TENNESSEE WASTEWATER SYSTEMS, INC.

AN ADENUS UTILITY

June 5, 2014

Docket No. 14-00062

Honorable Jim Allison Chairman Tennessee Regulatory Authority 502 Deaderick Street 4th Floor Nashville, TN 37243

RE: Petition to amend Certificate of Convenience and Necessity

Dear Chairman Allison:

Matt Pickney

Tennessee Wastewater Systems, Inc. desires to expand its service area to include a portion of Williamson County in Tennessee, known as Clovercroft Acres. The attached Petition is in support of our request. The proposed updated tariff sheets accompanying this petition are for informational purposes only.

Sincerely,

Matt Pickney, Operations Manager Tennessee Wastewater Systems, Inc.

851 Aviation Parkway Smyrna, TN 37167 (615) 220-7200 Fax (615) 220-7207

BEFORE THE TENNESSEE REGULATORY AUTHORITY

	NASHVILLE, TENNESSEE
	, 2014
IN RE:	PETITION OF TENNESSEE WASTEWATER SYSTEMS
	INC. TO AMEND ITS CERTIFICATE OF

DOCKET NO.		

CONVENIENCE AND NECESSITY

Petition of Tennessee Wastewater Systems, Inc. To amend its Certificate of Convenience and Necessity

Tennessee Wastewater Systems, Inc. ("TWSI") petitions the Tennessee Regulatory Authority ("TRA") to amend TWSI's Certificate of Convenience and Necessity to expand its service area to include a portion of Williamson County known as

Clovercroft Acres. The project is located along Clovercroft Road just east of Tulloss Road in Williamson County. The property includes parcel 5 on Tax Map 81, which is represented on the tax map enclosed (see attached "Exhibit A"). This parcel encompasses

approximately 12 acres.

We are proposing to provide wastewater service to approximately 120 residential units at Clovercroft Acres. Residential customers will be charged according to residential Rate Class 1, currently set at \$46.15 as of the date of this submittal. The wastewater system will be designed and constructed to serve approximately 120 units (approximately 36,000 gallons per day) and can be expanded if needed. The TDEC application for a permit has been submitted and is enclosed (see attached "Exhibit B"). A Professional Services Agreement has been signed by Adenus Solutions Group, LLC and the developer. It is the intention of the parties that TWSI will own the collection, treatment, and dispersal system and will own a permanent easement on the property that the system occupies.

Also enclosed are letters from the Nolensville/College Grove Utility District and the Williamson County Mayor stipulating that neither of these entities will provide sewer service for this parcel. We have also enclosed a letter from the President of LandDevelopment.com, Ardavan Afrakhteh, requesting TWSI to be the public sewer utility provider for the project.

After approval, the construction of the system, which is comprised of watertight effluent collection, fixed film treatment, and subsurface drip dispersal, will take approximately 60 days to complete. The estimated value of the contribution in aid of the construction of the initial wastewater system is approximately \$675,000.00.

Respectfully Submitted,

Tennessee Wastewater Systems, Inc.

CERTIFICATE OF SERVICE

The undersigned hereby certifies that the above and foregoing Pre-Filed Direct Testimony of Matt Pickney has been served upon the Tennessee Regulatory Authority, 502 Deaderick Street, Nashville, TN 37243 on this 5th day of June 2014 and delivered by hand.

MATT PICKNEY

LandDevelopment.com 798 Old Hickory Blvd Brentwood, TN 37027

Date: June 4, 2014

Mr. Charles Hyatt President Tennessee Wastewater Systems, Inc. 851 Aviation Parkway Smyrna, TN 37167

Dear Mr. Hyatt:

This letter is a request for Tennessee Wastewater Systems, Inc. to provide sewer services for the area(s) near Clovercroft Road, Williamson County, Tennessee. The areas of interest are identified in Williamson County Tax Maps as: Map 81, parcel 5.

We are proposing to develop a residential subdivision, currently known as Clovercroft Acres, with approximately 120 single family lots.

Sincerely

Ardavan Afrakhteh

President

LandDevelopment.com

WILLIAMSON COUNTY GOVERNMENT

May 20, 2014

VIA UNITED STATES MAIL

Mr. Ardavan Afrakhteh LandDevelopment.Com, Inc. 798 Old Hickory Blvd. Brentwood, TN 37027

Re:

Sewer Request - Clovercroft Acres Subdivision,

Tax Map 81, Parcel 5.00

Mr. Afrakhteh:

On May 16, 2014, Williamson County received your request that sewer service be provided to the above-named property. In response to your inquiry, this correspondence confirms that Williamson County Government does not currently provide public sanitary sewer service and has no plans in the foreseeable future to provide said service.

I hope this information is helpful. Should you need anything further, please do not hesitate to contact me.

Sincerely,

Rogers C. Anderson

County Mayor

Nolensville/College Grove Utility District N

C P.O. Box 127, 2000 Johnson Industrial Blvd., Nolensville, TN 37135

August 14, 2013

Jamie Reed, President Site Engineering Consultants, Inc. 850 Middle Tennessee Blvd. Murfreesboro, TN 37219

Re:

Clovercroft Acres Subdivision Sanitary Sewer Service

Dear Mr. Reed.

The Board of Commissioners, at its regular meeting on August 13, 2013, did approve your request to release its charter rights to provide sanitary sewer service to the proposed development known as Clovercroft Acres and depicted as Map 81, Parcel 5.00.

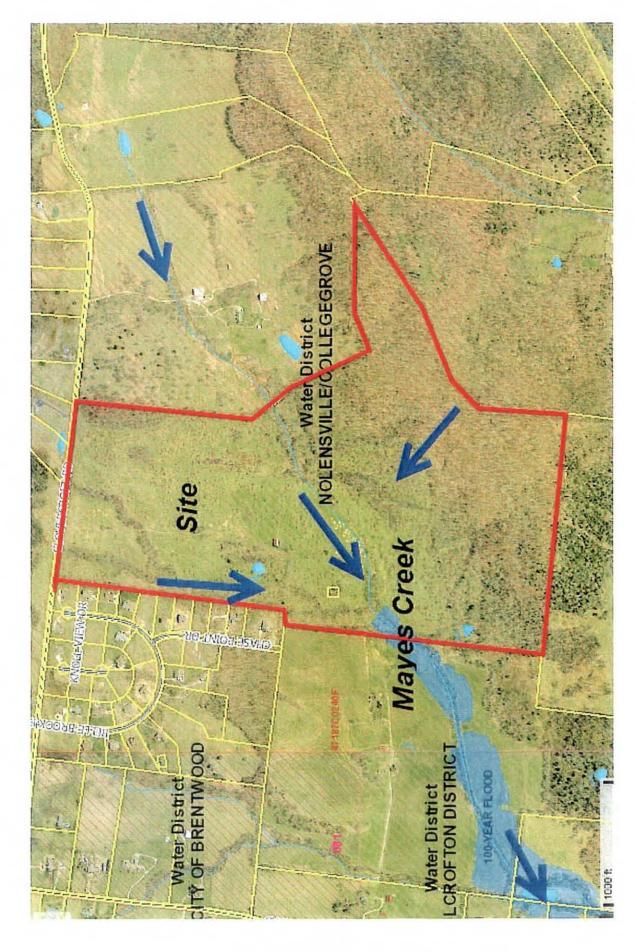

Please feel free to contact me if I can be of further assistance.

Sincerely,

Charles Strasser

Charles Thasser

Engineering Report (required for collection systems and/or land application treatment systems): N/A Prepared in accordance with Rule 1200-4-2-.03 and Section 1.2 of the Tennessee Design Criteria (see website for more information) Attached, or Previously submitted and entitled: Approved? Yes. Date: □ No Wastewater Collection System: N/A System type (i.e., gravity, low pressure, vacuum, combination, etc.): Watertight effluent pressure collection system System Description: 2", 3", and 4" diameter SDR 21 PVC pressure pipe and required fittings Describe methods to prevent and respond to any bypass of treatment or discharges (i.e., power failures, equipment failures, heavy rains, etc.): Each home has a minimum of 24-36 hours storage in the STEP tank. Heavy rains have a minimal impact on a watertight collection system. Small generators can be connected to the pump stations and treatment system as necessary during an extended power outage. In the event of a system failure describe means of operator notification: All pumps have redundancy & alarms. List the emergency contact(s) (name/phone): Brian Carter /615-220-7200 For low-pressure systems, who is responsible for maintenance of STEP/STEG tanks and pumps or grinder pumps (list all contact information)? STEP tanks - Adenus Operations, 849 Aviation Parkway, Smyrna, TN 37167 (615) 220-7200 Approximate length of sewer (excluding private service lateral): 17,800 LF Number/hp of lift stations: Number/hp of lift pumps Number/volume of low pressure and or grinder pump tanks Proposed 1-5000 gal Recirc Tank, 1-3,000 gal Final Dose Tank Number/volume septic tanks 200~1,500 STEP tanks Attach a schematic of the collection system. Attached If this is a satellite sewer and you are tying in to another sewer system complete the following section, listing tie-in points to the sewer system and their location (attach additional sheets as necessary): Latitude (xx.xxxx°) Tic-in Point Longitude (xx.xxxx°) None □ N/A Land Application Treatment System: Type of Land Application Treatment System: Drip ☐ Spray Other, explain: Type of treatment facility preceding land application (recirculating media filters, lagoons, other, etc.): Recirculating media filter Attach a treatment schematic. Attached Describe methods to prevent and respond to any bypass of treatment or discharges (i.e., power failures, equipment failures, heavy rains, etc.): The existing septic tank and proposed STEP tanks are sized for peak daily flow storage for the purpose of power failures and equipment failures. For New or Modified Projects: Clovercroft Acres SD Name of Developer for the project: NVR, Inc. Davis Lamb Developer address and phone number: 93 Senboard Lane, Suite 201 Brentwood, TN 37027 (615)-377-6840 For land application, list: Proposed acreage involved: approx. 12 acres total Minches/week upd/sq.fl loading rule to be applied: 2.2 with 6 acre reserve, approximately 0.2 gpd/sf loading rate Is wastewater disinfection proposed? Yes Describe land application area access: No Describe how access to the land application area will be restricted fence with access gates

Permit Number: SOP-Attach required additional Engineering Report Information (see website for more information) ☑ Topographic map (1:25,000 scale presented at a six inch by six inch minimum size) showing the location of the project including quadrangle(s) name(s) GPS coordinates, and latitude and longitude in decimal degrees should also be included. Scaled layout of facility showing the following: lots, buildings, etc. being served, the wastewater collection system routes, the pretreatment system location, the proposed land application area(s), roads, property boundaries, and sensitive areas such as streams, lakes, springs, wells, wellhead protection areas, sinkholes and wetlands. Soils information for the proposed land disposal area in the form of a Water Pollution Control (WPC) Soils Map per Chapter 16 and 17 State of Tennessee Design Criteria for Sewage Work. The soils information should include soil depth (borings to a minimum of 4 feet or refusal) and soil profile description for each soil mapped. Topographic map of the area where the wastewater is to be land applied with no greater than ten foot contours presented at a minimum size of 24 inches by 24 inches. Describe alternative application methods based on the following priority rating: (1) connection to a municipal/public sewer system, (2) connection to a conventional subsurface disposal system as regulated by the Division of Groundwater Protection, and/or (3) land application. For Drip Dispersal Systems Only: Unless otherwise determined by the Department, sewage treatment effluent wells, i.e. large capacity treatment/drip dispersal systems after approval of the SOP Application, will be issued an UIC tracking number and will be authorized as Permit by Rule per UIC Rule 1200-4-6-.14(2) and upon issue of a State Operating Permit and Sewage System Construction Approval by the Department, Describe the following: The area of review (AOR) for each Drip Dispersal System shall, unless otherwise specified by the Department, consist of the area lying within a one mile radius or an area defined by using calculations under 1200-4-6-,09 of the Drip Dispersal System site or facility, and shall include, but not be limited to general surface geographic features, general subsurface geology, and general demographic and cultural features within the area. Attach to this part of the application a general characterization of the AOR, including the following: (This can be in narrative form) see 2.0 A general description of all past and present groundwater uses as well as the general groundwater flow direction and general water quality. see 3.0 A general description of the population and cultural development within the AOR; i.e. A gricultural, Commercial, residential or C mixed, sec 4.0 Nature of injected fluid to include physical, chemical, biological or radiological characteristics. sec 5.0 If groundwater is used for drinking water within the area of review, then identify and locate on a topographic map all groundwater withdrawal points within the AOR, which supply public or private drinking water systems. Or supply map showing general location of publicly supplied water for the area(this can be obtained from the water provider) see 6.0 If the proposed system is located within a wellhead protection area or source water protection area designated by Rule 1200-5-1-,34, show the boundary of the protection area on the facility site plan. Description of system, Volume of injected fluid in gallons per day based upon design flow, including any monitoring wells see 7.0 Nature and type of system, including installed dimensions of wells and construction materials see 8.0 N/A Pump and Haul: Reason system cannot be served by public sewer: Distance to the nearest manhole where public sewer service is available; When sewer service will be available: Volume of holding tank: gal. Tennessee licensed septage hauler (attach copy of agreement): Facility accepting the septage (attach copy of acceptance letter): Latitude and Longitude (in decimal degrees) of approved manhole for discharge of septage: Describe methods to prevent and respond to any bypass of treatment or discharges (i.e., power failures, equipment failures, heavy rains, etc.):

Holding Ponds (for non-domestic wastewater only):	⊠ N/A
Pond use: ☐ Recirculation ☐ Sedimentation ☐ Cooling ☐ Other (describe):	

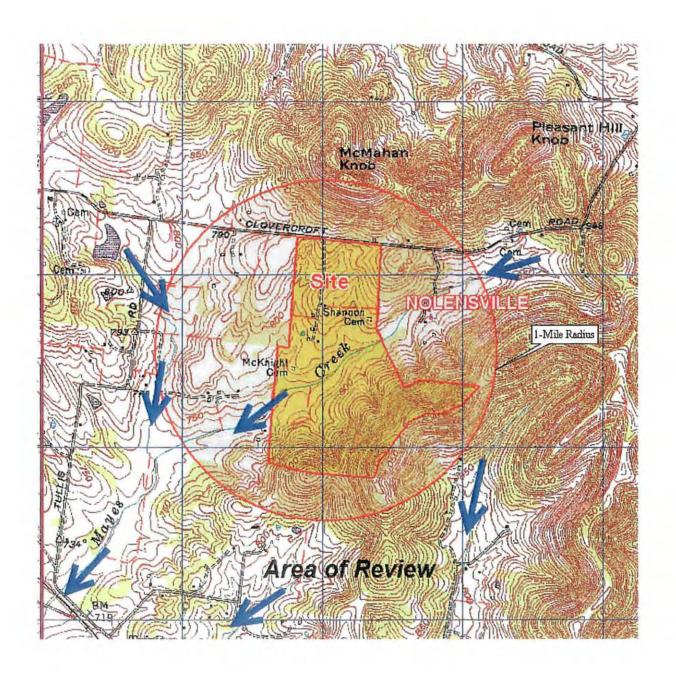

Permit Number: SOP-

Describe pond use and operation:	
If the pond(s) are existing pond(s), what was the previous use?	
Have you prepared a plan to dispose of rainfall in excess of evaporation? ☐ Yes ☐ No	
If so, describe disposal plan:	
Is the pond ever dewatered? Yes No	
If so, describe the purpose for dewatering and procedures for disposal of wastewater and/or sludge:	
Is(arc) the pond(s) aerated? Yes No	
Volume of pond(s): gal. Dimensions:	
Is the poul lined (Note if this is a new pond system it must be lined for SOP coverage. Otherwise, you must apply for an Underground Injection Control permit.)?	☐ Yes ☐ No
Describe the liner material (if soil liner is used give the compaction specifications):	
Is there an emergency overflow structure? Yes No	
If so, provide a design drawing of structure.	
Are monitoring wells or lysimeters installed near or around the pond(s)? Yes No	
If so, provide location information and describe monitoring protocols (attach additional sheets as necessary): Attach required additional Information	
☐ Topographic map (1:24,000 scale presented at a six inch by six inch minimum size) showing the location of the project in coordinates, latitude and longitude in decimal degrees quadrangle name should also be included.	ncluding GPS
Scaled layout of facility showing the following: lots, buildings, etc. being served, the wastewater collection system routes system location, roads, property boundaries, and sensitive areas such as streams, lakes, springs, wells, wellhead protection and wetlands.	
The area of review (AOR) for each holding pond shall, unless otherwise specified by the Department, consist of the area ly a one mile radius of the holding pond site or facility, and shall include, but not be limited to surface geographic features, subdemographic and cultural features within the area. Attach to this part of the application a complete characterization of the following: (This can be in narrative form)	surface geology, and
Description of all past and present uses of groundwater within the AOR, as documented by public record.	
Description of the groundwater hydrology within the AOR, including characteristics of all subsurface aquifers, presence solution development features, general direction of groundwater movement, and chemical characteristics of the ground water movement.	
Description of the population and cultural development within the AOR, including the number of persons living within or or facility, land uses within the AOR, and the existence of any community, state, regional or national parks, wildlife refuguideness areas, recreational or other public-use areas, or any other environmentally sensitive features within the area of	ges, natural or
If groundwater is used for drinking water within the area of review, then identify and locate on a topographic map all gropoints within the AOR, which supply public or private drinking water systems	undwater withdrawal
☐ Identify any surface water intake, which supplies a public water distribution system and is located within the AOR or wit topographically down gradient from the well or facility. If any such intake(s) wells or springs exist, then locate on map	hin three miles

3.0 Groundwater General Description

The attached USGS maps indicate the Clovercroft Acres Subdivision wastewater treatment area drainage flow path is to the southwest discharging into Mayes Creek watershed. The site is comprised of approximately 195 acres. The topography is mainly gently rolling to rolling slopes of 5 - 15 % with moderately steep slopes at the south of the property equating approximately 30% of the property. The property is bordered by Clovercroft Road to the north, to the west by agricultural property, Mayes Creek and large estate lots, and to the south and east by agricultural property. Roughly 50% of the site is wooded and the 7-10 acres for drip dispersal is mostly cleared with some minor underbrush.

The above mentioned property has typically been used for pasture land. Groundwater was used historically to provide water. At this time the area is served by Nolensville College Grove Utility District for water.

It is assumed tat the groundwater movement and surface flows are to the southwest toward Mayes Creek

See attached maps and USDA soils info under Section 2 Area of Review.

4.0 Population General Description

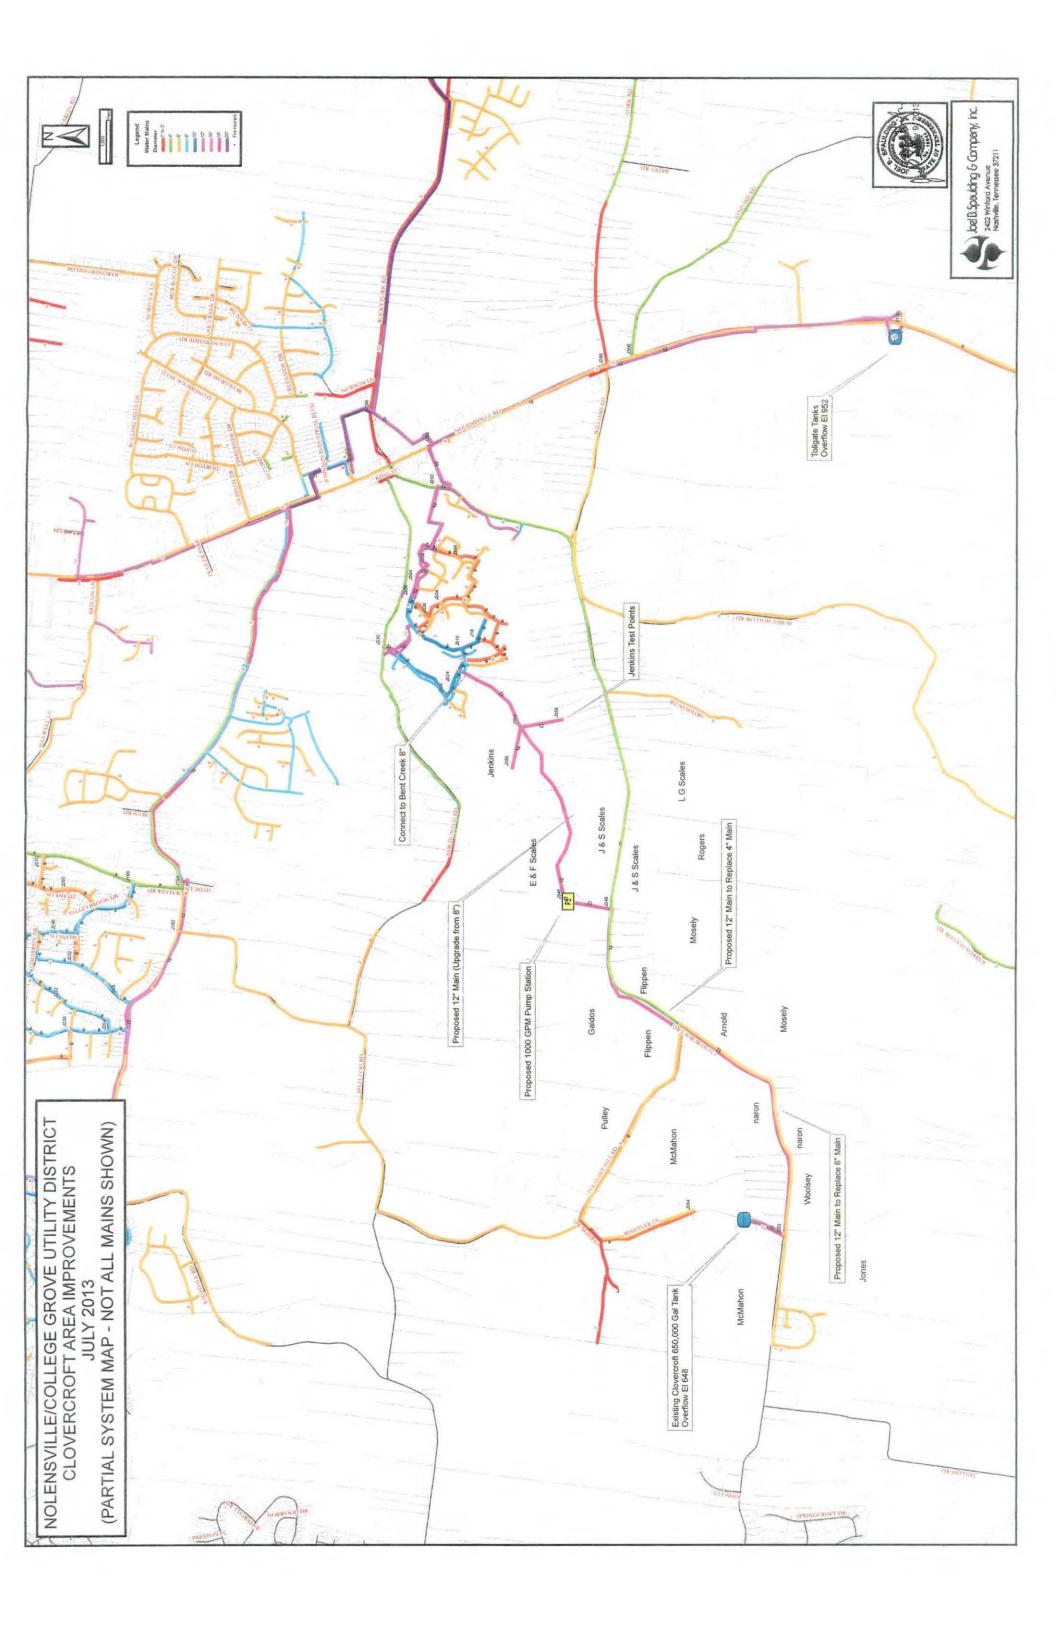

The majority of the Area of Review is agriculture land used primarily for pasture. See attached aerial map of property under Section 2 Area of Review.

5.0 Nature of Fluid

Clvercroft Acres Subdivision (~200 lots) will have a peak design discharge of approximately 60,000 gpd of domestic wastewater. The effluent quality is typical domestic residential treated wastewater that meets State Operating Permit limits.

6.0 General Location of Publicly Supplied Water

The area will be served by Nolensville College Grove Utility District. See attachment next page with existing water lines.

7.0 Description of System

Treated wastewater approximately 60,000 gpd is pumped through arkal filter units and then distributed to HDPE drip lines with pressure compensating emitters. The drip lines are to be installed on 5-foot centers along the contours with the emitters spaced at 2-foot centers along the drip lines. Drip lines are plowed into the soils that have been approved by a certified soil scientist and placed at an approximate depth of 7-8 inches below the ground surface. Distribution of the treated wastewater is managed through solenoid valves and controlled by a programmable PLC.

8.0 Nature and Type of System

Treated wastewater from the subdivision will first be pumped from numerous water tight septic tanks at each lot. Grey water is pumped from the septic tank via a small diameter pressure collection line to a recirculating sand filters (RSF). The wastewater will then cycle through the RSF 5 times before discharging into the final dose tank. From the final dose tank, the treated wastewater is pumped through arkal filter units and then distributed through the drip dispersal lines within the approved soil site.
