TENNESSEE AMERICAN WATER COMPANY/THUNDER AIR, INC.
DOCKET NO. 18-00099
FIRST DATA REQUEST OF THE
TENNESSEE PUBLIC UTILITY COMMISSION

Responsible Witness: **Dane Bradshaw**

Question:

12. Provide a copy of the 2017 tax returns for the water system being transferred from Thunder Air, Inc. to TAWC and for Thunder Air Inc.

Response:

Thunder Air, Inc. very much understands and appreciates the Commission's duties and responsibilities with respect to the Joint Petition and, along with TAWC, respects the necessary information gathering process. As demonstrated in this case, Thunder Air, Inc. has been very responsive to both discovery and data requests alike. Notwithstanding the foregoing, without some additional clarification, it appears that this particular data request is unreasonably broad, extremely burdensome and not relevant. For these, among other reasons, Thunder Air, Inc. respectfully objects to this request as submitted. In the spirit of cooperation and in an attempt to be responsive to the Commission, however, Thunder Air, Inc. submits, without objection, a copy of the 2017 tax returns for the water system being transferred from Thunder Air, Inc.

TENNESSEE AMERICAN WATER COMPANY/THUNDER AIR, INC.
DOCKET NO. 18-00099
FIRST DATA REQUEST OF THE
TENNESSEE PUBLIC UTILITY COMMISSION

Responsible Witness: **R. Kevin Kruchinski**

Question:

14. On Page 7 (lines 7-9) of Mr. Kruchinski's testimony, he states "The purchase price is supported by the current water rates and is less than the depreciated book value of the system. TAWC will adopt the current rates as charged by Thunder Air Inc." Provide an itemized list of the total amount of plant investment being acquired by USOA account, including date purchased or placed into service, depreciation rate and current balance of accumulated depreciation. Also, please further discuss and provide all calculations prepared by TAWC that detail how the "purchase price is supported by the current rates."

Response:

For an itemized list of the total amount of plant investment being acquired by TAWC, please refer to System Valuation information provided by Thunder Air, Inc. to TAWC attached to the response to Item 4 of the CPAD's Second Discovery Request, filed November 20, 2018. Using that information, TAWC developed a schedule identifying each asset by utility plant account, and corresponding depreciation rate based on TAWC currently authorized depreciation rates and estimated accumulated depreciation since plant construction. Please refer to the attached.

TAWC believes that the purchase price is supported by the current rates based on the financial forecast for the next three years as attached to Item 16 of this same discovery request. Using TAWC's capital structure from its last general rate case, the net utility operating income forecasted would provide an estimated return on equity of 10% beginning in 2021.

FIRST DATA REQUEST OF THE
TENNESSEE PUBLIC UTILITY COMMISSION

Responsible Witness: **R. Kevin Kruchinski**

Question:

15. On page 6 (lines 21-22) of Mr. Kruchinski's testimony, he states "TAWC will provide operations and management of the system with existing TAWC employees as an expansion of their current duties." Please discuss in detail the Company's proposed methods for allocating expenses to the newly acquired water system.

Response:

The company will establish a new cost center to capture the time and expenses associated with operating the water system. All labor utilized to operate and maintain the system will be charged accordingly as will all maintenance and other operational expenses. This is consistent with page 7 of Linda Bridwell’s testimony regarding the impact on TAWC’s ratepayers.

Responsible Witness: **R. Kevin Kruchinski/Linda C. Bridwell**

Question:

16. Provide TAWC' s budgeted financial statements, including balance sheets, income statements and statements of cash flows, for the first three years of operation for the water system being transferred to TAWC. Please describe in detail all budget assumptions utilized to support these calculations.

Response:

Please see the attached estimated financial statements for 2019-2021 operations of the water system being transferred to TAWC.

In preparing the financial statements, TAWC assumed that all residential customers would average 5,500 gallons per month with 12 bills annually, 1% uncollectible rate, 100% debt financing over the first two years and the currently authorized capitalization structure in year 3, that the existing rates would continue, and that the number of customers be 2019-160 customers, 2020 – 210 customers, and 2021 – 240 customers. Assumed labor costs were $21,000.

TENNESSEE AMERICAN WATER COMPANY/THUNDER AIR, INC.
DOCKET NO. 18-00099
FIRST DATA REQUEST OF THE
TENNESSEE PUBLIC UTILITY COMMISSION

Responsible Witness: **R. Kevin Kruchinski**

Question:

17. Provide the total estimated investment and related expenses relating to necessary upgrades for new meters and the SCADA system. Please include these amounts in the above three-year budgeted financial statements.

Response:

It is estimated that total SCADA investment will not exceed $45,000 based upon TAWC's due diligence evaluation of the water system. The SCADA investment will have an additional monthly expense based upon whether we can retrieve the computer signals via cellular connection or fiber connection. Both expenses are anticipated to be relatively minor, but TAWC will proceed with the most cost effective and reliable connection required to operate the system.

It is estimated that meter replacements will not exceed $20,000 based upon the number of existing meters in Jasper Highlands. Both of these investments will be considered capital investments. Beyond the expense of retrieving meter meter readings, we do not anticipate additional expenses regarding the meter replacement.

Question:

19. Are all customer locations equipped with water meters? If so, please indicate the meter size by residential, commercial or other.

Response:

All existing water customers of JHPOA / Thunder Air are metered with 5/8" meters and classified as residential customers. JHPOA / Thunder Air serves water to a couple common areas, swimming pool and picnic pavilion, within the development with a 2" meter and a 1" water meter and it is Thunder Air's understanding that these accounts will be classified as commercial accounts after the closing.

Question:

20. Provide separately, the number of residential, commercial or other types of customers currently receiving water service within the Jasper Highlands development. Will all customers be transferred to TAWC?

Response:

All customers will be transferred to TAWC consistent with the Joint Petition stating that TAWC will be the exclusive water provider within the development. Currently, only one rate exists for customers within the development and they are all billed the same rates. Upon transfer of the water system, TAWC will specify the customer classifications to include but not limited to, Other Public Authority (OPA), Commercial, and Residential. Based upon data provided in October 2018, (1) account would be specified as OPA, (2) accounts would be specified as commercial, and (89) accounts would be specified as residential accounts.

Question:

21. What is the total number of gallons that the water system being transferred to TAWC is capable of serving?

Response:

South Pittsburg has indicated that they will limit the purchase of water to 75,000 gallons per day based upon physical capacity limits with their system of mains. South Pittsburg has the potential to provide additional capacity. The pump stations are currently installed with a capacity of 245,000 gallons per day and the water tank within the water system is rated at 262,000 gallons. Based upon a 24 hour storage capacity standard, the system could potentially provide up to 262,000 gallons of water without additional improvements if the contract with South Pittsburg were increased.

Good morning Jasper Highlands,

It was great to see many of you this past weekend as the community continues to rapidly grow with new property owners and more people breaking ground all the time.

John Thornton and I wanted to personally update you on a potential announcement regarding our water system at Jasper Highlands. We have executed an asset purchase agreement with Tennessee American Water, which is the largest investor-owned water utility in the state and provides high-quality and reliable water services to approximately 375,000 people in Tennessee and northern Georgia, including Whitwell and Powell's Crossroads, and with the intent that TAW would own and operate the water system. There are various approvals that need to occur so this is still somewhat preliminary but, as it progresses and news gets out rather via word of mouth or media outlets, we wanted to provide as much information as possible to you first.

We thought an FAQ format below would be the most helpful.

Q: Why is JH interested in selling the water system?

A: By having a professional water provider with a 130 plus year history of providing quality water to the region, we are assuring that the future of the water system remains reliable, maintained and operated at a reasonable cost to the residents well after we are finished developing the mountain.

It's fairly common in larger metropolitan areas for a developer to receive a "TIF" (tax incremental financing) where infrastructure such as water, roads, power, fiber, etc. are subsidized by the city/county knowing the tax revenue that will be coming as a result of the development. We did not have that luxury as all infrastructure, including the water system, was privately funded. As owners of the water system, we are responsible for a utility which is a large commitment in addition to all of the other obligations that come with running a development whereas Tennessee American Water's primary focus and expertise is providing water.

Q: How would this impact water rates to the Jasper Highlands residents and future residents?

A: Having TAW as the water provider is the best long-term solution for maintaining stable rates for residents and preventing sudden spikes as the water system ages and maintenance needs increase.

As the current owner's of the water system, JH spreads its costs among the number of residents living there. Tennessee American Water, on the other hand, is able to spread its costs across a larger customer base. As a large company, TAW has access to materials through national contracts, which translate into cost savings to customers for work that is performed.

Because TAW is an investor-owned utility, its rates are regulated by the Tennessee Public Utility Commission (TPUC). This means that their rates are set by TPUC, based on the cost of service for its customers.

Q: What role would the developer still have in the water system?
A: While TAW owns and operates, you would still see our construction crews handling the installation of the water lines in new phases, which TAW would acquire as new water lines become available.

Q: Who would handle the billing and customer service?

A: TAW. They have a local team in Marion County to provide operations as well as respond to emergencies like outages.

Q: How did this potential acquisition come about?

A: In the fall of 2017, TAW held a reception at our Pat's Summitt Pavilion and was invited on a follow up tour of the Jasper Highlands water system. TAW was very impressed with the up to date infrastructure, new water tank, and overall quality of our system and our conversations continued. After multiple site visits and due diligence, TAW presented us with an offer.

Q: What happens next?

A: TAW will begin their submittals for approvals at the state and local level. While we do not have a set date, if all goes through we would expect this transition to occur before the end of the year.

In conclusion, we're flattered that a company like TAW has been so complimentary of our water system that they're willing to invest in the opportunity to own it themselves. While it's not done yet, we're excited that Jasper Highlands residents can be in an even better position to potentially save money on water and be in the hands of a reputable company like TAW that adds value to the investment you have made in JH.

Feel free to ask any questions that we may not have covered. As important updates are available, we will communicate them to you.

Sincerely,
Dane

Bravo Dane well done

This is very good news and thank all of you for putting a good water system together. This will be a benefit to JH and the residents.

Dick Marvin

Dane,

This makes perfect sense and seems like it is a good long term solution and you are ahead of the game in timing. Nicely done.

Sally Duval

It makes a lot of sense.
-Rafael Grillo

WONDERFUL news for ALL!

-Tina Jack

Thanks for all your hard work in making this happen. It is much appreciated!

Randy and Linda Caldwell

Thank you Dane. Very informative and promising. There's an old saying that happens sometimes, "no good deed goes unpunished", but in this case, the extra care and attention to detail for our water infrastructure seems to have the potential to be a rewarding effort. Way to go Dane and everyone!

-Bob & Karen Landry

Dear Dane. Janice and I would like to thank you for this detailed explanation about the betterment of the water system for us here on the Highlands. It sounds like we will not only be better served because of the size of the water company, but also that rates would be similar to what other people pay in the same area.

Please also convey our thanks to Mr. Thornton.
Best regards, Bill and Janice Smith.

Very much appreciate this update and concise summary. Christy and I can only imagine the significant effort that has probably been put into this endeavor by you and John. Hoping all goes well with the final negotiations, this seems like it can only be a great thing overall for everyone.

Thanks Dane,

Michael Brooks

This justakes perfect sense. Hope the process goes smoothly. Regards

NOTES

1. THE LOCATION OF THE EXISTING UTILITIES, PIPING, AND STRUCTURES SHOWN ARE APPROXIMATE ONLY. IT IS POSSIBLE THAT SOME EXISTING UTILITIES, PIPING, AND STRUCTURES ARE NOT SHOWN ON THIS DRAWING. THE CONTRACTOR SHALL BE RESPONSIBLE FOR LOCATING ALL UTILITIES, PIPING, AND STRUCTURES PRIOR TO BEGINNING CONSTRUCTION.
2. THE CONTRACTOR SHALL BE REQUIRED TO FILE FOR AND OBTAIN LAND DISTURBING ACTIVITY PERMITS FROM ALL GOVERNMENT ENTITIES HAVING JURISDICTION FOR SUCH PROGRAMS IN AREAS TRANSVERSED BY THIS PROJECT. SUCH PERMITS SHALL BE OBTAINED BEFORE STARTING CONSTRUCTION AND SHALL COMPLY WITH ALL EROSION AND SEDIMENT CONTROL REQUIREMENTS DESCRIBED IN THE CONTRACT DRAWINGS AND SPECIFICATIONS.
3. THE CONTRACTOR SHALL INSTALL AND MAINTAIN ALL EROSION AND SEDIMENT CONTROLS AS SHOWN ON THE CONTRACT DRAWINGS AND IN ACCORDANCE WITH THE REQUIREMENTS STIPULATED IN THE SPECIFICATIONS. EROSION AND SEDIMENT CONTROL DETAILS, NOTES, AND EROSION CONTROL CODES AND SYMBOLS ARE INCLUDED ON DRAWING NO.28.
4. EXCAVATION, BACKFILLING, GRADING, COMPACTING, AND SITE-CLEANUP SHALL BE CONDUCTED AS SHOWN ON THIS DRAWING AND IN ACCORDANCE WITH THE REQUIREMENTS STIPULATED IN THE SPECIFICATIONS.
5. ALL DISTURBED AREAS THAT ARE NOT PAVED OR COVERED WITH STONE SHALL BE GRADED AND SEEDED IN ACCORDANCE WITH THE REQUIREMENTS STIPULATED IN THE SPECIFICATIONS.
6. ANY DISCREPANCIES AND/OR CONFLICTS SHOWN ON THE DRAWINGS SHALL BE BROUGHT TO THE ATTENTION OF THE ENGINEER PRIOR TO PROCEEDING ANY FURTHER WITH CONSTRUCTION ACTIVITIES.

MECHANICALLY RESTRAINED JOINTS GENERAL NOTES:

1. THE RESTRAINED LENGTHS SHOWN IN THE TABLE ASSUME A WORST CASE SOIL CONDITION FOR EACH BEDDING CONDITION AND DESIGN PRESSURE.
2. INSTALL THRUST RESTRAINTS IN STRICT CONFORMANCE WITH MANUFACTURERS INSTRUCTIONS AND RECOMMENDATIONS.
3. PIPE JOINTS WITHIN CASING PIPES WILL BE RESTRAINED BUT PIPE LENGTHS WITHIN CASING PIPES WILL NOT BE CONSIDERED IN THE TOTAL LENGTH OF RESTRAINED PIPE.
4. "L" IN THE TABLE INDICATES THE MINIMUM LENGTH (IN FEET) TO BE RESTRAINED ON EACH SIDE OF THE RESPECTIVE FITTING LISTED.
5. THE FOLLOWING ARE THE PROCEDURES FOR DETERMINING THE MINIMUM RESTRAINED LENGTHS WHEN INSTALLING BENDS AND FITTINGS.
   A. WHERE HORIZONTAL NON–ENCROACHING BENDS ARE ENCOUNTERED, USE "L" AS SHOWN IN THE TABLES.
   B. WHERE HORIZONTAL RESTRAINED LENGTHS ENCROACH, RESTRAIN ALL JOINTS BETWEEN BENDS (OR FITTINGS) AND MULTIPLY "L" BY 1.5 FOR NEW RESTRAINED LENGTH OPPOSITE THE FULLY RESTRAINED SECTION OF PIPING.
   C. WHERE VERTICAL UP BENDS ARE ENCOUNTERED, USE "L" AS SHOWN IN TABLES.
   D. WHERE VERTICAL DOWN BENDS ARE ENCOUNTERED, MULTIPLY "L" BY 1.5 FOR NEW RESTRAINED LENGTH.
   E. WHERE VERTICAL BENDS ENCROACH, RESTRAIN ALL JOINTS BETWEEN BENDS. FOR VERTICAL UP BENDS, MULTIPLY "L" BY 1.5 AND FOR VERTICAL DOWN BENDS, MULTIPLY "L" BY 2.25 FOR NEW RESTRAINED LENGTHS OPPOSITE THE FULLY RESTRAINED SECTION OF PIPE.
6. THE RESTRAINED LENGTHS SHOWN FOR REDUCERS ARE BASED ON A REDUCTION OF ONE SIZE DOWN (I.E. 8 TO 6, 4 TO 3, ETC.). IF A REDUCTION GREATER THAN ONE SIZE DOWN IS NECESSARY, SEE THE ENGINEER FOR THE REQUIRED RESTRAINED LENGTH.

ENCROACHING: WHERE FITTINGS ARE INSTALLED AT LOCATIONS CLOSE ENOUGH TO ONE ANOTHER WHERE THE CALCULATED MINIMUM RESTRAINED LENGTHS OVERLAP.

1.0 General

1.1 The Hydrodynamic Mixing System (HMS) is defined as a supplemental system installed within a potable water storage reservoir which passively utilizes the energy provided by the inlet water supply (via pumped or gravity head) and generates a sufficient inlet momentum to achieve a complete homogeneous blending of the water volume within the reservoir with the inlet supply flow. Determination of Complete Homogeneous Blending shall be defined by the modeling requirements and supporting hydraulic analyses as conducted by each individual manufacturer for their specific system configuration as defined within these specifications. System submittals not providing this validation shall not be considered as a viable Hydrodynamic Mixing System (HMS) and shall not be accepted as an equivalent to this system specification.

1.2 The specifications in this section include all components of the Reservoir Hydrodynamic Mixing System (HMS) consisting of a bi-directional flow manifold equipped with variable orifice ductbull inlet nozzles and outlet flow check valves that are NSF61 certified. The HMS manufacturer shall be responsible for designing the system in accordance with the hydrodynamic criteria defined within these specifications and submit design calculations verifying compliance in accordance with the submittal requirements. The following is a description of the Hydrodynamic Mixing System.

1.3 All modeling and hydraulic and mixing calculations pertaining to the HMS shall originate from the ductbull valve manufacturer. Modeling and calculations provided by parties other than the ductbull valve manufacturer are not allowed.

1.4 The complete Hydrodynamic Mixing System shall be supplied by the variable orifice nozzle manufacturer to maintain single source responsibility for the system. The complete system shall be defined as all piping and appurtenances within the low-downstream of the tank penetration. Appurtenances include pipe, fittings, horizontal and vertical pipe supports, expansion joints, variable orifice ductbull check valves, and any other equipment specified within this section of the specifications. Approved manufacturer is Tideflex Technologies, Carneg e, PA 15106. Local Representative is [ ].

1.5 Manufacturer's and/or contractors submitting an alternative to the named Tideflex Technologies mixing system shall be responsible for observing any and all proprietary rights, license fees, royalties, technology licenses, and/or permissions required to provide such a system. The Manufacturer shall indemnify and hold harmless the Owner and Engineer against all claims, damages, losses, and expenses arising out of any infringement of patent rights or copyright incident relating to this system.

3.0 Variable Orifice Ductbull Inlet Nozzles

3.1. Inlet ports/nozzles shall be ductbull style check valves that allow fluid to enter the reservoir during fill cycles and prevent flow in the reverse direction through the nozzle during draw periods. Inlet ports/nozzles may not be fixed diameter ports or pipes.

3.2. The ductbull valves shall be NSF61 Certified. NSF61 approved/Certified materials will not be accepted in lieu of valve certification.

3.3. Inlet ports/nozzles shall have a variable diameter vs. flow hydraulic profile that provides a non-linear jet velocity vs. flow characteristic and a linear headloss vs. flow characteristic. The hydraulic characteristics of the ductbull valves shall be defined by "Hydraulic Coeds".

3.4. The inlet ports/nozzles shall discharge an elliptically shaped jet. The nozzle must have been modeled by an independent laboratory using Laser Induced Fluorescence (LIF).

3.5. Manufacturer shall have conducted independent hydraulic testing to determine headloss and jet velocity characteristics on a minimum of eight (8) sizes of ductbull valves ranging from 2" through 48". The testing must include multiple constructions (taffrass) within each size and must have been conducted for free discharge (discharge to atmosphere) and submerged conditions

3.6. Manufacturer shall have conducted an independent hydraulic test where multiple valves (at least four) of the same size and construction (taffrass) were tested to validate the submitted headloss characteristics and to prove the repeatability of the manufacturing process to produce the same hydraulic characteristics.

3.7. Manufacturer shall have conducted independent hydraulic testing to study the flow distribution characteristics of ductbull valves installed on multiport manifolds

3.8. Manufacturer to have conducted Finite Element Analysis (FEA) on various ductbull valves to determine deflection, stress, and strain characteristics under various load conditions Modeling must have been done for flowing conditions (positive differential pressure) and reverse differential pressure

3.9. Manufacturer must have conducted in-house backpressure testing on ductbull valves ranging from ½" to 48".

3.10 Manufacturer shall have at least fifteen (15) years experience in the manufacturing of "ductbull" style elastomeric valves.

3.11. Manufacturer must have ductbull valves installed on manifold piping systems in at least 100 distribution system reservoirs.

3.12. Manufacturer must have representative inspection videos showing the ductbull valves discharging water into the reservoir during an initial fill (unsubmerged). Manufacturer must also have representative underwater inspection videos showing the operation of the valves when submerged. Representative videos can be submitted upon request from the engineer.

3.13. The ductbull style nozzles shall be two-piece elastomer matrix with internal fabric reinforcing designed to produce the required discharge velocity and minimum headloss requirements as stipulated in the Submittals section. The flange portion shall be an integral portion of the nozzle with fabric reinforcing spanning across the joint between the flange and nozzle body.

3.14. The elastomer used in construction of the ductbull valves must have been tested by an accredited independent laboratory that confirmed there is no degradation in the elastomer

when exposed to chlorine and chloramine per the ASTM D471-98 "Standard Test Method for Rubber Property – Effect of Liquids."

3.15 The manufacturer's name, plant location, serial number and product part number which designates nozzle size, material and construction specifications shall be bonded onto the surface of the nozzle.

4.5. The support rod shall be stainless steel and drilled with three (3) longitudinal holes to allow fastening of rod to membrane and perforated disc.

4.6. When line pressure inside the valve exceeds the backpressure outside the valve, the line pressure forces the membrane to open, allowing flow to pass through the perforations in the disc. When backpressure exceeds the line pressure, the membrane seats on the perforated disc preventing backflow.

4.7. The valve allows flow out of the reservoir during draw cycles and prevents flow into the reservoir during fill cycles

4.8. The elastomer used in construction of the membrane must have been tested by an accredited independent laboratory that confirmed there is no degradation in the elastomer when exposed to chlorine and chloramine per the ASTM D471-98 "Standard Test Method for Rubber Property – Effect of Liquids."

SEDIMENT BASINS & BARRIERS WILL REMAIN IN PLACE UNTIL SEDIMENT CONTRIBUTING AREAS ARE STABILIZED. SEDIMENT BASINS, THE SEDIMENT FENCES, & THE BARRIERS WILL THEN BE REMOVED & THE AREAS OCCUPIED BY THESE STRUCTURES VEGETATED. GUIDELINES FOR THE MAINTENANCE OF ESTABLISHED VEGETATION WILL BE PROVIDED TO THE OWNER WHEN ALL DISTURBED AREAS ARE STABILIZED.

CONCRETE TRUCKS: THE CONTRACTOR SHALL PROVIDE A BERMED AREA FOR CONCRETE TRUCKS TO "WASH-DOWN". CONTRACTOR TO PERIODICALLY REMOVE CONCRETE WASTE & BYPRODUCTS AND DISPOSE OF PROPERLY.

THE ESCAPE OF SEDIMENT FROM THE SITE SHALL BE PREVENTED BY THE INSTALLATION OF EROSION CONTROL MEASURES AND PRACTICES PRIOR TO, OR CONCURRENT WITH LAND DISTURBANCE ACTIVITIES.

NOTES:
*Horizontal staple spacing should be altered if necessary to allow staples to secure the critical points along the channel surface

**In loose soil conditions, the use of staple or stake lengths greater than 6"(15cm) may be necessary to properly secure the RECP's

CHANNEL INSTALLATION DETAIL

1 Prepare soil before installing rolled erosion control products (RECPs), including any necessary application of lime, fertilizer, and seed
2 Begin at the top of the channel by anchoring the RECPs in a 6"(15cm) deep X 6"(15cm) wide trench with approximately 12" (30cm) of RECPs extended beyond the up-slope portion of the trench. Use ShoreMax nail at the channel/culvert outlet as supplemental scour protection as needed. Anchor the RECPs with a row of staples/stakes approximately 12"(30cm) apart in the bottom of the trench. Backfill and compact the trench after stapling. Apply seed to the compacted soil and fold the remaining 12"(30cm) portion of RECPs back over the seed and compacted soil. Secure RECPs over compacted soil with a row of staples/stakes spaced approximately 12" apart across the width of the RECPs
3 Roll the RECPs in direction of water flow in bottom of channel. RECPs will unroll with appropriate side against the soil surface. All RECPs must be securely fastened to soil surface by placing staples/stakes in appropriate locations as shown in the staple pattern guide
4 Place consecutive RECPs end-over-end (Shingle style) with a 4"-6" overlap. Use a double row of staples staggered 4" apart and 4" on center to secure RECPs
5 Full length edge of RECPS at top of side slopes must be anchored with a row of staples/stakes approximately 12"(30cm) apart in a 6"(15cm) deep X 6"(15cm) wide trench. Backfill and compact the trench after stapling
6 Adjacent RECPs must be overlapped approximately 2"-5" (5-12.5cm) (Depending on RECPs type) and stapled
7 In high flow channel applications a staple check slot is recommended at 30 to 40 foot (9 -12m) intervals. Use a double row of staples staggered 4"(10cm) apart and 4"(10cm) on center over entire width of the channel
8 The terminal end of the RECPs must be anchored with a row of staples/stakes approximately 12" (30cm) apart in a 6"(15cm) deep X 6"(15cm) wide trench. Backfill and compact the trench after stapling
