payments from a retirement income account maintained by a church (or certain other organizations as described in sec. 403(b)(9)) even though the payments are not made under an annuity purchased from an insurance company.[237]

Explanation of Provision

The bill provides that annuity payments provided with respect to any account maintained for a participant or beneficiary under a qualified church plan does not fail to meet the minimum distribution rules merely because the payments are not made under an annuity contract purchased from an insurance company if such payments would not fail such requirements if provided with respect to a retirement income account described in section 403(b)(9).

For purposes of the provision, a qualified church plan means any money purchase plan described in section 401(a) which (1) is a church plan (as defined in section 414(e)) with respect to which the election provided by section 410(d) has not been made, and (2) was in existence on April 17, 2002.

Effective Date

The provision is effective for years beginning after the date of enactment. No inference is intended from the provision with respect to the proper application of the minimum distribution rules to church plans before the effective date.

6. Exemption for income from leveraged real estate held by church plans (sec. 514(c)(9) of the Code)

Present Law

Debt-financed income of a tax-exempt entity is subject to unrelated business income tax ("UBIT") under section 514 of the Code. Debt-financed property generally is property that is held to produce income and with respect to which there is acquisition indebtedness.

There is an exception to the UBIT rules for debt-financed property held by qualifying organizations (sec. 514(c)(9)). Qualified organizations include retirement plans qualified under section 401(a).

---

[236] Treas. Reg. sec. 1.401(a)(9)-6, A-4.

[237] Treas. Reg. sec. 1.403(b)-3, A-1(c)(3).

Explanation of Provision

The bill provides that a retirement income account of a church (or certain other organizations) as defined in section 403(b)(9) is a qualified organization for purposes of the exemption from the UBIT debt-financed property rules.

Effective Date

The provision is effective for taxable years beginning on or after the date of enactment.

7. Church plan rule for benefit limitations (sec. 415 of the Code)

Present Law

Section 415 limits the amount of benefits and contributions that may be provided under a tax-qualified plan. In the case of a defined benefit plan, the limit on annual benefits payable under the plan is the lesser of: (1) a dollar amount which is adjusted for inflation ($175,000 for 2006); and (2) 100 percent of the participant's compensation for the highest three years. Special rules apply in some cases.

Explanation of Provision

The provision provides that the 100 percent of compensation limit does not apply to a plan maintained by a church or qualified church controlled organization defined in section 3121(w)(3)(A) except with respect to "highly compensated benefits". The term "highly compensated benefits" means any benefits accrued for an employee in any year on or after the first year in which such employee is a highly compensated employee (as defined in sec. 414(q)) of the organization. For purposes of applying the 100 percent of compensation limit to highly compensated benefits, all the benefits of the employee which would otherwise be taken into account in applying the limit shall be taken into account, i.e., the limit does not apply only to those benefits accrued on or after the first year in which the employee is a highly compensated employee.

Effective Date

The provision is effective for years beginning after December 31, 2006.

8. Gratuitous transfers for the benefit of employees (sec. 664 of the Code)

Present Law

Present law permits certain limited transfers of qualified employer securities by charitable remainder trusts to an employee stock ownership plan ("ESOP") without adversely affecting the status of the charitable remainder trusts under section 664. In addition, the ESOP does not fail to be a qualified plan because it complies with the requirements with respect to a qualified gratuitous transfer.

A number of requirements must be satisfied for a transfer of securities to be a qualified gratuitous transfer, including the following: (1) the securities transferred to the ESOP must previously have passed from the decedent to a charitable remainder trust; (2) at the time of the transfer to the ESOP, family members own no more than a certain percentage of the outstanding stock of the company; (3) immediately after the transfer the ESOP owns at least 60 percent of the value of the outstanding stock of company; and (4) the ESOP meets certain requirements.

Among other requirements applicable to the ESOP, securities transferred to the ESOP are required to be allocated each year up to the applicable limit (after first allocating all other annual additions for the limitation year). The applicable limit is the lesser of (1) $30,000 (as indexed) or (2) 25 percent of the participant's compensation.

Explanation of Provision

The provision clarifies that, under section 664, the amount of transferred securities required to be allocated each year is determined on the basis of fair market value of the securities when allocated to participants.

Effective Date

The provision is effective on the date of enactment.

TITLE IX: INCREASE IN PENSION PLAN DIVERSIFICATION AND PARTICIPATION

A. Defined Contribution Plans Required to Provide Employees with Freedom to Invest Their Plan Assets (new sec. 401(a)(35) of the Code and new sec. 204(j) of ERISA)

Present Law

In general

Defined contribution plans may permit both employees and employers to make contributions to the plan. Under a qualified cash or deferred arrangement (commonly referred to as a "section 401(k) plan"), employees may elect to make pretax contributions to a plan, referred to as elective deferrals. Employees may also be permitted to make after-tax contributions to a plan. In addition, a plan may provide for employer nonelective contributions or matching contributions. Nonelective contributions are employer contributions that are made without regard to whether the employee makes elective deferrals or after-tax contributions. Matching contributions are employer contributions that are made only if the employee makes elective deferrals or after-tax contributions.

Under the Code, elective deferrals, after-tax employee contributions, and employer matching contributions are subject to special nondiscrimination tests. Certain employer nonelective contributions may be used to satisfy these special nondiscrimination tests. In addition, plans may satisfy the special nondiscrimination tests by meeting certain safe harbor contribution requirements.

The Code requires employee stock ownership plans ("ESOPs") to offer certain plan participants the right to diversify investments in employer securities. The Employee Retirement Income Security Act of 1974 ("ERISA") limits the amount of employer securities and employer real property that can be acquired or held by certain employer-sponsored retirement plans. The extent to which the ERISA limits apply depends on the type of plan and the type of contribution involved.

Diversification requirements applicable to ESOPs under the Code

An ESOP is a defined contribution plan that is designated as an ESOP and is designed to invest primarily in qualifying employer securities and that meets certain other requirements under the Code. For purposes of ESOP investments, a "qualifying employer security" is defined as: (1) publicly traded common stock of the employer or a member of the same controlled group; (2) if there is no such publicly traded common stock, common stock of the employer (or member of the same controlled group) that has both voting power and dividend rights at least as great as any other class of common stock; or (3) noncallable preferred stock that is convertible into common stock described in (1) or (2) and that meets certain requirements. In some cases, an employer may design a class of preferred stock that meets these requirements and that is held only by the ESOP.

An ESOP can be an entire plan or it can be a component of a larger defined contribution plan. An ESOP may provide for different types of contributions. For example, an ESOP may include a qualified cash or deferred arrangement that permits employees to make elective deferrals.[238]

Under the Code, ESOPs are subject to a requirement that a participant who has attained age 55 and who has at least 10 years of participation in the plan must be permitted to diversify the investment of the participant's account in assets other than employer securities.[239] The diversification requirement applies to a participant for six years, starting with the year in which the individual first meets the eligibility requirements (i.e., age 55 and 10 years of participation). The participant must be allowed to elect to diversify up to 25 percent of the participant's account (50 percent in the sixth year), reduced by the portion of the account diversified in prior years.

The participant must be given 90 days after the end of each plan year in the election period to make the election to diversify. In the case of participants who elect to diversify, the plan satisfies the diversification requirement if: (1) the plan distributes the applicable amount to the participant within 90 days after the election period; (2) the plan offers at least three investment options (not inconsistent with Treasury regulations) and, within 90 days of the election period, invests the applicable amount in accordance with the participant's election; or (3) the applicable amount is transferred within 90 days of the election period to another qualified defined contribution plan of the employer providing investment options in accordance with (2).[240]

ERISA limits on investments in employer securities and real property

ERISA imposes restrictions on the investment of retirement plan assets in employer securities or employer real property.[241] A retirement plan may hold only a "qualifying" employer security and only "qualifying" employer real property.

Under ERISA, any stock issued by the employer or an affiliate of the employer is a qualifying employer security.[242] Qualifying employer securities also include certain publicly traded partnership interests and certain marketable obligations (i.e., a bond, debenture, note, certificate or other evidence of indebtedness). Qualifying employer real property means parcels of employer real property: (1) if a substantial number of the parcels are dispersed geographically;

---

[238] Such an ESOP design is sometimes referred to as a "KSOP."

[239] Sec. 401(a)(28). The present-law diversification requirements do not apply to employer securities held by an ESOP that were acquired before January 1, 1987.

[240] IRS Notice 88-56, 1988-1 C.B. 540, Q&A-16.

[241] ERISA sec. 407.

[242] Certain additional requirements apply to employer stock held by a defined benefit pension plan or a money purchase pension plan (other than certain plans in existence before the enactment of ERISA).

(2) if each parcel of real property and the improvements thereon are suitable (or adaptable without excessive cost) for more than one use; (3) even if all of the real property is leased to one lessee (which may be an employer, or an affiliate of an employer); and (4) if the acquisition and retention of such property generally comply with the fiduciary rules of ERISA (with certain specified exceptions).

ERISA also prohibits defined benefit pension plans and money purchase pension plans (other than certain plans in existence before the enactment of ERISA) from acquiring employer securities or employer real property if, after the acquisition, more than 10 percent of the assets of the plan would be invested in employer securities and real property. Except as discussed below with respect to elective deferrals, this 10-percent limitation generally does not apply to defined contribution plans other than money purchase pension plans.[243] In addition, a fiduciary generally is deemed not to violate the requirement that plan assets be diversified with respect to the acquisition or holding of employer securities or employer real property in a defined contribution plan.[244]

The 10-percent limitation on the acquisition of employer securities and real property applies separately to the portion of a plan consisting of elective deferrals (and earnings thereon) if any portion of an individual's elective deferrals (or earnings thereon) are required to be invested in employer securities or real property pursuant to plan terms or the direction of a person other than the participant. This restriction does not apply if: (1) the amount of elective deferrals required to be invested in employer securities and real property does not exceed more than one percent of any employee's compensation; (2) the fair market value of all defined contribution plans maintained by the employer is no more than 10 percent of the fair market value of all retirement plans of the employer; or (3) the plan is an ESOP.

Explanation of Provision

In general

Under the provision, in order to satisfy the plan qualification requirements of the Code and the vesting requirements of ERISA, certain defined contribution plans are required to provide diversification rights with respect to amounts invested in employer securities. Such a plan is required to permit applicable individuals to direct that the portion of the individual's account held in employer securities be invested in alternative investments. An applicable individual includes: (1) any plan participant; and (2) any beneficiary who has an account under the plan with respect to which the beneficiary is entitled to exercise the rights of a participant.

---

[243] The 10-percent limitation also applies to a defined contribution plan that is part of an arrangement under which benefits payable to a participant under a defined benefit pension plan are reduced by benefits under the defined contribution plan (i.e., a "floor-offset" arrangement).

[244] Under ERISA, a defined contribution plan is generally referred to as an individual account plan. Plans that are not subject to the 10-percent limitation on the acquisition of employer securities and employer real property are referred to as "eligible individual account plans."

The time when the diversification requirements apply depends on the type of contributions invested in employer securities.

Plans subject to requirements

The diversification requirements generally apply to an "applicable defined contribution plan,"[245] which means a defined contribution plan holding publicly-traded employer securities (i.e., securities issued by the employer or a member of the employer's controlled group of corporations[246] that are readily tradable on an established securities market).

For this purpose, a plan holding employer securities that are not publicly traded is generally treated as holding publicly–traded employer securities if the employer (or any member of the employer's controlled group of corporations) has issued a class of stock that is a publicly-traded employer security. This treatment does not apply if neither the employer nor any parent corporation[247] of the employer has issued any publicly–traded security or any special class of stock that grants particular rights to, or bears particular risks for, the holder or the issuer with respect to any member of the employer's controlled group that has issued any publicly–traded employer security. For example, a controlled group that generally consists of corporations that have not issued publicly-traded securities may include a member that has issued publicly–traded stock (the "publicly–traded member"). In the case of a plan maintained by an employer that is another member of the controlled group, the diversification requirements do not apply to the plan, provided that neither the employer nor a parent corporation of the employer has issued any publicly–traded security or any special class of stock that grants particular rights to, or bears particular risks for, the holder or issuer with respect to the member that has issued publicly–traded stock. The Secretary of the Treasury has the authority to provide other exceptions in regulations. For example, an exception may be appropriate if no stock of the employer maintaining the plan (including stock held in the plan) is publicly traded, but a member of the employer's controlled group has issued a small amount of publicly-traded stock.

The diversification requirements do not apply to an ESOP that: (1) does not hold contributions (or earnings thereon) that are subject to the special nondiscrimination tests that apply to elective deferrals, employee after-tax contributions, and matching contributions; and (2) is a separate plan from any other qualified retirement plan of the employer. Accordingly, an ESOP that holds elective deferrals, employee contributions, employer matching contributions, or nonelective employer contributions used to satisfy the special nondiscrimination tests (including

[245] Under ERISA, the diversification requirements apply to an "applicable individual account plan."

[246] For this purpose, "controlled group of corporations" has the same meaning as under section 1563(a), except that, in applying that section, 50 percent is substituted for 80 percent.

[247] For this purpose, "parent corporation" has the same meaning as under section 424(e), i.e., any corporation (other than the employer) in an unbroken chain of corporations ending with the employer if each corporation other than the employer owns stock possessing at least 50 percent of the total combined voting power of all classes of stock with voting rights or at least 50 percent of the total value of shares of all classes of stock in one of the other corporations in the chain.

the safe harbor methods of satisfying the tests) is subject to the diversification requirements under the Provision. The diversification rights applicable under the provision are broader than those applicable under the Code's present-law ESOP diversification rules. Thus, an ESOP that is subject to the new requirements is excepted from the present-law rules.[248]

The new diversification requirements also do not apply to a one–participant retirement plan. For purposes of the Code, a one–participant retirement plan is a plan that: (1) on the first day of the plan year, either covered only one individual (or the individual and his or her spouse) and the individual owned 100 percent of the plan sponsor (i.e., the employer maintaining the plan), whether or not incorporated, or covered only one or more partners (or partners and their spouses) in the plan sponsor; (2) meets the minimum coverage requirements without being combined with any other plan of the business that covers employees of the business; (3) does not provide benefits to anyone except the individuals and partners (and spouses) described in (1); (4) does not cover a business that is a member of an affiliated service group, a controlled group of corporations, or a group of corporations under common control; and (5) does not cover a business that uses the services of leased employees.[249] It is intended that, for this purpose, a "partner" includes an owner of a business that is treated as a partnership for tax purposes. In addition, it includes a two-percent shareholder of an S corporation.[250]

Elective deferrals and after–tax employee contributions

In the case of amounts attributable to elective deferrals under a qualified cash or deferred arrangement and employee after-tax contributions that are invested in employer securities, any applicable individual must be permitted to direct that such amounts be invested in alternative investments.

Other contributions

In the case of amounts attributable to contributions other than elective deferrals and after-tax employees contributions (i.e., nonelective employer contributions and employer matching contributions) that are invested in employer securities, an applicable individual who is a participant with three years of service,[251] a beneficiary of such a participant, or a beneficiary of a deceased participant must be permitted to direct that such amounts be invested in alternative investments.

---

[248] An ESOP will not be treated as failing to be designed to invest primarily in qualifying employer securities merely because the plan provides diversification rights as required under the provision or greater diversification rights than required under the provision.

[249] For purposes of ERISA, a one-participant retirement plan is defined as under the provision of ERISA that requires advance notice of a blackout period to be provided to participants and beneficiaries affected by the blackout period, as discussed below.

[250] Under section 1372, a two-percent shareholder of an S corporation is treated as a partner for fringe benefit purposes.

[251] Years of service is defined as under the rules relating to vesting (sec. 411(a)).

A transition rule applies to amounts attributable to these other contributions that are invested in employer securities acquired before the first plan year for which the new diversification requirements apply. Under the transition rule, for the first three years for which the new diversification requirements apply to the plan, the applicable percentage of such amounts is subject to diversification as shown in Table 1, below. The applicable percentage applies separately to each class of employer security in an applicable individual's account. The transition rule does not apply to plan participants who have three years of service and who have attained age 55 by the beginning of the first plan year beginning after December 31, 2005.

Table 1.–Applicable Percentage for Employer Securities Held on Effective Date

Plan year for which diversification applies:	Applicable percentage:
First year	33 percent
Second year	66 percent
Third year	100 percent

The application of the transition rule is illustrated by the following example. Suppose that the account of a participant with at least three years of service held 120 shares of employer common stock contributed as matching contributions before the diversification requirements became effective. In the first year for which diversification applies, 33 percent (i.e., 40 shares) of that stock is subject to the diversification requirements. In the second year for which diversification applies, a total of 66 percent of 120 shares of stock (i.e., 79 shares, or an additional 39 shares) is subject to the diversification requirements. In the third year for which diversification applies, 100 percent of the stock, or all 120 shares, is subject to the diversification requirements. In addition, in each year, employer stock in the account attributable to elective deferrals and employee after-tax contributions is fully subject to the diversification requirements, as is any new stock contributed to the account.

Rules relating to the election of investment alternatives

A plan subject to the diversification requirements is required to give applicable individuals a choice of at least three investment options, other than employer securities, each of which is diversified and has materially different risk and return characteristics. It is intended that other investment options generally offered by the plan also must be available to applicable individuals.

A plan does not fail to meet the diversification requirements merely because the plan limits the times when divestment and reinvestment can be made to periodic, reasonable opportunities that occur at least quarterly. It is intended that applicable individuals generally be given the opportunity to make investment changes with respect to employer securities on the same basis as the opportunity to make other investment changes, except in unusual circumstances. Thus, in general, applicable individuals must be given the opportunity to request

changes with respect to investments in employer securities with the same frequency as the opportunity to make other investment changes and that such changes are implemented in the same timeframe as other investment changes, unless circumstances require different treatment.

Except as provided in regulations, a plan may not impose restrictions or conditions with respect to the investment of employer securities that are not imposed on the investment of other plan assets (other than restrictions or conditions imposed by reason of the application of securities laws). For example, such a restriction or condition includes a provision under which a participant who divests his or her account of employer securities receives less favorable treatment (such as a lower rate of employer contributions) than a participant whose account remains invested in employer securities. On the other hand, such a restriction does not include the imposition of fees with respect to other investment options under the plan, merely because fees are not imposed with respect to investments in employer securities.

Effective Date

The provision is effective for plan years beginning after December 31, 2006.

In the case of a plan maintained pursuant to one or more collective bargaining agreements, the provision is effective for plan years beginning after the earlier of (1) the later of December 31, 2007, or the date on which the last of such collective bargaining agreements terminates (determined without regard to any extension thereof after the date of enactment), or (2) December 31, 2008.

A special effective date applies with respect to employer matching and nonelective contributions (and earnings thereon) that are invested in employer securities that, as of September 17, 2003: (1) consist of preferred stock; and (2) are held within an ESOP, under the terms of which the value of the preferred stock is subject to a guaranteed minimum. Under the special rule, the diversification requirements apply to such preferred stock for plan years beginning after the earlier of (1) December 31, 2007; or (2) the first date as of which the actual value of the preferred stock equals or exceeds the guaranteed minimum. When the new diversification requirements become effective for the plan under the special rule, the applicable percentage of employer securities held on the effective date that is subject to diversification is determined without regard to the special rule.

B. Increasing Participation Through Automatic Enrollment Arrangements (secs. 404(c) and 514 of ERISA and secs. 401(k), 401(m), 414 and 4979 of the Code)

Present Law

Qualified cash or deferred arrangements–in general

Under present law, most defined contribution plans may include a qualified cash or deferred arrangement (commonly referred to as a "section 401(k)" or "401(k)" plan),[252] under which employees may elect to receive cash or to have contributions made to the plan by the employer on behalf of the employee in lieu of receiving cash. Contributions made to the plan at the election of the employee are referred to as "elective deferrals" or "elective contributions".[253] A 401(k) plan may be designed so that the employee will receive cash unless an affirmative election to make contributions is made. Alternatively, a plan may provide that elective contributions are made at a specified rate unless the employee elects otherwise (i.e., elects not to make contributions or to make contributions at a different rate). Arrangements that operate in this manner are sometimes referred to as "automatic enrollment" or "negative election" plans. In either case, the employee must have an effective opportunity to elect to receive cash in lieu of contributions.[254]

Nondiscrimination rules

A special nondiscrimination test applies to elective deferrals under a section 401(k) plan, called the actual deferral percentage test or the "ADP" test. The ADP test compares the actual deferral percentages ("ADPs") of the highly compensated employee group and the nonhighly compensated employee group. The ADP for each group generally is the average of the deferral percentages separately calculated for the employees in the group who are eligible to make elective deferrals for all or a portion of the relevant plan year. Each eligible employee's deferral percentage generally is the employee's elective deferrals for the year divided by the employee's compensation for the year.

The plan generally satisfies the ADP test if the ADP of the highly compensated employee group for the current plan year is either (1) not more than 125 percent of the ADP of the

---

[252] Legally, a section 401(k) plan is not a separate type of plan, but is a profit-sharing, stock bonus, or pre-ERISA money purchase plan that contains a qualified cash or deferred arrangement. The terms "section 401(k) plan" and "401(k) plan" are used here for convenience.

[253] The maximum annual amount of elective deferrals that can be made by an individual is subject to a limit ($15,000 for 2006). An individual who has attained age 50 before the end of the taxable year may also make catch-up contributions to a section 401(k) plan, subject to a limit ($5,000 for 2006).

[254] Treasury regulations provide that whether an employee has an effective opportunity to receive cash is based on all the relevant facts and circumstances, including the adequacy of notice of the availability of the election, the period of time during which an election may be made, and any other conditions on elections. Treas. Reg. sec. 1.401(k)-1(e)(2).

nonhighly compensated employee group for the prior plan year, or (2) not more than 200 percent of the ADP of the nonhighly compensated employee group for the prior plan year and not more than two percentage points greater than the ADP of the nonhighly compensated employee group for the prior plan year.

Under a safe harbor, a section 401(k) plan is deemed to satisfy the special nondiscrimination test if the plan satisfies one of two contribution requirements and satisfies a notice requirement (a "safe harbor section 401(k) plan"). A plan satisfies the contribution requirement under the safe harbor rule if the employer either (1) satisfies a matching contribution requirement or (2) makes a nonelective contribution to a defined contribution plan of at least three percent of an employee's compensation on behalf of each nonhighly compensated employee who is eligible to participate in the arrangement. A plan generally satisfies the matching contribution requirement if, under the arrangement: (1) the employer makes a matching contribution on behalf of each nonhighly compensated employee that is equal to (a) 100 percent of the employee's elective deferrals up to three percent of compensation and (b) 50 percent of the employee's elective deferrals from three to five percent of compensation;[255] and (2) the rate of match with respect to any elective deferrals for highly compensated employees is not greater than the rate of match for nonhighly compensated employees.

Employer matching contributions are also subject to a special nondiscrimination test, the "ACP test," which compares the average actual contribution percentages ("ACPs") of matching contributions for the highly compensated employee group and the nonhighly compensated employee group. The plan generally satisfies the ACP test if the ACP of the highly compensated employee group for the current plan year is either (1) not more than 125 percent of the ACP of the nonhighly compensated employee group for the prior plan year, or (2) not more than 200 percent of the ACP of the nonhighly compensated employee group for the prior plan year and not more than two percentage points greater than the ACP of the nonhighly compensated employee group for the prior plan year.

A safe harbor section 401(k) plan that provides for matching contributions is deemed to satisfy the ACP test if, in addition to meeting the safe harbor contribution and notice requirements under section 401(k), (1) matching contributions are not provided with respect to elective deferrals in excess of six percent of compensation, (2) the rate of matching contribution does not increase as the rate of an employee's elective deferrals increases, and (3) the rate of matching contribution with respect to any rate of elective deferral of a highly compensated employee is no greater than the rate of matching contribution with respect to the same rate of deferral of a nonhighly compensated employee.

[255] In lieu of matching contributions at rates equal to the safe harbor rates, a plan may provide for an alternative match if (1) the rate of the matching contributions does not increase as an employee's rate of elective deferrals increases and (2) the amount of matching contributions at such rate of elective deferrals is at lest equal to the aggregate amount of contributions which would be made if rate of the matching contributions equaled the safe harbor rates.

Top-heavy rules

Special rules apply in the case of a top-heavy plan. In general, a defined contribution plan is a top-heavy plan if the accounts of key employees account for more than 60 percent of the aggregate value of accounts under the plan. If a plan is a top-heavy plan, then certain minimum vesting standards and minimum contribution requirements apply.

A plan that consists solely of contributions that satisfy the safe harbor plan rules for elective and matching contributions is not considered a top-heavy plan.

Tax-sheltered annuities

Tax-sheltered annuities ("section 403(b) annuities") may provide for contributions on a salary reduction basis, similar to section 401(k) plans. Matching contributions under a section 403(b) annuity are subject to the same nondiscrimination rules under section 401(m) as matching contributions under a section 401(k) plan (sec. 403(b)(12)). Thus, for example, the safe harbor method of satisfying the section 401(m) rules for matching contributions under a 401(k) plan applies to section 403(b) annuities.

Erroneous automatic elective contributions

Present law provides special rules for distributions of elective contributions that exceed the amount permitted under the nondiscrimination rules or the dollar limit on such contributions.

Fiduciary rules applicable to default investments of individual account plans

ERISA imposes standards on the conduct of plan fiduciaries, including persons who make investment decisions with respect to plan assets. Fiduciaries are personally liable for any losses to the plan due to a violation of fiduciary standards.

An individual account plan may permit participants to make investment decisions with respect to their accounts. ERISA fiduciary liability does not apply to investment decisions made by plan participants if participants exercise control over the investment of their individual accounts, as determined under ERISA regulations. In that case, a plan fiduciary may be responsible for the investment alternatives made available, but not for the specific investment decisions made by participants.

Preemption of State law

ERISA generally preempts all State laws relating to employee benefit plans, other than generally applicable criminal laws and laws relating to insurance, banking, or securities.

Excess contributions

An excise tax is imposed on an employer making excess contributions or excess aggregate contributions to a qualified retirement plan. Excess contributions are elective contributions, including qualified nonelective contributions and qualified matching contributions that are treated as elective contributions, made to a plan on behalf of highly compensated

employees to the extent that the contributions fail to satisfy the applicable nondiscrimination tests for such plan for the year. Excess aggregate contributions are the aggregate amount of employer matching contributions and employee after-tax contributions to a plan for highly compensated employees to the extent that the contributions fail to satisfy the applicable nondiscrimination tests for such plan for the year.

The excise tax is equal to 10 percent of the excess contributions or excess aggregate contributions under a plan for the plan year ending in the taxable year. The tax does not apply to any excess contributions or excess aggregate contributions that, together with income allocable to the contributions, are distributed or forfeited (if forfeitable) within 2½ months after the close of the plan year. Any excess contributions or excess aggregate contributions that are distributed within 2½ months after the close of the plan year are treated as received and earned by the recipient in the taxable year for which such contributions are made. If the total of such distributions to a recipient under a plan for any plan year is less than $100, such distributions (and any income allocable thereto) are treated as earned and received by the recipient in the taxable year in which the distributions are made.

Additionally, if certain requirements are met, excess contributions may be recharacterized as after-tax employee contributions, no later than 2½ months after the close of the plan year to which the excess contributions relate.[256]

Explanation of Provision

In general

Under the provision, a 401(k) plan that contains an automatic enrollment feature that satisfies certain requirements (a "qualified automatic enrollment feature") is treated as meeting the ADP test with respect to elective deferrals and the ACP test with respect to matching contributions. In addition, a plan consisting solely of contributions made pursuant to a qualified automatic enrollment feature is not subject to the top-heavy rules.

A qualified automatic enrollment feature must meet certain requirements with respect to: (1) automatic deferral; (2) matching or nonelective contributions; and (3) notice to employees.

Automatic deferral/amount of elective contributions

A qualified automatic enrollment feature must provide that, unless an employee elects otherwise, the employee is treated as making an election to make elective deferrals equal to a stated percentage of compensation not in excess of 10 percent and at least equal to: three percent of compensation for the first year the deemed election applies to the participant; four percent during the second year; five percent during the third year; and six percent during the fourth year and thereafter. The stated percentage must be applied uniformly to all eligible employees.

[256] Treas. Reg. sec. 1.401(k)-2(b)(3).

Eligible employees mean all employees eligible to participate in the arrangement, other than employees eligible to participate in the arrangement immediately before the date on which the arrangement became a qualified automatic contribution arrangement with an election in effect (either to participate at a certain percentage or not to participate).

Matching or nonelective contribution requirement

Contributions

An automatic enrollment feature satisfies the contribution requirement if the employer either (1) satisfies a matching contribution requirement or (2) makes a nonelective contribution to a defined contribution plan of at least three percent of an employee's compensation on behalf of each nonhighly compensated employee who is eligible to participate in the automatic enrollment feature. A plan generally satisfies the matching contribution requirement if, under the arrangement: (1) the employer makes a matching contribution on behalf of each nonhighly compensated employee that is equal to 100 percent of the employee's elective deferrals as do not exceed one percent of compensation and 50 percent of the employee's elective deferrals as exceeds one percent but does not exceed six percent of compensation and (2) the rate of match with respect to any elective deferrals for highly compensated employees is not greater than the rate of match for nonhighly compensated employees. It is intended that the provision apply to section 403(b) annuities.

A plan including an automatic enrollment feature that provides for matching contributions is deemed to satisfy the ACP test if, in addition to meeting the safe harbor contribution requirements applicable to the qualified automatic enrollment feature: (1) matching contributions are not provided with respect to elective deferrals in excess of six percent of compensation, (2) the rate of matching contribution does not increase as the rate of an employee's elective deferrals increases, and (3) the rate of matching contribution with respect to any rate of elective deferral of a highly compensated employee is no greater than the rate of matching contribution with respect to the same rate of deferral of a nonhighly compensated employee.

Vesting

Any matching or other employer contributions taken into account in determining whether the requirements for a qualified automatic enrollment feature are satisfied must vest at least as rapidly as under two-year cliff vesting. That is, employees with at least two years of service must be 100 percent vested with respect to such contributions.

Withdrawal restrictions

Under the provision, any matching or other employer contributions taken into account in determining whether the requirements for a qualified automatic enrollment feature are satisfied are subject to the withdrawal rules applicable to elective contributions.

Notice requirement

Under a notice requirement, each employee eligible to participate in the arrangement must receive notice of the arrangement which is sufficiently accurate and comprehensive to apprise the employee of such rights and obligations and is written in a manner calculated to be understood by the average employee to whom the arrangement applies. The notice must explain: (1) the employee's right under the arrangement to elect not to have elective contributions made on the employee's behalf or to elect to have contributions made in a different amount; and (2) how contributions made under the automatic enrollment arrangement will be invested in the absence of any investment election by the employee. The employee must be given a reasonable period of time after receipt of the notice and before the first election contribution is to be made to make an election with respect to contributions and investments.

Application to tax-sheltered annuities

The new safe harbor rules for automatic contribution plans apply with respect to matching contributions under a section 403(b) annuity through the operation of section 403(b)(12).

Corrective distributions

The provision includes rules under which erroneous automatic contributions may be distributed from the plan no later than 90 days after the date of the first elective contribution with respect to the employee under the arrangement. The amount that is treated as an erroneous contribution is limited to the amount of automatic contributions made during the 90-day period that the employee elects to treat as an erroneous contribution. It is intended that distributions of such amounts are generally treated as a payment of compensation, rather than as a contribution to and then a distribution from the plan. The 10-percent early withdrawal tax does not apply to distributions of erroneous automatic contributions. In addition, it is intended that such contributions are not taken into account for purposes of applying the nondiscrimination rules, or the limit on elective deferrals. Similarly, it is intended that distributions of such contributions are not subject to the otherwise applicable withdrawal restrictions. The rules for corrective distributions apply to distributions from (1) qualified pension plans under Code section 401(a), (2) plans under which amounts are contributed by an individual's employer for Code section 403(b) annuity contract and (3) governmental eligible deferred compensation plans under Code section 457(b).

The corrective distribution rules are not limited to arrangements meeting the requirements of a qualified enrollment feature.

Excess contributions

In the case of an eligible automatic contribution arrangement, the excise tax on excess contributions does not apply to any excess contributions or excess aggregate contributions which, together with income allocable to the contributions, are distributed or forfeited (if forfeitable) within six months after the close of the plan year. Additionally, any excess contributions or excess aggregate contributions (and any income allocable thereto) that are distributed within the period required to avoid application of the excise tax are treated as earned

and received by the recipient in the taxable year in which the distribution is made (regardless of the amount distributed), and the income allocable to excess contributions or excess aggregate contributions that must be distributed is determined through the end of the year for which the contributions were made.

Preemption of State law

The provision preempts any State law that would directly or indirectly prohibit or restrict the inclusion in a plan of an automatic contribution arrangement. The Labor Secretary may establish minimum standards for such arrangements in order for preemption to apply. An automatic contribution arrangement is an arrangement: (1) under which a participant may elect to have the plan sponsor make payments as contributions under the plan on behalf of the participant, or to the participant directly in cash, (2) under which a participant is treated as having elected to have the plan sponsor make such contributions in an amount equal to a uniform percentage of compensation provided under the plan until the participant specifically elects not to have such contributions made (or elects to have contributions made at a different percentage), and (3) under which contributions are invested in accordance with regulations issued by the Secretary of Labor relating to default investments as provided under the bill. The State preemption rules under the bill are not limited to arrangements that meet the requirements of a qualified enrollment feature.

A plan administrator must provide notice to each participant to whom the automatic contribution arrangement applies. If the notice requirement is not satisfied, an ERISA penalty of $1,100 per day applies.

Effective Date

The provision is effective for years beginning after December 31, 2007. The preemption of conflicting State regulations is effective on the date of enactment. No inference is intended as to the effect of conflicting State regulations prior to date of enactment.

C. Treatment of Eligible Combined Defined Benefit Plans and Qualified Cash or Deferred Arrangements (new sec. 414(x) of the Code and new sec. 210(e) of ERISA)

Present Law

In general

Under present law, most defined contribution plans may include a qualified cash or deferred arrangement (commonly referred to as a "section 401(k)" or "401(k)" plan),[257] under which employees may elect to receive cash or to have contributions made to the plan by the employer on behalf of the employee in lieu of receiving cash (referred to as "elective deferrals" or "elective contributions").[258] A section 401(k) plan may provide that elective deferrals are made for an employee at a specified rate unless the employee elects otherwise (i.e., elects not to make contributions or to make contributions at a different rate), provided that the employee has an effective opportunity to elect to receive cash in lieu of the default contributions. Such a design is sometimes referred to as "automatic enrollment."

Besides elective deferrals, a section 401(k) plan may provide for: (1) matching contributions, which are employer contributions that are made only if an employee makes elective deferrals; and (2) nonelective contributions, which are employer contributions that are made without regard to whether an employee makes elective deferrals. Under a section 401(k) plan, no benefit other than matching contributions can be contingent on whether an employee makes elective deferrals. Thus, for example, an employee's eligibility for benefits under a defined benefit pension plan cannot be contingent on whether the employee makes elective deferrals.

A cash balance plan is a defined benefit pension plan with benefits resembling the benefits associated with defined contribution plans. Cash balance plans are sometimes referred to as "hybrid" plans because they combine features of a defined benefit pension plan and a defined contribution plan. Under a cash balance plan, benefits are determined by reference to a hypothetical account balance. An employee's hypothetical account balance is determined by reference to hypothetical annual allocations to the account ("pay credits") (e.g., a certain percentage of the employee's compensation for the year) and hypothetical earnings on the account ("interest credits"). Other types of hybrid plans exist as well, such as so-called "pension equity" plans.

---

[257] Legally, a section 401(k) plan is not a separate type of plan, but is a profit-sharing, stock bonus, or pre-ERISA money purchase plan that contains a qualified cash or deferred arrangement. The terms "section 401(k) plan" and "401(k) plan" are used here for convenience.

[258] The maximum annual amount of elective deferrals that can be made by an individual is subject to a dollar limit ($15,000 for 2006). An individual who has attained age 50 before the end of the taxable year may also make catch-up contributions to a section 401(k) plan, subject to a limit ($5,000 for 2006).

The assets of a qualified retirement plan (either a defined contribution plan or a defined benefit pension plan) must be held in trust for the exclusive benefit of participants and beneficiaries. Defined benefit pension plans are subject to funding rules, which require employers to make contributions at specified minimum levels.[259] In addition, limits apply on the extent to which defined benefit pension plan assets may be invested in employer securities or real property. The minimum funding rules and limits on investments in employer securities or real property generally do not apply to defined contribution plans.

Nondiscrimination requirements

Under a general nondiscrimination requirement, the contributions or benefits provided under a qualified retirement plan must not discriminate in favor of highly compensated employees.[260] Treasury regulations provide detailed and exclusive rules for determining whether a plan satisfies the general nondiscrimination rules. Under the regulations, the amount of contributions or benefits provided under the plan and the benefits, rights and features offered under the plan must be tested.

A special nondiscrimination test applies to elective deferrals under a section 401(k) plan, called the actual deferral percentage test or the "ADP" test. The ADP test compares the actual deferral percentages ("ADPs") of the highly compensated employee group and the nonhighly compensated employee group. The ADP for each group generally is the average of the deferral percentages separately calculated for the employees in the group who are eligible to make elective deferrals for all or a portion of the relevant plan year. Each eligible employee's deferral percentage generally is the employee's elective deferrals for the year divided by the employee's compensation for the year.

The plan generally satisfies the ADP test if the ADP of the highly compensated employee group for the current plan year is either (1) not more than 125 percent of the ADP of the nonhighly compensated employee group for the prior plan year, or (2) not more than 200 percent of the ADP of the nonhighly compensated employee group for the prior plan year and not more than two percentage points greater than the ADP of the nonhighly compensated employee group for the prior plan year.

Under a safe harbor, a section 401(k) plan is deemed to satisfy the special nondiscrimination test if the plan satisfies one of two contribution requirements and satisfies a notice requirement (a "safe harbor section 401(k) plan"). A plan satisfies the contribution requirement under the safe harbor rule if the employer either (1) satisfies a matching contribution requirement or (2) makes a nonelective contribution to a defined contribution plan of at least three percent of an employee's compensation on behalf of each nonhighly compensated

[259] The Pension Benefit Guaranty Corporation generally guarantees a minimum level of benefits under a defined benefit plan.

[260] Under special rules, referred to as the permitted disparity rules, higher contributions or benefits can be provided to higher-paid employees in certain circumstances without violating the general nondiscrimination rules.

employee who is eligible to participate in the arrangement. A plan generally satisfies the matching contribution requirement if, under the arrangement: (1) the employer makes a matching contribution on behalf of each nonhighly compensated employee that is equal to (a) 100 percent of the employee's elective deferrals up to three percent of compensation and (b) 50 percent of the employee's elective deferrals from three to five percent of compensation; and (2) the rate of matching contribution with respect to any rate of elective deferrals of a highly compensated employee is not greater than the rate of matching contribution with respect to the same rate of elective deferral of a nonhighly compensated employee.[261]

Employer matching contributions are also subject to a special nondiscrimination test, the "ACP test," which compares the average actual contribution percentages ("ACPs") of matching contributions for the highly compensated employee group and the nonhighly compensated employee group. The plan generally satisfies the ACP test if the ACP of the highly compensated employee group for the current plan year is either (1) not more than 125 percent of the ACP of the nonhighly compensated employee group for the prior plan year, or (2) not more than 200 percent of the ACP of the nonhighly compensated employee group for the prior plan year and not more than two percentage points greater than the ACP of the nonhighly compensated employee group for the prior plan year.

A safe harbor section 401(k) plan that provides for matching contributions must satisfy the ACP test. Alternatively, it is deemed to satisfy the ACP test if it satisfies a matching contribution safe harbor, under which (1) matching contributions are not provided with respect to elective deferrals in excess of six percent of compensation, (2) the rate of matching contribution does not increase as the rate of an employee's elective deferrals increases, and (3) the rate of matching contribution with respect to any rate of elective deferral of a highly compensated employee is no greater than the rate of matching contribution with respect to the same rate of deferral of a nonhighly compensated employee.

Vesting rules

A qualified retirement plan generally must satisfy one of two alternative minimum vesting schedules. A plan satisfies the first schedule if a participant acquires a nonforfeitable right to 100 percent of the participant's accrued benefit derived from employer contributions upon the completion of five years of service. A plan satisfies the second schedule if a participant has a nonforfeitable right to at least 20 percent of the participant's accrued benefit derived from employer contributions after three years of service, 40 percent after four years of service, 60 percent after five years of service, 80 percent after six years of service, and 100 percent after seven years of service.

Special vesting rules apply to elective deferrals and matching contributions. Elective deferrals must be immediately vested. Matching contributions generally must vest at least as

[261] Alternatively, matching contributions may be provided at a different rate, provided that: (1) the rate of matching contribution doesn't increase as the rate of elective deferral increases; and (2) the aggregate amount of matching contributions with respect to each rate of elective deferral is not less than the amount that would be provided under the general rule.

rapidly as under one of two alternative minimum vesting schedules. A plan satisfies the first schedule if a participant acquires a nonforfeitable right to 100 percent of matching contributions upon the completion of three years of service. A plan satisfies the second schedule if a participant has a nonforfeitable right to 20 percent of matching contributions for each year of service beginning with the participant's second year of service and ending with 100 percent after six years of service. However, matching contributions under a safe harbor section 401(k) plan must be immediately vested.

Top-heavy rules

Under present law, a top-heavy plan is a qualified retirement plan under which cumulative benefits are provided primarily to key employees. An employee is considered a key employee if, during the prior year, the employee was (1) an officer with compensation in excess of a certain amount ($140,000 for 2006), (2) a five-percent owner, or (3) a one-percent owner with compensation in excess of $150,000. A plan that is top-heavy must provide (1) minimum employer contributions or benefits to participants who are not key employees and (2) more rapid vesting for participants who are not key employees (as discussed below).

In the case of a defined contribution plan, the minimum contribution is the lesser of (1) three percent of compensation, or (2) the highest percentage of compensation at which contributions were made for any key employee. In the case of a defined benefit pension, the minimum benefit is the lesser of (1) two percent of average compensation multiplied by the participant's years of service, or (2) 20 percent of average compensation. For this purpose, a participant's average compensation is generally average compensation for the consecutive-year period (not exceeding five years) during which the participant's aggregate compensation is the greatest.

Top-heavy plans must satisfy one of two alternative minimum vesting schedules. A plan satisfies the first schedule if a participant acquires a nonforfeitable right to 100 percent of contributions or benefits upon the completion of three years of service. A plan satisfies the second schedule if a participant has a nonforfeitable right to 20 percent of contributions or benefits for each year of service beginning with the participant's second year of service and ending with 100 percent after six years of service.[262]

A safe harbor section 401(k) plan is not subject to the top-heavy rules, provided that, if the plan provides for matching contributions, it must also satisfy the matching contribution safe harbor.

Other qualified retirement plan requirements

Qualified retirement plans are subject to various other requirements, some of which depend on whether the plan is a defined contribution plan or a defined benefit pension. Such requirements include limits on contributions and benefits and spousal protections.

[262] The top-heavy vesting schedules are the same as the vesting schedules that apply to matching contributions.

In the case of a defined contribution plan, annual additions with respect to each plan participant cannot exceed the lesser of: (1) 100 percent of the participant's compensation; or (2) a dollar amount, indexed for inflation ($44,000 for 2006). Annual additions are the sum of employer contributions, employee contributions, and forfeitures with respect to an individual under all defined contribution plans of the same employer. In the case of a defined benefit pension, annual benefits payable under the plan generally may not exceed the lesser of: (1) 100 percent of average compensation; or (2) a dollar amount, indexed for inflation ($175,000 for 2006).

Defined benefit pension plans are required to provide benefits in the form of annuity unless the participant (and his or her spouse, in the case of a married participant) consents to another form of benefit. In addition, in the case of a married participant, benefits generally must be paid in the form of a qualified joint and survivor annuity ("QJSA") unless the participant and his or her spouse consent to a distribution in another form. A QJSA is an annuity for the life of the participant, with a survivor annuity for the life of the spouse which is not less than 50 percent (and not more than 100 percent) of the amount of the annuity payable during the joint lives of the participant and his or her spouse. These spousal protection requirements generally do not apply to a defined contribution plan that does not offer annuity distributions.

Annual reporting by qualified retirement plans

The plan administrator of a qualified retirement plan generally must file an annual return with the Secretary of the Treasury and an annual report with the Secretary of Labor. In addition, in the case of a defined benefit pension, certain information is generally required to be filed with the Pension Benefit Guaranty Corporation ("PBGC"). Form 5500, which consists of a primary form and various schedules, includes the information required to be filed with all three agencies. The plan administrator satisfies the reporting requirement with respect to each agency by filing the Form 5500 with the Department of Labor.

The Form 5500 is due by the last day of the seventh month following the close of the plan year. The due date may be extended up to two and one-half months. Copies of filed Form 5500s are available for public examination at the U.S. Department of Labor.

A plan administrator must automatically provide participants with a summary of the annual report within two months after the due date of the annual report (i.e., by the end of the ninth month after the end of the plan year unless an extension applies). In addition, a copy of the full annual report must be provided to participants on written request.

Explanation of Provision

In general

The provision provides rules for an "eligible combined plan." An eligible combined plan is a plan: (1) that is maintained by an employer that is a small employer at the time the plan is established; (2) that consists of a defined benefit plan and an "applicable" defined contribution plan; (3) the assets of which are held in a single trust forming part of the plan and are clearly identified and allocated to the defined benefit plan and the applicable defined contribution plan to the extent necessary for the separate application of the Code and ERISA; and (4) that meets

certain benefit, contribution, vesting and nondiscrimination requirements as discussed below. For this purpose, an applicable defined contribution plan is a defined contribution plan that includes a qualified cash or deferred arrangement (i.e., a section 401(k) plan). A small employer is an employer that employed an average of at least two, but not more than 500, employees on business days during the preceding calendar year and at least two employees on the first day of the plan year.

Except as specified in the provision, the provisions of the Code and ERISA are applied to any defined benefit plan and any applicable defined contribution plan that are part of an eligible combined plan in the same manner as if each were not part of the eligible combined plan. Thus, for example, the present-law limits on contributions and benefits apply separately to contributions under an applicable defined contribution plan that is part of an eligible combined plan and to benefits under the defined benefit plan that is part of the eligible combined plan. In addition, the spousal protection rules apply to the defined benefit plan, but not to the applicable defined contribution plan except to the extent provided under present law. Moreover, although the assets of an eligible combined plan are held in a single trust, the funding rules apply to a defined benefit plan that is part of an eligible combined plan on the basis of the assets identified and allocated to the defined benefit, and the limits on investing defined benefit plan assets in employer securities or real property apply to such assets. Similarly, separate participant accounts are required to be maintained under the applicable defined contribution plan that is part of the eligible combined plan, and earnings (or losses) on participants' account are based on the earnings (or losses) with respect to the assets of the applicable defined contribution plan.

Requirements with respect to defined benefit plan

A defined benefit plan that is part of an eligible combined plan is required to provide each participant with a benefit of not less than the applicable percentage of the participant's final average pay. The applicable percentage is the lesser of: (1) one percent multiplied by the participant's years of service; or (2) 20 percent. For this purpose, final average pay is determined using the consecutive-year period (not exceeding five years) during which the participant has the greatest aggregate compensation.

If the defined benefit plan is an applicable defined benefit plan,[263] the plan is treated as meeting this benefit requirement if each participant receives a pay credit for each plan year of not less than the percentage of compensation determined in accordance with the following table:

[263] Applicable defined benefit plan is defined as under the TITLE VII of the bill.

Table 2.–Percentage of Compensation

Participant's age as of the beginning of the plan year:	Percentage:
30 or less	2 percent
Over 30 but less than 40	4 percent
Over 40 but less than 50	6 percent
50 or over	8 percent

A defined benefit that is part of an eligible combined plan must provide the required benefit to each participant, regardless of whether the participant makes elective deferrals to the applicable defined contribution plan that is part of the eligible combined plan.

Any benefits provided under the defined benefit plan (including any benefits provided in addition to required benefits) must be fully vested after three years of service.

Requirements with respect to applicable defined contribution plan

Certain automatic enrollment and matching contribution requirements must be met with respect to an applicable defined contribution plan that is part of an eligible combined plan. First, the qualified cash or deferred arrangement under the plan must constitute an automatic contribution arrangement, under which each employee eligible to participate is treated as having elected to make deferrals of four percent of compensation unless the employee elects otherwise (i.e., elects not to make deferrals or to make deferrals at a different rate). Participants must be given notice of their right to elect otherwise and must be given a reasonable period of time after receiving notice in which to make an election. In addition, participants must be given notice of their rights and obligations within a reasonable period before each year.

Under the applicable defined contribution plan, the employer must be required to make matching contributions on behalf of each employee eligible to participate in the arrangement in an amount equal to 50 percent of the employee's elective deferrals up to four percent of compensation, and the rate of matching contribution with respect to any elective deferrals for highly compensated employees must not be not greater than the rate of match for nonhighly compensated employees.[264] Matching contributions in addition to the required matching contributions may also be made. The employer may also make nonelective contributions under the applicable defined contribution plan, but any nonelective contributions are not taken into account in determining whether the matching contribution requirement is met.

[264] As under present law, matching contributions may be provided at a different rate, provided that: (1) the rate of matching contribution doesn't increase as the rate of elective deferral increases; and (2) the aggregate amount of matching contributions with respect to each rate of elective deferral is not less than the amount that would be provided under the general rule.

Any matching contributions under the applicable defined contribution plan (including any in excess of required matching contributions) must be fully vested when made. Any nonelective contributions made under the applicable defined contribution plan must be fully vested after three years of service.

Nondiscrimination and other rules

An applicable defined contribution plan satisfies the ADP test on a safe-harbor basis. Matching contributions under an applicable defined contribution plan must satisfy the ACP test or may satisfy the matching contribution safe harbor under present law, as modified to reflect the matching contribution requirements applicable under the provision.

Nonelective contributions under an applicable defined contribution plan and benefits under a defined benefit plan that are part of an eligible combined plan are generally subject to the nondiscrimination rules as under present law. However, neither a defined benefit plan nor an applicable defined contribution plan that is part of an eligible combined plan may be combined with another plan in determining whether the nondiscrimination requirements are met.[265]

An applicable defined contribution plan and a defined benefit plan that are part of an eligible combined plan are treated as meeting the top-heavy requirements.

All contributions, benefits, and other rights and features that are provided under a defined benefit plan or an applicable defined contribution plan that is part of an eligible combined plan must be provided uniformly to all participants. This requirement applies regardless of whether nonuniform contributions, benefits, or other rights or features could be provided without violating the nondiscrimination rules. However, it is intended that a plan will not violate the uniformity requirement merely because benefits accrued for periods before a defined benefit or defined contribution plan became part of an eligible combined plan are protected (as required under the anticutback rules).

Annual reporting

An eligible combined plan is treated as a single plan for purposes of annual reporting. Thus, only a single Form 5500 is required. All of the information required under present law with respect to a defined benefit plan or a defined contribution plan must be provided in the Form 5500 for the eligible combined plan. In addition, only a single summary annual report must be provided to participants.

Other rules

The provision of the bill relating to default investment options and the preemption of State laws with respect to automatic enrollment arrangements are applicable to eligible combined

[265] The permitted disparity rules do not apply in determining whether an applicable defined contribution plan or a defined benefit plan that is part of an eligible combined plan satisfies (1) the contribution or benefit requirements under the provision or (2) the nondiscrimination requirements.

plans. It is intended that in the case that an eligible combined plan terminates, the PBGC guarantee applies only to benefits under the defined benefit portion of the plan.

Effective Date

The provision is effective for plan years beginning after December 31, 2009.

D. Faster Vesting of Employer Nonelective Contributions (sec. 203 of ERISA, and sec. 411 of the Code)

Present Law

Under present law, in general, a plan is not a qualified plan unless a participant's employer-provided benefit vests at least as rapidly as under one of two alternative minimum vesting schedules. A plan satisfies the first schedule if a participant acquires a nonforfeitable right to 100 percent of the participant's accrued benefit derived from employer contributions upon the completion of five years of service. A plan satisfies the second schedule if a participant has a nonforfeitable right to at least 20 percent of the participant's accrued benefit derived from employer contributions after three years of service, 40 percent after four years of service, 60 percent after five years of service, 80 percent after six years of service, and 100 percent after seven years of service.[266]

Faster vesting schedules apply to employer matching contributions. Employer matching contributions are required to vest at least as rapidly as under one of the following two alternative minimum vesting schedules. A plan satisfies the first schedule if a participant acquires a nonforfeitable right to 100 percent of employer matching contributions upon the completion of three years of service. A plan satisfies the second schedule if a participant has a nonforfeitable right to 20 percent of employer matching contributions for each year of service beginning with the participant's second year of service and ending with 100 percent after six years of service.

Explanation of Provision

The provision applies the present-law vesting schedule for matching contributions to all employer contributions to defined contribution plans.

The provision does not apply to any employee until the employee has an hour of service after the effective date. In applying the new vesting schedule, service before the effective date is taken into account.

Effective Date

The provision is generally effective for contributions for plan years beginning after December 31, 2006.

In the case of a plan maintained pursuant to one or more collective bargaining agreements, the provision is not effective for contributions (including allocations of forfeitures) for plan years beginning before the earlier of (1) the later of the date on which the last of such collective bargaining agreements terminates (determined without regard to any extension thereof on or after the date of enactment) or January 1, 2007, or (2) January 1, 2009.

---

[266] The minimum vesting requirements are also contained in Title I of the Employee Retirement Income Security Act of 1974 ("ERISA").

In the case of an employee stock ownership plan ("ESOP") which on September 26, 2005, had outstanding a loan incurred for the purpose of acquiring qualifying employer securities, the provision does not apply to any plan year beginning before the earlier of (1) the date on which the loan is fully repaid, or (2) the date on which the loan was, as of September 26, 2005, scheduled to be fully repaid.

E. Distributions During Working Retirement (sec. 3(2) of ERISA and new sec. 401(a)(35) of the Code)

Present Law

Under ERISA, a pension plan is a plan, fund, or program established or maintained by an employer or an employee organization, or by both, to the extent that, by its express terms or surrounding circumstances, the plan, fund, or program: (1) provides retirement income to employees, or (2) results in a deferral of income by employees for periods extending to the termination of covered employment or beyond, regardless of the method of calculating contributions made to or benefits under the plan or the method of distributing benefits from the plan.

For purposes of the qualification requirements applicable to pension plans, stock bonus plans, and profit-sharing plans under the Code, a pension plan is a plan established and maintained primarily to provide systematically for the payment of definitely determinable benefits to employees over a period of years, usually life, after retirement.[267] A pension plan (i.e., a defined benefit plan or money purchase pension plan) may not provide for distributions before the attainment of normal retirement age (commonly age 65) to participants who have not separated from employment.[268]

Under proposed regulations, in the case of a phased retirement program, a pension plan is permitted to pay a portion of a participant's benefits before attainment of normal retirement age.[269] A phased retirement program is a program under which employees who are at least age 59½ and are eligible for retirement may reduce (by at least 20 percent) the number of hours they customarily work and receive a pro rata portion of their retirement benefits, based on the reduction in their work schedule.

Explanation of Provision

Under the provision, for purposes of the definition of pension plan under ERISA, a distribution from a plan, fund, or program is not treated as made in a form other than retirement income or as a distribution prior to termination of covered employment solely because the distribution is made to an employee who has attained age 62 and who is not separated from employment at the time of such distribution.

In addition, under the Code, a pension plan does not fail to be a qualified retirement plan solely because the plan provides that a distribution may be made to an employee who has attained age 62 and who is not separated from employment at the time of the distribution.

---

[267] Treas. Reg. sec. 1.401-1(b)(1)(i).

[268] See, e.g., Rev. Rul. 74-254.

[269] Prop. Treas. Reg. secs. 1.401(a)-1(b)(1)(iv) and 1.401(a)-3.

Effective Date

The provision is effective for distributions in plan years beginning after December 31, 2006.

F. Treatment of Plans Maintained by Indian Tribes (sec. 414(d) of the Code and sec. 3(32) of ERISA)

Present Law

Governmental plans are exempt from ERISA and from Code requirements that correspond to ERISA requirements, such as the vesting rules and the funding rules. A governmental plan is generally a plan established and maintained for its employees by (1) the Federal government, (2) the government of a State or political subdivision of a State, or (3) any agency or instrumentality of any of the foregoing.

Benefits under a defined benefit pension plan generally cannot exceed the lesser of (1) 100 percent of average compensation, or (2) a dollar amount ($175,000 for 2006), subject to certain special rules for defined benefit plans maintained by State and local government employers and other special rules for employees of a police or fire department. Employee contributions to a defined benefit pension plan are generally subject to tax; however, employee contributions may be made to a State or local government defined benefit pension plan on a pretax basis (referred to as "pickup" contributions).

Governmental defined benefit pension plans are not covered by the PBGC insurance program.

Explanation of Provision

Under the provision, the term "governmental plan" for purposes of section 414 of the Code, section 3(32) of ERISA, and the PBGC termination insurance program includes a plan: (1) which is established and maintained by an Indian tribal government (as defined in Code sec. 7701(a)(40)), a subdivision of an Indian tribal government (determined in accordance with Code sec. 7871(d)), or an agency or instrumentality of either; and (2) all of the participants of which are qualified employees of such entity. A qualified employee is an employee of an entity described in (1) all of whose services for such entity are in the performance of essential governmental services and not in the performance of commercial activities (whether or not such activities are an essential governmental function). Thus, for example, a governmental plan would include a plan of a tribal government all of the participants of which are teachers in tribal schools. On the other hand, a governmental plan would not include a plan covering tribal employees who are employed by a hotel, casino, service station, convenience store, or marina operated by a tribal government.

Under the provision, the special benefit limitations applicable to employees of police and fire departments of a State or political subdivision (Code sec. 415(b)(2)(H)) apply to such employees of an Indian tribe or any political subdivision thereof. In addition, the rules relating to pick up contribution under governmental plans (Code sec. 414(h)) and special benefit limitations for governmental plans (sec. 415(b)(10)) apply to tribal plans treated as governmental plans under the provision.

Effective Date

The provision is effective for plan years beginning on or after the date of enactment.

TITLE X: SPOUSAL PENSION PROTECTION

A. Regulations on Time and Order of Issuance of Domestic Relations Orders

Present Law

Benefits provided under a qualified retirement plan for a participant may not be assigned or alienated to creditors of the participant, except in very limited circumstances.[270] One exception to the prohibition on assignment or alienation is a qualified domestic relations order ("QDRO").[271] A QDRO is a domestic relations order that creates or recognizes a right of an alternate payee, including a former spouse, to any plan benefit payable with respect to a participant and that meets certain procedural requirements. In addition, a QDRO generally may not require the plan to provide any type or form of benefit, or any option, not otherwise provided under the plan, or to provide increased benefits.

Present law also provides that a QDRO may not require the payment of benefits to an alternate payee that are required to be paid to another alternate payee under a domestic relations order previously determined to be a QDRO. This rule implicitly recognizes that a domestic relations order issued after a QDRO may also qualify as a QDRO. However, present law does not otherwise provide specific rules for the treatment of a domestic relations order as a QDRO if the order is issued after another domestic relations order or a QDRO (including an order issued after a divorce decree) or revises another domestic relations order or a QDRO.

Present law provides specific rules that apply during any period in which the status of a domestic relations order as a QDRO is being determined (by the plan administrator, by a court, or otherwise). During such a period, the plan administrator is required to account separately for the amounts that would have been payable to the alternate payee during the period if the order had been determined to be a QDRO (referred to as "segregated amounts"). If, within the 18-month period beginning with the date on which the first payment would be required to be made under the order, the order (or modification thereof) is determined to be a QDRO, the plan administrator is required to pay the segregated amounts (including any interest thereon) to the person or persons entitled thereto. If, within the 18-month period, the order is determined not to be a QDRO, or its status as a QDRO is not resolved, the plan administrator is required to pay the segregated amounts (including any interest) to the person or persons who would be entitled to such amounts if there were no order. In such a case, any subsequent determination that the order is a QDRO is applied prospectively only.

Explanation of Provision

The Secretary of Labor is directed to issue, not later than one year after the date of enactment of the provision, regulations to clarify the status of certain domestic relations orders. In particular, the regulations are to clarify that a domestic relations order otherwise meeting the

---

[270] Code sec. 401(a)(13); ERISA sec. 206(d).

[271] Code secs. 401(a)(13)(B) and 414(p); ERISA sec. 206(d)(3).

QDRO requirements will not fail to be treated as a QDRO solely because of the time it is issued or because it is issued after or revises another domestic relations order or QDRO. The regulations are also to clarify that such a domestic relations order is in all respects subject to the same requirements and protections that apply to QDROs. For example, as under present law, such a domestic relations order may not require the payment of benefits to an alternate payee that are required to be paid to another alternate payee under an earlier QDRO. In addition, the present-law rules regarding segregated amounts that apply while the status of a domestic relations order as a QDRO is being determined continue to apply.

Effective Date

The provision is effective on the date of enactment.

B. Benefits Under the Railroad Retirement System for Former Spouses (secs. 2 and 5 of the Railroad Retirement Act of 1974)

Present Law

In general

The Railroad Retirement System has two main components. Tier I of the system is financed by taxes on employers and employees equal to the Social Security payroll tax and provides qualified railroad retirees (and their qualified spouses, dependents, widows, or widowers) with benefits that are roughly equal to Social Security. Covered railroad workers and their employers pay the Tier I tax instead of the Social Security payroll tax, and most railroad retirees collect Tier I benefits instead of Social Security. Tier II of the system replicates a private pension plan, with employers and employees contributing a certain percentage of pay toward the system to finance defined benefits to eligible railroad retirees (and qualified spouses, dependents, widows, or widowers) upon retirement; however, the Federal Government collects the Tier II payroll contribution and pays out the benefits.

Former spouses of living railroad employees

Generally, a former spouse of a railroad employee who is otherwise eligible for any Tier I or Tier II benefit cannot receive either benefit until the railroad employee actually retires and begins receiving his or her retirement benefits. This is the case regardless of whether a State divorce court has awarded such railroad retirement benefits to the former spouse.

Former spouses of deceased railroad employees

The former spouse of a railroad employee may be eligible for survivors' benefits under Tier I of the Railroad Retirement System. However, a former spouse loses eligibility for any otherwise allowable Tier II benefits upon the death of the railroad employee.

Explanation of Provision

Former spouses of living railroad employees

The provision eliminates the requirement that a railroad employee actually receive railroad retirement benefits for the former spouse to be entitled to any Tier I benefit or Tier II benefit awarded under a State divorce court decision.

Former spouses of deceased railroad employees

The provision provides that a former spouse of a railroad employee does not lose eligibility for otherwise allowable Tier II benefits upon the death of the railroad employee.

Effective Date

The provision is effective one year after the date of enactment.

C. Requirement for Additional Survivor Annuity Option (sec. 417 of the Code and sec. 205 of ERISA)

Present Law

Defined benefit pension plans and money purchase pension plans are required to provide benefits in the form of a qualified joint and survivor annuity ("QJSA") unless the participant and his or her spouse consent to another form of benefit. A QJSA is an annuity for the life of the participant, with a survivor annuity for the life of the spouse which is not less than 50 percent (and not more than 100 percent) of the amount of the annuity payable during the joint lives of the participant and his or her spouse.[272] In the case of a married participant who dies before the commencement of retirement benefits, the surviving spouse must be provided with a qualified preretirement survivor annuity ("QPSA"), which must provide the surviving spouse with a benefit that is not less than the benefit that would have been provided under the survivor portion of a QJSA.

The participant and his or her spouse may waive the right to a QJSA and QPSA provided certain requirements are satisfied. In general, these conditions include providing the participant with a written explanation of the terms and conditions of the survivor annuity, the right to make, and the effect of, a waiver of the annuity, the rights of the spouse to waive the survivor annuity, and the right of the participant to revoke the waiver. In addition, the spouse must provide a written consent to the waiver, witnessed by a plan representative or a notary public, which acknowledges the effect of the waiver.

Defined contribution plans other than money purchase pension plans are not required to provide a QJSA or QPSA if the participant does not elect an annuity as the form of payment, the surviving spouse is the beneficiary of the participant's entire vested account balance under the plan (unless the spouse consents to designation of another beneficiary),[273] and, with respect to the participant, the plan has not received a transfer from a plan to which the QJSA and QPSA requirements applied (or separately accounts for the transferred assets). In the case of a defined contribution plan subject to the QJSA and QPSA requirements, a QPSA means an annuity for the life of the surviving spouse that has an actuarial value of at least 50 percent of the participant's vested account balance as of the date of death.

Explanation of Provision

The provision revises the minimum survivor annuity requirements to require that, at the election of the participant, benefits will be paid in the form of a "qualified optional survivor annuity." A qualified optional survivor annuity means an annuity for the life of the participant

---

[272] Thus, for example, a QJSA could consist of an annuity for the life of the participant, with a survivor annuity for the life of the spouse equal to 75 percent of the amount of the annuity payable during the joint lives of the participant and his or her spouse.

[273] Waiver and election rules apply to the waiver of the right of the spouse to be the beneficiary under a defined contribution plan that is not required to provide a QJSA.

with a survivor annuity for the life of the spouse which is equal to the applicable percentage of the amount of the annuity that is: (1) payable during the joint lives of the participant and the spouse; and (2) the actuarial equivalent of a single annuity for the life of the participant.

If the survivor annuity provided by the QJSA under the plan is less than 75 percent of the annuity payable during the joint lives of the participant and spouse, the applicable percentage is 75 percent. If the survivor annuity provided by the QJSA under the plan is greater than or equal to 75 percent of the annuity payable during the joint lives of the participant and spouse, the applicable percentage is 50 percent. Thus, for example, if the survivor annuity provided by the QJSA under the plan is 50 percent, the survivor annuity provided under the qualified optional survivor annuity must be 75 percent.

The written explanation required to be provided to participants explaining the terms and conditions of the qualified joint and survivor annuity must also include the terms and conditions of the qualified optional survivor annuity.

Under the provision of the bill relating to plan amendments, a plan amendment made pursuant to a provision of the bill generally will not violate the anticutback rule if certain requirements are met. Thus, a plan is not treated as having decreased the accrued benefit of a participant solely by reason of the adoption of a plan amendment pursuant to the provision requiring that the plan offer a qualified optional survivor annuity. The elimination of a subsidized QJSA is not protected by the anticutback provision in the bill unless an equivalent or greater subsidy is retained in one of the forms offered under the plan as amended. For example, if a plan that offers a subsidized 50 percent QJSA is amended to provide an unsubsidized 50 percent QJSA and an unsubsidized 75 percent joint and survivor annuity as its qualified optional survivor annuity, the replacement of the subsidized 50 percent QJSA with the unsubsidized 50 percent QJSA is not protected by the anticutback protection.

Effective Date

The provision applies generally to plan years beginning after December 31, 2007. In the case of a plan maintained pursuant to one or more collective bargaining agreements, the provision applies to plan years beginning on or after the earlier of (1) the later of January 1, 2008, and the last date on which an applicable collective bargaining agreement terminates (without regard to extensions), and (2) January 1, 2009.

TITLE XI: ADMINISTRATIVE PROVISIONS

A. Updating of Employee Plans Compliance Resolution System

Present Law

Tax-favored treatment is provided to various retirement savings arrangements that meet certain requirements under the Code, including qualified retirement plans and annuities (secs. 401(a) and 403(a)), tax-sheltered annuities (sec. 403(b)), simplified employee pensions ("SEPs") (sec. 408(k)), and SIMPLE IRAs (sec. 408(p)). The Internal Revenue Service ("IRS") has established the Employee Plans Compliance Resolution System ("EPCRS"), which is a comprehensive system of correction programs for sponsors of retirement plans and annuities that are intended to satisfy the requirements of section 401(a), section 403(a), section 403(b), section 408(k), or section 408(p), as applicable. The IRS has updated and expanded EPCRS several times.[274]

EPCRS permits employers to correct compliance failures and continue to provide their employees with retirement benefits on a tax-favored basis. EPCRS is based on the following general principles:

- Plans sponsors and administrators should be encouraged to establish administrative practices and procedures that ensure that plans are operated properly in accordance with applicable Code requirements;
- Plans sponsors and administrators should satisfy applicable plan document requirements;
- Plans sponsors and administrators should make voluntary and timely correction of any plan failures, whether involving discrimination in favor of highly compensated employees, plan operations, the terms of the plan document, or adoption of a plan by an ineligible employer; timely and efficient correction protects participating employees by providing them with their expected retirement benefits, including favorable tax treatment;
- Voluntary compliance is promoted by providing for limited fees for voluntary corrections approved by the Service, thereby reducing employers' uncertainty regarding their potential tax liability and participants' potential tax liability;
- Fees and sanctions should be graduated in a series of steps so that there is always an incentive to correct promptly;
- Sanctions for plan failures identified on audit should be reasonable in light of the nature, extent, and severity of the violation;
- Administration of EPCRS should be consistent and uniform; and

[274] See Rev. Proc. 2006-27, 2006-22 IRB 945.

- Sponsors should be able to rely on the availability of EPCRS in taking corrective actions to maintain the tax-favored status of their plans.

The components of EPCRS provide for self-correction, voluntary correction with IRS approval, and correction on audit. The Self-Correction Program ("SCP") generally permits a plan sponsor that has established compliance practices and procedures to correct certain insignificant failures at any time (including during an audit), and certain significant failures generally within a 2-year period, without payment of any fee or sanction. The Voluntary Correction Program ("VCP") permits an employer, at any time before an audit, to pay a limited fee and receive IRS approval of a correction. For a failure that is discovered on audit and corrected, the Audit Closing Agreement Program ("Audit CAP") provides for a sanction that bears a reasonable relationship to the nature, extent, and severity of the failure and that takes into account the extent to which correction occurred before audit.

Explanation of Provision

The provision clarifies that the Secretary has the full authority to establish and implement EPCRS (or any successor program) and any other employee plans correction policies, including the authority to waive income, excise or other taxes to ensure that any tax, penalty or sanction is not excessive and bears a reasonable relationship to the nature, extent and severity of the failure.

Under the provision, the Secretary of the Treasury is directed to continue to update and improve EPCRS (or any successor program), giving special attention to (1) increasing the awareness and knowledge of small employers concerning the availability and use of EPCRS, (2) taking into account special concerns and circumstances that small employers face with respect to compliance and correction of compliance failures, (3) extending the duration of the self-correction period under SCP for significant compliance failures, (4) expanding the availability to correct insignificant compliance failures under SCP during audit, and (5) assuring that any tax, penalty, or sanction that is imposed by reason of a compliance failure is not excessive and bears a reasonable relationship to the nature, extent, and severity of the failure.

Effective Date

The provision is effective on the date of enactment.

B. Notice and Consent Period Regarding Distributions (sec. 417(a) of the Code, and sec. 205(c) of ERISA)

Present Law

Notice and consent requirements apply to certain distributions from qualified retirement plans. These requirements relate to the content and timing of information that a plan must provide to a participant prior to a distribution, and to whether the plan must obtain the participant's consent to the distribution. The nature and extent of the notice and consent requirements applicable to a distribution depend upon the value of the participant's vested accrued benefit and whether the joint and survivor annuity requirements apply to the participant.

If the present value of the participant's vested accrued benefit exceeds $5,000,[275] the plan may not distribute the participant's benefit without the written consent of the participant. The participant's consent to a distribution is not valid unless the participant has received from the plan a notice that contains a written explanation of (1) the material features and the relative values of the optional forms of benefit available under the plan, (2) the participant's right to defer the receipt of a distribution, or, as applicable, to have the distribution directly transferred to another retirement plan or individual retirement arrangement ("IRA"), and (3) the rules concerning taxation of a distribution. If the joint and survivor annuity requirements are applicable, this notice also must contain a written explanation of (1) the terms and conditions of the qualified joint and survivor annuity ("QJSA"), (2) the participant's right to make, and the effect of, an election to waive the QJSA, (3) the rights of the participant's spouse with respect to a participant's waiver of the QJSA, and (4) the right to make, and the effect of, a revocation of a waiver of the QJSA. The plan generally must provide this notice to the participant no less than 30 and no more than 90 days before the date distribution commences.[276]

Explanation of Provision

Under the provision, a qualified retirement plan is required to provide the applicable distribution notice no less than 30 days and no more than 180 days before the date distribution commences. The Secretary of the Treasury is directed to modify the applicable regulations to reflect the extension of the notice period to 180 days and to provide that the description of a participant's right, if any, to defer receipt of a distribution shall also describe the consequences of failing to defer such receipt.

Effective Date

The provision and the modifications required to be made under the provision apply to years beginning after December 31, 2006. In the case of a description of the consequences of a

---

[275] The portion of a participant's benefit that is attributable to amounts rolled over from another plan may be disregarded in determining the present value of the participant's vested accrued benefit.

[276] Code sec. 417(a)(6)(A); ERISA sec. 205(c)(7)(A); Treas. Reg. secs. 1.402(f)-1, 1.411(a)-11(c), and 1.417(e)-1(b).

participant’s failure to defer receipt of a distribution that is made before the date 90 days after the date on which the Secretary of the Treasury makes modifications to the applicable regulations, the plan administrator is required to make a reasonable attempt to comply with the requirements of the provision.

C. Pension Plan Reporting Simplification

Present Law

The plan administrator of a pension plan generally must file an annual return with the Secretary of the Treasury, an annual report with the Secretary of Labor, and certain information with the Pension Benefit Guaranty Corporation ("PBGC"). Form 5500, which consists of a primary form and various schedules, includes the information required to be filed with all three agencies. The plan administrator satisfies the reporting requirement with respect to each agency by filing the Form 5500 with the Department of Labor.

The Form 5500 series consists of 2 different forms: Form 5500 and Form 5500-EZ. Form 5500 is the more comprehensive of the forms and requires the most detailed financial information. The plan administrator of a "one-participant plan" generally may file Form 5500-EZ. For this purpose, a plan is a one-participant plan if: (1) the only participants in the plan are the sole owner of a business that maintains the plan (and such owner's spouse), or partners in a partnership that maintains the plan (and such partners' spouses);[277] (2) the plan is not aggregated with another plan in order to satisfy the minimum coverage requirements of section 410(b); (3) the plan does not provide benefits to anyone other than the sole owner of the business (or the sole owner and spouse) or the partners in the business (or the partners and spouses); (4) the employer is not a member of a related group of employers; and (5) the employer does not use the services of leased employees. In addition, the plan administrator of a one-participant plan is not required to file a return if the plan does not have an accumulated funding deficiency and the total value of the plan assets as of the end of the plan year and all prior plan years beginning on or after January 1, 1994, does not exceed $100,000.

With respect to a plan that does not satisfy the eligibility requirements for Form 5500-EZ, the characteristics and the size of the plan determine the amount of detailed financial information that the plan administrator must provide on Form 5500. If the plan has more than 100 participants at the beginning of the plan year, the plan administrator generally must provide more information.

Explanation of Provision

The Secretary of the Treasury is directed to modify the annual return filing requirements with respect to a one-participant plan to provide that if the total value of the plan assets of such a plan as of the end of the plan year does not exceed $250,000, the plan administrator is not required to file a return. In addition, the Secretary of the Treasury and the Secretary of Labor are directed to provide simplified reporting requirements for plan years beginning after December 31, 2006, for certain plans with fewer than 25 participants.

---

[277] Under Department of Labor regulations, certain business owners and their spouses are not treated as employees. 29 C.F.R. sec. 2510.3-3(c) (2006). Thus, plans covering only such individuals are not subject to ERISA.

Effective Date

The provision relating to one-participant retirement plans is effective for plan years beginning on or after January 1, 2007. The provision relating to simplified reporting for plans with fewer than 25 participants is effective on the date of enactment.

D. Voluntary Early Retirement Incentive and Employment Retention Plans Maintained by Local Educational Agencies and Other Entities (secs. 457(e)(11) and 457(f) of the Code, sec. 3(2)(B) of ERISA, and sec. 4(l)(1) of the ADEA)

Present Law

Eligible deferred compensation plans of State and local governments and tax-exempt employers

A "section 457 plan" is an eligible deferred compensation plan of a State or local government or tax-exempt employer that meets certain requirements. For example, the amount that can be deferred annually under section 457 cannot exceed a certain dollar limit ($14,000 for 2005). Amounts deferred under a section 457 plan are generally includible in gross income when paid or made available (or, in the case of governmental section 457 plans, when paid). Subject to certain exceptions, amounts deferred under a plan that does not comply with section 457 (an "ineligible plan") are includible in income when the amounts are not subject to a substantial risk of forfeiture. Section 457 does not apply to any bona fide vacation leave, sick leave, compensatory time, severance pay, disability pay, or death benefit plan. Additionally, section 457 does not apply to qualified retirement plans or qualified governmental excess benefit plans that provide benefits in excess of those that are provided under a qualified retirement plan maintained by the governmental employer.

ERISA

ERISA provides rules governing the operation of most employee benefit plans. The rules to which a plan is subject depend on whether the plan is an employee welfare benefit plan or an employee pension benefit plan. For example, employee pension benefit plans are subject to reporting and disclosure requirements, participation and vesting requirements, funding requirements, and fiduciary provisions. Employee welfare benefit plans are not subject to all of these requirements. Governmental plans are exempt from ERISA.

Age Discrimination in Employment Act

The Age Discrimination in Employment Act ("ADEA") generally prohibits discrimination in employment because of age. However, certain defined benefit pension plans may lawfully provide payments that constitute the subsidized portion of an early retirement benefit or social security supplements pursuant to ADEA[278], and employers may lawfully provide a voluntary early retirement incentive plan that is consistent with the purposes of ADEA.[279]

---

[278] See ADEA sec. 4(l)(1).

[279] See ADEA sec. 4(f)(2).

Explanation of Provision

Early retirement incentive plans of local educational agencies and education associations

In general

The provision addresses the treatment of certain voluntary early retirement incentive plans under section 457, ERISA, and ADEA.

Code section 457

Under the provision, special rules apply under section 457 to a voluntary early retirement incentive plan that is maintained by a local educational agency or a tax-exempt education association which principally represents employees of one or more such agencies and that makes payments or supplements as an early retirement benefit, a retirement-type subsidy, or a social security supplement in coordination with a defined benefit pension plan maintained by a State or local government or by such an association. Such a voluntary early retirement incentive plan is treated as a bona fide severance plan for purposes of section 457, and therefore is not subject to the limits under section 457, to the extent the payments or supplements could otherwise be provided under the defined benefit pension plan. For purposes of the provision, the payments or supplements that could otherwise be provided under the defined benefit pension plan are to be determined by applying the accrual and vesting rules for defined benefit pension plans.[280]

ERISA

Under the provision, voluntary early retirement incentive plans (as described above) are treated as welfare benefit plans for purposes of ERISA (other than governmental plans that are exempt from ERISA).

ADEA

The provision also addresses the treatment under ADEA of voluntary early retirement incentive plans that are maintained by local educational agencies and tax-exempt education associations which principally represent employees of one or more such agencies, and that make payments or supplements that constitute the subsidized portion of an early retirement benefit or a social security supplement and that are made in coordination with a defined benefit pension plan maintained by a State or local government or by such an association. For purposes of ADEA, such a plan is treated as part of the defined benefit pension plan and the payments or supplements under the plan are not severance pay that may be subject to certain deductions under ADEA.

[280] The accrual and vesting rules have the effect of limiting the social security supplements and early retirement benefits that may be provided under a defined benefit pension plan; however, government plans are exempt from these rules.

Employment retention plans of local educational agencies and education associations

The provision addresses the treatment of certain employment retention plans under section 457 and ERISA. The provision applies to employment retention plans that are maintained by local educational agencies or tax-exempt education associations which principally represent employees of one or more such agencies and that provide compensation to an employee (payable on termination of employment) for purposes of retaining the services of the employee or rewarding the employee for service with educational agencies or associations.

Under the provision, special tax treatment applies to the portion of an employment retention plan that provides benefits that do not exceed twice the applicable annual dollar limit on deferrals under section 457 ($14,000 for 2005). The provision provides an exception from the rules under section 457 for ineligible plans with respect to such portion of an employment retention plan. This exception applies for years preceding the year in which benefits under the employment retention plan are paid or otherwise made available to the employee. In addition, such portion of an employment retention plan is not treated as providing for the deferral of compensation for tax purposes.

Under the provision, an employment retention plan is also treated as a welfare benefit plan for purposes of ERISA (other than a governmental plan that is exempt from ERISA).

Effective Date

The provision is generally effective on the date of enactment. The amendments to section 457 apply to taxable years ending after the date of enactment. The amendments to ERISA apply to plan years ending after the date of enactment. Nothing in the provision alters or affects the construction of the Code, ERISA, or ADEA as applied to any plan, arrangement, or conduct to which the provision does not apply.

.

E. No Reduction in Unemployment Compensation as a Result of Pension Rollovers (sec. 3304(a)(15) of the Code)

Present Law

Under present law, unemployment compensation payable by a State to an individual generally is reduced by the amount of retirement benefits received by the individual. Distributions from certain employer-sponsored retirement plans or IRAs that are transferred to a similar retirement plan or IRA ("rollover distributions") generally are not includible in income. Some States currently reduce the amount of an individual's unemployment compensation by the amount of a rollover distribution.

Explanation of Provision

The provision amends the Code so that the reduction of unemployment compensation payable to an individual by reason of the receipt of retirement benefits does not apply in the case of a rollover distribution.

Effective Date

The provision is effective for weeks beginning on or after the date of enactment.

F. Revocation of Election Relating to Treatment as Multiemployer Plan (sec. 3(37) of ERISA and sec. 414(f) of the Code)

Present Law

A multiemployer plan mean a plan (1) to which more than one employer is required to contribute; (2) which is maintained pursuant to one or more collective bargaining agreements between one or more employee organizations and more than one employer; and (3) which satisfies such other requirements as the Secretary of Labor may prescribe.[281] Present law provides that within one year after the date of enactment of the Multiemployer Pension Plan Amendments Act of 1980, a multiemployer plan could irrevocably elect for the plan not to be treated as a multiemployer plan if certain requirements were satisfied.

Explanation of Provision

The provision allows multiemployer plans to revoke an existing election not to treat the plan as a multiemployer plan if, for each of the three plan years prior to the date of enactment, the plan would have been a multiemployer plan, but for the extension in place. The revocation must be pursuant to procedures prescribed by the PBGC.

The provision also provides that a plan to which more than one employer is required to contribute which is maintained pursuant to one or more collective bargaining agreements between one or more employee organizations and more than one employer (collectively the "criteria") may, pursuant to procedures prescribed by the PBGC, elect to be a multiemployer plan if (1) for each of the three plan years prior to the date of enactment, the plan has met the criteria; (2) substantially all of the plan's employer contributions for each of those plan years were made or required to be made by organizations that were tax-exempt; and (3) the plan was established prior to September 2, 1974. Such election is also available in the case of a plan sponsored by an organization that was established in Chicago, Illinois, on August 12, 1881, and is described in Code section 501(c)(5). There is no inference that a plan that makes an election to be a multiemployer plan was not a multiemployer plan prior to the date of enactment or would not be a multiemployer plan without regard to the election.

An election made under the provision is effective beginning with the first plan year ending after date of enactment and is irrevocable. A plan that elects to be a multiemployer plan under the provision will cease to be a multiemployer plan as of the plan year beginning immediately after the first plan year for which the majority of its employer contributions were made or required to be made by organizations that were not tax-exempt. Elections and revocations under the provision must be made within one year after the date of enactment.

Not later than 30 days before an election is made, the plan administrator must provide notice of the pending election to each plan participant and beneficiary, each labor organization representing such participants or beneficiaries, and to each employer that has an obligation to

[281] ERISA sec. 3(36); Code sec. 414(f).

contribute to the plan. Such notice must include the principal differences between the guarantee programs and benefit restrictions for single employer and multiemployer plans. The Secretary of Labor must prescribe a model notice within 180 days after date of enactment. The plan administrator's failure to provide the notice is treated as a failure to file an annual report. Thus, an ERISA penalty of $1,100 per day applies.

Effective Date

The provision is effective on the date of enactment.

G. Provisions Relating to Plan Amendments

Present Law

Present law provides a remedial amendment period during which, under certain circumstances, a plan may be amended retroactively in order to comply with the qualification requirements.[282] In general, plan amendments to reflect changes in the law generally must be made by the time prescribed by law for filing the income tax return of the employer for the employer's taxable year in which the change in law occurs. The Secretary of the Treasury may extend the time by which plan amendments need to be made.

The Code and ERISA provide that, in general, accrued benefits cannot be reduced by a plan amendment.[283] This prohibition on the reduction of accrued benefits is commonly referred to as the "anticutback rule."

Explanation of Provision.

A plan amendment made pursuant to the changes made by the bill or regulations issued thereunder, may be retroactively effective and will not violate the anticutback rule, if, in addition to meeting the other applicable requirements, the amendment is made on or before the last day of the first plan year beginning on or after January 1, 2009 (2011 in the case of a governmental plan).

A plan amendment will not be considered to be pursuant to the bill (or applicable regulations) if it has an effective date before the effective date of the provision under the bill (or regulations) to which it relates. Similarly, the provision does not provide relief from the anticutback rule for periods prior to the effective date of the relevant provision (or regulations) or the plan amendment. The Secretary of the Treasury is authorized to provide exceptions to the relief from the prohibition on reductions in accrued benefits. It is intended that the Secretary will not permit inappropriate reductions in contributions or benefits that are not directly related to the provisions under the bill.

Effective Date

The provision is effective on the date of enactment.

---

[282] Sec. 401(b).

[283] Code sec. 411(d)(6); ERISA sec. 204(g).

TITLE XII: PROVISIONS RELATING TO EXEMPT ORGANIZATIONS

A. Charitable Giving Incentives

1. Tax-free distributions from individual retirement plans for charitable purposes (secs. 408, 6034, 6104, and 6652 of the Code)

Present Law

In general

If an amount withdrawn from a traditional individual retirement arrangement ("IRA") or a Roth IRA is donated to a charitable organization, the rules relating to the tax treatment of withdrawals from IRAs apply to the amount withdrawn and the charitable contribution is subject to the normally applicable limitations on deductibility of such contributions.

Charitable contributions

In computing taxable income, an individual taxpayer who itemizes deductions generally is allowed to deduct the amount of cash and up to the fair market value of property contributed to a charity described in section 501(c)(3), to certain veterans' organizations, fraternal societies, and cemetery companies,[284] or to a Federal, State, or local governmental entity for exclusively public purposes.[285] The deduction also is allowed for purposes of calculating alternative minimum taxable income.

The amount of the deduction allowable for a taxable year with respect to a charitable contribution of property may be reduced depending on the type of property contributed, the type of charitable organization to which the property is contributed, and the income of the taxpayer.[286]

A taxpayer who takes the standard deduction (i.e., who does not itemize deductions) may not take a separate deduction for charitable contributions.[287]

A payment to a charity (regardless of whether it is termed a "contribution") in exchange for which the donor receives an economic benefit is not deductible, except to the extent that the donor can demonstrate, among other things, that the payment exceeds the fair market value of the benefit received from the charity. To facilitate distinguishing charitable contributions from purchases of goods or services from charities, present law provides that no charitable contribution deduction is allowed for a separate contribution of $250 or more unless the donor obtains a contemporaneous written acknowledgement of the contribution from the charity

[284] Secs. 170(c)(3)-(5).

[285] Sec. 170(c)(1).

[286] Secs. 170(b) and (e).

[287] Sec. 170(a).

indicating whether the charity provided any good or service (and an estimate of the value of any such good or service) to the taxpayer in consideration for the contribution.[288] In addition, present law requires that any charity that receives a contribution exceeding $75 made partly as a gift and partly as consideration for goods or services furnished by the charity (a "quid pro quo" contribution) is required to inform the contributor in writing of an estimate of the value of the goods or services furnished by the charity and that only the portion exceeding the value of the goods or services may be deductible as a charitable contribution.[289]

Under present law, total deductible contributions of an individual taxpayer to public charities, private operating foundations, and certain types of private nonoperating foundations may not exceed 50 percent of the taxpayer's contribution base, which is the taxpayer's adjusted gross income for a taxable year (disregarding any net operating loss carryback). To the extent a taxpayer has not exceeded the 50-percent limitation, (1) contributions of capital gain property to public charities generally may be deducted up to 30 percent of the taxpayer's contribution base, (2) contributions of cash to private foundations and certain other charitable organizations generally may be deducted up to 30 percent of the taxpayer's contribution base, and (3) contributions of capital gain property to private foundations and certain other charitable organizations generally may be deducted up to 20 percent of the taxpayer's contribution base.

Contributions by individuals in excess of the 50-percent, 30-percent, and 20-percent limits may be carried over and deducted over the next five taxable years, subject to the relevant percentage limitations on the deduction in each of those years.

In addition to the percentage limitations imposed specifically on charitable contributions, present law imposes a reduction on most itemized deductions, including charitable contribution deductions, for taxpayers with adjusted gross income in excess of a threshold amount, which is indexed annually for inflation. The threshold amount for 2006 is $150,500 ($75,250 for married individuals filing separate returns). For those deductions that are subject to the limit, the total amount of itemized deductions is reduced by three percent of adjusted gross income over the threshold amount, but not by more than 80 percent of itemized deductions subject to the limit. Beginning in 2006, the overall limitation on itemized deductions phases-out for all taxpayers. The overall limitation on itemized deductions is reduced by one-third in taxable years beginning in 2006 and 2007, and by two-thirds in taxable years beginning in 2008 and 2009. The overall limitation on itemized deductions is eliminated for taxable years beginning after December 31, 2009; however, this elimination of the limitation sunsets on December 31, 2010.

In general, a charitable deduction is not allowed for income, estate, or gift tax purposes if the donor transfers an interest in property to a charity (e.g., a remainder) while also either retaining an interest in that property (e.g., an income interest) or transferring an interest in that property to a noncharity for less than full and adequate consideration.[290] Exceptions to this

[288] Sec. 170(f)(8).

[289] Sec. 6115.

[290] Secs. 170(f), 2055(e)(2), and 2522(c)(2).

general rule are provided for, among other interests, remainder interests in charitable remainder annuity trusts, charitable remainder unitrusts, and pooled income funds, and present interests in the form of a guaranteed annuity or a fixed percentage of the annual value of the property.[291] For such interests, a charitable deduction is allowed to the extent of the present value of the interest designated for a charitable organization.

IRA rules

Within limits, individuals may make deductible and nondeductible contributions to a traditional IRA. Amounts in a traditional IRA are includible in income when withdrawn (except to the extent the withdrawal represents a return of nondeductible contributions). Individuals also may make nondeductible contributions to a Roth IRA. Qualified withdrawals from a Roth IRA are excludable from gross income. Withdrawals from a Roth IRA that are not qualified withdrawals are includible in gross income to the extent attributable to earnings. Includible amounts withdrawn from a traditional IRA or a Roth IRA before attainment of age 59-½ are subject to an additional 10-percent early withdrawal tax, unless an exception applies. Under present law, minimum distributions are required to be made from tax-favored retirement arrangements, including IRAs. Minimum required distributions from a traditional IRA must generally begin by the April 1 of the calendar year following the year in which the IRA owner attains age 70-½.[292]

If an individual has made nondeductible contributions to a traditional IRA, a portion of each distribution from an IRA is nontaxable until the total amount of nondeductible contributions has been received. In general, the amount of a distribution that is nontaxable is determined by multiplying the amount of the distribution by the ratio of the remaining nondeductible contributions to the account balance. In making the calculation, all traditional IRAs of an individual are treated as a single IRA, all distributions during any taxable year are treated as a single distribution, and the value of the contract, income on the contract, and investment in the contract are computed as of the close of the calendar year.

In the case of a distribution from a Roth IRA that is not a qualified distribution, in determining the portion of the distribution attributable to earnings, contributions and distributions are deemed to be distributed in the following order: (1) regular Roth IRA contributions; (2) taxable conversion contributions;[293] (3) nontaxable conversion contributions; and (4) earnings. In determining the amount of taxable distributions from a Roth IRA, all Roth IRA distributions in the same taxable year are treated as a single distribution, all regular Roth IRA contributions for a year are treated as a single contribution, and all conversion contributions during the year are treated as a single contribution.

---

[291] Sec. 170(f)(2).

[292] Minimum distribution rules also apply in the case of distributions after the death of a traditional or Roth IRA owner.

[293] Conversion contributions refer to conversions of amounts in a traditional IRA to a Roth IRA.

Distributions from an IRA (other than a Roth IRA) are generally subject to withholding unless the individual elects not to have withholding apply.[294] Elections not to have withholding apply are to be made in the time and manner prescribed by the Secretary.

Split-interest trust filing requirements

Split-interest trusts, including charitable remainder annuity trusts, charitable remainder unitrusts, and pooled income funds, are required to file an annual information return (Form 1041A).[295] Trusts that are not split-interest trusts but that claim a charitable deduction for amounts permanently set aside for a charitable purpose[296] also are required to file Form 1041A. The returns are required to be made publicly available.[297] A trust that is required to distribute all trust net income currently to trust beneficiaries in a taxable year is exempt from this return requirement for such taxable year. A failure to file the required return may result in a penalty on the trust of $10 a day for as long as the failure continues, up to a maximum of $5,000 per return.

In addition, split-interest trusts are required to file annually Form 5227.[298] Form 5227 requires disclosure of information regarding a trust's noncharitable beneficiaries. The penalty for failure to file this return is calculated based on the amount of tax owed. A split-interest trust generally is not subject to tax and therefore, in general, a penalty may not be imposed for the failure to file Form 5227. Form 5227 is not required to be made publicly available.

Explanation of Provision

Qualified charitable distributions from IRAs

The provision provides an exclusion from gross income for otherwise taxable IRA distributions from a traditional or a Roth IRA in the case of qualified charitable distributions.[299] The exclusion may not exceed $100,000 per taxpayer per taxable year. Special rules apply in determining the amount of an IRA distribution that is otherwise taxable. The present-law rules regarding taxation of IRA distributions and the deduction of charitable contributions continue to apply to distributions from an IRA that are not qualified charitable distributions. Qualified charitable distributions are taken into account for purposes of the minimum distribution rules applicable to traditional IRAs to the same extent the distribution would have been taken into account under such rules had the distribution not been directly distributed under the provision.

---

[294] Sec. 3405.

[295] Sec. 6034. This requirement applies to all split-interest trusts described in section 4947(a)(2).

[296] Sec. 642(c).

[297] Sec. 6104(b).

[298] Sec. 6011; Treas. Reg. sec. 53.6011-1(d).

[299] The provision does not apply to distributions from employer-sponsored retirements plans, including SIMPLE IRAs and simplified employee pensions ("SEPs").

An IRA does not fail to qualify as an IRA merely because qualified charitable distributions have been made from the IRA. It is intended that the Secretary will prescribe rules under which IRA owners are deemed to elect out of withholding if they designate that a distribution is intended to be a qualified charitable distribution.

A qualified charitable distribution is any distribution from an IRA directly by the IRA trustee to an organization described in section 170(b)(1)(A) (other than an organization described in section 509(a)(3) or a donor advised fund (as defined in section 4966(d)(2)). Distributions are eligible for the exclusion only if made on or after the date the IRA owner attains age 70-½.

The exclusion applies only if a charitable contribution deduction for the entire distribution otherwise would be allowable (under present law), determined without regard to the generally applicable percentage limitations. Thus, for example, if the deductible amount is reduced because of a benefit received in exchange, or if a deduction is not allowable because the donor did not obtain sufficient substantiation, the exclusion is not available with respect to any part of the IRA distribution.

If the IRA owner has any IRA that includes nondeductible contributions, a special rule applies in determining the portion of a distribution that is includible in gross income (but for the provision) and thus is eligible for qualified charitable distribution treatment. Under the special rule, the distribution is treated as consisting of income first, up to the aggregate amount that would be includible in gross income (but for the provision) if the aggregate balance of all IRAs having the same owner were distributed during the same year. In determining the amount of subsequent IRA distributions includible in income, proper adjustments are to be made to reflect the amount treated as a qualified charitable distribution under the special rule.

Distributions that are excluded from gross income by reason of the provision are not taken into account in determining the deduction for charitable contributions under section 170.

Qualified charitable distribution examples

The following examples illustrate the determination of the portion of an IRA distribution that is a qualified charitable distribution. In each example, it is assumed that the requirements for qualified charitable distribution treatment are otherwise met (e.g., the applicable age requirement and the requirement that contributions are otherwise deductible) and that no other IRA distributions occur during the year.

Example 1.−Individual A has a traditional IRA with a balance of $100,000, consisting solely of deductible contributions and earnings. Individual A has no other IRA. The entire IRA balance is distributed in a distribution to an organization described in section 170(b)(1)(A) (other than an organization described in section 509(a)(3) or a donor advised fund). Under present law, the entire distribution of $100,000 would be includible in Individual A's income. Accordingly, under the provision, the entire distribution of $100,000 is a qualified charitable distribution. As a result, no amount is included in Individual A's income as a result of the distribution and the distribution is not taken into account in determining the amount of Individual A's charitable deduction for the year.

Example 2.−Individual B has a traditional IRA with a balance of $100,000, consisting of $20,000 of nondeductible contributions and $80,000 of deductible contributions and earnings. Individual B has no other IRA. In a distribution to an organization described in section 170(b)(1)(A) (other than an organization described in section 509(a)(3) or a donor advised fund), $80,000 is distributed from the IRA. Under present law, a portion of the distribution from the IRA would be treated as a nontaxable return of nondeductible contributions. The nontaxable portion of the distribution would be $16,000, determined by multiplying the amount of the distribution ($80,000) by the ratio of the nondeductible contributions to the account balance ($20,000/$100,000). Accordingly, under present law, $64,000 of the distribution ($80,000 minus $16,000) would be includible in Individual B's income.

Under the provision, notwithstanding the present-law tax treatment of IRA distributions, the distribution is treated as consisting of income first, up to the total amount that would be includible in gross income (but for the provision) if all amounts were distributed from all IRAs otherwise taken into account in determining the amount of IRA distributions. The total amount that would be includible in income if all amounts were distributed from the IRA is $80,000. Accordingly, under the provision, the entire $80,000 distributed to the charitable organization is treated as includible in income (before application of the provision) and is a qualified charitable distribution. As a result, no amount is included in Individual B's income as a result of the distribution and the distribution is not taken into account in determining the amount of Individual B's charitable deduction for the year. In addition, for purposes of determining the tax treatment of other distributions from the IRA, $20,000 of the amount remaining in the IRA is treated as Individual B's nondeductible contributions (i.e., not subject to tax upon distribution).

Split-interest trust filing requirements

The provision increases the penalty on split-interest trusts for failure to file a return and for failure to include any of the information required to be shown on such return and to show the correct information. The penalty is $20 for each day the failure continues up to $10,000 for any one return. In the case of a split-interest trust with gross income in excess of $250,000, the penalty is $100 for each day the failure continues up to a maximum of $50,000. In addition, if a person (meaning any officer, director, trustee, employee, or other individual who is under a duty to file the return or include required information)[300] knowingly failed to file the return or include required information, then that person is personally liable for such a penalty, which would be imposed in addition to the penalty that is paid by the organization. Information regarding beneficiaries that are not charitable organizations as described in section 170(c) is exempt from the requirement to make information publicly available. In addition, the provision repeals the present-law exception to the filing requirement for split-interest trusts that are required in a taxable year to distribute all net income currently to beneficiaries. Such exception remains available to trusts other than split-interest trusts that are otherwise subject to the filing requirement.

[300] Sec. 6652(c)(4)(C).

Effective Date

The provision relating to qualified charitable distributions is effective for distributions made in taxable years beginning after December 31, 2005, and taxable years beginning before January 1, 2008. The provision relating to information returns of split-interest trusts is effective for returns for taxable years beginning after December 31, 2006.

2. Charitable deduction for contributions of food inventory (sec. 170 of the Code)

Present Law

Under present law, a taxpayer's deduction for charitable contributions of inventory generally is limited to the taxpayer's basis (typically, cost) in the inventory, or if less the fair market value of the inventory.

For certain contributions of inventory, C corporations may claim an enhanced deduction equal to the lesser of (1) basis plus one-half of the item's appreciation (i.e., basis plus one half of fair market value in excess of basis) or (2) two times basis (sec. 170(e)(3)). In general, a C corporation's charitable contribution deductions for a year may not exceed 10 percent of the corporation's taxable income (sec. 170(b)(2)). To be eligible for the enhanced deduction, the contributed property generally must be inventory of the taxpayer, contributed to a charitable organization described in section 501(c)(3) (except for private nonoperating foundations), and the donee must (1) use the property consistent with the donee's exempt purpose solely for the care of the ill, the needy, or infants, (2) not transfer the property in exchange for money, other property, or services, and (3) provide the taxpayer a written statement that the donee's use of the property will be consistent with such requirements. In the case of contributed property subject to the Federal Food, Drug, and Cosmetic Act, the property must satisfy the applicable requirements of such Act on the date of transfer and for 180 days prior to the transfer.

A donor making a charitable contribution of inventory must make a corresponding adjustment to the cost of goods sold by decreasing the cost of goods sold by the lesser of the fair market value of the property or the donor's basis with respect to the inventory (Treas. Reg. sec. 1.170A-4A(c)(3)). Accordingly, if the allowable charitable deduction for inventory is the fair market value of the inventory, the donor reduces its cost of goods sold by such value, with the result that the difference between the fair market value and the donor's basis may still be recovered by the donor other than as a charitable contribution.

To use the enhanced deduction, the taxpayer must establish that the fair market value of the donated item exceeds basis. The valuation of food inventory has been the subject of disputes between taxpayers and the IRS.[301]

---

[301] *Lucky Stores Inc. v. Commissioner*, 105 T.C. 420 (1995) (holding that the value of surplus bread inventory donated to charity was the full retail price of the bread rather than half the retail price, as the IRS asserted).

Under the Katrina Emergency Tax Relief Act of 2005, any taxpayer, whether or not a C corporation, engaged in a trade or business is eligible to claim the enhanced deduction for certain donations made after August 28, 2005, and before January 1, 2006, of food inventory. For taxpayers other than C corporations, the total deduction for donations of food inventory in a taxable year generally may not exceed 10 percent of the taxpayer's net income for such taxable year from all sole proprietorships, S corporations, or partnerships (or other entity that is not a C corporation) from which contributions of "apparently wholesome food" are made. "Apparently wholesome food" is defined as food intended for human consumption that meets all quality and labeling standards imposed by Federal, State, and local laws and regulations even though the food may not be readily marketable due to appearance, age, freshness, grade, size, surplus, or other conditions.

Explanation of Provision

The provision extends the provision enacted as part of the Katrina Emergency Tax Relief Act of 2005. As under such Act, under the provision, any taxpayer, whether or not a C corporation, engaged in a trade or business is eligible to claim the enhanced deduction for donations of food inventory. For taxpayers other than C corporations, the total deduction for donations of food inventory in a taxable year generally may not exceed 10 percent of the taxpayer's net income for such taxable year from all sole proprietorships, S corporations, or partnerships (or other non C corporation) from which contributions of apparently wholesome food are made. For example, as under the Katrina Emergency Tax Relief Act of 2005, if a taxpayer is a sole proprietor, a shareholder in an S corporation, and a partner in a partnership, and each business makes charitable contributions of food inventory, the taxpayer's deduction for donations of food inventory is limited to 10 percent of the taxpayer's net income from the sole proprietorship and the taxpayer's interests in the S corporation and partnership. However, if only the sole proprietorship and the S corporation made charitable contributions of food inventory, the taxpayer's deduction would be limited to 10 percent of the net income from the trade or business of the sole proprietorship and the taxpayer's interest in the S corporation, but not the taxpayer's interest in the partnership.[302]

Under the provision, the enhanced deduction for food is available only for food that qualifies as "apparently wholesome food." "Apparently wholesome food" is defined as it is defined under the Katrina Emergency Tax Relief Act of 2005.

---

[302] The 10 percent limitation does not affect the application of the generally applicable percentage limitations. For example, if 10 percent of a sole proprietor's net income from the proprietor's trade or business was greater than 50 percent of the proprietor's contribution base, the available deduction for the taxable year (with respect to contributions to public charities) would be 50 percent of the proprietor's contribution base. Consistent with present law, such contributions may be carried forward because they exceed the 50 percent limitation. Contributions of food inventory by a taxpayer that is not a C corporation that exceed the 10 percent limitation but not the 50 percent limitation could not be carried forward.

Effective Date

The provision is effective for contributions made after December 31, 2005, and before January 1, 2008.

3. Basis adjustment to stock of S corporation contributing property (sec. 1367 of the Code)

Present Law

Under present law, if an S corporation contributes money or other property to a charity, each shareholder takes into account the shareholder's pro rata share of the contribution in determining its own income tax liability.[303] A shareholder of an S corporation reduces the basis in the stock of the S corporation by the amount of the charitable contribution that flows through to the shareholder.[304]

Explanation of Provision

The provision provides that the amount of a shareholder's basis reduction in the stock of an S corporation by reason of a charitable contribution made by the corporation will be equal to the shareholder's pro rata share of the adjusted basis of the contributed property.[305]

Thus, for example, assume an S corporation with one individual shareholder makes a charitable contribution of stock with a basis of $200 and a fair market value of $500. The shareholder will be treated as having made a $500 charitable contribution (or a lesser amount if the special rules of section 170(e) apply), and will reduce the basis of the S corporation stock by $200.[306]

Effective Date

The provision applies to contributions made in taxable years beginning after December 31, 2005, and taxable years beginning before January 1, 2008.

---

[303] Sec. 1366(a)(1)(A).

[304] Sec. 1367(a)(2)(B).

[305] *See* Rev. Rul. 96-11 (1996-1 C.B. 140) for a rule reaching a similar result in the case of charitable contributions made by a partnership.

[306] This example assumes that basis of the S corporation stock (before reduction) is at least $200.

4. Charitable deduction for contributions of book inventory (sec. 170 of the Code)

Present Law

Under present law, a taxpayer's deduction for charitable contributions of inventory generally is limited to the taxpayer's basis (typically, cost) in the inventory, or if less the fair market value of the inventory.

For certain contributions of inventory, C corporations may claim an enhanced deduction equal to the lesser of (1) basis plus one-half of the item's appreciation (i.e., basis plus one half of fair market value in excess of basis) or (2) two times basis (sec. 170(e)(3)). In general, a C corporation's charitable contribution deductions for a year may not exceed 10 percent of the corporation's taxable income (sec. 170(b)(2)). To be eligible for the enhanced deduction, the contributed property generally must be inventory of the taxpayer, contributed to a charitable organization described in section 501(c)(3) (except for private nonoperating foundations), and the donee must (1) use the property consistent with the donee's exempt purpose solely for the care of the ill, the needy, or infants, (2) not transfer the property in exchange for money, other property, or services, and (3) provide the taxpayer a written statement that the donee's use of the property will be consistent with such requirements. In the case of contributed property subject to the Federal Food, Drug, and Cosmetic Act, the property must satisfy the applicable requirements of such Act on the date of transfer and for 180 days prior to the transfer.

A donor making a charitable contribution of inventory must make a corresponding adjustment to the cost of goods sold by decreasing the cost of goods sold by the lesser of the fair market value of the property or the donor's basis with respect to the inventory (Treas. Reg. sec. 1.170A-4A(c)(3)). Accordingly, if the allowable charitable deduction for inventory is the fair market value of the inventory, the donor reduces its cost of goods sold by such value, with the result that the difference between the fair market value and the donor's basis may still be recovered by the donor other than as a charitable contribution.

To use the enhanced deduction, the taxpayer must establish that the fair market value of the donated item exceeds basis.

The Katrina Emergency Tax Relief Act of 2005 extended the present-law enhanced deduction for C corporations to certain qualified book contributions made after August 28, 2005, and before January 1, 2006. For such purposes, a qualified book contribution means a charitable contribution of books to a public school that provides elementary education or secondary education (kindergarten through grade 12) and that is an educational organization that normally maintains a regular faculty and curriculum and normally has a regularly enrolled body of pupils or students in attendance at the place where its educational activities are regularly carried on. The enhanced deduction under the Katrina Emergency Tax Relief Act of 2005 is not allowed unless the donee organization certifies in writing that the contributed books are suitable, in terms of currency, content, and quantity, for use in the donee's educational programs and that the donee will use the books in such educational programs.

Explanation of Provision

The provision extends the provision enacted as part of the Katrina Emergency Tax Relief Act of 2005. As under such Act, an enhanced deduction for C corporations for qualified book contributions is allowed.

Effective Date

The provision is effective for contributions made after December 31, 2005, and before January 1, 2008.

5. Modify tax treatment of certain payments to controlling exempt organizations (secs. 512 and 6033 of the Code)

Present Law

In general, interest, rents, royalties, and annuities are excluded from the unrelated business income of tax-exempt organizations. However, section 512(b)(13) generally treats otherwise excluded rent, royalty, annuity, and interest income as unrelated business income if such income is received from a taxable or tax-exempt subsidiary that is 50 percent controlled by the parent tax-exempt organization. In the case of a stock subsidiary, "control" means ownership by vote or value of more than 50 percent of the stock. In the case of a partnership or other entity, control means ownership of more than 50 percent of the profits, capital or beneficial interests. In addition, present law applies the constructive ownership rules of section 318 for purposes of section 512(b)(13). Thus, a parent exempt organization is deemed to control any subsidiary in which it holds more than 50 percent of the voting power or value, directly (as in the case of a first-tier subsidiary) or indirectly (as in the case of a second-tier subsidiary).

Under present law, interest, rent, annuity, or royalty payments made by a controlled entity to a tax-exempt organization are includable in the latter organization's unrelated business income and are subject to the unrelated business income tax to the extent the payment reduces the net unrelated income (or increases any net unrelated loss) of the controlled entity (determined as if the entity were tax exempt).

Explanation of Provision

The provision provides that the general rule of section 512(b)(13), which includes interest, rent, annuity, or royalty payments made by a controlled entity to the controlling tax-exempt organization in the latter organization's unrelated business income to the extent the payment reduces the net unrelated income (or increases any net unrelated loss) of the controlled entity, applies only to the portion of payments received or accrued in a taxable year that exceeds the amount of the specified payment that would have been paid or accrued if such payment had been determined under the principles of section 482. Thus, if a payment of rent by a controlled subsidiary to its tax-exempt parent organization exceeds fair market value, the excess amount of such payment over fair market value (as determined in accordance with section 482) is included in the parent organization's unrelated business income, to the extent that such excess reduced the net unrelated income (or increased any net unrelated loss) of the controlled entity (determined as if the entity were tax exempt). In addition, the provision imposes a 20-percent penalty on the

larger of such excess determined without regard to any amendment or supplement to a return of tax, or such excess determined with regard to all such amendments and supplements. The provision applies only to payments made pursuant to a binding written contract in effect on the date of enactment (or renewal of such a contract on substantially similar terms). It is intended that there should be further study of such arrangements in light of the provision before any determination about whether to extend or expand the provision is made.

The provision requires that a tax-exempt organization that receives interest, rent, annuity, or royalty payments from a controlled entity report such payments on its annual information return as well as any loans made to any controlled entity and any transfers between such organization and a controlled entity.

The provision provides that, not later than January 1, 2009, the Secretary shall submit a report to the Committee on Finance of the Senate and the Committee on Ways and Means of the House of Representatives a report on the effectiveness of the Internal Revenue Service in administering the provision and on the extent to which payments by controlled entities to the controlling exempt organization meet the requirements of section 482 of the Code. Such report shall include the results of any audit of any controlling organization or controlled entity and recommendations relating to the tax treatment of payments from controlled entities to controlling organizations.

Effective Date

The provision related to payments to controlling organizations applies to payments received or accrued after December 31, 2005 and before January 1, 2008. The provision relating to reporting is effective for returns the due date (determined without regard to extensions) of which is after the date of enactment. The provision relating to a report is effective on the date of enactment.

6. Encourage contributions of real property made for conservation purposes (sec. 170 of the Code)

Present Law

Charitable contributions generally

In general, a deduction is permitted for charitable contributions, subject to certain limitations that depend on the type of taxpayer, the property contributed, and the donee organization. The amount of deduction generally equals the fair market value of the contributed property on the date of the contribution. Charitable deductions are provided for income, estate, and gift tax purposes.[307]

In general, in any taxable year, charitable contributions by a corporation are not deductible to the extent the aggregate contributions exceed 10 percent of the corporation's

[307] Secs. 170, 2055, and 2522, respectively.

taxable income computed without regard to net operating or capital loss carrybacks. For individuals, the amount deductible is a percentage of the taxpayer's contribution base, which is the taxpayer's adjusted gross income computed without regard to any net operating loss carryback. The applicable percentage of the contribution base varies depending on the type of donee organization and property contributed. Cash contributions of an individual taxpayer to public charities, private operating foundations, and certain types of private nonoperating foundations may not exceed 50 percent of the taxpayer's contribution base. Cash contributions to private foundations and certain other organizations generally may be deducted up to 30 percent of the taxpayer's contribution base.

In general, a charitable deduction is not allowed for income, estate, or gift tax purposes if the donor transfers an interest in property to a charity while also either retaining an interest in that property or transferring an interest in that property to a noncharity for less than full and adequate consideration. Exceptions to this general rule are provided for, among other interests, remainder interests in charitable remainder annuity trusts, charitable remainder unitrusts, and pooled income funds, present interests in the form of a guaranteed annuity or a fixed percentage of the annual value of the property, and qualified conservation contributions.

Capital gain property

Capital gain property means any capital asset or property used in the taxpayer's trade or business the sale of which at its fair market value, at the time of contribution, would have resulted in gain that would have been long-term capital gain. Contributions of capital gain property to a qualified charity are deductible at fair market value within certain limitations. Contributions of capital gain property to charitable organizations described in section 170(b)(1)(A) (e.g., public charities, private foundations other than private non-operating foundations, and certain governmental units) generally are deductible up to 30 percent of the taxpayer's contribution base. An individual may elect, however, to bring all these contributions of capital gain property for a taxable year within the 50-percent limitation category by reducing the amount of the contribution deduction by the amount of the appreciation in the capital gain property. Contributions of capital gain property to charitable organizations described in section 170(b)(1)(B) (e.g., private non-operating foundations) are deductible up to 20 percent of the taxpayer's contribution base.

For purposes of determining whether a taxpayer's aggregate charitable contributions in a taxable year exceed the applicable percentage limitation, contributions of capital gain property are taken into account after other charitable contributions. Contributions of capital gain property that exceed the percentage limitation may be carried forward for five years.

Qualified conservation contributions

Qualified conservation contributions are not subject to the "partial interest" rule, which generally bars deductions for charitable contributions of partial interests in property. A qualified conservation contribution is a contribution of a qualified real property interest to a qualified organization exclusively for conservation purposes. A qualified real property interest is defined as: (1) the entire interest of the donor other than a qualified mineral interest; (2) a remainder interest; or (3) a restriction (granted in perpetuity) on the use that may be made of the real

property. Qualified organizations include certain governmental units, public charities that meet certain public support tests, and certain supporting organizations. Conservation purposes include: (1) the preservation of land areas for outdoor recreation by, or for the education of, the general public; (2) the protection of a relatively natural habitat of fish, wildlife, or plants, or similar ecosystem; (3) the preservation of open space (including farmland and forest land) where such preservation will yield a significant public benefit and is either for the scenic enjoyment of the general public or pursuant to a clearly delineated Federal, State, or local governmental conservation policy; and (4) the preservation of an historically important land area or a certified historic structure.

Qualified conservation contributions of capital gain property are subject to the same limitations and carryover rules of other charitable contributions of capital gain property.

Explanation of Provision

In general

Under the provision, the 30-percent contribution base limitation on contributions of capital gain property by individuals does not apply to qualified conservation contributions (as defined under present law). Instead, individuals may deduct the fair market value of any qualified conservation contribution to an organization described in section 170(b)(1)(A) to the extent of the excess of 50 percent of the contribution base over the amount of all other allowable charitable contributions. These contributions are not taken into account in determining the amount of other allowable charitable contributions.

Individuals are allowed to carryover any qualified conservation contributions that exceed the 50-percent limitation for up to 15 years.

For example, assume an individual with a contribution base of $100 makes a qualified conservation contribution of property with a fair market value of $80 and makes other charitable contributions subject to the 50-percent limitation of $60. The individual is allowed a deduction of $50 in the current taxable year for the non-conservation contributions (50 percent of the $100 contribution base) and is allowed to carryover the excess $10 for up to 5 years. No current deduction is allowed for the qualified conservation contribution, but the entire $80 qualified conservation contribution may be carried forward for up to 15 years.

Farmers and ranchers

Individuals

In the case of an individual who is a qualified farmer or rancher for the taxable year in which the contribution is made, a qualified conservation contribution is allowable up to 100 percent of the excess of the taxpayer's contribution base over the amount of all other allowable charitable contributions.

In the above example, if the individual is a qualified farmer or rancher, in addition to the $50 deduction for non-conservation contributions, an additional $50 for the qualified

conservation contribution is allowed and $30 may be carried forward for up to 15 years as a contribution subject to the 100-percent limitation.

Corporations

In the case of a corporation (other than a publicly traded corporation) that is a qualified farmer or rancher for the taxable year in which the contribution is made, any qualified conservation contribution is allowable up to 100 percent of the excess of the corporation's taxable income (as computed under section 170(b)(2)) over the amount of all other allowable charitable contributions. Any excess may be carried forward for up to 15 years as a contribution subject to the 100-percent limitation.

Requirement that land be available for agriculture or livestock production

As an additional condition of eligibility for the 100 percent limitation, with respect to any contribution of property in agriculture or livestock production, or that is available for such production, by a qualified farmer or rancher, the qualified real property interest must include a restriction that the property remain generally available for such production. (There is no requirement as to any specific use in agriculture or farming, or necessarily that the property be used for such purposes, merely that the property remain available for such purposes.) Such additional condition does not apply to contributions made after December 31, 2005, and on or before the date of enactment.

Definition

A qualified farmer or rancher means a taxpayer whose gross income from the trade of business of farming (within the meaning of section 2032A(e)(5)) is greater than 50 percent of the taxpayer's gross income for the taxable year.

Effective Date

The provision applies to contributions made in taxable years beginning after December 31, 2005, and before January 1, 2008.

7. Excise tax exemptions for blood collector organizations (secs. 4041, 4221, 4253, 4483, 6416, and 7701 of the Code)

Present Law

American National Red Cross

The American National Red Cross ("Red Cross") is a Congressionally chartered corporation. It is responsible for giving aid to members of the U.S. Armed Forces, to disaster victims in the United States and abroad to help people prevent, prepare for, and respond to

emergencies.[308] The Red Cross is responsible for over half of the nation's blood supply and blood products.

Exemption from certain retail and manufacturers excise taxes

The Code permits the Secretary to exempt from excise tax certain articles and services to be purchased for the exclusive use of the United States (sec. 4293). This authority is conditioned upon the Secretary determining (1) that the imposition of such taxes will cause substantial burden or expense which can be avoided by granting tax exemption and (2) that full benefit of such exemption, if granted, will accrue to the United States.

On April 18, 1979, the Secretary exercised this authority to exempt, with limited exceptions, the Red Cross from the taxes imposed by chapters 31 and 32 of the Code with respect to articles sold to the Red Cross for its exclusive use.[309] An exemption is also authorized from the taxes imposed with respect to tires and inner tubes if such tire or inner tube is sold by any person on or in connection with the sale of any article to the American National Red Cross, for its exclusive use.[310] No exemption is provided from the gas guzzler tax (sec. 4064), and the taxes imposed on aviation fuel, on fuel used on inland waterways (sec. 4042), and on coal (sec. 4121).[311] The exemption is subject to registration requirements for tax-free sales contained in Treasury regulations. Credit and refund of tax is subject to the requirements set forth in section 6416 relating to the exemption for taxable articles sold for the exclusive use of State and local governments.

Exemption from heavy highway motor vehicle use tax

An annual use tax is imposed on highway motor vehicles, at the rates below (sec. 4481).

Under 55,000 pounds	No tax
55,000-75,000 pounds	$100 plus $22 per 1,000 pounds over 55,000
Over 75,000 pounds	$550

[308] *See* 36 U.S.C. sec. 300102.

[309] Department of the Treasury, *Notice-Manufacturers and Retailers Excise Taxes -Exemption from Tax of Sales of Certain Articles to the American Red Cross*, 44 F.R. 23407, 1979-1 C.B. 478 (1979). At the time the notice was issued the following taxes were covered in Chapters 31 and 32: special fuels, automotive and related items (motor vehicles, tires and tubes, petroleum products, coal, and recreational equipment (sporting goods and firearms).

[310] Under present law, there is no longer a tax on inner tubes.

[311] Department of the Treasury, *Notice-Manufacturers and Retailers Excise Taxes -Exemption from Tax of Sales of Certain Articles to the American Red Cross*, 44 F.R. 23407, 1979-1 C.B. 478, at 479 (1979). The Treasury notice also exempts the Red Cross from tax on aircraft tires and tubes, however, present law currently limits the tax to highway vehicle tires (sec. 4071(a)).

The Code provides that the Secretary may authorize exemption from the heavy highway vehicle use tax as to the use by the United States of any particular highway motor vehicle or class of highway motor vehicles if the Secretary determines that the imposition of such tax with respect to such use will cause substantial burden or expense which can be avoided by granting tax exemption and that the full benefit of such exemption, if granted will accrue to the United States (sec. 4483(b)). The IRS has ruled that the Red Cross comes within the term "United States" for purposes of the exemption from the heavy highway motor vehicle use tax (Rev. Rul. 76-510).

Exemption from communications excise tax

The Code imposes a three-percent tax on amounts paid for local telephone service; toll telephone service and teletypewriter exchange service (sec. 4251). These taxes do not apply to amounts paid for services furnished to the Red Cross (sec. 4253(c)).

Certain other tax-free sales

Exemption from certain manufacturer and retail sale excise taxes

The following sales generally are exempt from certain manufacturer and retail sale excise taxes: (1) for use by the purchaser for further manufacture, or for resale to a second purchaser in further manufacture; (2) for export or for resale to a second purchaser for export; (3) for use by the purchaser as supplies for vessels or aircraft; (4) to a State or local government for the exclusive use of a State or local government; and (5) to a nonprofit educational organization for its exclusive use (sec. 4221). The exemption generally applies to manufacturers taxes imposed by chapter 32 of the Code (the gas guzzlers tax, and the taxes imposed on tires, certain vaccines, and recreational equipment) and the tax on retail sales of heavy trucks and trailers.[312]

The manufacturers excise taxes on coal (sec. 4121), on gasoline, diesel fuel, and kerosene (sec. 4081) are not covered by the exemption. The exemption for a sale to a State or local government for their exclusive use and the exemption for sales to a nonprofit educational organization does not apply to the gas guzzlers tax, and the tax on vaccines. In addition, the exemption of sales for use as supplies for vessels and aircraft does not apply to the vaccine tax.

Exempt sales of special fuels

A retail excise tax is imposed on special motor fuels, including propane, compressed natural gas, and certain alcohol mixtures (sec. 4041). Section 4041 also serves as a back-up tax for diesel fuel or kerosene that was not subject to the manufacturers taxes under section 4081 (other than the Leaking Underground Storage Tank Trust Fund tax) if such fuel is delivered into

[312] The tax imposed by subchapter A of chapter 31 (relating to luxury passenger vehicles) are also exempt pursuant to this provision, however, this tax expired on December 31, 2002. (sec. 4001(g).)

the fuel supply tank of a diesel-powered highway vehicle or train.[313] No tax is imposed on these fuels for nontaxable uses, including fuel: (1) sold for use or used as supplies for vessels or aircraft, (2) sold for the exclusive use of any State, any political subdivision of a State, or the District of Columbia or used by such entity as fuel, (3) sold for export, or for shipment to a possession of the United States and is actually exported or shipped, (4) sold to a nonprofit educational organization for its exclusive use, or used by such entity as fuel (sec. 4041(g)).

Credits and refunds

In general

A credit or refund is allowed for overpayment of manufacturers or retail excise taxes (sec. 6416). Overpayments include (1) certain uses and resales, (2) price adjustments, and (3) further manufacture.

Specified uses and resales

The special fuel taxes, the retail tax on heavy trucks and trailers, and any of the manufacturers excise taxes paid on any article will be a deemed overpayment subject to credit or refund if sold for certain specified uses (sec. 6416(b)(2)). These uses are (1) export, (2) used or sold for use as supplies for vessels or aircraft, (3) sold to a State or local government for the exclusive use of a State or local government, (4) sold to a nonprofit educational organization for its exclusive use; (5) taxable tires sold to any person for use in connection with a qualified bus, or (6) the case of gasoline used or sold for use in the production of a special fuel. Certain exceptions apply in that this deemed overpayment rule does not apply to the taxes imposed by sections 4041 and 4081 on diesel fuel and kerosene, and the coal taxes (sec. 4121). Additionally, the deemed overpayment rule does not apply to the gas guzzler tax in the case of an article sold to a state or local government for its exclusive use or sold to an educational organization for its exclusive use.

Special rule for tires sold in connection with other articles

If the tax imposed on tires (sec. 4071) has been paid with respect to the sale of any tire by the manufacturer, producer, or importer, and such tire is sold by any person in connection with the sale of any other article, such tax will be deemed an overpayment by person if such other article (1) is an automobile bus chassis or an automobile bus body, or (2) is by any person exported, sold to a State or local government for exclusive use of a State or local government, sold to a nonprofit educational organization for its exclusive use, or used or sold for use as supplies for vessels or aircraft (sec. 6416(b)(4)).

Gasoline used for exempt purposes

[313] For example, tax is imposed on the delivery of any of the following into the fuel supply tank of a diesel powered highway vehicle or train of any dyed diesel or dyed kerosene for other than a nontaxable use; any undyed diesel fuel or undyed kerosene on which a credit or refund.

If gasoline is sold to any person for certain specified purposes, the Secretary is required to pay (without interest) to such person an amount equal to the product of the number of gallons of gasoline so sold multiplied by the rate at which tax was imposed on such gasoline under section 4081 (sec. 6421(c)). Under this provision, the specified purposes are (1) for export or for resale to a second purchaser for export; (2) for use by the purchaser as supplies for vessels or aircraft; (3) to a State or local government for exclusive use of a State or local government; and (4) to a nonprofit educational organization for its exclusive use (sec. 4221(a), 6421(c)).

Diesel fuel or kerosene used in a nontaxable use

If diesel fuel or kerosene, upon which tax has been imposed is used by any person in a nontaxable use, the Code authorizes the Secretary to pay (without interest) an amount equal to the aggregate amount of tax imposed on such fuel (sec. 6427(l)). Nontaxable uses include any exemption from the tax imposed by section 4041(a) (except prior taxation).

Explanation of Provision

The provision exempts qualified blood collector organizations from certain retail and manufacturers excise taxes to the extent such items are for the exclusive use of such an organization for the distribution or collection of blood. A qualified blood collector organization means an organization that is (1) described in section 501(c)(3) and exempt from tax under section 501(a), (2) primarily engaged in the activity of the collection of blood, (3) registered with the Secretary for purposes of excise tax exemptions, and (4) registered by the Food and Drug Administration to collect blood.

Under the provision, qualified blood collector organizations are exempt from the communications excise tax as provided by Treasury regulations. The provision also provides an exemption from the special fuels tax, and certain taxes imposed by chapter 32 and subchapter A and C of chapter 31 of the Code (i.e., the retail excise tax on heavy trucks and trailers, and the manufacturers excise taxes on tires). 314 The provision also makes conforming amendments to allow for the credit or refund of these taxes and any tax paid on gasoline for the exclusive use of the blood collector organization. The provision also permits a refund of tax for diesel fuel or kerosene used by a qualified blood collector organization. Finally, the provision provides an exemption from the heavy vehicle use tax of a "qualified blood collector vehicle" by a qualified blood collector organization. A "qualified blood collector vehicle" means a vehicle at least 80 percent of the use of which during the prior taxable period was by a qualified blood collector organization in the collection, storage, or transportation of blood. A special rule is provided for the first taxable period a vehicle is placed in service by the qualified blood collector organization. For the first taxable period a vehicle is placed in service by the organization, the vehicle will be treated as a "qualified blood collector vehicle" for that period if the organization certifies that it reasonably expects that at least 80 percent of the use of the vehicle during such

[314] Such organizations are also exempt from the expired retail excise tax on luxury passenger vehicles. No exemption is provided from the gas guzzler tax (sec. 4064), the taxes imposed on fuel used on inland waterways (sec. 4042), on coal (sec. 4121), and on recreational equipment (sport fishing equipment, bows, arrow components, and firearms).

taxable period will be by the organization in the collection, storage, or transportation of blood. Such certification is to be provided to the Secretary on such forms and in such manner as the Secretary may require.

It is expected that the excise tax exemptions of the Red Cross will be reexamined in conjunction with a review of its charter.

Effective Date

Generally, the provision is effective on January 1, 2007. The exemption from the heavy vehicle use tax is effective for taxable periods beginning July 1, 2007.

B. Reforming Exempt Organizations

1. Reporting on certain acquisitions of interests in insurance contracts in which certain exempt organizations hold interests (new sec. 6050V of the Code)

Present Law

Amounts received under a life insurance contract

Amounts received under a life insurance contract paid by reason of the death of the insured are not includible in gross income for Federal tax purposes.[315] No Federal income tax generally is imposed on a policyholder with respect to the earnings under a life insurance contract (inside buildup).[316]

Distributions from a life insurance contract (other than a modified endowment contract) that are made prior to the death of the insured generally are includible in income to the extent that the amounts distributed exceed the taxpayer's investment in the contract (i.e., basis). Such distributions generally are treated first as a tax-free recovery of basis, and then as income.[317]

Transfers for value

A limitation on the exclusion for amounts received under a life insurance contract is provided in the case of transfers for value. If a life insurance contract (or an interest in the contract) is transferred for valuable consideration, the amount excluded from income by reason of the death of the insured is limited to the actual value of the consideration plus the premiums and other amounts subsequently paid by the acquiror of the contract.[318]

---

[315] Sec. 101(a).

[316] This favorable tax treatment is available only if a life insurance contract meets certain requirements designed to limit the investment character of the contract. Sec. 7702.

[317] Sec. 72(e). In the case of a modified endowment contract, however, in general, distributions are treated as income first, loans are treated as distributions (i.e., income rather than basis recovery first), and an additional 10-percent tax is imposed on the income portion of distributions made before age 59-½ and in certain other circumstances. Secs. 72(e) and (v). A modified endowment contract is a life insurance contract that does not meet a statutory "7-pay" test, i.e., generally is funded more rapidly than seven annual level premiums. Sec. 7702A.

[318] Section 101(a)(2). The transfer-for-value rule does not apply, however, in the case of a transfer in which the life insurance contract (or interest in the contract) transferred has a basis in the hands of the transferee that is determined by reference to the transferor's basis. Similarly, the transfer-for-value rule generally does not apply if the transfer is between certain parties (specifically, if the transfer is to the insured, a partner of the insured, a partnership in which the insured is a partner, or a corporation in which the insured is a shareholder or officer).

Tax treatment of charitable organizations and donors

Present law generally provides tax-exempt status for charitable, educational and certain other organizations, no part of the net earnings of which inures to the benefit of any private shareholder or individual, and which meet certain other requirements.[319] Governmental entities, including some educational organizations, are exempt from tax on income under other tax rules providing that gross income does not include income derived from the exercise of any essential governmental function and accruing to a State or any political subdivision thereof.[320]

In computing taxable income, a taxpayer who itemizes deductions generally is allowed to deduct the amount of cash and the fair market value of property contributed to an organization described in section 501(c)(3) or to a Federal, State, or local governmental entity for exclusively public purposes.[321]

State-law insurable interest rules

State laws generally provide that the owner of a life insurance contract must have an insurable interest in the insured person when the life insurance contract is issued. State laws vary as to the insurable interest of a charitable organization in the life of any individual. Some State laws provide that a charitable organization meeting the requirements of section 501(c)(3) of the Code is treated as having an insurable interest in the life of any donor,[322] or, in other States, in the life of any individual who consents (whether or not the individual is a donor).[323] Other States' insurable interest rules permit the purchase of a life insurance contract even though the person paying the consideration has no insurable interest in the life of the person insured if a charitable, benevolent, educational or religious institution is designated irrevocably as the beneficiary.[324]

Transactions involving charities and non-charities acquiring life insurance

Recently, there has been an increase in transactions involving the acquisition of life insurance contracts using arrangements in which both exempt organizations, primarily charities,

Laws Ann. ch. 175, sec. 123A(2) (West 2005); Iowa Code Ann. sec. 511.39 (West 2004) ("a person who, when purchasing a life insurance policy, makes a donation to the charitable organization or makes the charitable organization the beneficiary of all or a part of the proceeds of the policy . . .).

[323] See, e.g., Cal. Ins. Code sec. 10110.1(f) (West 2005); 40 Pa. Cons. Stat. Ann. sec. 40-512 (2004); Fla. Stat. Ann. sec. 27.404 (2) (2004); Mich. Comp. Laws Ann. sec. 500.2212 (West 2004).

[324] Or. Rev. Stat. sec. 743.030 (2003); Del. Code Ann. Tit. 18, sec. 2705(a) (2004).

and private investors have an interest in the contract.[325] The exempt organization has an insurable interest in the insured individuals, either because they are donors, because they consent, or otherwise under applicable State insurable interest rules. Private investors provide capital used to fund the purchase of the life insurance contracts, sometimes together with annuity contracts. Both the private investors and the charity have an interest in the contracts, directly or indirectly, through the use of trusts, partnerships, or other arrangements for sharing the rights to the contracts. Both the charity and the private investors receive cash amounts in connection with the investment in the contracts while the life insurance is in force or as the insured individuals die.

Explanation of Provision

The provision includes a temporary reporting requirement with respect to the acquisition of interests in certain life insurance contracts by certain exempt organizations, together with a Treasury study.

The provision provides that, for reportable acquisitions occurring after the date of enactment and on or before the date two years from the date of enactment, an applicable exempt organization that makes a reportable acquisition is required to file an information return. The information return is to contain the name, address, and taxpayer identification number of the organization and of the issuer of the applicable insurance contract, and such other information as the Secretary of the Treasury prescribes. It is intended that the Treasury Department may require the reporting of other information relevant to the study required under the provision. The report is to be in the form prescribed by the Treasury Secretary and is required to be filed at the time established by the Treasury Secretary. It is intended that the Treasury Department may require the report to be filed within a certain period after the reportable acquisition takes place in order to gather information in a timely manner that is relevant to the study required under the provision.

For this purpose, a reportable acquisition means the acquisition by an applicable exempt organization of a direct or indirect interest in a contract that the applicable exempt organization knows or has reason to know is an applicable insurance contract, if such acquisition is a part of a structured transaction involving a pool of such contracts.

An applicable insurance contract means any life insurance, annuity, or endowment contract with respect to which both an applicable exempt organization and a person other than an applicable exempt organization have directly or indirectly held an interest in the contract (whether or not at the same time). Exceptions apply under this definition. First, the term does not apply if each person (other than an applicable exempt organization) with a direct or indirect interest in the contract has an insurable interest in the insured independent of any interest of the exempt organization in the contract. Second, the term does not apply if the sole interest in the contract of the applicable exempt organization or each person other than the applicable exempt

[325] Davis, Wendy, "Death-Pool Donations," Trusts and Estates, May 2004, 55; Francis, Theo, "Tax May Thwart Investment Plans Enlisting Charities," Wall St. J., Feb. 8, 2005, A-10.

organization is as a named beneficiary. Third, the term does not apply if the sole interest in the contract of each person other than the applicable exempt organization is either (1) as a beneficiary of a trust holding an interest in the contract, but only if the person's designation as such a beneficiary was made without consideration and solely on a purely gratuitous basis, or (2) as a trustee who holds an interest in the contract in a fiduciary capacity solely for the benefit of applicable exempt organizations or of persons otherwise meeting one of the first two exceptions.

An applicable exempt organization is any organization described in section 170(c), 168(h)(2)(A)(iv), 2055(a), or 2522(a). Thus, for example, an applicable exempt organization generally includes an organization that is exempt from Federal income tax by reason of being described in section 501(c)(3) (including one organized outside the United States), a government or political subdivision of a government, and an Indian tribal government.

Under the provision, penalties apply for failure to file the return.

The reporting requirement terminates with respect to reportable acquisitions occurring after the date that is 2 years after the date of enactment.

The provision requires the Treasury Secretary to undertake a study on the use by tax-exempt organizations of applicable insurance contracts for the purpose of sharing the benefits of the organization's insurable interest in insured individuals under such contracts with investors, and whether such activities are consistent with the tax-exempt status of the organizations. The study may, for example, address whether certain such arrangements are or may be used to improperly shelter income from tax, and whether they should be listed transactions within the meaning of Treasury Regulation section 1.6011-4(b)(2). No later than 30 months after the date of enactment, the Treasury Secretary is required to report on the study to the Committee on Finance of the Senate and the Committee on Ways and Means of the House of Representatives.

Effective Date

The reporting provision is effective for acquisitions of contracts after the date of enactment. The study provision is effective on the date of enactment.

2. Increase the amounts of excise taxes imposed relating to public charities, social welfare organizations, and private foundations (secs. 4941, 4942, 4943, 4944, 4945, and 4958 of the Code)

Present Law

Public charities and social welfare organizations

The Code imposes excise taxes on excess benefit transactions between disqualified persons (as defined in section 4958(f)) and charitable organizations (other than private

foundations) or social welfare organizations (as described in section 501(c)(4)).[326] An excess benefit transaction generally is a transaction in which an economic benefit is provided by a charitable or social welfare organization directly or indirectly to or for the use of a disqualified person, if the value of the economic benefit provided exceeds the value of the consideration (including the performance of services) received for providing such benefit.
