TENNESSEE AMERICAN WATER COMPANY
DOCKET NO. 14-00121
RESPONSE TO INFORMAL REQUEST FOR INFORMATION OF THE CONSUMER ADVOCATE AND PROTECTION DIVISION

Responsible Witnesses: Brent E. O'Neill/Linda C. Bridwell

Question:

1. Spreadsheet WKP 2014 SCEP: Company changes formulas in the total column, to total everything-not just investment projects.

Response:

Tennessee American copied the "WKP 2014 SCEP" tab from the workpapers in 13-00130 with the values only and without the formulas. This may have led to some confusion regarding the "Totals". Additionally, the nomenclature may not be as straightforward as it could be.

To further assist, TAW offers the following definitions:

"Projects Funded by Others" (Row 10) are projects primarily funded by contributions and/or developer advances.

"Total Recurring Projects" (Row 31) is the total amount of recurring investment items made by the company that are not defined, separate projects or Projects funded by Others.

"Total Centrally Sponsored Projects" (Row 38) is the total amount of investment from projects led by American Water, such as the recently completed Business Transformation project.

"Total Investment Projects" (Row 57) is the total amount of separately identified larger investment projects.

"Total Investment and Centrally Sponsored Projects" (Row 58) is simply the sum of Row 38 and Row 57.

"Gross minus BT" (Row 63) is the sum of all capital investment, despite funding source, except the Centrally Sponsored Projects.

"Net minus BT" (Row 65) is the sum of all capital investment, despite funding source, minus the Centrally Sponsored Projects and the amount of Contributions, Advances, and Refunds.

"Gross plus BT" (Row 68) is the sum of all capital investment by TAW, despite funding source. This is the total capital budget of TAW.

"Net plus BT" (Row 70) is the sum of all capital investment minus Contributions, Advances, and Refunds. This is essentially the net total capital budget of TAW.

Responsible Witness: Brent E. O'Neill

Question:

2. Spreadsheet WKP 2014 SCEP: Provide the source and support for projected capital expenditures and non-investor supplied funds used on this schedule.

Response:

During the development of the budget each year, Tennessee American Water goes through several stages to develop an accurate forecast and future needs are identified.

The first step is to review the historical trend of the budget lines. A review of the actual spending for the past five years is conducted. In addition, for 2015 a review of the average actual spend for the 2 year period of 2012 and 2013 was conducted. This first step allows for a guide for the level of activity that each line has experienced during the review periods.

The second step is a review of the needs identified by each budget line manager on the activity or work that is expected for each budget line. This review includes a list of projects or the anticipated number of items that is planned for each budget line. The budget line managers use historical knowledge and a review of the required amount of work needed for the upcoming year to establish their needs. This information allows them to develop the number of new and replacement meters and service lines based on regulatory replacement priorities and a review of the previous year's new development activity. Items such as replacement and new hydrants and valves are based on a review of the operation of existing valves and discussions with the fire department.

Purchase of tools, equipment, and vehicles are based on identified needs and a list of projects or items is developed.

The third step is to take this information developed by the budget line managers and combine it in a Recurring Project Spreadsheet along with the anticipated costs. This spreadsheet provides a listing for each budget line with the expected level of work and cost associated with each project. During this step, each identified item or project is provided with a priority level that allows for guidance if adjustments in budget lines on the importance of each item and the impact it could have to customers or the system. Investment Project items are developed within the Engineering Department based on preliminary cost estimates and cash flows based on engineering judgment.

The final stage is to review the overall budget using the costs rolled up from each line. Adjustments in each budget line are made using the priorities and importance of each items and a comparison to historical spend on each line. During this stage projects are adjusted and some are placed on hold to allow the overall capital spend to be within the expected budget amount.

Contributions, Advances and Refunds are estimated using historical averages and professional judgment.

Once this is complete, the Strategic Capital Expenditures Plan or SCEP is prepared.

A copy of the 2014 Spreadsheet for Recurring Project is attached.

RESPONSE TO INFORMAL REQUEST FOR INFORMATION OF THE CONSUMER ADVOCATE AND PROTECTION DIVISION

Responsible Witness: Linda Bridwell

Question:

3. Spreadsheet WKP 2014 - In Serviced SCEP No source and support for account split percentages.

Response:

The account split percentages were based on professional engineering judgment and were the same assumption used in Docket No. 13-00130. The reconciliation will include the actual expenditures in each recurring project line by account.

TENNESSEE AMERICAN WATER COMPANY
DOCKET NO. 14-00121
RESPONSE TO INFORMAL REQUEST FOR INFORMATION OF THE CONSUMER ADVOCATE AND PROTECTION DIVISION

Responsible Witness: Linda Bridwell

Question:

4. Spreadsheet WKP 2014 - In Serviced SCEP: No source and support for "in-service months".

Response:

The estimated in-service months for investment projects are provided by engineering personnel based on their professional judgment as to the length and scope of each project.

RESPONSE TO INFORMAL REQUEST FOR INFORMATION OF THE CONSUMER ADVOCATE AND PROTECTION DIVISION

Responsible Witness: Linda Bridwell

Question:

6. Spreadsheet WKP 2014 - In Serviced SCEP Vehicle monthly addition in Period 7 seems to be in error.

Response:

It appears that in the file utilized in Docket No. 13-00130, the Vehicle monthly additions for Period 7, Period 9 and Period 11 did not pick up the previous month's balance. This would understate the amount of vehicle investment in-service during 2014. This formula error was not carried into the 2015 calculation. The actual amount for 2014 will be corrected during the reconciliation process.

TENNESSEE AMERICAN WATER COMPANY
DOCKET NO. 14-00121
RESPONSE TO INFORMAL REQUEST FOR INFORMATION OF THE CONSUMER ADVOCATE AND PROTECTION DIVISION

Responsible Witness: Linda Bridwell

Question:

7. Spreadsheet WKP 2014 - In Serviced SCEP: Process Plant Facilities and Equipment monthly additions seems to be in error beginning with Period 3.

Response:

It appears that in the file utilized in Docket No. 13-00130, the Process Plant Facilities and Equipment monthly additions for Period 3, Period 5, Period 7, Period 9 and Period 11 did not pick up the previous month's balance. This would understate the amount of investment in-service during 2014. This formula error was not carried into the 2015 calculation. The actual amount for 2014 will be corrected during the reconciliation process.

TENNESSEE AMERICAN WATER COMPANY
DOCKET NO. 14-00121
RESPONSE TO INFORMAL REQUEST FOR INFORMATION OF THE CONSUMER ADVOCATE AND PROTECTION DIVISION

Responsible Witness: Linda Bridwell

Question:

8. Spreadsheet WKP 2014 - In Serviced SCEP: Average annual plant additions for vehicles is multiplied by 25% without any source or support.

Response:

The 25% inclusion was a management judgment of the amount of capital expenditures in 2014 to be spent on alternative fuel vehicles and retrofitting existing vehicles for alternative fuels. This was included in Docket No. 13-00130 and after confirming with operations and engineering personnel, was utilized in this filing.

TENNESSEE AMERICAN WATER COMPANY
DOCKET NO. 14-00121
RESPONSE TO INFORMAL REQUEST FOR INFORMATION OF THE CONSUMER ADVOCATE AND PROTECTION DIVISION

Responsible Witness: Linda Bridwell

Question:

9. Spreadsheet WKP 2014 - In Serviced SCEP: No source and support for average retirements.

Response:

The average retirements was calculated for ratebase schedules in 12-00049 based on historical averages and engineering judgment. These same retirement calculations were used in Docket No. 13-00130 and again in this filing. The tab "WKP 2014 – In Serviced SCEP" was copied without formulas from the file in Docket No. 13-00130 titled *TAW_R_TRADR3_NUM006_013114_Attachment1 with AVG Impact change.* The average retirement in that file is calculated on the tab "WKP Retires".

RESPONSE TO INFORMAL REQUEST FOR INFORMATION OF THE CONSUMER ADVOCATE AND PROTECTION DIVISION

Responsible Witness: Linda Bridwell

Question:

10. Spreadsheet WKP 2014 - In Serviced SCEP: No source and support for CIAOC.

Response:

The 2014 Contribution In Aid of Construction (CIAC) was provided based on engineering judgment on the projects for which CIAC was available and in Recurring Project Line G. The amount calculated in Docket No. 13-00130 was from the last general rate proceeding Docket No. 12-00049 which equals the average annual amount from a 2-year history for those contributions only on Recurring Project Line G. This was calculated on tab "WKP CIAC" in the file in Docket No. 13-00130 titled *TAW_R_TRADR3_NUM006_011314_Attachment1 with AVG Impact change.*

RESPONSE TO INFORMAL REQUEST FOR INFORMATION OF THE CONSUMER ADVOCATE AND PROTECTION DIVISION

Responsible Witness: Linda Bridwell

Question:

13. Spreadsheet WKP 2014 - In Serviced SCEP: No source and support for tax depreciation rate.

Response:

The tax depreciation rate assumptions for 2014 were provided in Docket No. 13-00130 by American Water tax analysts. The "WKP 2014 – In-Serviced SCEP" tab was copied from the file *TAW_R_TRADR3_NUM006_013114_Attachment1 with AVG Impact change* in Docket No. 13-00130 with values only and no formulas.

TENNESSEE AMERICAN WATER COMPANY
DOCKET NO. 14-00121
RESPONSE TO INFORMAL REQUEST FOR INFORMATION OF THE CONSUMER ADVOCATE AND PROTECTION DIVISION

Responsible Witness: Linda Bridwell

Question:

14. Spreadsheet WKP 2014 - In Serviced SCEP Accumulated Depreciation calculation appears to be in error because it multiplies depreciation expense * 50% when the full depreciation rate has already been applied to average plant.

Response:

Accumulated Depreciation is calculated as an average balance similar to the average plant balance. The depreciation expense is a full year depreciation expense amount. In order to calculate an average accumulated depreciation balance for 2014, 50% of the depreciation expense is used since the timing of the in-service dates will vary. This calculation is consistent with the calculation in Docket 13-00130.

RESPONSE TO INFORMAL REQUEST FOR INFORMATION OF THE CONSUMER ADVOCATE AND PROTECTION DIVISION

Responsible Witness: Linda Bridwell

Question:

16. Spreadsheet WKP 2015 - In Serviced SCEP: Company's array formula on Projects Funded by Others and Business Units A - D (3 month time horizons) appears to produce incorrect results.

Response:

Projects Funded by Others and Business Units A – D are recurring main installation and replacement projects. These projects typically last a couple months from inception to completion and in-service. In order to accommodate this, a 3-month rolling average of project spend for each investment line is used for the forecasted in-service amount each month. Each month, a 3-month average for projected in-service amounts is calculated and added to the current utility plant in service (UPIS) balance for that project line. For example, the in-service amount for Line A in May 2015 is $3,334. This is difference between the May 2015 balance of $94,501 and the April 2015 balance of $91,167 on tab "WKP 2015 - In Serviced SCEP". The $3,334 is the 3-month average of March-May 2015 of capital expenditures from tab "EXH 2015 SCEP" ($10,000/3).

CONSUMER ADVOCATE AND PROTECTION DIVISION

Responsible Witness: Linda Bridwell/Brent E. O'Neill

Question:

17. Spreadsheet WKP 2015 - In Serviced SCEP: Company excluded Citico Plant Improvement Phase 1B from Investment projects without explanation.

Response:

The Company carefully reviewed its capital budget and ongoing construction work schedule after the increased cost of the Wastewater Treatment & Handling Improvement project was fully recognized. The Wastewater Treatment & Handling Improvement project was going to be much more complex, require much more attention from both engineering and operations personnel, and would take more investment than originally anticipated. After careful deliberation, it was determined that it would be in the best interests of both Tennessee American and its customers to not attempt to have these projects run concurrently. The Wastewater Treatment & Handling Improvement project was determined to need priority. Therefore, the Citico Plant Improvement Phase 1B project has been delayed until 2016 to allow focus and increased investment required to complete the Wastewater Treatment & Handling Improvement project.

TENNESSEE AMERICAN WATER COMPANY
DOCKET NO. 14-00121
RESPONSE TO INFORMAL REQUEST FOR INFORMATION OF THE CONSUMER ADVOCATE AND PROTECTION DIVISION

Responsible Witness: Brent E. O'Neill

Question:

18. Spreadsheet WKP 2015 - In Serviced SCEP: Company included $6,150,000 in Wastewater Treatment & Handling Improvement in Investment Projects as a reforecast without explanation.

Response:

The Company included $6,150,000 in project I26-020032 - Wastewater Treatment & Handling Improvement as a reforecast. The total project estimate increased as the result of many factors that are unique to the site where the dewatering facility is to be constructed as well as a further development of the project scope. The preliminary cost estimate was based on a written performance description of the proposed facility. The estimate was prepared without drawings or specifications and was mainly focused on the dewatering equipment component of the project. The preliminary cost estimate was developed using costs incurred at other installations of similar equipment. In most cases these improvements used for comparison were part of larger improvement costs and most of the ancillary costs were not captured. Below are the primary reasons that the cost estimate was revised:

•Site investigation during the final design of the proposed structure foundations indicated that the an existing out-of-service concrete clearwell would require full removal of the 14' deep concrete walls, floor and the unsuitable soils found inside and around the old structure. Due to site limitations and material not being suitable for fill, all material will need to be hauled off site. The unsuitable soil will be replaced with structural fill that will be installed and compacted in 9 inch lifts. The preliminary cost estimate assumed that the footprint of the proposed improvements would not require demolition of the concrete clearwell.

•The dewatering building increased in size to accommodate considerations for maintenance and arrangement of conveyors and drying equipment. In addition, more space was necessary to include required components such as polymer and sludge pumping equipment, as well as electrical and control panels.

•Fully enclosed bays for two trucks replaced the exposed canopy envisioned during the development of the original preliminary cost estimate. Protection from weather and freezing, improved accessibility to conveyors and discharge valves and actuators were a major component of determining the need for the change. It is anticipated that the enclosed truck bays will reduce future maintenance costs.

TENNESSEE AMERICAN WATER COMPANY
DOCKET NO. 14-00121
RESPONSE TO INFORMAL REQUEST FOR INFORMATION OF THE CONSUMER ADVOCATE AND PROTECTION DIVISION

Response:

(-continued)

•With the increase in the building size and the additional infrastructure needed, the site slope and topography required the development of a long concrete retaining wall be constructed at the northeast corner of the site that was not accounted for in the preliminary cost estimate.

•The existing topography required the number of pumping steps necessary to transfer sludge throughout the site to be more than typical installations used to develop the preliminary cost estimate. Subsequently, there are more pumps to be constructed, piped, controlled and monitored.

•Because the Citico Water Treatment Station was built in 1870's and 150 years old, locating possible piping routes at the station, with the least impact on existing lines, was challenging and resulted in additional costs to uncover a majority of the expected path of the 6,417 linear feet of underground piping.

•The preliminary cost estimate anticipated the use of existing clarification to provide the drying equipment with sludge. However, during final development of the project a second clarifier was required to allow for a more consistent sludge to the drying equipment and to accommodate the expected loading rate from the operation of the water treatment plant.

• To meet the requirements of the Tennessee Department of Environment and Conservation (TDEC) to allow for clarification of backwash water and the sediment supernatant prior to recycling water to the head of the water treatment plant. A new Backwash Equalization Tank was added to the projects. This tank is required to mitigate instantaneous high wash water flow during filter backwash operations. During the preliminary cost estimate it was assumed that the existing Plant 2 equalization tank could be modified, however the TDEC requirements could not be satisfied with the proposed modifications.

•Additional switchgear infrastructure for the sludge improvement was required due to the mismatch of operating voltage from the existing Citico Water Treatment Plant and the equipment and safety requirements of the new improvements.

•Electrical and control improvements are required to ensure efficient operations to valves and instrumentation that are currently manual or non-existing.

TENNESSEE AMERICAN WATER COMPANY

Question:

19. Spreadsheet WKP 2015 - In Serviced SCEP: Company accumulated Period 1 - 4 expenditures into period 5 for Wastewater Treatment A & Handling Improvement in Investment Projects without explanation.

Response:

Investment Project I26-020032 - Wastewater Treatment A & Handling Improvement ($15.3M) has a scheduled in-service date of May 2015 (used and useful). At that time, inception to date costs on the project will be placed in-service. In May 2015, projected inception to date costs for this project will be $14.2M which is comprised of $8.15M for 2014 (including the $6.15M reforecast), and $6.05M for January-May 2015.

DOCKET NO. 14-00121
RESPONSE TO INFORMAL REQUEST FOR INFORMATION OF THE CONSUMER ADVOCATE AND PROTECTION DIVISION

Responsible Witness: Linda Bridwell

Question:

24. Spreadsheet WKP 2015 - In Serviced SCEP: Company uses 2.56% as the Year 1 Tax Rate for Business Units M and N for 2014, but then uses 1.282% as the Year 1 Tax Rate in 2015.

Response:

Per the tax depreciation rates provided in response to Item 23, the tax depreciation rate for Year 1 is .01282 for and changes to .0256 for Year 2.

TENNESSEE AMERICAN WATER COMPANY
DOCKET NO. 14-00121
RESPONSE TO INFORMAL REQUEST FOR INFORMATION OF THE CONSUMER ADVOCATE AND PROTECTION DIVISION

Responsible Witness: Linda Bridwell

Question:

25. Spreadsheet WKP 2015 - In Serviced SCEP: Tax vintage year depreciation calculations will likely become unmanageable in future periods; consider an alternative for future filings.

Response:

While tax vintage year depreciation calculations are a bit cumbersome over time, the Company believes this is an accurate method to calculate the deferred tax impact on the requested rider additions. Please refer to the response to Item 23 for the tax depreciation rates used in this calculation. The filing of a general base rate case will reset the riders and the Company does not anticipate that the tax vintage year depreciation calculations in future rider filings will become unmanageable.

TENNESSEE AMERICAN WATER COMPANY
DOCKET NO. 14-00121
RESPONSE TO INFORMAL REQUEST FOR INFORMATION OF THE CONSUMER ADVOCATE AND PROTECTION DIVISION

Responsible Witness: Linda Bridwell

Question:

26. Spreadsheet WKP 2015 - In Serviced SCEP: Accumulated Depreciation calculation appears to be in error because it multiplies depreciation expense * 50% when the full depreciation rate has already been applied to average plant.

Response:

Accumulated Depreciation is calculated as an average balance similar to the average plant balance. The depreciation expense calculated in column BG on Spreadsheet WKP 2015 - In Serviced SCEP is a full year depreciation expense amount. In order to calculated an average accumulated depreciation balance for 2015, 50% of the 2015 depreciation expense is added to the full year 2014 depreciation expense. These average amounts are used as part of the riders' Net invested rate base calculation. This calculation is consistent with the calculation in Docket 13-00130.

TENNESSEE AMERICAN WATER COMPANY
DOCKET NO. 14-00121
RESPONSE TO INFORMAL REQUEST FOR INFORMATION OF THE CONSUMER ADVOCATE AND PROTECTION DIVISION

Responsible Witness: Linda Bridwell

Question:

27. Spreadsheet WKP 2015 - In Serviced SCEP: ADFIT calculation appears to be in error because it multiplies current year deferred tax * 50% when the full deferred tax has already been calculated from applied to average plant additions.

Response:

ADFIT is calculated as an average balance similar to the average plant balance. The tax over book depreciation expense is calculated in column BF on Spreadsheet WKP 2015 - In Serviced SCEP is a full year expense amount. The full year tax over book depreciation expense is then tax effected in column BH. In order to calculate an average ADFIT balance for 2015, 50% of the 2015 tax effected amount is added to the full year 2014 tax effected amount. These average amounts are used as part of the riders' Net invested rate base calculation.

TENNESSEE AMERICAN WATER COMPANY
DOCKET NO. 14-00121
RESPONSE TO INFORMAL REQUEST FOR INFORMATION OF THE CONSUMER ADVOCATE AND PROTECTION DIVISION

Responsible Witness: Linda Bridwell

Question:

28. Spreadsheet WKP Retires: Company substitutes different accounts for Business Unit Q without explanation as 2015 Average UPIS.

Response:

The purpose of Spreadsheet WKP Retires is to calculate the average retirement activity to offset requested rider additions. The Company utilized actual retirements reported during 2012 – 2013 to project the retirement activity for the rider filing. Please reference the response to Item 32 for the 2012 – 2013 actual retirement data.

In the instances where a utility account included in a specific business unit in the rider additions also had a corresponding retirement during 2012-2013, the average retirement amount was calculated for that combination. Business Unit Q and utility account 340200- Computer & Peripheral Equipment did not have any retirements in years 2012-2013.

RESPONSE TO INFORMAL REQUEST FOR INFORMATION OF THE CONSUMER ADVOCATE AND PROTECTION DIVISION

Responsible Witness: Linda Bridwell

Question:

29. Spreadsheet WKP Retires: Company multiplies 2015 Allocated Retirements * 3 without explanation.

Response:

The 2015 Allocated Retirement amounts are calculated by taking the average ½ year retirement amount multiplied by 3. As this is the second year of the rider filings, this calculation ensures that 2014 retirement activity is accounted for as a whole year (2 * ½ = 1) and 2015 as a ½ year.

Responsible Witness: Linda Bridwell

Question:

30. Spreadsheet WKP Retires: Company multiplies 2015 Allocated COR less Salvage * 3 without explanation.

Response:

The 2015 Cost of Removal less Salvage (COR) amounts are calculated by taking the average ½ year COR amount multiplied by 3. As this is the second year of the rider filings, this calculation ensures that 2014 COR activity is accounted for as a whole year (2 * ½ = 1) and 2015 as a ½ year.

RESPONSE TO INFORMAL REQUEST FOR INFORMATION OF THE CONSUMER ADVOCATE AND PROTECTION DIVISION

Responsible Witness: Linda Bridwell

Question:

35. Spreadsheet EXH SEC 1: Array formula does not seem to give correct result for Deferred Income Taxes.

Response:

For the projects eligible for the SEC rider, the average deferred income tax balance is in a positive (asset) position. The tab "EXH SEC1" subtracts a negative amount to reflect the positive (asset) position. The primary driver of the positive (asset) position is Business Unit Q for account 320200 - Water Treatment Equip Filter Media. The book depreciation rate is higher than the tax depreciation rate which causes the positive (asset) position.

RESPONSE TO INFORMAL REQUEST FOR INFORMATION OF THE CONSUMER ADVOCATE AND PROTECTION DIVISION

Responsible Witness: Linda Bridwell

Question:

36. Spreadsheet EXH SEC 1: Company excludes retirements from Earnings Basis Net Investment calculation.

Response:

Retirements are excluded from the Earnings Basis Net Investment calculation. This calculation follows the calculation in Docket 13-00130. Retirements are accounted for by crediting UPIS and debiting Accumulated Depreciation for original cost of the assets retired. UPIS and Accumulated Depreciation are both part of the Earnings Basis Net Investment calculation so the net impact of retirement accounting is zero.

RESPONSE TO INFORMAL REQUEST FOR INFORMATION OF THE CONSUMER ADVOCATE AND PROTECTION DIVISION

Responsible Witness: Linda Bridwell

Question:

41. Spreadsheet EXH SEC 2: Explain how the proposed recovery of chemical, electric power and hauling expenses are related to the SEC capital recovery rider.

Response:

These expenses are additional operational expenses related directly to the operation of the new investment project, the Wastewater Handling and Treatment project which is included in the SEC capital investment projects in this filing. The expenses can be segregated from the other production expenses fairly easily as the new facilities will have separate electric power metering, chemicals used only for residuals processing, and hauling of dried residuals which does not currently occur. The Tariff for the Safety and Environmental Compliance Rider filed March 25, 2014 and approved in Docket No. 13-00130 contemplated the inclusion of operational expenses in the SEC rider on page Original Sheet No. 12-SEC-5 under "**Safety and Environmental Compliance Expenses** = the incremental operational expenses similar to other expenses authorized in previous rate cases that are specifically for safety and environmental compliance or to support safety and environmental compliance utility plant."

TENNESSEE AMERICAN WATER COMPANY

Responsible Witness: Linda Bridwell

Question:

59. Spreadsheet OTHER: Provide a copy of any data responses requested by the TRA Staff in this tariff filing.

Response:

Tennessee American is certainly willing to provide any data request responses to all parties in the case as they are submitted, either formally or informally.

TENNESSEE AMERICAN WATER COMPANY
DOCKET NO. 14-00121
RESPONSE TO INFORMAL REQUEST FOR INFORMATION OF THE CONSUMER ADVOCATE AND PROTECTION DIVISION

Responsible Witness: Linda Bridwell

Question:

60. Spreadsheet OTHER: Do NOT use array calculations in future filings - it does not leave a clear audit trail of how the calculations are made.

Response:

Similar to the 2014 filing, only certain projects qualify for a specific rider. Each project line is labeled with the appropriate rider that it is eligible for in column AY, on the tab "WKP 2015 In-Serviced SCEP". The project lines with no label in column AY are not eligible for the riders. The array calculations were utilized to only take into account the project lines labeled with a specific rider. The added benefit of array calculations is the prevention of double-counting within a spreadsheet.

In order to tabulate amounts for each rider, filter only the lines labeled with the appropriate rider and total the corresponding column to the surcharge amount being audited. Below is an example of the support for some of the 2015 EDI amounts.

	2015 Amounts for Surcharge				
Surcharg	Average Plant in Service	Average Retires (Replacement Projec	Average CIAC	Depreciation Expense	Cost of Removal Less Salvage
EDI	117,322			$ 1,467	
EDI	37,652			$ 471	
EDI	26,491			$ 609	
EDI	698,308		(159,611)	$ 5,980	
EDI	528,978			$ 39,515	
EDI	294,975			$ 8,053	
EDI	10,478	-		$ 1,676	-
EDI	34,527	-		$ 5,738	-
EDI	9,283	-		$ 1,056	-
EDI	-			$ -	

INSTRUCTIONS AND USE OF THIS WORKBOOK

A General

1 This worksheet is designed to capture RP Work Order level details for each RP Funding Project. A pipeline prioritization model is also included for Line Item B (Mains - Replaced / Restored).

2 Blue tabs allow for data entry. Green tabs are all related to Line B (and the Line B tab itself allows for data entry). Gray tabs provide information only. The gray tabs with graphs may require manual editing of the secondary axis to align with the primary axis.

3 Cells in which information can be entered are unlocked. All other cells are locked. Protection can be turned off on each sheet without the need for a password.

4 One worksheet is required for each Operating Unit. The worksheet includes one tab for each of the RP Line Items (A-S). A description of the RP Line Items is provided on the RP CATEGORIES tab. Asset Investment Strategy guidance as it relates to RP Line Items is provided on the RP GUIDANCE tab.

5 A summary of all RP Line Items is displayed in text format on the RP SUMMARY tab. Unit costs are not rolled up for Line Items which do not have like units.

6 Two hidden tabs called LOOKUP TABLE 1 and LOOKUP TABLE 2 are provided as the source for many of the pulldown menus on the individual Line Item tabs. District names are also provided at the bottom of each individual Line Item tab and are hidden.

7 Do not delete or add any rows or columns on any tab. Doing so will cause the calculations to fail. Each RP Line Item tab can accommodate up to 600 projects.

B For All Line Items Except A, B, D, I, J, and S

8 To begin using the worksheet, enter the current date in cell D1, then select the Operating Unit and enter the Business Plan Year in Cells B4 and C4 respectively on the RP SUMMARY tab. This information will then be displayed on all of the individual Line Item tabs. NOTE: The Business Plan Year is the year in which the projects will be executed.

9 On any of the RP Line Item tabs, in the PROJECT INFORMATION section, the District can be selected from the pull down in Column B, and the Project Title entered in Column D.

10 Also in the PROJECT INFORMATION section, Column C allows for the identification of the project funds as Budget, Budget Reserve, or Overprogram. Budget means it is to be included in the budget. Budget Reserve means it is also to be included in the budget, but that it is a lower priority project that can be deferred until later in the year and delivered quickly should those funds instead be needed for emerging needs as the year progresses. Overprogram means that the project is not included in the budget, but if additional funds should become available, it can be delivered quickly.

11 Lastly in the PROJECT INFORMATION section, Column E allows for the top down prioritization of the project (First Priority A, Second Priority B, or Third Priority C). This prioritizaton is aligned with the company's Asset Investment Strategies. Guidance for each Line Item can be found on the RP GUIDANCE tab. Each level of prioritization is also categorized as Defined or Historical. Defined means that a specific project can be defined in advance. Historical means that the project cannot be defined in advance and needs to be based on historical activity. As an example, Line C would generally be historical because we are not able to predict an unscheduled main replacement in advance.

12 In the PROJECT COSTS and UNITS sections, fill in Columns F and I respectively reflecting the estimated cost and quantity for the project. Also fill in Column P with the Justification for the project. If the Justification is based on history and is not specifically identified, the historical information should be referenced here (typically a 3-year average with max and min) that is the basis for the project cost.

13 Hidden columns are provided immediately after the Justification column if you desire to provide a monthly VOW spread (optional).

14 Once the above are completed for all projects within a Line Item, the Priority No. can be changed as necessary for each project, and the list re-sorted using standard Excel sorting capabilities. At this point, the Business Planning stage of the RP Spreadsheet is complete. The last 10 columns of the worksheet combine and sort all of the project information by District.

15 As the year progresses and individual projects are completed, the spreadsheet is designed to be used as a tracking tool. Actual costs and actual quantities can be populated in Columns G and J respectively. Column O can be used to record the Work Order or WBS Element number.

C For Line Items A, D, I, and J (same as paragraph B above except)

16 Column O has been inserted to allow SIZE (diameter) to be provided. This should always be provided for Line Items A and D, and is optional for Line Items, I and J. If more than one size is proposed, this should be entered on separate lines with the same Project Title and Priority No. with the costs and units broken out separately.

D For Line Item B (same as paragraphs B and C above except)

17 A pipeline prioritization model has be integrated into Line Item B. All pipeline replacement or rehabilitation projects need to be scored per this model. This prioritization model utilizes information that is provided in the PAIRWISE COMPARISON tab as discussed in paragraph F below.

18 In the REPLACE OR REHABILITATE section, Columns Q, R, and S have been inserted to indicate if this is a replacement or rehabilitation project. The REHAB FLOW CHART tab should be followed to make this decision.

19 A PRIORTIZATION section with eleven sub-sections in Columns T through AD has been inserted for use in prioritizing the project. All of the columns used for the prioritization of the projects include pull down menus. Every column needs to be populated. If the cohort information is not definitively known, the COHORT TIMELINE tab may be of assistance if the approximate age of the pipe is known.

20 The final prioritization score is automatically calculated and displayed in Column AE. Based on the information entered in the PAIRWISE COMPARISON tab, the Max and Min prioritization score that can be achieved is displayed at the top of Column AE such that the score achieved for a project can be put into perspective.

E For Line Item S (same as paragraph B above except)

21 Additional planning specific information is required in Columns AC though AI. Some columns require manual entry while others have pulldowns.

F Pairwise Comparison

22 The PAIRWISE COMPARISON hidden tab is utilized by each Operating Unit's Capital Team to provide information that is used to score and prioritize the projects in Line Item B (Mains - Replaced/Restored). A pairwise comparison is first performed on each of the variables in order to establish a Variable Weighting. This is accomplished by comparing each variable one by one on a total score of six. For example, if the two variables are equal, the pairwise score is 3-3. If one variable is more critical than the other (i.e. more justification to replace the main), the pairwise score could be 4-2, 5-1, or 6-0. Only one of the two values needs to be populated (in the yellow area), and the corresponding value will automatically populate. A similar pairwise comparison is then performed on each individual variable to establish Variable Scores. The values that are initially filled in are the default values generally applicable to all Operating Units. Each individual Operating Unit can choose to either use these values or provide their own values which can be more applicable to the respective Operating Unit. The Pairwise Comparison values can be edited at any time before or after data is collected for Line Item B. The Operating Unit does not have the option to change or add variables to asure consistency across the company.

23 One additional tab called LINE B CALCS is utilized for the prioritization calculations and is hidden. This tab should never be accessed.

END

RP GUIDANCE

Line Item	RP Description	A "A" First Priority Projects (per Asset Investment Strategy)	B "B" Second Priority Projects (per Asset Investment Strategy)	C "C" Third Priority Projects (per Asset Investment Strategy)
A	Mains - New	Provide service to new customers within existing franchise area.	Provide service to new customers beyond existing franchise area.	Address long term regulatory hydraulic issues (e.g. pressure below min required).
		Required to comply with regulations.	Address near term regulatory hydraulic issues (e.g. pressure below min required).	Proactive hydraulic improvement resulting in future improvement to service (e.g. loop dead end mains).
			Hydraulic improvement resulting in immediate improvement to service (e.g. loop dead end mains).	To enhance fire flows above AW minimum goals and up to full ISO recommended flows.
			Address to meet AW goals for fire flow and specific requests of local fire districts.	
B	Mains - Replaced / Restored	RP Prioritization model score in the 75-100% range.	RP Prioritization model score in the 50-75% range.	RP Prioritization model score in the 0-50% range.
C	Mains - Unscheduled	All - based on history.	n/a	n/a
D	Mains - Relocated	Project is known and defined and expected to proceed.	Project is tentative. Funded as "Budget Reserve".	Project is speculative. Would need to be funded from Reserves.
E	Hydrants, Valves, and Manholes - New	Required to comply with regulations.	Address significant operational issues or requested by local government.	Proactive improvement resulting in future improvement to operations.
F	Hydrants, Valves, and Manholes - Replaced	Physically fails and not repairable, or in imminent danger of failure.	Poor condition and spare parts no longer available.	Proactive replacement based on age or condition.
		Hydraulically inadequate.		
G	Services and Laterals - New	Provide service to new customers.	n/a	n/a
H	Services and Laterals - Replaced	Physically fails and materials are known to be prone to failure.	Physically fails and materials are not known to be prone to failure.	Proactive replacement of materials known to be prone to failure.
		Required to comply with regulations.		
I	Meters - New	Provide service to new customers.	n/a	n/a
J	Meters - Replaced	Required to comply with regulations.	No regulatory requirement and has been in service beyond expected life.	No regulatory requirement and has been in service for less than its expected lifespan.
		Meter stops or under registers.	New technology that results in operational improvement and/or savings.	
K	ITS Equipment and Systems	To support new (additional) employees.	Has reached the end of its expected life.	Proactive replacement based on condition or new technology.
		Equipment still needed and currently not supported by the vendor.	Provides a hard payback <3 years.	
		Required to comply with regulations.	Equipment still needed and soon to no longer be supported by the vendor.	
		Physically fails and not repairable, or in imminent danger of failure.		
L	SCADA Equipment and Systems	Equipment still needed and currently not supported by the vendor.	Has reached the end of its expected life.	Proactive replacement based on age, condition, or new technology.
		Required to comply with regulations.	Provides a hard payback <3 years.	
		Physically fails and not repairable, or in imminent danger of failure.	Equipment still needed and soon to no longer be supported by the vendor.	
M	Security Equipment and Systems	Minimum level of health and safety risk reduction not in place.	Has reached the end of its expected life.	Proactive replacement based on age, condition, or new technology.
		Equipment still needed and currently not supported by the vendor.	Provides a hard payback <3 years.	
		Required to comply with regulations.	Equipment still needed and soon to no longer be supported by the vendor.	
		Physically fails and not repairable, or in imminent danger of failure		
N	Offices and Operations Centers	For new (additional) employees, equipment, or vehicles.	Has reached the end of its expected life.	Proactive replacement based on age, condition, or new technology.
		Required to comply with regulations.	Provides a hard payback <3 years.	
		Addresses imminent health and/or safety issues.		
		Physically fails and not repairable, or in imminent danger of failure.		
O	Vehicles	For new (additional) employees.	Has reached the end of its expected life.	Proactive replacement based on age, condition, or new technology.
		Required to comply with regulations.	Provides a hard payback <3 years.	Provides environmental benefits.
		Addresses imminent health and/or safety issues.		
		Physically fails and not repairable, or in imminent danger of failure.		
P	Tools and Equipment	For new (additional) employees.	Has reached the end of its expected life.	Proactive replacement based on age, condition, or new technology.
		Required to comply with regulations.	Provides a hard payback <3 years.	
		Addresses imminent health and/or safety issues.		
		Physically fails and not repairable, or in imminent danger of failure.		
Q	Process Plant Facilities and Equipment	Equipment still needed and currently not supported by the vendor.	Provides increased reliability or operating flexibility of critical assets.	Proactive replacement based on age, condition, or new technology.
		Required to comply with regulations.	Has reached the end of its expected life.	To meet non-mandatory water quality goals.
		Addresses imminent health and/or safety issues.	Provides a hard payback <3 years.	
		Physically fails and not repairable, or in imminent danger of failure.		
R	Capitalized Tank Rehabilitation / Painting	Physically fails or in imminent danger of failure.	Has reached the end of its expected life.	Proactive replacement based on age, condition, or new technology.
		Required to comply with regulations.		
		Addresses imminent health and/or safety issues.		
S	Engineering Studies	As necessary to provide regulatory support for future capital improvements.	Existing study is 10 years or older.	Existing study is 5-10 years old.
		Demands of existing system are at 90% or greater of capacity.		
		System is experiencing significant growth.		
		Required to comply with regulations.		
		Addresses imminent health and/or safety issues.

INSTRUCTIONS AND USE OF THIS WORKBOOK

A General

1 This workbook is designed to capture RP Work Order level details for each RP Funding Project by Profit Center (or District).

2 Blue tabs allow for data entry for the individual RP Line Items A through S. Orange tabs provide a total RP SUMMARY by RP Line Item (1st summary tab) and by District (2nd summary tab). Gray tabs provide information only, including RP GUIDANCE and RP CATEGORY definitions.

3 Cells in which information can be entered are unlocked. All other cells are locked. **Protection can be turned off on each worksheet without the need for a password.** NOTE: Additional columns for data entry of Business Plan Outer Years for 5-Year Business Plan development (includes 4 years beyond the current Business Plan Year) are "Grouped" and can either be displayed or collapsed depending upon the user's needs in the business planning process. The RP Workbook will be issued with the Outer Years collapsed. **To ungroup or display the Outer Years data entry columns, the Protection on the worksheet must be turned OFF.**

4 One workbook is required for each Operating Unit (or State). The workbook includes one tab for each of the RP Line Items (A through S). A description of the RP Line Items is provided on the RP CATEGORIES tab. Asset Investment Strategy (i.e., Prioritization) guidance as it relates to RP Line Items is provided on the RP GUIDANCE tab. NOTE: The guidance for Prioritization listed in the RP GUIDANCE tab, directly correlates to the 'Justification" columns on the Blue tabs for most RP Line Items (exception of Lines B and C). For Line B, the Prioritization Model has been removed from this RP workbook, and could be used separately to determine Line B Prioritization, as outlined in the RP GUIDANCE tab. For Line C, all project work is Priority A.

5 Each RP worksheet (Blue tab) has a 'BUDGET LEVEL' defined in cell B5. This is either at a 'Project' level or 'District' level. For RP Line Items A, D and K through S, the line items will be budgeted based on 'Project' level data for a particular project. For RP Line Items, B, C and E through J, the line items will be budgeted at the 'District' level.

6 A summary of all RP Line Items is displayed in text format on the RP SUMMARY tab. Unit costs are not rolled up for Line Items which do not have units (Line C - Mains - Unscheduled) OR do not have like units (ex., Line K - ITS Equipment).

7 Two hidden tabs called LOOKUP TABLE 1 and LOOKUP TABLE 2 are provided as the source for many of the pull-down menus on the individual Line Item tabs. District names are also provided at the bottom of each individual Line Item (Blue) tab in Rows 607 through 831 and are hidden.

8 **Do NOT delete or add any rows OR columns on any worksheet tab.** Doing so will cause the calculations to fail Each RP Line Item tab can accommodate up to 600 projects or district-level data.

B Set Up and Use

9 To begin using the worksheet, on the RP SUMMARY tab,**enter the current date in cell D1, then select the Operating Unit in Cell B4 and enter the current Business Plan Year in Cell C4**. This information will then be displayed on all of the individual Line Item worksheets (Blue tabs), and set-up the drop-down lists for the appropriate Profit Centers (Districts) on each of the data entry tabs (Blue tabs).

10 For each RP Line Item tab, in the PROJECT INFORMATION section, the Profit Center (District) can be selected from the drop down list in Column A.

11 Also in the PROJECT INFORMATION section, Column B allows for the identification of the project funds as Budget, Budget Reserve, or Overprogram. Budge means it is to be included in the budget. Budget Reserve means it is also to be included in the budget, but that it is a lower priority project that can be deferred until later in the year and delivered quickly should those funds instead be needed for emerging needs as the year progresses. Overprogram means that the project is not included in the budget, but if additional funds should become available, it can be delivered quickly.

12 Lastly in the PROJECT INFORMATION section, the PRIORITY Column allows for the top down prioritization of the project (Priority A, Priority B, or Priority C). This prioritization is aligned with the company's Asset Investment Strategies outlined in the RP GUIDANCE tab. As stated above, the guidance listed in the RP GUIDANCE tab, directly correlates to the 'Justification" Column dropdown selections on the Blue tabs for the RP Line Items (exception of Lines B and C). In order for the Project to have an assigned Priority (A, B or C), a selection from the "Justification" dropdown list must be made for each Project line. For Line C - Unscheduled Mains, all of the project work should be categorized as 'Priority A' (no other Priority assignment can be selected).

C Lines A, and D through J

13 Select Budget, Budget Reserve or Overprogram from Column B for each Project line item. This selection is mandatory, as a non-selection will not allow the project/line item to be captured in the total project cost summary.

14 In the UNITS, UNIT COST and PROJECT COST sections, fill in the UNITS and UNIT COST for each Project-level and/or District-level line item. The PROJECT COST will be automatically calculated based on these entries. These sections are also available for data entry in the four (4) outer years (may be collapsed, and can be displayed by unclicking the 'Grouped' (+) button at the top of each worksheet.

15 Select the appropriate project JUSTIFICATION from the 'Justification' Column, as this will assign a Priority (A, B or C) automatically. This selection is mandatory, as a non-selection will not allow the project/line item to be captured in the total project cost summary. Any additional information or justification can be added to the 'Comments' section which is available on each data entry tab.

16 **Lines A and D only**: Select the pipe diameter (the diameter that encompasses the majority of the main project) from the 'Predominant Pipe Diameter' Column dropdown list and also indicate the number of ESTIMATED services in the 'Estimated No. of Services' Column.

17 **Lines E and F only**: Select the equipment type (Hydrant, Valve or Manhole) from the dropdown list in the 'Hydrant, Valve OR Manhole' column. Do not combine different equipment types on one project/district line item. Also, for example, if budgeting for a hydrant valve, use the 'Hydrant' dropdown selection, a this type of valve is normally considered part of a Hydrant. The 'Valve' selection is meant to encompass isolation valves (gate valves, etc.) within the main project. Multiple rows can be used to budget each equipment type for a single District.

18 **Lines G and H only**: Select the equipment type (Service or Lateral) from the dropdown list in the 'Service or Lateral' Column.

19 **Lines I and J only**: Select the meter type (Residential or Commercial) from the dropdown list in the 'Meter Type' Column, and select a meter diameter from the dropdown list in the 'Diameter' Column. Multiple rows can be used to budget each meter type and/or diameter for a single District.

D Line B Specifics

20 Same procedures as items 13, 14 and 15 (above). Line items will be budgeted at the District or Profit Center level. Select each Profit Center (District) from the dropdown list, as historical data (Total Main, Break Rate and NRW) for the prior year for each District will be displayed. Please select ALL Districts even if there are no plans for main replacement in the current Budget Year. The total footage of pipe for the State will then be utilized to calculate the overall planned Main Replacement Rate that is built into the worksheet in Cell K5. The individual District-level pipe replacement rates will also be calculated for each line item and are displayed in Column K. Also, if there is a potential for Main Rehabilitation, as opposed to Main Replacement, please indicate this in the 'Comments' field in Column K. NOTE: The Line B Prioritization Model has been removed from this RP workbook, and could be used separately.

E Line C Specifics

21 Same procedures as item 13 (above). Line items will be budgeted at the District or Profit Center level. Select each Profit Center (District) from the dropdown list. The Columns C, D and E will be used to populate District-level historical Line C spend data for the past three (3) years.***This data will be provided by the States OR, as needed, provided separately by the corporate Business Services - Engineering Capital Planning group*** *(in the future, it will be pre-loaded into the RP Workbook for each Profit Center).* Please select ALL Districts, even if there are no plans for Line C in the current Budget Year. Select 'Priority A' from the 'Priority' Column. ALL Line C Unscheduled Main replacement will have a 'Priority A' indicator.

END

RP GUIDANCE

Line Item	RP Description	A "A" First Priority Projects (per Asset Investment Strategy)	B "B" Second Priority Projects (per Asset Investment Strategy)	C "C" Third Priority Projects (per Asset Investment Strategy)
A	Mains - New	Provide service to new customers within existing franchise area.	Provide service to new customers beyond existing franchise area.	Address long term regulatory hydraulic issues (e.g. pressure below min required).
		Required to comply with regulations.	Address near term regulatory hydraulic issues (e.g. pressure below min required).	Proactive hydraulic improvement resulting in future improvement to service (e.g. loop dead end mains).
			Hydraulic improvement resulting in immediate improvement to service (e.g. loop dead end mains).	To enhance fire flows above AW minimum goals and up to full ISO recommended flows.
			Address to meet AW goals for fire flow and specific requests of local fire districts.	
B	Mains - Replaced / Restored	No longer providing expected level of service	Coordination with others (e.g., road is being repaved)	Proactive replacement based on performance of similar cohorts
C	Mains - Unscheduled	All - based on history.	n/a	n/a
D	Mains - Relocated	Project is known and defined and expected to proceed.	Project is tentative.	Project is speculative.
E	Hydrants, Valves, and Manholes - New	Required to comply with regulations.	Address significant operational issues.	Proactive improvement resulting in future improvement to operations.
		Requested by local government.		
F	Hydrants, Valves, and Manholes - Replaced	Physically fails and not repairable, or in imminent danger of failure.	Poor condition and spare parts no longer available.	Proactive replacement based on age or condition.
		Hydraulically inadequate.		
G	Services and Laterals - New	Provide service to new customers.	n/a	n/a
H	Services and Laterals - Replaced	Physically fails and materials are known to be prone to failure.	Physically fails and materials are not known to be prone to failure.	Proactive replacement of materials known to be prone to failure.
		Required to comply with regulations.		
I	Meters - New	Provide service to new customers.	n/a	n/a
J	Meters - Replaced	Required to comply with regulations.	No regulatory requirement and has been in service beyond expected life.	No regulatory requirement and has been in service for less than its expected lifespan.
		Meter stops or registers inaccurately.	New technology that results in operational improvement and/or savings.	
K	ITS Equipment and Systems	To support new (additional) employees.	Has reached the end of its expected life.	Proactive replacement based on condition or new technology.
		Equipment still needed and currently not supported by the vendor.	Provides a hard payback <3 years.	
		Required to comply with regulations.	Equipment still needed and soon to no longer be supported by the vendor.	
		Physically fails and not repairable, or in imminent danger of failure.	New equipment that improves productivity.	
L	SCADA Equipment and Systems	Equipment still needed and currently not supported by the vendor.	Has reached the end of its expected life.	Proactive replacement based on age, condition, or new technology.
		Required to comply with regulations.	Provides a hard payback <3 years.	
		Physically fails and not repairable, or in imminent danger of failure.	Equipment still needed and soon to no longer be supported by the vendor.	
			New equipment that improves productivity.	
M	Security Equipment and Systems	Minimum level of health and safety risk reduction not in place.	Has reached the end of its expected life.	Proactive replacement based on age, condition, or new technology.
		Equipment still needed and currently not supported by the vendor.	Provides a hard payback <3 years.	
		Required to comply with regulations.	Equipment still needed and soon to no longer be supported by the vendor.	
		Physically fails and not repairable, or in imminent danger of failure		
N	Offices and Operations Centers	For new (additional) employees, equipment, or vehicles.	Has reached the end of its expected life.	Proactive replacement based on age, condition, or new technology.
		Required to comply with regulations.	Provides a hard payback <3 years.	
		Addresses imminent health and/or safety issues.		
		Physically fails and not repairable, or in imminent danger of failure.		
O	Vehicles	For new (additional) employees.	Has reached the end of its expected life.	Proactive replacement based on age, condition, or new technology.
		Required to comply with regulations.	Provides a hard payback <3 years.	Provides environmental benefits.
		Addresses imminent health and/or safety issues.		
		Physically fails and not repairable, or in imminent danger of failure.		
P	Tools and Equipment	For new (additional) employees.	Has reached the end of its expected life.	Proactive replacement based on age, condition, or new technology.
		Required to comply with regulations.	Provides a hard payback <3 years.	
		Addresses imminent health and/or safety issues.	New tool / equipment that improves productivity.	
		Physically fails and not repairable, or in imminent danger of failure.		
Q	Process Plant Facilities and Equipment	Equipment still needed and currently not supported by the vendor.	Provides increased reliability or operating flexibility of critical assets.	Proactive replacement based on age, condition, or new technology.
		Required to comply with regulations.	Has reached the end of its expected life.	To meet non-mandatory water quality goals.
		Addresses imminent health and/or safety issues.	Provides a hard payback <3 years.	
		Physically fails and not repairable, or in imminent danger of failure.		
R	Capitalized Tank Rehabilitation / Painting	Physically fails or in imminent danger of failure.	Has reached the end of its expected life.	Proactive replacement based on age, condition, or new technology.
		Required to comply with regulations.		
		Addresses imminent health and/or safety issues.		
S	Engineering Studies	As necessary to provide regulatory support for future capital improvements.	Existing study is 10 years or older.	Existing study is 5-10 years old.
		Demands of existing system are at 90% or greater of capacity.		
		System is experiencing significant growth.		
		Required to comply with regulations.		
		Addresses imminent health and/or safety issues.
