A widespread application of the risk premium method is based on an average of the realized spreads between total returns on equity and debt investments over some historical period. A refinement of this approach is to calculate the average spread between realized equity total returns and bond yields, in order to obtain a forward-looking measure of the required return on debt. Either type of average risk premium is then added to the current cost of debt to obtain a current cost of equity estimate. The assumption implicit in such approaches is that a constant risk premium is embodied in the current cost of equity. A corollary assumption is that the constant risk premium embodied in expected returns is equal to the average of risk premiums measured from realized returns. In actuality, the time period over which past returns are measured can result in significantly different risk premiums. However, many practitioners of this method argue that if the market risk premium is constant, then it is best approximated by realized returns over very long periods of time. These factors underlie the weaknesses of an ex post risk premium approach. Still, this method has cognitive appeal due to the almost tangible dimension added by the measurement of risk premiums from observed returns. There is also great practical appeal to this approach because it is easy to implement by using readily accessible data from sources like Ibbotson Associates (1993), which provide a regularly updated and consistently available compilation of various risk premiums based on holding periods beginning in 1926.

In recent years, an alternative risk premium model has been proposed. It relies on the expected cost of equity, rather than realized returns, as the appropriate basis for measuring risk premiums. Several studies empirically support the hypothesis that risk premiums, as measured by the expected cost of equity, are not constant but, instead, vary inversely with interest rates (Brigham, Shome, and Vinson, 1985; Harris, 1986; Harris and Marston, 1992; and Shome and Smith, 1988). Generally, studies supporting an ex ante risk premium approach are based on data from as early as the mid-1960s through the mid-1980s. The measurement of the ex ante risk premium holds conceptual appeal because it is consistent with the valuation of equity investments based on *expected* returns. However, a practical concern is the reliability of a risk premium measure that must be based upon an estimate of the cost of equity obtained by some other method, such as a DCF model. If problems exist in the formulation of the model used to estimate the cost of equity, those problems are transferred to the risk premium estimate.

An ex ante risk premium study by Brigham et al. (1985) supported the existence of an inverse relationship between interest rates and utility stock risk premiums from 1980 through the first half of 1984. To determine these risk premiums, they employed a two-stage DCF model to obtain monthly cost of equity estimates for utility stocks. Risk premium measures for each month were then derived by deducting an appropriate Treasury bond yield each month. They found that, prior to 1980, the relationship between equity risk premiums and interest rates had been positive. Shome and Smith (1988) obtained similar results, finding an inverse relationship between interest rates and electric utility risk premiums that continued through 1985. Both studies discussed factors that reduced the impact of regulatory lag on utility stocks from the late 1970s into the early 1980s. Both studies concluded that reduced regulatory lag contributed to shifting the relative risk relationship between debt and utility stocks from positive to negative.

These studies were by and large an outgrowth of the market climate of the early 1980s. During that time, the risk of debt instruments rose in both an absolute sense and compared to stocks. This environment led many to conclude that the risk premium had narrowed and some to even argue it was negative.

Shome and Smith (1988) note that while stocks and bonds are both considered to be hedges against anticipated inflation, common stocks are considered to offer a partial hedge against unanticipated inflation. Therefore, during periods of greater inflation uncertainty, Smith and Shome argue that it would seem reasonable that equity risk premiums would decline as interest rates rise (see Gordon and Halpern, 1976). Stated another way, the risk and required return of the less complete hedge (i.e., debt) would increase at a relatively greater rate than the more complete hedge (i.e., equity), thereby reducing the risk premium during periods of higher uncertainty. However, Carleton, Chambers, and Lakonishok (1983) furnish empirical evidence that risk premiums for utility stocks tend to rise with inflation and interest rates if regulatory lag severely hampers earnings and prevents dividends from keeping pace with inflation.

Harris (1986) also finds an inverse relationship between interest rates and ex ante risk premium measures during the early to mid-1980s, based on utility and broader stock market indices. In a more recent study, Harris and Marston (1992) find an inverse relationship between interest rates and ex ante risk premiums for stocks in the S&P 500, based on data from 1982 to 1991. Blanchard (1993) studied real, rather than nominal, risk premiums between 1926 and 1993. Blanchard hypothesized that the persistence of relatively high risk premiums from the late 1930s through the 1940s could have been due to the market's reaction to the high stock market volatility in the late 1920s and early 1930s. Blanchard also

suggested that changes in inflation had a more temporal impact on the relative risk of debt and equity. He concluded that there was a declining trend in real risk premiums for the broad market since the 1950s, to a current level of about 2% to 3%. He also concluded that inflation contributed to a transitory increase above the trend in the 1970s and to a transitory decrease below the trend in the 1980s. However, Blanchard finds that real risk premiums were negative throughout much of the 1980s, which leads to the question as to whether the method he used to measure risk premiums is consistent with the basic risk/return tenet of financial theory.

II. Risk Premium Method and Data Sources

In our study, risk premiums for the electric utility industry are based on quarterly cost of equity estimates from 1980 through 1993 for a sample group of 30 electric utilities. Companies in the sample group met the following selection criteria over the review period: 1) principally remained an electric utility company, 2) did not file for Chapter 11 protection, and 3) continuously paid dividends.

Cost of equity estimates were obtained using the constant-growth form of the DCF model:

$$k_e = \frac{D_1}{P} + g \quad (1)$$

where

k_e = cost of common equity

D_1 = expected annual dividend per share in the coming year

P = current stock price

g = expected growth rate in dividends per share

Brigham et al. (1985) used a two-stage DCF model to estimate the cost of equity and noted that utility companies "meet the conditions of the constant-growth DCF model rather well." The DCF model is also appropriate for utility stocks, perhaps more than for other stocks, because a significant portion of a utility stock's required return is reflected in the dividend yield component.[1] Constant-growth forms of the DCF model were also used by Harris (1986) and Harris and Marston (1992).

[1]Hansen, Kumar, and Shome (1994) found that traditionally high dividend payout ratios in the electric utility industry provided a cost effective means to monitor and manage agency costs related to stockholder-manager and stockholder-regulator conflict.

Data for the DCF model were obtained from *The Value Line Investment Survey*. Part 1, the Summary and Index section of *Value Line*, contains an estimate of the expected dividend yield (D_1/P) over the next 12 months. The dividend yield for each sample company was based on the *Value Line* yield figure published in the last week of each quarter.

Each company's quarterly growth rate estimate was based on the average of three projected measures: *Value Line*'s projected growth rate in earnings and dividends per share and the projected percentage of common equity retained. The last of the three growth measures is equivalent to the familiar b(r) method of estimating a growth rate. *Value Line*'s growth rates represented a readily available and consistent set of projected growth rates over the study period. Projected growth rates were used in order to be consistent with the ex ante measurement of risk premiums for the study.

The three-month average yield on 30-year Treasury bonds was used as the reference rate. It was subtracted from each company's quarterly cost of equity estimate to derive a risk premium. The risk premiums for each company were then averaged to develop a quarterly risk premium for the electric utility sample.

III. Empirical Results

Figure 1 provides a graph of the observed risk premiums and interest rates. It shows a general inverse trend between the two measures over the period studied. We note that the trend closely resembles the one observed by Brigham et al. (1985). The average interest rate over the study period was 9.77%, and the average risk premium was 3.21%.

To estimate the relationship between electric utility risk premiums and interest rates, we fit a simple linear regression model. Model 1 specifies the regression equation. The risk premium is the dependent variable, and the 30-year Treasury bond yield is the independent variable.

A. Model 1

$$RP_t = \alpha + \beta(TB_t) + \varepsilon \quad (2)$$

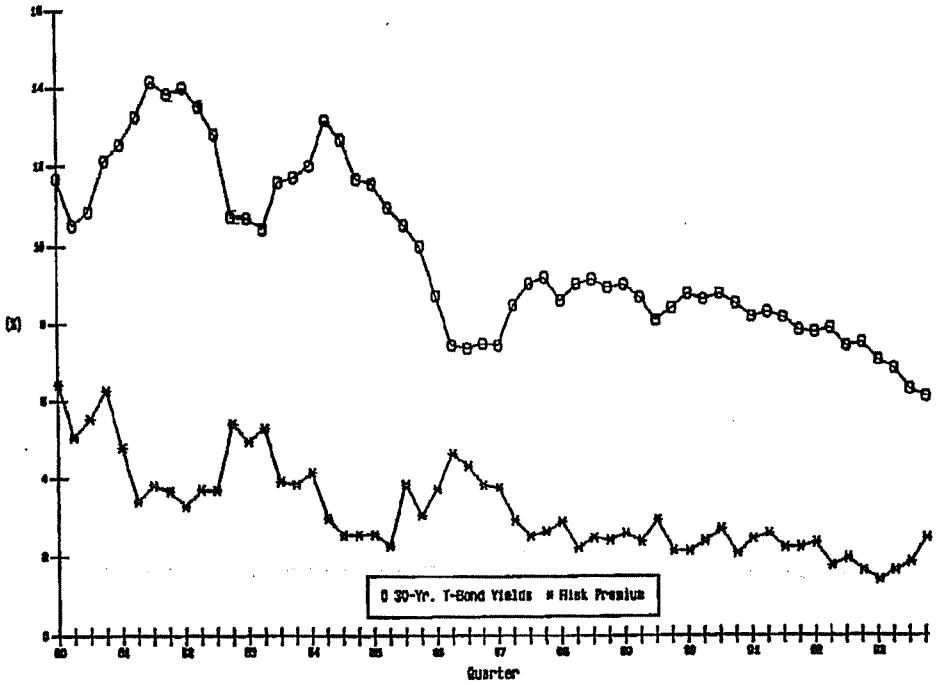
where

RP_t = quarterly average risk premium for all utilities

TB_t = quarterly average 30-year U.S. Treasury bond yield

Initially, we examined our data over the same 1980-1984 time period used by Brigham et al. (1985) and achieved similar results. Expansion of the study period through 1993 produced markedly different results. For example, the adjusted R^2 for Model 1 for the 1980-1993 period was only

Figure 1. Observed Risk Premiums and Treasury Bond Yields Over the Sample Period



0.22, which sharply contrasts with the 0.73 R^2 reported by Brigham et al. (1995) for the 1980-1984 period.

Figure 2 is a graph of all the risk premium data points in the study period for the electric utility industry, with respect to the interest rates at which they were observed. Figure 2 illustrates that there was a divergence in risk premiums that corresponded to interest rates of the same general level during the study period. If a single linear relationship held throughout the observation period, then one would expect very similar risk premium observations at the same general interest rates. This observation led to the hypothesis that perhaps the relative risks of debt and equity were changing over time.

Alternative models were tested to empirically capture the dynamic relationship between risk premiums and interest rates (see Johnston, 1984). We determined that the model specified below was more appropriate than Model 1 for estimating risk premiums over the study period because it would capture this dynamic relationship.

B. Model 2

$$RP_t = \alpha_0 + \alpha_1(D1_t) + \alpha_2(D2_t) + \alpha_3(D3_t) + \alpha_4(D4_t) + \beta(TB_t) + \varepsilon \quad (3)$$

where

RP_t = quarterly average risk premium for all utilities

$D1_t$ = binary variable equal to 1 for Quarter 2-1984 through Quarter 4-1993, and 0 otherwise

$D2_t$ = binary variable equal to 1 for Quarter 1-1987 through Quarter 4-1993, and 0 otherwise

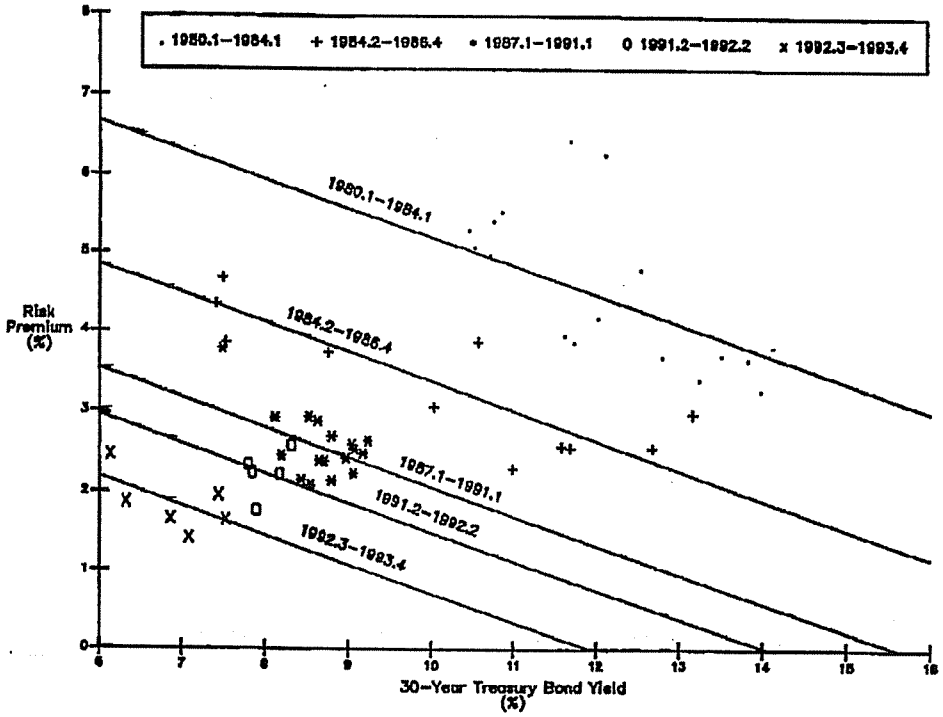
$D3_t$ = binary variable equal to 1 for Quarter 2-1991 through Quarter 4-1993, and 0 otherwise

$D4_t$ = binary variable equal to 1 for Quarter 3-1992 through Quarter 4-1993, and 0 otherwise

TB_t = quarterly average 30-year U.S. Treasury bond yield

The binary variables in Model 2 are included to account for major changes in the relative risks of debt and equity. These changes in relative risk would be reflected as shifts in the level or magnitude of the risk premiums, regardless of the behavior of Treasury bond yields. We did not attempt to determine specific factors that might account for such shifts. Cumulative sum of error tests (see Hall, Johnson, and Lilien, 1990) and break-point Chow tests (see Pindyke and Rubinfeld, 1991) were used to determine the placement

Figure 2. Observed Risk Premiums Plotted Against Treasury Bond Yields



of the binary variables. These tests indicated that significant shifts in the market's evaluation of the relative risk of debt and equity most likely occurred in 1984, 1987, 1991, and 1992.

Table 1 reports the results of fitting Equation (3). These results indicate an inverse relationship between ex ante risk premiums and interest rates over the sample period. A first-order autoregressive correction was made to adjust for the possibility of serial correlation during the sample period (see Johnston, 1984, pp. 321-324). The adjusted R^2 for Model 2 is 0.82. All variables are statistically significantly different from zero at the 0.01 level, except for D3 and D4, which are significant at the 0.05 level. As anticipated, the coefficient estimate of the Treasury bond variable is negative, which indicates the existence of a general inverse relationship between interest rates and risk premiums over the study period.

It is important to note that Model 2 identifies the basic relationship between risk premiums and interest rates, which is defined by the slope coefficient β, as statistically stable over the sample period. Stability of the Treasury bond slope coefficient over the study period was supported by statistical tests that permitted the slope coefficient to change.

C. Interpretation of Empirical Results

The inverse relationship indicated in Table 1 represents approximately 37 basis points for each 100 basis-point change in Treasury bond yields. This result is consistent with the Harris and Marston (1992) study, which found a 36 basis-point inverse relationship between long-term government bond rates and risk premiums for a broader sample of companies for the 1982-1991 period. However, our utility risk premium values are lower than those reported by Harris and Marston for the broader market. One might expect such a difference between the risk premium for utility stocks and the broader market, due to the relatively lower risk of utility stocks.

Harris and Marston found that changes in relative risk, as proxied by a yield spread variable, were important in explaining risk premium changes in subperiods between 1982 and 1991. They also noted, however, that the yield spread variable was more significant in the early 1980s and less significant in the latter 1980s. This phenomenon may be embedded within our intercept dummies, which also exhibited a declining level of magnitude and significance. Interestingly, the break-points for Harris and Marston's

Table 1. Model 2 Regression Results[a]

This table reports the results of fitting Equation (3). The risk premium is the dependent variable.

Variable	Coefficient	Standard Error	t-statistic

**Significant at the 0.05 level.

[a]Regressions were corrected for the possible existence of serial correlation using the Cochran-Orcutt method.

sub-periods closely approximate the break-points indicated by our tests.

Trends in the overall level of risk premiums provide one of the more intriguing comparisons between our results and those of Harris and Marston. Both studies support an inverse relationship throughout similar study periods. However, the late 1980s and early 1990s produced some of the highest risk premiums in Harris and Marston's study, while the same period produced some of the lowest risk premiums observed in our study. These results may be indicative of higher perceived risk for their broader sample relative to our utility stock sample during this period. Electric utility companies generally have significantly lower reported values for beta than would be reported for a broad market sample of companies. While beta is a somewhat controversial measure of risk, Harris and Marston report a significant positive relationship between beta and risk premiums.

Our results indicate that ex ante risk premiums for electric utility stocks remained inversely related to interest rates over the study period when changes regarding the market's evaluation of relative risk are taken into account. We acknowledge the limitation that our regression model is descriptive of the study period only; however, some measure of robustness would appear to be imparted by the fairly wide range of market climates in our study period.

During the study period, any number of events could have had an impact on the relative risks of debt and equity.[2] In all likelihood, this relationship will continue to be affected by innumerable future events. The projected growth rates for utility dividends and earnings during the early 1980s were viewed by some as too high to be sustainable and therefore not reasonable proxies for the long-run growth rate the DCF model requires. Interestingly, the projected dividend and earnings growth rates for the early 1990s have been viewed by some as too low. Therefore, results of a descriptive model developed from ex ante measures over a period of time can help to provide a reasonableness check concerning an estimate at one point in time.

IV. Usefulness of the Model

In developing cost of equity recommendations, the staff of the Virginia State Corporation Commission (VSCC) presently includes ex ante risk premium methods based on the information presented in this study as well as others. For example, the VSCC staff incorporated an earlier version of the model presented in this paper to formulate a cost of equity recommendation for The Potomac Edison Company in a 1993 rate case. At that time, the model included data from 1980 to 1991, which indicated two shifts in the level of risk premiums, one in the second quarter of 1994 and the other in the first quarter of 1987. The estimated slope coefficient at that time was -0.395, or roughly 40 basis points for each 100 basis-point change in interest rates.

Using the 6.3% average yield on 30-year Treasury bonds from July 1993 to September 1993, the model indicated a risk premium of 3.4%. Combined with the 6.3% interest

[2]Over the study period, the relative risks of debt and equity could have been affected by such factors as changing monetary policy, concern over the growing budget deficit, the savings and loan debacle, the Continental Illinois Bank crisis and other bank industry problems resulting from defaulted loans to developing countries, the leveraged buyout binge of the 1980s, and the 1987 stock market crash, to name a few.

rate, this risk premium produced a 9.7% cost of equity estimate. The VSCC staff also adjusted the average risk premium for the study period based on the model's slope coefficient to obtain a cost of equity estimate for the current level of interest rates. Using this approach, the 3.9% difference between the average interest rate over the study period (10.2%) and the recent 3-month average rate (6.3%) was multiplied by the approximate slope coefficient of 0.4%. The resulting 1.6% was then added to the 3.4% average risk premium for the study period to incorporate the inverse relationship between Treasury yields and utility equity risk premiums. This approach indicated a current risk premium of 5.0%, which indicated a current cost of equity of 11.3% when combined with the 6.3% interest rate. A 10 basis-point flotation cost adjustment was added to both estimates, thus providing cost of equity estimates of 9.8% and 11.4% from the risk premium study. The Potomac Edison Company's requested rate increase reflected a 12.50% return on equity (and increased rates had been in effect on an interim basis subject to refund since September 28, 1993). Ultimately, the VSCC authorized a cost of equity range of 10.4% to 11.4% in its Final Order issued on November 18, 1994.

In addition to providing the basis for a supplemental cost of equity estimate, our risk premium study may be applicable in a more relaxed regulatory framework. For example, in its investigation of alternative regulatory methods for local telephone companies, the VSCC established a number of regulatory options for local telephone companies in Case No. PUE930036. The Earnings Incentive Plan option in that case included the provision for an annually authorized return on equity range that would span 300 basis points and be based on a risk premium approach that recognizes an inverse relationship between risk premiums and interest rates. The risk premium for the bottom of the range in each year would be established as 2.0%, plus 0.5 times the difference between 10.0% and the three-month average yield on 30-year Treasury bonds from September through November of the preceding year. The risk premium for the top of the range would be determined in the same manner, except that the calculation would start with a base level of 5.0%. The resulting risk premiums (subject to the constraint that they cannot be less than zero) are added to the same three-month average yield on 30-year Treasury bonds in the risk premium formula to produce the cost of equity range. The average interest rate and risk premium from a study such as ours could easily be incorporated within a plan like the one developed by the VSCC. While the VSCC's plan did not incorporate a provision for the sharing of earnings, one could be included so that returns above the banded range could be shared.

V. Conclusions

This study furnishes evidence that equity risk premiums are not constant. Our results indicate a statistically significant inverse relationship between interest rates and utility equity risk premiums. Yet, considering that our study covers a recent 14-year period, the hypothesis of a constant ex ante risk premium should also be tested over a longer period. It would also be interesting to test whether the long-term average of ex ante risk premiums converges with the long-term average of ex post risk premiums. ■

historical cost. In the discussion of the price-level problem in Chapter 14, it was pointed out that price-level adjustments can validly be made only within the framework of a complete restatement of all elements of the financial statements. Crude "adjustments", such as using the gross asset amount, are apt to be misleading and are generally worse than no adjustments at all.

Long-term liabilities plus equity capital. The use of long-term liabilities plus equity capital as the investment base differs from the "total assets" base only in that current liabilities are excluded as suppliers of funds on which the return is computed. The focus here is on the two major suppliers of longer-term funds, that is, long-term creditors and equity shareholders. In this context, working capital required to support operations is regarded as the excess of current assets over current liabilities.

Shareholders' equity. The computation of return on shareholders' equity measures the return accruing to the owners' capital. As was seen in the discussion of financial leverage in Chapter 18, this return reflects the effect of the employment of debt capital on the owners' return. Since preferred stock, while in the equity category, is usually nevertheless entitled only to a fixed return, it is also omitted from the calculation of the final return on equity computation.

Book versus market values in the investment base

Return on asset calculations are most commonly based on book values appearing in the financial statements rather than on market or fair values that are, in most cases, analytically more significant and relevant. Also, quite often, a return is earned by enterprises on assets that either do not appear in the financial statements or are significantly understated therein. Examples of such assets are intangibles such as patents, trademarks, expensed research and development (R&D) costs, advertising and training costs, and so forth. Other excluded assets may include leaseholds and the value of natural resources discovered.

One avenue to the use of such data is to rely on the valuation that the market places on the equity securities of the enterprise in order to approximate fair values. Thus, we can substitute the market value of equity securities and debt for the book value of total assets in computing a proper investment base.

Difference between investor's cost and enterprise investment base

For purposes of computing the ROI, a distinction must be drawn between the investment base of an enterprise and that of an investor. The investor's investment base is, of course, the price paid for his or her

equity securities. Except for those cases in which he or she acquired such securities at book value, the investment base is going to differ from that of the company in which he or she has invested. In general, the focus in ROI computations is on the return realized by the enterprise rather than the return realized on the investment cost of any one shareholder.

Averaging the investment base

Regardless of the method used in arriving at the investment base, the return achieved over a period of time is always associated with the investment base that was, on average, actually available to the enterprise over that period of time. Thus, unless the investment base did not change significantly during the period, it will be necessary to average it.

The most common method of averaging for the external analyst is that of adding the investment base at the beginning of the year to that at the end of the year and dividing their total by two. Care must, however, be used in employing this method of averaging. Companies in some industries choose a "natural" rather than the calendar business year. Thus, for example, in retailing, the natural business year ends when inventories are at their lowest (e.g., January 31 after the holiday selling season) and when it is easiest to count them. In such case, averaging two year-ends may yield the *lowest* rather than the average amount of assets employed.

In such or similar cases, more accurate methods of averaging, where the data are available, are to average by month-end balances, that is, adding the month-end investment bases and dividing the total by 12, or to average on a quarterly basis.

Relating income to the investment base

In the computation of ROI, the definition of return (income) is dependent on the definition of the investment base.

If the investment base is defined as comprising total assets, then income *before* interest expense is used.[4] The exclusion of interest from income deductions is due to its being regarded as a payment for the use of money to the suppliers of debt capital in the same way that dividends are regarded as a reward to suppliers of equity capital. Before deductions for interest or dividends, income is used when it is related to total assets or to long-term debt plus equity capital (assuming most of the interest expense is on long-term obligations).

The income of a consolidated entity that includes a subsidiary that is partially owned by a minority interest usually reflects a deduction for the

[4] Interest expense means interest incurred less interest capitalized. In theory, the amount of previously capitalized interest currently amortized and included in expenses should also be added back to income.

minority's share in that income. The consolidated balance sheet, however, includes all the assets of such a subsidiary, i.e., those belonging to the parent as well as those belonging to the minority (see also Chapter 9). Because the investment in the denominator includes all the assets of the consolidated entity, the income (in the numerator) should include all the income (or loss), not just the parent's share. For this reason, the minority's share of earnings (or loss) must be added back to income in computing return on total assets. When the denominator is the equity capital only, the minority share in income (or loss) need not be added back if equity capital excludes minority interest.

When the return on the equity capital is computed, net income *after* deductions for interest and preferred dividends is used. If the preferred dividends are cumulative, they are deducted in arriving at the balance of earnings accruing to the common stock, whether these dividends were declared or not.

The final ROI must always reflect all applicable costs and expenses and that includes income taxes. Some computations of ROI nevertheless omit deductions of income taxes. One reason for this practice is the desire to isolate the effects of tax management from those of operating performance. Another reason is that changes in tax rates affect comparability over the years. Moreover, companies that have tax loss carry-forwards find that the deduction of taxes from income adds confusion and complications to the ROI computations.

It must, however, be borne in mind that income taxes reduce the final return and that they must be taken into consideration particularly when the return on shareholders' equity is computed.

ADJUSTING THE COMPONENTS OF THE ROI FORMULA

In computing any measure or ratio, the analyst uses the amounts in the financial statements only as starting points. As was seen in the discussion in Chapter 18 on the adjustment of the debt-to-equity ratios, some amounts need analytical adjustment and some amounts not found in the financial statements need to be included in the adjusted computation. Reference to the discussion in Chapter 18 will reveal that some of the items discussed therein, such as adjustment of inventory amounts, may affect the ROI computation while others, such as reclassification of deferred taxes, may not. Moreover, some adjustments, such as those relating to inventory amounts, affect both the numerator and the denominator of the formula, thus moderating the net effect on the ratio.

The computation of ROI under the various concepts of "investment base" discussed above will now be illustrated by means of the data contained in Exhibits 19–1 and 19–2. The computations are for the year 19x9 and based on figures rounded to the nearest million dollars.

XIX. Conclusion..... 574.

1. On November 15, 2018, the Commission issued an Order Directing Briefs in the above-captioned proceedings.[1] The Briefing Order directed the participants in the above-captioned proceedings to submit briefs regarding: (1) a proposed framework for determining whether an existing base return on equity (ROE) is unjust and unreasonable under the first prong of Federal Power Act (FPA) section 206;[2] and (2) a revised methodology for determining just and reasonable base ROEs under the second prong of FPA section 206.[3] As discussed below, we will adopt the proposal in the Briefing Order, with certain revisions. Principally, we will not adopt the use of the expected earnings (Expected Earnings) and risk premium (Risk Premium) models in our ROE analyses under the first and second prongs of section 206, and instead will use only the discounted cash flow (DCF) model and capital-asset pricing model (CAPM) in our ROE analyses under both prongs of section 206.

I. Background

A. Opinion No. 531 *et seq.*

2. In Opinion No. 531, the Commission adopted certain changes to its use of the DCF methodology for evaluating and setting the Commission-allowed ROE for the New England transmission owners (New England TOs). In particular, the Commission elected to replace the "one-step" DCF model, which considers only short-term growth projections for a public utility, with a "two-step" model that considers both short- and long-term growth projections.[4] The Commission also departed from its typical practice of setting the just and reasonable ROE of a group of utilities at the midpoint of the zone of reasonableness. The Commission explained that evidence of "anomalous" capital market conditions, including "bond yields [that were] at historic lows," made the Commission "less confiden[t] that the midpoint of the zone of reasonableness . . . accurately reflects the [ROE] necessary to meet the *Hope* and *Bluefield* capital attraction

FERC*, 854 F.3d 9 (D.C. Cir. 2017) (*Emera Maine*).

standards."[5] The Commission therefore looked to four alternative benchmark models: three financial models—the Risk Premium model, CAPM, and Expected Earnings model[6]—as well as a comparison with the ROEs approved by state public utility commissions.[7] In considering those models, the Commission emphasized that it was not departing from its long-standing reliance on the DCF model, but rather relying on those models only to "inform the just and reasonable placement of the ROE within the zone of reasonableness established . . . by the DCF methodology."[8] Based on these alternative models, the Commission determined that an ROE of 10.57 percent, the midpoint of the upper half of the zone of reasonableness produced by the two-step DCF model, would be just and reasonable. Because that figure differed from the New England TOs' existing 11.14 percent ROE, the Commission concluded that the existing base ROE had become unjust and unreasonable and it therefore set New England TOs' base ROE at 10.57 percent, pending a paper hearing concerning the long-term growth projection to use in the DCF analysis. Following that hearing, in Opinion No. 531-A the Commission reaffirmed its conclusion that 10.57 percent was the just and reasonable ROE and that New England TOs' existing ROE was unjust and unreasonable. The Commission required New England TOs to submit a compliance filing to implement their new ROEs effective October 16, 2014—the date of Opinion No. 531-A.

---

[5] Opinion No. 531, 147 FERC ¶ 61,234 at PP 144-145 & n.285. "*Hope*" and "*Bluefield*" refer to a pair of U.S. Supreme Court cases that require the Commission "to set a rate of return commensurate with other enterprises of comparable risk and sufficient to assure that enough capital is attracted to the utility to enable it to meet the public's needs." *Boroughs of Ellwood City, Grove City, New Wilmington, Wampum, & Zelienople, Pa. v. FERC*, 731 F.2d 959, 967 (D.C. Cir. 1984) (citing *FPC v. Hope Nat. Gas Co.*, 320 U.S. 591, 603 (1944) (*Hope*) and *Bluefield Waterworks Improvement Co. v. Pub. Serv. Comm'n of W.V.*, 262 U.S. 679 (1923) (*Bluefield*)).

[6] As discussed further below, the Risk Premium model and CAPM estimate cost of equity using the premium that investors expect to earn on a stock investment over and above the return that they expect to earn on a bond investment, and the Expected Earnings model is a method of calculating the earnings that an investor expects to receive on the book value of a particular stock.

[7] Opinion No. 531, 147 FERC ¶ 61,234 at PP 147-149.

[8] *Id.* P 146.

B. Opinion No. 551 *et seq.*

3. On November 12, 2013, multiple complainants[9] filed a complaint (First Complaint) in Docket No. EL14-12-000 pursuant to FPA section 206, alleging, among other things, that the Midcontinent Independent System Operator, Inc.'s (MISO) transmission-owning members' (MISO TOs) base ROE reflected in MISO's Open Access Transmission, Energy and Operating Reserve Markets Tariff (Tariff) was unjust and unreasonable.[10] At the time of the First Complaint, MISO TOs had a base ROE of 12.38 percent (except for the ATCLLC zone which had a 12.20 percent ROE),[11] and their total ROE—i.e., the base ROE plus any ROE adders approved by the Commission—was not permitted to exceed 15.96 percent. The Commission established the MISO TOs'

[9] The complainants consist of a group of large industrial customers: Association of Businesses Advocating Tariff Equity (ABATE); Coalition of MISO Transmission Customers (Coalition of MISO Customers); Illinois Industrial Energy Consumers (IIEC); Indiana Industrial Energy Consumers, Inc. (INDIEC); Minnesota Large Industrial Group (MLIG); and Wisconsin Industrial Energy Group.

[10] The following MISO transmission owners were named in the First Complaint: ALLETE, Inc. for its operating division Minnesota Power (and its subsidiary Superior Water, L&P); Ameren Services Company, as agent for Union Electric Company, Ameren Illinois Company, and Ameren Transmission Company of Illinois; American Transmission Company LLC (ATC); Cleco Power LLC; Duke Energy Corporation for Duke Energy Indiana, Inc.; Entergy Arkansas, Inc.; Entergy Louisiana, LLC; Entergy Gulf States Louisiana, L.L.C.; Entergy Mississippi, Inc.; Entergy New Orleans, Inc.; Entergy Texas, Inc.; Indianapolis Power & Light Company; International Transmission Company; ITC Midwest LLC; METC; MidAmerican Energy Company; Montana-Dakota Utilities Co.; Northern Indiana Public Service Company; Northern States Power Company, a Minnesota corporation, and Northern States Power Company, a Wisconsin corporation, subsidiaries of Xcel Energy Inc.; Northwestern Wisconsin Electric Company; Otter Tail Power Company; Southern Indiana Gas & Electric Company; and Wolverine Power Supply Cooperative, Inc. Intervenor Xcel Energy Services Inc. did not join certain of the MISO Transmission Owners' pleadings in this proceeding, but generally supports this brief on behalf of respondents Northern States Power Company, a Minnesota corporation, and Northern States Power Company, a Wisconsin corporation.

[11] For the sake of clarity, we refer to this ROE of the MISO TOs as 12.38 percent in this order, without separately identifying that the ATCLLC zone had a 12.20 percent ROE. Our discussion and decisions with respect to the MISO TOs' 12.38 percent ROE also apply to the 12.20 percent ATCLLC ROE.

preexisting 12.38 percent ROE in a 2002 decision.[12] That ROE was based on a DCF analysis using financial data for the six-month period ending February 2002.[13] On October 16, 2014, the same date that the Commission issued Opinion No. 531-A, it set the First Complaint for hearing before an Administrative Law Judge and established a refund effective date of November 12, 2013.[14]

4. Following the hearing, the Presiding Judge issued an Initial Decision,[15] and the Commission subsequently issued Opinion No. 551.[16] In Opinion No. 551, the Commission calculated the just and reasonable ROE using the two-step DCF methodology from Opinion No. 531 and financial data for the period January 1 through June 30, 2015. The Commission affirmed the conclusions of Initial Decision (I), finding that the Presiding Judge correctly applied the two-step DCF analysis required by Opinion No. 531.[17] The Commission also affirmed the Presiding Judge's determination that, as in Opinion No. 531, there were anomalous capital market conditions such that the Commission had less confidence that the midpoint of the zone of reasonableness produced by a mechanical application of the DCF methodology satisfied the capital

[16] *Ass'n of Businesses Advocating Tariff Equity v. Midcontinent Indep. Sys. Operator, Inc.*, Opinion No. 551, 156 FERC ¶ 61,234 (2016) (affirming Initial Decision (I), 153 FERC ¶ 63,027).

[17] *See generally* Opinion No. 551, 156 FERC ¶ 61,234 at P 9.

attraction standards of *Hope* and *Bluefield*.[18] The Commission found that the Presiding Judge reasonably considered evidence of alternative methodologies for determining the ROE and the ROEs approved by state regulatory commissions, for purposes of deciding to set the ROE at the central tendency of the upper half of the zone of reasonableness, setting the base ROE for MISO TOs at 10.32 percent.[19] The Commission required MISO TOs to submit a compliance filing to implement their new ROEs effective September 28, 2016, the date of Opinion No. 551, and to provide refunds for the November 12, 2013-February 11, 2015 refund period. Following the issuance of Opinion No. 551, numerous parties submitted requests for rehearing.

C. Second Complaint Against MISO TOs' ROE

5. On February 12, 2015, a new set of complainants[20] filed a complaint (Second Complaint) also alleging that the MISO TOs' base ROE of 12.38 percent was unjust and unreasonable.[21] Relying on an updated two-step DCF analysis, the Second Complaint

[18] *Id.*

[19] *Id.*

[20] Complainants for the Second Complaint consist of: Arkansas Electric Cooperative Corporation (Arkansas Electric Cooperative); Mississippi Delta Energy Agency and its two members, Clarksdale Public Utilities Commission of the City of Clarksdale, Mississippi and Public Service Commission of Yazoo City of the City of Yazoo City, Mississippi; and Hoosier Energy Rural Electric Cooperative, Inc. (Hoosier Cooperative).

[21] The following MISO transmission owners were named in the Second Complaint: ALLETE, Inc. (for its operating division Minnesota Power, Inc. and its wholly-owned subsidiary Superior Water Light, & Power Company; Ameren Illinois Company; Union Electric Company (identified as Ameren Missouri); Ameren Transmission Company of Illinois; ATC; Cleco Power LLC; Duke Energy Business Services, LLC; Entergy Arkansas, Inc.; Entergy Gulf States Louisiana, LLC; Entergy Louisiana, LLC; Entergy Mississippi, Inc.; Entergy New Orleans, Inc.; Entergy Texas, Inc.; Indianapolis Power & Light Company; International Transmission Company, ITC Midwest LLC, and Michigan Electric Transmission Company, LLC; MidAmerican Energy Company; Montana-Dakota Utilities Co., Northern Indiana Public Service Company; Northern States Power Company-Minnesota; Northern States Power Company-Wisconsin; Otter Tail Power Company; and Southern Indiana Gas & Electric Company.

complainants argued that the base ROE should be no higher than 8.67 percent.[22] On June 18, 2015, the Commission established hearing procedures and set a refund effective date of February 12, 2015.[23]

6. Parties filed requests for rehearing of the MISO II Hearing Order, and on July 21, 2016, the Commission generally denied these rehearing requests.[24] Following the MISO II Hearing Order, the Presiding Judge issued the Initial Decision on June 30, 2016.[25] The Presiding Judge adopted a zone of reasonableness of 6.75 percent to 10.68 percent based on financial data for the period July 1, 2015 through December 31, 2015. The Presiding Judge also determined that the anomalous market conditions identified in Opinion No. 531 persisted and, after considering the alternative benchmark methodologies, that the just and reasonable ROE was 9.70 percent—halfway between the midpoint and the upper bound of the zone of reasonableness. The participants filed briefs on and opposing exception, which are currently pending before the Commission.

D. ***Emera Maine***

7. On April 14, 2017, the United States Court of Appeals for the District of Columbia Circuit (D.C. Circuit) issued its *Emera Maine* decision, vacating and remanding Opinion No. 531 *et seq*. As an initial matter, the D.C. Circuit was not persuaded by New England TOs' argument that an ROE within the DCF-produced zone of reasonableness could not be deemed unjust and unreasonable. The D.C. Circuit explained that the zone of reasonableness established by the DCF is not "coextensive" with the "statutory" zone of reasonableness envisioned by the FPA.[26] Accordingly, the D.C. Circuit concluded that the fact that New England TOs' existing ROE fell within the zone of reasonableness

[26] *Emera Maine*, 854 F.3d at 22-23.

produced by the DCF did not necessarily indicate that it was just and reasonable for the purposes of the FPA.[27]

8. Nevertheless, the D.C. Circuit found that the Commission had not adequately shown that the New England TOs' existing ROE was unjust and unreasonable. The D.C. Circuit explained that the FPA's statutory "zone of reasonableness creates a broad range of potentially lawful ROEs rather than a single just and reasonable ROE" and that whether a particular ROE is unjust and unreasonable depends on the "particular circumstances of the case."[28] Thus, the fact that New England TOs' existing ROE did not equal the just and reasonable ROE that the Commission would have set using the current DCF inputs did not necessarily indicate that New England TOs' existing ROE fell outside the statutory zone of reasonableness.[29] As such, the D.C. Circuit concluded that Opinion No. 531 "failed to include an actual finding as to the lawfulness of [New England TOs'] existing base ROE" and that its conclusion that their existing ROE was unjust and unreasonable was itself arbitrary and capricious.[30]

9. The D.C. Circuit also found that the Commission had not adequately shown that the 10.57 percent ROE that it set was just and reasonable. Although recognizing that the Commission has the authority "to make 'pragmatic adjustments' to a utility's ROE based on the 'particular circumstances' of a case," the D.C. Circuit nevertheless concluded that the Commission had not explained why setting the ROE at the upper midpoint was just and reasonable.[31] The D.C. Circuit noted, in particular, that the Commission relied on the alternative models and state-regulated ROEs to support a base ROE *above* the midpoint, but that it did not rely on that evidence to support an ROE *at* the upper midpoint.[32]

---

[27] *Id.* at 23.

[28] *Id.* at 23, 26.

[29] *Id.* at 27 ("To satisfy its dual burden under section 206, FERC was required to do more than show that its single ROE analysis generated a new just and reasonable ROE and conclusively declare that, consequently, the existing ROE was per se unjust and unreasonable.").

[30] *Id.*

[31] *Id.* (quoting *FPC v. Nat. Gas Pipeline Co. of America*, 315 U.S. 575, 586 (1942)).

[32] *Id.* at 29 ("FERC's reasoning is unclear. On the one hand, it argued that the alternative analyses supported its decision to place the base ROE above the midpoint, but

Similarly, the D.C. Circuit noted that the Commission had concluded that a base ROE of 9.39 percent—the midpoint of the zone of reasonableness—might not be sufficient to satisfy *Hope* and *Bluefield* or to allow the utility to attract capital, but that the Commission had not similarly explained how a 10.57 percent base ROE was sufficient to meet either of those conditions. Because the D.C. Circuit found that the Commission had not pointed to record evidence supporting the specific point at which it set New England TOs' ROE, the D.C. Circuit held that the Commission had not articulated the "rational connection" between the evidence and the rate that the FPA demands.[33]

10. Based on the D.C. Circuit's conclusion that the Commission had not met its burden either under the first or the second prong of FPA section 206, it vacated and remanded Opinion No. 531 *et seq.*[34] Thus, the current state of affairs concerning the MISO TOs' ROE is this: There are two currently pending complaints against their ROE, both of which have been fully litigated before a Presiding Judge. The D.C. Circuit vacated the Commission's determinations in Opinion No. 531, upon which the Commission relied extensively in its order on the First Complaint (i.e., Opinion No. 551), meaning that Opinion No. 531 is no longer precedential,[35] even though the Commission remains free to re-adopt those determinations on remand as long as it provides a reasoned basis for doing so.[36] In the meantime, MISO TOs are continuing to collect their 10.32 percent ROE, although the Commission has broad remedial authority to correct its legal error in order to make whatever ROE it sets on rehearing effective as of the date of Opinion No. 551.[37]

E. Briefing Orders

11. On October 16, 2018, the Commission issued an order proposing a methodology for addressing the issues that were remanded to the Commission in *Emera Maine* and

---

on the other hand, it stressed that none of these analyses were used to select the 10.57 percent base ROE.").

[33] *Id.* at 28-30.

[34] *Id.* at 30.

[35] *ISO New England Inc. v. Bangor Hydro-Electric Co.*, 161 FERC ¶ 61,031, at P 28 (2017).

[36] *Emera Maine*, 854 F.3d at 30.

[37] *See ISO New England Inc. v. Bangor Hydro-Electric Co.*, 161 FERC ¶ 61,031 at PP 24, 34.

establishing a paper hearing on whether and how this methodology should apply to the four complaint proceedings concerning the New England TOs' ROE.[38] In the *Coakley* Briefing Order, the Commission proposed to change its approach to determining base ROE by giving equal weight to four financial models, instead of primarily relying on the DCF methodology. The Commission stated that evidence indicates that investors do not rely on any one model to the exclusion of others. Therefore, relying on multiple financial models makes it more likely that our ROE determination will accurately reflect how investors make their investment decisions.

12. Specifically, the Commission proposed to rely on three financial models that produce zones of reasonableness—the DCF model, CAPM, and Expected Earnings model—to establish a composite zone of reasonableness. The zone of reasonableness produced by each model would be given equal weight and averaged to determine the composite zone of reasonableness.[39]

13. The Commission also proposed a framework for using the composite zone of reasonableness in evaluating whether an existing base ROE remains just and reasonable. The Commission proposed that, in order to find a utility's existing ROE unjust and unreasonable under the first prong of FPA section 206, its ROE must be outside a range of presumptively just and reasonable ROEs for a utility of its risk profile, absent additional evidence to the contrary. In other words, the Commission would dismiss an ROE complaint if the targeted utility's existing ROE falls within the range of presumptively just and reasonable ROEs for a utility of its risk profile unless that presumption is sufficiently rebutted. The Commission explained that, by the same token, a finding that the existing ROE of a utility falls outside that range would support a holding that the ROE has become unjust and unreasonable, absent additional evidence to the contrary.[40]

14. The Commission explained that it is appropriate to calculate the applicable ranges of presumptively just and reasonable ROEs based on a utility's risk profile because a utility's risk profile remains the "particular circumstance[]" most relevant to determining whether a point within a zone of reasonableness is a just and reasonable ROE for that utility.[41] The Commission further concluded that the "principal consideration for

---

[38] *Coakley v. Bangor Hydro-Elec. Co.*, 165 FERC ¶ 61,030 (2018) (*Coakley* Briefing Order).

[39] *See id.* PP 16, 30.

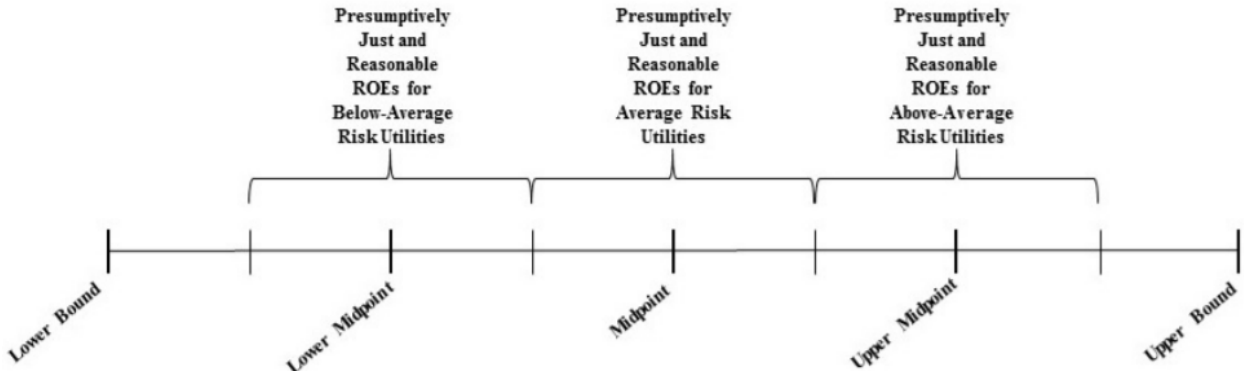
[40] *See id.* PP 16, 28.

[41] *Id.* P 24 (quoting *Emera Maine*, 854 F.3d at 23).

determining whether an existing ROE within the overall zone of reasonableness has become unjust and unreasonable is the risk profile of the utility or utilities for which the Commission is setting the ROE."[42]

15. The Commission proposed that the applicable range of presumptively just and reasonable ROEs for a utility should correspond to those points that are closer to the ROE that the Commission should set for that utility than to the ROE for a utility of a different risk profile.[43] For example, the Commission explained that it typically would be unjust and unreasonable for an average risk utility to receive an ROE that is closer to the ROE that would be just and reasonable for a utility of above- or below-average risk.[44] In particular, for average risk utilities, the Commission proposed that the presumptively just and reasonable range would be the quartile of the zone of reasonableness centered on the central tendency of the composite zone of reasonableness. For below average risk utilities, the Commission proposed that such range would be the quartile of the zone of reasonableness centered on the central tendency of the lower half of the zone of reasonableness. For above average risk utilities, the Commission proposed that such range would be the quartile of the zone of reasonableness centered on the central tendency of the upper half of the zone of reasonableness.[45] The Commission illustrated how these presumptively just and reasonable quartile ranges would be divided as follows:

Figure 1: Zone of Reasonableness Quartiles



16. For purposes of establishing a new just and reasonable base ROE when the existing base ROE has been shown to be unjust and unreasonable, the Commission proposed using the above three models, plus the Risk Premium model. The Risk

[42] *Id.* P 28.

[43] *Id.* P 27.

[44] *Id.* P 26.

[45] *Id.*

Premium model produces a single numerical point rather than a range; therefore the Commission did not propose to use it to establish a composite zone of reasonableness. The Commission proposed to determine a new just and reasonable ROE for average risk utilities by determining the midpoint/medians of each zone of reasonableness produced by the DCF, CAPM, and Expected Earnings models and averaging those ROEs with the Risk Premium ROE, giving equal weight to each of the four figures. The Commission proposed to use the midpoint/medians of the lower and upper halves of the zones of reasonableness to determine ROEs for below average and above average risk utilities, respectively, and average those ROEs with the Risk Premium ROE.[46]

17. On November 15, 2018, the Commission issued the Briefing Order in these proceedings. In that order, the Commission similarly established a paper hearing on whether and how the methodology proposed in the *Coakley* Briefing Order should apply to the two proceedings pending before the Commission involving MISO TOs' ROE.[47]

II. Overview

18. As discussed below, we adopt the revised base ROE methodology proposed in the Briefing Order, with certain revisions. The Commission will use this methodology to determine whether an existing base ROE is unjust and unreasonable under the first prong of section 206, and for determining a new just and reasonable replacement base ROE under the second prong of section 206 when an existing ROE has been shown to be unjust and unreasonable. However, we will not use the Expected Earnings model or Risk Premium model in our revised base ROE methodology, for the reasons we discuss below. As a result, we will use the DCF model and CAPM in our determinations under the first and second prongs of section 206, as we discuss further below. These models are the two methods most commonly used by investors for estimating the cost of equity.[48] We will also use the ranges of presumptively just and reasonable ROEs in our analysis under the first prong of section 206, as the Commission proposed in the Briefing Order.

19. In this order, we also make other, more specific findings regarding the implementation of these models in our revised base ROE methodology. In particular, in the DCF model, we will use a two-step DCF analysis that incorporates a long-term growth rate, use the short-term growth rate to calculate the (1+.5g) adjustment to dividend yield, and use only the Institutional Brokers' Estimate System (IBES) as the source of short-term earnings growth estimates. In the CAPM, we will: (1) estimate the

[46] *Id.* P 17.

[47] *See* Briefing Order, 165 FERC ¶ 61,118 at P 1.

[48] Trial Staff Initial Br. (I) at 8 (citing *In re Connect Am. Fund*, 28 FCC Rcd. 7123, 7148 (2013)); Trial Staff Initial Br. (II) at 7 (citing same).

CAPM expected market return using a forward-looking approach; (2) use a one-step DCF model without any long-term growth projection for the DCF analysis within the CAPM; (3) use only IBES as the source of short-term earnings growth estimates in the DCF analysis within the CAPM; (4) screen from the CAPM analysis S&P 500 companies with growth rates that are negative or in excess of 20 percent; and (5) include a size premium adjustment. In addition, we also adopt a revised low-end outlier test that eliminates DCF and CAPM proxy group ROE results that are less than the yields of generic corporate Baa bonds plus 20 percent of the CAPM risk premium.

20. Applying this revised base ROE methodology to the facts of the First Complaint, we review the MISO TOs' 12.38 percent ROE that was the existing ROE reviewed in Opinion No. 551, which is pending on rehearing before us here. Under the revised base ROE methodology, the composite zone of reasonableness in the First Complaint proceeding is from 7.52 percent to 12.24 percent.[49] As discussed below, we find that MISO TOs are of average risk, therefore the applicable quartile range of presumptively just and reasonable ROEs for MISO TOs in the First Complaint proceeding is from 9.29 percent to 10.47 percent.[50] Accordingly, MISO TOs' 12.38 percent ROE is not treated as presumptively just and reasonable and in fact, is higher than the 12.24 percent top of the overall zone of reasonableness. As discussed below, in light of this and the other circumstances of the case, we find that MISO TOs' 12.38 percent is unjust and unreasonable. Having found that MISO TOs' existing 12.38 percent ROE is unjust and unreasonable, we then find that the just and reasonable replacement ROE for the MISO TOs in the First Complaint proceeding is 9.88 percent because MISO TOs are of average risk and the midpoint of the composite zone of reasonableness is 9.88 percent.[51] Accordingly, we grant rehearing of Opinion No. 551 in part to require the MISO TOs to adopt a 9.88 percent ROE effective September 28, 2016, the date Opinion No. 551 required the MISO TOs to adopt a 10.32 percent ROE, and provide refunds, with interest for the applicable refund period, as discussed below.

21. As discussed further below, in the Second Complaint proceeding, the ROE to be reviewed is the 9.88 percent ROE established in the First Complaint proceeding that is effective prospectively from September 28, 2016. Under the revised base ROE methodology, the composite zone of reasonableness in the Second Complaint proceeding is from 7.78 percent to 11.66 percent.[52] As discussed below, we continue to find that

[49] *See* Appendix C.

[50] *See id.*

[51] *See id.*

[52] *See id.*

MISO TOs are of average risk in the Second Complaint proceeding; therefore the applicable quartile range of presumptively just and reasonable ROEs for MISO TOs in that proceeding is from 9.23 percent to 10.20 percent.[53] The 9.88 percent ROE that the Commission is reviewing for purposes of the Second Complaint proceeding falls within that range; therefore, the Commission presumes it to be just and reasonable. As discussed below, we find that this presumption has not been rebutted by the evidence in the Second Complaint proceeding. Accordingly, we affirm in part and reverse in part the Initial Decision (II) in the Second Complaint proceeding, dismiss the Second Complaint, and find that no refunds should be issued as a result of the resolution of that complaint.

III. Use of Multiple Models Generally

A. Background

22. As noted above, in the Briefing Order, the Commission proposed to change its methodology for analyzing base ROEs under section 206 to rely on multiple financial models instead of primarily relying on only the DCF model. Specifically, the Commission proposed to rely on the three financial models that produce zones of reasonableness—the DCF, CAPM, and Expected Earnings models—in its ROE analysis under the first prong of section 206, and to rely on four financial models—the Risk Premium model, in addition to those used in the first prong analysis—in its ROE analysis under the second prong of section 206.[54]

23. The Commission explained that changing its base ROE methodology to rely on these multiple financial models is appropriate because investors do not rely on any single financial model to make their investment decisions, but instead rely on these models and other methods to varying degrees. The Commission reasoned that, therefore, a more accurate estimate of what ROE is needed to induce investors to invest in a utility—i.e., what ROE a utility must offer in order to attract capital—would be provided by relying on multiple financial models because that is what investors do when making investment decisions.[55] The Commission further explained that relying on multiple financial models is appropriate because any one model has the potential for errors or inaccuracies and

[53] *See id.*

[54] *See* Briefing Order, 165 FERC ¶ 61,118 at PP 17-18.

[55] *See id.* PP 37-49.

relying on multiple models together reduces the risks that errors or inaccuracies in any one model will produce an inaccurate cost of equity estimate.[56]

B. CAPs

24. Complaint-Aligned Parties (CAP)[57] argue that the Commission should continue to rely on the DCF as the primary, if not exclusive, model in its ROE analyses. CAPs assert that the DCF method still remains the most robust and instructive market-based method to use in the determination of just and reasonable ROEs.[58] CAPs contend that the Commission's concerns about continuing to rely on only the DCF model are misplaced.[59]

25. CAPs argue that, to the extent the Commission adopts an ROE methodology that relies upon the CAPM model, it must be implemented properly and that CAPs' witness

[57] For purposes of the CAPs briefs in the First Complaint proceeding, CAPs include the following entities: American Municipal Power, Inc. (AMP); ABATE, Coalition of MISO Customers, IIEC, INDIEC, MLIG, and Wisconsin Industrial Group (WIEC) (collectively, Joint Complainants); Joint Consumer Advocates, including Indiana Office of Utility Consumer Counselor, Iowa Office of Consumer Advocate, Michigan Citizens Against Rate Excess, Minnesota Department of Commerce, and Citizens Utility Board of Wisconsin; Joint Customers, including Arkansas Electric Cooperative, Cooperative Energy, and Hoosier Cooperative; Organization of MISO States, Inc. (OMS); Mississippi Public Service Commission (MS PSC), Missouri Public Service Commission (MO PSC) and Missouri Joint Municipal Electric Utility Commission (MJMEUC) (collectively, Missouri-Mississippi Parties or MOMs); and Southwest Electric Cooperative, Inc. (SWEC). For purposes of the CAPs briefs in the Second Complaint proceeding, CAPs include Industrial Consumer Groups (ICG), comprising ABATE, Coalition of MISO Customers, IIEC, INDIEC, MLIG, and WIEC; Joint Consumer Advocates, comprising Illinois Citizens Utility Board, Indiana Office of Utility Consumer Counselor, Iowa Office of Consumer Advocate, Michigan Citizens Against Rate Excess, Minnesota Department of Commerce, and Citizens Utility Board of Wisconsin; Joint Complainants and Intervenor (JCI), comprising Arkansas Electric Cooperative, Cooperative Energy, and Hoosier Cooperative; OMS; Missouri-Mississippi Parties; and SWEC.

[58] CAPs Initial Br (I) at 12-14; CAPs Initial Br. (II) at 11-14; CAPs Reply Br. (I) at 6-9; CAPs Reply Br. (II) at 21-24.

[59] CAPs Initial Br. (I) at 14-22; CAPs Initial Br. (II) at 14-22.

Mr. Gorman provides a CAPM analysis that "produces reliable results."[60] CAPs similarly assert that, if the Commission uses the Risk Premium model in its ROE methodology, it should be revised in the manner recommended by CAPs and "Mr. Gorman addresses the correct approach for conducting a Risk Premium study that produces a reliable cost-of-equity estimate."[61] CAPs oppose the use of the Expected Earnings model in the Commission's ROE methodology, arguing that it should receive no weight.[62] CAPs contend that, at the most, the Expected Earnings model should be given significantly less weight than market-based models.[63]

C. MISO TOs

26. MISO TOs support the Commission's proposal to use multiple financial models in its ROE methodology, asserting that the multiple model approach is a significant improvement over the approach of relying on only the DCF model.[64] MISO TOs assert that the additional three models which the Commission proposes to use are widely relied upon by investors and present transparent cost-of-capital estimates.[65] MISO TOs propose certain modifications to the DCF, CAPM, and Expected Earnings models and urge the Commission to apply the Risk Premium model in the same manner in this proceeding as the Commission proposed in the New England TOs' ROE complaint proceedings.[66]

D. Trial Staff

27. Trial Staff proposes various adjustments to the DCF, CAPM and Risk Premium models, but does not oppose the Commission using them in its ROE methodology in general.[67] Trial Staff argues that the Expected Earnings model should not be included in

the Commission's ROE methodology. Trial Staff asserts that the Commission has used market-based models for over 30 years to determine the cost of equity, but the Expected Earnings model is not a market-based method for estimating the cost of equity. Trial Staff also asserts that there is little evidence that the Expected Earnings approach is widely used by investors.[68]

E. LPSC

28. The Louisiana Public Service Commission (LPSC) contends that the Commission should require certain changes to the Risk Premium model and CAPM if those models are used in the Commission's ROE methodology, but does not oppose the use of those models in general.[69] LPSC argues that the Expected Earnings model should not be used in the Commission's ROE methodology, arguing, among other things, that the model has no legitimate relationship to investors' required return on equity.[70] LPSC argues that, if the Commission decides to use the Expected Earnings model, then it should adjust the analysis for market-to-book ratios.[71]

F. RPGI

29. Resale Power Group of Iowa (RPGI) argues that the Commission should "reaffirm the primacy of the DCF model" and continue to use a DCF-based approach for setting ROEs.[72] RPGI contends that, if the Commission uses multiple financial models in its ROE methodology, then the Commission should make changes to the CAPM and Risk Premium models, but it does not oppose the use of these two financial models in general.[73] RPGI endorses Trial Staff's proposal to exclude the Expected Earnings model from the Commission's ROE methodology.[74]

G. Alliant

30. Alliant supports Trial Staff's proposal to exclude the Expected Earnings model from the Commission's ROE methodology.[75] Alliant does not oppose the use of the DCF, CAPM or Risk Premium models in the Commission's ROE methodology.

H. Commission Determination

31. We will expand our methodology for determining whether an existing base ROE is unjust and unreasonable under the first prong of section 206, and for determining a new just and reasonable replacement base ROE under the second prong of section 206 when an existing ROE has been shown to be unjust and unreasonable, to rely on multiple financial models. Specifically, we will use the DCF model and CAPM in our ROE methodology, but not the Expected Earnings or Risk Premium models. As discussed further below, we find that expanding our methodology to use the CAPM model in addition to the DCF model will better reflect how investors make their investment decisions. This should result in our ROE analyses producing cost of equity estimates that more accurately reflect what ROE a utility must offer in order to attract capital. As discussed in sections VI and VIII below, we find that, on balance, the Expected Earnings and Risk Premium models would not improve our ROE determinations sufficiently to justify using those models, in light of their flaws and the potential inaccuracies and complexity that they could introduce into our ROE analyses.

32. As an initial matter, the D.C. Circuit has repeatedly observed that the Commission is not required to rely upon the DCF methodology alone or even at all.[76] Accordingly, the Commission may "change its past practices," such as relying exclusively on the DCF model, "with advances in knowledge in its given field or as its relevant experience and expertise expands," provided that it supplies "a reasoned analysis indicating that prior

[76] *Tenn. Gas Pipeline Co. v. FERC*, 926 F.2d 1206, 1211 (D.C. Cir. 1991) (explaining that the Commission is free to reject the DCF methodology, provided that it adequately explains its reasons for doing so); *Elec. Consumers Res. Council v. FERC*, 747 F.2d 1511, 1514 n.6 (D.C. Cir. 1984) ("[N]either statutes nor decisions of this court require that the Commission utilize a particular formula or a combination of formulae to determine whether rates are just and reasonable."); *NEPCO*, *Mun. Rate Comm. v. FERC*, 668 F.2d 1327, 1345 (D.C. Cir. 1987) ("FERC is not bound 'to the service of any single formula or combination of formulas.'" (quoting *FPC v. Nat. Gas Pipeline Co.*, 315 U.S. at 586)); *see also Emera Maine*, 854 F.3d at 27 (noting that the Commission has authority to make "'pragmatic adjustments' to a utility's ROE" based on the facts of the particular case (quoting *FPC v. Nat. Gas Pipeline Co.*, 315 U.S. at 586)).

policies and standards are being deliberately changed, not casually ignored."[77] Our existing ROE methodology relies on the DCF model exclusively for purposes of determining the zone of reasonableness that is used under the first and second prongs of section 206. However, we find that now, in light of our expanded experience with ROE determinations under various market conditions and the court's guidance in *Emera Maine*, expanding our ROE methodology to include the CAPM, as well as the DCF model, will better reflect how investors make their investment decisions and result in more accurate cost of equity estimates.

33. In *Hope*, the Supreme Court held that "the return to the equity owner should be commensurate with returns on investments in other enterprises having corresponding risks. That return, moreover, should be sufficient to assure confidence in the financial integrity of the enterprise, so as to maintain its credit and to attract capital."[78] Thus, a key consideration in determining just and reasonable utility ROEs is determining what ROE a utility must offer in order to attract capital, i.e., induce investors to invest in the utility in light of its risk profile.[79] As the Commission stated in Opinion No. 414-B,[80] "the cost of common equity to a regulated enterprise depends upon what the market expects not upon precisely what is going to happen."[81] Thus, in determining what ROE to award a utility, we must look to how investors analyze and compare their investment opportunities.

34. Investors have varying preferences as to which of the various methods for determining cost of equity they may use to inform their investment decisions. As Dr. Roger Morin states, "Investors do not necessarily subscribe to any one method, nor does the stock price reflect the application of any one single method by the price-setting

investor. There is no monopoly as to which method is used by investors."[82] As discussed further below, the record in this proceeding demonstrates that the CAPM model is one of the primary methods investors use to measure the cost of equity, along with the DCF model.[83] Moreover, like the DCF model, the CAPM model is market-oriented and produces a zone of reasonableness. Accordingly, we find that cost of equity estimates based on both models will provide a more reasonable measure of investor expectations, since they are among the information that investors rely upon when making investment decisions.

35. We also find that the expansion of our ROE methodology to use the CAPM in addition to the DCF model will help address the issues that led the court to remand Opinion No. 531 in *Emera Maine*. In that proceeding involving New England TOs' base ROE, the Commission found that it had "less confidence that the midpoint of the zone of reasonableness" produced by the DCF model "accurately reflect[ed] the equity returns necessary to meet the *Hope* and *Bluefield* capital attraction standards."[84] Because of this concern, the Commission considered "'additional record evidence, including evidence of alternative benchmark methodologies" to inform the placement of ROE within the DCF-produced zone of reasonableness.[85] The Commission found that that evidence "supported a finding that an upward adjustment from the midpoint was warranted."[86] The

[85] Opinion No. 531, 147 FERC ¶ 61,234 at P 145.

[86] Opinion No. 531-B, 150 FERC ¶ 61,165 at P 37.

Commission then set the New England TOs' ROE at the 10.57 percent midpoint of the upper half of the DCF zone of reasonableness. In taking this action, the Commission emphasized that it was "'not depart[ing] from [its] use of the DCF methodology.'"[87]

36. In *Emera Maine*, the court held that the Commission "failed to explain how any evidence demonstrated that 10.57 percent was a just and reasonable base ROE."[88] The court found that this omission was particularly troublesome in light of the Commission concerns over the reliability of the DCF zone of reasonableness. The court also stated that "FERC never explained how 10.57 percent was just and reasonable when the alternative benchmarks and additional record evidence it used to justify a departure merely pointed to a base ROE somewhere above 9.39 percent." The court also stated that "[o]n the one hand, [the Commission] argued that the alternative analyses supported its decision to place the base ROE above the midpoint, but on the other hand, it stressed that none of these analyses were used to select the 10.57 percent base ROE."[89]

37. We find that if the most useful types of additional record evidence that the Commission relied upon in Opinion No. 531, namely the CAPM analysis, are more directly incorporated into the formal ROE methodology and construction of the zone of reasonableness, then that evidence will be directly "used to select" a just and reasonable ROE and we will not make ROE decisions because evidence "merely point[s] to a base ROE somewhere" that is different than a given base ROE, but because that evidence will be directly used to calculate a specific cost of equity estimate. This will help ensure that our ROE determinations are directly connected to, and supported by justifications in the record evidence. Our new ROE methodology will do this by averaging the top and bottom of the DCF and CAPM zones of reasonableness to produce a composite zone of reasonableness and then setting the ROE of average risk utilities at the central tendency midpoint of that zone.

38. Moreover, any methodology has the potential for errors or inaccuracies. Therefore, relying exclusively on any single methodology increases the risk that the Commission could authorize an unjust and unreasonable ROE. There is significant evidence indicating that combining estimates from different models is more accurate than relying on a single model.[90] For example, in discussing "model risk," Mr. McKenzie

explained that "when conditions associated with a model are outside of the normal range, there is a risk . . . that the theoretical model will fail to predict or represent the real phenomenon that is being modeled."[91] Similarly, Ms. Ellen Lapson testified on behalf of MISO TOs that "it is wise to consider a broader set of evidence from alternate models and methods of estimating investors' cost of equity . . . Although all such methods are potentially subject to error, the use of multiple models that are based on different underlying assumptions provides a check on the reasonableness of the results of the DCF model and the placement of the [MISO TOs'] base ROE with the DCF range."[92]

39. As discussed further below, we find that the CAPM and DCF models most accurately reflect how investors make their investment decisions, therefore providing a more accurate cost of equity estimate and helping to minimize model risk to the greatest extent possible.

IV. Presumptively Just and Reasonable ROE Ranges for Determining if an Existing ROE is Unjust and Unreasonable under Prong One of Section 206

A. Background

40. As noted above, in the Briefing Order, the Commission proposed to use ranges of presumptively just and reasonable ROEs in determining whether an existing ROE is unjust and unreasonable under the first prong of section 206.[93] As described below, CAPs and the RPGI oppose the Commission's proposed approach of using ranges of presumptively just and reasonable ROEs while MISO TOs support the proposal.

1. CAPs

41. CAPs contend that the Commission's proposed approach of establishing a range of presumptively just and reasonable ROEs would: (a) contravene the customer protection principles embodied in the FPA; (b) improperly tilt the balancing of interests under *Hope* and *Bluefield* in favor of industry over customers; (c) introduce an unlawful asymmetry between the treatment of FPA sections 205 and 206 filings; and (d) violate complainants' due process rights. In addition, they argue that the proposal to establish ranges of presumptively just and reasonable ROEs is arbitrary and capricious because it fails to provide a reasoned explanation for the risk profile.[94]

42. CAPs assert that *Emera Maine* did not hold or imply that the Commission must accept a range of ROEs as just and reasonable. They contend that, instead, it held that the Commission had not provided a sufficiently clear explanation of what made it unreasonable to retain a prior ROE that exceeded the newly re-determined cost of equity. In addition, they argue that the mere fact that the existing ROE was higher than the ROE determined to be just and reasonable was not the basis for the Commission's decisions in Opinion No. 551 and Initial Decision (II). They point out that both Opinion No. 551 and Initial Decision (II) found that the MISO TOs' existing 12.38 percent ROE was outside the DCF zone of reasonableness. CAPs accordingly argue that any concerns in *Emera Maine* with respect to the Commission's application of the first prong of section 206 where the existing ROE is within the DCF zone of reasonableness are not present in these proceedings.[95]

---

[93] *See* Briefing Order, 165 FERC ¶ 61,118 at PP 24, 28-30.

[94] CAPs Initial Br. (I) at 67; CAPs Initial Br. (II) at 67.

[95] CAPs Initial Br. (I) at 68-69; CAPs Initial Br. (II) at 68-69.

43. CAPs argue that the Briefing Order presents its proposal to use ranges of presumptively just and reasonable ROEs as a response to the court's observation in *Emera Maine* that there exists a "broad range of potentially lawful ROEs."[96] CAPs contend that, however, nothing in *Emera Maine* requires the Commission to create ranges of presumptively just and reasonable ROEs. CAPs assert that the court held that the Commission was correct in noting that "rates within the zone of reasonableness are not *per se* just and reasonable" and that "the fact that a rate falls within the zone of reasonableness does not establish that the rate is *the* just and reasonable rate for the utility at issue."[97] CAPs contend that the *Emera Maine* court's reference to the "broad range of potentially lawful ROEs" was to the full breadth of the DCF range and that the court specifically affirmed that this range is not a zone of immunity from rate reductions under FPA section 206.[98]

44. In addition, CAPs assert that the proposal to use ranges of presumptively just and reasonable ROEs violates the Commission's statutory duty to protect customers from excessive rates because it would presume ROEs within the zone to be lawful even when the preponderance of the evidence points to a lower ROE. They argue that the just and reasonable standard of FPA sections 205 and 206 permits not even a little unlawfulness and that "the primary aim of the [FPA is] to guard the consumer against excessive rates."[99] CAPs contend that, accordingly, the customer protection purpose of section 206 requires the Commission to reduce existing rates that are shown to have become unjust, unreasonable, or unduly discriminatory, which conflicts with the use of ranges of presumptively just and reasonable ROEs.[100]

45. CAPs further argue that the use of ranges of presumptively just and reasonable ROEs would create an unlawful asymmetry between rate increases sought by utilities under FPA section 205 and rate reductions sought by consumers under FPA section 206. They contend that this would be the case because utilities filing under section 205 can continue to obtain approval of a proposed ROE increase if they show that the cost of

---

[100] CAPs Initial Br. (I) at 72-73; CAPs Initial Br. (II) at 72-73.

equity exceeds the existing ROE by any amount, but under the proposed presumption, customers filing complaints under section 206 would have to show that the existing ROE is so high that it is above the applicable range of presumptively just and reasonable base ROEs. CAPs assert that this treatment is contrary to the *Mobile*[101] and *Sierra*[102] cases and the 1988 Regulatory Fairness Act, all of which indicate that section 205 rate increase filings and section 206 complaints seeking rate decreases should be treated similarly. CAPs further contend that the use of ranges of presumptively just and reasonable ROEs will create an asymmetry between sections 205 and 206 by heightening the burden of proof faced by complainants under section 206.[103]

46. In addition, CAPs argue that the proposal creates a conclusive presumption that violates customers' due process rights. They contend that this is the case because the use of ranges of presumptively just and reasonable ROEs could allow an ROE to be considered presumptively just and reasonable even if the existing ROE exceeds the central value of all of the financial models that the Commission proposes to use. CAPs assert that the central values of the financial models are the best evidence of the cost of equity and if an ROE can exceed all of those values and still be considered presumptively just and reasonable, then the presumption is a conclusive presumption that violates customers' due process rights. CAPs argue that, while the Commission's Briefing Order indicates that the presumption can be rebutted with additional evidence to the contrary such as changes in capital market conditions, such changes in capital market conditions will already be reflected in the financial models and it is doubtful that customers will be able to produce additional evidence that is more effective than the collective evidence of the financial models. CAPs assert that the presumption is therefore effectively conclusive.[104]

47. CAPs also contend that the proposal to use ranges of presumptively just and reasonable ROEs is arbitrary and capricious. They argue that this is the case first because the proposed presumption is not inferred from proven facts, as is required by court precedent,[105] but rather from the erroneous conclusion that each of the MISO TOs is of average risk, combined with a logical fallacy. CAPs go on to contend that the

[102] *FPC v. Sierra Pac. Power Co.*, 350 U.S. 348 (1956).

[103] CAPs Initial Br. (I) at 73-76; CAPs Initial Br. (II) at 73-75.

[104] CAPs Initial Br. (I) at 76-78; CAPs Initial Br. (II) at 76-78.

[105] CAPs Initial Br. (I) at 79 (citing *U.S. v. Gainey*, 380 U.S. 63, 78-79 (1965)); CAPs Initial Br. (II) at 78 (citing same).

Commission has not explained how the "broad range of potentially lawful ROEs" contemplated by *Emera Maine* becomes a range of presumptively just and reasonable ROEs. CAPs then assert that the Commission's rationale appears to be that an existing ROE is reasonable even if it exceeds (or is below) the risk-appropriate just and reasonable ROE as long as it is closer to the risk-appropriate ROE than to an appropriate ROE for a utility of a different risk profile.[106] They contend that this is arbitrary and capricious because the fact that an ROE lies closer to the just and reasonable ROE than to an appropriate ROE for a utility of a different risk profile does not render that ROE just and reasonable in light of court precedent that does not permit "even a little unlawfulness."[107] CAPs also argue that the proposal contradicts the court's rulings in *Emera Maine* that "[w]hether a rate, even one within the zone of reasonableness, is unlawful depends on the particular circumstances of the case" and that "the fact that a rate falls within the zone of reasonableness does not establish that the rate is the just and reasonable rate for the utility at issue."[108]

48. In addition, CAPs argue that it is arbitrary and capricious to assume that all utilities fall into one of only three risk groups—low risk, average risk, and high risk. They contend that the Commission has previously set ROEs at a wide variety of locations within the distribution of proxy results, not only at the upper or lower midpoint. CAPs suggest that the Commission could establish a greater number of more granular risk groups.[109]

2. MISO TOs

49. MISO TOs support the Commission's proposal in the Briefing Order to use the composite zone of reasonableness to identify a range of presumptively just and reasonable ROEs for utilities of similar risk profiles as an evidentiary tool to evaluate complaints under section 206 of the FPA. MISO TOs argue that it is well established that the Commission has the authority to adopt a rebuttable presumption to assist it in deciding whether or not to grant a complaint. They note that, in *AEP Marketing*,[110] the Commission described its authority to establish a new policy, including a new rebuttable

---

[106] CAPs Initial Br. (I) at 79-80; CAPs Initial Br. (II) at 79.

[109] CAPs Initial Br. (I) at 82-83; CAPs Initial Br. (II) at 82-83.

[110] *AEP Power Mktg., Inc.*, 107 FERC ¶ 61,018 (2004) (*AEP Marketing*).

presumption, as part of adjudication of a case-specific proceeding.[111] MISO TOs further state that the Commission adopted a rebuttable presumption that a "price squeeze" indicates that a wholesale rate is unduly discriminatory in violation of section 206 of the FPA[112] and the D.C. Circuit upheld this presumption.[113]

50. MISO TOs argue that it is immaterial whether the court in *Emera Maine* specifically mandated that the Commission use ranges of presumptively just and reasonable ROEs. They assert that the court in *Emera Maine* directed the Commission to provide a more complete explanation why the New England TOs' base ROE was unjust and unreasonable and that the Commission's adoption of ranges of presumptively just and reasonable ROEs is a logical step in analyzing whether an existing base ROE may no longer be just and reasonable under the first prong of FPA section 206. MISO TOs state that the Commission's adoption of a rebuttable presumption that a base ROE within a portion of the zone of reasonableness is consistent with *Emera Maine* and other ROE precedents which provide that there may be more than one just and reasonable return, even though the Commission ultimately must fix a single, just and reasonable rate.[114]

51. MISO TOs contend that the Commission's adoption of ranges of presumptively just and reasonable ROEs does not contravene the Regulatory Fairness Act. They assert that the Regulatory Fairness Act sought to add symmetry between FPA sections 205 and 206 by adding a refund obligation to FPA section 206 where previously there was none in order to match more closely the refund obligation in FPA section 205, but did not broadly require a uniform symmetry between sections 205 and 206 beyond what already existed between the two provisions. MISO TOs further argue that CAPs assume without basis that the Commission's ranges of presumptively just and reasonable ROEs will not apply in section 205 proceedings and that if the Commission does apply those ranges in section 205 proceedings, CAPs' concerns about symmetry between sections 205 and 206 are moot.[115]

---

[111] MISO TOs Reply Br. (I) at 59-60 (citing *AEP Marketing*, 107 FERC ¶ 61,018 at PP 199, 201).

[112] MISO TOs Reply Br. (I) at 60 (citing *Conn. Light & Power Co.*, 8 FERC ¶ 61,187, at 61,655 (1979)).

[113] MISO TOs Reply Br. (I) at 60 (citing *Anaheim v. FERC*, 941 F.2d 1234, 1241, 1249 (D.C. Cir. 1991)).

[114] MISO TOs Reply Br. (I) at 61-63; MISO TOs Reply Br. (II) at 61-62.

[115] MISO TOs Reply Br. (I) at 64-65; MISO TOs Reply Br. (II) at 63-64.

52. MISO TOs also assert that CAPs erroneously attempt to characterize the presumption as conclusive or irrebuttable. MISO TOs state that CAPs purport to support their claim by arguing that the only evidence customers could possibly use to show a base ROE is unjust and unreasonable would be already incorporated into the Commission's calculation of the composite zone of reasonableness and the zone of presumptively just and reasonable ROEs. MISO TOs disagree and state that, for example, evidence that is not already incorporated in those zones could include risk premium data, which is used in the formulation of a new base ROE in prong two of FPA section 206 but not for calculation of the zone of reasonableness, non-utility stock prices and investor expectations for non-utility stocks, various types of bond yields, investor testimony and testimony of customer hardship.[116]

53. MISO TOs further argue that nothing about the approach of using ranges of presumptively just and reasonable ROEs contravenes the customer protection purpose of section 206. They contend that the approach will promote the Commission's compliance with its mandate to reduce existing rates only when they are shown to be unjust, unreasonable, or unduly discriminatory by providing an objective benchmark against which to measure existing rates. In addition, MISO TOs note that the rebuttable presumption provides value to customers and utilities alike, not only utilities as CAPs suggest. MISO TOs assert that a zone of presumptively just and reasonable ROEs is also a useful tool for making a *prima facie* case that an existing base ROE may no longer be just and reasonable, which will benefit consumers that file complaints.[117]

54. MISO TOs request that the Commission clarify that, just as a base ROE falling within the applicable quartile of the composite range of returns that is commensurate with the utility's risk profile creates a rebuttable presumption that such base ROE remains just and reasonable, a base ROE outside of the same quartile is only rebuttably presumed to be no longer just and reasonable.[118]

3. RPGI

55. RPGI argues that the proposed approach of using ranges of presumptively just and reasonable ROEs effectively shields existing ROEs from modification absent a showing that the ROE is outside the applicable range. RPGI asserts that no such margin applies to any other existing cost of service component of a formula rate like those employed by most transmission utilities under current Commission practice. RPGI contends that, if the cost of furnishing regulated service declines, it is subject to adjustment and true-up on an

annual basis under formula rates. RPGI contends that it is arbitrary and unfair to consumers to allow a zone of protection within which changes to a base ROE allowance will be disregarded, given the magnitude of the costs at issue. RPGI also contends that the Commission does not indicate that it intends to determine whether to dismiss a complaint and whether to grant a complaint on the basis of the same process. In addition, RPGI asserts that the Commission should clarify how it intends to resolve factual issues raised by the process in which a complaint and answer are filed. RPGI contends that, if the Commission anticipates that it will be in a position to resolve all factual issues instrumental to denying a complaint, then it should follow that it can resolve all issues relating to the establishment of a just and reasonable replacement ROE allowance where it finds that a complainant has satisfied that same standard.[119]

56. RPGI argues that the Commission should not clarify, as MISO TOs request, that if a base ROE falls outside the applicable quartile zone of presumptively just and reasonable ROEs, it is only rebuttably presumed to be no longer just and reasonable. RPGI contends that this would unfairly benefit utilities by giving them additional procedures to defend an existing ROE and would delay adjudication of just and reasonable rates.[120]

B. Commission Determination

1. Use of Presumptively Just and Reasonable ROE Ranges Generally

57. In *Emera Maine*, the court found that our prior practice of using "a single ROE analysis" to demonstrate both: (1) that an existing ROE is unjust and unreasonable under the first prong of FPA section 206; and (2) that a new ROE is just and reasonable under the second prong is contrary to the FPA.[121] In response to that decision, we adopt a new framework for evaluating whether an existing ROE remains just and reasonable for purposes of the first prong of FPA section 206. Specifically, we adopt the use of ranges of presumptively just and reasonable ROEs based on the risk profile of a utility or group of utilities to inform our decision of whether an existing ROE has become unjust and unreasonable, as proposed in the Briefing Order.[122] We reiterate that, for average risk utilities, the presumptively just and reasonable range is the quartile of the overall composite zone of reasonableness centered on the central tendency of the overall zone of

[119] RPGI Initial Br. (I) at 40-41; RPGI Initial Br. (II) at 43-44.

[120] RPGI Reply Br. (II) at 24-26.

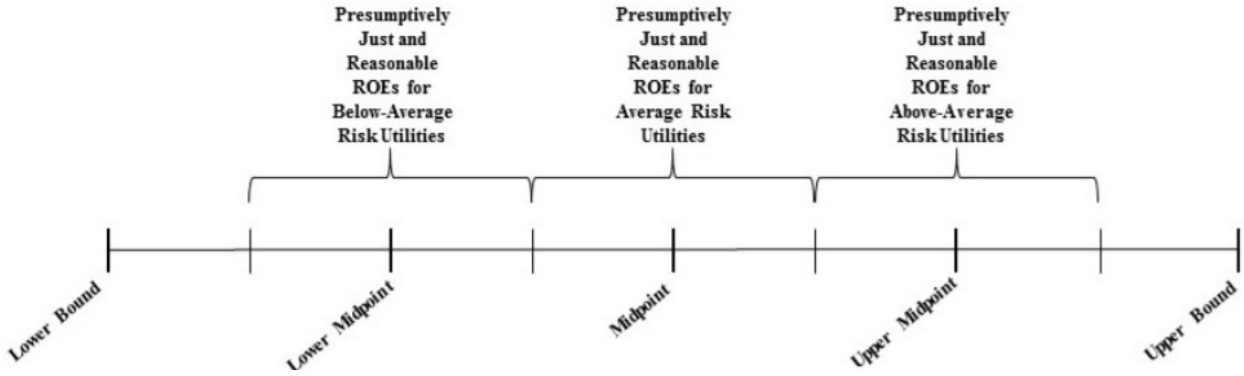
reasonableness; for below average risk utilities, that range is the quartile of the zone of reasonableness centered on the central tendency of the lower half of the zone of reasonableness; and for above average risk utilities, that range is the quartile of the zone of reasonableness centered on the central tendency of the upper half of the zone of reasonableness. These ranges of presumptively just and reasonable located within the overall composite zone of reasonableness are again illustrated below.

Figure 1: Zone of Reasonableness Quartiles



58. We recognize that this facet of our new ROE methodology departs from our prior policy and precedent. As courts have held, "[t]he Commission can depart from a prior policy or line of precedent, but it must acknowledge that it is doing so and provide a reasoned explanation."[123] The D.C. Circuit has explained that

> [a]n agency is free to discard precedents or practices it no longer believes correct. Indeed we expect that any agency may well change its past practices with advances in knowledge in its given field or as its relevant experience and expertise expands. If an agency decides to change course, however, we require it to supply a reasoned analysis indicating that prior policies and standards are being deliberately changed, not casually ignored.[124]

[123] *La. PSC v. FERC*, 772 F.3d 1297, 1303 (D.C. Cir. 2014) (citing *FCC v. Fox Television Stations, Inc.*, 556 U.S. 502, 515 (2009); *Motor Vehicle Mfrs. Ass'n v. State Farm Mut. Auto. Ins. Co.*, 463 U.S. 29, 57 (1983)).

[124] *Nuclear Energy Inst., Inc. v. EPA,* 373 F.3d 1251, 1296 (D.C. Cir. 2004) (per curiam) (internal citations and quotation marks omitted).

That same court has affirmed the Commission's departure from prior policy when the Commission has "explained how changed circumstances justified a new policy."[125] Similarly, agency action has been upheld where "to the extent the agency departed from precedent, it offered a reasonable explanation for doing so."[126]

59. We find that this change to our prior methodology for determining whether an existing ROE is unjust and unreasonable is necessary to ensure that our ROE determinations under section 206 satisfy the requirements of the *Emera Maine* decision. In that case, the court found that the Commission's decision that "a single ROE analysis generating a new just and reasonable ROE necessarily proved that the Transmission Owners' existing ROE was unjust and unreasonable" is contrary to the FPA.[127] The court found that this decision "relied on [the Commission's] assumption that all ROEs other than the one FERC identifies as the utility's just and reasonable ROE are per se unlawful in a section 206 proceeding."[128] However, the court held that, because "the zone of reasonableness creates a broad range of potentially lawful ROEs rather than a single just and reasonable ROE," a finding that a particular ROE is just and reasonable, "standing alone, 'does not amount to a finding that every other rate of return'" is not just and reasonable.[129] Rather, the Commission must explain what circumstances render an existing ROE unjust and unreasonable in order to satisfy its burden of proof under the first prong of FPA section 206.[130]

60. As discussed in detail later in this order, the Commission has long based its decisions concerning just and reasonable ROEs for public utilities on the "current market cost of equity."[131] Accordingly, the starting point for determining whether a public utility's existing ROE has become unjust and unreasonable must be a consideration of

whether the current market cost of equity has changed since the existing ROE was established. For this purpose, we intend to use the DCF and CAPM financial models to establish a composite zone of reasonableness reflecting the current market cost of equity, as discussed below. However, neither of those models "conclusively determines or estimates the expected return for an individual firm. Each methodology possesses its own way of examining investor behavior, its own premises, and its own set of simplifications of reality. Each method proceeds from different fundamental premises that cannot be validated empirically."[132]

61. Accordingly, while the results of these models "inform" our determination whether an existing ROE has become unjust and unreasonable, the models are too imprecise to "rigidly . . . determine" that issue.[133] The models can, at best, produce a general estimate of the current cost of equity. As a result, there is no single percentage current cost of equity that we can select from the zone of reasonableness that will demonstrate that all other ROEs within the zone of reasonableness are per se unjust and unreasonable. Put another way, as the court held in *Emera Maine*, the mere fact that the financial models now produce a cost of equity that is somewhat lower than the existing ROE is, "without any further explanation," insufficient to satisfy our burden under FPA section 206 to "prove that Transmission Owners' existing base ROE was unlawful."[134] Rather, the court requires that we explain the "particular circumstances" that support an explicit finding that the existing ROE has become unjust and unreasonable.[135]

62. Given the imprecise tools available to us for estimating the current cost of equity, we find that our explanation in such circumstances must include a showing that the existing ROE is now outside some range of potentially just and reasonable ROEs within the zone of reasonableness for the public utility at issue, in light of our estimate of the current market cost of equity, or alternatively, that other evidence convincingly demonstrates that the existing ROE is unjust and unreasonable despite it falling within that range. Given the Court's explanation that there is "'a substantial spread' of potentially reasonable rates,"[136] we believe that a range of potentially just and reasonable ROEs will likely be the best evidence of what is a just and reasonable ROE for the utility

[136] *Id.*

at issue. Therefore, we find that it is appropriate to treat an ROE that falls within that range as presumptively just and reasonable, unless other evidence is sufficient to rebut that presumption. We also find that the circumstance most relevant to determining that range is the utility's risk profile. As the Supreme Court explained in *Hope*, when describing what has become the standard for evaluating whether an ROE is just and reasonable under the FPA, a utility's ROE "should be commensurate with returns on investments in other enterprises *having corresponding risks*."[137] Indeed, the D.C. Circuit has explained that failing to consider a utility's risk profile, at least relative to the proxy group companies, can itself be arbitrary and capricious.[138] By the same token, an ROE—even one within the zone of reasonableness—that is *not* commensurate with the returns on investments in other enterprises having "corresponding risks" will not be just and reasonable. Accordingly, we find that, in order to explain the "particular circumstances" that support an explicit finding that the existing ROE has become unjust and unreasonable, we must determine the relevant utility's risk profile and then identify a range of presumptively just and reasonable ROEs within the overall zone of reasonableness for that utility based on its risk profile.

63. Consistent with the Commission's well-established policy on relative risk analysis, we find that the measure of central tendency for the entire zone of reasonableness should be the starting point for identifying the range within the overall zone of reasonableness that represents presumptively just and reasonable ROEs for utilities with an average risk profile.[139] Similarly, the starting points for identifying the ranges within the overall zone of reasonableness that represent presumptively just and reasonable ROEs for utilities with above or below average risk profiles should be the measures of central tendency of the upper and lower halves of the zone of reasonableness, respectively.[140] Logic dictates that the end points of those ranges should not be closer to the starting points for the ranges of

---

[140] *See, e.g.*, *id.* at 30 (citing *Tenn. Gas Pipeline*, 926 F.2d at 1213) (where "the utility at issue was riskier than the proxy group . . . the midpoint of the upper half was 'an obvious place to begin.'"); *Potomac-Appalachian Transmission Highline, LLC*, 158 FERC ¶ 61,050, at PP 270, 273 (2017) (setting ROE at the "measure of central tendency of the lower half of the zone of reasonableness . . . Given [the utility's] low level of risk as compared to the proxy group.").

utilities with different risk profiles than they are to their own starting point. Applying those principles, we find that the range within the overall zone of reasonableness that best represents presumptively just and reasonable ROEs for average risk utilities is the quartile of the zone of reasonableness centered on the central tendency of the entire zone of reasonableness, while the ranges within the overall zone of reasonableness that best represent presumptively just and reasonable ROEs for above- and below- average utilities are the quartiles centered on the central tendencies of the upper and lower halves of the zone of reasonableness, respectively.

64. This is the reasoning underlying how we constructed the ranges of presumptively just and reasonable ROEs proposed in the Briefing Order. We are now changing our ROE methodology to incorporate these ranges of presumptively just and reasonable ROEs into our analysis of whether an existing ROE is just and reasonable. We do so in order to satisfy the court's requirements in *Emera Maine* that our section 206 analysis produce an "actual finding as to the lawfulness" of an existing ROE and that we "explain what circumstances" led to that finding. Along with the prevailing market conditions, a utility's risk profile is the most important circumstance to be considered in determining whether an existing ROE is unjust and unreasonable. Using the ranges of presumptively just and reasonable ROEs objectively and automatically incorporates risk profile into our ROE analysis so that we can ensure that we explain how this most important circumstance factors into our ROE determinations under section 206, as the court required in *Emera Maine*.

65. While previous Commission determinations under section 206 regarding ROEs may have made "actual finding[s] as to the lawfulness" of existing ROEs and sufficiently "explain[ed] what circumstances" led to those findings without the use of ranges of presumptively just and reasonable ROEs as we are adopting herein, we find that using such ranges is now necessary to ensure that our determinations meet the requirements of the court in the *Emera Maine* decision and is well within the Commission's "'considerable latitude in developing a methodology responsive to its regulatory challenge.'"[141] We believe that using such ranges incorporates a utility's risk profile into our ROE analysis in a concrete and objective way that will establish a direct connection between the most important circumstance of the case—a utility's risk profile—and our ultimate determination as to whether an existing ROE is unjust and unreasonable. In addition, because our determination of a utility's risk profile will lead to a rebuttable presumption of lawfulness or unlawfulness, our reasoning underlying that determination will largely "explain what circumstances" support our "actual finding as to the lawfulness" of the existing ROE. That is because, if the presumption is not rebutted, the reasoning underlying our risk profile determination will support our finding as to

[141] *Emera Maine*, 854 F.3d at 20 (citations and internal quotation marks omitted) (citing *S.C. Pub. Serv. Auth. v. FERC*, 762 F.3d 41, 55 (D.C. Cir. 2014)).

lawfulness and, if the presumption is rebutted, we will have to explicitly explain how the other evidence rebuts the presumption and leads to our finding as to unlawfulness.

66. Moreover, while using ranges of presumptively just and reasonable ROEs is necessary to ensure that our ROE determinations under section 206 meet the requirements of the *Emera Maine* decision, we believe that it will also provide more general benefits to consumers and utilities. Specifically, "[r]atemaking . . . is not a science"[142] and the overall composite zone of reasonableness that is calculated under the revised methodology will still "create[] a broad range of potentially lawful ROEs rather than a single just and reasonable ROE."[143] In addition, it remains true under the new ROE methodology, as it did under our prior policy and precedent, that "[w]hether a rate, even one within the zone of reasonableness, is unlawful depends on the particular circumstances of the case."[144] Accordingly, while the overall composite zone of reasonableness informs the Commission's assessment of whether an existing ROE is unjust and unreasonable under section 206, potential complainants and respondents still face a substantial amount of uncertainty as to whether an existing ROE is unjust and unreasonable in light of the particular circumstances of the case.

67. We believe that using ranges of presumptively just and reasonable ROEs will provide additional certainty and predictability to parties because it will provide an additional objective indicator of whether an existing ROE may be unjust and unreasonable under section 206. This additional guidance should help potential complainants assess whether an existing ROE may be unjust and unreasonable and avoid expending time and resources on complaints that are not likely to succeed. Similarly, utilities will be able to better assess whether their existing ROEs are likely to be found unjust and unreasonable under section 206 and, if so, proactively file to reduce their ROEs in advance of complaints.

68. At the same time, we recognize that whether an existing ROE is unjust and unreasonable, even one that falls within the applicable range of presumptively just and reasonable ROEs, still "depends on the particular circumstances of the case."[145] Accordingly, if an existing ROE falls within the applicable range of presumptively just and reasonable ROEs, the presumption that the ROE is just and reasonable is a rebuttable presumption. Therefore, other evidence regarding the particular circumstances of the case can demonstrate that an existing ROE is unjust and unreasonable even if falls within

[144] *Id.* at 23.

[145] *Id.*

the applicable range of presumptively just and reasonable ROEs, such as evidence regarding non-utility stock prices, investor expectations for non-utility stocks, various types of bond yields and their relation to stock prices, investor and other expert testimony, and testimony regarding the effects of rates on customers. We believe that employing a rebuttable presumption will provide additional certainty and transparency to parties while also not restricting the Commission's ability to consider the particular circumstances of the case, as required by applicable precedent.

2. Arguments Opposing the Use of Presumptively Just and Reasonable ROE Ranges

69. We are not persuaded by the arguments opposing the use of ranges of presumptively just and reasonable ROEs as proposed in the Briefing Order. CAPs argue that the court's holding in *Emera Maine* did not require that we "must accept a range of ROEs as just and reasonable."[146] CAPs' argument on this point is inapposite. If an existing ROE falls within the applicable range of presumptively just and reasonable ROEs, it does not mean that we "must accept" that ROE as just and reasonable nor do such ranges establish that every ROE within that range "must" be just and reasonable. As we discuss further below, if an existing ROE falls within the applicable range of presumptively just and reasonable ROEs, then it is only rebuttably presumed to be just and reasonable. That presumption may be rebutted by other evidence regarding the particular circumstances of the case and the Commission may find that an existing ROE is unjust and unreasonable even if it falls within the applicable range of presumptively just and reasonable ROEs.

70. CAPs further assert that the court in *Emera Maine* only held that the Commission "was required to do more than show that its single ROE analysis generated a new just and reasonable ROE and conclusively declare that, consequently, the existing ROE was per se unjust and unreasonable."[147] It is true that the court held this, but it further held that the Commission's analysis did not satisfy section 206 because it "failed to include an actual finding as to the lawfulness of Transmission Owners' existing base ROE"[148] and explained that such a finding should "explain what circumstances rendered Transmission Owners' existing rate unlawful."[149] The court also stated that the Commission's decision

[149] *Id.* at 26.

"relied on its assumption that all ROEs other than the one FERC identifies as the utility's just and reasonable ROE are *per se* unlawful in a section 206 proceeding",[150] but explained that this reasoning was insufficient because "the zone of reasonableness creates a broad range of potentially lawful ROEs rather than a single just and reasonable ROE, meaning that FERC's finding that 10.57 percent was a just and reasonable ROE, standing alone, 'did not amount to a finding that every other rate of return was not.'"[151] Similarly, the court explained that finding that a just and reasonable ROE would be a "'a numerical value below the existing numerical value'"[152] was "without any further explanation . . . insufficient to prove that Transmission Owners' existing base ROE was unlawful."[153] Thus, CAPs' quote of the *Emera Maine* case is accurate but incomplete. In light of this more complete context of the court's holding, we find that using ranges of presumptively just and reasonable ROEs in our ROE methodology is necessary in order to ensure that our ROE determinations under section 206 meet the requirements of the court's holding in *Emera Maine*.

71. In particular, using such ranges will produce a specific result from our risk profile determination—a rebuttable presumption—and then we will make an explicit finding as to whether the other evidence presented by the parties in the case has rebutted that presumption. This analysis will allow the Commission to "explain what circumstances" support our "actual finding as to the lawfulness" in a structured manner. Moreover, because risk profile is the particular circumstance most relevant to determining whether an existing ROE is unjust and unreasonable, using ranges of presumptively just and reasonable ROEs based on a utility's risk profile will ensure that the risk profile determination has a clear and significant connection to our ultimate finding as to lawfulness. We find that the use of ranges of presumptively just and reasonable ROEs in our ROE methodology ensures that our determinations satisfy the requirements of the *Emera Maine* decision.

72. CAPs also argue that using ranges of presumptively just and reasonable ROEs violates the Commission's statutory duty to protect customers from excessive rates because it would presume ROEs within the range to be lawful even when the

[153] *Id.*

preponderance of the evidence points to a lower ROE.[154] RPGI makes a similar argument, asserting that the use of these ranges effectively shields existing ROEs from modification absent a showing that they fall outside of the applicable range.[155] We disagree. Using ranges of presumptively just and reasonable ROEs will not hinder the Commission's ability to protect customers from excessive rates or necessarily require a showing that the relevant ROE falls entirely outside of the applicable range. As explained above, we will use the range of presumptively just and reasonable ROEs as an additional tool to help inform our ROE analyses. The range of presumptively just and reasonable ROEs will provide an initial indication of whether an existing ROE may be unjust and unreasonable which we will consider along with all of the other evidence in the applicable record, including evidence addressing the particular circumstances of the case. The presumption that will apply if an existing ROE falls within the applicable range of presumptively just and reasonable ROEs is rebuttable. Accordingly, the Commission can still find that the ROE is unjust and unreasonable based upon the preponderance of the evidence, even if it falls within the applicable range of presumptively just and reasonable ROEs. Moreover, as the court held in *Emera Maine*, the mere fact the financial models now produce a cost of equity that is somewhat lower than the existing ROE is, "without any further explanation," insufficient to satisfy our burden under FPA section 206 to "prove that Transmission Owners' existing base ROE was unlawful."[156] Thus, contrary to CAPs' assertion, even if the evidence points to a lower ROE, this alone "without any further explanation" is insufficient to support a finding that the existing ROE is unjust and unreasonable.

73. In opposing our use of presumptively just and reasonable ROEs, CAPs contend that we should take the approach that the *Emera Maine* court specifically rejected. CAPs assert that the court in *Emera Maine* held that "at any given time and for the particular circumstances of each case, there is ultimately a *single ROE* level that *is* just and reasonable."[157] On the contrary, the court explicitly held that there is a "broad range of potentially lawful ROEs rather than a single just and reasonable ROE"[158] and reversed the Commission's finding that an existing ROE was unjust and unreasonable because it exceeded the single just and reasonable ROE that the Commission would have set. CAPs similarly argue that ranges of presumptively just and reasonable ROEs are unlawful

---

[154] CAPs Initial Br. (I) at 72-73; CAPs Initial Br. (II) at 72-73.

[156] *Emera Maine*, 854 F.3d at 26.

[157] CAPs Initial Br. (I) at 71-72 (emphasis in original); CAPs Initial Br. (II) at 71 (emphasis in original).

[158] *Emera Maine*, 854 F.3d at 26.

because the Commission cannot allow returns "that exceed the cost-based level." However, the court in *Emera Maine* found that the Commission must do more than simply determine what the cost-based ROE is and then determine if the existing ROE is unjust and unreasonable based on whether it exceeds that cost-based level. Accordingly, we disagree with CAPs' apparent position that the Commission should continue to follow the approach that was reversed in *Emera Maine* of identifying the cost of equity and then finding that an existing ROE is unjust and unreasonable under prong one of section 206 if it exceeds that cost of equity.

74. CAPs also argue that our use of ranges of presumptively just and reasonable ROEs will create an unlawful asymmetry between rate increases sought by utilities under FPA section 205 and rate reductions sought by consumers under FPA section 206. According to CAPs, utilities filing under section 205 can continue to obtain approval of a proposed ROE increase if they show that the cost of equity exceeds the existing ROE by any amount, but under the proposed presumption, customers filing complaints under section 206 would have to show that the existing ROE is so high that it is above the applicable range of presumptively just and reasonable base ROEs.[159] We disagree that the use of ranges of presumptively just and reasonable ROEs will create any unlawful difference between our treatment of filings under section 205 and section 206. As an initial matter, "[t]he purpose of section 206 is 'quite different' from that of section 205"[160] and "[s]ection 206's procedures are 'entirely different' and 'stricter' than those of section 205."[161] As the D.C. Circuit has further explained, "[i]n contrast to section 206, section 205 'is intended for the benefit of the utility,'"[162] and the Commission "plays 'an essentially passive and reactive' role under section 205."[163] The court in *Emera Maine* further explained that "A utility filing a rate adjustment under section 205 must show that the adjustment is *lawful*. The proponent of a rate change under section 206, however, bears 'the burden of proving that the existing rate is *unlawful*.'"[164] We find that there is nothing unlawful about using ranges of

presumptively just and reasonable ROEs to inform our analysis of whether an existing ROE has been shown to be unlawful under section 206. The showing that is required under section 206 differs from the showing that is required under section 205. Using ranges of just and reasonable ROEs will not change this fact. It remains the case that demonstrating that a proposed rate change is lawful under section 205 and demonstrating that an existing rate is unlawful under section 206 are two different standards. CAPs frame their argument as opposing the use of ranges of presumptively just and reasonable ROEs, but they are in fact taking issue with the different standards that apply to section 205 filings and section 206 complaints. We lack the authority to change those standards and our modification of the Commission's ROE methodology to use ranges of presumptively just and reasonable ROEs adheres to those standards.

75. In addition, we reiterate that customers filing complaints under section 206 do not necessarily have to show that the existing ROE is so high that it is above the applicable range of presumptively just and reasonable base ROEs in order to demonstrate that an existing ROE is unjust and unreasonable. As noted above, the presumption is a rebuttable one and whether an existing ROE falls within the applicable range is just one piece of evidence that the Commission will consider along with all of the evidence in a particular case.

76. In support of their argument, CAPs point to court precedent ruling that "[t]he statutory 'just and reasonable' standard is the same under section 205 and section 206."[165] However, the same court in *Emera Maine*, citing that same case, clarified that "while '[t]he just and reasonable lodestar is no loftier under section 206 than under section 205,' the showing required of FERC to exercise its section 206 authority to change an existing rate differs from anything required for FERC to approve a utility's proposed rate adjustment under section 205."[166] Therefore, precedent does not require the Commission's analysis under sections 205 and 206 to be the same. On the contrary, the statutes themselves *require* different showings and thus a different analysis by the Commission. The Commission's use of ranges of presumptively just and reasonable ROEs in reviewing complaints under section 206 will help it determine if an existing rate has been shown to be unjust and unreasonable and that does not create any unlawful asymmetry with its analysis under section 205.

77. CAPs' contention that the Commission's use of such ranges also contravenes the Regulatory Fairness Act, which modified FPA section 206(b) to provide the Commission

---

[165] CAPS Initial Br. (I) at 74 (citing *FirstEnergy Serv. Co. v. FERC*, 758 F.3d 346, 353 (D.C. Cir. 2014)); CAPS Initial Br. (II) at 74 (citing same).

[166] *Emera Maine*, 854 F.3d at 24 (quoting *FirstEnergy*, 758 F.3d at 353) (internal quotation marks omitted).

some refund authority, is also unavailing. CAPs assert that this is the case because the Regulatory Fairness Act was intended to add symmetry between the Commission's treatment of section 205 rate increase filings and section 206 complaints seeking rate decreases.[167] However, a step to "add symmetry" between the sections does not mean that they are completely symmetrical. In fact, as discussed above "[s]ection 206's procedures are 'entirely different' and 'stricter' than those of section 205."[168]

78. The fact that the Commission's analysis under section 206 differs from its analysis under section 205 is not only consistent with the Regulatory Fairness Act but also mandated by the statutory language of sections 205 and 206. CAPs further assert that *Mobile* and *Sierra* support their argument because those cases provide that a rate increase filing made and suspended under FPA section 205 and a rate decrease complaint filed under FPA section 206 are both subject to the same "character" and "scope."[169] We are not persuaded by this contention because, as discussed above, "while '[t]he just and reasonable lodestar is no loftier under section 206 than under section 205,' the showing required of FERC to exercise its section 206 authority to change an existing rate differs from anything required for FERC to approve a utility's proposed rate adjustment under section 205."[170] It is consistent with *Mobile* and *Sierra* for the Commission to employ one analysis to determine if the required showing that an existing ROE is unjust and unreasonable has been made under the first prong of section 206 and a somewhat different analysis to determine if a showing has been made under section 205 that a proposed ROE is just and reasonable.

79. CAPs also argue that using ranges of presumptively just and reasonable ROEs heightens the burden of proof faced by complainants, thereby creating an unlawful asymmetry between the burden of proof that utilities must meet to raise rates under FPA section 205, and the burden of proof that customers must meet to obtain lower rates under FPA section 206.[171] We disagree. The change to our ROE methodology to utilize ranges of presumptively just and reasonable ROEs does not change the burden of proof that

---

parties face under section 205 or section 206. It is merely an objective benchmark that will be used in our overall analysis of base ROEs to help determine if an existing rate has been shown to be unjust and unreasonable under section 206. It remains the case, as it was before implementing this modification to our ROE methodology, that "[a] utility filing a rate adjustment under section 205 must show that the adjustment is *lawful*" while "[t]he proponent of a rate change under section 206, however, bears 'the burden of proving that the existing rate is *unlawful*.'"[172] The use of ranges of presumptively just and reasonable ROEs does not change these burdens. Those ranges will merely serve to inform our assessment of ROEs. The fact that our use of those ranges will involve employing a rebuttable presumption does not change the burdens that apply. As MISO TOs note, the Commission has previously adopted a rebuttable presumption in the context of section 206. For example, in *AEP Marketing*,[173] the Commission adopted a rebuttable presumption that a utility does not possess market power in generation if it passes two market power screens and a rebuttable presumption that a utility does have market power if it fails either screen.[174] The Commission explained that "[f]ailure of a screen will provide the basis for instituting a section 206 proceeding and will establish a rebuttable presumption of market power in the section 206 proceeding."[175] This presumption is now incorporated in the Commission's regulations.[176] The Commission also previously adopted a rebuttable presumption that a "price squeeze" indicates a wholesale rate is unduly discriminatory in violation of section 206 of the FPA.[177] Indeed, the use of rebuttable presumptions in the context of section 206 analyses does not create an unlawful asymmetry with section 205 as CAPs suggest. Complainants continue to bear the burden of proving that the existing rate is unlawful and this burden is unchanged regardless of whether the rebuttable presumption is triggered. The addition of the ranges of presumptively just and reasonable ROEs merely provides additional detail regarding

---

[173] *AEP Power Mktg.,* 107 FERC ¶ 61,018.

[174] *See id.* P 37.

[175] *Id.* P 201.

[176] *See* 18 C.F.R. §35.37(c)(1) (2019).

[177] *See Conn. Light & Power Co.*, 8 FERC at 61,655 ("Based on the above, we conclude that given the establishment of a prima facie case of price discrimination and competition, it is reasonable from an administrative point of view to presume that there is a reasonable probability of an anticompetitive effect. The utility, of course, will have an opportunity to rebut this presumption.").

how a complainant must approach its effort to satisfying that burden. As MISO TOs note, the Commission has broad discretion over what weight to give evidence presented to it,[178] and our use of ranges of presumptively just and reasonable ROEs merely provides additional detail as to our evidentiary expectations for complainants' satisfying the burden of proof under prong one of FPA section 206.

80. CAPs further contend that, at worst, the use of such ranges creates a conclusive presumption that violates customers' due process rights. They argue that this is the case because the central values of the financial models are the best evidence of cost of equity but the ranges of presumptively just and reasonable ROEs would allow an existing ROE to exceed the central values of all of the financial models and still be presumed just and reasonable. CAPs assert that it would violate their due process rights to presume the lawfulness of rates that have been shown to be excessive by the same financial models that are used to establish the range of presumptively just and reasonable ROEs. They argue that this is further true because it is doubtful that customers will be able to produce additional evidence that is more effective than the collective evidence of the financial models.[179] This argument is unavailing. As discussed above, the presumption that will apply if an ROE falls within the applicable range of presumptively just and reasonable ROEs is a rebuttable presumption. Contrary to CAPs' suggestion, there is a wide variety of potential additional evidence that could be used to rebut the applicable presumption. For example, complainants could offer evidence regarding non-utility stock prices, investor expectations for non-utility stocks, various types of bond yields and their relation to stock prices, and investor and other expert testimony, including testimony regarding the effects of rates on customers. Moreover, even if an ROE falls within the applicable range of presumptively just and reasonable ROEs, the relative location of that ROE within the range, and the level of the ROE relative to the central values of the other financial models could be relevant. Accordingly, it is not the case, as CAPs imply, that the central values of the financial models would be ignored merely because an ROE falls within the applicable range of presumptively just and reasonable ROEs. These are just illustrative examples of the types of evidence that could be used to potentially rebut the presumption. There is a wide array of potential evidence that could be used to rebut the presumption and therefore we disagree with CAPs' contention that the presumption is conclusive.

81. CAPs also argue that the proposal to use ranges of presumptively just and reasonable ROEs is arbitrary and capricious because the proposed presumption is not

---

[178] *See e.g., Hope*, 320 U.S. at 622 ("The amount of evidence to be admitted on any point was of course in the agency's reasonable discretion, and it was free to give its own weight to these or other factors and to determine from all the evidence its own judgment as to the necessary rates.").

[179] CAPs Initial Br. (I) at 76-78; CAPs Initial Br. (II) at 76-78.

inferred from proven facts. We disagree. The presumption is inferred from proven facts, namely the zones of reasonableness produced by the DCF and CAPM which use verifiable data inputs, the objective calculations of the overall composite zone of reasonableness, where the applicable range of presumptively just and reasonable ROEs is located within that overall zone, the identification of where the relevant existing ROE falls within that overall zone, and the determination of whether it falls within the applicable range of presumptively just and reasonable ROEs.

82. Moreover, we disagree with CAPs' contention that the rationale underlying how the ranges of presumptively just and reasonable ROEs are constructed is flawed. CAPs point to the Commission's statement in the Briefing Order that "for an average risk utility, the 'broad range of potentially lawful ROEs' that the D.C. Circuit contemplated in *Emera* should correspond to those points that are closer to the ROE that the Commission would set for that utility than to the ROE for a utility of a different risk profile,"[180] and then assert that the Commission has not explained how the potentially lawful ROEs contemplated in *Emera Maine* for the DCF zone of reasonableness became presumptively lawful ROEs under its new proposal. As an initial matter, we clarify that the ranges of presumptively just and reasonable ROEs are not coextensive with the "broad range of potentially lawful ROEs" contemplated in *Emera Maine*. As the court explained "the zone of reasonableness creates a broad range of potentially lawful ROEs."[181] The court was referencing the overall zone of reasonableness and we clarify that, under our revised methodology, the composite overall zone of reasonableness will still represent the "broad range of potentially lawful ROEs" for a utility or group of utilities. The ranges of presumptively just and reasonable ROEs are intended to assist the Commission, as well as market participants, in determining whether an ROE that falls within the overall composite zone of reasonableness is just and reasonable because "[w]hether a particular rate within the zone is the just and reasonable rate for the utility at issue depends on a number of factors" and "[t]hus, the fact that a rate falls within the zone of reasonableness does not establish that the rate is the just and reasonable rate for the utility at issue."[182] Accordingly, we clarify that the potentially lawful ROEs contemplated in this language of *Emera Maine* are not coextensive with the applicable range of presumptively just and reasonable ROEs under our revised methodology. As a result, CAPs' argument on this point does not demonstrate any flaw in our methodology.

83. CAPs also point to the Commission's statement in the Briefing Order that the applicable range of presumptively just and reasonable ROEs for a diverse group of

---

[180] Briefing Order, 165 FERC ¶ 61,118 at P 29.

[181] *Emera Maine*, 854 F.3d at 26.

[182] *Id.* at 23.

average risk utilities is one quarter of the zone of reasonableness, centered on the midpoint because "[e]very potential ROE within that range is closer to the current just and reasonable ROE for an average-risk utility than the current just and reasonable ROE for a utility of a different risk profile."[183] CAPs counter that the observation that an ROE lies closer to the just and reasonable ROE than to some appropriate ROE for a utility of a different risk profile does not render that ROE just and reasonable. CAPs have misconstrued the point of the statement. Nothing in our rationale asserts the position CAPs describes. The fact that an ROE lies closer to the just and reasonable ROE than to an appropriate ROE for a utility of a different risk profile does not render that ROE just and reasonable, but it does provide some evidence indicating that the ROE may be just and reasonable. That is why our revised methodology uses that information to determine how to construct the ranges of presumptively just and reasonable ROEs, which we will then use as one piece of evidence in our overall assessment of whether an ROE is just and reasonable. Our rationale does not find that this information conclusively establishes that an ROE is just and reasonable, but instead that it is some evidence indicating that the ROE is just and reasonable. Using this information to construct the ranges of presumptively just and reasonable ROEs is the most effective manner in which we can incorporate this information into our ROE methodology.

84. In addition, CAPs argue that the use of only three risk groups (below-average risk, average risk, and above-average risk) in the ranges of presumptively just and reasonable ROEs is arbitrary. They assert that the Commission has previously set ROEs at a wide variety of locations within the distribution of proxy results, not only at the upper or lower midpoint. CAPs suggest that the Commission could establish more granular risk groups, for example using five risk groups of very-low-risk, moderately-low-risk, average-risk, moderately-high-risk, and very-high risk. We are not persuaded by this argument. The quartile approach using three risk groups strikes an appropriate balance between the interests of customers and utilities. We find that the ranges that are produced by this approach are narrow enough to protect customers from unjust and unreasonable ROEs while also providing utilities and all market participants with an additional objective benchmark that the Commission will use to assess whether an ROE is likely unjust and unreasonable. This will provide additional transparency and certainty with respect to our ROE analyses without giving undue preference to a utility's existing ROE or to a challenge of an existing ROE. As noted above, the use of three risk groups is supported by the fact that, under that construct, every ROE within the applicable presumptively just and reasonable range will be closer to the traditional starting place for evaluating the

[183] CAPs Initial Br. (I) at 79-80 (citing Briefing Order, 165 FERC ¶ 61,118 at P 29); CAPs Initial Br. (II) at 79 (citing same).

ROE of a utility with that risk profile[184] than it will be to the corresponding traditional starting place for a utility of a different risk profile. This approach will most effectively identify whether a given ROE is likely more appropriate for a utility of the applicable risk profile than it would be for a utility of a different risk profile, which will help inform our assessment of whether the ROE is unjust and unreasonable in light of all of the particular circumstances of the case. Because "[r]atemaking . . . is not a science,"[185] we could have constructed the ranges of presumptively just and reasonable ROEs using a different number of risk groups or with wider or narrower ranges.[186] However, we find that, in light of the record in these proceedings and our past experience with ROE analyses, the approach we are adopting herein will best balance the interests of consumers and utilities and most effectively allow us to determine if an ROE is unjust and unreasonable.

85. MISO TOs request that the Commission clarify that a base ROE that falls outside of the applicable range of presumptively just and reasonable ROEs is only rebuttably presumed to be no longer just and reasonable, just as an ROE that falls within the zone is only rebuttably presumed to be just and reasonable.[187] RPGI opposes this clarification, arguing that it would unfairly benefit utilities.[188] We clarify that the Commission will apply a rebuttable presumption to both ROEs that fall within the applicable range of presumptively just and reasonable ROEs and those that fall outside of the applicable range. In other words, ROEs that fall within the applicable range will be presumed to be just and reasonable, unless that presumption is rebutted, and those that fall outside of the applicable range will be presumed to be unjust and unreasonable, unless that presumption is rebutted.

[187] MISO TOs Initial Br. (I) at 6; MISO TOs Initial Br. (II) at 7-8.

[188] RPGI Reply Br. (II) at 24-26.

86. RPGI requests that the Commission acknowledge that it intends to determine whether to dismiss a complaint and whether to grant a complaint on the basis of the same process under the new ROE methodology. Specifically, RPGI contends that, if the Commission anticipates that it will be in a position to resolve all factual issues instrumental to denying a complaint if the relevant ROE falls within the applicable range of presumptively just and reasonable ROEs and the presumption is not rebutted, then the Commission should apply an equivalent standard for granting complaints.[189] We clarify that we intend to determine whether to dismiss a complaint and whether to grant a complaint on the basis of the same process under the new ROE methodology. The ranges of presumptively just and reasonable ROEs and the other changes to our methodology adopted in this order will apply generally to our overall assessment of existing ROEs under FPA section 206. There will be no difference in how the methodology is applied in the context of potentially dismissing a complaint as opposed to potentially granting a complaint, outside of the differences in the statutory and regulatory burdens and requirements that complainants and respondents face under section 206 which, as noted above, the revised methodology adopted herein cannot and does not change. With respect to RPGI's contention that, if the Commission anticipates that it will be able to resolve all factual issues relevant to denying a complaint, it should also be able to do so with respect to granting a complaint, we clarify that we do not necessarily anticipate that the revised methodology adopted in this order will allow us to resolve all factual issues in every ROE case without additional hearing or settlement procedures. As was the case before this order, there may be cases where we will be able to resolve all factual issues before us and dismiss or grant a complaint without additional procedures. However, there may be other cases where there are issues of material fact in dispute that cannot be resolved based upon the record and will require additional procedures. We will not approach the question of whether there are issues of material fact differently in determining if a complaint will be granted as opposed to if a complaint will be denied, again outside of the differences in the statutory and regulatory burdens and requirements that complainants and respondents face under section 206 which the revised methodology adopted herein does not change.

V. DCF

A. Background

87. The DCF model is based on the premise that an investment in common stock is worth the present value of the infinite stream of dividends discounted at a market rate commensurate with the investment's risk. With simplifying assumptions, the DCF model results in the investor using the following formula to determine share price:

[189] RPGI Initial Br. (I) at 41; RPGI Initial Br. (II) at 44.

$$P = D/k-g,$$

where "P" is the price of the common stock, "D" is the current dividend, "k" is the discount rate (or investors' required rate of return), and "g" is the expected growth rate in dividends.

88. Unlike investors, the Commission uses the DCF model to determine the ROE (the "k" component) to be included in the utility's rates, rather than to estimate a stock's value. Therefore, the Commission rearranges the DCF formula to solve for "k", the discount rate, which represents the rate of return that investors require to invest in a company's common stock. The Commission also multiplies the dividend yield by the expression (1+.5g) to account for the fact that dividends are paid on a quarterly basis. Multiplying the dividend yield by (1+.5g) increases the dividend yield by one half of the growth rate and produces what the Commission refers to as the "adjusted dividend yield." Under the resulting formula, ROE equals the adjusted dividend yield plus the expected future growth rate of dividends and can be expressed as follows:

$$k=D/P\ (1+.5g) + g.$$

89. Under the Commission's two-step DCF methodology, the input for the expected future growth rate of dividends, "g," is calculated using both short-term and long-term growth projections.[190] Those two growth rate estimates are averaged, with the short-term growth rate estimate receiving two-thirds weighting and the long-term growth rate estimate receiving one-third weighting, to create a composite growth rate.[191]

B. Dividend Yield

90. In the First Complaint proceeding, all parties, including the MISO TOs, calculated the adjusted dividend yield using the same composite growth rate, including both short- and long-term growth rates, for the (1+.5g) adjustment the Commission uses for the expected future growth rate of dividends. Accordingly, the Presiding Judge in that proceeding, and the Commission in Opinion No. 551, also calculated the adjusted dividend yield using the composite growth rate, and no party sought rehearing of Opinion No. 551 on this issue.

91. Initially, all parties in the Second Complaint proceeding, including the MISO TOs, also proposed to calculate the adjusted dividend yield using the composite growth rate for

---

[190] Opinion No. 531, 147 FERC ¶ 61,234 at PP 15-17, 36-40; Opinion No. 531-A, 149 FERC ¶ 61,032 at P 10.

[191] Opinion No. 531, 147 FERC ¶ 61,234 at PP 17, 39.

the (1+.5g) adjustment. However, three days after the MISO TOs filed their update testimony in the Second Complaint proceeding, the Commission issued Opinion No. 546 in *Seaway Crude Pipeline Co. LLC*,[192] holding that only a short-term growth projection should be used in calculating the (1+.5g) adjustment to dividend yield. The Commission stated that "the short-term IBES growth rate is far more representative of the growth investors expect over the coming year than is the [composite] growth rate."[193] At the hearing in the Second Complaint proceeding, the MISO TOs presented modified dividend yield calculations consistent with Opinion No. 546, using only short-term growth projections to calculate the (1+.5g) adjustment to dividend yield.[194] However, the Presiding Judge, without discussion, used the same composite growth rate to calculate the adjusted dividend yield as used for the expected future growth in dividends.

1. MISO TOs

92. In their brief on exceptions to Initial Decision (II) in the Second Complaint proceeding and in the initial affidavits of their witness Mr. McKenzie in response to the Briefing Order, MISO TOs argue that only the short-term IBES growth rate should be used to calculate the (1+.5g) adjustment to dividend yield. They point out that the Commission found in Opinion No. 546 that a projected GDP growth rate should not be used in adjusting the dividend yield, because the short-term IBES growth rate is more representative of the growth investors expect over the coming year than a composite growth rate also reflecting GDP growth.[195] In their brief on exceptions, MISO TOs explain that the Commission has long held that "[t]he appropriate dividend figure to use in the DCF equation is the amount which is expected to be received by the investor during the twelve months following the purchase of the stock."[196] MISO TOs assert that the Commission assumes that the dividend will be increased annually and that the next increase will occur on average six months after the stock purchase.[197] Therefore, the

actual dividend yield during the six-month study period must be adjusted upward for the first expected dividend increase. MISO TOs state that, because the adjusted dividend yield is intended to reflect investor expectations during just one year, it is inherently a short-run figure, and therefore the short-term IBES growth projection is the appropriate growth projection to use in making the adjustment.

2. CAPs

93. CAPs oppose MISO TOs recommendation to use only a short-term dividend growth rate, for purposes of the (1+ .5g) adjustment to the dividend yield.[198] Instead, they recommend using a composite growth rate consistent with Opinion Nos. 531 and 551 and Initial Decision (II).

94. CAPs contend that the Commission's longstanding practice has been to use the composite growth rate, not the short-term IBES growth projection, as the "g" in the (1 + .5g) dividend adjustment factor.[199] They state that this practice is appropriate, because the purpose of the adjustment is to account for the quarterly, rather than annual, payment of dividends, and therefore the adjustment requires a projection of growth in dividends, not growth in earnings. CAPs state that projected long-term earnings growth is the best available predictor of near-term dividend growth because: (1) long-term earnings growth funds long-term dividend growth; and (2) utility holding companies moderate their near-term dividend growth in order to avoid cutting dividends when earnings fall. Thus, CAPs claim, "the composite growth rate is a better predictor of near-term dividend yield increases than is the first-stage growth rate."[200] CAPs state that this conclusion is borne out in the record of the Second Complaint proceeding, where, to take one example, OGE Energy's earnings have increased during the last five years by 6.84 percent annually, but its dividends have only increased by 4.5 percent annually.[201]

95. CAPs also reject the MISO TOs' argument that Opinion No. 546 established a new DCF methodology for electric utilities. Rather, CAPs state that Opinion No. 546 concerned an oil pipeline master limited partnership (MLP) and was a "case-specific determination" that the pipeline's DCF study should not be disregarded because of a relatively minor difference related to the dividend adjustment. CAPs point out that the

---

[198] CAPs Reply Br. (I) at 22-25; CAPs Reply Br. (II) at 40-44; CAPs Br. Opposing Exceptions at 40-44.

[199] CAPs Reply Br. (I) at 23. CAPs Reply Br. (II) at 42.

[200] CAPs Reply Br. (I) at 23; CAPs Reply Br. (II) at 42.

[201] CAPs Br. Opposing Exceptions at 43.

pipeline had argued that, for MLPs, the short-term earnings growth rate was the best predictor of the coming year's earnings growth, because MLPs distribute most available cash to investors, and therefore near-term dividends growth would be expected to track near-term earnings growth. CAPs assert that this determination in Opinion No. 546 was never meant to apply to electric utilities.[202] In addition, CAPs argue that the MISO TOs' recommended methodology of using different growth rates for future dividends and cash flows would distort the DCF model's results.[203]

3. Trial Staff

96. Trial Staff also opposes using only a short-term dividend growth rate, for purposes of the (1+ .5g) adjustment to the dividend yield. Trial Staff contends that MISO TOs' reliance on Opinion No. 546 is misplaced. Trial Staff states that that case involved an oil pipeline and used a proxy group of only oil pipeline MLPs, which "distribute most available cash to investors."[204] Trial Staff instead asserts that "investors value stable dividends" and that "adjusted dividend yield calculations should be based on expectations of long-term earnings growth, which requires the use of the composite growth rate."[205]

97. Trial Staff also contends that, if the Opinion No. 546 dividend adjustment methodology is applied to public utilities, it is likely to reduce the low-end DCF results and increase the high-end DCF results. That is because proxy companies with high-end DCF results generally have IBES growth rates that are higher than the GDP growth projection, while proxy companies with low-end DCF results have IBES growth projections that are less than the GDP growth projection. However, Trial Staff states that the reduced low-end DCF results are likely to be eliminated by the low-end outlier test, but the high-end results will not be eliminated. As a result, Trial Staff asserts that the Opinion No. 546 methodology is likely to increase the midpoint ROE.[206]

4. Commission Determination

98. The Commission will use the short-term growth rate to calculate the (1+.5g) adjustment to dividend yield. As noted in Opinion No. 305-A,

---

[202] *Id.* at 41-42.

[203] CAPs Reply Br. (I) at 22-24; CAPs Reply Br. (II) at 41-43.

> The appropriate dividend figure to use in the DCF equation is that amount which is expected to be received by the investor during the twelve months following the purchase of the stock. To estimate that amount, we generally make the following two simplifying assumptions: (a) that the dividend rate will be increased annually (this has been the recent practice for electric utilities); and (b) that the next increase will occur, on average, six months after the stock purchase.[207]

Because this first dividend is necessarily paid within the time period covered by the IBES short-term growth projection, that rate is the more appropriate growth rate for calculating the (1+.5g) adjustment to the dividend yield.

99. We are not persuaded by the contention that the Commission should apply Opinion No. 546 only to oil pipeline MLPs. Opinion No. 546 approved use of the short-term IBES growth projection to calculate the (1+.5g) adjustment to dividend yield on the ground that "the short-term IBES growth rate is far more representative of the growth investors expect over the coming year than is the two-stage growth rate."[208] That rationale applies equally to public utilities as to oil pipelines. It does not turn on any unique feature of oil pipeline MLPs, such as their slower expected long-term growth because of the fact MLPs distribute most available cash to investors. We find that the adjusted dividend yield methodology used in Opinion No. 546 should be applied both to electric utilities and pipeline companies. Furthermore, we do not agree that using different growth rates would distort the DCF's results; the adjusted dividend yield, which concerns only the dividend received in the first year after a stock's purchase, is logically distinct from the infinite stream of dividends received from holding the stock in perpetuity.

100. We do not find Trial Staff's assertion that using only the IBES growth rate in calculating the adjusted dividend yield is likely to increase the midpoint ROE to be a basis for requiring the composite growth rate to be used in calculating the adjusted dividend yield. As noted above, the adjusted dividend yield only considers expected growth within the year after a stock's purchase, and so should be calculated using a short-term growth rate. In any event, as the Commission stated in Opinion No. 546, using only the IBES short-term growth projection to make the (1+.g) adjustment to dividend yield has a *de minimis* effect on the outcome of the DCF analysis, increasing proxy company ROEs by only one or two basis points.

[208] Opinion No. 546, 154 FERC ¶ 61,070 at P 198.

C. Short-Term Growth Rate

1. Opinion No. 551

101. In the First Complaint proceeding, the MISO TOs proposed to use earnings growth projections published by *Value Line* as the short-term projection of the future growth in dividends. However, the Presiding Judge adopted the IBES 3 to 5 year growth projections published by *Yahoo! Finance*, stating that the Commission has "long relied on IBES growth projections as evidence of the growth rates expected by the investment community."[209] Additionally, the Presiding Judge stated that the Commission's policy that ROE should be determined using the most recent financial data in the record (i.e., data for the last six months of 2015) dictates use of the IBES growth projections, because the MISO TOs had only provided *Value Line* data from the first half of 2015, whereas the other parties had provided IBES growth projections through July 13, 2015.[210] In their brief on exceptions, MISO TOs stated they were not excepting to the Presiding Judge's use of IBES growth projections in the First Complaint proceeding, because the record did not contain *Value Line* growth estimates from the last half of 2015. However, they requested that the Commission confirm that, in future proceedings, *Value Line* growth projections would constitute an acceptable and comparable source of short-term earnings growth estimates that may be considered for use in the two-step DCF analysis.[211]

102. In Opinion No. 551, the Commission denied MISO TOs' request for clarification that the *Value Line* growth projections constitute an acceptable and comparable source of short-term earnings growth estimates that may be considered for use in the two-step DCF analysis. It stated, that while the Commission has not mandated the exclusive use of IBES data in its natural gas and oil pipeline rate of return cases, the Commission has stated that "IBES data is the preferred data source for computing the short-term growth rate"[212] and explained that "IBES data is a compilation of projected growth rates from

various knowledgeable financial advisors within the investment community."[213] As such, the IBES short-term growth estimates generally represent consensus growth rate estimates by a number of analysts. The Commission stated that, by contrast, it has rejected the use of *Value Line* growth estimates, because they are the estimates of a single analyst and do not constitute such consensus estimates.[214]

103. In response to MISO TOs' argument that the *Value Line* estimates should be considered a comparable source, the Commission cited Opinion No. 531, which states that the Commission "has long relied on IBES growth projections as evidence of the growth rates expected by the investment community."[215] The Commission also noted that Opinion No. 531 states that, while the Commission could conceivably allow the substitution of "comparable data," an "alternative source of growth rate data should only be used when that source can be used for the growth projections of all of the proxy group companies" because using different sources could "produce skewed results, because those sources may take different approaches to calculating growth rates."[216] The Commission confirmed that this is the reason that it has "consistently used a single investor service such as IBES for the investment analysts' growth rate estimates."[217]

104. Thus, the Commission stated that, while it is willing to use short-term growth data published by a source comparable to IBES, because *Value Line* does not publish consensus growth rate estimates, it cannot be considered comparable.[218] The Commission also stated that published consensus estimates sourced from investment

analysts, e.g., IBES's growth rate estimates, are updated on a rolling basis, sometimes as frequently as daily, and are therefore superior to *Value Line*'s growth rate estimates, which are updated only on a lagging, quarterly basis.[219]

2. MISO TOs' Request for Rehearing of Opinion No. 551

105. MISO TOs sought rehearing of Opinion No. 551 on this issue.[220] MISO TOs argue that nothing in the record suggests that investors are more likely to rely on an earnings forecast if more analysts helped develop the forecast. Additionally, MISO TOs argue that *Value Line*'s growth projections have as much, if not more, influence on investment decision-making as the IBES estimates.[221] Furthermore, they assert that the IBES growth estimates lack transparency regarding the forecast and updating procedures, a defect "not common to *Value Line*'s estimates."[222] As an example of this opacity, MISO TOs point to Mr. Keyton's testimony which, they argue, concedes that there is no way to know how many analysts contribute to any IBES growth estimate.[223] In contrast, MISO TOs contend that Dr. Avera argued that *Value Line*'s short-term growth estimates meet the same objective criteria of IBES's, are widely relied upon by investors, and are based on transparent forecast techniques explained in *Value Line*'s user manual.[224]

106. MISO TOs further contend that the Commission relied on an erroneous assumption about the frequency of IBES updates, as Mr. Solomon stated that the IBES update frequency is indeterminable. Additionally, MISO TOs argue that Dr. Avera explained that *Value Line*'s projections "are updated on a scheduled basis, which removes debate about the potential staleness of the underlying data."[225] MISO TOs argue, therefore, that the record contradicts the Commission's findings about the update frequency of IBES and Value-Line. Nonetheless, MISO TOs argue that update frequency

[222] *Id.*

[223] *Id.*

[224] *Id.* at 8-9.

[225] *Id.* at 9.

is irrelevant in light of the fact that the investment community relies on *Value Line*.[226] To this point, they argue that "[w]hat matters is whether" growth estimates are representative of investor expectations, and that investors' "undisputed reliance" on *Value Line* establishes that such estimates are suitable for the DCF model.[227] MISO TOs also argue that the Commission has relied on *Value Line* investment data in other contexts.[228]

107. Furthermore, MISO TOs argue that the Commission erroneously assumed that investors are more likely to rely on a consensus forecast even though the record does not demonstrate that IBES estimates reflect a greater consensus of input than *Value Line* estimates. To this point, they argue that Mr. Keyton stated, and Mr. Solomon confirmed, that there is no way to ascertain the number of IBES analysts contributing to an estimate or if more than one analyst was responsible for any particular forecast.[229] MISO TOs therefore ask the Commission to grant rehearing and leave open the ability of parties to propose appropriate alternatives to IBES, including *Value Line*.[230] Additionally, MISO TOs argue that undisputed record evidence confirms that *Value Line* estimates are reviewed by a committee of peer analysts, which undercuts the worth of the Commission's determination that such estimates are only published under the name of a single analyst.[231] They also argue that, even if IBES provides updates with greater frequency, this is actually a disadvantage because such updates do not adhere to any known schedule or published metrics. In contrast, MISO TOs point out that *Value Line*'s earnings forecasts are updated quarterly in accordance with documented procedures.[232]

108. MISO TOs also argue that the Commission has not rejected the use of *Value Line* growth estimates in natural gas pipeline rate cases based on the fact that they are estimates of a single analyst and do not constitute consensus estimates.[233] They argue

---

that this finding in Opinion No. 551 contradicts the Commission's earlier finding in Opinion No. 531-B, where the Commission concluded that investors' reliance on IBES growth projections does not vary depending upon the "the exact number of analysts contributing to any particular IBES growth projection."[234]

109. Finally, MISO TOs argue that the Commission's categorical rejection of *Value Line* growth projections deprives the Commission of information relevant to the determination of a just and reasonable ROE.[235]

3. Second Complaint Proceeding

110. In the Second Complaint proceeding, the MISO TOs again proposed to use *Value Line* growth projections as the short-term projection of growth in future dividends. The Presiding Judge, however, rejected that proposal and determined that IBES data should be used.[236] The Presiding Judge held that, because the Commission had used IBES data as the short-term growth projection in Opinion No. 531, the MISO TOs had the burden to demonstrate that use of *Value Line* growth projections would be preferable in this case. The Presiding Judge was not persuaded by the MISO TOs' contention that the *Value Line* short-term growth projection should be used, because the resulting DCF midpoint and upper midpoints (9.50 and 10.89 percent) are closer to the result of the alternative methodologies than the DCF midpoint and upper midpoint produced using IBES growth projections (8.72 and 9.70 percent).[237] The Presiding Judge found that the alternative methodologies should not be referred to in deciding what short-term growth projection should be used in a DCF analysis. The Presiding Judge also found that use of the IBES short-term growth projections "better conforms to the Commission's admonition that the DCF model incorporate the most recent data available,"[238] because the IBES projections in the record were obtained as late as January 8, 2016, while the *Value Line* growth projections were obtained for various proxy group companies on October 30, November 30, and December 18, 2015.

111. In its brief on exceptions, MISO TOs argued, among other things, that prior reliance on IBES does not foreclose the use of *Value Line* growth projections, and it

---

[237] *Id*. PP 36-41.

[238] Initial Decision (II), 155 FERC ¶ 63,030 at P 42.

again argued that the *Value Line* DCF is corroborated by the results of its risk premium, CAPM, and expected earnings analyses.[239] MISO TOs contend that a DCF analysis using *Value Line* short-term growth projections produces ROEs close to those produced by the alternative methodologies, such as a DCF analysis using IBES short-term growth projections. MISO TOs also argued that the *Value Line* estimates are at least as current as the IBES estimates. MISO TOs explained that, although the IBES growth projections in the record were in an IBES report published in January 2016, the analyst growth projections reflected in the report may have been made as much as 180 days earlier. MISO TOs cited evidence that *Yahoo Finance* provides no information as to the schedule or frequency of updates to any of the analyst growth projections used to create the consensus IBES growth projection published by *Yahoo Finance*.

112. In their briefs opposing exceptions, CAPs, OMS, RPGI, and Trial Staff all disagree with MISO TOs on this issue.[240] CAPs contend that *Value Line* growth projections are not similar to IBES short-term growth projections for at least three reasons. First, IBES short-term growth projections represent a consensus of the views of multiple analysts, while *Value Line* projections are made by only one analyst. Second, CAPs state that the *Value Line* growth rates are substantially retrospective in contrast to the prospective IBES growth projections. CAPs state that IBES analysts typically start from a single most recent historical year, make adjustments to that base year to remove non-recurring gains or losses, and then project normalized earnings growth over a three to five year period. However, *Value Line* growth rates represent an estimate of growth from a three-year historical period to a three-year forecast period, with the base period starting up to four years before the date of the *Value Line* publication.[241] Third, CAPs assert that the *Value Line* growth rates do not reflect as accurate a normalization of non-recurring base period gains and losses as the IBES projections. They state that the *Value Line* growth rates rely solely on an averaging of the three historical years, whereas IBES participating analysts make adjustments to the most recent year to remove specific non-recurring gains and losses.[242] OMS and Trial Staff also argue that the IBES growth projections are more current, because IBES updates its data base on a daily basis as participating analysts provide new inputs, whereas *Value Line* publishes on a rolling

quarterly basis.[243] Trial Staff and RPGI also oppose MISO TOs' reliance on alternative methodologies to support use of *Value Line* growth rates in the DCF model, asserting that alternative methodologies may only be considered after the DCF analysis has been completed.[244]

4. Briefing Order

113. In the Briefing Order, the Commission stated that, while IBES growth projections represented a consensus in the past, they may not reflect as robust a consensus at this point.[245] The Commission stated that this concern stems from the fact that most investment analysts that make and publish quarterly and annual earnings estimates no longer make and publish three-to-five year short-term projections of earnings growth and that in recent years, the IBES data for many proxy companies have reflected between one and three analysts' short-term growth projections.[246] The Commission further stated that the reduced number of short-term growth projections means that a significant change in a single analyst's growth projection for a particular proxy company can significantly affect that company's DCF analysis result.[247]

5. MISO TOs' Initial Briefs

114. In their brief in the First Complaint proceeding, MISO TOs state that they do not propose reliance on growth rates from a source other than IBES to resolve the First Complaint.[248] However, they ask the Commission to clarify that it is receptive to considering in the future other sources of growth rate estimates that are widely relied

[247] *See e.g., id.* P 48 (noting, for example, that one analyst's error involving the growth projection for Portland General Electric Company (Portland General) reduced the overall Reuters consensus projected short-term percentage growth in earnings for Portland General from 10.96 percent to 7.80 percent).

[248] MISO TOs Initial Br. (I) at 22.

upon in the investment community, such as *Value Line*.[249] They argue that, from the earliest application of the two-step DCF, the Commission has neither adopted nor endorsed IBES as the only source of data for developing short-term growth projections.[250] They also state that the Commission has conceded that there is no perfect data source for such estimates and that the order directing briefing questions whether IBES growth rates reflect investor consensus.[251] For these reasons, they ask the Commission to clarify that it is open to considering sources of short-term earnings growth rate estimates other than IBES.[252]

115. In their brief in the Second Complaint proceeding, MISO TOs propose to use the *Value Line* growth estimates they presented at the hearing as the short-term estimate of the future growth in dividends.[253] MISO TOs rely on the same rationale as in their Brief on Exceptions to Initial Decision (II).

6. RPGI Initial Briefs

116. RPGI provides arguments in support of the use of IBES. RPGI contends that the Commission has previously considered and rejected concerns regarding the number of IBES analysts when using such data in the DCF model and the Commission has previously found that calculating the "common equity to a regulated enterprise depends upon what the market expects not upon precisely what is going to happen."[254] RPGI argues that the focus of the analysis in formulating a policy choice among financial models should not be whether the IBES growth estimates are the product of numerous inputs but whether there is "sufficient continuity and regularity over time in the publication of analysts' estimates that investors might reasonably make use of those

estimates in evaluating proxy companies' prospects."[255] It argues that there is no evidence to suggest that IBES inputs fail under this analysis.

117. RPGI also states that investors continue to make use of IBES forecasts and thus, the DCF continues to meet the Commission's established criterion for selecting which source to use—that the source is used by investors.[256] It also argues that it is not a defect that IBES forecasts "appear to be published on a basis that excludes estimates made more than six months prior."[257]

7. CAPs Reply Brief

118. CAPs' reply brief in the First Complaint proceeding did not address the issue of what short-term growth projection to use in the DCF model. However, in their reply brief in the Second Complaint proceeding, CAPs oppose use of *Value Line* as the short-term growth projection, repeating the same arguments they made in their brief opposing exceptions in the Second Complaint proceeding.

8. Trial Staff Reply Briefs

119. In reply to MISO TOs' Initial Briefs in both complaint proceedings, Trial Staff reiterates the Commission's arguments about its preference for IBES. It also points to Opinion No. 531-B, where the Commission stated that it is "preferable to use a consistent source of dividend growth projections for all members of the proxy group as provided by IBES, rather than to use different sources of growth projections depending upon the number of analysts contributing to each IBES growth projection."[258] Moreover, Trial Staff states that the Commission has a long history of finding that IBES is the preferred data source for computing the short-term growth rates[259] and that alternate sources should only be used when they are available for the growth projections for all proxy group companies in order to avoid skewed results.[260] Trial Staff also points out that the

Commission has found that IBES is updated on a rolling basis, sometimes as frequently as daily, while *Value Line*'s growth estimates are updated only on a lagging quarterly basis.[261] Trial Staff therefore recommends that the Commission reject the proposed use of *Value Line*-based short-term growth rates in the future and any alternative source that does not include all proxy group companies.[262]

9. Commission Determination

120. For the reasons discussed below, we deny MISO TOs' request for rehearing of Opinion No. 551's rejection of their request for clarification that *Value Line* growth projections constitute an acceptable source of short-term earnings growth estimates for use in the two-step DCF analysis. We also affirm the Presiding Judge's rejection of the MISO TOs' proposal in the Second Complaint proceeding to use *Value Line* growth projections as the short-term growth projection for purposes of the two-step DCF analysis and therefore we deny MISO TOs' exceptions on this point.

121. In Opinion No. 531, the Commission held that "in future public utility cases, the Commission will adopt the same two-step DCF methodology it uses in natural gas and oil pipeline cases."[263] Although the Commission has refrained from mandating the exclusive use of IBES data in its natural gas and oil pipeline rate of return cases, the Commission has in fact used IBES data for the short-term growth projection in every such case since the Commission initiated the two-step DCF model 25 years ago in *Ozark Gas Transmission System*.[264] For example, when the Commission increased the weighting of the short-term growth projection from one-half to two-thirds in Opinion Nos. 414-A and 414-B,[265] the Commission reaffirmed the use of IBES data for the short-term growth projection and rejected the use of *Value Line* short-term growth projections. Opinion No. 414-B cited testimony that "there is a body of evidence showing that the most reliable measure of investor expected growth is the growth forecasts, such as IBES,

published by security analysts."[266] That evidence included the article by Robert Harris, entitled *Using Analysts' Growth Forecasts to Estimate Shareholder Required Rates of Return*,[267] upon which the MISO TOs rely in this case to support their use of a one-step DCF method as part of their CAPM analysis. Opinion No. 414-B stated that article supported the use of IBES growth projections.[268] The Commission also quoted the testimony of the pipeline's witness that "[t]he analysts from which IBES collects forecasts are professionals, exercising their best judgment as to the future growth in earnings of the companies they follow . . . Their analyses are provided as a service to investors and should therefore serve as a good measure of the expectations investors have formed. I believe that IBES and Zacks Investment Research . . . are the best sources. IBES is well known in the investment community, and I believe draws on more professional forecasts than any other similar service except for Zacks."[269]

122. The Commission continued to follow this precedent in subsequent natural gas and oil pipeline rate of return cases.[270] The Commission also rejected proposals to average IBES short-term growth projections with *Value Line* growth estimates, finding that *Value Line* projections are "projections from a single source" and their use would "dilute the industry consensus reflected in the IBES data."[271]

123. Similarly, when the Commission modified its proxy group policies to permit MLPs to be included in natural gas and oil pipeline proxy groups, the Commission held that IBES growth projections should also be used for MLPs, finding that those

projections remain "the best and most reliable source of growth information available."[272] The Commission again found that investors rely on the IBES growth projections in making investment decisions, because they are widely available and generally reflect the input of a number of financial analysts. The Commission also rejected a proposal to use *Value Line* reports to test the reasonableness of IBES growth projections.[273]

124. MISO TOs have failed to provide a persuasive reason for the Commission to modify this longstanding policy concerning the short-term growth projection to be used in the two-step DCF model. For the reasons we discuss below, we continue to find the use of IBES three-to-five year growth projections preferable to the use of *Value Line* growth projections.

125. MISO TOs point out that, in Opinion No. 531, the Commission stated that the short-term growth projection to be used in the two-step DCF model "will be based on the five-year projections reported by IBES (or a comparable source)."[274] They contend that *Value Line* is a "comparable source," and thus Opinion No. 531 permitted its use. However, we find that *Value Line* is not a comparable source. As we have previously found, the IBES growth projections generally represent consensus growth estimates by a number of analysts.[275] By contrast, the *Value Line* growth estimates represent the growth projection of a single analyst, as Opinion No. 531-B stated.[276] MISO TOs assert that the *Value Line* growth estimates are comparable to consensus estimates, because they "are vetted through internal processes including review by a committee composed of peer analysts."[277] However, regardless of any review process within *Value Line,* the fact remains that the *Value Line* growth projections are projections by a single institution. By

[275] Ex. JCI-14 (II) at 27 ("IBES consensus estimates are normally based on the average of multiple analysts, or brokerage or investment firms' estimates.").

[276] Opinion No. 531-B, 150 FERC ¶ 61,165 at P 72 n.145 (stating that the *Value Line* data "for any company consists of an earnings estimate from only one analyst, rather than consensus estimates").

[277] MISO TOs Rehearing Request at 12 (citing Ex. S-1 at 17 and Ex. MTO-1 at 27).

contrast, IBES compiles the growth projections of a number of analysts at different brokerage and investment firms. The IBES growth projections thus generally represent an average of projections made independently of one another by a number of analysts at different institutions.[278] Data sources can reflect investor expectations by being used by large numbers of investors and/or being themselves the results of the analysis of a diverse group of persons in the investment community. Both IBES and *Value Line* growth rates are used by large numbers of investors but only IBES growth rates reflect the analysis of a diverse group of persons in the investment community.

126. Academic research supports the use of consensus forecasts such as those reported by IBES for purposes of the DCF growth projection, rather than the forecast of a single analyst or institution. For example, Roger Morin states,

> Exclusive reliance on a single analyst's growth forecast runs the risk of being unrepresentative of investors' consensus forecast. One would expect that averages of analysts' growth forecasts, such as those contained in IBES or Zacks, are more reliable estimates of investors' consensus expectations likely to be impounded in stock prices. Averages of analysts' growth forecasts rather than a single analyst's forecasts are more reliable estimates of investors' consensus expectations.[279]

The Harris article, *Required Rates of Return*, cited by Opinion No. 414-B, similarly supports the use of a survey of multiple analyst growth projections, such as IBES, for the DCF growth projection. In addition, Harris and Marston concluded in *Estimating Shareholder Risk Premia Using Analysts' Growth Forecasts* that use of IBES growth

[278] As MISO TOs point out, the Commission has recognized that in a few instances an IBES growth projection may be based on the projection of a single analyst. MISO TOs Rehearing Request at 16 (citing Opinion No. 531-B, 150 FERC ¶ 61,165 at P 71-72). However, the fact that a few of the IBES growth projections may not represent the consensus of more than one analyst or institution's growth projection does not justify shifting to a source of growth projections in which none of the growth projections reflect a consensus of more than one analyst or institution's growth projection. For the reasons discussed above, we believe it is appropriate to use as many consensus growth projections as possible, and participants are free to propose alternatives to IBES to the extent they may provide more robust consensus projections.

[279] Morin at 302.

projections offer "a straightforward and powerful aid in establishing required rates of return either for corporate investment decisions or in the regulatory arena."[280]

127. The record in these proceedings includes testimony to the same effect. For example, CAPs' witness, Mr. Gorman, stated, "Because IBES captures a greater number of analysts' growth rate projections, it more likely reflects the information used by investors to form investment decisions."[281] Similarly, Trial Staff's witness, Mr. Keyton, stated, "I believe that IBES growth estimates have a higher potential for representing a broader consensus in the investor community."[282] Thus, we believe it is appropriate to use IBES as the short-term growth projection, not simply because investors use IBES, but also because the consensus growth projection reported by IBES reflects the information which the analysts, brokerage and investments firms contributing to IBES provide to their clients.

128. We also find that the IBES growth projections are generally more timely than the *Value Line* projections. IBES updates its data base on a daily basis as participating analysts revise their forecasts,[283] whereas *Value Line* publishes its projections on a rolling quarterly basis.[284] Thus, the IBES consensus growth projection will immediately reflect any change a contributing analyst makes in its forecast. However, *Value Line* will not reflect such changes until its next quarterly report. MISO TOs suggest that some analyst projections reflected in the IBES consensus projections may be stale, whereas *Value Line*'s quarterly publication schedule guarantees that all analyst projections are updated on a quarterly basis. However, the record indicates that IBES has a policy of retaining each analyst's estimate in its data base for only 180 days.[285] Although some questions have been raised as to whether *Yahoo Finance* always follows this policy, in this case the evidence indicates that the IBES growth projections for the proxy companies are regularly updated. For example, the IBES growth projections of 26 of the 30 companies

---

[284] Ex. MTO -22 (II) at 79.

[285] Hearing Transcript (II) at 128.

that are in the proxy groups for both the First and Second Complaint proceedings changed in the course of the six months between the dates when the IBES projections were downloaded.[286]

129. MISO TOs also contend that the Commission has relied on *Value Line* growth forecasts in its public utility rate of return cases in the past.[287] However, in each of the cases cited by MISO TOs, *Value Line* data was used for the purpose of implementing the "br + sv" growth formula[288] which the Commission previously used as part of the one-step DCF model, but the Commission discontinued using that model in Opinion No. 531. The Commission used *Value Line* data, rather than IBES data, for the purpose of implementing the br + sv formula, because not all of the necessary data is published by IBES. In any event, the Commission also consistently used IBES growth projections as a second growth projection as part of its one-step DCF method.[289]

130. MISO TOs suggest that IBES growth projections could be overly optimistic, because analysts contributing to those projections may be selling the stocks that they are reporting on, whereas *Value Line* is an independent research firm not engaged in buying and selling stocks.[290] The Commission disagreed with this contention in Opinion No. 414-B, stating that analysts have a significant incentive to make their analyses as accurate as possible to meet the needs of their clients.[291] Investors will not utilize brokerage firms whose analysts repeatedly overstate the growth potential of companies. Moreover, there is no evidence in these proceedings that analysts contributing to IBES

---

[286] Compare the IBES growth projections in the MISO Initial Decision, 153 FERC ¶ 61,027, App. B to the IBES growth projections in Ex. MTO-34 (II) at 1.

[287] MISO TOs Br. on Exceptions at 14 (citing, e.g., *RiteLine Ill., LLC*, 137 FERC ¶ 61,039 (2011), *reh'g denied*, 149 FERC ¶ 61,238 (2014); *N. [288] Under that formula, "b" is the expected retention formula, "r" is the expected earned rate of return on common equity, "s" is the percent of common equity expected to be issued annually as new common stock, and "v" is the equity accretion rate.

[289] *See, e.g*., *RiteLine Ill., LLC*, 137 FERC ¶ 61,039, at P 68; *N. Pass Transmission LLC*, 134 FERC ¶ 61,095, at P 46; *Pub. Serv. Elec. & Gas Co*., 126 FERC ¶ 61,219, at P 62 (2009); Opinion No. 445, 92 FERC at 61,265.

[290] MISO TOs Rehearing Request at 17 n. 44.

[291] Opinion No. 414-B, 85 FERC at 62,270.

provide more optimistic growth projections, than *Value Line* analysts. In fact, the *Value Line* growth rates tend to be higher than those of IBES. For instance, in the Second Complaint, where the MISO TOs seek to use *Value Line* instead of IBES data, use of the former instead of the later would increase the midpoint of their proposed DCF zone of reasonableness by 77 basis points from 8.73 percent to 9.50 percent.[292]

131. Finally, MISO TOs contend that the Presiding Judge in the Second Complaint proceeding erred in rejecting their contention that the *Value Line* short-term growth projection should be used, because the resulting DCF midpoint and upper midpoints (9.50 and 10.89 percent) are closer to the results of the alternative methodologies than the DCF midpoint and upper midpoint produced using IBES growth projections (8.72 and 9.70 percent).[293] The Commission denies this exception. In this order, we are deciding to use only the DCF and CAPM models to determine public utility ROEs. Therefore, the fact that using *Value Line* growth projections may produce results closer to the ROEs proposed by MISO TOs based on the Expected Earnings and Risk Premium models is irrelevant. More significantly, we find that the DCF and CAPM models should be implemented independently of one another. They are separate models based on different assumptions and inputs. We have no basis to find either model more reliable than the other. Therefore, there is no reason to decide issues concerning the implementation of either model based upon which resolution produces an ROE closest to the ROE produced by the other model.

132. The Commission has discretion in this proceeding to make a determination about available data sources in calculating the DCF. In making this determination, we agree with Trial Staff that it is preferable for the Commission to use a consistent source of dividend growth, such as IBES, for projections for all members of the proxy group.[294] Furthermore, we again note that the Commission has historically relied on IBES as the preferred source for computing short-term growth rates.[295]

133. MISO TOs also ask the Commission to leave open the ability of parties to propose appropriate alternatives to IBES, including *Value Line.* Parties are free to propose whatever data sources they deem appropriate. However, absent compelling reasons why, we will continue to rely exclusively on IBES as the preferred source for short-term growth projections for the purpose of performing the DCF analysis. Moreover, while this order lays out changes to the Commission's method for determining the ROE, wherever

[295] Trial Staff Reply Br. at 16.

possible, we seek to provide predictability. Such predictability would be undermined if, in each proceeding, parties cherry pick whichever data best supports their desired results, leaving the Commission to adjudicate which is superior in each proceeding. Although MISO TOs have offered arguments to suggest that *Value Line* is a comparable source, the record in this proceeding still indicates that IBES is more stable and robust because IBES represents the views of multiple analysts and is updated more frequently.

D. Long-Term Growth Projection

134. As described above, the Commission's current policy is to require the DCF analysis of an individual company to include a projection of the long-term growth in dividends based on the growth in gross domestic product (GDP). The long-term growth projection is given one-third weight, with a short-term growth projection given two-thirds weight. For the reasons we discuss below, the Commission reaffirms this policy and will continue to require a long-term growth projection in the DCF analysis.

1. Opinion No. 551

135. During the hearing in the First Complaint proceeding, the MISO TOs, CAPs, and Trial Staff all presented DCF studies that included long-term growth projections based on growth in GDP, consistent with Commission policy. The Presiding Judge approved the 4.39 percent GDP growth projection included in Trial Staff's DCF study, reasoning that its method of calculating the growth rate most closely paralleled that which the Commission used in Opinion No. 531.[296] Thereafter, when the Initial Decision was considered by the Commission, no exceptions were raised by any party regarding the Presiding Judge's rulings concerning the long-term growth projection. The Commission approved the DCF study with a long-term growth projection in Opinion No. 551,[297] and no issue concerning the use of long-term growth projections in the DCF study was raised on rehearing of Opinion No. 551.

2. Second Complaint Proceeding

136. In the Second Complaint proceeding, the participants, including the MISO TOs, again all presented DCF studies that included long-term growth projections based on growth in GDP, and the Presiding Judge again adopted Trial Staff's long-term growth projection of 4.35 percent. No party filed an exception to the Presiding Judge's finding on this issue.

---

[296] Initial Decision (I), 153 FERC ¶ 63,027 at PP 51-53.

[297] Opinion No. 551, 156 FERC ¶ 61,234 at P 65.

3. Initial Briefs

137. In their Initial Brief in response to the Briefing Order, MISO TOs assert that, when the Commission adopted the two-step DCF method for electric utilities in Opinion No. 531, the Commission concluded that the long-term growth rate portion of that method moderates the estimated cost of equity, rendering a high-end outlier test unnecessary.[298] MISO TOs accordingly oppose the high-end outlier test proposed in the Briefing Order. However, they state that, if the Commission nevertheless applies a high-end outlier test to the DCF model, then it should employ a single-stage, constant growth DCF, rather than a two-stage DCF, and eliminate the long-term growth projection.[299]

138. The MISO TOs contend that there are significant shortcomings in using GDP growth rates as part of the DCF analysis. MISO TOs' witness, Mr. McKenzie, comments that practical application of the DCF model requires a growth estimate that matches investors' expectations, which he asserts is less than the 30 year horizon for GDP growth estimates.

139. MISO TOs assert that there are no utility-specific, long-term growth projections available to the public. Therefore, although the DCF model is supposed to reflect investor behavior, it includes GDP growth estimates that investors do not use. As a result, this approach gives greater weight to the theory that all firms' growth rates converge to long-term GDP growth over actual investor behavior.[300]

140. MISO TOs assert that GDP growth estimates understate investors' expectations for electric utility growth and fall well short of analysts' estimates of the proxy companies' growth rates during the study periods in these proceedings.[301] Mr. McKenzie asserts that actual historical growth rates for certain individual proxy companies refute the notion that the long-term growth of electric utilities is constrained by GDP. For example, he states that *Value Line* reports included in the First Complaint proceeding record indicate that Alliant Energy and Eversource Energy had a 10-year earnings per share growth rate of 8 percent, while OGE Energy and IDACORP, Inc., had 10-year

---

[298] MISO TOs Initial Br. (I) at 16 (citing Opinion No. 531, 147 FERC ¶ 61,234 at P 118).

[300] *Id*. at 20-21 (citing App. 2 McKenzie Aff. (I) at 42-43).

[301] *Id*. at 21 (citing App. 2 McKenzie Aff. (I) at 47). MISO TOs Initial Br. (II) at 36 (citing App. 2 McKenzie Aff. (II) at 43-44).

earnings per share growth rates of 8.5 percent and 9.0 percent respectively.[302] Mr. McKenzie also states that *Value Line* reports in the Second Complaint proceeding record indicate that ALLETTE, Eversource Energy, OGE Energy, and IDACORP had 10-year earnings per share growth rates of 7.0 percent, 8.0 percent, 8.5 percent, and 9.0 percent, respectively.[303] MISO TOs explain that Myron Gordon, the founder of the DCF model, believed that it should use growth estimates that correspond to investor expectations, and he was dubious about incorporating long-term growth rates into the DCF model.[304]

141. Also, the MISO TOs state that, according to Mr. McKenzie, the instant case does not present the kind of circumstances that might support using a two-step DCF with long-term growth estimates.[305] Mr. McKenzie states that when the Commission adopted the two-step DCF model for natural gas pipelines, the IBES short-term growth projections for those pipelines were substantially higher than the projected growth in GDP. For example, in *Transcontinental Gas Pipe Line Corp*., the IBES growth rates for the proxy group ranged from 8.0 percent to 15.0 percent and averaged 11.3 percent.[306] However, in the First Complaint proceeding, the IBES growth projections of all but one of the proxy companies are less than 8.0 percent,[307] and in the Second Complaint proceeding the IBES growth projections of all but two of the proxy companies are less than 8.0 percent.[308] Therefore, Mr. McKenzie asserts that there is no evidence in these proceedings that analysts' short-term earnings per share growth projections for electric utilities are characterized by the short-term optimism that led the Commission to adopt the two-step DCF model for natural gas pipelines. Mr. McKenzie also states that evidence presented by CAPs that electric utilities have entered a cycle of significant capital spending on

utility infrastructure suggests that GDP growth estimates understate investors' growth expectations for electric utilities.[309]

4. Reply Briefs

142. In their Reply Briefs, CAPs, Trial Staff and RPGI addressed issues raised by the MISO TOs. These three parties oppose MISO TOs' proposal to use a single-stage, constant growth DCF, rather than the two-step DCF method if the Commission applies a screen for high-end outliers.[310] RPGI asserts that over time the Commission has adopted and expanded its preference for the two-step DCF method, including support for the theoretical assumptions of the DCF formula requiring the use of a two-stage growth component.[311] CAPs argue that it is important to use an accurate representation of long-term dividend stream that investors expect, regardless of the tests used to filter outliers. CAPs also argue that, because MISO TOs are not proposing to filter out any DCF high-end results from the study-period analysis in this proceeding, they are essentially conceding that in this case the DCF model should apply a two-step composite growth rate.[312]

143. Moreover, in response to MISO TOs' assertion that the DCF model requires a growth estimate that matches investors' expectations, CAPs assert that this is a reason to use the long-term GDP constraints on analysts' projected rate of near-term growth in earnings per share. CAPs state that rational investors know what Dr. Roger Morin explains in his textbook: that utility holding companies seek to keep dividend growth on a path they can sustain over the long term to avoid having to cut dividends when earnings are down.[313] CAPs comment that the Commission recognized the importance of factoring in long-term growth even before Opinion No. 531,[314] but now MISO TOs are

[314] Opinion No. 531, 147 FERC ¶ 61,234; Opinion No. 531-A, 149 FERC ¶ 61,032; Opinion No. 531-B, 150 FERC ¶ 61,165.

proposing to eliminate consideration of whether the growth projected by analysts for the next three-to-five years is sustainable over the long term. Further, CAPs argue that, consistent with its findings in Opinion No. 531, the Commission factored in a long-term growth projection in Opinion No. 551, and MISO TOs' did not seek rehearing.[315]

144. CAPs comment that Mr. McKenzie does not provide evidence to support his claim that investors do not rely on estimates of GDP growth in evaluating growth expectations for utility stocks.[316] CAPs state that Warren Buffet, who they say may be both the largest and most followed individual investor in U.S. electric utilities, has made clear that he expects stocks' long term earnings growth to be constrained by GDP growth.[317]

145. Further, CAPs dispute MISO TOs' reliance on the fact that in the First Complaint proceeding four of the proxy companies had 10-year earnings per share growth rates averaging 8.4 percent and in the Second Complaint proceeding four proxy companies had 10-year earnings per share growth rates averaging 8.1 percent. CAPs argue that, because the DCF model "turns" on investors' expected stream of dividend receipts, the growth in dividends over the last 10 years is more meaningful than growth in earnings per share. CAPS assert that in the First and Second Complaint proceedings the growth in dividends for the four proxy companies in question averaged less than 3.9 percent and 4.9 percent respectively.[318] Also, CAPs contend that Mr. McKenzie's focus on four proxy companies was cherry-picking. CAPs point out that in the First and Second Complaint proceedings, just looking at the top of the alphabet, one could equally point to the low 10-year earnings per share growth rates of American Electric Power (1.5 percent), Ameren (-2.0 percent), CenterPoint Energy (2.0 percent), and Consolidated Edison (3.5 percent).[319]

146. MISO TOs argue that capital expenditures forecast in 2018 for 2018 imply higher long-term growth. In response, CAPs assert that the Commission should not accept Mr. McKenzie's view that capital investment can generate profit expansions that will long exceed GDP growth.[320] CAPs first argue that the relevance of this report in ascertaining the cost of equity during the study periods in these proceedings is not clear, because the April 2018 Regulatory Research Associates report uses data that post-dates both study periods. In any event, CAPs state that the referenced report indicates that capital expenditures of the covered electric industry holding companies will shrink from 2018 to 2020 to a level below that of 2016. CAPs also state that the Commission's composite-growth method giving two-thirds weight to the IBES short-term growth projection already assumes that near-term growth will continue for decades. Further, CAPs assert that the real focus of the DCF model is the expected rate of growth in dividends per share and that the near-term growth rate is better projected by factoring in long-term GDP growth, because electric utilities seek to keep dividend growth on a path they can sustain over the long run. CAPs argue that the resulting moderation of earnings growth in realized dividend growth can be seen by comparing past earnings per share (EPS) growth projections to actual dividend per share growth.[321]

147. CAPs dispute MISO TOs' reliance upon a 1974 publication expressing skepticism about the use of the two-stage DCF model. They argue that in the intervening decades the DCF model has been widely adopted and refined. They cite to Dr. Morin, author of a text cited by the Commission in the Briefing Order, as supporting "[a] multiple-stage DCF model that better mirrors the patterns of future dividend growth," and recognizing that "[a] transition must occur between the first stage of growth forecast by analysts for the first five years and the company's long-term sustainable growth rate."[322]

148. CAPs disagree with MISO TOs' argument that the two-stage DCF was appropriate in the 1990s when electric utilities were transitioning to non-regulated markets, but that expectations of widespread deregulation no longer exist. CAPs explain that in fact the

[320] MISO TOs Reply Br. (I) at 12-13 (citing *S&P Global Market Intelligence, RRA Financial Focus – Utility Capital Expenditures Update,* Regulatory Research Associates (Apr. 20, 2018)).

[321] CAPs Reply Br. (I) at 12-14. CAPs witness, Mr. Gorman, provides a comparison of the 2015 projections of three-to-five year EPS growth that are the basis for the composite growth rate used in Opinion No. 551 to the DPS growth rate between then and now. These companies' projected EPS growth rate averaged 5.15 percent, whereas their realized DPS growth rate averaged 3.83 percent. CAP witness Gorman Ex. JC-109 at 1.

[322] CAPs Reply Br. (I) at 14 (quoting Morin at 309).

Commission used a one-stage DCF model for electric utilities during the transitional period,[323] but that in Opinion No. 531, the Commission determined that it was no longer appropriate to consider the transitional period of deregulation as the basis for assuming utility stocks' near-term growth rates would continue indefinitely.[324]

149. CAPs argue that MISO TOs mischaracterize the testimony of Dr. J. Randall Woolridge before the Virginia State Commission as supporting the constant growth DCF model for DCF valuation procedures. CAPs argue that, in fact, Dr. Woodridge opposed basing DCF growth rate solely on analysts' projections of the near-term EPS growth.[325]

150. Trial Staff comments that their expert witness, Mr. Keyton, disagrees with McKenzie's elimination of the long-term growth component in the DCF. Trial Staff cites to the Commission's determination in *Williston Basin Interstate Pipeline Company* and Opinion No. 531 rejecting the one-step or constant growth DCF model in favor of a two-step DCF model.[326] Trial Staff also relies upon Dr. Morin who supports incorporating a long-term growth estimate in the DCF model and who was the Commission's authority for the conclusion that "all company growth rates, especially utility service growth rates, converge to a level consistent with the growth rate of the aggregate economy."[327] Mr. Keyton also notes that Professors Brigham and Ehrhardt support the use of longer term growth rates.[328]

5. Commission Determination

151. We disagree with MISO TOs' contention that the Commission should eliminate the long-term growth projection based on GDP from its DCF analysis of electric utilities. As the Commission held in Opinion No. 531,

> The DCF model is based on the premise that an investment in common stock is worth the present value of the infinite stream of future dividends discounted at a market rate

[328] *Id.*

> commensurate with the investment's risk.[329] Corporations have indefinite lives and therefore will pay dividends for an indefinite period. For that reason, the Commission stated as long ago as 1983, when it first adopted the constant growth DCF model for gas pipeline cases, that 'projections by investment advisory services of growth for relatively short periods of years into the future' cannot be relied on 'without further consideration.' Thus, as the Commission held in *Ozark*, the constant growth DCF model requires consideration of long-term growth projections.[330]

152. MISO TOs have not provided a persuasive basis for us to depart from this policy. Although MISO TOs cite a 1974 article by Myron Gordon arguing that analysts' short-term growth projections may be used without reference to a longer-term projection, more recent academic works support inclusion of a long-term growth projection based on GDP. For example, in *New Regulatory Finance*, Roger Morin recognizes that there is a growing consensus that security analysts' growth projections are "the best place to start" in projecting growth in dividends. However, he continues,

> The problem is that from the standpoint of the DCF model that extends into perpetuity, analysts' horizons are too short, typically five years. It is often unrealistic for such growth to continue into perpetuity. A transition must occur between the first stage of growth forecast by analysts for the first five years and the company's long-term sustainable growth rate . . . It is useful to remember that eventually all company growth rates, especially utility service growth rates, converge to a level consistent with the growth rate of the aggregate economy.[331]

---

[329] As the Commission explained, "The DCF model assumes growth for an infinite period of time. This can be approximated as 50 years because the present value of a one dollar dividend received 50 years in the future, discounted at 12 percent, is less than one cent." *Ozark Gas Transmission Sys.*, 68 FERC at 61,105 n.32 (citing Eugene F. Brigham & Louis C. Gapenski, Financial Management 291 (1991)).

[330] Opinion No. 531, 147 FERC ¶ 61,234 at P 33 (quoting *Consol. Gas Supply Corp.*, 24 FERC ¶ 61,046, at 61,105 (1983)) (footnotes omitted).

[331] Morin at 308.

Dr. Morin goes on to state that one way to account for the two stages of growth is to adopt a blended growth rate as the Commission does, giving two-thirds weight to analysts' five-year growth projections and one-third weight to long-range projections of growth in GDP projected for the very long-term.[332]

153. MISO TOs argue that, regardless of the fact that the underlying theory of the DCF model requires a long-term growth projection, as a practical matter investors rely solely on short-term growth projections, such as the IBES three-to-five year growth projections. MISO TOs assert that there are no long-term projections of the growth of public utilities and therefore investors must be limited to using short-term growth projections. However, MISO TOs fail to counter evidence that sophisticated investors do in fact consider long-term economic trends, including long-term growth in GDP, when estimating the future growth in earnings or dividends. For example, CAPs note that Warren Buffet has made clear that he expects firms' long-term earnings growth to be limited by GDP growth, stating,

> You know, someone once told me that New York has more lawyers than people. I think that's the same fellow who thinks profits will become larger than GDP. When you begin to expect the growth of a component factor to forever outpace that of the aggregate, you get into certain mathematical problems.[333]

154. MISO TOs nevertheless assert that GDP does not constrain the growth in earnings of electric utilities, stating that the record in the First Complaint proceeding contains *Value Line* reports showing that four electric utilities had earnings per share growth rates over the previous 10 years of 8 to 10 percent, and the record in the Second Complaint proceeding contains similar *Value Line* reports showing that four electric utilities had earnings per growth rates of 7 to 9 percent. MISO TOs point to the proxy group companies featuring the highest growth rates, while the growth rates of the overall proxy group contradict their position. The First Complaint proceeding record includes *Value*

---

[332] *Id*. at 309. In *Corporate Finance, A Focused Approach*, at 279 (Fourth Edition), Ehrhardt and Brigham also state "dividend growth for most mature firms is generally expected to continue in the future at about the same rate as nominal gross domestic product (real GDP plus inflation)," and they also discuss a blended approach for determining the growth projection for the constant growth DCF model when the short-term growth projection is unsustainable. *Id*. at 324.

[333] "Mr. Buffet on the Stock Market," *Fortune*, November 22, 1999.

Line reports showing the average 10-year earnings growth rates for 41 electric utilities.[334] The median 10-year earnings growth rate for all 41 electric utilities was 3.5 percent, which is less than the long-term projected nominal GDP growth rate of 4.39 percent in that proceeding. Similarly, the Second Complaint proceeding record includes *Value Line* reports showing the average 10-year earnings growth rates for 30 electric utilities.[335] The median 10-year earnings growth rate for all 30 of those electric utilities is also 3.5 percent, which is less than the long-term projected nominal GDP growth rate of 4.35 percent in that proceeding. Thus, a review of all the *Value Line* reports in the exhibits cited by the MISO TOs indicates 10-year earnings growth more in line with the growth of the economy as whole.

155. In any event, the fact some electric utilities may maintain earnings growth in excess of GDP for periods of 10 years or more is not inconsistent with the Commission's two-step DCF model. As the Commission has previously explained, our two-step DCF model does not assume that an electric utility's growth rate will immediately drop to the GDP growth rate following the fifth year of the IBES short-term growth projection. "Our decision to give the IBES data two-thirds weight and the long-term projection one-third weight is the equivalent, in a 50-year model, of averaging 33 years at the higher IBES number and 17 years at the lower GDP number."[336] Therefore, the fact some electric utilities may have earnings growth in excess of the growth in GDP for periods of 10 years or more is not inconsistent with our holding that GDP is appropriate as a long-term growth rate given one-third weight.

156. MISO TOs also argue investors may expect public utilities to have earnings and dividend growth in excess of GDP, pointing to several reports that public utility capital expenditures are expected to increase. For example, MISO TOs cite a 2014 S&P report, stating among other things, "[b]eginning in 2017, we expect the industry's generation and overall capital spending needs to pick up significantly, consistently exceeding $100 billion annually."[337] In addition, they cite a 2018 report stating, "[f]orecasted 2018 capital expenditures for the 52 electric and gas utilities in the RRA universe climbed to

[337] Standard & Poor's Corporation, *The Outlook for U.S. Regulated Utilities Remains Stable on Increasing Capital Spending and Robust Financial Performance*, RatingsDirect (Dec. 16, 2014) (2014 S&P Report).

an all-time high of $141.1 billion."[338] MISO TOs' reliance on these reports is unavailing. These reports relate to the public utilities' capital spending in the relatively near future, within a time frame during which, as discussed in the preceding paragraph, the two-step DCF model assumes growth consistent with the IBES growth projection. Therefore, these reports do not undercut the underlying rationale of the two-step DCF model that firms cannot grow faster than GDP over the indefinite long-term. Moreover, the 2018 S&P report was issued over two years after the financial study periods in the two complaint proceedings, the second of which ended on December 31, 2015, and therefore that report could not affect investor expectations during the time periods at issue in these proceedings. In any event, as CAPs point out, the 2018 S&P report indicates that capital expenditures of the covered electric industry holdings companies will shrink from 2018 to 2020 to a level below that of 2016.[339]

157. MISO TOs also seek to distinguish electric utilities from natural gas pipelines with respect to the need for a long-term growth projection. They argue that the IBES short-term growth projections of electric utilities are generally lower than natural gas pipeline IBES growth projections in the cases where the Commission first adopted the two-step DCF model. Opinion No. 531 recognized that the IBES growth projections of electric utilities reflect a different pattern from those of natural gas and oil pipelines. Although pipeline IBES growth projections are consistently higher than the long-term growth of GDP, that is not true of electric utilities.[340] Nevertheless, Opinion No. 531 adopted the two-step DCF model for electric utilities. The Commission pointed out that it had held that giving some effect to the long-term growth projection will aid in normalizing any distortions that might be reflected in short-term data limited to a narrow segment of the economy.[341] Opinion No. 531 concluded that this reasoning applied

> regardless of whether the short-term growth projection is greater or less than the growth of the economy as a whole.

[339] See 2018 S&P Report, Table 1 ("Total Electric" Cap Ex of $93.6 million in 2016A, $106.6 million in 2018E, and $86.2 million in 2020E, its most distant prediction.).

[340] Opinion No. 531, 147 FERC ¶ 61,234 at P 30 (citing *S. Cal. Edison Co.*, 92 FERC at 61,261).

[341] Opinion No. 531, 147 FERC ¶ 61,234 at P 38 (citing Opinion No. 414-A, 84 FERC at 61,423).

> Over the long-run, a regulated firm may reasonably be expected to grow at the rate of the average firm in the economy; growth either significantly above or below the growth of the economy as a whole is unlikely to continue indefinitely. Using the same long-term growth projection for all public utilities is consistent with this expectation.[342]

158. In any event, regardless of the fact that the IBES growth projections of a number of public utilities are less than or about equal to projected growth in GDP, the IBES growth projections of the public utility proxy companies that set the top of the DCF zone of reasonableness in both proceedings are substantially above projected growth in GDP. In the First Complaint proceeding, TECO Energy (TECO) sets the top of the zone of reasonableness. The IBES short-term growth projection for TECO is 7.68 percent, 329 basis points above the long-term GDP growth projection of 4.39 percent.[343] In the Second Complaint proceeding, PNM Resources, Inc. (PNM) sets the top of the zone of reasonableness. The IBES short-term growth projection for PNM is 9.30 percent, over twice the long-term GDP growth projection in that case of 4.35 percent.[344] Thus, these public utilities present the same circumstances as the pipelines in the cases where the Commission adopted the two-step DCF method – IBES short-term growth projections substantially in excess of GDP growth. Because we determine the central tendency of the zone of reasonableness using the midpoint, it is particularly important that the ROEs of the companies setting the top of the zone be determined consistent with the underlying theory of the DCF model, requiring use of a long-term growth projection.

159. Finally, MISO TOs assert that, if the Commission applies a high-end outlier test to the DCF model, there will remain no rationale for requiring the long-term growth component of the two-step DCF model. The existence of the high-end outlier test is irrelevant to the question of whether a long-term growth projection should be included in a DCF analysis of public utilities. The high-end outlier tests eliminates outlier proxy group members. It does not address the fact that, over the long-term, companies cannot maintain their short-term growth rates and must, to some extent, converge on the growth rate of the overall economy. Furthermore, the high-end outlier test we adopt later in this order does not screen out any of the ROEs produced by the DCF analysis of the proxy groups in these two cases, including the ROE results discussed above that establish the top of the zones of reasonableness in these two cases.

---

[342] *Id*.

[343] Initial Decision (I), 153 FERC ¶ 63,027 at App. B.

[344] CAPs Initial Br. (II) at App. I.

E. Has DCF Performed Inconsistently with Underlying Theory

160. In both Opinion Nos. 531 and 551, the Commission found that, because of unusual capital market conditions, the Commission had "less confidence" that the midpoint of the zone of reasonableness determined by the DCF analysis satisfied the *Hope* and *Bluefield* capital attraction standards.[345] For example, in Opinion No. 551, the Commission stated that bond yields remained at historically low levels during the January to June 2015 study period in the First Complaint proceeding. The yield on 10-year U.S. Treasury bonds, which the Commission noted in Opinion No. 531[346] was below two percent in that case and had not been below three percent since the 1950s, was at 2.07 percent during the Opinion No. 551 study period.[347] Also, the yield on short-term U.S. Treasury bonds was historically low, ranging from zero to 0.25 percent.[348]

161. Opinion No. 551 then considered the alternative cost of equity models to corroborate the Commission's determination to set MISO TOs' ROE "at a point above the midpoint" of the DCF analysis' zone of reasonableness, i.e., the midpoint of the upper half of the zone.[349] However, the Commission emphasized that it was not departing from the use of the DCF methodology to determine the zone of reasonableness.[350] At the hearings on the Second Complaint, the participants devoted a substantial portion of their evidentiary presentations to debating whether the continuing low-interest rate capital market conditions should be considered "anomalous" and whether those conditions distort the results of a DCF analysis.[351]

162. In the Briefing Order, the Commission stated that those issues are largely irrelevant under the Briefing Order's proposed approach to determining just and

[348] *Id*.

[349] *Id.* P 135.

[350] *Id*. P 137.

[351] *See, e.g.*, Exs. JCA-1 at 6-18, JCI-1 at 29-32, 38, ICG-15 at 18-30, MTO-1 at 21-28, 102-105, MTO-16 at 16-38.

reasonable ROEs.[352] The Commission stated that, under this approach, it would average the cost of equity results produced by the DCF model with the results produced by the other proposed models, using the midpoint/medians of the models that produce zones of reasonableness, to get one average figure for the cost of equity. Therefore, the Commission would not be making an adjustment above the midpoint/median as it did in Opinion No. 551. The Commission stated that, as a result, there was no need to find that low-interest rate capital market conditions distort the results of a DCF analysis so as to justify adjusting the ROE for average risk utilities above the midpoint. To the contrary, the Commission's primary reason for proposing to average the results of the DCF analysis with the results of other models is that investors use those models, in addition to the DCF methodology, to inform their investment decisions. The Commission concluded that, under this approach, whether a change in the capital market conditions is anomalous or persistent is of less importance, because relying on multiple financial models makes it more likely that the Commission's decision would accurately reflect how investors are making their investment decisions.

163. Nevertheless, the Commission noted that, in recent years, utility stock prices appear to have performed in a manner inconsistent with the theory underlying the DCF methodology.[353] The Commission stated that, under that theory, increases in a company's actual earnings or projected growth in earnings would ordinarily be required to justify an increase in the company's stock price. However, the Commission stated that, although the Dow Jones Utility Average increased by almost 70 percent from October 1, 2012 through December 1, 2017, there was not an increase in either utility earnings or projected earnings during that period that would justify the substantial increase in stock prices. The Commission stated that this is an example of what MISO TOs have described as "model risk" —the risk that in some circumstances a model will produce results that do not reflect real world experience.[354] The Commission stated that

---

[352] Briefing Order, 165 FERC ¶ 61,118 at P 46.

[353] *Id*. P 47.

[354] *Id*. (citing Ex. MTO-16 (II) at 36) ("There is 'model risk' associated with the excessive reliance or mechanical application of a model when the surrounding conditions are outside of the normal range. 'Model risk' is the risk that a theoretical model that is used to value real-world transactions fails to predict or represent the real phenomenon that is being modeled. Although the concept of model risk was originally applied to derivative instruments and hedging transactions, it applies equally to models used to value companies, to manage investment portfolios, to assign credit ratings, or in this case, to determine the ROE that will provide a fair return and encourage investment in critical infrastructure.").

it appears that, for whatever the reason, investors have seen greater value in utility stocks than the DCF methodology would predict. The Commission concluded that this suggests that the ROE estimated by that methodology may be correspondingly inaccurate.

1. CAPs

164. CAPs contest the Briefing Order's suggestion that current capital market conditions, including low bond yields, have affected the reliability of the DCF Model.[355] They contend that the Commission failed to support its assertion that utility stock prices appear to have performed in a manner inconsistent with the theory underlying the DCF model. In particular, they state that the Commission's statement that the DCF model assumes that stock prices increase only when there is an actual or projected increase in earnings/dividends is inaccurate. Rather, their witness, Mr. Bertram, explained that "[t]he theory underlying the DCF method is that stock prices can change not only as a result of expected changes in earnings/dividends ("g"), but also due to changes in investors' required rate of return for investing in a company ("k")."[356] Mr. Solomon states that factors influencing the investor's required rate of return include

> expected returns that might be earned on alternative investments, changes in risk perceptions, changes in risk tolerance, changes in a desire for current income versus longer-term capital gains, expectations about inflation, expectations about real interest rates, expectations about the U.S. economy in general and various sectors of the U.S. economy specifically as well as expectations about the global economy, among others.[357]

165. CAPs also point out that, in Order No. 489, the Commission explained that the DCF model does not assume that stock prices are solely a function of current and projected future earnings, stating the DCF model "shows the relationship between stock prices and dividends, growth rate of dividends, and shareholders' required rate of return."[358] Opinion No. 489 stated that the term "k" in the DCF model, representing

[356] Ex. JCI-100 at 22.

[357] *Id*. at 22-23.

[358] CAPs Initial Br. (I) at 20 (quoting *Generic Determination of Rate or Return on Common Equity for Public Utilities*, Order No. 489, FERC Stats. & Regs. ¶ 30,795 at 30,990 (1988) (cross-referenced at 42 FERC ¶ 61,122)). Ex. JCI-100 at 22-25.

shareholders' required rate of return, reflects a number of factors influencing stock prices, "including expectations about the real interest rates, the expected rate of inflation, and the 'risks' associated with owning a particular stock."[359]

166. CAPs assert that the increase in utility stock prices from 2012 to 2017 likely reflected the historically low interest rates the Commission noted in the Briefing Order, as opposed to "model risk." They contend that this conclusion is consistent with the Commission's own statement, quoted by the D.C. Circuit in *Tennessee v. FERC*, that a "drastic drop in interest rates attract[s] capital away from bonds and into stocks, causing a rise in stock prices and a decline in dividend yields."[360]

2. MISO TOs

167. MISO TOs contend that the Briefing Order properly determined that the limitations of the DCF model justify taking a broader perspective to the examination of ROE.[361] For example, they state that the Briefing Order documented that utility stock prices have trended in a manner inconsistent with the basic theory of the DCF model.

168. MISO TOs' witness, Mr. McKenzie, states that the Briefing Order's observation that utility stock prices rose by almost 70 percent without a corresponding increase in utility earnings during the period 2012 to 2017 is not critical to supporting the Commission's proposal to use multiple financial models to determine ROE. However, Mr. McKenzie states that the Briefing Order's observation illustrates that the behavior of investors in the financial markets can depart significantly from the underlying assumptions of the DCF model.[362] He states that the DCF model assumes dividends, earnings, and stock price growth at the same constant rate to infinity, resulting in a constant price/earnings ratio. Mr. McKenzie states that the Briefing Order's observation that utility stocks increased without a corresponding increase in earnings simply indicates that the price/earnings ratio was not constant, contrary to the DCF model's assumptions. He argues that real-world experience contradicts the DCF assumptions, which he claims illustrates that there is no perfect way to estimate the cost of equity and therefore reliance on multiple modes is fully supported.

[361] MISO TOs Reply Br. (I) at 13-15.

[362] *Id.*, App. 2 McKenzie Reply Aff. (I) at 17-18.

3. Other Parties

169. RPGI contends that the Briefing Order failed to support its assertion that the increase in utility stock prices from 2012 to 2017 was not accompanied by a commensurate growth in earnings per share.[363] RPGI states that, in support of this assertion, the Briefing Order cited the *Coakley* Briefing Order,[364] and that order in turn cited only a single exhibit from the fourth complaint proceeding concerning the New England TOs' ROE.[365] RPGI states that the cited exhibit only contains information concerning utility stock prices and contains no information concerning earnings or projected earnings of any utilities.[366] RPGI also states that the period 2012 to 2017 extends beyond the 2015 test periods in the two MISO complaint proceedings and after the close of the records in these proceedings.

4. Commission Determination

170. As the Commission stated in the Briefing Order, the issue of whether the low-interest rate capital market conditions during 2015 were "anomalous" or may have distorted the results of the DCF model are not relevant to our revised approach to determining just and reasonable ROEs. In Opinion Nos. 531 and 551, the Commission relied on its finding of anomalous capital market conditions to justify setting the New England TOs' and MISO TOs' ROEs at the midpoint of the upper half of the DCF zone of reasonableness, despite the fact that the transmission owners are of average risk and the Commission ordinarily sets the ROE of average risk utilities at the central tendency of the overall zone of reasonableness. Under our revised approach to determining just and reasonable ROEs, we are averaging the results of the DCF and CAPM models to determine a composite zone of reasonableness and setting the ROE of average risk utilities at the central tendency of that composite zone of reasonableness. We are not making an adjustment above the central tendency of the zone of reasonableness as we did in Opinion Nos. 531 and 551. There is thus no need to find that low-interest rate capital market conditions distort the results of a DCF analysis so as to justify increasing the ROE for average risk utilities above the central tendency, and we make no such finding in this order.

[366] RPGI Initial Br. (I) at 19; RPGI Initial Br. (II) at 22.

171. Rather, our revised ROE policy rests on a finding that investors use the DCF and CAPM models to inform their investment decisions. Under this approach, whether a change in capital market conditions is anomalous or persistent is of little importance, because relying on multiple financial models makes it more likely that our decision will accurately reflect how investors are making their investment decisions. Moreover, to the extent that investors in fact rely on a financial model, the fact that that model may have defects does not invalidate its use in determining ROE. A key consideration in determining just and reasonable utility ROEs is determining what ROE a utility must offer in order to attract capital, i.e., induce investors to invest in the utility in light of its risk profile. For this purpose, we must look to the methods investors actually use to analyze and compare their investment opportunities, regardless of any flaws in those methods. As the Commission stated in Opinion No. 414-B, "the cost of common equity to a regulated enterprise depends upon what the market expects not upon precisely what is actually going to happen."[367] As we discuss elsewhere in this order, there is no serious dispute that investors use the DCF and CAPM models in making investment decisions. In any event, the application of the CAPM model mitigates some of the model risk that the DCF model may perform poorly in certain circumstances.

VI. Expected Earnings Model

A. Background

172. A comparable earnings analysis is a method of calculating the earnings an investor expects to receive on the book value of a particular stock. The analysis can be either backward looking using the company's historical earnings on book value, as reflected on the company's accounting statements, or forward-looking using estimates of earnings on book value, as reflected in analysts' earnings forecasts for the company.[368] The latter approach is often referred to as an "Expected Earnings analysis." The Expected Earnings methodology provides an accounting-based approach that uses investment analyst estimates of return (net earnings) on book value (the equity portion of a company's overall capital, excluding long-term debt).

173. In Opinion No. 551, the Commission found that the results of MISO TOs' Expected Earnings analysis corroborated its determination that MISO TOs should be awarded an ROE above the midpoint of the zone of reasonableness produced by the DCF analysis.[369] In doing so, the Commission reversed the Presiding Judge's rejection of

[367] Opinion No. 414-B, 85 FERC at 62,268.

[368] *See* Opinion No. 531-B, 150 FERC ¶ 61,165 at P 125.

[369] Opinion No. 551, 156 FERC ¶ 61,234 at P 230.

MISO TOs' Expected Earnings analysis. The Presiding Judge rejected the analysis because a critique by Dr. Morin took the position that the Expected Earnings analysis should be based on a sample of unregulated, rather than regulated companies, but MISO TOs' Expected Earnings analysis relied on regulated companies in the proxy group and their expert, Dr. Avera, was unable to sufficiently address Dr. Morin's critique.[370]

174. In Opinion No. 551, the Commission pointed out that Dr. Morin's critique was based on his concern that using the historical book ROE of regulated companies in the analysis would be based on past actions of regulatory commissions and would raise issues of circularity. The Commission found, however, that this concern was not present with respect to MISO TOs' Expected Earnings analysis because it was forward-looking.[371] The Commission further explained that the Expected Earnings analysis was useful in corroborating the results produced by the DCF model because investors rely on both the market cost of equity and the book return on equity in determining whether to invest in a utility.[372] CAPs, OMS, and RPGI request rehearing of Opinion No. 551's decision to consider the MISO TOs' Expected Earnings analysis.[373]

175. In the Initial Decision in the Second Complaint proceeding, the Presiding Judge similarly found that "an expected earnings [analysis] serves as a useful guide to placement of the Base ROE within the DCF-calculated zone of reasonableness to the extent it calculates the earnings on book value investors can expect to earn."[374] CAPs, OMS and JCA, RPGI, and Trial Staff filed exceptions to the Presiding Judge's decision to consider the MISO TOs' Expected Earnings analysis.[375]

176. In the Briefing Order, the Commission proposed to give the Expected Earnings model equal weight, along with the DCF model and CAPM, in establishing a composite zone of reasonableness to be used under the first prong of section 206.[376] For purposes of

establishing a new just and reasonable ROE where the existing ROE has been shown to be unjust and unreasonable (i.e., the second prong of the FPA section 206 analysis), the Commission proposed to use the Expected Earnings model, DCF model, CAPM, and Risk Premium model to produce four separate cost of equity estimates and then average the four estimates to produce the just and reasonable ROE.

177. In the briefs filed in response to the Briefing Order, the parties either generally opposed or supported the use of the Expected Earnings model in the Commission's revised ROE methodology. Those arguments and other relevant arguments in the records of these proceedings are summarized and addressed below.

B. Parties Opposing the Use of Expected Earnings

178. CAPs, Trial Staff, LPSC, and Alliant oppose using the Expected Earnings model in the Commission's revised ROE methodology. They all argue that the Expected Earnings model does not accurately reflect a utility's cost of equity because it is an accounting-based measure that does not reflect the rate of return that investors require to invest in the market-priced common equity capital of a utility.[377] CAPs assert that this is because an investor cannot purchase a utility's common stock at book value and must instead pay the prevailing market price for common equity, which means that expected earned return on book value is not indicative of what an investor can expect to earn on an investment in the utility's common stock nor what return an investor requires to invest in the utility's common stock.[378] Similarly, Trial Staff notes precedent in which the Commission found that "[a]ccounting rates of return are not reliable measures of the current market cost of capital, since they do not reflect the current market prices that are determined in competitive capital markets."[379]

179. Trial Staff also argues that the Expected Earnings model is not widely used by investors.[380] Trial Staff notes that Dr. Roger A. Morin's book, *New Regulatory Finance*, addresses a generic comparable earnings method, which is a backward-looking measure that is not the same model as the Expected Earnings model used by the MISO TOs in

---

[380] Trial Staff Initial Br. (I) at 6-8; Trial Staff Initial Br. (II) at 5-7.

these proceedings. In addition, Trial Staff points to Dr. Morin's explanation of why multiple models should be used to estimate the cost of equity and notes that he cites Professor Eugene Brigham as stating that the CAPM, DCF, and Risk Premium models "typically are used" but not mentioning the Expected Earnings model.[381] Trial Staff further cites to an observation by Professor Brigham that the comparable earnings method has been "thoroughly discredited" and replaced by the market-oriented DCF, Risk Premium and CAPM models.[382] In addition, Trial Staff cites to a Federal Communications Commission report which explains that the two most commonly used methods for estimating the cost of equity are the DCF and CAPM models.[383] Accordingly, Trial Staff contends that there is little support for the notion that the Expected Earnings approach is widely used by investors.

180. LPSC similarly argues that evidence indicates that the Expected Earnings model is not used by investors. LPSC argues that the comparable earnings approach was grounded in the theory that the rate of return for utilities could be determined by examining the book returns of unregulated firms because their profitability would be limited by the forces of competition. LPSC asserts that, however, this analysis was made impractical because of differences in accounting between regulated and unregulated firms and the difficulty in measuring differences in risk between regulated and unregulated firms. LPSC argues that the alternative of using the comparable earnings of regulated utilities—like the analysis that was accepted in Opinion No. 551—conflicts with the essential premise of the comparable earnings approach because utilities do not operate in competition and therefore such an Expected Earnings analysis is not reliable. LPSC asserts that, if investors consider returns on book value at all, they do not consider it as a direct indication of returns on their investments because they cannot purchase stock at book value unless market price and book value happen to be exactly equal. In addition, LPSC cites to various academic sources which it asserts indicate that the Expected Earnings model is not used because of its flaws.[384] LPSC also asserts that, while

[384] LPSC Initial Br. at 1-4; 13-24.

Dr. Morin's academic text may explain the Expected Earnings model, he does not use it himself when presenting testimony concerning investor return requirements.[385] LPSC also states that, in proposing to abandon the use of book return to determine carriers' rate of return, the Federal Maritime Commission stated that a firm's accounting rates of return are not equivalent to the firm's true economic rate of return, because accounting and economic concepts of income and value are substantially different.[386] LPSC states that the Federal Maritime Commission adopted a final rule using the DCF model to determine rate of return.

181. CAPs argue that the Expected Earnings model produces an erroneously inflated measure of investors' required level of return for stocks whose market value exceeds their book value. CAPs assert that only when investors bid the stock price of a company to at or near its book value (i.e., a market-to-book ratio at or near 1.0) can the expected earned rates of return on the company's book value be considered a reasonable estimate of its cost of common equity capital, or investors' required return. CAPs further contend that the Expected Earnings model does not measure opportunity cost because the only opportunity cost available to investors is the market price at which they can actually purchase stock.[387]

182. CAPs also assert that the Expected Earnings model should not be used because it is inappropriately circular and potentially self-fulfilling. CAPs contend that this is the case because the *Value Line* projected earnings-to-book ratios are based on past allowed ROEs and therefore the Expected Earnings model's reliance on them will merely serve to perpetuate existing ROEs.[388]

183. RPGI argues that, if the Commission uses the Expected Earnings model in its revised methodology, it must consider market-to-book ratios in order to give the model an element of being a market-based approach. RPGI contends that, if the Commission

---

[388] CAPs Reply Br. (I) at 37-38; CAPs Reply Br. (II) at 57-58.

does not consider market-to-book ratios then the Expected Earnings model should not be used.[389] LPSC similarly asserts that, if the Commission decides to use the Expected Earnings model, then it should adjust the analysis for market-to-book ratios or screen the group of unregulated firms based on market-to-book ratios.[390]

184. CAPs also argue that, if the Commission decides to use the Expected Earnings model, then it should implement certain adjustments. Specifically, CAPs argue that any Expected Earnings model should use the average of all available projected years' returns on book common equity, rather than just using the *Value Line* projection that is furthest out in time (that for 2018-2020). CAPS state that using all three forward projections provided by *Value Line*, including those for 2015 and 2016 would better reflect long-term expectations of per-book earnings. CAPs further contend that the Expected Earnings model should incorporate actual, realized returns for all available years because this will incorporate a measure of historical realism which will mitigate the risk that projections could reflect only short-run economic conditions that fail to represent long-term expectations.[391] CAPs also assert that an analysis of proxy company market-to-book ratios must be used in combination with the Expected Earnings model.[392] In addition, as discussed further below in section XII, CAPs argue that if the Expected Earnings model is used, then it should be given the least weight among the different financial models.[393]

185. Trial Staff witness, Mr. Keyton, asserts that, if the Commission uses the Expected Earnings model, then it should use the average of all three of the return on book value projections provided by *Value Line* rather than only the most distant projection, because this will moderate the impact of any irregular return on book value estimates that may be obtained from a single estimate.[394] Trial Staff and CAPs also both criticize the fact that

the Expected Earnings model relies solely on *Value Line* growth estimates, which they contend are unreliable because they are made by a single analyst.[395]

C. Parties Supporting the use of Expected Earnings

186. MISO TOs argue that the Expected Earnings model is a useful tool for evaluating utilities' cost of equity[396] and that the Commission should reject all of the parties' arguments against using the Expected Earnings model.[397] MISO TOs note that CAPs cite to Order No. 461[398] for the proposition that *Hope* and *Bluefield* require returns to reflect the market cost of equity and then argue that the Commission has not justified the use of the Expected Earnings model because it is based on accounting rates of return that do not estimate the market cost of capital. MISO TOs argue that CAPs overstate the importance of Order No. 461's reference because the mere fact that the Commission previously found compelling reasons to focus on the market cost of equity does not tie the Commission's hands today. MISO TOs assert that ratemaking is not a science and that the Commission uses models only to inform, not rigidly determine an appropriate ROE. MISO TOs further contend that, in the sentence immediately following CAPs' selected passage in Order No. 461, the Commission stated that it will "take into account non-cost factors in setting an allowed rate of return in an individual case if circumstances warrant."[399]

187. MISO TOs also note CAPs' citation to Opinion No. 429 but assert that, while the Commission declined to rely solely on the comparable earnings method to establish ROE in that case, it did not hold that the FPA forecloses non-market-based methods for developing just and reasonable returns. MISO TOs argue that the Commission only noted that it "*currently* favors market-oriented methodologies (the DCF methodology in

particular)."[400] MISO TOs argue that the Commission is now merely proposing a different, equally legitimate, approach in light of different circumstances.

188. In addition, MISO TOs take issue with LPSC's citation to the Federal Maritime Commission's proposal of a new rule as support for LPSC's argument that the Expected Earnings model does not utilize accepted financial theory. MISO TOs argue that the statement that LPSC cites is irrelevant because courts had in fact previously upheld the Federal Maritime Commission's use of a purely accounting-based, comparable earnings test to determine rates of return under a "just and reasonable" standard akin to that of the FPA.[401] MISO TOs contend that, therefore, the Expected Earnings model's reliance on accounting data does not preclude the Commission from using the model in its ROE methodology.[402]

189. MISO TOs' witness, Mr. McKenzie, similarly asserts that the purpose of the Expected Earnings model is not to derive a market cost of equity. He contends that this is an advantage of the model because it avoids the complexities, controversies, and limitations of capital market methods and instead focuses on expected earned returns on book equity, which are readily available to investors. MISO TOs also assert that the fact that the Expected Earnings model does not rely on market data is, in fact, a sound reason for the Commission to include the model in its ROE determinations. MISO TOs argue that the market-based methods all involve complexities, controversies, and limitations that the Expected Earnings does not share. Mr. McKenzie asserts that, because no single approach can accurately reflect investors' required return, the Commission correctly determined that considering the results of alternative methods provides a more accurate basis on which to determine a just and reasonable ROE and reliance on the Expected Earnings approach is consistent with this logic. Mr. McKenzie further contends that, because regulators establish the allowed return on the book value of a utility's investment—not the return that investors earn in the capital markets—the Expected

[400] MISO TOs Reply Br. (I) at 38 (citing *Consumers Energy Co.*, Opinion No. 429, 85 FERC ¶ 61,100, at 61,362 (1998) (Opinion No. 429) (emphasis added by MISO TOs)); MISO TOs Reply Br. (II) at 38 (citing same).

[401] MISO TOs Reply Br. (I) at 38-39 (citing *Matson Navigation Co. v. Fed. Mar. Comm'n*, 959 F.2d 1039, 1041, 1043 (D.C. Cir. 1992); MISO TOs Reply Br. (II) at 38-39 (citing same).

[402] MISO TOs Reply Br. (I) at 38-39; MISO TOs Reply Br. (II) at 38-39.

Earnings model provides a direct guide to ensure that the allowed ROE is similar to what other utilities of comparable risk will earn on invested capital.[403]

190. MISO TOs also assert that the circularity criticisms of the Expected Earnings model are meritless. MISO TOs argue that the Expected Earnings model is not circular because it relies on forward-looking, expected returns on book equity, and circularity is an issue only with the comparable earnings model, which relies on historical earnings on book equity. MISO TOs also contend that Trial Staff and LPSC are mistaken in asserting that Dr. Morin does not support use of the Expected Earnings model. MISO TOs argue that they disregard his explanation that the comparable earnings model is highly meaningful. Moreover, MISO TOs contend that, while Trial Staff is correct that Dr. Morin does not explicitly mention "expected earnings," the comparable earnings model that he does discuss is the forward-looking version of the Expected Earnings model. MISO TOs also state that Trial Staff and LPSC ignore the close relationship of the comparable earnings approach to the capital attraction standards of *Hope* and *Bluefield*.[404] Mr. McKenzie states that "virtually every measure of future financial performance—including cash flow measures, profitability, and dividend policies—is impacted by the ROE established by regulators"[405] and concludes that, therefore the Expected Earnings model is no more susceptible to circularity concerns than the DCF.

191. In addition, MISO TOs argue that evidence demonstrates that investors rely on the utilities' expected earnings. MISO TOs assert that investors understand that regulators establish rates of return on book equity and they do not and cannot determine a rate of return on the market value of a utility's equity. MISO TOs contend that the evidentiary records in these proceedings include numerous examples of investment advisories and other publications that provide estimates of utilities' returns on equity, including returns on book value of utilities' assets.[406] They assert that Mr. McKenzie's reply affidavit

includes additional examples of the investment community's recognition of the relevance of returns on book value.[407]

192. Mr. McKenzie cites an S&P report as demonstrating the relevance of earned returns on book value in highlighting the primary credit considerations in the utility industry. In particular, he points to a statement in the report that "'required rate of return on equity investment is closely linked to a utility company's profitability.'"[408] Mr. McKenzie points to the report's statement that "'the regulator ultimately bases its decision on an authorized ROE,'" but "different factors such as variances in costs and usage may influence the return a utility is actually able to earn, and consequently our analysis of profitability for cost-of- service-based utilities centers on the utility's ability to consistently earn the authorized ROE.'"[409] Mr. McKenzie contends that this demonstrates that S&P's view is that earned return on book value may provide better insight into the financial health of the utility because it reflects the end-result of regulation, not the theoretical outcome implied by an authorized ROE.[410]

193. Mr. McKenzie argues that Moody's also recognizes the relevance of returns on book value in its assessment of a utility's future prospects. He cites a report in which Moody's stated that, while "'[t]he authorized ROE is a popular focal point in many regulatory rate case proceedings,'" it is the case that "'earned ROEs, as reported by

utilities and adjusted by Moody's,' are a key gauge of financial performance."[411] In addition, Mr. McKenzie cites a CFRA publication which he contends "highlighted the relevance of returns on book equity to investors." He cites the following portion of the publication as supporting this contention

> If a utility's ROE is too low, the analyst must determine if it was caused by mild weather or the absence of a needed rate hike – or if the utility is poorly operated. Conversely, an ROE that is too high could cause regulators to seek a rate cut. For firms in the S&P Composite 1500 electric utilities index, the average ROE generally ranges between 10% and 13%, although the average has trended lower in the past few years.[412]

194. As additional evidence that the Expected Earnings model has been recognized as a meaningful ROE methodology, Mr. McKenzie cites to a 1991 survey by the National Association of Regulatory Commissioners (NARUC) in which it reported that 19 regulatory jurisdictions cited the comparable earnings approach as a primary method favored in determining the allowed ROE, while an additional 16 jurisdictions reported that this approach was considered along with the results of other methods.[413] He also notes that the Virginia State Corporation Commission is required by statute to consider the earned returns on book value of electric utilities in its region, which establish lower and upper boundaries for the allowed ROE.[414] In addition, Mr. McKenzie points to a textbook prepared by Mr. Parcell for the Society of Utility and Regulatory Financial

Analysts which Mr. McKenzie asserts "observes that the amount of subjective judgment required to implement this method is 'minimal,' particularly when compared to the DCF and CAPM methods."[415]

195. MISO TOs also disagree with LPSC's contention that Dr. Morin says that the Expected Earnings model requires a proxy group of non-regulated companies. MISO TOs assert that, to the contrary, Dr. Morin only observed that the backward-looking, comparable earnings model "usually" uses a sample of unregulated companies. MISO TOs argue that, because Dr. Morin did not even explicitly address the Expected Earnings model, the "usual" application of a different methodology does not indicate any error in the Commission's proposal.[416]

196. MISO TOs further assert that LPSC's claim that the Expected Earnings model reflects the results of inconsistent accounting does not establish that the Expected Earnings model is unreliable. MISO TOs claim that LPSC provides no evidence that any of the data relied upon in the Expected Earnings analyses in these proceedings is inaccurate or unreliable in any way.[417]

197. MISO TOs also dispute that the Expected Earnings model is unreliable when utilities' market-to-book ratios are greater than one. MISO TOs argue that, in Opinion No. 551, the Commission explained that investors rely upon the return on book equity to determine the opportunity cost of investing in a particular company, and investors rely upon Expected Earnings analysis for this purpose without attempting to convert that opportunity cost into the current market cost of equity.[418] MISO TOs further assert that LSPC fails to mention that Dr. Morin rejects the notion that regulators' ROE decisions should consider market-to-book ratios.[419] MISO TOs' witness Mr. McKenzie contends that market-to-book ratios of greater than one are not unusual and that if, as CAPs and

LPSC assert, an appropriate market-to-book ratio for utilities is at or near 1.0, then this would imply that MISO TOs should incur significant capital losses.[420]

198. MISO TOs support the use of *Value Line* estimates in the Commission's proposed Expected Earnings model. MISO TOs dispute CAPs' argument that, because the Commission has declined to use *Value Line*'s estimates in the DCF model, the Commission should not rely upon *Value Line*'s five-year average earnings estimates in the Expected Earnings model. MISO TOs state that the Commission has declined to accept *Value Line* earnings growth rates in its DCF model on the ground that such estimates are created by a single analyst. MISO TOs note that CAPs point to the Commission's observation that its decision to abandon exclusive reliance on the DCF model was based in part on evidence that a single analyst is the source of many IBES earnings estimates. MISO TOs argue that the proper response to this is not to ignore all single-analyst estimates, but to consider additional, multiple estimates, to minimize the risk that unreliable data may distort the results of a particular model. MISO TOs also disagree with CAPs' alternative contention that the Commission should require the Expected Earnings model to average *Value Line*'s shorter-term earnings estimates with the five-year estimates. MISO TOs assert that the Commission rejected this suggestion in Opinion No. 551 and no party has offered any basis for the Commission to revisit that conclusion.[421]

199. In addition, MISO TOs argue that the Commission should reject CAP's proposal to use actual realized returns for all available years to incorporate historical realism in the Expected Earnings model. MISO TOs contend that using estimates of future earnings and book equity, rather than historical data, is what distinguishes the Expected Earnings model from the comparable earnings method and thus historical data should not be used.[422]

D. Commission Determination

200. In the Briefing Order, the Commission proposed to use the Expected Earnings model because the record in these proceedings included the Expected Earnings model as one of the methods that "investors may use to estimate the expected return from an

investment in a company."[423] In Opinion No. 551, the Commission found that the Expected Earnings model was useful in corroborating the results produced by the DCF model[424] and, in the Initial Decision in the Second Complaint proceeding, the Presiding Judge similarly found that the Expected Earnings model was a "useful guide to placement of the Base ROE within the DCF-calculated zone of reasonableness to the extent it calculates the earnings on book value investors can expect to earn."[425] However, we now find that, in light of the record as supplemented after issuance of the Briefing Order, it is not appropriate to use the Expected Earnings model in our new base ROE methodology.

201. In particular, we find that the record does not support departing from our traditional use of market-based approaches to determine base ROE.[426] Under the market-based approach, the Commission sets a utility's ROE to equal the estimated return that investors would require in order to purchase stock in the utility at its current market price. In *Hope*, the Supreme Court explained that "the return to the equity owner should be commensurate with returns on investments in other enterprises having corresponding risks."[427] In order to determine this, we must analyze the returns that are earned on "investments in other enterprises having corresponding risks," but investors cannot invest in an enterprise at book value and must instead pay the prevailing market price for an enterprise's equity. As a result, the expected return on a utility's book value does not reflect "returns on investments in other enterprises" because book value does not reflect the value of any investment that is available to an investor in the market, outside of the unlikely situation in which market value and book value are exactly equal. Accordingly, we find that relying on the Expected Earnings model would not satisfy the requirements of *Hope*.

202. The return on book value is also not indicative of what return an investor requires to invest in the utility's equity or what return an investor receives on the equity

Furthermore, a market cost of capital approach addresses both the comparable earnings and attraction of capital standards of the *Hope* decision.").

[427] *Hope*, 320 U.S. at 603.

investment, because those returns are determined with respect to the current market price that an investor must pay in order to invest in the equity. As CAPs similarly explain, "Because an investor cannot purchase a utility's common stock at book value and must instead pay the prevailing market price for common equity, the utility's expected earned return on book value is indicative of neither what an investor can expect to earn on an investment in the utility's common stock nor what return an investor requires to invest in the utility's common stock."[428] Accordingly, return on book value does not reflect "the return to the equity owner" that we must ensure is "commensurate with returns on investments in other enterprises"; therefore we find that this model is not useful in ensuring that the standards of *Hope* are satisfied.

203. MISO TOs argue that the fact that the Expected Earnings model does not rely on market data is a sound reason for the Commission to include the model in its ROE determinations. MISO TOs assert that the Expected Earnings model avoids the complexities and opportunities for controversy that are implicated by the market-based models. MISO TOs contend that the Expected Earnings model relies on the straight-forward concept that when evaluating two investments of comparable risk, investors will choose the alternative with the higher expected return.[429] To make a similar point, MISO TOs' witness Mr. McKenzie points to a textbook prepared by Mr. Parcell for the Society of Utility and Regulatory Financial Analysts which Mr. McKenzie asserts "observes that the amount of subjective judgment required to implement this method is 'minimal,' particularly when compared to the DCF and CAPM methods."[430]

204. While it may be true that the Expected Earnings model does not involve the same complexities as the market-based approaches, we find that this is because it does not reflect a utility's cost of equity. It is simpler because it does not consider the market price that an investor must pay to make its investment and other factors such as projected growth rates for the subject utility. Factors such as these—in particular the market price that an investor must pay for an investment, which is the basis for determining the return on that investment—are critical to determining a utility's cost of equity. While it may be simpler to use a model that does not consider such factors, doing so renders that model unable to effectively estimate the rate of return that investors require to invest in the market-priced common equity capital of a utility, which is the utility's cost of equity

capital. We find that it is not appropriate to use a model that does not accurately measure the "return to the equity owner" as required by *Hope* merely because it may be simpler to administer. We are cognizant of the administrative burden that is placed on parties to evaluate models that are used in analyzing ROEs, but the mere simplicity of one model as compared to others does not justify using that model if it does not assist us in ensuring that returns to equity owners are just and reasonable.

205. Moreover, we find that the record demonstrates that the Expected Earnings model does not identify investments of comparable risk and which alternatives will have a higher expected return as MISO TOs' witness Mr. McKenzie indicates.[431] In particular, because the Expected Earnings model measures returns on book value, without consideration of what market price an investor would have to pay to invest in the relevant company, it does not accurately measure the investor's expected returns on its investment. In order to assess what return investors will receive, they must know the market price of the equity that they are purchasing. For example, if two companies each have book value of $100 and expected returns on that book value of 10 percent, or $10, over the next year, then they would appear to be equally attractive investments to an investor based on the Expected Earnings model. However, if the market price to purchase the first company's stock is $20 and the market price to purchase the second company's stock is $40, then the first company would obviously be a more attractive investment. Thus, contrary to Mr. McKenzie's characterization, investors in such a situation would not be able to determine what "the alternative with the higher expected return" is with the Expected Earnings model.

206. MISO TOs also argue that the fact that the majority of stocks, including utility stocks, sell substantially above the company's book value supports the use of the Expected Earnings Model.[432] MISO TOs' witness, Mr. McKenzie, points out that *Value Line* reports that approximately 1500 of the roughly 1700 stocks it follows have market-to-book ratios above one, and he cited evidence that utility stocks have an average market-to-book ratio of 2.1.[433] Mr. McKenzie asserts that, in these circumstances, an ROE equal to the current market cost of equity as determined under the DCF model will not produce sufficient earnings to support the utility's current stock price. Mr. McKenzie points out that the Commission calculates the dollar return included in a utility's rate base by multiplying the book value of the rate base by the percentage ROE determined by the

[431] MISO TOs Reply Br. (I) at 39 and App. 2, McKenzie Reply Aff. (I) at 65; MISO TOs Reply Br. (II) at 39 and App. 2, McKenzie Reply Aff. (II) at 65.

Commission. He then provides a numerical example that purports to show that, when a utility's market-to-book ratio is above one, this calculation will not produce a sufficient dollar return to allow the utility to continue to pay the same level of dividends and retain the same level of earnings to fund growth as the investor assumed in performing its DCF analysis and evaluating whether to purchase the stock.[434] As a result, according to Mr. McKenzie, the DCF model will not provide a return sufficient to support the utility's current stock price.[435] Mr. McKenzie asserts that, by contrast, the Expected Earnings model calculates the projected returns on the utility's book equity that support the investors' expectations underlying the current market price of the stock. As a result, Mr. McKenzie contends the Expected Earnings model provides a direct guide to ensure that the ROE allowed by the Commission is similar to the returns that investors expect other utilities of comparable risk will earn on the book value of their invested capital.[436]

207. The MISO TOs' concerns about market-to-book ratios in excess of one and maintaining the current stock values of public utilities do not justify use of the Expected Earnings model. The Commission is not obligated to set ROEs so as to maintain current stock values.[437] As the Supreme Court held in *Hope*, the "fair value" of a regulated enterprise "is the end product of the process of ratemaking, not the starting point . . . The heart of the matter is that rates cannot be made to depend on 'fair value' when the value of the going enterprise depends upon earnings under whatever rates are anticipated."[438] Consistent with this holding in *Hope*, the Commission has stated, "The market value of an enterprise or its common stock depends upon its earnings or anticipated earnings,

Cir. 1993) (*Illinois Bell*) (affirming the FCC's rejection of the same contention concerning use of the DCF model when market-to-book ratios are above one as the MISO TOs make here, and stating that the FCC "has no obligation to maintain the current market value on investors' property.").

[438] *Hope*, 320 U.S. at 601.

which in turn depend upon the rates allowed. Thus, market value is the result of the ratemaking process and may not properly be the beginning of that process as well."[439]

208. In any event, there is no evidence that the Commission's use of the DCF model to determine ROEs based on the current market cost of capital has provided insufficient returns to support proxy company stock values or had a tendency to drive market-to-book ratios down to one. In fact, market-to-book ratios of the proxy companies have been consistently above one since the 1980s, a period during which the Commission solely used the DCF model to determine ROEs.[440] Moreover, the public utility companies for which the Commission sets rates are not publicly traded and thus do not have any market-determined stock values. Hence, there is no observable market-to-book ratio specifically applicable to the electric transmission business for which we are establishing an ROE. The publicly-traded companies in the proxy group are generally holding companies, which not only have regulated electric transmission business but also other businesses that are not subject to cost-based regulation.[441] Therefore, the proxy company market-to-book ratios may exceed one primarily because of the value investors see in their non-electric transmission businesses.[442] We recognize that, in an environment where the market-to-book ratios of publicly-traded companies are generally above one, it would be unreasonable to adopt an ROE policy that resulted in capital losses for investors in order to drive market-to-book ratios that are currently above one down to one.[443] However, the record before us does not contain evidence that our longstanding policy of determining ROE based on the current market cost of equity is having this effect. In these circumstances, we see no basis to change that policy in order to use the Expected Earnings model.

[443] *See* Morin at 376-378.

209. We agree with MISO TOs that the Commission is not necessarily required to rely on only market-based methods to determine ROEs merely because it previously found that such an approach was appropriate. If, for example, facts and circumstances before the Commission change in a manner that would allow the Commission to provide a reasoned explanation for departing from this precedent, then the Commission could depart from this precedent. However, the mere fact that the Commission can depart from precedent such as Order No. 461 and Opinion No. 429 does not necessarily mean that it should. Here, we find that the record does not demonstrate that it is appropriate to rely on the Expected Earnings model in our ROE analysis and we find, consistent with our existing precedent, that it is appropriate to rely on market-based methods in our ROE determinations. Similarly, we agree with MISO TOs that the fact that the Federal Maritime Commission criticized using an accounting-based rate of return method does not preclude this Commission from using such a method. However, the fact that we are not precluded from using an accounting-based method does not mean that we must use such a method. As discussed herein, we find that, on balance, this evidence and the other record evidence in these proceedings demonstrates that the Expected Earnings approach is not appropriate for us to use in our ROE analysis.

210. In the Briefing Order, the Commission noted that the returns on book equity that investors expect to receive "are relevant to determining that utility's cost of equity, because those returns on book equity help investors determine the opportunity cost of investing in that particular utility instead of other companies of comparable risk."[444] The Commission further stated that "Because investors rely on Expected Earnings analyses to help estimate the opportunity cost of investing in a particular utility, we find this type of analysis useful in determining a utility's ROE."[445] In light of the record in these proceedings as supplemented after issuance of the Briefing Order, we find that there is not sufficient record evidence to conclude that investors rely on the Expected Earnings analysis to estimate the opportunity cost of investing in a particular utility as compared to other companies. As parties have noted, investors cannot purchase equity at book value;[446] therefore, although book value and returns on book equity may be useful data points for investors, they do not reflect an opportunity for investment that can be characterized as an opportunity cost. In addressing this point, CAPs' witness Mr. Solomon cites to a similar explanation of the point made by Dr. Morin that "Accounting rates of return are not opportunity costs in the economic sense, but reflect

[444] Briefing Order, 165 FERC ¶ 61,118 at App.

[445] *Id.*

[446] *See, e.g.*, CAPs Initial Br. (I) at 41, Ex. JCI-100 at 30; CAPs Initial Br. (II) at 41, Ex. JCI-200 at 29.

the average returns earned on past investments and hence reflect past regulatory actions . . . Investors can only purchase new shares of common stock at current market prices and not at book value."[447] Moreover, as we discuss further below, there is insufficient record evidence to demonstrate that investors rely on the Expected Earnings model.

211. Record evidence also provides an example of how returns on book equity fail to reflect the returns that investors require to invest in a given company and thus, fail to reflect the opportunity costs of investing in one company as opposed to others. As CAPs explain, when the market value of a company's equity exceeds its book value—i.e., when its market-to-book ratio exceeds 1.0—this means that investors' required rate of return for investing in the equity is less than the expected earnings on book value for that company.[448] CAPs' witness Mr. Solomon then details the market-to-book ratios for the proxy groups used by Dr. Avera in the First Complaint and Second Complaint proceedings, finding that the ratios ranged from 1.17 to 2.55 for the proxy groups in both proceedings, with 30 of the 39 companies in the First Complaint proxy group having ratios at or above 1.50 (with an average of 1.80) and 23 of the 32 companies in the Second Complaint proxy group having ratios at or above 1.50 (with an average of 1.70).[449] Accordingly, the record demonstrates that investors' required rate of return for investing in the equity of all of the proxy group companies in both of these proceedings is less than the return on the book value of the equity of those companies. Therefore, the return on the book value measured by the Expected Earnings model overstates the investors' required rate of return for investing in the proxy group companies and as a result it does not reflect investors' opportunity cost of investing in one proxy group company as opposed to another.

212. In the Briefing Order, the Commission stated that a primary reason for proposing to average the results of the DCF analysis with the results of the CAPM, Expected Earnings, and Risk Premium analyses is that investors use those models, in addition to

the DCF methodology, to inform their investment decisions.[450] Upon review of the record, as supplemented after issuance of the Briefing Order, we find that this statement may not be true with respect to the Expected Earnings model. MISO TOs cite numerous pieces of evidence of "investment advisories and other publications that provide estimates of utilities' returns on equity, including returns on book value of utilities' assets."[451] This evidence cited by the MISO TOs shows that investors examine expected earnings (future profits). However, looking at the future earnings of a company is not the same as determining a company's cost of capital or making investment decisions based on the earnings per book value calculations in the Expected Earnings model. Additionally, there is no evidence that such information is useful to investors in determining their required return from an investment in a particular company independent of the stock price, which the Expected Earnings model ignores. Below we examine the specific evidence that MISO TOs' claim demonstrates that investors use the Expected Earnings model.

213. Exhibit No. MTO-43 in the First Complaint proceeding, a Wolf Research report, discusses Commission and state regulated ROE determinations. Exhibit No. MTO-44 in the First Complaint proceeding, a UBS Global Research brief, also discusses Commission ROE policy without mentioning non-DCF approaches or book value. Exhibit No. MTO-45 in the First Complaint proceeding, another UBS Global Research brief, similarly merely discusses potential changes to the Commission's ROE policy with no mention of use of earnings per book value or other approaches. Although investors are obviously interested in what ROE the Commission may approve in pending rate proceedings, that fact does not support a finding that investors use the Expected Earnings model to determine their required returns on investments in public utilities.

214. Exhibit No. MTO-54 in the First Complaint proceeding, the *Value Line* portion of Exhibit No. S-3 cited by MISO TOs, and pages 41-85 of Exhibit No. JCI-3 in the Second Complaint proceeding—all *Value Line* summary PDFs for proxy group companies—include dozens of financial metrics and brief discussions of major issues surrounding companies. Book value and book value per share are among the information provided, as well as return on total capital. However, total capital in this instance differs from net plant, which is listed separately and is more analogous to book value. In any event, the listing of a relevant metric among dozens does not indicate that investors use it independently to determine their required return on their investments in particular companies. The Barron's report in Exhibit No. S-3 discusses key financial metrics including earnings per share and dividend yield, and explicitly discusses these metrics

[450] Briefing Order, 165 FERC ¶ 61,118 at P 46.

[451] MISO TOs Reply Br. (I) at 43-44; MISO TOs Reply Br. (II) at 43-44.

with respect to the share price that investors see.[452] It does not discuss book value or illustrate that investors determine the cost of equity or make purchase decisions using the Expected Earnings model. Pages 3-4 of Exhibit No. JCI-12 in the Second Complaint proceeding, a Moody's report, examines the impact of Commission proceedings on American Transmission Company. It makes no mention of book value and merely opines on how changes in authorized ROEs could affect future earnings. The information in Exhibit No. JCI-13 in the Second Complaint provides a similar analysis for Ameren Illinois.

215. MISO TOs' witness Mr. McKenzie asserts that an S&P Global report in Exhibit No. MTO-74 in the Second Complaint proceeding indicates that the earned return on book value may provide better insight into the financial health of the utility because it reflects the end-result of regulation, not the theoretical outcome implied by an authorized ROE. He also maintains that Moody's recognizes the relevance of returns on book value when it explains that earned ROEs, rather than authorized ROEs, are a "key gauge of financial performance."[453] However, we agree with Trial Staff that the record lacks evidence that S&P and Moody's use this information to estimate the cost of equity.[454] First, we disagree with MISO TOs that S&P's statement that "different factors [other than ROEs] such as variances in costs and usage may influence the return a utility is actually able to earn, and consequently our analysis of profitability for cost-of-service –based utilities centers on the utility's ability to consistently earn the authorized ROE"[455] indicates that S&P examines earnings per book value. Whether a utility actually earns the authorized ROE can be determined by comparing actual earnings with the earnings implied by the authorized ROE, which is independent of book value. In fact, the only mention of book value in the S&P article is, when explaining the usefulness of earnings before interest, tax, depreciation and amortization, the statement that "the book value of capital does not always reflect true earning potential." Similarly, the Moody's reference

[455] MISO TOs Reply Br. (I), App. 2, McKenzie Reply Aff. (I) at 69-70 (citing S&P Global, *Utilities: Key Credit Factors For The Regulated Utilities Industry*, Criteria Corporates (Nov. 19, 2013), https://www.standardandpoors.com/en_US/web/guest/article/-/view/type/HTML/id/2189281)); MISO TOs Reply Br. (II), App. 2, McKenzie Reply Aff. (II) at 69-70 (citing same).

to the stability of "earned ROEs" as reported by utilities does not clearly indicate that it is earned returns on book value.

216. Even if Mr. McKenzie's inferences regarding the usefulness of earnings as related to book value to assess the financial health of a utility are correct, that fact is not indicative that such information is used by investors independently of price to determine their required returns. As discussed above, the Commission relies on the market cost of capital as the standard for its rate of return decisions. This approach requires us to estimate the return that investors would require in order to purchase stock in the utility at its current market price. We have determined that, for this purpose, we should look to the methods that investors use to determine their required return on an investment in public utilities, including the DCF and CAPM models. However, there is nothing in the S&P and Moody's articles cited by Mr. McKenzie to indicate that investors look to earnings on book value to determine their required return on an investment. Credit rating agencies, who are not investors, may use such information to inform their assessment of utilities' risk or financial strength. As Mr. McKenzie states, S&P uses this metric to assess utilities' "financial health."[456] However, there is no evidence that they use such metrics to determine the cost of capital of utilities or to calculate return on an investment.

217. Looking at earned return on book value is not the same as conducting an Expected Earnings analysis to determine the applicable cost of capital. Investors observe many financial metrics, including metrics such as price to earnings ratios and free cash flow, which are not independently bases for determining an entity's cost of equity or investment decisions. When an investor makes an investment decision, a fundamental consideration is the cost to the investor to make the investment—i.e., the market price that the investor must pay for the investment. The Expected Earnings analysis does not take this fundamental consideration into account and thus it does not reflect how an investor would make an investment decision. MISO TOs' citations to evidence that merely references book value or earnings on book value among various other financial metrics or in the context of credit rating analyses does not demonstrate that investors would use the earnings on book value results of an Expected Earnings analysis to make investment decisions without considering the market price of the investment.

218. The academic literature and testimony by academics cited in the record also indicates that investors do not commonly use the Expected Earnings model to estimate utilities' cost of equity. Trial Staff states that the Briefing Order cites Exhibit No. MTO-1 in the First Complaint proceeding as support for the proposition that investors base their decisions on models that include the Expected Earnings model. Trial Staff argues that, however, that exhibit, which in turn cites Dr. Morin's *New Regulatory*

[456] MISO TOs Reply Br. (I), App. 2, McKenzie Reply Aff. (I) at 70; MISO TOs Reply Br. (II), App. 2, McKenzie Reply Aff. (II) at 70.

Finance, does not support this proposition. Trial Staff asserts that Dr. Morin does not mention the Expected Earnings model used by MISO TOs in this proceeding. Trial Staff contends that, in fact, as support for his contention that financial literature supports the use of multiple methods to estimate the cost of equity, Dr. Morin cites Professor Eugene Brigham who identifies the DCF, CAPM, and Risk Premium models as the "[t]hree methods [that] typically are used . . . when . . . estimating a company's cost of equity"[457] and does not identify the Expected Earnings model. Trial Staff argues that, therefore, Dr. Morin's own source of information on the use of multiple ROE methodologies excludes the Expected Earnings approach as one of the methods typically used. LPSC and CAPs' expert Mr. Solomon also point to Dr. Morin's discussion of the comparable earnings approach which states, among other things, that "Accounting rates of return are not opportunity costs in the economic sense . . . More simply, the Comparable Earnings standard ignores capital markets."[458] MISO TOs counter that these parties "cherry-pick" Dr. Morin's treatise. MISO TOs assert that they disregard Dr. Morin's explanation of the benefits of the approach, which states that "because the investment base for ratemaking purposes is expressed in book value terms, a rate of return on book value . . . is highly meaningful."[459] Trial Staff and LPSC also cite to recent testimony by Dr. Morin in other proceedings that they allege supports excluding the Expected Earnings model. In particular, LPSC cites the following testimony of Dr. Morin in an Oklahoma Corporation Commission proceeding:[460]

> Q. Do you agree with Mr. Parcell's Comparable Earnings Analysis?
>
> A. *Although I myself do not rely on this accounting-based method*, I agree with Mr. Parcell's Comparable Earnings results.[461]

[460] *Okla. Gas and Elec. Co.*, Cause No. PUD201700496 (Okla. Corp. Comm'n).

[461] *Okla. Gas and Elec. Co.*, Cause No. PUD201700496 (Okla. Corp. Comm'n), Reb. Test. of Roger A. Morin at 33 (May 29, 2018).

Trial Staff cites testimony by Dr. Morin in a Commission proceeding in which he identified the methods available to determine cost of equity and did not include the Expected Earnings model.[462]

219. The evidence in the record regarding Dr. Morin's views on the Expected Earnings model, if anything, indicates that the Expected Earnings model is inappropriate in this context. As LPSC and CAPs note, Dr. Morin's *New Regulatory Finance* states that "[a]ccounting rates of return are not opportunity costs in the economic sense" and that the Expected Earnings model's historical-looking analog, the comparable earnings standard, "ignores capital markets." The fact that the accounting-based Expected Earnings approach does not represent opportunity costs and ignores capital markets undermines its ability to estimate "the return to the equity owner [that is] commensurate with returns on investments in other enterprises" because returns on investments depend on what price an investor must pay for the investment in the capital markets. In addition, the fact that Dr. Morin has testified that he does not use the accounting-based comparable earnings method and that the Expected Earnings model is not one of the "methods available to measure the cost of equity" further indicates that the Expected Earnings model is not appropriate to use to estimate cost of equity. MISO TOs' citation to Dr. Morin's statement that "rate of return on book value . . . is highly meaningful" is not sufficient to convince us that the Expected Earnings model is appropriate. The quoted language does not indicate that Dr. Morin believes that rate of return on book value "is highly meaningful" for purposes of determining cost of equity. Rate of return on book value could be highly meaningful for other purposes—e.g., for determining revenues because rate of return is applied to the book value of a utility's rate base—but this does not mean that it is necessarily highly meaningful for determining cost of equity. In light of the other academic literature and testimony evidence in the record, we find that this evidence does not justify using the Expected Earnings model in our ROE analysis.

220. Trial Staff also notes that Professor Brigham has stated that the Expected Earnings model's historical-looking analog, the comparable earnings approach, "has now been thoroughly discredited . . . and it has been replaced by three market-oriented (as opposed to accounting-oriented) approaches: (i) the DCF method, (ii) the bond-yield-plus-risk-

[462] San Diego Gas & Electric Company, Prepared Direct Testimony of Dr. Roger A. Morin on behalf of San Diego Gas & Electric Company, Docket No. ER19-221-000, at 16-17 (filed Oct. 30, 2018) ("There are three broad generic methods available to measure the cost of equity: DCF, Risk Premium, and CAPM. All three of these methods are accepted and used by the financial community and firmly supported in financial literature.").

premium method, and (iii) the CAPM."[463] LPSC cites another article that states that

> Investments in equity shares are made by the purchase of shares at market prices. Therefore, the fairness of the rate of return to the investor must be judged from the investor's point of view in the market place and not on the basis of book value.[464]

LPSC also cites to studies that it claims demonstrate that accounting rates of return like those produced by the Expected Earnings model are unreliable as a measure of economic returns. In particular, LPSC cites a paper that concludes that "the accounting rate of return—after tax as well as before tax—is a misleading measure of the economic rate of return."[465] LPSC further cites an article which observed that, over a 15-year period "We see that the annual rates of return based on book value have fluctuated very little, while the annual rates of return to the investor in the market have fluctuated quite wildly."[466]

221. We find that this evidence does not support using the Expected Earnings model in our ROE analysis. Trial Staff's cited evidence indicates that the similar accounting-based comparable earnings approach has been "thoroughly discredited" and replaced by market-oriented rather than accounting-oriented approaches. As discussed above, this is logical given that the return an investor requires and the return an investor receives are dependent on the market price that investor must pay for the investment, not the accounting book value of the investment. Similarly, the evidence cited by the LPSC demonstrates that accounting rates of return do not reflect the economic rate of return actually received by an investor. *Hope* requires us to ensure that the return to a utility's

[466] *Id.* at 23 (citing Alexander A. Robichek, *Regulation and Modern Finance Theory*, 33 Journal of Finance 693, 701-702 (1978)).

equity owner is "commensurate with returns on investments in other enterprises having corresponding risks" but if an accounting-based model like the Expected Earnings model does not take into account the market price of investments in other enterprises and thus the economic return rate of return on those investments, then it cannot accurately estimate the "returns on investments in other enterprises" that we must analyze in order to assess a utility's ROE. Accordingly, we find that this evidence does not support using the Expected Earnings model in our ROE analysis.

222. As support for using the Expected Earnings model, MISO TOs' witness, Mr. McKenzie, cites to a 1991 NARUC survey in which it reported that 19 regulatory jurisdictions cited the comparable earnings approach as a primary method favored in determining the allowed ROE.[467] He also notes that the Virginia State Corporation Commission is required by statute to consider the earned returns on book value of electric utilities in its region when making ROE determinations.[468] This evidence is insufficient to persuade us that using the Expected Earnings model is appropriate. As an initial matter, the over 30-year old survey that MISO TOs cite addresses the use of the comparable earnings method, which is based on historical book returns and is not the Expected Earnings model that is at issue here.[469] Similarly, the cited Virginia statute relates to past returns on book value, not expected returns like those considered in the Expected Earnings model. Moreover, this is evidence of what regulators consider in making ROE determinations, not necessarily what investors consider in making investment decisions and determining what return they will receive on their investment, which necessarily involves a consideration of the market price that must be paid to make the investment. Accordingly, this evidence does not persuade us that return on book value can be used to estimate the "return to the equity owner" that we must ensure is "commensurate with returns on investments in other enterprises having corresponding risks" under *Hope*.

223. In addition, the application of the Expected Earnings model in the electric utility cost-of-service context could produce illogical results that render use of the model sub-optimal. The simple math of the equation is that the higher the ratio of earnings to book value a given company features, the higher the resulting return from the model. Much of

---

[468] *See* Va. Code Ann. § 56-585.1.A.2.a (2019).

[469] *See* Trial Staff Reply Br. (I), Keyton Reply Aff. (I) at 4-5; Trial Staff Reply Br. (II), Keyton Reply Aff. (II) at 4-5.

the earnings from regulated utilities comes from the return earned in their cost-of-service rates. In such rates, the higher the percentage of equity in the capital structure, the higher the overall return, and thus earnings, would be, because the cost of equity is higher than the cost of debt. Consequently, holding all else equal, if a utility features an equity-rich capital structure, the Expected Earnings model would produce a higher return than if it featured a less equity-rich capital structure. This is illogical because the latter utility would be riskier than the former given its higher amount of leverage. Thus, the model would imply that less risky companies merit higher returns, when investors would require a lower return from those companies.

224. In addition, book value in the expected earnings calculation, if it follows general accounting conventions, would take the initial value of assets and subtract depreciation (and include any subsequent adjustments like write-downs). This leads to higher returns from the model for utilities that feature older, more-depreciated, assets than newer ones. Again, all else being equal, utilities with more depreciated assets are generally of lower risk, because they have recovered more of their invested capital, and thus they would generally merit a lower return, than utilities with newer assets.

225. Finally, we note that the MISO TOs' Expected Earnings model, unlike the other market-based models, is based solely on projections and features data from a single *Value Line* analyst. Thus the data, even if reviewed by others at *Value Line*, is much less robust and more subject to error than the data underlying the CAPM and DCF models, most of which is historic, easily verifiable, and comes from more than the projections of a single analyst.

226. We recognize that, in Opinion No. 551, the Commission reversed the Presiding Judge's rejection of MISO TOs' Expected Earnings analysis. However, in Opinion No. 551, the Commission only found that "MISO TOs' expected earnings analysis is sufficiently reliable to be used as corroborative evidence that the midpoint of the zone of reasonableness produced by the mechanical application of the DCF methodology does not result in a return that satisfies the requirements of *Hope* and *Bluefield*."[470] The Commission stated that "The expected earnings analysis, like the other alternative methodologies accepted herein, is merely used as corroborative evidence . . . which at most can corroborate the Commission's decision to place an ROE above the midpoint of the zone of reasonableness."[471] Here, the question before the Commission is whether to adopt the proposal in the Briefing Order to directly use the results of the Expected Earnings model in the ROE estimate calculations that are the foundation of our ROE analysis. We find that stronger evidence is required to support a decision to include the Expected Earnings model as a direct input in our ROE methodology than is required to

[470] Opinion No. 551, 156 FERC ¶ 61,234 at P 239.

[471] *Id.* P 233.

merely use it as corroborative evidence for placing an ROE within the zone of reasonableness. We have directed the parties in these proceedings to address the Briefing Order's proposal to use the Expected Earnings model as a direct input in our ROE methodology and, in light of the evidence that they have provided, we find that there is not sufficient support to use the Expected Earnings model as a direct input in our ROE methodology. The question in this proceeding regarding the Expected Earnings model differs from the question that was considered in Opinion No. 551. Accordingly, our decision to exclude the Expected Earnings model from our ROE methodology here is not inconsistent with our determination in Opinion No. 551.

227. Some parties argue that, if the Expected Earnings model is used, the Commission should implement certain modifications to the model.[472] MISO TOs argue against implementing these modifications.[473] We find that these arguments are moot and that it is unnecessary to address them because we will not use the Expected Earnings model as part of our ROE methodology. For the same reason, we find it unnecessary to address the arguments that oppose using the Expected Earnings model on other grounds, such as the LPSC's *Daubert* arguments,[474] and the applicable counterarguments.

228. Because we find that it is not appropriate to use the Expected Earnings model in our ROE methodology, we grant the requests for the rehearing of Opinion No. 551 in the First Complaint proceeding and the exceptions to the Initial Decision in the Second Complaint proceeding that ask the Commission to exclude the Expected Earnings model from its ROE determinations, to the extent those requests for rehearing and exceptions are based on our reasoning discussed above for excluding the Expected Earnings model.

VII. CAPM

A. Background

229. Investors use CAPM analysis as a measure of the cost of equity relative to risk.[475] The CAPM methodology is based on the theory that the market-required rate of return for a security is equal to the risk-free rate, plus a risk premium associated with the specific

---

[472] *See, e.g.*, CAPs Initial Br. (I) at 44-46; CAPs Initial Br. (II) at 44-46; Trial Staff Initial Br. (I) at 18-19 and ; Trial Staff Initial Br. (II) at 18; RPGI Initial Br. (I), Ex. RPG-17 at 25-26; RPGI Initial Br. (II), Ex. RPG-38 at 26; LPSC Initial Br. at 29.

[473] *See, e.g.*, MISO TOs Reply Br. (I) at 47-51; MISO TOs Reply Br. (II) at 47-51.

[474] *See, e.g.*, LPSC Initial Br. at 15-20.

[475] Opinion No. 551, 156 FERC ¶ 61,234 at P 138.

security. Specifically, the CAPM methodology estimates the cost of equity by taking the "risk-free rate" and adding to it the "market-risk premium" multiplied by "beta."[476] The risk-free rate is represented by a proxy, typically the yield on 30-year U.S. Treasury bonds.[477] Betas, which are published by several commercial sources, measure a specific stock's risk relative to the market. The market risk premium is calculated by subtracting the risk-free rate from the expected return. The expected return can be estimated either using a backward-looking approach, a forward-looking approach, or a survey of academics and investment professionals. A CAPM analysis is backward-looking if the expected return is determined based on historical, realized returns. A CAPM analysis is forward-looking if the expected return is based on a DCF analysis of a large segment of the market. Thus, in a forward-looking CAPM analysis, the market risk premium is calculated by subtracting the risk-free rate from the result produced by the DCF analysis.[478]

230. In the First Complaint proceeding, MISO TOs submitted a forward-looking CAPM analysis of each company in the proxy group. MISO TOs used the 2.7 percent 30-year U.S. Treasury average historical bond yield for November 2014 to April 2015 for the risk-free rate,[479] beta values for each proxy company reported by *Value Line*, and a market risk premium based on a one-step DCF study of all dividend-paying companies in the S&P 500.[480] In that DCF study, MISO TOs added the weighted average dividend of those companies (2.4 percent) to the average of the weighted average growth rates projected for the companies by IBES and *Value Line* (8.9 percent). MISO TOs did not include a long-term growth projection in its DCF study of the dividend-paying companies in the S&P 500. MISO TOs' DCF study resulted in a uniform cost of equity for the dividend-paying companies in the S&P 500 of 11.3 percent. The MISO TOs then subtracted from that figure the 2.7 percent risk-free rate to obtain a risk premium of 8.6 percent. The MISO TOs multiplied this risk premium by the beta listed for each proxy company by *Value Line* and added the risk-free rate to that product. This CAPM analysis

[477] *Id.* P 138.

[478] *See id.* PP 150, 155.

[479] Ex. MTO-30 at 1. MISO TOs also performed a CAPM study using the average projected 30-year U.S. Treasury bond yield for 2016-2020. *Id.* at 2. However, the Presiding Judge rejected that study, finding that projected bond yields are speculative and therefore less reliable for a CAPM study than current Treasury bond yields. Initial Decision (I), 153 FERC ¶ 63,027 at P 309. MISO TOs did not except to this ruling.

[480] Ex. MTO-1 at 97-98.

produces an unadjusted ROE range of 7.86 percent to 10.87 percent for the proxy group, with a midpoint value of 9.37 percent.[481]

231. However, after adjusting for the effect of each proxy company's size, MISO TOs' CAPM analysis produced an ROE range of 7.50 percent to 12.61 percent, with a midpoint value of 10.06 percent.[482] MISO TOs' witness, Dr. Avera, explained that the "size adjustment reflects the fact that differences in investors' required rate of return that are related to firm size are not fully captured by beta."[483] Dr. Avera based his size adjustments on data contained in a table published in Morningstar Inc.'s (Morningstar) "2015 Ibbotson SBBI Market Report." The table adjusts each proxy company's cost of equity based on its size, reducing the unadjusted cost of equity of larger companies, while increasing those of smaller companies.[484]

232. In Opinion No. 551, the Commission affirmed the Presiding Judge's acceptance of MISO TOs' CAPM analysis "to be used as corroborative evidence" in determining where to place MISO TOs' ROE in the DCF zone of reasonableness.[485] The Commission rejected challenges to MISO TOs' calculation of the market risk premium and use of a size adjustment. In their requests for rehearing of Opinion No. 551, CAPs and OMS contend that the Commission erred in approving MISO TOs' CAPM analysis, taking issue with how MISO TOs implemented their CAPM analysis.[486]

233. In the Second Complaint proceeding, MISO TOs submitted a CAPM study using the identical methodology as the CAPM study they presented in the First Complaint proceeding.[487] After the size adjustment, that study produced a zone of reasonableness of

---

[487] *See* Ex. MTO-36.

7.97 percent to 12.12 percent with a midpoint of 10.05 percent.[488] The Presiding Judge rejected most challenges to that study.[489] However, the Presiding Judge found that MISO TOs erred in using both IBES and *Value Line* short-term growth projections in its DCF analysis of the dividend paying companies in the S&P 500, and should have only used IBES growth projections.[490] The Presiding Judge found that revising MISO TOs' CAPM study to use only the IBES growth projections reduced the midpoint from 10.05 percent to 9.67 percent, and he approved MISO TOs' CAPM study with that modification.[491]

234. Although MISO TOs' excepted to the Presiding Judge's rejection of their proposal to use only the *Value Line* short-term growth projections in their two-step DCF analysis of the proxy group,[492] they did not except to the Presiding Judge's rejection of the use of *Value Line* short-term growth projections as part of the DCF analysis of the dividend-paying companies in the S&P 500 for purposes of their CAPM study. However, CAPs, OMS and JCA, and RPGI filed exceptions to the Presiding Judge's approval of MISO TOs' CAPM study, as modified, objecting to the use of a one-step DCF analysis of the dividend-paying companies in the S&P 500 and the size adjustment.[493]

235. In the Briefing Order, the Commission proposed to give the CAPM model equal weight, along with the DCF model and Expected Earnings model, in establishing a composite zone of reasonableness to be used under the first prong of section 206 to determine whether the existing ROE has become unjust and unreasonable.[494] It also proposed to give the CAPM model equal weight, along with the DCF, Expected Earnings, and Risk Premium models, in determining a new just and reasonable ROE, when the existing ROE has been shown to be unjust and unreasonable under the second prong of section 206.[495] The Commission also recognized that the fact it was no longer

proposing to use the alternative methodologies only to corroborate setting the ROE above the midpoint of the DCF zone of reasonableness raises the issue of whether there should be any adjustments to how we implement the alternative methodologies, including the CAPM model.[496]

B. Use of CAPM Generally

236. Parties generally do not oppose use of the CAPM in the Commission's ROE methodology, with most parties generally agreeing that proper application of the CAPM model can produce reliable ROE results and that investors use the CAPM model.[497] As noted above, some parties argue that the Commission should continue to exclusively rely the DCF model but those parties do not oppose the use of the CAPM model if the Commission does move to a multiple-model ROE methodology.[498] However, the parties disagree on the proper application of the CAPM model. The record evidence demonstrates that this model is widely used by investors.[499] Academic literature similarly indicates that investors rely on the CAPM.[500] Moreover, the CAPM is directly relevant to

[500] *See, e.g.*, Jonathan B. Berk and Jules H. van Binsbergen, *Assessing asset pricing models using revealed preference*, 119(1) Journal of Financial Economics 1, 2 (2016) ("We find that the CAPM is the closest model to the model that investors use to

the Commission's task in this context of assessing what rate of return on equity investors require to invest in a utility.[501] John Graham and Campbell Harvey have explained that "the CAPM is by far the most popular method of estimating the cost of equity capital."[502] Accordingly, we adopt the CAPM as one of the models that the Commission will use in its methodology for assessing whether an ROE is just and reasonable and determining just and reasonable ROEs when existing ROEs have been shown to be unjust and unreasonable. Below we address the parties' arguments regarding how the CAPM model should be implemented.

C. Calculation of Market Risk Premium

1. Risk-Free Rate

237. As noted above, the market risk premium in the CAPM model is calculated by subtracting the risk-free rate from the expected market return. Parties generally support the use of 30-year U.S. Treasury average historical bond yield over a six-month period as the risk-free rate.[503] RPGI proposes using the 20-year U.S. Treasury average historical

---

make their capital allocation decisions . . . investors appear to be using the CAPM to make their investment decisions."); Brad M. Barber, et al., *Which Factors Matter to Investors? Evidence from Mutual Fund Flows*, 29(10) The Review of Financial Studies 2600, 2639 (2016) ("[W]hen we ran a horse race between six asset-pricing models, the CAPM is able to best explain variation in flows across mutual funds."); *id.* at 2624 ("[T]he CAPM does the best job of predicting fund-flow relations.").

[501] *See, e.g.*, Michael C. Ehrhardt and Eugene F. Brigham, *Financial Management: Theory and Practice* 253 (13th ed. 2011) ("[T]he basic CAPM is still the most widely used method for thinking about required rates of return on stocks.").

[503] *See, e.g.*, CAPs Initial Br. (I) at 34 ("The components of a properly implemented forward-looking CAPM methodology include: (1) the use of the actual 30-year U.S. Treasury bond yield during the six-month study period for the risk-free rate") and Ex. JC-100 at 11, 26; Trial Staff Initial Br. (I) at 11 ("Mr. Keyton also accepts the use of the risk-free rate as the yield on the 30-year U.S. Treasury bonds."); LPSC Initial Br. at 38; MISO TOs Reply Br. (I), App. 2 at 28 ("The CAPM applications presented in Mr. Gorman's and Mr. Keyton's affidavits all use an average yield on 30-year U.S. Treasury bonds for the risk-free rate and rely on *Value Line* beta values. I agree with these aspects of their analyses.").

yield over a six-month period as the risk-free rate, but only supports this proposal with a footnote stating that "Use of 20-year Treasury bonds is appropriate as risk-free rate since this is the maturity of bonds used in Morningstar study as measurement of long-term government bonds."[504] We find that the evidence supporting the use of the 30-year U.S. Treasury average historical bond yield over a six-month period as the risk-free rate outweighs the evidence supporting the use of the 20-year U.S. Treasury yield. RPGI is the only party to propose using the 20-year U.S. Treasury yield and the other evidence and precedent provides greater support for using the 30-year U.S. Treasury yield.[505] Accordingly, we adopt use of the 30-year U.S. Treasury average historical bond yield over a six-month period as the risk-free rate.

238. CAPs argue that the six-month period for purposes of determining the risk-free rate should be the same time period as used to produce the DCF study in the applicable proceeding.[506] Other parties do not disagree with this argument and generally use the same time period as used to produce the DCF study or a time period as close as possible to that time period.[507] Accordingly, we adopt the use of the 30-year U.S. Treasury average historical bond yield over a six-month period corresponding as closely as possible to the six-month financial study period as the risk-free rate.

2. Expected Market Return

a. Background

239. As described above, in the CAPM model, the market risk premium is calculated by subtracting the risk-free rate from the expected market return. The expected market return can be estimated either using a backward-looking approach based upon realized

market returns during a historical period, a forward-looking approach applying the DCF model to a representative market index, such as the S&P 500, or a survey of academics and investment professionals.[508]

240. In Order No. 551, the Commission affirmed the Presiding Judge's findings that the MISO TOs' witness, Dr. Avera, properly calculated a forward-looking expected market return, using a one-step DCF analysis of the dividend-paying companies in the S&P 500. The Commission found that Dr. Avera's use of an average of IBES and *Value Line* short-term growth projections as his short-term growth projection and his decision to not include a long term growth projection were acceptable. The Commission stated that, while it has found that *Value Line*'s growth rate estimates are not acceptable for purposes of the two-step DCF model, the Commission has nevertheless found that *Value Line* is a valid source of general financial data.[509] In his CAPM analysis, Dr. Avera uses the *Value Line* data in conjunction with IBES data and both are averaged over a 400-company data set. The Commission held that

> this use of growth rate data is fundamentally different from how growth rate data is used in the DCF model, because it is intended to provide a less precise cost of equity estimate than the DCF model. Although we require more precision from our DCF model—as the primary financial model that we use . . . to determine public utility ROEs—that same degree of precision is less essential in the CAPM analysis because that analysis is but one of multiple pieces of evidence corroborating the results of our DCF analysis.[510]

Furthermore, the Commission stated that no party demonstrated that reliance on IBES growth rate estimates alone would produce a materially different CAPM result.

241. The Commission also found that a long-term growth component is not required in the DCF study when developing a market risk premium for a CAPM analysis.[511] The Commission stated that "the rationale for requiring a two-step DCF methodology that incorporates a long-term growth rate input when conducting a DCF study on a specific group of public utilities does not necessarily apply when conducting a DCF study of the

---

[508] Morin at 155-162.

[509] Opinion No. 551, 156 FERC ¶ 61,234 at P 169.

[510] *Id*.

[511] *Id.* P 170.

companies in the S&P 500."[512] Further, over protests from parties that MISO TOs did not use the S&P 500, the Commission explained that MISO TOs selected every dividend-paying stock included in the S&P 500, totaling approximately 400 companies, and that each company selected had a high market capitalization at that time. The Commission determined that, consistent with Opinion No. 531-B, the resulting DCF study of the approximately 400 dividend-paying stocks need not include a two-step DCF methodology that incorporates a long-term growth rate input.[513]

242. In the Second Complaint proceeding, the Presiding Judge in his initial decision, issued before Opinion No. 551, held that MISO TOs erred in using both IBES and *Value Line* short-term growth projections in the DCF analysis of the dividend paying companies in the S&P 500. The Presiding Judge found that, because the Commission does not permit use of *Value Line* growth projections in its regular DCF analyses of public utility and pipeline proxy groups, those growth projections also should not be used as part of the DCF analysis of the dividend paying companies in the S&P 500 for purposes of a CAPM analysis.[514] However, the Presiding Judge did, consistent with Opinion Nos. 531 and 551, find that Dr. Avera properly used a one-step DCF analysis for this purpose.

b. MISO TOs

243. MISO TOs support the Commission's holdings in Opinion No. 551 concerning the DCF analysis of the dividend paying members of the S&P 500 for purposes of determining the CAPM market risk premium. They argue that the Commission properly approved use of an average of *Value Line* and IBES short-term growth projections. MISO TOs state that in Opinion No. 551 the Commission found that "*Value Line* is a valid source of general financial data" and that the "use of growth rate data [in the CAPM] is fundamentally different from how growth rate data is used in our DCF model."[515] MISO TOs argue that Trial Staff does not confront this finding, but instead raises generalized arguments that do not invalidate the reliability of *Value Line*'s growth rate estimates. MISO TOs assert that the Commission has not ruled out consideration of *Value Line* in any and all contexts. MISO TOs add that Trial Staff's claim that IBES growth rates are updated more frequently than *Value Line*'s lacks any empirical support, and in any event, there is no evidence that the frequency of updates has any bearing on

[512] *Id.* (citing Opinion No. 531-B, 150 FERC ¶ 61,165 at P 113).

investor reliance on either IBES or *Value Line*.[516] MISO TOs conclude that the Commission should continue to allow the use of *Value Line* data in CAPM analyses.

244. MISO TOs also support the Commission's determination in Order No. 551 to use a single stage DCF model to develop the market risk premium for the CAPM analysis, noting that the Commission has already twice rejected CAPs and other parties' arguments that the two-step DCF is required.[517] According to MISO TOs, it is appropriate to use a single stage DCF to evaluate the S&P 500 Index because the "growth rates used in the MISO TOs' CAPM studies are representative of the consensus expectations for the dividend paying firms in the S&P 500 Index *as a whole*."[518] Mr. McKenzie asserts that concerns about the sustainability of such growth rates for a single firm miss the point because the growth rate represents the weighted average of investors' expectations for the dividend paying firms in the S&P 500 Index, not a growth rate for a single firm that is assumed to be constant in perpetuity. MISO TOs' witness Mr. McKenzie states that the S&P 500 includes a broad sample of corporations from widely varied and distinct industries. He states that growth expectations for some firms fall below expected trends in GDP, while projections for other firms are more optimistic. He also points out that the composition of the S&P 500 is not static. As a result, formerly successful firms are supplanted by new firms with potential for high growth, for example Sears is supplanted by Amazon or Blockbuster by Netflix.[519]

245. Mr. McKenzie also asserts that academic research supports the use of a single-step DCF model when performing a DCF analysis of the S&P 500.[520] For example, Mr. McKenzie points out that in *Estimating Shareholder Risk Premia*, Harris and Marston estimate the market-required rate of return by performing a DCF analysis of the

Harris, *Risk and Return: A Revisit Using Expected Returns*, Fin. Rev., Feb. 1993); MISO TOs Reply Br. (II), App. 2 at 23-25 (citing same).

dividend paying companies in the S&P 500. Consistent with the MISO TOs' CAPM approach, Harris and Marston state that "[t]he mean value of the individual analysts' forecasts of five-year growth rates in [earnings per share] will be used as a proxy for g in the DCF model."[521] In addition, Mr. McKenzie points out that Harris and Marston state that "[t]he five-year horizon is the longest horizon over which such forecasts are available from IBES and often is the longest horizon used by analysts."[522] Moreover, Harris and Marston emphasize that their use of a one-step DCF analysis to determine the market-required rate of return "is applied to portfolios of stocks [i.e., the S&P 500], rather than to individual securities, since future growth patterns may be expected to have drastic changes for some specific securities."[523]

246. MISO TOs state that the DCF analysis used to determine an input into the CAPM need not mimic the DCF model used to yield ROE estimates for individual public utilities. "It is a feature . . . that the CAPM and the Commission's DCF rely on different approaches to estimate investors' expected return on equity."[524] They state that reliance on the one-step DCF is consistent with the Briefing Order's approach reducing the risk of misidentifying the ROE through the use of multiple models. Finally, MISO TOs argue that CAPs have not provided any reason for the Commission to revisit its findings on this matter.[525]

c. CAPs

247. In their request for rehearing of Opinion No. 551, brief on exceptions to the Initial Decision in the Second Complaint proceeding, and briefs in response to the Briefing Order, CAPs assert that the Commission's two-step DCF methodology is required to accurately calculate the market risk premium of the CAPM,[526] and assert the MISO TOs'

[526] CAPs Initial Br (I) at 30-31; CAPs Initial Br. (II) at 30-31.

CAPM study improperly used the one-step DCF.[527] CAPs assert that including only short-term growth rates in this DCF calculation implies that such growth will continue in perpetuity, and assumes that a company can grow faster than the economy for an indefinite period of time.[528] They also comment that such an assumption is both unrealistic and inconsistent with the Commission's prior determinations.[529] CAPs assert that failure to include a second-stage growth rate in the CAPM portfolio DCF calculation runs counter to economic logic.[530]

248. In their request for rehearing of Opinion No. 551, CAPs assert that the record in the First Complaint proceeding shows that the investment community expects corporate earnings growth to track GDP growth.[531] For example, they cite Pacific Investment Management Company (PIMCO's) "Asset Allocation Secular Outlook 2015," in which PIMCO projects a 10-year return on U.S. equities of 4.5 percent.[532] They point out that this is well below the 11.3 percent market return estimated by the MISO TOs' one-step DCF analysis of the dividend paying members of the S&P 500 in the MISO TOs' CAPM study in the First Complaint proceeding. CAPs also observe that PIMCO states that its estimate of "[e]xpected earnings growth is based on per capita real GDP growth estimates."[533] CAPs also state that the PIMCO report calculates a forward-looking equity risk premium of 3.9 percent by comparing the projected 10 year return of the S&P 500 to

[533] *Id*. (citing Ex. S-11 at 7).

inflation protected 10-year treasury bonds. CAPs state that this is less than half the 8.6 percent equity risk premium calculated by the MISO TOs.[534]

249. In addition to the PIMCO report, CAPs state that the American Appraisal Risk Premium Quarterly calculated a forward-looking risk premium of 6.0 percent, and Duff & Phelps calculated a forward-looking risk premium of 5.0 percent.[535] Also, according to CAPs, *Value Line* estimated "that the required equity premium above the yield on ten-year bonds in order to induce investment in corporate equity was about 5.5 percent."[536]

250. CAPs assert that these facts demonstrate that the 11.3 percent market return calculated by MISO TOs using the one-step DCF method, without any long-term GDP growth projection, is "way out of line with forward-looking (and historical) investment-community sources."[537] CAPs conclude that a two-step DCF method must be used to calculate the market return. They state that using a two-step DCF analysis of the dividend paying members of the S&P 500 in the First Complaint proceeding would lower the equity risk premium from 8.6 percent to 7.1 percent and lower the midpoint of the CAPM zone of reasonableness to 8.89 percent.[538] CAPs make similar arguments, relying on similar evidence, in their Brief on Exceptions to the Initial Decision in the Second Complaint proceeding.[539]

251. CAPs challenge MISO TOs' reliance upon three academic papers published between 1986 and 1993 that applied a one-stage DCF in constructing their CAPM models.[540] CAPs explain that these studies estimated that the risk premium of a diversified equity portfolio over long-term U.S. bonds averaged well under seven percent,

Harris, *Risk and Return: A Revisit Using Expected Returns*, Fin. Rev., Feb. 1993.

less than the 8.6 percent and 8.2 percent that Mr. McKenzie applied in his CAPMs for the First Complaint and Second Complaint study periods. CAPs also assert that these studies are not relevant here because they tested whether the cost of equity varied over time and across company risks, not the absolute value of the cost of equity.[541] CAPs posit that the authors did not use a two-stage DCF methodology because long-term growth "was tangential to what they sought to measure."[542]

252. CAPs disagree with Mr. McKenzie's argument that investors can expect long-term dividend growth that exceeds the growth rate of the U.S. economy because the composition of the S&P 500 Index is not static and firms with high growth potential replace firms with low growth potential.[543] CAPs argue that regardless of index composition, the equity market as a whole cannot sustainably grow faster than the economy as a whole. Finally, CAPs assert that the S&P 500 Index does not grow through the substitution of firms, but instead when there is a substitution of firms, the index value is held constant.[544]

253. CAPs contest Mr. McKenzie's argument that the portfolio return must exceed the 9.29 percent that Opinion No. 551 found insufficient for electric utilities.[545] CAPs argue that because Opinion No. 551 is under reconsideration by the Commission, it should not be relied upon here. Further, CAPs argue that the decision in Opinion No. 551 to place the base ROE above the DCF midpoint was based on the fact that CAPM results, if premised on an unsustainable equity portfolio return, pointed above the DCF midpoint. CAPs assert that relying upon that decision to require an equity portfolio return above the DCF midpoint would be untenably circular. Also, they argue that the appropriate comparison would be between the average (or median) composite earnings growth rate used in the utility DCF and the composite earnings growth rate used in the CAPM's portfolio DCF. CAPs explain that the earnings growth rate for the CAPM equity portfolio is substantially higher than that of the utility proxies. CAPs' witness, Mr. Gorman recommended a modification of the DCF-based CAPM portfolio return, with an average composite earnings growth rate of 7.4 percent. CAPs argue that the

[545] CAPs Reply Br. (I) at 20 (citing MISO TOs, McKenzie Reply Aff., Docket No. EL11-66, at 31 (filed Mar. 8, 2019)); CAPs Reply Br. (II) at 36 (citing same).

earnings growth rate for the CAPM equity portfolio is substantially higher than that of the utility proxies, as expected given the utility proxies' low risk. And, they argue that this difference contradicts the MISO TOs' claim that the growth rate obtained by applying a second-stage growth constraint to portfolio earnings is too low when compared to utility stock financial data.[546]

254. CAPs disagree with Mr. McKenzie's assertion that other regulators rely on a one-stage DCF to find CAPM portfolio returns.[547] They comment that Mr. McKenzie's assertion relied upon testimony that was filed 18 years ago in a state commission proceeding. According to CAPs, in the *Coakley* Briefing Order proceeding, a survey of electric transmission ROE regulation in Australia, Canada, the United Kingdom and Europe showed that when regulators apply CAPM models, they use equity market returns that are typically about 4.75 percent to 6.0 percent above the risk-free governmental security yield.[548]

255. In their request for rehearing of Opinion No. 551, CAPs state that they are not seeking rehearing of the Commission's acceptance of MISO TOs' use of an average of IBES and *Value Line* growth projections as the short-term growth projection in their DCF analysis of the dividend paying members of the S&P 500 in the First Complaint proceeding. CAPs agree with Opinion No. 551's finding that the record in the First Complaint proceeding is insufficient to show that removal of the *Value Line* growth projection would materially affect the results of the MISO TOs' CAPM analysis. However, CAPs state that they support the Presiding Judge's decision in the Second Complaint proceeding to eliminate the *Value Line* growth projection and use only IBES as the short-term growth projection.[549]

d. Trial Staff

256. Trial Staff argues that the DCF component of CAPM should be calculated following the Commission's two-step DCF methodology.[550] Trial Staff asserts that use of the one-step DCF model implies that a company can grow faster than the economy for an indefinite period of time.[551] Trial Staff also comments that such an assumption is both unrealistic and inconsistent with the Commission's prior determinations.[552]

257. In its briefs in both the First and Second Complaint proceedings, Trial Staff also argues that only IBES growth rates should be used as the short-term growth projection in the DCF model employed in a CAPM analysis.[553] Trial Staff states that *Value Line* does not represent consensus earnings growth estimates, but rather the estimate of a single analyst.[554] Trial Staff alleges that IBES growth rates are updated more frequently. Trial Staff's witness, Mr. Keyton, included in the workpapers attached to his affidavit in the First Complaint proceeding the IBES growth projections for the dividend-paying members of the S&P 500 necessary for calculating a short-term growth projection using only IBES growth projections.[555]

258. Trial Staff proposes to remove companies from the CAPM whose short-term IBES growth rates or composite growth rates are less than or equal to zero, and those greater than or equal to 20 percent, as supported by Dr. Morin.[556] Trial Staff argues that the Commission has previously found that zero or negative growth rates are either

economically illogical or unsustainable.[557] Trial Staff states that, similarly, the Commission has also screened for high-end short-term growth rates.[558] Trial Staff also reasons that employing growth rate screens in both the DCF and the CAPM provides for consistency among methods.[559]

e. Other Parties

259. LPSC argues that the Commission should adopt the two-step DCF to determine the CAPM's market risk premium. They argue that MISO TOs' one-step approach "inflated the yield compared to what would be developed using the two-step approach."[560] LPSC continues that it is inconsistent to match the short-term DCF forecast with the yield on long-term bonds.[561] RPGI argues that the 8.6 percent market risk premium component of the CAPM adopted in the Briefing Order exceeds long-term risk premiums by approximately 6 percent.[562]

f. Commission Determination

260. We continue to find reasonable the MISO TOs' proposal to estimate the CAPM expected market return using a forward-looking approach, based on applying the DCF model to the dividend paying members of the S&P 500. Using a DCF analysis of the dividend-paying members of the S&P 500 is a well-recognized method of estimating the expected market return for purposes of the CAPM model.[563] The DCF analysis must be limited to the dividend-paying members of the S&P 500, rather than using all companies in the S&P 500, because a DCF analysis can only be performed on companies that pay dividends.

[563] Morin at 160.

261. No participant opposes the use of a DCF analysis of the dividend-paying members of the S&P 500 to estimate the expected market return. However, CAPS, LPSC, and Trial Staff raise several issues with respect to the growth projection used by MISO TOs in their CAPM analyses in both complaint proceedings. These issues include: (1) the use of the one-step DCF model without any long-term growth projection based on GDP; (2) whether S&P 500 companies included in the DCF analysis should be screened for unrealistic growth projections; and (3) the use of an average of IBES and *Value Line* growth projections as the short-term growth projection. For the reasons discussed below, we are not persuaded by CAPs and Trial Staff's arguments in support of a two-step DCF analysis to calculate the CAPM expected market return. However, we agree with CAPs that the *Value Line* growth projections should not be included in the DCF analysis.

262. Financial research supports using a one-step DCF analysis of the dividend paying members of the S&P 500 when determining a forward looking expected market return as part of the CAPM model. For example, in *Estimating Shareholder Risk Premia*, Harris and Marston present estimates of shareholder required rates of return and risk premiums using forward-looking analysts' growth forecasts. They state that "a 'market' required rate of return is calculated using each dividend paying stock in the S&P 500 for which data is available."[564] In describing this process, the authors state, "This expectational approach employs the [DCF model] in which a consensus measure of financial analysts' forecasts . . . of earnings is used as a proxy for investor expectations."[565] They continue that "[t]he mean value of individual analysts' forecasts of five-year growth rate in [earnings per share (EPS)] will be used as a proxy for *g* in the DCF model," and state that the "five-year horizon is the longest horizon over which such forecasts are available from IBES and often is the longest horizon used by analysts."[566] A second study cited by MISO TOs cautions against "the introduction of *ad hoc* assumptions about future growth" beyond the five-year time-frame used by IBES.[567] That study also emphasizes, "[i]mportantly, however, the approach is applied to portfolios of stocks rather than to individual securities, since future growth patterns may be expected to have drastic changes for some specific securities."[568] Thus, these studies support Opinion No. 531-B's holding that a long-term growth projection is not needed when performing a

[568] *Id*.

DCF analysis of a portfolio of stocks, despite the fact such a growth projection is needed when doing a DCF analysis of a single utility.[569] We note that the third study also relies solely upon analysts' five-year IBES growth forecasts.[570]

263. As the Commission found in Opinion No. 531-B, we continue to find that the rationale for incorporating a long-term growth rate estimate in conducting a two-step DCF analysis of a specific group of utilities does not apply when conducting a DCF study of the companies in the S&P 500.[571] The Commission's rationale for incorporating a long-term growth rate estimate in DCF analyses for public utilities is that it is often unrealistic and unsustainable for high short-term growth rates to continue in perpetuity for a particular utility or group of utilities.[572] The purpose of the DCF analysis in the CAPM model differs from the purpose of using the DCF analysis to directly estimate a utility's cost of equity. The purpose of the DCF analysis in the CAPM model is to determine the "required return on the overall market" that will be used to determine the market risk premium—which is based on the difference between the "required return on the overall market" and the risk-free rate.[573]

264. As described above, the required return on the overall market is determined by conducting a DCF study of "a representative market index, such as the Standard & Poor's 500 Index."[574] We find that there are at least two reasons why it is not necessary to include a long-term growth projection based on GDP in a DCF analysis of the dividend paying companies in the S&P 500. First, the S&P 500 is regularly updated to ensure, among other things, that it only includes companies with high market capitalization[575] and that it remain representative of the industries in the economy of the United States. Although the value of the S&P 500 index is held constant when one company is replaced

[573] *See id.* P 113.

[574] Morin at 159.

[575] Currently, in order to be included in the S&P 500, a company must have a market capitalization of at least $8.2 billion, calculated by multiplying outstanding shares of stock by stock price.

by another as CAPs state,[576] the updating of the companies in the index has the general effect of substituting companies with declining stock values and market capitalization with companies with growing stock values and market capitalization. As Mr. McKenzie testified for the MISO TOs, "As a result formerly successful firms are supplanted by new firms with potential for high growth."[577] CAPs contest this reasoning on the ground that, although the companies in the S&P 500 are updated, the MISO TOs performed a DCF analysis of a specific group of about 400 companies, and there is no reason to expect that a group of stocks "will enjoy long-term growth at short-term rates without being affected by changes in the economy as a whole."[578] This argument misses the point. Although the MISO TOs' applied their DCF analysis to the specific companies who happened to be the dividend paying members of the S&P 500 at that point in time, the purpose of the analysis was to determine a required return on the overall market as represented by an investment in the S&P 500, which is regularly updated. Thus, it is reasonable for the inputs used in the DCF analysis, including the growth projections, to be selected based on the assumption that the subject companies will be updated in the manner described above.

265. Second, we find that, because the dividend paying members of the S&P 500 constitute a large portfolio of stocks, they include companies at all stages of growth. Some are relatively young companies with new products that have not yet fully penetrated the markets and thus are likely to have quite high IBES growth rates. However, other companies are mature companies with limited growth potential which are likely to have quite low IBES growth rates. The inclusion of the IBES growth rates of such mature companies in the overall average IBES growth rate of all the dividend paying members of the S&P 500 performs the same role as the inclusion of the long-term GDP growth rate in the DCF analysis of a single utility: it reflects the fact that companies cannot maintain indefinitely the high growth rates of their early years. Thus, using the IBES growth rates of all dividend paying S&P 500 companies, without using a long-term GDP growth projection can reasonably reflect investors' consensus expectations about the S&P 500 Index as a whole.

266. In summary, while it may be unreasonable to expect an individual company to sustain high short-term growth rates in perpetuity, the same cannot be said for a broad representative market index that is regularly updated to include new companies. Put differently, a portfolio of companies behaves differently than an individual company. Accordingly, the rationale for incorporating a long-term growth rate estimate in conducting a two-step DCF analysis of a specific utility or group of utilities for purposes of directly estimating cost of equity does not apply to the DCF analysis of a broad

[578] CAPs Rehearing Request at 51.

representative market index with a wide variety of companies that is regularly updated to include new companies for purposes of determining the required return to the overall market.

267. We also accept Trial Staff's proposal to screen from the CAPM analysis S&P 500 companies with growth rates that are negative or in excess of 20 percent. Such screening is consistent with the elimination of outliers elsewhere in our ROE methodology. Such high or low growth rates are highly unsustainable and non-representative of the growth rates of the electric utilities in the proxy groups. For instance, in the Second Complaint proceeding, Helmerich and Payne featured an IBES growth rate of negative 42 percent while Cabot Oil and Gas featured an IBES growth rate of 48.1 percent.[579] Neither growth rate is sustainable for the intermediate, much less long, term and should thus be eliminated from the group of S&P 500 companies examined.

268. Evidence indicates that the use of this growth rate screen is appropriate in the CAPM analysis. For example, in *Principles of Corporate Finance*, Richard A. Brealey and Stewart C. Myers explain that "No firm can continue growing at 20 percent per year forever, except possibly under extreme inflationary conditions."[580] Dr. Morin also separately states that growth rates less than or equal to zero and greater than or equal to 20 percent should be removed from an analysis.[581] In addition, in conducting a DCF analysis of the dividend-paying S&P 500 members to estimate *ex ante* expected returns in the CAPM analysis, Harris, et al. screened out companies "if the standard deviation around the mean [analyst] forecast exceeds 20%."[582] While this screen differs from the one Trial Staff has proposed in this proceeding, it nonetheless indicates that it is appropriate to screen out companies when conducting a DCF analysis of the dividend paying S&P 500 members in the CAPM analysis. The CAPM growth rate screen that is in record evidence before us is the screen proposed by Trial Staff and there is sufficient support to indicate that it will exclude companies with growth rates that are unsustainable. Accordingly, we find that S&P 500 companies with growth rates that are negative or in excess of 20 percent should be excluded from the CAPM analysis because their growth rates are not representative of sustainable growth rates.

[579] Trial Staff Reply Br. (I) at App. C.

[580] Richard A. Brealey and Stewart C. Myers, *Principles of Corporate Finance* 68 (7th ed. 2003).

[581] Trial Staff Initial Br. (I); Keyton Aff. (I) at 33 (citing Morin at 165).

[582] Robert S. Harris et al., *Ex Ante Cost of Equity Estimates of S&P 500 Firms: The Choice between Global and Domestic CAPM*, Fin. Mgmt., Autumn 2003, at 5.

269. CAPs assert that the Harris and Marston articles cited by the MISO TOs do not support use of the one-step DCF model to determine the market risk premium in these two proceedings. CAPs point out that those studies estimated that the risk premium of a diversified equity portfolio over long-term U.S. bonds averaged well under seven percent,[583] less than the 8.6 percent and 8.2 percent market risk premiums that the MISO TOs used in their CAPM analyses for the First Complaint and Second Complaint study periods. Based upon our holdings in this order, we calculate market risk premiums in the First and Second Complaint proceedings of 9.12 percent and 8.85 percent respectively. The fact that the absolute market risk premiums calculated in the Harris and Marston articles for varying periods between 1982 and 1991 are lower than those we calculate based on financial information for the first and second halves of 2015 does not undercut our reliance on the Harris and Marston articles. In *Estimating Shareholder Risk Premia Using Analysts' Growth Forecasts*, Harris and Marston found that the "market risk premium varies over time. In particular, the equity market premium over government bonds is higher in low interest rate environments."[584] Government bond interest rates were significantly lower during 2015 than during the 1982 to 1991 period.[585] Therefore, the fact that we have found higher market risk premiums of 9.12 percent and 8.85 percent during the first and second halves of 2015, rather than the less than 7.0 percent risk premiums Harris and Marston found during 1982 to 1991 is consistent with the Harris and Marston articles. Indeed, Dr. Morin cites a subsequent 2003 article by Harris, Marston, Mishra, and O'Brien[586] in which they estimate the market risk premium rising to just above 9 percent in 1998, using the same methodology as in the earlier Harris and Marston articles cited by the MISO TOs.

270. CAPs also assert that the Harris and Marston articles are not relevant here because they tested whether the cost of equity varied over time and across company risks, not the

---

[583] The first article estimated 1982 average annual risk premiums of 6.16 percent. The second article estimated 1982-1991 average annual risk premiums of 6.47 percent, and the third article estimated 1982-1987 average annual premiums of 5.66 percent.

[585] *See, e.g.* St. Louis Federal Reserve, Treasury Constant Maturity Rate Data, https://fred.stlouisfed.org/categories/115.

[586] Morin at 160 (citing Robert S. Harris et al., *Ex Ante Cost of Equity Estimates of S&P 500 Firms: The Choice between Global and Domestic CAPM*, Fin. Mgmt., Autumn 2003, at 51-66).

absolute value of the cost of equity.[587] CAPs posit that the authors did not use a two-stage DCF because long-term growth "was tangential to what they sought to measure."[588] However, as discussed above, in *Using Analysts' Growth Forecasts to Estimate Shareholder Required Rates of Return*, Harris expressly supported using the one-step DCF model when performing a DCF analysis of a portfolio of stocks, such as the S&P 500, as opposed to individual securities. The Harris and Marston articles discuss how the costs of equity calculated by their studies varied over time and across company risks for the purpose of confirming the accuracy of their analyses using a one-step DCF study of the dividend paying members of the S&P 500, not as a separate inquiry.

271. We are not persuaded by Trial Staff's arguments that Dr. Morin supports the two-step DCF analysis for a market risk premium used in a CAPM. In particular, Trial Staff argues that Dr. Morin supports the underlying theory of incorporating a long-term growth estimate in the DCF methodology, citing his statement that "eventually all company growth rates, especially utility service growth rates, converge to a level consistent with the growth rate of the aggregate economy."[589] However, Dr. Morin made this statement in the context of discussing the DCF analysis of a single company or utility, not the market risk premium used in a CAPM. As discussed above, in discussing the application of the DCF model to a representative market index for purposes of estimating a prospective market risk premium for the CAPM, Dr. Morin cited the studies by Marris and Marston and the study by Harris, Marston, Mishra, and O'Brien discussed above.[590]

272. Finally, in their request for rehearing of Opinion No. 551, CAPs contend that the 8.6 percent market risk premium calculated by MISO TOs in the First Complaint proceeding using a one-step DCF analysis to estimate the expected market return is substantially higher than forward-looking market risk premiums calculated by other financial analysts during the same time period. They cite a PIMCO report calculating a forward-looking equity risk premium of 3.9 percent calculated by comparing the projected 10-year return of the S&P 500 to inflation protected 10-year treasury bonds. They also state that the American Appraisal Risk Premium Quarterly calculated a forward-looking risk premium of 6.0 percent, Duff & Phelps calculated a forward-looking risk premium of 5.0 percent, and *Value Line* estimated that the required equity

---

[587] CAPs Reply Br. (I) at 17-18; CAPs Reply Br. (II) at 33-34.

[589] Morin at 308.

[590] *Id.* at 159-164.

premium above the yield on ten-year bonds in order to induce investment in corporate equity was about 5.5 percent.

273. There are a variety of views as to the reasonable market risk premium to include in a CAPM study and what method to use to determine that premium, as is clear from Dr. Morin's summary of academic studies of both historical and prospective market risk premiums. Dr. Morin concludes that "Faced with this myriad, and often conflicting, evidence on the magnitude of the risk premium, a regulator might very well be confused about the correct market risk premium."[591] Although the risk premiums we approve in this order exceed those of certain other analyses, we find that their determination is analytically sound and supported by the evidence in this proceeding. We find, on balance, that the MISO TOs' use of a one-step DCF analysis of the dividend paying members of the S&P 500, in conjunction with Trial Staff's outlier test, to determine the expected market return is reasonable.

274. We now turn to the issue of what short-term growth projection sources to use in the one-step DCF analysis. For the reasons discussed below, we find that only the IBES three to five year consensus growth projections should be used. Thus, we find that MISO TOs erred in averaging the IBES growth projections with single analyst *Value Line* growth projections. This determination is consistent with our determination above to utilize IBES data for the short-term growth projection in the two-step DCF model. In that determination, we held that the record suggests that IBES provides more stable and robust data than *Value Line*, because, among other reasons, the IBES growth projections are consensus projections generally based on projections from a number of independent analysts and brokerage and investment firms, whereas the *Value Line* growth projections are by a single analyst.[592] Moreover, the Commission has rejected proposals to average IBES short-term growth projections with *Value Line* growth estimates, finding that *Value Line* projections are "projections from a single source" and their use would "dilute the industry consensus reflected in the IBES data."[593]

275. In addition, the Marston and Harris articles cited above in support of using a one-step DCF analysis of the dividend paying members of the S&P 500 as part of determining the market risk premium endorse the use of IBES projections as the single growth projection in that analysis. For example, Harris and Marston concluded in *Estimating Shareholder Risk Premia Using Analysts' Growth Forecasts* that the use of IBES data

---

[591] *Id.* at 163.

[592] *See, e.g.*, *supra* PP 125-127.

[593] *Nw. Pipeline Corp.*, 87 FERC at 62,058-59; *Enbridge Pipelines (KPC)*, 100 FERC ¶ 61,260 at P 234.

"offers a straightforward and powerful aid to establishing required rates of return either for corporate investment decisions or in the regulatory arena." [594]

276. As MISO TOs point out, Opinion No. 551 accepted their proposal to average IBES and *Value Line* growth projections for purposes of the DCF analysis of the dividend paying members of the S&P 500 as part of implementing the CAPM model. However, in doing so, the Commission explained, "Although we require more precision from our DCF model—as the primary financial model that we use, and have used for decades, to determine public utility ROEs—that same degree of precision is less essential in the CAPM analysis because that analysis is but one of multiple pieces of evidence corroborating the results of our DCF analysis."[595] In this order, by contrast, we find that it is appropriate to give equal weight to the DCF and CAPM models in setting just and reasonable ROEs. Accordingly, the CAPM model must be implemented with the same degree of precision as the DCF model. Therefore, having found that use of the IBES growth projections is preferable to the *Value Line* growth projections, we require the sole use of IBES growth projections for the DCF component of the CAPM analysis.

D. Betas and Size Premium

1. CAPs

277. In their initial briefs, CAPs argue that Dr. Avera's CAPM approach improperly includes a size premium adjustment to the base CAPM ROE range. CAPs contend that Dr. Avera's application of the size premium adjustment produces an inflated and unreliable CAPM result due to the use of mismatched betas. As explained below, CAPs assert that the betas used in Dr. Avera's base CAPM are different from, and incompatible with, the betas in the size premium adjustment. Thus, CAPs argue that the adjusted CAPM results accurately reflect neither a security's investment risk nor the market-required return on that investment risk level. CAPs assert that, as Mr. Gorman testifies, the CAPM model produces the most reliable results when it does not include a size premium adjustment.[596]

278. CAPs note that in the base CAPM, Dr. Avera relied on *Value Line*'s adjusted betas. CAPs state that *Value Line* measures a "raw" beta based on a regression of the monthly returns of the individual companies, relative to the New York Stock Exchange

---

[594] Robert S. Harris and Felicia C. Marston, *Estimating Shareholder Risk Premia Using Analysts' Growth Forecasts*, Fin. Mgmt., Summer 1992, at 6.

[595] Opinion No. 551, 156 FERC ¶ 61,234 at P 169.

[596] CAPs Initial Br. (I) 31-32; CAPs Initial Br. (II) 31-32.

(NYSE) average, over a five-year period. CAPs note that *Value Line* then adjusts the raw beta for the long-term tendency of beta to converge on the market beta of one over long periods of time. CAPs state that *Value Line*'s adjusted betas represent a raw beta estimate given two-thirds weight and the market beta of one given one-third weight.[597] CAPs also note that *Value Line* publishes its adjusted betas, not its raw betas.[598]

279. CAPs further state Dr. Avera's size premium adjustment relies on Duff & Phelps unadjusted or "raw" betas. CAPs note that Duff & Phelps' raw betas are produced by a regression study of the monthly returns on the stock index that are in excess of a 30-day U.S. Treasury yield over the period 1926 through the most recent period. CAPs state that, unlike *Value Line*, Duff & Phelps does not adjust raw betas for the long-term tendency of betas to converge on the market beta of one over time, and thus, the *Value Line* and Duff & Phelps betas are not measured in the same manner and are incompatible with each other. Additionally, CAPs argue that Duff & Phelps explicitly caution against the use of mismatched betas. CAPs assert that when these two betas are combined, as Dr. Avera has proposed, they do not accurately measure the risk or required return for a security and in fact, inflate the CAPM return estimate.[599]

280. CAPs argue that Mr. Gorman corrects Dr. Avera's CAPM to incorporate raw betas in both the base CAPM analysis and the size adjustment, which makes it evident that the use of mismatched betas inflates the CAPM results. CAPs contend that Mr. Gorman's corrected version of Dr. Avera's base CAPM produces a midpoint value of 8.40 percent and, after applying the size adjustment, a midpoint value of 9.09 percent. Further, CAPs assert that, when a consistent beta methodology is used to measure both the base CAPM and size adjustment, the resulting midpoint of 9.09 percent is reasonably comparable to a base CAPM return using a *Value Line* adjusted beta without a size premium. CAPs argue that the use of unrelated betas involves an apples-and-oranges measurement of risk and return, and therefore the CAPM should not include a size adjustment.[600]

2. Trial Staff

281. Trial Staff witness, Mr. Keyton, supports omitting the size premium adjustment. Trial Staff argues the three most important reasons the size premium adjustment should be removed are: (1) it is a questionable method with conflicting support among academics; (2) the data on which the Commission relied to support a size premium adjustment in Opinion No. 551 contradicts the Commission's goal to use forward-looking methods for developing the cost of equity; and (3) Mr. Keyton's regression analysis determined there is no meaningful relationship between forward-looking DCF results and current market capitalizations.[601] Mr. Keyton also notes that several scholars disagree over the use of a size premium adjustment in numerous studies.[602] Trial Staff also argues that in Opinion No. 551, the size premium adjustment was based on historical (rather than forward-looking) data that shows smaller market capitalization companies earn higher returns than larger market capitalization companies.[603]

282. In reply briefs, Trial Staff agrees with CAPs and LPSC that the size premium adjustment is unsupported and may amount to double counting. Trial Staff agrees with LPSC that there is no empirical evidence suggesting the need for a size premium adjustment.[604]

3. Other Parties

283. LPSC also criticizes the MISO TOs' use of the raw beta for determining the size premium adjustment while using the *Value Line* adjusted beta for the CAPM calculation. LPSC also argues that the stock index used to derive beta should be the same as the index used to determine the required return on equity.[605] LPSC states that in Opinion No. 551, the Commission accepted a CAPM analysis that forecasted equity returns and compared them with current long-term bond yields. LPSC argues that MISO TOs' witness Dr. Avera, however, matched a short-term DCF equity return with long-term Treasury bond yields, contrary to the guidance in *New Regulatory Finance*. LPSC argues MISO TOs applied a beta developed by comparing utility stock volatility with that of the New York Stock Exchange, but then applied that beta to dividend-paying firms in the

[605] LPSC Initial Br. at 8.

S&P 500, which created a mismatch that conflicts with advice in *New Regulatory Finance*.[606]

284. LPSC argues that the MISO TOs' method incorrectly applied a size premium adjustment to increase the return on equity, on the theory that beta does not fully account for risk differences resulting from the size of firms. LPSC argues that no empirical evidence suggesting the need for a size premium adjustment for utilities was cited and it appears that none exists. LPSC argues the empirical evidence in the record, capitalization amounts and DCF results for the proxy group, shows that size is completely unrelated to the required return on equity.[607] LPSC also points to a regression analysis between company size and the DCF-calculated ROEs to argue that the size premium adjustment is inappropriate, citing the lack of apparent relationship between required return and company size.[608]

285. RPGI opposes the incorporation of a size premium adjustment in CAPM calculations and argues it has been shown through empirical studies to be invalid as applied to utilities. RPGI further notes that Mr. Parcell demonstrated in a study comparing the size of a utility with its risk factors, that there is no significant difference and there is no discernible pattern of increase among the risk indicators of publicly-traded electric utilities of different sizes.[609]

4. MISO TOs

286. In reply briefs, MISO TOs argue there is no rational basis for Mr. Gorman's argument that it is inappropriate to use *Value Line*'s adjusted betas in conjunction with size premium adjustments from Duff & Phelps and that his attempt to interject raw betas into the process simply biases his results downward.[610] MISO TOs contend that Duff & Phelps neither recommends a specific source for beta, nor suggests that adjusted betas are incompatible with their size premia adjustments. MISO TOs argue that Duff & Phelps simply observed that, because there can be differences in the methodologies used by alternative reporting services, it is preferable to use the same, consistent source of betas

for all companies included in the analysis.[611] Further, MISO TOs argue that there is no inconsistency between the two betas because the beta values reported by *Value Line* are based on an ordinary least-squares analysis, as are the size premium adjustments reported by Duff & Phelps for the firm size deciles.[612]

287. MISO TOs oppose the "build-up method" presented by Mr. Gorman, which they argue is based on historical risk premiums that have been rejected by the Commission and found to be considerably downward-biased.[613] MISO TOs argue that Mr. Gorman confuses the size premium adjustment required by the CAPM with aspects of the build-up method described in a Duff & Phelps publication and that the CAPM and build-up method are not synonymous and in fact are distinct methods for estimating the cost of equity. MISO TOs contend that the industry risk adjustment Mr. Gorman uses in the context of the build-up method is in lieu of the more precise beta risk measure for each firm in the proxy group that is employed in the CAPM. MISO TOs assert that Mr. Gorman's observation that regulated utility companies' industry risk is lower than companies in other industries does not support the use of a generic industry risk adjustment, as risk differences are already reflected in the CAPM through the use of beta. Further, MISO TOs argue the Commission has already rejected Mr. Gorman's build-up method, as well as the related logical errors underlying his contentions regarding the CAPM size premium adjustment and the Commission should continue to do so.[614]

288. MISO TOs assert the Commission should continue to include a size premium adjustment when applying the CAPM. MISO TOs argue that Duff & Phelps conclude in the publication attached to Mr. Gorman's affidavit that observation of the size effect is consistent with a modification of the pure CAPM, that studies have shown the limitations of beta as a sole measure of risk, and that the size premium adjustment is an empirically

derived correction to the pure CAPM.[615]

289. MISO TOs argue Mr. Parcell and Mr. Keyton incorrectly place significant weight on a 1993 study by Annie Wong that refutes the need for a size premium adjustment when applying the CAPM to a utility. MISO TOs contend that a closer examination of this research reveals that it is largely inconclusive and inconsistent with CAPM and demonstrates no material difference between utilities and industrial firms with respect to size premiums. MISO TOs argue that her study also finds no significant relationship between beta and returns, which contradicts modern portfolio theory and the CAPM.[616]

290. MISO TOs assert that Mr. Parcell's observation that the majority of publicly traded companies are unregulated and operate in industries that are much riskier than the utility industry says nothing at all about the relevance of a size premium adjustment. MISO TOs argue that the fact that the size premia reported by Duff & Phelps was estimated on an industry-by-industry basis provides no basis to ignore the relationship in estimating the cost of equity for utilities. MISO TOs contend that Mr. Gorman concluded that a size premium adjustment for a regulated utility company should only be considered along with recognizing the low-risk nature of the regulated utility industry and that that is exactly the effect of combining *Value Line*'s beta values for the proxy companies with beta adjusted size premiums reported by Duff & Phelps.[617]

291. In response to Mr. Parcell's claims that a comparison of risk measures for utilities of different size demonstrates that there is no need for a size premium adjustment, MISO TOs argue the size premium adjustment is narrowly tailored to address an inability of beta to fully account for the impact of firm size within the CAPM, and the CAPM did not even figure into Mr. Parcell's simplistic comparison.[618]

292. In response to Mr. Keyton's claims that a regression between DCF estimates for the dividend-paying firms in the S&P 500 index and market capitalization demonstrates there is no need for a size premium adjustment, MISO TOs argue that the size premium does not relate to cost of equity estimates computed using the DCF model, which were the basis for Mr. Keyton's regression. Rather, MISO TOs assert that they are solely intended to address an inability of beta to account for the impact of firm size, and beta did

---

not even figure into Mr. Keyton's regression. MISO TOs argue that Trial Staff's calculations have nothing whatsoever to do with the CAPM and say nothing about the relevance of the size premium adjustment.[619] MISO TOs assert that these observations apply equally to the LPSC's regression between DCF estimates and size. Further, MISO TOs contend that the size premium adjustment relates to beta, not the DCF model, and the fact that DCF estimates may not be correlated with market capitalization is unrelated to the size premium adjustment, as applied in the CAPM.[620]

293. MISO TOs argue that Mr. Parcell's historic premium of 6.0 percent is too low and that he incorrectly calculated the equity risk premium using the total return for Duff & Phelps' long-term government bond series. MISO TOs assert that, as a result, his historical equity risk premiums fall far below what his own source reports and Mr. Parcell's CAPM analysis is further compromised. MISO TOs argue that using only the arithmetic mean income component of the long-term government bond return provides a more reliable estimate of the expected risk premium because investors do not anticipate capital losses for a risk-free security.[621]

294. In response to LPSC's arguments that *Value Line* betas cannot be applied to firms in the S&P 500 due to a mismatch, MISO TOs contend that application of the DCF approach to the dividend-paying firms in the S&P 500 Index provides a sound proxy for investors' expected return on the market. MISO TOs assert that similarly, reference to *Value Line*'s published beta values also offer an objective proxy for an unobservable forward-looking beta and that there is no mismatch.[622]

295. MISO TOs argue that LPSC wrongly contends that the size premium adjustment is predicated on a finding that utilities are generally smaller than the companies in the S&P 500 and that size premium adjustments correspond to market capitalization across the spectrum of publicly traded firms.[623]

5. Commission Determination

296. With regard to MISO TOs' size premium adjustment, the Commission stated in Opinion No. 531-B that the use of such an adjustment was "a generally accepted approach to CAPM analyses."[624] We continue to find this to be the case.

297. CAPs argue that it is inconsistent to apply the Ibbotson size adjustment, which is derived based on raw betas, to a CAPM analysis that uses adjusted betas. We continue to find that the *Value Line* adjusted betas are reasonable for use in the CAPM. There is substantial evidence in the record that investors rely on *Value Line* betas.[625] No party objects to use of adjusted betas, which Dr. Morin supports, stating that "the regression tendency of betas to converge to 1.0 over time is very well known and discussed in the financial literature."[626] We acknowledge that there is imperfect correspondence between the size premia being developed with different betas. Nonetheless, we conclude that the size premium adjustments improve the accuracy of the CAPM results and cause it to better correspond to the costs of capital estimates employed by investors.

298. We also find that the application of size premium adjustments based on the NYSE to dividend-paying members of the S&P 500 is acceptable. The use of the NYSE for the size premium calculations enabled Ibbotson to develop a rich data set. There is no evidence that the application to a CAPM methodology using S&P 500 growth rates and dividend yields with a size premium adjustment based on NYSE data is problematic. There is no evidence that companies in the S&P 500 feature different risk premiums than those in the NYSE. Furthermore, the betas and size premia are applied to the calculated cost of equity of individual utilities in the proxy group, regardless of what stock index they may be found in.

299. We find that, though not uniform, a sufficient amount of academic literature exists to indicate that many investors rely on the size premia. Dr. Morin discusses the "size effect" finding that:

> Investment risk increases as company size diminishes, all else remaining constant. Small companies have very different returns than large ones, and on average they have been

[626] Morin at 72.

> higher. The greater risk of small stocks does not fully account for their higher returns over many historical periods.[627]

300. Dr. Morin also avers that the higher returns required by investors in small companies than the CAPM would project is well documented in the financial literature.[628] Specifically, Dr. Morin cites to work by Rolf Banz showing that from 1936 to 1975 stocks of small firms earned higher risk-adjusted abnormal returns than those of large firms.[629] Eleswarapu Reinganum found a similar dynamic, looking at the relationship between firm size and PE ratio.[630] Ibbotson Associates, now under Duff & Phelps, has long published a series quantifying this effect for various sizes of firms, pulling from data going back to 1926.

301. We also agree with the Presiding Judge that the financial literature arguing against the continued existence of the size premium or its applicability to utilities is unavailing. Specifically, we do not find persuasive the article cited by Professor Annie Wong that utilities are less risky than industrial stocks and feature betas that do not decrease with firm size.[631] Even if true, which the MISO TOs aver is not the case, the argument in favor of a size premium adjustment is that there are differences in risk and required returns between small and large companies that are not captured in the betas. Consequently, lack of substantial variance in the betas between large and small companies is not indicative that they feature differences in risk and corresponding returns that are the basis for the size premium adjustment. The subsequent endorsement of this phenomenon, by Dr. Morin, lends credence to the view that Professor Wong's conclusions are no longer state of the art. Furthermore, an article reconsiders Professor Wong's evidence and concludes that "new information… indicates that there is a small

---

firm effect in the utility sector."[632] A more recent article published in *Business Valuation Review* found that "none of the academic papers throughout the last three decades have qualified the [size premium] as a statistical error."[633] Finally, a 2019 National Association of Certified Valuators and Analysts publication supports the use of the size premium adjustment to the CAPM.[634] We thus find that, based on the evidence of this dynamic and that many investors consider it when evaluating companies, it is appropriate to include it in CAPM determinations.

302. We also find unconvincing Mr. Keyton and the LPSC's regression analyses demonstrating that a size premium adjustment is not appropriate for the CAPM. Mr. Keyton and LPSC's regression analyses examine the relationship between forward-looking DCF results and company size. Although DCF results do reflect the cost of capital required by investors, the DCF model is fundamentally different than the CAPM model, which relies on a distinct set of assumptions, inputs, and calculations. This diversity is part of the reason that we are including the CAPM model. By the same rationale, a regression analyses on the reasonableness of CAPM model inputs using the DCF model is unpersuasive, since that model does not consider betas at all.

303. We also find there to be insufficient reason to conclude that the utility industry is unique, as certain intervenors suggest, such that the size premium adjustment is inapplicable. The size premium adjustment is supported by a robust data set. Although the variations in the risk profiles of firms in any industry inevitably vary somewhat, we do not see sufficient evidence in the record to conclude that factors specific to the utility industry insulate smaller utilities from risks such that the CAPM betas sufficiently account for any increased risks and corresponding returns demanded by investors.

VIII. Risk Premium Model

A. Background

304. The risk premium methodology, in which interest rates are also a direct input, is "based on the simple idea that since investors in stocks take greater risk than investors in bonds, the former expect to earn a return on a stock investment that reflects a 'premium' over and above the return they expect to earn on a bond investment."[635]

305. Multiple approaches have been advanced to determine the equity risk premium for a utility.[636] For example, a risk premium can be developed directly, by conducting a risk premium analysis for the company at issue, or indirectly by conducting a risk premium analysis for the market as a whole and then adjusting that result to reflect the risk of the company at issue.[637] Another approach for the utility context is to "examin[e] the risk premiums implied in the returns on equity allowed by regulatory commissions for utilities over some past period relative to the contemporaneous level of the long-term U.S. Treasury bond yield."[638]

306. In Opinion No. 551, the Commission found that "it is appropriate to rely on risk premium analyses as corroborative evidence during periods of anomalous capital market conditions"[639] and that "MISO TOs' risk premium analysis is sufficiently reliable to corroborate the results of the DCF analysis in this proceeding."[640] The Commission concluded that "MISO TOs' risk premium study is valid and supports awarding the MISO TOs a base ROE above the midpoint"[641] and found that "We, therefore, affirm the Presiding Judge's acceptance of the risk premium analysis to be used as corroborative evidence, in determining whether the midpoint of the zone of reasonableness produced by the Commission's DCF analysis provides a return that satisfies the requirements of *Hope*

[641] *Id.* P 191.

and *Bluefield*."[642] The Commission also made various determinations regarding specific aspects of how the Risk Premium analysis should be implemented.[643] CAPs, RPGI, and OMS requested rehearing of certain of the Commission's determinations regarding how the Risk Premium analysis was implemented.

307. In the Initial Decision in the Second Complaint proceeding, the Presiding Judge similarly found that MISO TOs' "historical risk premium analysis is valid and supports awarding the MISO TOs a Base ROE above the Midpoint."[644] The Presiding Judge also made various determinations regarding specific aspects of how the Risk Premium analysis should be implemented.[645] CAPs, OMS and JCA, and RPGI took exception to the Presiding Judge's determinations regarding how the Risk Premium analysis was implemented.

308. In the Briefing Order, for purposes of establishing a new just and reasonable ROE where the existing ROE has been shown to be unjust and unreasonable (i.e., the second prong of the FPA section 206 analysis), the Commission proposed to use the Risk Premium model, DCF model, CAPM, and Expected Earnings model to produce four separate cost of equity estimates and then average the four estimates to produce the just and reasonable ROE. For each of the DCF, CAPM, and Expected Earnings models, the Commission proposed to use the central tendency of the respective zones of reasonableness as the cost of equity estimate for average risk utilities and then average those three midpoint/median figures with the sole numerical figure produced by the Risk Premium model to determine the ROE of average risk utilities. The Commission proposed to use the midpoint/medians of the resulting lower and upper halves of the zones of reasonableness to determine ROEs for below or above average risk utilities, respectively.[646] The Commission proposed to omit the Risk Premium model from the analysis under the first prong of section 206 because it does not produce a range which can be used to determine a zone of reasonableness and instead only produces a numerical

point. Accordingly, the Commission proposed to use the Risk Premium model output only in the second prong of the FPA section 206 analysis.[647]

B. CAPs

309. CAPs contend that the Commission erred in relying on MISO TOs' Risk Premium analysis, which CAPs argue should have been either rejected or adjusted.[648] CAPs argue that, at a minimum, the Commission should correct MISO TOs' Risk Premium analysis by refining the readings of, and dates attributed to the 81 Commission orders used as inputs in the Risk Premium analysis.[649] CAPs state that the base ROE was not at issue in many of the 81 Commission orders, including those that approved settlements. According to CAPs, by taking appropriate account of the relied upon cases, the result of MISO TOs' Risk Premium analysis would have been materially below the 10.32 percent DCF upper midpoint.[650]

310. CAPs note that nearly all of the Commission outcomes relied upon in MISO TOs' Risk Premium analysis were taken from a period when the Commission applied a one-step DCF methodology that it subsequently found to have been inappropriate. CAPs argue that such reliance unreasonably perpetuates that past error.[651] CAPs also argue that many of these cases involved incentive adders and that previously-determined base ROEs were not at issue.[652]

311. CAPs also explain that, because many of these cases involve Commission settlement and litigation, there is a meaningful disconnect between the dates of Commission orders and the period of time they reflect. CAPs argue that Opinion No. 551 failed to consider that the core of MISO TOs' Risk Premium methodology is the comparison between past findings as to the cost of equity and the contemporaneous cost of debt. CAPs point to the 12.38 percent utility cost of equity as an example. CAPs explain that the 12.38 percent base ROE was based on a study period from August 2001

---

[647] *Id.* P 18 n.39.

[648] CAPs Rehearing Request at 41. CAPs state that, prior to Opinion No. 531, the Commission has repeatedly rejected risk premium analyses. *Id.* at 42.

through January 2002, and therefore argue that it is arbitrary and capricious for MISO TOs' Risk Premium study to compare it to bond yields in 2011, 2012, and 2013.[653]

312. CAPs state that, with its corrections to MISO TOs Risk Premium study, the resulting cost of equity drops to 9.89 percent.[654] CAPs assert that its 9.89 percent Risk Premium outcome or OMS' 9.94 percent Risk Premium outcome can serve as the representative Risk Premium result for this case.[655]

313. CAPs argue that the Commission, in Opinion No. 551, adopted a deficient Risk Premium study prepared by MISO TOs' witness, Dr. Avera. According to CAPs, MISO TOs' Risk Premium study generates inaccurate and unreliable cost of equity indicators, and should be replaced by CAPs' witness, Mr. Gorman's, Risk Premium study.[656] CAPs also contend that the Presiding Judge, in Initial Decision (II), accepted a flawed Risk Premium study prepared by MISO TOs' witness, Mr. McKenzie.[657]

314. CAPs assert that compiling past Commission findings and attempting to trend them to current market conditions is inferior to directly applying empirical techniques to current market information. CAPs claim that the data set of Commission cases used in MISO TOs' Risk Premium studies consists largely of cases where the Commission expressly declined to make such a substantive cost of capital finding.[658] CAPs assert that, therefore, the ROE in many of these cases do not reflect market costs at the time of the Commission order.[659] CAPs argue that, therefore, the fundamental assumption underlying Dr. Avera's Risk Premium analysis that was accepted in Opinion No. 551 and

---

[653] *Id.* at 44-45.

[654] *Id.* at 47. CAPs propose modifications to MISO TOs' Risk Premium study regarding its use of the 12.38 base ROE, as well as its use of several other base ROEs. *Id.* at 46-48.

[655] *Id.* at 48. CAPs also state that, despite being rejected in the Initial Decision, Trial Staff witness Keyton's Risk Premium analysis was well-supported. *Id.* at 26-27.

[656] CAPs Initial Br. (I) at 35; CAPs Initial Br. (II) at 35.

[657] CAPs Initial Br. (II) at 37.

[658] CAPs Initial Br. (I) at 37 (citing Ex. JC-100 at 27-29); CAPs Initial Br. (II) at 37 (citing Ex. ICG-200 at 27, 28-29).

[659] CAPs Initial Br. (I) at 37-38; CAPs Initial Br. (II) at 37.

Mr. McKenzie's Risk Premium analysis that was accepted in Initial Decision (II), is invalid.

315. CAPs also argue that MISO TOs' Risk Premium studies rely too heavily on the inverse relationship between interest rates and risk premiums. According to CAPs, over the last five to six years, the real yield spread between utility stocks and Baa bond yields has been nearly flat.[660] CAPs assert that this shows that interest rate changes are not the sole driver of risk premium changes. Consequently, CAPs recommend applying the following parameters for risk premium determinations: (1) ROE determinations made by the Commission or state commissions at the time of the order; (2) observable market evidence of risk differential, including spreads between A-rated and Baa-rated utility bonds and long-term Treasury bonds; and (3) a comparison of utility stock yields to utility bond yields and Treasury bond yields. Applying such parameters, Mr. Gorman recommends a Risk Premium model ROE range of 8.98 to 9.12 percent in the First Complaint proceeding[661] and of 9.09 to 9.76 percent in the Second Complaint proceeding.[662]

316. CAPs also argue that the risk premium model is inherently less accurate than a well-constructed DCF or CAPM model because it relies on results of market-based methods from past cases, where the DCF and CAPM model rely on primary data. CAPs aver that the Risk Premium model tends to replicate the regulatory lag and "inertial continuation of past returns" affecting past regulatory decisions.[663]

317. In addition, CAPs contend that the MISO TOs' Risk Premium analyses rely on bond yield projections that the Commission has found to be speculative. CAPs state that MISO TOs presented no reason for use of projected bond yields other than to say that this approach is "[c]onsistent with the approach adopted in the *Coakley* Briefing Order."[664] CAPs argue that, however, the *Coakley* Briefing Order used a Risk Premium result based on the actual bond yield. CAPs point out that Initial Decision (I) in the First Complaint

---

[664] CAPs Reply Br. (I) at 27 (citing MISO TOs Initial Br. (I), App. 2 McKenzie Aff. (I) at 27); CAPs Reply Br. (II) at 47 (citing MISO TOs Initial Br. (II), App. 2 McKenzie Aff. (II) at 26 n.46).

proceeding, which ROE the Briefing Order relies on for its Risk Premium figures, rejected use of a projected bond yields as "speculative,"[665] a position affirmed in Opinion No. 551.[666] CAPs contend that, in order to be internally consistent, a Risk Premium study must use projected bond yields to derive the risk premium as well as the yield to which it is added. Additionally, CAPs argue that the projected bond yields do not represent the known and measurable cost of capital and that projected bond yields have proven unreliable.

318. CAPs further argue that MISO TOs' Risk Premium approach includes ROEs from proceedings for which ROEs were not at issue. Consequently, according to CAPs, ROEs from such proceedings are not a valid basis for comparing the cost of equity and cost of debt. CAPs assert that these included two cases which the New England TOs recently admitted did not involve base ROEs.[667]

C. RPGI

319. RPGI notes that MISO TOs' Risk Premium analysis relied on ROEs authorized by the Commission from 2006 through 2014. RPGI questions why, if anomalous market conditions call into question the reliability of the DCF in this case, the same is not true for the Risk Premium analysis, which relies on DCF-produced returns after the onset of the Great Recession.[668]

320. RPGI contends that the MISO TOs have not demonstrated that the Risk Premium model addresses any of the supposed distortions in the DCF model, and thus has no demonstrated superiority over the DCF model.[669]

321. RPGI, in its Initial Brief, states that the Risk Premium methodology the Commission proposes to use is flawed due to: (1) a conceptual flaw in reasoning; (2) a misplaced reliance on research reflecting vastly different financial conditions; and

[668] RPGI Rehearing Request at 13-14.

[669] RPGI Reply Br. (I) at 9.

(3) flaws in the model's inputs. In order to correct these deficiencies, RPGI recommends an overhaul to the Risk Premium methodology.[670] RPGI states that its Risk Premium model, which corrects the various flaws in the proposed Risk Premium model, results in an 8.68 percent ROE.[671]

322. First, RPGI argues that the Risk Premium model incorporates the same distortions that the Commission has found to warrant a departure from full reliance on the DCF model. RPGI explains that the Risk Premium model uses the same financial data (i.e., interest rates) that the Commission found to be abnormal and unique. According to RPGI, it makes no sense to "carry forward" the same financial market conditions identified as distorting DCF inputs into an alternative model. RPGI states that, unless cured, this case-specific flaw serves as a reason for not using the Risk Premium model at all. RPGI contends that he Commission's stated rational for using other models (i.e., concerns over unusual market capital conditions) is inconsistent with relying on those same capital market conditions on a going-forward basis.[672]

323. Second, RPGI argues that the upward adjustment based on low interest rates contradicts the reasoning used to critique the DCF. RPGI explains that, according to MISO TOs witness, Ms. Lapson, artificially low interest rates have caused investors to migrate from utility bonds to utility stocks.[673] RPGI contrasts this claim with the theory underlying the adjustment included in MISO TOs' Risk Premium study, which is that lower interest rates correlate with an increase in equity risk premiums. RPGI asserts investors cannot be driven to stocks in search of higher returns and simultaneously demand a higher premium than had previously been offered. RPGI states that such investors would not migrate to stocks and take on the additional risk while simultaneously demanding an increase in the risk premium of holding stocks. RPGI contends that, if anything, MISO TOs witness Ms. Lapson's theory would suggest a narrower risk premium than under normal conditions.[674]

[672] RPGI Initial Br. (I) at 30-31 (citing Parcell Aff. (I) at 14); RPGI Initial Br. (II) at 34 (citing Parcell Aff. (II) at 14).

[673] RPGI Initial Br. (I) at 31-32 (citing Initial Decision (I) at PP 123-136, 142-158); RPGI Initial Br. (II) at 35 (citing same).

[674] RPGI Initial Br. (I) at 32; RPGI Initial Br. (II) at 35-36.

324. Third, RPGI disputes the reliance on the research from 1985 relied upon to support the adjustment to the Risk Premium model to reflect the inverse relationship between risk premiums and interest rates.[675] RPGI explains that the authors actually found the relationship between interest rates and risk premiums to be volatile. RPGI notes that the statistical correlation between interest rates and risk premiums were actually positive over the time period from 1970 through 1979. RPGI argues that the financial conditions during the article's five-year study period from 1980 through 1984 (i.e., increasing inflationary expectations) have nothing to do with the financial conditions at issue in these proceedings. RPGI asserts that inflation is not a major investment risk, and that no meaningful conclusion can be draw from the 34-year old research.[676]

325. Fourth, RPGI argues that the MISO TOs' Risk Premium model is flawed because it measures risk premiums over a short-term period. Although RPGI concedes that Opinion No. 531 supported the use of a shortened time-period beginning with the enactment of the Energy Policy Act of 2005, RPGI notes that the Risk Premium approach was merely used as a benchmark in Opinion No. 531. RPGI states that the proposal in the Briefing Order faces a higher standard of scrutiny because it is proposed as a source of data for computing a just and reasonable return.[677]

326. Fifth, RPGI argues that the proposed Risk Premium model incorporates a number of dubious choices. RPGI states that input-related flaws include the mismatch between the time period to which the data is attributed and the utility bond yields to which they are compared. RPGI points to the instant proceedings as an example. According to RPGI, the final orders in these proceedings may be issued as many as seven or eight years after the complaints were filed and the relevant data were generated.[678] RPGI also argues that settlements should not be used in the Risk Premium Study. According to RPGI, no meaningful precedent can be drawn from a settlement because the Commission

---

does not approve individual components of a settlement but rather the overall settlement.[679]

D. LPSC

327. LPSC states that risk premiums vary substantially over time, but—in theory—measuring risk premiums over a long period will even out fluctuations and reflect a normal risk premium. LPSC asserts that the nine-year period used by MISO TOs was far too short to reflect a normal risk premium. LPSC argues that a historic risk premium analysis should use the actualized returns on market equity and debt over a long period (i.e., using decades of data).[680] According to LPSC, it is circular and inaccurate to use returns allowed by regulators to determine the risk premium.[681] LPSC states that, in Opinion No. 551, the Commission used its own past allowed returns on equity to reach a decision. LPSC asserts that this methodology is completely circular, and that the circularity concerns cannot be dismissed on the basis that allowed returns presumably reflect market data, because this only mitigates the circularity problem.[682]

328. LPSC argues that the 77 basis point offset for every percentage change in the cost of debt means that the required return on equity is largely unrelated to the cost of debt. LPSC contends that there is no statistically-significant relationship between the cost of debt and investors' return on equity requirements.[683] LPSC acknowledges that MISO TOs' witness, Dr. Avera, found a strong statistical correlation between interest rates and risk premiums. However, LPSC asserts that this simply proved that Commission-allowed ROEs barely changed as bond yields fluctuated, and therefore – because the risk premium is defined as the difference between the ROE and bond yields – risk premiums of course

---

[680] LPSC Initial Br. at 5-7, 29-31 (citing Morin at 115 (stating that the use of a short period would be defective)).

[681] *Id* at 5.

[682] *Id.* at 6-7 (citing Morin at 125). LPSC notes that Dr. Morin offers the opposite advice with respect to the comparable earnings approach: "[t]he historical book return on equity for regulated firms is not determined by competitive forces but instead reflects the past actions of regulatory commissions." *Id.* at 7, 32 (quoting Morin at 383).

[683] *Id.* at 6. LPSC also note that the 77 basis point offset conflicts with empirical research, which has found an approximately 50 basis point offset. *Id.*

changed in relation to changing bond yields.[684] LPSC argues that a regression of ROEs and bond yields, on the other hand, would show that there is no statistically significant relationship between the two.[685]

329. LPSC asserts that the Risk Premium methodology accepted in Opinion No. 551 substantially mirrors the past. LPSC notes that the returns allowed from 2006 through 2014 are mostly non-litigated cases, many of which involved the settlement of multiple issues, and closely mirrored prior results despite a significant reduction in interest rates. LPSC argues that, given the significant changes in capital markets, this mirror image could not have accurately depicted investor return requirements.[686]

E. OMS

330. OMS argues that the Commission, in Opinion No. 551, erred by relying on MISO TOs' Risk Premium analysis to justify a base ROE of 10.32 percent. OMS argues that a Risk Premium study that assumes a linear relationship between bond yields and cost of equity is incompatible with anomalous market conditions.[687] OMS argues that an analysis that incorporates ROE determinations from a period when the Commission was applying the single-stage DCF methodology, which the Commission no longer accepts, unreasonably perpetuates erroneous results.[688]

331. OMS asserts that, if the Commission nonetheless chooses to rely on a Risk Premium analysis, MISO TOs' Risk Premium analysis should not be used because it is flawed. First, OMS argues that the analysis included 15 cases involving incentive adders that merely reiterated a set of existing base ROEs between 11.14 percent and 12.38

---

[684] *Id.* at 32-33. LPSC explains that he results would be even more statistically significant (in fact, the fit would be perfect) if the ROE did not change at all. *Id.* at 33.

[685] *Id.* at 34.

[686] *Id.* at 6. LPSC explains that parties settle for many reasons, such as trade-offs on other issues, cost of litigation, and competing objectives. LPSC asserts that the use of the results of settlements would require objective evidence linking allowed returns to market evidence. *Id.* at 31, 35, 42 (citing *Daubert v. Merrell Dow Pharmaceuticals, Inc.,* 43 F.3d 1311, 1317-19 (9th Cir. 1995)).

[687] OMS Rehearing Request at 20-21. OMS notes that Opinion No. 531 found that the relationship between cost of equity and Treasury bond yields has become unreliability in both magnitude. *Id.* at 21 (citing Opinion No. 531, 147 FERC ¶ 61,234 at P 159).

[688] *Id.* at 21-22.

percent that had already been approved. According to OMS, relying on these high base ROEs multiple times artificially inflates the results of the analysis. Second, OMS contends that it is improper to include Commission decisions that were the product of settlement or simply mentioned in the context of deciding whether to allow an ROE incentive adder. Third, OMS states that it is particularly troublesome for the Commission to use a Risk Premium analysis that includes the very 12.38 percent base ROE that Opinion No. 551 finds to be unjust and unreasonable. Fourth, OMS points to the lack of synchronism between ROE decisions and the bond yields to which they are compared. OMS explains that synchronizing the data points, by merely correcting the dates to reflect contemporaneous bond yields, has a significant effect on the results of the Risk Premium analysis.[689]

F. Trial Staff

332. Trial Staff explains that its witness Mr. Keyton made adjustments to improve the proposed Risk Premium analysis to ensure that the results are more timely and accurate.[690]First, Trial Staff explains that its witness, Mr. Keyton, removed any Commission-authorized ROE that was not developed using market data contemporaneous with the applicable bond yields. Trial Staff states that, in some cases, the market analysis had taken place years prior to a Commission order assigning an ROE to a utility. Trial Staff notes that, when utilities join an RTO, they are simply given the currently-effective RTO-wide ROE, which is not tied to the risks or cost of equity faced by the utilities at that time. Trial Staff argues that such ROEs do not reflect a cost of equity estimate that is contemporaneous with the bond yields used to calculate the risk premium. Trial Staff explains that, consequently, Mr. Keyton removed observations that were merely reapplication of existing ROEs.[691]

333. Mr. Keyton also contends that using past-authorized ROEs generate erroneous equity risk premiums since their inclusion results in overstated equity risk premiums for more recent years because the vintage ROEs do not reflect the fact that equity costs have fallen as bond yields have fallen. He posits that this contradicts prior Commission findings recognizing the relationship between the cost of equity and bond yields.[692]

---

[691] Trial Staff Initial Br. (I) at 22-23 (citing Keyton Aff. (I) at 43-45); Trial Staff Initial Br. (II) at 21-22 (citing Keyton Aff. (II) at 42-43).

[692] Trial Staff Reply Br. (I), Keyton Reply Aff. (I) at 29 (citing Opinion No. 314, 44 FERC at 61,952 n.11, *order on reh'g*, Opinion No. 314-A, 45 FERC ¶ 61,252, *reh'g denied*, 46 FERC ¶ 61,036 (1989) and Order No. 489, FERC Stats. & Regs. ¶ 30,795 at

Mr. Keyton also states that Dr. Morin and Dr. Eugene F. Brigham have both noted the general relationship between interest rates and the cost of equity, which move in the same direction.[693]

334. Second, Trial Staff argues that that the MISO TOs' Risk Premium approach should have removed equity risk premiums between 2008 and 2009 that were impacted by bond yield spikes corresponding to the financial crisis.[694] According to Trial Staff, Mr. Keyton removed the six-month average Moody's Baa bond yields for the months from October to December 2008 and January to August 2009. Trial Staff explains that Mr. Keyton removed the bond yields from October to December 2008 because the yields suddenly rose by 143 basis points, and that he removed the bond yields from January to August 2009 because those yields were in steady decline until they stabilized in September 2009. Trial Staff explains that these removal adjustments were made because a risk premium calculated during a time of bond yield spikes will understate the actual risk premium required by investors.[695] Mr. Keyton notes that Mr. McKenzie acknowledged that there was no indication that a particular Commission-authorized ROE was derived to account for these spikes in bond yields.[696]

335. Trial Staff notes that MISO TOs now support use of a Risk Premium analysis based on both historical and projected bond yields, as apparently supported in the *Coakley* Briefing Order.[697] Trial Staff posits that the use of projected bond yields in the Risk Premium analysis referenced in the *Coakley* Briefing Order was inadvertent. Trial Staff notes that Opinion No. 551 clearly articulated why use of projected bond yields in

[697] Trial Staff Reply Br. (I) at 12 (citing MISO TOs Initial Br. (I) at 24); Trial Staff Reply Br. (II) at 12 (citing MISO TOs Initial Br. (II) at 39-40).

the Risk Premium analysis is inappropriate, finding that "projected yields used in risk premium analyses are speculative and less reliable than historical yields."[698] Trial Staff adds that, for the fluctuations in the cost of equity to be captured by the Risk Premium model, the Commission must eliminate inputs that are speculative, inaccurate, or unreliable.

G. MISO TOs

336. In response to briefs opposing implementation of the MISO TOs' Risk Premium model, MISO TOs observe that the Commission accepted similar use of the Risk Premium analyses in Opinion No. 551 and found it to be similar to the analysis that it accepted in Opinion No. 531-B.[699] MISO TOs aver that opposing parties fail to raise new arguments that were not considered in those orders. Additionally, in response to arguments that their Risk Premium methodology inappropriately relies on settlement agreements, MISO TOs observe that the Commission, in Opinion No. 531-B, found that the use of settlements "do[] not affect that reliability of the risk premium analysis,"[700] and MISO TOs explain that, just as with litigated ROE outcomes, settling parties "rely upon the same market-based methodologies in determining the rates they are willing to accept."[701] MISO TOs further argue that, in each of the cases that other parties criticize, the Commission nonetheless ruled that the ROE at issue resulted in rates that were just and reasonable.[702] MISO TOs also reject arguments that the ROE inputs should align more closely with contemporary bond yields, noting that the Commission already found such precision to be overly difficult.[703]

337. MISO TOs also disagree with criticisms of the inverse relationship between equity risk premiums and interest rates. They note that the Commission, consistent with

financial literature, has recognized this relationship.[704] MISO TOs aver that the CAPs offer no empirical evidence or academic literature to support their argument that investment risk differentials reflected in yield spreads have a material effect on the behavior of equity risk premiums. With respect to the LPSC's assertions of the circulatory of this approach, MISO TOs state that Dr. Morin, who the LPSC cites, found that such circulatory concerns are mitigated in the risk premium context because the Commission-approved ROs are "presumably based on the results of market-based methodologies."[705]

338. MISO TOs disagree with Trial Staff's recommendation to remove bond yields associated with periods of volatility. They aver that doing so would ignore relevant observations and undermine the integrity of the risk premium model by enabling analysts to selectively parse monthly bond yield average data. MISO TOs also contend that using annual, averaged Baa utility bond yields, as they propose, washes out some of the monthly volatility.[706]

339. MISO TOs also assert that the Risk Premium model is a traditional method that investors use to estimate the expected return from an investment in a company[707] and that approved ROEs, which are inputs in the Risk Premium model, are closely followed by investors, and provide a direct signal that influences their expectations and required rates of return.[708]

H. Commission Determination

340. Based on full consideration of the record in this proceeding, we will not use the Risk Premium model, as proposed by the MISO TOs, in the Commission's ROE methodology, either for determining the justness of and reasonableness of existing ROEs under the first prong of section 206 or for determining new just and reasonable base ROEs under the second prong of section 206. In light of the evidence in the record regarding the Risk Premium model and the other models that we proposed to use in the

Briefing Order, we conclude that the additional robustness that the Risk Premium model adds to the ROE determination is outweighed by the disadvantages of its deficiencies, as discussed below. Furthermore, we find that the model requires methodological decisions that would likely undermine transparency and predictability in Commission outcomes, which are valued by both investors and customers.

341. As an initial matter, the Risk Premium model is largely redundant with the CAPM. Although they rely on different data sources to determine the risk premium, both models use indirect measures (i.e., past Commission orders in the Risk Premium model and S&P 500 data in the CAPM) to ascertain the risk premium that investors require over the risk-free rate of return. We find that using the Risk Premium model in conjunction with the CAPM model would confer too much weight towards risk premium methodologies. The Commission has long used and, over time, refined the DCF model and we find that it would be inappropriate for variations of the risk premium model to receive twice its weight. In light of the disadvantages of the Risk Premium model discussed below and the similarity of the CAPM and Risk Premium models, we find that it is more appropriate to use only the CAPM to provide a risk premium-based cost of equity estimate.

342. In addition, we agree with CAPs that the Risk Premium model is likely to provide a less accurate current cost of equity estimate than the DCF model or CAPM because it relies on previous ROE determinations, whose resulting ROE may not necessarily be directly determined by a market-based method, whereas the DCF and CAPM methods apply a market-based method to primary data.[709] For example, previous ROE determinations may not involve an explicit determination as to whether an ROE is just and reasonable, but instead focused on whether to allow an ROE incentive adder or were approving a preexisting RTO-wide ROE for a new RTO member. Similarly, many previous ROE determinations used in the Risk Premium model were the product of rate case settlements. Such settlements often involve compromises on a variety of issues present in a rate case, of which the appropriate ROE is only one. Consequently, such settlements could include ROEs that are not representative of the market cost of equity because the ROEs were negotiated above or below that market cost of equity in order to form an overall settlement package, together with negotiated outcomes on other issues, that were acceptable to the parties.

343. While all models, including the DCF, feature some circularity, such circularity is particularly direct and acute with the Risk Premium model because it directly relies on past Commission ROE decisions. MISO TOs' regression analysis, discussed below, accentuates such circularity by largely offsetting the effects of changes in interest rates. As a result, we share the concerns expressed by various parties that the circularity inherent in the Risk Premium model's use of prior ROE determinations would largely

[709] *See* CAPs Reply Br. (I) at 26; CAPs Reply Br. (II) at 46.

continue previously-approved ROEs and reflect past circumstances that influenced the previous ROE decisions.[710]

344. We also question the application of the regression analyses used by MISO TOs in their Risk Premium model. These regressions, which have the impact of increasing the risk premium by 75 basis points for every 100 basis point decline in interest rates,[711] contrast starkly with Dr. Morin's analysis, which made that adjustment 48 basis points. This could be due to the length of time examined by the MISO TOs being less than half of the 18 years of regulatory decisions analyzed by Dr. Morin.[712] We note that, unlike for DCF and CAPM calculations, MISO TOs did not update and add to the data set for ROE proceedings through the end of the test period in June of 2015, further reducing the robustness of the data set. MISO TOs' regression in the first proceeding, by using the average of ROEs from each year, only has nine observations in its regression analysis, which is a low figure for a regression analysis, and therefore could impact the reliability of the results. Regardless of the reason for the high regression results, the MISO TOs' regression creates a dynamic where, regardless of the capital market conditions, the Risk Premium analysis will keep the ROE essentially stable. This defies general financial logic that lower interest rates make it easier to raise capital based on the reduced opportunity cost of bonds and greater availability of revenue to invest due to the opportunity for carry trades where borrowing low-cost debt is used to finance equity purchases. This relationship is evident when the stock market increases or decreases inversely with news regarding Federal Reserve interest rate activity. Additionally, the results of MISO TOs' regression analyses imply that the Federal Reserve's activities following the financial crisis in terms of reducing interest rates and open market operations had virtually no effect on the underlying required return on equity.

345. Additionally, the record contains insufficient evidence to conclude that investors rely on risk premium analyses utilizing historic Commission ROE determinations or settlement approvals to determine the cost of capital and make investment decisions. Investors certainly observe regulatory ROEs and how changes in authorized ROE levels could affect utility earnings, but such considerations differ from the type of analyses employed by the MISO TOs looking back at past decisions to determine the current cost

---

[710] *See, e.g.*, CAPs Reply Br. (I) at 26 ("[A] Risk Premium-based finding will tend to replicate the regulatory lag and inertial continuation of past returns that affected past regulatory decisions."); CAPs Reply Br. (II) at 46; LPSC Initial Br. at 6-7; OMS Rehearing Request at 20-21.

[712] Morin at 123.

of capital. We recognize that academic literature discusses this methodology, but the record indicates the greater prevalence of other methods.

346. The Risk Premium methodology also entails numerous judgement calls and corresponding points of dispute among parties that would render the model results less predictable and transparent than other models. First, as illustrated in this proceeding, there would likely be vigorous debate on which past ROE determinations the analysis should include. First, there is the issue of how far back such data should go. MISO TOs propose to start their analysis after the Energy Policy Act of 2005. This creates, at least for the time being, a much smaller data set than that which was used by Dr. Morin. We find unpersuasive MISO TOs' arguments that the nature of the industry and the resulting risk premiums changed due to this legislation sufficiently to ignore prior data. FPA section 219 requiring the Commission to provide transmission incentives is not germane to the base ROE determinations, nor are changes to the Public Utility Regulatory Policies Act, Commission enforcement authority, federal citing authority, or other elements of the 2005 Energy Policy Act. With that said, there is no clear initial starting point, which could be subject to debate.

347. In Opinion No. 531, the Commission found that "whether the regulatory decision involved a settlement agreement or the application of a cost of equity that was calculated in the past, e.g., the 12.38 percent ROE established for the MISO region, does not affect the reliability of a risk premium analysis."[713] Upon further review, we find that such application of past ROEs and settlements are not in all cases appropriate. In certain proceedings involving the admittance of new members to RTOs, the pleadings and resulting Commission orders did not reexamine the justness and reasonableness of the existing ROEs. Consequently, it is not reasonable to infer that the ROEs applied in these proceedings are the result of contemporary Commission analysis and representative of the cost of capital at that time. The same rationale applies to certain proceedings involving transmission incentives. In some cases, the Commission has explicitly examined the base ROEs or zones of reasonableness,[714] while in others the Commission has stated that the base ROE is beyond the scope of the proceeding, rendering it hard to argue that the resulting ROEs reflected contemporary risk premiums.[715] Consequently, it is highly debatable, as illustrated in this proceeding, which ROE proceedings the Commission should include in a Risk Premium analysis.

[713] Opinion No. 531-B, 150 FERC ¶ 61,165 at P 98.

[714] *See Dusqesne Light*, 125 FERC ¶ 61,028 (2008).

[715] *See Pub. Serv. Elec. and Gas Co.,* 147 ¶ FERC 61,142, at P 48 (2014).

348. Order No. 531-B also found that "[g]iven the varying duration of regulatory proceedings, it is difficult, if not impossible, to ensure precise contemporaneity between long-term Treasury bond yields and the cost of equity allowed by a regulator."[716] Although an analysis with such imprecision may have been sufficient for using the Risk Premium model for corroborative purposes, we find that direct use of the model would require actual alignment of the test periods and the dates assigned for purposes of comparing the ROE to the risk free rate of return to determine the risk premium. In particular, orders on initial decision often occur more than a year following the updated test period.[717] It is unclear what test period should be assumed for orders in other types of proceedings, such as those approving transmission incentives. If the Commission were to adopt a precise timing in this proceeding, as a practical matter, such a decision would likely require the Commission to exclude certain proceedings whose test periods predate 2006 and include others, as well as potentially change the dates assigned to yet other proceedings.

349. Other debatable input decisions also bedevil the Risk Premium methodology, such that the Commission would need to resolve numerous implementation questions to enable its use. For instance, what is the risk premium resulting from proceedings resolved by settlements with different ROEs for different parties or time periods? Should multiple ROEs from the same proceeding be given more weight than individual ROEs from other proceedings? Where different ROEs apply to different time periods, should the ROEs be assigned to different times for purposes of the risk premium analysis? Should ROEs from settlements resolving multiple proceedings with the same ROE be counted once or twice? Other methodological decisions include whether to look at the annual average of ROEs and corresponding risk-free rates of return or look at them individually. The former avoids overweighting proceedings from years with many proceedings but greatly reduces precision by muting changes in ROEs and risk free rates of returns within years. Other points of disagreement include the appropriateness of using risk premiums from periods of high bond volatility, and whether to include state ROEs.

350. Such questions illustrate the inherent imprecision and complexity of this approach. We find that, although certain elements of the CAPM and DCF are subject to debate, as discussed above, the Risk Premium model features far more ambiguity and potential for dispute. Although the Commission could provide guidance on some of these matters, others would require ongoing adjudication. As a result, the Risk Premium model would lead to higher costs for participation by interested parties and reduced predictability of results, which both investors and customers value. Additionally, as discussed above, in

---

[716] Opinion No. 531-B, 150 FERC ¶ 61,165 at P 98.

[717] *See* Opinion No. 551 which was issued 13 months following the end of the test period.

both proceedings before us here, the parties make numerous arguments supporting and opposing various specific aspects of how the Risk Premium model is implemented. For example, parties dispute whether or not to use settlements as inputs to the Risk Premium model,[718] how the time periods that are used for the comparison of bond yields and allowed ROEs should align,[719] whether to exclude bond yields from periods of high volatility,[720] and whether to use real or nominal bond yields in the Risk Premium analysis.[721]

351. Moreover, as noted in the Briefing Order, the output that the Risk Premium model produces is a single numerical point, and therefore, it does not produce a range which can be used to determine a zone of reasonableness. Accordingly, the Briefing Order proposed to only use the Risk Premium model in the second prong of the section 206 analysis where we determine a specific just and reasonable ROE, but not in the first prong of the analysis, which requires models that produce a range that can be used to determine a zone of reasonableness. This asymmetry in the potential use of the Risk Premium is not ideal and is another disadvantage of the Risk Premium model that weighs in favor of excluding it from the Commission's ROE methodology. We would prefer to use the same models in the prong one and prong two analyses to ensure that our ROE determinations under each prong are based on the same data and models. It would not be logical to use different models and data sources to apply this same standard under the two prongs unless there is some compelling justification for the difference. We find that there is no such compelling justification. We initially proposed to use the Risk Premium model, despite it only being appropriate for use in the second prong analysis, because our initial analysis of the model indicated that it could potentially provide benefits to our ROE methodology that outweighed the disadvantages of only having the model available for use in the second prong analysis. However, in light of the full record in these proceedings before us now, we find that the Risk Premium model does not provide benefits to our ROE methodology that would outweigh the model's disadvantages, such as the disadvantage of only having the model available for use in the second prong analysis.

---

[718] *See, e.g.*, CAPs Br. on Exceptions at 65-59; MISO TOs Br. Opposing Exceptions at 57-58; MISO TOs Reply Br. (I) at 31-32.

[719] *See, e.g.*, OMS Rehearing Request at 23-25; RPGI Initial Br. (I) at 36–37; Trial Staff Initial Br. (I) at 21–23; MISO TOs Reply Br. (I) at 32.

[720] *See, e.g.*, Trial Staff Initial Br. (I) at 23-24; MISO TOs Reply Br. (I) at 34-35.

[721] *See, e.g.*, CAPs Br. on Exceptions at 50-52; OMS-JCA Br. on Exceptions at 47-48; MISO TOs Br. Opposing Exceptions at 58-59.

352. As discussed above, we will not use the Risk Premium model in our ROE methodology. Accordingly, we find that the parties' arguments regarding how the Risk Premium model should be implemented are moot and we will not address any such arguments raised in the briefs on and opposing exceptions to Initial Decision (II), requests for rehearing of Opinion No. 551, the initial and reply briefs issued in response to the Briefing Order, or any pleadings in these proceedings. We address some of these implementation issues in the context of discussing our decision to not use the Risk Premium model above, but in light of our decision not to use the model, we find that it is unnecessary to reach determinations on how the model should be implemented. Accordingly, we find that arguments in these proceedings regarding how the Risk Premium model should be implemented are moot.

IX. Potential Consideration of State ROEs

A. Briefing Order Proposal

353. In the Briefing Order, the Commission proposed to not consider the level of state ROEs when determining the composite zone of reasonableness under the first prong of section 206, nor to weight state ROEs equally with the financial models in establishing a new just and reasonable ROE under the second prong of section 206. However, the Commission proposed to consider evidence of state ROEs to the extent that the record adequately demonstrates that investors are using them to inform their investment decisions.[722]

B. CAPs

354. CAPs argue that the Commission's proposal is arbitrary and capricious for several reasons.[723] CAPs contend that the proposal departs from precedent rejecting direct use of state-authorized ROEs in establishing the Commission-jurisdictional return of utilities.[724] They assert that "Commission precedent rejects the direct use of state commissions' return determinations in setting [Commission]-jurisdictional ROEs."[725]

---

[722] Briefing Order, 165 FERC ¶ 61,118 at P 37 n.67.

[723] CAPs Initial Br. (I) at 48; CAPs Initial Br. (II) at 48.

[724] CAPs Initial Br. (I) at 49; CAPs Initial Br. (II) at 49.

[725] CAPs Initial Br. (I) at 49 (citing, e.g., *Middle South Services, Inc.,* Opinion No. 124, 16 FERC ¶ 61,101 (1981*)*; *Boston Edison Co.,* Opinion No. 411, 77 FERC ¶ 61,272 (1996); *Jersey Cent. Power & Light Co.,* Opinion No. 408, 77 FERC ¶ 61,001 (1996); *Appalachian Power Co.*, Opinion No. 423, 83 FERC ¶ 61,335 (1998); *Midwest*

CAPs contend that in Opinion Nos. 531 and 531-B the Commission acknowledged and reaffirmed this precedent. They argue that the Commission has not explained "how its proposed use of state-authorized ROEs would be consistent with precedent, or why departure from its precedent would be appropriate."[726] CAPs further assert that "[i]n *Emera Maine*, the D.C. Circuit found it arbitrary and capricious to use state-allowed ROEs to support placement of the New England TOs' ROE at the upper midpoint because state-authorized ROE data pointed to a level below the DCF upper midpoint."[727] CAPs also contend that the Commission does not explain why it may be appropriate to use state-authorized ROEs in the second prong of section 206 proceedings (i.e., to establish the new just and reasonable ROE), but that it is never appropriate to use such data in the first prong of section 206 (i.e., to determine whether the existing ROE of utilities is unjust and unreasonable).[728]

355. CAPs assert that the Commission proposes to disregard considering state-authorized ROEs in the formation of the composite zone of reasonableness at the same time that it is proposing to consider such data in the calculation of a replacement ROE. CAPs argue that, if evidence in the record shows that investors rely on state-authorized ROE data, it follows that investors' return expectations based on this data is as relevant to determining whether the existing ROE is unjust and unreasonable as it is to determining the replacement ROE and the total ROE cap.[729] Hence, CAPs contend that the Commission is proposing an inconsistent application of state-authorized ROE evidence without providing a reasonable explanation for doing so.[730] Further, CAPs argue that the Commission has not explained what weight state-authorized ROEs will be given or what type of evidence could show that investors rely on these ROEs.[731]

356. CAPs comment that the use of state-authorized ROEs by the Commission would not satisfy the comparability standard of *Hope* and *Bluefield*, which requires that a

[731] CAPs Initial Br. (I) at 52; CAPs Initial Br. (II) at 51.

utility's return on equity must be "equal to that generally being made at the same time and in the same general part of the country on investments in other business undertakings which are attended by corresponding risks and uncertainties."[732] CAPs argue that state commissions establish ROEs having taken into account a wide range of risk factors that are unique to each state, vary across jurisdictions and change over time. According to CAPs, state ROEs reflect considerations that are completely unrelated to the transmission risks that the base ROE in this case sees to account for.[733]

357. Finally, CAPs assert that, to the extent that the Commission decides to use state-authorized ROE data in its ROE determinations, it should establish generic, transparent criteria to ensure appropriate comparability, and that the state-authorized ROE data should be used in a consistent manner, regardless of whether the data increases or lowers the base ROE.[734]

C. Alliant

358. Alliant argues that the Commission should compare the base ROE resulting from its proposed methodology to retail utility ROEs allowed in states in which transmission facilities owned by each of the MISO TOs are located. Alliant contends that the ROE established by the Commission for unbundled transmission service within a state should be consistent with the ROE permitted by state regulators for retail rates because state regulators also have the obligation to ensure that charges for bundled electric service by retail electric service customers are just and reasonable.[735]

D. MISO TOs

359. In their reply brief, the MISO TOs assert that, contrary to arguments presented by CAPs, the Commission has ample justification in the record of the First and Second Complaint proceedings for considering state-authorized ROEs as evidence of expected investor returns.[736] Further, they endorse the Commission considering state-authorized ROEs in the context of how the risk profile of a state-regulated utility compares to the

[734] CAPs Initial Br. (I) at 53; CAPs Initial Br. (II) at 53.

[735] Alliant Initial Br. at 10-11.

[736] *See* MISO TOs Reply Br. (I) at 82.

risk profile of the MISO Transmission Owners, and argue that consideration of state-authorized ROEs is consistent with Opinion No. 531-B. MISO TOs also assert that CAPs incorrectly characterizes the ruling in *Emera Maine* regarding the Commission's consideration of data for state-authorized ROEs. MISO TOs argue that the Court did not find error with the Commission's consideration of state ROE data. Rather, the Court determined that the Commission erred when it failed to provide a reasoned explanation relative to the cited state-authorized ROEs and other evidence.[737]

360. In response to CAPs' assertion that the Commission in the First Complaint proceeding did not find that investors had relied upon state-authorized ROE, MISO TOs argue that it is illogical to conclude that there was not a showing that investors relied on such data. MISO TOs argue that the Commission did not need to specifically rely on evidence of state-authorized ROEs in order to present the methodology and findings it proposed in the Briefing Order.[738]

361. MISO TOs comment that CAPs misread the Commission's Briefing Order when they conclude that state-authorized ROEs will not be used in evaluating an existing ROE for justness and reasonableness under prong one of the FPA section 206 analysis.[739] Instead, MISO TOs assert that the Commission explains in the Briefing Order that it will not use state-authorized ROEs in the composition of the composite zone of reasonableness in prong one of PFA section 206, nor as one of the four financial models used to establish a new base ROE in prong two of FPA section 206. Nonetheless, MISO TOs assert that in the Briefing Order the Commission leaves open other purposes for which the Commission could consider state-authorized ROEs in both prongs of the FPA section 206.[740] MISO TOs argue that, contrary to CAP comments, the state ROE data cannot be used to calculate a composite zone of reasonableness because there are material risk differences between utilities regulated at the state level and the transmission utilities regulated at the federal level.[741] Rather, MISO TOs assert that state-authorized ROE data

[737] *Id.* at 83-84.

[738] *Id.* at 84.

[739] *Id.* at 85 (citing Briefing Order, 165 FERC ¶ 61,118 at P 37 n.67).

[740] *Id.* at 85-86.

[741] *Id.* at 86.

has been and can be a useful tool as a benchmark in reviewing investor expectations and evaluations cost of equity estimates within the larger market context.[742]

362. Finally, MISO TOs respond to CAPs request that the Commission adopt a generic and transparent criteria when using data on state-authorized ROEs by asserting that this request seeks a superfluous legal standard that is unnecessary, outside of the scope of this proceeding and would have no discernable benefit.[743]

E. Commission Determination

363. We continue to find that our ROE determination in these proceedings need not consider state-authorized ROEs. As MISO TOs point out, there are material differences between state and Commission ROEs. As an initial matter, state-authorized ROEs may apply to distribution companies, which feature lower risks than transmission companies subject to Commission ROEs. Also, certain states include shared savings, decoupling, or performance-based rates, rendering comparisons between Commission and state ROEs less precise. As a result, we will only consider state-authorized ROEs on a case-by-case basis to the extent that they demonstrate that the results of the Commission's CAPM and DCF analyses are substantially excessive or deficient. We do not expect that the Commission will regularly consider state-authorized ROEs. Rather, they serve as a check given the model risk as we formulate our ROE determinations.

364. We also clarify that state ROE information could inform both prongs of the section 206 ROE analysis. For the first prong, such information could be used to rebut the presumption that a given base ROE is or is not just and reasonable. Such information could also be used to demonstrate, for instance, that the base ROE established under the second prong is substantially excessive or deficient. We also reject Alliant's proposal to use state ROEs where the utility is located. Doing so would potentially tie Commission ROE determinations to state determinations, which could be methodologically very different or apply to utilities featuring different risk profiles than Commission-jurisdictional transmission owners.

X. Proxy Group Construction

365. Both the DCF and CAPM models use proxy groups to determine a range of reasonable returns. In the Briefing Order,[744] the Commission stated that it intends to

---

[742] *Id.* at 86.

[743] *Id.* at 86-87.

[744] *Coakley* Briefing Order, 165 FERC ¶ 61,030 at P 51.

continue to use the same screens for developing a proxy group as the Commission has used in recent cases, including Opinion Nos. 531[745] and 551.[746] Those five screens are: (1) the use of a national group of companies considered electric utilities by *Value Line*;[747] (2) the inclusion of companies with credit ratings no more than one notch above or below the utility or utilities whose ROE is at issue;[748] (3) the inclusion of companies that pay dividends and have neither made nor announced a dividend cut during the six month study period;[749] (4) the inclusion of companies with no merger activity during the six-month study period that is significant enough to distort the study inputs;[750] and (5) companies whose ROE results pass threshold tests of economic logic, including both a low-end outlier test and a revised high-end outlier test proposed in the Briefing Order.

366. The first four screens listed above evaluate particular characteristics potential proxy group companies. They do not vary depending upon the results of the DCF or CAPM analyses. Accordingly, those screens may be used to develop a starting group of proxy companies eligible for inclusion in the proxy group to be used for the purposes of both the DCF and CAPM analyses. However, the high-end outlier test part of the last screen—whether the company's cost of equity estimate passes threshold tests of economic logic—depends upon the median cost of equity estimate each of the two models produces. Thus, in determining the zone of reasonableness produced by each of these models, the high-end outlier test must be applied separately to each model. Below, we discuss issues raised by the participants with respect to the high-end and low-end outlier tests. By contrast, the low-end outlier test for both models is derived, in part from, the CAPM's risk premium.

A. High End Outlier Test

1. Briefing Order

367. In the Briefing Orders, the Commission recognized that the CAPM model can produce unsustainably high results for a particular proxy company, because, unlike the

---

[745] Opinion No. 531, 147 FERC ¶ 61,234 at P 97.

[746] Opinion No. 551, 156 FERC ¶ 61,234 at P 20.

[747] Opinion No. 531, 147 FERC ¶ 61,234 at PP 96, 100-102.

[748] The Commission requires use of both Standard and Poor's corporate credit ratings and Moody's issuer ratings when both are available. *Id.* P 107.

[749] *Id.* P 112.

[750] *Id.* P 114; Opinion No. 551, 156 FERC ¶ 61,234 at PP 37-43.

two-step DCF analysis, it does not include a long-term growth projection based on GDP that would normalize the ROEs produced by the model, similar to that used in the two-step DCF analysis. Moreover, the Commission recognized that in unusual circumstances, the two-step DCF analysis could also produce unsustainably high results. Therefore, the Commission proposed to apply a high-end outlier test to the results of both these models.

368. The Commission proposed to treat as high-end outliers any proxy company whose cost of equity estimated under the model in question is more than 150 percent of the median result of all of the potential proxy group members in that model before any high or low-end outlier test is applied, subject to a "natural break" analysis similar to the approach the Commission uses for low-end DCF analysis results. The Commission stated that this test should identify those companies whose cost of equity under the model in question is so far above the cost of equity of a typical proxy company as to suggest that it is the result of atypical circumstances that are not representative of the risk profile of a more normal utility.

2. CAPs

369. MISO CAPs contend that a high-end outlier test should be used, particularly if the Commission sets the base ROE based mainly on the midpoint rather than the median of the zone of reasonableness. However, CAPs contend that the Commission's proposed high-end outlier test lacks a statistically sound basis and does not appropriately consider information inherent in the underlying array of ROEs produced by each financial model. MISO CAPs recommend the Commission should, instead, exclude as high-end outliers any ROEs produced by each model that are more than two standard deviations[751] above the median of the ROEs produced by that model.[752] MISO CAPs state that MISO TOs'

[751] In statistics, a standard deviation is a measure that is used to quantify the amount of variation or dispersion on a set of values. The smaller the standard deviation, the more values that are expected to be closer to the mean. Conversely, a large standard deviation implies that the data is more widely distributed. Under a normal distribution, only 2.5 percent of observations are expected to be more than two standard deviations above the mean.

[752] CAPS Initial Br. (I) at 60-63, Ex. JCI-100 (Solomon Testimony) at 13-14, CAPS Initial Br. (II) at 60-63, Ex. JCI-200 at 12-13. In reply briefs, MISO CAPS also alternatively endorse use of the Grubbs test, another statistical method for identifying outliers, over MISO TOs' proposals. *See* CAPS Reply Br. (I) at 60.

proposed alternative threshold, which is 150 percent of the highest median return on equity from all three models, has no economic basis.[753]

3. MISO TOs

370. MISO TOs oppose the use of any high-end outlier test.[754] MISO TOs contend that the 150 percent threshold test is arbitrary and not tied to previous Commission policy. MISO TOs specifically assert that there is no support for the contention that an estimate greater than 1.5 times the median of a model's range of estimates must be the result of "atypical circumstances." MISO TOs also contend that there has been no showing that investors generally disregard high-end estimates from any model or rely on the proposed 150 percent test to eliminate high-end results.

371. MISO TOs also oppose CAPs' alternative statistical tests based on a standard deviation. They assert that those tests relate to the practice of sampling, i.e., the selection of a subset of data from within a larger population that allows the researcher to make statistical inferences about unknown qualities of the population. MISO TOs assert that the CAPs' proposed tests are used to determine whether the sampling data represent a random sample from a single normal population. However, MISO TOs contend that, when the Commission selects a proxy group, it is not sampling. Rather, the Commission has identified all of the utilities deemed to be of comparable risk to the MISO TOs. Thus, the array of cost of equity estimates of the proxy companies represent a population, not a sample of the population. As a result, the dispersion of individual values around the population mean is not a valid test of how well a specific estimate reflects investors' expectations.[755] However, MISO TOs contend that, if the Commission does use a high-end outlier test, then it should apply that test to the highest median of the CAPM, Expected Earnings, and DCF models, and apply it only as a rebuttable presumption.

372. Further, MISO TOs contend that the high-end outlier test should not apply to the DCF model.[756] MISO TOs note that, in Opinion No. 531, the Commission stated that including long-term GDP growth in the two-step DCF eliminates the need to screen the results for high-end outliers. MISO TOs also assert that the median of the DCF results does not constitute a meaningful guide to investors' required returns given that the Commission has determined that the central tendency of the DCF zone of reasonableness

---

[753] Ex. JCI-107 at 29-30 (Solomon Testimony).

[754] MISO TOs Initial Br. (I) at 12-16.

[755] MISO TOs Initial Br. (I), App. 2 McKenzie Reply Aff. (I) at 100-102.

[756] MISO TOs Initial Br. (I) at 16-18.

may be distorted by anomalous capital market conditions as the Commission found in Opinion Nos. 531 and 551. MISO TOs contend that, if the Commission does apply the high-end outlier test to the DCF model, then it should employ the one-step DCF model without any long-term growth projection.

4. Trial Staff

373. In its reply brief, Trial Staff supports the high-end outlier test proposed in the Briefing Order and opposes the MISO TOs' contention that a high-end outlier test is unnecessary.[757]

5. Other Parties

374. RPGI supports the high-end outlier test proposed by the Briefing Order.[758]

6. Commission Determination

375. We adopt the high-end outlier test proposed in the Briefing Order. Although we have decided not to use the Expected Earnings model, which is more subject to high-end outliers than the other models, or the Risk Premium Model, the other models may produce unsustainably high results for a particular proxy company in unusual situations. Therefore, we find it necessary to apply a high-end outlier test to the results of these methods. As shown with TECO,[759] whose IBES growth estimates changed from 6.43 to 9.2 and back to 7.68 percent during the course of the First Complaint proceeding, financial metrics for individual utilities can fluctuate dramatically, potentially affecting the resulting ROE. Particularly given that the Commission will continue to use the midpoint as the measure of central tendency for region-wide ROEs, as discussed below, we find it appropriate that there be a high-end outlier test to eliminate members of the proxy group whose ROEs are unreasonably high.

376. While parties have proposed alternative high-end outlier tests as being superior because they have a firmer statistical basis, we do not find these arguments persuasive. Statistical methodologies, like the proposed alternative outlier test methodologies, may be based on assumptions such as the distribution of the underlying population being

---

[757] Trial Staff Reply Br. (I) at 6-7.

[758] RPGI Reply Br. (I) at 13-18.

[759] As noted above, in the First Complaint proceeding, TECO set the top of the zone of reasonableness.

normal.[760] These underlying assumptions may not always hold for a given proxy group, especially a small proxy group.[761] As stated in the article by Frank Grubbs cited by CAPs, "the rejection of 'outlying' observations may be just as much a practical (or common sense) problem as a statistical one and sometimes the practical or experimental viewpoint may naturally outweigh any statistical contributions in a sample . . . [A]ny test which requires an inordinate amount of calculation seems hardly to be worthwhile."[762] The high-end outlier test proposed in the Briefing Orders has the advantage that it is relatively easy to carry out and places a well-defined upper bound on the proxy group. In addition, because this test only utilizes a percentage differential compared to the median, it can be used with small proxy groups.

377. We also reject MISO TOs' proposal to use 150 percent of the highest median ROE produced by either the DCF or the CAPM model as the high-end outlier test for both models. As Mr. Solomon testified for CAPs, each model is based on different assumptions and thus estimates the cost of equity in different ways. Therefore, the determination of whether each model produces one or more extreme or illogical results is best determined by examining the dispersion of the ROE estimates produced by that model.[763]

378. MISO TOs also assert that, if the Commission applies a high-end outlier test to the DCF model, it should use a one-step DCF model without any long-term growth projection, instead of the two-step DCF model. However, the Commission has already discussed earlier in this order why a DCF analysis of a single utility should include a long-term growth projection. We recognize that the inclusion of a long-term growth projection based on GDP tends to normalize the ROEs produced by the model, and that this minimizes the likelihood that there will be any high-end outlier. Indeed, the high-end outlier test adopted in this order does not exclude any proxy company's DCF ROE in either the First Complaint or Second Complaint proceeding. Nonetheless, it is possible that unusual circumstances with respect to a particular company, if for example, there is an unusually high IBES growth projection as a company bounces back from a unique

[760] *See, e.g.*, MISO TOs Reply Br. (I), App. 2 McKenzie Reply Aff. (I) at 107 ("Under Mr. Solomon's paradigm, where the standard deviation serves as a relevant measure of dispersion, the distribution is assumed to be perfectly normal.").

[761] *See, e.g.*, *Northwest Pipeline Corp.*, 99 FERC ¶ 61,305, at 62,276 (2002) (addressing a case where "the distribution of figures used to calculate Northwest's ROE is negatively skewed.").

[763] Ex. JCI-107 at 29.

setback, could cause the two-step DCF model to produce an illogically high ROE. The high-end outlier test adopted in this order allows such an illogical ROE to be excluded from the proxy group.

B. Low-End Outlier Test

1. Briefing Order

379. Under the Commission's existing low-end outlier test, companies whose ROE fails to exceed the average 10-year bond yield by approximately 100 basis points are excluded from the proxy group on the ground that investors generally cannot be expected to purchase a common stock if debt, which has less risk than a common stock, yields essentially the same expected return.[764] In the Briefing Order, the Commission proposed to continue to use this test for purposes of the CAPM and Expected Earnings analyses as well as the DCF analysis.[765]

2. MISO TOs

380. MISO TOs assert that the Commission adopted its current low-end outlier test in four ROE cases which used financial data for the six months ending November 2007 or the six months ending September 2008.[766] MISO TOs state that Baa bond yields over those two six-month periods averaged 6.69 percent.[767] However, Baa bond yields during the study period for the First Complaint proceeding (the six months ending June 2015) declined by 204 basis points to 4.65 percent,[768] and during the study period for the

---

[764] *Pioneer Transmission, LLC*, 126 FERC ¶ 61,281, at P 94 (2009) (*Pioneer)*, *reh'g denied*, 130 FERC ¶ 61,044 (2010). *S. Cal. Edison Co*., 131 FERC ¶ 61,020, at PP 54-56 (2010) (*SoCal Edison*). In *SoCal Edison*, the Commission stated that it also eliminated companies whose ROEs were less than 100 basis points above the Moody's bond yield for that particular rating in *Atlantic PATH 15*, 122 FERC ¶ 61,135 (2008) (*Atlantic PATH*) and in *Startrans IO. L.L.C.*, 122 FERC ¶ 61,306 (2008) (*Startrans*). *Id.* P 54.

[768] *Id*. at 31.

Second Complaint study period (the six months ending December 2015) declined by 128 basis points to 5.41 percent.[769] Accordingly, MISO TOs contend that the 100 basis point low-end threshold should be adjusted upwards to account for the inverse relationship between risk premiums and bond yields shown by their risk premium analysis in each case.[770] Under the MISO TOs' proposed method, the low end threshold would be adjusted upwards by 154 basis points[771] from 100 basis points to 254 basis points in the First Complaint proceeding, and by 91 basis points[772] to 191 basis points in the Second Complaint proceeding. Thus, in the First Complaint Proceeding the low-end outlier test would exclude from the proxy group any companies with ROEs of 7.19 percent or less and in the Second Complaint Proceeding the test would exclude companies with ROEs of 7.32 percent or less. MISO TOs contend that this revised test would justify excluding additional companies from the proxy groups used for the DCF analysis. The MISO TOs state that the revised low-end outlier test would not affect the proxy group used for the CAPM analysis.

381. Further, MISO TOs argue that the Commission's practice has been to compare every proxy company's ROE to Baa bond index yields. MISO TOs argue the Commission should continue to use Baa bond index yields for the low-end outlier test because that is the bond rating category closest to the risks of common stock.[773]

3. CAPs

382. CAPs oppose MISO TOs' proposed revision to the low-end outlier test.[774] CAPs point out that the Commission used the 100 basis point low-end outlier test in Opinion No. 551 in the First Complaint Proceeding, and the MISO TOs did not seek rehearing on

---

[769] MISO TOs Initial Br. (II), App. 2 McKenzie Aff. (II) at 27.

[770] MISO TOs Initial Br. (I), App. 2 McKenzie Aff. (I) at 28-31; MISO TOs Initial Br. (II), App. 2 McKenzie Aff. (II) at 24-27.

[771] MISO TOs calculate this adjustment by multiplying the 204 basis point decline in interest rate by the 75.34 percent increase in the risk premium determined by its risk premium study in the First Complaint proceeding.

[772] MISO TOs calculate this adjustment by multiplying the 128 basis point decline in interest rate by the 71.56 percent increase in the risk premium determined by its risk premium study in the Second Complaint proceeding.

[773] MISO TOs Reply Br. (I) at 57-58.

[774] CAPs Reply Br. (I) at 48-59; Ex. JC-108 at 29.

that issue. Also, the Presiding Judge in the Second Complaint Proceeding used the 100 basis point low-end outlier test, and the MISO TOs did not file an exception on that issue.

383. CAPs assert that the Commission has explained that the "the purpose of the low-end outlier test is to exclude from the proxy group those companies whose ROE estimates are below the average bond yield or are above the average bond yield but are sufficiently low that an investor would consider the stock to yield essentially the same return as debt."[775] CAPs argue that, for purposes of determining whether a stock would be considered to yield essentially the same return as debt, the 100 basis point threshold is appropriate regardless of changes in interest rates. They assert that yield spreads of utility stock dividends over utility bond yields are relatively stable during most markets. The only notable exception would be during distressed markets when the market demands abnormal risk premiums to invest in securities of greater risk.[776]

384. CAPs also disagree with the MISO TOs' contention that, in applying the low-end outlier test, the ROE of every proxy company should be compared to the Baa bond yield. CAPs argue that the ROE of each proxy company should be compared to the yields of bonds with the same credit rating as the proxy company in question. Thus, if the proxy company has a credit rating of A, its ROE would be compared to A bond yields.[777]

4. Trial Staff

385. Trial Staff argues that MISO TOs' proposed modification to the low-end outlier test, which would require exclusion of companies with ROEs of 7.19 percent or less in the First Complaint Proceeding and companies with ROEs of 7.32 percent or less in the Second Complaint Proceeding, is illogical. Trial Staff contends that no rational investor would consider ROEs of 7.19 percent and 7.32 percent as "essentially the same return" as the contemporary Baa bond yields of 4.65 percent and 5.41 percent respectively.[778] Trial Staff also asserts that the adjustments proposed by MISO TOs rely on an arbitrary choice of time periods for a comparison of interest rates. Trial Staff states that the baseline 6.69 percent Baa bond yield staff used based on study periods in 2007 and 2008 was higher

---

[778] Trial Staff Reply Br. (I) at 6 (citing Trial Staff Reply Br. (I), Keyton Reply Aff. (I) at 10-11). *See also* Trial Staff Reply Br. (II) at 5-6 (citing Trial Staff Reply Br. (II), Keyton Reply Aff. (II) at 10-11).

than the calendar year average Baa bond yields for every year since 2002, except for the bond yield spike period of 2008 and 2009.[779] Trial Staff asserts that it is arbitrary to assume that the baseline for the change in interest rates should be constrained to a comparison between the 2007 and 2008 study periods and the study periods for the First and Second Complaint Proceedings.

386. Trial Staff also states that, in applying the low-end outlier test, the ROE of each proxy company should be compared to the yields of bonds with the same credit rating as the proxy company in question.[780]

5. Commission Determination

387. We will adjust the low-end outlier test to include a risk premium instead of the generic 100 basis points proposed in the Briefing Order, as discussed below. In particular, we will adopt a revised low-end outlier test that eliminates proxy group ROE results that are less than the yields of generic corporate Baa bonds plus 20 percent of the CAPM risk premium. The purpose of the low-end outlier test is to eliminate from the proxy group companies with ROEs that are so low that they should not be considered in determining the low end of the zone of reasonableness. Thus, the mere fact a potential proxy company's ROE may be lower than what would be considered reasonable for an average risk, or even a below average risk, utility is not a sufficient reason to exclude the company from the proxy group. Instead, the Commission's standard has been to exclude companies whose ROEs yield "essentially the same expected return" as debt. As MISO TOs have argued, and the Commission has acknowledged, as bond yields decline, the ROE that investors would consider to yield "essentially the same expected return" as a bond is increasingly higher than the corresponding bond yield.[781] Thus, to ensure that the low-end outlier test properly excludes companies whose ROE is indistinguishable from debt, an adjustment accounting for this risk premium is necessary.

388. We find that 20 percent of the risk premium from the CAPM analysis described above is a reasonable risk premium to apply to the low-end outlier test. Because the risk premium that investors demand changes over time, it is imprecise to simply add 100 basis

---

[779] Trial Staff Reply Br. (I), Keyton Reply Aff. (I) at 11.

[780] *Id*. at 11-12 (citing *Bangor Hydro-Electric Co*., Opinion No. 489, 117 FERC ¶ 61,129, at PP 56-60 (2006) and Opinion No. 445, 92 FERC at 61,266).

[781] See Morin at 128-129, summarizing empirical research showing that as interest rates decline, the risk premium required by equity investors increases. Morin concludes that the gist of this research is that for every 100 basis point decline in government bond yields, the equity risk premium increases by about 50 basis points.

points to the bond yield. The methodology that we are adopting in this order captures such changes because the risk premium from the CAPM analysis reflects investors' required risk premium under the prevailing market conditions. We find that the 20 percent portion of the risk premium strikes a proper balance by being sufficiently large to account for the additional risk of equities over bonds, but not so large as to inappropriately exclude proxy group members whose return on equity is distinguishable from debt. This raises the low-end outlier threshold in the First Complaint proceeding from 5.65 to 6.47 percent, and it raises the low-end outlier threshold in the Second Complaint proceeding from 6.41 to 7.18 percent.[782] This revision does not result in the exclusion of any additional companies from the proxy group when applied to either the DCF or CAPM analyses in the First Complaint proceeding. However, in the Second Complaint proceeding, the revised low-end outlier test excludes one additional company from the DCF analysis.

389. MISO TOs argue that the low-end outlier test has been and should be based on the average Baa yield, while CAPs argue that the application of the low-end outlier test should be dependent on the bond rating of each company in the proxy group. We note that the Commission has applied this test differently in the past, with the most recent application being to apply the test based on the average Baa yield.[783] Conversely, CAPs contend that the Commission should base the low-end outlier test on Moody's Public Utility Bond index yield for the same rating category proxy utility under consideration. While CAPs argue that this application would be more precise, we find that using the Baa bond yields as the low-end test is consistent with the Commission seeking the proxy group for a diverse group of utilities to be representative of the cost of capital for all of those utilities. Further, using the specific bond yield for each company, in addition to adding complexity to the calculations, renders them (and the resulting ROE) less predictable, as the credit ratings for individual companies are likely more volatile than the generic corporate rate baa credit rating due to company-specific credit rating considerations. As discussed elsewhere in this order, where possible, we seek to provide predictability and transparency to ROE determinations, which is best accomplished by using a single outlier test. We find no reason to adjust the low-end outlier test to be applied to Moody's Public Utility Bond index yield for the same rating category proxy utility under consideration at this time.

[783] Opinion No. 531, 147 FERC ¶ 61,234 at P 123.

C. Natural Break Analysis

1. Briefing Order

390. In the Briefing Orders, the Commission proposes to apply its low-end and high-end outlier screens, subject to a "natural break" analysis. The natural break analysis determines whether certain proxy group companies screened as outliers, or those almost screened as outliers, truly represent outliers and should thus be removed from the proxy group. Typically this involves examining the distance between that proxy group company and the next closest proxy group company, and comparing that to the dispersion of other proxy group companies.[784]

391. In the Briefing Orders, the Commission did not explicitly define how large of a difference constitutes a natural break, nor did it set forth a specific methodology for determining what constitutes a natural break. In Opinion No. 531, the Commission stated that there was a natural break where an excluded proxy group company had a cost of equity estimate that was 101 basis points above the applicable bond yield and the lowest cost of equity estimate of the included proxy group companies was 242 basis points above the applicable bond yield—or a 141 basis point break between the excluded and lowest included companies.[785] In Opinion 531-B, the Commission indicated that the same natural break analysis need not apply to both the low- and high-end outlier tests because those tests serve different purposes,[786] but did not otherwise define the numerical difference that would constitute a natural break or provide a methodology for determining what constitutes a natural break.

2. CAPs

392. CAPS contend that the natural break analysis should apply to low-end and high-end outliers.[787] However, CAPS argue that the natural break analysis is vague and subjective, and contend the Commission should use a more objective test. Specifically, CAPS propose the Commission use a two-part test that examines whether a proxy value is: (1) close to the threshold level that applies prior to considering natural breaks; and

---

[784] *See, e.g., SoCal Edison*, 131 FERC ¶ 61,020 at P 56, applying a natural break analysis to exclude from the proxy group a company whose ROE was 102 basis points above the applicable bond yield.

[785] Opinion No. 531, 147 FERC ¶ 61,234 at P 123.

[786] Opinion No. 531-B, 150 FERC ¶ 61,165 at P 79.

[787] CAPS Initial Br. (I) at 61.

(2) far from the neighboring proxy value that would be retained.[788] MISO CAPS contend that the population argument raised by MISO TOs is undermined by, among other things, the Commission's proxy group selection criteria having changed over time.[789]

3. MISO TOs

393. MISO TOs contend the Commission should not use the natural break analysis. Specifically, MISO TOs contend the test has no economic basis, is illogical, unnecessary, arbitrary, and highly subjective. MISO TOs contend the use of the natural break analysis is based on a false premise that evaluating cost of equity estimates is akin to sampling. Instead, MISO TOs contend that the Commission's proxy group criteria are designed to identify the entire relevant population. Further, the MISO TOs contend that the goal is not to exclude outliers, but to exclude estimates that are illogical for use as a basis for establishing the zone of reasonableness.[790] MISO TOs contend that, if the Commission elects to use a natural break analysis, it only be used on the low end of a cost-of-equity estimate range to determine whether the low-end outlier test may have failed to exclude illogical results.[791]

4. Trial Staff

394. Trial Staff contends a natural break test should be used, and argues that dispersion must be taken into consideration for the midpoint to pass the test of economic logic.[792]

5. Commission Determination

395. We will continue to apply the natural break analysis to our outlier screens. We do not find the arguments raised by MISO TOs against its use availing. As has been noted,

---

[788] CAPS Initial Br. (I) at 61-64. The specific test CAPS proposes is detailed in Exhibit JCI-100 at 14-16. Specifically, this test first identifies whether the distance between the outlier threshold and the adjacent proxy value is less than the average jump, or the width of the distribution's range divided by the number of proxies. The test then identifies whether the distance between that lowest or highest proxy value and its neighbor is more than twice the jump separating that neighbor from the next neighbor.

[789] CAPS Reply Br. (I) at 75.

[790] MISO TOs Initial Br. (I) at 9-11.

[791] *Id.* at 11-12.

[792] Trial Staff Reply Br. (I), Keyton Reply Aff. (I) at 29.

the purpose of both the high and low-end outlier tests is to screen for outliers whose inclusion in the proxy group would lead to economically illogical results. Under both tests, as outlined in this order, the Commission will use a formula to calculate a specific numerical guideline for determining whether a particular company's DCF or CAPM ROE should be treated as a high or low-end outlier. However, any such specific numerical guideline must, of necessity, be somewhat arbitrary, given the insignificance of a few basis points difference in ROE. The natural break analysis gives the Commission the flexibility to determine whether a given proxy group company is truly an outlier, or whether it contains useful information, in light of the particular array of ROEs presented by the potential proxy group companies. This is illustrated by the natural break analysis that the Commission performed in both *SoCal Edison*[793] and Opinion No. 531,[794] where the Commission excluded companies whose ROEs were only one and two basis points above the then applicable low-end outlier test, because there was a natural break between those companies' ROEs and the higher ROEs of the companies that the Commission included in the proxy group.

396. We clarify that the Commission will apply such a natural break analysis to both the low-end and high-end outlier tests. We further clarify that the analysis may justify excluding companies whose ROEs are a few basis points above the low-end screen, if their ROEs are far lower than other companies in the proxy group; a similar analysis could also apply with respect to the high-end outlier test. We also clarify that the natural break analysis may justify inclusion of companies in the proxy group despite their failing either the low or high-end outlier test. For instance, a company's ROE could be 152 percent of the median ROE, but, based on this analysis, the Commission may include it in the proxy group if it were not substantially higher than other companies in the proxy group.

397. Further, the Commission has not enumerated a rigid formula, such as specifying how close the company has to be to the next proxy group member to justify inclusion or exclusion from the proxy group, for the application of the natural break analysis, and we decline to do so here. The natural break analysis provides the Commission flexibility to reach a reasonable result based upon the particular array of ROEs presented in a specific case. Although we recognize the value of transparency and predictability, given the number of potential scenarios with respect to outlier proxy group companies, we are not convinced that there is any specific formula that would reach reasonable results in every possible factual situation. In any event, we believe it is appropriate to develop our policy on this issue through case-by-case analysis, rather than adopting a specific formula here.

---

[794] 147 FERC ¶ 61,234 at P 123.

XI. Use of Midpoint or Median as Measure of Central Tendency

398. In determining the central tendency of the zone of reasonableness, the Commission has distinguished between cases involving an RTO-wide ROE and cases involving the ROE of a single utility (or pipeline). In cases involving an RTO-wide ROE, the Commission has held that the midpoint is appropriate. The Commission has reasoned that, because an RTO-wide ROE will apply to a diverse set of companies, the range of results becomes as important as the central value, and the midpoint fully considers that range, because it is derived directly from the endpoints of the range. The Commission established this policy in an order on remand in the proceeding establishing the MISO TOs' 12.38 percent ROE.[795] By contrast, in cases involving a single utility, the Commission has held that using the median is appropriate, because the median "is the most accurate measure of central tendency for a single utility of average risk."[796] In the Briefing Order, the Commission proposed to continue this policy.[797]

399. As described below, the CAPs and OMS assert that the Commission should no longer use the midpoint in cases involving an RTO-wide ROE, while MISO TOs defend the current policy. As discussed below, the Commission is retaining its current policy of using the midpoint for determining the central tendency of the zone of reasonableness in cases involving an RTO-wide ROE.

A. CAPs

400. CAPs recommend using the median for setting the base ROE for all MISO TOs, noting that the Commission has found that the "median best represents central tendency" if a distribution is skewed, for companies of average risk.[798] CAPs further assert that "the midpoint is inherently inferior to the median as a measure of central tendency because it depends upon only the two most extreme, unrepresentative observations . . . and ignores

---

[796] *See SoCal Edison*, 131 FERC ¶ 61,020, at P 91, *remanded on other grounds sub nom. S. Cal. Edison Co. v. FERC*, 717 F.3d 177, 183-87 (D.C. Cir. 2013) (*S. Cal. Edison v. FERC*).

[797] Briefing Order, 165 FERC ¶ 61,118 at P18 n.40.

[798] CAPs Initial Br. (I) at 54; CAPs Initial Br. (II) at 53.

the distribution of proxy group results."[799] CAPs contend that the midpoint may be higher than almost all data points in a given distribution, and using the midpoint of such a distribution to establish a base ROE has previously been found arbitrary and capricious.[800]

401. CAPs acknowledge that the Commission previously found in the *MISO Remand Order* that using the midpoint to determine a single ROE for a diverse group of utilities is justified. However, CAPs contend that the *MISO Remand Order* is distinguishable from this proceeding. They contend that the *MISO Remand Order* emphasized that the proxy group used to define the zone of reasonableness in that proceeding was a subset of the MISO TOs to which the ROE would apply. Therefore, the Commission stated that, unlike a case involving a single utility, it was "not as concerned that the high or low results represent different risks from the single company because the range encompasses only publicly traded Midwest ISO TOs. Rather, we must use the measure that produces the most just and reasonable ROE for all of the Midwest ISO TOs."[801]

402. CAPs point out that here, unlike in the *MISO Remand Order*, the zone of reasonableness is based on a national proxy group. They assert that the "risk comparability requirement established in *Bluefield* emphasizes the geographic proximity of proxy companies." However, CAPs state that most of the proxy group companies are national holding companies whose risk profiles include risk unrelated to the MISO TOs' transmission risk, and as a result, the range of costs of equity for this group are fundamentally not comparable to those of the MISO TOs.[802] In particular, CAPs note that the credit ratings for the high and low-end outliers of the national proxy group do not correspond to those of the MISO TOs.[803] Furthermore, CAPs claim that the proxy group companies have, on average, worse credit ratings than the MISO TOs.[804]

---

[799] CAPs Initial Br. (I) at 40 (citing Ex. OMS-108 at P 4); CAPs Initial Br. (II) at 60-61 (citing Ex. OMS-208 at P 4).

[801] CAPs Initial Br. (I) at 54-55 (citing *MISO Remand Order*, 106 FERC ¶ 61,302 at P 10); CAPs Initial Br. (II) at 54.

[802] CAPs Initial Br. (I) at 55; CAPs Initial Br. (II) at 55.

[803] CAPs Initial Br. (I) at 56; CAPs Initial Br. (II) at 55.

[804] CAPs Initial Br. (I) at 57 (citing Ex. OMS-100 at 11); CAPs Initial Br. (II) at 57 (citing Ex. OMS-200 at 11, Ex. OMS-205 at 1-4).

403. Finally, CAPs argue that the justifications for using the midpoint established in previous proceedings are not applicable here. CAPs point out that the MISO Remand Order stated that the MISO TOs are a "broad group of utilities with diverse risks and business profiles," but the Briefing Order stated that the MISO TOs are of average risk.[805] CAPs contend that, if the MISO TOs as a group can be considered of average risk, then using the median, which emphasizes the central tendency of the range, rather than the midpoint, which emphasizes the impact of the outliers, is consistent with Commission precedent.[806] CAPs also note that averaging the midpoints of the DCF range, CAPM range, Expected Earnings range, and Risk Premium singular value to determine a replacement ROE does not consider whether the outliers' risk profiles for each range are comparable to those of the MISO TOs' outliers. As a result, the replacement ROE "may not correspond to [the costs of equity] of the MISO TOs' outliers."[807]

B. MISO TOs

404. MISO TOs state that CAPs' argument for use of the median relied on Commission decisions addressing single-utility ROEs, which ignores the Commission's repeated rulings that the median is an appropriate measure for single-utility ROEs, but the midpoint is the appropriate measure for diverse groups of utilities in ISOs/RTOs.[808] MISO TOs state that the goal of setting a base ROE for an individual utility is to reflect most accurately the risk of an individual utility applicant, while the goal of setting a base ROE for a regional group of utilities is to estimate a central tendency while also reflecting the diverse nature of the group. MISO TOs argue that, when setting the base ROE for a regional group of utilities, the Commission is not seeking the most refined measure of central tendency, but to consider the full range and risks and business profiles, which is why it would be more appropriate to use the approach of using the midpoint for regional groups.[809]

405. MISO TOs state that CAPs' argument that the Commission's use of a national proxy group warrants the abandonment of the midpoint in favor of the median because

the returns identified for outliers have no particular correspondence to the highest and lowest risk profiles is inaccurate. MISO TOs state that Opinion No. 531 recognizes that transmission utilities compete nationally for investors' capital, making the national range of utility returns the most appropriate range from which to derive a just and reasonable base ROE.[810]

406. MISO TOs state that the Commission should reject CAPs' argument that the midpoint would overstate MISO TOs' costs of equity and ignore the distribution of the proxy companies' cost of capital estimates. MISO TOs state that CAPs' argument assumes that the midpoint will generally be higher than the median. However, MISO TOs state that nothing about the midpoint ensures that it will be higher than the median in any particular instance and it is only "pure happenstance" when the midpoint exceeds a median of the same range and vice-versa.[811] MISO TOs state that the Commission should reject CAPs' argument for use of the median instead of the midpoint, and that the midpoints of the CAPM and Expected Earning ranges are the appropriate measure of the central tendency.[812]

407. MISO TOs state that, while CAPs argue that the use of the midpoint is no longer appropriate in light of the Commission's adoption of a hybrid method for estimating the cost of equity, the new approach incorporates two new range-producing methods: CAPM and Expected Earnings. MISO TOs argue that the proxy groups for these methods are composed the same way as they have historically been used in the Commission's DCF approach.[813]

408. MISO TOs state that the Commission's proposal for calculating a new base ROE by averaging the four methods is appropriate because the new base ROE will then be a product of the midpoints of the three range-producing methods and the single result of the Risk Premium approach, and disagrees with CAPs' assertion that the Commission's proposed four-method approach would be calculated without regard to its placement within the new composite zone of reasonableness.[814]

C. Commission Determination

409. We will continue to use the midpoint to determine the central tendency of the zone of reasonableness in cases involving an RTO-wide ROE, consistent with the policy set forth in the *MISO Remand Order*. The United States Court of Appeals for the District of Columbia upheld that policy in *Public Service Commission of Kentucky v. FERC*. We find that the CAPs have not presented a compelling reason why that policy should not be applied in this case.

410. The court described the *MISO Remand Order's* rationale for using the midpoint in cases involving an RTO-wide ROE as follows,

> The Commission . . . distinguished between 'cases in which a ROE is set for one gas pipeline or electric utility' and cases where 'applicants proposed setting a single ROE for across-the-board application.' In the latter situation, where 'the ROE will apply to a diverse set of companies,' FERC reasoned that the range of results becomes as important as the central value. The midpoint—unlike the other measures of central tendency—'fully considers that range,' because it is derived directly from the endpoints of the range.[815]

411. This reasoning applies equally in this case. The MISO TOs continue to be "a diverse set of companies." For example, in both the First Complaint and Second Complaint proceedings, the MISO TOs' S&P corporate ratings range from BB- to AA, and their Moody's long-term ratings range from Ba3 to Aa2.[816] This broad range of credit ratings supports a finding that the MISO TOs are a diverse group with a variety of risk profiles, even though we treat the group as a whole as of average risk, consistent with the *MISO Remand Order*.[817]

412. We recognize that the proxy group at issue in the *MISO Remand Order* was limited to MISO TOs, whereas in the First Complaint and Second Complaint proceedings we are using national proxy groups that include some firms with no MISO TO operating companies. However, this does not mean that the high and low ends of the DCF and CAPM zones of reasonableness produced by those proxy groups are unrepresentative of the highest and lowest risk profiles among the MISO TOs. In the First Complaint

[817] Cross-Answering Testimony of Ellen Lapson in MISO I, Ex. MTO-39 at 46.

proceeding, the high end of the DCF zone of reasonableness is set by TECO.[818] Its S&P corporate rating is BBB+ and its Moody's long-term rating is Baa1.[819] The high-end of the CAPM zone of reasonableness is set by Black Hills Corp.[820] Its S&P corporate rating is BBB and its Moody's long-term rating is Baa1.[821] Thus, the credit ratings of the two companies whose ROEs are averaged together to establish the high end of the composite zone of reasonableness are both within the MISO TOs' S&P corporate ratings range of BB- to AA, and Moody's long-term ratings range of Ba3 to Aa2. The low end of the DCF range of reasonableness is set by Public Service Enterprise Group and IDACORP, Inc.[822] Public Service Enterprise Group's S&P corporate rating is BBB+ and its Moody's long-term rating is Baa2.[823] IDACORP, Inc.'s S&P corporate rating is BBB and its Moody's long-term rating is Baa1.[824] The low-end of the CAPM zone of reasonableness is set by Duke Energy Corp. (Duke) and Southern Company (Southern).[825] Duke's S&P corporate rating is A- and its Moody's long-term rating is A3.[826] Southern's S&P corporate rating is A, and its Moody's long-term rating is Baa1.[827] These credit ratings are also within the ranges of MISO TOs' S&P corporate ratings and Moody's long-term ratings range.[828] Thus, the companies that set the high and low ends of the DCF and CAPM zones of reasonableness in the First Complaint proceeding have similar risk

[827] *Id.*

[828] *Id.*

profiles to the MISO TOs, and one of those companies is in fact a member of MISO. Similarly, in the Second Complaint proceeding, the high end of the DCF zone of reasonableness is set by PNM Resources.[829] Its S&P corporate rating is BBB+ and its Moody's long-term rating is Baa3.[830] The high-end of the CAPM zone of reasonableness is set by Otter Tail Corp. (Otter Tail).[831] Its S&P corporate rating is BBB and its Moody's long-term rating is Baa2.[832] These credit ratings are both within the MISO TOs' S&P corporate ratings range of BB- to AA, and Moody's long-term ratings range of Ba3 to Aa2. The low end of the DCF zone of reasonableness is set by CenterPoint Energy, Inc.[833] Its S&P corporate rating is A- and its Moody's long-term rating is Baa1.[834] The low-end of the CAPM zone of reasonableness is set by PG&E.[835] Its S&P corporate rating is BBB and its Moody's long-term rating is Baa1.[836] These credit ratings are also within the ranges of MISO TOs' S&P corporate ratings and Moody's long-term ratings. Thus, the companies that set the high and low ends of the DCF and CAPM zones of reasonableness in the Second Complaint proceeding also have similar risk profiles to the MISO TOs, and one of those companies is in fact a member of MISO.

413. We also disagree that the Commission should abandon the midpoint in favor of the median because the proxy group ROEs could be so skewed that the midpoint might be higher than almost all the proxy group ROEs. As the Commission recognized in the MISO Remand Order, the midpoint may be inappropriate in certain circumstances because of egregious distortion by the highest or lowest number. However, here the proxy group ROEs are not so skewed as to render the midpoint inappropriate. In the First Complaint proceeding, the 9.88 percent midpoint of composite zone of reasonableness is only 38 basis points, or four percent, above the 9.50 percent median. In the Second

[833] Appendix B.

[834] Ex. MTO-32 at 1.

[835] Trial Staff Initial Br. (I), Attachment A to App. 2 at 6.

[836] Ex. MTO-32 at 1.

Complaint proceeding, the 9.72 percent midpoint of the composite zone of reasonableness is only 4 basis points, or less than one percent, above the 9.68 percent median. The proxy group ROEs in these cases are thus no more skewed than in the *Pub. Serv. Comm'n of Ky. v. FERC* case, where the 12.38 percent midpoint of the zone of reasonableness was 53 basis points, or about 4.5 percent, above the 11.85 percent median. In that case, the court recognized that, although there was some skew, "this is part of the reason FERC used the midpoint in the first place."[837] The same reasoning applies to the current cases.

414. Accordingly, we will determine the central tendency of both the DCF and CAPM zones of reasonableness in the First Complaint and Second Complaint proceedings based on the midpoint, consistent with our policy of using the midpoint in cases involving RTO-wide ROEs.

XII. Weighting of Models

A. Background

415. In the Briefing Order, the Commission proposed to use the DCF model, the CAPM, and the Expected Earnings model to determine whether an existing ROE remains just and reasonable under the first prong of FPA section 206.[838] The Commission then proposed to use the DCF model, the CAPM, the Expected Earnings model, and the Risk Premium model for establishing a new just and reasonable ROE, where the existing ROE has been shown to be unjust and unreasonable (i.e., the second prong of the FPA section 206 analysis).[839] Under each prong, the Commission proposed to give the models to be used equal weight.[840] Below, we discuss issues raised by the participants with respect to the weighting of the various proposed models.

---

[837] *Pub. Serv. Comm'n of Ky. v. FERC*, 397 F. 3d at 1003.

[838] Briefing Order, 165 FERC ¶ 61,118 at P 17.

[839] *Id.* P 18.

[840] *See id.* PP 13, 16, 18, 32.

B. CAPs

416. CAPs argue that the Expected Earnings model should be excluded and, if included, should be given the least amount of weight.[841] As described above, CAPs assert that the Expected Earnings model does not accurately estimate a utility's cost of equity, because it is an accounting-based measure that does not reflect the rate of return that investors require in the market-priced common equity capital of a utility.[842] CAPs argue that there is no evidence investors give the Expected Earnings model any weight in informing their investment decisions.[843] If used, CAPs contend that the Expected Earnings model should be weighted significantly less than the market-oriented models (suggested weight of 16.7 percent for prong one and 12.5 percent for prong two),[844] arguing that it distorts and inflates the estimate of investors' required return on market-priced equity.[845]

417. CAPs also assert a number of reasons why the DCF should be weighted more than other models. First, CAPs argue that the Commission has used the DCF method for many years with proven success.[846] Second, CAPs state that, in contrast to other proposed models, the Commission has refined and honed the DCF model over a number of years, making it more accurate.[847] Third, CAPs contend that, because the Commission has used the DCF model for many years, investors are familiar with it and more likely to

---

[841] CAPs Initial Br. (I) at 46; CAPs Initial Br. (II) at 46; CAPs Reply Br. (I) at 40, 46; CAPs Reply Br. (II) at 60, 67.

[842] CAPs Initial Br. (I) at 40-44; CAPs Initial Br. (II) at 39-44. CAPs states that the Expected Earnings model may only help predict the stock-issuing company's own rate of return per *its* book equity, not the investor's own rate of return on investment unless adjusted for the market/book ratio. CAPs Reply Br. (I) at 47; CAPs Reply Br. (II) at 67.

[845] CAPs Initial Br. (I) at 46; CAPs Initial Br. (II) at 46.

[846] CAPs Initial Br. (I) at 46; CAPs Initial Br. (II) at 46; CAPs Reply Br. (I) at 46; CAPs Reply Br. (II) at 66.

[847] CAPs Initial Br. (I) at 46; CAPs Initial Br. (II) at 46; CAPs Reply Br. (I) at 46; CAPs Reply Br. (II) at 66-67.

apply it in the same manner as prescribed the Commission.[848] Fourth, CAPs argue that the DCF model is a superior model for assessing investors' expectations and required returns, because it is the only one that incorporates direct inputs from investors pertaining to the market value of electric utilities' common equity capital (through the "P" term in the DCF equation).[849]

418. CAPs argue that the Commission should exclude the Expected Earnings model, and if it is excluded, that the Commission should use the following weighting for the different models. CAPs assert that for the prong one analysis, the Commission should weight the DCF model at 60 percent and the CAPM at 40 percent; and that for the prong two analysis, the Commission should weight the DCF model at 42.8 percent, the CAPM at 28.6 percent, and the Risk Premium model at 28.6 percent.[850] CAPs contend that, if the Commission includes the Expected Earnings model, the Commission should use the following weighting for the different models. CAPs assert that for prong one, the Commission should weight the DCF model at 50 percent, the CAPM at 33.3 percent, and the Expected Earnings model at 16.7 percent; and that for the prong two analysis, the Commission should weight the DCF model at 37.5 percent, the CAPM at 25 percent, the Expected Earnings model at 12.5 percent, and the Risk Premium model at 25 percent.[851]

C. MISO TOs

419. MISO TOs assert that CAPs' argument to weight the DCF model more heavily than other models is arbitrary and unsupported by evidence.[852] MISO TOs argue in support of weighting all models equally. MISO TOs argue that the methodology is complex as is and that unequal weighting would only result in an extra layer of subjectivity.[853]

---

[848] CAPs Reply Br. (I) at 46; CAPs Reply Br. (II) at 67.

[851] CAPs Initial Br. (I) at 47-48; CAPs Initial Br. (II) at 46-47; Ex. OMS-100 at 7-8; Ex. OMS-200 at 7-8.

[852] MISO TOs Reply Br. (I) at 52; MISO TOs Reply Br. (II) at 51.

[853] MISO TOs Reply Br. (I) at 52; MISO TOs Reply Br. (II) at 51.

420. MISO TOs contend that because there is no evidence that one model is inherently superior to another, weighting them differently is an option unsupported by evidence.[854] MISO TOs argue the Commission has recognized that there is no single approach that is fundamentally superior or foolproof and that each model offers unique features with their own advantages and disadvantages.[855]

421. While MISO TOs generally support weighting all models equally, MISO TOs take particular exception to giving the DCF more weight as compared to other models.[856] MISO TOs state that the evidence submitted during this proceeding indicates that the DCF model fails to meet the *Hope* and *Bluefield* standards, and, therefore, CAPs' argument to weight the DCF model more than the others is particularly flawed.[857]

D. Trial Staff

422. Trial Staff acknowledges that the Commission has proposed to use equal weighting for all models.[858] Trial Staff argues that the Commission should not use the Expected Earnings model for either prong.[859] But if the Commission chooses to use the Expected Earnings model, Trial Staff proposes that, for prong one, the Commission should weight the DCF model, the CAPM, and the Expected Earnings model equally.[860] Additionally, for prong two, Trial Staff proposes that the Commission should weight the

---

DCF model, the CAPM, the Risk Premium model, and the Expected Earnings model equally.[861]

E. RPGI

423. RPGI argues that the Commission should weight the DCF model no less than one-half in proportion to the other models.[862] RPGI states that the Commission has not explained nor justified no longer relying exclusively on the DCF model, rather than utilizing an equally-weighted multiple methodology approach.[863] RPGI argues that, because the Commission has previously observed that the DCF model is statistically superior to alternatives and the Commission has not provided any evidence that the alternative models produce better forecasts, the DCF model should not be weighted equally with the others.[864] RPGI summarizes its arguments in support of the DCF model being weighted at one-half, at the least, by stating that the DCF methodology maintains a preferred status at the Commission and that the Commission has failed to adequately explain its reasoning for adopting a changed course of action.[865]

F. Commission Determination

424. As discussed above in sections VI and VIII, we find that is not appropriate to use the Expected Earnings and Risk Premium models in ROE methodology. Accordingly, the Commission will not give those models any weight in the analysis under either prong one or prong two of FPA section 206. As a result, the arguments proposing alternative weighting of the various models if the Expected Earnings and Risk Premium models are included in the ROE methodology are moot and we will not address them here.

425. In light of our decision not to use the Expected Earnings and Risk Premium models, we will apply only the DCF and CAPM models, giving equal weight to each model. Specifically, the top and bottom of the zones of reasonableness produced by the DCF and CAPM will be given equal weight and averaged to produce a single composite zone of reasonableness that will be used for both the prong one and prong two analysis

---

[861] Trial Staff Initial Br. (I), Keyton Aff. (I) at 51; Trial Staff Initial Br. (II), Keyton Aff. (II) at 49.

[862] RPGI Initial Br. (I) at 5, 38; RPGI Initial Br. (II) at 4, 41.

[863] RPGI Initial Br. (I) at 11; RPGI Initial Br. (II) at 15-16.

[865] RPGI Initial Br. (I) at 38; RPGI Initial Br. (II) at 41.

under FPA section 206. As discussed in section IV above, in order to determine whether an existing ROE is unjust and unreasonable, we will divide the composite zone of reasonableness into quartiles; the quartile centered on the central tendency[866] of the overall composite zone of reasonableness will represent the range of presumptively just and reasonable ROEs for average risk utilities, and the quartiles centered on the central tendencies of the upper and lower halves of the composite zone of reasonableness will represent the range of presumptively just and reasonable ROEs for above- and below-average utilities, respectively. For purposes of determining just and reasonable ROEs under the second prong of FPA section 206 (and under FPA section 205), we will generally set the ROE of average risk utilities at the central tendency of the overall composite zone of reasonableness, and set the ROEs of above average risk utilities at the central tendency of the upper half of the composite zone of reasonableness and below average risk utilities at the central tendency of the lower half of the composite zone of reasonableness.[867]

426. We find that the record evidence supports giving each model that will be used in the ROE methodology equal weight, as described above. The evidence indicates that neither remaining model is conclusively superior to the other model. Each model has unique aspects, and advantages and disadvantages that make it preferable to the other model in some respects, but not other respects. Parties point out, for example, that the DCF model is the only one that incorporates direct inputs from investors pertaining to the market value of electric utilities' common equity capital;[868] however, parties also argue that investors base their decisions on factors more closely aligned with those contained within the CAPM.[869] Accordingly, we find that, on balance, the evidence does not indicate that there is a clearly superior model for estimating cost of equity that should be given more weight than the others. Moreover, we find that equally weighting the two models will reduce the model risk associated with any particular model more than giving one model greater weight than the other. Therefore we find that the risks associated with

---

[866] As noted above in section XI, the Commission will continue to use the midpoint of the zone of reasonableness as the appropriate measure of central tendency for a diverse group of average risk utilities and the median as the measure of central tendency for a single utility.

[867] We do not intend by this discussion to foreclose the possibility that a particular utility could be of such high or low risk to justify setting its ROE at the top or bottom of the composite zone of reasonableness.

[868] CAPs Reply Br. (I) at 46; CAPs Reply Br. (II) at 67.

[869] MISO TOs Reply Br. (I) at 53 n.212 (citing Jonathan B. Berk & Jules H. van Binsbergen, *How Do Investors Compute the Discount Rate? They Use the CAPM,* Fin. Analyst J. (2d. Quarter 2017)); MISO TOs Reply Br. (II) at 52 (citing same).

the potential errors or flaws in any one model will be mitigated to the greatest extent by giving each model equal weight.

427. Accordingly, we give equal weight to the CAPM and DCF models for purposes of the analysis under both prong one and two of the FPA, as discussed above.

XIII. Sequencing of Calculations in Determining Composite Zone

A. Background

428. As proposed in the Briefing Order, the calculations for determining the composite zone of reasonableness and applicable range of presumptively just and reasonable ROEs under the first prong of section 206 would be carried out as follows. First, a proxy group would be determined for each model using existing Commission screens. Second, for each model, low and high end outliers would be removed using applicable tests. Third, the models would apply to the proxy groups for each model, which would produce separate zones of reasonableness from each model. Fourth, the top and bottom of the zone of reasonableness produced by each methodology would be averaged to determine a single composite zone of reasonableness. Fifth, the midpoint/median, lower midpoint/median, and upper midpoint/median of that composite zone would be calculated. Sixth, the quartile ranges constituting the ranges of presumptively just and reasonable ROEs would be calculated, with the average risk quartile centered on the midpoint/median of the composite range, the above-average risk quartile centered on the upper midpoint/median of the composite range, and the below-average risk quartile is centered on the lower midpoint/median of the composite range. The Commission would then determine whether the utility, or group of utilities, at issue are of average risk, above-average in risk, or below-average in risk as compared with the proxy companies in order to determine the applicable range of presumptively just and reasonable ROEs. The Commission would then consider any other record evidence that would be relevant to its determination under the first prong of section 206.

429. As proposed in the Briefing Order, if an existing ROE is found to be unjust and unreasonable under the first prong of section 206, then the additional calculations necessary to determine a replacement just and reasonable ROE would be carried out as follows. First, the applicable midpoint/median, or upper or lower midpoint/median, within the zones of reasonableness would be identified for the utility or utilities. Then those applicable midpoint/medians (or upper or lower midpoint/medians) would be given equal weight and averaged to produce a replacement ROE. As proposed in the Briefing Order, the cost of equity estimate produced by the Risk Premium model would also be given equal weight and averaged with the other values. However, as discussed above in section VIII, we find that it is not appropriate to include the Risk Premium model in our ROE methodology. Therefore that part of the calculation will not be included and we need not address it here.

B. CAPs

430. CAPs argue that the Commission should use only the DCF model, but that, if the Commission instead uses multiple financial models, the Commission should use a different sequence of calculations to determine the composite zone of reasonableness and replacement ROE than the sequence proposed in the Briefing Order.[870] CAPs argue that the computational sequence proposed in the Briefing Order increases the potential for errors due to model risk because it treats each model's range as a separate zone of reasonableness, which results in separate results (median or midpoint) that are then averaged to establish the replacement ROE, but each model's median or midpoint carries its own margin of error. CAPs contend that a more appropriate computational sequence is to average the results of each proxy company's DCF and CAPM values, after first addressing any low-end or high-end outliers associated with each methodology.[871]

431. In particular, CAPs' witness, Dr. Berry, proposes to first calculate for each proxy company the average[872] of the DCF and the CAPM results to determine a company-specific cost of equity. Specifically, Dr. Berry proposes to modify the sequence of calculations proposed in the Briefing Order for determining the composite zone of reasonableness and applicable range of presumptively just and reasonable ROEs under the first prong of section 206 to be carried out as follows. First, a proxy group would be determined using existing Commission screens. Second, for each model, low and high end outliers would be removed using applicable tests. Third, a cost of equity *for each proxy group company* would be determined by averaging the DCF and the CAPM results for each company. Fourth, highest and the lowest company-specific composite costs of equity would define the upper bound and the lower bound of the composite zone of reasonableness. Fifth, the Commission would determine whether the utility or utilities are of average risk, above-average risk, or below-average risk as compared with the proxy companies.[873]

---

[870] CAPs Initial Br. (I) at 65-66, Ex. OMS-100 at 9, Ex. OMS-108 at 9; CAPs Initial Br. (II) at 65-66, Ex. OMS-200 at 9, Ex. OMS-208 at 9.

[871] CAPs Initial Br. (I) at 65-66; CAPs Initial Br. (II) at 65-66.

[872] We note that Dr. Berry proposes to use a weighted average in calculations based on his proposed alternative weighting of the different models. As discussed above in section XII, we are not adopting Dr. Berry's proposed alternative weighting therefore we need not address that aspect of his proposal in this section.

[873] CAPs Initial Br. (I), Ex. OMS-100 at 10-11; CAPs Initial Br. (I), Ex. OMS-200 at 10-11.

432. Under Dr. Berry's proposal, if an existing ROE is found to be unjust and unreasonable then the applicable median, or upper or lower median, of the composite zone would then be averaged with the Risk Premium model result to calculate a just and reasonable replacement ROE.[874]

433. CAPs provide several reasons in support of this alternative sequencing approach. First, CAPs assert that there is only one just and reasonable return for a given proxy company, though it is not directly observable, and the DCF and the CAPM methods attempt to estimate this unknown cost of equity for each proxy company. CAPs argue that, therefore, the identification of each proxy's equity cost is improved if both methods are combined in identifying *that proxy's* single equity cost.[875] Second, CAPs contend that upper bounds, lower bounds, and midpoints/medians produced by each separate model are susceptible to model risk because they are calculated using only one model. Third, CAPs argue that this alternative sequencing approach reduces model risk by more effectively limiting the inclusion of extreme results in the proxy groups.[876] To illustrate this point, CAPs state that other parties, by implementing the traditional sequencing approach, have engaged in blatant cherry-picking, as evidenced by the fact that each model's proxy groups yielded a different company as the high point.[877] Third, in response to MISO TOs' argument that this alternative sequencing approach washes out the limits of the respective ranges of risk from independent financial models, CAPs argue that the narrowing of the composite zone of reasonableness is appropriate because it enhances the precision of the estimates and excludes the extreme and unrepresentative values that would otherwise be given undue and unreasonable weight.[878] Fourth, CAPs state that any instance where companies may get weighted more or less, simply because they have more or less available financial data, would occur all the same using the traditional sequencing approach.[879] Fifth, CAPs argue that using the alternative

sequencing approach to control for outliers leads to results not materially different from the traditional approach.[880]

C. MISO TOs

434. MISO TOs argue that, rather than averaging the cost of equity estimates produced for each individual proxy company across the DCF model and the CAPM, as CAPs support, a separate range and midpoint should be produced for each model as proposed in the Briefing Order.[881] MISO TOs state that the ultimate goal is to specify the broad range of potentially lawful ROEs, and argue that their proposal for a traditional sequencing approach meets that standard.[882]

435. MISO TOs state a number of supporting arguments to claim that CAPs' proposed alternative sequencing approach does not meet this ultimate goal. First, MISO TOs argue that evaluations of the cost of equity typically present the results of alternative models independently, rather than averaging estimates for each individual firm in a proxy group under the separate models.[883] MISO TOs claim that no witnesses for the complainants had previously presented their methodology in this way and that no examples of similar proposals in comparable regulatory proceedings has been presented.[884]

436. Second, MISO TOs state that it is important to compare the results of each methodology against the others, and that, if the Commission followed CAPs' suggested approach, this comparison would be obscured due to a reduction of the results to a single, arithmetic average.[885] Third, MISO TOs argue that CAPs' approach, based on the arithmetic mean of the cost of equity estimates for each proxy company, contradicts the

Commission's precedent of using range and midpoint values.[886] Fourth, MISO TOs state that CAPs' approach does not cancel out model risk or address the impact of extreme results, as CAPs claim, but, rather, just narrows the range by muting out the upper-end estimates.[887] Fifth, MISO TOs argue that the purpose of the proceedings is to arrive at a single ROE that fully considers the range of risks for a diverse group of transmission owners; but, MISO TOs claim that CAPs' approach, instead, determines the average ROE for the average utility, which washes out the limits of the respective ranges of risk from independent financial models.[888]

D. Commission Determination

437. We will use the sequence of calculations proposed in the Briefing Order for the analyses under the first prong and second prong of section 206, with revisions to reflect our decision not to use the Expected Earnings or Risk Premium models, as discussed herein. In particular, we will apply the DCF and CAPM models separately to the applicable proxy group, producing two zones of reasonableness: a DCF zone of reasonableness and a CAPM zone of reasonableness. Then the top of the DCF zone of reasonableness will be averaged with the top of the CAPM zone of reasonableness and the bottom of the DCF zone of reasonableness will be averaged with the bottom of the CAPM zone of reasonableness to determine a single composite zone of reasonableness for use in both the first and second prong analysis under FPA section 206. If an existing ROE is found to be unjust and unreasonable, the replacement ROE will be set at the central tendency of the composite zone or reasonableness or the central tendency of the upper or lower halves of the composite zone of reasonableness depending upon whether the utility is of average, above average, or below average risk, respectively.

438. We will not adopt CAPs' proposed alternative calculation sequence. As noted above, CAPs propose that we determine a cost of equity for each proxy group company by averaging the company-specific DCF and the CAPM results for each company and then using those company-specific composite costs of equity to define the composite zone of reasonableness. We find that the record evidence supports that the DCF and

CAPM models that we will use are intended to produce results separately based on the entire applicable proxy group to which the model is applied, without computing averages across multiple methods for a single company, as CAPs propose. There is no record evidence indicating that analysts apply these models in this way or present the results of these models in this way, nor has any party provided an example of these models being applied this way in a comparable regulatory proceeding. There is also nothing in the record to indicate that the assumptions or structures of the DCF and CAPM models contemplate that the result for a specific proxy group company will be isolated and averaged with a company-specific result from a separate model, rather than considered along with the full range of returns for the entire proxy group that the models produce. The sequencing approach that we adopt here allows the models to function as they are designed until they produce their intended end result. CAPs' alternative proposal would interfere in the function of the models before they produce their intended end result and instead take inputs from the models and combine them before the inputs were used as the models intended.

439. Moreover, the purpose of the DCF and CAPM models is to produce a range of returns applicable to the entire span of investment risks for a proxy group of utilities. The purpose is not to provide a specific cost of equity estimate for each proxy group company that can be considered in isolation, outside of the parameters of the model, and then averaged with a company-specific estimate from a separate model. The product of each model is the full range of cost of equity estimates, as calculated within the parameters of the model. There is no evidence to indicate that the DCF and CAPM models would produce superior results if we used the individual data points that form each model's range, before looking at the ranges themselves that are the intended product of the models.

XIV. Use of Group-Wide ROEs as Opposed to Individual Utility ROEs

A. Alliant

440. Alliant argues that the Commission's ROE methodology should allow the base ROE of each individual transmission owner to be different from that established for the group of MISO TOs as a whole. Alliant argues that this is appropriate because the cost of equity may be different among individual transmission owners within a designated group based on company-specific risk factors. Alliant acknowledges the potential administrative burden that would be associated with examining each individual transmission owner's circumstances to determine if a specific transmission owner warrants a different ROE and to mitigate this, proposes to allow stakeholders the

opportunity to provide arguments within the already existing proceeding as to why a specific transmission owner warrants further examination.[889]

B. OMS

441. OMS also argues that the Commission should depart from using RTO-wide ROEs and adopt a more granular approach to examining the risk profiles of utilities in future transmission rate proceedings. OMS contends that the rationale for the original RTO-wide ROE was avoiding unnecessary litigation that could jeopardize formation of MISO, and this rationale no longer applies. OMS asserts that an RTO-wide ROE does not result from proxy groups that appropriately reflect the risk-profile of individual transmission owners based on their own credit rating. OMS contends that the record demonstrates that the MISO TOs feature a wide range of risk profiles and that, for example, a utility with an S&P AA credit rating should not have its rate of return determined using a proxy group that includes companies with an S&P BBB- credit rating. OMS argues that this will over-compensate some transmission owners and under-compensate others. OMS acknowledges that proving that the risks faced by an individual transmission owner (among a group of utilities) are higher or lower than those faced by companies in the proxy group through a comparative risk analysis is difficult. However, OMS does not propose a specific alternative approach but only asks the Commission to pursue a more granular risk analysis of individual transmission owners.[890]

C. MISO TOs

442. MISO TOs argue that the proposals by Alliant and OMS to evaluate MISO TOs' on an individual basis rather than a region-wide group are beyond the scope of these proceedings. MISO TOs assert that at no time prior to the Briefing Order did any complainant, intervenor (including Alliant and OMS), or Commission Trial Staff submit evidence or a brief arguing for evaluation of each MISO TOs' base ROEs on an individual basis. MISO TOs also contend that the complaints in these proceedings challenged the MISO TOs' region-wide base ROE and did not seek a new ROE separately for each transmission owner. MISO TOs also assert that the Commission's orders setting the cases for hearing gave no indication that the possibility of company-specific ROEs was at issue. MISO TOs argue that, accordingly, entertaining these proposals at this stage of the proceedings would deny the MISO TOs due process.[891]

---

[889] Alliant Initial Br. (I) at 9-10; Alliant Initial Br. (II) at 9-10.

[890] OMS Initial Br. (I) at 2-8; OMS Initial Br. (II) at 2-8.

[891] MISO TOs Reply Br. (I) at 79-81; MISO TOs Reply Br. (II) at 78-80.

D. Commission Determination

443. We find that the Alliant's and OMS's requests to depart from the use of an RTO-wide ROE are outside the scope this proceeding. The complaints that originated these proceedings asserted that the base ROE for MISO TOs was unjust and unreasonable because it was too high. They did not, however, dispute the use of an RTO-wide ROE for the MISO TOs or contend that each MISO TO's base ROE should be different. Moreover, the Commission did not propose to depart from the use of an RTO-wide ROE for the MISO TOs in its orders in Order No. 551 or in the Briefing Order. Consequently, we find that such arguments are beyond the scope here.

444. Still, even in light of this finding, we note that it is appropriate for MISO, consistent with its historical practice,[892] to retain a single RTO-wide base ROE.[893] The reason is that many of the factors that affect the cost of capital for the MISO TOs are similar due to their MISO membership. For example, MISO administers a regional planning process in which the need for transmission upgrades and expansions within the RTO are established and the MISO TOs are subject to the same requirements with respect to construction of and cost responsibility for the upgrades and expansions identified in the that planning process. In particular, we note that MISO TOs share cost responsibility for some transmission facilities developed pursuant to the MISO Transmission Expansion Plan.[894] In addition, all of the MISO transmission facilities are pooled and operated by MISO and subject to MISO's functional control without distinction as to ownership. Accordingly, the risks faced by the MISO TOs associated with the operation of their transmission facilities will be substantially similar because the facilities will share the same operator and the costs associated with that operation will be shared by the MISO TOs as members of MISO. Furthermore, there is a single OATT for the MISO region and therefore the rules and requirements applicable to the use of those facilities will be similar in many ways. We find that in such circumstances it is reasonable to allow the

---

[892] *See MISO Remand Order*, 106 FERC ¶ 61,302 at P 9 ("[H]ere the applicants proposed setting a single ROE for . . . application to all but one of the Midwest ISO TOs. Accordingly, . . . we must calculate a single ROE for application to a broad group of utilities with diverse risks and business profiles") .

[893] *See* Opinion No. 551, 156 FERC ¶ 61,234 at P 2 ("The 12.38 percent base ROE continues to be the applicable ROE under Attachment O of the MISO Tariff used by all MISO TOs except for American Transmission Company, LLC (ATC).").

[894] *See, e.g.*, Midcontinent Independent System Operator, Inc., Compliance Filing Reporting on Multi-Value Project Process Under the Open Access Transmission, Energy and Operating Reserve Markets Tariff, Docket No. ER10-1791-000, at Tab A (filed Apr. 23, 2019) (discussing cost-shared projects in MISO and cost allocations).

use of a single RTO-wide ROE because many of the factors influencing the return that investors would require to invest in the MISO TOs are similar such as operating risks, the potential effects of upgrades and expansions, and the rules and requirements applicable to use of their transmission facilities.

445. Moreover, we find that using a single RTO-wide base ROE will likely promote closer integration among the transmission owners in the MISO region and consistency in MISO planning efforts because the effects of RTO planning and expansion decisions will be more balanced across the various different transmission owners with a single RTO-wide ROE than if those transmission owners earned multiple different ROEs on their respective rate bases.

446. Furthermore, even when a single ROE is used for all of the MISO TOs, the method and the calculation of that ROE accounts for differences between the MISO TOs. For example, the comparable risk band used in forming the proxy groups in these proceedings is based on the credit rating range of all of the MISO TOs.[895] Similarly, the Commission considers the full range of the risks and business profiles of the MISO TOs in setting the single RTO-wide ROE. The Commission has explained that, "Given that the ROE will apply across-the-board to all members of the Midwest ISO, rather than to a single company of average risk, we must consider their full range of risks and business profiles."[896] In addressing the MISO TOs' ROE, the Commission similarly explained that "Here, we are dealing with a group of utilities with differing risks and business rankings. In our view, the differing ROEs in this group fairly brackets the range of reasonableness for all Midwest ISO TOs."[897] For these reasons, we find that it is still appropriate to retain an RTO-wide base ROE for the MISO TOs.

XV. ROE Incentives Cap

A. Background

447. The Briefing Order proposed to cap a utility's total ROE, i.e., its base ROE plus incentive ROE adders, at the top of the overall composite zone of reasonableness produced by the DCF, CAPM, and Expected Earnings models. The Briefing Order

[895] *See, e.g.*, OMS Initial Br. (I) at 4; OMS Initial Br. (II) at 4.

[896] *MISO Remand Order*, 106 FERC ¶ 61,302 at P 9.

[897] *Id.*

explained that this continued with the Commission's current policy of capping a utility's total ROE at the top of the zone of reasonableness.[898]

B. CAPs

448. CAPs oppose the Commission's proposal, arguing that it is flawed, and assert that the cap on total ROE should be no higher than the top of the zone of reasonableness produced by the DCF model.[899] CAPs contend that the Commission has not provided a reasoned explanation for the proposed departure from Commission precedent of using the DCF zone of reasonableness to set the total ROE cap. CAPs state that the Commission's primary basis for proposing to rely on multiple financial models instead of the DCF alone is that the DCF methodology alone no longer captures how investors view utility returns because investors do not rely on the DCF alone and the other methods used by investors do not necessarily produce the same results as the DCF. CAPs assert that this basis is not founded on reliable record evidence. Accordingly, they assert that the Commission's proposal to use the top of the overall composite zone of reasonableness is not supported.[900]

449. In particular, CAPs argue that inclusion of the Expected Earnings model in the calculation of the overall zone of reasonableness artificially increases the top of the zone in most instances, thereby inflating the total ROE cap and resulting in exploitation of customers.[901] CAPs further contend that, even if the Commission's explanation could support departure from precedent relying on the DCF method, the total ROE cap at the top of the DCF range was established by rulemaking procedures[902] and should continue to apply, unless and until it is changed through a subsequent formal rulemaking.

---

[898] Briefing Order, 165 FERC ¶ 61,118 at PP 18, 57.

[899] CAPs Initial Br. (I) at 10; CAPs Initial Br. (II) at 10.

[900] CAPs Initial Br. (I) at 84-85; CAPs Initial Br. (II) at 83-85; CAPs Reply Br. (I) at 76-77; CAPs Reply Br. (I) at 96-97.

[901] CAPs Initial Br. (I) at 84-85; CAPs Br. (II) at 84; CAPs Reply Br. (I) at 76-77; CAPs Reply Br. (II) at 96-97.

[902] CAPs Initial Br. (I) at 85 (citing *Promoting Transmission Investment through Pricing Reform*, Order No. 679, 116 FERC ¶ 61,057, at PP 92-93 (2006), *order on reh'g,* Order No. 679-A, 117 FERC ¶ 61,345 (2006), *clarified*, 119 FERC ¶ 61,062 (2007)); CAPs Initial Br. (II) at 84-85 (citing Order No. 679, 116 FERC ¶ 61,057 at PP 92-93).

450. CAPs assert that, if the Commission does adopt the top of the overall composite zone of reasonableness as the cap on total ROE, it should adopt CAPs' proposed alternative sequence of calculations that would first calculate, for each proxy company, the average of the different financial models that produce zones of reasonableness to determine a company-specific cost of equity, then use the highest and lowest company-specific composite costs of equity define the upper bound and lower bound of the composite zone of reasonableness, and have that upper bound serve as the cap for the total ROE plus incentives.[903]

C. MISO TOs

451. MISO TOs support the Commission's proposal to cap total ROE plus incentives at the top of the overall composite zone of reasonableness. MISO TOs assert that the Commission's proposal is consistent with the Commission's incentives policy. They argue that it would be irrational for the Commission to adopt a multi-method hybrid approach for analyzing cost of equity and then not use the range of returns produced by that multi-method approach to establish the high end of the range as the cap on total ROE. MISO TOs contend that CAPs provide no justification for placing undue weight on the DCF model solely for the purpose of setting the upper bound on total ROE.[904]

D. Commission Determination

452. Our existing policy is to cap a utility's total ROE—i.e., base ROE in addition to all incentive adders— at the top of the zone of reasonableness.[905] Although we are not changing that policy in this order, we must now incorporate our new method of calculating the overall composite zone of reasonableness into our existing policy. As discussed above, we find that calculating the zone of reasonableness using the DCF and CAPM will more accurately reflect a utility's cost of equity, because it will better represent how investors make their investment decisions. Accordingly, we find that it is appropriate to use the upper end of the composite zone of reasonableness as produced by the revised methodology adopted in this order to cap total ROE rather than only the upper end of the zone of reasonableness produced by the DCF methodology, as CAPs argue.

453. CAPs oppose continuing the Commission's policy of using the top of the overall zone of reasonableness to cap total ROE on the basis that the Commission has not justified using multiple models to calculate the zone of reasonableness instead of only the DCF. We address these arguments in this order, specifically in section III, and explain

---

[903] CAPs Reply Br. (I) at 43-45; 77-78; CAPs Reply Br. (II) at 63-65; 97-98.

[904] MISO TOs Reply Br. (I) at 81-82; MISO TOs Reply Br. (II) at 80-81.

[905] *See, e.g.*, Order No. 679, 116 FERC ¶ 61,057 at P 93.

why we find that it is no longer appropriate to use only the DCF model to calculate the zone of reasonableness. For those reasons, CAPs' argument on this point is unavailing.

454. CAPs further argue against capping total ROE with the top of the overall zone of reasonableness by asserting that including the Expected Earnings analysis artificially inflates the top of the zone and thus inflates the total ROE cap because it is an outlier that does not reflect to the market cost of equity. As discussed above in section VI, we are not including the Expected Earnings analysis in our calculation of the overall composite zone of reasonableness. Accordingly, CAPs' arguments on this point are inapposite.

455. In addition, CAPs contend that, even if the Commission could support its approach, the total ROE cap at the top of the DCF range was established by rulemaking procedures and should continue to apply, unless and until it is changed through a subsequent formal rulemaking.[906] CAPs cite a case stating that agencies must "use the same procedures when they amend or repeal a rule as they used to issue the rule in the first instance."[907] We find this argument unavailing. We are not amending or repealing our current policy of using the top of the overall zone of reasonableness to cap total ROE. We are continuing that policy, but amending our previous approach to calculating the overall zone of reasonableness. That approach was established via adjudication and therefore we are "us[ing] the same procedures" to change that approach as we did to implement it "in the first instance."

456. Moreover, we find that, even if this constituted a change to our policy of capping total ROE, we could do so in this proceeding. The Commission "has substantial discretion to establish rules of general application by adjudication and need not necessarily employ a separate generic proceeding."[908] We have similarly explained that

"[o]ur decision to establish new policy in the context of case-specific proceedings is clearly within our authority."[909] Moreover, we stated in the Briefing Order that "we [did] not make any final determinations with respect to the proposed new methodology,"[910] which included our proposal to cap total ROE with the top of the overall zone of reasonableness,[911] and that we would consider briefing regarding "the justness and reasonableness of any aspect of the proposed methodology."[912]

457. In addition, while briefs were being filed in response to the Briefing Order, the Commission issued an NOI that raised questions regarding the Commission's policy on capping total ROE and indicated that any new policy adopted in these proceedings could be modified in the future, and could be incorporated into the Commission's rules through a formal rulemaking.[913] Accordingly, all parties have had ample notice of and opportunity to address the Commission's proposal to continue with its existing policy of capping total ROE at the top of the overall zone of reasonableness.

458. We are also not persuaded by CAPs' arguments that, if we do adopt the top of the overall composite zone of reasonableness as the cap on total ROE, we should adopt

CAPs' proposed alternative sequence of calculations. As discussed above in section XIII we find that this proposed alternative sequence of calculations would not accurately reflect a utility's cost of equity and we do not adopt that proposal.

XVI. Complaint-Specific Results: First Complaint

459. As discussed above, we find that the revised methodology established in this order will better enable us to identify whether an existing ROE is unjust and unreasonable and, if so, what is a just and reasonable ROE. Applying this methodology to the First Complaint, we continue to find that the MISO TOs' existing 12.38 percent ROE for purposes of the First Complaint is unjust and unreasonable. Having addressed the first prong of the Commission's dual burden under FPA section 206 and thus satisfied the "condition precedent"[914] to exercising our authority to change a rate under section 206, we grant rehearing of Opinion No. 551 and find that a just and reasonable replacement ROE for MISO TOs' in the First Complaint is 9.88 percent under the section prong of the Commission's dual burden under FPA section 206.

460. Below we address the "specific findings"[915] as to the "'particular circumstances'"[916] of the First Complaint proceeding that establish "'a rational connection'"[917] between the record evidence in that proceeding and our decisions under both prongs of section 206 herein to establish that we have "'made a principled and reasoned decision supported by the evidentiary record.'"[918] Because the Commission bases its decisions concerning just and reasonable ROEs for public utilities on the most recent information in the record regarding market cost of equity, the starting point for determining whether MISO TOs' existing ROE has become unjust and unreasonable must be a consideration of whether the current market cost of equity has changed since the MISO TOs' existing ROE was established based on financial for the six months ending February 2002. Accordingly, we begin by determining a composite zone of reasonableness using the most recent financial information in the record of the First Complaint proceeding, i.e., data for the first six months of 2015.

A. Composition of Starting Proxy Group

461. As described in the Briefing Order,[919] the Commission uses the following screens for developing a proxy group: (1) the use of a national group of companies considered electric utilities by *Value Line*; (2) the inclusion of companies with credit ratings no more than one notch above or below the utility or utilities whose ROE is at issue; (3) the inclusion of companies that pay dividends and have neither made nor announced a dividend cut during the six month study period; (4) the inclusion of companies with no merger activity during the six-month study period that is significant enough to distort the study inputs; and (5) companies whose ROE results pass threshold tests of economic logic, including the low-end outlier test and high-end outlier test adopted in section X of this order. The first four screens listed above evaluate particular characteristics of the companies in question that do not vary depending upon the results of the DCF or CAPM analyses. Accordingly, those screens may be used to develop a starting group of proxy companies eligible for inclusion in the proxy group to be used for the purposes of both the DCF and CAPM models. The low-end and high-end outlier tests must then be applied separately to the results of the DCF and CAPM models to determine the final DCF and CAPM proxy groups. Below, we first address issues concerning the determination of the starting proxy group in the First Complaint proceeding. We then apply the low-end and high-end outlier tests to the results of the DCF and CAPM analyses in order to determine the DCF and CAPM zones of reasonableness.

1. Opinion No. 551

462. The Presiding Judge determined that the DCF Study Period for calculating the zone of reasonableness should be the most recent six-month period for which there is financial data in the record, January to June 2015.[920]

463. In order to establish a proxy group, the Presiding Judge reviewed the DCF-determined cost of equity for 42 companies. The Presiding Judge determined that 40 of those companies should be included in the proxy group, before application of any low or high-end outlier test. Of those companies, the lowest cost of equity was Edison International's 4.38 percent and the highest cost was TECO's 11.35 percent.[921] The Presiding Judge rejected contentions that TECO should be excluded from the proxy group because of certain Merger and Acquisition (M&A) Activity. The Presiding Judge excluded Madison Gas and Electric Energy, Inc. because it did not have a credit rating

[919] Briefing Order, 165 FERC ¶ 61,118 at PP 50-51.

[921] *Id.* at App. A.

from either Moody's Investors Service or S&P and, therefore, could not be shown to have a credit rating of not more than one notch above or below MISO TOs, as required by Opinion No 531.[922] In addition, the Presiding Judge also excluded Unitil Corporation (Unitil) from the proxy group because it is not one of the companies covered by *Value Line* and because, unlike the companies in *Value Line*, Unitil has a capitalization of less than $1 billion.[923]

464. Complainants, Joint Customer Intervenors, and Trial Staff excepted to the Presiding Judge's inclusion of TECO in the proxy group.[924] No participant filed exceptions to any of the Presiding Judge's other rulings with respect to the proxy group.

465. In Opinion No. 551, the Commission affirmed the Presiding Judge's decision to include TECO in the proxy group.[925] Citing Opinion No. 531, the Commission explained that "it is the Commission's 'practice . . . to eliminate from the proxy group any company engaged in M&A activity significant enough to distort the [company's] DCF inputs" — i.e., the company's "stock prices, dividends, or growth rates."[926] The Commission stated that it does not exclude a company simply because it has engaged in any M&A activity or that activity may cause changes in the DCF inputs.[927] Rather, the Commission stated that it excludes a company if the M&A activity may cause temporary changes in DCF inputs that are not sustainable or representative of longer-term investor expectations for the company.

466. As noted in Opinion No. 551, TECO engaged in two M&A activities that could potentially require its exclusion from the proxy group. First, on September 2, 2014, nearly four months before the beginning of the updated the study period, TECO completed its acquisition of New Mexico Gas Company (New Mexico Gas). The record reveals that, several months later, during the January 2015 to June 2015 study period,

[927] *Id.* (citing Opinion No. 489, 117 FERC ¶ 61,129 at PP 67-68 ("We also reject [the] . . . argument that Commission precedent supports, in every instance, the exclusion from a proxy group of any utility engaged in merger activity."), *order on reh'g*, 122 FERC ¶ 61,265, *order on clarification*, 124 FERC ¶ 61,136 (2008)).

analysts were still assessing the impact of the New Mexico Gas acquisition on TECO earnings.[928] For example, the May 22, 2015 issue of *Value Line* noted that the acquisition should increase TECO's earnings, although the acquisition was just one of several factors, including strong customer growth and impending rate increases, that *Value Line* identified to support the projected increase in TECO's earnings for 2015 and 2016.[929]

467. Second, on October 20, 2014, roughly a month after closing the New Mexico Gas acquisition, TECO announced an agreement to sell its coal mining subsidiary, TECO Coal Corporation (TECO Coal) to Cambrian Coal Corp. (Cambrian) for $120 million and a contingent payment of up to $50 million, depending on coal prices.[930] TECO's stock price rose approximately 8 percent in the month following news of the sale. A few months later, in February 2015, TECO announced an amendment to the terms of the agreement that lowered the purchase price to $80 million, but increased the maximum contingent payment to $60 million.[931] Later in February, a securities analyst at UBS upgraded TECO from "neutral" to "buy," noting the potential sale of TECO Coal as one of the reasons for the upgrade. Throughout this period in early 2015, IBES's growth projections for TECO increased from 6.43 percent in January to 7.08 percent in February and all the way up to 9.20 percent by March 2015, even as at least one analyst expressed skepticism that TECO would complete the sale of TECO Coal.[932]

468. In April 2015, TECO announced that it was considering selling TECO Coal to other potential buyers in the event that the deal with Cambrian fell through.[933] As it happened, TECO announced in June 2015, the last month of the study period, that the deal with Cambrian had not closed as scheduled, but that it had received a non-binding offer for TECO Coal from an undisclosed buyer. The IBES growth projections remained steady at 9.20 percent throughout April, May, and June, notwithstanding the multiple reports casting doubt on TECO's ability to complete the sale of TECO Coal.[934] In early

[933] Initial Decision (I), 153 FERC ¶ 63,027 at P 99.

[934] *Id.* P 101; Ex.S-6 at 149, 151.

July 2015, TECO announced that it had failed to reach an agreement with the undisclosed buyer, but that a sale of TECO Coal to Cambrian remained a possibility. A week later, on July 13, 2015, IBES's growth projection for TECO declined to 7.68 percent.[935] The Presiding Judge used the 7.68 percent IBES growth projection in his DCF analysis of TECO.

469. Opinion No. 551 affirmed the Presiding Judge's conclusion that neither the acquisition of New Mexico Gas nor the attempted sale of TECO Coal was sufficient to "distort" the DCF inputs.[936] In Opinion No. 551, with respect to New Mexico Gas, the Commission noted the Initial Decision's finding that TECO's acquisition of New Mexico Gas was completed on September 2, 2014, nearly four months before the beginning of the updated study period, which covered January-June, 2015.[937] As such, the Commission determined that speculation about whether the acquisition would be completed could not have affected, much less distorted, the stock price or the other DCF inputs during the updated study period. The Commission rejected Complainants' contention that TECO should be excluded on the grounds that the acquisition of New Mexico Gas created a temporary and unsustainable increase in TECO's expected earnings. As an initial matter, the Commission found that, over the course of the updated study period, the IBES growth estimates increased 125 basis points, not 280 basis points that Complainants' witness Mr. Gorman testified to.[938] However, the Commission further noted, as illustrated by the July 13, 2015 *Yahoo! Finance* data included along with the testimony of Joint Consumer Advocates' witness Mr. Hill, the actual projected earnings growth for TECO at the end of

---

[935] Initial Decision (I), 153 FERC ¶ 63,027 at P 101. The Presiding Judge's Order Establishing Procedural Schedule provided that the cut-off date for data to be used by any party in updates of ROE studies would be July 13, 2015. Ex. JCA-22.

[936] Initial Decision (I), 153 FERC ¶ 63,027 at PP 81, 96, 106.

[937] Opinion No. 551, 156 FERC ¶ 61,234 at P 38.

[938] *Id.* (citing Ex. JC-22 at 7). In making that finding, the Commission rejected Complainants' contention that there was a disputed issue of fact regarding the appropriate growth rate for TECO at the end of the updated study period. The Commission affirmed the Presiding Judge's decision to rely on Mr. Hill's 7.68 percent growth rate, determining that Mr. Hill's testimony states clearly that he relied upon the numbers from *Yahoo! Finance* on July 13, 2015, the cut-off date for ROE data used in the updated study period, to evaluate TECO's merger activity. By contrast, the Commission determined that there was nothing in Mr. Gorman's testimony that suggests that he used July 13, 2015 IBES data – and not data from earlier in the study period, when the IBES growth rate was 9.20 percent when deciding whether to exclude TECO from the proxy group. *Id*. P 50 n.88.

the updated study period used in the parties' DCF analysis was 7.68 percent, 125 basis points above the 6.43 percent at the beginning of the study period.[939]

470. The Commission concluded that there was no evidence in the record suggesting that the New Mexico Gas acquisition caused a significant and unsustainable increase in TECO's earnings expectations during the updated study period. The Commission determined that the May 22, 2015 *Value Line* report suggested that the acquisition will increase earnings "over and above" the savings TECO will realize from no longer paying transaction costs associated with the acquisition. The Commission found that there was nothing suggesting that the additional increase is unsustainable. After all, the Commission determined, all other things being equal, an earnings increase is what would be expected when a company increases its regulated gas and electric customers by 50 percent, as TECO did in acquiring New Mexico Gas.[940] The Commission further stated that, in any case, the acquisition was just one of many factors, along with rate increases for TECO's Florida utilities and an anticipated reduction in TECO's cost of debt, which supported *Value Line*'s increased earnings projections.[941] The Commission determined that the *Value Line* report thus was not evidence suggesting that the acquisition distorted TECO's expected growth rate based on temporary, short-term developments that are unlikely to continue.[942]

471. Regarding TECO's attempts to sell TECO Coal, the Commission similarly concluded that there was no evidence suggesting that those efforts "distorted" the DCF inputs. The Commission stated that, unlike the acquisition of New Mexico Gas, the efforts to sell TECO extended into the updated study period and, therefore, it was possible that speculation related to the potential merger could have affected TECO's DCF inputs. Nevertheless, the Commission concluded that any effect was either too small or

---

[939] *Id*.

[940] *Id*. P 39. To the extent that the parties suggested that TECO should be excluded because its earnings outlook improved because it was no longer incurring the transaction cost associated with the acquisition, the Commission rejected their argument. The Commission stated that adopting that position would require that it exclude companies for a year after almost any major merger or acquisition as the savings from no longer incurring the transaction costs materialize in annual earnings. The Commission stated that that result is not the purpose of the M&A screen. *Id*. P 50 n.89.

[941] *Id*. P 39 (citing Initial Decision (I), 153 FERC ¶ 63,027 at P 91).

[942] *Id*.

too attenuated to rise to the level of a distortion requiring TECO's exclusion from the proxy group.[943]

472. The Commission found that that the record did not show that the attempted sale of TECO Coal distorted TECO's expected earnings. Noting that TECO Coal represents less than 1.5 percent of TECO's total market capitalization,[944] the Commission determined that the sale of such a relatively small asset is, as a general matter, not the type of input-distorting transaction that the M&A screen is intended to address. Additionally, the Commission stated that many of the public utilities, especially relatively large companies that make a good comparison for TECO, are regularly engaged in potential mergers or acquisitions of small business units or subsidiaries. It stated that excluding such companies from the proxy group on the basis of any small purchase or sale would unnecessarily shrink the group of representative companies, thereby making the proxy group, and the resulting DCF analysis, a less reliable tool for ensuring that the allowed ROE satisfies the requirements of *Hope* and *Bluefield*.[945]

473. The Commission determined that the evidence in this case confirmed that TECO's potential sale of its underperforming asset, TECO Coal, had little impact on its projected growth rates or stock prices. As the Presiding Judge observed, IBES's projected growth rates for TECO steadily increased throughout the first five months of the six-month study period, even as the prospects for selling TECO Coal steadily deteriorated.[946] The Commission stated that, if the potential sale of TECO Coal was a significant factor affecting TECO's DCF inputs, it would anticipate at least some decline in the expected growth rate as the prospects for a sale deteriorated between February and June, 2015. Instead, TECO's expected growth rate first increased between February and March and then held steady through June.[947] In short, the Commission concluded that the record

---

[943] *Id*. PP 40-43.

[944] While noting the possibility that the expected earnings growth rate would have further increased during this period were it not for the eroding chances of a successful sale of TECO Coal, the Commission concluded that there was no evidence in the record suggesting that the decreasing likelihood of a sale provided any such drag on TECO's earnings expectations. *Id*. P 51 n.91.

[945] *Id.* P 41.

[946] Initial Decision (I), 153 FERC ¶ 63,027 at P 103.

[947] *Id.* P 101.

simply did not suggest that the potential sale had much, if any, effect on the growth rate used in the DCF analysis.[948]

474. Similarly, the Commission concluded that there was no evidence in the record that the attempted sale of TECO Coal caused a distortion in TECO's stock price. The comparison of TECO's stock price versus the Dow Jones Utility Average submitted by Dr. Avera showed that the two moved in near lockstep from November 2014 through April 2015, which significantly overlapped with the study period. In any case, Dr. Avera's graph showed that TECO outperformed the industry average by an even greater amount for much of March and April, 2015, when the chances of a successful sale appeared to be diminishing.[949] Once again, the Commission determined that, if the potential sale of TECO Coal was affecting TECO's DCF inputs in any significant way, it would not expect to see TECO's stock price performing well relative to the industry average even as the prospects for the sale declined. The Commission stated that, although it might be argued that looking at relative performance is somewhat misleading, and that TECO's stock would have performed consistently worse relative to the industry average were it not for the potential sale, there was no evidence in the record suggesting that that is the case here and the Commission's M&A screen did not require a company's exclusion from the proxy group on so speculative a basis.[950]

2. Request for Rehearing

475. CAPs state that because TECO's 11.35 percent market cost of equity is the highest of all proxy group companies, TECO, if it is included, sets the upper end of the zone of

---

[948] Opinion No. 551, 156 FERC ¶ 61,234 at P 42.

[949] The Commission noted that the Presiding Judge did not rely on Dr. Avera's chart because the y-axis for TECO's stock price was smaller relative to the y-axis for the industry average, which, according to the Presiding Judge, caused Dr. Avera's chart to underrepresent the variation in TECO's stock price. But, the Commission stated, that observation did not require it to change its conclusion, which rested in part on the fact that TECO's stock price performed better relative to the industry average when the prospects for the sale dimmed, than when the sale appeared most likely to occur. *Id.* P 53 n.95.

[950] *Id*. P 43. Although there was evidence in the record that some analysts viewed TECO Coal as "a drag on shares" of TECO, the Commission found that that evidence did not suggest that the increasingly dim prospect of eliminating that "drag" was sufficient to "distort" the DCF inputs, especially given the absence of any apparent correlation between the DCF inputs and the prospects for a successful sale of TECO Coal. *Id*. P 56 n.97 (citing Initial Decision (I), 153 FERC ¶ 63,027 at P 100).

reasonableness, thereby having a significant impact on the determination of the midpoint. CAPs state that it is important in this case to ensure that the high end of the DCF range is not associated with DCF model inputs that may been distorted by merger-related activity. CAPs argue that, consistent with Commission precedent, TECO should be excluded from the proxy group due to M&A activity that distorted TECO's DCF inputs during the relevant study period.[951]

476. CAPs argue that, in Opinion No. 551, the Commission did not properly apply the standard established by the Commission in Opinion No. 531. They argue that the Commission's application of the M&A screen in Opinion No. 531 focused on whether the M&A activity is significant enough to cause a distortion to the DCF inputs, not whether the M&A activity distorts DCF inputs only on a basis that is "temporary" or "not sustainable." They argue that by imposing on parties the additional burden of demonstrating that the impact on DCF inputs will be temporary or unsustainable in Opinion No. 551, the Commission departed from established precedent without explanation. They further contend that the Commission failed to explain how a party can demonstrate in advance whether the effect of particular M&A activity will be sustainable.[952]

477. Citing TECO's acquisition of New Mexico Gas and the sale of its subsidiary TECO Coal, CAPs argue that the record demonstrates that TECO was engaged in various M&A activities throughout the study period and that such M&A activity distorted the DCF inputs.[953] CAPs contend that neither Opinion No. 531 nor any precedent cited therein supports the proposition that a certain level or duration of distortion is required to exclude a utility from the proxy group. They further contend that Commission precedent is also silent on whether the distortion must occur in a certain direction (positive or negative) in order to warrant removal group.[954] In addition, they argue that M&A activity

[951] CAPs Rehearing Request at 9-10. CAPs state that the Joint Consumer Advocates opt out of CAPs' rehearing request on this issue.

[953] *Id*. at 11 (citing Initial Decision (I), 153 FERC ¶ 63,027 at PP 100-101).

[954] *Id*. at 12 (citing Opinion No. 486-B, 126 FERC ¶ 61,034 at PP 79, 81 (explaining that, here, the Commission's removal of a utility from the proxy group was based, in part, on the basis that the utility's M&A activity "can distort that share prices by creating uncertainty (positive or negative) about the impact of change")).

is not limited to activity within the study period, but may include activity that is "recent, current, or forecasted."[955]

3. Briefs

478. CAPs witness Mr. Solomon argues for the exclusion of TECO from the proxy group.[956] Mr. Solomon asserts that TECO's DCF study inputs were distorted during the relevant study period, January to June 2015, as a result of its major M&A activity.[957] Mr. Solomon contends that the late October 2014 announcement of the agreement to sell TECO Coal had the effect of increasing TECO's price relative to the SNL Energy stock index, and it subsequently maintained that higher relative price throughout the study period ending June 30, 2015, demonstrating the continuing effect the expected sale of TECO Coal had on TECO's stock price. Mr. Solomon states that changes in TECO's stock price followed changes in the SNL Energy group average price relatively closely from July 1, 2014, until the late October 2014 announcement of the agreement to sell TECO Coal, when there was a clear increase in the price of TECO Energy stock relative to the SNL Energy average price. He states that, with some fluctuations, the TECO price subsequently maintained that relative price spread, indicating the continuing favorable effect the expected TECO Coal sale had on the TECO stock price. He argues that this effect on key market-based data requires TECO's exclusion from the proxy group.[958]

479. Mr. Solomon also states that, on July 16, 2015, shortly after the conclusion of the study period in this proceeding, TECO disclosed that it was exploring strategic alternatives, which could include a sale of the entire company. He states that in reaction, shares of TECO spiked that day, justifying excluding TECO from the proxy group.[959]

480. With regard to the Judge's conclusion that TECO should not be excluded from the proxy group because, if anything, the distortion reduces the resulting DCF study ROE input, Mr. Solomon contends that the purpose of the M&A screen is not to determine

---

[955] *Id*. (citing *Atlantic Grid Operations*, 135 FERC ¶ 61,144, at P 88 n.55 (2011) (finding proxy group screens for "significant recent, current or forecasted merger activity to be appropriate)).

[957] *Id*. at 54 (citing Initial Decision (I), 153 FERC ¶ 63,027 at PP 56 and 60; Opinion No. 551, 156 FERC ¶ 61,234 at P 19).

[958] *Id*. at 55.

[959] *Id*. at 55-56.

whether a distorted input causes an increase or decrease in the resulting ROE. He argues that the criterion described in Opinion No. 531 and elsewhere simply requires the exclusion of companies that engaged in significant M&A activity where such activity distorts study inputs, which compromises the integrity of the model's output in respect of the company subject to M&A activity.[960]

481. Mr. Solomon states that the Commission's rationale in affirming the Initial Decision is in contrast to the views expressed by the Judge. According to Mr. Solomon, whereas the Judge declined to exclude TECO from the proxy group on the ground that the price spike caused TECO's dividend yield and 11.35 percent DCF result, which set the top of the range, to be lower than it should be and that excluding TECO would lower the top of the range even more, the Commission instead found that the effect was too small to remove TECO Energy from the proxy group.[961] Mr. Solomon argues that the Commission responded only indirectly to the Judge's finding that TECO's stock price was affected by its announced intention and subsequent attempts to sell TECO Coal.

482. First, Mr. Solomon states that, in finding that the potential sale had little or no effect on the growth rate used in the DCF analysis, the Commission did not use the 9.20 percent growth rate that was in place from March through June in the approved DCF calculations, but rather used the 7.68 percent growth rate from July 13, 2015, which was some 152 basis points, or 16.5 percent, lower. Mr. Solomon further contends that although the Commission cited the Initial Decision at P 103 where the Presiding Judge concluded that there was no evidence "that the 7.68 percent projection was the result of distortions resulting from TECO's attempts to sell TECO Coal," the Presiding Judge also did not cite any evidence to the contrary. Nonetheless, Mr. Solomon argues, TECO's projected growth rate did drop in July 2015, likely for multiple reasons including its declining prospects for unloading TECO Coal. It was also not until July 6, 2015 that Standard and Poor's removed TECO Energy from CreditWatch due to its failure, to that point, to find a buyer for TECO Coal.[962]

483. Second, Mr. Solomon challenges what he characterizes as the Commission's apparent reliance upon a chart produced by MISO TO witness Dr. Avera that purportedly demonstrates that TECO's stock price moved in near lockstep with the Dow Jones Utility Average during much of the study period.[963] Mr. Solomon states that the Presiding Judge

---

[960] *Id*. at 56-57.

[961] *Id*. at 57-58.

[962] *Id*. at 58-59.

[963] *Id*. at 59 (citing Opinion No. 551, 156 FERC ¶ 61,234 at P 43).

expressed concern that Dr. Avera's chart created an optical illusion (because the variation in the scale on the two axes was not equal) which, when corrected for the optical illusion, "would likely result in a price pattern comparable to that shown on Mr. Solomon's graph."[964]

484. In addition, Mr. Solomon notes that, on February 10, 2015, during the study period, a UBS securities analyst advised SNL Financial that the sale of TECO Coal would remove a large drag on shares. Thus, as the Presiding Judge found, there is evidence in the record to demonstrate that the TECO stock price was affected by TECO's announcement of an agreement to sell and subsequent attempts to sell its underperforming TECO Coal subsidiary prior to which *Value Line* had found had weighed on the stock.[965]

485. Mr. Solomon also argues that there was an increase in TECO's projected earnings growth rate during the study period that was at least partially attributable to TECO's acquisition of New Mexico Gas, which increased TECO's regulated gas and electric customers by 50 percent. Mr. Solomon argues that, while this acquisition was completed almost four months prior to the beginning of the DCF study period, it certainly impacted the expected growth rate for TECO Energy. Mr. Solomon states that it is undisputed that TECO's expected earnings growth rate increased from 6.43 percent at the beginning of study period, to the 7.68 percent the Commission found appropriate to use in the DCF analysis by the end of the study period. Mr. Solomon argues that, while the New Mexico Gas acquisition was likely only one of many factors, including rate increases for TECO's Florida utilities and an anticipated reduction in TECO Energy's cost of debt, contributing to the expected growth earnings increase, the resulting 50 percent in regulated gas and electric customers had to be a major contributor and there has been no showing that it was not.[966]

486. Further, Mr. Solomon disagrees with the Commission's conclusion in Opinion No. 551 that there was no evidence in the record suggesting that the New Mexico Generation acquisition caused a significant and unsustainable increase in TECO's earnings expectations during the updated study period. First, Mr. Solomon argues that an

[964] *Id*. (quoting Initial Decision (I), 153 FERC ¶ 62,027 at P 105).

[965] *Id*. at 60.

[966] *Id*. at 60-61.

increase in TECO's expected earnings per share growth rate from 6.43 percent to 7.68 percent—a more than 19 percent increase—is not insignificant.[967]

487. Second, Mr. Solomon argues that the finding of sustainability is misdirected. Mr. Solomon argues that the Commission's statement that an earnings increase would be expected when a company increases its regulated gas and electric customers by 50 percent, as TECO did in acquiring New Mexico Gas, misses the point.[968] According to Mr. Solomon, the point is that the acquisition caused a one-time increase in the expected earnings growth rate, not a one-time increase in the absolute level of expected earnings. Mr. Solomon argues that, after the acquisition is assimilated with a higher base level of earnings, changes in the expected growth rate will not be as large. He contends that while some analysts may make adjustments in an attempt to restate the historical data to account for the acquisition, others may not and, in any event, such adjustments are difficult to quantify.[969]

488. Moreover, Mr. Solomon argues, the *Value Line* betas used for the CAPM analysis are based on historical prices for the last five years and are less certain to be representative of future betas for TECO now that TECO Energy has increased its regulated electric and gas customer base by 50 percent with the New Mexico Gas acquisition, which not only significantly changed the number, but also the composition of its electric versus gas service.[970]

489. MISO TOs respond that Mr. Solomon's argument that TECO is not a proper proxy due to its M&A activity flies in the face of the Commission's prior findings in Opinion No. 551 that there is no evidence in the record suggesting that the New Mexico Gas acquisition caused a significant and unsustainable increase in TECO's earnings expectations during the dated study period, or that such activity operated to distort the DCF inputs.[971]

490. In a reply affidavit, MISO TOs' witness, Mr. McKenzie, argues that Mr. Solomon's arguments to exclude TECO Energy from the proxy group should be rejected. First, Mr. McKenzie argues that the issue of whether to include TECO Energy

---

[970] *Id*.

[971] MISO TOs Reply Br. (I) at 51.

in the proxy group in Docket No. EL14-12-000 is not in any way related to the ROE methodology proposed in the Briefing Order.[972] Mr. McKenzie contends that neither the Court's findings in *Emera Maine* nor the Commission's ROE methodology in the Briefing Order pertain to the evaluation of proxy group companies. Mr. McKenzie argues that Mr. Solomon is improperly attempting to broaden the scope of inquiry, none of his arguments raised in his affidavit are based on new information and that Mr. Solomon is simply second-guessing the Commission's previous determination that TECO belongs in the proxy group.[973] Mr. McKenzie also states that the Commission, in Opinion No. 531, specifically ruled out excluding proxy companies without a demonstration that the transaction impacted the DCF results by distorting the companies' stock prices, dividends, or growth rates.[974]

491. In response to Mr. Solomon's assertion that Dr. Avera's chart created an optical illusion, Mr. McKenzie presents a chart using the same data comparing the TECO stock price with the Dow Jones Utility Average. But, in response to the Presiding Judge's concerns, the values on the two axes are both scaled by exactly 25 percent. Mr. McKenzie asserts that his chart shows that there is no indication of systemic distortion in TECO's stock prices, relative to broader trends for the utility industry.[975] Meanwhile, argues Mr. McKenzie, the chart presented by Mr. Solomon[976] does not compare the movement of TECO Energy's stock price to the corresponding trend for utilities as a whole. Mr. McKenzie contends that the diverse group of companies in the SNL Energy stock index used in Mr. Solomon's comparison is not indicative of price trends for a utility like TECO. Further, Mr. McKenzie argues that Mr. Solomon's figure is a comparison of cumulative percentage changes in value from a selected beginning point, which is arbitrary.[977]

492. Moreover, Mr. McKenzie states that, as Dr. Avera documented, the cash price for TECO's coal subsidiary represented less than 1.5 percent of TECO Energy's total capital. Mr. McKenzie argues that Mr. Solomon's speculation that the sale of an asset that had

already been classified as discontinued since the third quarter of 2014 would somehow motivate a 20 percent revaluation of TECO's stock price is illogical and unsupported.[978]

4. Determination

a. Commission Response to Rehearing Arguments

493. We are not persuaded by CAPs' argument, reiterated in their briefing arguments, that the Commission's application of the M&A screen in establishing the starting proxy group did not properly apply the standard established in Opinion No. 531. CAPs argue that Opinion No. 531 requires exclusion from the proxy group of any company whose M&A activity caused a change in its DCF inputs. They contend that Opinion No. 551 improperly altered that standard by requiring them to show not only that TECO's M&A activity had an impact on its DCF inputs, but also that that impact was "temporary" or "not sustainable."

494. Opinion No. 551 properly considered whether TECO's M&A activity "may cause temporary changes in DCF inputs that are not sustainable or representative of longer-term investor expectations for the company."[979] In Opinion No. 531, the Commission, citing precedent, noted that its practice is to eliminate from the proxy group any company engaged in M&A activity significant enough to distort the DCF inputs, based on the facts and circumstances of each case.[980] The DCF inputs are "distorted" if they are not representative of longer-term investor expectations for the company, for example because the M&A activity has caused a temporary jump in stock price or an unsustainable growth projection. However, if a completed M&A activity has caused a sustainable change in a DCF input, as the Commission found with respect to TECO's purchase of New Mexico Gas, then the DCF inputs are representative of longer-term investor expectations and the company is properly included in the proxy group.

495. Opinion No. 531 and the precedent it cited is not inconsistent with this interpretation of our M&A screen. For example, Opinion No. 531 cited the Presiding Judge's initial decision in *Bangor Hydro-Electric Co*., which the Commission affirmed. In that initial decision, the presiding judge held that the facts and circumstances of that case did not warrant exclusion of the companies at issue from the proxy group:

---

[978] *Id.* at 130.

[979] Opinion No. 551, 156 FERC ¶ 61,234 at P 37.

[980] Opinion No. 531, 147 FERC ¶ 61,234 at P 114 (citing, among other cases, *Bangor Hydro-Electric Co*., 111 FERC ¶ 63,048, at PP 67-68, *aff'd in relevant part*, Opinion No. 489, 117 FERC ¶ 61,129).

> I agree with the testimony presented by the [New England TOs] that "Whether or not [the anticipation of a merger] does or does not [affect the market] *depends on the facts and circumstances*. If a very large company acquires a very small company, it typically is not very material to the very large company. It may be material to the small company, depending on whether there's a premium or investors revise their expectations markedly . . . *whether a merger makes a big effect or not depends on the facts and circumstances*." Tr. 297-98. In this the [New England TOs] presented testimony that the anticipation of merger did not distort stock prices, and therefore, although I agree that whether a company is engaged in merger activity should be a criterion for examination when choosing a proxy group, *in this case* neither PSEG nor Exelon should be eliminated on this basis.[981]

496. In Opinion No. 531 the Commission similarly analyzed whether the M&A activity was significant enough to distort the DCF inputs, based on the facts and circumstances of that case. It affirmed the initial decision's approval of the elimination of two utilities from the proxy group based on their recent M&A activity as well as finding that the record did not indicate that a third utility's recent M&A activity was significant enough to distort the DCF inputs.[982]

497. Sustainability of the impact of M&A activity on growth was not at issue in Opinion No. 531. By contrast, the record relied upon by the Commission in Opinion No. 551 does include evidence of the sustainability of the impact of the M&A activity, specifically the purchase of New Mexico Gas, on growth, and nothing in Opinion No. 531 restricted the Commission from considering such record evidence in making its determination in Opinion No. 551. Further, in the Briefing Order, the Commission "recognize[d] that in unusual circumstances the two-step DCF methodology may produce *unsustainably* high results for a particular proxy company."[983]

b. Commission Response to Briefing Arguments

498. We agree with MISO TOs that additional arguments and evidence regarding whether to exclude TECO from the starting proxy group that parties provided in their briefs is outside the scope of the Briefing Order. In the Coakley Briefing Order, the Commission set forth a framework for addressing proposed revised methodology for rate of return. As noted above, in the Briefing Order, the Commission sought comments on whether to apply the methodology it proposed in the Coakley Briefing Order. While the Commission said that all aspects of the proposed methodology were subject to comment and that parties could provide evidence, the Commission did not propose to change its screens for developing a proxy group, instead proposing to use the same screens as in Opinion Nos. 531 and 551.[984] Moreover, CAPS do not oppose the Briefing Order's proposed M&A screen itself.[985] Rather, CAPs briefing argument, through Mr. Solomon's testimony, is confined to reiterating CAPs' opposition to the inclusion of TECO in the proxy group. But, even if Mr. Solomon's arguments were properly within the scope of the Briefing Order, we find them unpersuasive, as discussed below.

499. Mr. Solomon's argument that the Commission's rationale with respect to the proposed sale of TECO Coal differed from that of the Presiding Judge is unpersuasive. The Commission may affirm the ultimate decision of the Initial Decision for different reasons than put forth by the Presiding Judge where, as in this case, there is a complete evidentiary record of the issue enabling the Commission to affirm the Initial Decision's ultimate conclusion.[986] Moreover, in this case, as we discuss below, the MISO TOs' introduced additional evidence in their reply to the CAPs' brief that addressed concerns raised by the Presiding Judge in his Initial Decision.

500. CAPs contend that TECOs' purchase of New Mexico Gas caused a one-time increase TECOs' growth rate by increasing TECOs' regulated gas and electric customers

---

[984] *Id*. P 50.

[985] CAPs Initial Br. (I) at 25-26.

Coop*., 158 FERC ¶ 61,045, at P 72 n.107 (2017) (affirming the Initial Decision's ultimate conclusion that a revised base energy rate was just and reasonable, despite disagreeing with the Initial Decision's statement that it was an unchanged element of the applicant's formula rate, because there was a complete evidentiary record on the issue), *reh'g denied*, 162 FERC ¶ 61,262 (2018); *Pub. Serv. Co. of Indiana Inc.*, 7 FERC ¶ 61,319, at 61,701, *order on reh'g*, 8 FERC ¶ 61,224 (1979) (affirming the Initial Decision's finding that purchased power estimates were reasonable, but for different reasons than expressed in the Initial Decision), *order on reh'g*, 14 FERC ¶ 61,058 (1981).

by 50 percent. CAPs point out that the IBES short-term year growth projection for TECO increased from 6.43 percent at the beginning of the January to June 2015 study period to the 7.68 percent IBES growth projection on July 13, 2015, which the Commission found appropriate for use in TECO's DCF analysis. CAPs argue that, after TECO's acquisition of New Mexico Gas is assimilated with the higher base level of earnings resulting from the increase in its customers, the longer term increase in TECO's earnings will not be as large.

501. The Presiding Judge addressed this issue in his Initial Decision.[987] Relying on a May 22, 2015 *Value Line* report, the Presiding Judge found that there were additional reasons beyond the New Mexico Gas purchase for TECO's growth rate to increase. That report found that TECO's Tampa Electric and Peoples Gas utilities in Florida were experiencing strong customer growth as the Florida economy expands, and Tampa Electric was benefitting from a rate hike that took effect in November 2014. Also, TECO was planning to replace maturing high-cost debt with borrowings that had a much lower interest rate. Furthermore, the Presiding Judge pointed out that the May 22, 2015 *Value Line* report stated,

> *We forecast continued bottom-line growth in 2016.* We expect the favorable trends at the Florida utilities to persist, and New Mexico Gas is also experiencing some growth, albeit modest. We estimate that earnings will rise 4%-5%, to $1.15 a share. A more significant increase is likely in 2017, as Tampa Electric's rates will be raised by $110 million once an upgrade to a power plant is completed.[988]

The Presiding Judge reasonably found that this statement indicated that *Value Line* did not expect any one-time effects of the New Mexico Gas purchase to extend beyond 2015 into 2016. Rather, New Mexico Gas's contribution to TECO's growth after 2015 would derive not from the two companies' combination of earnings, but from New Mexico Gas' own modest increase in earnings. In these circumstances, we continue to find that the July 13, 2015 IBES projection of TECO's growth over the next three to five years may be treated as representative of longer-term investor expectations of sustainable growth and not significantly affected by any one-time effects of the New Mexico Gas purchase, which was completed over 10 months earlier.

502. CAPs also dispute Opinion No. 551's holding that TECO's October 20, 2014 announcement of an agreement to sell TECO Coal to Cambrian for $120 million and a contingent payment of up to $50 million, depending on coal prices, did not distort its

---

[987] See Initial Decision (I), 153 FERC ¶ 63,027 at PP 89-96.

[988] *Id*. P 93 (citing Ex. MTO-54 at 41 (emphasis in *Value Line* report)).

DCF inputs during the January to June 2015 study period. CAPs cite various *Value Line* reports from before the October 20, 2014 announcement noting that the coal mining business had become a drag on TECO, and a November 21, 2014 *Value Line* report stating that TECO's stock had increased by 8 percent since the announcement.[989] CAPs also rely on a graph comparing the price of TECO stock during the July 1, 2014 to July 13, 2015 to the SNL Energy stock index. CAPs assert that that the graph shows that the October 20, 2014 announcement of the agreement to sell TECO Coal had the effect of increasing TECO's price relative to the SNL Energy stock index and it subsequently maintained that higher relative price throughout the study period, demonstrating the continuing effect of the expected sale of TECO Coal on TECO's stock price.

503. We continue to disagree with these contentions. Although the October 20, 2014 announcement had an immediate effect on the price of TECO stock, we find that there is insufficient evidence that the announcement continued to have a sufficient effect on TECO's stock during the January to June 2015 study period to justify excluding TECO from the proxy group. In the first place, there is no evidence that the average risk profile of the companies reflected in the SNL Energy stock index is comparable to TECO's risk profile. The SNL Energy stock index "[i]ncludes all publicly traded (NYSE, NYSE MKT, NASDAQ, OTC) Electric, Gas, Diversified, and Merchant companies in SNL's coverage universe."[990] About half the companies tracked are midstream gas and oil pipeline companies, and thus the SNL Energy stock index is more exposed to risks associated with changes in natural gas and crude oil commodity prices than an electric utility with some local gas distribution business such as TECO. As a result, there has been no showing that a comparison of how TECO stock performed versus the SNL Energy stock index provides any meaningful information as to how the announcement of the sale of TECO Coal may have affected TECO's stock price during the first half of 2015.

504. In contrast to CAPs, MISO TOs provided at the hearing a graph comparing the price of TECO's stock with the Dow Jones Utility Index from November 1, 2014 to June 30, 2015.[991] That graph shows TECO's stock moving in virtual lockstep with the Dow Jones Utility Index. During periods when the Dow Jones Utility Index increased, the price of TECO stock almost invariably also increased; similarly, when the Dow Jones Utility Index decreased, the price of TECO stock almost invariably also decreased. As CAPs point out, the Presiding Judge was concerned that the MISO TOs' graph used different scales to display the prices of TECO stock and the Dow Jones Utility Index, and

[989] Ex. JCI-100 at 54-55 (I).

[990] Ex. JCI-10 at 271.

[991] Ex. MTO-23 at 99, Figure 1.

he asserted that if the same scale had been used to display both prices, the graph would have shown TECO stock prices increasing at a somewhat faster rate than the Dow Jones Utility Index.[992] However, in their reply brief in response to the Briefing Order, the MISO TOs have provided a revised graph comparing the TECO stock prices with the Dow Jones Utility Average, but using the same scale for both.[993] The revised graph continues to show TECO's stock moving in virtual lockstep with the Dow Jones Utility Index. CAPs' witness, Mr. Solomon, asserts that in late January/early February 2015, TECO's stock price was up approximately 20 percent compared to July 2014.[994] However, MISO TOs' revised graph shows a similar increase in the Dow Jones Utility Index. As MISO TOs' witness, Mr. McKenzie states, the revised graph indicates that there is no indication of systemic distortion in TECO's stock prices, relative to broader trends for the utility industry.[995] In fact, the revised graph shows, if anything, that during the latter part of the study period, the price of TECO stock declined at a slightly faster rate than the Dow Jones Utility Index did during that period, in further contradiction to CAPs' assertion that the TECO Coal sale announcement caused the price of TECO stock to increase during the study period, thus depressing its dividend yield.

505. Moreover, as the Commission pointed out in Opinion No. 551, TECO Coal represents less than 1.5 percent of TECO's total market capitalization.[996] We continue to find that the attempted sale of TECO coal appears too small relative to the size of the company to be responsible for significant changes in TECOs' stock price.

506. In addition, we are not persuaded by Mr. Solomon's argument disputing the Commission's determination, in Opinion No. 551, affirming the Initial Decision's finding that TECO's potential sale of TECO Coal had little impact on its projected growth rates. Opinion No. 551 pointed out that IBES's projected growth rates for TECO steadily increased throughout the first five months of the six-month study period, even as the

---

[992] See Initial Decision (I), 153 FERC ¶ 61,027 at P 105. The Presiding Judge stated that while the TECO stock prices on the graph vary by 35.2 percent, the Dow Jones Utility Index varies by only 25.9 percent.

[993] MISO TOs Reply Br. (I), App. 2 McKenzie Reply Aff. (I) at 129. In the revised graph, both TECO stock prices and the Dow Jones Utility Average vary by 25 percent.

[994] Ex. JCI-100 at 57.

[995] *Id*. at 128-129.

[996] Ex. MTO-23 at 99 (valuing TECO Coal using the most recent non-contingent purchase price for the attempted sale to Cambrian).

prospects for selling TECO Coal steadily deteriorated.[997] If the potential sale of TECO Coal was a significant factor affecting TECO's DCF inputs, we would anticipate at least some decline in the expected growth rate as the prospects for a sale deteriorated between February and June, 2015. Instead, TECO's expected growth rate first increased from 6.43 percent in January 2015, to 7.08 percent in February, and to 9.20 percent in March, and held steady through June. CAPs point out that TECO's IBES growth projection fell to 7.68 percent in July, which was 152 basis points below the 9.20 percent growth projection in March, and the Commission used the 7.68 percent growth projection in its DCF analysis. CAPs suggest that the declining prospects for the sale of TECO Coal contributed to this decline. However, the 7.68 IBES growth projection in July was still above the January IBES growth projection of 6.43 percent and the February IBES growth projection of 7.08 percent, and thus simply returned TECO's growth projection to approximately the same level as at the start of the January to June 2015 study period. In short, the record simply does not suggest that the potential sale had much, if any, effect on the growth rate used in the DCF analysis. Mr. Solomon proffers no new evidence to the contrary.

507. Our merger screen seeks to exclude companies that are engaging in major mergers and acquisition activity. This attempted sale of TECO Coal does not reach this standard and appears to be the type of minor activity that occurs regularly in the course of business for utility holding companies. Accordingly, we deny rehearing of Opinion No. 551's holding that TECO should be included in the proxy group.

B. DCF Proxy Group and Analysis

508. In Opinion No. 551, the Commission affirmed the Presiding Judge's findings concerning how the two-step DCF analysis should be conducted. In this order, we have reaffirmed Opinion No. 551's approval of the Presiding Judge's DCF analysis, with one exception. In section V.C above, we have held that only the IBES short-term growth projection should be used for calculating the (1+.5g) adjustment to the dividend yield, instead of the composite growth rate used by the Presiding Judge. Accordingly, as shown in Appendix A to this order, we have revised the Presiding Judge's DCF analysis of the starting proxy group to reflect the revised calculation of the dividend yield.

509. We now turn to the issue of whether, for purposes of determining the DCF zone of reasonableness, any company in the starting proxy group should be excluded as a low- or high-end outlier. The Presiding Judge excluded three companies — Edison International, FirstEnergy Corporation (FirstEnergy), and Entergy Corporation (Entergy) — because

[997] Initial Decision (I), 153 FERC ¶ 63,027 at P 103.

their ROEs were less than 5.65 percent, which is 100 basis points above the average yield for public utility bonds rated Baa by Moody's.[998]

510. No party excepted to the Presiding Judge's ruling on this issue, and Opinion No. 551 accordingly adopted that ruling. However, as described above, in their brief responding to the Briefing Order, MISO TOs propose a revised low-end outlier test under which all companies whose ROEs are less than 254 basis points above the average yield for Baa utility bonds would be excluded from the proxy group. This revised test would exclude companies with ROEs below 7.19 percent.[999] Based on this revised test, MISO TOs propose to exclude from the DCF proxy group three companies in addition to the three that the Presiding Judge excluded. The additional three companies are Public Service Enterprise Group, Consolidated Edison, Inc., and OGE Energy Corp. The ROEs of those companies range from 7.23 percent to 7.28 percent. Although these ROEs exceed MISO TOs' 7.19 percent proposed threshold, MISO TOs nevertheless assert that they are sufficiently close to the threshold that an investor would consider the stock to yield essentially the same return as debt.[1000]

511. We reject MISO TOs' proposal to exclude Public Service Enterprise Group, Consolidated Edison, Inc., and OGE Energy Corp. from the DCF proxy group. In section X of this order, we rejected MISO TOs' proposed revised low-end outlier test. Instead, we adopted a revised low-end outlier test under which we exclude from the proxy group companies with ROEs that do not exceed the Baa bond yield by at least 20 percent of the risk premium from the CAPM analysis. In the First Complaint proceeding, the risk premium from the CAPM analysis is 9.12 percent**.** Twenty percent of that risk premium is 182 basis points. Adding 182 basis points to the 4.65 percent Baa bond yield produces a low-end outlier threshold in the First Complaint proceeding of 6.47 percent. Although that low-end outlier threshold is higher than the 5.65 percent low-end outlier threshold that the Presiding Judge applied, it does not exclude any additional companies from the proxy group. Public Service Enterprise Group and IDACORP, INC., both with ROEs of 7.23 percent, have the lowest DCF ROE of any company included in the proxy group. That ROE is well above the revised 6.47 percent low-end outlier threshold.

512. The Presiding Judge did not exclude any company from the DCF proxy group on the ground that it is a high-end outlier, nor does any participant seek to exclude any company on that ground. Under the high-end outlier test we have adopted in this order, we would, subject to the natural break analysis, exclude any DCF ROE that is more than 150 percent of the median of the starting proxy group DCF ROEs. In this case, the

---

[998] *See id.* PP 66-67.

[999] MISO TOs Initial Br. (I), App.2 McKenzie Aff. (I) at 31.

[1000] *Id.* at 31 and n. 75.

median of the starting proxy group DCF ROEs, using the exclusions made by the Presiding Judge, is 8.68 percent. One-hundred-fifty percent of that median is 13.02 percent. TECO's DCF ROE of 11.37 percent is well below that amount. Accordingly, we do not exclude any company from the DCF proxy group as a high end-outlier. Based on this discussion, we conclude that the DCF zone of reasonableness is 7.23 percent to 11.37 percent.

C. CAPM Proxy Group and Analysis

513. In Opinion No. 551, the Commission affirmed the Presiding Judge's findings concerning how the CAPM analysis should be conducted. In this order, we have reaffirmed Opinion No. 551's approval of the Presiding Judge's CAPM analysis, with two exceptions related to the market risk premium. In section VII.C above, we have held that only the IBES short-term growth projection should be used in the one-step DCF analysis of the dividend paying members of the S&P 500, instead of the average of the IBES and *Value Line* growth projections approved by the Presiding Judge.[1001] In addition, we have held that companies with negative ROEs or ROEs above 20 percent should be excluded from that analysis. Accordingly, we have revised the CAPM analysis of the starting proxy group approved by the Presiding Judge to reflect this revision.[1002]

514. We now turn to the issue of whether, for purposes of determining the CAPM zone of reasonableness, any company in the starting proxy group should be excluded from the CAPM proxy group as a low- or high-end outlier. The Presiding Judge did not exclude any company from the proxy group on these grounds, nor does any participant contend that any company is a low or high-end outlier. As discussed in the preceding section, we have determined that the low-end outlier threshold in the First Complaint proceeding is 6.37 percent. The companies in the starting proxy group with the lowest ROE are Duke Energy Corp. and Southern Company, both with ROEs of 7.80 percent. Because that ROE is well above the 6.37 percent low-end outlier threshold, we do not exclude any company from the CAPM proxy group as a low-end outlier.

515. Under the high-end outlier test we have adopted in this order, we would exclude from the CAPM proxy group any ROE that is more than 150 percent of the median of the starting proxy group CAPM ROEs. In this case, the median of the starting proxy group CAPM ROEs is 10.3 percent. One-hundred-fifty percent of that median is 15.45 percent.

[1001] Opinion No. 551, 156 FERC ¶ 61,234 at PP 169, 172.

[1002] The results of the CAPM analysis incorporating this revision and the other revisions and clarifications discussed above (i.e., use of the one-step DCF, size adjustment, and only IBES growth rates) are reflected in page 6 of Attachment A to Trial Staff's Initial Briefs. *See* Trial Staff Initial Br. (I), Attachment A to App. 2 at 6; Trial Staff Initial Br. (II), Attachment A to App. 2 at 6.

The company with the highest CAPM ROE in the starting proxy group has an ROE of 13.09 percent, well below the 15.45 percent high-end outlier threshold. Accordingly, we do not exclude any company from the CAPM proxy group as a high end-outlier. Based on this discussion, we conclude that the CAPM zone of reasonableness is 7.80 percent to 13.09 percent.

D. Composite Zone of Reasonableness and FPA Section 206 Findings

516. Averaging the top and bottom of the DCF and CAPM zones of reasonableness determined above based on financial data for the first six months of 2015 produces a composite zone of reasonableness in the First Complaint proceeding of from 7.52 percent to 12.24 percent. The midpoint of that zone of reasonableness is 9.88 percent.

517. Having determined the composite zone of reasonableness based on financial data for the first half of 2015, we now turn to considering whether the MISO TOs' existing 12.38 percent ROE, which was determined based on financial data for the six months ending February 2002, may be found unjust and unreasonable pursuant to the first prong of FPA section 206. In section IV of this order, we have adopted the use of ranges of presumptively just and reasonable ROEs based on the risk profile of a utility or group of utilities to inform our decision whether an existing ROE has become unjust and unreasonable. Specifically, we have held that, for average risk utilities, the presumptively just and reasonable range is the quartile of the overall composite zone of reasonableness centered on the central tendency of the overall zone of reasonableness; for below average risk utilities, that range is the quartile of the zone of reasonableness centered on the central tendency of the lower half of the zone of reasonableness; and for above average risk utilities, that range is the quartile of the zone of reasonableness centered on the central tendency of the upper half of the zone of reasonableness.

518. We find that, for purposes of determining the range of presumptively just and reasonable ROEs applicable to the MISO TOs, they must be treated as of average risk. In their initial brief in response to the Briefing Order, CAPs question whether the MISO TOs should be treated as of average risk.[1003] They assert that the Briefing Order erroneously stated that this is an undisputed fact because MISO TOs' credit ratings and risk profiles do not support a finding that the MISO TOs are of average risk. CAPs state that MISO TOs have study-period credit ratings ranging from S&P BB+ to A+ and contend that such a broad range of risk profiles cannot be described as average risk. They further argue that the risk profile of the MISO TOs as a group was disputed in both of the MISO ROE complaint proceedings. CAPs assert that CAPs introduced evidence of risk mitigation factors such as transmission rate incentives, high equity levels for some MISO TOs, and formula rates and MISO TOs introduced evidence of factors that increase risk, such as high CAPEX levels and evidence of risk purportedly not addressed

[1003] CAPs Initial Br. (I) at 80; CAPs Initial Br. (II) at 80.

by transmission rate incentives. CAPs also assert that the Commission fails to explain why ROEs that exceed the cost-based level by as much as one-eighth of the composite zone of reasonableness are presumptively just and reasonable for all of the MISO TOs' broad risk profiles.[1004]

519. In Opinion No. 551, the Commission disagreed with CAPs' contentions that the MISO TOs' formula rates and the high equity ratios of some MISO TOs reduce their risk profile as compared to the proxy group. Among other things, Opinion No. 551 held that our criteria for selecting members of the proxy group are intended to produce a proxy group made up of companies of similar risk. Those criteria include screens to ensure that the proxy group contains only utilities with similar credit ratings to the utility at issue. To the extent that a higher percentage equity in the capital structure reduces a utility's risk, as CAPs assert, then the utility's credit rating would be correspondingly higher than that of a utility with a typical capital structure.[1005] Opinion No. 551 also found that, to the extent formula rates reduce risk, they would, similar to the use of more equity in the capital structure, improve utility credit ratings. This would, in turn, affect the DCF proxy group because the credit screens require a proxy group of similarly rated utilities, diminishing the ROE produced by the DCF analysis.[1006] CAPs did not seek rehearing of these holdings in Opinion No. 551. Moreover, CAPs' evidence indicates that MISO TOs' average credit ratings are comparable to the averages for the proxy group. As MISO TOs point out, the average credit ratings that CAPs' witness Dr. Berry reports for the MISO TOs are within one notch of the average ratings for the proxy group, which does not indicate that MISO TOs are demonstrably less risky than the proxy group companies.[1007]

520. The Commission recognizes that, because the various MISO TOs have a relatively wide range of credit ratings, the proxy group in this case contains companies with a similarly wide range of credit ratings. However, as discussed in section XI of this order, we have held that the MISO TOs' ROE should be set at the midpoint of the zone of reasonableness, for the very reason that they are a diverse group with a variety of risk profiles, and the court has affirmed that policy. The midpoint fully considers the range of reasonable returns, because it is derived directly from the endpoints of the range.

[1004] CAPs Initial Br. (I) at 80-82; CAPs Initial Br. (II) at 80-82.

[1005] Opinion No. 551, 156 FERC ¶ 61,234 at P 288.

[1006] *Id*. P 297.

[1007] *See* MISO TOs Reply Br. (I), App. 2 McKenzie Reply Aff. (II) at 121; CAPs Initial Br. (I), Ex. OMS-105; CAPs Initial Br. (II), Ex. OMS-205.

521. Given that Commission policy is to set an RTO-wide ROE at the midpoint of the zone of reasonableness and the other record evidence regarding MISO TOs' risk profile, we conclude that MISO TOs must be treated as of average risk and that the range of presumptively reasonable ROEs for consideration in determining whether an existing RTO-wide ROE is unjust and unreasonable should be the quartile of the zone of reasonableness centered on the midpoint of the composite zone of reasonableness. In the First Complaint proceeding, that quartile is from 9.29 percent to 10.47 percent.[1008] ROEs within this range may be treated as presumptively just and reasonable, because they are closer to the 9.88 midpoint of the overall composite zone of reasonableness where we would set the ROE for a diverse group of average risk utilities, than to either: (1) the 8.70 midpoint of the lower half of that zone where we would set the ROE for a diverse group of below risk utilities; or (2) the 11.06 midpoint of the upper half of that zone where we would set the ROE for a diverse group of above risk utilities.[1009]

522. The MISO TOs' existing 12.38 percent is 191 basis above the range of presumptively just and reasonable ROEs for a diverse group of average risk utilities. Accordingly, it is treated as presumptively unjust and unreasonable. In fact, the existing 12.38 percent ROE is higher than the 12.24 percent top of the overall zone of reasonableness.[1010] It is thus clear that, in light of our estimate of the current cost of capital, the MISO TOs' existing ROE is well outside any possible range of potentially just and reasonable ROEs for the MISO TOs. We see no other evidence in the record, such as state ROEs, ROEs of non-utility companies, ROEs produced by other methodologies, non-utility stock prices, investor expectations for non-utility stocks, various types of bond yields and their relation to stock prices, investor and other expert testimony, or testimony regarding the effects of rates on customers that would indicate that this is not the case. For example, the evidence in the record regarding state ROEs indicates that all state-authorized ROEs during the period April 1, 2013 through March 31, 2015 for integrated electric utilities providing generation, transmission, and distribution services ranged from 9.5 percent to 10.4 percent and that 87.34 percent of state-authorized ROEs for both integrated electric utilities and distribution-only electric utilities during that period were within this range.[1011] The fact that MISO TOs' 12.38

[1008] *See* Appendix C.

[1009] *Id.*

[1010] Although the 12.20 percent ATCLLC zone ROE is slightly below the top of the overall zone of reasonableness, it is 173 basis point above the range of presumptively reasonable ROEs established above. Therefore, our finding that MISO's existing 12.38 percent ROE is unjust and unreasonable applies equally to the 12.20 percent ATCLLC zone ROE.

[1011] *See, e.g.*, Opinion No. 551, 156 FERC ¶ 61,234 at P 240.

percent ROE is 198 basis points above this range further demonstrates that MISO TOs' 12.38 percent ROE is unjust and unreasonable. In these circumstances, we find under the first prong of FPA section 206 that the MISO TOs' existing 12.38 percent ROE has become unjust and unreasonable.

523. Having found that the MISO TOs' existing ROE is unjust and unreasonable, we turn to the establishment of a just and reasonable replacement ROE under the second prong of FPA section 206. As discussed above, we have found that the midpoint of the composite zone of reasonable ROEs based on the most recent financial information in the record of the First Complaint proceeding is 9.88 percent. As discussed above, we find that MISO TOs are of average risk. Our policy is to set an RTO-wide ROE at the midpoint of the zone of reasonableness when the transmission owners receiving the RTO-wide ROE are of average risk. Accordingly, we find that the just and reasonable replacement ROE for the MISO TOs in the First Complaint proceeding is 9.88 percent. We therefore grant rehearing of Opinion No. 551 in part to require the MISO TOs to adopt a 9.88 percent ROE effective September 28, 2016, the date Opinion No. 551 required the MISO TOs to adopt a 10.32 percent ROE.

XVII. Complaint Specific Results: Second Complaint

A. Existing ROE for Purposes of Second Complaint

524. In the Briefing Order, the Commission stated that the issue to be addressed in the Second Complaint proceeding is whether the ROE established in the First Complaint remained just and reasonable based on financial data for the six-month period July to December 2015 presented by the participants at the hearing on the Second Complaint.[1012] However, certain parties dispute that the existing ROE to be analyzed for purposes of the Second Complaint is the ROE established in the First Complaint.

1. CAPs

525. CAPs argue that the Briefing Order errs in stating that the issue to be addressed in the Second Complaint proceeding is whether the ROE established in the First Complaint proceeding remained just and reasonable based on financial data for the six-month period from July to December 2015. CAPs contend that the existing ROE to which the July to December 2015 cost of equity should be compared is the 12.38 percent that was in effect from the time when the complaint was filed until September 28, 2016, when Opinion No. 551 was issued and reduced the ROE to 10.32 percent prospectively. They assert

[1012] *See* Briefing Order, 165 FERC ¶ 61,118 at P 61.

that this should be the case regardless of any relief that has been applied or will be applied as a remedy resulting from the First Complaint.[1013]

2. RPGI

526. RPGI argues that the Commission has not justified its interpretation that the "existing rate" for purposes of a section 206 complaint is the one that is determined in a prior proceeding. RGPI asserts that, in the context of successive complaint proceedings, that figure would be unknown when a second complaint is filed. RPGI states that this would present potential complainants with a choice of either awaiting the outcome of any pending 206 complaint to resolve the just and reasonable rate that would serve as the "existing rate" for purposes of framing a complaint, or file a complaint based on a rate that may not prove to be relevant under the Commission's proposed new ROE methodology. RPGI argues that the first choice foregoes any hope of receiving refunds for an unknown and potentially lengthy period of time, while the second choice is a gamble of investing in months or years of litigation that might prove fruitless or overtaken by events. RPGI asserts that the Commission's proposed approach would discourage the filing of complaints and that the Commission has not acknowledged or justified such a policy initiative.[1014]

3. MISO TOs

527. MISO TOs argue that the Briefing Order was correct in explaining that the existing base ROE for purposes of analyzing the Second Complaint is the ROE resulting from resolution of the First Complaint, as determined under the Commission's new ROE methodology. They assert that CAPs' objective in arguing that the 12.38 percent (or 12.20 percent) ROE should be the existing base ROE for purposes of the Second Complaint is to preserve a basis for refunds during the Second Complaint's refund period. MISO TOs contend that it would be illogical to evaluate the merits of a complaint against any rate other than the just and reasonable rate determined by the Commission from the preceding complaint. They argue that such an approach would lead to the meaningless outcome of forcing the Commission to re-examine a rate that it had already determined was unjust and unreasonable.[1015]

528. MISO TOs also assert that CAPs' interpretation of what the existing rate is for purposes of the Second Complaint would also violate section 206(b) of the FPA because

---

[1013] CAPs Initial Br. (II) at 85-86.

[1014] RPGI Initial Br. (II) at 8-10.

[1015] MISO TOs Reply Br. (II) at 86-89.

it would, in this case, double the 15-month refund period in the statute. They argue that refunds arising by virtue of the Second Complaint, if any, will be based on the ROE determined in the First Complaint proceeding and the outcome of the First Complaint cannot legally serve as the predicate for refund liability for a period of thirty consecutive months, until the end of the Second Complaint refund period.[1016]

4. Commission Determination

529. FPA section 206(a) provides that "[w]henever the Commission, after a hearing held upon its own motion or upon complaint, shall find that any rate . . . charged, or collected by any public utility for any transmission . . . subject to the jurisdiction of the Commission . . . is unjust, unreasonable, unduly discriminatory or preferential, the Commission shall determine the just and reasonable rate . . . to be thereafter observed and in force, and shall the fix the same by order." For purposes of deciding whether a rate charged by a public utility is unjust and unreasonable and determining a new just and reasonable rate "to be thereafter observed" pursuant to FPA section 206(a), we must assess whether the public utility's currently effective rate is unjust and unreasonable, not some earlier rate that may have been in effect when the complaint was filed but has now been superseded. Any new just and reasonable rate that we require "to be thereafter observed" pursuant to section 206(a) will replace the currently effective rate, not some previously effective rate. In other words, in order to determine a new rate to be thereafter observed, we must examine what the currently effective rate is because that is the rate that will need to be replaced if it is unjust and unreasonable. It therefore follows that it is the currently effective rate that must be found unjust and unreasonable.

530. The 12.38 percent ROE in effect when Arkansas Electric Cooperative et al. filed the Second Complaint on February 12, 2015 has been superseded. As discussed in the preceding section, in the First Complaint proceeding, we are requiring MISO TOs to reduce their ROE to 9.88 percent effective prospectively from September 28, 2016. Therefore, that is the MISO TOs' currently effective ROE as of today when we are deciding whether MISO TOs' ROE is unjust and unreasonable and should be modified prospectively pursuant to FPA section 206 in the Second Complaint proceeding. Accordingly, 9.88 percent is the ROE which we would have to find unjust and unreasonable under the first prong of FPA section 206, before we could require a new ROE "to be thereafter observed" pursuant to the second prong of FPA section 206. Moreover, as MISO TOs note, it would be illogical for the Commission to re-examine an ROE that it has already determined is unjust and unreasonable and that has been superseded by a new ROE.

531. We also agree with MISO TOs that interpreting the existing rate to be examined in the Second Complaint to be the now-superseded 12.38 percent ROE would effectively

[1016] *Id.* at 90-91.

extends the refund period in the First Complaint proceeding beyond the 15-month limitation in section 206. The Commission's decision in the First Complaint proceeding—i.e., that the 12.38 percent ROE is unjust and unreasonable—would effectively serve as the predicate for allowing refunds in the Second Complaint proceeding if that ROE continues to be unjust and unreasonable based on the data for the Second Complaint's study period, which would allow refunds to extend beyond the 15-month refund period limitation. In other words, if the Commission used the 12.38 percent ROE as the existing rate for purposes of the Second Complaint, then the Commission would be permitted to merely repeat its decision in the First Complaint that the 12.38 percent ROE is unjust and unreasonable and this same decision could serve as the predicate for ordering refunds again, which would effectively extend the statutory 15-month limitation.

532. Under the framework that we have adopted above for analyzing whether a currently effective ROE can be found unjust and unreasonable, we must first develop a composite zone of reasonableness based on the most recent financial data in the Second Complaint proceeding record (i.e., financial data for the period July to December 2015), and then determine whether the currently effective 9.88 percent ROE falls within, or outside, the appropriate range of presumptively just and reasonable ROEs. For the reasons discussed below, in this section we find that the 9.88 percent ROE does fall within the range of presumptively just and reasonable ROEs from the Second Complaint proceeding and we find that this presumption has not been rebutted by the evidence in the Second Complaint proceeding. Accordingly, we cannot find that ROE unjust and unreasonable or require a prospective modification of that ROE. Below in section XVIII, we address the issue of whether, having made that finding, we can nevertheless require refunds for the 15-month refund period when the MISO TOs' pre-existing 12.38 percent ROE was in effect.

B. Composition of Starting Proxy Group

533. As described above in paragraph 461 and in the Briefing Order,[1017] the Commission uses five screens for developing a proxy group. The first four screens listed above evaluate particular characteristics of the companies in question that do not vary depending upon the results of the DCF or CAPM analyses. Accordingly, those screens may be used to develop a starting group of proxy companies eligible for inclusion in the proxy group to be used for the purposes of the DCF and CAPM models. The low-end and high-end outlier tests must then be applied separately to the results of the DCF and CAPM models to determine the final DCF and CAPM proxy groups. First, we address the determination of the composition of the starting proxy group in the Second Complaint proceeding. We then apply the low-end and high-end outlier tests to the results of the

[1017] Briefing Order, 165 FERC ¶ 61,118 at PP 50-51.

DCF and CAPM analyses in order to determine the DCF and CAPM zones of reasonableness.

534. For purposes of determining the starting proxy group, the Presiding Judge determined that the DCF Study Period for calculating the zone of reasonableness should be the most recent six-month period for which there is financial data in the record, July to December 2015.[1018]

535. At the hearing in the Second Complaint proceeding, the participants considered 45 companies included in *Value Line*'s list of electric utilities for inclusion in the proxy group. The Presiding Judge found that all the participants agreed that 11 of these companies should be excluded, primarily because they failed the merger and acquisition screen.[1019] In addition, the Presiding Judge agreed with CAPs that Duke Energy Corporation and NextEra Energy Inc., should also be excluded from the proxy group because of merger and acquisition activity.[1020] This left a proxy group of 32 companies before application of any low-end or high-end outlier tests,[1021] No participant filed an exception to these findings by the Presiding Judge, and accordingly we affirm the Presiding Judge's findings as to the composition of the starting proxy group before application of the high-end and low-end outlier tests.

C. DCF Proxy Group and Analysis

1. Dividend Yield Data

a. Initial Decision (II)

536. The Presiding Judge stated that all participants in the Second Complaint proceeding calculated dividends for purposes of the DCF using the average yield approach. However, the Presiding Judge noted that the dividend yields that the participants calculated vary from one another. He explained that, while some witnesses

---

[1018] Initial Decision (II), 155 FERC ¶ 63,030 at P 24.

[1019] *Id.* P 50. These companies were Black Hills Corporation; Cleco Corporation; Empire District Electric Company; Exelon Corporation; Hawaiian Electric Industrial, Inc.; ITC Holdings Corporation; MGE Energy, Inc.; Pepco Holdings, Inc.; Southern Company; TECO Energy, Inc.; and UIL Holdings.

[1020] *Id*. P 51.

[1021] The 32 companies (together with the ROEs for each company adopted by the Presiding Judge) are listed in Appendix I of the CAPs' initial post-hearing brief.

provided workpapers, their underlying data differs in ways that are difficult to check (e.g., monthly stock prices).[1022]

537. The Presiding Judge stated that these variances only mattered with respect to OGE Energy and PNM Resources, the total returns of which constitute, respectively, the low and high ends of the range of reasonableness. He stated that the CAPs and the MISO TOs calculate a 3.81 percent dividend yield for OGE Energy, while Trial Staff witness Mr. Keyton calculates a dividend yield 3.87 percent for the company. He further explained that the CAPs and the MISO TOs calculate a 2.92 percent yield for PNM, while Mr. Keyton calculates a 2.97 percent yield for the company.[1023]

538. The Presiding Judge stated that the Initial Decision "uses a consensus approach" that adopted the dividend yields calculated by CAPs and MISO TOs, as opposed to those calculated by Trial Staff's witness.[1024]

b. MISO TOs' Exceptions

539. In their Brief on Exceptions to Initial Decision (II), MISO TOs take exception to the Presiding Judge's decision to use the dividend yields for OGE Energy and PNM Resources calculated by CAPs and MISO TOs, as opposed to the higher dividend yields calculated by Trial Staff's witness.[1025] MISO TOs argue that Trial Staff's higher dividend yields for those two companies are based on its witness's reliance on the proxy companies' respective declared dividends in each month of the study period, and that this approach is consistent with Commission precedent that "'approv[es] the use of the most recent dividend declared by the relevant company to determine the 'indicated annual dividend' for each of the six months'" of the DCF study period.[1026] MISO TOs further assert that this approach is appropriate because "'[a] reasonable investor would factor a change in dividend . . . into its risk assessment of a company as of the date the dividend is

[1022] Initial Decision (II), 155 FERC ¶ 63,030 at P 55.

[1023] *Id.* P 56.

[1024] *Id.* P 57.

[1025] MISO TOs Br. on Exceptions at 44-45.

[1026] *Id.* at 45-46 (quoting Opinion No. 531, 147 FERC ¶ 61,234 at P 77 n.135).

declared, not the date it is paid.'"[1027] MISO TOs argue that the Presiding Judge offers no rationale for disregarding the declared dividends that Trial Staff's witness used.

c. Briefs Opposing Exceptions

540. CAPs argue that the Commission should deny MISO TOs' exceptions to the Presiding Judge's decision regarding the appropriate dividend yields to utilize for OGE and PNM. CAPs contend that the MISO TOs' own witness used the same dividends and dividend timing as the Presiding Judge in Initial Decision (II). CAPs assert that nowhere in the record have MISO TOs previously advocated for the use of the dividend increase timing used by Trial Staff's witness. CAPs further argue that MISO TOs have not demonstrated that the approach used by Trial Staff's witness is more appropriate than the approach that was used by both CAPs' witnesses and MISO TOs' witnesses.[1028]

541. CAPs contend that MISO TOs have provided no evidence or argument that the approach taken by Trial Staff's witness is uniquely accurate in reflecting the dividend increase timing that was known to the investors who set each study month's high and low stock prices. CAPs assert that the mere existence of slight variances in the witnesses' approaches does not prove that the Trial Staff witness' approach was more accurate. CAPs argue that MISO TOs had opportunities during the proceeding to present a basis supporting the approach taken by Trial Staff's witness, but they instead elected to present the dividend increase timing used by their own witness and did not disclose their disagreement with their own witness, or their preference for the approach used by Trial Staff's witness until well after the record closed.[1029]

542. CAPs contend that, as the record stands, it is at least equally possible that CAPs and MISO TOs witnesses, rather than Trial Staff's witness, took the more accurate and reasonable approach to the fine points of determining just when a dividend increase should be recognized in calculating a dividend yield. CAPs argue that, faced with a limited record, the Presiding Judge made a reasonable and supportable decision to utilize the dividend increase timing, and resulting dividend yields, presented by most of the witnesses, including the MISO TOs witness. CAPs conclude that the fact that MISO TOs

---

[1027] *Id.* at 46 (quoting *Portland Natural Gas Transmission Sys.*, Opinion No. 524, 142 FERC ¶ 61,197, at P 321 (2013), *reh'g denied*, Opinion No. 524-A, 150 FERC ¶ 61,107 (2015)).

[1028] CAPs Br. Opposing Exceptions at 45-46.

[1029] *Id.* at 47.

now prefer Trial Staff witness' slightly higher dividend yields is no reason to overturn the Presiding Judge's determination.[1030]

543. OMS and JCA also opposed MISO TOs' exception on this issue. They argue that MISO TOs should not be allowed to file exceptions after the close of the record that are contrary to positions that their own witnesses took during litigation because it would deprive other participants of fair notice of their positions and an opportunity to adequately defend against them. OMS and JCA further note that Trial Staff itself did not file exceptions on this point, thereby tacitly accepting the approach adopted by the Presiding Judge in Initial Decision (II).[1031]

544. RPGI similarly opposes MISO TOs' exception on this point. RPGI argues that its witness, Mr. Parcell, calculated the exact same results for PNM Resources as MISO TOs' Witness McKenzie and two other witnesses, and the exact same results for OGE Energy as every other single witness except Trial Staff witness Mr. Keyton. RPGI asserts that MISO TOs failed to raise this matter in answering testimony, in cross examination or any time before filing exceptions despite having ample opportunity to do so.[1032]

545. RPGI also contends that MISO TOs' attempt to introduce their new "Appendix 2"—which provides revised IBES-based DCF returns for OGE Energy and PNM Resources, using the dividend yield calculations of Trial Staff's witness—into the record now without evidentiary foundation is unfair to the Commission and the parties. RPGI asserts that their witness cannot, at this point, offer any explanation or elaboration upon his decision to apply the dividend increase in the months that he did, nor can RPGI question MISO TOs' witness Mr. McKenzie about why he chose the same methodology as RPGI's witness.[1033]

d. Commission Determination

546. We agree with MISO TOs that Commission precedent requires changes in dividends to be reflected as of the date changes in dividends are declared, not as of the date that they are paid.[1034] We have explained that "the most recent declared dividend as

---

[1030] *Id.* at 48.

[1031] OMS-JCA Br. Opposing Exceptions at 26-27.

[1032] RPGI Br. Opposing Exceptions at 33.

[1033] *Id.* at 33-34.

[1034] MISO TOs Br. on Exceptions at 45-46. *See also* Opinion No. 524, 142 FERC ¶ 61,197 at P 321 ("Trial Staff correctly used the declared date of January 21, 2011 for

of the end of each month during the six-month period" should be used when calculating the estimated dividend yield for purposes of the DCF analysis.[1035] Similarly, "the Commission [has] approved the use of the most recent dividend declared by the relevant company to determine the 'indicated annual dividend' for each of the six months."[1036] However, there is insufficient evidence for us to conclude that the OGE Energy and PNM Resources dividend yield calculations of Trial Staff's witness rely upon the dates that dividends were declared, while the calculations adopted by the Presiding Judge do not and instead rely upon the date on which dividends were paid, such that the latter calculations are inconsistent with Commission precedent. We agree with the Presiding Judge's determination that the differences between the dividend yield calculations of Trial Staff's witness and those of CAPs and MISO TOs' witnesses result from "underlying data [that] differs in ways that are difficult to check."[1037] Under these circumstances, we find that there is insufficient evidence to reverse the Presiding Judge's decision to adopt the dividend yield calculations that were used by a greater number of expert witnesses in this proceeding.

547. It does appear, as MISO TOs suggest, that Trial Staff's dividend yield calculations may have accurately factored in dividend changes as of the dates the dividends were declared, consistent with Commission precedent. For example, it appears that Trial Staff's witness increased the dividend in its calculations for PNM Resources to $0.88 per share for the month of December 2015,[1038] but CAPs' witness used a dividend of $0.80 per share for the month of December 2015, which was the rate that prevailed in the preceding months of the study period.[1039] Assuming the parties were relying on PNM Resource's December 10, 2015 declaration of a dividend increase to an indicated annual rate of $0.88 per share of common stock,[1040] then Trial Staff's calculations appear to

---

the dividend. A reasonable investor would factor a change in dividend (here, an increase) into its risk assessment of a company as of the date the dividend is declared, not the date it is paid.").

[1038] Trial Staff Ex. S-6 at 240

[1039] Joint Customer Complainants Ex. JCI-8 at 5.

[1040] PNM Resources, PNM Resources Board Increases Dividend Payment, Declares Quarterly Common Stock Dividend, (Dec. 10, 2015),

include the appropriate dividend value for December 2015. However, it is unclear if the dividend values in Trial Staff's calculations were necessarily changed in response to this announcement or if the dividend values in the calculations of CAPs' witness remained unchanged because the dividend was not paid until after December 2015, or for some other reason. There is no clear and explicit explanation in the record of the reason for the changes in the inputs to the participants' dividend yield calculations. Accordingly, there is not a sufficient basis to conclude that the dividend yield calculations adopted by the Presiding Judge in Initial Decision (II) were inconsistent with Commission precedent and we affirm his decision on this issue.

548. Moreover, as OMS and JCA note, Trial Staff did not file exceptions to the Presiding Judge's decision on this issue.[1041] This creates further uncertainty as to the source of the differences between Trial Staff's dividend yield calculations and the calculations adopted by the Presiding Judge. In particular, it means that the record does not contain an explanation from Trial Staff addressing whether or not they agree with MISO TOs' contention that Trial Staff's calculations are consistent with Commission precedent, while those adopted by the Presiding Judge are not. The issue is further obscured by the fact that the Presiding Judge relied on the dividend yield calculations submitted by MISO TOs but now MISO TOs favor Trial Staff's calculations instead of their own. MISO TOs contrast Trial Staff's workpapers and those of CAPs' witness to suggest that Trial Staff's calculations should be used, but they do not address whether the calculations that they submitted themselves are inappropriate and if so, why. MISO TOs' dividend yield calculations were one of the two sets of calculations that the Presiding Judge stated constituted the "consensus approach" that he adopted. MISO TOs' failure to address why their own calculations are no longer appropriate further weakens the case for reversing the Presiding Judge's decision on this issue.

549. In light of the lack of clarity in the record as to why the dividend calculations from Trial Staff and those adopted by the Presiding Judge are different, we find that there is not a sufficient basis on which to reverse the Presiding Judge's decision to adopt the calculations that were used by a greater number of expert witnesses in this proceeding. Accordingly, we affirm the Presiding Judge's decision regarding the dividend yields for OGE Energy and PNM Resources to be used in the DCF analysis and deny MISO TOs' exceptions on this issue.

---

[1041] *See* OMS-JCA Br. Opposing Exceptions at 27.

2. Outlier Tests and Final DCF Analysis

550. We affirm the Presiding Judge's DCF analysis in Initial Decision (II) in the Second Complaint proceeding, with one exception. As discussed above in section V.C, we have held that only the IBES short-term growth projection should be used for calculating the (1+.5g) adjustment to the dividend yield, instead of the composite growth rate used by the Presiding Judge. Accordingly, as shown in Appendix B to this order, we have revised the Presiding Judge's DCF analysis of the starting proxy group to reflect the revised calculation of the dividend yield.

551. We now turn to the issue of whether, for purposes of determining the DCF zone of reasonableness, any company in the starting proxy group should be excluded as a low- or high-end outlier. The Presiding Judge excluded Edison International, Entergy, FirstEnergy, and Public Service Enterprise Group.[1042]

552. As described above, in their brief responding to the Briefing Order, MISO TOs propose a revised low-end outlier test. In the Second Complaint proceeding, MISO TOs' proposed revised test would exclude all companies whose ROEs are less than 191 basis points above the average yield for Baa utility bonds from the proxy group. This revised test would exclude companies with ROEs below 7.32 percent.[1043] Based on this revised test, MISO TOs propose to exclude from the DCF proxy group three companies in addition to the three that the Presiding Judge excluded. The additional three companies are OGE Energy Corp., CenterPoint Energy, and IDACORP, Inc.[1044]

553. We reject MISO TOs' proposal to exclude CenterPoint Energy and IDACORP, Inc. from the DCF proxy group. In section X of this order, we rejected MISO TOs' proposed revised low-end outlier test. Instead, we adopted a revised low-end outlier test under which we exclude from the proxy group companies with ROEs that do not exceed the Baa bond yield by at least 20 percent of the risk premium from the CAPM analysis. In the Second Complaint proceeding, the risk premium from the CAPM analysis is 8.85 percent. Twenty percent of that risk premium is 177 basis points. Adding 177 basis

---

[1042] Initial Decision (II), 155 FERC ¶ 63,030 at P 171 and P 174 n.75; *id.* P 54 ("This Initial Decision adopts the proxy group and the DCF results developed by the CAPs in Appendix I."); CAPs Reply Br. (II) at n.300 (citing CAPs, March 30, 2016 Initial Brief of the CAPs at 45 ("Applying the Commission's low-end outlier screen, CAPs witnesses eliminated four companies from their respective proxy groups: Edison International, FirstEnergy Corp., Public Service Enterprise Group, and Entergy Corp.").

[1043] MISO TOs Initial Br. (II), App. 2 at 27.

[1044] *Id.* at 27-28 and Attachment 3.

points to the 5.41 percent Baa bond yield produces a low-end outlier threshold in the Second Complaint proceeding of 7.18 percent. That low-end outlier threshold is higher than the 6.41 percent low-end outlier threshold that the Presiding Judge applied, and excludes one additional company from the proxy group—OGE Energy Corp.—whose DCF ROE is 6.75 percent.

554. The Presiding Judge did not exclude any company from the DCF proxy group on the ground that it is a high-end outlier, nor does any participant seek to exclude any company on that ground. Under the high-end outlier test we have adopted in this order, we would exclude any DCF ROE that is more than 150 percent of the median of the starting proxy group DCF ROEs. In this case, the median of the starting proxy group DCF ROEs is 8.70 percent.[1045] One-hundred-fifty percent of that median is 13.01 percent. PNM Resources' DCF ROE of 10.71 percent is well below that amount. Accordingly, we do not exclude any company from the DCF proxy group as a high end-outlier. Based on this discussion, we conclude that the DCF zone of reasonableness is 7.20 percent to 10.71 percent.[1046]

D. CAPM Proxy Group and Analysis

555. We affirm the Presiding Judge's CAPM analysis in Initial Decision (II) in the Second Complaint proceeding, with one exception related to the market risk premium. In section VII.C above, we have held that only the IBES short-term growth projection should be used in the one-step DCF analysis of the dividend paying members of the S&P 500, which is consistent with the Presiding Judge's approach in Initial Decision (II).[1047] However, we have also held that companies with negative ROEs or ROEs above 20 percent should be excluded from that analysis. Accordingly, we have revised the CAPM analysis of the starting proxy group approved by the Presiding Judge to reflect this revision.[1048]

[1045] *See* Appendix C.

[1046] *Id.*

[1047] *See* Initial Decision (II), 155 FERC ¶ 63,030 at P 412.

[1048] The results of the CAPM analysis incorporating this revision and the other revisions and clarifications discussed above (i.e., use of the one-step DCF, size adjustment, and only IBES growth rates) are reflected in page 6 of Attachment A to Trial Staff's Initial Briefs. *See* Trial Staff Initial Br. (I), Attachment A to App. 2 at 6; Trial Staff Initial Br. (II), Attachment A to App. 2 at 6.

556. We now turn to the issue of whether, for purposes of determining the CAPM zone of reasonableness, any company in the starting proxy group should be excluded from the CAPM proxy group as a low- or high-end outlier. The Presiding Judge did not exclude any company from the proxy group on these grounds, not does any participant contend that any company is a low or high-end outlier. As discussed in the preceding section, we have determined that the low-end outlier threshold in the Second Complaint proceeding is 7.18 percent. The company in the starting proxy group with the lowest ROE is Pacific Gas and Electric Company, with an ROE of 8.35 percent.[1049] Because that ROE is well above the 7.18 percent low-end outlier threshold, we do not exclude any company from the CAPM proxy group as a low-end outlier.

557. Under the high-end outlier test that we have adopted in this order, we would exclude from the CAPM proxy group any ROE that is more than 150 percent of the median of the starting proxy group CAPM ROEs. In this case, the median of the starting proxy group CAPM ROEs is 10.51 percent.[1050] One-hundred-fifty percent of that median is 15.77 percent. The company with the highest CAPM ROE in the starting proxy group has an ROE of 12.63 percent,[1051] well below the 15.77 percent high-end outlier threshold. Accordingly, we are not excluding any company from the CAPM proxy group as a high end-outlier. Based on this discussion, we conclude that the CAPM zone of reasonableness is 8.35 percent to 12.63 percent.[1052]

E. Composite Zone of Reasonableness and FPA section 206 Findings

558. Based on the findings above concerning the DCF and CAPM zones of reasonableness in the Second Complaint proceeding, we find that the composite zone of reasonableness based on the most recent financial data in the record of the Second Complaint proceeding is from 7.78 percent to 11.66 percent. The midpoint and the lower and upper midpoints of that zone of reasonableness are 9.72 percent, 8.72 percent, and 10.7 percent respectively. This results in a range of presumptively just and reasonable ROEs for the MISO TOs in the Second Complaint proceeding of 9.23 percent to 10.20 percent. As discussed above, the issue to be addressed in the Second Complaint is whether the ROE established in the First Complaint remained just and reasonable during the applicable test period as addressed by the evidence presented by the participants in

---

[1049] *See* Appendix C; Trial Staff Initial Br. (II), Attachment A to App. 2 at 6.

[1050] *See* Appendix C; Trial Staff Initial Br. (II), Attachment A to App. 2 at 6.

[1051] *See* Appendix C; Trial Staff Initial Br. (II), Attachment A to App. 2 at 6.

[1052] *See* Appendix C; Trial Staff Initial Br. (II), Attachment A to App. 2 at 6.

the Second Complaint.[1053] The MISO TOs' 9.88 ROE established upon resolution of the First Complaint proceeding falls within the range of presumptively just and reasonable ROEs that applies in the Second Complaint. We find that this presumption has not been rebutted by the evidence in the Second Complaint proceeding. We see no evidence in the record, such as state ROEs, ROEs of non-utility companies, and other methodologies demonstrating serving to rebut this presumption. Accordingly, we cannot find that the MISO TOs' ROE established in the First Complaint proceeding and in effect as of the date of this order is unjust and unreasonable under the first prong of FPA section 206. For that reason, we cannot establish a new just and reasonable ROE in the Second Complaint proceeding to be in effect prospectively from the date of this order.

XVIII. Refunds in Second Complaint Proceeding

559. Our holding in the preceding section that we cannot establish a new just and reasonable ROE in the Second Complaint proceeding to be in effect prospectively raises the question of whether we can nevertheless order refunds for the Second Complaint's 15-month refund period. That period includes the 15 months from February 12, 2015 to May 11, 2016, and thus precedes the September 28, 2016 date when the 9.88 percent ROE established in the First Complaint proceeding took effect. Thus, during the entire 15-month refund period, the pre-existing 12.38 percent ROE was in effect.

A. CAPs

560. CAPs assert that section 206 provides for "refunds of any amounts paid . . . in excess of those which would have been paid under the just and reasonable rate" and through the 15-month refund period for the Second Complaint, the "amounts paid" by transmission customers were based on the 12.38 percent base ROE. They argue that, therefore, even assuming the First Complaint results in an ROE reduction and that reduced ROE is found to be just and reasonable based on the record in the Second Complaint proceeding, MISO transmission customers would continue to be entitled to refunds of the difference between the 12.38 percent rate they actually paid for the refund period and the reduced ROE found to be just and reasonable in the First Complaint and Second Complaint proceedings.[1054]

561. CAPs argue that the base ROE established as a result of the outcome of the First Complaint should be applied only to the prospective relief aspect of the Second Complaint. In other words, they contend that the base ROE determined in the First Complaint could result in denying prospective relief in the Second Complaint, but that

[1053] Briefing Order, 165 FERC ¶ 61,118 at P 61.

[1054] CAPS Reply Br. (II) at 10-11.

this should not necessarily result in a determination that the Second Complaint should yield no refunds during its applicable refund period. CAPs assert that, instead, refunds should apply to that period for the difference between the just and reasonable ROE determined in the Second Complaint proceeding (including if that remains the just and reasonable ROE determined in the First Complaint proceeding) and the 12.38 percent that was the existing base ROE for purposes of the Second Complaint.[1055]

562. CAPs contend that MISO TOs should not be allowed to keep revenues from the Second Complaint period, with no refund obligation, when those revenues reflect rates that incorporated a 12.38 percent ROE that was found to be unjust and unreasonable.[1056] They argue that this would be inconsistent with the principle that the FPA "meant to afford consumers a complete, permanent and effective bond of protection from excessive rates and charges."[1057]

563. CAPs also assert that the Commission erroneously contemplates using its "broad remedial authority" to correct "legal error" only with respect to the First Complaint outcome that will apply from September 28, 2016 going forward and not with respect to the Second Complaint. They argue that, to the extent that resolution of the Second Complaint results in a reduced ROE, the finally-determined ROE should be given effect from the date that the Commission would have been able to resolve the Second Complaint had Opinions Nos. 531 and 551 been properly decided. CAPs submit that the fair estimate of that date is the one estimated for that event in the Second Complaint Hearing Order, which was May 31, 2017. CAPs contend that the "legal error" doctrine should apply to the Second Complaint because its resolution was delayed by the legal errors in the vacated Opinion No. 531 and the time that the Commission has subsequently taken to process the remand and related proceedings.[1058]

B. MISO TOs

564. MISO TOs argue that, because the existing ROE resulting from resolution of the First Complaint remains just and reasonable for the study period applicable to the Second Complaint, the Second Complaint must be dismissed and therefore it cannot provide the

---

[1055] *Id.* at 86-87.

[1056] *Id.* at 12-13.

[1057] *Id.* at 13 (citing *Atl. Refining Co. v. Pub. Serv. Comm'n*, 360 U.S. 378, 388 (1959)).

[1058] CAPs Initial Br. (II) at 87-89.

basis for refunds under section 206.[1059] MISO TOs contend that, because the Second Complaint must be dismissed, no action by the Commission in response to the Second Complaint can establish a rate to be "thereafter observed," which is a prerequisite to the Commission's ability to order refunds under FPA section 206. MISO TOs further argue that the Second Complaint cannot give rise to refunds because that would exceed the refund period limitation prescribed by section 206(b). They assert that, because refunds arising by virtue of the Second Complaint, if any, will be based on the ROE determined in the First Complaint proceeding, that outcome of that proceeding cannot legally serve as the predicate for refund liability for a period of thirty consecutive months from November 12, 2013 (the First Complaint refund effective date), through May 11, 2016 (the end of the Second Complaint refund period).[1060]

565. MISO TOs contend that CAPs' proposed May 31, 2017 date for relief resulting from the Second Complaint on the theory of "legal error" is moot because the Second Complaint will be dismissed based on the ROE established in the First Complaint. They argue that the ROE established in the First Complaint will be effective as of September 28, 2016, with refunds due for the 15-month refund period established in the First Complaint, and the Second Complaint will be dismissed, therefore the "legal error" theory provides no basis for relief in the Second Complaint proceeding. MISO TOs argue that, even if the Second Complaint would not be dismissed, the legal error theory does not apply to the Second Complaint because the Commission has not made any findings with respect to the Second Complaint and therefore there has been no Commission action in the Second Complaint proceeding that can be said to constitute legal error.[1061]

C. Commission Determination

566. As discussed above, the question on this issue is whether the Commission can order refunds of the 12.38 percent ROE that was in effect during the 15-month refund period in the Second Complaint proceeding despite the fact that the Commission is not granting any prospective relief with respect to the 9.88 percent ROE that is in effect as of the date we are acting on the Second Complaint.

567. Resolution of this issue requires the Commission to determine the extent of the refund authority granted the Commission by the following language of FPA section 206(b):

[1059] MISO TOs Reply Br. (II) at 87-88.

[1060] *Id.* at 89-90.

[1061] *Id.* at 91-93.

> At the conclusion of any proceeding under this section, the Commission may order refunds of any amounts paid, for the period subsequent to the refund date through a date fifteen months after such refund effective date, in excess of those which would have been paid under the just and reasonable rate, charge, classification, rule, regulation, practice, or contract which the Commission orders to be thereafter observed and in force: *Provided,* That if the proceeding is not concluded within fifteen months after the refund effective date and if the Commission determines at the conclusion of the proceeding that the proceeding was not resolved within the fifteen-month period primarily because of dilatory behavior by the public utility, the Commission may order refunds of any or all amounts paid for the period subsequent to the refund effective date and prior to the conclusion of the proceeding.[1062]

568. As discussed below, we find that the Commission cannot order refunds in the Second Complaint proceeding because of the limits of our statutory authority under FPA section 206. The language of section 206(b) states that "[a]t the conclusion of any proceeding under this section" the Commission may order refunds for amounts paid during the 15-month refund period in excess of "what would have been paid under" the just and reasonable rate that "the Commission orders to be thereafter observed and in force." We interpret this language to mean that refunds may be ordered in a complaint proceeding only when the Commission grants prospective relief in that proceeding—i.e., the Commission sets a new just and reasonable rate which it "orders to be thereafter observed and in force." Here, as discussed above, we cannot find the 9.88 percent ROE in effect as of the date we are acting on the Second Complaint to be unjust and unreasonable and therefore we are not ordering any new just and reasonable rate "to be thereafter observed and in force." Having not ordered a new just and reasonable rate to be thereafter observed, there are no "amounts paid . . . in excess of" that rate that the Commission can order to be refunded.

569. In addition, we find that ordering refunds in the Second Complaint proceeding despite the fact that we are granting no prospective relief would exceed the statutory authority granted to us in FPA section 206 because it would effectively extend the 15-month refund period for the First Complaint. Section 206 explicitly limits the length of time that public utilities may be subject to potential refunds as a result of a Commission determination in a proceeding to 15 months after the refund effective date in that

[1062] 16 U.S.C. § 824e(b) (2018).

proceeding. Moreover, Congress indicated that the 15-month refund period was intended to limit the refund exposure of public utilities.[1063] Here, in the First Complaint proceeding, we have found the MISO TOs' pre-existing 12.38 percent ROE unjust and unreasonable and ordered that ROE reduced to 9.88 percent effective September 28, 2016 and ordered refunds for the November 12, 2013 to February 11, 2015 15-month refund period in the First Complaint proceeding. In the Second Complaint proceeding, we are not granting any prospective relief and allowing the 9.88 percent ROE determined in the First Complaint proceeding to continue. Accordingly, we find that ordering refunds in the Second Complaint proceeding on the basis of our ROE determination in the First Complaint proceeding, would exceed our statutory authority under FPA section 206 because it would effectively extend the refund period in the First Complaint proceeding beyond the statutory 15-month limit.

570. Moreover, section 206(b) indicates that Congress contemplated the possibility that the Commission could order refunds for periods outside of a proceeding's 15-month refund period, but only provided for that possibility in one instance that is not applicable here. Specifically, section 206(b) provides that, if a proceeding is not concluded within 15 months after the refund effective date, the Commission may order refunds for periods beyond the 15-month period if "the proceeding was not resolved within the fifteen-month period primarily because of dilatory behavior by the public utility." The statute provides only this one exception to the 15-month refund period limitation and that exception does not apply to the Second Complaint. Accordingly, because any refunds that would be ordered in the Second Complaint proceeding would be refunds that were triggered by the Commission's determination in the First Complaint proceeding, the 15-month refund period in that First Complaint proceeding would apply, and there is no exception in the statute that would allow the Commission to order refunds beyond the 15-month refund period in that proceeding, there having been no dilatory behavior by the MISO TOs in either proceeding. The existence of this single explicit exception to the 15-month refund period limitation also indicates that Congress contemplated the possibility that a complainant may not necessarily receive refunds to make it completely whole if the 15-month refund period has expired, for example if conclusion of a complaint proceeding takes longer than 15 months but the delay is not primarily because of dilatory behavior by the public utility. Accordingly, while it may appear unusual at first glance to evaluate a complaint on the basis of whether an existing base ROE remains just and reasonable, but then deny the refunds that would be owed if that ROE actually was in effect, the statute explicitly contemplates that even successful complainants may not be made completely whole by refunds.

[1063] S. Rep. No. 100-491, at 6 (1988) (describing the fifteen-month refund period as a limit on "the time period during which refund liability can accrue.").

571. In addition, the legislative history indicates that Congress was aware that section 206 proceedings typically required two years to resolve but nonetheless adopted only a 15-month refund period.[1064] This further indicates that Congress was aware that even successful complainants may not be made completely whole by the refunds provided for in section 206. This is also consistent with other language in the legislative history which provides that the 15-month period is intended limit a respondent's refund liability, without reference to the success or merits of a complaint. Specifically, the Senate Report on the Regulatory Fairness Act states that

> While giving FERC the discretionary authority to grant refunds, the Committee amendment in several respects limits the time period during which refund liability can accrue. In general, refunds may only be ordered for amounts paid in excess of lawful rates during the period within 15 months of the refund effective date.[1065]

572. This approach is consistent with Commission precedent. In *San Diego Gas & Electric*,[1066] the Commission stated that "Under FPA section 206, as amended by the Regulatory Fairness Act, upon instituting a proceeding under section 206, the Commission establishes a refund effective date and *may order refunds*, commencing with the refund effective date and for up to 15 months thereafter, *if it finds an existing rate to be unjust, unreasonable or unduly discriminatory or preferential*."[1067] As described in that case, the Commission can only order refunds if it finds an existing rate to be unjust, unreasonable or unduly discriminatory or preferential. We are not finding an existing rate to be unjust, unreasonable or unduly discriminatory or preferential in the Second Complaint proceeding and we cannot order refunds in that proceeding.

573. As a result, we will dismiss the Second Complaint and not order MISO TOs to make any refunds for the applicable 15-month refund period in that proceeding. In light of this determination, we find that CAPs' request that any relief that is granted in the Second Complaint be granted effective as of May 31, 2017 because of the legal error doctrine is moot. The ROE established in the First Complaint will be effective as of September 28, 2016, with refunds due for the 15-month refund period established in the

---

[1064] *See id.* ("Resolution of section 206 proceedings requires two years on average.").

[1065] *Id.*

[1066] *San Diego Gas & Elec. Co. v. Sellers of Energy and Ancillary Servs.*, 127 FERC ¶ 61,191 (2009).

[1067] *Id.* P 17 (emphasis added).

First Complaint, and the Second Complaint will be dismissed; therefore, no relief will be granted in the Second Complaint proceeding. In other words, dismissal of the Second Complaint means that there will be no refund obligation associated with the Second Complaint, thus the Commission need not determine the time period applicable to that refund obligation, and the legal error doctrine is inapplicable.

XIX. Conclusion

574. For the reasons discussed above, we adopt the revised methodology described above for determining whether an existing base ROE is unjust and unreasonable under the first prong of FPA section 206, and for determining a new just and reasonable replacement base ROE under the second prong of FPA section 206 when an existing ROE has been shown to be unjust and unreasonable. Applying this revised methodology to the First Complaint proceeding results in a finding that MISO TOs' 12.38 percent ROE, which is pending before us on rehearing of Opinion No. 551, is unjust and unreasonable, thus resulting in us granting the First Complaint, and finding that 9.88 percent is a just and reasonable replacement ROE for MISO TOs. Accordingly, we grant in part and deny in part rehearing of Opinion No. 551 and require the MISO TOs to adopt a 9.88 percent ROE effective September 28, 2016, the date Opinion No. 551 required the MISO TOs to adopt a 10.32 percent ROE. As a result, we require MISO TOs to provide refunds, with interest for the First Complaint proceeding's 15-month refund period from November 12, 2013 through February 11, 2015, as discussed in the body of this order.

575. Applying this revised methodology to the Second Complaint proceeding results in a finding that the MISO TOs' 9.88 percent ROE established in the First Complaint proceeding to be effective prospectively from September 28, 2016, remains just and reasonable. Accordingly, we affirm in part and reverse in part Initial Decision (II) in the Second Complaint proceeding, grant in part and deny in part the exceptions to Initial Decision (II) as discussed above, and dismiss the Second Complaint. As a result, we find that no refunds should be issued as a result of the resolution of the Second Complaint, as discussed above.

The Commission orders:

(A) Rehearing of Opinion No. 551 is granted in part and denied in part, as discussed in the body of this order.

(B) MISO TOs' base ROE is set at 9.88 percent with a total or maximum ROE including incentives not to exceed 12.24 percent, effective as of September 28, 2016, as discussed in the body of this order.

(C) MISO and MISO TOs are directed to provide refunds, with interest calculated pursuant to 18 C.F.R. § 35.19a (2019), within thirty (30) days of the date of this order, for the 15-month refund period for the First Complaint from November 12,

2013 through February 11, 2015 and for the period from September 28, 2016 to the date of this order, as discussed in the body of this order.

(D) MISO and MISO TOs are directed to file a refund report detailing the principal amounts plus interest paid to each of their customers within forty-five (45) days of the date of this order.

(E) The Initial Decision in the Second Complaint proceeding is affirmed in part and reversed in part, as discussed in the body of this order.

(F) The Second Complaint is dismissed, as discussed in the body of this order.

By the Commission. Commissioner Glick is dissenting in part with a separate statement attached.

(S E A L)

Nathaniel J. Davis, Sr.,
Deputy Secretary.

(Issued November 21, 2019)

GLICK, Commissioner, *dissenting in part*:

1. Although I join most of today's order, I dissent in part because I disagree with the Commission's decision not to order refunds of rates that we all agree were unjust and unreasonable. I fully support the Commission's conclusion that the MISO Transmission

Owners' (MISO TOs) pre-existing 12.38 percent ROE was unjust and unreasonable and its decision to fix the new just and reasonable ROE at 9.88 percent. Hopefully these determinations will provide some much-needed certainty to all MISO stakeholders. That being said, I disagree with the Commission's refusal to order refunds of the unjust and unreasonable rates collected during the refund period for the second of the two complaints pending before us. The law permits us to order those refunds and I see no reason to deprive customers of the full protections afforded by the Federal Power Act (FPA).

* * *

2. It helps to have the basic facts in one place. On November 12, 2013, multiple parties filed a complaint (First Complaint) alleging that the MISO TOs' 12.38 percent ROE was unjust and unreasonable.[1] The Commission set the matter for hearing and established a refund effective date of November 12, 2013 (the date the First Complaint was filed),[2] meaning that the 15-month refund period for the First Complaint lasted until February 12, 2015.[3] On February 12, 2015, a different set of parties filed another complaint (Second Complaint) against the MISO TOs' ROE. The Commission again set the matter for hearing and established a refund effective date of February 12, 2015,[4] meaning that the 15-month refund period for the Second Complaint lasted until May 12, 2016. On December 22, 2015, an Administrative Law Judge issued an initial decision recommending that the Commission grant the First Complaint and establish a new just

---

[1] *Ass'n of Bus. Advocating Tariff Equity v. Midcontinent Indep. Sys. Operator, Inc.*, 169 FERC ¶ 61,129, at P 3 (2019) (Order). The authorized base ROE for the ATCLLC zone was 12.20 percent, but I will follow the Order's practice of referring to the MISO-wide ROE as 12.38. *Id.* P 3 & n.11. The overall ROE that the MISO TOs could earn—*i.e.*, the sum of the base ROE and any incentives—was capped at 15.96. *Id.*

[2] *Ass'n of Bus. Advocating Tariff Equity v. Midcontinent Indep. Sys. Operator, Inc.*, 149 FERC ¶ 61,049, at P 188 (2014), *order on reh'g*, 156 FERC ¶ 61,060 (2016).

[3] As discussed further below, pursuant to the Regulatory Fairness Act, Pub. L. No. 100-473, § 2, 102 Stat 2299 (1988) (codified at 16 U.S.C. § 824e(b)), as part of any proceeding under section 206 of the FPA, the Commission shall establish a refund effective date and, at the conclusion of that proceeding, it may order refunds for the difference between an unjust and unreasonable rate in effect during the period up to 15 months following the refund effective date and the new just and reasonable rate fixed by the Commission.

[4] *Ark. Elec. Coop. Corp. v. ALLETE, Inc.*, 151 FERC ¶ 61,219, at P 1 (2015), *order on reh'g*, 156 FERC ¶ 61,061 (2016) (Second Complaint Rehearing Order).

and reasonable ROE.[5] On June 30, 2016, a second Administrative Law Judge issued an initial decision, this time on the Second Complaint, again finding the MISO TOs' ROE to be unjust and unreasonable and establishing a new just and reasonable ROE.[6] And on September 28, 2016, the Commission issued Opinion No. 551, which largely affirmed the initial decision on the First Complaint, finding that the MISO TOs' 12.38 percent ROE was unjust and unreasonable and establishing a new just and reasonable ROE of 10.32 percent.[7] That is where things stood when the United States Court of Appeals for the District of Columbia Circuit issued its decision in *Emera Maine v. FERC*,[8] which vacated the Commission's decision in Opinion No. 531—on which Opinion No. 551 was based.

3. Today's order responds to *Emera Maine* by granting rehearing of Order No. 551 and (1) establishing a new process for evaluating whether an existing ROE is unjust and unreasonable, (2) applying that process to these proceedings to find that the MISO TOs' 12.38 percent ROE was unjust and unreasonable, and then (3) setting a new just and reasonable ROE of 9.88 percent. I join my colleagues on all three determinations. Nevertheless, I dissent in part because today's order requires the MISO TOs to pay refunds only for the First Complaint, and not the Second Complaint, even though it is undisputed that the unjust and unreasonable 12.38 percent ROE was in effect for the entire refund period established for the Second Complaint. I see nothing in section 206(b) of the FPA that prevents us from providing MISO customers with relief from that unjust and unreasonable ROE.

4. Section 206(b) provides that, at the conclusion of a proceeding under section 206, "the Commission may order refunds of any amounts paid [during the 15-month refund period] in excess of those which would have been paid under the just and reasonable rate, charge, classification, rule, regulation, practice, or contract which the Commission orders to be thereafter observed and in force."[9] All that text requires is that the Commission

[7] *Ass'n of Businesses Advocating Tariff Equity v. Midcontinent Indep. Sys. Operator, Inc.*, Opinion No. 551, 156 FERC ¶ 61,234, at P 9 (2016).

[8] 854 F.3d 9 (D.C. Cir. 2017).

[9] 16 U.S.C. § 824e(b). The full text of the relevant portion of section 206(b) is:

> At the conclusion of any proceeding under this section, the Commission may order refunds of any amounts paid, for the period subsequent to the refund effective date through a date fifteen months after such refund

find that customers paid an unjust and unreasonable rate during the refund period and that the Commission identify a replacement just and reasonable rate, so that it can calculate refunds equal to the difference between the two rates. Both conditions are satisfied here.

5. After all, there is no dispute that all parties were on notice that the Commission would require refunds in the event that it found the existing 12.38 percent ROE unjust and reasonable.[10] And there similarly is no dispute among my colleagues that the MISO TOs' 12.38 percent ROE was unjust and unreasonable and substantially in excess of the 9.88 percent just and reasonable ROE that the Commission is establishing pursuant to section 206. Applying the plain text of section 206(b), I believe that the Commission had ample authority to order refunds pursuant to the Second Complaint and should have done so here.[11] In addition, interpreting Section 206(b) to permit refunds in this instance is both more consistent with the FPA's primary purpose of protecting consumers[12] and

---

> effective date, in excess of those which would have been paid under the just and reasonable rate, charge, classification, rule, regulation, practice, or contract which the Commission orders to be thereafter observed and in force: *Provided,* That if the proceeding is not concluded within fifteen months after the refund effective date and if the Commission determines at the conclusion of the proceeding that the proceeding was not resolved within the fifteen-month period primarily because of dilatory behavior by the public utility, the Commission may order refunds of any or all amounts paid for the period subsequent to the refund effective date and prior to the conclusion of the proceeding.

[10] *Cf. La. Pub. Serv. Comm'n v. FERC*, 482 F.3d 510, 520 (D.C. Cir. 2007).

[11] The Commission relies on its decision in *San Diego Gas & Electric* for the proposition that it can only order refunds when it grants a particular complaint. Order, 169 FERC ¶ 61,129 at P 572 (quoting *San Diego Gas & Elec. Co. v. Sellers of Energy and Ancillary Servs.*, 127 FERC ¶ 61,191 (2009)). But the quoted language merely restates the statutory text (albeit embellished with italics) without shedding any light on the Commission's authority to order refunds for subsequent pancaked complaints, which was not at issue in that decision.

[12] *See, e.g.*, *California ex rel. Lockyer v. FERC*, 383 F.3d 1006, 1017 (9th Cir. 2004); *City of Chicago, Ill. v. FPC*, 458 F.2d 731, 751 (D.C. Cir. 1971) ("[T]he primary purpose of the Natural Gas Act is to protect consumers." (citing, *inter alia*, *City of Detroit v. FPC*, 230 F.2d 810, 815 (1955)); *see also* S. Rep. 100-491, 5-6 (1988) ("The Committee intends the Commission to exercise its refund authority under section 206 in a manner that furthers the long-term objective of achieving the lowest cost for consumers consistent with the maintenance of safe and reliable service.").

more equitable given that the only reason we are faced with this question is that the Commission did not act on the First Complaint in the 15-month period before the Second Complaint was filed.

6. The Commission, by contrast, reads into the text of section 206(b) a pair of implicit limitations on its refund authority. But neither limitation is as well-founded as today's order would have you believe. First, the Commission interprets the presence of the word "thereafter" in section 206(b) "to mean that refunds may be ordered in a complaint proceeding only when the Commission grants prospective relief in that proceeding."[13] In other words, if the Commission does not fix a new just and reasonable ROE pursuant to each pancaked complaint, then it cannot order refunds of unjust and unreasonable rates collected during the relevant refund periods. I believe that the "thereafter observed and in force" language is better read as a reference to the identical language in section 206(a).[14] Under my reading, all the "thereafter observed and in force" language does is clarify that the ceiling on the Commission's refund authority pursuant to section 206(b) is the difference between the rate in effect during the refund period and the just and reasonable rate that the Commission subsequently established pursuant to subsection 206(a).[15] Accordingly, where the Commission finds that the rate that prevailed in the refund period exceeded the just and reasonable rate, the Commission has the authority to order refunds for the difference. That straightforward interpretation has the unremarkable result of allowing the Commission to protect customers by ordering refunds for any duly established refund period in which a public utility collected a rate in excess of the just and reasonable rate.

7. That brings us to the Commission's second limitation. The Commission contends that ordering refunds for the Second Complaint would, in essence, be an end run around the 15-month limit on refunds established in section 206(b).[16] But the Commission has repeatedly held that the FPA permits successive or "pancaked" complaints and those complaints are "'entirely new proceeding[s]'" and not "'duplicative proceeding[s]

---

[13] Order, 169 FERC ¶ 61,129 at P 568.

[14] *See* 16 U.S.C. § 824e(a) (requiring the Commission to establish a new just and reasonable rate to be "thereafter observed and in force" whenever it finds that an existing rate is unjust and unreasonable or unduly discriminatory or preferential).

[15] That interpretation makes even more sense when you consider that section 206(b) was added more than 50 years after section 206(a), which was part of the original FPA, and so it would have been necessary to clarify how the amendment worked in conjunction with the pre-existing language.

[16] Order, 169 FERC ¶ 61,129 at P 569.

intended solely to expand the amount of refund protection beyond 15 months.'"[17] Accordingly, under the Commission's own interpretation of section 206, ordering refunds for the Second Complaint is not an end run around the 15-month limit on the refund period, but rather is consistent with customers' right under the FPA to file multiple complaints under section 206.

8. It may be that allowing refunds for pancaked complaints creates undue and unfair uncertainty for public utilities. But those policy considerations should not—and, in my opinion, do not—control our interpretation of the text of section 206(b). Perhaps Congress should consider revising section 206 to prohibit pancaked complaints. But it is not our job to do Congress' work for it. Unless and until Congress amends the FPA to prohibit pancaked complaints, the Commission should not permit its dislike of pancaked complaints to deprive customers of the full protections provided by the FPA.

For these reasons, I respectfully dissent in part.

_____

OPINION NO. 569-A

ORDER ON REHEARING

(Issued May 21, 2020)

1. On November 21, 2019, the Commission issued Opinion No. 569.[1] In that order, the Commission acted on the then-pending rehearing requests and the Initial Decision, as well the Order Directing Briefs,[2] in the above-captioned proceedings. In brief, Opinion No. 569 applied a revised methodology for analyzing the base return on equity (ROE) component of public utility rates under section 206 of the Federal Power Act (FPA) that used the discounted cash flow (DCF) model and capital-asset pricing model (CAPM), instead of only the DCF model, and established a range of presumptively just and reasonable ROEs based on the quartiles of the zone of reasonableness. Multiple parties request rehearing of Opinion No. 569.[3] In this order, we grant in part and deny in part the requests for rehearing.

2. In particular, in Opinion No. 569, the Commission used the DCF model and CAPM in its determinations under the first and second prongs of section 206, giving each model equal weight under both prongs, and did not use the expected earnings (Expected Earnings) or risk premium (Risk Premium) models, as proposed in the Briefing Order. In addition, the Commission used the ranges of presumptively just and reasonable ROEs in its analysis under the first prong of section 206, as the Commission proposed in the Briefing Order, used the high-end outlier test as proposed in the Briefing Order, used the Institutional Brokers' Estimate System (IBES) as the source of short-term earnings growth estimates in the DCF and CAPM, and used a revised low-end outlier test that eliminates DCF and CAPM proxy group ROE results that are less than the yields of generic corporate Baa bonds plus 20% of the CAPM risk premium. In this order, we are granting rehearing of Opinion No. 569 to use the Risk Premium model under both prongs of our section 206 analysis, to give the short-term growth rate 80% weighting and the long-term growth rate 20% weighting in the two-step DCF model, to modify the high-end outlier test to treat any proxy company as high-end outlier if its cost of equity estimated under the model in question is more than 200% of the median result of all of the potential proxy group members in that model[4] before any high or low-end outlier test is applied, subject to a "natural break" analysis, to consider the use of *Value Line* short-term earnings growth estimates in the CAPM in future proceedings, and to calculate the ranges

[2] *Ass'n of Bus. Advocating Tariff Equity v. Midcontinent Indep. Sys. Operator, Inc.*, 165 FERC ¶ 61,118 (2018) (Briefing Order).

[3] *See infra* PP 23-24.

[4] As noted below, the high-end outlier test only applies to the DCF model and CAPM because they utilize results of the relevant analysis applied to a proxy group, while the Risk Premium model is derived from actual ROEs.

of presumptively just and reasonable base ROEs by dividing the overall composite zone of reasonableness into equal thirds.

3. Applying this revised methodology to the facts of the November 12, 2013, complaint filed in Docket No. EL14-12-000 pursuant to section 206 (First Complaint), we review the Midcontinent Independent System Operator, Inc. (MISO) transmission-owning members' (MISO TOs) 12.38% base ROE that was the existing ROE reviewed in Opinion No. 551, which was pending on rehearing before the Commission when it issued Opinion No. 569, and continue to find that this base ROE is unjust and unreasonable. Having found that MISO TOs' 12.38% ROE is unjust and unreasonable, we then find that a just and reasonable replacement ROE for the MISO TOs in the First Complaint proceeding is 10.02%. As discussed further below, in the second section 206 complaint (Second Complaint) proceeding in Docket No. EL15-45-000, the ROE to be reviewed is the 10.02% base ROE established in the First Complaint proceeding that is effective prospectively from September 28, 2016—the date of the issuance of Opinion No. 551. Under the revised base ROE methodology applied in this order, the 10.02% base ROE that the Commission is reviewing for purposes of the Second Complaint proceeding falls within the applicable range of presumptively just and reasonable base ROEs, therefore, the Commission presumes it to be just and reasonable. As discussed below, we find that this presumption has not been rebutted by the evidence in the Second Complaint proceeding. Accordingly, we affirm the Commission's decision in Opinion No. 569 to dismiss the Second Complaint, and its finding that no refunds should be issued as a result of the resolution of that complaint.

I. Background

A. Opinion No. 531 *et seq.*

4. In Opinion No. 531, the Commission adopted certain changes to its use of the DCF methodology for evaluating and setting the Commission-allowed ROE for the New England transmission owners (New England TOs). In particular, the Commission elected to replace the "one-step" DCF model, which considers only short-term growth projections for a public utility, with a "two-step" model that considers both short- and long-term growth projections.[5] The Commission also departed from its typical practice of setting the just and reasonable ROE of a group of utilities at the midpoint of the zone of reasonableness. The Commission explained that evidence of "anomalous" capital

[5] *See generally Coakley Mass. Attorney Gen. v. Bangor Hydro-Elec. Co*., Opinion No. 531, 147 FERC ¶ 61,234, at PP 8, 32-41, *order on paper hearing*, Opinion No. 531-A, 149 FERC ¶ 61,032 (2014), *order on reh'g*, Opinion No. 531-B, 150 FERC ¶ 61,165 (2015), *rev'd, Emera Maine v. FERC*, 854 F.3d 9 (D.C. Cir. 2017) (*Emera Maine*).

market conditions, including "bond yields [that were] at historic lows," made the Commission "less confiden[t] that the midpoint of the zone of reasonableness . . . accurately reflects the [ROE] necessary to meet the *Hope* and *Bluefield* capital attraction standards."[6] The Commission therefore looked to four alternative benchmark models: three financial models—the Risk Premium model, CAPM, and Expected Earnings model[7]—as well as a comparison with the ROEs approved by state public utility commissions.[8] In considering those models, the Commission emphasized that it was not departing from its long-standing reliance on the DCF model, but rather relying on those models only to "inform the just and reasonable placement of the ROE within the zone of reasonableness established . . . by the DCF methodology."[9] Based on these alternative models, the Commission determined that an ROE of 10.57%, the midpoint of the upper half of the zone of reasonableness produced by the two-step DCF model, would be just and reasonable. Because that figure differed from New England TOs' existing 11.14% ROE, the Commission concluded that the existing base ROE had become unjust and unreasonable and it therefore set New England TOs' base ROE at 10.57%, pending a paper hearing concerning the long-term growth projection to use in the DCF analysis. Following that hearing, in Opinion No. 531-A the Commission reaffirmed its conclusion that New England TOs' existing ROE was unjust and unreasonable and that 10.57% was the just and reasonable ROE. The Commission required New England TOs to submit a compliance filing to implement their new ROEs effective October 16, 2014—the date of issuance of Opinion No. 531-A.

---

[6] Opinion No. 531, 147 FERC ¶ 61,234 at PP 144-145 & n.285. "*Hope*" and "*Bluefield*" refer to a pair of U.S. Supreme Court cases that require the Commission "to set a rate of return commensurate with other enterprises of comparable risk and sufficient to assure that enough capital is attracted to the utility to enable it to meet the public's needs." *Boroughs of Ellwood City, Grove City, New Wilmington, Wampum, & Zelienople, Pa. v. FERC*, 731 F.2d 959, 967 (D.C. Cir. 1984) (citing *FPC v. Hope Nat. Gas Co.*, 320 U.S. 591, 603 (1944) (*Hope*) and *Bluefield Waterworks Improvement Co. v. Pub. Serv. Comm'n of W.V.*, 262 U.S. 679 (1923) (*Bluefield*)).

[7] As discussed further below, the Risk Premium model estimates cost of equity using the implied premium that provided over Baa-rated utility bonds by regulatory decisions and settlements. The CAPM derives the ROE through the risk premium observed from the risk premium of a DCF analysis of S&P 500 dividend-paying companies. The Expected Earnings model is a method of calculating the earnings that an investor expects to receive on the book value of a particular stock.

[9] *Id.* P 146.

B. Opinion No. 551 *et seq.*

5. On November 12, 2013, multiple complainants[10] filed the First Complaint in Docket No. EL14-12-000 pursuant to section 206 of the FPA, alleging, among other things, that the MISO TOs' base ROE reflected in MISO's Open Access Transmission, Energy and Operating Reserve Markets Tariff was unjust and unreasonable.[11] At the time of the First Complaint, MISO TOs had a base ROE of 12.38% (except for the ATCLLC zone which had a 12.20% ROE),[12] and their total ROE (i.e., the base ROE plus any ROE adders approved by the Commission) was not permitted to exceed 15.96%. The Commission established the MISO TOs' preexisting 12.38% ROE in a 2002 decision.[13] That ROE was based on a DCF analysis using financial data for the

---

[10] The complainants consist of a group of large industrial customers: Association of Businesses Advocating Tariff Equity (ABATE); Coalition of MISO Transmission Customers (Coalition of MISO Customers); Illinois Industrial Energy Consumers (IIEC); Indiana Industrial Energy Consumers, Inc. (INDIEC); Minnesota Large Industrial Group (MLIG); and Wisconsin Industrial Energy Group.

[11] The following MISO transmission owners were named in the First Complaint: ALLETE, Inc. for its operating division Minnesota Power (and its subsidiary Superior Water, L&P); Ameren Services Company, as agent for Union Electric Company, Ameren Illinois Company, and Ameren Transmission Company of Illinois; American Transmission Company LLC (ATC); Cleco Power LLC; Duke Energy Corporation for Duke Energy Indiana, Inc.; Entergy Arkansas, Inc.; Entergy Louisiana, LLC; Entergy Gulf States Louisiana, L.L.C.; Entergy Mississippi, Inc.; Entergy New Orleans, Inc.; Entergy Texas, Inc.; Indianapolis Power & Light Company; International Transmission Company; ITC Midwest LLC; METC; MidAmerican Energy Company; Montana-Dakota Utilities Co.; Northern Indiana Public Service Company; Northern States Power Company, a Minnesota corporation, and Northern States Power Company, a Wisconsin corporation, subsidiaries of Xcel Energy Inc.; Northwestern Wisconsin Electric Company; Otter Tail Power Company; Southern Indiana Gas & Electric Company; and Wolverine Power Supply Cooperative, Inc. Intervenor Xcel Energy Services Inc. did not join certain of the MISO TOs' pleadings in this proceeding, but generally supported the brief on behalf of respondents Northern States Power Company, a Minnesota corporation, and Northern States Power Company, a Wisconsin corporation.

[12] For the sake of clarity, we refer to this ROE of the MISO TOs as 12.38% in this order, without separately identifying that the ATCLLC zone had a 12.20% ROE. Our discussion and decisions with respect to the MISO TOs' 12.38% ROE also apply to the 12.20% ATCLLC ROE.

[13] *See Midwest Indep. Transmission Sys. Operator, Inc.*, 99 FERC ¶ 63,011, *initial decision affirmed as to base ROE*, 100 FERC ¶ 61,292 (2002), *reh'g denied*, 102 FERC

six-month period ending February 2002.[14] On October 16, 2014, the same date that the Commission issued Opinion No. 531-A, it set the First Complaint for hearing before an Administrative Law Judge and established a refund effective date of November 12, 2013.[15]

6. Following the hearing, the Presiding Judge issued an Initial Decision,[16] and the Commission subsequently issued Opinion No. 551.[17] In Opinion No. 551, the Commission calculated the just and reasonable ROE using the two-step DCF methodology from Opinion No. 531 and financial data for the period January 1 through June 30, 2015. The Commission affirmed the conclusions of Initial Decision (I), finding that the Presiding Judge correctly applied the two-step DCF analysis required by Opinion No. 531.[18] The Commission also affirmed the Presiding Judge's determination that, as in Opinion No. 531, there were anomalous capital market conditions such that the Commission had less confidence that the midpoint of the zone of reasonableness produced by a mechanical application of the DCF methodology satisfied the capital attraction standards of *Hope* and *Bluefield*.[19] The Commission found that the Presiding Judge reasonably considered evidence of alternative methodologies for determining the

[19] *Id.*

ROE and the ROEs approved by state regulatory commissions, for purposes of deciding to set the ROE at the central tendency of the upper half of the zone of reasonableness, setting the base ROE for MISO TOs at 10.32%.[20] The Commission required MISO TOs to submit a compliance filing to implement their new ROEs effective September 28, 2016, the date of Opinion No. 551, and to provide refunds for the November 12, 2013-February 11, 2015 refund period. Following the issuance of Opinion No. 551, numerous parties submitted requests for rehearing.

C. Second Complaint Against MISO TOs' ROE

7. On February 12, 2015, a new set of complainants[21] filed the Second Complaint in Docket No. EL15-45-000 also alleging that the MISO TOs' base ROE of 12.38% was unjust and unreasonable.[22] Relying on an updated two-step DCF analysis, the Second Complaint complainants argued that the base ROE should be no higher than 8.67%.[23] On

[20] *Id.*

[21] Complainants for the Second Complaint consist of: Arkansas Electric Cooperative Corporation (Arkansas Electric Cooperative); Mississippi Delta Energy Agency and its two members, Clarksdale Public Utilities Commission of the City of Clarksdale, Mississippi and Public Service Commission of Yazoo City of the City of Yazoo City, Mississippi; and Hoosier Energy Rural Electric Cooperative, Inc. (Hoosier Cooperative).

[22] The following MISO transmission owners were named in the Second Complaint: ALLETE, Inc. (for its operating division Minnesota Power, Inc. and its wholly-owned subsidiary Superior Water Light, & Power Company); Ameren Illinois Company; Union Electric Company (identified as Ameren Missouri); Ameren Transmission Company of Illinois; ATC; Cleco Power LLC; Duke Energy Business Services, LLC; Entergy Arkansas, Inc.; Entergy Gulf States Louisiana, LLC; Entergy Louisiana, LLC; Entergy Mississippi, Inc.; Entergy New Orleans, Inc.; Entergy Texas, Inc.; Indianapolis Power & Light Company; International Transmission Company, ITC Midwest LLC, and Michigan Electric Transmission Company, LLC; MidAmerican Energy Company; Montana-Dakota Utilities Co.; Northern Indiana Public Service Company; Northern States Power Company-Minnesota; Northern States Power Company-Wisconsin; Otter Tail Power Company; and Southern Indiana Gas & Electric Company.

[23] *Ark. Elec. Coop. Corp. v. ALLETE, Inc.*, 151 FERC ¶ 61,219, at P 1 (2015) (MISO II Hearing Order), *order on reh'g*, 156 FERC ¶ 61,061 (2016) (MISO II Rehearing Order).

June 18, 2015, the Commission established hearing procedures and set a refund effective date of February 12, 2015.[24]

8. Parties filed requests for rehearing of the MISO II Hearing Order, and on July 21, 2016, the Commission generally denied these rehearing requests.[25] Following the MISO II Hearing Order, the Presiding Judge issued the Initial Decision on June 30, 2016.[26] The Presiding Judge adopted a zone of reasonableness of 6.75% to 10.68% based on financial data for the period July 1, 2015 through December 31, 2015. The Presiding Judge also determined that the anomalous capital market conditions identified in Opinion No. 531 persisted and, after considering the alternative benchmark methodologies, that the just and reasonable ROE was 9.70%—halfway between the midpoint and the upper bound of the zone of reasonableness. The participants filed briefs on and opposing exception.

D. ***Emera Maine***

9. On April 14, 2017, the United States Court of Appeals for the District of Columbia Circuit (D.C. Circuit) issued its *Emera Maine* decision, vacating and remanding Opinion No. 531 *et seq*. As an initial matter, the D.C. Circuit was not persuaded by New England TOs' argument that an ROE within the DCF-produced zone of reasonableness could not be deemed unjust and unreasonable. The D.C. Circuit explained that the zone of reasonableness established by the DCF is not "coextensive" with the "statutory" zone of reasonableness envisioned by the FPA.[27] Accordingly, the D.C. Circuit concluded that the fact that New England TOs' existing ROE fell within the zone of reasonableness produced by the DCF did not necessarily indicate that it was just and reasonable for the purposes of the FPA.[28]

10. Nevertheless, the D.C. Circuit found that the Commission had not adequately shown that New England TOs' existing ROE was unjust and unreasonable. The D.C. Circuit explained that the FPA's statutory "zone of reasonableness creates a broad range of potentially lawful ROEs rather than a single just and reasonable ROE" and that whether a particular ROE is unjust and unreasonable depends on the "particular

---

[27] *Emera Maine*, 854 F.3d at 22-23.

[28] *Id.* at 23.

circumstances of the case."[29] Thus, the fact that New England TOs' existing ROE did not equal the just and reasonable ROE that the Commission would have set using the current DCF inputs did not necessarily indicate that New England TOs' existing ROE fell outside the statutory zone of reasonableness.[30] As such, the D.C. Circuit concluded that Opinion No. 531 "failed to include an actual finding as to the lawfulness of [New England TOs'] existing base ROE" and that its conclusion that their existing ROE was unjust and unreasonable was itself arbitrary and capricious.[31]

11. The D.C. Circuit also found that the Commission had not adequately shown that the 10.57% ROE that it set was just and reasonable. Although recognizing that the Commission has the authority "to make 'pragmatic adjustments' to a utility's ROE based on the 'particular circumstances' of a case," the D.C. Circuit nevertheless concluded that the Commission had not explained why setting the ROE at the upper midpoint was just and reasonable.[32] The D.C. Circuit noted, in particular, that the Commission relied on the alternative models and state-regulated ROEs to support a base ROE above the midpoint, but that it did not rely on that evidence to support an ROE at the upper midpoint.[33] Similarly, the D.C. Circuit noted that the Commission had concluded that a base ROE of 9.39%—the midpoint of the zone of reasonableness—might not be sufficient to satisfy *Hope* and *Bluefield* or to allow the utility to attract capital, but that the Commission had not similarly explained how a 10.57% base ROE was sufficient to meet either of those conditions. Because the D.C. Circuit found that the Commission had not pointed to record evidence supporting the specific point at which it set New England TOs' ROE, the

[29] *Id.* at 23, 26.

[30] *Id.* at 27 ("To satisfy its dual burden under section 206, FERC was required to do more than show that its single ROE analysis generated a new just and reasonable ROE and conclusively declare that, consequently, the existing ROE was per se unjust and unreasonable.").

[31] *Id.*

[32] *Id.* (quoting *FPC v. Nat. Gas Pipeline Co. of America*, 315 U.S. 575, 586 (1942)).

[33] *Id.* at 29 ("FERC's reasoning is unclear. On the one hand, it argued that the alternative analyses supported its decision to place the base ROE above the midpoint, but on the other hand, it stressed that none of these analyses were used to select the 10.57% base ROE.").

D.C. Circuit held that the Commission had not articulated the "rational connection" between the evidence and the rate that the FPA demands.[34]

12. Based on the D.C. Circuit's conclusion that the Commission had not met its burden either under the first or the second prong of section 206 of the FPA, it vacated and remanded Opinion No. 531 *et seq.*,[35] meaning that Opinion No. 531 is no longer precedential,[36] even though the Commission remained free to re-adopt those determinations on remand as long as it provided a reasoned basis for doing so.[37] The Commission relied extensively on its determinations in Opinion No. 531 in its order on the First Complaint (i.e., Opinion No. 551).

E. Briefing Orders

13. On October 16, 2018, the Commission issued an order proposing a methodology for addressing the issues that were remanded to the Commission in *Emera Maine* and established a paper hearing on whether and how this methodology should apply to the four complaint proceedings concerning New England TOs' ROE.[38] In the *Coakley* Briefing Order, the Commission proposed to change its approach to determining base ROE by giving equal weight to four financial models, instead of primarily relying on the DCF methodology. The Commission stated that evidence indicates that investors do not rely on any one model to the exclusion of others. Therefore, relying on multiple financial models made it more likely that the Commission's ROE determination would accurately reflect how investors make their investment decisions.

14. Specifically, the Commission proposed to rely on three financial models that produce zones of reasonableness—the DCF model, CAPM, and Expected Earnings model—to establish a composite zone of reasonableness. The zone of reasonableness produced by each model would be given equal weight and averaged to determine the composite zone of reasonableness.[39]

---

[34] *Id.* at 28-30.

[35] *Id.* at 30.

[36] *Id.*

[37] *Id.*

[38] *Coakley v. Bangor Hydro-Elec. Co.*, 165 FERC ¶ 61,030 (2018) (*Coakley* Briefing Order).

[39] *See id.* PP 16, 30.

15. The Commission also proposed a framework for using the composite zone of reasonableness in evaluating whether an existing base ROE remains just and reasonable. The Commission proposed that, in order to find a utility's existing ROE unjust and unreasonable under the first prong of section 206 of the FPA, its ROE must be outside a range of presumptively just and reasonable ROEs for a utility of its risk profile, absent additional evidence to the contrary. In other words, the Commission would dismiss an ROE complaint if the targeted utility's existing ROE falls within the range of presumptively just and reasonable ROEs for a utility of its risk profile unless that presumption is sufficiently rebutted. The Commission explained that, by the same token, a finding that the existing ROE of a utility falls outside that range would support a holding that the ROE has become unjust and unreasonable, absent additional evidence to the contrary.[40]

16. The Commission explained that it would be appropriate to calculate the applicable ranges of presumptively just and reasonable ROEs based on a utility's risk profile because a utility's risk profile remains the "particular circumstance[]" most relevant to determining whether a point within a zone of reasonableness is a just and reasonable ROE for that utility.[41] The Commission further concluded that the "principal consideration for determining whether an existing ROE within the overall zone of reasonableness has become unjust and unreasonable is the risk profile of the utility or utilities for which the Commission is setting the ROE."[42]

17. The Commission proposed that the applicable range of presumptively just and reasonable ROEs for a utility should correspond to those points that are closer to the ROE that the Commission should set for that utility than to the ROE for a utility of a different risk profile.[43] For example, the Commission explained that it typically would be unjust and unreasonable for an average risk utility to receive an ROE that is closer to the ROE that would be just and reasonable for a utility of above- or below-average risk.[44] In particular, for average risk utilities, the Commission proposed that the presumptively just and reasonable range would be the quartile of the zone of reasonableness centered on the central tendency of the composite zone of reasonableness. For below average risk utilities, the Commission proposed that such range would be the quartile of the zone of reasonableness centered on the central tendency of the lower half of the zone of

---

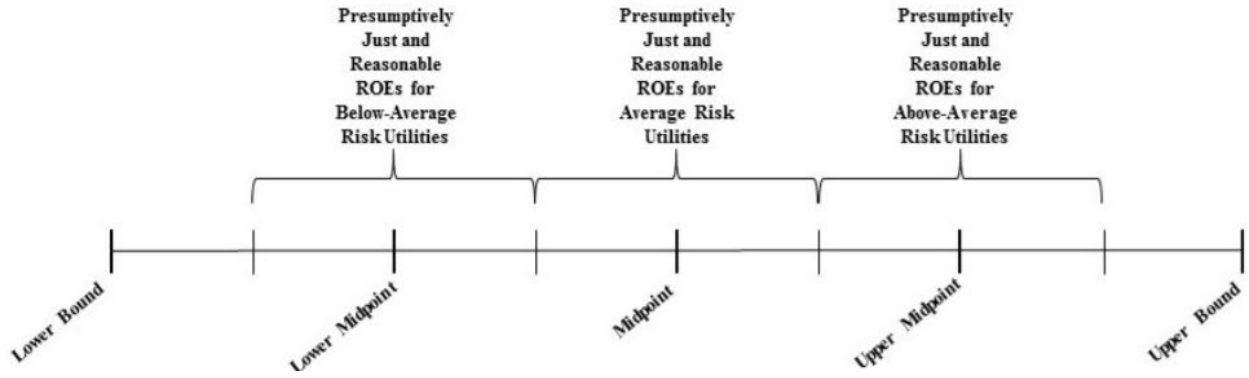
[43] *Id.* P 27.

[44] *Id.* P 26.

reasonableness. For above average risk utilities, the Commission proposed that such range would be the quartile of the zone of reasonableness centered on the central tendency of the upper half of the zone of reasonableness.[45] The Commission illustrated how these presumptively just and reasonable quartile ranges would be divided as follows:

Figure 1: Zone of Reasonableness Quartiles



18. For purposes of establishing a new just and reasonable base ROE when the existing base ROE has been shown to be unjust and unreasonable, the Commission proposed using the above three models, plus the Risk Premium model. The Risk Premium model produces a single numerical point rather than a range; therefore, the Commission did not propose to use it to establish a composite zone of reasonableness. The Commission proposed to determine a new just and reasonable ROE for average risk utilities by determining the midpoint/medians of each zone of reasonableness produced by the DCF, CAPM, and Expected Earnings models and averaging those ROEs with the Risk Premium ROE, giving equal weight to each of the four figures.[46] The Commission

[45] *Id.*

[46] *See* Opinion No. 569, 169 FERC ¶ 61,129 at P 344 ("In determining the central tendency of the zone of reasonableness, the Commission has distinguished between cases involving an RTO-wide ROE and cases involving the ROE of a single utility (or pipeline). In cases involving an RTO-wide ROE, the Commission has held that the midpoint is appropriate. The Commission has reasoned that, because an RTO-wide ROE will apply to a diverse set of companies, the range of results becomes as important as the central value, and the midpoint fully considers that range, because it is derived directly from the endpoints of the range . . . By contrast, in cases involving a single utility, the Commission has held that using the median is appropriate, because the median 'is the most accurate measure of central tendency for a single utility of average risk.'") (citing *SoCal Edison*, 131 FERC ¶ 61,020, at P 91 (2010), *remanded on other grounds sub nom. S. Cal. Edison Co. v. FERC*, 717 F.3d 177, 183-87 (D.C. Cir. 2013) (*S. Cal. Edison v. FERC*)); Briefing Order, 165 FERC ¶ 61,118 at n.40: "The Commission will continue to use the midpoint of the zone of reasonableness as the appropriate measure of central

proposed to use the midpoint/medians of the lower and upper halves of the zones of reasonableness to determine ROEs for below average and above average risk utilities, respectively, and average those ROEs with the Risk Premium ROE.[47]

19. On November 15, 2018, the Commission issued the Briefing Order in these proceedings. In that order, the Commission similarly established a paper hearing on whether and how the methodology proposed in the *Coakley* Briefing Order should apply to the two proceedings pending before the Commission involving MISO TOs' ROE.[48]

F. Opinion No. 569

20. On November 21, 2019, the Commission issued Opinion No. 569 in which it applied a revised methodology for analyzing existing base ROEs under section 206 of the FPA. The revised methodology applied in Opinion No. 569 did not use the Expected Earnings or Risk Premium models as was proposed in the Briefing Order, and instead used only the DCF model and CAPM in the Commission's determinations under the first and second prongs of section 206. The methodology applied in Opinion No. 569 gave equal weight to the DCF model and CAPM by averaging the top and bottom of the DCF and CAPM zones of reasonableness to produce a composite zone of reasonableness.[49] In addition, in Opinion No. 569, the Commission reaffirmed its use of a two-step DCF analysis that gives one-third weight to a long-term growth rate based on projected growth in gross domestic product (GDP).[50] The Commission also held that it would continue to rely exclusively on the IBES as the preferred source for the DCF short-term growth projection, absent compelling reasons otherwise.[51] The Commission further held that only the short-term growth rate should be used to calculate the (1+.5g) adjustment to dividend yield in the DCF analysis for the CAPM.[52]

[50] *Id.* PP 151-159.

[51] *Id.* P 133.

[52] *Id.* PP 98-100.

21. In Opinion No. 569, the Commission also adopted a specific CAPM methodology. First, the Commission adopted the use of the 30-year U.S. Treasury average historical bond yield over a six-month period as the risk free rate.[53] Second, the Commission held that the CAPM expected market return should be estimated using a forward-looking approach based on applying the DCF model to the dividend paying members of the S&P 500.[54] In addition, the Commission approved the use of a one-step DCF model using only short-term three to five-year growth projections for the DCF analysis of the dividend paying members of the S&P 500. The Commission also held that IBES should be the sole source of the short-term earnings growth estimates used in the DCF analysis that is part of the CAPM analysis[55] and that S&P 500 companies with growth rates that are negative or in excess of 20% should be screened from the DCF analysis.[56] Finally, the Commission held that the CAPM analysis should include a size premium adjustment.[57]

22. In addition to the above holdings concerning the DCF and CAPM models, the Commission also adopted a revised low-end outlier test that eliminates DCF and CAPM proxy group ROE results that are less than the yields of generic corporate Baa bonds plus 20% of the CAPM risk premium.[58] The Commission also adopted the high-end outlier test that was proposed in the *Coakley* Briefing Order and the Briefing Order in these proceedings, which treats as high-end outliers any proxy company whose cost of equity estimated under the model in question is more than 150% of the median result of all of the potential proxy group members in that model before any high or low-end outlier test is applied, subject to a "natural break" analysis.[59] The Commission also reaffirmed its use of the midpoint, rather than the median, as the measure of central tendency for ROEs that applied to groups of utilities.[60]

G. Requests for Rehearing

23. On December 23, 2019, the following parties to one or both of these proceedings filed requests for rehearing of Opinion No. 569: MISO TOs, the Complaint-Aligned Parties (CAP);[61] the Resale Power Group of Iowa (RPGI); Louisiana Public Service Commission (LPSC); Exelon Corporation (Exelon); Transource Energy, LLC (Transource Energy); and Ameren Services Company, on behalf of its transmission-owning public utility affiliates Ameren Illinois Company d/b/a Ameren Illinois, Union Electric Company d/b/a Ameren Missouri, and Ameren Transmission Company of Illinois (collectively, Ameren). In addition, on December 20, 2019, DTE Electric Company, Consumers Energy Company and Alliant Energy Corporate Services, Inc. (collectively, DTE), parties to both proceedings, filed a request for rehearing. On December 23, 2019, the Indicated PJM Transmission Owners (PJM TO)[62] filed a motion to lodge and request for rehearing.

---

[61] For purposes of the their request for rehearing, CAPs include the following entities: American Municipal Power, Inc. (AMP); ABATE, Coalition of MISO Customers, IIEC, INDIEC, MLIG, and Wisconsin Industrial Group (WIEC) (collectively, Joint Complainants); Joint Consumer Advocates, including Indiana Office of Utility Consumer Counselor, Iowa Office of Consumer Advocate, Michigan Citizens Against Rate Excess, Minnesota Department of Commerce, and Citizens Utility Board of Wisconsin; Joint Customers, including Arkansas Electric Cooperative, Cooperative Energy, and Hoosier Cooperative; Organization of MISO States, Inc. (OMS); Mississippi Public Service Commission (MS PSC), Missouri Public Service Commission (MO PSC) and Missouri Joint Municipal Electric Utility Commission (MJMEUC) (collectively, Missouri-Mississippi Parties or MOMs); and Southwest Electric Cooperative, Inc. (SWEC). For purposes of the CAPs briefs in the Second Complaint proceeding, CAPs include Industrial Consumer Groups (ICG), comprising ABATE, Coalition of MISO Customers, IIEC, INDIEC, MLIG, and WIEC; Joint Consumer Advocates, comprising Illinois Citizens Utility Board, Indiana Office of Utility Consumer Counselor, Iowa Office of Consumer Advocate, Michigan Citizens Against Rate Excess, Minnesota Department of Commerce, and Citizens Utility Board of Wisconsin; Joint Complainants and Intervenor (JCI), comprising Arkansas Electric Cooperative, Cooperative Energy, and Hoosier Cooperative; OMS; Missouri-Mississippi Parties; and SWEC.

[62] For purposes of this filing, the PJM TOs are American Electric Power Service Corporation, on behalf of its affiliates, Appalachian Power Company, Indiana Michigan Power Company, Kentucky Power Company, Kingsport Power Company, Ohio Power Company, Wheeling Power Company, AEP Appalachian Transmission Company, AEP Indiana Michigan Transmission Company, AEP Kentucky Transmission Company, AEP Ohio Transmission Company, and AEP West Virginia Transmission Company; Duquesne Light Company; Exelon; PPL Electric Utilities Corporation; and Public

24. In addition, multiple non-parties filed requests for rehearing and other motions. On December 23, 2019, the following entities filed such requests and/or motions: PPL Electric Utilities Corporation (PPL Electric) filed a motion to intervene out-of-time and motion to lodge; Southern California Edison Company (SoCal Edison) filed a motion to comment; American Electric Power Service Corporation[63] (AEP) filed a motion to intervene out-of-time and motion to lodge; San Diego Gas & Electric Company (SDG&E) filed a motion to intervene out-of-time and motion for Clarification, or in the alternative, request for rehearing; FirstEnergy Service Company (FirstEnergy) filed a request for rehearing and motion for late intervention; WIRES LLC filed a motion to intervene out-of-time, motion to lodge, and request for rehearing; Public Service Electric and Gas Company (PSEG) filed a motion to intervene out-of-time; Edison Electric Institute (EEI) filed a motion to intervene out-of-time, motion to lodge, and request for rehearing; AEP Indiana Michigan Transmission Company, Inc. filed a motion to intervene out-of-time; and the Southwest Power Pool, Inc. (SPP) Transmission Group[64] filed public comments concerning Opinion No. 569. On December 23, 2019, New England TOs[65] filed a letter requesting that, if the Commission intends to use the

---

Service Electric and Gas Company. Some, but not all, of the PJM TOs have timely intervened in these proceedings.

[63] American Electric Power Service Corporation filed on behalf of Appalachian Power Company, Indiana Michigan Power Company, Kentucky Power Company, Kingsport Power Company, Ohio Power Company, Wheeling Power Company, AEP Appalachian Transmission Company, AEP Kentucky Transmission Company, AEP Ohio Transmission Company, and AEP West Virginia Transmission Company.

[64] For purposes of this filing, the SPP Transmission Group is Evergy Kansas Central, Inc., Evergy Metro, Inc., Evergy Missouri West, Inc. (subsidiaries of Evergy, Inc. that were formerly known as Westar Energy, Inc., Kansas City Power & Light Company, and KCP&L Greater Missouri Operations Company, respectively), American Electric Power Service Corporation, on behalf of its affiliates, Public Service Company of Oklahoma, Southwestern Electric Power Company, Oklahoma Transmission Company and Southwestern Transmission Company (collectively AEP-West), The Empire District Electric Company (a Liberty Utilities company), Oklahoma Gas & Electric Company, and Southwestern Public Service Company.

[65] For purposes of this letter, the New England TOs are: Emera Maine f/k/a Bangor Hydro-Electric Company, Central Maine Power Company, New England Power Company d/b/a National Grid, New Hampshire Transmission LLC, Eversource Energy Service Company (on behalf of its operating company affiliates: The Connecticut Light and Power Company; NSTAR Electric Company; and Public Service Company of New Hampshire, each of which is doing business as Eversource Energy), The United

outcome of these proceedings to establish any ROE policies or precedent that would apply to the New England TOs, then the Commission consider the arguments that the New England TOs made in their supplemental brief in the complaint proceedings regarding their base ROE in which the *Coakley* Briefing Order was issued. On January 7, 2020, the American Public Power Association (APPA) and Transmission Access Policy Study Group (TAPS) filed a conditional motion to intervene out-of-time and conditional motion to lodge.

H. Subsequent Filings

25. On January 7, 2020, CAPs filed an answer in opposition to the late motions to intervene and alternative motion for leave to respond to non-party comments. On January 10, 2020, EEI and WIRES LLC filed a motion for leave to answer and answer to CAPs' January 7 answer. On January 13, 2020, FirstEnergy filed a motion for leave to answer and answer to CAPs' January 7 answer. On January 21, 2020, PPL Electric filed a motion for leave to answer and answer to CAPs' January 7 answer. On January 28, 2020, CAPs filed a motion to strike portions of various entities' requests for rehearing and motions. On February 12, 2020, MISO TOs filed a motion for leave to answer and answer to certain portions of entities' requests for rehearing, as well as CAPs' January 7 answer and the APPA and TAPS January 7 conditional motion to intervene out-of-time and conditional motion to lodge. On February 12, 2020, the PJM TOs, MISO TOs and Exelon filed separate answers to CAPs' January 28 motion to strike. On February 13, 2020, Transource Energy also filed an answer to CAPs' January 28 motion to strike. On February 27, 2020, CAPs filed an answer to MISO TOs' February 12 answer.

II. Procedural Matters

26. We deny the motions to intervene out-of-time and the requests for rehearing and other motions included with those motions to intervene out-of-time. In ruling on a motion to intervene out-of-time, we apply the criteria set forth in Rule 214(d) of the Commission's Rules of Practice and Procedure.[66] When late intervention is sought after the issuance of a dispositive order, the prejudice to other parties and burden upon the Commission of granting the late intervention may be substantial. Thus, movants bear a higher burden to demonstrate good cause for the granting of such late intervention.[67] In addition, it is generally Commission policy to deny late intervention at the rehearing

---

Illuminating Company, Unitil Energy Systems, Inc., Fitchburg Gas and Electric Light Company, and Vermont Transco, LLC.

[66] 18 C.F.R. § 385.214(d) (2019).

[67] *See, e.g., Midwest Indep. Transmission Sys. Operator, Inc.*, 102 FERC ¶ 61,250, at P 7 (2003).

stage, including when the petitioner claims that the decision establishes a broad policy of general application.[68]

27. None of the entities that filed motions to intervene out-of-time have met their burden to justify granting late intervention, and we therefore deny their motions to intervene. We find that granting these late interventions at this stage of the proceedings would substantially disrupt the proceedings,[69] as well as prejudice and place significant additional burdens on the existing parties to these proceedings.[70] The entities seeking late intervention have not demonstrated good cause that would justify granting late intervention despite these negative consequences. This is particularly true in light of the fact that, as discussed below, parties will have an opportunity to argue that the base ROE methodology applied in any of these proceedings should be modified or applied differently because of the specific facts and circumstances of the proceeding involving that party.[71] Accordingly, we deny the motions to intervene out-of-time of PPL Electric, AEP, SDG&E, FirstEnergy, WIRES LLC, PSEG, EEI, AEP Indiana Michigan Transmission Company, Inc., and APPA and TAPS. As these entities are not parties to these proceedings, they may not seek rehearing of Opinion No. 569, and we reject their respective pleadings on that basis.[72]

28. SoCal Edison filed a motion to comment and the SPP Transmission Group filed what it styled as "public comments" regarding Opinion No. 569, without motions to intervene out-of-time. We find that these pleadings are effectively requests for rehearing and, because these entities are not parties to these proceedings, they may not seek rehearing of Opinion No. 569, and we reject their respective pleadings on that basis. We note that only some of the PJM TOs have timely intervened in these proceedings—Duquesne Light Company and Exelon—therefore we will address the requests for rehearing that those two parties made as part of the PJM TOs.

29. The motions to lodge filed by PPL Electric, AEP, WIRES LLC, EEI, and APPA and TAPS are essentially components of requests for rehearing of Opinion No. 569, and

---

[68] *See, e.g., Seminole Elec. Coop., Inc.*, 153 FERC ¶ 61,037, at P 11 & n.14 (2015) (citing *PáTu Wind Farm LLC v. Portland General Elec. Co.*, 151 FERC ¶ 61,223, at P 39 & n.85 (2015) (citing *Columbia Gas Transmission Co.*, 113 FERC ¶ 61,066, at 61,243 (2005))).

[69] *See* 18 C.F.R. § 385.214(d)(1)(ii).

[70] 18 C.F.R. § 385.214(d)(1)(iv).

[71] *See infra* at P 204.

[72] 16 U.S.C. § 825*l* (2018); 18 C.F.R. § 385.713(b).

we therefore deny those motions because those entities are not parties to these proceedings. Moreover, even if we were to consider those motions to lodge, and the motion to lodge filed by PJM TOs, as not a component of a request for rehearing, we would deny those motions on the merits. Rule 716 provides that a proceeding may be reopened only when reopening is warranted by a change in condition of fact or law, or by public interest.[73] Additionally, a decision to reopen the record is a discretionary one for the Commission, and Commission policy discourages reopening records, except in extraordinary circumstances in order to prevent administrative chaos and provide finality to proceedings.[74] Further, a demonstration of extraordinary circumstances requires a showing of a material change that goes to the very heart of the case.[75] We find that the entities that filed motions to lodge have failed to show any compelling changes in law, fact, or public interest that would necessitate reopening of the record to lodge the materials that they seek to lodge. As discussed further below in section XV, to the extent that these entities are concerned that Commission actions in these proceedings will affect them and they have filed pleadings or materials in other proceedings that they want the Commission to consider before taking action with respect to their base ROEs, such entities will have an opportunity to present those pleadings or materials and argue that any Commission actions in these proceedings should be modified or applied differently because of the specific facts and circumstances of the proceeding involving that entity.

30. Given that we are denying the motions to intervene out-of-time, we find that CAPs' January 7 answer in opposition to the late motions to intervene or, in the alternative, motion for leave to respond to the pleadings, comments and requests for rehearing submitted by those entities, is moot and we reject it. We therefore also reject the answers to CAPs' January 7 answer submitted by EEI, WIRES LLC, FirstEnergy, PPL Electric, and MISO TOs. We also reject CAPs' January 28 motion to strike portions of various entities' requests for rehearing and motions. To the extent that this motion relates to contents of a motion to lodge that has been denied, as discussed above, we find that it is moot. To the extent that this motion relates to requests for rehearing, it is an answer to a request for rehearing and we reject it because it is prohibited by Rule 713(d)(1) of the Commission's Rules of Practice and Procedure.[76] We find that

---

[73] 18 C.F.R. § 385.716(c).

[74] *See, e.g.*, *Gas Producing Enterprises, Inc.*, 28 FERC ¶ 61,008 (1984) (citing *Consolidated Gas Supply Corp.*, 24 FERC ¶ 61,283 (1983), *Transcontinental Gas Pipe Line Corp.*, 23 FERC ¶ 61,152 (1983), and *ICC v. Jersey City*, 322 U.S. 503 (1944)).

[75] *See, e.g.*, *CMS Midland, Inc., Midland Cogeneration Venture Limited Partnership*, 56 FERC ¶ 61,177, at 61,624 (1991).

[76] 18 C.F.R. § 385.713(d)(1).

CAPs have not shown good cause for us to waive this rule to allow their answer.[77] Because we are rejecting CAPs' January 28 motion to strike, we also reject the answers to that motion filed by PJM TOs, MISO TOs, Exelon, and Transource Energy. We reject MISO TOs' February 12 answer to requests for rehearing for the same reasons, and find that this answer is moot as it relates to the APPA and TAPS January 7 conditional motion to intervene out-of-time because, as discussed above, we are denying that motion to intervene out-of-time. Given that we are rejecting MISO TOs' February 12 answer, we also reject CAPs' February 27 answer to that answer.

III. General Model Issues

31. This section pertains to the Commission's decision in Opinion No. 569 to use two models in its base ROE analysis under section 206 of the FPA, rather than either using only the DCF model or using all four models proposed in the Briefing Order. It does not address the specific merits of the individual models, which are discussed in subsequent sections.

A. Opinion No. 569

32. The Commission found that averaging of multiple models reflected how investors made investment decisions and reduced model risk to the greatest extent possible. The Commission cited MISO TOs' witness, Mr. McKenzie, who explained that "when conditions associated with a model are outside of the normal range, there is a risk . . . that the theoretical model will fail to predict or represent the real phenomenon that is being modeled."[78] The Commission also cited Dr. Morin, who found that "Reliance on any single method or preset formula is inappropriate when dealing with investor expectations because of possible measurement difficulties and vagaries in individual companies' market data."[79]

33. The Commission, for reasons specific to the Risk Premium and Expected Earnings Models, determined that they were not appropriate to use for determination of ROEs, for either the first or second prong of section 206 analyses. Opinion No. 569, applying the DCF model and CAPM, reduced the MISO TOs' ROE from the 10.32% prescribed in Opinion No. 551, which was itself a reduction from 12.38%, to 9.88%.

---

[78] Opinion No. 569, 169 FERC ¶ 61,129 at PP 38-39 (citing Docket No. EL14-12-001, Ex. MTO-22, at 18-19).

[79] *Id*. (citing Roger A. Morin, James, *New Regulatory Finance* (Public Utilities Reports, Inc. 2006) (Morin) at 428).

B. Requests for Rehearing

34. CAPs contend that the Commission erred by finding that the results of the DCF model alone were not just and reasonable. Specifically, CAPs contend that the Commission did not address the testimony of its expert, Dr. Keith Berry, arguing against the Commission's finding of model risk justifying the use of multiple models.[80]

35. Certain parties argue that the Commission acted arbitrarily and capriciously or otherwise did not engage in reasoned decision-making when it determined that the Risk Premium and Expected Earnings models should not be used for ROE determinations. Parties point out that the Commission endorsed using the Risk Premium and Expected Earnings Models in Opinion Nos. 531, 531-A, and 551, as well as the Briefing Order in these proceedings. Specifically, Exelon states that, in the Briefing Order, the Commission found that "it is clear that investors place greater weight on one or more of the other methods for estimating the expected returns from utility investments, as well as taking other factors into account."[81] Exelon contends that the Commission, in Opinion No. 569, insufficiently justified reversing course on this point. Exelon also argues that the Risk Premium and Expected Earnings Models should not be ignored due to their alleged deficiencies, asserting that the CAPM and DCF also have deficiencies. Ameren similarly contends that the Commission's reversal from the Briefing Order was unsupported and contradictory to its findings that investors rely on a diverse set of data sources.[82]

36. Transource Energy argues that the Commission, in Opinion No. 569, was internally inconsistent by giving no weight to the Expected Earnings and Risk Premium Models despite finding that investors rely on multiple models.[83] Transource Energy contends that four models provide a more complete picture than two models, which themselves share many common inputs. Transource Energy asserts that the Commission in Opinion No. 569 issued findings inconsistent with those in Opinion No. 531, which considered three other models, and notes that the Court did not find fault with this finding.[84] Transource Energy states that the CAPM results indicate that a 9.88% ROE was inadequate. Transource Energy also states that the midpoint of the CAPM was 10.45% and contends that no record evidence suggests that 10.45% is overstated.

---

[81] Exelon Rehearing Request (citing Briefing Order, 165 FERC ¶ 61,118 at P 37).

[82] Ameren Rehearing Request at 11-13.

[83] Transource Energy Rehearing Request at 15-16.

[84] *Id*. at 17-18

Transource Energy argues that the Commission has previously determined that the DCF is not reliable and that substantial evidence in the record demonstrates that the cost of capital is more consistent with the CAPM result than the DCF result for the complaint time period.[85]

37. Certain parties also argue that the reduction of MISO TOs' ROE in Opinion No. 569 is unjust and unreasonable on the basis that it reduces MISO TOs' ROE to an unreasonably low level. MISO TOs state that, in Opinion No. 551, "the Commission concluded that a 175-basis point ROE reduction . . . could put transmission investment at risk."[86] MISO TOs also argue that the ROE resulting from Opinion No. 569 could cause capital to be diverted to other purposes. Transource Energy similarly contends that the Commission has not supported a 9.88% ROE, and notes that it is below many of the benchmarks provided by state ROEs and other models.[87] Ameren also contends that this methodology threatens utility credit ratings and thus violates *Hope* and *Bluefield*. Specifically, they cite *Bluefield's* finding that the return "should be sufficient to assure confidence in the financial integrity of the enterprise, so as to maintain its credit and to attract capital."[88]

38. Ameren and Transource Energy state that the Commission should not have excluded the Expected Earnings and Risk Premium models because they have flaws while keeping the DCF and CAPM models, which the Commission acknowledged also have flaws.[89] As an example of DCF and CAPM flaws, Transource Energy notes the Commission's finding in Opinion No. 551 that the DCF model is distorted by a low-interest rate capital market.[90] Ameren and Transource Energy argue, therefore, that the Commission's assertion that there exist imperfections in the Expected Earnings and Risk Premium models is not a valid justification for excluding those models.[91] According to Transource Energy, excluding the Expected Earnings and Risk Premium models results in twice the weighting for the DCF model, and Transource Energy notes

---

[85] *Id.* at 14-15.

[86] MISO TOs Rehearing Request at 19 (citing Opinion No. 551, 156 FERC ¶ 61,234 at P 263).

[90] Transource Energy Rehearing Request at 21-22.

[91] Ameren Rehearing Request at 12; Transource Energy Rehearing Request at 23.

that only including one other model with inputs which share similar characteristics to the DCF does not obviate the issue of whether the DCF is less reliable due to capital market conditions.[92]

39. Ameren and Transource Energy argue that the Commission should keep the four-model framework proposed in the Briefing Order because the Commission has stated that use of multiple models provides more accuracy, consistency with investor expectations, and robustness.[93] Ameren contends that the addition of the Expected Earnings and Risk Premium models would prevent an unreasonable restriction of the zone of reasonableness, and Transource Energy notes that the DCF and CAPM models provide the least diversification benefits of the four the Commission originally proposed.[94] Ameren argues that, when the Commission moved to a two-model ROE methodology, it failed to explain why it excluded certain models (i.e., the Expected Earnings and Risk Premium models) that are relied upon by investors. Ultimately, the new methodology gives zero weight to the excluded models when they were previously assigned a 25% weight in Opinion No. 569. Ameren asserts that the resulting ROE based on only the CAPM and DCF models is not supported by the record and is therefore arbitrary and capricious.[95] Ameren and Transource Energy state that the Commission's use of only the DCF and CAPM models fails to compensate MISO TOs for the actual risks associated with transmission infrastructure development.[96] Ameren and Transource Energy argue that this inadequacy amounts to failure of the capital attraction standards and threatens utility credit metrics, in violation of *Hope* and *Bluefield*.[97]

---

[92] Transource Energy Rehearing Request at 21-22.

[93] Ameren Rehearing Request at 12-13; Transource Energy Rehearing Request at 15, 26.

[94] Ameren Rehearing Request at 12-13; Transource Energy Rehearing Request at 16-17, 19.

[95] SoCal Edison Comment, Docket No. EL14-12, at 11-12; Indicated PJM TOs Rehearing Request, Docket No. EL14-12, at 11; Ameren Rehearing Request, Docket No. EL14-12, at 23-25; Wires Comment Rehearing Request, Docket No. EL15-45, et al., at 17; Wires Comment Rehearing Request, Docket No. EL14-12, et al., at 7, 17; FirstEnergy Hearing Request, Docket No. EL15-45, at 3; Transource Energy Rehearing Request, Docket No. EL14-12, at 18-19.

[96] Ameren Rehearing Request at 6; Transource Energy Rehearing Request at 9-12.

[97] Ameren Rehearing Request at 6-7; Transource Energy Rehearing Request at 9-12.

40. MISO TOs also argue that the court's analysis in *Emera Maine* did not require the Commission to construct a new paradigm to satisfy the second prong of section 206. Instead, they argue, the Commission can remedy its error simply by evaluating "the alternative benchmarks and additional record evidence" that warrant selecting a base ROE greater than the midpoint (of whatever range of estimated returns on which the Commission elects to rely) to determine a new, just and reasonable base ROE.[98]

41. MISO TOs contend that, regardless of whether the base ROE prescribed by Opinion No. 569 is a midpoint value of some range of estimated ROEs, section 206 still requires the Commission to explain why, based on the evidence in the record, the new ROE is just and reasonable. MISO TOs contend that the Commission's new approach still fails to do so. MISO TOs contend that the mere fact that the newly prescribed ROE is the midpoint of the composite DCF-CAPM range of estimates does not make that value a just and reasonable ROE. According to MISO TOs, the Commission's selection of the average of the DCF and CAPM midpoints is no better justified in Opinion No. 569 than was the selection of the upper half midpoint found to be arbitrary and capricious in *Emera Maine*.[99]

42. With regard to the First Complaint, MISO TOs argue that *Emera Maine* does not require, and establishes no reason why, the Commission should fundamentally modify the approach of Opinion Nos. 531 and 551, other than to correct or avoid the specific errors the court pinpointed. They argue that the evidence more than amply supports the Commission's conclusion in Opinion No. 551 that the DCF midpoint of 9.29% (stated as 9.3% in Opinion No. 569) is too low to pass muster under *Hope* and *Bluefield*.[100]

C. Commission Determination

43. We disagree with CAPs' contention that the record does not support our finding of model risk as justifying no longer relying solely on the DCF model. Model risk includes the broad conceptual issue of models being imperfect and not always working well in all situations. It also entails errors of specific model inputs, such as the error discussed with respect to the Portland General Electric inputs, discussed in paragraph 145 below. We continue to find that ROE determinations should consider multiple models, both to capture the variety of models used by investors and to mitigate model risk. With respect to the former, we reiterate our findings from Opinion No. 569 in support of the finding

[98] MISO TOs Rehearing Request at 30-31.

[99] *Id.* at 31-32.

[100] *Id*. at 32.

that use of multiple models reduces model risk. Dr. Morin speaks of the type of potential model errors that comprise "model risk" and why use of additional models is warranted:

> In the absence of any hard evidence as to which method outdoes the other, all relevant evidence should be used and weighted equally, in order to minimize judgmental error, measurement error, and conceptual infirmities. A regulator should rely on the results of a variety of methods applied to a variety of comparable groups, and not on one particular method. There is no guarantee that a single DCF result is necessarily the ideal predictor of the stock price and of the cost of equity reflected in that price, just as there is no guarantee that a single CAPM or Risk Premium result constitutes the perfect explanation of that stock price.[101]

44. We also disagree with contentions that Opinion No. 569 resulted in rates that fail to meet the *Hope* and *Bluefield* standards for just and reasonable rates because they reduce the ROE. As an initial matter, the ROE resulting from this order will be materially higher than the 9.88% resulting from Opinion No. 569 for the First Complaint, rendering such concerns at least partially addressed. Second, cost-of-service principles dictate that the ROE should increase or decrease with the cost of capital. The Commission employs, and at times modifies, financial models, to determine this cost of capital. Although any rate reduction, by reducing earnings, will necessarily adversely affect certain financial metrics, that does not preclude the Commission from reducing rates. It is not incumbent on the Commission to demonstrate that any rate reduction, if supported by evidence demonstrating reduced cost of capital, would not adversely affect utilities' financial metrics. By the logic of certain parties, virtually any rate reduction would be unjust and unreasonable simply because it reduces the ROE and thus harms financial metrics for the affected utilities. In this case, the reduction in ROE from 10.32% in Opinion No. 551 to 9.88% in Opinion No. 569 was less than 4% and Opinion No. 569 extensively supported this such reduction.

45. As described below, we now find that the flaws for the Risk Premium model, when mitigated by certain adjustments, do not render use of the model unreasonable, while the flaws of the Expected Earnings model are significant enough to render the model inappropriate for ROE calculations. We are not persuaded by Ameren's and Transource Energy's arguments that the Expected Earnings model's flaws constitute an insufficient reason to exclude the model because the Commission has acknowledged that other models also have flaws. As the Commission explained in Opinion No. 569, the Commission considered the disadvantages and advantages of each model and concluded that, on balance, the disadvantages of the Expected Earnings model outweigh its

[101] Morin at 429.

advantages.[102] Simply because other models also have disadvantages does not mean that they have the same level of disadvantages or advantages as those of the Expected Earnings model. The Commission may use its discretion to determine which flaws in various models render the models unreasonable, and thus unusable, and which do not.

46. Regarding arguments that the Commission should include all four models because more models provide additional robustness, we agree—if the models are methodologically and legally sound. As described below, we conclude that the Risk Premium model, with adjustments, is sound, while the Expected Earnings model is not. We are not persuaded by arguments that all four models should be included because they broaden the zone of reasonableness. Such assertions, without support, suggest adopting a zone of reasonableness that is far wider than what the Commission has historically determined would be just and reasonable without sufficient justification as to why such a broader zone of reasonableness is appropriate. Nonetheless, our decision to now construct the ranges of presumptively just and reasonable ROEs by dividing the full zone of reasonableness into equal thirds instead of using the quartiles applied in Opinion No. 569, as discussed in section XIV below, at least in part addresses such concerns by widening the range of presumptively just and reasonable existing ROEs.

IV. DCF

A. Opinion No. 569

1. Short-Term Growth Rate

47. In Opinion No. 569, the Commission found that the DCF and CAPM models should employ IBES short-term growth rates.[103] In the context of the DCF, the Commission explained that IBES was preferable because the IBES growth projections generally represent consensus growth estimates by a number of analysts while *Value Line* growth estimates represent the growth projection of a single analyst.[104] The Commission explained that, while many investors use both IBES and *Value Line* growth rates, only IBES growth rates reflect the analysis of a diverse group of persons in the investment community.[105] The Commission cited academic research that supported the use of IBES

[102] *See* Opinion No. 569, 169 FERC ¶ 61,129 at P 209.

[103] *Id.* P 251.

[104] *Id.* P 125.

[105] *Id.*

because of its use of multiple analysts' growth projections instead of a single analyst.[106] In addition, the Commission noted that IBES growth projections are generally more timely than the *Value Line* projections because IBES updates its data base on a daily basis as participating analysts revise their forecasts, whereas *Value Line* publishes its projections on a rolling quarterly basis.[107]

2. Long-Term Growth Rate Weighting

48. In Opinion No. 531, the Commission adopted the same two-step DCF model for electric utilities as it has used for natural gas and oil pipelines since the mid-1990s. That model includes a projection of the long-term growth in dividends based on the growth in GDP, in addition to the short-term three to five-year growth projection. The long-term growth projection is given one-third weight, with a short-term growth projection given two-thirds weight.

49. In the Briefing Order, the Commission proposed no changes to its existing two-step DCF model. In Opinion No. 569, the Commission rejected the MISO TOs' contention that, if the Commission applied a high-end outlier test to the ROE results produced by the two-step DCF analysis, the Commission should eliminate the long-term growth projection.[108] Specifically, the Commission rejected MISO TOs' assertion that, if the Commission applies a high-end outlier test to the DCF model, there will remain no rationale for requiring the long-term growth component of the two-step DCF model.[109] The Commission found that the existence of the high-end outlier test is irrelevant to the question of whether a long-term growth projection should be included in a DCF analysis of public utilities.[110] The Commission stated that the high-end outlier test eliminates outlier proxy group members and that it does not address the fact that, over the long-term, companies cannot maintain their short-term growth rates and must, to some extent, converge on the growth rate of the overall economy.[111] Furthermore, the Commission stated that the high-end outlier test that it adopted in Opinion No. 569 does not screen out any of the ROEs produced by the DCF analysis of the proxy groups in these two cases,

[107] *Id.* P 128.

[108] *Id.* PP 151-159.

[109] *Id.* P 159

[110] *Id.*

[111] *Id.*

including the ROE results discussed above that establish the top of the zones of reasonableness in these two cases.[112]

B. Rehearing Requests

1. Short-Term Growth Rate

50. RPGI states that the Commission correctly used IBES consensus earnings growth estimates rather than *Value Line* earning growth estimates.[113]

51. MISO TOs state that the Commission erred in finding that "IBES is more reliable and robust" than *Value Line* and choosing to use the IBES three to five-year growth projection over *Value Line* growth projections.[114] MISO TOs assert that the Commission erred in finding that there was a general consensus by citing a witness's belief that IBES growth estimates have a higher potential for representing a broader investor community, and the Commission cannot accurately characterize IBES estimates as consensus estimates.[115]

52. MISO TOs assert that the Commission wrongly attempted to relegate *Value Line*'s estimates as "projections by a single institution."[116] MISO TOs argue that the Commission's statement minimizes the fact that *Value Line* estimates are consensus estimates that are the results of a committee composed of peer analysts, and not simply the product of a single analyst.[117] MISO TOs also state that merely averaging analysts' estimates does not create a consensus, and there is no indication that the analysts behind the IBES estimates agree on the published value.[118]

---

[112] *Id.*

[113] RPGI Rehearing Request at 61.

[114] MISO TOs Rehearing Request at 63 (citing Opinion No. 569, 169 FERC ¶ 61,129 at P 133).

[115] *Id.* at 64 (citing Opinion No. 569, 169 FERC ¶ 61,129 at P 127 (quoting Commission Trial Staff witness Mr. Robert J. Keyton)).

[116] *Id.* (citing Opinion No. 569, 169 FERC ¶ 61,129 at P 125 n.278).

[117] *Id.* at 64-65.

[118] *Id.* at 65.

53. MISO TOs assert that the Commission's stated preference for IBES over *Value Line* because it is more current is not supported by the record and is arbitrary and capricious.[119] MISO TOs state that the Commission appears to rely on the misperception that IBES' estimates are more up-to-date than *Value Line* simply because IBES can update its daily estimates on a daily basis.[120]

2. Long-Term Growth Rate Weighting

54. MISO TOs request rehearing of the Commission's decision not to adopt any changes to its existing two-step DCF model, averring that, if the Commission adopts a high-end outlier test, it should remove the long-term growth rate portion of the two-step DCF analysis.[121] MISO TOs contend that although no single approach provides a "one-size-fits-all" scenario for estimating the cost of capital, a constant growth DCF better represents investor expectations for the MISO TOs than a two-step DCF model using a long-term growth rate component.[122]

C. Commission Determinate

1. Short-Term Growth Rate

55. We will maintain the longstanding practice of using IBES short-term growth rates for the DCF model, absent compelling reasons for using an alternative source.[123] The record in this and numerous prior proceedings illustrates that the IBES growth rates appropriately inform the DCF analysis.[124] We continue to find that IBES is a reliable source of short-term growth rate data for the DCF model[125] and find that it is appropriate to continue to rely on IBES short-term growth rates in the DCF model given the

---

[119] *Id.* at 66.

[121] *Id.* at 77.

[122] *Id.* at 80 (citing McKenzie Supplemental Initial Brief Affidavit, Docket No. EL14-12, at 51–52).

[123] *See, e.g.*, Opinion No. 569, 169 FERC ¶ 61,129 at P 133 ("absent compelling reasons why, we will continue to rely exclusively on IBES as the preferred source for short-term growth projections for the purpose of performing the DCF analysis.").

[124] *See, e.g.*, *id.* at PP 120-133.

[125] *See id.* PP 125-128.

Commission's longstanding practice of relying on those IBES short-term growth rates in the DCF model[126] and the experience that entities coming before the Commission have gained in using IBES in the DCF model in light of that practice. However, we find that, although IBES short-term growth rates should be used for the DCF model,[127] the Commission will consider use of *Value Line* in future proceedings for the CAPM methodology, as discussed below.

2. Long-Term Growth Rate Weighting

56. We disagree with the MISO TOs' request that, if the Commission adopts a high-end outlier test, it should remove the long-term growth rate portion of the two-step DCF analysis and that a constant growth DCF better represents investor expectations for a two-step DCF model using a long-term growth rate component. However, as we note below, we are modifying the high-end outlier test to treat any proxy company as high-end outlier if its cost of equity estimated under the model in question is more than 200% of the median result of all of the potential proxy group members in that model before any high or low-end outlier test is applied, subject to a "natural break" analysis. Although we are not adopting MISO TOs' proposed change, upon reconsideration, we agree that changes to the long-term growth rate are warranted.

57. We grant rehearing to give the short-term growth rate 80% weighting and the long-term growth rate 20% weighting. We note that the court in *CAPP v. FERC*[128] held that the Commission has broad discretion in its weighting choice. Since the Commission established its one-third weighting policy of the GDP in the long-term growth rate, short-term growth rate projections for electric utilities have declined and are now closer to the current GDP growth projection than those from the 1990s when the Commission adopted the two-step DCF using one-third weighting for GDP in the long-term growth

---

[126] *See id.* PP 121-123.

[127] In addition, with respect to the First Complaint proceeding, IBES short-term growth rates are the only data available in the record for the study period. *See, e.g.*, MISO TOs Initial Br. (I) at 22 ("MISO Transmission Owners do not propose reliance on growth rates from a source other than IBES to resolve the First Complaint."); MISO TOs Rehearing Request, Docket No. EL14-12-000, at 3 ("The MISO Transmission Owners . . . did not take exception to the Presiding Judge's adoption of the June 2015 Update Period as the appropriate study period for this case. Since they did not object to the June 2015 Update Period, and since there was no *Value Line* growth rate evidence related to that period, the MISO Transmission Owners had no quarrel with, and did not take exception to, the ALJ's ruling that his adoption of the June 2015 Study Period "dictate[d] use of IBES growth rates" insofar as Docket No. EL14-12 was concerned.").

[128] 254 F.3d 289 (D.C. Cir. 2001).

rate for natural gas and oil pipelines[129] that was subsequently adopted for public utilities.[130] For example, in Opinion No. 531, which considered market conditions during the time period from October 2012 to March 2013, the IBES growth projections of the proxy group (before the exclusion of low-end outliers) ranged from -1.90% to 8.10% and averaged 4.58%, only 19 basis points above the 4.39% GDP growth projection in that proceeding.[131] In the First Complaint proceeding, which considered market conditions during the time period from January 2015 to June 2015, the IBES growth projections of the proxy group (before the exclusion of low-end outliers) ranged from -0.64% to 11.66% and averaged 5.03%, 64 basis points above the projected growth in GDP in that proceeding of 4.39%.[132] By contrast, when MISO's 12.38% base ROE was established in 2002, the average IBES short-term growth rate estimate for that year was 7.79%,[133] a full 158 basis points above the estimated 6.21% GDP growth rate from a contemporaneous natural gas pipeline filing.[134]

58. Additionally, average electric utility IBES growth projections are only marginally higher than GDP growth projections. Under these circumstances, investors are likely to view electric utility IBES growth projections as more sustainable than the substantially higher natural gas pipeline IBES growth projections when the Commission established its two-thirds/one-third weighting policy. Therefore, it is reasonable to give the IBES growth projection more weight and give the GDP growth projection less weight. This finding is consistent with Opinion No. 414-A's findings that "long-term projections are

[129] For example, *New York State Electric & Gas Corp.*, 85 FERC ¶ 63,002 (1998). In Footnote 22, the Initial Order references a GDP growth rate of 5.08%, which was an average of three estimates: 5.10% from Data Resources Inc., 4.95% from Wharton Econometric Forecasting Associates, Inc., and 5.20% from the Energy Information Administration.

[130] *See* Opinion No. 531, 147 FERC ¶ 61,234 at PP 17-23, 32.

[131] *See id.* P 38 and Appendix.

[132] Opinion No. 569, 169 FERC ¶ 61,129 at P 135; Appendix A.

[133] *See Midwest Indep. Transmission Sys. Operator, Inc.,* 100 FERC ¶ 61,292 at app. A.

[134] *See* Trailblazer Pipeline Company, Testimony of Peter J. Williamson, Docket No. RP03-162-000, at P 19.

inherently more difficult to make, and thus are less reliable than short-term projections."[135]

59. We still believe that it is appropriate to consider the long-term growth rate to some extent, but now find that it is appropriate to afford less influence to the long-term growth rate. As the Commission held in Opinion No. 531:

> The DCF model is based on the premise that an investment in common stock is worth the present value of the infinite stream of future dividends discounted at a market rate commensurate with the investment's risk.[136] Corporations have indefinite lives and therefore will pay dividends for an indefinite period. For that reason, the Commission stated as long ago as 1983, when it first adopted the constant growth DCF model for gas pipeline cases, that 'projections by investment advisory services of growth for relatively short periods of years into the future' cannot be relied on 'without further consideration.' Thus, as the Commission held in *Ozark*, the constant growth DCF model requires consideration of long-term growth projections.[137]

60. As the Commission found in Opinion No. 531, we continue to recognize the need for a long-term growth projection to "aid in normalizing any distortions that might be reflected in short-term data limited to a narrow segment of the economy."[138]

---

[135] *Transcontinental Gas Pipe Line Corp.*, Opinion No. 414-A, 84 FERC ¶ 61,084, at 61,423 (1998).

[136] As the Commission explained, "The DCF model assumes growth for an infinite period of time. This can be approximated as 50 years because the present value of a one dollar dividend received 50 years in the future, discounted at 12%, is less than one cent." *Ozark Gas Transmission Sys*., 68 FERC at 61,105 n.32 (citing Eugene F. Brigham & Louis C. Gapenski, Financial Management 291 (1991)).

[138] *Id.* P 38 (quoting Opinion No. 414-A, 84 FERC at 61,423-24).

V. CAPM

A. Opinion No. 569

1. Use of Betas and Size Adjustments

61. In Opinion No. 569, the Commission noted that the Commission found in Opinion No. 531-B that the size adjustment was "a generally accepted approach to CAPM analyses" and continued to find this to be the case.[139] The Commission stated that there was substantial evidence in the record that investors rely on *Value Line* betas. While the Commission acknowledged that there is an imperfect correspondence between the size premia being developed with different betas, it concluded that the size adjustments improve the accuracy of the CAPM results and cause it to better correspond to the costs of capital estimates employed by investors.[140]

62. The Commission also found that the application of size adjustments based on the New York Stock Exchange (NYSE) to dividend-paying members of the S&P 500 is acceptable, as the use of the NYSE for the size premium adjustment enabled Ibbotson Associates to develop a rich data set,[141] and found no evidence that companies in the S&P 500 feature different risk premiums than those in the NYSE.[142]

63. The Commission disagreed with intervenors that the utility industry is unique, and that the size premium adjustment would therefore be inapplicable, as the size premium adjustments are supported by a robust data set. The Commission noted that there are variations in the risk profiles of firms of any industry and there was insufficient evidence in the record to conclude that factors specific to the utility industry insulate smaller utilities from risks such that the CAPM betas sufficiently account for any increased risks and corresponding returns demanded by investors.[143]

---

[139] Opinion No. 569, 169 FERC ¶ 61,129 at P 296 (citing Opinion No. 531-B, 150 FERC ¶ 61,165 at P 117).

[140] *Id.* P 297.

[141] Ibbotson Associates, now under Duff & Phelps, has long published a series quantifying this effect for various sizes of firms, pulling from data going back to 1926.

[142] *Id.* P 298.

[143] *Id.* P 303.

2. Exclusion of Growth Rates

64. In Opinion No. 569, the Commission accepted Trial Staff's proposal to screen from the CAPM analysis S&P 500 companies with growth rates that are negative or in excess of 20%. The Commission stated that such a screen is consistent with the elimination of outliers elsewhere in the ROE methodology, as such high or low growth rates are highly unsustainable and non-representative of the growth rates of the electric utilities in the proxy groups.[144]

B. Rehearing Requests

1. Use of Betas and Size Adjustments

65. CAPs state that the size adjustment is inconsistent with other elements of the adopted CAPM model. CAPs explain that the CAPM analysis incorporating a *Value Line* adjusted beta designed to measure market capitalization and a size premium adjustment based on raw betas is not based on substantial evidence.[145] Additionally, CAPs assert that the academic articles cited in Opinion No. 569 do not support the notion that investors rely on size factors.[146]

66. CAPs also argue that Opinion No. 569 appears to have misunderstood CAPs' concerns about the impact of mismatched betas as being whether the *Value Line* adjusted betas are appropriate for use in the CAPM. RPGI states that the issue before the Commission, however, was whether it is appropriate to combine adjusted and raw betas when performing a base CAPM analysis and applying a size premium adjustment.[147]

67. LPSC contends that the size adjustment is flawed because including such an adjustment conflicts with the Commission's determinations that utility growth rates will, in the long run, grow at the rate of the average firm in the economy.[148] LPSC also states that the Commission failed to address its contention that *Value Line* betas are methodologically mismatched to the S&P 500 because *Value Line* betas are calculated

---

[144] *Id.* P 267.

[145] CAPs Rehearing Request at 77.

[146] *Id.* at 80.

[147] RPGI Rehearing Request at 77.

[148] LPSC Rehearing Request at 10.

using the NYSE, a different stock index.[149] LPSC asserts that the Commission incorrectly relies on raw betas in its size adjustment portion of the CAPM, while relying on adjusted betas in the rest of its CAPM analysis.[150]

68. RPGI states that the Commission erred by authorizing a size adjustment to the CAPM methodology that is unsupported by substantial record evidence and which arbitrarily inflated the ROE to an unjust and unreasonable level.[151] RPGI asserts that MISO TOs' comments did not recognize that the size premium adjustment is narrowly tailored to address an inability of beta to fully account for the impact of firm size within the CAPM, but failed to recognize that the size adjustment is of firms across the entire economy.[152] RPGI contends that Mr. Parcell's analysis shows that the size adjustment is inappropriate for regulated monopoly electric utilities. They aver that the Commission's silence on the simplification of Mr. Parcell's analysis is a central issue, and that the evidence contradicts the Commission's analysis.[153]

2. Exclusion of Growth Rates

69. MISO TOs argue that the Commission erred in excluding growth rates that are negative or in excess of 20% and argue that this adjustment has no economic justification.[154]

70. Exelon asserts that the Commission discards without justification companies with an IBES growth rate of greater than 20% from the CAPM.[155]

71. CAPs contend that the equity market return estimate, if calculated based on the short-term growth rate, should not exclude S&P 500 companies with negative growth rates. They aver that such exclusions are inappropriate because companies can feature negative growth rates for an extended period. Further, CAPs argue that, for the analysis

[149] *Id.* at 11.

[150] *Id.* at 14-15.

[151] RPGI Rehearing Request at 31.

[152] *Id.* at 32.

[153] *Id.* at 32-33.

[154] MISO TOs Rehearing Request at 69.

[155] Exelon Rehearing Request at 13.

to be appropriately diverse, these companies should be included, noting that such exclusions include some companies in the electric proxy group.[156]

3. Other Issues

72. Transource Energy asserts that the anomalous capital market conditions that called the DCF midpoint into question also suggest that the CAPM result would be too low, as the CAPM is premised in part on long-term Treasury bond yields.[157]

73. CAPs state that Opinion No. 569's specification of the CAPM methodology is erroneous and produces excessive results.[158] CAPs also note that independent estimates of the CAPM equity market return by financial institutions and other regulators are much lower than the Commission's estimates in Opinion No. 569.[159]

74. LPSC argues that the use of a one-step market DCF analysis in the CAPM fails to account for the long-term growth of stocks in the S&P 500, despite that utility stocks are long-term investments.[160] LPSC argues that the dividend-paying firms in the S&P 500 are not representative of the required return of the market as a whole, and solely relying on those firms results in the required market return being overstated. LPSC further argues that the exclusion of long-term GDP growth rates suggests that these high short-term growth rates will continue in perpetuity, which cannot be true.[161] LPSC further argues that the inclusion of mature, large market cap companies is not a remedy, as even these companies have an average growth rate significantly higher than long-term GDP growth.[162]

C. Commission Determination

1. Use of Betas and Size Adjustments

75. We continue to find reasonable the use of *Value Line* adjusted betas in the CAPM methodology, as well as the use of raw betas based on the NYSE in the size premium adjustment. We also continue to find that the size adjustment is necessary to correct for the CAPM's inability to fully account for the impact of firm size when determining the cost of equity. As we found in Opinion No. 569, there is substantial evidence indicating that investors rely on *Value Line* betas in making investment decisions.[163] Furthermore, we are not persuaded by LPSC's argument that betas calculated based on the NYSE cannot be used with the S&P 500. We continue to find that size adjustments are appropriate for the utility industry and improve the overall accuracy of the CAPM results.[164]

76. We agree with LPSC that there is imperfect correspondence with applying *Value Line* betas derived from the NYSE to risk premiums developed using the S&P 500. However, we find that it is not reasonable to calculate the risk premium using the full 2800 companies in the NYSE. Furthermore, no parties assert that investors do not use *Value Line* betas or that such betas are materially different from betas derived from only the S&P 500. Thus, while not a perfect match, we find that the use of *Value Line* betas is appropriate for the CAPM calculation.

2. Exclusion of Growth Rates

77. We are not persuaded by MISO TOs' arguments that the CAPM methodology should consider growth rates that are negative or above 20% and continue to find that such a screen is consistent with the elimination of outliers elsewhere in the ROE methodology. Similarly, we disagree with CAPs that negative growth rates should be included. Negative and very high growth rates are both unsustainable and should thus be excluded from the determination of the CAPM risk premium, even if they enhance the diversity of covered companies.[165]

3. Source of Short-Term Growth Rates

78. For the reasons discussed above, we find that IBES is a reliable source of short-term growth rate data and therefore we find it reasonable for IBES growth rates to

---

[163] *See* Opinion No. 569, 169 FERC ¶ 61,129 at P 297.

[164] *See id.* PP 297-298, 301, 303.

[165] *See id.* PP 267-268.

be used in the CAPM model. However, we clarify here that we will consider the use of *Value Line* short-term growth rates for the CAPM model in future proceedings. Consistent with our finding that it is beneficial to use different models in the ROE methodology, we find that it may be beneficial to diversify the data sources as well. We believe that diversifying data sources may better reflect the data sources that investors consider in making investment decisions and mitigate the effect of any unusual or incorrect data in a given source. Furthermore, as MISO TOs assert, there is substantial evidence that *Value Line* is used by numerous investors.[166] The Commission has, since Opinion No. 531, recognized the merit of *Value Line* data, as illustrated by its support for *Value Line* betas, discussed above.

79. We are purposefully taking different approaches for the sources of short-term growth rate data in the DCF and CAPM. We believe that, in keeping with the Commission's historic use of IBES for the DCF, the DCF should continue to use IBES short-term growth rate data, as discussed above. By contrast, we believe that the CAPM is a better candidate for a new growth rate data source given that the Commission is newly adopting the CAPM as a direct input into its determination of the zone of reasonableness under the first prong of section 206 and its selection of a just and reasonable replacement ROE under the second prong of section 206.

80. While the Commission found in Opinion No. 569 that IBES data is preferable because it represents consensus growth estimates by a number of analysts, upon further consideration, we conclude that, while *Value Line* estimates may come from a single analyst, those estimates are vetted through internal processes, including review by a committee composed of peer analysts, and thus they similarly incorporate the input of multiple analysts.

81. The Commission also found in Opinion No. 569 that IBES data is preferable because IBES projections are updated more often than the *Value Line* projections. However, after further consideration of the record, including broad requests to allow the use *Value Line* projections,[167] we find here that there is also value in including *Value Line* projections because they are updated on a more predictable basis. *Value Line*'s regular updates provide certainty about updates to key model inputs.

82. Therefore, we conclude that IBES and *Value Line* data both have advantages and thus it is appropriate to consider both data sources. As stated above, however, we believe

[166] *See, e.g.*, MISO TOs Rehearing Request at 63-69.

[167] *See, e.g.*, *id.* at 63-67; MISO TOs Initial Br. (I) at 22-23; MISO TOs Initial Br. (II), App. 2 McKenzie Aff. (II) at 19-20.

it is appropriate to only consider using *Value Line* in the CAPM, which is being newly adopted, while continuing the traditional exclusive use of IBES data in the DCF model.

83. Although we find it appropriate to consider the use of *Value Line* short-term growth rates in the CAPM in future proceedings, we find that the record in these proceedings is insufficient to adopt use of *Value Line* growth rates for the CAPM at this time. Rather, we will evaluate proposals to use *Value Line* short term growth rates in the CAPM based on evidence produced in future proceedings. As we determine here, consistent with Opinion No. 569,[168] the Commission will screen from the CAPM analysis S&P 500 companies with growth rates that are negative or in excess of 20%. The only CAPM analyses in the record here that apply this screen are those provided by Trial Staff, which use only IBES short-term growth rates.[169] Thus, there is no CAPM analysis in the record that applies the growth rate screen to *Value Line* short-term growth rates. Moreover, we note that, even if we could determine a way in which to apply this screen to the data available in the record, no party has provided a CAPM analysis using only *Value Line* short-term growth rates or another analysis that would allow us to reliably derive a CAPM analysis using only *Value Line* short-term growth rates. The CAPM analyses provided by MISO TOs in these proceedings, which average IBES and *Value Line* short-term growth rates, do not contain sufficient information to allow us to reliably produce a CAPM analysis using only *Value Line* short-term growth rates because those analyses do not specify the weighted average earnings growth rates from *Value Line* that were used in arriving at the short-term growth rates which average IBES and *Value Line*.[170] Accordingly, although we believe, as discussed above, that it may be appropriate to use *Value Line* short-term growth rates in the CAPM, we find that we do not have sufficient record evidence to support adopting such use in these proceedings. Therefore, we will continue to use the CAPM analyses provided by Trial Staff here, but we will consider *Value Line* data in future proceedings.[171]

[170] *See also* CAPs Rehearing Request, Docket No. EL14-12-002 at 55-56 n.193 ("The record on this issue . . . does not break out the Ex. MTO-30 growth inputs either by source or by S&P 500 company.").

[171] These analyses are reflected in page 6 of Attachment A to Trial Staff's Initial Briefs. *See also* Trial Staff Initial Br. (I), Attachment A to App. 2 at 6; Trial Staff Initial Br. (II), Attachment A to App. 2 at 6.

4. Other Issues

84. We disagree with Transource Energy's and CAPs' assertions that the Commission's CAPM methodology produces inadequate and excessive results, respectively, and continue to find the Commission's CAPM methodology to be consistent with conventional CAPM methodologies. Regarding assertions that the CAPM results here exceed those used in other contexts, the Commission is not obligated to use the same exact ROE calculations as other regulatory bodies or investment services, and our CAPM calculations are specific to the electric utility industry. Regarding assertions that the results are unreasonably low, as discussed above, the mere decline of the ROE does not demonstrate that results are unreasonable, and, as discussed below, state-jurisdictional retail ROEs do not serve as an explicit floor on Commission-jurisdictional transmission ROEs.

85. We also continue to find that the CAPM should use a one-step DCF for its risk premium. This is because the rationale for using a two-step DCF methodology for a specific group of utilities does not apply when conducting a DCF study of the dividend-paying companies in the S&P 500, as the Commission found in Opinion Nos. 531-B and 569.[172] A long-term component is unnecessary because of the regular updates to the S&P 500, which allows it to continue to grow at a short-term growth rate and because S&P 500 companies include stocks that are both new and mature, the latter of which have a moderating effect on the short-term growth rates.[173]

86. We also find unsupported Transource Energy's assertion that the anomalous capital market conditions the Commission found rendered the DCF results too low also render the CAPM too low. We are no longer relying on such arguments based on the court's remand of Opinion No. 531. Furthermore, Transource Energy offers no evidence that the CAPM results in this proceeding were unreasonably low.

VI. Risk Premium

A. Opinion No. 569

87. In Opinion No. 569, the Commission determined that it would not use the Risk Premium model for either the first or second prong of the ROE analysis under section 206 of the FPA. It concluded that the Risk Premium model's deficiencies outweigh the additional robustness that it provides. Furthermore, the Commission found that the Risk Premium model requires methodological decisions that would likely

[172] *See* Opinion No. 531-B, 150 FERC ¶ 61,165 at P 113; Opinion No. 569, 169 FERC ¶ 61,129 at P 263.

[173] *See* Opinion No. 569, 169 FERC ¶ 61,129 at PP 264-266.

undermine transparency and predictability in Commission outcomes.[174] The Commission also explained that the Risk Premium model is largely redundant with the CAPM in that both models use indirect measures to ascertain the risk premium.[175]

88. The Commission agreed with CAPs that the Risk Premium model is likely to provide a less accurate current cost of equity estimate than the DCF model or CAPM because it relies on previous ROE determinations. It found that those determinations' ROE results may not necessarily be directly determined by a market-based method, whereas the DCF and CAPM methods apply a market-based method to primary data. The Commission noted that many previous ROE determinations used in the Risk Premium model were from rate case settlements and that such settlements often involve compromises on a variety of non-ROE issues.[176]

89. The Commission also determined that circularity is particularly direct and acute with the Risk Premium model because it relies on past Commission ROE decisions. The Commission found that MISO TOs' regression analysis accentuates such circularity by largely offsetting the effects of changes in interest rates.[177]

90. The Commission also expressed doubt concerning the application of the regression analyses used by MISO TOs in their Risk Premium model. The Commission contrasted the impact of MISO TOs' analysis, which indicated an increase in the risk premium of 75 basis points for every 100 basis point decline in interest rates, with Dr. Morin's analysis, which indicated an adjustment of 48 basis points. The Commission found that, unlike for DCF and CAPM calculations, MISO TOs did not update and add to the data set for ROE proceedings through the end of the test period in June of 2015, further reducing the robustness of the data set. The Commission observed that, due to using the average of ROEs from each year, MISO TOs' regression in the First Complaint proceeding only has nine observations in its regression, which is a low number of observations for a linear regression and could impact the reliability of the results. The Commission found that MISO TOs' regression created a dynamic in which the Risk Premium analysis will keep the ROE essentially stable in contravention of general financial logic that lower interest rates make it easier to raise capital based on both the reduced opportunity cost of investing in bonds and greater availability of revenue to

[174] *Id.* P 340.

[175] *Id*. P 341.

[176] *Id*. P 342.

[177] *Id.* P 343.

invest due to the opportunity for carry trades where borrowing low-cost debt is used to finance equity purchases.[178]

91. Additionally, the Commission found that there was insufficient record evidence to conclude that investors rely on risk premium analyses utilizing historic Commission ROE determinations or settlement approvals to determine the cost of capital and make investment decisions.[179] The Commission was also unpersuaded by MISO TOs' arguments that the nature of the industry and the resulting risk premiums changed following the Energy Policy Act of 2005 sufficiently to ignore prior data.

92. The Commission also reconsidered its finding in Opinion No. 531-B that "[g]iven the varying duration of regulatory proceedings, it is difficult, if not impossible, to ensure precise contemporaneity between long-term Treasury bond yields and the cost of equity allowed by a regulator."[180] The Commission found that, although an analysis with such imprecision may have been sufficient for using the Risk Premium model for corroborative purposes, direct use of the model to determine the risk premium would require actual alignment of the test periods and the dates assigned for purposes of comparing the ROE to the risk free rate of return. The Commission stated that, if it were to adopt a precise timing in this proceeding, as a practical matter, such a decision would likely require the Commission to exclude certain proceedings whose test periods predate 2006 and include others, as well as potentially change the dates assigned to yet other proceedings.[181]

93. The Commission also noted that the Risk Premium model entails numerous judgment calls which could be disputed by parties, such as: determining the risk premium resulting from proceedings resolved by settlements with different ROEs for different parties or time periods; whether the ROEs should be assigned to different times for purposes of the Risk Premium analysis; and whether ROEs from settlements resolving multiple proceedings with the same ROE should be counted once or twice. The Commission also noted other methodological decisions, including whether to look at the annual average of ROEs and corresponding risk-free rates of return or look at them individually. Because of this, the Commission found that the Risk Premium model

[178] *Id*. P 344.

[179] *Id*. P 345.

[180] *Id*. P 348 (citing Opinion No. 531-B, 150 FERC ¶ 61,165 at P 98).

[181] *Id.*

features far more ambiguity and potential for dispute than the DCF and CAPM models, which would lead to higher costs for participation and less predictable results.[182]

94. The Commission stated that the output that the Risk Premium model produces is a single numerical point, and therefore, it does not produce a range which can be used to determine a zone of reasonableness. Accordingly, the Commission explained, the Briefing Order proposed to only use the Risk Premium model in the second prong of the section 206 analysis, but not in the first prong. The Commission stated that it preferred to use the same models in the prong one and prong two analyses to ensure that our ROE determinations under each prong are based on the same data and models and that there was no compelling justification to use different models and data sources to apply this same standard under the two prongs.

B. Rehearing Requests

95. Transource Energy argues that the Commission should utilize the Risk Premium model. Transource Energy argues that none of the Commission's justifications for using the DCF model and CAPM but not the Risk Premium model support reversing its prior findings that the imperfections of the Expected Earnings analysis and Risk Premium models do "not undermine" their usefulness.[183] Transource Energy contends that the Risk Premium model adds useful information that does not rely on the same assumptions as the DCF and CAPM models.[184]

96. Transource Energy also avers that the Commission has not shown that investors do not rely on the Risk Premium (or Expected Earnings) model and that, at most, the Commission shows that investors use those approaches differently than the DCF and

[182] *Id.* PP 346-350.

[183] Transource Energy Rehearing Request at 23 (citing Opinion No. 531-B, 150 FERC ¶ 61,165 at P 98).

[184] *Id*. (citing Avera Test., Ex. MTO-1, Docket No. EL14-12, at 94 (explaining that unlike DCF models, which indirectly impute the cost of equity, risk premium methods directly estimate investors' required rate of return by adding an equity risk premium to observable bond yields)).

CAPM models.[185] Transource Energy further points to the publication of returns granted by regulators as evidence that investors rely on the Risk Premium model.[186]

97. MISO TOs contend that the implementation questions raised in Opinion No. 569 do not undermine the probity of the Risk Premium analysis supplied by MISO TOs. MISO TOs contend that the Commission's decision in Opinion No. 569 to disregard this evidence is inconsistent with Opinion No. 551, where the Commission evaluated those issues and found that the model was probative.[187]

98. MISO TOs disagree with the Commission's finding that the Risk Premium model is redundant with the CAPM. MISO TOs note that the Risk Premium model focuses on the bond market while the CAPM focuses on the equity market, using different inputs. MISO TOs contend that investors independently rely on both models and note that many jurisdictions employ a Risk Premium approach for determining utilities' cost of equity.[188] MISO TOs argue that the Commission's finding that the stability of the Risk Premium model "defies general financial logic" overlooks that the data inputs used in the Risk Premium model inherently smooth out volatility.[189] They also argue that the Commission's assertion that the DCF and CAPM approaches may have a greater prevalence does not go to the merits of the Risk Premium approach, and it contradicts the record and the Commission's prior finding that Risk Premium is a traditional method investors may use to estimate the expected return from an investment in a company.[190]

99. MISO TOs argue that implementation issues associated with the Risk Premium method are neither insurmountable nor unique to the Risk Premium method. They argue that the Commission's concerns about which ROE inputs to include and "how far back such data should go" are directly analogous to questions regarding proxy group selection and the determination of the study period for the DCF analysis.[191]

---

[185] *Id*. at 24.

[186] *Id*. at 25, n.13 (citing MISO TOs, Supplemental Reply Brief, Docket No. EL14-12-003, App. 2 at 44).

[187] MISO TOs Rehearing Request at 52-53.

[188] *Id*. at 47-49.

[189] *Id*. at 48.

[190] *Id.* at 49 (citing Briefing Order, 165 FERC ¶ 61,118 at P 36).

[191] *Id.* at 50.

100. MISO TOs assert that the Commission's concerns regarding circularity arising from using Commission-approved ROEs as inputs are overblown and present in other methodologies. MISO TOs contend that such circularity is limited because of the presumption that orders and settlements are based on market-based methodologies.[192] MISO TOs also aver that the lack of a resulting zone of reasonableness from the Risk Premium model is not a problem because the evaluation of whether an ROE remains just and reasonable is less exact than setting a new base ROE. MISO TOs contend that, while the Commission should include the Risk Premium in setting new ROEs, it does not necessarily need to include it in evaluating existing ROEs.[193]

101. MISO TOs also contend that the Commission's failure to provide guidance on the Risk Premium model's implementation is not a valid justification for omitting the model, particularly since the Commission has reopened the implementation of the models in this proceeding.[194]

102. PJM TOs contend that investors recognize that each of the four financial models in the Briefing Order has its own advantages and disadvantages. PJM TOs contend that investors use multiple models because no single model provides accurate results under all market conditions.[195]

103. PJM TOs argue that the Risk Premium model complements the Commission's DCF model by recognizing that the Risk Premium varies over time and with interest rates whereas the DCF model does not account for this variation.[196] PJM TOs argue that the Commission-authorized ROEs used in the Risk Premium model reflect inputs and analyses of multiple experts as well as the Commission's judgment concerning factors that affect the cost of equity, and contend that investors are likely to consider Commission-authorized ROEs to an extent.[197]

C. Commission Determination

104. Upon reconsideration and with the modifications described below, we find that the defects of the Risk Premium model do not outweigh the benefits of model diversity and reduced volatility resulting from the averaging of more models.

105. In Opinion No. 569, the Commission expressed concerns that the Risk Premium model was an iteration of the CAPM, where both compared a derived return to a risk-free rate of return, affording too much weight to similar models. Upon reconsideration, we agree with the PJM TOs that the Risk Premium model is sufficiently distinct from the CAPM to use in our ROE analysis. The Risk Premium relies on corporate utility bonds while the CAPM uses Treasury Bond yields. Additionally, the Risk Premium model relies on the risk premiums implicit in regulatory judgements, including those using the DCF model, while the CAPM relies upon a different set of inputs, including S&P 500 dividend yields and growth rates as well as adjusted betas.

106. The Commission, in Opinion No. 569, found that the Risk Premium model contained substantial circularity. Upon reconsideration, we agree with MISO TOs[198] and find that, while it contains some circularity, the averaging of the results with those of the DCF and CAPM models sufficiently mitigates that circularity. Additionally, all of the models contain some circularity. And, upon consideration of the rehearing requests, we believe that the level of circularity in the Risk Premium model is acceptable.

107. The Commission also found that use of the Risk Premium model was inconsistent with the other models because it could only be used for the second prong of the section 206 analysis because it does not produce a zone of reasonableness. We continue to find that this is a serious concern, particularly in a circumstance where the Risk Premium model's ROE differs substantially from those of the DCF and CAPM models, such that the ROE produced in the second prong could fall within the applicable presumptively just and reasonable range from the first prong despite the challenged ROE falling outside that range or vice versa. To remedy this problem, we will impute the average width of the zones of reasonableness from the CAPM and DCF models onto the ROE produced by the Risk Premium model, with that ROE serving as the measure of central tendency of the zone of reasonableness. Doing so creates a zone of reasonableness for the ROE from the Risk Premium model, which can then be averaged with those of the other models in the first prong of the section 206 analysis. For example, if the Risk Premium model produces an ROE of 10% while the CAPM and DCF produce zones of reasonableness that average 400 basis points wide, the imputed zone of reasonableness for the Risk Premium would be 8% to 12%. We find that this is appropriate because the average width of those zones of reasonableness from models that

[198] *See* MISO TOs Rehearing Request at 51.

produce a zone of reasonableness is the best estimate of how far a zone of reasonableness should span from a single point like that produced by the Risk Premium model. Moreover, addition of the Risk Premium model to our analysis under the first prong of section 206 will not impact the size of the overall composite zone of reasonableness. Instead, it will merely reflect the Risk Premium model in the zone of reasonableness, based on equally weighted information from the models that directly produce a zone of reasonableness, allowing the Commission to use this model in both prongs. Accordingly, we find that it is appropriate to impute a zone of reasonableness for the Risk Premium model so that our ROE determinations under both prongs of section 206 are based on the same data and models.[199]

108. The Commission also expressed concerns regarding the regression analysis, noting specifically that the low number of observations could impact the reliability of the results.[200] Here we propose to use the individual cases for the Risk Premium analysis and not the average of the data from each year. Consequently, instead of nine observations in the regression analysis as proposed by the MISO TOs, there are 71 observations used in the First Complaint regression and 77 in the Second Complaint regression, leading to a much more robust and reliable result. Although the resulting regression coefficients are similar to those in the MISO TOs' calculations, we conclude that they are now based on more sound inputs and are thus more reliable.

109. The Commission cited use of settlements as a deficiency of the Risk Premium model. Parties may consider many factors when settling rate case proceedings. However, because of how directly ROEs affect rates, we conclude that parties engaged in arms-length negotiations seriously consider the ROE in the course of reaching settlements, even if the records in certain proceedings do not contain specific ROE calculations or testimony. Consequently, upon further consideration, we find that the ROEs from such settlements are reasonable to include in the Risk Premium analysis. However, because of the need to more precisely correspond the timing of ROEs to the corresponding bond yields, discussed below, we revise the bond yields (and corresponding risk premiums) to correspond to the six months preceding the offer of settlement and not Commission orders approving the settlements, as discussed below.

---

[199] *See* Opinion No. 569, 169 FERC ¶ 61,129 at P 351 ("We would prefer to use the same models in the prong one and prong two analyses to ensure that our ROE determinations under each prong are based on the same data and models. It would not be logical to use different models and data sources to apply this same standard under the two prongs unless there is some compelling justification for the difference.").

[200] *See* Opinion No. 569, 169 FERC ¶ 61,129 at P 344.

This period, not the six months preceding Commission approval of settlements, best reflects when parties evaluated the ROE.

110. We also find that it is appropriate to eliminate certain cases from the Risk Premium analysis where the Commission did not consider the justness and reasonableness of the base ROE or the zone of reasonableness in making decisions. For example, we are excluding cases where transmission owners joined MISO and received the prevailing 12.38% ROE that was approved in 2002 without examination of the justness and reasonableness of that ROE. Similarly, in an order on a transmission rate incentives filing by PSEG,[201] the Commission explicitly stated that the ROE was beyond the scope of the proceeding.[202] In other cases, the MISO TOs' analysis unjustifiably contained multiple ROEs counted in the analysis from the same case.[203] We are also eliminating cases where the test period is in 2004, well before other proceedings on the list, given that there were likely other proceedings with test periods during 2004 and 2005 that were not included. We also propose, in order for the results of the Risk Premium analysis to be consistent with those of other models, to update the list of applicable cases to include data up through the conclusion of the test periods, which conclude June 2015 and December 2015 for the First Complaint and Second Complaint, respectively.

111. The Commission, in Opinion No. 569, also considered whether the bond yields used to determine the risk premium should more precisely align with test periods of Risk Premium cases. It found that, although a misalignment of the timing of bond yields and test periods might be acceptable when using the Risk Premium model corroboratively, using the model to set the actual ROE demanded correcting this imprecision. We continue to find that the risk premiums should not contain inconsistent dates for the ROEs and for the bond yields. Rather, they should be aligned by corresponding the ROE to the test periods on which it is based. For settlements, the relevant date is the date that parties file the settlement, not when the Commission approves it. Consequently, the six-month time period bond yields should be the six months preceding the settlements. Such information is reflected in the data in Appendix I.

112. In Opinion No. 569, the Commission also found that the record contained insufficient evidence to conclude that investors rely on risk premium analyses utilizing historic Commission ROE determinations or settlement approvals to determine the cost

---

[201] *PJM Interconnection, L.L.C. and Pub. Serv. Elec. & Gas Co*., 147 FERC ¶ 61,142, at P 48 (2014).

[202] However, the analysis does include those cases where the Commission made this finding, but the ROE was modified by settlement.

[203] *See* Appendix I. Note that when a case has multiple *different* ROEs, each of those are counted in the analysis.

of capital and make investment decisions. On rehearing, we find that investors do expect to earn a return on a stock investment that reflects a premium above the return they expect to earn on a bond investment,[204] and that the Risk Premium model is a method of estimating the premium over bond yields that investors require to invest in electric utility equities. In addition, as the Commission noted in Opinion No. 569, investors do observe regulatory ROEs and how changes in authorized ROE levels could affect utility earnings,[205] and while such considerations differ from the type of analysis employed by the Risk Premium model, it is a model that considers regulatory ROEs in estimating the premium that investors require to make equity investments instead of bond investments.

113. The Commission discussed in Opinion No. 569 that the MISO TOs' sample period, beginning in 2006, was substantially shorter than the period used by Dr. Morin, potentially leading to less credible results. We find that, although the data set for determining the risk premium would ideally be longer, that 10 years of data yielding over 60 observations is sufficient, noting that we are extending the sample periods slightly to the end of the updated test periods, as discussed above. Furthermore, the record lacks information on ROE proceedings whose order dates precede 2006.

114. The Commission also noted concerns, raised by Trial Staff, that the Risk Premium model should exclude periods of high volatility, specifically around the beginning of the Great Recession. We conclude that all periods should be included because the Risk Premium analysis should factor in periods where the bond yields change. A full sample size in this case *does* include the outlying periods because they reflect the Risk Premium at the time and such economic disturbances, which periodically recur.

VII. Expected Earnings

A. Opinion No. 569

115. In Opinion No. 569, the Commission determined that, in light of the record as supplemented after issuance of the Briefing Order, it is not appropriate to use the Expected Earnings model in our new base ROE methodology.[206]

---

[204] *See, e.g.*, Morin at 108 ("[B]ased on the simple idea that since investors in stocks take greater risk than investors in bonds, the former expect to earn a return on a stock investment that reflects a 'premium' over and above the return they expect to earn on a bond investment.").

[205] Opinion No. 569, 169 FERC ¶ 61,129 at P 345.

[206] *Id.* P 200.

116. In particular, the Commission found that the record does not support departing from our traditional use of market-based approaches to determine base ROE.[207] The Commission determined that under *Hope*—which declares that "the return to the equity owner should be commensurate with returns on investments in other enterprises having corresponding risks"[208]—it is appropriate to consider the value of investment that is actually available to an investor in the market. Outside of the unlikely situation in which the market value and book value are exactly equal, investors do not have the opportunity to invest in an enterprise at its book value. Accordingly, the Commission deemed it most appropriate to exclude the Expected Earnings model, which relies on an enterprise's book value instead of the market value.

117. The Commission explained that the return on book value is not indicative of what return an *investor* requires to invest in the utility's equity or what return an investor receives on the equity investment, because those returns are determined with respect to the current market price that an investor must pay in order to invest in the equity.[209] Specifically, the Commission found that the Expected Earnings model measures returns on book value, without consideration of what market price an investor would have to pay to invest in the relevant company, so it does not accurately measure the investor's expected returns on its investment, and, therefore, has been "thoroughly discredited."[210] In other words, the return on book value does not reflect "the return to the equity owner" that we must ensure is "commensurate with returns on investments in other enterprises," as *Hope* requires; therefore, the Commission found that this model is not useful in ensuring that these standards are satisfied.[211] Furthermore, the Commission found that there was insufficient record evidence to conclude that investors rely on the Expected Earnings analysis to estimate the opportunity cost of investing in a particular utility.[212]

118. The Commission also explained that, while it may be true that the Expected Earnings model does not involve the same complexities as the market-based approaches, this is because it does not reflect a utility's cost of equity.[213] Furthermore, applying the

---

[207] *Id.* PP 201, 221.

[208] *Hope*, 320 U.S. at 603.

[209] Opinion No. 569, 169 FERC ¶ 61,129 at P 202.

[211] *Id.* PP 202, 221-22.

[212] *Id.* P 210.

[213] *Id.* P 204.

Expected Earnings model in the cost-of-service context would lead to illogical results because a company in such a context would receive a higher overall return when it features a higher equity ratio, despite this indicating a lower risk (and thereby indicating a lower required rate of return by investors) than a company featuring a lower equity ratio.[214] Even though companies with more depreciated assets are generally of lower risk and therefore would merit a lower return, the Expected Earnings model would instead provide higher returns to such companies.[215]

B. Rehearing Requests

119. MISO TOs, Ameren, and Transource Energy seek rehearing of the Commission's decision to exclude the Expected Earnings model in determining base ROEs.[216] Transource Energy argues that the alleged flaws in the Expected Earnings approach actually become strengths when combined with the other models.[217]

120. Transource Energy asserts that the Expected Earnings model is actually market-based in the sense that market participants use it for investment decisions and that the Commission's definition of "market-based" is too narrow.[218] Furthermore, Transource Energy argues that the fact that the Expected Earnings model does not fit into the Commission's narrow definition of "market-based" highlights that it is needed to diversify the other models.[219] On the other hand, MISO TOs contend that the Expected Earnings approach helps ensure a base ROE that meets the requirements of *Hope* precisely because it is *not* market-based.[220]

121. According to MISO TOs, the record demonstrates that the Expected Earnings approach provides a unique perspective that no other model addresses and thus provides

[220] MISO TOs Rehearing Request at 59-61.

a check on the market-based cost of equity approaches.[221] MISO TOs assert that, because regulators do not set the returns that investors earn in the capital markets, the Expected Earnings approach provides a direct guide to ensure that the allowed ROE is similar to what other utilities of comparable risk will earn on invested capital.[222] In other words, MISO TOs explain, the Expected Earnings approach measures whether the allowed ROE is sufficient to assure confidence in the financial integrity of an enterprise so as to maintain its credit and attract capital.[223] In addition, MISO TOs state that, because it is not market-based, the Expected Earnings approach avoids the complexities, controversies, and limitations of capital market methods.[224] Transource Energy argues that the fact that Expected Earnings is not used independently of stock price is not disqualifying, because, under the four-model framework originally proposed, this approach actually works in concert with market-based methods like the included CAPM and DCF models.[225] According to MISO TOs, it is precisely because the Expected Earnings method examines the books of a proxy company rather than relying on market data that the approach provides a unique value in assessing whether a Commission-determined ROE meets the *Hope* and *Bluefield* standards.[226]

122. MISO TOs, Transource Energy, and Exelon assert that the Commission's finding that investors do not rely on the Expected Earnings analysis to estimate the ROE that a utility will earn in the future is contrary to the record in this proceeding and the record in the Commission's Notice of Inquiry proceeding[227] regarding its base ROE policy.[228] Transource Energy argues that Opinion No. 569 did not identify changed circumstances regarding how investors use the Expected Earnings and Risk Premium models and does

[224] *Id.* at 60 (citing MISO TOs, Supplemental Reply Brief, Docket No. EL14-12-003, App. 2 at 65 (filed Apr. 10, 2019) (McKenzie Supplemental Reply Brief Affidavit)).

[225] Transource Energy Rehearing Request at 24.

[226] MISO TOs Rehearing Request at 62.

[227] *Inquiry Regarding the Commission's Policy for Determining Return on Equity*, 166 FERC ¶ 61,207 (2019) (Base ROE NOI).

[228] MISO TOs Rehearing Request at 54-58; Transource Energy Rehearing Request at 18, 20-21, 24.

not find that investors no longer rely on them in evaluating investment decisions.[229] MISO TOs contend that testimony filed by multiple commenters in the Base ROE NOI proceeding, including MISO TOs, the New England TOs, the PJM TOs, and EEI, clearly demonstrates that investors do rely on the Expected Earnings analysis when making investment choices.[230] Exelon notes that the Commission stated in the Briefing Order that investors use the Expected Earnings model, but then later in Opinion No. 569 stated that there is insufficient evidence that investors rely on the Expected Earnings model. Exelon argues that the Expected Earnings model should be included in the ROE methodology even if only some investors rely on it.[231]

123. MISO TOs and Transource Energy also argue that the Commission cannot ignore evidence concerning the Expected Earnings model that it already found probative.[232] They contend that the Commission found the Expected Earnings approach to be reliable, corroborative evidence of the proper base ROE for electric utilities in Opinion Nos. 531, 531-B, and 551, and cannot now simply ignore evidence pertinent to the question before it with no basis for the sudden change.[233] Ameren contends that the Commission's assertion that the exclusion of the Expected Earnings model in Opinion No. 569 is not inconsistent with its determination in Opinion No. 551 is circular because the question on whether to exclude the model was never asked in Opinion No. 551.[234] Ameren explains that, in Opinion No. 551, the Commission relied on the Expected Earnings model to corroborate its finding and provides no explanation here for completely ignoring it. Ameren contends that this failure to at least consider the Expected Earnings model cannot be reconciled with the Commission's prior finding.[235] According to MISO TOs, the Expected Earnings analysis can inform whether the ROE produced by the Commission's methodology is appropriate, and ignoring pertinent evidence rooted in controlling Supreme Court precedent is arbitrary and capricious and not the product of reasoned

[234] Ameren Rehearing Request at 25.

[235] *Id.*

decision-making.[236] Moreover, Ameren argues that this exclusion constitutes reversible error because the Commission never proposed the two-model approach in the Briefing Order or the Base ROE NOI, no party advocated for this approach in the instant docket, and the record does not support exclusion of the Expected Earnings model.[237]

124. MISO TOs and Transource Energy also assert that the Commission cannot deny the historical and regulatory acceptance of the Expected Earnings approach, as it was used in the Commission's prior "br + sv" approach for determining public utility ROEs and is closely related to the comparable earnings approach that originated in *Hope*.[238] Accordingly, they contend that the Commission can rely on the Expected Earnings model to determine whether a prospective base ROE meets the requirements of *Hope*, and to the extent a base ROE is inconsistent with the Expected Earnings analysis, significant explanation is needed as to how such a base ROE meets the requirements of *Hope*.[239] MISO TOs assert that the Commission should employ the Expected Earnings approach in setting the MISO TOs' base ROE or, failing that, should at least consider it as a check on the base ROE yielded by the Commission's alternative approach.[240]

C. Commission Determination

125. We deny requests for rehearing of the Commission's decision to exclude the Expected Earnings model from its base ROE analysis under section 206 of the FPA. As an initial matter, we note that the requests for rehearing largely repeat arguments parties previously made and which the Commission addressed in Opinion No. 569. Nothing in the rehearing requests persuades us to alter our decision here.

126. We are not persuaded by MISO TOs', Transource Energy's, and Exelon's arguments that investors rely on the Expected Earnings analysis to project utilities' earned ROE. While the record in this proceeding contains evidence that investors have access to data on earnings per book value, we continue to find that it lacks evidence that investors use such data to directly value equities, determine the cost of equity, or make investment decisions without consideration of the market price of the relevant equities.

[239] MISO TOs Rehearing Request at 60-61; Transource Energy Rehearing Request at 20-21, 24-25.

[240] MISO TOs Rehearing Request at 62.

As the Commission explained in Opinion No. 569,[241] investors cannot use the Expected Earnings model to directly determine the return they would earn from purchasing a company's stock, because the return estimated by that model is a return on the company's book value, not a return on the current stock price, which is what the investor must pay in order to invest in the company. Therefore, the returns estimated by the Expected Earnings model are divorced from the returns required by investors, because investors cannot purchase a company's stock at its book value (except in the very rare instance where a utility's market capitalization happens to exactly equal its book value). Similarly, we are not persuaded by MISO TOs' and Transource Energy's arguments that the Expected Earnings analysis is probative because the Commission, until Opinion No. 531, considered book value in the "br + sv" calculations. Our decision to exclude the Expected Earnings model from our base ROE analysis is not inconsistent with the Commission's prior consideration of book value in this context because such information was used in conjunction with, rather than instead of, the market price of the stocks.

127. Moreover, because the current market values of utility stocks substantially exceed utilities' book value, a utility's expected earnings on its book value will inevitably exceed the return that investors require in order to purchase the utility's higher-value stock, which means that the Expected Earnings model does not accurately measure the returns that investors require to invest in utilities.[242]

128. As explained in Opinion No. 569, the Commission has found that it is important to base the ROE on the returns currently required by investors, and the Expected Earnings model does not measure those returns. Specifically, since the 1980s, the Commission has rejected the use of returns on book value in determining the cost of equity and emphasized the importance of incorporating the market cost of equity when estimating ROEs because the market price is what investors must pay when making an investment and therefore is the basis on which investors measure the return on their investment.[243] As discussed in Opinion No. 569, this is also supported by a variety of academic literature indicating that the Expected Earnings model is not relied upon to directly estimate cost of equity.[244]

129. We are also not persuaded by MISO TOs' arguments that the Expected Earnings model should be used because it provides a unique, non-market-based perspective, and thus increases model diversity. Simply because a model increases model diversity does

---

[241] Opinion No. 569, 169 FERC ¶ 61,129 at PP 201-202.

[242] *See id.* P 211.

[243] *See id.* PP 201 & n.426, 202, 216-18.

[244] *Id.* P 218.

not mean that it is necessarily appropriate to include, if the model is fatally flawed. This is the case because the returns on investment received depend on the market price that investors must pay to make their investment, which the accounting-based Expected Earnings model does not consider.

130. In response to MISO TOs' argument that the Expected Earnings model should be used because it avoids the complexities, controversies, and limitations of market-based methods, we stand by the Commission's explanation in Opinion No. 569[245] that the Expected Earnings model is simpler because it does not take into account the vitally important market cost of investing in a utility's equity. The market price that an investor must pay for an investment is a critical factor in determining a utility's cost of equity, and a model that ignores that factor is not useful in estimating cost of equity. The Expected Earnings model's relative simplicity is due to and invalidated by this deficiency.

131. Finally, we disagree with MISO TOs' and Transource Energy's arguments that the Commission cannot exclude the Expected Earnings model now because it already relied on the model as corroborative evidence in the underlying Opinion No. 551 in these proceedings. As the Commission explained in Opinion No. 569,[246] the Commission is now deciding whether to use the Expected Earnings model as a direct input in its ROE estimates—not merely whether to use it as corroborative evidence—and more convincing evidence is required to justify using the model as a direct input. We continue to find that parties have not supplemented the record with this more convincing evidence. We further note that no parties have explained or refuted the Commission's observation in Opinion No. 569 that the use of the Expected Earnings model in this context leads to illogical results of higher ROEs from companies with more equity in their capital structure or more depreciated assets.[247] Furthermore, Opinion No. 531, whose logic and methodology the Commission adopted in Opinion No. 551, was vacated by the court, such that neither form binding precedent.

132. While we do not adopt the Expected Earnings model in our revised methodology here for the reasons discussed above, we do not necessarily foreclose its use in future proceedings if parties can demonstrate that the concerns discussed above have been addressed.

[247] *See id.* P 223.

VIII. Weighting of Models

133. A number of parties made general comments that the Commission erred in overweighting the DCF and CAPM models by excluding the Risk Premium and Expected Earnings models. Section III above addresses such arguments.

A. Opinion No. 569

134. In Opinion No. 569, the Commission chose to use the DCF and CAPM models to determine base ROE, with both approaches being given equal weight. The Commission argued that it was inappropriate to include the Expected Earnings and Risk Premium models, as discussed above. By excluding them, the Commission effectively gave those models a weight of zero in its analysis under prongs one and two of section 206 of the FPA.[248]

135. The Commission also described why it would create the zones of reasonableness for each model based on the proxy company results for those individual models, average the midpoints/medians and zones of reasonableness bounds for the used models, and then determine the midpoints and applicable quartiles based on the averaged zones of reasonableness.[249] The Commission declined to adopt CAPs' proposed alternative of averaging the results for multiple models for each proxy group company before determining the applicable midpoint/median and zone of reasonableness. Further, the Commission noted that there was no record evidence of the models being applied this way in other regulatory proceedings or that the assumptions and structure of the DCF and CAPM models contemplate the isolation of results for specific proxy group companies as the CAPs' proposal would do.

B. Rehearing Requests

136. CAPs state that the Commission should not have equally weighted the results of the DCF and CAPM models in determining the composite zone of reasonableness. According to CAPs, the Commission disregarded the complainants' arguments regarding the "superiority of the DCF model, including evidence of broad industry recognition of the DCF model as the most appropriate way to determine allowable rates of return that meet the standards set out in *Hope* and *Bluefield*."[250] CAPs claim that the Commission relied more heavily on the MISO TOs' assertion that "investors base their decisions on factors more closely aligned with CAPM factors to disregard long-standing precedent

---

[248] *Id.* PP 424-427.

[249] *Id*. PP 437-438.

[250] CAPs Rehearing Request at 85.

stating the superiority of the DCF model." CAPs argue that the equal weighting of the DCF and CAPM models is not supported by the record evidence or Commission precedent indicating that the DCF model is superior to the CAPM.

137. CAPs assert that the Commission did not explain its conclusion that equal weighting will reduce model risk associated with a given model more so than giving one model greater weight over the other. CAPs note that the DCF model has not become less reliable over the time that the Commission used it exclusively to determine cost of equity. Lastly, CAPs criticize the Commission for not considering Dr. Berry's rebuttal of the Briefing Order's basis for its new concerns regarding the DCF model's risk. According to CAPs, disregarding parties' arguments constitutes arbitrary and capricious decision making.[251] CAPs also aver that the Commission did not address Dr. Berry's testimony regarding the sequencing of model calculations.

138. Transource Energy argues that the Commission's rationale does not support a 50% weight for the DCF model. Previously with a four-model methodology, the DCF approach received a 25% weight. That approach led to a diverse methodology that minimized measurement errors. According to Transource Energy, assigning no weight to the Expected Earnings and Risk Premium models does not mean that the DCF model should be weighted equally with the CAPM.[252]

139. MISO TOs state that benchmark estimates of utilities' cost of equity using the Risk Premium and Expected Earnings models substantially exceed the Commission's composite midpoint ROE. In addition, MISO TOs state that anomalous capital market conditions undercut the validity of the DCF analysis where that model holds a 50% weight in deriving the composite zone of reasonableness from which the Commission derived the new base ROE it adopted in Opinion No. 569.[253] MISO TOs also note that the Commission previously agreed with Ms. Lapson's conclusion that using the DCF model does not satisfy *Hope* and *Bluefield*. MISO TOs assert that the DCF model does not satisfy *Hope* and *Bluefield* and therefore question the validity of the new ROE methodology when assigning a 50% weight to the DCF model. According to MISO TOs, the "same evidence of prevailing state ROEs on which the Commission relied in Opinion No. 551 undercuts the 50% weighting of the very same DCF analysis in Opinion No. 569."[254] They argue that the Expected Earnings and Risk Premium models can be used to show that the DCF model has a downward bias on the resulting base ROE.

---

[251] *Id.* at 85-87.

[252] Transource Energy Rehearing Request, Docket No. EL14-12, at 21-22.

[253] MISO TOs Rehearing Request, Docket No. EL14-12, at 13.

[254] *Id.* at 18-19.

Furthermore, the Commission had previously noted that investors utilize the Expected Earnings and Risk Premium models.[255]

C. Commission Determination

140. We disagree with parties that assert that low reliability of the DCF model, the DCF model's similarity to the CAPM in terms of inputs, and the drawbacks of those two models as reasons against equal weighting. We also disagree with other parties that argue that the DCF should receive more weighting than other models given that it has been long-used by regulators. Parties arguing for less weighting do not suggest a specific alternative weighting scheme other than simply reducing the DCF's weight to less than 50% and overlook the distinctions between it and the other models. We disagree with contentions that, because the DCF gives results in these proceedings that are lower than those of the other models, that it should receive *less* weight than they do. The DCF model is clearly used by investors[256] and has been subject to extensive regulatory review and refinement. We also disagree with parties arguing for more weighting of the DCF model, because, as discussed above, we find substantial value in the CAPM and Risk Premium models and the evidence indicates that none of the three models is conclusively superior to any other. As discussed in this order and in Opinion No. 569, each model has unique aspects, and advantages and disadvantages that make it preferable to the other model in some respects, but not other respects.

141. We continue to find that the models used in our methodology should be afforded equal weighting to fully capture the model diversity that each brings. The evidence does not indicate that there is a clearly superior model for estimating cost of equity that should be given more weight than the others and we find that equally weighting the three models will reduce the model risk associated with any particular model more than giving one model greater weight than the other. Consequently, each model shall receive one-third weighting for both the first and second prongs of the section 206 analysis. The revised methodology ultimately addresses the concerns of certain commenters by reducing the weight attributed to the DCF model while expanding the diversity of the ROE methodology by including the Risk Premium model. We disagree with CAPs' assertion that the Commission in Opinion No. 569 failed to address Dr. Berry's concerns regarding model sequencing. The Commission provided a full and reasoned description of why it employed the sequencing order for ROE calculations that it had described in the Briefing Order.

---

[255] *Id.* at 22.

[256] *See, e.g.*, Opinion No. 569, 169 FERC ¶ 61,129 at PP 171, 426.

IX. Natural Break Analysis

A. Opinion No. 569

142. In Opinion No. 569, the Commission affirmed the use of a natural break analysis to both the high and low-end outlier screens but declined to set a specific threshold level or formula to use in the analysis. The Commission stated that any numerical outlier test will necessarily be somewhat arbitrary, and that the natural break analysis gives the Commission the flexibility to determine whether a given proxy group company is truly an outlier, or whether it contains useful information.[257]

B. Rehearing Requests

143. MISO TOs argue that, if the Commission retains the high-end outlier test and the natural break analysis, the high-end outlier threshold should be useable as evidence for retaining one or more cost-of-equity estimates that might otherwise be excluded because of a subjectively identified "natural break."[258]

144. MISO TOs contend that the natural break analysis utilized by the Commission has no foundation and invites arbitrary application. MISO TOs contend that the analysis is especially erroneous when applied to the high-end outlier test.[259] MISO TOs also argue that, if the Commission continues to apply a natural break standard to its low-end outlier test, it should not use this threshold to include companies that investors would ignore as unrepresentative of acceptable equity returns.[260]

C. Commission Determination

145. We deny MISO TOs' request for rehearing on the natural break analysis. We note that the high and low-end outlier tests are not meant to be purely statistical tests and refute MISO TOs' assertion that the natural break analysis is inherently flawed because it is subjective. Additionally, we clarify that the natural break analysis may be used as evidence for retaining one or more cost-of-equity estimates that might otherwise be excluded because of a high-end or low-end outlier test. Observations that are shown to be rational and not the result of error may still be included, even if they otherwise would fail one of the outlier tests. By the same logic, the natural break analysis can be used to

---

[257] Opinion No. 569, 169 FERC ¶ 61,129 at PP 187-188.

[258] MISO TOs Rehearing Request at 76-77.

[259] *Id.* at 80-82.

[260] *Id.* at 83.

argue for exclusion of cost-of-equity estimates that do not fail either outlier test but can be shown to be irrational, anomalous, or the result of human error.

146. Model inputs can be flawed, due to incorrect inputs or the result of poor judgement by analysts. Such errors can improperly influence the analysis, especially when they affect estimates at the high and low end of the proxy group. As the Commission noted in the Briefing Order, one analyst's error involving the growth projections for Portland General Electric Company reduced the overall Reuters consensus projected short-term percentage growth in earnings from 10.96% to 7.8%.[261] This case illustrates the fallibility of model inputs and the importance of having a natural break analysis to enable the Commission to use its discretion with respect to high or low values.

X. High-End Outlier Test

A. Opinion No. 569

147. In Opinion No. 569, the Commission adopted the high-end outlier test proposed in the Briefing Order, which excludes from the proxy group any company whose cost of equity estimated under the model in question is more than 150% of the median result of all of the potential proxy group members in that model before any high or low-end outlier test is applied, subject to a natural break analysis. The Commission noted that financial metrics for individual utilities can fluctuate dramatically, potentially affecting ROEs that use midpoints as measures of central tendency and found that it was appropriate to eliminate members of the proxy group whose ROEs are unreasonably high.[262]

B. Rehearing Requests

148. MISO TOs argue that the Commission should not adopt any high-end outlier test. MISO TOs argue that the high-end outlier test artificially narrows the zone of reasonableness. MISO TOs further argue that if the Commission retains the high-end outlier test, it should be used only as a rebuttable presumption, and then applied only to the highest of the median values produced by the analyses used.[263]

149. MISO TOs further argue that, even if the Commission retains the high-end outlier test, it should not be applied to the two-step DCF analysis. MISO TOs argue that,

---

[261] Briefing Order, 165 FERC ¶ 61,118 at P 19 n.95 (*Coakley* Briefing Order, 165 FERC ¶ 61,030 at P 47).

[262] Opinion No. 569, 169 FERC ¶ 61,129 at P 179.

[263] MISO TOs Rehearing Request at 70-73.

because the median of the two-step DCF may be unreliable or produce unjust and unreasonable results, its use in the high-end outlier test is similarly unreliable.[264]

150. Transource Energy contends that there is no evidence that a logical high-end outlier test exists that would apply generically as the low-end outlier test does. Transource Energy argues that a generic exclusion based on distance from the median may reject potentially useful observations. Transource Energy contends that, if the Commission were to utilize a high-end outlier test, the Commission should treat the test as a high-end cap on the result and not a high-end exclusion of data points.[265]

151. Exelon contends that the high-end proxy group utilities that are excluded under the high-end outlier test represent actual data regarding utilities of a similar risk profile, and thus application of the test changes the range of studied ROEs from those that actual investors consider in the market.[266]

C. Commission Determination

152. We grant in part and deny in part the requests for rehearing on the high-end outlier test. While the high-end outlier test uses the median, it is not solely meant to serve as a statistical test to remove proxy group companies that are not representative of typical utilities. Rather, the high-end outlier test, when coupled with a natural break analysis, screens for observations that are irrationally or anomalously high.

153. As an initial matter, we note that some parties have characterized the high-end outlier test as stricter than it is. As noted above, the high-end outlier test is subject to a natural break analysis, meaning observations that are shown to be rational and not the result of error may still be included, even if they are over the threshold.

154. However, we find that it is appropriate to modify the high-end outlier test to treat any proxy company as high-end outlier if its cost of equity estimated under the model in question is more than 200% of the median—as opposed to the 150% of the median threshold applied in Opinion No. 569—result of all of the potential proxy group members in that model before any high or low-end outlier test is applied, subject to a "natural break" analysis. The high-end outlier test is the Commission's best attempt to use an objective test to identify proxy group ROEs that are irrationally or anomalously high because, for example, they are the result of atypical circumstances that are unrepresentative of the subject utility's risk profile or otherwise likely to be in error.

---

[264] *Id.* at 74-76.

[265] Transource Energy Rehearing Request at 28-29.

[266] Exelon Rehearing Request at 13-14.

We recognize such a test with a bright-line threshold could inappropriately exclude ROEs that are rational and not anomalous for the subject utility. In recognition of this risk, we find that increasing the threshold for the high-end outlier test to 200% of the median result of all of the potential proxy group members in the applicable model[267] is appropriate because it will reduce the risk that such rational results are inappropriately excluded. However, as we note above, the continued application of the natural break analysis will still allow the exclusion of ROEs that are truly irrational or anomalously high, even if they fall under the threshold set by this high-end outlier test.

155. While we are modifying the high-end outlier test to increase its exclusion threshold, we find that it is still appropriate to maintain the test as an objective check to help identify observations that are irrationally or anomalously high. This is especially true because we will continue to use the midpoint as a baseline to determine region-wide ROEs for groups of utilities and potentially flawed high-end observations from the proxy group play a large role in an ROE analysis that uses the midpoint. While we note that the addition of the Risk Premium model to the analysis diminishes the impact of outliers, we do not find this to be enough to warrant removal of the high-end outlier test entirely. Thus, the high-end outlier test continues to apply, but with the modification described above.

XI. Low-End Outlier Test

A. Opinion No. 569

156. In Opinion No. 569, the Commission adjusted the low-end outlier test to eliminate from the proxy group ROE results that are less than the yields of generic corporate Baa bonds plus 20% of the CAPM risk premium. The Commission found that it was necessary to exclude ROEs whose yield was "essentially the same expected return" as debt in order to determine the low end of the zone of reasonableness. The Commission noted that the risk premium that investors demand changes over time and found that using 20% of the CAPM risk premium struck an appropriate balance of accounting for the additional risk of equities over bonds while not inappropriately excluding proxy group members whose ROE is distinguishable from debt.[268]

[267] The high-end outlier test only applies to the DCF model and CAPM because they utilize results of the relevant analysis applied to a proxy group, while the Risk Premium model is derived from actual ROEs.

[268] Opinion No. 569, 169 FERC ¶ 61,129 at PP 184-185.

B. Rehearing Requests

157. RPGI argues that the Commission has not justified revising the low-end outlier test, and specifically has not supported including 20% of the CAPM risk premium.[269]

158. CAPs contend that using the Baa bond yield index is an inappropriate way to determine whether a ROE is an unreliable low-end outlier. CAPs further contend that this is inconsistent with Commission precedent, noting the Commission's explanation in Opinion No. 489 that, when applying a low-end outlier test, "it is appropriate to consider the company's own cost of debt, not the composite debt of the proxy group."[270] CAPs note that applying this to a company's own cost of debt results in OGE Energy being added back into the proxy group for the Second Complaint.[271]

159. CAPs similarly argue that the Commission's use of the risk premium should be rejected. However, CAPs contend that, if the Commission continues to utilize a risk premium, it should instead be 20% of the difference between the CAPM equity market return and the Moody's Baa utility bond yield.[272]

160. MISO TOs argue that the Commission erred in adopting its low-end outlier test and should instead apply the low-end methodology described by Mr. McKenzie in order to account for the inverse relationship between equity risk premiums and bond yields.[273]

C. Commission Determination

161. We deny the requests for rehearing on the low-end outlier test. We are not persuaded by RPGI's and MISO TOs' assertions that the Commission erred in adopting its low-end outlier test based on 20% of the CAPM risk premium. Likewise, we disagree with CAPs that the low-end outlier test is inconsistent with prior Commission precedent. As the Commission noted in Opinion No. 569, the Commission has applied this test differently in the past and did not always examine a company's own cost of debt.[274]

---

[269] RPGI Rehearing Request at 27-31.

[270] CAPs Rehearing Request at 88-90.

[271] *Id.* at 94.

[272] *Id.* at 90-92.

[273] MISO TOs Rehearing Request at 83-84.

[274] Opinion No. 569, 169 FERC ¶ 61,129 at P 389 n.783 (citing Opinion No. 531, 147 FERC ¶ 61,234 at P 123).

The Commission also found that "using the specific bond yield for each company . . . renders [the calculations] (and the resulting ROE) less predictable, as the credit ratings for individual companies are likely more volatile than the generic corporate rate Baa credit rating."[275] Thus, we reiterate our finding here that applying the low-end outlier test to the Baa bond yield is appropriate. We also decline to adopt CAPs' proposal to instead use 20% of the difference between the CAPM equity market return and the Moody's Baa utility bond yield, and affirm our use of the United States 30 year treasury note in calculating the CAPM equity risk premium. There is no compelling evidence that, with respect to determining the risk premium, using Moody's Baa utility bond yields is superior to the treasury yields. Treasury yields are generally more stable than corporate bond yields, which here increases model stability. Furthermore, the low-end outlier test already incorporates the Moody's Baa utility bond, to which it adds 20% of the risk premium to determine the test. Using it twice would be unnecessarily duplicative. Additionally, we note that the risk premium is meant to reflect the opportunity cost of investing in equities generally, and therefore, using an industry-specific measure to determine the low end of the risk premium's range is inappropriate.

162. We also decline to adopt MISO TOs' proposed methodology. Opinion No. 569's proposed low-end outlier test methodology recognizes the dynamic nature of risk premiums without eliminating numerous proxy group members as the MISO TOs' methodology might in certain conditions. In Mr. McKenzie's example, use of his proposed test leads to the exclusion of six rather than three companies, the upper three of which feature ROEs very close to those of other companies.[276] This indicates that MISO TOs' proposed outlier test is excluding more than just outliers, systematically adding a significant upward bias to the DCF results.

XII. Consideration of State ROEs

A. Opinion No. 569

163. The Commission found that the ROE determination in these proceedings did not need to consider state-authorized ROEs. The Commission agreed with MISO TOs that there are material differences between state and Commission ROEs. As a result, the Commission stated that it would only consider state-authorized ROEs on a case-by-case

[275] *Id.*

[276] Appendix 3 to McKenzie Affidavit in MISO TOs Initial Brief.

basis to the extent that the state-authorized ROEs demonstrate that the results of the Commission's CAPM and DCF analyses are substantially excessive or deficient.[277]

B. Requests for Rehearing

164. Ameren, MISO TOs, and Transource Energy all note that the Commission stated in Opinion No. 569 that its new ROE approach would consider state-authorized ROEs, but argue that, despite the express inclusion, the Commission failed to perform this check. These parties assert that the Commission has previously found that transmission ROEs generally should be higher relative to those of distribution-only and integrated electric utilities. These parties claim that the Commission disregarded record evidence of state-authorized ROEs above 9.88%, and argue that this evidence demonstrates that, relative to the risk to transmission, 9.88% is an insufficient level of return to attract capital under the *Hope* and *Bluefield* standards.[278]

165. According to MISO TOs, the Commission's findings that transmission is riskier than state-regulated retail utility operations and that the MISO TOs are at least as risky as integrated utilities require that the MISO TOs' base ROE be somewhat higher than most, if not all, contemporaneous state-authorized ROEs. MISO TOs state that all state ROEs allowed during the Docket No. EL14-12 study period exceeded the DCF midpoint. Indeed, even the midpoint of all state-allowed ROEs, 9.95%, exceeded the base ROE of Opinion No. 569, and 31 out of 58 state-authorized ROEs for integrated utilities were between 10% and 10.4%.[279]

166. MISO TOs argue that *Emera Maine* did not disturb the Commission's finding in Opinion No. 531-B that the proper use of state commission ROEs is to compare the "significant number of state commission-authorized ROEs to the midpoint produced by the application of the Commission's traditional methodology" and determine whether "their levels, relative to each other, were illogical in light of the record evidence concerning the comparative risks of state-level electric distribution and interstate electric transmission." They contend that evidence of prevailing state ROEs during the study period indicates that a base ROE equal to or higher than 10.32% is justified.[280] They state that other estimates of the MISO TOs' cost of equity support the same inference, and thus support the Opinion No. 551 outcome. They note that: the Commission's

[278] Ameren Rehearing Request at 8-10; MISO TOs Rehearing Request at 14-16; Transource Energy Rehearing Request at 10-14.

[279] MISO TOs Rehearing Request at 33.

[280] *Id.* at 33-34 (citing Opinion No. 531-B, 150 FERC ¶ 61,165 at P 88).

application of the CAPM in Opinion No. 569 resulted in a midpoint of 10.45%; the Commission in Opinion No. 551 accepted a Risk Premium estimate of 10.36% and an Expected Earnings midpoint estimate of 11.99%; and the Briefing Order presented a restated Expected Earnings analysis with a midpoint of 11.41%, and repeated the Risk Premium estimate of 10.36%.[281]

C. Commission Determination

167. As an initial matter, the modifications made in this order to the ROE determination methodology result in higher ROEs in these proceedings, at least in part rendering moot concerns about the relative levels of state-authorized ROEs for integrated utility operations versus Commission-authorized transmission ROEs. Furthermore, the 10.02% ROE resulting from this order exceeds the average ROEs in the MISO TOs' analysis for both vertically-integrated utilities and for all utilities.[282] Moreover, MISO TOs' comparison of Commission ROEs in this proceeding with state ROEs over a two-year period, concluding in 2014, before the test period in this proceeding, is inappropriate. As illustrated by the fact that the DCF and CAPM midpoint ROEs in the Second Complaint are lower than those in the First Complaint, capital market conditions can change over time, rendering past comparisons obsolete. The ROEs in this proceeding must reflect capital market conditions during the first half of 2015 for the First Complaint and the second half of 2015 for the Second Complaint, so comparisons to state ROEs during the preceding two years are of limited value. We also continue to find that state-authorized and Commission-authorized ROEs are conceptually distinct and do not necessarily need to be aligned. In Opinion No. 569, the Commission indicated that state-authorized ROEs would only be considered on a case-by-case basis and not as a necessary part of the Commission's ROE methodology, and accordingly we disagree that we were required to consider state-authorized ROEs as part of the ROE determination in this proceeding. Although the Commission may consider a wide range of evidence in its ROE determinations, it is not legally required to base its jurisdictional transmission ROE determinations on the ROEs determined by state utility commissions. Furthermore, that the Commission relied on state ROEs corroboratively in the vacated Opinion No. 531 and in Opinion No. 551 that was pending before the Commission on rehearing, does not create binding precedent that the Commission must justify departure from in its finding that it will not necessarily consider state ROEs when determining transmission ROEs.

[282] *See* MTO-20 at 1-2.

XIII. Use of the Midpoint

A. Opinion No. 569

168. The Commission stated that it will continue to use the midpoint to determine the central tendency of the zone of reasonableness in cases involving an RTO-wide ROE, consistent with the policy set forth in the *MISO Remand Order*,[283] and that intervenors did not present a compelling reason as to why that policy should not be applied in this ROE proceeding.[284] The Commission explained that MISO TOs are a diverse set of companies and the central value becomes an important part in determining RTO-wide ROE.[285] The Commission also found that the high and low ends of the DCF and CAPM zones of reasonableness were representative of the highest and lowest risk profiles among the MISO TOs.[286]

B. Requests for Rehearing

169. CAPs contend that the Commission erred in using the midpoint, rather than the median, as the measure of central tendency for the ROE under the second prong of the section 206 analysis. CAPs point out that the Commission has found that the median best represents the central tendency in a skewed distribution[287] and is "less affected by extreme numbers than the midpoint."[288] CAPs find unpersuasive the Commission's finding in Opinion No. 569 that the companies that set the high and the low end of the zone of reasonableness in Opinion No. 569's DCF and CAPM analyses have similar risk

[288] *Id.* (citing SCE Rehearing, 137 FERC ¶ 61,016 at P 19).

profiles to the MISO TOs. CAPs contend that this explanation misses the point because, even if the risk profile of the proxy group companies setting the high and low ends of the DCF and CAPM zones of reasonableness are within that wide variation, the averaged DCF and CAPM midpoints do not correspond to the highest and lowest cost of capital among Respondent MISO TOs. Consequently, according to CAPs, using the highest and lowest ROEs in the DCF and CAPM zones to calculate the presumptively just and reasonable zones or to determine the replacement ROE does not result in emphasizing the full range of the individual MISO TOs' costs of equity to serve a diverse group of TOs.

170. CAPs state that the premise for use of the midpoint is counter-factual because there is no direct correlation between credit ratings and the utilities setting the upper and lower bounds of the composite zone of reasonableness and the highest and lowest credit ratings of the MISO TOs.[289] CAPs state that the Commission dismissed this concern on the basis that such lack of correlation is not a problem because the credit ratings of the proxy companies that turn out to define the DCF-CAPM combined range are within the MISO TOs' wide variation of credit ratings.

C. Commission Determination

171. We disagree with arguments on rehearing that the Commission erred in continuing to use the midpoint as the measure of central tendency when establishing an ROE for groups of utilities like the MISO TOs. Such arguments fail to provide a basis for reversing a court-affirmed finding that it is just and reasonable to use the midpoint as the measure of central tendency for groups of utilities.[290] Additionally, the Commission described in great detail the general correspondence between the credit rating of proxy group companies and those at the high and low end of the zone of reasonableness, even if this examination was not specific to the MISO TOs.[291] The fact that the MISO TOs' highest and lowest credit ratings do not fully correspond to the high and the low ends of the CAPM and DCF zone of reasonableness in this particular proceeding does not change the fundamental purpose of applying the midpoint to groups of utilities, which is capturing a variety of risks that they feature.

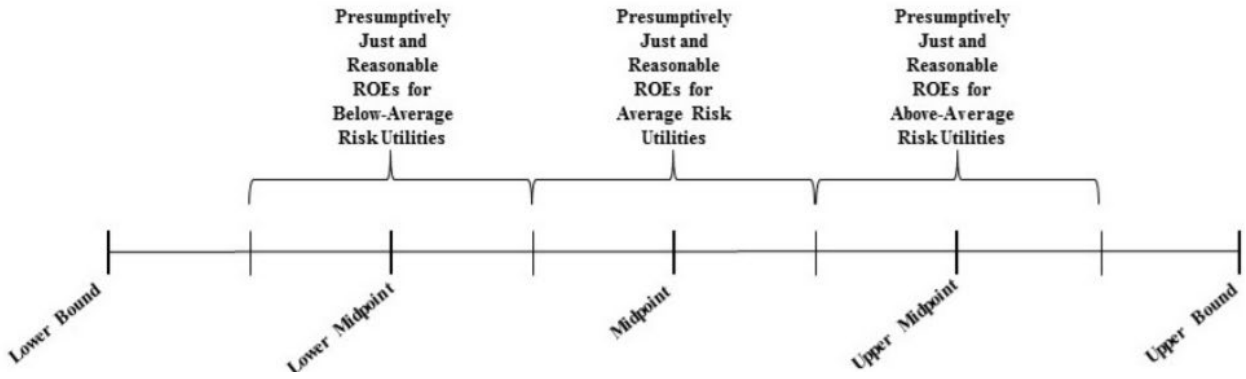
XIV. Ranges of Presumptively Just and Reasonable ROEs

A. Opinion No. 569

172. In Opinion No. 569, the Commission adopted the use of ranges of presumptively just and reasonable ROEs based on the risk profile of a utility or group of utilities to inform the Commission's decision of whether an existing ROE has become unjust and unreasonable, as proposed in the Briefing Order.[292] Specifically, the Commission found that, for average risk utilities, the presumptively just and reasonable range is the quartile of the overall composite zone of reasonableness centered on the central tendency of the overall zone of reasonableness; for below average risk utilities, that range is the quartile of the zone of reasonableness centered on the central tendency of the lower half of the zone of reasonableness; and for above average risk utilities, that range is the quartile of the zone of reasonableness centered on the central tendency of the upper half of the zone of reasonableness. These ranges of presumptively just and reasonable base ROEs located within the overall composite zone of reasonableness are illustrated below.

Figure 1: Zone of Reasonableness Quartiles



173. In constructing the ranges of presumptively just and reasonable base ROEs, the Commission noted its precedent that the midpoint of the overall zone of reasonableness is a good starting place for the placement of an ROE and found that the measure of central tendency for the entire zone of reasonableness should be the starting point for identifying the range of presumptively just and reasonable base ROEs for utilities with an average risk profile.[293] The Commission then found that, similarly, the starting points for identifying the ranges of presumptively just and reasonable base ROEs for utilities with above or below average risk profiles should be the historic measures of central tendency

[292] *See id.* P 57.

[293] *Id.* P 63 (citing *Emera Maine*, 854 F.3d at 27 (citing *Tenn. Gas Pipeline Co. v. FERC*, 926 F.2d 1206, 1213 (D.C. Cir. 1991)) ("We have noted that the midpoint is a good 'starting place' for the placement of the ROE.")).

of the upper and lower halves of the zone of reasonableness, respectively – their respective midpoints.[294] The Commission explained that it was logical for the end points of those ranges to not be closer to the starting points for the ranges of utilities with different risk profiles than they are to their own starting point. Applying this rationale, the Commission found that the range within the overall zone of reasonableness that best represents presumptively just and reasonable ROEs for average risk utilities is the quartile of the zone of reasonableness centered on the central tendency of the entire zone of reasonableness, while the ranges within the overall zone of reasonableness that best represent presumptively just and reasonable ROEs for above- and below- average utilities are the quartiles centered on the central tendencies of the upper and lower halves of the zone of reasonableness, respectively.[295]

174. The Commission explained that adopting the use of ranges of presumptively just and reasonable base ROEs was necessary to satisfy the requirements of the *Emera Maine* decision, which found that the Commission's decision that "a single ROE analysis generating a new just and reasonable ROE necessarily proved that the Transmission Owners' existing ROE was unjust and unreasonable" is contrary to the FPA.[296] Such ranges were also necessary, the Commission reasoned, because, according to the *Emera Maine* decision, "the zone of reasonableness creates a broad range of potentially lawful ROEs rather than a single just and reasonable ROE," and thus that a finding that a particular ROE is just and reasonable, "standing alone, 'does not amount to a finding that every other rate of return'" is not just and reasonable.[297] The Commission found that, in light of these findings, the Commission's explanation of the particular circumstances that support an explicit finding that the existing ROE has become unjust and unreasonable must include a showing that the existing ROE is now outside some range of potentially just and reasonable ROEs within the zone of reasonableness for the public utility at issue, in light of our estimate of the current market cost of equity. Alternatively, the Commission found that it could find that it could determine that other evidence

[g]iven [the utility's] low level of risk as compared to the proxy group.")).

[295] *Id.*

[296] *Id.* P 57 (citing *Emera Maine*, 854 F.3d at 26).

[297] *Id.* (citing *Emera Maine*, 854 F.3d at 26 (quoting *Papago Tribal Util. Auth. v. FERC*, 723 F.2d 950, 857 (D.C. Cir. 1983))).

convincingly demonstrates that the existing ROE is unjust and unreasonable despite it falling within that range.[298]

175. The Commission also explained that the base ROEs that fall within the applicable range of presumptively just and reasonable base ROEs will be presumed to be just and reasonable, and those that fall outside of the applicable range will be presumed to be unjust and unreasonable.[299] The Commission further found that those presumptions would only be rebuttable presumptions because the ultimate determination of whether an existing ROE is unjust and unreasonable still "depends on the particular circumstances of the case."[300] The Commission noted that other evidence regarding the particular circumstances of the case could rebut a presumption that applies, such as evidence regarding non-utility stock prices, investor expectations for non-utility stocks, various types of bond yields and their relation to stock prices, investor and other expert testimony, and testimony regarding the effects of rates on customers.[301]

B. Rehearing Requests

176. MISO TOs argue that, while the concept of a range of presumptively just and reasonable ROE values has merit, there are problems with the quartile approach used in Opinion No. 569. First, MISO TOs contend that the Commission never reconciles its concept of risk-associated sub-ranges with its long-standing rationale for using the midpoint to establish base ROEs for groups of utilities (i.e., to reflect such a group's broad range of risks). They contend that, while the midpoint rationale dovetails with *Emera Maine*'s recognition that "the zone of reasonableness creates a broad range of potentially lawful ROEs," the quartile approach of Opinion No. 569 does not. MISO TOs state that the Commission's historical reference to the midpoint explicitly recognizes the need to reflect the full range of required returns for a proxy group determined to be representative of a group of utilities such as the MISO TOs. But they contend that the Commission's attempt to further parse this composite zone uses an unexplained and arbitrary notion of relative risk based on arbitrary quartiles and is inconsistent with the Commission's own rationale for referencing the midpoint. Moreover, they assert that, as applied in Opinion No. 569, the effort lacks any foundation in case-specific evidence.[302]

---

[298] *Id.* PP 61-62.

[299] *Id.* P 85.

[300] *Id.* P 68 (citing *Emera Maine*, 854 F.3d at 23).

[301] *Id.*

[302] MISO TOs Rehearing Request at 29.

177. In addition, MISO TOs contend that the Commission's new approach is inconsistent with the logic it uses to select the proxy group. They state that the proxy group is assembled using criteria which limit the proxies to companies that are considered to present investment risks comparable to those of the utility or group of utilities whose rates are at issue. Nevertheless, they argue, the Commission's quartile approach effectively truncates the zone of reasonableness by omitting from consideration the top one-eighth and the bottom one-eighth of the composite zone. They argue that the Commission's reasoning departs without explanation from the principle that every value in the zone of reasonableness is potentially a lawful ROE.[303]

178. MISO TOs further argue that the Commission derives its quartiles from the composite range of DCF and CAPM results but overlooks that different proxy companies' results are found at the low end, the middle, and the high end of each of the two analyses on which the Commission relies. Thus, MISO TOs assert, one or more proxies that fall within the "above average risk" quartile in the results of the DCF model appear in a different quartile of the CAPM results. MISO TOs argue that the Commission therefore cannot rationally distinguish "high risk" proxy companies from "low risk" proxies in its composite zone. They contend that the Commission has not provided an economic or financial rationale for the quartile approach.[304]

179. With regard to the Second Complaint, MISO TOs contend that there likewise is no need for a new ROE methodology to justify dismissal of the Second Complaint. According to MISO TOs, the upper midpoint of the Commission's IBES-based DCF analysis for the Second Complaint study period is only 9.83%, reflecting—just as in the First Complaint—anomalous capital market conditions. But they assert that alternative benchmark estimates and state ROE data demonstrate, as the Presiding Judge found, that the DCF outcome is unreliable. They argue that midpoint CAPM and Expected Earnings estimates (10.49% and 11.41%, respectively), as well as a Risk Premium estimate of 10.36%, establish that the Second Complaint record does not support a finding that the 10.32% base ROE determined in Opinion No. 551 was unjust and unreasonable for the Second Complaint study period.[305] They state that state-authorized ROEs for lower-risk integrated and distribution utilities further corroborate that conclusion, citing witness Lapson's national survey of state regulatory decisions in 2014-2015 that authorized base ROEs of 10% or more for retail utility operations in states within the MISO region.[306]

---

[303] *Id*. at 29-30.

[304] *Id.* at 30.

[305] *Id*. at 35.

[306] *Id*. at 35-37.

180. MISO TOs state that, if the Commission continues to pursue Opinion No. 569's approach to using ranges of presumptively just and reasonable ROEs based on a portion of the zone of reasonableness, two alternative approaches would remedy the principal shortcoming of the Commission's quartile approach (i.e., its excision of the highest and lowest eighths of the composite zone). They state that this can be resolved either by dividing the entire zone of reasonableness into equal thirds, rather than quarters, or by using the upper and lower midpoints of the zone of reasonableness to segregate the three portions of the zone.[307]

181. Exelon argues that the Commission's ranges of presumptively just and reasonable ROEs are too narrow. Exelon contends that the Commission does not explain why it makes sense to treat only 25% of the range of investor expectations that is developed by the financial models as presumptively just and reasonable. Exelon asserts that the Commission already identifies a screened peer group with comparable risk to the subject utility when it selects a proxy group, and that it is unreasonable to adjust again for that same risk in determining quartiles for ranges of presumptively just and reasonable ROEs.[308]

182. Exelon also argues that there is no rationale for placing the top eighth and bottom eighth of the zone of reasonableness out of the ranges of presumptively just and reasonable ROEs. Exelon further contends that, while quartiles result in an even division, the Commission never justifies its use of quartiles.[309] In addition, Exelon asserts that the Commission's ranges of presumptively just and reasonable ROEs are so narrow that small proxy group changes, such as the exclusion of a proxy group company or a change in the performance of a particular proxy group company, could result in a utility's ROE changing from presumptively just and reasonable to presumptively unjust and unreasonable. Exelon argues that this will create rate instability that will chill investment.[310]

183. Exelon also disagrees with the Commission's conclusion in Opinion No. 569 that the use of ranges of presumptively just and reasonable ROEs does not change the burdens that apply in the context of section 206 complaints. Exelon contends that, under Opinion No. 569, an average risk utility whose base ROE is above the applicable range of presumptively just and reasonable ROEs bears the burden of overcoming a presumption that its ROE is unjust and unreasonable, which removes the burden on the complainant to

---

[307] *Id*. at 38.

[308] Exelon Rehearing Request at 8-10.

[309] *Id.* at 10-11.

[310] *Id.* at 15-17.

demonstrate that such an ROE is unjust and unreasonable. Exelon asserts that this departure from section 206 is especially unreasonable because the upper and lower eighths of the zone of reasonableness can never be presumptively just and reasonable.[311]

184. Transource Energy argues that the full zone of reasonableness represents the broad range of potentially reasonable ROEs, as the court stated in *Emera Maine*, and thus that full zone presents the best evidence of what is a potentially lawful ROE, not a subzone within the overall zone. Transource Energy contends that the full zone of reasonableness already accounts for risk and contains comparable and representative companies. Transource Energy asserts that the Commission does not provide evidence justifying that there are identifiable distinctions in the risk profiles of firms that constitute the proxy group which fall neatly into quartiles. Transource Energy further argues that the Commission's exclusion of the top and bottom eighths of the zone of reasonableness ignore otherwise valid ROE estimates in the ranges of presumptively just and reasonable ROEs.[312]

185. CAPs argue that *Emera Maine* did not require the Commission to adopt a new methodology, but only to better explain Opinion No. 531's finding that the New England TOs' existing 11.14% base ROE was unjust and unreasonable.[313] If the Commission decides to adopt a new methodology, CAPs argue that the quartile approach is flawed. CAPs argue that the presumptively just and reasonable zones raise the customers' burden of proof to challenge ROEs that may have become unjust and unreasonable. CAPs assert that the presumptively just and reasonable zones are contrary to the customer protection principles embodied in the FPA and introduces an unlawful asymmetry between rate increases sought by utilities under section 205 of the FPA and rate reductions sought by customers under section 206 of the FPA.[314]

186. If the Commission keeps the presumptively just and reasonable zones, CAPs argue that the Commission should narrow these zones. They contend that the quartile approach results in unnecessarily broad presumptive zones. They reiterate their argument from their initial briefs that the Commission could narrow the presumptive immunity zones by, for example, establishing five risk groups:ver y-low risk; moderately low risk; average risk; moderately high risk; and very high risk. Under this approach, CAPs argue, the zones would be narrower, representing sextiles rather than quartiles of the composite

---

[311] *Id.* at 19-22.

[312] Transource Energy Rehearing Request at 30-35.

[313] CAPs Rehearing Request at 12-16.

[314] *Id.* at 16.

range.[315] Regarding the Commission's statement that the quartile approach using three risk groups strikes an appropriate balance between the interests of customers and utilities, CAPs argue that the very establishment of presumptively just and reasonable zones already tilts the balance of interests in favor of shareholders.[316]

187. CAPs argue that the Commission did not explain why the "traditional" starting point for assessing risk is relevant or even preferable to a narrower and more precise definition of risk that would better protect customers. CAPs argue that it is possible to start the risk assessment at a point of central tendency within any sub-range of the zone of reasonableness. Furthermore, CAPs assert that the proximity of potentially lawful ROEs to the just and reasonable ROE does not render these ROEs presumably just and reasonable (i.e., ROEs within the zone of reasonableness that are close to the just and reasonable ROE may be a little less unjust and unreasonable, but remain unjust and unreasonable nonetheless). They argue that the courts have ruled that the just and reasonable standard does not permit "even a little unlawfulness."[317]

188. CAPs also argue that the notion of presuming the justness and reasonableness of ROEs close to the lawful ROE runs afoul of multiple rulings made by the court in *Emera Maine*: (1) it is arbitrary and capricious to assume that there are only three possible stopping points—lower midpoint, midpoint, and upper midpoint—on the continuum of "potentially just and reasonable" ROEs that lie within the range of adopted proxy results; (2) the fact that a rate falls within the zone of reasonableness does not establish that the rate is the just and reasonable rate for the utility at issue; and (3) whether a rate, even one within the zone of reasonableness, is unlawful depends on the particular circumstances of the case, and, therefore, requires that a numerical comparison of model results to an existing ROE be accompanied by a narrative explanation of what made a difference between the two unreasonable.[318] CAPs argue that, if the proximity of an ROE to the just and reasonable ROE does not conclusively prove the justness and reasonableness of an ROE, then such proximity cannot be used to infer that all ROEs that are close to the just and reasonable ROE within a certain range "may" be just and reasonable.[319]

[318] *Id*. at 18-19.

[319] *Id*. at 19-20.

189. RPGI asserts that, for average risk utilities, the midpoint of the zone of reasonableness is what the existing ROE must be compared to—not a range of presumptively just and reasonable ROEs—and any existing ROE that exceeds that midpoint should be presumed unjust and unreasonable. RPGI also contends that the use of ranges of presumptively just and reasonable ROEs contravenes the FPA's consumer protection purpose because it can insulate an existing ROE from a section 206 challenge even if, for example, an existing ROE for an average-risk group of utilities exceeds the midpoint. In addition, RPGI argues that, while the Commission states that the ranges of presumptively just and reasonable ROEs create only a rebuttable presumption, it is difficult to imagine the circumstances under which the presumption could be rebutted. RPGI asks the Commission to grant rehearing to reject the use of ranges of presumptively just and reasonable ROEs.[320]

C. Commission Determination

190. We grant rehearing and hold that the ranges of presumptively just and reasonable base ROEs will be calculated by dividing the overall composite zone of reasonableness into three equal portions. We are persuaded by the requests for rehearing that contend that the Commission's ranges of presumptively just and reasonable base ROEs should encompass the entire composite zone of reasonableness. The court in *Emera Maine* stated that "the zone of reasonableness creates a broad range of potentially lawful ROEs[,]"[321] and we now find that excluding the bottom eighth and top eighth of the overall zone of reasonableness, as the Commission's approach in Opinion No. 569 did, is inappropriate because it will ignore some "potentially lawful ROEs" when determining which ranges of ROEs should be considered presumptively just and reasonable. The ranges of presumptively just and reasonable base ROEs are intended to help inform the Commission's analysis under section 206 by identifying what subset of the "potentially lawful ROEs" for given utilities represents the range of base ROEs that would likely be just and reasonable for utilities of that risk profile. We find that it would be inappropriate to identify a subset of "potentially lawful ROEs" for given utilities without considering all of those potentially lawful ROEs.

191. We are further persuaded by arguments that it is inappropriate to exclude the bottom eighth and top eighth of the overall composite zone of reasonableness because even those portions of the overall composite zone of reasonableness are results from proxy group companies that have been screened using criteria which limit the proxies to companies that are considered to present investment risks comparable to those of the utility or group of utilities whose rates are at issue. We find that, when we have already

[320] RPGI Rehearing Request at 9-16.

[321] *Emera Maine*, 854 F.3d at 26.

constructed a proxy group using limitations for comparable risk, it would be too restrictive to then construct ranges of presumptively just and reasonable base ROEs using only the results of some of those risk-screen proxy group companies. That initial proxy group screening process is intended to lead to the "broad range of potentially lawful ROEs" for a given utility or utilities, and we find that is more appropriate for the ranges of presumptively just and reasonable base ROEs to encompass the results from all of the proxy group companies that were identified in that process, rather than to exclude the results of the bottom eighth and top eighth of those results.

192. Exelon argues that the ranges of presumptively just and reasonable ROEs used in Opinion No. 569 are too narrow. MISO TOs make a similar argument, contending that the Commission's ranges of presumptively just and reasonable ROEs are inappropriate because they overlook that one or more proxies that fall within a particular risk profile range for one of the models used by the Commission may fall within a different risk profile range for a different model. CAPs make an opposing argument, asserting that the Commission's ranges are unnecessarily broad. We continue to find that using three risk groups strikes an appropriate balance between the interests of customers and utilities because they will be narrow enough to protect customers from unjust and unreasonable ROEs while also providing utilities and all market participants with an additional objective benchmark that the Commission will use to assess whether an ROE is likely unjust and unreasonable.[322] With respect to MISO TOs' argument that the ranges are inappropriate because the proxies that fall within a particular risk profile range for one of the models used by the Commission may fall within a different risk profile range for a different model, we find that this concern is addressed by averaging the results of the different models. We recognize that proxy group companies may fall within different risk profile ranges in different models, and this is why we average the results of those models. Indeed, this is a significant reason why we are considering different models and averaging their results—so that we can consider and give equal weight to the different results that are produced by these models, reflecting to a greater extent the models that investors consider.

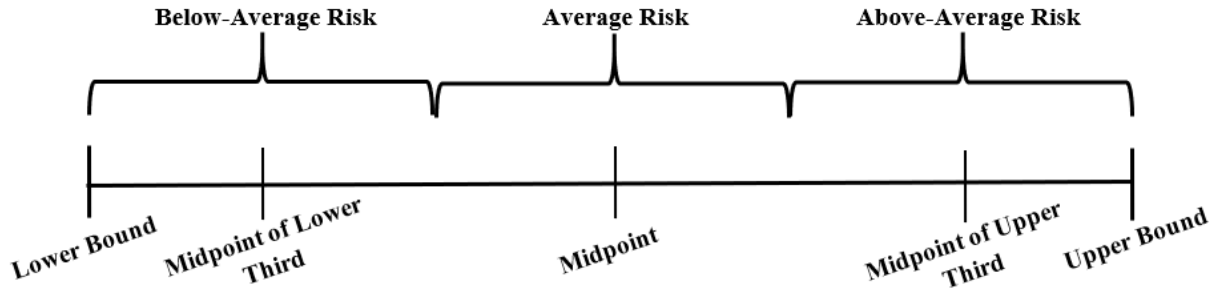
193. Accordingly, we will continue to use three ranges of presumptively just and reasonable base ROEs and that they should be constructed by dividing the overall zone of reasonableness into three equal segments. This construction will include all of the "potentially lawful ROEs" in the zone of reasonableness in one of the ranges of presumptively just and reasonable base ROEs.

194. The Commission explained that its approach to constructing the ranges of presumptively just and reasonable base ROEs in Opinion No. 569 was based on the logic that the end points of a range for a given risk profile should be closer to the traditional

[322] *See id.* P 84.

starting point for analyzing the ROEs of utilities with that risk profile than they are to the traditional starting points for utilities with a different risk profile.[323] Upon further consideration, given our decision to use three ranges of presumptively just and reasonable base ROEs that together encompass the overall zone of reasonableness, we find it appropriate to modify the traditional starting points for below-average and above-average risk utilities to be the midpoint of the lower and upper thirds, respectively. Applying these new starting points, as well as the traditional midpoint of the zone of reasonableness starting point for average risk utilities, will ensure that the end points for all three risk profile ranges will be closer to the starting point for analyzing ROEs of utilities with each respective risk profile than they are to the starting points for utilities with different risk profiles. Below is an illustration of the overall composite zone of reasonableness divided into three equal ranges of presumptively just and reasonable base ROEs.

Figure 2: Ranges of Presumptively Just and Reasonable Base ROEs



195. Exelon asserts that the use of ranges of presumptively just and reasonable base ROEs removes the burden on the complainant to demonstrate that an existing base ROE is unjust and unreasonable when such a base ROE is above the applicable range of presumptively just and reasonable ROEs because the utility or utilities then bear the burden of overcoming a presumption that its ROE is unjust and unreasonable. CAPs make a similar argument in the opposite direction, contending that the presumptively just and reasonable zones raise the customers' burden of proof to challenge ROEs that may have become unjust and unreasonable. We find these arguments unavailing. As the

[323] Opinion No. 569, 169 FERC ¶ 61,129 at P 63. Those traditional starting points were the midpoint of the zone of reasonableness for average risk utilities, the midpoint of the lower half of the zone for below-average risk utilities, and the midpoint of the upper half of the zone for above-average risk utilities.

Commission explained in Opinion No. 569,[324] the change to our ROE methodology to utilize ranges of presumptively just and reasonable ROEs does not change the burdens that parties face under section 206. It is merely an objective benchmark that will be used in our overall analysis of base ROEs to help determine if an existing rate has been shown to be unjust and unreasonable under section 206. It remains the case, as it was before implementing this modification to our ROE methodology, that "[t]he proponent of a rate change under section 206 . . . bears 'the burden of proving that the existing rate is *unlawful*.'"[325] The use of ranges of presumptively just and reasonable ROEs does not change this burden. Those ranges will merely serve to inform our assessment of ROEs. The fact that our use of those ranges will involve employing a rebuttable presumption does not change the burdens that apply.

196. MISO TOs and CAPs also take issue with the use of presumptively just and reasonable base ROEs because they assert that *Emera Maine* did not require the Commission to adopt the use of such ranges. As the Commission explained in Opinion No. 569,[326] the use of ranges of presumptively just and reasonable ROEs in our ROE methodology ensures that our determinations satisfy the requirements of the *Emera Maine* decision. The court in *Emera Maine* found that the Commission must "explain what circumstances" support its "actual finding as to the lawfulness" of an existing base ROE in a section 206 proceeding, and the use of ranges of presumptively just and reasonable base ROEs will allow us to do so in a structured manner. Using such ranges will produce a specific result from our risk profile determination—a rebuttable presumption—and then we will make an explicit finding as to whether the other evidence presented by the parties in the case has rebutted that presumption; therefore, this analysis will require us to "explain what circumstances" support our "actual finding as to the lawfulness" of an existing base ROE. Moreover, because risk profile is the particular circumstance most relevant to determining whether an existing ROE is unjust and unreasonable, using ranges of presumptively just and reasonable ROEs based on a utility's risk profile will ensure that the risk profile determination has a clear and significant connection to our ultimate finding relating to lawfulness. Accordingly, we continue to find that that the use of ranges of presumptively just and reasonable ROEs in our ROE methodology will ensure that our determinations satisfy the requirements of the *Emera Maine* decision.

---

[324] *See id.* P 79.

[325] *Emera Maine*, 854 F.3d at 24 (emphasis in original) (quoting *Ala. Power Co. v. FERC*, 993 F.2d 1557, 1571 (D.C. Cir. 1993)).

[326] *See* Opinion No. 569, 169 FERC ¶ 61,129 at PP 70-71.

197. CAPs and RPGI assert that the use of ranges of presumptively just and reasonable base ROEs is inappropriate because any base ROE that exceeds the applicable base ROE produced by the Commission's analyses should be found unjust and unreasonable. We disagree. As the Commission stated in Opinion No. 569,[327] the court in *Emera Maine* rejected this approach, finding that the Commission must do more than simply identify a single ROE from its own analysis and then determine if the existing ROE is unjust and unreasonable based on whether it exceeds that single ROE. Accordingly, we affirm the Commission's finding that it should not continue to follow the approach that was reversed in *Emera Maine* of identifying a single cost of equity result and then finding that an existing ROE is unjust and unreasonable under prong one of section 206 if it exceeds that cost of equity.

198. CAPs also reiterate their argument that the use of ranges of presumptively just and reasonable base ROEs creates an unlawful asymmetry between rate increases sought by utilities under section 205 and rate reductions sought by customers under section 206. We disagree and affirm the Commission's finding that the use of presumptively just and reasonable ranges does not create any such unlawful asymmetry.[328] As the Commission explained, the showing that is required under section 206 differs from the showing that is required under section 205. The D.C. Circuit explained that "[t]he purpose of section 206 is 'quite different' from that of section 205,"[329] "[s]ection 206's procedures are 'entirely different' and 'stricter' than those of section 205," and that, while "[a] utility filing a rate adjustment under section 205 must show that the adjustment is *lawful* . . . [t]he proponent of a rate change under section 206 [] bears 'the burden of proving that the existing rate is *unlawful*.'"[330] The Commission does not have the authority to change those standards and our modification of the Commission's ROE methodology to use ranges of presumptively just and reasonable ROEs adheres to those standards; therefore, we reject CAPs' argument on this point.

199. We also are not persuaded by CAPs' argument that the use of ranges of presumptively just and reasonable base ROEs is inconsistent with other rulings made by the court in *Emera Maine*. Contrary to CAPs' assertion, the use of such ranges does not assume that there are only three possible stopping points—lower midpoint, midpoint, and upper midpoint—on the continuum of "potentially just and reasonable" ROEs. In fact, it

---

[327] *See id.* P 73.

[328] *See id.* P 74.

[329] *Emera Maine*, 854 F.3d at 24 (quoting *City of Winnfield, La. v. FERC*, 744 F.2d 871, 875 (D.C. Cir. 1984)).

[330] *Id.* (emphasis in original) (quoting *Ala. Power Co. v. FERC*, 993 F.2d 1557, 1571 (D.C. Cir. 1993)).

does the opposite—it recognizes that there may be more than one just and reasonable return and employs ranges of just and reasonable ROEs to help determine if a particular existing base ROE is just and reasonable in light of the overall composite zone of reasonableness and the risk profile of the utilities at issue. The use of presumptively just and reasonable ranges also does not find that if a rate falls within the zone of reasonableness, then it is just and reasonable, as CAPs suggest. As described above, the fact that a rate falls within the zone of reasonableness will not result in a finding that such a rate is just and reasonable. In fact, it is possible that a rate that falls within the overall zone, but outside of the applicable presumptively just and reasonable range, would be presumed unjust and unreasonable. Similarly, whether an existing ROE is unjust and unreasonable, even one that falls within the applicable range of presumptively just and reasonable ROEs, still "depends on the particular circumstances of the case."[331] Accordingly, if an existing ROE falls within the applicable range of presumptively just and reasonable ROEs, the presumption that the ROE is just and reasonable is a rebuttable presumption. Therefore, other evidence regarding the particular circumstances of the case can demonstrate that an existing ROE is unjust and unreasonable even if it falls within the applicable range of presumptively just and reasonable ROEs, such as evidence regarding non-utility stock prices, investor expectations for non-utility stocks, various types of bond yields and their relation to stock prices, investor and other expert testimony, and testimony regarding the effects of rates on customers.

XV. Acting in these Proceedings as Opposed to in Base ROE NOI Proceeding

A. Rehearing Requests

200. Parties on rehearing argue that, because the Commission has sought public input on the Commission's base ROE policy from all interested parties in the Base ROE NOI proceeding,[332] it would be inappropriate for the Commission to establish a new base ROE policy in these MISO ROE proceedings without considering the broader universe of comments and evidence submitted in response to the Base ROE NOI.

201. Specifically, Exelon states that the thousands of pages of comments from utilities, industry groups, and other interested parties provided the Commission with a wide range of perspectives and valuable data. Exelon, MISO TOs, and Ameren argue that promulgating a new ROE method in an individual proceeding ignores the evidence submitted in the Base ROE NOI docket.[333] Moreover, Exelon, Transource Energy, and

---

[331] *Id.*

[332] Base ROE NOI, 166 FERC ¶ 61,207.

[333] Exelon Rehearing Request at 27; *see also* MISO TOs Rehearing Request at 56-57; Ameren Rehearing Request at 27.

Ameren explain that, in the Base ROE NOI proceeding, the Commission specifically sought comments regarding the ROE four-financial model approach and, therefore, those parties participating in the Base ROE NOI proceeding did not address the new ROE two-model method that was introduced in Opinion No. 569 or the potential issues with the ROE four-model financial model approach revealed in Opinion No. 569.[334] Exelon and Ameren comment that establishing a new base ROE policy in these proceedings, as opposed to the Base ROE NOI proceeding, is inappropriate because the Commission's actions here will not reflect the input and evidence that was provided in the Base ROE NOI proceeding by other stakeholders who are not parties to these proceedings.[335] Exelon argues that the Commission should not rely on the fact that an outcome is reasonable as applied to this group of transmission owners, without analyzing the potential outcomes that will result from wider application of this method.[336] Transource Energy recognizes that the Commission has some discretion to enact policies through adjudication. However, it contends that under this set of circumstances the Commission's reliance on an adjudication and not the pending Base Roe NOI "amounts[s] to an abuse of discretion" that violates the Administrative Procedure Act.[337]

202. MISO TOs also assert that the Commission does not engage in reasoned decision-making when it disregards relevant evidence available to it, even if the evidence is in a different docket,[338] and it would be arbitrary and capricious for the Commission to set an industry-wide, binding precedent while ignoring this evidence.[339] Accordingly, MISO TOs argue that the Commission should take official notice in this proceeding of pertinent evidence introduced in the NOI docket.[340] MISO TOs state that the Commission's generic, industry-wide NOI on the methodology for determining base ROEs provides a more logical and reasonable forum for the Commission to develop, with

[334] Exelon Rehearing Request at 27-28; Transource Energy Rehearing Request at 36-37; Ameren Rehearing Request at 24.

[338] MISO TOs Rehearing Request at 55.

[339] *Id.* at 58.

[340] *Id.* at 55.

the benefit of the extensive stakeholder input it solicited, any changes to its ROE methodology that it may find to be appropriate.[341]

203. Ameren argues that the fact that the Commission has left open the generic NOI docket, while at the same time making an industry-wide policy change in this adjudicated proceeding, constitutes arbitrary and capricious agency decision-making.[342]

204. Finally, Exelon asserts that the Commission should limit the application of any new method for assessing base ROEs adopted by Opinion No. 569 to these MISO cases and clarify that the Commission is not prejudging the application of any new method to other utilities.[343]

B. Commission Determination

205. We are not persuaded that it is inappropriate for the Commission to establish a new base ROE policy in these MISO complaint proceedings when it has also issued the Base ROE NOI to obtain input on this topic from interested parties. The Commission "has substantial discretion to establish rules of general application by case-specific adjudication and is not restricted to the use of a separate generic proceeding"[344] to

---

[341] *Id*. at 37.

[342] Ameren Rehearing Request at 24.

[343] Exelon Rehearing Request at 28.

[344] Opinion No. 569, 169 FERC ¶ 61,129 at P 449 (quoting *Procedures for Disposition of Contested Audit*, Order No. 675, 114 FERC ¶ 61,178, at P 32 (2006). *See also NLRB v. Bell Aerospace Corp*., 416 U.S. 267, 294 (1974) ("[A]djudicative cases may and do serve as vehicles for the formulation of agency policies."); *SEC v. Chenery Corp*., 332 U.S. 194, 203 (1974) ("[T]he choice made between proceeding by general rule or by individual, ad hoc litigation is one that lies primarily in the informed discretion of the administrative agency."); *Michigan-Wisconsin Pipeline Co. v. FPC*, 520 F.2d 84, 89 (D.C. Cir. 1975) ("[T]here is no question that the Commission may attach precedential and even controlling weight to principles developed in one proceeding and then apply them under appropriate circumstances in a stare decisis manner."); *Pac. Gas and Electric Co. v. FPC*, 506 F.2d. 33, 38 (D.C. Cir. 1974) ("[A]gency may establish binding policy through rulemaking procedures . . . or through adjudications which constitute binding precedents."); *AEP Power Mktg., Inc*., 108 FERC ¶ 61,026, at P 187 (2004) ("Our decision to establish new policy in the context of case-specific proceedings is clearly within our authority."); *Investigation of Terms and Conditions of Public Utility Market-Based Rate Authorizations*, 103 FERC ¶ 61,349, at P 51 (2003) ("The Commission, moreover, is not limited to notice and comment rulemaking to develop

establish such rules. The Commission similarly has explained that "[o]ur decision to establish new policy in the context of case-specific proceedings is clearly within our authority."[345] Thus, while the Commission issued the Base ROE NOI, this did not prohibit it from changing its base ROE policy in an adjudication nor require that changes in base ROE policy occur in that Base ROE NOI proceeding. Importantly, we note that the due process protections afforded to all parties to these proceedings are available to every party to Commission proceedings. Any party in other proceedings will be free to argue, just as the parties to these proceedings were, that the base ROE methodology applied in any of these proceedings should be modified or applied differently because of the specific facts and circumstances of the proceeding involving that party.

XVI. Complaint-Specific Results: First Complaint

206. As discussed in this order, we are revising the methodology for determining whether an existing ROE is unjust and unreasonable and, if so, what is a just and reasonable ROE pursuant to section 206 of the FPA. Applying this methodology to the First Complaint proceeding, we continue to find that the rate to be reviewed in that proceeding— MISO TOs' 12.38% ROE—is unjust and unreasonable. Having addressed the first prong of the Commission's dual burden under section 206 and thus satisfied the "condition precedent"[346] to exercising our authority to change a rate under section 206, we grant rehearing of Opinion No. 569 and find that a just and reasonable replacement ROE for MISO TOs in the First Complaint proceeding is 10.02% under the second prong of section 206.

207. Below we address the "specific findings"[347] as to the "'particular circumstances'"[348] of the First Complaint proceeding that establish "'a rational connection'"[349] between the record evidence in that proceeding and our decisions under both prongs of section 206 herein to establish that we have "'made a principled and

---

policy. Agencies generally are permitted considerable discretion to choose whether to proceed by rulemaking or by adjudication.")).

reasoned decision supported by the evidentiary record.'"[350] The Commission bases its decisions concerning just and reasonable ROEs for public utilities on the most recent information in the record regarding market cost of equity. Consequently, the starting point for determining whether MISO TOs' existing ROE has become unjust and unreasonable must be a consideration of whether the current market cost of equity has changed since the MISO TOs' existing ROE was established based on financial data for the six months ending February 2002, such that the existing base ROE is no longer just and reasonable. Accordingly, we begin by determining a composite zone of reasonableness using the most recent financial information in the record of the First Complaint proceeding. We continue to find that the appropriate study period including this most recent financial information is the first six months of 2015.[351]

A. DCF Analysis

208. In Opinion No. 569, the Commission affirmed Opinion No. 551's approval of the Presiding Judge's DCF analysis, with one exception. In Opinion No. 569, the Commission held that only the IBES short-term growth projection should be used for calculating the (1+.5g) adjustment to the dividend yield, instead of the composite growth rate including both short- and long-term growth rates that was used by the Presiding Judge. Here, we affirm the Commission's holding on that issue and the Commission's use of the low-end outlier test applied in Opinion No. 569. Accordingly, our determinations on those issues do not result in any changes to the DCF analysis that was used in Opinion No. 569 for the First Complaint proceeding.

209. As discussed above, we grant rehearing of Opinion No. 569 to modify the high-end outlier test that was used there to now treat any proxy company as high-end outlier if its cost of equity estimated under the model in question is more than 200% of the median result of all of the potential proxy group members in that model before any high or low-end outlier test is applied, subject to a "natural break" analysis. The Commission explained in Opinion No. 569 that applying the version of the high-end outlier test that was used there did not result in the exclusion of any company from the DCF proxy group as a high-end outlier.[352] The high-end outlier test as modified in this order also does not result in any exclusions. Accordingly, our determination on this issue also does not result in any changes to the DCF analysis that was used in Opinion No. 569. We also grant rehearing of Opinion No. 569 to find that the long-term growth rate should be given 20% weighting and the short-term growth rate 80% weighting in the two-step

---

[350] *Id.* at 30 (citing *S. Cal. Edison v. FERC*, 717 F.3d at 181).

[351] *See* Opinion No. 569, 169 FERC ¶ 61,129 at P 460; Opinion No. 551, 156 FERC ¶ 61,234 P 19.

[352] Opinion No. 569, 169 FERC ¶ 61,129 at P 512.

DCF model. Our DCF analysis in the First Complaint proceeding reflecting this finding is shown in Appendix II to this order. Based on these determinations, we conclude that the DCF zone of reasonableness is 6.97% to 12.07%.

B. CAPM Analysis

210. In Opinion No. 569, the Commission affirmed Opinion No. 551's approval of the Presiding Judge's CAPM analysis in the First Complaint proceeding, with two exceptions related to the market risk premium. The Commission held that only the IBES short-term growth projection should be used in the one-step DCF analysis of the dividend paying members of the S&P 500, instead of the average of the IBES and *Value Line* growth projections approved by the Presiding Judge.[353] In addition, the Commission held that companies with negative ROEs or ROEs above 20% should be excluded from that analysis.[354]

211. As discussed above in section IV.C.1, we grant rehearing of Opinion No. 569 to, in future proceedings, consider the use of *Value Line* short-term growth rate projections in the one-step DCF analysis of the dividend paying members of the S&P 500 that is conducted in the CAPM. However, we find that the record is insufficient to allow us to use only *Value Line* short-term growth rates in the CAPM in the First Complaint proceeding. In addition, we affirm the Commission's application of the low-end outlier test and grant rehearing to modify the high-end outlier test, as described above. As the Commission explained in Opinion No. 569, the application of the low-end outlier test and the version of the high-end outlier that was used there did not result in the exclusion of any company from the CAPM proxy group.[355] The low-end outlier test and the modified high-end outlier test adopted herein also do not result in the exclusion of any company from the CAPM proxy group. Accordingly, we will continue to use the CAPM analysis that was relied upon in Opinion No. 569 for the First Complaint proceeding.[356] Based on these determinations, we conclude that the CAPM zone of reasonableness is 7.80% to 13.09%.

---

[353] Opinion No. 551, 156 FERC ¶ 61,234 at PP 169, 172.

[354] Opinion No. 569, 169 FERC ¶ 61,129 at P 513.

[355] *See id.* PP 514-515.

[356] *See id.* P 513. The results of this CAPM analysis are reflected in page 6 of Attachment A to Trial Staff's Initial Briefs. *See* Trial Staff Initial Br. (II), Attachment A to App. 2 at 6.

C. Risk Premium Analysis

212. As discussed above, we grant rehearing of Opinion No. 569 to find that the Risk Premium Model should be used in our ROE analysis under section 206 of the FPA. As described above, we adopt modifications to the Risk Premium analysis that was provided by MISO TOs in the record for the First Complaint proceeding. Appendix I to this order shows the results of the Risk Premium Model, as applied with modifications adopted herein.

213. This Risk Premium Model produces an ROE result of 10.10%.[357] As further discussed above, we will impute a zone of reasonableness from the ROE produced by the Risk Premium model for purposes of using the Risk Premium model in our analysis under the first prong of section 206. We do so by applying the average of the widths of the zones of reasonableness from the CAPM and DCF models to the ROE produced by the Risk Premium model, with that ROE serving as the measure of central tendency of the zone of reasonableness. In the First Complaint proceeding, the result of the Risk Premium Model is 10.10% and the average width of the zones of reasonableness produced by the CAPM and DCF models is 520 basis points. Applying this value to the Risk Premium result to impute a zone of reasonableness results in a Risk Premium zone of reasonableness of 7.50% to 12.70%.[358]

D. Composite Zone of Reasonableness and Section 206 Findings

214. Averaging the top and bottom of the DCF, CAPM, and Risk Premium zones of reasonableness determined above based on financial data for the first six months of 2015 produces a composite zone of reasonableness in the First Complaint proceeding of 7.42% to 12.62%. The midpoint of that zone of reasonableness is 10.02%.

215. Having determined the composite zone of reasonableness based on financial data for the first half of 2015, we now turn to considering whether the MISO TOs' 12.38% ROE, which was determined based on financial data for the six months ending February 2002, may be found unjust and unreasonable pursuant to the first prong of section 206. In this order, we affirm the Commission's decision in Opinion No. 569 to use ranges of presumptively just and reasonable ROEs based on the risk profile of the MISO TOs to inform our decision whether their ROE has become unjust and unreasonable. However, as discussed above, we grant rehearing of Opinion No. 569 to find that those ranges should be calculated by dividing the overall composite zone of reasonableness into equal thirds.

---

[357] *See* Appendix I.

[358] *Id.*

216. We affirm the Commission's determination in Opinion No. 569 that the MISO TOs should be treated as of average risk for purposes of determining the range of presumptively just and reasonable ROEs applicable to the MISO TOs.[359] In light of this determination, we find that the range of presumptively reasonable ROEs for consideration in determining whether MISO TOs' base ROE of 12.38% ROE in the First Complaint proceeding is unjust and unreasonable should be the middle third of the zone of reasonableness based on the revised construction of the presumptively just and reasonable zones adopted in this order. In the First Complaint proceeding, that range is from 9.15% to 10.89%.[360]

217. The MISO TOs' 12.38% is 149 basis points above the range of presumptively just and reasonable ROEs for the MISO TOs. Accordingly, we find that it is presumptively unjust and unreasonable. It is thus clear that, in light of our estimate of the cost of capital, the MISO TOs' 12.38% ROE is well outside any possible range of potentially just and reasonable ROEs for the MISO TOs. In order to rebut the presumption that the ROE is unjust and unreasonable, we would look at other evidence, such as state ROEs, ROEs of non-utility companies, ROEs produced by other methodologies, non-utility stock prices, investor expectations for non-utility stocks, various types of bond yields and their relation to stock prices, investor and other expert testimony, or testimony regarding the effects of rates on customers that would indicate that this is not the case. However, the record lacks such evidence sufficient to rebut the presumption. For example, the evidence in the record regarding state ROEs indicates that all state-authorized ROEs during the period April 1, 2013 through March 31, 2015 for integrated electric utilities providing generation, transmission, and distribution services ranged from 9.5% to 10.4% and that 87.34% of state-authorized ROEs for both integrated electric utilities and distribution-only electric utilities during that period were within this range.[361] The fact that MISO TOs' 12.38% ROE is 198 basis points above this range further demonstrates that MISO TOs' 12.38% ROE is unjust and unreasonable. In these circumstances, we find under the first prong of section 206 that the MISO TOs' 12.38% ROE that is the subject of the First Complaint proceeding has become unjust and unreasonable.

218. Having found that the MISO TOs' existing ROE is unjust and unreasonable, we turn to the establishment of a just and reasonable replacement ROE under the second prong of section 206. As discussed above, we have found that the midpoint of the composite zone of reasonable ROEs based on the most recent financial information in the record of the First Complaint proceeding is 10.02%. As discussed above, we find that the

---

[361] *See, e.g.*, Opinion No. 551, 156 FERC ¶ 61,234 at P 240.

MISO TOs are of average risk. Our policy is to set an RTO-wide ROE at the midpoint of the zone of reasonableness when the transmission owners receiving the RTO-wide ROE are of average risk. Accordingly, we find that the just and reasonable replacement ROE for the MISO TOs in the First Complaint proceeding is 10.02%. We therefore grant rehearing of Opinion No. 569 in part to require the MISO TOs to adopt a 10.02% ROE effective September 28, 2016, the date Opinion No. 551 required the MISO TOs to adopt a 10.32% ROE.

XVII. Complaint Specific Results: Second Complaint

A. Existing Rate for Purposes of Second Complaint and Overview

219. As discussed further below, we affirm the Commission's finding in Opinion No. 569 that the 10.02% base ROE established in the First Complaint proceeding is the existing rate to be reviewed for purposes of the Second Complaint proceeding because that is the rate which we would have to find unjust and unreasonable under the first prong of section 206 of the FPA, before we could require a new ROE "to be thereafter observed" pursuant to the second prong of section 206. As the Commission explained in Opinion No. 569, any new just and reasonable rate that we require "to be thereafter observed" pursuant to section 206(a) will replace the currently effective rate, not some previously effective rate. Accordingly, in order to determine a new rate to be thereafter observed, we must examine what the currently effective rate is because that is the rate that will need to be replaced if it is unjust and unreasonable. As discussed in the preceding section, in the First Complaint proceeding, we require MISO TOs to reduce their ROE to 10.02% effective prospectively from September 28, 2016. Therefore, that is the MISO TOs' currently effective ROE when we are deciding whether MISO TOs' ROE is unjust and unreasonable and should be modified prospectively pursuant to section 206 in the Second Complaint proceeding.

220. As discussed in this order, we are revising the methodology for determining whether an existing ROE is unjust and unreasonable and, if so, what is a just and reasonable ROE pursuant to section 206. Applying this methodology to the Second Complaint proceeding, we continue to find that the rate to be reviewed in that proceeding— 10.02% base ROE established in the First Complaint proceeding—has not been shown to be unjust and unreasonable.

221. Below we address the "specific findings"[362] as to the "'particular circumstances'"[363] of the Second Complaint proceeding that establish "'a rational

[362] *Emera Maine*, 854 F.3d at 30.

[363] *Id.* at 27 (citing *FPC v. Nat. Gas Pipeline Co.*, 315 U.S. 575, 586 (1942)).

connection'"[364] between the record evidence in that proceeding and our decisions under both prongs of section 206 herein to establish that we have "'made a principled and reasoned decision supported by the evidentiary record.'"[365] Because the Commission bases its decisions concerning just and reasonable ROEs for public utilities on the most recent information in the record regarding market cost of equity, the starting point for determining whether the MISO TOs' existing ROE has become unjust and unreasonable must be a consideration of whether the current market cost of equity has changed such that the 10.02% base ROE established in the First Complaint proceeding is unjust and unreasonable. Accordingly, we begin by determining a composite zone of reasonableness using the most recent financial information in the record of the Second Complaint proceeding. We continue to find that the appropriate study period including this most recent financial information is July 1, 2015 through December 31, 2015.[366]

B. DCF Analysis

222. In Opinion No. 569, the Commission affirmed the Presiding Judge's DCF analysis in Initial Decision (II) with one exception. The Commission held that only the IBES short-term growth projection should be used for calculating the (1+.5g) adjustment to the dividend yield, instead of the composite growth rate including both short- and long-term growth rates that was used by the Presiding Judge. Here, we affirm the Commission's holding on that issue and the Commission's use of the low-end outlier test applied in Opinion No. 569. Accordingly, our determinations on those issues do not result in any changes to the DCF analysis that was used in Opinion No. 569 for the Second Complaint proceeding.

223. As discussed above, we grant rehearing of Opinion No. 569 to modify the high-end outlier test that was used there. The Commission explained in Opinion No. 569 that applying the version of the high-end outlier test that was used there did not result in the exclusion of any company from the DCF proxy group as a high-end outlier.[367] The high-end outlier test as modified in this order also does not result in any exclusions. Accordingly, our determination on this issue also does not result in any changes to the DCF analysis that was used in Opinion No. 569. We also grant rehearing of Opinion No. 569 to find that the long-term growth rate should be given 20% weighting and the short-term growth rate 80% weighting in the two-step DCF model. Our DCF analysis in the Second Complaint proceeding reflecting this finding is shown in Appendix II to this

---

[364] *Id.* at 28 (citing *FERC v. Elec. Power Supply Ass'n*, 136 S.Ct. 760, 782 (2016)).

[365] *Id.* at 30 (citing *S. Cal. Edison v. FERC*, 717 F.3d at 181).

[366] *See* Opinion No. 569, 169 FERC ¶ 61,129 at P 524.

[367] *Id.* P 554.

order. Based on these determinations, we conclude that the DCF zone of reasonableness is 7.37% to 11.37%.

C. CAPM Analysis

224. In Opinion No. 569, the Commission affirmed the Presiding Judge's CAPM analysis in the Second Complaint proceeding, with one exception related to the market risk premium. The Commission held that only the IBES short-term growth projection should be used in the one-step DCF analysis of the dividend paying members of the S&P 500, which was consistent with the Presiding Judge's approach in Initial Decision (II).[368] In addition, the Commission held that companies with negative ROEs or ROEs above 20% should be excluded from that analysis.[369]

225. As discussed above in section IV.C.1, we grant rehearing of Opinion No. 569 to, in future proceedings, consider the use of *Value Line* short-term growth rate projections in the one-step DCF analysis of the dividend paying members of the S&P 500 that is conducted in the CAPM. However, we find that the record is insufficient to allow us to use only *Value Line* short-term growth rates in the CAPM in the Second Complaint proceeding. In addition, we affirm the Commission's application of the low-end outlier test and grant rehearing to modify the high-end outlier test as described above. As the Commission explained in Opinion No. 569, the application of the low-end outlier test and the version of the high-end outlier test that was used there did not result in the exclusion of any company from the CAPM proxy group.[370] The low-end outlier test and modified high-end outlier test adopted herein also do not result in the exclusion of any company from the CAPM proxy group. Accordingly, we will continue to use the CAPM analysis that was relied upon in Opinion No. 569 for the Second Complaint proceeding.[371] Based on these determinations, we conclude that the CAPM zone of reasonableness is 8.35% to 12.63%.

D. Risk Premium Analysis

226. As discussed above, we grant rehearing of Opinion No. 569 to find that the Risk Premium Model should be used in our ROE analysis under section 206 of the FPA. As

---

[368] *See* Initial Decision (II), 155 FERC ¶ 63,030 at P 412.

[369] Opinion No. 569, 169 FERC ¶ 61,129 at P 555.

[370] *See id.* PP 556-557.

[371] *See id.* P 513. The results of this CAPM analysis are reflected in page 6 of Attachment A to Trial Staff's Initial Briefs. *See* Trial Staff Initial Br. (II), Attachment A to App. 2 at 6.

described above, we are adopting modifications to the Risk Premium analysis that was provided by the MISO TOs in the record for the Second Complaint proceeding. Appendix I of this order shows the results of the Risk Premium Model, as applied with modifications adopted herein.

227. This Risk Premium analysis produces an ROE result of 10.29%.[372] As further discussed above, we find that we will impute a zone of reasonableness from the ROE produced by the Risk Premium model for purposes of using the Risk Premium model in our analysis under the first prong of section 206. We do so by applying the average of the widths of the zones of reasonableness from the CAPM and DCF models to the ROE produced by the Risk Premium model, with that ROE serving as the measure of central tendency of the zone of reasonableness. In the Second Complaint proceeding, the result of the Risk Premium analysis is 10.29% and the average width of the zones of reasonableness produced by the CAPM and DCF models is 414 basis points. Applying this value to the Risk Premium result to impute a zone of reasonableness results in a Risk Premium zone of reasonableness of 8.22% to 12.36%.[373]

E. Composite Zone of Reasonableness and Section 206 Findings

228. Averaging the top and bottom of the DCF, CAPM, and Risk Premium zones of reasonableness determined above based on the most recent financial data in the record of the Second Complaint proceeding produces a composite zone of reasonableness in the Second Complaint proceeding of 7.98% to 12.12%. The midpoint of that zone of reasonableness is 10.05%.

229. The applicable range of presumptively just and reasonable ROEs for the MISO TOs in the Second Complaint proceeding is from 9.36% to 10.74%. As discussed above, the issue to be addressed in the Second Complaint is whether the ROE established in the First Complaint remains just and reasonable during the applicable test period as addressed by the evidence presented by the participants in the Second Complaint. The MISO TOs' 10.02% ROE established upon resolution of the First Complaint proceeding falls within the range of presumptively just and reasonable ROEs that applies in the Second Complaint. We find that this presumption has not been rebutted by the evidence in the Second Complaint proceeding. We see no evidence in the record, such as state ROEs, ROEs of non-utility companies, and other methodologies that rebuts this presumption. Accordingly, we do not find that the MISO TOs' ROE established in the First Complaint proceeding and in effect as of the date of this order is unjust and unreasonable under the first prong of section 206. For that reason, we do not establish a

[372] *See* Appendix I.

[373] *Id.*

new just and reasonable ROE in the Second Complaint proceeding to be in effect prospectively from the date of this order.

XVIII. Refund Issues

A. Opinion No. 569

230. In Opinion No. 569, the Commission granted rehearing of Opinion No. 551 in part, found that the challenged 12.38% base ROE in the First Complaint proceeding was unjust and unreasonable, and additionally found that a replacement base ROE of 9.88% was just and reasonable—instead of the 10.32% replacement ROE that was set in Opinion No. 551. The Commission made the 9.88% ROE effective as of September 28, 2016, the date on which Opinion No. 551 was issued.[374] The Commission ordered MISO and the MISO TOs to provide refunds, with interest calculated pursuant to 18 C.F.R. § 35.19a, for the 15-month refund period for the First Complaint proceeding from November 12, 2013 through February 11, 2015 and for the period from September 28, 2016—the date on which Opinion No. 551 was issued—to the date of Opinion No. 569.[375]

231. The Commission then found that the 9.88% base ROE established in the First Complaint proceeding was the existing rate to be analyzed for purposes of the Second Complaint proceeding. In brief, the Commission reasoned that, for purposes of deciding whether a rate charged by a utility is unjust and unreasonable and determining a new just and reasonable rate "to be thereafter observed" pursuant to section 206(a) of the FPA, it must assess whether the public utility's currently effective rate is unjust and unreasonable, not some earlier rate that may have been in effect when the complaint was filed but has now been superseded. The Commission explained that, in other words, in order to determine a new rate to be thereafter observed, it must examine the currently effective rate because that is the rate that will need to be replaced if it is unjust and unreasonable. The Commission then explained that, because the 9.88% base ROE established in the First Complaint proceeding is effective prospectively from September 28, 2016, that is the currently effective rate that the Commission would have to find unjust and unreasonable under the first prong of section 206, before we could require a new ROE "to be thereafter observed" pursuant to the second prong of section 206.[376]

---

[374] *See* Opinion No. 569, 169 FERC ¶ 61,129 at P 20.

[375] *Id.* at ordering para. (B).

[376] *Id.* P 530.

232. The Commission then concluded that the 9.88% ROE was just and reasonable based on the facts and circumstances of the Second Complaint and therefore dismissed the Second Complaint. The Commission then found that section 206 dictates that refunds may be ordered in a complaint proceeding only when the Commission grants prospective relief in that proceeding (i.e., the Commission sets a new just and reasonable rate which it "orders to be thereafter observed and in force.").[377] The Commission concluded that it could not order refunds for the Second Complaint proceeding's refund period because it was dismissing the complaint and not granting any prospective relief. The Commission found that ordering refunds in the Second Complaint proceeding despite the fact that it was granting no prospective relief would exceed the statutory authority in section 206 because it would effectively extend the 15-month refund period for the First Complaint since the refunds would be based on the relief granted in the First Complaint and not any action taken in the Second Complaint.

B. First Complaint Proceeding Refunds

1. Rehearing Requests

233. MISO TOs argue that the Commission erred in directing refunds for the period from September 28, 2016, through the date of Opinion No. 569 based on the new ROE set in the First Complaint proceeding. MISO TOs contend that the effective date of the new base ROE resulting from resolution of the First Complaint proceeding should be November 21, 2019, the date on which Opinion No. 569 was issued. MISO TOs acknowledge that, in cases of legal error, the proper remedy is one that puts the parties in the position they would have been in had the error not been made, but they assert that this is not a case of legal error because Opinion No. 569's adoption of a new ROE methodology goes beyond what is necessary to fix the problems identified by the *Emera Maine* court. MISO TOs contend that the court merely found that the Commission never explained how its ultimate placement of the base ROE was just and reasonable and that the Commission could correct this error by better tying the 10.32% base ROE set in Opinion No. 551 to the evidence in the record, rather than adopting a new base ROE methodology.[378] MISO TOs maintain that, therefore, the Commission's adoption of the 9.88% ROE for the First Complaint proceeding in Opinion No. 569 does not remedy a legal error.[379]

234. MISO TOs further argue that this is also not a case where the Commission fixed an error on rehearing of Opinion No. 551. They contend that, while the Commission

---

[377] *Id.* P 568.

[378] MISO TOs Rehearing Request at 84-85 (citing *Emera Maine*, 854 F.3d at 28).

[379] *Id.*

"grant[ed] rehearing of Opinion No. 551 in part to require the MISO TOs to adopt a 9.88% ROE effective September 28, 2016, the date Opinion No. 551 required the MISO TOs to adopt a 10.32% ROE,"[380] it is unclear as to which issue presented on rehearing the Commission actually granted. MISO TOs assert that none of the rehearing requests asked the Commission to adopt a new ROE methodology, and instead opposing parties requested rehearing on the grounds that the composition of the DCF proxy group was incorrect, and that Commission should consider only DCF results, ignore the anomalous capital market conditions that impacted the DCF model inputs, and ignore cost of equity evidence produced by alternative models.[381]

235. MISO TOs argue that, therefore, in establishing the new 9.88% base ROE upon resolution of the First Complaint proceeding, the Commission was acting on its own motion pursuant to its authority under section 313(a) of the FPA[382] to modify Opinion No. 551. They contend that, as a result, the 9.88% base ROE that the Commission established upon resolution of the First Complaint proceeding can be effective only prospectively as of the date of the issuance of Opinion No. 569—November 21, 2019.[383]

236. MISO TOs argue that, if the Commission holds that it did fix a legal error through the adoption of the new methodology for determining a base ROE, the Commission should nonetheless use its discretion not to require the payment of interest on the refunds directed. MISO TOs note that "the Commission is not required to order that interest be paid on all refunds"[384] and contend that the Commission should use its discretion not to include interest with the refunds for the period from September 28, 2016, going forward because the full status quo ante cannot be restored in this case. They assert that this is the case because the Commission has implicitly recognized that some non-public utility members of MISO do not have a refund obligation relating to complaints that were filed prior to 2017,[385] and thus that non-public utility members of MISO may not have an obligation to make refunds for the First Complaint, which was filed in 2013. MISO TOs

---

[385] *Id.* at 88-89 (citing *Midcontinent Indep. Sys. Operator, Inc.*, 151 FERC ¶ 61,050, at P 24 (2015) (only as of the effective date of their RTO adder are non-public utilities obligated to make refunds for Docket Nos. EL14-12 and EL15-45)).

argue that, without all transmission-owning members of MISO contributing their share of refunds, it will be impossible to reinstitute the full status quo ante.[386]

237. Ameren similarly argues that the 9.88% base ROE that the Commission found to be a new just and reasonable base ROE in the First Complaint proceeding cannot be made effective as of the date of Opinion No. 551, and thus no refunds can be directed for the period from September 28, 2016 to November 21, 2019. Ameren contends that section 206 of the FPA only permits the Commission to make a new just and reasonable rate effective prospectively and that, therefore, the Commission acted beyond its authority in making the 9.88% base ROE established in Opinion No. 569 effective as of the date of Opinion No. 551.[387]

238. Ameren asserts that the D.C. Circuit's decision in *City of Anaheim v. FERC* also prohibits the Commission from requiring refunds for the period from September 28, 2016 to November 21, 2019, based on its finding in the First Complaint proceeding that 9.88% is a new just and reasonable base ROE. Ameren contends that, in that case the Commission granted a complaint, but stated that it would set a just and reasonable rate in the future, and the court found that the Commission could not make the rate that it set in the future effective retroactively. Ameren argues that there is no meaningful difference between postponing the fixing of a new rate as the Commission did in *City of Anaheim* and modifying Opinion No. 551 and replacing the rate fixed there with another one calculated by a different method, as the Commission did in Opinion No. 569. Ameren contends that the act of fixing a new rate undersection 206 cannot be a three-year process because that would impermissibly expand the Commission's refund authority.[388]

239. Ameren argues that the legal error doctrine does not give the Commission authority to direct refunds for the period from September 28, 2016, to November 21, 2019, as a result of its decision in the First Complaint proceeding. Ameren asserts that, unlike the *ISO New England Inc. v. Bangor Hydro-Electric Co.*[389] case that the Commission cites in Opinion No. 569, a court has not vacated any of the Commission decisions in these proceedings and therefore the legal error doctrine does not apply in these proceedings. Ameren acknowledges that the Commission is empowered to change

[386] *Id.* at 89.

[387] Ameren Rehearing Request at 13-20.

[388] *Id.* at 17-19.

[389] 161 FERC ¶ 61,031 (2017).

its order on rehearing, but argues that, when doing so, it can only fix a new rate that is "thereafter observed."[390]

240. Transource Energy argues that the Commission can only make the rate that it adopts for the First Complaint proceeding effective prospectively, and not effective as of the date of Opinion No. 551.[391] Transource Energy asserts that, if the Commission believes it has the discretion to make the rate adopted upon resolution of the First Complaint proceeding effective as of the date of Opinion No. 551, it should find that the 10.32% ROE ordered in Opinion No. 551 is just and reasonable. Transource Energy further contends that under the Commission's methodology adopted in Opinion No. 569, there is no evidence showing that a 10.32% ROE is not just and reasonable. Transource Energy notes that the 10.32% base ROE adopted in Opinion No. 551 falls within the quartile range of presumptively just and reasonable ROEs for the period at issue in Opinion No. 551, which is 9.29% to 10.47%. Transource Energy further contends that the Commission's decision in Opinion No. 569 represents a change in policy and not a correction of a legal error. In addition, Transource Energy argues that the Commission should use its discretion to not order additional refunds for the First Complaint proceeding's 15-month refund period because customers benefitted from investments during the refund period.[392]

2. Commission Determination

241. We deny the requests for rehearing of the Commission's decision in Opinion No. 569 to order refunds for the period from September 28, 2016, to November 21, 2019, based on its decision in the First Complaint proceeding. In Opinion No. 569, the Commission granted rehearing of the Commission's decision in Opinion No. 551 that, in the First Complaint proceeding, a 10.32% base ROE was a just and reasonable new ROE under the second prong of section 206, instead finding that a 9.88% base ROE was a just and reasonable new ROE. Accordingly, the Commission's decision in Opinion No. 569 granted rehearing of the decision in Opinion No. 551 to make 10.32% the new base ROE effective prospectively from the date of Opinion No. 551. Consequently, the new ROE that the Commission set in Opinion No. 569 in granting rehearing, and which is modified in this order, is effective as of the date of the original decision which is being modified on rehearing (i.e., the date of Opinion No. 551).

242. As the Commission has explained, "[R]ate changes required in section 206 proceedings should take effect as of the date of the order setting rates, *not* the date of the

[390] Ameren Rehearing Request at 20-23.

[391] Transource Energy Rehearing Request at 36-38.

[392] *Id.*

rehearing—regardless of whether and to what extent the rehearing order changes the rates originally allowed."[393] The Commission further explained that "[s]uch a policy is fair to both utilities and ratepayers since it allows finally determined just and reasonable rates to go into effect at the earliest possible date, thereby preventing unjust enrichment of one party for any period of time. It also eliminates any incentive parties would have to delay the effective date of new rates."[394] Accordingly, the Commission's decision to grant rehearing of Opinion No. 551 to modify the rate established in that order for the First Complaint proceeding under section 206 takes effect as of the date of the order setting that rate (i.e., Opinion No. 551), not as of the date of Opinion No. 569 or this order. As discussed further below, because the changed rate set on rehearing of Opinion No. 551 is effective as of the date of that order, it is appropriate to direct refunds for the period from that date through the date of this order, which establishes the finally determined just and reasonable rate.

243. We disagree with MISO TOs' argument that this is not a case where the Commission fixed an error on rehearing of Opinion No. 551, and with Ameren's and Transource Energy's arguments that the new replacement base ROE established in granting rehearing of Opinion No. 551 can only be effective prospectively from the date of Opinion No. 569. MISO TOs contend that, while the Commission granted rehearing of Opinion No. 551 in part, it is unclear as to which issue presented on rehearing the Commission granted because none of the rehearing requests asked the Commission to adopt a new ROE methodology.[395] MISO TOs, instead, contend that opposing parties requested rehearing on the grounds that the composition of the DCF proxy group was incorrect, and that Commission should consider only DCF results, ignore the anomalous capital market conditions that impacted the DCF model inputs, and ignore cost of equity evidence produced by alternative models.[396] While it may be true that a party did not explicitly request that the Commission reach each and every exact decision that it made in Opinion No. 569, the Commission nonetheless acted within its discretion to reach its conclusions and these conclusions involved granting rehearing of the Commission's decision in Opinion No. 551 to establish a 10.32% base ROE as the new ROE under the second prong of section 206 in the First Complaint proceeding.

244. In Opinion No. 551, the Commission relied on the DCF analysis and looked to the CAPM, Risk Premium, and Expected Earnings models as corroborative evidence to support its decision. On rehearing, certain parties argued, as MISO TOs note, that the

---

[393] *Ariz. Pub. Serv. Co.*, 26 FERC ¶ 61,087, at 61,221 (1984).

[394] *Id.*

[395] MISO TOs Rehearing Request at 85-86.

[396] *Id.* at 86.

Commission should have considered only DCF results and ignored those alternative models.[397] In Opinion No. 569, as modified in this order, the Commission granted rehearing to reach a logical middle ground that does not consider only DCF, as those parties requested, but does depart from Opinion No. 551 by considering only some of the other three models that the Commission initially considered in Opinion No. 551. Specifically, here we consider the CAPM and Risk Premium models in addition to the DCF model, but not the Expected Earnings model, which the Commission initially did consider in Opinion No. 551. In reaching its decision on rehearing of Opinion No. 551, the Commission is not limited to only reaching a conclusion that replicated every detail of a conclusion that a party had explicitly proposed.[398] In relevant part, the Commission, upon a party's application for rehearing, "shall have power to grant or deny rehearing or to abrogate or modify its order without further hearing."[399] Accordingly, the Commission may modify its order on rehearing as it has here, because there exists no such limitation as a requirement that the Commission may only modify its order if the exact modification is explicitly proposed by a party on rehearing. The Commission found merit in some of the arguments against considering all of the non-DCF models but was not persuaded to ignore all of the models. Accordingly, it reached a conclusion arising from compromise that considered some, but not all, of the alternative models that were considered in Opinion No. 551. As a result of partially granting rehearing on these issues, the Commission granted rehearing of its decision to establish 10.32% as a new replacement base ROE in the First Complaint proceeding. Accordingly, this is a case where the Commission granted rehearing to modify Opinion No. 551, and that modified conclusion is effective as of the date of Opinion No. 551.

245. While the Commission's grant of rehearing of Opinion No. 551 is sufficient to justify the Commission's ordering of refunds from the date of Opinion No. 551—September 28, 2016—through the date of this order, the Commission's decision to order such refunds is further justified by the fact that it is correcting a legal error in granting rehearing to change the new just and reasonable ROE established for the First Complaint proceeding in Opinion No. 551. Although Ameren is correct that none of the Commission decisions in these proceedings have been vacated by a court, that does not mean that there was no legal error in the Commission's decisions in these proceedings. In *Emera Maine*, the D.C. Circuit found that the Commission failed to satisfy its dual burden under section 206 of the FPA by finding that the result of a single ROE analysis was sufficient to demonstrate that an existing base ROE was unjust and unreasonable if it exceeded that result and that such result was a just and reasonable

[397] *See id.* at 86.

[398] *See* 16 U.S.C. § 825*l*.

[399] *Id.*

replacement ROE. Opinion No. 551 and Initial Decision (II) in the Second Complaint proceeding both used the same reasoning that the D.C. Circuit found was insufficient to satisfy the Commission's burden under section 206. Accordingly, while no court has vacated a specific decision in this case, the rationale on which Opinion No. 551 and Initial Decision (II) in the Second Complaint proceeding are based has been rejected by the D.C. Circuit as in violation of section 206. As a result, those Commission decisions are based on a legal error identified by the D.C. Circuit. The fact that the court did not explicitly identify that legal error in a case involving a decision in these proceedings does not mean that there is no error in Opinion No. 551 and Initial Decision (II). To find otherwise would allow the Commission to continue to make decisions that are based on reasoning that has been found to be unlawful and only require the Commission to correct those decisions when a court has repeated its previous conclusion in every individual applicable case.

246. MISO TOs and Transource Energy also argue that the legal error doctrine does not apply here because the methodology adopted in Opinion No. 569 goes beyond what they contend is necessary to fix the problems identified by the *Emera Maine* court, and therefore represents a change in policy and not correction of a legal error. We disagree. The court in *Emera Maine* found that the Commission acted arbitrarily and outside of its statutory authority because its single ROE analysis failed to include an actual finding as to the lawfulness of the existing base ROE at issue. The court remanded the proceeding for the Commission to make that actual finding, but it did not specify exactly how the Commission needed to make that finding. In Opinion No. 569, as modified herein, the Commission concluded that the best way to make that finding in these proceedings in light of its statutory obligations was to revise its methodology for analyzing base ROEs under section 206 as explained herein. Accordingly, while MISO TOs and Transource Energy would prefer the Commission to arrive at this finding in a different way, that does not mean that the Commission's action is a change in policy instead of a correction of a legal error.

247. We are also not persuaded by arguments that the Commission should exercise its discretion to not order interest on the refunds for the period from the date of Opinion No. 551 through the date of this order replacing the base ROE set in in Opinion No. 551. While MISO TOs are correct that the Commission is not required to order that interest be paid on all refunds, we find that there are no equitable reasons that would warrant not ordering interest on the refunds ordered from the date of Opinion No. 551 through the date of this order. The parties to the First Complaint proceeding had notice that the base ROE established to be prospective from the date of Opinion No. 551 was subject to rehearing and therefore could be modified such that the modified rate would result in refunds, with interest pursuant to the Commission's authority under section 206. We are also not persuaded by MISO TOs' argument that the Commission should exercise its discretion to not require interest on the refunds because the status quo ante cannot be

fully restored since a separate Commission order "implicitly has recognized"[400] that some non-public utility members of MISO do not have a refund obligation relating to complaints that were filed prior to 2017.[401] As the precedent cited by MISO TOs provides, the Commission is not restricted to only requiring interest on refunds when it can completely restore the status quo ante, but rather, whether the status quo ante can be fully restored is merely a consideration that "may . . . offset . . . at least in part"[402] a full refund. MISO TOs also correctly recognize that "whether to order interest in crafting a remedy is a matter of Commission discretion."[403] MISO TOs have not persuaded us that the fact that some members of MISO may have different obligations with respect to the subject refunds is sufficient to use to our discretion to deny the complainants a full refund with interest. The payment of interest on refunds merely "ensures that the amounts to be refunded are, in fact, refunded through the addition of interest so that the recipient receives payment in inflation-adjusted dollars . . . to make the recipients whole,"[404] consistent with the Commission's "general policy of granting full refunds" for overcharges.'"[405] While we may exercise our discretion to decline to make recipients whole through the payment of interest on refunds, MISO TOs' argument on this point is not a sufficient reason to do so. On balance, we find that is more appropriate to ensure that the overcharged entities are made whole through the payment of interest on refunds than it is to decline to require interest because some members of MISO may have different obligations with respect to the subject refunds such that the refunds paid do not exactly reconstitute the status quo ante.

248. Transource Energy argues that the Commission should use its discretion to not order additional refunds for the First Complaint proceeding's 15-month refund period because customers benefitted from investments during the refund period.[406] We find that this argument is similarly unavailing. Transmission owners are constantly making new

investments and changing investments during proceedings that may result in refund obligations. Therefore, to find that the existence of these investments alone would absolve such transmission owners from ordering refunds resulting from a Commission decision would mean that transmission owners would only owe refunds in the rarest of circumstances. We find that this would be contrary to the purpose of the refund obligation in section 206.

249. Consequently, we deny rehearing on this issue and find that, by granting rehearing of the decision in Opinion No. 551 to establish a new just and reasonable base ROE, and by acting to correct a legal error, it is appropriate to direct refunds, with interest, for the period from the effective date of the just and reasonable base ROE that was set in Opinion No. 551 which is being replaced in this order— September 28, 2016—through the date of this order, based on the new 10.02% base ROE established for the First Complaint proceeding in this order.

C. Second Complaint Proceeding Refunds

1. Rehearing Requests

250. CAPs argue that the Commission erred in not requiring refunds for the Second Complaint proceeding's refund period. They contend that the First Complaint and Second Complaint each challenged the base ROE in effect as of the date of filing of each complaint and had separate refund periods.[407] CAPs assert that, therefore, the mere fact that the two separate refund periods exceed 15 months does not mean that section 206 of the FPA is violated, "particularly in view of the fact that Commission orders set both refund periods, and the Commission itself acknowledged that the ROE in force when each complaint was filed was demonstrated to be unjust and unreasonable based on evidence of market conditions during the relevant study period."[408]

251. CAPs further contend that the Commission's interpretation of the existing rate to be analyzed in the Second Complaint proceeding creates a loophole that utilities could exploit to vitiate the consumer protection intended by section 206. In particular, CAPs assert that a utility could make a tactical section 205 filing after a section 206 filing is signaled or underway to undermine section 206's refund and prospective relief remedies. CAPs argue that, for example, if an initial decision identifies a new just and reasonable base ROE resulting from a section 206 complaint, the subject utility could make a section 205 filing before issuance of a Commission order on the initial decision that reduces its base ROE to a level well above the base ROE the initial decision determined was just and reasonable, but just within the top end of what the initial decision identifies

[407] CAPs Rehearing Request at 52-53.

[408] *Id.* at 53.

as the zone of presumptively just and reasonable ROEs, such that the utility's proposed base ROE in the section 205 filing would likely be accepted by the Commission. CAPs argue that, under the Commission's rationale in Opinion No. 569, in such a case, the base ROE in the utility's section 205 filing would become the currently effective base ROE that the Commission would examine for purposes of acting on the initial decision, meaning that this base ROE would likely not be found unjust and unreasonable in the Commission's order on the initial decision because it falls within the zone of presumptively just and reasonable ROEs identified in the initial decision. CAPs contend that, in such a case, the utility would have successfully shielded itself both from refunds and from a prospective reduction down to the cost-based level found in the initial decision. CAPs argue that, because of this possibility, the Commission should reconsider its finding that the FPA requires section 206 relief to be denied if the rate in effect just before a final order applying section 206 is just and reasonable, or at least clarify how it would prevent such tactics from vitiating relief under section 206.[409]

252. CAPs further contend that, even if the Commission does not reverse its determination that the outcome of the Second Complaint was dependent on the outcome of the First Complaint, it still has and should exercise discretion to order refunds for the Second Complaint proceeding. CAPs assert that, because section 206 contains no deadline for the Commission to act on a complaint, where two complaints raising overlapping issues are pending before the Commission simultaneously, the order in which the Commission acts on the complaints is within the Commission's discretion. CAPs argue that the Commission should have acted on the Second Complaint before acting on rehearing of Opinion No. 551 because this would have kept prospective rates, which can affect future conduct, aligned with the most recent and accurate evidence of the MISO TOs' cost of equity. CAPs contend that, by acting in this sequence, MISO transmission customers would have been entitled to refunds for the Second Complaint proceeding's refund period and the First Complaint proceeding's refund period because the ROE set by an order in the Second Complaint could not be deemed to be the "existing" ROE for purposes of deciding the First Complaint. CAPs assert that, therefore, the Commission's rationale for denying refunds in the Second Complaint proceeding effectively claims that the Commission's procedural decisions can expand or contract the statutory rights of public utility customers.[410]

253. LPSC argues that Opinion No. 569 interprets section 206 to mean that the Commission must decide whether the rate that is "currently effective" at the time it issues its opinion is just and reasonable, as opposed to the rate that was in effect at the time the

[409] *Id.* at 53-54.

[410] *Id.* at 56-59.

complaint was filed and contends that this interpretation violates the FPA.[411] LPSC contends that section 206 provides that the Commission shall determine the just and reasonable rate, if the Commission determines that the rate "demanded, observed, charged, or collected by any public utility . . . is unjust, unreasonable, unduly discriminatory or preferential."[412] LPSC asserts that Opinion No. 569 is inconsistent with this plain language because it requires an analysis of whether a new rate that had never been charged or collected by the utility is just and reasonable. LPSC contends that the MISO TOs have never "demanded, observed, charged, or collected" the 9.88% ROE that was established in Opinion No. 569 from their customers, so the FPA could not have intended for that to be the rate analyzed by the Commission.[413]

254. LPSC argues that the Commission's interpretation of the existing rate to be analyzed in the Second Complaint proceeding would prevent the Commission from ever granting refunds in a second ROE proceeding, even if the Commission found that the newly effective ROE that resulted from the first ROE proceeding had become unjust and unreasonable by the time the second complaint was filed. LPSC contends that this is the case because section 206 provides for refunds to "persons who have paid those rates" but no person would have paid the rate established in such a first complaint proceeding.[414]

255. LPSC also contends that the Commission's interpretation on this point is inconsistent with the Commission's precedent in *Golden Spread Elec. Coop., Inc. v. Southwestern Pub. Serv. Co.*[415] LPSC asserts that, in that case, the Commission rejected a company's argument that a 2013 ROE complaint should be dismissed because it served only to extend the refund effective period associated with a 2012 ROE complaint, and explained that, "In assessing the 2013 Complaint, the relevant comparison is between the current ROE and the ROE sought in the 2013 Complaint."[416]

256. LPSC further argues that Opinion No. 569 is also arbitrary because its conclusions rely entirely on the order that the Commission decides the ROE proceedings, but there is no statute or regulation that requires the Commission to resolve section 206 proceedings

---

[411] LPSC Rehearing Request at 17-19.

[413] *Id.*

[414] *Id.* at 19-20.

[415] 151 FERC ¶ 61,126 (2015).

[416] LPSC Rehearing Request at 21 (citing *Golden Spread Elec. Coop., Inc. v. Southwestern Pub. Serv. Co.*, 151 FERC ¶ 61,126 at P 24).

chronologically. LPSC contends that refunds could have been granted for the second complaint proceeding and a different ROE would have applied prospectively if Opinion No. 569 had resolved the second complaint proceeding first. LPSC asserts that Congress did not intend to give the Commission the power to decide the justness and reasonableness of rates and whether refunds should be granted based on the order that it chooses to decide complaints.[417]

257. In addition, LPSC argues that Opinion No. 569 is inconsistent with the Commission's precedent that a second ROE complaint can be filed and a second refund effective period can be ordered, as long as the second complaint is based on new analyses and data. LPSC contends that, "Contrary to its precedent, Opinion No. 569 now finds that determining whether the ROE in a second ROE complaint proceeding is unjust and unreasonable by analyzing the ROE that was in effect when the complaint was filed would effectively extend the statutory fifteen-month refund effective period."[418] LPSC argues that, in *Firstenergy Service Co. v. FERC*, 758 F.3d 346 (D.C. Cir. 2014), the D.C. Circuit stated that "FERC is required to evaluate a 206 complaint as to existing rates specifically because they might have become unjust and unreasonable by intervening shifts in circumstances"[419] and that the Commission should do the same here and rule that the rate in effect at the time the Second Complaint was filed should be analyzed to assess possible "intervening shifts in circumstances."[420]

258. RPGI similarly argues that the Commission's interpretation of section 206 to not permit refunds for the Second Complaint proceeding is unsupported. RPGI asserts that the Commission's interpretation sets up a scenario in which the ROE in force on a second complaint's date of filing becomes virtually irrelevant. RPGI contends that a complainant would know that, if it filed, the benchmark against which its case would be evaluated would not be the ROE in effect on the date the second complaint would be filed—which is known—but rather the ROE set by the first proceeding and where it falls in the second proceeding's updated zone of reasonableness, neither of which is known at the second proceeding's outset. RPGI asserts that, thus, after Opinion No. 569, filing a second complaint upon the expiration of a first complaint's refund period represents such

[417] *Id.* at 21-23.

[418] *Id.* at 24.

[419] *Id.* at 27-28 (citing *Firstenergy Service Co. v. FERC*, 758 F.3d at 356).

[420] *Id.*

a high risk of a "no-change" outcome as to effectively bar successive complaints, even if the data from the second proceeding supports an ROE lower than that set by the first.[421]

259. RPGI argues that, if the Commission's concern is that successive complaints require it to make duplicative findings of one ROE's unlawfulness, then it could consolidate proceedings. RPGI further contends that, if the Commission's concern is the effect of successive refund periods on the MISO TOs, the appropriate course of action is seeking a statutory change, not adopting a strained statutory interpretation.[422]

2. Commission Determination

260. We deny rehearing on this issue. We continue to find, as the Commission did in Opinion No. 569, that, for purposes of deciding whether a rate charged by a public utility is unjust and unreasonable and determining a new just and reasonable rate "to be thereafter observed" pursuant to section 206(a) of the FPA, we must assess whether the public utility's currently effective rate is unjust and unreasonable, not some earlier rate that may have been in effect when the complaint was filed but has now been superseded. As explained in Opinion No. 569, in the context of successive, or pancaked, complaints like those in these proceedings, if the Commission's analysis in the successive complaint analyzed some earlier rate that may have been in effect when the complaint was filed but has since been superseded, it would permit the Commission to order refunds for a period beyond the 15-month statutory refund period based on a single decision in the preceding complaint decision. We find that this would allow the Commission to use a single decision as the predicate for issuing refunds beyond the refund period applicable to that decision, which would exceed the refund authority granted to the Commission in section 206.

261. CAPs argue that the First Complaint and Second Complaint each challenged the base ROE in effect as of the date of filing of each complaint and had separate refund periods, and the mere fact that the two separate refund periods exceed 15 months does not mean that section 206 is violated. CAPs misinterpret the Commission's finding in Opinion No. 569. In Opinion No. 569, the Commission did not find that the mere fact that the First Complaint and Second Complaint proceedings had separate refund periods that combined exceed 15 months rendered the Commission unable to issue refunds in the Second Complaint proceeding. It would have been possible for the Commission to order refunds for the refund periods in both complaint proceedings if the base ROE resulting from resolution of the First Complaint proceeding was no longer just and reasonable based on the facts and circumstances of the Second Complaint proceeding. However, complainants did not show that the existing rate reviewed in the Second Complaint

[421] RPGI Rehearing Request at 17-21.

[422] *Id.* at 22-23.

proceeding was unjust and unreasonable under the facts and circumstances of that proceeding.

262. Both complaints challenged the MISO TOs' base ROE, and the Commission established a new just and reasonable base ROE in the First Complaint proceeding that was filed first chronologically. As discussed above, the Commission found that it was required to review that new base ROE as the existing rate for purposes of the Second Complaint and complainants did not show that this existing rate was unjust and unreasonable. The Commission then found that section 206 provides that refunds may be ordered in a complaint proceeding only when the Commission grants prospective relief in that proceeding because section 206 only permits refunds in proceedings where the Commission sets a new rate to be "thereafter observed and in force."[423] As a result, the Commission found that it did not have authority under section 206 to order refunds in the Second Complaint proceeding because it did not grant prospective relief by establishing a new base ROE in that proceeding. The Commission further explained that ordering refunds in the Second Complaint proceeding even though it did not grant prospective relief in that proceeding would in fact allow its determination in the First Complaint proceeding to serve as the predicate for two 15-month refund periods, which is beyond the Commission's authority in section 206. Accordingly, the fact that the First Complaint and Second Complaint proceedings had separate refund periods that together exceeded 15 months did not render the Commission unable to issue refunds in the Second Complaint proceeding. Rather, it was the fact that the Commission could not grant prospective relief in the Second Complaint proceeding because the complainants did not show that the rate that was reviewed in that Second Complaint proceeding was unjust and unreasonable. Had the complainants made that showing, the Commission could have ordered refunds in the Second Complaint proceeding, regardless of the fact that the refund periods in the First Complaint proceeding and Second Complaint proceeding add up to more than 15 months. However, that was not the case and consequently we find CAPs' argument on this point unavailing.

263. CAPs argue that the Commission's interpretation of the existing rate to be analyzed in the Second Complaint proceeding creates a loophole pursuant to which a utility could make a tactical section 205 filing after a section 206 filing is signaled or underway to undermine section 206's refund and prospective relief remedies. CAPs assert that such a filing could, for example, propose to reduce the utility's base ROE to a level well above the base ROE the initial decision determined was just and reasonable, but just within the top end of what the initial decision identifies as the zone of presumptively just and reasonable ROEs, such that the utility's proposed base ROE in the section 205 filing would likely be accepted by the Commission and then become the currently effective base ROE that the Commission would examine for purposes of acting

[423] Opinion No. 569, 169 FERC ¶ 61,129 at P 568.

on the initial decision. This argument does not persuade us that our interpretation is inappropriate. As an initial matter, we note that the presumptively just and reasonable ranges applied in this order are limited to our analysis of complaints filed under section 206. There is no section 205 filing before us in this proceeding and we are not making any determinations regarding whether or how the presumptively just and reasonable ranges used in this order would apply in the context of a section 205 filing. Moreover, if a utility were to make such a tactical section 205 filing proposing a new base ROE while a section 206 proceeding challenging the utility's base ROE is still pending a final Commission decision, then the Commission could consider such a section 205 filing in light of the pending section 206 proceeding. "The Commission has broad discretion to structure its proceedings so as to resolve a controversy in the way it best sees fit,"[424] and, in addressing such a section 205 filing, the Commission could consider the common issues that would likely be raised by a section 205 filing to change the same base ROE that is being challenged in a pending section 206 proceeding. For example, in analogous circumstances, the Commission consolidated a rate filing pursuant to section 4 of the Natural Gas Act (NGA) with an ongoing complaint proceeding pursuant to section 5 of the NGA involving the same rates. There the Commission noted that "KCC asserts that Southwest Gas's instant section 4 rate filing is nothing more than an attempt to circumvent the ongoing section 5 complaint proceeding"[425] and found that "the section 4 filing appears as an outgrowth of the section 5 complaint proceeding"[426] for which consolidation would "provide the most efficient and effective forum to handle issues common to both proceedings."[427] Any section 205 filing like the type suggested by CAPs would be considered by the Commission in light of any other proceedings

---

[424] *PJM Transmission Owners*, 120 FERC ¶ 61,013, at P 12 (2007). *See also Ameren Energy Generating Co.,* 108 FERC ¶ 61,081, at P 23 (2004) ("The courts have repeatedly recognized that the Commission has broad discretion in managing its proceedings."); *Fla. [426] *Id.* P 20.

[427] *Id.* P 21.

involving common issues, including section 206 proceedings.[428] We do not believe that the Commission's interpretation of the existing rate to be analyzed in the Second Complaint proceeding would somehow allow utilities to make section 205 filings that would dictate or otherwise limit the Commission's ability to appropriately determine just and reasonable rates in section 206 proceedings.

264. LPSC argues that Opinion No. 569's decision to not order refunds in the Second Complaint proceeding is inconsistent with section 206 because section 206 requires the Commission to determine whether a rate "demanded, observed, charged, or collected by any public utility . . . is unjust, unreasonable, unduly discriminatory or preferential"[429] but MISO TOs have never "demanded, observed, charged, or collected" the base ROE that was established in the First Complaint proceeding from their customers, but that is the rate that the Commission analyzed in making its determination in the Second Complaint proceeding. We find this argument unavailing. While at the time the Second Complaint was filed, the new just and reasonable rate established in the First Complaint proceeding had not yet been demanded, observed, charged or collected, the Commission's decision in the First Complaint proceeding made the new base ROE established in that proceeding the rate that was demanded, observed, charged and collected for the First Complaint proceeding's refund period. Therefore, when the Commission analyzed the new just and reasonable rate established in the First Complaint proceeding in making its determination in the Second Complaint proceeding, that rate was the one demanded, observed, charged and collected for the First Complaint proceeding's refund period, which is consistent with the language of section 206. The fact that the Commission acted on the successive complaints in the First Complaint and Second Complaint proceedings in a single order instead of in two separate sequential ones does not render the new base ROE established in the First Complaint proceeding a fiction that is not actually applied by the MISO TOs. Rather, the Commission's decision in the First Complaint proceeding made the rate established there the rate "demanded, observed, charged, or collected" for purposes of the First Complaint proceeding and the Commission then reviewed that rate as the existing rate in making its decision on the Second Complaint which followed the First Complaint. We are not persuaded that this analysis is inconsistent with section 206.

[428] *See, e.g.*, *Mobil Oil Explor. & Prod. SE Inc. v. United Distrib. Cos.*, 498 U.S. 211, 230 (1991) ("An agency enjoys broad discretion in determining how best to handle related, yet discrete, issues in terms of procedures."); *Nadar v. FCC*, 520 F.2d 182, 195 (D.C. Cir. 1975) ("[T]his court has upheld in the strongest terms the discretion of regulatory agencies to control the disposition of their caseload.").

[429] LPSC Rehearing Request at 19 (citing 16 U.S.C. § 824e).

265. CAPs and LPSC argue that the Commission is not required to act on the First Complaint proceeding first and should have acted on the Second Complaint proceeding first. They contend that there is no requirement that the Commission resolve section 206 proceedings chronologically. As an initial matter, we note that, "The Commission has broad discretion to structure its proceedings so as to resolve a controversy in the way it best sees fit."[430] The Commission "is generally master of its own calendar and procedures."[431] In these proceedings, we find that it is appropriate to act on the First Complaint proceeding first and then the Second Complaint proceeding. The Commission permitted the Second Complaint because it was "was based on financial data from a different time period, and produced a different proxy group, than the DCF analysis set forth in the [First Complaint]."[432] In that order, the Commission explained that it "has allowed multiple complaints regarding the same ROE, where the subsequent complaints are based on 'new, more current data.'"[433] Accordingly, the premise for permitting the Second Complaint was that it was based on different, more current data, than the data in the First Complaint proceeding. We find that it is appropriate to address the First Complaint first because the Commission must first determine what the final data and results from the First Complaint are before determining whether the Second Complaint can be granted based on how the Second Complaint's data have changed as compared to the data in the First Complaint. Moreover, we find that it would not be appropriate to follow the approach suggested by CAPs and LPSC because it could force the Commission to delay action on a preceding complaint that is likely closer to resolution until it has first acted on a successive complaint because that successive complaint is

FERC*, 574 F.2d 610, 624 (D.C. Cir. 1978) (stating that agencies have wide leeway in controlling their calendars)).

[432] MISO II Rehearing Order, 156 FERC ¶ 61,061 at P 34.

[433] *Id.* P 33 (quoting *Consumer Advocate Div. of the Pub. Serv. Of West Virginia v. Allegheny Generating Co.*, 67 FERC ¶ 61,288, *order on reh'g*, 68 FERC ¶ 61,207, at 61,998 (1994)).

"aligned with the most recent and accurate evidence."[434] This could further delay Commission action on section 206 complaint proceedings that are often already very protracted. In addition, CAPs' and LPSC's approach would not always benefit ratepayers over utilities. For example, it is possible that, in resolving a successive complaint first, ratepayers would be subject a higher rate during such a complaint's refund period than they would have been subject to if the preceding complaint resulted in a prospectively effective rate that overlapped with the successive complaint's refund period which was lower than the rate resulting from the successive complaint. Accordingly, we find that it is appropriate to address the complaints in these proceedings in chronological order by deciding the First Complaint before deciding the Second Complaint.

266. RPGI argues that, if the Commission's concern in deciding to not order refunds in the Second Complaint proceeding was that it would be required to make duplicative findings of one ROE's unlawfulness, then it could consolidate the First Complaint and Second Complaint proceedings. We find this argument unavailing. The Commission has explained that "[i]n general, the Commission consolidates matters only if . . . consolidation will ultimately result in greater administrative efficiency."[435] However, these proceedings have progressed through hearing, initial decision and, in the case of the First Complaint proceeding, Commission decision, separately with separate records. At this point there would be no greater administrative efficiency in consolidating these two proceedings because they are already close to final resolution. Moreover, RPGI does not explain how consolidation would eliminate the need to identify the existing rate to be analyzed in the Second Complaint proceeding and then determine whether refunds could be issued based on the Commission's analysis of that rate under section 206. Thus, RPGI has not explained how consolidation would change the analysis underlying our decision to not order refunds in the Second Complaint proceeding.

267. RPGI also contends that, if the Commission's concern in making its decision in Second Complaint proceeding is the effect of successive refund periods on the MISO TOs, the appropriate course of action is seeking a statutory change, not adopting a strained statutory interpretation. However, here we must determine how to act in these section 206 complaint proceedings and in order to do so we must determine how to interpret and apply section 206 to these proceedings. The issue before us is not whether it would be appropriate or preferable to seek a statutory change. We must apply the statute as it exists to these proceedings. The fact that RPGI would prefer that the Commission adopt a different interpretation does not mean that the Commission had the option of not applying section 206 as it exists to these proceedings. For the reasons discussed in this order, we find that the application of section 206 to the Second

[434] *See* CAPs Rehearing Request at 59.

[435] *See, e.g.*, *Startrans IO, LLC*, 122 FERC ¶ 61,253, at P 25 (2008).

Complaint proceeding requires us to dismiss the complaint and not order refunds in that proceeding. Accordingly, we find that RPGI's argument on this point does not persuade us to grant rehearing of our decision to not order refunds in the Second Complaint proceeding.

XIX. Conclusion

268. For the reasons discussed above, we grant in part and deny in part the requests for rehearing of Opinion No. 569. In particular, we require the MISO TOs to adopt a 10.02% base ROE effective September 28, 2016, the date Opinion No. 551 initially required the MISO TOs to adopt a 10.32% ROE. As discussed above, we therefore require the MISO TOs to provide refunds based on that 10.02% base ROE, with interest, for the First Complaint proceeding's 15-month refund period from November 12, 2013 through February 11, 2015, and for the period from September 28, 2016 to the date of this order. Further, as discussed above we are denying rehearing of the Commission's dismissal of the Second Complaint in Opinion No. 569 and its finding that no refunds will be ordered in the Second Complaint proceeding.

The Commission orders:

(A) Rehearing of Opinion No. 569 is granted in part and denied in part, as discussed in the body of this order.

(B) MISO TOs' base ROE is set at 10.02% with a total or maximum ROE including incentives not to exceed 12.62%, effective as of September 28, 2016, as discussed in the body of this order.

(C) MISO and MISO TOs are directed to provide refunds, with interest calculated pursuant to 18 C.F.R. § 35.19a (2019), by December 23, 2020, for the 15-month refund period for the First Complaint from November 12, 2013 through February 11, 2015 and for the period from September 28, 2016 to the date of this order, as discussed in the body of this order.

(D) MISO and MISO TOs are directed to file a refund report a detailing the principal amounts plus interest paid to each of their customers by December 23, 2020.

By the Commission. Commissioner Glick is concurring in part and dissenting in part in a separate statement attached.

(S E A L)

Nathaniel J. Davis, Sr.,
Deputy Secretary.

*Highlighted cases only included in MISO II

Cases removed from the Risk Premium Model

As noted above, the Commission refined the Risk Premium Model by, among other things, removing some cases from the analysis. A full list of those cases, along with the reason for their removal, is below:

Cases removed because the utility was merely adopting an existing ROE, such as the MISO ROE, without consideration of whether that ROE would be determined to be just and reasonable under fresh analysis:

- EL08-77, *Central Maine Power Co.*
- ER08-1548, *Northeast Utilities Service Co.*
- ER09-14, *NSTAR Elec. Co.*
- ER07-694, *New England Power Co.*
- EL10-80, *Ameren*
- ER12-1593, *DATC Midwest Holdings*
- ER12-2681, *ITC Holdings*

Cases removed because the ROE was clearly not under consideration:

- ER08-10, *Pepco Holdings, Inc.*
- ER11-3352, *PJM and Public Service Enterprise Group*

Cases removed for being duplicative:

- EL13-86, *Public Service Co. of Colorado*

Cases removed because the ROE was set for a definite future date, and the Commission could not have evaluated a risk premium for a future date:

- ER08-1457, *PPL Elec. Utilities Corp.*[436]

Cases removed because the test period predates 2006:

- EL05-19, *Golden Spread Electric Cooperative, Inc.*
- ER05-154, *Bangor Hydro Electric Company*

[436] Only the 11.18% was removed from consideration. The other two resulting ROEs, because they were not solely applied to a future period, are still included in the analysis.

GLICK, Commissioner, *concurring in part and dissenting in part*:

1. Today's order is yet another twist in the Commission's decade-long effort to adapt its methodology for setting public utilities' return on equity (ROE) to the low-interest rate conditions that have prevailed since the late 2000s. In that time, the Commission has proposed multiple different ways of dealing with the fact that its long-standing ROE methodology produces cost-of-equity estimates well below the ROEs it generally permitted public utilities to collect in the years before the Great Recession. The

Commission's most recent attempt to address this issue, Opinion No. 569,[1] was far from perfect. Nevertheless, I supported it because it represented a reasonable compromise that I hoped would bring some much-needed certainty and predictability to the Commission's approach to setting public utilities' ROEs.

2. So much for that. Today, we are once again changing course and revamping our ROE methodology. And, in so doing, we are sacrificing whatever certainty Opinion No. 569 might have provided.

3. In addition, I am particularly troubled that the Commission is portraying its change of heart as a dispassionate assessment of various technical questions—the comparative merits of one financial model, the right source of data for another, or the appropriate application of various assumptions. It is hard for me to believe that anyone buys that this latest twist is a genuine reassessment of those technical minutiae or that those details are what led Chairman Chatterjee to express his eagerness to consider rehearing requests at the December 2019 Open Meeting, before those requests were even filed. Instead, it appears that the Commission again has chosen a path directed by the results, in this case the perceived need to award a higher ROE, rather than the law and the facts.

4. In fairness, it may be that the methodology established in Opinion No. 569 would yield ROEs that are too low. And it may also be that the ROE established in this proceeding—10.02 percent—is a just and reasonable number. But, even so, the Commission must be transparent about the factors driving its decisionmaking process. If we think the ROEs set by the Commission's methodology are too low—or, for that matter, too high—we ought to say so and explain our reasoning, rather than pretending to be concerned only with the technical details of our models, data, and assumptions. Accordingly, I dissent in part because I do not believe that today's order adequately justifies several of the changes it adopts, even if the end result is an appropriate number.

5. Finally, today's order affirms the one aspect of Opinion No. 569 that merited a grant of rehearing. Opinion No. 569 declined to order refunds for a period in which everyone agrees customers paid an unjust and unreasonable rate. I continue to believe that decision was an abdication of our responsibility to protect consumers. As a result, I also dissent from the portion of today's order that affirms that decision.

[1] *Ass'n of Bus. Advocating Tariff Equity v. Midcontinent Indep. Sys. Operator, Inc.*, Opinion No. 569, 169 FERC ¶ 61,129 (2019).

I. The Commission Must Stop the Endless Fiddling with Its ROE Methodology

6. Between 2011 and 2015, various entities representing customers' interests filed a series of complaints under section 206 of the Federal Power Act[2] (FPA) arguing that the base ROE available to transmission owners in ISO New England, Inc. and the Midcontinent Independent System Operator (MISO) was unjust and unreasonable. In Opinion No. 531, the Commission addressed the first of those complaints, with its most significant findings being that "anomalous capital market conditions" required the Commission to consider a variety of financial models and that those models supported an elevated ROE.[3] The Commission subsequently applied that approach to a similar complaint involving the MISO Transmission Owners.[4] Shortly thereafter, however, the D.C. Circuit vacated Opinion No. 531, sending it back to the Commission and the Commission back to the drawing board.[5] Following that remand, the Commission proposed to expressly rely on the four financial models considered in Opinion No. 531.[6] A year later, in Opinion No. 569, we narrowed it to two models, while making a number of changes to how we implemented those models.[7] Today, we're back up to three models, with another round of tweaks to those models.[8]

7. With the exception of the Commission's finding of anomalous market conditions, which at least hinted at its real concern, the Commission's various orders in this saga have suggested that each new iteration of its ROE methodology is a largely technical affair that turns on the Commission's evaluation of discrete issues with the various

[8] Although the complaints against the RTO-wide ROEs in MISO and ISO New England garnered the most attention, the last ten years have also seen a host of other complaints against individual transmission owner's ROEs, which have also been affected by the Commission's back-and-forth over these complaints.

financial models. In so doing, the Commission has added new models,[9] removed some of those models,[10] tweaked some of those models,[11] introduced new inputs,[12] modified existing inputs,[13] introduced new screens,[14] modified existing screens,[15] and even altered how the Commission places the ROE within the zone of reasonableness.[16] But, with each

[9] *See, e.g.*, Opinion No. 551, 156 FERC ¶ 61,234 at P 9 (relying on four alternative models to place the ROE within the zone of reasonableness).

[10] *See, e.g.*, Opinion No. 569, 169 FERC ¶ 61,129 at PP 200, 340 (declining to rely on the Expected Earnings or Risk Premium methodologies). Indeed, at this point, the Commission has considered, but not relied on the risk premium model, Opinion No. 551, 156 FERC ¶ 61,234 at P 191, proposed relying on the risk premium model, Briefing Order, 165 FERC ¶ 61,118 at PP 18-19**,** declined to rely on the risk premium model, Opinion No. 569, 169 FERC ¶ 61,129 at P 340, and, with today's order, now elected to rely on the rely risk premium model, *Ass'n of Bus. Advocating Tariff Equity v. Midcontinent Indep. Sys. Operator, Inc.*, Opinion No. 569, 171 FERC ¶ 61,154, at P 104 (2020).

[11] *See, e.g.*, Opinion No. 569-A, 171 FERC ¶ 61,154 at P 107 (modifying the risk premium model to produce a zone of reasonableness rather than a single point estimate).

[12] *Compare* Opinion No. 569, 169 FERC ¶ 61,129 at P 274 (rejecting the use of *Value Line* short-term growth rates in the Capital Asset Pricing Model (CAPM)) *with* Opinion No. 569-A, 171 FERC ¶ 61,154 at P 78 ("clarify[ing]" that the Commission will consider *Value Line* short-term growth rates in the CAPM).

[13] *See, e.g.*, Opinion No. 569-A, 171 FERC ¶ 61,154 at P 57 (reducing the weighting of the long-term growth rate in the two-step Discounted Cash Flow model (DCF) from one-third to one-fifth).

[14] Briefing Order, 165 FERC ¶ 61,118 at P 54 (proposing a high-end outlier screen that would apply to "any proxy company whose cost of equity estimated with a given model is more than 150 percent of the median result of all of the potential proxy group members in that model"); Opinion No. 569, 169 FERC ¶ 61,129 at P 375 (adopting the proposed high-end outlier screen).

[15] *See, e.g.*, Opinion No. 569-A, 171 FERC ¶ 61,154 at P 154 (increasing the threshold for the high-end outlier test from 150 percent of the median of the zone of reasonableness to 200 percent of the median of the zone of reasonableness).

[16] *See, e.g.*, *id.* P 193 (changing the start points for setting ROEs for above- and below-average ROEs); Opinion No. 551, 156 FERC ¶ 61,234 at P 275 (setting the MISO-wide ROE at the midpoint of the upper half of the zone of reasonableness).

new twist, it becomes harder to buy that the Commission is genuinely reassessing the mechanics of each model rather than disagreeing with the ROE numbers those models produce.[17]

8. Today's order is the culmination of all that. Not long after completing a year-long process to re-evaluate our approach to setting ROEs following the D.C. Circuit's decision in *Emera Maine*, the Commission is now once again charting a major change of course. In so doing, the Commission is again portraying its change of heart as a technical matter based on its reassessment of a handful of discrete issues rather than what it is: A determination that the old number was too low and now we need a higher one.

9. To be fair, I am sympathetic to the impulse to consider subjective factors. The Commission's approach to setting a just and reasonable ROE will often implicate broader policy considerations, equity, and other factors that cannot be captured in, for example, a discussion of dividend yields or the appropriate sources of growth rate calculations. But while ROE policy will always be as much art as science, that is no excuse to pretend that art is science.

10. If broader considerations, including policy goals, are preventing the Commission from settling on or consistently applying an ROE methodology, then we must acknowledge those goals and give the interested entities the chance to weigh in on them just as they do for the intricacies of dividend yields, growth rates, and the like. All approaches to setting ROEs have their shortcomings, but the worst result by far is to continually fiddle with those approaches, undermining the certainty and predictability that help transmission owners make long-term investments. If the Commission is going to purport to rely entirely on financial models to evaluate and set ROEs, it has to take those models at face value without second-guessing them when it does not like the results.

11. In addition, today's order illustrates the problems with disguising subjective policy considerations as technical determinations. In a number of instances, the Commission is reversing determinations made in Opinion No. 569 using rationales that are far less convincing than those that supported the opposite outcome in Opinion No. 569. Shifting

---

[17] It is also worth noting that, today, the Commission is adding even more complexity to its approach to setting ROE methodologies by also issuing a policy statement regarding oil and natural gas pipelines that largely follows the approach outlined in Opinion No. 569 rather than this order. In particular, that policy statement does not use the risk premium model, adjust the weighting of long- and short-term growth rates for the two-step DCF model, or adopt a particular high-end outlier screen. *See Policy Statement on Determining Return on Equity for Natural Gas and Oil Pipelines*, 171 FERC ¶ 61,155 at PP 2, 87 (2020). The Commission, it seems, just cannot settle on an analytically consistent approach to this important issue.

from such strong arguments to such suspect ones underscores the extent to which subjective factors seem to be operating in the background while also opening the Commission up to considerable risk on judicial review, creating even more of the uncertainty we ought to be trying to minimize.

12. Take the example of the risk premium model. Although Opinion No. 569 declined to utilize the risk premium model based on a long list of shortcomings, today's order reverses course, adding it to the DCF and CAPM on which the Commission previously relied. The record before us does not support that choice.

13. As an initial matter, and as explained in Opinion No. 569, the risk premium model does essentially the same thing as the CAPM by attempting to calculate the "premium that investors require over the risk-free rate of return."[18] Opinion No. 569 rightly pointed out that nothing in the record supports having two thirds of the Commission's ROE methodology composed of such analytically redundant approaches.[19] Today's order tersely responds to that concern by asserting that the two models are "sufficiently distinct" since they use different inputs.[20] But that ignores the point in Opinion No. 569 that the problem with relying on both models is that they replicate the same basic methodology, irrespective of their inputs.[21]

14. Opinion No. 569 also explained how the risk premium model is, in most respects, just an inferior version of the CAPM in so far as it does not consider market-based cost-of-equity estimates[22] and introduces significant circularity concerns by relying on *past*

---

[18] Opinion No. 569, 169 FERC ¶ 61,129 at P 341.

[19] *Id.*

[20] Opinion No. 569-A, 171 FERC ¶ 61,154 at P 105.

[21] Opinion No. 569, 169 FERC ¶ 61,129 at P 341 ("We find that using the Risk Premium model in conjunction with the CAPM model would confer too much weight towards risk premium methodologies. The Commission has long used and, over time, refined the DCF model and we find that it would be inappropriate for variations of the risk premium model to receive twice its weight.").

[22] *Id.* P 342 ("[T]he Risk Premium model is likely to provide a less accurate current cost of equity estimate than the DCF model or CAPM because it relies on previous ROE determinations, whose resulting ROE may not necessarily be directly determined by a market-based method, whereas the DCF and CAPM methods apply a market-based method to primary data."). In addition, as the Commission noted, many of the ROEs included in the risk premium analyses in the record were never determined to be just and reasonable. For example, many of the ROEs were set through uncontested settlements, which involve compromise across a host of issues of which ROE is just one.

judgments, which may not reflect the appropriate risk premium under current conditions.[23] The Commission responds to those circularity concerns by contending that they are "mitigate[d]" by the fact that the Commission will average the results of the risk premium with the DCF and the CAPM, which do not present the same concerns.[24] But observing that the Commission will *also* use models without significant circularity concerns is not a reasoned response to the argument that you should not use circular models in the first place.

15. In addition, the Commission convincingly explained in Opinion No. 569 how "the record contains insufficient evidence to conclude that investors rely on risk premium analyses utilizing historic Commission ROE determinations or settlement approvals to determine the cost of capital and make investment decisions."[25] The Commission noted that, while allowed ROEs are certainly important to investors' decisionmaking, that does not suggest that investors' perform anything remotely close to the analysis contemplated by the risk premium model—*i.e.*, a backward looking comparison between riskless assets and allowed ROEs—when making their investment decisions.[26] Today's order now takes the opposite position, observing only that investors in regulated utilities expect to earn a return above a risk-free asset (which is obviously true) and that "investors . . . observe regulatory ROEs and how changes in authorized ROE levels could affect utility earnings" (which is equally obvious).[27] It should go without saying that investors pay attention to ROEs earned by public utilities and expect them to be higher than debt backed by the U.S. government. But neither of those self-evident statements provides *any* reason—much less substantial evidence—to believe that investors perform a risk premium analysis comparing past differences between risk free assets and Commission-allowed ROEs when evaluating whether to invest in Commission-regulated public utilities.

16. And, finally, the risk premium model does not at all fit with the Commission's new approach for evaluating whether an existing ROE is just and reasonable. Opinion No. 569 established a framework for evaluating whether an existing ROE is just and

---

The Commission frequently approves uncontested without directly passing on whether the individual terms are just and reasonable. *See id.*

[23] *See id.* P 343 (explaining that the circularity concerns with the risk premium model are "particularly direct and acute").

[24] Opinion No. 569-A, 171 FERC ¶ 61,154 at P 106.

[25] Opinion No. 569, 169 FERC ¶ 61,129 at P 345.

[26] *Id.*

[27] Opinion No. 569-A, 171 FERC ¶ 61,154 at P 112.

reasonable based on ranges of presumptively just and reasonable results derived from the financial models used by the Commission.[28] Unlike every other financial model used, or even considered by the Commission in Opinion No. 569,[29] the risk premium model produces a single point estimate of the just and reasonable ROE, not a zone of reasonableness.[30]

17. Recognizing this "serious concern," but nevertheless determined to fit a square peg into a round hole, today's order resolves to "impute" the average width of the zone of reasonableness created by the DCF and CAPM methodologies to the risk premium model.[31] For example, if the DCF and CAPM produce an average zone of 200 basis points, it seems that the Commission will just assume that the risk premium model does too. Today's order, however, does not point to any evidence suggesting that such imputation is appropriate or that any investors or financial experts have sanctioned the Commission's method. Presumably that is because the record lacks any evidence supporting such an odd repurposing of the risk premium model.[32] After all, the Commission's approach to using the risk premium in evaluating whether an existing ROE is just and reasonable is the equivalent of making someone a "custom" suit based on their siblings' measurements: Maybe it will fit, but there is no reason to believe that it will and, in any case, it misses the point of the exercise.

18. In addition, today's order adopts a series of equally unreasoned modifications to Opinion No. 569's framework for conducting the first step of the section 206 inquiry. As noted, Opinion No. 569 established a practice of dividing the zone of reasonableness into ranges of presumptively just and reasonable ROEs within the broader zone of reasonableness.[33] In particular, the Commission created risk-adjusted "quartiles" of the

---

[28] Opinion No. 569, 169 FERC ¶ 61,129 at P 57.

[29] The Commission also considered, but rejected, relying upon an expected earnings model as well. *Id.* P 200.

[30] *Id.* P 351.

[31] Opinion No. 569-A, 171 FERC ¶ 61,154 at P 107.

[32] That become especially clear when compared with the Commission's thorough and well-reasoned rejection of the risk premium on this basis, among others, in Opinion No. 569. *Compare id* P 107 *with* Opinion No. 569, 169 FERC ¶ 61,129 at P 351.

[33] That change responded to the D.C. Circuit's holding that the FPA contemplates "a 'broad' range of potentially just and reasonable ROEs, 'not an exact dollar figure.'" *Emera Maine v. FERC*, 854 F.3d 9, 23 (D.C. Cir. 2017) (quoting *Panhandle E. Pipe Line Co. v. FERC*, 777 F.2d 739, 746 (D.C. Cir. 1985)).

zone of reasonableness centered on the three points that the Commission uses as the starting point for setting ROEs for utilities of different risk profiles[34]—the midpoint of the entire zone of reasonableness for average-risk utilities, the midpoint of the lower half of the zone of reasonableness for below-average risk utilities, and the midpoint of the upper half of the zone of reasonableness for above-average risk utilities.[35]

19. The Commission justified the end points of each quartile by explaining that "[l]ogic dictates that the end points of those ranges should not be closer to the starting points for the ranges of utilities with different risk profiles than they are to their own starting point."[36] In other words, it would not make sense to presume that an existing ROE is just and reasonable if it was closer to the starting point used to set the ROE for a utility of a different risk profile than the starting point for a utility of the same risk profile. The Commission's quartile-based approach made sense given the emphasis that the Commission has historically placed on relative risk profiles when placing ROEs within the zone of reasonableness[37] and it ensured that the ranges of presumptively just and reasonable results were not just arbitrary sub-sections of the zone of reasonableness.

20. Today's order abandons that well-reasoned approach and arbitrarily divides the entire zone of reasonableness into thirds, with each third providing a presumptively just and reasonable range of ROEs for certain utilities. The Commission appears to suggest[38] that this maneuver is necessary to comply with the D.C. Circuit's statement in *Emera Maine* that "the zone of reasonableness creates a broad range of *potentially* lawful

---

[34] Opinion No. 569, 169 FERC ¶ 61,129 at P 57.

[35] *Id*. The midpoint is the measure of central tendency that the Commission uses when setting the ROE for a diverse range of utilities. *Id.* PP 398, 409. By contrast, the Commission uses the median as the measure of central tendency when setting the ROE for a single utility. *Id.* P 398.

[36] *Id.* P 63.

[37] *See* Opinion No. 569, 169 FERC ¶ 61,129 at P 62 ("We also find that the circumstance most relevant to determining that range is the utility's risk profile."); *see also FPC v. Hope Natural Gas Co.*, 320 U.S. 591, 603 (1944) ("[T]he return to the equity owner should be commensurate with returns on investments in other enterprises having corresponding risks."); *Petal Gas Storage, L.L.C. v. FERC*, 496 F.3d 695, 6-99700 (D.C. Cir. 2007) (explaining the emphasis that the Commission and courts have placed on the role of risk in setting ROEs).

[38] Opinion No. 569-A, 171 FERC ¶ 61,154 at P 190.

ROEs."[39] But *Emera Maine* requires nothing of the sort. Read in context, the quoted language stands only for the proposition that the Commission cannot prove that an existing rate is unjust and unreasonable simply by showing that its ROE methodology would produce a different number using current data.[40] The court certainly did not suggest that every point within the zone of reasonableness must be *presumptively* just and reasonable for some utility, which is how today's order appears to understand that language. In any case, the quartile-based approach in Opinion No. 569 easily complied with even the Commission's reading of the language in *Emera Maine*. Because the ranges only represented presumptive findings, a public utility could still argue that an ROE outside those ranges was nevertheless just and reasonable based on other considerations,[41] making every ROE within the zone of reasonableness at least "potentially" just and reasonable.

21. And that's just the start of it. Recognizing that the decision to divide the zone of reasonableness into thirds obliterates the rationale for the ranges outlined in Opinion No. 569,[42] the Commission announces, without any explanation, that it will change the starting points it uses when setting the ROE for below- and above-average risk utilities to the midpoint of the lower third of the zone of reasonableness and the midpoint of the upper third of the zone of reasonableness, respectively.[43] Now the tail is truly wagging the dog. In Opinion No. 569, the Commission justified the ranges of presumptively just and reasonable ROEs based on the Commission's longstanding approach to handling companies' relative risk profiles, namely the use of the upper and lower midpoints for utilities of above- and below-average risk, respectively.[44] In today's order, the Commission uproots that longstanding approach, selecting entirely new starting points for placing ROEs within the zone of reasonableness in order to support its new ranges of

[39] *Emera Maine*, 854 F.3d at 26 (emphasis added).

[40] *Id.* ("But, as we have explained, the zone of reasonableness creates a broad range of potentially lawful ROEs rather than a single just and reasonable ROE, meaning that FERC's finding that 10.57 percent was a just and reasonable ROE, standing alone, did not amount to a finding that every other rate of return was not." (internal quotation marks omitted)).

[41] Opinion No. 569, 169 FERC ¶ 61,129 at PP 60-64, 68 (discussing how the Commission would apply the new framework, including what other factors it would consider).

[42] *See supra* P 20 & note 37.

[43] Opinion No. 569-A, 171 FERC ¶ 61,154 at 194.

[44] Opinion No. 569, 169 FERC ¶ 61,129 at PP 62-64.

presumptively just and reasonable results. That gets it entirely backwards; the ranges of presumptively just and reasonable results should reflect how we set ROEs, not the other way around. In any case, at no point in today's order does the Commission explain why the new starting points themselves are an appropriate place to begin the process of placing the ROE for an above- or below-average risk utility within the zone of reasonableness.[45]

22. Suffice it to say, the Commission has not justified its change of course with respect to either the risk premium model or its approach to step one of the section 206 inquiry. Nevertheless, while I believe that Opinion No. 569 was a superior approach to setting ROEs, I also recognize that the roughly 10 percent ROE established in today's order may well be a just and reasonable end result.[46] In addition, for the reasons explained above, I firmly believe that the Commission must finally bring some certainty and predictability to how its sets transmission owner ROEs.

II. The Commission Should Order Refunds for Unjust and Unreasonable Rates Paid by Consumers

23. I continue to disagree with the Commission's refusal to order refunds for the fifteen-month refund period established pursuant to the Second Complaint.[47] Throughout that period, customers within MISO paid an unjust and unreasonable ROE. Nevertheless, the Commission refuses to order refunds on the specious basis that the FPA requires it to act as if the 10.02 percent ROE set in today's order was in effect throughout that fifteen-month period. In reality, however, customers actually paid a 12.38 percent ROE—a difference worth tens of millions of dollars—and nothing in the law requires us to pretend otherwise.

24. The facts relevant to the issue of refunds are straightforward. On November 12, 2013, multiple parties filed a complaint (First Complaint) alleging that the MISO Transmission Owners' 12.38 percent ROE was unjust and unreasonable.[48] The

---

[45] That failure is particularly glaring because the new starting points will be closer to either the top or bottom of the zone of reasonableness than the midpoint. Nothing in today's order—or the record before us—explains why those starting points should be biased towards the most extreme costs of equity in the zone of reasonableness.

[46] *Cf. Hope*, 320 U.S. 591, 602 (1944) ("Under the statutory standard of 'just and reasonable' it is the result reached not the method employed which is controlling.").

[47] *See* Opinion No. 569, 169 FERC ¶ 61,129 (Glick, Comm'r, dissenting in part).

[48] *Id.* P 3. The authorized base ROE for the ATCLLC zone was 12.20 percent, but I will follow the underlying order's practice of referring to the MISO-wide ROE as 12.38.

Commission set the matter for hearing and established a refund effective date of November 12, 2013 (the date the First Complaint was filed),[49] meaning that the 15-month refund period for the First Complaint lasted until February 12, 2015.[50] On February 12, 2015, a different set of parties filed another complaint (Second Complaint) against the MISO Transmission Owners' ROE. The Commission again set the matter for hearing and established a refund effective date of February 12, 2015,[51] meaning that the 15-month refund period for the Second Complaint lasted until May 12, 2016. Both proceedings were fully litigated and produced initial decisions by Administrative Law Judges.[52] And, in both cases, the Commission did not get around to issuing orders on the initial decisions until well after both refund periods expired, meaning that customers paid rates reflecting a 12.38 percent ROE throughout both refund periods.[53]

25. In today's order, the Commission affirms its conclusion in Opinion No. 569 that the 12.38 percent ROE was unjust and unreasonable and it establishes a new just and reasonable ROE of 10.02 percent. That is sufficient to order refunds for the refund

---

Id. P 3 & n.11.

[49] *Ass'n of Bus. Advocating Tariff Equity v. Midcontinent Indep. Sys. Operator, Inc.*, 149 FERC ¶ 61,049, at P 188 (2014), *order on reh'g*, 156 FERC ¶ 61,060 (2016).

[50] As discussed further below, pursuant to the Regulatory Fairness Act, Pub. L. No. 100-473, § 2, 102 Stat 2299 (1988) (codified at 16 U.S.C. § 824e(b)), as part of any proceeding under section 206 of the FPA, the Commission shall establish a refund effective date and, at the conclusion of that proceeding, it may order refunds for the difference between an unjust and unreasonable rate in effect during the period up to 15 months following the refund effective date and the new just and reasonable rate fixed by the Commission.

[51] *Ark. Elec. Coop. Corp. v. ALLETE, Inc.*, 151 FERC ¶ 61,219, at P 1 (2015), *order on reh'g*, 156 FERC ¶ 61,061 (2016) (Second Complaint Rehearing Order).

[52] *Ass'n of Bus. Advocating Tariff Equity v. Midcontinent Indep. Sys. Operator, Inc.*, 153 FERC ¶ 63,027 (2015); *Ark. Elec. Coop. Corp. v. ALLETE, Inc.*, 155 FERC ¶ 63,030 (2016).

[53] The Commission originally issued an order on the First Complaint in September 2016. *See Ass'n of Businesses Advocating Tariff Equity v. Midcontinent Indep. Sys. Operator, Inc.*, Opinion No. 551, 156 FERC ¶ 61,234, at P 9 (2016). But, shortly thereafter, the D.C. Circuit issued its opinion in *Emera Maine*, 854 F.3d 9, which vacated the precedent on which Opinion No. 551 relied. Following briefing on remand, the Commission issued Opinion No. 569, which elicited the rehearing requests addressed in today's order.

periods established pursuant to *both* the First and Second Complaints. To see why, let's start with the text of section 206(b), which provides that

> At the conclusion of any proceeding under this section [i.e., section 206], the Commission may order refunds of any amounts paid, for the period subsequent to the refund effective date through a date fifteen months after such refund effective date, in excess of those which would have been paid under the just and reasonable rate, charge, classification, rule, regulation, practice, or contract which the Commission orders to be thereafter observed and in force.[54]

All that text requires is that the Commission find that customers paid an unjust and unreasonable rate during the refund period and that the Commission have set a just and reasonable replacement rate, so that it can calculate refunds equal to the difference between those two rates. Both conditions are satisfied here: Customers paid 12.38 percent through the Second Complaint refund period and the Commission has determined that they should have paid 10.02 percent. That is sufficient to order refunds pursuant to section 206(b).

26. Contrary to the suggestion in today's order,[55] the text of section 206(b) does not limit the Commission's refund authority to only those individual proceedings in which it sets a new rate. Instead, it provides the Commission with the authority to order refunds "[a]t the *conclusion* of *any* proceeding under this section"—*i.e.*, section 206."[56] Congress surely understood that not every section 206 proceeding would be resolved against the public utility and, had it so desired, it could have conditioned the Commission's refund authority accordingly. But by pairing the word "conclusion"—which would seem to contemplate proceedings in which the public utility prevailed as well as those in which it did not—with the phrase "any proceeding"—which is equally unlimited—Congress rejected such a narrow interpretation of the Commission's refund authority. Instead, as noted, the plain text of section 206 indicates that the Commission's refund authority turns on the presence of a difference between the unjust and unreasonable rate that customers paid during the refund period and the just and reasonable rate that they should have paid, not whether the Commission set a new rate in every complaint it resolves.

27. Recognizing that Congress did not explicitly limit the Commission's refund authority, the Commission responds that it did so implicitly when it inserted the phrase

---

[54] 16 U.S.C. § 824e(b) (emphasis added).

[55] Opinion No. 569-A, 171 FERC ¶ 61,154 at PP 260-262.

[56] 16 U.S.C. § 824e(b) (emphasis added).

"thereafter observed and in force" in section 206(b).[57] The idea, as I understand it, is that "thereafter observed and in force" is supposed to reflect Congress' understanding that the Commission would be setting a new rate in each complaint prior to ordering any refunds.[58] Thus, the argument appears to go, the Commission cannot order refunds unless it sets a new rate in the complaint corresponding to each individual refund period.

28. As an initial matter, that would be a remarkably convoluted way of limiting the Commission's refund authority under section 206. It envisions that, instead of limiting the Commission's refund authority in the statutory text that establishes the proceedings in which the Commission can order refunds, Congress elected to do so through an opaque reference in the discussion of how the Commission should calculate any refunds that it may order. That is a bizarre—and overly complicated—way to read an otherwise straightforward statute.[59]

29. In any case, the "thereafter observed and in force" language is better read as a reference to the identical language in section 206(a).[60] Under that reading, all that "thereafter observed and in force" does is clarify that the ceiling on the Commission's refund authority under section 206(b) is the difference between the rate in effect during the refund period and the just and reasonable rate that the Commission established pursuant to subsection 206(a).[61] In other words, that language specifies *how* the Commission should calculate any refunds it orders, not *when* it may order refunds. As noted, my reading makes far more sense given the fact that the "thereafter observed and in force" language appears in the portion of 206(b) that defines how the Commission should calculate refunds, not when it should order them. I see no reason to abandon that

---

[57] Opinion No. 569-A, 171 FERC ¶ 61,154 at P 262.

[58] *Id.*

[59] *Cf. City of Anaheim v. FERC*, 558 F.3d 521, 525 (D.C. Cir. 2009) ("declin[ing] FERC's invitation to mangle the statute").

[60] *See* 16 U.S.C. § 824e(a) (requiring the Commission to establish a new just and reasonable rate to be "thereafter observed and in force" whenever it finds that an existing rate is unjust and unreasonable or unduly discriminatory or preferential).

[61] That interpretation makes even more sense when you consider that section 206(b) was added more than 50 years after section 206(a), which was part of the original FPA, and so it would have been necessary to clarify how the amendment worked in conjunction with the pre-existing language.

straightforward reading of the statute, which protects customers from paying unjust and unreasonable rates, in favor of a convoluted one that does not.[62]

30. The Commission's next argument is even more of a head scratcher. The Louisiana Public Service Commission argues that it is irrational to use the ROE set in Opinion No. 569 as the baseline for evaluating whether to order refunds for the Second Complaint refund period because that ROE was never "demanded, observed, charged, or collected," as section 206 requires. The Commission responds with what might charitably be called a regulatory fiction. It argues that Opinion No. 569 made the new just and reasonable ROE set in the First Complaint proceeding effective as of the beginning of the First Complaint refund period, which, the Commission argues, means that we must pretend that that lower ROE was in effect throughout the refund period for the Second Complaint as well. The Commission seems to be suggesting that it must pretend that the 10.02 ROE established today was "demanded, observed, charged, or collected" during the second refund period.[63]

31. But that interpretation is both demonstrably false and squarely foreclosed by section 206. First and foremost, the ROE that the MISO Transmission Owners collected during the refund period for the Second Complaint was 12.38 percent, no ifs, ands, or buts. In addition, the FPA flatly prohibited the MISO Transmission Owners from collecting any other ROE during that period. As noted, section 206 is forward looking in that it gives the Commission the ability to set a new just and reasonable rate as of the date on which the Commission makes the findings required by section 206.[64] The only exception to that rule is for the refund period, during which time the Commission is

---

[62] *Cf., e.g.*, *California ex rel. Lockyer v. FERC*, 383 F.3d 1006, 1017 (9th Cir. 2004) (rejecting "an interpretation [that] comports neither with the statutory text nor with the Act's 'primary purpose' of protecting consumers"); *City of Chicago, Ill. v. FPC*, 458 F.2d 731, 751 (D.C. Cir. 1971) ("[T]he primary purpose of the Natural Gas Act is to protect consumers." (citing, *inter alia*, *City of Detroit v. FPC*, 230 F.2d 810, 815 (D.C. Cir. 1955)); S. Rep. 100-491, 5-6 (1988) ("The Committee intends the Commission to exercise its refund authority under section 206 in a manner that furthers the long-term objective of achieving the lowest cost for consumers consistent with the maintenance of safe and reliable service.").

[63] Opinion No. 569-A, 171 FERC ¶ 61,154 at P 264.

[64] *See, e.g.*, *Louisiana Pub. Serv. Comm'n v. FERC*, 772 F.3d 1297, 1299 (D.C. Cir. 2014) (explaining that section 206 provides for prospective relief only with the exception of the refund period).

permitted to act as if the new rate were in effect when ordering refunds.[65] The refund period for the Second Complaint, however, fell *after* the conclusion of the refund period for the First Complaint and *before* the date on which the Commission issued Opinion No. 569. Suffice it to say, it is arbitrary and capricious for the Commission to assume that it did that which it is legally prohibited from doing.

32. The Commission's next argument is that ordering refunds for the Second Complaint would represent an end-run around the 15-month limitation on refunds enshrined in section 206(b).[66] That argument appears to have both a legal dimension and a policy dimension. Beginning with the former, the Commission seems to be taking the position that ordering refunds in the Second Complaint period would effectively extend the refund period established for the First Complaint. But the Commission has repeatedly held that the FPA permits such successive or "pancaked" complaints, which are "'entirely new proceeding[s]'" and not "'duplicative proceeding[s] intended solely to expand the amount of refund protection beyond 15 months,'"[67] provided that they raise new facts or arguments,[68] which the Commission held that the Second Complaint did.[69] Accordingly, rather than extending the refund period for the First Complaint, ordering refunds pursuant to the Second Complaint would simply reflect the fact that the MISO Transmission Owners collected an unjust and unreasonable ROE during a period when all parties were on notice that the Commission might order refunds of such excessive rates.[70]

33. From the perspective of public policy, I recognize that permitting pancaked complaints with multiple refund periods may be sub-optimal. After all, pancaked complaints can create significant uncertainty in an area where certainty is especially

---

[65] *Id.*

[66] Opinion No. 569-A, 171 FERC ¶ 61,154 at P 259.

[67] Second Complaint Rehearing Order, 156 FERC ¶ 61,061 at P 33 (quoting *Southern Co. Servs. Inc*., 83 FERC ¶ 61,079, 61,386 (1998)).

[68] *Id.* P 33 ("[T]he Commission has allowed multiple complaints regarding the same ROE, where the subsequent complaints are based on new, more current data, explaining that this is particularly critical given that what is at issue is return on equity, which, in contrast to other cost of service issues can be particularly volatile. (internal alterations and quotation marks omitted)).

[69] *Id.* P 34.

[70] *Cf. La. Pub. Serv. Comm'n v. FERC*, 482 F.3d 510, 520 (D.C. Cir. 2007) (noting that the filing of a section 206 put all parties on notice of the possibility that the Commission would order refunds).

important as transmission owners decide whether and how to invest in transmission infrastructure. But the desirability of pancaked complaints is something for Congress to consider, not a reason for us to twist the text of the FPA. So long as the FPA and the Commission's precedents permit pancaked complaints, then the Commission should not let its antipathy toward such complaints prevent customers from receiving the refunds to which they are entitled.

For these reasons, I respectfully concur in part and dissent in part.

At the center of everything we do is a strong commitment to independent research and sharing its profitable discoveries with investors. This dedication to giving investors a trading advantage led to the creation of our proven Zacks Rank stock-rating system. Since 1988 it has more than doubled the S&P 500 with an average gain of +23.52% per year. These returns cover a period from January 1, 1988 through May 4, 2020. Zacks Rank stock-rating system returns are computed monthly based on the beginning of the month and end of the month Zacks Rank stock prices plus any dividends received during that particular month. A simple, equally-weighted average return of all Zacks Rank stocks is calculated to determine the monthly return. The monthly returns are then compounded to arrive at the annual return. Only Zacks Rank stocks included in Zacks hypothetical portfolios at the beginning of each month are included in the return calculations. Zacks Ranks stocks can, and often do, change throughout the month. Certain Zacks Rank stocks for which no month-end price was available, pricing information was not collected, or for certain other reasons have been excluded from these return calculations.

At the center of everything we do is a strong commitment to independent research and sharing its profitable discoveries with investors. This dedication to giving investors a trading advantage led to the creation of our proven Zacks Rank stock-rating system. Since 1988 it has more than doubled the S&P 500 with an average gain of +23.52% per year. These returns cover a period from January 1, 1988 through May 4, 2020. Zacks Rank stock-rating system returns are computed monthly based on the beginning of the month and end of the month Zacks Rank stock prices plus any dividends received during that particular month. A simple, equally-weighted average return of all Zacks Rank stocks is calculated to determine the monthly return. The monthly returns are then compounded to arrive at the annual return. Only Zacks Rank stocks included in Zacks hypothetical portfolios at the beginning of each month are included in the

At the center of everything we do is a strong commitment to independent research and sharing its profitable discoveries with investors. This dedication to giving investors a trading advantage led to the creation of our proven Zacks Rank stock-rating system. Since 1988 it has more than doubled the S&P 500 with an average gain of +23.52% per year. These returns cover a period from January 1, 1988 through May 4, 2020. Zacks Rank stock-rating system returns are computed monthly based on the beginning of the month and end of the month Zacks Rank stock prices plus any dividends received during that particular month. A simple, equally-weighted average return of all Zacks Rank stocks is calculated to determine the monthly return. The monthly returns are then compounded to arrive at the annual return. Only Zacks Rank stocks included in Zacks hypothetical portfolios at the beginning of each month are included in the return calculations. Zacks Ranks stocks can, and often do, change throughout the month. Certain Zacks Rank stocks for which no month-end price was available, pricing information was not collected, or for certain other reasons have been excluded from these return calculations.

BUSINESS: Atmos Energy Corporation is engaged primarily in the distribution and sale of natural gas to over three million customers through six regulated natural gas utility operations: Louisiana Division, West Texas Division, Mid-Tex Division, Mississippi Division, Colorado-Kansas Division, and Kentucky/Mid-States Division. Gas sales breakdown for fiscal 2019: 66%, residential; 27%, commercial; 5%, industrial; and 2% other. The company sold Atmos Energy Marketing, 1/17. Officers and directors own approximately 1.4% of common stock (12/19 Proxy). President and Chief Executive Officer: Kevin Akers. Incorporated: Texas. Address: Three Lincoln Centre, Suite 1800, 5430 LBJ Freeway, Dallas, Texas 75240. Telephone: 972-934-9227. Internet: www.atmosenergy.com.

Atmos Energy posted a solid, 7% increase in share net through the first six months of fiscal 2020 (concludes September 30th), compared to the prior-year total. This was made possible partly by the natural gas distribution unit, which benefited from higher rates, mainly in the Mississippi, Mid-Tex, Louisiana, and West Texas divisions. Customer growth, largely in the Mid-Tex operation, also contributed. Meanwhile, the performance of the pipeline and storage division enjoyed an increase in revenue from a Gas Reliability Infrastructure Program filing approved in fiscal 2019. Lastly, the company's interest charges were lower.

But prospects for the remainder of the year are a bit unclear. The coronavirus is hampering the economy, evidenced by such factors as rising unemployment and disrupted supply chains. However, the severity of the pandemic cannot be determined at this juncture, since developments are constantly changing. Leadership contends that preventative measures have been taken, which include a greater emphasis on employees working remotely and adherence to social distancing and other government guidelines when working in the service territories. Still, erring on the side of caution, we currently expect full-year profits to be around $4.60 a share (around 6% growth), which is on the low side of the company's range of $4.58 to $4.73. Looking at fiscal 2021, a similar rate of increase, to $4.85 a share, seems plausible, assuming that the health crisis fades away.

Rate-filing efforts continue. During the first six months of fiscal 2020, Atmos was able to complete eight regulatory proceedings, resulting in a $59.2 million increase in annual operating income. What's more, some ratemaking initiatives were in progress at the time of this report, seeking $170 million of annual operating income. Of course, there are no guarantees that the company will get everything it wants.

Long-term total return potential is not outstanding, relative to other natural gas equities. In spite of the recent stock-price weakness (due to pandemic concerns), rebound potential over 2023-2025 remains unspectacular. The dividend yield is subpar, as well.

BUSINESS: New Jersey Resources Corp. is a holding company providing retail/wholesale energy svcs. to customers in NJ, and in states from the Gulf Coast to New England, and Canada. New Jersey Natural Gas had 547,600 cust. at 9/30/19. Fiscal 2019 volume: 232 bill. cu. ft. (17% interruptible, 17% res., 9% commercial & elec. utility, 40% capacity release programs). N.J. Natural Energy subsidiary provides unregulated retail/wholesale natural gas and related energy svcs. 2019 dep. rate: 2.6%. Has 1,108 empls. Off./dir. own 1.3% of common; BlackRock, 13.9%; Vanguard, 10.4% (12/19 Proxy). CEO, President & Director: Steven D. Westhoven. Incorporated: New Jersey. Address: 1415 Wyckoff Road, Wall, NJ 07719. Telephone: 732-938-1480. Web: www.njresources.com.

Since our February review, shares of New Jersey Resources have staged a hefty correction. Indeed, over that time frame, the equity's price has fallen more than 20%. This likely reflects the challenging operating environment caused by the coronavirus pandemic; the sharp rise in unemployment; and the fact that many utility providers have assured customers that there will not be an interruption in service despite some customers not being able to pay bills due to economic hardship. **Meanwhile, the retail and wholesale energy services provider posted lower-than-expected March-quarter financial results.** In fact, the top line fell 26.2%, to $639.6 million, as NJR's nonutility and utility volumes declined 39.4% and 1.4%, to $342.4 million and $297.2 million, respectively. On the profitability front, total expenses receded by 600 basis points when viewed as a percentage of sales. After accounting for the dilutive effects of a nearly 6.7-million-share increase in common stock outstanding, the fiscal second-quarter share net registered an 11.8% downturn, to $1.12. This was markedly below our call for earnings of $1.45.

Consequently, we have reduced our outlook for this fiscal year (ends September 30th). New Jersey Resources appears poised to log a revenue shortfall of approximately 12%, to $2.275 billion, due largely to volatility in commodity prices and a significant drop in the market rate for fossil fuels. These record low prices are greatly weighing on the nonutility operations. What's more, the recent issuance of stock may help to shore up NJR's cash position, but it is diluting share net. Therefore, we have sliced $0.35 from our 2020 bottom-line estimate, to $1.70 a share. This figure would represent a more-than-13% drop in earnings.

The balance sheet is in good shape. Cash reserves have swelled nearly tenfold, due to stock offerings, to $25.9 billion. Meanwhile, the long-term debt load has remained stable, but management has secured a $425 million short-term revolver, which should help it to weather the current economic downturn.

At the recent quotation, these untimely shares appear richly valued.

Bryan J. Fong *May 29, 2020*

(A) Fiscal year ends Sept. 30th.
(B) Diluted earnings. Qtly. sales and egs. may not sum to total due to rounding and change in shares outstanding. Next earnings report due early Aug.
(C) Dividends historically paid in early Jan., April, July, and October. ■ Dividend reinvestment plan available.
(D) Includes regulatory assets in 2019: $496.6 million, $5.56/share.
(E) In millions, adjusted for splits.

BUSINESS: Northwest Natural Holding Co. distributes natural gas to 1000 communities, 750,000 customers, in Oregon (89% of customers) and in southwest Washington state. Principal cities served: Portland and Eugene, OR; Vancouver, WA. Service area population: 3.7 mill. (77% in OR). Company buys gas supply from Canadian and U.S. producers; has transportation rights on Northwest Pipeline system. Owns local underground storage. Rev. breakdown: residential, 37%; commercial, 22%; industrial, gas transportation, 41%. Employs 1,167. BlackRock Inc. owns 15.5% of shares; Off./Dir. own less than 1% (4/20 proxy). CEO: David H. Anderson. Inc.: Oregon. Address: 220 NW 2nd Ave., Portland, OR 97209. Tel.: 503-226-4211. Internet: www.nwnatural.com.

Northwest Natural Holding recorded improved first-quarter results. Revenues came in about even with the prior-year period, as reduced prices for natural gas offset a greater number of customers, primarily driven by additional demand from the Mist storage facility. Meantime, the Oregon coverage area added 12,400 new customers over the past 12 months, boosting that total 1.6%. However, the weather was warmer in Oregon, partially offsetting some of the positives there. Maintenance expense was about flat year over year, and the company benefited from reduced pension expense in the quarter, but a slightly higher share count hampered share-net expansion. Overall, these factors allowed earnings to rise to $1.58 per share during the period. Northwest is in decent shape, as operations will likely not be affected all that much by the coronavirus, given its focus on residential customers. Overall, we estimate that profits should rise to $2.45 per share this year.

The company further extended the date of its Gil Ranch storage facility sale to June 26th. Management had been looking to divest its stake in the business, and though it has been postponed the sale once before. Northwest has been working to improve its asset mix, and we think this will be completed in the second quarter and will result in a one-time gain.

The company is on track for better performance in the years ahead. Operations will probably benefit from higher revenues, as Northwest recently purchased a water utility in Texas, which further expands operations in that industry. Too, the company has filed for $71.4 million in rate hikes in Oregon, which should help the top line if approved. Overall, we think profits will increase to $2.70 per share in 2021, and $3.50 per share by the 2023-2025 period.

Shares of Northwest Natural Holding are neutrally ranked for Timeliness. The shares have fallen over the past three months, though appreciation potential is lower than average. The dividend yield is now above average and is well covered by earnings. Too, Northwest holds our Highest (1) rank for Safety. All told, this stock is a decent choice for income-seeking accounts.

John E. Seibert III *May 29, 2020*

The shares of ONE Gas, Inc. began trading "regular-way" on the New York Stock Exchange on February 3, 2014. That happened as a result of the separation of ONEOK's natural gas distribution operation. Regarding the details of the spinoff, on January 31, 2014, ONEOK distributed one share of OGS common stock for every four shares of ONEOK common stock held by ONEOK shareholders of record as of the close of business on January 21. It should be mentioned that ONEOK did not retain any ownership interest in the new company.

BUSINESS: ONE Gas, Inc. provides natural gas distribution services to more than two million customers. There are three divisions: Oklahoma Natural Gas, Kansas Gas Service, and Texas Gas Service. The company purchased 174 Bcf of natural gas supply in 2019, compared to 180 Bcf in 2018. Total volumes delivered by customer (fiscal 2019): transportation, 56.6%; residential, 32.5%; commercial & industrial, 10.3%; other, .6%. ONE Gas has around 3,600 employees. BlackRock owns 12.1% of common stock; The Vanguard Group, 10.1%; T. Rowe Price Associates, 7.0%; officers and directors, 1.9% (4/20 Proxy). CEO: Pierce H. Norton II. Incorporated: Oklahoma. Address: 15 East Fifth Street, Tulsa, Oklahoma 74103. Tel.: 918-947-7000. Internet: www.onegas.com.

ONE Gas, Inc. got off to an uninspiring start in 2020. Indeed, first-quarter share net of $1.72 was 2.3% below last year's $1.76 tally. This was attributable, to some extent, to lower gas sales, net of weather normalization, mainly in Kansas and Oklahoma because of warmer temperatures. Also, there was a drop in transportation volumes in Kansas plus a higher effective income tax rate.

The path might be a bit rough over the course of this year. The coronavirus is now having a larger, unfavorable effect on results. But the company argues that the impact will be partially offset by regulatory actions allowing it to use an accounting mechanism to accumulate and defer certain incremental costs incurred (including bad-debt expenses) and lost revenues in connection with the pandemic. What's more, management implemented a comprehensive set of procedures to protect the safety of employees and customers. Still, right now, it appears that full-year profits will decrease about 2%, to $3.45 a share, versus the 2019 total of $3.51. Turning to 2021, though, we expect share net to rebound nearly 6%, to $3.65, if, of course, the health crisis diminishes in intensity.

Finances are healthy. When the first quarter ended, cash and equivalents stood at around $11 million, and cash flows were decent (although they may slow some in the months ahead). Too, long-term debt resided at a reasonable 37% of total capital, and short-term commitments did not appear to be a major problem. Furthermore, there was $474.7 million available (out of $700 million) under a commercial paper program. ONE Gas also holds a $700 million revolving credit facility expiring October 2024, and in April, it entered into a 364-day, $250 million revolving credit agreement. All things considered, the company ought to continue to satisfy its various obligations, such as working capital and dividend payments.

The stock offers decent long-term total return potential for a natural gas utility. The dividend should remain on a steady, upward trajectory. Moreover, the recent price drop (given pandemic concerns), has increased 3- to 5-year recovery possibilities.

Frederick L. Harris, III *May 29, 2020*

(A) Diluted EPS. Excludes nonrecurring gain: 2017, $0.06. Next earnings report due early Aug. Quarterly EPS for 2018 don't add up due to rounding.

BUSINESS: South Jersey Industries, Inc. is a holding company. The company distributes natural gas in New Jersey and Maryland. South Jersey Gas rev. mix '19: residential, 47%; commercial, 23%; cogen. and electric gen., 12%; industrial, 18%. Acq. Elizabethtown Gas and Elkton Gas, 7/18. Nonutil. operations include South Jersey Energy, South Jersey Resources Group, South Jersey Exploration, Marina Energy, South Jersey Energy Service Plus, and SJI Midstream. Has about 1,100 employees. Off./dir. own less than 1% of common; BlackRock, 15.5%; The Vanguard Group, 11.4% (3/20 proxy). Pres. & CEO: Michael J. Renna. Chairman: Joseph M. Rigby. Inc.: NJ. Addr.: 1 South Jersey Plaza, Folsom, NJ 08037. Tel.: 609-561-9000. Internet: www.sjindustries.com.

Shares of South Jersey Industries have rebounded in price lately, following a selloff earlier in the year resulting from the spread of the coronavirus. The company posted mixed results for the March quarter. The top line declined roughly 16% year to year. But cost of sales fell significantly, and operating expenses remained in check. All told, earnings per share of $1.15 compared favorably with the prior-year tally of $1.09.

Considerable economic weakness ought to impact the top line this year. We have lowered our revenue estimate for full-year 2020, to $1.58 billion. Operations and delivery of natural gas to customers have not been materially affected by the coronavirus pandemic, though some incremental costs have been incurred for emergency response, and construction activity has ceased in response to government directives. Overall, we anticipate that expenses will remain subdued in the coming quarters, and that earnings per share of $1.55 for the full year will be a marked improvement from the 2019 level.

We expect a top-line rebound in 2021, and further share-net improvement. Healthy growth ought to continue thereafter. This should be driven by the company's utility operations and regulatory initiatives. These businesses will likely continue to benefit from growth in the customer base. Infrastructure investments to modernize its system should allow South Jersey to meet increasing demand for natural gas in its service territories. Infrastructure replacement programs allow this business to earn an authorized return on approved investments. We expect a measure of improvement from the company's nonutility operations, as well.

This stock is ranked to track the broader market averages for the coming six to 12 months. Aggressive accounts seeking wide capital gains potential should look elsewhere. But conservative investors looking for exposure to the utilities sector may want to take a closer look. South Jersey Industries earns good marks for Safety and Price Stability. Volatility is subdued, as well. All told, the shares offer decent total return potential, on a risk-adjusted basis. This is helped by a generous dividend yield.

BUSINESS: Southwest Gas Holdings, Inc. is the parent holding company of Southwest Gas and Centuri Group. Southwest Gas is a regulated gas distributor serving about 2.1 million customers in parts of Arizona, Nevada, and California. Centuri provides construction services. 2019 margin mix: residential and small commercial, 84%; large commercial and industrial, 3%; transportation, 13%. Total throughput: 2.3 billion therms. Has 8,944 employees. Off. & dir. own .8% of common stock; BlackRock, Inc., 13.5%; The Vanguard Group, Inc., 10.3%; T.Rowe Price Assoc., Inc., 6.8% (3/20 Proxy). Chairman: Michael J. Melarkey. Pres. & CEO: John P. Hester. Inc.: DE. Address: 5241 Spring Mountain Road, Las Vegas, Nevada 89193. Telephone: 702-876-7237. Internet: www.swgas.com.

Shares of Southwest Gas rebounded sharply in price in late March and early April. This followed a dramatic sell-off that began in late February, due to the spread of the coronavirus. The company reported mixed results for the March quarter. The top line advanced slightly for the period. Utility infrastructure revenue increased due to a higher volume of electric infrastructure and pipe replacement work under blanket and bid contracts. Performance at the utility was supported by customer growth and rate relief (which was mainly in California). Operating costs remained in check, and operating income of $148.4 million compared favorably with the prior-year figure of $140.5 million. However, earnings were hurt by a $15.5 million decline in the cash surrender value of company-owned life insurance policies, compared with an increase of $7.6 million in the year-ago period. As a result, earnings per share of $1.31 marked a significant decline, year over year.

Economic weakness associated with measures to curb the spread of the coronavirus pandemic will likely constrain performance in the near term. The economic impact of the pandemic ought to be more pronounced in the current quarter, and such challenges should remain in the back half of the year. The infrastructure services operation Centuri may be more affected than the utility business. In the long run, Centuri will probably benefit from the need for utilities to replace aging infrastructure. In the meantime, performance on the utility side should be supported by customer growth, infrastructure tracker mechanisms, expansion projects, and rate relief.

This stock is ranked to track the broader market averages for the coming six to 12 months. We anticipate solid bottom-line growth for Southwest out to early next decade. From the recent quotation, long-term appreciation potential is below average. Moreover, the dividend yield is not particularly generous for a utility. A selloff some time down the line may offer patient investors a better entry point. Southwest Gas earns good marks for Financial Strength, Price Stability, Growth Persistence, and Earnings Predictability. Volatility is subdued, as well.

Michael Napoli, CFA *May 29, 2020*

BUSINESS: Spire Inc., formerly known as the Laclede Group, Inc., is a holding company for natural gas utilities, which distributes natural gas across Missouri, including the cities of St. Louis and Kansas City, Alabama, and Mississippi. Has roughly 1.7 million customers. Acquired Missouri Gas 9/13, Alabama Gas Co 9/14. Utility therms sold and transported in fiscal 2019: 3.4 bill. Revenue mix for regulated operations: residential, 68%; commercial and industrial, 23%; transportation, 6%; other, 3%. Has about 3,536 employees. Officers and directors own 2.9% of common shares; BlackRock, 15.0% (1/20 proxy). Chairman: Edward Glotzbach; CEO: Suzanne Sitherwood. Inc.: Missouri. Address: 700 Market Street, St. Louis, Missouri 63101. Tel.: 314-342-0500. Internet: www.spireenergy.com.

Spire Inc. has continued to underperform in fiscal 2020 (ends September 30th). In fact, first-half share net decreased 13.3%, to $3.78, compared to the prior-year total of $4.36. That was attributed largely to the Gas Marketing division, which recorded an unrealized loss of $0.29 a share on energy-related derivatives, while the fiscal 2019 amount included a $0.22 gain from that activity. Moreover, the Gas Utility segment generated modestly lower earnings.

Results for the second half ought to face some pressure from an extraordinary occurrence. Though the coronavirus had limited financial impact on the company during the first half, the situation now appears to be changing, given diminishing demand plus escalating bad debts and other operating costs. But Spire is pursuing operating efficiencies and potential regulatory mechanisms to help offset the impact. Consider, also, that the third quarter, fiscal 2019 loss of $0.09 a share should be easy to beat. Still, at this juncture, *Value Line* anticipates full-year profits of $3.40 a share, which would be 3% below the fiscal 2019 tally of $3.52. Regarding next year, however, a 9% rebound (to $3.70 a share) seems plausible, if the pandemic fades away.

The fiscal 2020 capital spending target was boosted by $30 million, to $640 million. That would still be substantially lower than last year's figure of $823 million, attributable, to a certain extent, to the completion of the Spire STL Pipeline. Funds are being deployed to such areas as infrastructure upgrades at the utilities and new business development initiatives. Leadership looks for total expenditures over the 2020-2024 horizon to be around $2.8 billion, which seems manageable.

These good-quality shares have not been invulnerable to the turbulence experienced by the market of late, reflecting worries about the virus. Even so, the dividend yield stacks up nicely to those of other equities in *Value Line's* Natural Gas Utility Industry. Moreover, our 2023-2025 projections show further steady hikes in the payout, which should continue to be well covered by earnings. Meanwhile, the stock is neutrally ranked for Timeliness.

Frederick L. Harris, III *May 29, 2020*

"Unusual and Exigent" Conditions Elicit Aggressive Policy Actions

- **Aggressive monetary policy actions involve Fed's balance sheet, not interest rates**
- **Fiscal policy actions make deficit four times the size forecast just two months ago**
- **Even as rates start to increase, they do so very slowly**
- **Long-term outlook just sees modest 2% growth and modest rise in interest rates**

In a 1935 amendment to the Federal Reserve Act of 1913, the Fed was enabled to extend credit to certain parties during "unusual and exigent circumstances." The current period is certainly "unusual." It is also "exigent," meaning, according to Merriam-Webster, that conditions "require immediate aid or action" and that they "require or call for much." In particular, the Fed's usual policy tool, the federal funds rate, was already cut to just above zero by mid-March, so the Federal Open Market Committee can't try to support the economy by lowering that unless they want to reconsider the view against negative interest rates.

Clearly, some policy action was needed. GDP dropped at a 5% annual rate in Q1 and is estimated by the Blue Chip panel to plunge at a 34.0% rate this quarter. A turnaround toward a 15% rate of growth is expected in Q3.

Fed balance sheet already up by $2.94 trillion. So in response to this perceived need for creative policy actions, the Fed has established nine credit-granting facilities reaching out to, as the descriptions all say, "households and businesses." And, as well, to state and local governments. In each case, the Fed is not the actual lender to the actual user of the funds, but it supports, among others, financial institution lenders such as commercial paper issuers (CPFF), money market mutual funds (MMLF) and the well-known Paycheck Protection Program Liquidity Facility (PPPLF) for small businesses. These programs began in late March and most recently have totaled some $130 billion. Since mid-March, the Fed has also bought $1.6 trillion in U.S. Government securities and its total assets have grown from $4.16 trillion to $7.10 trillion.

While the special programs cover just a fraction of the increase in the Fed's assets and a fraction of their legislated totals, they have carried larger announcement effects than the actual dollar amounts might imply. Fed Vice Chair Richard Clarida commented on this in a speech May 21; "just the announcement that these backstop facilities would soon be launched appears to have bolstered confidence in capital markets, allowing many companies to finance themselves privately even before the facilities were up and running."

Fed needs to pair with fiscal policy to give economy effective help. One other clarification on the role of legislation in these Federal Reserve actions. Vice Chair Clarida made a helpful point: ". . . it is important to note that the Fed's statutory authority grants us *lending* powers, not *spending* powers. The Fed is not authorized to grant money to particular beneficiaries, to meet the payroll expenses of small businesses, or to underwrite the unemployment benefits of displaced workers. Programs to support such worthy goals reside squarely in the domain of fiscal policy. The Fed can only make loans to solvent entities with the expectation the loans will be paid back. Direct fiscal support for the economy is thus also essential to sustain economic activity and complement what monetary policy cannot accomplish on its own."

The Blue Chip Financial Forecasts panel believes the Fed's total assets will reach $9.4 trillion at the end of this year, so it would acquire another $2.3 trillion in securities and special facilities loans. At the end of 2021, the panel estimates a balance sheet of $10.2 trillion, with a few of the panelists actually looking for reductions in the Fed's total assets.

Aggressive fiscal policy as well. Fiscal policy actions include the coordination with the Federal Reserve funded programs as well as some other CARES Act benefits, special exemptions on the SNAP food stamps program, more funding for COVID-19 testing, increased funding for certain small business grants and so on. Before all this was enacted during March and April, the March 1st issue of Blue Chip Financial Forecasts included a Special Question asking for panelists' budget deficit estimate for fiscal 2020. They said then that after the $984 billion in fiscal 2019, the fiscal 2020 deficit would be $1.077 trillion. Now the panel is saying $4.0 trillion this fiscal year and $2.5 trillion in fiscal 2021.

As to the more standard interest rate forecasts, the panel expects that the Fed would hold the federal funds rate at its current almost-zero level until the middle of next year, when it would start to raise rates. Even then, the increase in Q3 2021 would still be quite modest, with just a dozen members of the Blue Chip panel seeing the rate higher than it has been recently and most of those by only a token amount. Other interest rates would rise somewhat more over the forecast span to Q3 2021, with ten-year Treasuries moving from their recent yield of 66 basis points to 1.2% by Q3 2021. Thus, the yield curve would steepen somewhat.

Long-term forecasts see growth, inflation and funds rate centering on 2%. This month's Financial Forecasts survey includes the semi-annual look at long-term trends in rates. GDP growth starts this coming decade slightly stronger at 3.2% in 2021 and 2022, and then moderates to 2.0% by 2026. Over the following five years it would average 2.1% a year. Inflation, measured by the CPI, would be 0.2% across this year, Q4 over Q4, then climb to 1.3% next year and 2.1% across the next five years and 2.2% the five years after that.

The fed funds rate would climb gradually toward 2%, reaching that between 2025 and 2026, and then hover just above that level during the following five years. Ten-year Treasury yields would increase from an average of 0.93% this year toward 1.2% next year, with averages of 2.3% and 3.1% during the two succeeding five-year periods. The pattern traced by these projections suggests that the aftermath of the current exigent economic conditions might take at least a couple of years to settle out and only further into the 2020s decade would the economy settle into a more orderly and sustainable situation.

Forecasts of panel members are on pages 10 and 11. Definitions of variables are as follows: [1]Monetary policy rates. [2]Government bonds are yields to maturity. [3]Foreign exchange rate forecasts for U.K., Australia and the Euro are U.S. dollars per currency unit. For the U.S dollar, forecasts are of the U.S. Federal Reserve Board's AFE Dollar Index.

International Since the middle of March when the coronavirus outbreak turned into a pandemic and large parts of economies were shut down, the Fed has increased its balance sheet by nearly $2.8 trillion, or 65%, to just over $7 trillion. Other major central banks have followed the Fed's aggressive lead. The European Central Bank has also restarted its asset purchase program and created a new one specially to confront the pandemic—the Pandemic Emergency Purchase Program (PEPP), which is scheduled to purchase €750 billion of assets by the end of this year. Since PEPP purchases were initiated at the beginning of April, the ECB has bought €212 billion of securities and has purchased another €107 billion in its APP (restarted in mid-March), increasing the ECB's assets by 18% to 46% of 2020 Q1 euro area GDP. Analysts generally expect the ECB to increase and to extend the PEPP at its June 4 Council meeting.

In mid-March, the Bank of England's Monetary Policy Committee voted unanimously to increase the Bank's holdings of UK government bonds and sterling non-financial investment-grade corporate bonds by £200 billion to a total of £645 billion. Since then, it has purchased nearly £126 billion of new securities. The Bank of England's external forecasters expect the Bank's total holdings to be increased to nearly £700 billion by the second quarter of 2021. The Bank of Japan has also increased its ongoing asset purchase program and created several new lending facilities. The most recent one aimed at increasing credit flow to small and medium-sized business was announced after an emergency meeting on May 22. Since the middle of March, the BoJ's assets have risen ¥43 trillion to 116% of Q1 nominal GDP.

Two central banks that had eschewed quantitative easing during the global financial crisis, the Reserve Bank of Australia and the Bank of Canada, have recently started asset purchase programs and have been quite aggressive. The RBA's program is similar to the Bank of Japan's yield curve control. The RBA intends to buy sufficient government and semi-government bonds to stabilize the yield on the 3-year government bond at 0.25%. Since mid-March, the Bank has increased its assets by 44%, buying A$111 billion of securities. Over this period the 3-year government bond yield has averaged 0.26% versus 0.64% during the first 2-1/2 months of 2020.

At the beginning of April, the Bank of Canada embarked on an asset purchasing campaign in which it intends to buy C$5 billion of Canadian government securities per week "until the economic recovery is well under way." So far, the Bank has purchased nearly C$50 billion of government bonds though its overall balance sheet has increased by much more—C$288 billion, a 187% increase—as repos and purchases of other securities have soared.

As the economic costs of the lockdowns escalate by unprecedented magnitudes, monetary policymakers have appealed for more fiscal support. The US government has legislated more than $2.7 trillion in aid and programs aimed at reducing the economic hit from the pandemic and the House has passed another $3 trillion package. Led by the fiscal authorities in Germany and France, individual euro area governments have also enacted aid programs totaling billions of euros. However, the most significant euro area fiscal policy response would be the €1.85 trillion coronavirus response plan recently proposed by the European Union. The proposal is composed of a €750 billion immediate recovery plan and an additional €1.1 trillion of economic activity-boosting budget over the next seven years. The proposal's largest hurdle is that it must be accepted by all 27 EU members, which at the very least would take some time. But if that can be accomplished, this would be a major step toward increased fiscal union across the bloc. Japan's fiscal policymakers have recently taken a more concrete step. In late May the Cabinet approved a second supplemental budget, which should be legislated sometime in June. This supplemental budget is estimated at slightly more than 6% of GDP on top the 5% of GDP supplemental budget passed in late April. Nearly half of the new supplement is earmarked for support to business.

Second Quarter 2020

Viewpoints:

A Sampling of Views on the Economy, Financial Markets and Government Policy Excerpted from Recent Reports Issued by our Blue Chip Panel Members and Others

Special Questions

1. a. What do you think the peak monthly unemployment rate might be?

20.3%

b. What month would that happen?

May	Jun	Jul	Aug	Oct
61%	24%	6%	6%	3%

c. What do you think the U.S. unemployment rate will be:

at the end of 2020? 11.0%

at the end of 2021? 7.2%

2. The House of Representatives has voted for another $3 trillion in COVID-related federal aid for the economy. Senate passage of this exact bill is, however, open for negotiation.

a. How much more aid do you believe is needed for meaningful support of the economy?

$2.4 trillion

b. The federal government budget deficit was just under $1.0 trillion in fiscal 2019, which was 4.6% of GDP. How large do you see the budget deficit this year and next, and what percentage of GDP would that be?

FY 2020? $4.0 trillion % of GDP 18.9%

FY 2021? $2.5 trillion % of GDP 10.9%

3. The Federal Reserve continues to add substantial amounts to its balance sheet as it seeks to provide credit and/or to support lending by private institutions. By mid-May, its total assets were $6.9 trillion. How large do you estimate the Fed's balance sheet at

Year-end 2020? $9.4 trillion

Year-end 2021? $10.2 trillion

Assessing Credit Losses and Risks to the Banking System

With businesses shuttered and job losses mounting rapidly, there is growing concern over the ability of borrowers to service their debt obligations and the resulting risks to financial stability. We assess the likely scale of economy-wide credit losses, the exposure of creditors to those losses, and the potential risks to financial stability and the banking sector in this edition of the Analyst.

Assessing Credit Losses. We first look at corporate debt. Nonfinancial corporate debt grew by over 60% since 2011 and recently rose to an all-time high as a share of GDP, leading to growing concern even prior to the virus that corporate defaults could rise dramatically in the next downturn. The sharp decline in revenues across many industries has left a large share of companies with negative cash flow, and rising bankruptcy filings and cases suggest the corporate default cycle has started.

A unique feature of this downturn is the wide variation in industry exposure to the virus, with physical constraints on spending, occupational health risks, and geographical variation in the virus outbreak affecting industries differently. Assessing the likely scale of corporate credit losses thus requires a closer look at which industries are most affected and how large they are as share of total corporate debt, as virus-exposure will likely play a large role in determining credit losses alongside traditional cyclical factors.

To assess the impact of the virus across industries, we first look at changes in credit spreads from before the virus to the present for high-yield corporate bonds at the granular industry level. We categorize industries as directly impacted by the virus or only indirectly impacted by the virus, based on a breakdown by our credit strategists and our assessment of which industries have been hardest hit by the virus thus far. Looking across roughly 80 industries, we find that the energy sector and industries directly impacted by the virus have seen significantly larger increases in credit spreads. While translating these numbers to default risk remains challenging given changes in risk premiums, they suggest that default rates will largely be driven by industry exposure to the virus.

The energy sector stands out both in terms of its size and default risks, given the collapse in oil demand, its disproportionately large footprint in the corporate bond market relative to its GDP share, and the heavy amounts of leverage in the sector. We estimate that roughly half of high-yield corporate bonds are in the energy or virus-impacted industries. Overall, our credit strategists estimate that the 12-month trailing high-yield default rate will increase to 13% by the end of 2020, similar to the peak rate reached during the Global Financial Crisis.

Another key area of concern is commercial real estate (CRE), given signs of overheating and overstretched valuations prior to the virus, as well as the unprecedented declines in demand in industries such as lodging, healthcare, and retail. Commercial real estate prices have outpaced single family house prices since the prior downturn, with CRE capitalization rates falling to historically low levels. Late payments on commercial mortgages have picked up sharply in recent months, suggesting mounting pressures.

Once again, the unique nature of this downturn suggests that variation in virus exposure will play a large role in determining the breadth and depth of credit losses in commercial real estate. Delinquencies by property type already show wide dispersion, with virus-exposed property types such as lodging and retail showing much higher delinquency rates

than less exposed property types such as self-storage. This contrasts with the prior real estate bust, when delinquencies were roughly evenly distributed across property types. Overall, our housing strategists expect a deeper contraction of property incomes than during the financial crisis period, given the heavy stresses to rents and occupancy rates facing many properties, and overall losses on commercial mortgages similar to those observed during the financial crisis.

In contrast to corporate debt, consumer debt should see lower default and delinquency rates thanks to strong household balance sheets, expanded unemployment benefits and stimulus payments, and public and private forbearance provisions. Early signs suggest the policy response is helping most consumers stay current on their bills. For these reasons, our housing strategists also expect significantly smaller losses on residential loans than during the prior downturn. Nevertheless, significant downside risks to household debt remain, particularly if unemployment insurance benefits are not extended, and if higher out-of-pocket medical expenses due to loss of employer-based health insurance push more households to default.

Who Bears the Losses? We next look to see where credit losses are most likely to be felt. The Fed's Financial Accounts suggests that the banking system plays a large role in providing credit for commercial real estate and overall corporate borrowing, two areas of greater concern. Household debt is also largely held by banks, particularly residential mortgages, credit card loans, and auto loans, while student debt is largely held by the federal government.

Municipal debt, another area of concern, is largely held by households, mutual funds and pensions funds, and insurance companies, and thus likely poses a smaller threat to financial stability. Lastly, a growing share of corporate lending—especially in riskier categories, such as leveraged loans—is now done by nonbank financial institutions, including collateralized loan obligations (CLOs), asset managers, hedge funds, and private equity companies, and such lending is not well captured in the Fed's Financial Accounts. TIC data provides some evidence that non-bank financial institutions and insurance companies own much of US CLO securities, a growing area of concern. Crucially, CLOs do not generally permit early redemptions and are thus less susceptible to runs, and our credit strategists do not see CLOs posing a major risk to financial stability, despite the likely significant pickup in defaults on leveraged loans.

Banks are highly exposed to many areas of credit, while households, mutual funds, and pensions are largely more exposed to equities. Insurance companies are somewhere in between, and hold a significant amount of exposure to corporate debt, including CLOs.

Given the large size of the banking system, its importance in credit provision, and its outsized role in amplifying the economic shocks of the last downturn, we next turn to assessing the risks of the credit downturn to the banking system.

Risks to the Banking System. The Fed's Financial Stability Report warned that financial sector vulnerabilities, including for the banking sector, are likely to be significant in the near term, while the April FOMC minutes indicated concern that banks could come under greater stress, particularly if more adverse economic scenarios were realized. The Fed's Senior Loan Officer Opinion Survey (SLOOS) indicated that lending standards tightened significantly, particularly for commercial and industrial (C&I) and CRE loans, with most banks citing a less favorable or more uncertain economic outlook, as well as a reduced tolerance for risk, as reasons for tightening lending standards. Loan loss provisions across banks have increased significantly in preparation for the rise in defaults and delinquencies.

While further losses are likely to come, there are several reasons why banks may prove more resilient than during the financial crisis. The banking system is much better capitalized, with capital ratios comfortably above their required minimum levels. Only a modest percentage of banks cited a deterioration in their capital position as playing a role in tightening lending standards in the first quarter. In addition, residential real estate remains the largest category of lending in the banking system by a significant margin. Given that this downturn was not precipitated by a housing crisis, losses on this particularly large category will likely be smaller than during the GFC.

One potential worry is that certain industries are heavily exposed to the virus, which may lead to larger risks to the banking system if the lending of particular banks, or the banking system as a whole, is highly concentrated in these industries. Disclosures on industry exposure provided by relatively large banks suggest that the exposure of the banking system to at-risk industries appears manageable. Moreover, most individual large banks are not heavily concentrated in at-risk industries, although smaller banks may be more geographically constrained and thus concentrated in particular industries.

We next assess the vulnerability of bank balance sheets as of 2019Q4, using comprehensive balance sheet data across all FDIC-insured institutions. We estimate the losses on total bank equity from losses across asset categories, based on projections from our bank and credit analysts and our economic projections. We assume similar losses on C&I and CRE lending as in the 2008 crisis, but a smaller hit on residential mortgages and consumer loans. Crucially, we do not build in large effects from the fiscal stimulus package, which should ease the burden of losses for the private sector, especially for household and small business loans.

We calculate the estimated losses as a percent of total bank equity capital, using our outlined assumptions. We estimate that losses on C&I, CRE, consumer, and residential real estate loans would amount to roughly 15% of total bank equity, compared to around 30% of total bank equity at risk heading into the Global Financial Crisis, using ex-post realized losses across the same categories. Two main reasons account for this difference: first, losses on the large residential real estate category are likely to be smaller, and second, bank equity levels are higher today than before the crisis.

We next look at lending exposure of the largest banks individually, using bank-specific details from regulatory data covering all large banks operating in the US. Bank-level data can reveal differences across banks and highlight whether there are a significant number of banks with large exposures to at-risk categories. We again compare the largest banks' exposure across major loan categories today to their exposure across these categories in 2007. Where available, we use bank-level disclosures on exposures to high-risk industries, applying a higher loss rate for banks with higher exposures.

We find that while there is dispersion among the largest banks in their exposure to losses, almost all of the largest banks today are less vulnerable than the median large bank was prior to the financial crisis. Again, our finding is driven by both the smaller losses in the large real estate category and by banks' higher equity capital levels today.

While financial stability concerns appear manageable, significant downside risks remain. A slower than expected recovery and a prolonged downturn would likely stress the banking system further, and a growing share of riskier lending is now done by less regulated nonbank financial institutions, where risks are harder to assess. Should a more adverse scenario arise, Fed officials have indicated the willingness to further help facilitate the provision of credit by the financial system.

David Choi (Goldman Sachs)

Long-Range Survey:

The table below contains the results of our twice-annual long-range CONSENSUS survey. There are also Top 10 and Bottom 10 averages for each variable. Shown are consensus estimates for the years 2021 through 2026 and averages for the five-year periods 2022-2026 and 2027-2031. Apply these projections cautiously. Few if any economic, demographic and political forces can be evaluated accurately over such long time spans.

		Average For The Year						Five-Year Averages

PIEDMONT NATURAL GAS COMPANY, INC.
Docket No. 20-00086
Consumer Advocate's First Discovery Request
Date Issued: August 17, 2020
Date Due: September 8, 2020

1-57. Provide a copy of the Duke Energy Business Service Cost Allocation Manual. To the extent any costs are allocated to Piedmont using methods other than those specified in the DEBS cost allocation manual, identify such methods and the amount of allocated costs incurred in 2019 by allocation method.

RESPONSE: See attachment 1 for a summary of all allocated costs exclusive of service company allocations for 2019. Costs allocated to both capital and O&M have been included on a Piedmont total basis as well as a Tennessee allocated basis.

See attachments 2 thru 5 for the DEBS Cost Allocation Manual and matrix for 2019 and 2020. Attachments 3 and 5 provide the percentages applicable to Piedmont for each cost allocation pool.

See attachments 6 and 7 for a description of the Natural Gas Business Unit overhead allocations.

Name and Title of Preparer: Laura Hager, Lead Rates & Regulatory Strategy Analyst

Name and Title of Responsible Person: Quynh Bowman, Director - Gas Rates & Regulatory Strategy

Response provided by Piedmont Natural Gas Company, Inc. on September 8, 2020.

A. INTRODUCTION

This Carolinas' Cost Allocation Manual ("CAM") documents the guidelines and procedures for allocating costs between the different business units impacting DEC, DEP, and Piedmont. The guidelines are intended to provide the foundation for proper identification and recording of transactions involving the exchange of services or goods between DEC, DEP, Piedmont and their Affiliates. These guidelines describe the allocation methods that are consistent with cost causation principles to ensure one Duke Energy entity does not subsidize another. Additional information on Duke Energy's internal controls and finance policies is available for Duke Energy employees on the employee portal.

Per the Regulatory Conditions in the *Order Approving Merger Subject to Regulatory Conditions and Code of Conduct* issued September 29, 2016 by the North Carolina Utilities Commission ("Commission") in Docket Nos. E-2, Sub 1095, E-7, Sub 1100, and G-9, Sub 682, as amended by the *Order Granting Motion to Amend Regulatory Conditions* issued by the Commission in Docket Nos. E-2, Sub 1095A, E-7, Sub 1100A, and G-9, Sub 682A, the following merger conditions apply to the CAM:

5.5 Charges for and Allocations of the Costs of Affiliate Transactions.

To the maximum extent practicable, all costs of Affiliate transactions shall be directly charged. When not practicable, such costs shall be assigned in proportion to the direct charges. If such costs are of a nature that direct charging and direct assignment are not practicable, they shall be allocated in accordance with Commission-approved allocation methods. The following additional provisions shall apply:

(a) DEC, DEP, and Piedmont shall keep on file with the Commission a cost allocation manual (CAM) with respect to goods or services provided by DEC, DEP, or Piedmont, any Utility Affiliate, DEBS, any other Non-Utility Affiliate, Duke Energy, any other Affiliates, or any Nonpublic Utility Operation to DEC, DEP, or Piedmont. Piedmont will adopt DEC's and DEP's CAM.

(b) The CAM shall describe how all directly charged, direct assignment, and other costs for each provider of goods and services will be charged between and among DEC, DEP, Piedmont, their Utility Affiliates, Non-Utility Affiliates, Duke Energy, any other Affiliates, and the Nonpublic Utility Operations, and shall include a detailed review of the common costs to be allocated and the allocation factors to be used.

OFFICIAL COPY
Apr 01 2019

(c) The CAM shall be updated annually, and the revised CAM shall be filed with the Commission no later than March 31 of the year that the CAM is to be in effect. DEC, DEP, and Piedmont shall review the appropriateness of the allocation bases every two years, and the results of such review shall be filed with the Commission. Interim changes shall be made to the CAM, if and when necessary, and shall be filed with the Commission, in accordance with Regulatory Condition 5.6.

(d) No changes shall be made to the procedures for direct charging, direct assigning, or allocating the costs of Affiliate transactions or to the method of accounting for such transactions associated with goods and services (including Shared Services provided by DEBS) provided to or by Duke Energy, other Affiliates, and the Nonpublic Utility Operations until DEC, DEP, or Piedmont has given 15 days' notice to the Commission of the proposed changes, in accordance with Regulatory Condition 5.6.

5.6 Procedures Regarding Interim Changes to the CAM or Lists of Goods and Services for which 15 Days' Notice Is Required.

With respect to interim changes to the CAM or changes to lists of goods and services, for which the 15 day notice to the Commission is required, the following procedures shall apply: the Public Staff shall file a response and make a recommendation as to how the Commission should proceed before the end of the notice period. If the Commission has not issued an order within 30 days of the end of the notice period, DEC, DEP, or Piedmont may proceed with the changes but shall be subject to any fully adjudicated Commission order on the matter. The provisions of Regulatory Condition 13.2 do not apply to advance notices filed pursuant to Regulatory Condition 5.5(c) and (d). Such advance notices shall be filed in Docket Nos. E-7, Sub 1100A, E-2, Sub 1095A, and G-9, Sub 682A.

In addition to the CAM as a cost charging guide, DEC, DEP, and Piedmont use OpenPages to track compliance with regulatory requirements. OpenPages is administered by Corporate Compliance, which serves DEC, DEP, and Piedmont. OpenPages allows a regulatory requirement to be broken down into actionable tasks and assigned to one or more individuals. Individuals must complete tasks assigned and report completion by a certain date. OpenPages is integral to DEC's, DEP's, and Piedmont's culture of compliance.

C. NORTH CAROLINA CODE OF CONDUCT

(as approved by the North Carolina Utilities Commission)

This section contains the complete text of the "official" North Carolina Code of Conduct (hereinafter "Code of Conduct" or "Code"), approved by the North Carolina Utilities Commission, which governs DEC's, DEP's, and Piedmont's transactions with affiliates. This Code applies in North Carolina and South Carolina.

CODE OF CONDUCT
GOVERNING THE RELATIONSHIPS, ACTIVITIES, AND TRANSACTIONS BETWEEN AND AMONG THE PUBLIC UTILITY OPERATIONS OF DEC, THE PUBLIC UTILITY OPERATIONS OF DEP, THE PUBLIC UTILITY OPERATIONS OF PIEDMONT, DUKE ENERGY CORPORATION, OTHER AFFILIATES, AND THE NONPUBLIC UTILITY OPERATIONS OF DEC, DEP, AND PIEDMONT

I. DEFINITIONS

For the purposes of this Code of Conduct, the terms listed below shall have the following definitions:

Affiliate: Duke Energy and any business entity of which ten percent (10%) or more is owned or controlled, directly or indirectly, by Duke Energy. For purposes of this Code of Conduct, Duke Energy and any business entity controlled by it are considered to be Affiliates of DEC, DEP, and Piedmont, and DEC, DEP, and Piedmont are considered to be Affiliates of each other.

Commission: The North Carolina Utilities Commission.

Confidential Systems Operation Information or CSOI: Nonpublic information that pertains to Electric Services provided by DEC or DEP, including but not limited to information concerning electric generation, transmission, distribution, or sales, and nonpublic information that pertains to Natural Gas Services provided by Piedmont, including but not limited to information concerning transportation, storage, distribution, gas supply, or other similar information.

Customer: Any retail electric customer of DEC or DEP in North Carolina and any Commission-regulated natural gas sales or natural gas transportation customer of Piedmont located in North Carolina.

OFFICIAL COPY
Apr 01 2019

Customer Information: Non-public information or data specific to a Customer or a group of Customers, including, but not limited to, electricity consumption, natural gas consumption, load profile, billing history, or credit history that is or has been obtained or compiled by DEC, DEP, or Piedmont in connection with the supplying of Electric Services or Natural Gas Services to that Customer or group of Customers.

DEBS: Duke Energy Business Services, LLC, and its successors, which is a service company Affiliate that provides Shared Services to DEC, DEP, Piedmont, Duke Energy, other Affiliates, or the Nonpublic Utility Operations of DEC, DEP, or Piedmont, singly or in any combination.

DEC: Duke Energy Carolinas, LLC, the business entity, wholly owned by Duke Energy, that holds the franchise granted by the Commission to provide Electric Services within DEC's North Carolina service territory and that engages in public utility operations, as defined in G.S. 62-3(23), within the State of North Carolina.

DEP: Duke Energy Progress, LLC, the business entity, wholly owned by Duke Energy, that holds the franchises granted by the Commission to provide Electric Services within the DEP's North Carolina service territory and that engages in public utility operations, as defined in G.S. 62-3(23), within the State of North Carolina.

Duke Energy: Duke Energy Corporation, is the current holding company parent of DEC, DEP, Piedmont, and any successor company.

Electric Services: Commission-regulated electric power generation, transmission, distribution, delivery, and sales, and other related services, including, but not limited to, administration of Customer accounts and rate schedules, metering, billing, standby service, backups, and changeovers of service to other suppliers.

Fuel and Purchased Power Supply Services: All fuel for generating electric power and purchased power obtained by DEC or DEP from sources other than DEC or DEP for the purpose of providing Electric Services.

Fully Distributed Cost: All direct and indirect costs, including overheads and an appropriate cost of capital, incurred in providing goods or services to another business entity; provided, however, that (a) for each good or service supplied by DEC, DEP, or Piedmont, the return on common equity utilized in determining the appropriate cost of capital shall equal the return on common equity authorized by the Commission in the supplying utility's most recent general rate case proceeding; (b) for each good or service supplied to DEC, DEP, or Piedmont, the appropriate cost of capital shall not exceed the overall cost of capital authorized in the supplying utility's most recent general rate case proceeding; and (c) for each good or service supplied by DEC, DEP, or Piedmont to each other, the return on common equity utilized in determining the appropriate cost of capital shall not exceed the lower of the returns on common equity authorized by the Commission in DEC's, DEP's, or Piedmont's most recent general rate case proceeding, as applicable.

OFFICIAL COPY
Apr 01 2019

JDA: Joint Dispatch Agreement, which is the agreement as filed with the Commission in Docket Nos. E-7, Sub 986, and E-2, Sub 998, on June 22, 2011, and as amended and refiled on June 12, 2012.

Market Value: The price at which property, goods, or services would change hands in an arm's length transaction between a buyer and a seller without any compulsion to engage in a transaction, and both having reasonable knowledge of the relevant facts.

Merger: All transactions contemplated by the Agreement and Plan of Merger between Duke Energy and Piedmont.

Natural Gas Services: Commission-regulated natural gas sales, natural gas transportation, and other related services, including, but not limited to, administration of Customer accounts and rate schedules, metering, billing, and standby service.

Non-affiliated Gas Marketer: An entity, not affiliated with DEC, DEP, or Piedmont, engaged in the unregulated sale, arrangement, brokering, or management of gas supply, pipeline capacity, or gas storage.

Nonpublic Utility Operation: All business operations engaged in by DEC, DEP, or Piedmont involving activities (including the sales of goods or services) that are not regulated by the Commission or otherwise subject to public utility regulation at the state or federal level.

Non-Utility Affiliate: Any Affiliate, including DEBS, other than a Utility Affiliate, DEC, DEP, or Piedmont.

Personnel: An employee or other representative of DEC, DEP, Piedmont, Duke Energy, another Affiliate, or a Nonpublic Utility Operation, who is involved in fulfilling the business purpose of that entity.

Piedmont: Piedmont Natural Gas Company, Inc., the business entity wholly owned by Duke Energy, that holds the franchise granted by the Commission to provide Natural Gas Services within its North Carolina service territory and that engages in public utility operations, as defined in G.S. 62-3(23), within the State of North Carolina.

Progress Energy: Progress Energy, Inc., which is the former holding company parent of DEP, is a subsidiary of Duke Energy, and any successors.

Public Staff: The Public Staff of the North Carolina Utilities Commission.

Regulatory Conditions: The conditions imposed by the Commission in connection with or related to the Merger.

Shared Services: The services that meet the requirements of the Regulatory Conditions approved in Docket Nos. E-2, Sub 1095, E-7, Sub 1100, and G-9, Sub 682, or subsequent orders of the Commission and that the Commission has explicitly authorized DEC, DEP, and Piedmont to take from DEBS pursuant to a service agreement (a) filed with the Commission pursuant to

OFFICIAL COPY
Apr 01 2019

G.S. 62-153(b), thus requiring acceptance and authorization by the Commission, and (b) subject to all other applicable provisions of North Carolina law, the rules and orders of the Commission, and the Regulatory Conditions.

Shipper: A Non-affiliated Gas Marketer, a municipal gas customer, or an end-user of gas.

Utility Affiliates: The regulated public utility operations of Duke Energy Florida, LLC ("DEF"), Duke Energy Indiana, LLC ("DEI"), Duke Energy Kentucky, Inc. ("DEK") and Duke Energy Ohio, Inc. ("DEO").

II. GENERAL

This Code of Conduct establishes the minimum guidelines and rules that apply to the relationships, transactions, and activities involving the public utility operations of DEC, DEP, Piedmont, Duke Energy, other Affiliates, or the Nonpublic Utility Operations of DEC, DEP, and Piedmont, to the extent such relationships, activities, and transactions affect the public utility operations of DEC, DEP, and Piedmont in their respective service areas. DEC, DEP, Piedmont, and the other Affiliates are bound by this Code of Conduct pursuant to Regulatory Condition 6.1 approved by the Commission in Docket Nos. E-2, Sub 1095, E-7, Sub 1100, and G-9, Sub 682. This Code of Conduct is subject to modification by the Commission as the public interest may require, including, but not limited to, addressing changes in the organizational structure of DEC, DEP, Piedmont, Duke Energy, other Affiliates, or the Nonpublic Utility Operations; changes in the structure of the electric industry or natural gas industry; or other changes that warrant modification of this Code.

DEC, DEP, or Piedmont may seek a waiver of any aspect of this Code of Conduct by filing a request with the Commission showing that circumstances in a particular case justify such a waiver.

III. STANDARDS OF CONDUCT

A. Independence and Information Sharing

1. Separation - DEC, DEP, Piedmont, Duke Energy, and the other Affiliates shall operate independently of each other and in physically separate locations to the maximum extent practicable; however, to the extent that the Commission has approved or accepted a service company-to-utility or utility-to- utility service agreement or list, DEC, DEP, Piedmont, Duke Energy, and the other Affiliates may operate as described in the agreement or list on file at the Commission. DEC, DEP, Piedmont, Duke Energy, and each of the other Affiliates shall maintain separate books and records. Each of DEC's, DEP's, and Piedmont's Nonpublic Utility Operations shall maintain separate records from those of DEC's, DEP's, and Piedmont's public utility operations to ensure appropriate cost allocations and any arm's-length-transaction requirements.

OFFICIAL COPY
Apr 01 2019

2. Disclosure of Customer Information:

(a) Upon request, and subject to the restrictions and conditions contained herein, DEC, DEP, and Piedmont may provide Customer Information to Duke Energy or another Affiliate under the same terms and conditions that apply to the provision of such information to non-Affiliates. In addition, DEC and DEP may provide Customer Information to their respective Nonpublic Utility Operations under the same terms and conditions that apply to the provision of such information to non-Affiliates.

(b) Except as provided in Section III.A.2.(f), Customer Information shall not be disclosed to any Affiliate or non-affiliated third party without the Customer's consent, and then only to the extent specified by the Customer. Consent to disclosure of Customer Information to Affiliates of DEC, DEP, and Piedmont or to DEC's or DEP's Nonpublic Utility Operations may be obtained by means of written, electronic, or recorded verbal authorization upon providing the Customer with the information set forth in Attachment A; provided, however, that DEC, DEP, and Piedmont retain such authorization for verification purposes for as long as the authorization remains in effect. Written, electronic, or recorded verbal authorization or consent for the disclosure of Piedmont's Customer Information to Piedmont's Nonpublic Utility Operations is not required.

(c) If the Customer allows or directs DEC, DEP, or Piedmont to provide Customer Information to Duke Energy, another Affiliate, or to DEC's or DEP's Nonpublic Utility Operations, then DEC, DEP, or Piedmont shall ask if the Customer would like the Customer Information to be provided to one or more non-Affiliates. If the Customer directs DEC, DEP, or Piedmont to provide the Customer Information to one or more non-Affiliates, the Customer Information shall be disclosed to all entities designated by the Customer contemporaneously and in the same manner.

(d) Section III.A.2.shall be permanently posted on DEC's, DEP's and Piedmont's website(s).

(e) No DEC, DEP, or Piedmont employee who is transferred to Duke Energy or another Affiliate, shall be permitted to copy or otherwise compile any Customer Information for use by such entity except as authorized by the Customer pursuant to a signed Data Disclosure Authorization. DEC, DEP, and Piedmont shall not transfer any employee to Duke Energy or another Affiliate for the purpose of disclosing or providing Customer Information to such entity.

OFFICIAL COPY
Apr 01 2019

(f) Notwithstanding the prohibitions in this Section III.A.2.:

(i) DEC, DEP, and Piedmont may disclose Customer Information to DEBS, any other Affiliate, or a non-affiliated third party without Customer consent to the extent necessary for the Affiliate or non-affiliated third party to provide goods or services to DEC, DEP, or Piedmont and upon the written agreement of the other Affiliate or non- affiliated third-party to protect the confidentiality of such Customer Information. To the extent the Commission approves a list of services to be provided and taken pursuant to one or more utility-to-utility service agreements, then Customer Information may be disclosed pursuant to the foregoing exception to the extent necessary for such services to be performed.

(ii) DEC and DEP may disclose Customer Information to their Nonpublic Utility Operations without Customer consent to the extent necessary for the Nonpublic Utility Operations to provide goods and services to DEC or DEP and upon the written agreement of the Nonpublic Utility Operations to protect the confidentiality of such Customer Information.

(iii) DEC, DEP, and Piedmont may disclose Customer Information to a state or federal regulatory agency or court of competent jurisdiction if required in writing to do so by the agency or court.

(g) DEC, DEP, and Piedmont shall take appropriate steps to store Customer Information in such a manner as to limit access to those persons permitted to receive it and shall require all persons with access to such information to protect its confidentiality.

(h) DEC, DEP, and Piedmont shall establish guidelines for its employees and representatives to follow with regard to complying with this Section III.A.2.

(i) No DEBS employee may use Customer Information to market or sell any product or service to DEC's, DEP's, or Piedmont's Customers, except in support of a Commission-approved rate schedule or program or a marketing effort managed and supervised directly by DEC, DEP, or Piedmont.

(j) DEBS employees with access to Customer Information must be prohibited from making any improper indirect use of the data, including directing or encouraging any actions based on the Customer Information by employees of DEBS that do not have access to such information, or by other employees of Duke Energy or other Affiliates or Nonpublic Utility Operations of DEC and DEP.

OFFICIAL COPY

Apr 01 2019

(k) Should any inappropriate disclosure of DEC, DEP, or Piedmont Customer Information occur at any time, DEC, DEP, or Piedmont shall promptly file a statement with the Commission describing the circumstances of the disclosure, the Customer information disclosed, the results of the disclosure, and the steps taken to mitigate the effects of the disclosure and prevent future occurrences.

3. The disclosure of Confidential Systems Operation Information of DEC, DEP, and Piedmont shall be governed as follows:

(a) Such CSOI shall not be disclosed by DEC, DEP, or Piedmont to an Affiliate or a Nonpublic Utility Operation unless it is disclosed to all competing non-Affiliates contemporaneously and in the same manner. Disclosure to non-Affiliates is not required under the following circumstances:

(i) The CSOI is provided to employees of DEC or DEP for the purpose of implementing, and operating pursuant to, the JDA in accordance with the Regulatory Conditions approved in Docket Nos. E-7, Sub 986, and E-2, Sub 998.

(ii) The CSOI is necessary for the performance of services approved to be performed pursuant to one or more Affiliate utility-to-utility service agreements.

(iii) A state or federal regulatory agency or court of competent jurisdiction over the disclosure of the CSOI requires the disclosure.

(iv) The CSOI is provided to employees of DEBS pursuant to a service agreement filed with the Commission pursuant to G.S. 62-153.

(v) The CSOI is provided to employees of DEC's, DEP's, or Piedmont's Utility Affiliates for the purpose of sharing best practices and otherwise improving the provision of regulated utility service.

(vi) The CSOI is provided to an Affiliate pursuant to an agreement filed with the Commission pursuant to G.S. 62-153, provided that the agreement specifically describes the types of CSOI to be disclosed.

(vii) Disclosure is otherwise essential to enable DEC or DEP to provide Electric Services to their Customers or for Piedmont to provide Natural Gas Services to its Customers.

(viii) Disclosure of the CSOI is necessary for compliance with the Sarbanes-Oxley Act of 2002.

OFFICIAL COPY
Apr 01 2019

(b) Any CSOI disclosed pursuant Section III.A.3.(a)(i)-(viii) shall be disclosed only to employees that need the CSOI for the purposes covered by those exceptions and in as limited a manner as possible. The employees receiving such CSOI must be prohibited from acting as conduits to pass the CSOI to any Affiliate(s) and must have explicitly agreed to protect the confidentiality of such CSOI.

(c) For disclosures pursuant to Section III.A.3.(a)(vii) and (viii), DEC, DEP, and Piedmont shall include in their annual affiliated transaction reports the following information:

(i) The types of CSOI disclosed and the name(s) of the Affiliate(s) to which it is being, or has been, disclosed;
(ii) The reasons for the disclosure; and
(iii) Whether the disclosure is intended to be a one-time occurrence or an ongoing process.

To the extent a disclosure subject to the reporting requirement is intended to be ongoing, only the initial disclosure and a description of any processes governing subsequent disclosures need to be reported.

(d) DEC, DEP, Piedmont, and DEBS employees with access to CSOI must be prohibited from making any improper indirect use of the data, including directing or encouraging any actions based on the CSOI by employees that do not have access to such information, or by other employees of Duke Energy or other Affiliates or Nonpublic Utility Operations of DEC, DEP, and Piedmont.

(e) Should the handling or disclosure of CSOI by DEBS, or another Affiliate or Nonpublic Utility Operation, or its respective employees, result in (i) a violation of DEC's or DEP's FERC Statement of Policy and Code of Conduct (FERC Code), 18 CFR 358 - Standards of Conduct for Transmission Providers (Transmission Standards), or any other relevant FERC standards or codes of conduct, (ii) the posting of such data on an Open Access Same-Time Information System (OASIS) or other Internet website, or (iii) other public disclosure of the data, DEC or DEP shall promptly file a statement with the Commission in Docket No. E-7, Sub 1100C, and E-2, Sub 1095C, respectively, describing the circumstances leading to such violation, posting, or other public disclosure describing the circumstances leading to such violation, posting, or other public disclosure, any data required to be posted or otherwise publicly disclosed, and the steps taken to mitigate the effects of the current and prevent any future potential violation, posting, or other public disclosure.

OFFICIAL COPY
Apr 01 2019

(f) Should any inappropriate disclosure of CSOI occur at any time, DEC, DEP, or Piedmont shall promptly file a statement with the Commission in Docket No. E-7, Sub 1100C, E-2, Sub 1095C, or G- 9, Sub 682C, respectively, describing the circumstances of the disclosure, the CSOI disclosed, the results of the disclosure, and the steps taken to mitigate the effects of the disclosure and prevent future occurrences.

(g) Unless publicly noticed and generally available, should the FERC Code, the Transmission Standards, or any other relevant FERC standards or codes of conduct be eliminated, amended, superseded, or otherwise replaced, DEC and DEP shall file a letter with the Commission in Docket Nos. E-7, Sub 1100E, and E-2, Sub 1095E, describing such action within 60 days of the action, along with a copy of any amended or replacement document.

B. Nondiscrimination

1. DEC's, DEP's, and Piedmont's employees and representatives shall not unduly discriminate against non-Affiliated entities.

2. In responding to requests for Electric Services, Natural Gas Services, or both, DEC, DEP, and Piedmont shall not provide any preference to Duke Energy, another Affiliate, or a Nonpublic Utility Operation, or to any customers of such an entity, as compared to non-Affiliates or their customers. Moreover, neither DEC, DEP, Piedmont, Duke Energy, nor any other Affiliates shall represent to any person or entity that Duke Energy, another Affiliate, or a Nonpublic Utility Operation will receive any such preference.

3. DEC, DEP, and Piedmont shall apply the provisions of their respective tariffs equally to Duke Energy, the other Affiliates, the Nonpublic Utility Operations, and non-Affiliates.

4. DEC, DEP, and Piedmont shall process all similar requests for Electric Services, Natural Gas Services, or both, in the same timely manner, whether requested on behalf of Duke Energy, another Affiliate, a Nonpublic Utility Operation, or a non-Affiliated entity.

5. No personnel or representatives of DEC, DEP, Piedmont, Duke Energy, or another Affiliate shall indicate, represent, or otherwise give the appearance to another party that Duke Energy or another Affiliate speaks on behalf of DEC, DEP, or Piedmont; provided however, that this prohibition shall not apply to employees of DEBS providing Shared Services or to employees of another Affiliate to the extent explicitly provided for in an affiliate agreement that has been accepted by the Commission. In addition, no personnel or representatives of a Nonpublic Utility Operation shall indicate, represent, or otherwise give the appearance to another party that they speak on behalf of DEC's, DEP's, or Piedmont's regulated public utility operations.

OFFICIAL COPY
Apr 01 2019

6. No personnel or representatives of DEC, DEP, Piedmont, Duke Energy, another Affiliate, or a Nonpublic Utility Operation shall indicate, represent, or otherwise give the appearance to another party that any advantage to that party with regard to Electric Services or Natural Gas Services exists as the result of that party dealing with Duke Energy, another Affiliate, or a Nonpublic Utility Operation, as compared with a non-Affiliate.

7. DEC, DEP, and Piedmont shall not condition or otherwise tie the provision or terms of any Electric Services or Natural Gas Services to the purchasing of any goods or services from, or the engagement in business of any kind with, Duke Energy, another Affiliate, or a Nonpublic Utility Operation.

8. When any employee or representative of DEC, DEP, or Piedmont receives a request for information from or provides information to a Customer about goods or services available from Duke Energy, another Affiliate, or a Nonpublic Utility Operation, the employee or representative shall advise the Customer that such goods or services may also be available from non-Affiliated suppliers.

9. Disclosure of Customer Information to Duke Energy, another Affiliate, a Nonpublic Utility Operation, or a non-Affiliated entity shall be governed by Section III.A.2. of this Code of Conduct.

10. Unless otherwise directed by order of the Commission, electric generation shall not receive a priority of use from Piedmont that would supersede or diminish Piedmont's provision of service to its human needs firm residential and commercial customers.

11. Piedmont shall file an annual report with the Commission summarizing all requests or inquiries for Natural Gas Services made by a non-utility generator, Piedmont's response to the request, and the status of the inquiry.

OFFICIAL COPY
Apr 01 2019

C. Marketing

1. The public utility operations of DEC, DEP, and Piedmont may engage in joint sales, joint sales calls, joint proposals, or joint advertising (a joint marketing arrangement) with their Affiliates and with their Nonpublic Utility Operations, subject to compliance with other provisions of this Code of Conduct and any conditions or restrictions that the Commission may hereafter establish. DEC, DEP, and Piedmont shall not otherwise engage in such joint activities without making such opportunities available to comparable third parties.

2. Neither Duke Energy nor any of the other Affiliates shall use the names or logos of DEC, DEP, or Piedmont in any communications without the following disclaimer:

(a) "[Duke Energy Corporation/Affiliate] is not the same company as [DEC/DEP/Piedmont], and [Duke Energy Corporation/Affiliate] has separate management and separate employees";

(b) "[Duke Energy Corporation/Affiliate] is not regulated by the North Carolina Utilities Commission or in any way sanctioned by the Commission";

(c) "Purchasers of products or services from [Duke Energy Corporation/Affiliate] will receive no preference or special treatment from [DEC/DEP/Piedmont]"; and

(d) "A customer does not have to buy products or services from [Duke Energy Corporation/Affiliate] in order to continue to receive the same safe and reliable electric service from [DEC/DEP] or natural gas service from Piedmont."

3. Nonpublic Utility Operations may not use the names or logos of DEC, DEP, or Piedmont in communications without the following disclaimer:

"[Name of product or service being offered by Nonpublic Utility Operation] is not part of the regulated services offered by [DEC/DEP/Piedmont] and is not in any way sanctioned by the North Carolina Utilities Commission."

4. In addition, DEC's and DEP's Nonpublic Utility Operations may not use the names or logos of DEC or DEP in any communications without the following disclaimers:

(a) "Purchasers of [name of product or service being offered by Nonpublic Utility Operation] from [Nonpublic Utility Operation] will receive no preference or special treatment from [DEC/DEP]"; and

(b) "A customer does not have to buy this product or service from [Nonpublic Utility Operation] in order to continue to receive the same safe and reliable electric service from [DEC/DEP]."

OFFICIAL COPY

Apr 01 2019

The required disclaimers in this Section III.C.4. must be sized and displayed in a way that is commensurate with the name and logo so that the disclaimer is at least the larger of one-half the size of the type that first displays the name and logo or the predominant type used in the communication.

D. Transfers of Goods and Services, Transfer Pricing, and Cost Allocation

1. Cross-subsidies involving DEC, DEP, or Piedmont and Duke Energy, other Affiliates, or the Nonpublic Utility Operations are prohibited.

2. All costs incurred by personnel or representatives of DEC, DEP, or Piedmont for or on behalf of Duke Energy, other Affiliates, or the Nonpublic Utility Operations shall be charged to the entity responsible for the costs.

3. The following conditions shall apply as a general guideline to the transfer prices charged for goods and services, including the use or transfer of personnel, exchanged between and among DEC, DEP, or Piedmont, and Duke Energy, the other Non-Utility Affiliates, and the Nonpublic Utility Operations, to the extent such prices affect DEC's, DEP's, or Piedmont's operations or costs of utility service:

(a) Except as otherwise provided for in this Section III.D., for untariffed goods and services provided by DEC, DEP, or Piedmont to Duke Energy, a Non-Utility Affiliate, or a Nonpublic Utility Operation, the transfer price paid to DEC, DEP, or Piedmont shall be set at the higher of Market Value or DEC's, DEP's, or Piedmont's Fully Distributed Cost.

(b) Except as otherwise provided for in this Section III.D., for goods and services provided, directly or indirectly, by Duke Energy, a Non-Utility Affiliate other than DEBS, or a Nonpublic Utility Operation to DEC, DEP, or Piedmont, the transfer price(s) charged by Duke Energy, the Non-Utility Affiliate, and the Nonpublic Utility Operation to DEC, DEP, or Piedmont shall be set at the lower of Market Value or Duke Energy's, the Non-Utility Affiliate's, or the Nonpublic Utility Operation's Fully Distributed Cost(s). If DEC, DEP, or Piedmont do not engage in competitive solicitation and instead obtain the goods or services from Duke Energy, a Non-Utility Affiliate, or a Nonpublic Utility Operation, DEC, DEP, and Piedmont shall implement adequate processes to comply with this Code provision and related Regulatory Conditions and ensure that in each case DEC's, DEP's, and Piedmont's Customers receive service at the lowest reasonable cost, unless otherwise directed by order of the Commission. For goods and services provided by DEBS to DEC, DEP, Piedmont, and Utility Affiliates, the transfer price charged shall be set at DEBS' Fully Distributed Cost.

OFFICIAL COPY

Apr 01 2019

(c) Tariffed goods and services provided by DEC, DEP, and Piedmont to Duke Energy, other Affiliates, or a Nonpublic Utility Operation shall be provided at the same prices and terms that are made available to Customers having similar characteristics with regard to Electric Services or Natural Gas Services under the applicable tariff.

(d) With the exception of gas supply transactions, transportation transactions, or both, between DEC and Piedmont or DEP and Piedmont, untariffed non-power, non-generation, or non-fuel goods and services provided by DEC, DEP, or Piedmont to DEC, DEP, Piedmont, or the Utility Affiliates or by the Utility Affiliates to DEC, DEP, or Piedmont, shall be transferred at the supplier's Fully Distributed Cost, unless otherwise directed by order of the Commission.

(e) All Piedmont deliveries to DEC and DEP pursuant to intrastate negotiated sales or transportation arrangements and combinations of sales and transportation transactions shall be at the same price and terms that are made available to other Shippers having comparable characteristics, such as nature of service (firm or interruptible, sales or transportation), pressure requirements, nature of load (process/heating/electric generation), size of load, profile of load (daily, monthly, seasonal, annual), location on Piedmont's system, and costs to serve and rates. Piedmont shall maintain records in sufficient detail to demonstrate compliance with this requirement.

(f) All gas supply transactions, interstate transportation and storage transactions, and combinations of these transactions, between DEC or DEP and Piedmont shall be at the fair market value for similar transactions between non-affiliated third parties. DEC, DEP, and Piedmont shall maintain records, such as published market price indices, in sufficient detail to demonstrate compliance with this requirement.

(g) All of the margins, also referred to as net compensation, received by Piedmont on secondary market sales to DEC and DEP shall be recorded in Piedmont's Deferred Gas Cost Accounts and shall flow through those accounts for the benefit of ratepayers. None of the margins on secondary market sales by Piedmont to DEC and DEP shall be included in the secondary market transactions subject to the sharing mechanism on secondary market transactions approved by the Commission in its *Order Approving Stipulation*, dated December 22, 1995, in Docket No. G-100, Sub 67. The sharing percentage on secondary market sales shall not be considered in determining the prudence of such transactions.

Apr 01 2019

4. To the extent that DEC, DEP, Piedmont, Duke Energy, other Affiliates, or the Nonpublic Utility Operations receive Shared Services from DEBS (or its successor), these Shared Services may be jointly provided to DEC, DEP, Piedmont, Duke Energy, other Affiliates, or the Nonpublic Utility Operations on a fully distributed cost basis, provided that the taking of such Shared Services by DEC, DEP, and Piedmont is cost beneficial on a service-by-service (e.g., accounting management, human resources management, legal services, tax administration, public affairs) basis to DEC, DEP, and Piedmont. Charges for such Shared Services shall be allocated in accordance with the cost allocation manual filed with the Commission pursuant to Regulatory Condition 5.5, subject to any revisions or other adjustments that may be found appropriate by the Commission on an ongoing basis.

5. DEC, DEP, Piedmont, and their Utility Affiliates may capture economies- of-scale in joint purchases of goods and services (excluding the purchase of electricity or ancillary services intended for resale unless such purchase is made pursuant to a Commission-approved contract or service agreement), if such joint purchases result in cost savings to DEC's, DEP's, and Piedmont's Customers. DEC, DEP, Piedmont, and their Utility Affiliates may capture economies-of-scale in joint purchases of coal and natural gas, if such joint purchases result in cost savings to DEC's, DEP's, and Piedmont's Customers. All joint purchases entered into pursuant to this section shall be priced in a manner that permits clear identification of each participant's portion of the purchases and shall be reported in DEC's, DEP's, and Piedmont's affiliated transaction reports filed with the Commission.

6. All permitted transactions between DEC, DEP, Piedmont, Duke Energy, other Affiliates, and the Nonpublic Utility Operations shall be recorded and accounted for in accordance with the cost allocation manual required to be filed with the Commission pursuant to Regulatory Condition 5.5 and with Affiliate agreements accepted by the Commission or otherwise processed in accordance with North Carolina law, the rules and orders of the Commission, and the Regulatory Conditions.

7. Costs that DEC, DEP, and Piedmont incur in assembling, compiling, preparing, or furnishing requested Customer Information or CSOI for or to Duke Energy, other Affiliates, Nonpublic Utility Operations, or non-Affiliates (other than the Customer or the Customer's designated representative or agent) shall be recovered from the requesting party pursuant to Section III.D.3. of this Code of Conduct.

8. Any technology or trade secrets developed, obtained, or held by DEC, DEP, or Piedmont in the conduct of regulated operations shall not be transferred to Duke Energy, another Affiliate, or a Nonpublic Utility Operation without just compensation and the filing of 60-days prior notification to the Commission. DEC, DEP, and Piedmont are not required to provide advance notice for such transfers to each other and may request a waiver of this requirement from the Commission with respect to such transfers to Duke Energy, a Utility Affiliate, a Non-Utility Affiliate, or a Nonpublic Utility Operation. In no case, however, shall the notice period requested be less than 20 business days.

OFFICIAL COPY

9. DEC, DEP, and Piedmont shall receive compensation from Duke Energy, other Affiliates, and the Nonpublic Utility Operations for intangible benefits, if appropriate.

E. Regulatory Oversight

1. The requirements regarding affiliate transactions set forth in G.S. 62-153 shall continue to apply to all transactions between DEC, DEP, Piedmont, Duke Energy, and the other Affiliates.

2. The books and records of DEC, DEP, Piedmont, Duke Energy, other Affiliates, and the Nonpublic Utility Operations shall be open for examination by the Commission, its staff, and the Public Staff as provided in G.S. 62-34, 62-37, and 62-51.

3. If Piedmont supplies any Natural Gas Services, with the exception of Natural Gas Services provided pursuant to Commission-approved contracts or service agreements, used by either DEC or DEP to generate electricity, DEC or DEP, as applicable, shall file a report with the Commission in its annual fuel and fuel-related cost recovery case demonstrating that the purchase was prudent and the price was reasonable.

4. To the extent North Carolina law, the orders and rules of the Commission, and the Regulatory Conditions permit Duke Energy, an Affiliate, or a Nonpublic Utility Operation to supply DEC, DEP, or Piedmont with Natural Gas Services or other Fuel and Purchased Power Supply Services used by DEC or DEP to provide Electric Services to Customers, and to the extent such Natural Gas Services or other Fuel and Purchased Power Supply Services are supplied, DEC or DEP, as applicable, shall demonstrate in its annual fuel adjustment clause proceeding that each such acquisition was prudent and the price was reasonable.

F. Utility Billing Format

To the extent any bill issued by DEC, DEP, Piedmont, Duke Energy, another Affiliate, a Nonpublic Utility Operation, or a non-Affiliated third party includes charges to Customers for Electric Services or Natural Gas Services and non-Electric Services, non-Natural Gas Services, or any combination of such services, from Duke Energy, another Affiliate, a Nonpublic Utility Operation, or a non-Affiliated third party, the charges for Electric Services and Natural Gas Services shall be separated from the charges for any other services included on the bill. Each such bill shall contain language stating that the Customer's Electric Services and Natural Gas Services will not be terminated for failure to pay for any other services billed.

G. Complaint Procedure

1. DEC, DEP, and Piedmont shall establish procedures to resolve potential complaints that arise due to the relationship of DEC, DEP, and Piedmont with Duke Energy, the other Affiliates, and the Nonpublic Utility Operations. The complaint procedures shall provide for the following:

(a) Verbal and written complaints shall be referred to a designated representative of DEC, DEP, or Piedmont.

(b) The designated representative shall provide written notification to the complainant within 15 days that the complaint has been received.

(c) DEC, DEP, or Piedmont shall investigate the complaint and communicate the results or status of the investigation to the complainant within 60 days of receiving the complaint.

(d) DEC, DEP, and Piedmont shall each maintain a log of complaints and related records and permit inspection of documents (other than those protected by the attorney/client privilege) by the Commission, its staff, or the Public Staff.

2. Notwithstanding the provisions of Section III.G.1., any complaints received through Duke Energy's EthicsLine (or successor), which is a confidential mechanism available to the employees of the Duke Energy holding company system, shall be handled in accordance with procedures established for the EthicsLine.

3. These complaint procedures do not affect a complainant's right to file a formal complaint with the Commission or otherwise communicate with the Commission or the Public Staff regarding a complaint.

OFFICIAL COPY
Apr 01 2019

H. Natural Gas/Electricity Competition

DEC, DEP, and Piedmont shall continue to compete against all energy providers, including each other, to serve those retail customer energy needs that can be legally and profitably served by both electricity and natural gas. The competition between DEC or DEP and Piedmont shall be at a level that is no less than that which existed prior to the Merger. Without limitation as to the full range of potential competitive activity, DEC, DEP, and Piedmont shall maintain the following minimum standards:

1. Piedmont will make all reasonable efforts to extend the availability of natural gas to as many new customers as possible.

2. In determining where and when to extend the availability of natural gas, Piedmont will at a minimum apply the same standards and criteria that it applied prior to the Merger.

3. In determining where and when to extend the availability of natural gas, Piedmont will make decisions in accordance with the best interests of Piedmont, rather than the best interest of DEC or DEP.

4. To the extent that either the natural gas industry or the electricity industry is further restructured, DEC, DEP, and Piedmont will undertake to maintain the full level of competition intended by this Code of Conduct subject to the right of DEC, DEP, Piedmont or the Public Staff to seek relief from or modifications to this requirement by the Commission.

CODE OF CONDUCT
ATTACHMENT A

DEC/DEP/PIEDMONT CUSTOMER INFORMATION DISCLOSURE AUTHORIZATION

For Disclosure to Affiliates:

DEC's/DEP's/Piedmont's Affiliates offer products and services that are separate from the regulated services provided by DEC/DEP/Piedmont. These services are not regulated by the North Carolina Utilities Commission. These products and services may be available from other competitive sources.

The Customer authorizes DEC/DEP/Piedmont to provide any data associated with the Customer account(s) residing in any DEC/DEP/Piedmont files, systems or databases **[or specify types of data]** to the following Affiliate(s) _____. DEC/DEP/Piedmont will provide this data on a non-discriminatory basis to any other person or entity upon the Customer's authorization.

For Disclosure to Nonpublic Utility Operations:

DEC/DEP offers optional, market-based products and services that are separate from the regulated services provided by DEC/DEP. These services are not regulated by the North Carolina Utilities Commission. These products and services may be available from other competitive sources.

The Customer authorizes DEC/DEP to use any data associated with the Customer account(s) residing in any DEC/DEP files, systems or databases **[or specify types of data]** for the purpose of offering and providing energy-related products or services to the Customer. DEC/DEP will provide this data on a non-discriminatory basis to any other person or entity upon the Customer's authorization.

D. SERVICE AGREEMENT LISTS

Service Agreement lists outlining services that DEC, DEP and Piedmont may receive from their Duke Energy affiliates include the following:

- Service Company Utility Service Agreement List
- Operating Companies Service Agreement List
- Operating Companies/Non-Utility Companies Service Agreement List

For a complete list of the services related to affiliate service agreements, please refer to NCUC Docket Nos. E-2, Sub 1095A, E-7, Sub 1100A or G-9, Sub 682A. These affiliate service agreements may also be found on the State Regulatory Compliance Portal.

In addition, DEC, DEP, and Duke Energy Florida, LLC are parties to the Nuclear Services Agreement, with the Nuclear Services Agreement List, which includes the services that DEC and DEP may receive from each other and Duke Energy Florida, LLC.

E. GUIDELINES FOR TRANSACTIONS BETWEEN DEC/DEP/PIEDMONT AND AFFILIATES

The *Guidelines for Transactions between DEC/DEP/Piedmont and Affiliates ("Guidelines")* is an internal document developed to help employees implement the North Carolina Code of Conduct. The Guidelines may be revised from time to time as necessary to meet changing business requirements.

These Guidelines are intended to apply to all employees in dealings between DEC/DEP/Piedmont and their affiliates to assist in compliance with the North Carolina Code of Conduct, North Carolina and South Carolina state laws, and federal laws concerning affiliate transactions. Application of the affiliate rules to specific transactions may depend on the specific facts at issue. Any questions concerning the affiliate rules or these Guidelines should be directed to the subject matter experts listed later in this section.

A. DEFINITIONS

Please reference Section C. *North Carolina Code of Conduct* in this CAM for definitions. Below are some additional definitions used throughout the CAM.

FERC: Federal Energy Regulatory Commission.

NCUC: North Carolina Utilities Commission.

ORS: Office of Regulatory Staff in South Carolina.

PSCSC: Public Service Commission of South Carolina.

Public Items: Items DEC/DEP/Piedmont, in their discretion, make available at no charge to any third party, including an Affiliate, upon request.

Service Company: Duke Energy Business Services, LLC ("DEBS"), which is an affiliate that provides shared services to DEC/DEP/Piedmont and their affiliates.

Technology And Trade Secrets: For the purposes of these Guidelines, "Trade Secrets" is defined as information, including a formula, pattern, compilation, device, method, technique, or process, that: (1) derives independent economic value, actual or potential, from not being generally known to, and not being readily ascertainable by proper means by, other persons who can obtain economic value from its disclosure or use; and (2) is the subject of efforts that are reasonable under the

OFFICIAL COPY

Apr 01 2019

circumstances to maintain its secrecy. Technology is scientific, engineering or technical information which is patented or is a trade secret.

B. INFORMATION SHARING RESTRICTIONS

1. Customer Information

- **Customer Information may be disclosed to an Affiliate, Nonpublic Utility Operations, or any third party only with the Customer's prior consent, as described in more detail below.**
  - Consent to disclosure of Customer Information to Affiliates or Nonpublic Utility Operations may be by written authorization, electronic authorization or recorded verbal authorization upon providing the Customer with the information set out in Attachment A to the Code of Conduct.
  - Departments providing Customer Information to Affiliates or Nonpublic Utility Operations must retain verification of the authorization for the longer of three years or as long as the authorization remains in effect.
  - Written, electronic, or recorded verbal authorization or consent for the disclosure of Piedmont's Customer Information to Piedmont's Nonpublic Utility Operations is not required.

  Exception: DEC/DEP/Piedmont may disclose Customer Information to Affiliates, Nonpublic Utility Operations or third parties as necessary for the Affiliate, Nonpublic Utility Operations or third party to provide goods or services to DEC, DEP or Piedmont.
  - Affiliates and/or Nonpublic Utility Operations receiving Customer Information under this exception must agree to protect the confidentiality of the Customer Information they receive. Employee training or information technology non-disclosure statements may be used to meet this requirement.
  - Agreements with third parties should provide for the protection of Customer Information.

- Customer Information may be used by DEBS employees to market or sell products or services to customers of DEC/DEP/Piedmont **only** in support of:
  - NCUC or PSCSC approved rate schedules or programs; or
  - Marketing efforts managed and supervised directly by DEC/DEP/Piedmont.

- DEBS employees with access to Customer Information may not act as an improper conduit of this information. For example, employees must not provide indirect access to the data, or recommend action based on the Customer Information, to any DEBS or other Affiliate or Nonpublic Utility Operations employees who have not been granted proper access to the information.

- ***Any improper disclosure of Customer Information requires promptly filing a statement with the NCUC describing the circumstances of the disclosure, the results of the disclosure, and the mitigating and/or other steps taken to address the disclosure, and the Legal Department must be informed of the disclosure to facilitate this notification.***

OFFICIAL COPY

Apr 01 2019

2. Confidential Systems Operation Information

- Confidential Systems Operation Information ("CSOI") may not be disclosed to an Affiliate or Nonpublic Utility Operation unless it is disclosed to all competing non-Affiliates at the same time and in the same manner.

- ***Exceptions:***
  - The CSOI is provided to employees of DEC/DEP/Piedmont for the purpose of implementing, and operating pursuant to, the Joint Dispatch Agreement in accordance with the Regulatory Conditions approved in Docket Nos. E-2, Sub 1095A, E-7, Sub 1100A, and G-9, Sub 682A.
  - The CSOI is necessary for the performance of services approved to be performed pursuant to one or more Affiliate utility-to-utility service agreements.
  - The disclosure is required by law or by a state or federal regulatory agency or court.
  - The CSOI is provided to employees of DEBS pursuant to a service agreement filed with the Commission pursuant to G.S. 62-153.
  - CSOI may be provided to Utility Affiliates for the purpose of sharing best practices and improving the provision of regulated utility service.
  - The CSOI is provided to an Affiliate pursuant to an agreement filed with the Commission pursuant to G.S. 62-153, provided that the agreement specifically describes the types of information to be disclosed.
  - Sharing of CSOI is permitted if it is otherwise essential to enable DEC/DEP/Piedmont to provide Utility Services to its Customers, or for compliance with the Sarbanes-Oxley Act of 2002.
  - However, certain reporting requirements are triggered by use of this exception. ***Consult with the Legal Department prior to sharing Operation Information under this exception.***
  - Employees receiving CSOI under these exceptions must agree to protect the confidentiality of information they receive and may not improperly share this information with other Affiliate or Nonpublic Utility Operation employees who are not permitted to have access to this information. Employee training or information technology non-disclosure statements may be used to communicate these requirements.
  - DEC/DEP/Piedmont and DEBS's employees with access to CSOI may not act as an improper conduit of this information. For example, employees must not provide indirect access to the data, or recommend action based on the CSOI, to any DEBS or other Affiliate or Nonpublic Utility Operations employees who have not been granted proper access to the information.

- ***Any improper disclosure of CSOI requires promptly filing a statement with the NCUC in Docket Nos. E-2, Sub 1095A, E-7, Sub 1100A, and G-9, Sub 682A, respectively, describing the circumstances of the disclosure, the CSOI disclosed, the results of the disclosure, and the mitigating and/or other steps taken to address the disclosure, and the Legal Department must be informed of the disclosure to facilitate this notification.***

Apr 01 2019

3. Market and Transmission Information

- The FERC Affiliate Restrictions and the Standards of Conduct prohibit the disclosure of DEC/DEP/Piedmont's market information and non-public transmission information to a market-regulated power sales affiliate (otherwise known as a non-regulated affiliate). FERC defines market information as: "non-public information related to the electric energy and power business including, but not limited to, information regarding sales, cost of production, generator outages, generator heat rates, unconsummated transactions, or historical generator volumes. Market information includes information from either affiliates or non-affiliates." The FERC Standards of Conduct prohibit the disclosure of DEC/DEP/Piedmont's non-public transmission system information to marketing function employees. Information regarding the Standards of Conduct and inappropriate disclosures is explained in Duke Energy's FERC Standards of Conduct Compliance Procedures found at www.ferc.duke-energy.com.
- Any handling or disclosure of DEC/DEP/Piedmont's market information or non-public transmission information by DEBS or its employees which results in (a) a violation of the FERC Affiliate Restrictions or Standards of Conduct, (b) the posting of such data on an OASIS or other Internet website, or (c) other public disclosure of the data, requires that DEC/DEP promptly file a statement with the NCUC. ***The Legal Department must be informed of any such occurrence to facilitate this notification.***

C. AFFILIATE AGREEMENTS

1. Filing Requirements

- Before DEC/DEP/Piedmont may make payment to an Affiliate for services not already approved, it must obtain prior NCUC approval.
- DEC/DEP/Piedmont must file all other affiliate agreements with the NCUC for notice. This notice must be at least 60 days in advance of the transfer of DEC/DEP/Piedmont's technology or trade secrets, provided, however, that DEC, DEP, and Piedmont are not required to provide advance notice for such transfers to each other.
- Before filing an affiliate agreement with the NCUC, DEC/DEP/Piedmont must submit it, unsigned, to the Public Staff -at least 15 days in advance for informal review.
- DEC/DEP/Piedmont must make available to the ORS copies of affiliate agreements involving payment by DEC/DEP/Piedmont to an Affiliate.
- **Service Level Agreements ("SLA")** may be considered affiliate agreements that trigger these filing and approval requirements. ***Contact the Legal Department before entering into an SLA between DEC/DEP/Piedmont and any Affiliate.***
- DEC/DEP/Piedmont must obtain PSCSC approval prior to the transfer of any utility asset valued at greater than $1 million to any party; and must provide 30 days advance notice to the NCUC prior to the transfer of any utility asset with a gross book value in excess of $10 million to any party.
- Under both North and South Carolina law, DEC/DEP/Piedmont bear the burden of showing that affiliate transactions are reasonable and prudent.

➢ Existing Agreements

- Copies of filed affiliate agreements are available for review on the State Regulatory Compliance Portal.

- On August 26, 2016, DEC, DEP, and Piedmont jointly filed in Docket Nos. E-2, Sub 1095A, E-7, Sub 1100A, and G-9, Sub 682A the following affiliate agreements to which they were parties:
  - ➢ Service Company Utility Service Agreement
  - ➢ Operating Companies Service Agreement
  - ➢ Operating Companies/Non-Utility Companies Service Agreement
  - ➢ Tax Sharing Agreement
  - ➢ Intercompany Asset Transfer Agreement
  - ➢ Utility Money Pool Agreement

- DEC and DEP are also parties to the Nuclear Services Agreement, which they jointly filed at the NCUC on December 1, 2011, in Docket Nos. E-2, Sub 998A and E-7, Sub 986A.

- Brief descriptions of these agreements follow:
  - ➢ Service Company Utility Service Agreement – It is expected that Franchised Electric & Gas employees whose job responsibilities involve providing certain services to different operating companies will be employed by DEBS and will provide services to DEC/DEP/Piedmont as well as the other Utility Affiliates[1] under this agreement.
  - ➢ Operating Companies Service Agreement – Under this agreement, DEC/DEP/Piedmont and their Utility Affiliates may provide certain services to each other. With the exception of DEC/DEP/Piedmont providing services for each other, the Utility Affiliates will request services from each other using Service Request for Affiliates form.
  - ➢ Operating Companies/Non-Utility Companies Agreement – Under this agreement, DEC/DEP/Piedmont and their non-utility Affiliates may provide certain services to each other under a Service Request for Affiliates form.
  - ➢ Nuclear Services Agreement – Under this agreement, DEC, DEP, and Duke Energy Florida, LLC, may provide certain services to each other to support management and operation of the nuclear plants.
  - ➢ Tax Sharing Agreement – The Tax Sharing Agreement, which is an agreement for the filing of consolidated income tax returns and for allocation of consolidated income tax liabilities and benefits.
  - ➢ Intercompany Asset Transfer Agreement – The Intercompany Asset Transfer Agreement, which is an agreement that allows DEC, DEP, Piedmont and their regulated utility affiliates to transfer assets to one another.
  - ➢ Utility Money Pool Agreement – The Utility Money Pool Agreement, which is an agreement that allows the parties to borrow funds on a short-term basis and to create a cash management program.

[1] "Utility Affiliates" means the regulated public utility operations of Duke Energy Indiana, LLC, Duke Energy Kentucky, Inc., Duke Energy Florida, LLC, and Duke Energy Ohio, Inc.

- Pursuant to North Carolina Regulatory Condition No. 5.4, DEC/DEP/Piedmont filed lists with the NCUC of the services they intend to obtain from their affiliates under the affiliate Service Agreements. Before receiving any services that are not on the appropriate list, DEC/DEP/Piedmont must give the NCUC **15 days advance notice.**

- With the exception of the Nuclear Services Agreement, which was last filed with the NCUC on June 30, 2014, these agreements supersede in their entirety DEC's affiliate service agreements previously filed in Docket Nos. E-7, Sub 795A and E-7, Sub 810; and DEC's and DEP's affiliate service agreements previously filed in Docket Nos. E-7, Sub 986A and E-2, Sub 998A.

- ***Contact the Legal Department before obtaining or providing goods or services from or to an Affiliate that are not covered by Affiliate Agreements.***

D. COST ALLOCATION & TRANSFER PRICING RULES

1. Cost Allocations

- **Corporate Governance and Shared Services**
  - DEC/DEP/Piedmont and their Affiliates may use joint corporate oversight, governance, corporate support and utility support systems and personnel. These services are provided by DEBS under the Service Company Utility Service Agreement (see Affiliate Agreements above).

  - Costs must be allocated or charged back on a fully distributed cost basis and are subject to review by state regulators. Charging methods are described in the applicable Service Agreement.

  - DEC/DEP/Piedmont must perform periodic evaluations that show shared services are cost-beneficial to it on a service by service basis.

- **Joint Purchases**
  - ***Generally:*** DEC/DEP/Piedmont and their Utility Affiliates may capture economies of scale in joint purchases of goods and services (*excluding*: electricity or ancillary services intended for resale unless such purchase is made pursuant to a Commission-approved contract or service agreement – see special provision below) or the joint development of an asset if (a) the purchase results in cost savings to DEC/DEP/Piedmont's Customers, and (b) the costs are allocated appropriately and an audit trail maintained.

  - ***Coal and Natural Gas:*** DEC/DEP/Piedmont and their Utility Affiliates may capture economies-of-scale in joint purchases of coal and natural gas for consumption, if these purchases result in cost savings to DEC/DEP/Piedmont's Customers. All joint purchases entered into pursuant to this section shall be priced in a manner that permits

OFFICIAL COPY
Apr 01 2019

clear identification of each participant's portion of the purchases and shall be reported in DEC's, DEP's and Piedmont's affiliated transaction reports filed with the Commission.

- ***The Legal Department must be informed of any such transfer to facilitate this notification.***

2. Transfer Pricing Rules

- **Types of Transactions**
  - **Affiliate or Nonpublic Utility Operation Providing Goods or Services to DEC/DEP/Piedmont**
    - Refer to "Filing Requirements" above.
    - DEC/DEP/Piedmont must perform a "make or buy" analysis.
    - For goods and services provided to DEC/DEP/Piedmont by Duke Energy Corporation, a Non-Utility Affiliate, or a Nonpublic Utility Operation, the transfer prices should be the lower of the supplier's fully distributed cost or market value.
    - For goods and services provided to DEC/DEP/Piedmont by each other or another Utility Affiliate, the transfer price should be the supplier's fully distributed cost.
    - Transfer pricing rules apply to Affiliates acting as subcontractors to other Affiliates providing goods or services to DEC/DEP/Piedmont.

  Exceptions:
    - Corporate governance, corporate services and utility support services (discussed above) may be provided at fully distributed cost.

  - **DEC/DEP/Piedmont Providing Utility Services to Affiliates/ Nonpublic Utility Operations**
    - Refer to "Filing Requirements" above.
    - Tariffed services provided by DEC/DEP/Piedmont to Duke Energy, other Affiliates, or a Nonpublic Utility Operation shall be provided at the same prices and terms that are made available to Customers having similar characteristics with regard to Utility Services.
    - Untariffed services provided by DEC/DEP/Piedmont to Duke Energy, a Non-Utility Affiliate, or a Nonpublic Utility Operation should be transferred at the higher of market value or DEC's, DEP's, or Piedmont's fully distributed cost.
    - Untariffed services provided by DEC/DEP/Piedmont to each other or another Utility Affiliate should be transferred priced at the supplier's fully distributed cost.
    - Loaned Employees
      - DEC/DEP/Piedmont may assign an employee to an Affiliate or Nonpublic Utility Operations if the assignment does not interfere with or impair DEC/DEP/Piedmont's utility responsibilities or business operations.
      - Responsibility for all liabilities to third parties and any legal or other related expenses that arise in connection with the work of the employee lies with the Affiliate.

OFFICIAL COPY
Apr 01 2019

- **DEC/DEP/Piedmont Providing Goods/Assets to Affiliates/Nonpublic Utility Operations and the transfer or Use of Utility Assets/Goods not subject to Intercompany Asset Transfer Agreement**

  - Tariffed goods provided by DEC/DEP/Piedmont to Duke Energy, other Affiliates, or a Nonpublic Utility Operations shall be provided at the same prices and terms that are made available to Customers having similar characteristics with regard to Electric Services or Natural Gas Services.
  - All Piedmont deliveries to DEC and DEP pursuant to intrastate negotiated sales or transportation arrangements and combinations of sales and transportation transactions shall be at the same price and terms that are made available to other Shippers having comparable characteristics, such as nature of service (firm or interruptible, sales or transportation), pressure requirements, nature of load (process/heating/electric generation), size of load, profile of load (daily, monthly, seasonal, annual), location on Piedmont's system, and costs to serve and rates. Piedmont shall maintain records in sufficient detail to demonstrate compliance with this requirement.
  - All gas supply transactions, interstate transportation and storage transactions, and combinations of these transactions, between DEC or DEP and Piedmont shall be at the fair market value for similar transactions between non-affiliated third parties. DEC/DEP/Piedmont shall maintain records, such as published market price indices, in sufficient detail to demonstrate compliance with this requirement.
  - All of the margins, also referred to as net compensation, received by Piedmont on secondary market sales to DEC and DEP shall be recorded in Piedmont's Deferred Gas Cost Accounts and shall flow through those accounts for the benefit of ratepayers. None of the margins on secondary market sales by Piedmont to DEC and DEP shall be included in the secondary market transactions subject to the sharing mechanism on secondary market transactions approved by the Commission in its *Order Approving Stipulation*, dated December 22, 1995, in Docket No. G-100, Sub 67. The sharing percentage on secondary market sales shall not be considered in determining the prudence of such transactions.
  - Untariffed goods provided by DEC/DEP/Piedmont to Duke Energy, a Non-Utility Affiliate, or a Nonpublic Utility Operation should be transferred at the higher of market value or DEC/DEP/Piedmont's fully distributed cost.
  - Determining the appropriate price requires consideration of fully distributed cost, market price evaluation and an appropriate allocation methodology (see below).
  - Affiliates/Nonpublic Utility Operations may use DEC/DEP/Piedmont's goods or assets without charge in connection with the performance of work for DEC/DEP/Piedmont if they would permit a third-party supplier to have the same access to such goods or assets without Operations without charge.
  - DEC/DEP/Piedmont may share Public Items with its Affiliates/Nonpublic Utility Operations without charge.
  - No materiality threshold on transfers to/from non-Utility or non-Regulated Utility affiliates.

  - ***In each instance, the Legal Department must be contacted prior to any such***

transfer to facilitate an asset transfer agreement.

- **Transfer of Technology or Trade Secrets**
  - ***Transfer, including sublicense, of technology or trade secrets by DEC/DEP/Piedmont to an Affiliate requires 60 days prior notice to the NCUC***. Software developed by *or on behalf of* DEC/DEP/Piedmont typically constitutes technology or trade secrets, which may also include proprietary manuals, technical processes, etc. The following procedure should be followed in the event of a request to transfer and provide use of technology or trade secrets to an Affiliate:
    - Notice: The Code of Conduct requires 60-days' notice to the NCUC in advance of the transfer of technology or trade secrets, unless the transfer is between DEC/DEP/Piedmont. If circumstances warrant, DEC/DEP/Piedmont may request a waiver of the advance notice requirement, but the notice period CANNOT be less than 20 business days. The department (or its department financial contact) transferring or allowing use of the DEC/DEP/Piedmont technology or trade secret to an Affiliate must notify the Legal or Carolinas Rates & Regulatory Strategy Departments before the beginning of the advance notice period. Details of the transaction, including description and appropriate compensation support, sufficient to make the filing with the NCUC must be provided in time to meet the notice requirement. If the transferring department requires assistance with determining the pricing methods or other transfer requirements, additional time to consult with the Legal or Carolinas Rates & Regulatory Strategy Departments should be allowed in advance of the notice period.
    - Transfer pricing: Generally, DEC/DEP/Piedmont are compensated for such technology and trade secret transfers at the higher of market or fully-distributed cost, subject to the conditions and/or exceptions discussed in this section. Market and cost comparison procedures to be followed (as well as applicable exceptions) are further discussed in the "Pricing Rules Compliance Documentation – Transfer or Sharing of Goods/Products" section below. The transferring department, along with the department financial contact if necessary, must ensure that the appropriate accounting entries are recorded to compensate DEC/DEP/Piedmont according to the transfer pricing requirements.

      Supporting documentation describing the technology or trade secret transferred, as well as the pricing support documentation must be maintained by the transferring department.

- **Sharing Customer Information or CSOI**
  - Sharing DEC/DEP/Piedmont's Customer Information or CSOI is strictly limited, as described in Sections B.1 & B.2 above. In the event Customer Information or CSOI is provided to an affiliate (or third party other than the Customer or the Customer's designated representative or agent), the North Carolina Code of Conduct requires that all costs incurred in assembling, compiling, preparing, or furnishing the information be recovered from the requesting party.

OFFICIAL COPY
Apr 01 2019

- "All costs" means fully-distributed cost and includes any overhead or allocable cost associated with the labor cost incurred to provide the information as well as any incremental systems, materials/supplies, or other costs identified with the transaction.

Although the Customer Information or CSOI is specific to DEC/DEP/Piedmont, the employees providing the Customer Information or CSOI, or providing a service using DEC/DEP/Piedmont Customer Information or CSOI, may be utility or Service Company employees. Charging fully distributed cost must have the effect of removing the applicable labor and other dollars from either DEC/DEP/Piedmont direct charges, or from a pool of Service Company dollars, which are otherwise direct-charged, distributed, or allocated to DEC/DEP/Piedmont. The following process should be followed to bill or charge costs associated with providing Customer Information or CSOI:

- The department or group providing the Customer Information or CSOI must develop a method to price the transaction or activity (if the activity is recurring) appropriately. For example, a per-transaction price may be developed by observing the average time involved in completing a service using Customer Information, applying a proportionate labor rate plus associated overheads, then multiplying by a number of transactions (tracked or estimated) for the accounting period, to compute a charge to the Affiliate or third party. Less complex methods may be appropriate to charge for one-time or infrequent transactions.
- The department or group providing the Customer Information or CSOI will provide sufficient detail to its department financial contact to enable the contact to make the appropriate journal entry to record the charge (or to bill the third party if applicable). The department financial contact must ensure that the appropriate accounting entries are recorded.
- Supporting documentation describing the transaction, as well as the pricing determination support, must be maintained by the department providing the Customer Information or CSOI or the applicable department.

- **Wholesale Power Sales or Purchases**
  - Require FERC approval.
  - May require Advance Notice to NCUC and approval by State Commissions, depending on the circumstances.

- **Pricing Rules Compliance and Documentation**
  - **Performance of Services**
    - Every DEC/DEP/Piedmont department that performs services for Affiliates should conduct, or cause to be prepared, a periodic market analysis to compare the department's current fully distributed cost to the equivalent market prices. Similarly, when it obtains services from an Affiliate (other than Corporate Governance and Shared Services or under the Utility-to-Utility exception),

OFFICIAL COPY
Apr 01 2019

each DEC/DEP/Piedmont department should perform, or ensure that the Affiliate performs a market comparison for such services and documents its rationale for selecting the Affiliate.

- **Transfer or Sharing of Goods/Products**
  - DEC/DEP/Piedmont should conduct periodic market to current cost comparisons for utility assets such as facilities, vehicles, equipment and information technology property, which are shared with or used by Affiliates. The market versus cost evaluation is applicable to any such assets provided on an ongoing basis or as the result of an individual transaction. Similarly, when DEC/DEP/Piedmont uses assets owned by an Affiliate, they should perform or ensure that the Affiliate performs a market comparison for such assets.

For the transfer or sharing of items developed, created or constructed by DEC/DEP/Piedmont or an Affiliate (regardless of whether the item is a capital asset), DEC/DEP/Piedmont departments should perform a market comparison to determine the appropriate price, taking into consideration the following as applicable:

- The fully distributed cost to DEC/DEP/Piedmont or the affiliate to develop the item; the appropriate allocation of such costs for items that will be shared, such as software; the market price to purchase the item "off the shelf", if available; and the market price to hire a professional to develop the item.

Exceptions:

- ***No Comparable Market Exception***. If no comparable market exists, the goods or services should be priced at fully distributed costs. A DEC/DEP/Piedmont department relying on this exception should document how it determined that no comparable market exists.

- ***Joint Purchase/Development Exception.*** The Code permits the use of shared corporate governance and shared support and permits joint purchases among DEC/DEP/Piedmont and their affiliates. Therefore, Duke Energy may establish a project to jointly develop an item to be used by multiple business units, including DEC/DEP/Piedmont, provided that the costs are allocated appropriately and accounting records are maintained to reflect the cost sharing. Similarly, DEC/DEP/Piedmont and their affiliates may jointly procure goods or services from third-party suppliers.

- ***Use of Assets in the Performance of Services.*** Affiliates may use DEC/DEP/Piedmont goods or assets without charge in connection with the performance of work for DEC/DEP/Piedmont if DEC/DEP/Piedmont would permit a third-party supplier to have the same access to such goods or assets without charge.

E. REGULATORY OVERSIGHT

- DEC/DEP/Piedmont are required to file a detailed Carolinas CAM and Annual Affiliate Transactions Report with the NCUC. The CAM and Report are subject to regular audit by the Public Staff.
- DEC/DEP/Piedmont are also required to maintain information on affiliate transactions for review by the PSCSC and ORS upon request.
- Corporate Audit Services performs an annual audit of Affiliate transactions.
- Independent audit of transactions under the Service Agreements occurs no less than every 2 years.

F. COMPLAINT PROCEDURE

The Code of Conduct requires DEC/DEP/Piedmont to follow established procedures to resolve any complaints that may arise due to the relationship of DEC/DEP/Piedmont with Duke Energy Corporation, its other Affiliates, or its Nonpublic Utility Operations. Complaints could originate from any source, including customers, potential suppliers, alliance partners, competitors, etc., or could be referred to DEC/DEP/Piedmont by the NCUC, PSCSC, Public Staff, or ORS. The following steps comprise the procedure to follow in the event of a complaint:

- Any verbal or written complaints will be referred to the Duke Energy Regulatory Affairs contact below (written complaints forwarded by the NCUC, PSCSC, Public Staff or ORS are automatically received by the Regulatory Affairs team).
- The Regulatory Affairs team will provide written notice to the complainant within 15 days indicating that the complaint was received.
- The Regulatory Affairs team will conduct or coordinate the investigation of the complaint, provide the results of such investigation to the Legal Department for review and input, and report back the status or results of the review to the complainant within 60 days of receiving the complaint.
- A log of complaints received and the related documents will be maintained by the Regulatory Affairs team for audit purposes.

Note: Any complaints received via the Ethics Line will be handled separately according to the procedures established for Ethics Line.

F. SHARED SERVICES COST DISTRIBUTION PROCESS

Services designated as "shared support," for purposes of the North Carolina Regulatory Conditions and Code of Conduct, are Services that are corporate or general utility in nature and are used by multiple business units. These services are provided pursuant to a Utility Service Agreement filed with the NCUC.

The list of services conforms to the service category descriptions included in Attachment 2 of the Service Company Utility Service Agreement, and represents the shared services offered that DEC, DEP, and Piedmont intend to obtain under this agreement. DEC, DEP, and Piedmont are required by the North Carolinas Utilities Commission to update the list of services as necessary. Interim changes to this list require filing with the Commission, with 15 days advance notice of the proposed changes.

The shared services cost distribution process is the method by which costs of the Services Company are fully distributed.

The objectives of the cost distribution process are to:

- Meet regulatory requirements.
- Ensure that each affiliate shares in and is appropriately charged for the relevant shared services costs.
- Assist affiliates in understanding the cost drivers and basis for allocation of shared services costs that affect their operating results.
- Provide an accounting model whereby affiliates can see how much is allocated to them for each shared service.

Costs for shared services are distributed to affiliates within Duke Energy through *(i)* direct charges, *(ii)* distribution or *(iii)* allocation. Costs are direct charged to the extent possible. Costs that cannot be direct charged can be distributed to the applicable business units using specific percentages if known. Costs that cannot be direct charged or distributed are allocated to the business units receiving the benefit using reasonable allocation methods as described in the "Shared Services Cost Distribution Details" section of this manual. Services are charged to

OFFICIAL COPY
Apr 01 2019

Affiliates on a fully distributed cost basis and include labor and non-labor costs. As part of a fully distributed cost, an overhead component is charged to Affiliates as a percentage of Service Company labor costs, whether direct charged, distributed or allocated. This overhead represents the cost of shared services provided by shared services employees.

The Corporate Accounting group is responsible for developing the following allocation factors, which serve as the basis for the allocation of costs that have not been direct charged or distributed. Final allocation factors distributing costs to each affiliate sum to 100% for each cost pool, thus clearing out 100% of costs to be allocated each month. Interim adjustments to allocation factors are made only for material transactions, such as an acquisition or divestiture of an affiliate, and for major company reorganizations.

Corporate Accounting reviews Service Company allocation factors annually. Typically during the budget process, rates are recalculated and implemented for actuals at the beginning of the following year. These rates are reflected in the Service Company allocation rate schedule included in the Cost Allocation Manual.

The Service Company also charges for certain services under the Service Company Utility Service Agreement. Types of pass-through costs typically handled by the Service Company may include:

1. Finance & Accounting Services
2. Insurance Premium Expense
3. Advertising Expense
4. Community Relations Projects
5. Donations
6. Employee Benefits Expense
7. Dues / Subscriptions
8. Merger Execution Costs
9. Research & Development
10. Miscellaneous Lease / Rent Expense

G. GUIDELINES AND PROCEDURE FOR CHARGING DEC/DEP/PIEDMONT FOR COSTS ORIGINATING WITH THE SERVICE COMPANY

On a regular basis, Service Company employees provide support to DEC/DEP/Piedmont. All Service Company resources used to support DEC/DEP/Piedmont must properly charge the respective utility through *(i)* direct charges, *(ii)* distribution or *(iii)* allocation. Charging fully distributed cost to DEC/DEP/Piedmont is normally accomplished with the application of a percentage loaded on direct labor. Service Company management is accountable for employees appropriately charging their costs. An Affiliate Rules and Transactions Computer Based Training ("CBT") (emphasis on DEC/DEP/Piedmont) is available in the Training Connection on the Portal.

The following procedure addresses employees' and management's responsibilities.

A. General Guidelines

1. Consistent with Regulatory Condition No. 5.5, hours worked by Service Company employees in direct support of DEC/DEP/Piedmont are charged directly to the respective utility to the maximum extent practicable.
2. First-line supervisors should review and approve, when appropriate, source documentation resulting in a charge by Service Company to DEC/DEP/Piedmont (timesheets, employee expenses, etc.).
3. First-line supervisors are responsible for reviewing reports that show monthly charges to their responsibility center. These reports would include any charges incurred by the responsibility center to DEC/DEP/Piedmont.
4. Service Company to DEC/DEP/Piedmont transactions are covered under the Service Company Utility Agreement.

B. Time Reporting

When a Service Company employee provides direct support to DEC/DEP/Piedmont: Consistent with Regulatory Condition No. 5.5, hours worked by Service Company employees in direct support of DEC/DEP/Piedmont are charged directly to the respective utility to the maximum extent practicable.

OFFICIAL COPY
Apr 01 2019

1. Management approvals are required for non-exempt employee timesheets, as well as exempt employee timesheets for vacation carryover or paid supplemental compensation.
2. The financial system will automatically load time reported to DEC/DEP/Piedmont with labor loads of fringe benefits, payroll taxes, incentive pay and unproductive time, as applicable.

C. Labor Allocations

Service Company employees provide services to DEC/DEP/Piedmont at fully distributed cost. Allocation of costs described in items 1 through 5 below are applied as a cost factor to labor charged to DEC/DEP/Piedmont. Below are the various cost components of labor loads. The rates for these items may be adjusted during the year to properly accrue the associated actual or anticipated cost.

1. Fringe Benefit Allocation

Fringe benefits are employee benefits such as retirement, and medical and dental insurance. These costs are generally accrued as they are earned. Actual fringe benefit costs are charged to the appropriate administrative and general FERC account. These costs are then allocated via a loading factor that is based on labor. This allows the proper distribution of fringe benefits between operating and capital projects as well as among Affiliates.

2. Payroll Tax Allocation

Payroll taxes include state unemployment, federal unemployment, social security and Medicare. Payroll taxes are accrued as they are incurred. Actual payroll taxes are charged to the appropriate payroll tax account. These costs are then allocated via a loading factor that is based on labor. This allows the proper distribution of payroll tax between operating and capital projects as well as among Affiliates.

3. Incentive Allocation

Incentives are accrued via a loading factor applied to labor charges.

OFFICIAL COPY
Apr 01 2019

4. Unproductive Cost Allocation

An unproductive cost allocation is applied to productive labor charges by the Service Company employee. Service Company allocates unproductive costs pro rata to productive labor, either via a monthly ratio or standard rates.

5. Service Company Overhead

A Service Company overhead rate is based on historical enterprise and governance overhead charged to Regulated Utilities in the following functions: Information Systems, Transportation, Human Resources, Materials Management, Accounting, Public Affairs, Legal, Finance, Facilities, Internal Auditing, Environmental, Health and Safety, Investor Relations, Planning, and Executive.

I. GUIDELINES AND PROCEDURE FOR CHARGING AFFILIATES FOR COSTS ORIGINATING WITH DEC/DEP/PIEDMONT

On occasion, DEC/DEP/Piedmont's employees may be requested to provide support, subject to availability, to Affiliates and Nonpublic Utility Operations. DEC/DEP/Piedmont's management is responsible for ensuring that use of all company resources to support Affiliate work is properly charged to the Affiliate/Nonpublic Utility Operation. Rules regarding affiliate agreements between DEC/DEP/Piedmont and any Affiliate/Nonpublic Utility Operation are described in Section E. *Guidelines for Transactions between DEC/DEP/Piedmont and Affiliates* incorporated in this CAM. DEC/DEP/Piedmont will charge the Affiliate/Nonpublic Utility Operation the higher of fully distributed cost or market value. Charging the Affiliate/Nonpublic Utility Operation either market or fully distributed cost is normally accomplished with the application of a percentage loaded on direct labor charges. Other charges may be made separately to account for vehicle charges, employee expenses, materials and supplies, contract services, etc. DEC/DEP/Piedmont's management is accountable for the review and approval of all charges from the utility in support of Affiliate/ Nonpublic Utility Operation work. An Affiliate Rules and Transactions CBT (emphasis on DEC/DEP/Piedmont) is available on the employee portal.

Costs covered by the utility affiliate loader are handled by utility departmental allocations and a change to the Service Company allocation basis. These steps eliminate the need for a utility affiliate loader between DEC and DEP, because the costs of the utility affiliate loader are now addressed in a simplified fashion between the two Companies. The utility affiliate loader still applies for all labor charged outside of DEC and DEP to their affiliates.

The following procedure addresses employees' and management's responsibilities.

A. General Guidelines

1. Hours worked by DEC/DEP/Piedmont employees in direct support of an Affiliate/ Nonpublic Utility Operation are charged directly to the Affiliate.

OFFICIAL COPY
Apr 01 2019

2. First-line supervisors should review and approve, when appropriate, source documentation resulting in a charge by DEC/DEP/Piedmont to an Affiliate/ Nonpublic Utility Operation (timesheets, employee expenses, etc.).
3. First-line supervisors are responsible for reviewing reports that show monthly charges to their responsibility center. These reports would include any charges incurred by the responsibility center to an Affiliate/ Nonpublic Utility Operation.
4. Transactions originating with DEC/DEP/Piedmont and charged to an Affiliate typically require the completion and approval of a Service Request form. The process and eForm can be found on the Portal under Rates & Regulatory.

B. Time Reporting

When a DEC/DEP/Piedmont employee supports an Affiliate/Nonpublic Utility Operation:

1. Hours worked by DEC/DEP/Piedmont employees in direct support of an Affiliate/Nonpublic Utility Operation are charged directly to the Affiliate/Nonpublic Utility Operation.
2. Overtime hours worked by a non-exempt employee during a week should be applied first to the Affiliate/Nonpublic Utility Operation project, up to total hours worked on the project.
    a) If overtime pay is charged to the utility but not the Affiliate/Nonpublic Utility Operation in a time reporting period, the reason for the exception shall be fully documented and maintained by the supervisor for a minimum of two years.
    b) For example, a non-exempt employee works 50 hours for a given week, 10 of which must be paid as overtime. Twenty of the 50 hours were in support of an Affiliate project. That project should be charged 10 hours overtime and 10 hours straight-time.
3. When an exempt employee who is paid semi-monthly provides support to an Affiliate/ Nonpublic Utility Operation, and overtime is worked, the employee's regular semi-monthly pay is prorated to the utility and the Affiliate/Nonpublic Utility Operation based on the number of hours worked for each.
4. Management approvals are required for non-exempt employee timesheets, as well as exempt employee timesheets for vacation carryover or paid supplemental compensation.

OFFICIAL COPY
Apr 01 2019

5. The financial system will automatically load time reported to an Affiliate/Nonpublic Utility Operation with labor loads including fringe benefits, payroll taxes, incentive pay, and unproductive time, as applicable. If market value is to be charged, journal entries will be made by the business finance support group to appropriately adjust the costs to market. The overhead cost factor includes the following components: department administrative overheads, corporate governance, employee training, Service Company-related shared services, facilities, and supervisory costs.

C. Labor Allocations

DEC/DEP/Piedmont employees may provide services to their regulated Utility Affiliates at DEC's, DEP's, or Piedmont's fully distributed costs and DEC/DEP/Piedmont employees may provide services to Duke Energy Corporation, a Non-Utility Affiliate, a non-regulated Utility Affiliate or Nonpublic Utility Operation at the higher of fully distributed cost or market value, subject to certain exceptions. The mechanism for charging is generally a cost applied to labor charges and a market value journal entry if applicable. Allocation rates described in items 1 through 10 below are applied as a cost factor to direct labor charged to an Affiliate/Nonpublic Utility Operation.

Below are the various cost components of labor loads. The rates for Items 1-4 may be adjusted during the year to properly accrue the associated actual or anticipated cost. Items 5-10 are components of Duke Energy's Regulated Utilities Franchised Electric and Gas labor cost multiplier and are updated annually. Items 5-10 do not apply to transactions between DEC and DEP.

1. Fringe Benefit Allocation

Fringe benefits are employee benefits such as retirement, and medical and dental insurance. These costs are generally accrued as they are earned. Actual fringe benefit costs are charged to the appropriate administrative and general FERC account. These costs are then allocated via a loading factor that is based on labor. This allows the proper distribution of fringe benefits between operating and capital projects as well as among business units.

2. Payroll Tax Allocation

Payroll taxes include state unemployment, federal unemployment, social security and Medicare. Payroll taxes are accrued as they are incurred. Actual payroll taxes are

OFFICIAL COPY

Apr 01 2019

charged to the appropriate payroll tax account. These costs are then allocated via a loading factor that is based on labor. This allows the proper distribution of payroll tax between operating and capital projects as well as among business units.

3. **Incentive Allocation**

   Incentives are accrued via a loading factor applied to direct labor charges by the DEC/DEP/Piedmont employee performing work for an Affiliate/Nonpublic Utility Operation.

4. **Unproductive Cost Allocation**

   An unproductive cost allocation is applied on the basis of direct labor charges by the DEC/DEP/Piedmont employee performing work for an Affiliate/Nonpublic Utility Operation. DEC/DEP/Piedmont allocates unproductive costs pro rata to direct labor, either via a monthly ratio or standard rates.

Duke Energy intends to calculate Items 5-10 below on a total Regulated Utilities Franchised Electric and Gas basis with the calculations to be performed annually. Annualized costs (either historic or projected) that best align with the current organization will be used in the calculations.

5. **Administrative Overheads**

   An Administrative Overhead Rate will be applied on the basis of direct labor charges. Administrative Overheads include: Departmental administrative functions (Business Support and General Office Executive Management), labor, and non-labor costs (e.g., training, employee expenses, Information Management costs for administrative functions by functional department).

6. **Corporate Governance**

   A corporate governance cost rate is applied on the basis of direct labor charges. The corporate governance rate is based on corporate governance costs allocated to FE&G.

OFFICIAL COPY
Apr 01 2019

7. Employee Training Costs

An employee training cost rate is applied on the basis of direct labor charges. The employee training-related costs factor will be developed by identifying the direct labor charges for those within Regulated Utilities that perform employee training-related tasks. Such training provides employees with the knowledge and skills necessary to perform their job duties, for professional development, and to maintain professional or technical licenses or for certifications required for business operations. The employee training cost rate is based on the total direct labor charges of the groups within Regulated Utilities that perform employee training-related tasks.

8. Service Company Costs

A service company cost rate is based on historical enterprise and governance overhead charged to Regulated Utilities in the following functions: Information Systems, Transportation, Human Resources, Materials Management, Accounting, Public Affairs, Legal, Finance, Facilities, Internal Auditing, Environmental, Health and Safety, Investor Relations, Planning, and Executive.

9. Facilities Cost

The facilities cost rate is applied on the basis of direct labor charges. The facility cost rate is based on the annual cost structure for corporate facilities, i.e., Charlotte, Raleigh, Cincinnati, St. Petersburg and Plainfield office buildings, and the number of employees occupying these facilities to arrive at an average facility cost.

10. Supervisory Costs

The supervisory cost rate is applied on the basis of direct labor charges. The supervisory cost rate represents the cost of supervision related to a Regulated Utilities employee performing work for an Affiliate Business unit. The basis for determining such costs is through the analysis of supervisory labor cost as a factor of Regulated Utilities employee labor cost.

OFFICIAL COPY
Apr 01 2019

D. Premium Services (Non-affiliate transactions)

Premium services are unregulated services provided by DEC or DEP to its electric customers. All costs related to premium services are either direct-charged or allocated to non-utility accounts. Costs identified in subsections C.1. through C.4. above are automatically allocated based on labor charges to premium services processes. An additional multiplier rate is also applied to labor charged to these premium services processes to cover costs such as facilities, administrative and corporate overheads, employee training and supervision, and shared services.

K. GUIDELINES AND PROCEDURE FOR CHARGING DEC/DEP/PIEDMONT FOR COSTS ORIGINATING WITH UTILITY AFFILIATES EXCLUDING THE SERVICE COMPANY

On occasion, Utility Affiliate (DEF, DEI, DEK, DEO-Transmission or DEO - Distribution) employees may be requested to provide support, subject to availability, to DEC/DEP/Piedmont. Affiliate management is responsible for ensuring that the use of all company resources to support DEC/DEP/Piedmont is properly charged to DEC/DEP/Piedmont. The Utility Affiliate will charge its fully distributed cost to DEC/DEP/Piedmont. Charging DEC/DEP/Piedmont fully distributed cost is normally accomplished with the application of a percentage loaded on direct labor charges. Other charges may be made separately to account for vehicle charges, employee expenses, materials and supplies, contract services, etc. The Utility Affiliate management is accountable for the review and approval of all charges from the Utility Affiliate in support of DEC/DEP/Piedmont work. An Affiliate Rules and Transactions CBT (emphasis on DEC/DEP/Piedmont) is available in the Training Connection on the Portal.

Please reference Section I. *Guidelines and Procedure for Charging Affiliates for Costs Originating with DEC/DEP/Piedmont*, which addresses eliminating a utility affiliate loader between DEC and DEP. The following procedure addresses the responsibilities of employees and management.

A. General Guidelines

1. Hours worked by the Utility Affiliate employees in direct support of DEC/DEP/Piedmont are charged directly to DEC/DEP/Piedmont.
2. First-line supervisors should review and approve, when appropriate, source documentation resulting in a charge by Utility Operations to DEC/DEP/Piedmont (timesheets, employee expenses, etc.).
3. First-line supervisors/managers are responsible for reviewing any reports that detail monthly charges to their responsibility center. These reports would include any charges incurred by the responsibility center to DEC/DEP/Piedmont.

OFFICIAL COPY

Apr 01 2019

4. Utility Affiliate to DEC/DEP/Piedmont transactions typically require the completion and approval of a Service Request form, unless DEC/DEP/Piedmont is requesting the service from the other. The process and eForm can be found on the Portal under Rates & Regulatory.

B. Time Reporting

When a Utility Affiliate employee supports DEC/DEP/Piedmont:

1. Hours worked by the Utility Affiliate employees in direct support of DEC/DEP/Piedmont are charged directly to DEC/DEP/Piedmont.
2. Management approvals are required for non-exempt employee timesheets, as well as exempt employee timesheets for vacation carryover or paid supplemental compensation.
3. The financial system will automatically load time reported to DEC/DEP/Piedmont with labor loads including fringe benefits, payroll taxes, incentive pay, and unproductive time, as applicable. If market value is to be charged, journal entries will be made by the Regulated Utility Financial Planning & Analysis group to appropriately adjust the costs to market. The overhead cost factor includes the following components: department administrative overheads, corporate governance, employee training, Service Company-related shared services, facilities, and supervisory costs.

C. Labor Allocations

Utility Affiliate employees provide services to DEC/DEP/Piedmont at fully distributed cost. The mechanism for charging DEC/DEP/Piedmont is generally a cost adder applied to labor charges and a market value journal entry if applicable. Allocation rates described in items 1 through 10 below are applied as a cost factor to direct labor charged to DEC/DEP/Piedmont. Below are the various cost components of labor loads. The rates for Items 1-4 may be adjusted during the year to properly accrue the associated actual or anticipated cost. Items 5-10 are components of Duke Energy's Regulated Utilities labor cost multiplier and are updated annually.

1. Fringe Benefit Allocation

Fringe benefits are employee benefits such as retirement and medical and dental insurance. These costs are generally accrued as they are earned. Actual fringe benefit costs are charged to the appropriate administrative and general FERC account. These

OFFICIAL COPY

Apr 01 2019

costs are then allocated via a loading factor that is based on labor. This allows the proper distribution of fringe benefits between operating and capital projects as well as among business units.

2. **Payroll Tax Allocation**

   Payroll taxes include state unemployment, federal unemployment, social security and Medicare. Payroll taxes are accrued as they are incurred. Actual payroll taxes are charged to the appropriate payroll tax account. These costs are then allocated via a loading factor that is based on labor. This allows the proper distribution of payroll tax between operating and capital projects as well as among business units.

3. **Incentive Allocation**

   Incentives are allocated via a loading factor applied to direct labor charges by each Utility Affiliate employee performing work for DEC/DEP/Piedmont.

4. **Unproductive Cost Allocation**

   An unproductive cost allocation is applied on the basis of direct labor charges by each Utility Affiliate employee performing work for DEC/DEP/Piedmont. Each Utility Affiliate allocates unproductive costs pro rata to direct labor, either via a monthly ratio or standard rates.

Duke Energy intends to calculate Items 5-10 below on a total Regulated Utilities basis with the calculations to be performed annually. Annualized costs (either historic or projected) that best align with the current organization will be used in the calculations. Please reference Section I. *Guidelines and Procedure for Charging Affiliates for Costs Originating with DEC/DEP/Piedmont*, details of Items 5-10. Items 5-10 do not apply to transactions between DEC and DEP.

5. **Administrative Overheads**
6. **Corporate Governance**
7. **Employee Training Costs**
8. **Service Company Costs**
9. **Facilities Cost**
10. **Supervisory Costs**

L. GUIDELINES AND PROCEDURE FOR CHARGING DEC/DEP/PIEDMONT FOR COSTS ORIGINATING WITH NON-REGULATED AFFILIATES

On occasion, employees of Non-Regulated Affiliates may be requested to provide support, subject to availability, to DEC/DEP/Piedmont. (Non-Regulated Affiliates' management is responsible for ensuring that use of all company resources to support DEC/DEP/Piedmont work is properly charged to DEC/DEP/Piedmont.) Rules regarding affiliate agreements between Non-Regulated Affiliates and DEC/DEP/Piedmont are described in Section E. *Guidelines for Transactions between DEC/DEP/Piedmont and Affiliates* incorporated in this CAM. Non-Regulated Affiliates will charge DEC/DEP/Piedmont the lower of fully distributed cost or market value as appropriate. Charging DEC/DEP/Piedmont either market or fully distributed cost is normally accomplished with the application of a percentage loaded on direct labor charges. Other charges may be made separately to account for vehicle charges, employee expenses, materials and supplies, contract services, etc. Non-Regulated management is accountable for the review and approval of all charges from Non-Regulated Affiliates in support of DEC/DEP/Piedmont's work.

The following procedure addresses employee's and manager's responsibilities.

A. General Guidelines

1. Hours worked by employees of Non-Regulated Affiliates in direct support of DEC/DEP/Piedmont are charged directly to DEC/DEP/Piedmont.
2. First-line supervisors should review and approve, when appropriate, any source documentation resulting in a charge by Non-Regulated Affiliates to DEC/DEP/Piedmont (timesheets, employee expenses, etc.).
3. First-line supervisors are responsible for reviewing reports that show monthly charges to their responsibility center. These reports would include charges incurred by the responsibility center to DEC/DEP/Piedmont.
4. Non-Regulated to DEC/DEP/Piedmont transactions typically require the completion and approval of a Service Request form. The process and eForm can be found on the Portal under Rates & Regulatory.

B. Time Reporting

When a Non-Regulated employee supports DEC/DEP/Piedmont:

1. Hours worked by Non-Regulated employees in direct support of DEC/DEP/Piedmont are charged directly to DEC/DEP/Piedmont.
2. Management approvals are required for non-exempt employee timesheets, as well as exempt employee timesheets for vacation carryover or paid supplemental compensation.
3. The financial system will automatically load time reported to DEC/DEP/Piedmont with labor loads including fringe benefits, payroll taxes, incentive pay, and unproductive time, as applicable. If market value is to be charged, journal entries will be made by the Non-Regulated Affiliate's financial group to appropriately adjust the costs to market.

C. Labor Allocations

Non-Regulated employees provide services to DEC/DEP/Piedmont at the lower of fully distributed cost or market value. The mechanism for charging DEC/DEP/Piedmont is generally a cost adder applied to labor charges. When appropriate to charge market, a market value journal entry is made. Allocation rates described in items 1 through 10 may be applied as a cost factor to direct labor when charging DEC/DEP/Piedmont.

Below are the various cost components of labor loads which may be applied to labor when Non-Regulated Affiliates do work for and charge DEC/DEP/Piedmont. The rates for Items 1-4 (specific to Non-Regulated Affiliates) may be adjusted during the year to properly accrue the associated actual or anticipated cost. Items 5-10 may also be included as components of Non-Regulated Affiliates' labor cost multiplier.

1. Fringe Benefit Allocation

Fringe benefits are employee benefits such as retirement and medical and dental insurance. These costs are generally accrued as they are earned. Actual fringe benefit costs are charged to the appropriate administrative and general FERC account. These costs are then allocated via a loading factor that is based on labor. This allows the proper distribution of fringe benefits between operating and capital projects as well as among business units.

OFFICIAL COPY
Apr 01 2019

2. Payroll Tax Allocation

Payroll taxes include state unemployment, federal unemployment, social security and Medicare. Payroll taxes are accrued as they are incurred. Actual payroll taxes are charged to the appropriate payroll tax account. These costs are then allocated via a loading factor that is based on labor. This allows the proper distribution of payroll tax between operating and capital projects as well as among business units.

3. Incentive Allocation

Incentives are allocated via a loading factor applied to direct labor charges by the Non-Regulated employee performing work for DEC/DEP/Piedmont.

4. Unproductive Cost Allocation

An unproductive cost allocation is applied on the basis of direct labor charges by the Non-Regulated employee performing work for DEC/DEP/Piedmont. Non-Regulated Affiliates allocate unproductive costs pro rata to direct labor, either via a monthly ratio or standard rates.

Please reference Section I. *Guidelines and Procedure for Charging Affiliates for Costs Originating with DEC/DEP/Piedmont*, details of Items 5-10.

5. Administrative Overheads

6. Corporate Governance

7. Employee Training Costs

8. Service Company Costs

9. Facilities Cost

10. Supervisory Costs

M. TYPICAL TRANSACTIONS BETWEEN DEC/DEP/PIEDMONT AND AFFILIATES COVERED UNDER SEPARATE AGREEMENTS

The following are some of the typical transactions that DEC/DEP/Piedmont conduct with one another or their affiliates under separate agreements not otherwise discussed in this manual. These agreements and others can be found on the State Regulatory Compliance portal page.

A. Bison Insurance

Duke Energy's Insurance program requires that costs be identified and allocated to the business units based upon their contributions to the risk of the entire company. The programs are designed to encourage risk control, early claims reporting, and efficient claims management and allow for cost-based pricing. This is accomplished by transferring the insurable losses across the company to the captive insurance companies, generally after a small business unit deductible is met. The captives also reinsure their risk in excess of its retention (and additional deductible) with unrelated third-party reinsurance companies. The captives charge premiums to business units that participate in the program to cover the aggregate cost of reinsurance and the estimated retained losses at the captives. This works essentially the same way commercial insurance works where the losses of a few are covered by the premiums of many.

The primary types of costs to be allocated are:

- retained losses and related loss adjustment expenses
- insurance premiums

Duke Energy has developed specific premium calculation methodologies for each line of coverage (i.e., general liability, property, workers' compensation and directors and officers), which is similar to how commercial insurance underwrites risk. Insurance premiums (costs) are generally allocated on a blended basis of exposure and historical loss experience (frequency and severity).

B. Intercompany Asset Transfer Agreement

An agreement among DEC, DEP, DEF, DEO, DEI, DEK, and Piedmont addresses the transfer of assets, compensation, payment, warranties, and indemnification. The Commission approved a limited waiver of the cost-based pricing provisions of the Intercompany Asset Transfer Agreement for the transfer between DEC and DEP of rotable fleet spares, which are specific working parts of a generating unit that must be replaced several during the relatively long life of that unit. *Order Approving Request for Limited Waiver and Pre-Approval of Accounting Authority Pursuant to Rule R8-27*, Docket No. E-2, Sub 998A, E-7, Sub 986A (Sept. 3, 2014).

C. Tax Sharing Agreement

Duke Energy Corporation, as parent of a consolidated group of companies, files federal income taxes on behalf of its affiliates who are members of its consolidated group. Under Duke Energy Corporation's Tax Sharing Agreement, which is applicable to all members of Duke Energy's consolidated group, income taxes allocable to Duke Energy Corporation are accrued by it and consolidated group members on a stand-alone basis.

D. Utility Money Pool Agreement

Establishes a cash management program (the "Utility Money Pool") to coordinate and provide for certain short-term cash and working capital requirements.

E. Carolinas Operating Companies Commodity and Related Equipment and Services Transfer Agreement

Provides for the pre-approved transfer of fuel, reagents, coal combustion products, and related equipment and services (but does not provide for the disposal of coal combustion products). See *Order Accepting Affiliate Agreement and Allowing Payment Thereunder*, Docket Nos. E-2, Sub 998A and E-7, Su b 986A (Feb. 10, 2015).

F. Asset Management and Delivered Supply Agreement (AMA)

Provides for DEC to be the asset manager for all natural gas supply and capacity for both DEC and DEP. The AMA facilitates coordination and optimization of natural gas capacity and supply rights owned by DEC and DEP to reduce the cost of providing electric service to both DEC's and DEP's native load customers.

N. OTHER

Audit Principles & Guidelines

An audit trail shall exist with respect to transactions between DEC/DEP/Piedmont and its affiliates.

Corporate Audit Services will have complete access to affiliate records necessary to ensure that cost allocations and affiliate transactions are conducted in accordance with established policies and procedures and regulatory requirements. Auditors will have complete access to affiliate records to ensure availability of relevant information necessary to evaluate whether subsidization exists. The auditors, not the individual affiliates, will determine what is relevant for a particular audit objective. Limitation of access would compromise the audit process and impair audit independence.

Cost allocation documentation will be made available to Corporate Audit Services for periodic review of the allocation policies and procedures and to any jurisdictional regulatory authority when appropriate and upon request. Any entity required to provide access to its books and records can, and is encouraged to, make arrangements as necessary and appropriate to ensure that competitively sensitive information provided in the course of the audits be kept confidential by Corporate Audit Services and/or regulatory authorities.

Transactions between DEC/DEP/Piedmont and its Affiliates/Nonpublic Utility Operations will be reviewed at a minimum annually by Corporate Audit Services.

Re: Cost Allocation Manual
Docket Nos. E-7, Sub 1100A; E-2, Sub 1095A; and G-9, Sub 682A

Dear Ms. Campbell:

Pursuant to Regulatory Condition No. 5.5(c) set forth in the Commission's *Order Granting Motion to Amend Regulatory Conditions* issued on August 24, 2018, enclosed for filing is the 2020 Cost Allocation Manual ("CAM") of Duke Energy Carolinas, LLC, Duke Energy Progress, LLC and Piedmont Natural Gas Company, Inc. in the referenced dockets.

During the review of allocation factors in 2019 in preparation for the 2020 Budget and Calendar year actuals, there were no changes deemed necessary to the allocation bases currently being used to allocate the various services.

Please do not hesitate to contact me if you have any questions.

Sincerely,

Kendrick C. Fentress

A. INTRODUCTION

This Carolinas' Cost Allocation Manual ("CAM") documents the guidelines and procedures for allocating costs between the different business units impacting DEC, DEP, and Piedmont. The guidelines are intended to provide the foundation for proper identification and recording of transactions involving the exchange of services or goods between DEC, DEP, Piedmont and their Affiliates. These guidelines describe the allocation methods that are consistent with cost causation principles to ensure one Duke Energy entity does not subsidize another. Additional information on Duke Energy's internal controls and finance policies is available for Duke Energy employees on the employee Portal.

Per the Regulatory Conditions in the *Order Approving Merger Subject to Regulatory Conditions and Code of Conduct* issued September 29, 2016 by the North Carolina Utilities Commission ("Commission") in Docket Nos. E-2, Sub 1095, E-7, Sub 1100, and G-9, Sub 682, as amended by the *Order Granting Motion to Amend Regulatory Conditions* issued by the Commission in Docket Nos. E-2, Sub 1095A, E-7, Sub 1100A, and G-9, Sub 682A, the following merger conditions apply to the CAM:

5.5 Charges for and Allocations of the Costs of Affiliate Transactions.

To the maximum extent practicable, all costs of Affiliate transactions shall be directly charged. When not practicable, such costs shall be assigned in proportion to the direct charges. If such costs are of a nature that direct charging and direct assignment are not practicable, they shall be allocated in accordance with Commission-approved allocation methods. The following additional provisions shall apply:

(a) DEC, DEP, and Piedmont shall keep on file with the Commission a cost allocation manual (CAM) with respect to goods or services provided by DEC, DEP, or Piedmont, any Utility Affiliate, DEBS, any other Non-Utility Affiliate, Duke Energy, any other Affiliates, or any Nonpublic Utility Operation to DEC, DEP, or Piedmont. Piedmont will adopt DEC's and DEP's CAM.

(b) The CAM shall describe how all directly charged, direct assignment, and other costs for each provider of goods and services will be charged between and among DEC, DEP, Piedmont, their Utility Affiliates, Non-Utility Affiliates, Duke Energy, any other Affiliates, and the Nonpublic Utility Operations, and shall include a detailed review of the common costs to be allocated and the allocation factors to be used.

(c) The CAM shall be updated annually, and the revised CAM shall be filed with the Commission no later than March 31 of the year that the CAM is to be in effect. DEC, DEP, and Piedmont shall review the appropriateness of the allocation bases every two years, and the results of such review shall be filed with the Commission. Interim changes shall be made to the CAM, if and when necessary, and shall be filed with the Commission, in accordance with Regulatory Condition 5.6.

(d) No changes shall be made to the procedures for direct charging, direct assigning, or allocating the costs of Affiliate transactions or to the method of accounting for such transactions associated with goods and services (including Shared Services provided by DEBS) provided to or by Duke Energy, other Affiliates, and the Nonpublic Utility Operations until DEC, DEP, or Piedmont has given 15 days' notice to the Commission of the proposed changes, in accordance with Regulatory Condition 5.6.

5.6 Procedures Regarding Interim Changes to the CAM or Lists of Goods and Services for which 15 Days' Notice Is Required.

With respect to interim changes to the CAM or changes to lists of goods and services, for which the 15-day notice to the Commission is required, the following procedures shall apply: the Public Staff shall file a response and make a recommendation as to how the Commission should proceed before the end of the notice period. If the Commission has not issued an order within 30 days of the end of the notice period, DEC, DEP, or Piedmont may proceed with the changes but shall be subject to any fully adjudicated Commission order on the matter. The provisions of Regulatory Condition 13.2 do not apply to advance notices filed pursuant to Regulatory Condition 5.5(c) and (d). Such advance notices shall be filed in Docket Nos. E-7, Sub 1100A, E-2, Sub 1095A, and G-9, Sub 682A.

In addition to the CAM as a cost charging guide, DEC, DEP, and Piedmont use OpenPages to track compliance with regulatory requirements. OpenPages is administered by Corporate Compliance, which serves DEC, DEP, and Piedmont. OpenPages allows a regulatory requirement to be broken down into actionable tasks and assigned to one or more individuals. Individuals must complete tasks assigned and report completion by a certain date. OpenPages is integral to DEC's, DEP's, and Piedmont's culture of compliance.

C. NORTH CAROLINA CODE OF CONDUCT

(as approved by the North Carolina Utilities Commission)

This section contains the complete text of the "official" North Carolina Code of Conduct (hereinafter "Code of Conduct" or "Code"), approved by the North Carolina Utilities Commission, which governs DEC's, DEP's, and Piedmont's transactions with affiliates. This Code applies in North Carolina and South Carolina.

CODE OF CONDUCT

GOVERNING THE RELATIONSHIPS, ACTIVITIES, AND TRANSACTIONS BETWEEN AND AMONG THE PUBLIC UTILITY OPERATIONS OF DEC, THE PUBLIC UTILITY OPERATIONS OF DEP, THE PUBLIC UTILITY OPERATIONS OF PIEDMONT, DUKE ENERGY CORPORATION, OTHER AFFILIATES, AND THE NONPUBLIC UTILITY OPERATIONS OF DEC, DEP, AND PIEDMONT

I. DEFINITIONS

For the purposes of this Code of Conduct, the terms listed below shall have the following definitions:

Affiliate: Duke Energy and any business entity of which ten percent (10%) or more is owned or controlled, directly or indirectly, by Duke Energy. For purposes of this Code of Conduct, Duke Energy and any business entity controlled by it are considered to be Affiliates of DEC, DEP, and Piedmont, and DEC, DEP, and Piedmont are considered to be Affiliates of each other.

Commission: The North Carolina Utilities Commission.

Confidential Systems Operation Information or CSOI: Nonpublic information that pertains to Electric Services provided by DEC or DEP, including but not limited to information concerning electric generation, transmission, distribution, or sales, and nonpublic information that pertains to Natural Gas Services provided by Piedmont, including but not limited to information concerning transportation, storage, distribution, gas supply, or other similar information.

Customer: Any retail electric customer of DEC or DEP in North Carolina and any Commission-regulated natural gas sales or natural gas transportation customer of Piedmont located in North Carolina.

Customer Information: Non-public information or data specific to a Customer or a group of Customers, including, but not limited to, electricity consumption, natural gas consumption, load profile, billing history, or credit history that is or has been obtained or compiled by DEC, DEP, or Piedmont in connection with the supplying of Electric Services or Natural Gas Services to that Customer or group of Customers.

DEBS: Duke Energy Business Services, LLC, and its successors, which is a service company Affiliate that provides Shared Services to DEC, DEP, Piedmont, Duke Energy, other Affiliates, or the Nonpublic Utility Operations of DEC, DEP, or Piedmont, singly or in any combination.

DEC: Duke Energy Carolinas, LLC, the business entity, wholly owned by Duke Energy, that holds the franchise granted by the Commission to provide Electric Services within DEC's North Carolina service territory and that engages in public utility operations, as defined in G.S. 62-3(23), within the State of North Carolina.

DEP: Duke Energy Progress, LLC, the business entity, wholly owned by Duke Energy, that holds the franchises granted by the Commission to provide Electric Services within the DEP's North Carolina service territory and that engages in public utility operations, as defined in G.S. 62-3(23), within the State of North Carolina.

Duke Energy: Duke Energy Corporation, is the current holding company parent of DEC, DEP, Piedmont, and any successor company.

Electric Services: Commission-regulated electric power generation, transmission, distribution, delivery, and sales, and other related services, including, but not limited to, administration of Customer accounts and rate schedules, metering, billing, standby service, backups, and changeovers of service to other suppliers.

Fuel and Purchased Power Supply Services: All fuel for generating electric power and purchased power obtained by DEC or DEP from sources other than DEC or DEP for the purpose of providing Electric Services.

Fully Distributed Cost: All direct and indirect costs, including overheads and an appropriate cost of capital, incurred in providing goods or services to another business entity; provided, however, that (a) for each good or service supplied by DEC, DEP, or Piedmont, the return on common equity utilized in determining the appropriate cost of capital shall equal the return on common equity authorized by the Commission in the supplying utility's most recent general rate case proceeding; (b) for each good or service supplied to DEC, DEP, or Piedmont, the appropriate cost of capital shall not exceed the overall cost of capital authorized in the supplying utility's most recent general rate case proceeding; and (c) for each good or service supplied by DEC, DEP, or Piedmont to each other, the return on common equity utilized in determining the appropriate cost of capital shall not exceed the lower of the returns on common equity authorized by the Commission in DEC's, DEP's, or Piedmont's most recent general rate case proceeding, as applicable.

JDA: Joint Dispatch Agreement, which is the agreement as filed with the Commission in Docket Nos. E-7, Sub 986, and E-2, Sub 998, on June 22, 2011, and as amended and refiled on June 12, 2012.

Market Value: The price at which property, goods, or services would change hands in an arm's length transaction between a buyer and a seller without any compulsion to engage in a transaction, and both having reasonable knowledge of the relevant facts.

Merger: All transactions contemplated by the Agreement and Plan of Merger between Duke Energy and Piedmont.

Natural Gas Services: Commission-regulated natural gas sales, natural gas transportation, and other related services, including, but not limited to, administration of Customer accounts and rate schedules, metering, billing, and standby service.

Non-affiliated Gas Marketer: An entity, not affiliated with DEC, DEP, or Piedmont, engaged in the unregulated sale, arrangement, brokering, or management of gas supply, pipeline capacity, or gas storage.

Nonpublic Utility Operation: All business operations engaged in by DEC, DEP, or Piedmont involving activities (including the sales of goods or services) that are not regulated by the Commission or otherwise subject to public utility regulation at the state or federal level.

Non-Utility Affiliate: Any Affiliate, including DEBS, other than a Utility Affiliate, DEC, DEP, or Piedmont.

Personnel: An employee or other representative of DEC, DEP, Piedmont, Duke Energy, another Affiliate, or a Nonpublic Utility Operation, who is involved in fulfilling the business purpose of that entity.

Piedmont: Piedmont Natural Gas Company, Inc., the business entity wholly owned by Duke Energy, that holds the franchise granted by the Commission to provide Natural Gas Services within its North Carolina service territory and that engages in public utility operations, as defined in G.S. 62-3(23), within the State of North Carolina.

Progress Energy: Progress Energy, Inc., which is the former holding company parent of DEP, is a subsidiary of Duke Energy, and any successors.

Public Staff: The Public Staff of the North Carolina Utilities Commission.

Regulatory Conditions: The conditions imposed by the Commission in connection with or related to the Merger.

Shared Services: The services that meet the requirements of the Regulatory Conditions approved in Docket Nos. E-2, Sub 1095, E-7, Sub 1100, and G-9, Sub 682, or subsequent orders of the Commission and that the Commission has explicitly authorized DEC, DEP, and

Piedmont to take from DEBS pursuant to a service agreement (a) filed with the Commission pursuant to G.S. 62-153(b), thus requiring acceptance and authorization by the Commission, and (b) subject to all other applicable provisions of North Carolina law, the rules and orders of the Commission, and the Regulatory Conditions.

Shipper: A Non-affiliated Gas Marketer, a municipal gas customer, or an end-user of gas.

Utility Affiliates: The regulated public utility operations of Duke Energy Florida, LLC ("DEF"), Duke Energy Indiana, LLC ("DEI"), Duke Energy Kentucky, Inc. ("DEK") and Duke Energy Ohio, Inc. ("DEO").

II. GENERAL

This Code of Conduct establishes the minimum guidelines and rules that apply to the relationships, transactions, and activities involving the public utility operations of DEC, DEP, Piedmont, Duke Energy, other Affiliates, or the Nonpublic Utility Operations of DEC, DEP, and Piedmont, to the extent such relationships, activities, and transactions affect the public utility operations of DEC, DEP, and Piedmont in their respective service areas. DEC, DEP, Piedmont, and the other Affiliates are bound by this Code of Conduct pursuant to Regulatory Condition 6.1 approved by the Commission in Docket Nos. E-2, Sub 1095, E-7, Sub 1100, and G-9, Sub 682. This Code of Conduct is subject to modification by the Commission as the public interest may require, including, but not limited to, addressing changes in the organizational structure of DEC, DEP, Piedmont, Duke Energy, other Affiliates, or the Nonpublic Utility Operations; changes in the structure of the electric industry or natural gas industry; or other changes that warrant modification of this Code.

DEC, DEP, or Piedmont may seek a waiver of any aspect of this Code of Conduct by filing a request with the Commission showing that circumstances in a particular case justify such a waiver.

III. STANDARDS OF CONDUCT

A. Independence and Information Sharing

1. Separation - DEC, DEP, Piedmont, Duke Energy, and the other Affiliates shall operate independently of each other and in physically separate locations to the maximum extent practicable; however, to the extent that the Commission has approved or accepted a service company-to-utility or utility-to-utility service agreement or list, DEC, DEP, Piedmont, Duke Energy, and the other Affiliates may operate as described in the agreement or list on file at the Commission. DEC, DEP, Piedmont, Duke Energy, and each of the other Affiliates shall maintain separate books and records. Each of DEC's, DEP's, and Piedmont's Nonpublic Utility Operations shall maintain separate records from those of DEC's, DEP's, and Piedmont's public utility operations to ensure appropriate cost allocations and any arm's-length-transaction requirements.

2. Disclosure of Customer Information:

(a) Upon request, and subject to the restrictions and conditions contained herein, DEC, DEP, and Piedmont may provide Customer Information to Duke Energy or another Affiliate under the same terms and conditions that apply to the provision of such information to non-Affiliates. In addition, DEC and DEP may provide Customer Information to their respective Nonpublic Utility Operations under the same terms and conditions that apply to the provision of such information to non-Affiliates.

(b) Except as provided in Section III.A.2.(f), Customer Information shall not be disclosed to any Affiliate or non-affiliated third party without the Customer's consent, and then only to the extent specified by the Customer. Consent to disclosure of Customer Information to Affiliates of DEC, DEP, and Piedmont or to DEC's or DEP's Nonpublic Utility Operations may be obtained by means of written, electronic, or recorded verbal authorization upon providing the Customer with the information set forth in Attachment A; provided, however, that DEC, DEP, and Piedmont retain such authorization for verification purposes for as long as the authorization remains in effect. Written, electronic, or recorded verbal authorization or consent for the disclosure of Piedmont's Customer Information to Piedmont's Nonpublic Utility Operations is not required.

(c) If the Customer allows or directs DEC, DEP, or Piedmont to provide Customer Information to Duke Energy, another Affiliate, or to DEC's or DEP's Nonpublic Utility Operations, then DEC, DEP, or Piedmont shall ask if the Customer would like the Customer Information to be provided to one or more non-Affiliates. If the Customer directs DEC, DEP, or Piedmont to provide the Customer Information to one or more non-Affiliates, the Customer Information shall be disclosed to all entities designated by the Customer contemporaneously and in the same manner.

(d) Section III.A.2. shall be permanently posted on DEC's, DEP's and Piedmont's website(s).

(e) No DEC, DEP, or Piedmont employee who is transferred to Duke Energy or another Affiliate, shall be permitted to copy or otherwise compile any Customer Information for use by such entity except as authorized by the Customer pursuant to a signed Data Disclosure Authorization. DEC, DEP, and Piedmont shall

not transfer any employee to Duke Energy or another Affiliate for the purpose of disclosing or providing Customer Information to such entity.

(f) Notwithstanding the prohibitions in this Section III.A.2.:

(i) DEC, DEP, and Piedmont may disclose Customer Information to DEBS, any other Affiliate, or a non-affiliated third party without Customer consent to the extent necessary for the Affiliate or non-affiliated third party to provide goods or services to DEC, DEP, or Piedmont and upon the written agreement of the other Affiliate or non- affiliated third-party to protect the confidentiality of such Customer Information. To the extent the Commission approves a list of services to be provided and taken pursuant to one or more utility-to-utility service agreements, then Customer Information may be disclosed pursuant to the foregoing exception to the extent necessary for such services to be performed.

(ii) DEC and DEP may disclose Customer Information to their Nonpublic Utility Operations without Customer consent to the extent necessary for the Nonpublic Utility Operations to provide goods and services to DEC or DEP and upon the written agreement of the Nonpublic Utility Operations to protect the confidentiality of such Customer Information.

(iii) DEC, DEP, and Piedmont may disclose Customer Information to a state or federal regulatory agency or court of competent jurisdiction if required in writing to do so by the agency or court.

(g) DEC, DEP, and Piedmont shall take appropriate steps to store Customer Information in such a manner as to limit access to those persons permitted to receive it and shall require all persons with access to such information to protect its confidentiality.

(h) DEC, DEP, and Piedmont shall establish guidelines for its employees and representatives to follow with regard to complying with this Section III.A.2.

(i) No DEBS employee may use Customer Information to market or sell any product or service to DEC's, DEP's, or Piedmont's Customers, except in support of a Commission-approved rate schedule or program or a marketing effort managed and supervised directly by DEC, DEP, or Piedmont.

(j) DEBS employees with access to Customer Information must be prohibited from making any improper indirect use of the data,

including directing or encouraging any actions based on the Customer Information by employees of DEBS that do not have access to such information, or by other employees of Duke Energy or other Affiliates or Nonpublic Utility Operations of DEC and DEP.

(k) Should any inappropriate disclosure of DEC, DEP, or Piedmont Customer Information occur at any time, DEC, DEP, or Piedmont shall promptly file a statement with the Commission describing the circumstances of the disclosure, the Customer information disclosed, the results of the disclosure, and the steps taken to mitigate the effects of the disclosure and prevent future occurrences.

3. The disclosure of Confidential Systems Operation Information of DEC, DEP, and Piedmont shall be governed as follows:

(a) Such CSOI shall not be disclosed by DEC, DEP, or Piedmont to an Affiliate or a Nonpublic Utility Operation unless it is disclosed to all competing non-Affiliates contemporaneously and in the same manner. Disclosure to non-Affiliates is not required under the following circumstances:

(i) The CSOI is provided to employees of DEC or DEP for the purpose of implementing, and operating pursuant to, the JDA in accordance with the Regulatory Conditions approved in Docket Nos. E-7, Sub 986, and E-2, Sub 998.

(ii) The CSOI is necessary for the performance of services approved to be performed pursuant to one or more Affiliate utility-to-utility service agreements.

(iii) A state or federal regulatory agency or court of competent jurisdiction over the disclosure of the CSOI requires the disclosure.

(iv) The CSOI is provided to employees of DEBS pursuant to a service agreement filed with the Commission pursuant to G.S. 62-153.

(v) The CSOI is provided to employees of DEC's, DEP's, or Piedmont's Utility Affiliates for the purpose of sharing best practices and otherwise improving the provision of regulated utility service.

(vi) The CSOI is provided to an Affiliate pursuant to an agreement filed with the Commission pursuant to G.S. 62-153, provided that the agreement specifically describes the types of CSOI to be disclosed.

(vii) Disclosure is otherwise essential to enable DEC or DEP to provide Electric Services to their Customers or for Piedmont to provide Natural Gas

Services to its Customers.

(viii) Disclosure of the CSOI is necessary for compliance with the Sarbanes-Oxley Act of 2002.

(b) Any CSOI disclosed pursuant Section III.A.3.(a)(i)-(viii) shall be disclosed only to employees that need the CSOI for the purposes covered by those exceptions and in as limited a manner as possible. The employees receiving such CSOI must be prohibited from acting as conduits to pass the CSOI to any Affiliate(s) and must have explicitly agreed to protect the confidentiality of such CSOI.

(c) For disclosures pursuant to Section III.A.3.(a)(vii) and (viii), DEC, DEP, and Piedmont shall include in their annual affiliated transaction reports the following information:

(i) The types of CSOI disclosed and the name(s) of the Affiliate(s) to which it is being, or has been, disclosed;
(ii) The reasons for the disclosure; and
(iii) Whether the disclosure is intended to be a one-time occurrence or an ongoing process.

To the extent a disclosure subject to the reporting requirement is intended to be ongoing, only the initial disclosure and a description of any processes governing subsequent disclosures need to be reported.

(d) DEC, DEP, Piedmont, and DEBS employees with access to CSOI must be prohibited from making any improper indirect use of the data, including directing or encouraging any actions based on the CSOI by employees that do not have access to such information, or by other employees of Duke Energy or other Affiliates or Nonpublic Utility Operations of DEC, DEP, and Piedmont.

(e) Should the handling or disclosure of CSOI by DEBS, or another Affiliate or Nonpublic Utility Operation, or its respective employees, result in (i) a violation of DEC's or DEP's FERC Statement of Policy and Code of Conduct (FERC Code), 18 CFR 358 - Standards of Conduct for Transmission Providers (Transmission Standards), or any other relevant FERC standards or codes of conduct, (ii) the posting of such data on an Open Access Same-Time Information System (OASIS) or other Internet

website, or (iii) other public disclosure of the data, DEC or DEP shall promptly file a statement with the Commission in Docket No. E-7, Sub 1100C, and E-2, Sub 1095C, respectively, describing the circumstances leading to such violation, posting, or other public disclosure describing the circumstances leading to such violation, posting, or other public disclosure, any data required to be posted or otherwise publicly disclosed, and the steps taken to mitigate the effects of the current and prevent any future potential violation, posting, or other public disclosure.

(f) Should any inappropriate disclosure of CSOI occur at any time, DEC, DEP, or Piedmont shall promptly file a statement with the Commission in Docket No. E-7, Sub 1100C, E-2, Sub 1095C, or G- 9, Sub 682C, respectively, describing the circumstances of the disclosure, the CSOI disclosed, the results of the disclosure, and the steps taken to mitigate the effects of the disclosure and prevent future occurrences.

(g) Unless publicly noticed and generally available, should the FERC Code, the Transmission Standards, or any other relevant FERC standards or codes of conduct be eliminated, amended, superseded, or otherwise replaced, DEC and DEP shall file a letter with the Commission in Docket Nos. E-7, Sub 1100E, and E-2, Sub 1095E, describing such action within 60 days of the action, along with a copy of any amended or replacement document.

B. Nondiscrimination

1. DEC's, DEP's, and Piedmont's employees and representatives shall not unduly discriminate against non-Affiliated entities.

2. In responding to requests for Electric Services, Natural Gas Services, or both, DEC, DEP, and Piedmont shall not provide any preference to Duke Energy, another Affiliate, or a Nonpublic Utility Operation, or to any customers of such an entity, as compared to non-Affiliates or their customers. Moreover, neither DEC, DEP, Piedmont, Duke Energy, nor any other Affiliates shall represent to any person or entity that Duke Energy, another Affiliate, or a Nonpublic Utility Operation will receive any such preference.

3. DEC, DEP, and Piedmont shall apply the provisions of their respective tariffs equally to Duke Energy, the other Affiliates, the Nonpublic Utility Operations, and non-Affiliates.

4. DEC, DEP, and Piedmont shall process all similar requests for Electric Services, Natural Gas Services, or both, in the same timely manner, whether requested on behalf of Duke Energy, another Affiliate, a Nonpublic Utility Operation, or a non-Affiliated entity.

5. No personnel or representatives of DEC, DEP, Piedmont, Duke Energy, or another Affiliate shall indicate, represent, or otherwise give the appearance to another party that Duke Energy or another Affiliate speaks on behalf of DEC, DEP, or Piedmont; provided however, that this prohibition shall not apply to employees of DEBS providing Shared Services or to employees of another Affiliate to the extent explicitly provided for in an affiliate agreement that has been accepted by the Commission. In addition, no personnel or representatives of a Nonpublic Utility Operation shall indicate, represent, or otherwise give the appearance to another party that they speak on behalf of DEC's, DEP's, or Piedmont's regulated public utility operations.

6. No personnel or representatives of DEC, DEP, Piedmont, Duke Energy, another Affiliate, or a Nonpublic Utility Operation shall indicate, represent, or otherwise give the appearance to another party that any advantage to that party with regard to Electric Services or Natural Gas Services exists as the result of that party dealing with Duke Energy, another Affiliate, or a Nonpublic Utility Operation, as compared with a non-Affiliate.

7. DEC, DEP, and Piedmont shall not condition or otherwise tie the provision or terms of any Electric Services or Natural Gas Services to the purchasing of any goods or services from, or the engagement in business of any kind with, Duke Energy, another Affiliate, or a Nonpublic Utility Operation.

8. When any employee or representative of DEC, DEP, or Piedmont receives a request for information from or provides information to a Customer about goods or services available from Duke Energy, another Affiliate, or a Nonpublic Utility Operation, the employee or representative shall advise the Customer that such goods or services may also be available from non-Affiliated suppliers.

9. Disclosure of Customer Information to Duke Energy, another Affiliate, a Nonpublic Utility Operation, or a non-Affiliated entity shall be governed by Section III.A.2. of this Code of Conduct.

10. Unless otherwise directed by order of the Commission, electric generation shall not receive a priority of use from Piedmont that would supersede or diminish Piedmont's provision of service to its human needs firm residential and commercial customers.

11. Piedmont shall file an annual report with the Commission summarizing all requests or inquiries for Natural Gas Services made by a non-utility generator, Piedmont's response to the request, and the status of the inquiry.

C. Marketing

1. The public utility operations of DEC, DEP, and Piedmont may engage in joint sales, joint sales calls, joint proposals, or joint advertising (a joint marketing arrangement) with their Affiliates and with their Nonpublic Utility Operations, subject to

compliance with other provisions of this Code of Conduct and any conditions or restrictions that the Commission may hereafter establish. DEC, DEP, and Piedmont shall not otherwise engage in such joint activities without making such opportunities available to comparable third parties.

2. Neither Duke Energy nor any of the other Affiliates shall use the names or logos of DEC, DEP, or Piedmont in any communications without the following disclaimer:

(a) "[Duke Energy Corporation/Affiliate] is not the same company as [DEC/DEP/Piedmont], and [Duke Energy Corporation/Affiliate] has separate management and separate employees";

(b) "[Duke Energy Corporation/Affiliate] is not regulated by the North Carolina Utilities Commission or in any way sanctioned by the Commission";

(c) "Purchasers of products or services from [Duke Energy Corporation/Affiliate] will receive no preference or special treatment from [DEC/DEP/Piedmont]"; and

(d) "A customer does not have to buy products or services from [Duke Energy Corporation/Affiliate] in order to continue to receive the same safe and reliable electric service from [DEC/DEP] or natural gas service from Piedmont."

3. Nonpublic Utility Operations may not use the names or logos of DEC, DEP, or Piedmont in communications without the following disclaimer:

"[Name of product or service being offered by Nonpublic Utility Operation] is not part of the regulated services offered by [DEC/DEP/Piedmont] and is not in any way sanctioned by the North Carolina Utilities Commission."

4. In addition, DEC's and DEP's Nonpublic Utility Operations may not use the names or logos of DEC or DEP in any communications without the following disclaimers:

(a) "Purchasers of [name of product or service being offered by Nonpublic Utility Operation] from [Nonpublic Utility Operation] will receive no preference or special treatment from [DEC/DEP]"; and

(b) "A customer does not have to buy this product or service from [Nonpublic Utility Operation] in order to continue to receive the same safe and reliable electric service from [DEC/DEP]."

The required disclaimers in this Section III.C.4. must be sized and displayed in a way that is commensurate with the name and logo so that the disclaimer is at least the

larger of one-half the size of the type that first displays the name and logo or the predominant type used in the communication.

D. Transfers of Goods and Services, Transfer Pricing, and Cost Allocation

1. Cross-subsidies involving DEC, DEP, or Piedmont and Duke Energy, other Affiliates, or the Nonpublic Utility Operations are prohibited.

2. All costs incurred by personnel or representatives of DEC, DEP, or Piedmont for or on behalf of Duke Energy, other Affiliates, or the Nonpublic Utility Operations shall be charged to the entity responsible for the costs.

3. The following conditions shall apply as a general guideline to the transfer prices charged for goods and services, including the use or transfer of personnel, exchanged between and among DEC, DEP, or Piedmont, and Duke Energy, the other Non-Utility Affiliates, and the Nonpublic Utility Operations, to the extent such prices affect DEC's, DEP's, or Piedmont's operations or costs of utility service:

(a) Except as otherwise provided for in this Section III.D., for untariffed goods and services provided by DEC, DEP, or Piedmont to Duke Energy, a Non-Utility Affiliate, or a Nonpublic Utility Operation, the transfer price paid to DEC, DEP, or Piedmont shall be set at the higher of Market Value or DEC's, DEP's, or Piedmont's Fully Distributed Cost.

(b) Except as otherwise provided for in this Section III.D., for goods and services provided, directly or indirectly, by Duke Energy, a Non-Utility Affiliate other than DEBS, or a Nonpublic Utility Operation to DEC, DEP, or Piedmont, the transfer price(s) charged by Duke Energy, the Non-Utility Affiliate, and the Nonpublic Utility Operation to DEC, DEP, or Piedmont shall be set at the lower of Market Value or Duke Energy's, the Non-Utility Affiliate's, or the Nonpublic Utility Operation's Fully Distributed Cost(s). If DEC, DEP, or Piedmont do not engage in competitive solicitation and instead obtain the goods or services from Duke Energy, a Non-Utility Affiliate, or a Nonpublic Utility Operation, DEC, DEP, and Piedmont shall implement adequate processes to comply with this Code provision and related Regulatory Conditions and ensure that in each case DEC's, DEP's, and Piedmont's Customers receive service at the lowest reasonable cost, unless otherwise directed by order of the Commission. For goods and services provided by DEBS to DEC, DEP, Piedmont, and Utility Affiliates, the transfer price charged shall be set at DEBS' Fully Distributed Cost.

(c) Tariffed goods and services provided by DEC, DEP, and Piedmont to Duke Energy, other Affiliates, or a Nonpublic Utility Operation shall be provided at the same prices and terms that are made available to

Customers having similar characteristics with regard to Electric Services or Natural Gas Services under the applicable tariff.

(d) With the exception of gas supply transactions, transportation transactions, or both, between DEC and Piedmont or DEP and Piedmont, untariffed non-power, non-generation, or non-fuel goods and services provided by DEC, DEP, or Piedmont to DEC, DEP, Piedmont, or the Utility Affiliates or by the Utility Affiliates to DEC, DEP, or Piedmont, shall be transferred at the supplier's Fully Distributed Cost, unless otherwise directed by order of the Commission.

(e) All Piedmont deliveries to DEC and DEP pursuant to intrastate negotiated sales or transportation arrangements and combinations of sales and transportation transactions shall be at the same price and terms that are made available to other Shippers having comparable characteristics, such as nature of service (firm or interruptible, sales or transportation), pressure requirements, nature of load (process/heating/electric generation), size of load, profile of load (daily, monthly, seasonal, annual), location on Piedmont's system, and costs to serve and rates. Piedmont shall maintain records in sufficient detail to demonstrate compliance with this requirement.

(f) All gas supply transactions, interstate transportation and storage transactions, and combinations of these transactions, between DEC or DEP and Piedmont shall be at the fair market value for similar transactions between non-affiliated third parties. DEC, DEP, and Piedmont shall maintain records, such as published market price indices, in sufficient detail to demonstrate compliance with this requirement.

(g) All of the margins, also referred to as net compensation, received by Piedmont on secondary market sales to DEC and DEP shall be recorded in Piedmont's Deferred Gas Cost Accounts and shall flow through those accounts for the benefit of ratepayers. None of the margins on secondary market sales by Piedmont to DEC and DEP shall be included in the secondary market transactions subject to the sharing mechanism on secondary market transactions approved by the Commission in its *Order Approving Stipulation*, dated December 22, 1995, in Docket No. G-100, Sub 67. The sharing percentage on secondary market sales shall not be considered in determining the prudence of such transactions.

4. To the extent that DEC, DEP, Piedmont, Duke Energy, other Affiliates, or the Nonpublic Utility Operations receive Shared Services from DEBS (or its successor), these Shared Services may be jointly provided to DEC, DEP, Piedmont, Duke Energy, other Affiliates, or the Nonpublic Utility Operations on a fully distributed cost basis, provided that the taking of such Shared Services by DEC, DEP, and Piedmont is cost beneficial on a service-by-service (e.g., accounting management, human resources management, legal services, tax administration, public affairs) basis to DEC, DEP, and Piedmont. Charges for such Shared Services shall be allocated in accordance with the cost allocation manual filed with the Commission pursuant to Regulatory Condition 5.5, subject to any revisions or other adjustments that may be found appropriate by the Commission on an ongoing basis.

5. DEC, DEP, Piedmont, and their Utility Affiliates may capture economies- of-scale in joint purchases of goods and services (excluding the purchase of electricity or ancillary services intended for resale unless such purchase is made pursuant to a Commission-approved contract or service agreement), if such joint purchases result in cost savings to DEC's, DEP's, and Piedmont's Customers. DEC, DEP, Piedmont, and their Utility Affiliates may capture economies-of-scale in joint purchases of coal and natural gas, if such joint purchases result in cost savings to DEC's, DEP's, and Piedmont's Customers. All joint purchases entered into pursuant to this section shall be priced in a manner that permits clear identification of each participant's portion of the purchases and shall be reported in DEC's, DEP's, and Piedmont's affiliated transaction reports filed with the Commission.

6. All permitted transactions between DEC, DEP, Piedmont, Duke Energy, other Affiliates, and the Nonpublic Utility Operations shall be recorded and accounted for in accordance with the cost allocation manual required to be filed with the Commission pursuant to Regulatory Condition 5.5 and with Affiliate agreements accepted by the Commission or otherwise processed in accordance with North Carolina law, the rules and orders of the Commission, and the Regulatory Conditions.

7. Costs that DEC, DEP, and Piedmont incur in assembling, compiling, preparing, or furnishing requested Customer Information or CSOI for or to Duke Energy, other Affiliates, Nonpublic Utility Operations, or non-Affiliates (other than the Customer or the Customer's designated representative or agent) shall be recovered from the requesting party pursuant to Section III.D.3. of this Code of Conduct.

8. Any technology or trade secrets developed, obtained, or held by DEC, DEP, or Piedmont in the conduct of regulated operations shall not be transferred to Duke Energy, another Affiliate, or a Nonpublic Utility Operation without just compensation and the filing of 60-days prior notification to the Commission. DEC, DEP, and Piedmont are not required to provide advance notice for such transfers to each other and may request a waiver of this requirement from the Commission with respect to such transfers to Duke Energy, a Utility Affiliate, a Non-Utility Affiliate, or a Nonpublic Utility Operation. In no case, however, shall the notice period requested be less than 20 business days.

9. DEC, DEP, and Piedmont shall receive compensation from Duke Energy, other Affiliates, and the Nonpublic Utility Operations for intangible benefits, if appropriate.

E. Regulatory Oversight

1. The requirements regarding affiliate transactions set forth in G.S. 62-153 shall continue to apply to all transactions between DEC, DEP, Piedmont, Duke Energy, and the other Affiliates.

2. The books and records of DEC, DEP, Piedmont, Duke Energy, other Affiliates, and the Nonpublic Utility Operations shall be open for examination by the Commission, its staff, and the Public Staff as provided in G.S. 62-34, 62-37, and 62-51.

3. If Piedmont supplies any Natural Gas Services, with the exception of Natural Gas Services provided pursuant to Commission-approved contracts or service agreements, used by either DEC or DEP to generate electricity, DEC or DEP, as applicable, shall file a report with the Commission in its annual fuel and fuel-related cost recovery case demonstrating that the purchase was prudent and the price was reasonable.

4. To the extent North Carolina law, the orders and rules of the Commission, and the Regulatory Conditions permit Duke Energy, an Affiliate, or a Nonpublic Utility Operation to supply DEC, DEP, or Piedmont with Natural Gas Services or other Fuel and Purchased Power Supply Services used by DEC or DEP to provide Electric Services to Customers, and to the extent such Natural Gas Services or other Fuel and Purchased Power Supply Services are supplied, DEC or DEP, as applicable, shall demonstrate in its annual fuel adjustment clause proceeding that each such acquisition was prudent and the price was reasonable.

F. Utility Billing Format

To the extent any bill issued by DEC, DEP, Piedmont, Duke Energy, another Affiliate, a Nonpublic Utility Operation, or a non-Affiliated third party includes charges to Customers for Electric Services or Natural Gas Services and non-Electric Services, non-Natural Gas Services, or any combination of such services, from Duke Energy, another Affiliate, a Nonpublic Utility Operation, or a non-Affiliated third party, the charges for Electric Services and Natural Gas Services shall be separated from the charges for any other services included on the bill. Each such bill shall contain language stating that the Customer's Electric Services and Natural Gas Services will not be terminated for failure to pay for any other services billed.

G. Complaint Procedure

1. DEC, DEP, and Piedmont shall establish procedures to resolve potential complaints that arise due to the relationship of DEC, DEP, and Piedmont with Duke Energy, the other Affiliates, and the Nonpublic Utility Operations. The complaint procedures shall provide for the following:

(a) Verbal and written complaints shall be referred to a designated

representative of DEC, DEP, or Piedmont.

(b) The designated representative shall provide written notification to the complainant within 15 days that the complaint has been received.

(c) DEC, DEP, or Piedmont shall investigate the complaint and communicate the results or status of the investigation to the complainant within 60 days of receiving the complaint.

(d) DEC, DEP, and Piedmont shall each maintain a log of complaints and related records and permit inspection of documents (other than those protected by the attorney/client privilege) by the Commission, its staff, or the Public Staff.

2. Notwithstanding the provisions of Section III.G.1., any complaints received through Duke Energy's EthicsLine (or successor), which is a confidential mechanism available to the employees of the Duke Energy holding company system, shall be handled in accordance with procedures established for the EthicsLine.

3. These complaint procedures do not affect a complainant's right to file a formal complaint with the Commission or otherwise communicate with the Commission or the Public Staff regarding a complaint.

H. Natural Gas/Electricity Competition

DEC, DEP, and Piedmont shall continue to compete against all energy providers, including each other, to serve those retail customer energy needs that can be legally and profitably served by both electricity and natural gas. The competition between DEC or DEP and Piedmont shall be at a level that is no less than that which existed prior to the Merger. Without limitation as to the full range of potential competitive activity, DEC, DEP, and Piedmont shall maintain the following minimum standards:

1. Piedmont will make all reasonable efforts to extend the availability of natural gas to as many new customers as possible.

2. In determining where and when to extend the availability of natural gas, Piedmont will at a minimum apply the same standards and criteria that it applied prior to the Merger.

3. In determining where and when to extend the availability of natural gas, Piedmont will make decisions in accordance with the best interests of Piedmont, rather than the best interest of DEC or DEP.

4. To the extent that either the natural gas industry or the electricity industry is further restructured, DEC, DEP, and Piedmont will undertake to maintain the full level of competition intended by this Code of Conduct subject to the right of DEC, DEP, Piedmont or the Public Staff to seek relief from or modifications to this requirement by the Commission.

CODE OF CONDUCT
ATTACHMENT A

DEC/DEP/PIEDMONT CUSTOMER INFORMATION DISCLOSURE AUTHORIZATION

For Disclosure to Affiliates:

DEC's/DEP's/Piedmont's Affiliates offer products and services that are separate from the regulated services provided by DEC/DEP/Piedmont. These services are not regulated by the North Carolina Utilities Commission. These products and services may be available from other competitive sources.

The Customer authorizes DEC/DEP/Piedmont to provide any data associated with the Customer account(s) residing in any DEC/DEP/Piedmont files, systems or databases **[or specify types of data]** to the following Affiliate(s) _____. DEC/DEP/Piedmont will provide this data on a non-discriminatory basis to any other person or entity upon the Customer's authorization.

For Disclosure to Nonpublic Utility Operations:

DEC/DEP offers optional, market-based products and services that are separate from the regulated services provided by DEC/DEP. These services are not regulated by the North Carolina Utilities Commission. These products and services may be available from other competitive sources.

The Customer authorizes DEC/DEP to use any data associated with the Customer account(s) residing in any DEC/DEP files, systems or databases **[or specify types of data]** for the purpose of offering and providing energy-related products or services to the Customer. DEC/DEP will provide this data on a non-discriminatory basis to any other person or entity upon the Customer's authorization.

D. SERVICE AGREEMENT LISTS

Service Agreement lists outlining services that DEC, DEP and Piedmont may receive from their Duke Energy affiliates include the following:

- Service Company Utility Service Agreement List
- Operating Companies Service Agreement List
- Operating Companies/Non-Utility Companies Service Agreement List

For a complete list of the services related to affiliate service agreements, please refer to NCUC Docket Nos. E-2, Sub 1095A, E-7, Sub 1100A or G-9, Sub 682A. These affiliate service agreements may also be found on the State Regulatory Compliance Portal.

In addition, DEC, DEP, and Duke Energy Florida, LLC are parties to the Nuclear Services Agreement, with the Nuclear Services Agreement List, which includes the services that DEC and DEP may receive from each other and Duke Energy Florida, LLC.

E. GUIDELINES FOR TRANSACTIONS BETWEEN DEC/DEP/PIEDMONT AND AFFILIATES

The *Guidelines for Transactions between DEC/DEP/Piedmont and Affiliates ("Guidelines")* is an internal document developed to help employees implement the North Carolina Code of Conduct. The Guidelines may be revised from time to time as necessary to meet changing business requirements.

These Guidelines are intended to apply to all employees in dealings between DEC/DEP/Piedmont and their affiliates to assist in compliance with the North Carolina Code of Conduct, North Carolina and South Carolina state laws, and federal laws concerning affiliate transactions. Application of the affiliate rules to specific transactions may depend on the specific facts at issue. Any questions concerning the affiliate rules or these Guidelines should be directed to the subject matter experts listed later in this section.

A. DEFINITIONS

Please reference Section C. *North Carolina Code of Conduct* in this CAM for definitions. Below are some additional definitions used throughout the CAM.

FERC: Federal Energy Regulatory Commission.

NCUC: North Carolina Utilities Commission.

ORS: Office of Regulatory Staff in South Carolina.

PSCSC: Public Service Commission of South Carolina.

Public Items: Items DEC/DEP/Piedmont, in their discretion, make available at no charge to any third party, including an Affiliate, upon request.

Service Company: Duke Energy Business Services LLC ("DEBS"), which is an affiliate that provides shared services to DEC/DEP/Piedmont and their affiliates.

Technology And Trade Secrets: For the purposes of these Guidelines, "Trade Secrets" is defined as information, including a formula, pattern, compilation, device, method, technique, or process, that: (1) derives independent economic value, actual or potential, from not being generally known to, and not being readily ascertainable by proper means by, other persons who can obtain economic value from its disclosure or use; and (2) is the subject of efforts that are reasonable under the

circumstances to maintain its secrecy. Technology is scientific, engineering or technical information which is patented or is a trade secret.

B. INFORMATION SHARING RESTRICTIONS

1. Customer Information

- **Customer Information may be disclosed to an Affiliate, Nonpublic Utility Operations, or any third party only with the Customer's prior consent, as described in more detail below.**
  - Consent to disclosure of Customer Information to Affiliates or Nonpublic Utility Operations may be by written authorization, electronic authorization or recorded verbal authorization upon providing the Customer with the information set out in Attachment A to the Code of Conduct.
  - Departments providing Customer Information to Affiliates or Nonpublic Utility Operations must retain verification of the authorization for the longer of three years or as long as the authorization remains in effect.
  - Written, electronic, or recorded verbal authorization or consent for the disclosure of Piedmont's Customer Information to Piedmont's Nonpublic Utility Operations is not required.

  Exception: DEC/DEP/Piedmont may disclose Customer Information to Affiliates, Nonpublic Utility Operations or third parties as necessary for the Affiliate, Nonpublic Utility Operations or third party to provide goods or services to DEC, DEP or Piedmont.
  - Affiliates and/or Nonpublic Utility Operations receiving Customer Information under this exception must agree to protect the confidentiality of the Customer Information they receive. Employee training or information technology non-disclosure statements may be used to meet this requirement.
  - Agreements with third parties should provide for the protection of Customer Information.

- Customer Information may be used by DEBS employees to market or sell products or services to customers of DEC/DEP/Piedmont **only** in support of:
  - NCUC or PSCSC approved rate schedules or programs; or
  - Marketing efforts managed and supervised directly by DEC/DEP/Piedmont.

- DEBS employees with access to Customer Information may not act as an improper conduit of this information. For example, employees must not provide indirect access to the data, or recommend action based on the Customer Information, to any DEBS or other Affiliate or Nonpublic Utility Operations employees who have not been granted proper access to the information.

- ***Any improper disclosure of Customer Information requires promptly filing a statement with the NCUC describing the circumstances of the disclosure, the results of the disclosure, and the mitigating and/or other steps taken to address the disclosure, and the Legal Department must be informed of the disclosure to facilitate this notification.***

2. Confidential Systems Operation Information

- Confidential Systems Operation Information ("CSOI") may not be disclosed to an Affiliate or Nonpublic Utility Operation unless it is disclosed to all competing non-Affiliates at the same time and in the same manner.

- ***Exceptions:***
  - The CSOI is provided to employees of DEC/DEP/Piedmont for the purpose of implementing, and operating pursuant to, the Joint Dispatch Agreement in accordance with the Regulatory Conditions approved in Docket Nos. E-2, Sub 1095A, E-7, Sub 1100A, and G-9, Sub 682A.
  - The CSOI is necessary for the performance of services approved to be performed pursuant to one or more Affiliate utility-to-utility service agreements.
  - The disclosure is required by law or by a state or federal regulatory agency or court.
  - The CSOI is provided to employees of DEBS pursuant to a service agreement filed with the Commission pursuant to G.S. 62-153.
  - CSOI may be provided to Utility Affiliates for the purpose of sharing best practices and improving the provision of regulated utility service.
  - The CSOI is provided to an Affiliate pursuant to an agreement filed with the Commission pursuant to G.S. 62-153, provided that the agreement specifically describes the types of information to be disclosed.
  - Sharing of CSOI is permitted if it is otherwise essential to enable DEC/DEP/Piedmont to provide Utility Services to its Customers, or for compliance with the Sarbanes-Oxley Act of 2002.
  - However, certain reporting requirements are triggered by use of this exception. ***Consult with the Legal Department prior to sharing Operation Information under this exception.***
  - Employees receiving CSOI under these exceptions must agree to protect the confidentiality of information they receive and may not improperly share this information with other Affiliate or Nonpublic Utility Operation employees who are not permitted to have access to this information. Employee training or information technology non-disclosure statements may be used to communicate these requirements.
  - DEC/DEP/Piedmont and DEBS's employees with access to CSOI may not act as an improper conduit of this information. For example, employees must not provide indirect access to the data, or recommend action based on the CSOI, to any DEBS or other Affiliate or Nonpublic Utility Operations employees who have not been granted proper access to the information.

- ***Any improper disclosure of CSOI requires promptly filing a statement with the NCUC in Docket Nos. E-2, Sub 1095A, E-7, Sub 1100A, and G-9, Sub 682A, respectively, describing the circumstances of the disclosure, the CSOI disclosed, the results of the disclosure, and the mitigating and/or other steps taken to address the disclosure, and the Legal Department must be informed of the disclosure to facilitate this notification.***

3. Market and Transmission Information

- The FERC Affiliate Restrictions and the Standards of Conduct prohibit the disclosure of DEC/DEP/Piedmont's market information and non-public transmission information to a market-regulated power sales affiliate (otherwise known as a non-regulated affiliate). FERC defines market information as: "non-public information related to the electric energy and power business including, but not limited to, information regarding sales, cost of production, generator outages, generator heat rates, unconsummated transactions, or historical generator volumes. Market information includes information from either affiliates or non-affiliates." The FERC Standards of Conduct prohibit the disclosure of DEC/DEP/Piedmont's non-public transmission system information to marketing function employees. Information regarding the Standards of Conduct and inappropriate disclosures is explained in Duke Energy's FERC Standards of Conduct Compliance Procedures found at www.ferc.duke-energy.com.
- Any handling or disclosure of DEC/DEP/Piedmont's market information or non-public transmission information by DEBS or its employees which results in (a) a violation of the FERC Affiliate Restrictions or Standards of Conduct, (b) the posting of such data on an OASIS or other Internet website, or (c) other public disclosure of the data, requires that DEC/DEP promptly file a statement with the NCUC. ***The Legal Department must be informed of any such occurrence to facilitate this notification.***

C. AFFILIATE AGREEMENTS

1. Filing Requirements

- Before DEC/DEP/Piedmont may make payment to an Affiliate for services not already approved, it must obtain prior NCUC approval.
- DEC/DEP/Piedmont must file all other affiliate agreements with the NCUC for notice. This notice must be at least 60 days in advance of the transfer of DEC/DEP/Piedmont's technology or trade secrets, provided, however, that DEC, DEP, and Piedmont are not required to provide advance notice for such transfers to each other.
- Before filing an affiliate agreement with the NCUC, DEC/DEP/Piedmont must submit it, unsigned, to the Public Staff -at least 15 days in advance for informal review.
- DEC/DEP/Piedmont must make available to the ORS copies of affiliate agreements involving payment by DEC/DEP/Piedmont to an Affiliate.
- **Service Level Agreements ("SLA")** may be considered affiliate agreements that trigger these filing and approval requirements. ***Contact the Legal Department before entering into an SLA between DEC/DEP/Piedmont and any Affiliate.***
- DEC/DEP/Piedmont must obtain PSCSC approval prior to the transfer of any utility asset valued at greater than $1 million to any party; and must provide 30 days advance notice to the NCUC prior to the transfer of any utility asset with a gross book value in excess of $10 million to any party.
- Under both North and South Carolina law, DEC/DEP/Piedmont bear the burden of showing that affiliate transactions are reasonable and prudent.

- **Existing Agreements**

- Copies of filed affiliate agreements are available for review on the State Regulatory Compliance Portal.

- On August 26, 2016, DEC, DEP, and Piedmont jointly filed in Docket Nos. E-2, Sub 1095A, E-7, Sub 1100A, and G-9, Sub 682A the following affiliate agreements to which they were parties:
  - Service Company Utility Service Agreement
  - Operating Companies Service Agreement
  - Operating Companies/Non-Utility Companies Service Agreement
  - Tax Sharing Agreement
  - Intercompany Asset Transfer Agreement
  - Utility Money Pool Agreement

- DEC and DEP (as well as Duke Energy Florida, LLC) are also parties to the Nuclear Services Agreement, which they jointly filed at the NCUC on December 1, 2011, in Docket Nos. E-2, Sub 998A and E-7, Sub 986A.

- Brief descriptions of these agreements follow:
  - Service Company Utility Service Agreement – It is expected that Franchised Electric & Gas employees whose job responsibilities involve providing certain services to different operating companies will be employed by DEBS and will provide services to DEC/DEP/Piedmont as well as the other Utility Affiliates[1] under this agreement.
  - Operating Companies Service Agreement – Under this agreement, DEC/DEP/Piedmont and their Utility Affiliates may provide certain services to each other. With the exception of DEC/DEP/Piedmont providing services for each other, the Utility Affiliates will request services from each other using Service Request for Affiliates form.
  - Operating Companies/Non-Utility Companies Agreement – Under this agreement, DEC/DEP/Piedmont and their non-utility Affiliates may provide certain services to each other under a Service Request for Affiliates form.
  - Nuclear Services Agreement – Under this agreement, DEC, DEP, and Duke Energy Florida, LLC may provide certain services to each other to support management and operation of the nuclear plants.
  - Tax Sharing Agreement – The Tax Sharing Agreement, which is an agreement for the filing of consolidated income tax returns and for allocation of consolidated income tax liabilities and benefits.
  - Intercompany Asset Transfer Agreement – The Intercompany Asset Transfer Agreement, which is an agreement that allows DEC, DEP, Piedmont and their regulated utility affiliates to transfer assets to one another.
  - Utility Money Pool Agreement – The Utility Money Pool Agreement, which is an agreement that allows the parties to borrow funds on a short-term basis and to

[1] "Utility Affiliates" means the regulated public utility operations of Duke Energy Indiana, LLC, Duke Energy Kentucky, Inc., Duke Energy Florida, LLC, and Duke Energy Ohio, Inc.

create a cash management program.

- Pursuant to North Carolina Regulatory Condition No. 5.4, DEC/DEP/Piedmont filed lists with the NCUC of the services they intend to obtain from their affiliates under the affiliate Service Agreements. Before receiving any services that are not on the appropriate list, DEC/DEP/Piedmont must give the NCUC **15 days advance notice.**

- With the exception of the Nuclear Services Agreement, which was last filed with the NCUC on June 30, 2014, these agreements supersede in their entirety DEC's affiliate service agreements previously filed in Docket Nos. E-7, Sub 795A and E-7, Sub 810; and DEC's and DEP's affiliate service agreements previously filed in Docket Nos. E-7, Sub 986A and E-2, Sub 998A.

- ***Contact the Legal Department before obtaining or providing goods or services from or to an Affiliate that are not covered by Affiliate Agreements.***

D. COST ALLOCATION & TRANSFER PRICING RULES

1. Cost Allocations

- **Corporate Governance and Shared Services**
  - DEC/DEP/Piedmont and their Affiliates may use joint corporate oversight, governance, corporate support and utility support systems and personnel. These services are provided by DEBS under the Service Company Utility Service Agreement (see Affiliate Agreements above).

  - Costs must be allocated or charged back on a fully distributed cost basis and are subject to review by state regulators. Charging methods are described in the applicable Service Agreement.

  - DEC/DEP/Piedmont must perform periodic evaluations that show shared services are cost-beneficial to it on a service by service basis.

- **Joint Purchases**
  - ***Generally:*** DEC/DEP/Piedmont and their Utility Affiliates may capture economies of scale in joint purchases of goods and services (*excluding*: electricity or ancillary services intended for resale unless such purchase is made pursuant to a Commission-approved contract or service agreement – see special provision below) or the joint development of an asset if (a) the purchase results in cost savings to DEC/DEP/Piedmont's Customers, and (b) the costs are allocated appropriately and an audit trail maintained.

  - ***Coal and Natural Gas:*** DEC/DEP/Piedmont and their Utility Affiliates may capture economies-of-scale in joint purchases of coal and natural gas for consumption, if these purchases result in cost savings to DEC/DEP/Piedmont's Customers. All joint

purchases entered into pursuant to this section shall be priced in a manner that permits clear identification of each participant's portion of the purchases and shall be reported in DEC's, DEP's and Piedmont's affiliated transaction reports filed with the Commission.

- ***The Legal Department must be informed of any such transfer to facilitate this notification.***

2. Transfer Pricing Rules

- **Types of Transactions**
  - **Affiliate or Nonpublic Utility Operation Providing Goods or Services to DEC/DEP/Piedmont**
    - Refer to "Filing Requirements" above.
    - DEC/DEP/Piedmont must perform a "make or buy" analysis.
    - For goods and services provided to DEC/DEP/Piedmont by Duke Energy Corporation, a Non-Utility Affiliate, or a Nonpublic Utility Operation, the transfer prices should be the lower of the supplier's fully distributed cost or market value.
    - For goods and services provided to DEC/DEP/Piedmont by each other or another Utility Affiliate, the transfer price should be the supplier's fully distributed cost.
    - Transfer pricing rules apply to Affiliates acting as subcontractors to other Affiliates providing goods or services to DEC/DEP/Piedmont.

  Exceptions:
    - Corporate governance, corporate services and utility support services (discussed above) may be provided at fully distributed cost.

  - **DEC/DEP/Piedmont Providing Utility Services to Affiliates/ Nonpublic Utility Operations**
    - Refer to "Filing Requirements" above.
    - Tariffed services provided by DEC/DEP/Piedmont to Duke Energy, other Affiliates, or a Nonpublic Utility Operation shall be provided at the same prices and terms that are made available to Customers having similar characteristics with regard to Utility Services.
    - Untariffed services provided by DEC/DEP/Piedmont to Duke Energy, a Non-Utility Affiliate, or a Nonpublic Utility Operation should be transferred at the higher of market value or DEC's, DEP's, or Piedmont's fully distributed cost.
    - Untariffed services provided by DEC/DEP/Piedmont to each other or another Utility Affiliate should be transferred priced at the supplier's fully distributed cost.
    - Loaned Employees
      - DEC/DEP/Piedmont may assign an employee to an Affiliate or Nonpublic Utility Operations if the assignment does not interfere with or impair DEC/DEP/Piedmont's utility responsibilities or business operations.
      - Responsibility for all liabilities to third parties and any legal or other related expenses that arise in connection with the work of the employee lies with the Affiliate.

- **DEC/DEP/Piedmont Providing Goods/Assets to Affiliates/Nonpublic Utility Operations and the transfer or Use of Utility Assets/Goods not subject to Intercompany Asset Transfer Agreement**

  - Tariffed goods provided by DEC/DEP/Piedmont to Duke Energy, other Affiliates, or a Nonpublic Utility Operation shall be provided at the same prices and terms that are made available to Customers having similar characteristics with regard to Electric Services or Natural Gas Services.
  - All Piedmont deliveries to DEC and DEP pursuant to intrastate negotiated sales or transportation arrangements and combinations of sales and transportation transactions shall be at the same price and terms that are made available to other Shippers having comparable characteristics, such as nature of service (firm or interruptible, sales or transportation), pressure requirements, nature of load (process/heating/electric generation), size of load, profile of load (daily, monthly, seasonal, annual), location on Piedmont's system, and costs to serve and rates. Piedmont shall maintain records in sufficient detail to demonstrate compliance with this requirement.
  - All gas supply transactions, interstate transportation and storage transactions, and combinations of these transactions, between DEC or DEP and Piedmont shall be at the fair market value for similar transactions between non-affiliated third parties. DEC/DEP/Piedmont shall maintain records, such as published market price indices, in sufficient detail to demonstrate compliance with this requirement.
  - All of the margins, also referred to as net compensation, received by Piedmont on secondary market sales to DEC and DEP shall be recorded in Piedmont's Deferred Gas Cost Accounts and shall flow through those accounts for the benefit of ratepayers. None of the margins on secondary market sales by Piedmont to DEC and DEP shall be included in the secondary market transactions subject to the sharing mechanism on secondary market transactions approved by the Commission in its *Order Approving Stipulation*, dated December 22, 1995, in Docket No. G-100, Sub 67. The sharing percentage on secondary market sales shall not be considered in determining the prudence of such transactions.
  - Untariffed goods provided by DEC/DEP/Piedmont to Duke Energy, a Non-Utility Affiliate, or a Nonpublic Utility Operation should be transferred at the higher of market value or DEC/DEP/Piedmont's fully distributed cost.
  - Determining the appropriate price requires consideration of fully distributed cost, market price evaluation and an appropriate allocation methodology (see below).
  - Affiliates/Nonpublic Utility Operations may use DEC/DEP/Piedmont's goods or assets without charge in connection with the performance of work for DEC/DEP/Piedmont if they would permit a third-party supplier to have the same access to such goods or assets without Operations without charge.
  - DEC/DEP/Piedmont may share Public Items with its Affiliates/Nonpublic Utility Operations without charge.
  - No materiality threshold on transfers to/from non-Utility or non-Regulated Utility affiliates.

- ***In each instance, the Legal Department must be contacted prior to any such transfer to facilitate an asset transfer agreement.***

- **Transfer of Technology or Trade Secrets**
  - ***Transfer, including sublicense, of technology or trade secrets by DEC/DEP/Piedmont to an Affiliate requires 60 days prior notice to the NCUC***. Software developed by *or on behalf of* DEC/DEP/Piedmont typically constitutes technology or trade secrets, which may also include proprietary manuals, technical processes, etc. The following procedure should be followed in the event of a request to transfer and provide use of technology or trade secrets to an Affiliate:
    - Notice: The Code of Conduct requires 60-days' notice to the NCUC in advance of the transfer of technology or trade secrets, unless the transfer is between DEC/DEP/Piedmont. If circumstances warrant, DEC/DEP/Piedmont may request a waiver of the advance notice requirement, but the notice period CANNOT be less than 20 business days. The department (or its department financial contact) transferring or allowing use of the DEC/DEP/Piedmont technology or trade secret to an Affiliate must notify the Legal or Carolinas Rates & Regulatory Strategy Departments before the beginning of the advance notice period. Details of the transaction, including description and appropriate compensation support, sufficient to make the filing with the NCUC must be provided in time to meet the notice requirement. If the transferring department requires assistance with determining the pricing methods or other transfer requirements, additional time to consult with the Legal or Carolinas Rates & Regulatory Strategy Departments should be allowed in advance of the notice period.
    - Transfer pricing: Generally, DEC/DEP/Piedmont are compensated for such technology and trade secret transfers at the higher of market or fully-distributed cost, subject to the conditions and/or exceptions discussed in this section. Market and cost comparison procedures to be followed (as well as applicable exceptions) are further discussed in the "Pricing Rules Compliance Documentation – Transfer or Sharing of Goods/Products" section below. The transferring department, along with the department financial contact if necessary, must ensure that the appropriate accounting entries are recorded to compensate DEC/DEP/Piedmont according to the transfer pricing requirements.

      Supporting documentation describing the technology or trade secret transferred, as well as the pricing support documentation must be maintained by the transferring department.

- **Sharing Customer Information or CSOI**
  - Sharing DEC/DEP/Piedmont's Customer Information or CSOI is strictly limited, as described in Sections B.1 & B.2 above. In the event Customer Information or CSOI is provided to an affiliate (or third party other than the Customer or the Customer's designated representative or agent), the North Carolina Code of Conduct requires that all costs incurred in assembling, compiling, preparing, or furnishing the information be recovered from the requesting party.

- "All costs" means fully-distributed cost and includes any overhead or allocable cost associated with the labor cost incurred to provide the information as well as any incremental systems, materials/supplies, or other costs identified with the transaction.

Although the Customer Information or CSOI is specific to DEC/DEP/Piedmont, the employees providing the Customer Information or CSOI, or providing a service using DEC/DEP/Piedmont Customer Information or CSOI, may be utility or Service Company employees. Charging fully distributed cost must have the effect of removing the applicable labor and other dollars from either DEC/DEP/Piedmont direct charges, or from a pool of Service Company dollars, which are otherwise direct charged, distributed, or allocated to DEC/DEP/Piedmont. The following process should be followed to bill or charge costs associated with providing Customer Information or CSOI:

- The department or group providing the Customer Information or CSOI must develop a method to price the transaction or activity (if the activity is recurring) appropriately. For example, a per-transaction price may be developed by observing the average time involved in completing a service using Customer Information, applying a proportionate labor rate plus associated overheads, then multiplying by a number of transactions (tracked or estimated) for the accounting period, to compute a charge to the Affiliate or third party. Less complex methods may be appropriate to charge for one-time or infrequent transactions.
- The department or group providing the Customer Information or CSOI will provide sufficient detail to its department financial contact to enable the contact to make the appropriate journal entry to record the charge (or to bill the third party if applicable). The department financial contact must ensure that the appropriate accounting entries are recorded.
- Supporting documentation describing the transaction, as well as the pricing determination support, must be maintained by the department providing the Customer Information or CSOI or the applicable department.

- **Wholesale Power Sales or Purchases**
  - Require FERC approval.
  - May require Advance Notice to NCUC and approval by State Commissions, depending on the circumstances.

- **Pricing Rules Compliance and Documentation**
  - **Performance of Services**
    - Every DEC/DEP/Piedmont department that performs services for Affiliates should conduct, or cause to be prepared, a periodic market analysis to compare the department's current fully distributed cost to the equivalent market prices. Similarly, when it obtains services from an Affiliate (other than Corporate Governance and Shared Services or under the Utility-to-Utility exception),

each DEC/DEP/Piedmont department should perform, or ensure that the Affiliate performs a market comparison for such services and documents its rationale for selecting the Affiliate.

- **Transfer or Sharing of Goods/Products**
  - DEC/DEP/Piedmont should conduct periodic market to current cost comparisons for utility assets such as facilities, vehicles, equipment and information technology property, which are shared with or used by Affiliates. The market versus cost evaluation is applicable to any such assets provided on an ongoing basis or as the result of an individual transaction. Similarly, when DEC/DEP/Piedmont uses assets owned by an Affiliate, they should perform or ensure that the Affiliate performs a market comparison for such assets.

For the transfer or sharing of items developed, created or constructed by DEC/DEP/Piedmont or an Affiliate (regardless of whether the item is a capital asset), DEC/DEP/Piedmont departments should perform a market comparison to determine the appropriate price, taking into consideration the following as applicable:

- The fully distributed cost to DEC/DEP/Piedmont or the affiliate to develop the item; the appropriate allocation of such costs for items that will be shared, such as software; the market price to purchase the item "off the shelf", if available; and the market price to hire a professional to develop the item.

Exceptions:

- ***No Comparable Market Exception***. If no comparable market exists, the goods or services should be priced at fully distributed costs. A DEC/DEP/Piedmont department relying on this exception should document how it determined that no comparable market exists.

- ***Joint Purchase/Development Exception.*** The Code permits the use of shared corporate governance and shared support and permits joint purchases among DEC/DEP/Piedmont and their affiliates. Therefore, Duke Energy may establish a project to jointly develop an item to be used by multiple business units, including DEC/DEP/Piedmont, provided that the costs are allocated appropriately and accounting records are maintained to reflect the cost sharing. Similarly, DEC/DEP/Piedmont and their affiliates may jointly procure goods or services from third-party suppliers.

- ***Use of Assets in the Performance of Services.*** Affiliates may use DEC/DEP/Piedmont goods or assets without charge in connection with the performance of work for DEC/DEP/Piedmont if DEC/DEP/Piedmont would permit a third-party supplier to have the same access to such goods or assets without charge.

E. REGULATORY OVERSIGHT

- DEC/DEP/Piedmont are required to file a detailed Carolinas CAM and Annual Affiliate Transactions Report with the NCUC. The CAM and Report are subject to regular audit by the Public Staff.
- DEC/DEP/Piedmont are also required to maintain information on affiliate transactions for review by the PSCSC and ORS upon request.
- Corporate Audit Services performs an annual audit of Affiliate transactions.
- Independent audit of transactions under the Service Agreements occurs no less than every 2 years.

F. COMPLAINT PROCEDURE

The Code of Conduct requires DEC/DEP/Piedmont to follow established procedures to resolve any complaints that may arise due to the relationship of DEC/DEP/Piedmont with Duke Energy Corporation, its other Affiliates, or its Nonpublic Utility Operations. Complaints could originate from any source, including customers, potential suppliers, alliance partners, competitors, etc., or could be referred to DEC/DEP/Piedmont by the NCUC, PSCSC, Public Staff, or ORS. The following steps comprise the procedure to follow in the event of a complaint:

- Any verbal or written complaints will be referred to the Duke Energy Regulatory Affairs contact below (written complaints forwarded by the NCUC, PSCSC, Public Staff or ORS are automatically received by the Regulatory Affairs team).
- The Regulatory Affairs team will provide written notice to the complainant within 15 days indicating that the complaint was received.
- The Regulatory Affairs team will conduct or coordinate the investigation of the complaint, provide the results of such investigation to the Legal Department for review and input, and report back the status or results of the review to the complainant within 60 days of receiving the complaint.
- A log of complaints received and the related documents will be maintained by the Regulatory Affairs team for audit purposes.

Note: Any complaints received via the Ethics Line will be handled separately according to the procedures established for Ethics Line.

F. SHARED SERVICES COST DISTRIBUTION PROCESS

Services designated as "shared support," for purposes of the North Carolina Regulatory Conditions and Code of Conduct, are Services that are corporate or general utility in nature and are used by multiple business units. These services are provided pursuant to a Utility Service Agreement filed with the NCUC.

The list of services conforms to the service category descriptions included in Attachment 2 of the Service Company Utility Service Agreement, and represents the shared services offered that DEC, DEP, and Piedmont intend to obtain under this agreement. DEC, DEP, and Piedmont are required by the North Carolinas Utilities Commission to update the list of services as necessary. Interim changes to this list require filing with the Commission, with 15 days advance notice of the proposed changes.

The shared services cost distribution process is the method by which costs of the Services Company are fully distributed.

The objectives of the cost distribution process are to:

- Meet regulatory requirements.
- Ensure that each affiliate shares in and is appropriately charged for the relevant shared services costs.
- Assist affiliates in understanding the cost drivers and basis for allocation of shared services costs that affect their operating results.
- Provide an accounting model whereby affiliates can see how much is allocated to them for each shared service.

Costs for shared services are distributed to affiliates within Duke Energy through *(i)* direct charges, *(ii)* distribution or *(iii)* allocation. Costs are direct charged to the extent possible. Costs that cannot be direct charged can be distributed to the applicable business units using specific percentages if known. Costs that cannot be direct charged or distributed are allocated to the business units receiving the benefit using reasonable allocation methods as described in the "Shared Services Cost Distribution Details" section of this manual. Services are charged to

Affiliates on a fully distributed cost basis and include labor and non-labor costs. As part of a fully distributed cost, an overhead component is charged to Affiliates as a percentage of Service Company labor costs, whether direct charged, distributed or allocated. This overhead represents the cost of shared services provided by shared services employees.

The Corporate Accounting group is responsible for developing the following allocation factors, which serve as the basis for the allocation of costs that have not been direct charged or distributed. Final allocation factors distributing costs to each affiliate sum to 100% for each cost pool, thus clearing out 100% of costs to be allocated each month. Interim adjustments to allocation factors are made only for material transactions, such as an acquisition or divestiture of an affiliate, and for major company reorganizations.

Corporate Accounting reviews Service Company allocation factors annually. Typically during the budget process, rates are recalculated and implemented for actuals at the beginning of the following year. These rates are reflected in the Service Company allocation rate schedule included in the Cost Allocation Manual.

The Service Company also charges for certain services under the Service Company Utility Service Agreement. Types of pass-through costs typically handled by the Service Company may include:

1. Finance & Accounting Services
2. Insurance Premium Expense
3. Advertising Expense
4. Community Relations Projects
5. Donations
6. Employee Benefits Expense
7. Dues / Subscriptions
8. Merger Execution Costs
9. Research & Development
10. Miscellaneous Lease / Rent Expense

G. GUIDELINES AND PROCEDURE FOR CHARGING DEC/DEP/PIEDMONT FOR COSTS ORIGINATING WITH THE SERVICE COMPANY

On a regular basis, Service Company employees provide support to DEC/DEP/Piedmont. All Service Company resources used to support DEC/DEP/Piedmont must properly charge the respective utility through *(i)* direct charges, *(ii)* distribution or *(iii)* allocation. Charging fully distributed cost to DEC/DEP/Piedmont is normally accomplished with the application of a percentage loaded on direct labor. Service Company management is accountable for employees appropriately charging their costs. An Affiliate Rules and Transactions Computer Based Training ("CBT") (emphasis on DEC/DEP/Piedmont) is available in the Training Connection on the Portal.

The following procedure addresses employees' and management's responsibilities.

A. General Guidelines

1. Consistent with Regulatory Condition No. 5.5, hours worked by Service Company employees in direct support of DEC/DEP/Piedmont are charged directly to the respective utility to the maximum extent practicable.
2. First-line supervisors should review and approve, when appropriate, source documentation resulting in a charge by Service Company to DEC/DEP/Piedmont (timesheets, employee expenses, etc.).
3. First-line supervisors are responsible for reviewing reports that show monthly charges to their responsibility center. These reports would include any charges incurred by the responsibility center to DEC/DEP/Piedmont.
4. Service Company to DEC/DEP/Piedmont transactions are covered under the Service Company Utility Agreement.

B. Time Reporting

When a Service Company employee provides direct support to DEC/DEP/Piedmont: Consistent with Regulatory Condition No. 5.5, hours worked by Service Company employees in direct support of DEC/DEP/Piedmont are charged directly to the respective utility to the maximum extent practicable.

1. Management approvals are required for non-exempt employee timesheets, as well as exempt employee timesheets for paid supplemental compensation.
2. The financial system will automatically load time reported to DEC/DEP/Piedmont with labor loads of fringe benefits, payroll taxes, incentive pay and unproductive time, as applicable.

C. Labor Allocations

Service Company employees provide services to DEC/DEP/Piedmont at fully distributed cost. Allocation of costs described in items 1 through 5 below are applied as a cost factor to labor charged to DEC/DEP/Piedmont. Below are the various cost components of labor loads. The rates for these items may be adjusted during the year to properly accrue the associated actual or anticipated cost.

1. Fringe Benefit Allocation

Fringe benefits are employee benefits such as retirement, and medical and dental insurance. These costs are generally accrued as they are earned. Actual fringe benefit costs are charged to the appropriate administrative and general FERC account. These costs are then allocated via a loading factor that is based on labor. This allows the proper distribution of fringe benefits between operating and capital projects as well as among Affiliates.

2. Payroll Tax Allocation

Payroll taxes include state unemployment, federal unemployment, social security and Medicare. Payroll taxes are accrued as they are incurred. Actual payroll taxes are charged to the appropriate payroll tax account. These costs are then allocated via a loading factor that is based on labor. This allows the proper distribution of payroll tax between operating and capital projects as well as among Affiliates.

3. Incentive Allocation

Incentives are accrued via a loading factor applied to labor charges.

4. Unproductive Cost Allocation

An unproductive cost allocation is applied to productive labor charges by the Service Company employee. Service Company allocates unproductive costs pro rata to productive labor, either via a monthly ratio or standard rates.

5. Service Company Overhead

A Service Company overhead rate is based on historical enterprise and governance overhead charged to Regulated Utilities in the following functions: Information Systems, Transportation, Human Resources, Materials Management, Accounting, Public Affairs, Legal, Finance, Facilities, Internal Auditing, Environmental, Health and Safety, Investor Relations, Planning, and Executive.

H. SHARED SERVICES COST DISTRIBUTION DETAILS

I. GUIDELINES AND PROCEDURE FOR CHARGING AFFILIATES FOR COSTS ORIGINATING WITH DEC/DEP/PIEDMONT

On occasion, DEC/DEP/Piedmont's employees may be requested to provide support, subject to availability, to Affiliates and Nonpublic Utility Operations. DEC/DEP/Piedmont's management is responsible for ensuring that use of all company resources to support Affiliate work is properly charged to the Affiliate/Nonpublic Utility Operation. Rules regarding affiliate agreements between DEC/DEP/Piedmont and any Affiliate/Nonpublic Utility Operation are described in Section E. *Guidelines for Transactions between DEC/DEP/Piedmont and Affiliates* incorporated in this CAM. DEC/DEP/Piedmont will charge the Affiliate/Nonpublic Utility Operation the higher of fully distributed cost or market value. Charging the Affiliate/Nonpublic Utility Operation either market or fully distributed cost is normally accomplished with the application of a percentage loaded on direct labor charges. Other charges may be made separately to account for vehicle charges, employee expenses, materials and supplies, contract services, etc. DEC/DEP/Piedmont's management is accountable for the review and approval of all charges from the utility in support of Affiliate/ Nonpublic Utility Operation work. An Affiliate Rules and Transactions CBT (emphasis on DEC/DEP/Piedmont) is available on the employee Portal.

Costs covered by the utility affiliate loader are handled by utility departmental allocations and a change to the Service Company allocation basis. These steps eliminate the need for a utility affiliate loader between DEC and DEP, because the costs of the utility affiliate loader are now addressed in a simplified fashion between the two Companies. The utility affiliate loader still applies for all labor charged outside of DEC and DEP to their affiliates.

The following procedure addresses employees' and management's responsibilities.

A. General Guidelines

1. Hours worked by DEC/DEP/Piedmont employees in direct support of an Affiliate/ Nonpublic Utility Operation are charged directly to the Affiliate.
2. First-line supervisors should review and approve, when appropriate, source

documentation resulting in a charge by DEC/DEP/Piedmont to an Affiliate/ Nonpublic Utility Operation (timesheets, employee expenses, etc.).

3. First-line supervisors are responsible for reviewing reports that show monthly charges to their responsibility center. These reports would include any charges incurred by the responsibility center to an Affiliate/ Nonpublic Utility Operation.
4. Transactions originating with DEC/DEP/Piedmont and charged to an Affiliate typically require the completion and approval of a Service Request form. The process and eForm can be found on the Portal under Rates & Regulatory.

B. Time Reporting

When a DEC/DEP/Piedmont employee supports an Affiliate/Nonpublic Utility Operation:

1. Hours worked by DEC/DEP/Piedmont employees in direct support of an Affiliate/Nonpublic Utility Operation are charged directly to the Affiliate/Nonpublic Utility Operation.
2. Overtime hours worked by a non-exempt employee during a week should be applied first to the Affiliate/Nonpublic Utility Operation project, up to total hours worked on the project.
    a) If overtime pay is charged to the utility but not the Affiliate/Nonpublic Utility Operation in a time reporting period, the reason for the exception shall be fully documented and maintained by the supervisor for a minimum of two years.
    b) For example, a non-exempt employee works 50 hours for a given week, 10 of which must be paid as overtime. Twenty of the 50 hours were in support of an Affiliate project. That project should be charged 10 hours overtime and 10 hours straight-time.
3. When an exempt employee who is paid semi-monthly provides support to an Affiliate/ Nonpublic Utility Operation, and overtime is worked, the employee's regular semi-monthly pay is prorated to the utility and the Affiliate/Nonpublic Utility Operation based on the number of hours worked for each.
4. Management approvals are required for non-exempt employee timesheets, as well as exempt employee timesheets for paid supplemental compensation.
5. The financial system will automatically load time reported to an Affiliate/Nonpublic

Utility Operation with labor loads including fringe benefits, payroll taxes, incentive pay, and unproductive time, as applicable. If market value is to be charged, journal entries will be made by the business finance support group to appropriately adjust the costs to market. The overhead cost factor includes the following components: department administrative overheads, corporate governance, employee training, Service Company-related shared services, facilities, and supervisory costs.

C. Labor Allocations

DEC/DEP/Piedmont employees may provide services to their regulated Utility Affiliates at DEC's, DEP's, or Piedmont's fully distributed costs and DEC/DEP/Piedmont employees may provide services to Duke Energy Corporation, a Non-Utility Affiliate, a non-regulated Utility Affiliate or Nonpublic Utility Operation at the higher of fully distributed cost or market value, subject to certain exceptions. The mechanism for charging is generally a cost applied to labor charges and a market value journal entry if applicable. Allocation rates described in items 1 through 10 below are applied as a cost factor to direct labor charged to an Affiliate/Nonpublic Utility Operation.

Below are the various cost components of labor loads. The rates for Items 1-4 may be adjusted during the year to properly accrue the associated actual or anticipated cost. Items 5-10 are components of Duke Energy's Regulated Utilities Franchised Electric and Gas labor cost multiplier and are updated annually. Items 5-10 do not apply to transactions between DEC and DEP.

1. Fringe Benefit Allocation

Fringe benefits are employee benefits such as retirement, and medical and dental insurance. These costs are generally accrued as they are earned. Actual fringe benefit costs are charged to the appropriate administrative and general FERC account. These costs are then allocated via a loading factor that is based on labor. This allows the proper distribution of fringe benefits between operating and capital projects as well as among business units.

2. Payroll Tax Allocation

Payroll taxes include state unemployment, federal unemployment, social security and Medicare. Payroll taxes are accrued as they are incurred. Actual payroll taxes are charged to the appropriate payroll tax account. These costs are then allocated via a

loading factor that is based on labor. This allows the proper distribution of payroll tax between operating and capital projects as well as among business units.

3. **Incentive Allocation**

   Incentives are accrued via a loading factor applied to direct labor charges by the DEC/DEP/Piedmont employee performing work for an Affiliate/Nonpublic Utility Operation.

4. **Unproductive Cost Allocation**

   An unproductive cost allocation is applied on the basis of direct labor charges by the DEC/DEP/Piedmont employee performing work for an Affiliate/Nonpublic Utility Operation. DEC/DEP/Piedmont allocates unproductive costs pro rata to direct labor, either via a monthly ratio or standard rates.

Duke Energy intends to calculate Items 5-10 below on a total Regulated Utilities Franchised Electric and Gas ("FE&G") basis with the calculations to be performed annually. Annualized costs (either historic or projected) that best align with the current organization will be used in the calculations.

5. **Administrative Overheads**

   An Administrative Overhead Rate will be applied on the basis of direct labor charges. Administrative Overheads include: Departmental administrative functions (Business Support and General Office Executive Management), labor, and non-labor costs (e.g., training, employee expenses, Information Management costs for administrative functions by functional department).

6. **Corporate Governance**

   A corporate governance cost rate is applied on the basis of direct labor charges. The corporate governance rate is based on corporate governance costs allocated to FE&G.

7. Employee Training Costs

An employee training cost rate is applied on the basis of direct labor charges. The employee training-related costs factor will be developed by identifying the direct labor charges for those within Regulated Utilities that perform employee training-related tasks. Such training provides employees with the knowledge and skills necessary to perform their job duties, for professional development, and to maintain professional or technical licenses or for certifications required for business operations. The employee training cost rate is based on the total direct labor charges of the groups within Regulated Utilities that perform employee training-related tasks.

8. Service Company Costs

A service company cost rate is based on historical enterprise and governance overhead charged to Regulated Utilities in the following functions: Information Systems, Transportation, Human Resources, Materials Management, Accounting, Public Affairs, Legal, Finance, Facilities, Internal Auditing, Environmental, Health and Safety, Investor Relations, Planning, and Executive.

9. Facilities Cost

The facilities cost rate is applied on the basis of direct labor charges. The facility cost rate is based on the annual cost structure for corporate facilities, i.e., Charlotte, Raleigh, Cincinnati, St. Petersburg and Plainfield office buildings, and the number of employees occupying these facilities to arrive at an average facility cost.

10. Supervisory Costs

The supervisory cost rate is applied on the basis of direct labor charges. The supervisory cost rate represents the cost of supervision related to a Regulated Utilities employee performing work for an Affiliate Business unit. The basis for determining such costs is through the analysis of supervisory labor cost as a factor of Regulated Utilities employee labor cost.

D. Premium Services (Non-affiliate transactions)

Premium services are unregulated services provided by DEC, DEP or Piedmont to its respective utility customers. All costs related to premium services are either direct-charged or allocated to non-utility accounts. Costs identified in subsections C.1. through C.4. above are automatically allocated based on labor charges to premium services processes. An additional multiplier rate is also applied to labor charged to these premium services processes to cover costs such as facilities, administrative and corporate overheads, employee training and supervision, and shared services.

J. UTILITY TO UTILITY COST DISTRIBUTION DETAILS

The following are Utility allocations that run on Duke Energy Carolinas and Duke Energy Progress:

2020 Utility Level Allocations

Function	Function Description	Allocation Method	Operating Unit (OU)	Function	OU Description	Allocation Pool	St.Cd	Total DEC	Total DEP	Total DEF	Total DEI	DBK Total	DEO Total	Electric Utilities Total	Gas Utilities Total	Total
Electric System Maintenance - Coordinates maintenance and support of electric transmission and distribution systems.	Services related to transmission system:	*Circuit Miles of Electric Transm Lines Ratio*	CTTR	Electric System	ESS Elec Tran Utility	CTTOMETR	C15	41.66	19.97	15.61	16.85	0.34	5.57	100.00	-	100.00

K. GUIDELINES AND PROCEDURE FOR CHARGING DEC/DEP/PIEDMONT FOR COSTS ORIGINATING WITH UTILITY AFFILIATES EXCLUDING THE SERVICE COMPANY

On occasion, Utility Affiliate (DEF, DEI, DEK, DEO-Transmission or DEO - Distribution) employees may be requested to provide support, subject to availability, to DEC/DEP/Piedmont. Affiliate management is responsible for ensuring that the use of all company resources to support DEC/DEP/Piedmont is properly charged to DEC/DEP/Piedmont. The Utility Affiliate will charge its fully distributed cost to DEC/DEP/Piedmont. Charging DEC/DEP/Piedmont fully distributed cost is normally accomplished with the application of a percentage loaded on direct labor charges. Other charges may be made separately to account for vehicle charges, employee expenses, materials and supplies, contract services, etc. The Utility Affiliate management is accountable for the review and approval of all charges from the Utility Affiliate in support of DEC/DEP/Piedmont work. An Affiliate Rules and Transactions CBT (emphasis on DEC/DEP/Piedmont) is available in the Training Connection on the Portal.

Please reference Section I. *Guidelines and Procedure for Charging Affiliates for Costs Originating with DEC/DEP/Piedmont*, which addresses eliminating a utility affiliate loader between DEC and DEP. The following procedure addresses the responsibilities of employees and management.

A. General Guidelines

1. Hours worked by the Utility Affiliate employees in direct support of DEC/DEP/Piedmont are charged directly to DEC/DEP/Piedmont.
2. First-line supervisors should review and approve, when appropriate, source documentation resulting in a charge by Utility Operations to DEC/DEP/Piedmont (timesheets, employee expenses, etc.).
3. First-line supervisors/managers are responsible for reviewing any reports that detail monthly charges to their responsibility center. These reports would include any charges incurred by the responsibility center to DEC/DEP/Piedmont.

4. Utility Affiliate to DEC/DEP/Piedmont transactions typically require the completion and approval of a Service Request form, unless DEC/DEP/Piedmont is requesting the service from the other. The process and eForm can be found on the Portal under Rates & Regulatory.

B. Time Reporting

When a Utility Affiliate employee supports DEC/DEP/Piedmont:

1. Hours worked by the Utility Affiliate employees in direct support of DEC/DEP/Piedmont are charged directly to DEC/DEP/Piedmont.
2. Management approvals are required for non-exempt employee timesheets, as well as exempt employee timesheets for paid supplemental compensation.
3. The financial system will automatically load time reported to DEC/DEP/Piedmont with labor loads including fringe benefits, payroll taxes, incentive pay, and unproductive time, as applicable. If market value is to be charged, journal entries will be made by the Regulated Utility Financial Planning & Analysis group to appropriately adjust the costs to market. The overhead cost factor includes the following components: department administrative overheads, corporate governance, employee training, Service Company-related shared services, facilities, and supervisory costs.

C. Labor Allocations

Utility Affiliate employees provide services to DEC/DEP/Piedmont at fully distributed cost. The mechanism for charging DEC/DEP/Piedmont is generally a cost adder applied to labor charges and a market value journal entry if applicable. Allocation rates described in items 1 through 10 below are applied as a cost factor to direct labor charged to DEC/DEP/Piedmont. Below are the various cost components of labor loads. The rates for Items 1-4 may be adjusted during the year to properly accrue the associated actual or anticipated cost. Items 5-10 are components of Duke Energy's Regulated Utilities labor cost multiplier and are updated annually.

1. Fringe Benefit Allocation

Fringe benefits are employee benefits such as retirement and medical and dental insurance. These costs are generally accrued as they are earned. Actual fringe benefit costs are charged to the appropriate administrative and general FERC account. These

costs are then allocated via a loading factor that is based on labor. This allows the proper distribution of fringe benefits between operating and capital projects as well as among business units.

2. **Payroll Tax Allocation**

   Payroll taxes include state unemployment, federal unemployment, social security and Medicare. Payroll taxes are accrued as they are incurred. Actual payroll taxes are charged to the appropriate payroll tax account. These costs are then allocated via a loading factor that is based on labor. This allows the proper distribution of payroll tax between operating and capital projects as well as among business units.

3. **Incentive Allocation**

   Incentives are allocated via a loading factor applied to direct labor charges by each Utility Affiliate employee performing work for DEC/DEP/Piedmont.

4. **Unproductive Cost Allocation**

   An unproductive cost allocation is applied on the basis of direct labor charges by each Utility Affiliate employee performing work for DEC/DEP/Piedmont. Each Utility Affiliate allocates unproductive costs pro rata to direct labor, either via a monthly ratio or standard rates.

Duke Energy intends to calculate Items 5-10 below on a total Regulated Utilities basis with the calculations to be performed annually. Annualized costs (either historic or projected) that best align with the current organization will be used in the calculations. Please reference Section I. *Guidelines and Procedure for Charging Affiliates for Costs Originating with DEC/DEP/Piedmont*, details of Items 5-10. Items 5-10 do not apply to transactions between DEC and DEP.

5. **Administrative Overheads**
6. **Corporate Governance**
7. **Employee Training Costs**
8. **Service Company Costs**
9. **Facilities Cost**
10. **Supervisory Costs**

L. GUIDELINES AND PROCEDURE FOR CHARGING DEC/DEP/PIEDMONT FOR COSTS ORIGINATING WITH NON-REGULATED AFFILIATES

On occasion, employees of Non-Regulated Affiliates may be requested to provide support, subject to availability, to DEC/DEP/Piedmont. (Non-Regulated Affiliates' management is responsible for ensuring that use of all company resources to support DEC/DEP/Piedmont work is properly charged to DEC/DEP/Piedmont.) Rules regarding affiliate agreements between Non-Regulated Affiliates and DEC/DEP/Piedmont are described in Section E. *Guidelines for Transactions between DEC/DEP/Piedmont and Affiliates* incorporated in this CAM. Non-Regulated Affiliates will charge DEC/DEP/Piedmont the lower of fully distributed cost or market value as appropriate. Charging DEC/DEP/Piedmont either market or fully distributed cost is normally accomplished with the application of a percentage loaded on direct labor charges. Other charges may be made separately to account for vehicle charges, employee expenses, materials and supplies, contract services, etc. Non-Regulated management is accountable for the review and approval of all charges from Non-Regulated Affiliates in support of DEC/DEP/Piedmont's work.

The following procedure addresses employee's and manager's responsibilities.

A. General Guidelines

1. Hours worked by employees of Non-Regulated Affiliates in direct support of DEC/DEP/Piedmont are charged directly to DEC/DEP/Piedmont.
2. First-line supervisors should review and approve, when appropriate, any source documentation resulting in a charge by Non-Regulated Affiliates to DEC/DEP/Piedmont (timesheets, employee expenses, etc.).
3. First-line supervisors are responsible for reviewing reports that show monthly charges to their responsibility center. These reports would include charges incurred by the responsibility center to DEC/DEP/Piedmont.
4. Non-Regulated to DEC/DEP/Piedmont transactions typically require the completion and approval of a Service Request form. The process and eForm can be found on the Portal under Rates & Regulatory.

B. Time Reporting

When a Non-Regulated employee supports DEC/DEP/Piedmont:

1. Hours worked by Non-Regulated employees in direct support of DEC/DEP/Piedmont are charged directly to DEC/DEP/Piedmont.
2. Management approvals are required for non-exempt employee timesheets, as well as exempt employee timesheets for paid supplemental compensation.
3. The financial system will automatically load time reported to DEC/DEP/Piedmont with labor loads including fringe benefits, payroll taxes, incentive pay, and unproductive time, as applicable. If market value is to be charged, journal entries will be made by the Non-Regulated Affiliate's financial group to appropriately adjust the costs to market.

C. Labor Allocations

Non-Regulated employees provide services to DEC/DEP/Piedmont at the lower of fully distributed cost or market value. The mechanism for charging DEC/DEP/Piedmont is generally a cost adder applied to labor charges. When appropriate to charge market, a market value journal entry is made. Allocation rates described in items 1 through 10 may be applied as a cost factor to direct labor when charging DEC/DEP/Piedmont.

Below are the various cost components of labor loads which may be applied to labor when Non-Regulated Affiliates do work for and charge DEC/DEP/Piedmont. The rates for Items 1-4 (specific to Non-Regulated Affiliates) may be adjusted during the year to properly accrue the associated actual or anticipated cost. Items 5-10 may also be included as components of Non-Regulated Affiliates' labor cost multiplier.

1. Fringe Benefit Allocation

Fringe benefits are employee benefits such as retirement and medical and dental insurance. These costs are generally accrued as they are earned. Actual fringe benefit costs are charged to the appropriate administrative and general FERC account. These costs are then allocated via a loading factor that is based on labor. This allows the proper distribution of fringe benefits between operating and capital projects as well as among business units.

2. Payroll Tax Allocation

Payroll taxes include state unemployment, federal unemployment, social security and Medicare. Payroll taxes are accrued as they are incurred. Actual payroll taxes are charged to the appropriate payroll tax account. These costs are then allocated via a loading factor that is based on labor. This allows the proper distribution of payroll tax between operating and capital projects as well as among business units.

3. Incentive Allocation

Incentives are allocated via a loading factor applied to direct labor charges by the Non-Regulated employee performing work for DEC/DEP/Piedmont.

4. Unproductive Cost Allocation

An unproductive cost allocation is applied on the basis of direct labor charges by the Non-Regulated employee performing work for DEC/DEP/Piedmont. Non-Regulated Affiliates allocate unproductive costs pro rata to direct labor, either via a monthly ratio or standard rates.

Please reference Section I. *Guidelines and Procedure for Charging Affiliates for Costs Originating with DEC/DEP/Piedmont*, details of Items 5-10.

5. Administrative Overheads

6. Corporate Governance

7. Employee Training Costs

8. Service Company Costs

9. Facilities Cost

10. Supervisory Costs

M. TYPICAL TRANSACTIONS BETWEEN DEC/DEP/PIEDMONT AND AFFILIATES COVERED UNDER SEPARATE AGREEMENTS

The following are some of the typical transactions that DEC/DEP/Piedmont conduct with one another or their affiliates under separate agreements not otherwise discussed in this manual. The related agreements and others can be found on the State Regulatory Compliance Portal page, or are available upon request.

A. Bison Insurance

Duke Energy's Insurance program requires that costs be identified and allocated to the business units based upon their contributions to the risk of the entire company. The programs are designed to encourage risk control, early claims reporting, and efficient claims management and allow for cost-based pricing. This is accomplished by transferring the insurable losses across the company to the captive insurance companies, generally after a small business unit deductible is met. The captives also reinsure their risk in excess of its retention (and additional deductible) with unrelated third-party reinsurance companies. The captives charge premiums to business units that participate in the program to cover the aggregate cost of reinsurance and the estimated retained losses at the captives. This works essentially the same way commercial insurance works where the losses of a few are covered by the premiums of many.

The primary types of costs to be allocated are:

- retained losses and related loss adjustment expenses
- insurance premiums

Duke Energy has developed specific premium calculation methodologies for each line of coverage (i.e., general liability, property, workers' compensation and directors and officers), which is similar to how commercial insurance underwrites risk. Insurance premiums (costs) are generally allocated on a blended basis of exposure and historical loss experience (frequency and severity).

B. Intercompany Asset Transfer Agreement

An agreement among DEC, DEP, DEF, DEO, DEI, DEK, and Piedmont addresses the

transfer of assets, compensation, payment, warranties, and indemnification. The Commission approved a limited waiver of the cost-based pricing provisions of the Intercompany Asset Transfer Agreement for the transfer between DEC and DEP of rotable fleet spares, which are specific working parts of a generating unit that must be replaced several during the relatively long life of that unit. *Order Approving Request for Limited Waiver and Pre-Approval of Accounting Authority Pursuant to Rule R8-27*, Docket No. E-2, Sub 998A, E-7, Sub 986A (Sept. 3, 2014).

C. Tax Sharing Agreement

Duke Energy Corporation, as parent of a consolidated group of companies, files federal income taxes on behalf of its affiliates who are members of its consolidated group. Under Duke Energy Corporation's Tax Sharing Agreement, which is applicable to all members of Duke Energy's consolidated group, income taxes allocable to Duke Energy Corporation are accrued by it and consolidated group members on a stand-alone basis.

D. Utility Money Pool Agreement

Establishes a cash management program (the "Utility Money Pool") to coordinate and provide for certain short-term cash and working capital requirements.

E. Carolinas Operating Companies Commodity and Related Equipment and Services Transfer Agreement

Provides for the pre-approved transfer of fuel, reagents, coal combustion products, and related equipment and services (but does not provide for the disposal of coal combustion products). See *Order Accepting Affiliate Agreement and Allowing Payment Thereunder*, Docket Nos. E-2, Sub 998A and E-7, Sub 986A (Feb. 10, 2015).

F. Asset Management and Delivered Supply Agreement (AMA)

Provides for DEC to be the asset manager for all natural gas supply and capacity for both DEC and DEP. The AMA facilitates coordination and optimization of natural gas capacity and supply rights owned by DEC and DEP to reduce the cost of providing electric service to both DEC's and DEP's native load customers.

N. OTHER

Audit Principles & Guidelines

An audit trail shall exist with respect to transactions between DEC/DEP/Piedmont and its affiliates.

Corporate Audit Services will have complete access to affiliate records necessary to ensure that cost allocations and affiliate transactions are conducted in accordance with established policies and procedures and regulatory requirements. Auditors will have complete access to affiliate records to ensure availability of relevant information necessary to evaluate whether subsidization exists. The auditors, not the individual affiliates, will determine what is relevant for a particular audit objective. Limitation of access would compromise the audit process and impair audit independence.

Cost allocation documentation will be made available to Corporate Audit Services for periodic review of the allocation policies and procedures and to any jurisdictional regulatory authority when appropriate and upon request. Any entity required to provide access to its books and records can, and is encouraged to, make arrangements as necessary and appropriate to ensure that competitively sensitive information provided in the course of the audits be kept confidential by Corporate Audit Services and/or regulatory authorities.

Transactions between DEC/DEP/Piedmont and its Affiliates/Nonpublic Utility Operations will be reviewed at a minimum annually by Corporate Audit Services.

Piedmont Natural Gas Company Inc.
Docket 20-00086
CAD Data Request No. 1, Item 57

Indirect Overhead Pool

A. **Background and Purpose**

Certain work groups provide overall support to both O&M and Capital work, but which the direct charging of the work activities is impractical or impossible. In these cases, it is appropriate to charge the indirect overhead pool which systematically allocates defined costs. The indirect overhead allocations are designed to allocate the costs of management and supervision as well as support departments to operation & maintenance and capital accounts based on direct labor and contractor labor costs. Each business unit has its own set of allocations: Piedmont North Carolina, Piedmont South Carolina, Piedmont Tennessee, Piedmont 2 State, Piedmont 3 State, Duke Ohio, and Duke Kentucky.

B. Pool Design

The pool of dollars to be allocated is captured in specific operating units in Account 0186120 and is segregated between labor costs and non-labor costs. Charges into Gas Ops indirect overhead pools are made directly to the pools using the OUs and project ids shown in the table below.

O&M/Capital Split - Indirect Cost Pool			
Jurisdiction	**OU**	**Project**	**Activity**
North Carolina	PNFA	GASNCIND	X
South Carolina	PSFA	GASSCIND	X
Tennessee	PTFA	GASTNIND	X
2 State split NC/SC	PTSA	GAS2SIND	X
3 State split NC/SC/TN	PTHA	GAS3SIND	X
Ohio	GOF1	GASOHIND	X
Kentucky	GOF2	GASKYIND	X

C. Basis of allocation

The Gas Ops indirect overhead basis of allocation includes direct labor and contractor costs from Natural Gas Ops responsibility centers charged to O&M and Capital accounts. The allocation only charges the same jurisdiction as the pool (does not follow affiliate charges).

D. Finance Roles and Responsibilities

Gas Ops Finance monitors the charging into indirect overhead pool regularly and reviews with business partners and are corrected if necessary.

Capital only overheads

Piedmont Natural Gas Company Inc.
Docket 20-00086
CAD Data Request No. 1, Item 57

A. Background and Purpose

The Natural Gas Ops organization includes certain work groups, which provide, over-reaching overall support to capital direct work, but which the direct charging of the numerous individual direct work activities is impractical or impossible. In these cases, it is appropriate to charge the capital pool which systematically allocate defined costs over direct charged field labor to capital projects.

B. Pool Design

Charges into Gas Ops capital pools can be made directly to the pools using the OUs shown in the table below.

Jurisdiction	OU	Project	Activity
North Carolina	PNOA	107GASNC	I
South Carolina	PSOA	107GASSC	I
Tennessee	PTOA	107GASTN	I
2 State split NC/SC	PTSO	107GAS2S	I
3 State split NC/SC/TN	PTHO	107GAS3S	I

C. Basis of allocation

The Gas Ops capital pool basis of allocation includes direct labor and contractor costs from Natural Gas Ops responsibility centers charged to Piedmont capital projects. The allocation only follows Capital accounts and the business unit must be in the same jurisdiction as the pool (does not follow affiliate charges).

D. Capital Pool Groups within Gas Ops Organization

a. **Asset Management & Engineering –** Engineers are encouraged to direct charge when possible. Engineering performs the scoping and estimating for capital work which occurs on the front end of the project life cycle and are permitted to use the capital pool when detailed capital projects have not been set up yet or if an engineer works on a large volume of projects daily which would be impractical and inefficient to direct charge on an individual basis due to their short duration. Large program work that will span a longer duration should be charged directly to the specific project as soon as the detailed project has been created and identified. Engineers are asked to split their time between direct charge to individual projects, the capital pool for the related jurisdiction and O&M as appropriate.

b. **Regional Field & System Operations** –Management and supervision of the regional construction organizations are encouraged to direct charge when possible however due to the nature of overall management of all construction projects they are permitted to use the capital pool for their appropriate

jurisdictions. Managers and supervisors are asked to split their time between direct charge to individual projects, the capital pool for the related jurisdiction and O&M as appropriate.

E. Finance Roles and Responsibilities

Gas Ops Finance monitors the amount of time that Engineering, Regional Field and System Ops charge to the capital pool monthly and review with business partners. Charges into the capital pool from outside groups are reviewed quarterly and are corrected if necessary.

Fleet Allocation

A. Background and Purpose

The Piedmont Gas business units have costs related to their fleet of vehicles such as, maintenance, depreciation and fuel. These costs must be allocated to the correct Operations & Maintenance and Capital accounts depending on type of work the fleet vehicle is being used for. In order to do this, all fleet costs for Piedmont owned vehicles are charged to a cost pool account which then systematically spreads the costs over direct charged field labor.

B. Pool Design

Charges into fleet cost pool account 0803290 are made directly for each Piedmont business unit.

C. Basis of allocation

The fleet cost pool basis of allocation includes direct labor from the various Piedmont resource center operating units for each jurisdictional business unit.

D. Finance Roles and Responsibilities

Gas Ops Finance monitors the charging into fleet cost pool regularly and reviews with business partners and adjusts the allocation as necessary.

Stores Allocation – Supply Chain

A. Background and Purpose

The stores allocation process is designed to systematically distribute costs of supply chain personnel based on materials and supplies issuances.

B. Pool Design

Charges into stores cost pool account 0163110 are made directly for each Piedmont business unit.

C. Basis of allocation

The stores cost pool account 0163110 is credited each month for a fixed percentage of Direct Material Inventory (Resource Type 21000) and Direct Material Purchases (Resource Type 31000) charges to capital projects and O&M accounts for that month. The fixed percentage in 2018 was 9% and in 2019 it is 3%. The 2018 rate was initially chosen to be in line with the legacy Duke gas operations rates however was determined to be too high based on Piedmont activity. As an example, if a capital project had $10,000 in Direct Material Purchases charged to it in February 2019,the stores allocation for February 2019 is $300. The fixed percentage is determined based on an analysis of the inventory account balance and the balance in the 0163110 account. This rate is adjusted throughout the year to reach a stores balance of approximately 5% of the inventory balance by year end.

D. Finance Roles and Responsibilities

Gas Ops Finance monitors the charging into stores cost pool regularly and reviews with business partners and adjusts the allocation as necessary.

Working Stock/Depot – MRC monthly invoice

A. Background and Purpose

The working stock allocation process is designed to systematically distribute costs captured on the monthly invoice from MRC Global Inc. which details the use of small tools and equipment inventory at the operations centers.

B. Pool Design

Charges into working stock cost pool account 0154410 are made directly for each Piedmont business unit.

C. Basis of allocation

The working stock cost pool basis of allocation is regional operations and field customer service labor.

D. Finance Roles and Responsibilities

Gas Ops Finance monitors the charging into working stock cost pool regularly and reviews with business partners and adjusts the allocation as necessary.

PIEDMONT NATURAL GAS COMPANY, INC.
Docket No. 20-00086
Consumer Advocate's First Discovery Request
Date Issued: August 17, 2020
Date Due: September 8, 2020

1-58. Page 9 of the Duke Energy 2019 10-K references the Innovation Center in Charlotte, which employs nearly 400 people dedicated to developing new products and services. With respect to this center respond to the following:

a. Are costs associated with this center assigned to Piedmonts' Tennessee operations? If so, respond to the following questions.

b. Identify the monthly costs incurred for the period January 2019 through June 2020 associated with the Center.

c. Provide a comprehensive explanation of how such costs are assigned to Piedmont Tennessee.

d. Provide a comprehensive listing of the new products and services developed that impact or are made available to Piedmont Tennessee customers.

RESPONSE:

a. Yes, there are costs associated with this center assigned to Piedmont's Tennessee operations through service company (DEBS) allocations. These DEBS charges to Piedmont are recorded on Piedmont's books to a 3-state business unit (BU). All charges recorded to Piedmont 3-state BUs are then allocated to TN, NC and SC for jurisdictional reporting purposes.

b. See Attachment 1 of 1.

c. The Innovation Center (Optimist Hall) is an office space and treated like other office space leased by the Company. Total lease and operating costs for the Innovation Center are paid by Duke Energy Business Services (DEBS) and allocated to the business units pursuant to the Cost Allocation Manual (CAM)

referenced in response to DR 1-57. A portion of the net amount charged to Piedmont is then allocated to Piedmont's TN operations for jurisdictional reporting purposes using the TN Composite Factor.

d. The following products were developed for use by the entire Natural Gas Business Unit and benefit Piedmont Tennessee customers by making operations more efficient and effective:

1) BEACON: This product is a mobile smart phone application which consolidates and prioritizes Atmospheric Corrosion Inspection (ACI). Atmospheric Corrosion Inspection consists of visually inspecting each customer's meter for corrosion (rust). It replaced outdated and out-of-support hardware which allowed for no functionality for using GPS location to efficiently complete these inspections with our team members who are already completing work in the same vicinity.

2) ACHIEVR: This product is a Virtual Reality Simulator for training our highest safety risk tasks (i.e. Pipe Purging) which cannot be simulated in a safe environment. The intent of this product is to develop muscle memory of the trainee with repetition so that when responding to an emergency or performing tasks on the pipeline the technician has an already established habit of the process or steps of the job to be performed. This is not intended to replace hands-on training but a supplement to refine the hands-on portion.

JOB SUMMARY

Job Title
State Government Affairs Dir

Reports To (Job Title)
VP Rates and Natural Gas Supply

Job Type
N/A

Job Level
Expert

SUMMARY

This position has the responsibility for effectively managing and influencing the relationships with governmental officials and bodies to support the interests of Piedmont Natural Gas Company, Inc. in its Tennessee service territory. A key responsibility of the incumbent is developing and maintaining effective working relationships with Governor, executive branch staff, legislators and their staffs, counterparts within industries and organizations sharing similar interests, and those with significant expertise on issues of importance to the Company. The position manages state legislative strategy and relationships and coordinates with other companies, statewide businesses, industry organizations, coalitions, and special interest groups to foster and promote the interests of Piedmont. The position also supports and assists with the Company's economic development, community relations, sales & marketing, regulatory, business development, operations, and corporate communications initiatives within the region. This position maintains primary responsibility for making Company personnel throughout the organization aware of governmental and legislative issues.

RESPONSIBILITIES

Leads State Government Relations and Public Policy—80%

Represent the Company before governmental and legislative bodies and provides accurate, effective, appropriate and timely communication of the Company's position. Manage legislative issues by staying abreast of relevant information, consistently monitoring legislative, political, and regulatory activity, maintaining an active role in all relevant industry forums, utilizing available information technologies, consulting with other departments responsible for subject matter affected by proposed legislation, consulting with peer companies and taking necessary and timely action on issues of importance. Monitor and report on public policy issues/trends relevant to the industry. Maintain a familiarity and awareness of public policy trends nationally. Serve as a policy resource for the Gas Business unit leadership team.

Develop and execute legislative and agency regulatory actions to enable core business strategies. Additionally, this position develops and executes legislative strategies to defend and/or eliminate business risk in the form of legislative or regulatory actions which could have an adverse effect on Piedmont's business operations and/or its customers.

Develop and maintain effective working relationships with Governor, executive branch staff, legislators and their staffs, counterparts within industries and organizations sharing similar interests, and those with significant expertise on issues of importance to the Company.

Manage external lobbying contractors and resources. Negotiate contract terms, direct external lobbying duties, and evaluate performance of external lobbying team.

Establish relationships with state and local environmental and business regulatory agencies. Monitor proposed regulations for potential impact to PNG.

Support operational divisions with assistance in gaining permits, licenses, easements and any other permissions required from governmental entities for the purpose of doing business. Serve as liaison between operational divisions and elected officials to deliver information regarding planned and ongoing PNG projects. Work with Company's business development department to identify and explore potential business development opportunities within the public sector.

Serve as the PNG interface for State Chambers of Commerce, Tennessee Gas Association, and other statewide or regional groups of businesses engaged in advocacy or policymaking.

Recommend candidates for contributions from Piedmont Corporate Contributions; deliver contributions to candidates and attend political fundraising events to the extent permitted by state law.

Serve as the lead registered state lobbyist for the Company. Ensure compliance with applicable campaign finance and lobbying laws.

Regulatory — 10%

Support regulatory affairs group by serving as primary geographic liaison to regulatory agencies.

Provide support to regulatory affairs via strategy, relationships with regulators and regulatory staff, and participates in regulatory proceedings as requested by the regulatory affairs group.

Local Government Relations/Community/ Communications—10%

Monitor proposed city and county ordinances for purposes of determining potential effect on the Company; presents the Company's position to elected officials in the event of adverse impacts.

Manage municipal franchise agreement negotiations and renewals.

As a senior leader in the assigned state, develop and maintain relationships with key business and community leaders within the assigned state. Represent the Company in leadership roles within various civic, political, professional and membership organizations, provides presentations to groups as needed.

Initiate and maintain contact with state and, if applicable, with multi-county regional economic development organizations and provide general information requested by those organizations. Relay requests for information related to specific customers or prospects to the appropriate Sales or Major Accounts Services representatives.

Support Public Relations and other operational divisions by participating and offering input on topics of strategic importance, communications strategy, and crisis communications. Serve as a media spokesperson as needed.

ADDITIONAL DETAILS

- An extensive understanding of the state legislative process and the state political arena
- Ability to communicate effectively on complex policy issues and with executive management and with members of the state legislature and their staffs
- Ability to represent the company effectively in influential public forums
- Ability to build relationships people effectively
- Strong initiative
- Sound judgment to operate in fluid situations
- Experience as a registered lobbyist
- Experience working with business groups and grassroots initiatives
- A working knowledge of the electric, natural gas, or telecommunications industry, Utility franchise, and municipalization concepts and strategies
- Effective negotiation skills, Strategic planning development, implementation and tracking
- Strong written and verbal communications skills
- Highly effective interpersonal and influencing skills

VP, Rates & NG Supply | Job Code – 800005

JOB SUMMARY

Job Title
VP, Rates & NG Supply

Reports To (Job Title)
SVP Natural Gas Business

Job Type
Supervisory/Management

Job Level
Vice President, Senior Vice President, President or Executive Vice President

SUMMARY

The Vice President, Rates & NG Supply has responsibility for developing, communicating, and executing the regulatory strategic plans for Piedmont Natural Gas as well as developing a comprehensive strategic planning and cost recovery planning framework, including coordination with the legal, legislative and accounting teams.

The Vice President, Rates & NG Supply acts as a principal advocate in all regulatory proceedings. The individual also develops and maintains constructive relationships with regulatory commissions (and their staffs), intervenors, and customer groups that are critical to the Company's financial success.

Position also ensures that the Company adequately plans and executes the acquisition of natural gas supply and capacity required to serve customers on the most critical day following its best cost policy in a safe and reliable manner and optimizes any available pipeline, storage and supply assets for the benefit of customers while maintaining compliance with all state and federal requirements. Further, leads the Company's initiatives to administer its natural gas transportation programs to serve customers and third-party marketers while providing accurate billing and management of imbalances, settlements and operational flow orders, ensuring compliance with Company tariffs and maintaining the integrity of the Company's pipeline system.

Additionally, this position oversees Piedmont's Community Relations. This group ensures that the Company adequately supports the communities it serves and responds to issues of concern to local citizens and leaders.

This role also supervises the State Governmental Affairs Director responsible for key external stakeholder relationships in Piedmont's Tennessee service territory.

RESPONSIBILITIES

50%: Direct and execute a comprehensive regulatory strategy for Piedmont Natural Gas. This includes planning, coordinating and preparing long-term regulatory strategies, in coordination with the financial planning group, for the utility to ensure that the Company's performance is maximizing shareholder value while maintaining competitive rates. The incumbent is charged with developing and maintaining relationships with the regulatory agencies to ensure that these plans are approved and implemented in a timely and efficient manner. Maintain expertise on relevant state laws and regulatory rules and policies. Direct the execution of utility rate cases, riders and trackers. Provide direction on interrogatory responses and testimony to support company positions.

30%: Lead Gas Supply Optimization and Pipeline Services function. Ensures that the Company adequately plans and executes the acquisition of natural gas supply and capacity. Optimizes available pipeline, storage and supply assets for the benefit of customers while maintaining compliance with all state and federal requirements. Further, lead the Company's initiatives to administer its natural gas transportation programs to serve customers and third-party marketers while providing accurate billing and management of imbalances, settlements and operational flow orders.

10%: Lead the Company's efforts to provide excellent service and support to the communities it serves.

5%: Lead the Company's efforts to effectively collaborate with key external stakeholders in the State of Tennessee.

5%: Develop organizational bench strength and improve each employee's skills through a combination of coaching, providing feedback, job rotation, cross training, and formal training. Provide one-on-one coaching, develop expectations and write performance appraisals. Ensure that all key work functions have an identified, capable and trained backup.

ADDITIONAL DETAILS

- Regulated experience;
- Strategic planning; collaborative skills, both internally and externally;
- Effective decision maker; strong leader with ability to see the big picture over the long term
- Experience in a regulated utility operating in Duke Energy's service territories.
- Public accounting, legal or other relevant experience outside of a regulated entity – a commercial perspective.
- Generation, Power Delivery or other operations and budgeting experience would be helpful but not required.

REQUIRED EDUCATION

PIEDMONT NATURAL GAS COMPANY, INC.
Docket No. 20-00086
Consumer Advocate's First Discovery Request
Date Issued: August 17, 2020
Date Due: September 8, 2020

1-61. With respect to home repair services provided by the partnership of Piedmont and HomeServe provide the following information:

a. Identify the monthly revenues and expenses by account associated with these services for the period January 2017 through the most recent information available.

b. Provide a comprehensive identification of Piedmont assets, including those of Duke Energy Business services which are used or accessed in the attempt to secure home maintenance related revenue.

c. For each asset, including tangible assets such as customer lists, indicate whether there is an assignment of these costs to the costs to provide this service line insurance function and how such costs are recorded on the books of Piedmont Tennessee.

d. Provide a comprehensive explanation of how the direct labor associated with the home maintenance function is determined and the account(s) to which it is charged on the books of Piedmont Tennessee.

e. Indicate the extent to which corporate cost allocations are assigned to the home maintenance activities. If such corporate cost allocations are not made, provide the justification for the lack of corporate cost assignment.

RESPONSE:

a See attachment.

b. No balance sheet exists for this non-utility activity. All marketing materials are processed by HomeServe, including development, postage and all other expenses.

Piedmont labor associated with HomeServe revenue is recorded under Home Warranty - Operating Expense

c. N/A

d. Labor and Overhead associated with the selling and administration of these activities is directly charged to Home Warranty - Operating Expenses - Salaries/OH

e. A portion of Corporate cost allocations are allocated for all of Duke non-regulated business to one Duke business unit rather than to each non-regulated business. Cost allocations are described in the Cost Allocation Manual, which was provided by the Company in its response to Request No. 57.

Consumer Advocate's First Discovery Request
Date Issued: August 17, 2020
Date Due: September 8, 2020

1-69. Confirm that Piedmont employees participate within the Duke corporate pension plan. If so, provide a comprehensive explanation as well as actuarial studies addressing the impact on Piedmont-TN pension funding requirements and ongoing pension GAAP expense resulting from the merging of Piedmont pension obligations into the Duke pension plan.

RESPONSE: A subset of Piedmont employees participate in the Duke Energy Retirement Cash Balance Plan (RCBP). Piedmont employees hired or rehired after January 1, 2008 are not eligible for coverage under a pension plan. Piedmont employees hired before January 1, 2008, who previously participated in the Piedmont Pension Plan (Retirement Plan of Piedmont Natural Gas Company Inc.), had their pension benefit accrued as of December 31, 2017, frozen and merged into the Duke RCBP. There is no actuarial study addressing the impact of merging the plan with the Duke pension plan.

Effective January 1, 2018 these employees began accruing pension benefits under the cash balance formula, which is a monthly pay credit equal to 4 - 7% of eligible pay and annual interest credits of 4% of the account balance. At retirement, the vested pension benefit for legacy Piedmont employees will have at least two parts – a final average pay benefit and a cash balance benefit.

For the pension funding requirements on Piedmont Natural Gas, please refer to the Company's response to Request No. 68. Net periodic pension cost (income) for Piedmont Natural Gas for the years 2018 - 2020 is as follows:

2020 $(5,603,424)

2019 $(7,334,401)

2018 $(3,075,715)

2017 $9,839,388

Consumer Advocate's First Discovery Request
Date Issued: August 17, 2020
Date Due: September 8, 2020

1-71. Confidential – Please see the attached worksheet extracted from Confidential MFR-14, detailing selected items related to Account 923, Outside Services. With respect to the items listed provide the following:

a. A summary of the nature of the services provided by the vendor (if applicable)

b. A copy of the invoice supporting each charge

c. With respect to items that are unrelated to a specific vendor, describe the nature of the charge, any related accounting distribution associated with the charge and all supporting documentation for the entry made on the books of Piedmont.

RESPONSE: See CONFIDENTIAL attachment. A summary explanation for each item selected is shown in the attachment named "CAD 1-71 Attachment Confidential". See the remaining attachments for supporting documentation for each item.

Name and Title of Preparer: Quynh Bowman, Director - Gas Rates & Regulatory Strategy

Name and Title of Responsible Person: Quynh Bowman, Director - Gas Rates & Regulatory Strategy

Response provided by Piedmont Natural Gas Company, Inc. on September 8, 2020.

PIEDMONT NATURAL GAS COMPANY, INC.
Docket No. 20-00086
Consumer Advocate's First Discovery Request
Date Issued: August 17, 2020
Date Due: September 8, 2020

1-72. Regarding Other Benefits within the Summary tab of Schedule 5C, identify each employee benefit and its corresponding cost on a PNG-Tennessee basis and explain where such amounts may be traced to the Company's Trial Balance.

RESPONSE: Please see the file named "5F_OtherBen Adj" that was provided as part of the Company's response to MFR Item 12. The amount referenced in Schedule 5C can be found in Excel column P on the "5F_Other Ben Adj" file and each employee benefit is identified there in Column B. The general ledger details including account charged to support the test period per books amounts in Column D can be found on the tabs following the tab labelled Additional Support >>.

Name and Title of Preparer: Laura Hager, Lead Rates & Regulatory Strategy Analyst

Name and Title of Responsible Person: Quynh Bowman, Director - Gas Rates & Regulatory Strategy

Response provided by Piedmont Natural Gas Company, Inc. on September 3, 2020.

PIEDMONT NATURAL GAS COMPANY, INC.
Docket No. 20-00086
Consumer Advocate's First Discovery Request
Date Issued: August 17, 2020
Date Due: September 8, 2020

1-73. Regarding the testimony of Brian Wesker, provide all material produced or obtained within Duke's due diligence review of Piedmont's records which documents the Maximum Allowable Operating Pressure (MAOP) of the Piedmont Transmission line prior to the 2016 acquisition.

RESPONSE: No Duke due diligence review materials regarding such MAOP was identified.

Name and Title of Preparers: Paul Mosley, Rates & Regulatory Strategy Analyst Doug Templeton, Rates & Regulatory Strategy Analyst; Kally Couzens, Manager - Gas Rates & Regulatory Strategy

Name and Title of Responsible Person: Pia Powers, Managing Director - Gas Rates & Regulatory

Response provided by Piedmont Natural Gas Company, Inc. on September 4, 2020.

PIEDMONT NATURAL GAS COMPANY, INC.
Docket No. 20-00086
Consumer Advocate's First Discovery Request
Date Issued: August 17, 2020
Date Due: September 8, 2020

1-74. Provide any information in the possession of Piedmont which demonstrates the cost of its OASIS system is comparable with the costs of similar systems of its peer natural gas utilities.

RESPONSE: Piedmont has no information responsive to this request.

Name and Title of Preparer: Jeremy Koster, General Manager - Gas Operations Support

Name and Title of Responsible Person: Jeremy Koster, General Manager - Gas Operations Support

Response provided by Piedmont Natural Gas Company, Inc. on September 3, 2020.

PIEDMONT NATURAL GAS COMPANY, INC.
Docket No. 20-00086
Consumer Advocate's First Discovery Request
Date Issued: August 17, 2020
Date Due: September 8, 2020

1-75. Does the Company have the obligation to make any necessary repairs on service lines from the Main to the Meter, or is this the financial responsibility of the customer?

RESPONSE: Title to gas service lines, among other facilities, is vested in the Company. The Company would make any necessary repairs needed on service lines from the main to the meter. Repairs made to services through the Company's normal operations and maintenance activities would not be directly charged to the customer.

In accordance with Section 4 of Piedmont's Tennessee Service Regulations, and in accordance with the Underground Utility Damage Prevention Act, any repairs to service lines damaged by others shall be charged at the Company's actual repair costs. If the customer causes the damage, and was determined to be in violation of the Underground Utility Damage Prevention Act, the Company would make the repair to the damaged service line, and hold the customer financially responsible for the repair. The damage relief shall not come from the customer unless proven that the damage by the customer resulted from negligence on the customer's part.

Name and Title of Preparer: Scott Shepard, Manager - Field Customer Service

Name and Title of Responsible Person: Lori Benfield, VP - Gas Field Customer Service

Response provided by Piedmont Natural Gas Company, Inc. on September 3, 2020.

PIEDMONT NATURAL GAS COMPANY, INC.
Docket No. 20-00086
Consumer Advocate's First Discovery Request
Date Issued: August 17, 2020
Date Due: September 8, 2020

1-76. Identify the number of Piedmont Tennessee service lines reflected within the property accounting records of the Company by customer class.

RESPONSE: Piedmont does not record the number of service lines by customer class in its asset accounting system. See the attachment which indicates the number of Tennessee service lines by Rate Schedule. The data in this attachment was extracted from Piedmont's Geographic Information System (GIS).

Name and Title of Preparer: Kally Couzens, Manager - Rates & Regulatory Strategy

Name and Title of Responsible Person: Monica Treverton, Director - Gas Asset Data Quality

Response provided by Piedmont Natural Gas Company, Inc. on September 4, 2020.

PIEDMONT NATURAL GAS COMPANY, INC.
Docket No. 20-00086
Consumer Advocate's First Discovery Request
Date Issued: August 17, 2020
Date Due: September 8, 2020

1-77. Provide the target and actual results of all operating metrics relied upon by management to monitor the safety and quality of service for the calendar year 2019.

RESPONSE: Please see attached NGBU December 2019 Scorecard.

Name and Title of Preparer: Lauren Crowe, Director - Gas Business Transformation & Improvement

Name and Title of Responsible Person: Jeremy Koster, GM - Gas Operations Support

Response provided by Piedmont Natural Gas Company, Inc. on September 8, 2020.

	NPS - SMB	N/A	N/A	56.6% 44.1%		53.0% 44.1%		#N/A
	ECHO Customer Service	N/A	N/A	92.0% 92.75%		92.7% 92.75%		In the 4th quarter of 2019 , almost thirty percent of our workforce came to the floor from new hire training classes in preparation for light up. There were opportunities identified from our customer CSAT verbatims regarding our quality of service which were addressed through our Organizational Effectiveness Team. In addition, it was identified that a major source of customer dissatisfaction exists within our service order scheduling options as customers would like to have smaller appointment windows.
	Fastrack 2.0*	N/A	N/A	66.3%	63.2%	71.0%	61.8%	#N/A
Operational Excellence	Employee TICR	1.9		0 1.1		1.31 1.1		Continue Incident Review Calls for OSHA, PVAs, and Significant Near Misses; Continued Observation review (EFST- corporate and regional); Communicated the historical top 3 injuries incurred in the 1st quarter the last 5 years; NGBU OpEx is prepping for the NGBU Cultural Assessment – 2020; Continued field observations; Continued work on Risk Register and begin work on Safety Improvement Plan actions for 2020
	REEs	0		3 0		10 5		The driver for the "red" was a series of sediment releases from several large pipeline project ROWs. As a result of these sediment excursions outside of the LOD and the resulting impact on REE-2s, Amy and team have put together an improvement plan that includes a variety of short term and longer term actions to improve the design, implementation, and monitoring of BMPs (best mgmt. practices) to reduce these releases.
	Contractor Safety LAI	0		0 0		0 0		#N/A
	Preventable Vehicle Accidents	47		7 6		52 70		The NGBU had a December spike in PVAs that caused the measure to go "red". Actions we are taking in 2020 include raising the awareness on PVA metrics (dashboard) , adding in regular content to Tuesday safety calls for driving best practices, evaluating a safe driving recognition program, taking steps to increase the visibility of our fleet vehicles, and have added a member of the Fleet Services Team to our NGBU Event Free Steering team to help drive fleet improvements.
	Damages per Locate	1.82	3.07	2.42 3.26		2.45 2.25		Charlotte, Nashville, Kellogg and Anderson had the largest increase by Resource Centers. The breakdown of year end DPT for 2020 by state is: KY 2.34, NC 2.40, OH 3.01, SC 3.04 & TN 2.76. In NC, the breakdown of DPT's is by zones is Central 3.03, North 2.45, South 2.13, Southeast 1.58 and East 1.47. In 2020 we will be continuing the Watch & Protect and Untoneable remediation programs in OH and will be starting in KY, NC Central and North Zones due to the available deferral & rate case funding mechanisms in place in these states.

Gas Operations Performance Scorecard
Natural Gas Business Unit
Metric Definitions

Customer	**NPS - Residential**	Net Promoter or Net Promoter Score (NPS) is a management tool that can be used to gauge the loyalty of a firm's customer relationships. It serves as an alternative to traditional customer satisfaction research and
	NPS - SMB	
	ECHO	"Every Customer Has Opinions" survey - average of 5 customer service questions weighted by number of surveys to calculate a customer satisfaction score
	Fastrack	The Fastrack program asks customers to rate their satisfaction with field work completed yesterday using a '0-10' scale. 'Net Satisfaction' scores are reported and calculated by subtracting the % Detractors (0-6) from the % Promoters (9&10)
Operational Excellence	**Employee TICR**	Number of employee OSHA recordable events x 200,000 / number of hours worked.
	REEs	Reportable Environmental Events are events resulting from Duke Energy operations that require notification to, or enforcement action by, a county, state or federal environmental regulatory agency. Category 1 REEs carry a fine greater than $10,000, and category 2 REEs carry a fine less than that amount. Category 3 REEs (near misses) are omitted.
	Contractor Safety LAI	Number of contractor serious injuries within control of the company or worker that resulted in certain types of injuries (See Health & Safety Department for more information).
	Preventable Vehicle Incidents	All preventable vehicle incidents.
	Damages per Locate	Number of damages per 1,000 line locate requests.
	Regulatory Findings	action. Metric will target no more than one fine greater than $10,000 or a corrective action that requires
	Cybersecurity Performance Index	The "CPI" is the total cybersecurity responsibility policy (CRP) violation rate per 100 workers in the groups outlined. The number is always provided in YTD.
	Natural Gas Outages / Reliability	Number of incidents where service was lost for more than 100 customers, excluding those incidents caused by third parties. Total number of outages with an outage defined as "non-third party caused affecting 100 or more customers" (*Note that a single outage affecting 500 or more customers wipes the metric to zero/no score).
	Emergency Response Time (mins)	Average time (minutes)it takes a Piedmont/Duke representative following an emergency notification to be on site either during working or non-working hours.

	Work Order Completion (days)	Average amount of time (days) it takes to complete a work order.
	Leaks Detected	Total Grade 1 and 2 leaks found per 100 miles (excluding excavation damage and above ground leaks).
Growth	**Total Customer Additions**	aggregate sum that includes Residential New Additions, Residential Conversions, and Commercial
	Gas Segment Net Income Growth	Net Income Growth reflects the total financial net gains for the Gas Segment, reported in millions of USD.
	O&M Expenses	Sum of all O&M Expenses for Natural Gas segment, reported in millions of USD.
Employee	**Diversity & Inclusion**	Measure calculates the percent representation of females and minorities in two separate calculations. Data is based upon what has been submitted/entered by employees into their Workday record. Total volume of full time + part time females divided the Population of the full time + part time headcount yields % representation. Minorities reflect any full time + part time employees that are NOT coded white or undefined divided by population.
	Regrettable Attrition	Calculated by capturing total terminations during specified time period. We do leverage a rolling 12 month period for consistency. For regrettable attrition, from total terms we eliminate anyone who left with severance, any retiree, any involuntary termination, any death or LTD term. Remainder is then divided by headcount.
	Operational Excellence (NERC Issue)	All terminations should be entered into the system 7 days prior to termination date if possible. But not later than the employee or contingent worker last day worked. Comparison is done by evaluating dates recorded of last day worked compared to date recorded in the system as entered. If greater than 1 day, flagged as late entry. NERC employees and contingents are flagged in the full population. Results are in the form of a count of late terminations.
	Employee Engagement & Enablement	Employee engagement surveys and scores are administered by a third party with results provided by tools to the levels of management with greater than 5+ employees responding. Pulse surveys may only receive results at an enterprise level. Specific questions are identified with the vendor and associated with the score calculation. Responses to these questions are then aggregated and a overall score calculated by the vendor using proprietary algorithms. Individual results are anonymous and held only by the vendor.
Service Provider Metrics	**SCADA Reliability**	Nomenclature for SCADA outages are (No of Outages) - (Total Minutes of Outage)

PIEDMONT NATURAL GAS COMPANY, INC.
Docket No. 20-00086
Consumer Advocate's First Discovery Request
Date Issued: August 17, 2020
Date Due: September 8, 2020

1-78. Page 46 of the 2019 Duke Energy 10k indicates that in determining the Goodwill Impairment Test it relies in part on application of the weighted average cost of capital (WACC) for each of its reporting units and that such ratios varied between 5.2% to 5.9%. With respect to this reference within the 10k respond to the following:

a. Identify the WACC applicable to the natural gas business unit in which Piedmont Tennessee resides.

b. Provide the calculation of the WACC referenced within the 10k that applies to the natural gas business unit in which Piedmont Tennessee resides.

c. Provide a thorough explanation for the theoretical distinction(s) between the WACC referenced within the Duke 10k and the WACC proposed within this docket.

RESPONSE:

a. 5.9%

b. See attachment.

c. The WACC referenced within the Duke Energy 10K is calculated for the purpose of estimating the fair value of Duke Energy's business units as discrete assets to an individual hypothetical buyer. The objective of the WACC proposed within this docket is to infer the market required return on equity for Piedmont Natural Gas based on market data reflecting the investment decisions of multiple investors valuing a minority interest in the Company's equity. Therefore, the intent and premise of the analyses are substantially different.

PIEDMONT NATURAL GAS COMPANY, INC.
Docket No. 20-00086
Consumer Advocate's First Discovery Request
Date Issued: August 17, 2020
Date Due: September 8, 2020

In accordance with the Financial Accounting Standards Board, Duke Energy is required to perform periodic goodwill impairment tests. One step of that process is a market reconciliation, which compares Duke Energy's estimated fair value, as an asset discounted by a WACC, to the actual market value of its outstanding capital. Accounting Standards Codification (ASC) 820 notes:

> Fair value is the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction in the principal (or most advantageous) market at the measurement date under current market conditions (that is, an exit price) regardless of whether that price is directly observable or estimated using another valuation technique. (1)

Thus, ASC 820 indicates that fair value is not linked directly to the current market value of a company's outstanding securities, but rather to an estimate of the subject entity's worth to a prospective buyer. Fair value reflects the value of Duke Energy's various operations to a prospective buyer through the purchase of the entire company as an asset, while the market value reflects the views of minority investors currently holding Duke Energy common equity. The circumstances of these distinct calculations are fundamentally different in nature and ultimately cannot be treated as equivalent.

(1) Accounting Standards Codification 820-10-35-9A

Docket No. 20-00086
Consumer Advocate's First Discovery Request
Date Issued: August 17, 2020
Date Due: September 8, 2020

1-82. Provide the underlying calculation and supporting workpapers for the $9,935,993 increase in Cash Working Capital identified as Requirement for Lead Lag within the Revenue Requirement Summary Schedule, which is identified as a hard-coded number.

RESPONSE: As explained in an email by Piedmont's counsel to the Consumer Advocate Division on August 3, 2020, the computation of the $9,935,993 increase in Cash Working Capital is provided in Exhibit PMN-2-CWC (p.1 of 3) accompanying Paul Normand's Lead Lag testimony filed in this proceeding.

Name and Title of Preparer: Quynh Bowman, Director - Regulatory Rates & Regulatory Strategy

Name and Title of Responsible Person: Quynh Bowman, Director - Regulatory Rates & Regulatory Strategy

Response provided by Piedmont Natural Gas Company, Inc. on September 3, 2020.

PIEDMONT NATURAL GAS COMPANY, INC.
Docket No. 20-00086
Consumer Advocate's First Discovery Request
Date Issued: August 17, 2020
Date Due: September 8, 2020

1-83. Provide all available supporting evidence that by extending the length of time to pay bills by thirteen days in order to obtain the 'net discount' such tariff revision will translate to a thirteen day increase in the revenue lag calculation.

RESPONSE: By extending the payment terms by 13 days for Piedmont Tennessee, the terms would be the same in Tennessee as it is in Piedmont North Carolina. In the Company's last NC rate case, the collection lag for the test period (the 12 months ended Dec 31, 2018) was 33.00 days. This compares to the collection lag computed for Piedmont Tennessee which was 30.59 days for the 12 months ended Dec 31, 2019, which includes the 13 days added for the change in payment terms. Both calculations were performed in a similar manner.

The Company believes the 30.59 days is reasonable given this comparison.

Name and Title of Preparer: Quynh Bowman, Director - Gas Rates & Regulatory Strategy

Name and Title of Responsible Person: Quynh Bowman, Director - Gas Rates & Regulatory Strategy

Response provided by Piedmont Natural Gas Company, Inc. on September 8, 2020.

PIEDMONT NATURAL GAS COMPANY, INC.
Docket No. 20-00086
Consumer Advocate's First Discovery Request
Date Issued: August 17, 2020
Date Due: September 8, 2020

1-84. Has Piedmont North Carolina implemented the increase in payment terms to the 25 days as proposed in Ms. Powers testimony? If so, provide the date of implementation and provide documentation identifying the incremental change in the revenue payment lag resulting from such tariff change, if such calculation exists.

RESPONSE: Piedmont's North Carolina residential customers have received payment terms of 25 days for many years. Piedmont's North Carolina non-residential customers have received payment terms of 15 days for many years. Piedmont has been unable to confirm the exact date of implementation, although it has confirmed that these terms have been in effect since at least November 1, 2005. Since Piedmont has been unable to determine the date of implementation, Piedmont does not have documentation identifying an incremental change in the revenue payment lag.

BEFORE THE TENNESSEE PUBLIC SERVICE COMMISSION

Nashville, Tennessee

December 21, 1992

IN RE: PIEDMONT NATURAL GAS COMPANY - REQUEST FOR APPROVAL OF SPECIAL ACCOUNTING FOR ENVIRONMENTAL ASSESSMENT AND CLEANUP COSTS

Docket No. 92-16160

ORDER

By letter dated December 10, 1992, Piedmont Natural Gas Company has requested Commission approval of special accounting for future costs associated with environmental assessments and cleanups.

Federal and state agencies have imposed environmental control requirements relating primarily to air emissions, wastewater discharges, and solid, toxic and hazardous waste management. Piedmont is attempting to ensure that its operations meet applicable environmental regulations and standards.

Piedmont requests the Commission's immediate attention to this matter so that it can receive an unqualified opinion from its independent auditors for the recently ended October 31, 1992, fiscal year. If there is a material financial matter that investors need to be apprised of regarding a company's financial statement, the company must disclose this fact and the Independent Auditor is obligated to issue a "qualified" opinion on the financial statements calling attention to this matter. Of

course, this could be a material event that could adversely affect Piedmont's financial position. Apparently, the Commission's approval to record this as an asset gives the Independent Auditor sufficient evidence that the Commission will give consideration to allowing Piedmont to recover this cost from rate payers and therefore allow the Independent Auditor to issue an "unqualified" opinion.

Under normal ratemaking and accounting rules, costs such as these are not recorded as an asset. Instead, they are recorded as an expense and flowed through to net income. Expenditures are considered assets if they benefit future periods such as plant purchases. If they are for past or current services, which is the category these cleanup costs fall in, they are considered expenses, and not recorded as assets. However, regulators have the power to create assets by promising a utility it will allow it to recover an expense that is related to a past period. Although the Company is not requesting the Commission to rule on the fairness of passing these costs to rate payers, authorizing it to be set up as an asset could inappropriately be viewed as a step in that direction unless complete disclosure is made as to the basis of the Commissions decision.

The Staff pointed out this could be $1,000 liability, a $100 million liability, or some other figure. The Commission has no evidence that this cost should be borne by the rate payer and therefore recorded as an asset. This issue would normally be

addressed in a rate case where the Commission would have evidence on the size of the liability, who is responsible for the liability and the fairness of passing this cost on to the rate payers. The Commission at that time would have evidence as to the amount of the costs and would give due consideration to the merits of the arguments for and against recording this cost as an asset and passing all or part of it on to rate payers.

This matter was presented to the Commission by the Staff during a specialy called meeting held on Monday, December 21, 1992. The Staff recommended two options for handling Piedmont's request.

Staffs first preference is for Piedmont to be authorized to account for this cost as an operating expense under the existing accounting rules. Staff argued that at this time, when the Company's actual expenses are small, there is no compelling reason to postpone paying those expenses. (The Company could maintain side records and capture any cost incurred in connection with this contingent liability between now and the time it files a rate case and make its argument to the Commission at that time as to why it should be allowed to recover this cost from rate payers). When and if a significant liability materializes, as part of a rate case or otherwise, the Commission could review the evidence and arguments at that time and make a decision to the appropriateness of deferring the cost as an asset and passing the cost on to the rate payers.

Staff's second option is for the commission to authorize the accounting sought by Piedmont, provided Piedmont would explain that the basis for the commission's authorization was to provide sufficient evidence to issue an unqualified opinion and appropriately disclose the regulatory status of this regulatory created asset versus other assets in the financial statements. The disclosure defining the regulatory created asset for this expense should include the following:

> "Unlike other assets appearing on the balance sheet, authorizing past cleanup expense as a regulatory asset does not necessarily mean the Commission will authorize the Company to recover this from future rate payers. It simply says the Commission will consider this in a rate case when the Commission will have evidence of the amount of the cleanup cost, who is responsible for the cleanup cost and the fairness of passing this cost on to rate payers."

By fully disclosing the basis for authorizing this asset, we believe the second option will accomplish the needs of all parties. Piedmont will receive an unqualified opinion and readers of the financial statements will have sufficient information to understand the status of the deferred-cleanup expense-asset versus other assets on the financial statements. We, therefore, approve Piedmont's request subject to the following or similar language being included in Piedmont's financial statements:

> "Authorizing past cleanup expenses as a regulatory asset does not mean the Commission will authorize the Company to recover all or part of these expenses from future rate payers. It simply says

18412
18445

the Commission will consider this in a rate case when the Commission will have evidence concerning the total amount of the cleanup cost, who is responsible for the cleanup cost, and the fairness of passing this cost on to ratepayers."

Based upon the Staff recommendation, the Commission approves Piedmont's request with the accompanying disclosure language.

IT IS SO ORDERED.

CHAIRMAN

COMMISSIONER

COMMISSIONER

ATTEST:

EXECUTIVE DIRECTOR

BEFORE THE TENNESSEE PUBLIC SERVICE COMMISSION
Nashville, Tennessee
JANUARY 7, 1993

IN RE: PIEDMONT NATURAL GAS COMPANY -- REQUEST FOR APPROVAL OF SPECIAL ACCOUNTING FOR ENVIRONMENTAL ASSESSMENT AND CLEANUP COSTS.

DOCKET NO. 92-16160

DISSENTING OPINION

This matter is before the Tennessee Public Service Commission upon the request of Piedmont Natural Gas for Commission approval of special accounting for future costs associated with environmental assessments and cleanups for the purpose of avoiding a qualified opinion from its independent auditor in the published financial statements to Piedmont's stockholders. The majority of the Commission approved creating a regulatory asset for these expenses with the following disclosures:

> Authorizing past cleanup expenses as a regulatory asset does not mean the Commission will authorize the Company to recover all or part of these expenses from future rate payers. It simply says the Commission will consider this in a rate case when the Commission will have evidence concerning the total amount of the cleanup cost, who is responsible for the cleanup cost, and the fairness of passing this cost on to ratepayers.

In a memo to the Commissioners, dated December 18, 1992, the Director of the Utility Rate Division set forth two possible alternatives for booking these costs: (a) recording them as an expense which is the normal accounting procedure or (b) "the less desirable alternative" -- recording an asset with the disclosure

that the cost is not necessarily recoverable through rates. I agree with the Staff's preference in this matter i.e., that the Company should be required to account for this cost as an operating expense under the existing accounting rules. Currently, the Company's actual cleanup costs are small, consequently there is no reason to postpone recognizing those expenses. When and if a significant liability materializes, as a part of a rate case or otherwise, the Commission should review the evidence and arguments at that time and make a decision regarding the appropriateness of deferring the cost as an asset and passing the cost on to the ratepayers.

Further, I am concerned about giving the Company any signal that they may be able to recover these expenses from ratepayers at some future date, especially since our legal staff has not had an opportunity to thoroughly research the legal ramifications of denying the recovery of a regulatory asset created by the Commission.

For the foregoing reasons the request of Piedmont Natural Gas to record environmental assessment and cleaning costs as a deferred asset should be denied.

STEVE HEWLETT, CHAIRMAN

ATTEST:

PAUL ALLEN, EXECUTIVE DIRECTOR

BEFORE THE TENNESSEE REGULATORY AUTHORITY AT

NASHVILLE, TENNESSEE

July 18, 2000

IN RE:	)	
	)	
APPLICATION OF NASHVILLE GAS COMPANY, A DIVISION OF PIEDMONT NATURAL GAS COMPANY, INC. FOR AN ADJUSTMENT OF ITS RATES AND CHARGES, THE APPROVAL OF REVISED TARIFFS AND THE APPROVAL OF REVISED SERVICE REGULATIONS	)	**DOCKET NO. 99-00994**

ORDER APPROVING APPLICATION

This matter came before the Tennessee Regulatory Authority (the "Authority") at a Hearing held on June 5, 2000 upon the Application of Nashville Gas Company (the "Company" or "Nashville Gas"), an operating division of Piedmont Natural Gas Company, Inc. ("Piedmont") for a general rate increase, the approval of revised tariffs, and the approval of revised service regulations.

Background

On December 30, 1999, Nashville Gas filed an application for an adjustment of its rates and charges, the approval of revised tariffs, and the approval of revised service regulations. In that filing, Nashville Gas sought an increase in its annual revenues of $10,687,612. After the discovery of certain errors in the Company's filing, the most notable of which were related to the computation of construction work in progress and accumulated depreciation, Nashville Gas's attrition period revenue deficiency was reduced by $620,063 to $10,067,549.

At a regularly scheduled Authority Conference held on January 11, 2000, the Authority voted to suspend the application for ninety (90) days. At a regularly scheduled Authority Conference held on February 1, 2000, the Directors appointed the General Counsel or his designee to act as Pre-Hearing Officer in this proceeding for the purpose of hearing preliminary matters and setting a procedural schedule to completion.

On February 11, 2000, the Consumer Advocate Division of the Office of the Attorney General (the "Consumer Advocate") filed a "Complaint or Petition to Intervene" in this proceeding. On April 6, 2000, the Consumer Advocate's petition for intervention was granted by the Pre-Hearing Officer without objection from Nashville Gas. By letter dated April 6, 2000, Nashville Gas agreed to extend the date at which rates may be placed into effect under bond from June 30, 2000 to July 31, 2000 in order to accommodate the agreed procedural schedule.[1]

On April 27, 2000, Associated Valley Industries Group ("AVI") filed a petition for intervention. On May 9, 2000, Ford Motor Company ("Ford") and Visteon Corporation ("Visteon") filed a joint petition for intervention. No objections being raised by the parties, on May 18, 2000, the Pre-Hearing Officer issued an order granting both petitions for intervention.

On May 18, 2000, Nashville Gas and the Consumer Advocate filed a Joint Motion for Approval and Implementation of Stipulation (the "Stipulation") in which they stated that they had resolved all known disputed issues in this case and had agreed to certain specified adjustments to revenues, expenses, net operating income, net operating income for return, rate base, and return on rate base. These adjustments reduce the Company's additional revenue

[1] The Hearing was set for June 5-8 to allow Nashville Gas to respond to Authority data requests and because certain witnesses for Nashville Gas would not be available earlier.

requirements from $10,687,612[2] to $4,944,000. The Company filed supplemental testimony and the Consumer Advocate filed an affidavit in support of the Stipulation.

On May 25, 2000, Ford and Visteon advised the Authority that they were in support of the rate design as to Special Contract customers and did not oppose the stipulation as to other matters. In support of their position, Ford and Visteon filed the affidavit of James Mulholland, Manager of Natural Gas Programs for Ford Motor Land Services Corporation. On June 2, 2000, the acting Pre-Hearing Officer issued an order establishing a schedule for the orderly conduct of the Hearing. All parties agreed to an order, which was entered on June 5, 2000, permitting the Authority Staff to ask questions of witnesses during the Hearing.

Nashville Gas's Hearing

On June 5, 2000, a Hearing was held in this matter. The Company presented the direct and supplemental testimony of Bill R. Morris, Chuck W. Fleenor, Ware F. Schiefer, and Dr. Donald A. Murry. The Consumer Advocate presented the affidavit and testimony of Daniel W. McCormac. Ford and Visteon presented the affidavit and testimony of James Mulholland. A representative of AVI stated that AVI did not wish to offer testimony or cross-examine witnesses and that AVI supported the Stipulation.

After testimony and questions from the Directors and the Authority Staff, the Authority approved the Stipulation except for the provision of the Stipulation relative to a tracking mechanism for "Special Contract Customers." Since the Authority must review and approve all special contracts, it is difficult to determine what benefit would be derived from advance approval of the special contract incentive mechanism. By sharing any revenue deviations from

[2] As noted above, $10,687,612 was the amount initially requested by the Company in its Application. After correction of a miscalculation, this figure was reduced to $10,067,549.

current levels, with ten percent (10%) going to Nashville Gas and ninety percent (90%) to other customers, the mechanism purports to provide an incentive for Nashville Gas to negotiate the highest possible rate for special contracts. In theory, ratepayers benefit from having to make up a smaller contribution loss than would be otherwise required if the special contract customer negotiated a lower rate or went to another supplier. In the past, and in the absence of any such "tracking mechanism," Nashville Gas has claimed to have negotiated the highest possible rate with special contract customers in its efforts to prevent by-pass. This being the case, it is unclear what would be achieved by giving the Company further supposed incentives under the tracking mechanism. Locking Nashville Gas into a 10% sharing of any loss with respect to special contract customers would limit the Authority's ability to allocate responsibility for revenue changes in a manner that is appropriate to the particular circumstances surrounding the consideration of a special contract at the time it is submitted to the Authority for approval. For these reasons, the Authority excluded approval of the incentive mechanism for special contract customers without prejudice.

The Authority also approved the Stipulation with a final proviso. The Authority's decision permitting the amortization of deferred pension costs does not indicate in any way that the Authority is abandoning the rationale for the treatment of pension costs as announced in its Orders of February 19, 1997 and June 9, 1997 in Docket No. 96-00977. In that proceeding, the Authority responded to the fact that the Company's pension plan could drop below a fully funded position before the Company's next rate filing by allowing the establishment of a deferred regulatory asset and future recovery. Nevertheless, the Authority has not abandoned the basic and sound regulatory goal of matching current expenses with current ratepayers. To the extent that the Company's future pension expenses continue to surpass fully funded levels, the

Authority will act appropriately to match current expenses with current ratepayers, notwithstanding its actions here.

All parties agreed to waive the condition of the Stipulation that required the Stipulation to be approved in whole.

Authority Consideration of Rate Increases

The Authority considers petitions seeking adjustments of rates and charges pursuant to Tenn. Code Ann. § 65-5-203, which provides:

> 1) that the Authority shall have the power upon written complaint, or upon its own initiative, to hear and determine whether the increase, change or alteration being sought by a public utility is just and reasonable;
>
> 2) that the burden of proof to show that the increase, change or alteration is just and reasonable shall be on the public utility making the same; and
>
> 3) that in determining whether such increase, change or alteration is just and reasonable, the Authority shall take into account the safety, adequacy and efficiency or lack thereof of the service or services furnished by the public utility.

The Stipulation

In the Stipulation, the Company and the Consumer Advocate agreed, and the Authority approved, that the Company should be permitted to:

> (1) increase its rates to produce additional revenues of $4,944,000 effective July 1, 2000;
>
> (2) recover 100% of its prudently incurred Liquefied Natural Gas power costs through its periodic Actual Cost Adjustment filings;
>
> (3) implement the revised rates attached to this Order as Schedule I effective July 1, 2000;
>
> (4) use the gas costs embedded in the proposed rates and set forth in Schedule II, attached to this Order, in future true-ups of gas costs under the Company's Purchase Gas Adjustment (PGA);

(5) use the "R" values, base load factors, and heat factors set forth in Schedule III, attached to this Order, in future rate adjustments under the Company's Weather Normalization Adjustment;

(6) implement the revised tariffs attached to this Order as Schedule IV effective July 1, 2000;

(7) implement the revised Service Regulations, including the main extension policy contained therein, attached to this Order as Schedule V, effective July 1, 2000; and

(8) amortize the previously established regulatory asset for deferred pension costs of $1,016,093 over a period of five years, beginning with the effective date of the rates approved herein.

Rate Increase

Schedule VI, attached to this Order, contains the Rate Base, Operating Income at Present Rates, Earned Rate of Return from Present Rates, Fair Rate of Return, Required Operating Income to Produce the Fair Rate of Return, Operating Income Deficiency, Gross Revenue Conversion Factor and Revenue Deficiency agreed upon by the Company and the Consumer Advocate in the Stipulation. The Authority has carefully reviewed each of these items and, based upon the testimony and supporting documentation, concludes that each is fair and reasonable and should be approved. The Authority further concludes that in order to permit the Company to earn the return determined to be just and reasonable, the Company should be allowed to increase its rates by $4,944,000. Further, the Authority has determined that this rate increase should become effective beginning with service rendered on and after July 1, 2000.

Rate Design and Tariff Changes

In his pre-filed direct and supplemental direct testimony, Chuck Fleenor testified that he designed the Company's proposed rates using a cost of service study of existing rates along with traditional rate design principles and the desire to provide additional services to the ratepayers.[3]

[3] Pre-Filed Direct Testimony of Chuck Fleenor, December 30, 1999, p. 4.

The traditional rate design principles considered by Mr. Fleenor included value of service, the need to avoid discrimination among classes of service, system load equalization, and revenue stability.[4] He testified that his main objective was to develop a design and structure that will enable the Company to continue to adapt to the many changes occurring in the natural gas industry and to recommend rate levels that more properly reflect the cost and value of service.[5]

In the Stipulation, the parties agreed to a rate increase of $4,944,000, or $5,743,612 less than requested by the Company in the Application. The parties also agreed that approximately 97% of the reduction in the rate increase should be reflected in rates for residential customers and the remainder in rates for small general service customers. As a result, residential rates will increase by 1.91%, small general service rates will increase by 3.97%, and industrial rates will increase by 8.38%.

The Company also filed to reduce the fixed gas costs included in its PGA by $2,418,299 to reflect a reduction in demand for gas from its suppliers as a result of the Company's renegotiations of its supplier contracts. The Company proposed to place this PGA reduction in effect simultaneously with the margin rate increase. The net effect of the PGA reduction and the margin rate increase approved herein is an increase in residential rates of 0.71%, an increase in small general service rates of 2.84%, and an increase of 2.67% for industrial rates.

The stipulated rates are set forth as Schedule I, attached to this Order, and are supported by Mr. Fleenor in his supplemental direct testimony.[6] After careful consideration, the Authority concludes that the stipulated rates are fair and reasonable to all classes of customers and will

[4] Pre-Filed Direct Testimony of Chuck Fleenor, December 30, 1999, p. 5.
[5] Id., p. 7.
[6] Pre-Filed Supplemental Direct Testimony of Chuck Fleenor, May 18, 2000, pp. 1-2.

permit the Company a reasonable opportunity to earn the return on the rate base previously found to be fair and reasonable.

The Company also proposed certain changes to its tariff language to permit the Company to respond to existing competitive conditions. Mr. Fleenor testified that market and regulatory changes over the years have caused certain language in the Company's existing tariffs to become outdated and in need of revision.[7] He testified that existing tariffs were designed for and intended to apply to the provision of monopolistic utility services to customers who have no alternative delivery system for natural gas.[8] Since competitive gas services are available to customers today, the Company proposes to amend the applicability section of all of its rate schedules to state that they apply only to full requirement natural gas customers.[9] In addition, the Company proposes to clarify language and correct typographical errors that occur in several rate schedules.[10] The Company also proposes to modernize and strengthen the "Unauthorized Gas" provisions of its tariffs to make them more reflective of the current volatile daily gas market and to provide a greater economic disincentive for abuse.[11]

No party has objected to the proposed tariff changes, and the Authority finds them to be fair and reasonable.

Service Regulations

Nashville Gas also proposed changes to its Service Regulations. The Company proposed to change its policy to allow main extension investments on those projects that produce a positive net present value (NPV) over the life of the project. The discount rate in the NPV

[7] Pre-Filed Direct Testimony of Chuck Fleenor, December 30, 1999, p. 9.
[8] Id.
[9] Id.
[10] Id.
[11] Id.

calculation is equal to the overall allowed rate of return in the Company's last general rate case. Mr. Morris testified[12] that the proposed methodology is the same methodology that has been approved for Piedmont by both the North Carolina Utilities Commission and the Public Service Commission of South Carolina and is similar to the policy approved by the Authority for Chattanooga Gas Company in Docket No. 96-01174.[13] The Company also proposed to eliminate the current preference given to Company employees under the existing main extension policy.

Because the Company no longer adds gas air conditioning customers, the Company proposed to eliminate the provision for 200 feet of free service line for the installation of gas air conditioning and heating which is currently included in its service line policy. In addition, the Company proposed a change in its service line policy to provide for 100 feet of free service line for the installation of one major gas appliance, where no main extension is required. An additional 50 feet of free service line would be allowed for the installation of each additional minor appliance, such as an outdoor grill or fireplace logs. Finally, the Company proposed to increase its reconnect fee from $35 to $50, and to eliminate the entire section pertaining to mobile homes.

The Authority carefully reviewed the proposed changes to the Company's Service Regulations and concluded that they are fair and reasonable.

Special Contract Customers

The Company proposed and the Stipulation provided for the implementation of a tracking mechanism for "Special Contract Customers," as explained in the pre-filed direct testimony of Bill R. Morris.[14] Under this proposal, the Company would share in any difference between

[12] Pre-Filed Direct Testimony of Bill R. Morris, December 30, 1999, p. 12.
[13] Authority Order of June 2, 1999.
[14] Pre-Filed Direct Testimony of Bill R. Morris, December 30, 1999, pp. 4-5.

annual revenues actually received from the Special Contract Customers and the existing Special Contract revenue on a 90%/10% basis. The Company states that such a mechanism would give it an incentive to maximize increases and minimize reductions in Special Contract revenue because of its potential 10% share in increases or reductions. In support of this tracking mechanism, the Company argued that the mechanism would provide the Company with an incentive to maximize its revenues from the Special Contract Customers to the benefit of all other customers. Nevertheless, in view of the Company's past practice of maximizing these revenues without an incentive, the Authority did not find a need for such a mechanism at this time. Further, the Authority will consider approval of all special contracts on a case-by-case basis, considering all relevant evidence, including the need for any recovery or "sharing" of any revenue changes, at the time the contract is submitted for approval. Prior approval of such a "sharing" or "tracking" arrangement, which may not meet the future needs of the Company or the public, is not necessary in this situtation. Therefore, the Authority excluded without prejudice the approval of the incentive mechanism for special contract customers.

IT IS THEREFORE ORDERED THAT:

1. The rates filed by Nashville Gas Company on December 31, 1999 are hereby denied;

2. The rates attached to this Order as Schedule I are hereby approved to be effective July 1, 2000, and the existing rates for the "Special Contract Customers" shall continue in effect until further order of the Authority;

3. The allocation of fixed pipeline demand costs for future changes in rates under the Company's Purchased Gas Adjustment as set forth in Schedule II attached to this Order are hereby approved to be effective July 1, 2000;

4. The Weather Normalization Adjustment factors attached to the Order as Schedule III are hereby approved to be effective July 1, 2000;

5. The tariffs attached to this Order as Schedule IV are hereby approved to be effective July 1, 2000;

6. The Service Regulations attached to this Order as Schedule V are hereby approved, to be effective July 1, 2000;

7. The Company is authorized to recover 100% of its prudently incurred Liquefied Natural Gas power costs through its periodic Actual Cost Adjustment filings;

8. The Company is authorized to amortize the regulatory asset for deferred pension costs of $10,016,093 over a period of five (5) years beginning with the effective date of the rates approved herein;

9. The Company's request to implement a tracking mechanism for "Special Contract Customers" is excluded from approval of the Stipulation without prejudice;

10. Any party aggrieved with the Authority's decision in this matter may file a Petition for Reconsideration with the Authority within fifteen (15) days from and after the date of this

11. Any party aggrieved with the Authority's decision in this matter has the right to judicial review by filing a Petition for Review in the Tennessee Court of Appeals, Middle Division, within sixty (60) days from and after the date of this Order.

NASHVILLE GAS COMPANY
665 Mainstream Drive
Nashville, Tennessee 37228
A Division of Piedmont Natural Gas Company
TRA Rate Schedule No.1

RATE SCHEDULE NO. 1
Residential Service

AVAILABILITY
Available within the Company's service area to any full requirements single private residences, including the separate private units of apartment houses and other multiple dwellings, actually used for residential purposes, which are separately metered where the Company's distribution mains are suitable for supplying the desired service.

MARGIN RATE	Winter (November-March)	Summer (April-October)
Customer Charge (per month)	$8.00	$8.00
Commodity Charge (per therm)	$.29884	$.26255
Backup Service Demand Charge (per therm of input per month)	$.534506	$.534506

AIR CONDITIONING RIDER
A Residential Customer who uses gas for summer air conditioning shall be billed at a rate of $.04 per therm less than that listed above for all gas consumed over 50 therms per month. This discount shall apply to all gas used during the billing months of June through October.

MONTHLY CUSTOMER CHARGE
A charge will be billed monthly to all Customers for the availability of gas service. This charge will be in addition to the commodity charge for gas delivered. The Customer charge will be billed from the date of initial service until service is terminated at the Customer's request. In the case of temporary discontinuance of service there will be a reconnect charge of $50.00 to be billed at the time the gas service is reinstated.

BACKUP SERVICE
When gas service is being supplied for use as a Backup Service for the dual-fuel heat pump or for similar use where the Customer's equipment is specifically designed by the manufacturer or is modified by the Customer or others for the purpose of using natural gas as the equipment's backup energy source, there shall be payable monthly in addition to all and other charges under this Rate Schedule a Backup Service Demand Charge individually determined for each Customer based upon the Customer's applicable gas equipment input rating.

Input shall be based upon individual Customer's applicable gas equipment rating in:

$$\frac{\text{BTU/Hour x 10 hours}}{\text{100,000 BTU}} = \text{TH}$$

SERVICE AGREEMENTS

All Customers purchasing gas pursuant to this schedule shall be subject to the Company's standard contracts and/or service applications and subject to the Company's Rules and Regulations as filed with the TRA.

PAYMENT TERMS

All bills for service are due upon presentation and the net rates are applicable if payment is made on or before the last date of payment stated on the bill. Payments made after that date shall be for the gross amount which is greater by five percent (5%) than the net billing.

RETURNED CHECK CHARGE

In the event a Customer's check for payment is returned to the Company marked NSF (Non Sufficient Funds) the Customer will be assessed a charge of $20.00.

ADJUSTMENTS

Bills for service are subject to adjustment caused by changes in the cost of purchased gas in accordance with Rule No. 1220-4-7 of the TRA Rules and Regulations.

Purchased gas adjustments and all applicable taxes and fees are in addition to the above stated margin rates in accordance with The Rules, Regulations and Orders of the TRA and Laws of the State of Tennessee.

SERVICE AVAILABILITY

All requests for new and additional service or the transfer of existing service to higher priority end use will be considered based upon the Company's judgement as to the available gas supply, Customer's load factor or use pattern, end use, impact on the local economy, and The Rules, Regulations, and Orders of the TRA and Laws of the State of Tennessee.

SERVICE INTERRUPTION AND CURTAILMENT

Gas service under this schedule is subject to the provisions contained within TRA Schedule No. 6, "Schedule for Limiting and Curtailing Service".

WEATHER NORMALIZATION ADJUSTMENT

Gas service under this schedule is subject to the provisions contained within TRA Schedule No. 13, "Weather Normalization Adjustment Rider".

NASHVILLE GAS COMPANY
665 Mainstream Drive
Nashville, Tennessee 37228
A Division of Piedmont Natural Gas Company
TRA Rate Schedule No.2

RATE SCHEDULE NO. 2
Small General Service

AVAILABILITY

Gas service under this Rate Schedule is available to any full requirements non-residential Customer whose maximum usage during any month of the 12-month period ended the 31st day of March was not more than 15,000 therms. Availability under this Rate Schedule for new Customers will be based on reasonably anticipated usage. A Customer under this Rate Schedule will be eligible to be transferred to Rate Schedules 3, 4, 7F or 7I if the Customers' usage is 110% or more of the minimum required by such rate schedule. Any such transfers will be effective June 1 of each year.

MARGIN RATE	Winter (November-March)	Summer (April-October)
Customer Charge (per month)	$22.00	$22.00
Commodity Charge (per therm)	$.34839	$.31233
Backup Service Demand Charge (per therm of input per month)	$.534506	$.534506

AIR CONDITIONING RIDER

A Small General Service Customer who uses gas for summer air conditioning shall be billed at a rate of $.04 per therm less than that listed above for all gas consumed over 500 therms per month. This discount shall apply to all gas used during the billing months of June through October.

MONTHLY CUSTOMER CHARGE

A charge will be billed monthly to all Customers for the availability of gas service. This charge will be in addition to the commodity charge for gas delivered. The Customer charge will be billed from the date of initial service until service is terminated at the Customer's request. In the case of temporary discontinuance of service there will be a reconnect charge of $50.00 to be billed at the time the gas service is reinstated.

BACKUP RATE

When gas service is being supplied for use as a Backup Service for the dual-fuel heat pump or for similar use where the Customer's equipment is specifically designed by the manufacturer or is modified by the Customer or others for the purpose of using natural gas as the equipment's backup energy source, there shall be payable monthly in addition to all and other charges under this Rate Schedule a Backup Service Demand Charge individually determined for each Customer based upon the Customer's applicable gas equipment input rating.

Input shall be based upon individual Customer's applicable gas equipment rating in:

$$\frac{\text{BTU/Hour x 10 hours}}{\text{100,000 BTU}} = \text{TH}$$

SERVICE AGREEMENTS

All Customers purchasing gas pursuant to this schedule shall be subject to the Company's standard contracts and/or service applications and subject to the Company's Rules and Regulations as filed with the TRA.

PAYMENT TERMS

All bills for service are due upon presentation and the net rates are applicable if payment is made on or before the last date of payment stated on the bill. Payments made after that date shall be for the gross amount which is greater by five percent (5%) than the net billing.

RETURNED CHECK CHARGE

In the event a Customer's check for payment is returned to the Company marked NSF (Non Sufficient Funds) the Customer will be assessed a charge of $20.00.

ADJUSTMENTS

Bills for service are subject to adjustment caused by changes in the cost of purchased gas in accordance with Rule No. 1220-4-7 of the TRA Rules and Regulations.

Purchased gas adjustments and all applicable taxes and fees are in addition to the above stated margin rates in accordance with The Rules, Regulations and Orders of the TRA and Laws of the State of Tennessee.

SERVICE AVAILABILITY

All requests for new and additional service or the transfer of existing service to higher priority end use will be considered based upon the Company's judgement as to the available gas supply, Customer's load factor or use pattern, end use, impact on the local economy, and The Rules, Regulations, and Orders of the TRA and Laws of the State of Tennessee.

SERVICE INTERRUPTION AND CURTAILMENT

Gas service under this schedule is subject to the provisions contained within TRA Schedule No. 6, "Schedule for Limiting and Curtailing Service".

WEATHER NORMALIZATION ADJUSTMENT

Gas service under this schedule is subject to the provisions contained within TRA Schedule No. 13, "Weather Normalization Adjustment Rider".

RATE SCHEDULE NO. 3
Large General Sales Service

AVAILABILITY

Gas service under this Rate Schedule is available to any full requirements non-residential Customer whose usage during any month of the 12-month period ended the 31st day of March was in excess of 15,000 therms. Availability under this Rate Schedule for new Customers will be based on reasonably anticipated usage. An existing Customer may also qualify for service under this Rate Schedule based upon reasonably anticipated usage by adding incremental load either by the installation of additional equipment or by increasing hours of operation. Service under this Rate Schedule is contingent upon the installation by the Company of telemetering equipment that reports daily consumption. A Customer will be transferred from this Rate Schedule to Rate Schedule No.2 if the Customers' usage is 90% or less of the minimum required by this Rate Schedule. Any such transfers will be effective June 1 of each year.

Once a qualified Customer elects service under this Rate Schedule, all services will be provided under the terms and conditions of this Rate Schedule for a term extending through the following May 31. Upon meeting the qualifications contained therein, a Customer may receive service under Rate Schedule 9 concurrent with service provided under the Rate Schedule. Subject to the requirements set forth above, a Customer may elect to discontinue service under this Rate Schedule and receive service under Rate Schedule No.7F by giving written notice to the Company prior to March 1 of any year. Proper notice having been provided, the Customer shall discontinue service under this Rate Schedule effective the first June 1 following the notice.

MARGIN RATE

Demand Charge (per therm of billing demand)	$.80000
Commodity Charge (per therm)	
1st Step (0-15,000 therms)	$.08918
2nd Step (15,001-40,000 therms)	$.08195
3rd Step (40,001-90,000 therms)	$.05904
4th Step (Over 90,000 therms)	$.02530

MONTHLY MINIMUM BILL

The minimum monthly bill shall be the monthly demand charge.

BILLING DEMAND

The billing demand shall be determined as follows:

A Customer's billing demand determinant shall be the highest daily usage during the period from November 1 to March 31 of the previous winter period as metered and reported to the Company by the telemetering equipment installed by the Company. Changes to the Customer's billing demand determinant will become effective May 1 of each year. The per unit demand charge may be adjusted from time to time to reflect rate changes, including, but not limited to, a general change in system rates or a change in pipeline capacity charges billed to the Company.

For Customers commencing initial gas service under this Rate Schedule and who do not have a consumption history from other services provided by the Company, the billing demand determinant shall be computed by multiplying the month of highest consumption for the period to date by six percent (6%). If a Customer has received gas service from the Company prior to receiving service under this rate schedule, but does not have daily telemetered records to determine peak day usage as described above, the Company shall determine a billing demand based upon the highest monthly level of consumption during the previous winter period multiplied by six percent (6%).

SERVICE AGREEMENTS

All Customers purchasing gas under this Rate Schedule shall be subject to the Company's standard contracts and/or service applications and subject to the Company's Rules and Regulations as filed with the TRA.

PAYMENT TERMS

All bills for service are due upon presentation and the net rates are applicable if payment is made on or before the last date of payment stated on the bill. Payments made after that date shall be for the gross amount which is greater by five percent (5%) than the net billing.

RETURNED CHECK CHARGE

In the event a Customer's check for payment is returned to the Company marked NSF (Non Sufficient Funds) the Customer will be assessed a charge of $20.00.

ADJUSTMENTS

Bills for service are subject to adjustment caused by changes in the cost of purchased gas in accordance with Rule No. 1220-4-7 of the TRA Rules and Regulations.

Purchased gas adjustments and all applicable taxes and fees are in addition to the above stated margin rates in accordance with The Rules, Regulations and Orders of the TRA and Laws of the State of Tennessee.

SERVICE AVAILABILITY

All requests for new or additional service or the transfer of existing service to a higher priority end use will be considered based upon the Company's judgement as to the available gas supply, Customer's load factor or use pattern, end use, impact on the local economy, and The Rules, Regulations, and Orders of the TRA and Laws of the State of Tennessee.

SERVICE INTERRUPTION AND CURTAILMENT

Gas service under this schedule is subject to the provisions contained within TRA Rate Schedule No.6, "Schedule for Limiting and Curtailing Service".

NASHVILLE GAS COMPANY
665 Mainstream Drive
Nashville, Tennessee 37228
A Division of Piedmont Natural Gas Company
TRA Rate Schedule No.4

RATE SCHEDULE NO. 4
Interruptible General Sales Service

AVAILABILITY

Gas service under this rate schedule is available **ON AN INTERRUPTIBLE BASIS** to any full requirements non-residential Customer whose usage during any month of the 12-month period ended the 31st day of March was in excess of 15,000 therms when adjusted for curtailment and cycle length. Availability under this rate schedule for new Customers will be based on reasonably anticipated usage. An existing Customer may also qualify for service under this Rate Schedule by adding incremental load either by the installation of additional equipment or by increasing hours of operation. Service under this Rate Schedule is contingent upon the installation by the Company of telemetering equipment that reports daily consumption. A Customer will be transferred from this Rate Schedule to Rate Schedule 2 if the Customers' usage is 90% or less of the minimum required by this Rate Schedule. Any such transfers will be effective June 1 of each year.

Once a qualified Customer elects service under this Rate Schedule, all services will be provided under the terms and conditions of this Rate Schedule for a term extending through the following May 31. Upon meeting the qualifications contained therein, a Customer may receive service under Rate Schedule 9 concurrent with service provided under this Rate Schedule. Subject to the requirements set forth above, a Customer may elect to discontinue service under this Rate Schedule and receive service under Rate Schedule No.7I by giving written notice to the Company prior to March 1 of any year. Proper notice having been provided, the Customer shall discontinue service under this Rate Schedule effective the first June 1 following the notice.

Customers purchasing gas pursuant to this schedule shall maintain, in useable condition, alternate-fuel facilities with ample on-site alternate fuel capability for supplying 100% of the establishment's gas requirements during periods of gas interruption or curtailment. Such interruption or curtailment shall be immediately effective upon verbal or written notification by the Company, and Customer shall refrain from using gas until permitted to do so by the Company. It is understood and agreed that the Company will have the right to suspend gas service without further notice to the Customer in the event Customer fails to curtail Customer's use of gas in accordance with the Company's notice of curtailment.

MARGIN RATE

Customer Charge (per month)	$300.00	
Commodity Charge (per therm)		
1st Step (0-15,000 therms)		$.08034
2nd Step (15,001-40,000 therms)		$.07382
3rd Step (40,001-90,000 therms)		$.05319
4th Step (Over 90,000 therms)		$.02280

MONTHLY MINIMUM BILL

The minimum monthly bill shall be the Customer Charge.

MONTHLY CUSTOMER CHARGE

A charge will be billed monthly to all Customers for the availability of gas service. This charge will be in addition to the commodity charge for gas delivered. The Customer Charge will be billed from the date of initial service until service is terminated at the Customer's request.

SERVICE AGREEMENTS

All Customers purchasing gas pursuant to this schedule shall be subject to the Company's standard contracts and/or service applications and subject to the Company's Rules and Regulations as filed with the TRA.

PAYMENT TERMS

All bills for service are due upon presentation and the net rates are applicable if payment is made on or before the last date of payment stated on the bill. Payments made after that date shall be for the gross amount which is greater by five percent (5%) than the net billing.

RETURNED CHECK CHARGE

In the event a Customer's check for payment is returned to the Company marked NSF (Non Sufficient Funds) the Customer will be assessed a charge of $20.00.

ADJUSTMENTS

Bills for service are subject to adjustment caused by changes in the cost of purchased gas in accordance with Rule No. 1220-4-7 of the TRA Rules and Regulations.

Purchased gas adjustments and all applicable taxes and fees are in addition to the above stated margin rates in accordance with The Rules, Regulations and Orders of the TRA and Laws of the State of Tennessee.

SERVICE AVAILABILITY

All requests for new and additional service or the transfer of existing service to higher priority end use will be supplied based upon the Company's judgement as to the available gas supply, Customer's load factor or use pattern, end use, impact on the local economy, and The Rules, Regulations, and Orders of the TRA and Laws of the State of Tennessee.

SERVICE INTERRUPTION AND CURTAILMENT

Gas service under this schedule is subject to the provisions contained within TRA Schedule No. 6, "Schedule for Limiting and Curtailing Service".

SERVICE SCHEDULE NO. 6
Schedule for Limiting and Curtailing Service

This Service Schedule defines the types of curtailment that the Company may invoke from time to time due to the occurrence of extreme weather conditions, operating conditions or force majeure events, and describes the process and procedures to be followed in the implementation of gas service restrictions.

DISTRIBUTION PRESSURE CURTAILMENTS

Due to extreme weather conditions, operating conditions or force majeure events as defined in the Nashville Gas Company Service Regulations, Rules and Regulations Governing Supply and Consumption of Gas, or the demands of the Company's firm Customers as the same may effect the Company's ability to provide interruptible service, the Company may experience localized pressure deficiencies. During such times and within the areas affected, the Company will curtail service to interruptible Customers served under Rate Schedule No. 4, Rate Schedule No. 9, or Rate Schedule 7I, by priority of their margin contribution to the Company (curtailing Customers with the lowest margin rate first) until the pressure situation can be alleviated. In the unlikely event that further interruption is required, the Company will proceed with curtailment by margin contribution considering end use, impact on the local economy, and The Rules, Regulations, and Orders of the TRA and Laws of the State of Tennessee.

SUPPLY OR CAPACITY RELATED CURTAILMENTS

In situations when supply and capacity services contracted by the Company are not sufficient to meet the full requirements of Customers desiring sales services from the Company, the Company will first curtail service to interruptible sales Customers receiving service under Rate Schedule No. 4 by priority of their margin contribution to the Company. Customers receiving discounted sales service under Rate Schedule No. 9 will also be curtailed according to the discounted rates. The Company reserves the right at the Company's discretion to purchase quantities being delivered to the Company by Customers under Rate Schedule 7I at market prices in order to serve Customers without operable alternative fuel capability. In the unlikely event that further interruption is required, the Company will proceed with curtailment by margin contribution considering end use, impact on the local economy, and The Rules, Regulations, and Orders of the TRA and Laws of the State of Tennessee.

EMERGENCY SERVICE

The Company will make every reasonable effort to deliver plant protection volumes to industrial and commercial Customers that do not have standby fuel systems sufficient to prevent damage to facilities or danger to personnel, or to Customers that find it impossible to continue operations on the Customer's standby or alternate energy source as a result of a bona fide existing or threatened emergency. This includes the protection of such existing material in process that would otherwise be destroyed, or deliveries required to maintain plant production. All emergency gas service is of a discretionary nature and implies no present or future obligation of the Company to any Customer to provide such service on either a temporary or continuing basis. Deliveries of gas hereunder shall be made pursuant only to advance operating arrangements between the Company's authorized personnel and the Customer and shall be subject to curtailment and interruption at any time should the Company deem it necessary.

RATE FOR EMERGENCY SERVICE

If the Company has authorized the Customer to consume limited quantities of emergency gas as provided in the above paragraph, then all gas consumed by the Customer will be at a rate of $1.00 per therm plus the higher of two gas commodity indices, "Monthly Contract" and "Daily Price", until otherwise notified that either (1) further gas sales will be under the Customer's regular rate schedule or (2) complete curtailment is unavoidable and that further gas sales will be considered unauthorized. "Monthly Contract" shall be defined as the monthly contract index price for the applicable calendar month as published in Gas Daily under the designation, "Monthly Contract Index" and indicated specifically under "Citygates" for Tenn. Zone 6 (delivered)". "Daily Price" shall be defined as the daily price for gas defined by Gas Daily as stated in the "Daily Price Survey", "Citygates", "Tenn. Zone 6 (delivered)", "Midpoint" price. For days of consumption when the Gas Daily is not published, the Gas Daily price shall equal the price as published on the nearest subsequent day by Gas Daily. Revenues realized from emergency service transactions will be credited to the Actual Cost Adjustment (ACA) account as recovery of gas costs.

UNAUTHORIZED OVER RUN PENALTY

If at any time a Customer exceeds specified contract entitlements or if during any curtailment period, any affected Customer takes, without the Company's advance written approval, a volume of natural gas in excess of the curtailment period quantity entitlement applicable to such Customer, said volume shall constitute an unauthorized over run volume. For each therm of such unauthorized over run volume taken by such Customer, such Customer shall pay to the Company a rate of $1.50 per therm plus the higher of two gas commodity indices, "Monthly Contract" and "Daily Price". "Monthly Contract" shall be defined as the monthly contract index price for the applicable calendar month as published in Gas Daily under the designation, "Monthly Contract Index" and indicated specifically under "Citygates" for Tenn. Zone 6 (delivered)". "Daily Price" shall be defined as the daily price for gas defined by Gas Daily as stated in the "Daily Price Survey", "Citygates", "Tenn. Zone 6 (delivered)", "Midpoint" price. For days of consumption when the Gas Daily is not published, the Gas Daily price shall equal the price as published on the nearest subsequent day by Gas Daily. The Customer shall be liable for the above charges together with and in addition to any incremental charges or assessments (including, but not limited to penalties) by the interstate pipeline during the time of the unauthorized usage by such Customer . The payment of a penalty for unauthorized over run volumes shall not under any circumstances be considered as giving any such Customer the right to take unauthorized over-run volumes, nor shall such payment be considered as a substitute for any other remedies available to the Company or any other Customer against the offending Customer for failure to adhere to its obligations under the provisions of this Rate Schedule. Revenues realized from unauthorized over run penalties will be credited to the Actual Cost Adjustment (ACA) account as recovery of gas costs.

PAYMENT TERMS

All bills for service are due upon presentation and the net rates are applicable if payment is made on or before the last date of payment stated on the bill. Payments made after that date shall be for the gross amount which is greater by five percent (5%) than the net billing.

RETURNED CHECK CHARGE

In the event a Customer's check for payment is returned to the Company marked NSF (Non Sufficient Funds) the Customer will be assessed a charge of $20.00.

ADJUSTMENTS

Bills for service are subject to adjustment caused by changes in the cost of purchased gas in accordance with Rule No. 1220-4-7 of the TRA Rules and Regulations.

Purchased gas adjustments and all applicable taxes and fees are in addition to the above stated margin rates in accordance with The Rules, Regulations and Orders of the TRA and Laws of the State of Tennessee.

RATE SCHEDULE NO. 7F
Firm Transportation Service

AVAILABILITY

Gas service under this Rate Schedule is available to any full requirements non-residential Customer whose usage during any month of the 12-month period ended the 31st day of March was in excess of 15,000 therms. Availability under this Rate Schedule for new Customers will be based on reasonably anticipated usage. An existing Customer may also qualify for service under this Rate Schedule based upon reasonably anticipated usage by adding incremental load either by the installation of additional equipment or by increasing hours of operation. Service under this Rate Schedule is contingent upon the installation by the Company of telemetering equipment that reports daily consumption. A Customer will be transferred from the Rate Schedule to Rate Schedule 2 if the Customers' usage is 90% or less of the minimum required by this Rate Schedule. Any such transfers will be effective June 1 of each year.

Once a qualified Customer elects service under this Rate Schedule, all services will be provided under the terms and conditions of this Rate Schedule for a term extending through the following May 31. Upon meeting the qualifications contained therein, a Customer may receive service under Rate Schedule 9 concurrent with service provided under this Rate Schedule. Subject to the requirements set forth above, a Customer may elect to discontinue service under this Rate Schedule and receive service under Rate Schedule 3 by giving written notice to the Company prior to March 1 of any year. Proper notice having been provided, the Customer shall discontinue service under this Rate Schedule effective the first June 1 following the notice.

APPLICABILITY AND CHARACTER OF SERVICE

Transportation service is available under this Rate Schedule to any qualified Customer connected to the Company's system who has obtained an independent supply of natural gas and has arranged to have this supply delivered to one of the Company's existing delivery points for transportation by the Company to the Customer's facilities.

The Company will deliver gas previously transported by a connected pipeline for the Customer's account under this Rate Schedule on a day-to-day basis in accordance with the Customer's scheduled and confirmed nominations, subject to such maximum allowable daily deliveries as may be specified in the Gas Service Contract. The Company reserves the right to suspend service on any day when, in the Company's sole opinion, its operating conditions are such that suspension of service is necessary. The Company reserves the right to limit, allocate, or direct third party gas nominations among the interstate pipelines serving the Company's distribution system, when, in the Company's sole opinion, such action is necessary to maintain the operational integrity of the system.

Receipts and deliveries of gas hereunder shall be at uniform rates of flow with no significant fluctuations or imbalance. Any imbalances shall be corrected by the Customer, insofar as practicable, during the month in which they occur. Customer may adjust its daily nominations during a month in order to correct any accumulated imbalance and maintain a monthly balance, subject to the operating limitations of the Company. The Company reserves the right to limit the amount of such imbalances to avoid operating problems and to comply with balancing requirements of any pipeline transporting gas hereunder. Customer will be responsible for any imbalance charges assessed by the pipeline in connection with any gas transported by the Company under this Rate Schedule. The Company reserves the right to reduce nominations when, in the judgment of the Company, such action is necessary to reduce or eliminate operational problems. Company will use its best efforts to notify the Customer or the Customer's agent before proceeding with a unilateral reduction and will notify Customer of any reduction to Customer's nomination that has been instituted by the Company. The Company reserves the

right to initiate Standby Sales Service, described below, when, in the judgement of the Company, such action is necessary to reduce or eliminate operational problems resulting from the gas imbalances of the Customer. The Company will use its best efforts to notify the Customer or the Customer's agent before initiating Standby Sales Service.

By 10:30am central time four business days prior to the beginning of each month, the Customer shall inform the Company of its a) nomination of the daily quantity of gas to be transported for such month, and b) choice of pipeline for transportation for such month. If the Customer does not provide a timely nomination to transport gas provided by a party other than the Company, the Customer will have requested Standby Sales Service provided herein by default. By 10:30am central time six business days prior to the beginning of each month, the Customer must inform the Company of the nominating agent for gas to be transported.
Changes to nominations for gas transportation within the month are due by 10:30am central time on the day prior to gas flow.

BALANCING

It shall be the Customer's responsibility to maintain a daily and monthly balance with its transporting pipelines to avoid any assessment of penalties against the Company. If the Company is assessed a penalty by a Customer's transporting pipeline, the Company shall have the right to pass-through all such penalties to the Customer to the extent the Customer is responsible for causing the Company to be assessed such penalties.

MONTHLY IMBALANCE RESOLUTION

Any differences between the quantities delivered to the Company's city gate facilities for the account of the Customer for the month, and the quantities consumed by the Customer as metered for the month, shall be the monthly imbalance. Unless the Company and Customer agree to correct imbalances in kind, this imbalance shall be resolved monthly by "cashing out" the imbalance as they are known to exist at that time. If the Customer consumes more gas than it has delivered to the Company, the Customer will be deemed to be "short" by the amount of the deficiency, and the Company will sell gas to the Customer in an amount equal to the deficiency and at a price equal to the highest Weighted Index Price for any week beginning in the calendar month as published in *Natural Gas Week* plus the Tennessee Gas Pipeline FT-A charges inclusive of all surcharges and fuel times the premium percentage corresponding to the percentage of the deficiency listed in the table below. If the Customer consumes less gas than it has delivered to the Company, the Customer will be deemed to be "long" by the amount of the surplus, and the Company will buy the amount of the surplus by paying the Customer a price equal to the lowest Weighted Index Price for any week beginning in the calendar month as published in *Natural Gas*

Week plus the Tennessee Gas Pipeline FT-A charges inclusive of all surcharges and fuel times the discount percentage corresponding to the percentage of the surplus listed in the table below.

Percentage of the Imbalance	Short (Premium)	Long (Discount)
Equal to or less than 5%	100%	100%
Over 5% & equal to or less than 10%	115%	85%
Over 10% & equal to or less than 15%	130%	70%
Over 15% & equal to or less than 20%	140%	60%
Over 20%	150%	50%

"The Weighted Index Price" shall be derived from the prices published in *Natural Gas Week* in the table Spot Prices on Interstate Pipeline Systems for the following pipeline designations and weighted by the corresponding percentages set forth below:

Tennessee Gas Pipeline Co. Zone 0:South Texas	X	19.47%[1]
+		
Tennessee Gas Pipeline Co. Zone 1: South Louisiana	X	73.69%[1]
+		
Columbia Gulf Transmission Co.: Rayne, La.	X	6.84% [1]

The Company will collect gross receipts tax on the incremental gas related charges.

Any difference between the actual cost of gas incurred by the Company and the Index price as defined in the previous paragraph will be accounted for in the Actual Cost Adjustment account in a manner consistent with Rule No. 1220-4-1-12 of the TRA Rules and Regulations. Increments or decrements which may result from the PGA adjustments will not apply to the cash-out of imbalances.

AGENCY AUTHORIZATION FORM

A Customer may authorize an agent to act on its behalf with respect to the nominations, imbalance resolution, and/or billing under this Rate Schedule by executing an Agency Authorization Form in the form attached to this Rate Schedule. To the extent that the Agent appointed by the Customer is common to other Customers of the Company, the Company will permit such Agent to aggregate all such qualifying Customers' transportation quantities for purposes of administering service to such Agent. Once a Customer has designated an agent, the agent is then authorized to act on behalf of that Customer and as such, the agent can be considered as the Customer in all references contained within this Rate Schedule. The Customer may not change agents within the calendar month without the permission of the Company. All agents must utilize the electronic means made available by the Company in order to submit nominations. The Company may recover all costs incurred in providing the agent access to the electronic bulletin board.

STANDBY SALES SERVICE

At the option of the Customer, an election may be made monthly to receive Standby Sales Service from the Company under this Rate Schedule for delivery to the Customer at the Company's city gate. The Customer will also receive Standby Sales Service as a default if the Customer or the Customer's agent fails to submit a timely and valid nomination for transportation service. In addition to paying the Monthly Standby Index Price set forth below for Standby Sales Service hereunder, the Customer will utilize the transportation services and incur the charges otherwise applicable under this Rate Schedule to cause such gas supplies to be delivered to the Customer's meter. The price which the Customer shall pay for the gas supplied under this paragraph will be the Monthly Standby Index Price defined as follows: "The weighted average index price for the applicable month as published in the first *Natural Gas Week* for such month in the table Spot Prices on Interstate Pipeline Systems in the column labeled "Bid Week", for:

Tennessee Gas Pipeline Co. Zone 0:South Texas	X	19.47%[1]
+		
Tennessee Gas Pipeline Co. Zone 1: South Louisiana	X	73.69%[1]
+		
Columbia Gulf Transmission Co.: Rayne, La.	X	6.84%[1]

1 These percentages are the ratio of actual test period purchases for these two pipelines determined in the Company's most recent general rate case.

If the Customer nominates transportation service hereunder and purchases gas supplies from a third party supplier, and such Customer's consumption exceeds actual deliveries to the Company from such third party supplier to the point where operational problems are created for the Company, then the Company shall have the right, at it sole discretion, to initiate Standby Sales Service to the Customer. The price for such service shall be the same as set forth above except when the Company is required by such imbalance shortfall to purchase incremental volumes of gas supplies. In this case the Customer receiving Standby Sales Service will pay the higher of (on a daily basis) the Monthly Standby Index Price or the Daily Standby Index Price defined as follows:

The midpoint daily index price as published in Gas Daily for the day of consumption as stated in the "Daily Price Survey", for the "Tennessee 500 Leg". For days of consumption when the Gas Daily is not published, the Gas Daily price shall equal the price as published on the nearest subsequent day by Gas Daily.

Applicable firm transportation tariff commodity charges, fuel and any other surcharges as defined in the above transporters' FERC approved tariffs will be added to the above standby index prices. The Company will collect gross receipts tax on the incremental gas related charges.

Any difference between the actual cost of gas incurred by the Company and the Index price as defined in the previous paragraph will be accounted for in the Actual Cost Adjustment account in a manner consistent with Rule No. 1220-4-1-12 of the TRA Rules and Regulations. Increments or decrements which may result from the PGA adjustments will not apply to the standby index prices.

MARGIN RATE

Demand Charge (per therm of billing demand)	$.80000
Commodity Charge (per therm)	
1st Step (0-15,000 therms)	$.08918
2nd Step (15,001-40,000 therms)	$.08195
3rd Step (40,001-90,000 therms)	$.05904
4th Step (Over 90,000 therms)	$.02530

MONTHLY MINIMUM BILL

The minimum monthly bill shall be the monthly demand charge multiplied by the billing demand determined as described below.

BILLING DEMAND

The billing demand shall be determined as follows:

Customer billing demand determinate shall be the highest daily usage during the period from November 1 to March 31 of the previous winter period as metered and reported to the Company by the telemetering equipment installed by the Company. Changes to the Customer's billing demand determinate will become effective May 1 of each year. The per unit charge may be adjusted from time to time to reflect rate changes, including, but not limited to, a general change in system rates or a change in pipeline capacity charges billed to the Company. For Customers commencing initial gas service under this Rate Schedule and who do not have a consumption history from other services provided by the Company, the billing demand determinate shall be based upon a reasonable assumption of usage considering the connected load. If a Customer has received gas service from the Company prior to receiving service under this Rate Schedule but does not have daily telemetered records to

determine peak day usage as described above , the Company shall determine a billing demand based on the highest monthly level of consumption during the previous winter period multiplied by six percent (6%).

SERVICE AGREEMENTS

All Customers receiving service under this Rate Schedule shall be required to execute the Company's standard contracts and/or service applications and shall be subject to the Company's Rules and Regulations as filed with and approved by the Tennessee Regulatory Authority (TRA).

PAYMENT TERMS

All bills for service are due upon presentation and the net rates are applicable if payment is made on or before the last date of payment stated on the bill. Payments made after that date shall be for the gross amount which is greater by five percent (5%) than the net billing.

RETURNED CHECK CHARGE

In the event a Customer's check for payment is returned to the Company marked NSF (Non Sufficient Funds) the Customer will be assessed a charge of $20.00.

ADJUSTMENTS

Bills for transportation service are subject to adjustment caused by changes in the cost of purchased gas in accordance with Rule No. 1220-4-7 of the TRA Rules and Regulations.

Purchased gas adjustments and all applicable taxes and fees are in addition to the above stated margin rates in accordance with the Rules, Regulations and Orders of the TRA and the Laws of the State of Tennessee.

SERVICE AVAILABILITY

All requests for new or additional service or the transfer of existing service to a higher priority end use will be considered based upon the Company's judgement as to the available gas supply, Customer's load factor or use pattern, end use, impact on the local economy, the TRA Rules and Regulations, Orders of the TRA, and the Laws of the State of Tennessee.

SERVICE CURTAILMENT

Gas service under this schedule is subject to the provisions contained within TRA Schedule No. 6, "Schedule for Limiting and Curtailing Service".

RATE SCHEDULE NO. 7I
Interruptible Transportation Service

AVAILABILITY

Gas service under this Rate Schedule is available ON AN INTERRUPTIBLE BASIS to any full requirements non-residential Customer whose usage during any month of the 12-month period ended the 31st day of March was in excess of 15,000 therms. Availability under this Rate Schedule for new Customers will be based on reasonably anticipated usage. An existing Customer may also qualify for service under this Rate Schedule based upon reasonably anticipated usage by adding incremental load either by the installation of additional equipment or by increasing hours of operation. Service under this Rate Schedule is contingent upon the installation by the Company of telemetering equipment that reports daily consumption. A Customer will be transferred from this Rate Schedule to Rate Schedule 2 if the Customers' usage is 90% or less of the minimum required by this Rate Schedule. Any such transfers will be effective June 1 of each year.

Once a qualified Customer elects service under this Rate Schedule, all services will be provided under the terms and conditions of this Rate Schedule for a term extending through the following May 31. Upon meeting the qualifications contained therein, a Customer may receive service under Rate Schedule No. 9 concurrent with service provided under this Rate Schedule. Subject to the requirements set forth above, a Customer may elect to discontinue service under this Rate Schedule and receive service under Rate Schedule No.4 and/or 10 by giving written notice to the Company prior to March 1 of any year. Proper notice having been provided, the Customer may discontinue service under this Rate Schedule effective the first June 1 following the notice.

Customers receiving services under this Rate Schedule shall maintain, in useable condition, alternate-fuel facilities with ample on-site alternate fuel capability for supplying 100% of the establishment's gas requirements during periods of gas interruption or curtailment. Such interruption or curtailment shall be immediately effective upon verbal or written notification by the Company, and Customer shall refrain from using gas until permitted to do so by the Company. It is understood and agreed that the Company will have the right to suspend gas service without further notice to the Customer in the event Customer fails to curtail Customer's use of gas in accordance with the Company's notice of curtailment.

APPLICABILITY AND CHARACTER OF SERVICE

Transportation service is available under this Rate Schedule to any qualified Customer connected to the Company's system who has obtained an independent supply of natural gas and has arranged to have this supply delivered to one of the Company's existing delivery points for transportation by the Company to the Customer's facilities.

The Company will deliver ON AN INTERRUPTIBLE BASIS gas previously transported by a connected pipeline for the Customer's account under this Rate Schedule on a day-to-day basis in accordance with the Customer's scheduled and confirmed nominations. The Company reserves the right to suspend service on any day when, in the Company's sole opinion, its operating conditions are such that suspension of service is necessary. The Company reserves the right to

limit, allocate, or direct third party gas nominations among the interstate pipelines serving the Company's distribution system, when, in the Company's sole opinion, such action is necessary to maintain the operational integrity of the system.

Receipts and deliveries of gas hereunder shall be at uniform rates of flow with no significant fluctuations or imbalance. Any imbalances shall be corrected by the Customer, insofar as practicable, during the month in which they occur. Customer may adjust its daily nominations during a month in order to correct any accumulated imbalance and maintain a monthly balance, subject to the operating limitations of the Company. The Company reserves the right to limit the amount of such imbalances to avoid operating problems and to comply with balancing requirements of any pipeline transporting gas hereunder. Customer will be responsible for any imbalance charges assessed by the pipeline in connection with any gas transported by the Company under this Rate Schedule. The Company reserves the right to reduce nominations when, in the judgment of the Company, such action is necessary to reduce or eliminate operational problems. Company will use its best efforts to notify the Customer or the Customer's agent before proceeding with a unilateral reduction and will notify Customer of any reduction to Customer's nomination that has been instituted by the Company.

By 10:30am central time four business days prior to the beginning of each month, the Customer shall inform the Company of its a) nomination of the daily quantity of gas to be transported for such month, and b) choice of pipeline for transportation for such month. If the Customer does not provide a timely nomination to transport gas , the Customer will not be entitled to receive gas service. By 10:30am central time six business days prior to the beginning of each month, the Customer must inform the Company of the nominating agent for gas to be transported.

Changes to nominations for gas transportation within the month are due by 10:30am central time on the day prior to gas flow.

Notwithstanding the above, if a supplier interrupts its sales service to Customer being transported hereunder, and such interruptions by the supplier occur within a month, Customer may reschedule alternative gas supplies which may be available to Customer subject to: a) normal daily nomination and confirmation deadlines and procedures b) any operational limitations of the Company and c) the availability of interruptible transportation service hereunder.

BALANCING

It shall be the Customer's responsibility to maintain a daily and monthly balance with its transporting pipelines to avoid any assessment of penalties against the Company. If the Company is assessed a penalty by a Customer's transporting pipeline, the Company shall have the right to pass-through all such penalties to the Customer to the extent the Customer or Customer's agent is responsible for causing the Company to be assessed such penalties.

MONTHLY IMBALANCE RESOLUTION

Any differences between the quantities delivered to the Company's city gate facilities for the account of the Customer for the month, and the quantities consumed by the Customer as metered for the month, shall be the monthly imbalance. Unless the Company and Customer agree to correct imbalances in kind, this imbalance shall be resolved monthly by "cashing out" the imbalance as they are known to exist at that time. If the Customer consumes more gas than it has

delivered to the Company, the Customer will be deemed to be "short" by the amount of the deficiency, the Company will sell gas to the Customer in an amount equal to the deficiency and at a price equal to the highest Weighted Index Price for any week beginning in the calendar month as published in *Natural Gas Week* plus the Tennessee Gas Pipeline FT-A charges inclusive of all surcharges and fuel times the premium percentage corresponding to the percentage of the deficiency listed in the table below. If the Customer consumes less gas than it has delivered to the Company, the Customer will be deemed to be "long" by the amount of the surplus, and the Company will buy the amount of the surplus by paying the Customer a price equal to the lowest Weighted Index Price for any week beginning in the calendar month as published in *Natural Gas Week* plus the Tennessee Gas Pipeline FT-A charges inclusive of all surcharges and fuel times the discount percentage corresponding to the percentage of the surplus listed in the table below.

Percentage of the Imbalance	Short (Premium)	Long (Discount)
Equal to or less than 5%	100%	100%
Over 5% & equal to or less than 10%	115%	85%
Over 10% & equal to or less than 15%	130%	70%
Over 15% & equal to or less than 20%	140%	60%
Over 20%	150%	50%

"The Weighted Index Price" shall be derived from the prices published in *Natural Gas Week* in the table Spot Prices on Interstate Pipeline Systems for the following pipeline designations and weighted by the corresponding percentages set forth below:

Tennessee Gas Pipeline Co. Zone 0:South Texas	X	19.47%[1]
+		
Tennessee Gas Pipeline Co. Zone 1: South Louisiana	X	73.69%[1]
+		
Columbia Gulf Transmission Co.: Rayne, La.	X	6.84% [1]

The Company will collect gross receipts tax on the incremental gross gas related charges

Any difference between the actual cost of gas incurred by the Company and the Index prices defined above will be accounted for in the Actual Cost Adjustment account in a manner consistent with Rule No. 1220-4-1-.12 of the TRA Rules and Regulations. Increments or decrements which may result from the PGA adjustments will not apply to the cash-out mechanism.

AGENCY AUTHORIZATION FORM

A Customer may authorize an agent to act on its behalf with respect to the nominations, imbalance resolution, and/or billing under this Rate Schedule by executing an Agency Authorization Form in the form attached to this Rate Schedule. To the extent that the Agent appointed by the Customer is common to other Customers of the Company, the Company will permit such Agent to aggregate all such qualifying Customers' transportation quantities for

1 These percentages are the ratio of actual test period purchases for these two pipelines determined in the Company's most recent general rate case.

purposes of administering service to such Agent. Once a Customer has designated an agent, the agent is then authorized to act on behalf of that Customer and as such, the agent can be considered as the Customer in all references contained within this Rate Schedule. The Customer may not change agents within the calendar month without the permission of the Company. All agents must utilize the electronic means made available by the Company in order to submit nominations. The Company may recover all costs incurred in providing the agent access to the electronic bulletin board.

MARGIN RATE

Customer Charge (per month)	$300.00
Commodity Charge (per therm)	
1st Step (0-15,000 therms)	$.08034
2nd Step (15,001-40,000 therms)	$.07382
3rd Step (40,001-90,000 therms)	$.05319
4th Step (Over 90,000 therms)	$.02280

MONTHLY MINIMUM BILL

The minimum monthly bill shall be the Customer Charge.

MONTHLY CUSTOMER CHARGE

A charge will be billed monthly to all Customers for the availability of gas service. This charge will be in addition to the commodity charge.

SERVICE AGREEMENTS

All Customers receiving service pursuant to this Rate Schedule shall be required to execute the Company's standard contracts and/or service applications and shall be subject to the Company's Rules and Regulations as filed with and approved by the Tennessee Regulatory Authority (TRA).

PAYMENT TERMS

All bills for service are due upon presentation and the net rates are applicable if payment is made on or before the last date of payment stated on the bill. Payments made after that date shall be for the gross amount which is greater by five percent (5%) than the net billing.

RETURNED CHECK CHARGE

In the event a Customer's check for payment is returned to the Company marked NSF (Non Sufficient Funds) the Customer will be assessed a charge of $20.00.

ADJUSTMENTS

Bills for transportation service are subject to adjustment caused by changes in the cost of purchased gas in accordance with Rule No. 1220-4-7 of the TRA Rules and Regulations.

Purchase gas adjustments and all applicable taxes and fees are in addition to the above stated margin rates in accordance with the Rules, Regulations and Orders of the TRA and the Laws of the State of Tennessee.

SERVICE AVAILABILITY

All requests for new or additional service or the transfer of existing service to a higher priority end use will be considered based upon the Company's judgement as to the available gas supply, Customer's load factor or use pattern, end use, impact on the local economy, the TRA Rules and Regulations, the Orders of the TRA, and the Laws of the State of Tennessee.

SERVICE INTERRUPTION AND CURTAILMENT

Gas service under this schedule is interruptible and is subject to the provisions contained within TRA Schedule No. 6, "Schedule for Limiting and Curtailing Service".

RATE SCHEDULE NO. 9
Special Availability Service

AVAILABILITY

Gas service under this rate schedule is available to any TRA Rate Schedule No. 3, 4, 7F, or 7I, Customer when the Company has gas supplies or services that it cannot sell at its established fixed rates where the Company's distribution mains are suitable for supplying the desired service. On such occasions, the opportunity is lost to the Company and its Customers. This Rate Schedule is designed to permit the Company to sell such gas and services at special rates for the purpose of enabling the Company to compete with alternative fuels and services available for use by its Customers.

Gas service under this Rate Schedule is available on a limited term basis to Customers who are connected to the Company's distribution system and would otherwise qualify for commercial and industrial sales or transportation service.. Gas service may be provided under this Rate Schedule only in the event that the Company has available supplies or services that cannot competitively be provided under other rate schedules. Service under this Rate Schedule is temporary and the Company has the right to discontinue such service. Gas service under this rate schedule will be curtailed prior to service under any other rate schedule.

In the event a Customer has zero consumption during any billing month, this tariff will not apply and service shall be rendered pursuant to the Company's regular rate schedules for the class of service indicated for the purpose of determining a minimum bill and qualifying provisions.

BASE RATE

The Customer shall pay the Company for all gas supplied or services provided under this schedule at a predetermined rate negotiated prior to delivery for limited term periods up to seven consecutive months.

SERVICE AGREEMENTS

All Customers purchasing gas pursuant to this Rate Schedule shall be subject to the Company's standard contracts and/or service applications and subject to the Company's Rules and Regulations as filed with the TRA.

PAYMENT TERMS

All bills for service are due upon presentation and the above stated net rates are applicable if payment is made on or before the last date of payment stated on the bill. Payments made after that date shall be for the gross amount which is greater by five percent (5%) than the net billing.

RETURNED CHECK CHARGE

In the event a Customer's check for payment is returned to the Company marked NSF (Non Sufficient Funds) the Customer will be assessed a charge of $20.00.

ADJUSTMENTS

Bills for service are subject to adjustment caused by changes in the cost of purchased gas in

accordance with Rule No. 1220-4-1-7 of the TRA Rules and Regulations.

Purchased gas adjustments and all applicable taxes and fees are in addition to the above stated base rates in accordance with The Rules, Regulations and Orders of the TRA and Laws of the State of Tennessee.

SERVICE AVAILABILITY

All requests for new and additional service or the transfer of existing service to higher priority end use will be supplied based upon the Company's judgement as to the available gas supply, Customer's load factor or use pattern, end use priority as specified by the Federal Energy Regulatory Commission (FERC), impact on the local economy, and The Rules, Regulations, and Orders of the TRA and Laws of the State of Tennessee.

SERVICE INTERRUPTION AND CURTAILMENT

Gas service under this schedule is subject to the provisions contained within TRA Schedule No. 6, "Schedule for Limiting and Curtailing Service."

TREATMENT OF NEGOTIATED MARGIN LOSSES

Margin losses under this rate schedule shall be recovered by the Company through the Company's Actual Cost Adjustment (ACA) as provided in the Company's Purchased Gas Adjustment (PGA) Rider (TRA Service Schedule No. 11).

NASHVILLE GAS COMPANY
665 Mainstream Drive
Nashville, Tennessee 37228
A Division of Piedmont Natural Gas Company
TRA Rate Schedule No. 10

RATE SCHEDULE NO. 10
Resale Service

AVAILABILITY
Sales for Resale Service is available under this rate schedule to any qualified local distribution company who purchases natural gas for the purpose of reselling same, where the Company's distribution mains are suitable for supplying the desired service.

MARGIN RATE

Demand Charge (per therm of billing demand)	$.80000
Commodity Charge (per therm)	$.07000

MONTHLY MINIMUM BILL
The minimum monthly bill shall be the monthly demand charge.

BILLING DEMAND
Demand determinants shall be those agreed to in the contract.

SERVICE AGREEMENTS
All customers purchasing gas pursuant to this schedule shall be subject to the Company's standard contracts and/or service applications and subject to the Company's Rules and Regulations as filed with the TRA.

PAYMENT TERMS
All bills for service are due upon presentation and the net rates are applicable if payment is made on or before the last date of payment stated on the bill. Payments made after that date shall be for the gross amount which is greater by five percent (5%) than the net billing.

RETURNED CHECK CHARGE
In the event a customer's check for payment is returned to the Company marked NSF (Non Sufficient Funds) the customer will be assessed a charge of $20.00.

ADJUSTMENTS
Bills for service are subject to adjustment caused by changes in the cost of purchased gas in accordance with

Rule No. 1220-4-7 of the TRA Rules and Regulations.

Purchased gas adjustments and all applicable taxes and fees are in addition to the above stated margin rates in accordance with The Rules, Regulations and Orders of the TRA and Laws of the State of Tennessee.

SERVICE AVAILABILITY

All requests for new and additional service or the transfer of existing service to higher priority end use will be supplied based upon the Company's judgement as to the available gas supply, customer's load factor or use pattern, end use priority as specified by the Federal Energy Regulatory Commission (FERC), impact on the local economy, and The Rules, Regulations, and Orders of the TRA and Laws of the State of Tennessee.

SERVICE INTERRUPTION AND CURTAILMENT

Gas service under this schedule is subject to the curtailment provisions contained within TRA Schedule No. 6, "Schedule for Limiting and Curtailing Service".

NASHVILLE GAS COMPANY
665 Mainstream Drive
Nashville, Tennessee 37228
A Division of Piedmont Natural Gas Company
TRA Rate Schedule No. 13

SERVICE SCHEDULE NO. 13
Weather Normalization Adjustment (WNA) Rider

I. Provision for Adjustment

The base rates per therm (100,000 Btu) for gas service set forth in any rate schedules utilized by the Authority in determining normalized test period revenues shall be adjusted by an amount hereinafter described, which amount is referred to as the "Weather Normalization Adjustment".

The Weather Normalization Adjustment will be applicable for bills rendered on and after November 1 and continuing through the final billing cycle in March of each year.

II. Definitions

For the purposes of this Rider:

"Authority" means the Tennessee Regulatory Authority.

"Relevant Rate Order" means the final order of the Authority in the most recent litigated rate case of the Company fixing the rates of the Company or the most recent final order of the Authority specifically prescribing or fixing the factors and procedures to be used in the application of this Rider.

III. Computation of Weather Normalization Adjustment

The Weather Normalization Adjustment shall be computed to the nearest one-hundredth cent per therm by the following formula:

$$WNA_i = R_i \quad * \quad \frac{(HSF_i(NDD-ADD))}{(BL_i + (HSF_i \times ADD))}$$

Where:

I = any particular rate schedule or billing classification within any particular rate schedule that contains more than one billing classification.

WNA_i = Weather Normalization Adjustment Factor for the i^{th} rate schedule or classification expressed in cents per therm.

R_i = weighted average base rate (base rate less any embedded gas cost) of temperature sensitive sales for the i^{th} schedule or classification utilized by the Authority in the Relevant Rate Order for the purpose of determining normalized test year revenues.

HSF_i = heat sensitive factor for the i^{th} schedule or classification utilized by the Authority in the Relevant Rate Order for the purpose of determining normalized test year revenues.

NDD = normal billing cycle heating degree days utilized by the Authority in the Relevant Rate Order for the purpose of determining normalized test year revenues.

ADD = actual billing cycle heating degree days.

BL_i = base load sales for the i^{th} schedule or classification utilized by the Authority in the Relevant Rate Order for the purpose of determining normalized test year revenues.

IV. Filing with Authority

The Company will file as directed by the Authority (a) a copy of each computation of the Weather Normalization Adjustment, (b) a schedule showing the effective date of each such Weather Normalization Adjustment, and a schedule showing the factors or values derived from the Relevant Rate Order used in calculating such Weather Normalization Adjustment.

2nd Revised Addendum to TRA Service Schedule No. 13

Section 1 – General Service Policy

Section 2 - Meters

Section 3 – Fuel Lines

Section 4 – Service Lines

Section 5 – Mains

Section 6 – Rules and Regulations Governing Supply and Consumption of Gas

Nashville Gas Company Service Regulations

Section 1 – GENERAL SERVICE POLICY OF NASHVILLE GAS

Nashville Gas (hereinafter referred to as "the Company") will make free service calls, within certain broad guidelines, around-the-clock on customer appliances connected to our mains. Those service requests requiring immediate attention will be answered as soon as possible. Those of less urgent nature will be answered on a scheduled basis according to the workload. In either case, the Company will make every effort to answer each customer's call promptly and to leave all appliances operating at maximum efficiency.

Free Services (1220-4-5-.06(iii))

The Company provides the following services at no charge to the customer during normal working hours (Mon - Fri, 8am - 5pm, excluding Holidays):

- Install gas meters and regulators for new customers
- Turn-on, turn-off, & service gas meters
- Check for gas leaks
- Investigate the possible presence of carbon monoxide
- Cut off pilots
- Disconnect appliances (disconnect & cap existing pipe only)
- Food Service equipment service including leveling, adjusting, or calibrating
- Diagnostic time or time to provide an estimate for jobbing work
- Quotes for appliance installation
- The first light-up and service call of the heating season on central furnaces (a flat charge applies for each additional light-up)
- Gaslight turn-on and re-lighting
- Service leased water heaters
- Service appliances other than central heating systems or gas air conditioners (no parts needed) including:
  - Service calls to diagnose problems
  - Check gas pressure
  - Adjust burners
  - Clean air mixers
  - Light pilots
  - Clean & adjust pilots
  - Examine flue connections & check draft
  - Check and calibrate thermostats & controls
  - Check appliance wiring & other electrical components
- Service central heating systems including floor furnaces and unit heaters

including:
  - Service calls to diagnose problems
  - Gas and air adjustments on burners and pilot assemblies
  - Adjustments of controls and thermostats
  - Minor electrical repairs that do not require materials
- Service Arkla, Bryant, and other gas-fired air conditioners including:
  - Service calls to diagnose problems
  - Gas and air adjustments on burners and pilot assemblies
  - Checks of controls and thermostats
  - Pumping of water-cooled units to maintain operation
  - Purging of non-condensables from air-cooled units

Note: When an appliance is not operating, every effort will be made to answer the call without delay, and in most circumstances, on the same day. Should repair work be required, parts needed to complete the repair will be ordered from the manufacturer and installed if the customer so desires. There is, however, a charge for this service.

The company will also provide immediate response to any hazardous situation that might cause threat to life or property after normal working hours (Mon – Fri, 5pm - 8am; Sat; Sun; & Holidays) at no charge, including:

- Fire or explosion
- Gas leak
- Damaged gas main or service (parts & labor may apply)
- Gas appliance that won't cut off
- Carbon monoxide investigation
- Leased water heater service within 24 hours

Services For Which There Are Charges

- Installation or connection of gas appliances
- Reconnects of gas appliances
- Repair of gas appliances where parts are needed (except central systems)
- Repair or replacement parts, electrical equipment, or thermostats on Arkla or Bryant gas air conditioners beyond Service/Warranty Contract
- Cleaning condensers and condensate lines on gas A/C units
- Gaslight repairs and reconditioning
- Miscellaneous pipe work
- Change outs and reconnects of food service equipment
- Repair of gas air conditioning units installed after January 1, 1975; units on which the Warranty/Service Contract has expired; and units or installations not approved by the Company's Service Department
- Work involving replacement of filters and out-of-warranty parts (charged on a "time and materials" basis)

- After hours work that requires a repair including commercial cooking and water heating equipment (the customer may be given the option for jobbing repair at the current overtime rate, if time and workload permits)

Work the Company Does Not Provide

- Replacement of filters in central heating equipment
- Installation, connection, or repair of unit heaters and central heating equipment
- Repair or replacement of unit heaters and other equipment requiring an electrician
- Repair or installation of gas appliances that are not AGA certified or where gas appliances are not used in accordance with manufacturer listing
- Repairs on heating equipment that requires parts will not be made except on those units sold by Nashville Gas prior to May 1, 1974. In addition, the Company does not install furnace filters
- No work will be performed on electrical air conditioning units installed with a gas furnace (this work will be referred to the installer or mechanical contractor)

Termination Policy

Reasons for Termination of Service or Denial of Service (1220-4-5-.18)

Service may be refused or discontinued for any of the reasons listed below. Unless otherwise stated, the customer shall be allowed a reasonable time in which to comply with the rule before service is discontinued.

1. With notice in the event of a condition determined by the utility to be hazardous
2. Without notice in the event of customer use of equipment or the utility's service to others
3. Without notice in the event of tampering with the equipment furnished and owned by the utility
4. Without notice in the event of unauthorized use
5. For violation of and/or non-compliance with the utility's rules on file with and approved by the Tennessee Regulatory Authority
6. For failure of the customer to fulfill his contractual obligations for service and/or facilities subject to regulation by the Tennessee Regulatory Authority
7. For failure of the customer to permit the utility reasonable access to its equipment
8. For non-payment of bill provided that the utility has made a reasonable attempt to effectively collect and has given the customer written notice that he has at least five (5) days, excluding Sundays and holidays, in which to make settlement on his account or have his service denied

9. For failure of the customer to provide the utility with a deposit as authorized by 1220-4-5-.14 of the Tennessee Regulatory Authority Statutes
10. For failure of the customer to furnish such services, equipment, permits, certificates, and/or rights-of-way, as shall have been specified by the utility as a condition to obtaining service, or in the event such equipment or permission are withdrawn or terminated.

Insufficient Reasons for Denying Service (1220-4-5-.19)

The following shall not constitute sufficient cause for refusal of service to a present or prospective customer:

1. Delinquency in payment for service by a previous occupant of the premises to be served
2. Failure to pay for merchandise purchased from the utility
3. Failure to pay for a different type of class of public utility service
4. Failure to pay the bill of another customer as guarantor thereof
5. Failure to pay a back bill rendered in accordance 1220-4-5-.17(a) of Tennessee Regulatory Authority Statutes.

Disconnection

The Company has the right to shut off gas from any consumer who may be in arrears for a longer period than twenty (20) days in paying for gas furnished hereunder or under any other prior or subsequent agreement, or for gas used by the consumer at the consumer's present or any prior subsequent address. The said twenty-day period commences to run from the date the bill was rendered. The Company will not shut off gas for non-payment without first mailing a notice to the consumer giving him seven (7) calendar days to pay the bill in arrears.

Reinstating Service

If natural gas service is disconnected for nonpayment, service will be restored after the customer has paid the total amount past due, paid the reconnection charge and paid a deposit.

Third-Party Notification

At the customer's request, the Company will send a copy of any disconnection notice to a designated third party. However, the designated third party is not responsible for paying the bill.

Medical Emergencies and Life Support Devices

The Company will delay disconnection of gas service for 30 days if a physician, public health officer or social service official certifies in writing that discontinuing gas service will worsen an existing medical emergency for a permanent resident of the premises where services are rendered. A prompt request is important. During the 30-day extension, payment of the bill must be guaranteed by another person or entity that is acceptable to the Company.

The Company will not disconnect service at the service address if there are natural gas appliances that are critical to maintaining the health of one or more permanent residents. The Customer Service Department must be contacted to determine whether a gas appliance is considered a life-support device.

Notice of Rights and Remedies

Should the Customer request help in paying his natural gas bill the Company will provide the customer with a list of community agencies that provide aid in paying their natural gas bill. The company will also, in some cases, make alternative pay arrangements if the customer is temporarily unable to pay his natural gas bill. However, if such an agreement is made the customer gives up their right to dispute the amount due under the agreement. If the customer does not fulfill the terms of the agreement, the Company may disconnect service and a new pay agreement will not be offered before we disconnect service.

If the Customer wants to appeal an unfavorable decision regarding a natural gas bill, they may contact the Tennessee Regulatory Authority's Complaint Division, 460 James Robertson Parkway, Nashville, TN 37219 (615-741-3939 or 800-342-8359). This must be done before the net due date if the dispute involves a disconnection notice. The Company will not disconnect service for nonpayment of the disputed portion of the bill while it is being reviewed. The Customers right to appeal will not expire if delay on the Company's part makes it impossible to contact the TRA within the required time period. The Customer also has the right to suspend payment of the disputed portion of the bill while the dispute procedures mentioned above are in progress.

Customer Classifications

Residential

Residential service applies to single private residences, including separate private units of apartment houses and other multiple dwellings, actually used for residential purposes, which are separately metered. A dwelling shall be considered non-residential which has more than one apartment or condo on the same meter. A duplex, for example, shall be considered residential only if each of the two units is separately metered. A residential dwelling will also be considered commercial if in

the Company's judgment such dwelling and/or usage is identifiable as being used primarily (more than 50%) for business or professional purposes.

Commercial

Commercial service applies to customers engaged in selling, warehousing, or distributing a commodity or service in some business activity or profession or in some other form of economic or social activity. For example, and not by way of limitation, all local, state and federal governmental agencies, any organizations or institutions whether profit or non-profit, with uses other than those involving industrial or residential requirements are classified as commercial customers. Also included are offices, stores, schools, dormitories, hotels, restaurants, apartment houses, religious institutions, orphanages, clubs, boarding and rooming houses, communes, motor courts, camps, and rehabilitation organizations.

Industrial

Industrial service applies to customers primarily engaged in a process that creates or changes raw or unfinished materials into another form of product, including the generation of electric power.

Firm Service

Firm service applies to those schedules or contracts under which the Seller is expressly obligated to deliver specific volumes within a given time period and under which the Seller anticipates no interruptions. This obligation does permit unexpected interruption in those cases where the supply to higher priority customers is threatened.

Interruptible Service

Interruptible (Limited Availability) service refers to those schedules or contracts under which the Seller is not expressly obligated to deliver specific volumes within a given time period. This category of service anticipates and permits interruption on short notice, or service under schedules or contracts that expressly or implicitly require installation of alternate fuel capability.

Priority of Service

The Company has established the following categories of service in order of priority:

1. Residential, small commercial (less than 50 MCF on a peak day), school, hospital, police protection, fire protection, sanitation, or correctional facility requirements
2. Essential agricultural requirements

3. Large commercial requirements (50 MCF or more on a peak day), firm industrial requirements for plant protection, feedstock and process needs, pipeline customer storage injection requirements, and firm industrial sales up to 300 MCF per day
4. All industrial requirements not specified in 2, 3, 5, 6, 7, 8, 9 or 10
5. Firm industrial requirements for boiler fuel use at less than 3,000 MCF per day, but more than 1,500 MCF per day, where alternate fuel capabilities can meet such requirements
6. Firm industrial requirements for large volume (3,000 MCF or more per day) boiler fuel use where alternate fuel capabilities can meet such requirements
7. Limited Availability requirements of less than 300 MCF per day, where alternate fuel capabilities can meet such requirements
8. Limited Availability requirements of more than 300 MCF per day but less than 1,500 MCF per day, where alternate fuel capabilities can meet such requirements
9. Limited Availability requirements of intermediate volumes (from 1,500 MCF per day through 3,000 MCF per day), where alternate fuel capabilities can meet such requirements
10. Limited Availability requirements of more than 3,000 MCF per day, but less than 10,000 MCF per day, where alternate fuel capabilities can meet such requirements
11. Limited Availability requirements of more than 10,000 MCF per day, where alternate fuel capabilities can meet such requirements.

Meter Turn On

There is no charge for meter turn on for a new customer. There will be a flat charge for meter turn on for an existing customer or member of same family or household. For turning on meters shut off for non-payment of bills there will be a flat charge for meter turn on plus payment of all past due bills. The Company may also secure an additional customer deposit. If an existing customer requests that his/her meter be turned off for the summer to avoid minimum bills during the summer period and then requests the Company to turn the meter back on, the flat charge for meter turn on will apply.

Gas Wastage (1220-4-5-.06(iv))

Excessive gas consumption without knowledge by the customer may possibly be the result of gas leakage or appliance malfunction. Gas bill adjustments generally will not be permitted for improper and/or inefficient operation of gas appliances or for gas leaks. Adjustments for all special cases will be based upon individual merit dependent upon such factors as prompt action by the customer, the nature of the problem, maintenance of facilities by the customer, the time period involved, etc. An example might possibly be a

hot water relief valve stuck open or a broken hot water line on a gas water heater. All such special adjustments shall not exceed 35% of the wastage and shall be approved by the Director of Customer Service (residential) or the General Manager of Marketing (commercial). Wastage shall be based on Service Department inspection or Customer Service Department researches. The Director of Customer Service shall determine consumption rates. Duration of the adjustment shall not exceed 30 days. Where such gas appliance malfunction or gas leakage was directly caused by actions of Company personnel or occurred within 30 days of the date the work was performed by Company personnel, the Company will grant 100% credit of wastage to the customer. The amount of wastage will be approved by the Service Superintendent and not exceed a period of 30 days.

Title to Facilities

The title to all facilities including mains, gas service lines, meters, and accessory equipment up to and including the outlet of the meter assembly shall be vested in the Company, notwithstanding any charge which may be made to the customer for extending service.

Appliance Classifications

Major appliances

- central heating systems
- circulating heater*
- floor furnaces
- gas air conditioners
- water heaters

* A circulating heater will be considered as a major appliance when it has all of the following features:

1. Has an input rating of 40,000 BTU per hour or greater (two or more smaller vented circulating heaters having a combined output of 40,000 BTU or more will be considered as one major appliance)
2. Is used for heating throughout the heating season
3. Is the major source of space heating in the building

Minor appliances

- clothes dryers
- gas fireplaces
- gaslights
- grills

- incinerators
- log starters
- logs
- ranges
- swimming pool gas water heaters

General Installation / Connection & Repair Policy

The following regulations are applicable for residential natural gas appliance connections on Nashville Gas lines. The delivery and uncrating of the appliance is the responsibility of the customer/dealer. The connection/installation of commercial and/or industrial gas appliances is the responsibility of dealer. All natural gas appliance installations on Nashville Gas lines shall comply with the provisions of the Southern Gas Code (SBCCI), as updated. All appliances must also be AGA approved. The Company reserves the right to refuse to connect those appliances which, in its judgment, do not conform to appropriate safety requirements.

Space Heaters and Central Heating

The Company will provide free of charge: a service call to diagnose the problem, gas and air adjustments on burners and pilot assemblies, adjustments to controls and thermostats, and minor electrical repairs not requiring material. The Company shall not make repairs to gas furnaces other than pilots, thermocouples, or other parts we normally stock. A heating contractor, preferably the one who installed the equipment, will perform such repairs. The Company does not install air filters. The Company will make repairs to gas heating equipment that was installed by the Company. Such repairs will be charged to the customer on a "Time and Material" basis or at a flat charge if so provided for herein.

A **Gas Furnace Safety Inspection** is provided without charge by the Company and covers the following:

1. Check for gas leaks at the meter and on the customers' gas fuel lines.
2. Check furnace vent.
3. Safety inspection of the gas fired equipment to ascertain that safety and other limit controls are operating correctly.
4. Safety inspection of the furnace combustion chamber to determine if cracked or unsafe.

A **Gas Furnace Operational Inspection** is provided at the request of the Federal Housing Authority, Veteran's Administration, HUD, real estate/mortgage firms, or other parties interested in a more thorough operational inspection of the gas fired heating equipment. Such requests should be initially referred to the Marketing Department. There is a charge for this inspection that includes the following:

1. Check for gas leaks at the meter and on the customers' gas fuel lines.
2. Check furnace vent.
3. Safety inspection of the gas fired equipment to ascertain that safety inspection and other limit controls are operating correctly.
4. Inspection of the combustion chamber for safety (check for cracked chamber) and for operational purposes to determine the condition of furnace.
5. Calculate actual equipment input rate (Btu/h) to determine if the burner is operating in accordance with the manufacturers' instructions and rating plate.
6. Make an inspection of the air delivery system to check for the condition of ductwork and delivery of reasonable air volumes.
7. Provide a written report to the client on findings of Operational Inspection.

Automatic Vent Dampers

Automatic vent dampers that are AGA certified and UL listed are acceptable. Dampers must be installed in accordance with the manufacturer's instructions. The name of the qualified installing agency must be affixed to the damper. The vent damper must be so installed and wired so that upon failure it will "fail safe" in the open position. If not, the damper and the associated gas appliance will be red-tagged and turned off. The Company will not install, repair, or provide service on the damper installation. In the instance of a malfunction or a retrofit damper installation, the Company will secure the damper in a "make safe" position and advise the customer to secure repair through the distributor, manufacturer, or installing dealer. The Company does not endorse any specific brand unit and does not endorse or guarantee any claimed energy savings.

Unvented Gas Heaters

The use of UL listed unvented natural gas space heaters is permitted in accordance with the Southern Gas Association Code. However, they may not be located in bedroom areas or sleeping quarters, nor in confined areas where the listed total input rating of such heaters is greater than 30 BTU/HR/CF of space volume (confined space definition). Further, the gas meter will not be turned on in the following cases:

- Where unvented heaters are the primary source of heat in a residence
- Where unvented heaters are the primary source of heat in commercial or industrial structures unless specifically approved by the Service Superintendent or General Superintendent as being unconfined space and adequately ventilated

Gas Air Conditioning

On Arkla, Bryant, and other gas-fired air conditioning units connected to our lines, the Company will provide the following services without charge to the customer:

1. Make service call to diagnose the problem.
2. Perform gas and air adjustments to all burners and pilot assemblies.
3. Check thermostats and controls.
4. Pumping of water-cooled units in order to maintain operations.
5. Purging of non-condensables from air-cooled units.

Other than that described above, and unless specifically covered under appropriate customer Warranty/Service Contract, service work involving repair or parts replacement will be charged to the customer on a "Time and Material" basis. The General Manager of Marketing or the Service Superintendent will determine any exceptions. On request by customer, the Company will replace air filters on gas air conditioning system on our lines for a flat charge, regardless of the number of filters required per job. This will apply to plain flat filters only, not bag or other types.

Water Heaters

All installations of and repairs on water heaters purchased from Nashville Gas will be charged on a "Time & Material" basis. The Company will provide dip tube replacement, thermostat control, and other repairs to the residential customer for a charge based on "Time & Material". For repairs of commercial gas water heaters, the customer is to be referred to local dealer or plumber.

Dryers

Installations of and repairs on residential gas clothes dryers will be charged on a "Time & Material" basis. Repair requests on commercial gas clothes dryers, other thermocouples or other parts normally stocked by our storeroom, will be referred to the appropriate dealer for servicing.

Gas Grills

The Company, as part of its free service program, will make burner air and gas adjustments, check controls, and assist in problem diagnosis on a no-charge basis. Installations of and repairs on gas grills will be charged on a "Time & Material" basis. Cleaning and painting of the grill will be the responsibility of customer. The Company may also perform the following:

1. Post Replacement: Gas grill posts will be replaced for "Time and Material." If a special post must be fabricated, the cost of the installation and post will be "Time and Material."
2. Repairs to Cut or Damaged Tubing: If repair to tubing is performed by the Company, the charge will be "Time and Material". A service representative can sometimes perform this work, but generally a three-man fitting crew is required.
3. All Other Repairs -- All other repairs will be performed at "Time and Material".

Gaslights

With regard to gaslights, the Company will turn on, re-light and replace mantles without charge to the residential customer. Should the residential customer wish to replace the mantles himself, the Company will, upon request, mail to him replacement mantles for residential use in his gaslights without charge. Residential customers may also pick up free replacement mantles for use only in their gaslights at the Company's storeroom. The same gaslight service policies apply to commercial/industrial customers except they will be charged for the mantles. Subdivision entrances and multi-family developments do not qualify for residential use. Services do not include the painting of gaslights or glass cleaning; these are considered the owner's responsibilities.
The Company will recondition the customer's gaslight, including replacement of mantles, cleaning and/or replacement of glass panes as required, and painting repair of gaslight as necessary, for a flat labor charge plus cost of replacement parts (other than mantles). In the case of multiple gaslights on the same piece of property, the labor charge shall apply only to the first light. For each additional light on the same property, an additional charge plus parts (other than mantles) will apply. The same policy applies to commercial customers except they will also be charged for mantles. Installation of and repairs on gaslights will be charged on a "Time & Materials" basis. The Company may also perform the following:

1. Post and/or Light Head Replacement: Post only replacement will be performed by the company on a "Time & Material" basis. All customers needing to purchase a gaslight head will be referred to the Home Energy Center.
2. Repairs to Cut or Damaged Tubing: If repair to tubing is performed by the Company, the charge will be "Time & Material". A service representative can sometimes perform this work, but generally a three-man fitting crew is required.
3. Complete Replacement: The customer shall be referred to the Company's Home Energy Center. If the customer provides a replacement light head and post of the same basic type, the Company will connect the replacement, charging the customer on a "Time & Material" basis.

4. All Other Repairs: Other repairs will be performed on a "Time & Material" basis.

Gas Logs & Log Starters

All installations of or repairs on gas logs and log starters will be charged on a "Time & Material" basis.

Other Miscellaneous Residential Gas Appliances

All installations of or repairs on other approved gas appliances will be charged on a "Time & Material" basis.

Customer Options

In those instances where a flat charge for connection/repair is listed, the customer may elect prior to our performing the work involved to be charged on a "Time & Material" basis rather than the flat charge. However, having elected to take the T&M option, after the work is completed that decision cannot be reversed and customer will be charged on the "Time & Material" basis. All customer charges described herein are subject to change by the Company.

Appliance Parts Broken by Company Personnel

From time to time when our service personnel are repairing a customer's gas appliance, other adjacent parts become broken during the course of the repair. Such instances leave a question as to whether the customer should be charged for that additional part. Such decisions shall be at the discretion of the supervisor involved. The following guidelines should be of assistance.

No Charge to Customer

1. Breakage caused by negligence on part of our personnel. In such cases, the employee will be counseled to avoid repetition.
2. Accidental breakage of part considered "relatively new" and our representative was using care and attention to work procedures.

Charge to Customer

1. Parts that may be broken after customer first being warned that we will use care in repair but the customer will be responsible for all parts involved. If the service representative has doubts about the condition of the appliance, he should so warn the customer initially.
2. Any parts broken which are not "relatively new" and in process of normal repair with our representative using reasonable care in work procedures. Where we

make a mistake we'll stand behind it, but we will not unilaterally absorb the cost of other parts broken, they will be considered part of the job.

Sales to Employees

The following is applicable for active permanent employees, retired employees and retiree's surviving wife or husband until such time as survivor remarries:

1. Employees may purchase Natural Gas Appliances and accessories at cost from the Home Energy Center. Appliances must be purchased for use only in the employee's own home.
2. Pipe, pipe fittings and similar material carried in stock by the Company may be purchased by employees at warehouse cost, but these also must be used in the employee's own home. The employee's department head must approve purchases exceeding $15.00. Each month, a list of employee purchases will be supplied to the employee's department head. Each purchase must be released to personnel for documentation and approved by the Customer Service Department if financing is requested.
3. Central gas HVAC systems purchased through Qualified Gas contractors and financed through the Nashville Gas Financing Program will be financed at the lowest rate available to customers. (Presently 8.9%) The units must be installed in the employee's own home.

There is no intent in these rules for employees to unfairly benefit from Company discounts. The giving of false information to obtain a discount from the Company will be considered a cause for discipline.

When an employee purchases a qualifying residential natural gas appliance from the Home Energy Center for connection on Company gas lines for use in his own home, the Company will provide normal installation at cost with no mark up to the employee. Qualifying residential natural gas appliances are as follows:

- Gas Dryer
- Gas Range, Cooktop, or Walloven
- Gas Grill
- Gas Water Heater
- Gas Space Heaters
- Gas Logs or Log Starter
- Gaslight

Appliances purchased elsewhere will be installed at the normal installation charges as set forth in the service Rules and Regulations Manual. Floor furnaces, central heating and cooling equipment, including pre-vent heaters and wall furnaces, commercial appliances, and pool heater installations are also not qualifying and should be referred to plumbing or

mechanical contractors. Relocation of the above listed applicable natural gas appliances, within an employee's own home, will be performed at cost of labor and materials, but no overhead will be charged.

Residential appliance repair on natural gas appliances in use by employee in his own home on Company lines will be performed by the Company with the employee being charged only for the cost of materials with no overhead. Replacement of furnace combustion chambers is not included in this program. Warranty repair work for an appliance obtained from a dealer and still in warranty will be performed by the dealer. The Vice President of Tennessee Operations and the Superintendent of the Service Department will resolve any questions or interpretations of the above policies.

Liquid Propane Conversion to Natural Gas

Any new conversion customer converting from liquid propane (LP) to natural gas will receive gas service line and meter installation on the same basis as any other residential or commercial customer. The fuel lines and any other required conversion labor and materials from the meter to the gas equipment will be the responsibility of the customer. Contractors other than Nashville Gas must perform these conversions.

Residential
Conversion of AGA approved residential gas dryers, grills, logs, and ranges from LP to natural gas is available for a flat charge for each appliance. This charge is to include change of burner orifices and addition or modification of gas appliance pressure regulator. Where a burner cannot be converted and new burner is required, the conversion charge will be "Time and Material." The charge for conversion of more than one of these appliances at the same time, shall be "Time and Material". Conversion of furnaces or other appliances will be done on "Time and Material" basis.

Commercial
Conversion of AGA approved residential gas appliances or commercial gas appliances in a commercial structure will be performed on a "Time and Material" basis. Service line and meter installation will be on the same basis as any other new customer. Any necessary fuel line, house piping and appliance connection will be done on a "Time and Material" basis.

Temporary Conversions to Liquid Propane
When deemed necessary by Nashville Gas, new construction and conversion customers will be temporarily converted to liquid propane at no charge. The conversion back to natural gas will also be performed by Nashville Gas at no charge.

Nashville Gas Company Service Regulations

Section 2 – METERS

Installation & Location

The Company performs standard meter installation at no charge to the customer. However, a customer desiring an underground meter installation will be charged for the additional cost. The most desirable and serviceable location for a new residential meter installation is on the outside of the structure, approximately four feet past the front wall, where it is not subject to damage from automobiles. The new meter shall be so located unless it is physically impractical or it interferes with customer's use of his property. If a problem arises, the Service Superintendent and General Manager of Marketing will make a decision on a location after consulting with the Construction Superintendent. Underground meter locations will not be used except as approved by the Vice President of Tennessee Operations.

The proper meter location for large outside commercial or industrial meters, especially those having multiple structures, is at the property line wherever possible. Under no circumstances shall a meter be located within 10 feet of a combustion air intake. Further, meters shall not be located within 3 feet of an ignition source such as heating or air conditioning equipment, water heaters, electric meters, switch gear, electric panels, etc.

The customer or owner must at all times provide a proper and accessible location for all meters and regulators. The following rules apply as well:

1. All meters installed on high-pressure services must be installed outdoors.
2. All "farm tap" meters shall be located at the main.
3. All meters served from standard and medium pressure mains shall be installed outdoors, except in those instances in which it is extremely difficult to do so or is very undesirable from the customer's viewpoint. In such cases, the meter may be installed indoors, at the discretion of the Company, if the installation conforms to applicable codes.
4. If a customer desires to use gas solely for swimming pool water heating, the meter shall be located at the house and the fuel line run from this point to the pool heater.
5. If located indoors, the meter shall not be located:
   a. Above the ground floor
   b. Less than 3 feet from a hot air furnace or boiler
   c. Less than 3 feet from a gas oven or hot water heater
   d. On or under stairways
   e. In bathrooms or adjoining clothes closets
   f. In small, unvented, or confined spaces

g. Where subject to damage, extreme high temperature, or corrosion
h. In entrances or exits so as to obstruct passage in any way
i. Less than 10 feet from boilers or other sources of heat, if the meter capacity is 80B or larger

Meter Relocation

Outside meters will be relocated when requested by the customer, however, the customer will be charged Time and Material.

Meter Testing

The Company maintains a regular program of meter testing and change-out to insure metering accuracy. Upon written request from the customer for a special test of his meter, the Company will inspect the meter at a reasonable time in accordance with provisions of Rules, Regulations and Statutes Governing Public Utilities as issued by the Tennessee Regulatory Authority. Such meters will be considered to register correctly if the error is not greater than plus or minus two percent (2%). If the meter is found to be registering incorrectly, the meter will be repaired or adjusted to conform to standards with no charge to the customer for testing or repair. If the meter is registering correctly, there will be a meter testing charge to the customer.

Meter Tampering or By-pass

The term "metered gas" is defined as "all gas that has passed through the customer's meter." It is Company policy to prosecute those persons involved where the Company finds evidence of meter tampering or by-pass. Such acts are illegal, as well as extremely dangerous, and Tennessee State Law provides for substantial punishment. In such cases, the customer or party involved will be charged for all gas used and the cost of meter repair including travel time and all other related expenses on a "Time and Materials" basis. At the Company's option, gas service may also be terminated. The Regional Customer Service Manager, the Manager of Meter Reading, and the Service Superintendent will handle such investigations.

Meter Damage

The customer has a responsibility to provide reasonable protection for the Company's metering facilities from damage by his employees, customers, and the general public. It is not, however, his equipment and he cannot be expected to provide security such as guards, surveillance, enclosures, etc. to protect the Company's meters from acts of vandalism or from the general public. The Company selects and approves meter locations.

If a location is in a drive, parking lot, alley, etc. where damage is likely, then it is the Company's responsibility to provide adequate protection such as posts, etc. In cases where the Company's metering facilities are damaged, the Service Department shall conduct investigations of the incidents. The Chief Engineer will approve all proposed meter damage bills after consultation with the General Manager of Marketing and the Service Superintendent. With regard to actual damage responsibility, the following applies:

1. If the customer or his employees cause damage (accidentally or purposely), then the customer should be billed for damages.
2. If a visitor, commercial vehicle, or general public vehicle damages a meter, damage relief should come from that person or firm causing the damage. Damage relief shall not come from the customer, unless it can be proven that the damage by a third party resulted from negligence on the customer's part.

Nashville Gas Company Service Regulations

Section 3 – FUEL LINES

Customer gas fuel lines installed on Company mains shall comply with provisions of the Southern Gas Code (SBCCI), the appropriate gas code recognized by the Metropolitan Government of Nashville and Davidson County, Nashville Gas, or other county regulations. The care and maintenance of all customer-owned underground fuel lines is the responsibility of the customer. All piping carrying metered gas is considered a fuel line. When in place in a finished building, hidden from view and not easily accessible, the piping is considered a concealed fuel line. All fuel lines will be (a) standard threaded and coupled or welded steel minimum schedule 40 pipe (depending on operating pressure), or (b) plastic pipe or tubing of the following types: TR-418 PE 2306 -- orange color, Drisco 7000 or 8000 PE 3406 -- black color, or approved equal.

Fuel Lines May

- Be installed underground in accordance with applicable codes to include corrosion protection.
- Be installed to serve any number of buildings if all the buildings are located on a single or continuous tract of land with common ownership.
- Be concealed if installed in accordance with applicable codes.

Fuel Lines May Not

- Be smaller than 1-1/4" coated steel or 1-1/8" x.090 wt Polyethylene (PE) tubing if installed underground (unless serving only gaslights, grills, or logs). Fuel lines to remote heating units may be smaller as approved by the Service Department. The Service Department will determine the size of fuel lines for mobile homes.
- Extend to or across property under different ownership.
- Cross any public street, alley, or highway. Fuel lines shall be sized to have a minimum pressure drop between the meter outlet and any appliance of 0.3-inch water column. Those fuel lines served from standard pressure distribution systems will be sized on 0.2-inch water column pressure drop.

Installation Charges

All fuel lines will be installed at the customer's expense with one exception: when determined necessary, the Company may choose to install a fuel line instead of a service line. In this event, ownership with maintenance responsibility shall remain with the customer. In such cases, footage of fuel line installed shall be equal to the footage of

service line that would be "free service" if the customer were served in the usual manner (a "farm tap" customer is an example). Charges for residential underground fuel lines will be "Time & Material." Pre-installation estimates may be obtained from the Service Department (for plastic tubing) or the Construction Department (for all other underground fuel lines). The customer at his expense will replace any sidewalk or pavement cut. The customer will be charged "Time and Materials" for all fuel line repairs (excluding tubing to gaslights and grills) made by the Company.

Commercial or Industrial Fuel Lines

Commercial or Industrial fuel line piping work requests shall be referred to local plumbing contractors, except in special cases as approved by the Superintendent of Construction and the General Manager of Marketing. If the Company installs a customer's underground fuel line, the charge will be "Time and Materials."

Nashville Gas Company Service Regulations

Section 4 – SERVICE LINES

Service lines are pipes used to carry unmetered gas from the main to the customer's meter. The preferred route of the service line will be from the nearest adequate main to four (4) feet beyond the customer's nearest building wall. Service lines, service relocations, and extensions may be installed in accordance with applicable codes by either the Company or by a contractor approved by the Company. The complete installation must be inspected and approved, prior to being backfilled, by the appropriate Company representative. In general, service lines should not be laid on vacant property adjoining the building to be served if there is likelihood that a building will be constructed on the vacant property. Service line installation policies are subject to conditions of gas supply and the Company's limited service attachment programs.

Customer Types

Residential

The Company will install free of charge 100 feet of service line for one major appliance where no main extension is required. An additional 50 feet of service line shall be installed free of charge for each additional appliance. These footages refer to the service line between the customer's property line and four (4) feet past the nearest outside building wall. The customer shall replace any sidewalk or pavement on his property that is cut.

For service lines to supply appliances not included as major appliances, the customer shall be charged the Company's actual cost for the entire length of the service line from the main to the meter. However, this rule shall not be construed as prohibiting the Company from installing service lines for certain groups of minor appliances as long as the installation is made under more favorable terms to the customer and no discrimination is practiced between customers whose service requirements are similar.

Commercial or Industrial

For permanent use and where revenues justify, the Company will install free of charge 100 feet of service line measured from customer's property line or four feet past the nearest building wall, whichever is less.

Charges

The facilities to be installed by the Company as described above will be at no cost to the customer if (1) at a minimum the customer will be installing central gas heating or gas water heating, (2) the gas service line extends along the route selected by the Company and (3) the length of the gas service line is no greater than allowed, as shown above. In the event that the above conditions are not met, the service line installed for the customer must provide a reasonable return to the Company, If the customer wishes the facilities to be constructed along a route other than the route selected by the Company and/or if the gas service line is more than the length allowed above and/or the service to be rendered to the customer will not produce a reasonable return to the Company, the Company may require the customer to pay the excess cost of constructing the facilities along the alternate route or in excess of the footage allowed and/or to make a contribution which will permit the Company to earn a reasonable return. In all cases any pavement or sidewalk cut will be replaced by and at the customer's expense.

Exceptions

In cases where there is exceptional cost due to length of service, paving (such as crossing major street), rock, etc., these service orders shall be reviewed by the Engineering Department on a case-by-case basis to determine if they meet the main extension policy provided in Section 5. The Chief Engineer and the General Manager of Marketing must approve these exceptions.

Excess Service

Excess service refers to that portion of the total cost of a service line installed for a customer that is in excess of the Company's justifiable investment and is that portion of service line cost paid for by the customer. A customer may pay the excess service charge with cash or credit with approval, and may spread the cost over three years on a monthly installment payment basis.

Repairs

Repairs to service lines damaged by others shall be charged at the Company's actual repair costs.

Service Extensions

A service extension includes all piping carrying unmetered gas from the termination of the previous service line to the inlet of the meter. Service extensions and relocations shall be installed at the customer's expense.

Branch Services

Branch services will be permitted only when the point of junction of the two services is either in the public right-of-way or on a customer's property. In the latter case, written and notarized permission of the property owner must be obtained and filed with the Register of Deeds of the appropriate county. In the case of services requiring in-line valves, the service must be branched in the public right-of-way, and the Construction Department must confirm presence of a valve in each branch.

Multiple Buildings on Same Lot

In those cases where two or more buildings are located on the same lot in such a manner as to be reasonably suited to subdividing, the Company will, if requested, run separate service lines to these buildings. However, if the buildings are not so situated (e.g. garage apartments or combination commercial and residential buildings), the Company will not run separate services except where the full cost of the additional service from main to meter, including paving, is borne by the customer.

Service Line Enlargements

If the load through an existing service is so increased as to require a larger service line, the Company will enlarge the existing service to a point four (4) feet beyond the customer's nearest outside building wall without charge. Any enlargement of the service line beyond this point will be at the customer's expense. Any fuel line changes will be at the customer's expense.

Shopping Centers

A shopping center shall be considered as a single structure containing a minimum of 7,500 square feet of floor space and a minimum of four (4) tenants or business stores operating within the structure. The Company shall install one service line and one bank of gas meters for each 12,000 square feet of floor space. The final number of meter banks shall be at the discretion of the General Manager of Marketing, based upon the size and layout of the particular shopping center under consideration.

Nashville Gas Company Service Regulations

Section 5 – MAINS

The Company has a policy of extending its main(s) to serve a new customer (or customers) provided such main extension is determined to be economically feasible. The criteria for economic feasibility shall be met when the total annual net revenue to be obtained from the customer (or customers) provides a rate of return that is equal to or greater than the overall cost of capital established in the Company's last general rate case.

The determination of the anticipated rate of return on the main extension will be based on a net present value (NPV) computation utilizing the following parameters:

1. Net revenues will be calculated by applying the applicable tariff margin rate to the estimated annual total usage and, where applicable, potential for future growth may be considered.
2. Estimated annual total usage shall be based on those appliances that will be in use during the first five (5) years of service, except as provided in paragraph 3 under "Main Extension Contract".
3. The required investment will be based upon engineering cost estimates as determined by the Company and will include the costs of all facilities required for providing service including material and labor costs associated with the installation of mains, service lines, metering and regulating equipment, easements, rights of way, street crossings, and all other required equipment or facilities.
4. The discount rate shall be equal to the overall cost of capital allowed in the Company's last general rate case adjusted for taxes and depreciation.
5. The discount period shall be equal to the economic useful life of the investment in the mains and services.
6. Main extensions producing a positive net present value at the end of the discount period shall be considered economically feasible.

Main Extension Contract

To the extent the net present value computation produces a negative result:

1. The customer shall pay to the Company an amount equal to the negative net present value at the end of the discount period, plus any additional funds required to provide for the payment of resulting taxes. This payment may be made in a lump sum or in periodic payments (without interest) -- annual, monthly, etc.
2. If within three (3) years after the original installation, the customer making the payment adds additional major or minor appliances, the Company will refund to the customer (if

paid in advance or credit his account if on extended terms), upon written request, an amount equal to the net annual revenues anticipated to be realized from the usage of the additional appliance(s).

3. If within three years after the original installation additional customers are connected to the main then the Company shall refund (or credit his account) to customers making the payment, upon written request, an amount equal to the net annual revenues anticipated to be realized from the additional customer(s).
4. In no case shall the customer making the payment be refunded more than he paid.

The above provisions assume that only one customer will make the payments. If two or more customers make the payments, the contract will be adjusted to reflect this fact; for example, if two customers made equal payments and a refund is due because one of the two has added an additional appliance, then the entire refund shall be paid to him.

Exceptions

The Company may make exceptions to the main extension rule when system improvements are realized by the extension.

Main Relocation

If a customer requests a re-routing or relocation of a main located on a public right-of-way, the customer will be charged for this work. If the main is located on private property, such as an easement, railroad right-of-way, the case will be referred to the Engineering Department for determination as to whether a charge shall be made. The same will apply to relocations or re-routings requested by a contractor. Repairs to mains damaged by a contractor will be charged to the contractor on a "Time and Materials" basis.

Aboveground Facilities

If the above-ground facilities (such as post regulators, vent pipe, etc.) are so located that they seriously interfere with, or make impracticable, the owner's use of this property, the relocation of such facility will be done at no cost to the customer. An example of serious interference would be when the aboveground facility was located in front of a proposed narrow driveway. In all other cases, the cost of relocation will be charged to the customer. In those cases where it is difficult to determine whether the customer is to be charged for the relocation, the decision shall be made by the Vice President of Tennessee Operations. The charge, unless specified for any of the above items, will be either of the following, at the customer's option, prior to commencement of work:

1. Estimated cost as determined by the Construction Department
2. Actual cost

Nashville Gas Company Service Regulations

Section 6 - Rules and Regulations Governing Supply & Consumption of Gas

The consumer agrees to the following rules and regulations, having made proper application and deposit for service with Nashville Gas Company.

1. Consumer is responsible for damage to any gas meter or equipment belonging to the Company placed on the premises occupied by the consumer and will immediately reimburse the Company for all costs of repairing or replacing same. In accordance with Item (1), Section 1220-4-5-. 18, Reasons for Denial of Service of the Tennessee Regulatory Authority's Rules and Regulations, a consumer may be refused service if consumer has damaged the Company's equipment or tampered with the lock on a meter. The Company will charge $45.00 for a broken meter lock.
2. Consumer will use gas supplied through Company's meter only. Use of other metering devices or bypassing equipment and tampering or adjustments on company-owned metering facilities by consumer are prohibited. The Company will not permit secondary meter billing.
3. In case the meter has failed to register the quantity of gas consumed, in whole or in part, the consumer will pay such reasonable sum as is ascertained to be due for the period involved.
4. The Company's authorized agents shall have access to consumer's premises at all reasonable times for the purpose of checking, reading, servicing, and disconnecting the meter; shutting off gas; and for such other purposes as the Company may deem advisable to protect its interests.
5. The Company shall be under no duty to inspect, repair, or maintain the service of other pipes, connections, equipment, or appliances located beyond the meter outlet on the premises of the consumer.
6. The consumer shall be liable and shall pay for all gas passing through the meter until it is turned off. When termination of service is requested, consumer must ensure that the Company receives either written or verbal notice at least two days prior to the desired date of termination. Access to the meter must be provided.
7. The consumer is entitled to the usual discount allowed by the Company if bills are paid within the first twelve days following the date bills are rendered. All gas bills are due when rendered and they will be considered as rendered when mailed to the address specified by the consumer. A residential, head of household consumer dependent on social security or other retirement check may request a net to gross

discount waiver. Qualified consumers will be granted a net to gross discount waiver and the account will be monitored for continuing compliance.

8. The Company shall have the right to shut off gas from any consumer who may be in arrears for a longer period than twenty days in paying for gas furnished hereunder or under any other prior or subsequent agreement, or for gas used by consumer at consumer's present or any prior or subsequent address, it being understood hereby that said twenty day period commences to run from date the bill is rendered as above defined. The Company will not shut off gas for non-payment without first mailing a notice to the consumer giving him seven days to pay for the bill in arrears.
9. The Company is authorized to require the consumer to make a deposit, or increase any existing deposit, in such amount as the Company deems proper for its protection before restoring gas service. The deposit amount will not exceed two consecutive billing periods or ninety (90) days, whichever is less.
10. If a consumer is found using gas service without having made proper application and deposit, a notice to the consumer will be delivered to the premises and the consumer will be allowed four days in which to make proper application before the service is discontinued.
11. All consumer deposits will accrue simple interest on the principal at the rate of six (6) percent per annum.
12. The Company will charge $50.00 for turning on a meter for an existing consumer or member of the same family or household at same address. This charge applies only to those consumers who have previously elected to have the meter turned off without discontinuing service or whose account has been closed because of non-payment of a bill.
13. In the event gas is shut off because of consumer's failure to pay, a charge will be made for each restoration. The Company will charge $50.00 plus payment of past due gas bills for turning on meters shut off for non-payment of bill. The Company will not be liable for damages for shutting off gas or for delay in restoring service. An additional deposit may also be required.
14. The consumer agrees to notify Company in advance of any planned change in physical premise or environment around meter or service to determine impact on safety cases, meter reading, and meter maintenance.
15. In the event the Company is unable, wholly or in part, by reason of force majeure to carry out its obligations to provide service, the obligations of the Company so far as they are affected by such force majeure, shall be suspended during the continuance of any inability so caused but for no longer period, and such cause shall as far as possible be remedied with all reasonable dispatch. The term "force majeure" as employed above shall mean acts of God; extreme weather conditions; strikes, lockouts, or other industrial disturbances; acts of the public enemy; war; blockades;

insurrections; riots; epidemics; landslides; lightning; earthquakes; fires; storms; floods; washouts; arrests and restraints of governments and people; civil disturbances; explosions; breakage of or accidents to machinery, lines of pipe, or the Company's peak shaving plants; freezing of wells or lines of reduction in gas pressure by its suppliers; inability to obtain rights-of-way, permits, materials, equipment, or supplies for use in the Company's peak shaving plants; and any other causes whether of the kind herein enumerated or otherwise, not within control of the Company, and which by the exercise of due diligence the Company is unable to prevent or overcome. It is understood and agreed that the settlement of strikes or lockouts shall be entirely within the discretion of the Company, and the above requirement that any force majeure shall be remedied with all reasonable dispatch shall not require the settlement of strikes or lockouts when such course is inadvisable in the discretion of the Company.

16. When the Company in its discretion determines that it is necessary to curtail service to maintain the integrity of its distribution system or to provide for its or the public's safety, the Company shall have the right to curtail delivery of gas to any consumer.

17. In the event of a failure or interruption of service, the Company shall use all reasonable diligence to remove the cause or causes thereof, but the Company shall not be liable for any loss or damage resulting from such failure or interruption due to accidents, force majeure, extreme weather conditions, or causes beyond its control.

Schedule VI

Nashville Gas Company
Results of Operations
For the 12 Months Ending May 31, 2001

ORDER APPROVING RATE INCREASE AND RATE DESIGN AND APPROVING RATES FILED BY NASHVILLE GAS COMPANY

This matter came before Director Pat Miller, Director Sara Kyle, and Director Ron Jones, of the Tennessee Regulatory Authority ("Authority" or "TRA"), the voting panel assigned to this docket, at a regularly scheduled Authority Conference held on September 22, 2003, for consideration of the *Application of Nashville Gas Company, a Division of Piedmont Natural Gas Company, Inc. for an Adjustment of its Rates and Charges, For Approval of Revised Tariffs and Approval of Revised Service Regulations* ("*Application*") filed on April 29, 2003. As more fully described herein, and for the reasons set forth below, the panel voted unanimously to grant the request of Nashville Gas Company ("NGC" or the "Company") to increase its rates. Additionally, a majority of the panel voted to approve a rate design implementing the increased rates.

BACKGROUND

NGC's *Application*

NGC filed its *Application* together with a proposed tariff for a rate increase on April 29, 2003. In the *Application*, NGC requested that it be allowed to earn an overall rate of return of ten and twenty-three one hundredths percent (10.23%) and a twelve and six-tenths percent (12.6%) return on equity during the attrition year ending October 31, 2004. The Consumer Advocate and Protection Division of the Office of the Attorney General ("Consumer Advocate" or the "CAPD") filed a petition to intervene on May 14, 2003. In support of its *Application*, NGC filed sworn testimony, together with exhibits, of the following witnesses: Thomas E. Skains, President and Chief Executive Officer of Piedmont Natural Gas Company; Chuck Fleenor, Vice President of Planning and Rates of Piedmont Natural Gas Company; Bill R. Morris, Director of Corporate Planning and Corporate Development of Piedmont Natural Gas Company; David Carpenter, Director of Rates of Piedmont Natural Gas Company; and Donald A. Murry, Economist with C. H. Guernsey & Company, Oklahoma City, Oklahoma.

NGC's *Application* was considered at a regularly scheduled Authority Conference held on June 2, 2003, at which time the panel voted unanimously to suspend NGC's proposed tariff, convene a contested case, grant the intervention of the Consumer Advocate, and appoint Director Pat Miller as the Hearing Officer in this proceeding for the purpose of preparing this matter for hearing. The Hearing Officer conducted a Status Conference on June 17, 2003 and thereafter, by way of an order issued on June 18, 2003, established a procedural schedule for discovery and the filing of testimony and set this matter for hearing on September 9 and 10, 2003.

On June 26, 2003 NGC filed a letter revising and amending the Service Regulations previously filed as part of their *Application*. On August 1, 2003 Associated Valley Industries, Inc. ("AVI") filed a petition to intervene. On August 7, 2003 NGC filed a request to modify the procedural schedule without modifying the hearing dates set by the Hearing Officer's June 18, 2003 order. On August 8, 2003 the Hearing Officer issued an order modifying the procedural schedule as requested and maintaining the September 9 and 10, 2003 hearing dates. A separate Notice of the September 9 and 10, 2003 hearing dates was also issued on August 8, 2003. On August 13, 2003 the Hearing Officer issued an order granting AVI's petition to intervene.[1] Thereafter NGC and the Consumer Advocate conducted discovery in the form of interrogatories and requests for production of documents pursuant to the Hearing Officer's procedural schedule.

A Status Conference was held on September 8, 2003. During the Status Conference, counsel for NGC and the Consumer Advocate confirmed that they had reached a tentative settlement of the case and were in the process of reducing the settlement to a written agreement. Thereafter counsel for the parties requested that the Hearing begin at 3:00 p.m. the next day rather than at 9:00 a.m. as originally scheduled. The Hearing Officer granted the parties' request and rescheduled the Hearing to begin at 3:00 p.m. on September 9, 2003.

The Hearing

This matter came before the panel of Directors for Hearing on September 9, 2003. Participating in the Hearing were the following parties and their respective attorneys:

[1] AVI was served copies of all filings in this docket but did not actively participate in this docket

Nashville Gas Company, a Division of Piedmont Natural Gas Company, Inc. – R. Dale Grimes, Esq., Bass, Berry & Sims, PLC, AmSouth Center, Suite 2700, 315 Deaderick Street, Nashville, Tennessee 37238 and James H. Jeffries IV, Esq. and Jerry Amos, Esq., Nelson, Mullins, Riley & Scarborough, L.L.P., Bank of America Corporate Center, Suite 2400, 100 North Tryon Street, Charlotte, North Carolina 28202;

Consumer Advocate and Protection Division – Timothy C. Phillips, Esq. and Joe A. Shirley, Esq., Office of the Attorney General, P.O. Box 20207, Nashville, Tennessee 37202.

AVI did not participate in the Hearing.

During the Hearing counsel for the parties submitted the *Stipulation*, reflecting the settlement agreement of the parties, for the consideration of the panel. The *Stipulation* was also filed in the docket file on September 9, 2003. The *Stipulation* contained the following language:

> The parties to this settlement have engaged in substantial discovery and have undertaken extensive discussions to resolve all known disputed issues in this case. In addition, the Staff of the Authority has engaged in discovery. As a result of the information obtained during discovery and the discussions between the Company and the CAPD, the parties to this stipulation have agreed to adjustments to revenues, expenses, net operating income, net operating income for return, rate base and return on rate base. These adjustments reduce the Company's additional revenue requirements from $18,315,475 to $10,300,000. The Staff of the Tennessee Regulatory Authority has identified certain adjustments which the parties agree are included in the $10,300,000 settlement amount.
>
> The parties agree that the adjustments referred to [above] include the following: (a) reduction to correct meter reading errors in the test period; (b) increase to include uncollectibles expense; (c) reduction to correct accumulated depreciation; (d) increase to include gas odorant costs; (e) decrease to remove certain consulting fees; (f) increase to reflect additional coverage and cost of directors and officers liability insurance; (g) decrease to reduce pension expense to reflect updated pension contributions; (h) increase to recognize new rate for state excise taxes; (i) decrease to reflect lower carrying charges for gas inventory; (j) decrease to eliminate short-term incentive bonus; and (k) decrease to eliminate GTI funding. The elimination of GTI funding from expenses in this case is not intended to prevent the Company from making contributions to GTI.

The parties were unable to reach an agreement as to various capital structure, cost of capital and rate of return issues; however, the parties agree that the increase of $10,300,000 results in reasonable rates.

The parties to this settlement jointly recommend to the Authority that the Authority issue an order authorizing the Company: (a) to increase its rates to produce additional revenues of $10,300,000 effective November 1, 2003; (b) to implement the revised rates attached hereto as Schedule I effective November 1, 2003; (c) to use the fixed gas costs set forth on Schedule II attached hereto in future true-ups of gas costs under the Company's Purchase Gas Adjustment (PGA); (d) to use the "R" values, base load factors and heat factors set forth on Schedule III attached hereto in future rate adjustments under the Company's Weather Normalization Adjustment (WNA); (e) to implement the revised tariffs attached hereto as Schedule IV effective November 1, 2003; and (f) to implement, effective November 1, 2003, the revised Service Regulations filed with the Authority on April 29, 2003, as amended by letter filing of June 26, 2003.

The parties hereto agree that the revised rates and tariffs agreed to herein are fair and reasonable to all customer classes and will provide the Company with a reasonable opportunity to recover the agreed upon additional operating revenue requirement and a reasonable rate of return on investment. The parties further agree as follows: (a) the Company's rate base is $259,859,927; (b) the Company's existing rates will permit it to earn an operating income of $15,602,432; (c) to earn a reasonable return on its investment, the Company should be permitted to earn an operating income of $21,880,206; (d) unless changed, the Company's existing rates will cause the Company to have an operating income deficiency of $6,277,774; (e) the gross revenue conversion factor is 1.640709; (f) the revenue deficiency is $10,300,000 ($6,277,774 x 1.640709); and (g) the fair rate of return on investment is within the range of 8.0% to 9.0%.

At the outset of the Hearing, the attorneys for the parties each expressed their respective clients' support for the *Stipulation*. After hearing from the parties, the Directors voted unanimously to continue the Hearing until September 22, 2003 at which time the panel would deliberate the merits of the *Stipulation* following the regularly scheduled Authority Conference.

After the September 9, 2003 Hearing, and prior to the resumption of the Hearing on September 22, 2003, the Consumer Advocate and NGC filed responses to data requests regarding the *Stipulation* issued by the Authority.[2]

The panel reconvened on September 22, 2003 and deliberated the merits of the *Stipulation*. Thereafter the panel voted unanimously to approve the requested rate increase as modified by the *Stipulation*. A majority of the Directors voted to approve the rate design set forth in the *Stipulation*.[3]

Criteria For Establishing Just And Reasonable Rates

The Authority considers Applications for a rate increase, filed pursuant to Tenn. Code Ann. § 65-5-203, in light of the following criteria:

1. The investment or rate base upon which the utility should be permitted to earn a fair rate of return;

2. The proper level of revenues for the utility;

3. The proper level of expenses for the utility; and

4. The rate of return the utility should earn.

Letter from Ron Jones, Director, Tennessee Regulatory Authority to R. Dale Grimes, Esq., Counsel for Piedmont Natural Gas Company; Mr Bill Morris, Director of Corporate Planning & Development, and Timothy Phillips, Esq., Assistant Attorney General, Office of the Attorney General, Consumer Advocate Division (September 12, 2003). *Response to TRA Data Request Dated September 11, 2003* (September 15, 2003). *Response to TRA Data Request Dated September 12, 2003* (September 16, 2003) Letter from James H Jeffries IV to Pat Miller, Director, Tennessee Regulatory Authority (September 16, 2003). Letter from James H Jeffries IV to Ron Jones, Director, Tennessee Regulatory Authority (September 16, 2003) (There are two letters from James H. Jeffries IV addressed to Director Ron Jones and filed on September 16, 2003 responding to separate data requests)

[3] Director Jones declined to vote with the majority with regard to the rate design portion of the *Stipulation* Director Jones could not find any basis in the *Stipulation* for dividing the residential class into two different classes that did not exist prior to the filing of the *Stipulation* or with one class bearing more of the demand reallocation than another and no part of the demand reallocation being placed on special contract customers *See* Transcript of Proceedings, p 71 (September 22, 2003)

Findings and Conclusions

After reviewing the record, including all exhibits, the TRA makes the following findings and conclusions.

Test Period

The objective of selecting a test period is to obtain financial data and adjust it as necessary to reflect the inter-relationship of revenues, expenses and investment expected to occur in the immediate future. In this case, the Company selected the twelve months ended December 31, 2002, as the historical test period and made two levels of adjustments. The first adjustment normalizes the test year and the second adjusts the normalized year to arrive at the forecast for the attrition year, which is the twelve months ending October 31, 2004. The *Stipulation* between the parties as to this issue is adopted. The TRA therefore finds that this attrition period will allow the Company the opportunity to earn a fair rate of return on its investment.

Rate Base

The parties stipulated as to a rate base for the attrition year in the amount of $259,859,927, as detailed below. The TRA finds that the rate base in this case has been adjusted to reflect the investment and expenses of the Company for the attrition year test period and therefore is proper and should give the Company the opportunity to earn a fair rate of return on its investment to which it is entitled.

Additions:	
Utility Plant in Service	$468,507,509
Construction Work in Progress	6,536,531
Working Capital	12,201,210
Total Additions	**$487,245,250**

Deductions:	
Accumulated Depreciation	$199,411,506
Accumulated Deferred Income Taxes	23,313,096
Customer Advances for Construction	187,175
Contributions in Aid of Construction	4,473,546
Total Deductions	**$227,385,323**
Rate Base	**$259,859,927**

Revenues and Expenses

The parties have stipulated to certain facts which were obtained by their review and investigation of the Company's books and records for the purposes of this case. The parties agree that the net operating income at present rates of the Company for the attrition period is $15,602,433 as detailed below. The TRA finds that the net operating income in this case has been adjusted to reflect the appropriate attrition period level of revenues and expenses necessary for continued utility operations.

Revenues:	
Sales and Transportation of Gas	$195,481,680
Less Gas Cost	115,869,340
Net Sale and Transportation of Gas	$79,612,340
Other Revenues	1,814,896
Total Net Revenues	**$81,427,236**
Expenses:	
Salaries and Wages	$17,721,485
Distribution Expense	5,062,890
Uncollectible Accounts Expense	850,872
Customer Relations Expense	657,174
Administrative and General Expense	10,526,781
Interest on Customer Deposits	232,103
Miscellaneous Expense	38,184
Depreciation & Amortization Expense	18,232,156
Taxes Other Than Income	8,938,625
State Excise Tax	678,624
Federal Income Tax	3,233,982
Total Expenses	**$66,172,876**
Allowance for Funds Used During Construction	$348,073
Net Operating Income	**$15,602,433**

Fair Rate of Return

In reaching a decision on a rate of return, the Authority must conduct an in-depth analysis and give proper consideration to numerous factors, such as capital structure, cost of capital and changes which can reasonably be anticipated in the foreseeable future. The Authority has the obligation to make this determination based upon the controlling legal standard set forth in the landmark cases of *Bluefield Water Works and Improvement Company v. Public Service Commission of the State of West Virginia*[4] and *Federal Power Commission v. Hope Natural Gas Company,*[5] which have been specifically relied upon by the Tennessee Supreme Court.[6]

In the *Bluefield* case, the United States Supreme Court stated:

> A public utility is entitled to such rates as will permit it to earn a return on the value of the property which it employs for the convenience of the public equal to that generally being made at the same time and in the same general part of the country on investments in other business undertakings which are attended by corresponding risk and uncertainties; but it has no constitutional rights to profits such as are realized or anticipated in highly profitable or speculative ventures. The return should be reasonably sufficient to assure confidence in the financial soundness of the utility, and should be adequate, under efficient and economical management to maintain and support its credit and enable it to raise the money necessary for the proper discharge of its public duties.[7]

Later, in the *Hope* case, the United States Supreme Court refined these guidelines, holding that:

> From the investor or company point of view it is important that there be enough revenue not only for operating expenses but also for the capital

---

[4] *Bluefield Water Works and Improvement Company v Public Service Commission of the State of West Virginia,* 262 U.S. 679, 43 S Ct 675 (1923)

[5] *Federal Power Commission v Hope Natural Gas Company*, 320 U S 591, 64 S. Ct. 281 (1944)

[6] *Southern Bell Telephone & Telegraph Co v Public Service Commission*, 304 S W 2d 640, 647 (Tenn 1957)

[7] *Bluefield Water Works and Improvement Company v Public Service Commission of the State of West Virginia*, 262 U S 679, 692-93, 43 S Ct 675, 679 (1923)

> costs of the business. These include service on the debt and dividends on the stock. By that standard the return to the equity owner should be commensurate with returns on investments in other enterprises having corresponding risks. That return, moreover, should be sufficient to assure confidence in the financial integrity of the enterprise so as to maintain its credit and to attract capital.[8]

The parties for this case, and this case only, have agreed on a capital structure and cost that produces an overall rate of return for the Company of 8.42% without providing detail as to the specific structural components of this return. The TRA finds that this return is fair and reasonable and meets the tests of the *Bluefield* and *Hope* cases.

Revenue Deficiency

Based upon the rate base, net operating income, and fair rate of return agreed to by the parties, the revenue deficiency for this case is calculated to be $10,300,000 as shown below. This revenue deficiency calculation was agreed to by each of the parties. The TRA finds that the Company needs additional annual revenues in the amount of $10,300,000 in order to earn a fair return on its investment during the attrition year.

Rate Base	$259,859,927
Fair Rate of Return	8.42%
Required Net Operating Income	**$21,880,207**
Current Net Operating Income	15,602,433
Net Operating Income Deficiency	$6,277,774
Revenue Conversion Factor	1.640709
Net Revenue Deficiency	**$10,300,000**

[8] *Federal Power Commission v Hope Natural Gas Company*, 320 U.S. 591, 603, 64 S. Ct. 281, 288 (1944)

Rate Design

The parties stipulated to a rate design that will produce additional revenues of approximately $10,300,000 as shown on **Attachment A** to this Order. Based upon a review of the rate design set forth in **Attachment A**, the testimony and exhibits of the parties that were filed in this matter prior to the filing of the stipulated rate design, and the record as a whole, a majority of the panel finds that this rate design is just and reasonable and meets the standards set out in Tenn. Code Ann. § 65-5-203(a).

	Present Net Revenues	**Rate Increase %**	**Rate Increase**
Residential	$51,021,291	16.51%	$7,229,179
Commercial	28,974,173	5.44%	1,494,901
Industrial	8,820,079	18.62%	1,384,350
Special Contract	752,415	0.00%	0
Sale for Resale	169,200	6.19%	9,867
Other	2,129,609	10.92%	209,635
Total	**$91,866,767**	**12.67%**	**$10,327,932**
Revenue Deficiency			10,300,000
Difference			**$27,932**

Tariff and Service Regulation Changes

The parties have also stipulated to changes other than rates in the Company's tariff. Specifically, the parties have agreed on language to segment residential customers into one of two categories: a Standard Rate or low base usage category, and a Value Rate or high base load usage category. In addition, the parties have also agreed on language to segment commercial customers into one of four categories: a Low Usage Standard Rate, a Low Usage Value Rate, a Medium Usage Standard Rate and a Medium Usage Value Rate. These changes are also outlined in **Attachment A** to this Order.

In addition, the parties have agreed on tariff language to change the reconnection fee from a year-round rate of $50 to a seasonal design of $85 for reconnections during the time period from September through January and $55 for reconnections during the time period from February through August.

Finally, the parties have agreed on language for changes in the Company's service line policy. Under the current service line policy, the Company will extend its service lines for one hundred (100) feet from the main to the customer's premise at no additional charge if the customer agrees to use natural gas for one major appliance, and install an additional fifty (50) feet at no cost for each additional natural gas appliance. The new language eliminates the provision of installing an additional fifty (50) feet and replaces it with language stating that the additional service line will be installed at no cost only if the anticipated load from the additional appliance provides a reasonable return to the Company.

The Authority finds that these tariff changes are just and reasonable and meet the standards set out in Tenn.Code Ann. § 65-5-203(a).

Fixed Demand Cost Reallocation

Although not part of the base rates established in this case, the parties have stipulated to an allocation of fixed demand costs that the Company will recover through the purchased gas adjustment ("PGA") process as shown on **Attachment A** to this Order. The TRA finds that this fixed demand cost allocation is just and reasonable and meets the standards set out in Tenn. Code Ann. § 65-5-203(a).

Weather Normalization Adjustment

The parties have stipulated to use the "R" values, base load factors, and heat factors as set out below in future rate adjustments under the Company's Weather Normalization Adjustment.[9] The TRA finds that these factors are just and reasonable and meet the standards set out in Tenn. Code Ann. § 65-5-203(a).

	"R" Value ($/Therm)	Heat Sensitivity Factor (Therms/DDD)	Base Factor (Therms/month)
Residential:			
Standard Rate	$0.32000	$0.15957	$3.915640
Value Rate	0.32000	0.21337	23.086530
Commercial:			
Rate 302			
All Usage	0.35400	0.79247	0.675169
Rate 332			
First 2,000 Therms	0.35400	0.51840	486.221100
Over 2,000 Therms	0.35400	0.51840	486.221100
Rate 352			
All Usage	0.35400	17.6718	2229.587600
Rate 362			
First 5,000 Therms	0.35400	5.36775	6229.705300
Over 5,000 Therms	0.35400	5.36775	6229.705300

[9] These values and factors are defined in Service Schedule No 315 of the Weather Normalization Adjustment Rider in NGC's tariff which is on file with the Authority

IT IS THEREFORE ORDERED THAT:

1. The *Application of Nashville Gas Company, a Division of Piedmont Natural Gas Company, Inc. for an Adjustment of its Rates and Charges, For Approval of Revised Tariffs and Approval of Revised Service Regulations,* as modified by the *Stipulation,* is approved based on the Authority's determination that a rate increase is warranted and that NGC is entitled to a rate increase of $10,300,000.

2. The rate design set forth in **Attachment A** to this Order shall be used to allocate the approved $10,300,000 rate increase.

3. Any party aggrieved by the Authority's decision in this matter may file a Petition for Reconsideration with the Authority within fifteen (15) days from the date of this Order.

4. Any party aggrieved by the Authority's decision in this matter has the right of judicial review by filing a Petition for Review in the Tennessee Court of Appeals, Middle Section, within sixty (60) days from the date of this Order.

Pat Miller, Director

Sara Kyle, Director

Ron Jones, Director[10]

[10] Director Jones voted with the panel on the issue of the rate increase but did not vote with the majority on the issue of rate design

Re: ***Petition of Piedmont Natural Gas Company, Inc. Inc., for an Adjustment to Its Rates, Approval of Changes to Its Rate Design, Amortization of Certain Deferred Assets, Approval of New Depreciation Rates, Approval of Revised Tariffs and Service Regulations, and Approval of a New Energy Efficiency Program and GTI Funding*, Docket No. 11-00144**

Dear Chairman Hill:

Enclosed please find an original and five (5) copies of the Stipulation and Settlement Agreement Between Piedmont Natural Gas Company, Inc. and the Consumer Advocate and Protection Division.

This material is also being filed today by way of email to the Tennessee Regulatory Authority docket manager, Sharla Dillon. Please file the original and four copies of this material and stamp the additional copy as "filed." Then please return the stamped copy to me by way of our courier.

Should you have any questions concerning this matter, please do not hesitate to contact me at the email address or telephone number listed above.

Sincerely,

David Killion

Piedmont Natural Gas Company, Inc.
Docket No. 20-00086
CAD Data Request No. 1, Item 85

BEFORE THE TENNESSEE REGULATORY AUTHORITY
NASHVILLE, TENNESSEE

IN RE:	)	
	)	
PETITION OF PIEDMONT NATURAL GAS COMPANY, INC. FOR AN ADJUSTMENT TO ITS RATES, APPROVAL OF CHANGES TO ITS RATE DESIGN, AMORTIZATION OF CERTAIN DEFERRED ASSETS, APPROVAL OF NEW DEPRECIATION RATES, APPROVAL OF REVISED TARIFFS AND SERVICE REGULATIONS, AND APPROVAL OF A NEW ENERGY EFFICIENCY PROGRAM AND GTI FUNDING	)	DOCKET NO. 11-00144

STIPULATION AND SETTLEMENT AGREEMENT BETWEEN PIEDMONT NATURAL GAS COMPANY, INC. AND THE CONSUMER ADVOCATE AND PROTECTION DIVISION

Piedmont Natural Gas Company, Inc. ("Piedmont" or "Company") and Robert E. Cooper, Jr., the Tennessee Attorney General and Reporter, through the Consumer Advocate and Protection Division ("Consumer Advocate") (collectively the "Parties"), constituting all of the parties to the above-captioned general rate proceeding and in comprehensive settlement of the matters at issue therein, do hereby stipulate and agree as follows:

BACKGROUND

1. Piedmont is incorporated under the laws of the State of North Carolina and is duly domesticated and engaged in the business of transporting, distributing and selling natural gas in the States of Tennessee, North Carolina and South Carolina. Piedmont's principal office and place of business is located at 4720 Piedmont Row Drive, Charlotte, North Carolina.

2. Piedmont is a public utility in Tennessee and its natural gas distribution business is subject to regulation and supervision by the Tennessee Regulatory Authority ("TRA" or the "Authority") pursuant to Chapter 4 of Title 65 of the Tennessee Code Annotated.

3. Piedmont is engaged in the business of distributing natural gas to customers located in Nashville and the remainder of Davidson County as well as portions of the adjoining counties of Cheatham, Dickson, Robertson, Rutherford, Sumner, Trousdale, Williamson, and Wilson and in certain incorporated towns and cities located therein. Piedmont has not filed for a rate increase with the Authority since 2003.

4. On September 2, 2011, Piedmont filed a petition for adjustment of its rates and charges, approval of changes to its rate design, amortization of certain deferred assets, approval of new depreciation rates, approval of revised tariffs and service regulations, and approval of a new energy efficiency program and Gas Technology Institute ("GTI") funding. In its petition, Piedmont sought an increase in its annual revenues of $16,712,711, an increase of 8.9%.

5. On September 21, 2011, the Consumer Advocate filed a Petition to Intervene in this proceeding which was allowed by Authority order dated September 29, 2011 without an objection. No other entity has sought or been granted party status in this proceeding.

6. Since the filing of Piedmont's petition, the parties to this proceeding have engaged in substantial discovery, informal information exchanges and extensive communication. In addition to the information provided pursuant to the Authority's Minimum Filing Requirements, Piedmont has responded to 85 data requests from the Authority's Staff and 55 data requests from the Consumer Advocate. Piedmont representatives and representatives from the Consumer Advocate have also spent a significant amount of time discussing the various aspects of Piedmont's rate case.

7. On December 6, 2011, the Consumer Advocate filed testimony in this proceeding challenging several aspects of Piedmont's petition, including the requested revenue increase. In this testimony, witnesses for the Consumer Advocate recommended a number of changes to the relief sought by Piedmont, including a proposed reduction in Piedmont's attrition period revenue requirement. The Consumer Advocate proposed a revenue increase of $9.863 million, an amount $6.849 million less than that proposed by Piedmont.

SETTLEMENT

8. Following Piedmont's review of the Consumer Advocate's testimony, representatives of Piedmont and the Consumer Advocate met by phone and in-person to discuss the possibility of a settlement in this proceeding.

9. Based on the exchange of information and discussions described above, and in order to resolve all disputed issues in this case through settlement and avoid the need for further litigation, Piedmont and the Consumer Advocate have agreed to certain adjustments to Piedmont's filing, including adjustments to its proposed revenues, expenses, net operating income, net operating income for return, rate base, and return on rate base, among others. Piedmont and the Consumer Advocate have also agreed to the disposition of a variety of non-rate matters at issue in this proceeding. Piedmont's and the Consumer Advocate's agreements encompass the matters discussed below.

10. Attrition Period. Piedmont and the Consumer Advocate agree that the appropriate attrition period for use in this proceeding is the 12 months ended February 28, 2013.

11. Revenue Deficiency. The adjustments to Piedmont's filed case described in paragraph 9 above collectively reduce Piedmont's attrition period revenue deficiency from

$16,712,711, an increase of 8.9%, to $11,900,000, an increase of 6.3%, and are based upon agreed changes to certain components of Piedmont's working capital, accumulated deferred income taxes, federal and state income tax expense, operating revenues, cost of gas, operations and maintenance expense, operating income, and return on common equity. Subject to Authority approval, Piedmont and the Consumer Advocate agree that this reduction in Piedmont's attrition period revenue deficiency is reasonable and appropriate.

12. Annualized Throughput. Piedmont and the Consumer Advocate agree that the appropriate level of attrition period throughput used herein, and reflected on Attachment B hereto, is 28,816,792 dekatherms, consisting of 18,370,260 dekatherms of tariff sales quantities, 9,901,819 dekatherms of tariff transportation quantities, and 544,713 dekatherms of special contract quantities.

13. Revenue Requirement. Piedmont and the Consumer Advocate agree that Piedmont's attrition period cost of service should include the components set forth on Attachment A hereto, which Piedmont and the Consumer Advocate agree are fair and reasonable to Piedmont and its customers and which include the following:

a. Required Operating Income of $27,824,920;

b. A rate base of $ 348,872,819;

c. An overall rate of return of 7.98%;

d. A return on common equity of 10.2%;

e. A capital structure consisting of 5.87% short-term debt, 41.42% long-term debt, and 52.71% equity.

f. A cost of short-term debt of 1.59%;

g. A cost of long-term debt of 6.05%;

h. A cost of common equity of 10.2%;

14. Amortization of Deferred Costs. Embedded within the cost of service described above, Piedmont and the Consumer Advocate also agree that it is appropriate to provide for the 8-year amortization of certain deferred regulatory assets and rate case expense in the following annual amounts:

a. $2,686,343 in deferred defined benefit pension costs as authorized by Authority Order dated June 9, 1997 in Docket No. 96-00977;

b. $243,760 in deferred environmental clean-up costs as authorized by Tennessee Public Service Commission Order dated December 21, 1992 in Docket No. 92-16160;

c. $119,963 in deferred flood response costs as authorized by Authority Order dated November 10, 2010 in Docket No. 10-00185; and

d. $89,983 in rate case expense incurred by Piedmont in conjunction with this case.

15. Rates. Piedmont and the Consumer Advocate agree that the rates reflected on Attachment B are fair and reasonable and appropriate for use in this proceeding.

16. Piedmont and the Consumer Advocate further stipulate and agree:

a. That the rate design set forth on Attachment B hereto, including the constituent components of rates for each of Piedmont's customer classes, is fair and reasonable and appropriate for use in this proceeding;

b. That the Company shall revert to filing for adjustments to fixed gas cost recovery through the PGA going forward;[1]

[1] The representation of fixed gas cost recovery rates as set forth on Attachment B is reasonable and appropriate in order to align with the elimination of the standard/value customer class distinction and the elimination of step rates in the small and medium general service classifications.

c. That the WNA factors and normal heating degree days set forth on Attachments C and D hereto are fair and reasonable and appropriate for use in this proceeding and should be approved by the Authority to be effective March 1, 2012;

d. That the period to which the WNA adjustment should apply going forward consists of the months of October through April of each year;

e. That the depreciation rates set forth in the depreciation study filed by Piedmont witness Rhonda Watts are fair and reasonable and appropriate for use in this proceeding and should be approved by the Authority to be effective March 1, 2012;

f. That for purposes of future defined benefit pension expense and environmental clean-up expense incurred by Piedmont, the deferral mechanisms established pursuant to Authority Order dated June 9, 1997 in Docket No. 96-00977 and Tennessee Public Service Commission Order dated December 21, 1992 in Docket No. 92-16160 should remain in effect;

g. That pursuant to Authority Order dated April 24, 2007 in Docket No. 03-00209, uncollectible gas costs should continue to be addressed through Piedmont's PGA mechanism and that no such costs are included in the revenue requirement or rates stipulated herein;

h. That pending Piedmont's next general rate proceeding, the appropriate AFUDC rate applicable to future investment in rate base by Piedmont is the overall rate of return on rate base stipulated herein;

i. That no funding of GTI research or implementation/funding of Piedmont's proposed School Energy Pledge Program will occur or be recovered from Piedmont's customers in conjunction with this case;

j. That the revised rate schedules and service regulations attached hereto as Attachment E are fair and reasonable and should be approved by the Authority to be effective March 1, 2012;

17. Piedmont also agrees to reduce the commodity gas cost component of Piedmont's PGA mechanism in conjunction with the other rate changes agreed to herein and to implement such reduction in rates on February 1, 2012.[2]

18. The Parties hereby agree that the revised rates, tariffs, rate schedules, and service regulations agreed to herein, both individually and in the aggregate, are fair and reasonable to all customer classes and will provide Piedmont with a reasonable opportunity to recover the agreed upon operating revenue requirement and a reasonable rate of return on investment.

19. The Parties agree to support this Stipulation and Settlement Agreement before the Authority and in any hearing, proposed order, or brief conducted or filed in this proceeding; provided, however, that the settlement of any issue provided for herein shall not be cited as precedent by any of the stipulating Parties hereto in any unrelated or separate proceeding or docket before the Authority. The resolution of issues reflected herein is the result of give and take negotiations between the Parties and does not necessarily reflect the position of any single Party on any discrete issue. None of the signatories hereto shall be deemed to have acquiesced in any ratemaking or procedural principle, including without limitation, any cost of service determination or cost allocation or revenue related methodology and neither Party waives its right to take positions with respect to the matters settled herein in future proceedings before the Authority. This Stipulation and Agreement shall not have any precedential effect in any future

[2] Nothing within this Stipulation and Settlement Agreement should be construed as having any impact on the PGA Rule and practice of the Authority.

proceeding or be binding upon any of the settling Parties in this or any other jurisdiction except to the extent necessary to implement the provisions hereof.

20. The Parties agree that all pre-filed testimony and exhibits of the Parties (including pre-filed supplemental testimony and exhibits supporting this Stipulation and Settlement Agreement) may be admitted into evidence without objection and the Parties hereby waive their right to cross-examine all witnesses with respect to such pre-filed testimony and exhibits; provided, however, that should questions be asked of such witnesses by any person at the hearing of this matter (including any questions by Directors or Authority staff), the Parties may cross-examine any witness with respect to such questions consistent with the agreements set forth in this Stipulation and Agreement.

21. The provisions of this Stipulation and Settlement Agreement are agreements reached in compromise and settlement and solely for the purpose of resolving this docket without the need for further litigation.

22. The stipulations agreed to in this Stipulation and Settlement Agreement, which are the product of negotiations and substantial communication and compromise between the Parties, are just and reasonable and in the public interest. The Parties jointly recommend that the Authority issue an order adopting this Stipulation and Settlement Agreement in its entirety without modification.

23. If the TRA does not accept the Stipulation and Settlement Agreement in whole and as full and final settlement of the issues in this Docket, this Stipulation and Settlement Agreement shall terminate and the Parties shall not be bound by any position set forth in this Stipulation and Settlement Agreement. Should this Stipulation and Settlement Agreement terminate, it will be considered void and have no binding effect, and the signatories to this

Stipulation and Settlement Agreement reserve their rights to fully participate in all relevant proceedings notwithstanding their agreement to the terms of this Stipulation and Settlement Agreement. The provisions of this Stipulation and Settlement Agreement are not severable.

24. By agreeing to this Stipulation and Settlement Agreement, no Party waives any right to continue litigating this matter should the Stipulation and Settlement Agreement be rejected by the TRA in whole or in part.

25. No provision of this Stipulation and Settlement Agreement shall be deemed an admission of any Party.

26. The Parties agree to support this Stipulation and Settlement Agreement in any proceeding before the Authority in this Docket; however, the Parties further agree and request the Authority to order that the settlement of any issue pursuant to this Stipulation and Settlement Agreement shall not be cited by the Parties or any other entity as binding precedent in any other proceeding before the Authority or any court, state or federal.

27. The provisions of this Stipulation and Settlement Agreement do not necessarily reflect the positions asserted by any Party, and no Party to this Stipulation and Settlement Agreement waives the right to assert any position in any future proceeding except as expressly stipulated herein. This Stipulation and Settlement Agreement shall not have precedential effect in any future proceeding or be binding on any Party except to the limited extent necessary to implement the provisions hereof.

28. This Stipulation and Settlement Agreement shall be governed by and construed under the laws of the State of Tennessee, notwithstanding conflict of law provisions.

The foregoing is agreed and stipulated to this 21 st day of December, 2011.

NOTES:
1) In accordance with the Tennessee Public Service Commission order in Docket U-7074 customers metered inside Davidson County are required to pay an additional 6.93% for collection of the Metro Franchise Fee. Customers served by the Fairview, Greenbrier, Hartsville, Mt. Juliet and White House systems are required to pay 5.0%. Customers served by the Franklin and Nolensville systems are required to pay 3%. Commercial customers on the Ashland City system are required to pay 5%.

2) The Monthly Charge for Rate Schedule 342 is not applicable to gas service provided at the Company's Premises. The Company may bill in units of Gas Gallon Equivalent ("GGE") for gas service provided at the Company's Premises under Rate Schedule 342. The rates convert 1.26 Therms to 1 GGE.

Tennessee Service Regulations

Piedmont Natural Gas Company, Inc.
Docket No. 20-00086
CAD Data Request No. 1, Item 85

RATE SCHEDULE NO. 301
Residential Service

AVAILABILITY
Gas Service under this Rate Schedule is available in the area served by the Company in the State of Tennessee, upon application to and consent by the Company to such Service, as provided in the Company's Service Regulations, to any full requirements single private residences, including the separate private units of apartment houses and other multiple dwellings, actually used for residential purposes, which are separately metered where the Company's distribution mains are suitable for supplying the desired service. N

CHARACTER OF SERVICE
The nature of Service provided by Company to Customer under this Rate Schedule is firm sales Service. Rate Schedule 301 applies to all residential customers. N

MARGIN RATE	Winter (November-March)	Summer (April-October)	
Monthly Charge	$17.45	$13.45	I
Commodity Charge (per therm)	$.32000	$.27000	

MONTHLY CHARGE
A charge will be billed monthly to all Customers for the availability of gas service. This charge will be in addition to the Commodity Charge for gas delivered. The Monthly Charge will be billed from the date of initial service until service is terminated at the Customer's request. T

COMMODITY CHARGE
The rate per therm shall be billed on the quantity of gas delivered by Company to Customer's premises. N

BACKUP SERVICE
When gas service is being supplied for use as a Backup Service for the dual-fuel heat pump or for similar use where the Customer's equipment is specifically designed by the manufacturer or is modified by the Customer or others for the purpose of using natural gas as the equipment's backup energy source, there shall be payable monthly in addition to all and other charges under this Rate Schedule a Backup Service Demand Charge individually determined for each Customer based upon the Customer's applicable gas equipment input rating. The per therm Demand Charge shall be equal to the unit Demand Charge applicable to the Company's firm industrial rate schedules.

Input shall be based upon individual Customer's applicable gas equipment rating in:

$$\frac{\text{BTU/Hour x 10 hours}}{\text{100,000 BTU}} = \text{TH}$$

Piedmont Natural Gas Company, Inc.
Docket No. 20-00086
CAD Data Request No. 1, Item 85

SERVICE AGREEMENTS
All Customers purchasing gas pursuant to this schedule shall be subject to the Company's standard contracts and/or service applications and subject to the Company's Service Regulations as filed with the TRA.

PAYMENT TERMS
All bills for service are due upon presentation and the net rates are applicable if payment is made on or before the last date of payment stated on the bill. Payments made after that date shall be for the gross amount which is greater by five percent (5%) than the net billing.

RETURNED CHECK CHARGE
In the event a Customer's check for payment is returned to the Company marked NSF (Non Sufficient Funds) the Customer will be assessed a charge of $20.00.

ADJUSTMENTS
Bills for service are subject to adjustment caused by changes in the cost of purchased gas in accordance with Rule No. 1220-4-1-.12 of the TRA Rules and Regulations and the operation of Rate Schedule 316. S

Purchased gas adjustments and all applicable taxes and fees are in addition to the above stated margin rates in accordance with The Rules, Regulations and Orders of the TRA and Laws of the State of Tennessee.

SERVICE AVAILABILITY
All requests for new and additional service or the transfer of existing service to higher priority end use will be considered based upon the Company's judgment as to the available gas supply, Customer's load factor or use pattern, end use, impact on the local economy, Company's Service Regulations, and The Rules, Regulations, and Orders of the TRA and Laws of the State of Tennessee. N

SERVICE INTERRUPTION AND CURTAILMENT
Gas service under this schedule is subject to the provisions contained within TRA Schedule No. 306, "Schedule for Limiting and Curtailing Service" and the Company's Service Regulations. S

WEATHER NORMALIZATION ADJUSTMENT
Gas service under this schedule is subject to the provisions contained within TRA Schedule No. 315, "Weather Normalization Adjustment Rider."

APPLICABLE DOCUMENTS DEFINING OBLIGATIONS OF THE COMPANY AND ITS CUSTOMERS
The applicable documents defining the obligations of the Company and its Customers are those described in Section 1 of the Company's Service Regulations. N

Piedmont Natural Gas Company, Inc.

RATE SCHEDULE NO. 303
Large General Sales Service

AVAILABILITY

Gas service under this Rate Schedule is available in the area served by the Company in the State of Tennessee to any full requirements non-residential Customer whose average daily gas usage is reasonably anticipated to equal or exceed 500 therms per day. All Service under this Rate Schedule shall be contingent upon application to and consent by the Company to such Service, as provided in the Company's Service Regulations. Upon commencement of Service under this Rate Schedule, any reclassification or change in quantity or character of Service to Customer shall be subject to the provisions of this Rate Schedule 303 and the procedures set forth in the Company's Service Regulations. Service under this Rate Schedule is contingent upon the installation by the Company of telemetering equipment that reports daily consumption. N

CHARACTER OF SERVICE

The nature of Service provided by Company to Customer under this Rate Schedule is firm sales Service. N

Once a qualified Customer elects service under this Rate Schedule, all services will be provided under the terms and conditions of this Rate Schedule for a term extending through the following May 31. Upon meeting the qualifications contained therein, a Customer may receive service under Rate Schedule 309 concurrent with service provided under the Rate Schedule. Subject to the requirements set forth above, a Customer may, subject to the consent of the Company, elect to discontinue service under this Rate Schedule and receive service under Rate Schedule No.313 by giving written notice to the Company prior to March 1 of any year. The Company will not withhold such consent provided (a) the Company continues to offer large general transportation Service under Rate Schedule 313, (b) the Company is able to provide Service under Rate Schedule 313 under commercially reasonable terms and conditions, and (c) the analyses applicable to reclassifications or changes in Service set forth in the Company's Service Regulations support such consent. If timely notice is received from Customer and consent is provided by Company, the Customer shall discontinue service under this Rate Schedule and Company shall provide Service under Rate Schedule 313 effective the first June 1 following the notice. N

All gas delivered pursuant to this Rate Schedule shall be metered by the Company separately from any gas delivered to Customer under any of the Company's other Rate Schedules.

MARGIN RATE

Monthly Charge	$800.00	I
Demand Charge (per therm of billing demand)	$.80000	
Commodity Charge (per therm)		R
1st Step (0-15,000 therms)	$.09682	
2nd Step (15,001-40,000 therms)	$.08953

4th Step (Over 90,000 therms)	$.02764	

EFFECTIVE: March 1, 2012

Piedmont Natural Gas Company, Inc.
Docket No. 20-00086
CAD Data Request No. 1, Item 85

MONTHLY MINIMUM BILL
The minimum monthly bill shall be the Monthly Charge plus the monthly Demand Charge.

MONTHLY CHARGE
A charge will be billed monthly to all Customers for the availability of gas service. This charge will be in addition to the Commodity Charge. The Monthly Charge will be billed from the date of initial service until service is terminated at the Customer's request. T

BILLING DEMAND
The billing demand shall be determined as follows:

A Customer's billing demand determinant shall be the highest daily usage during the period from November 1 to March 31 of the previous winter period as metered and reported to the Company by the telemetering equipment installed by the Company. Changes to the Customer's billing demand determinant will become effective June 1 of each year. The per unit demand charge may be adjusted from time to time to reflect rate changes, including, but not limited to, a general change in system rates or a change in pipeline capacity charges billed to the Company.

For Customers commencing initial gas service under this Rate Schedule and who do not have a consumption history from other services provided by the Company, the billing demand determinant shall be the greater of: 1) the month of highest consumption for the period to date multiplied by six percent (6%), or 2) 500 therms. If a Customer has received gas service from the Company prior to receiving service under this rate schedule, but does not have daily telemetered records to determine peak day usage as described above, the Company shall determine a billing demand based upon the highest monthly level of consumption during the previous winter period multiplied by six percent (6%).

COMMODITY CHARGE
The rate per therm shall be billed on the quantity of gas delivered by Company to Customer's premises. N

SERVICE AGREEMENTS
All Customers purchasing gas under this Rate Schedule shall be subject to the Company's standard contracts and/or service applications and subject to the Company's Rules and Regulations as filed with the TRA.

PAYMENT TERMS
All bills for service are due upon presentation and the net rates are applicable if payment is made on or before the last date of payment stated on the bill. Payments made after that date shall be for the gross amount which is greater by five percent (5%) than the net billing.

RETURNED CHECK CHARGE
In the event a Customer's check for payment is returned to the Company marked NSF (Non Sufficient Funds) the Customer will be assessed a charge of $20.00.

ADJUSTMENTS
Bills for service are subject to adjustment caused by changes in the cost of purchased gas in accordance with Rule No. 1220-4-1-12 of the TRA Rules and Regulations and the operation of Rate Schedule 316. S

Piedmont Natural Gas Company, Inc.
Docket No. 20-00086
CAD Data Request No. 1, Item 85

Purchased gas adjustments and all applicable taxes and fees are in addition to the above stated margin rates in accordance with The Rules, Regulations and Orders of the TRA and Laws of the State of Tennessee.

SERVICE AVAILABILITY

All requests for new or additional service or the transfer of existing service to a higher priority end use will be considered based upon the Company's judgment as to the available gas supply, Customer's load factor or use pattern, end use, impact on the local economy, Company's Service Regulations, and The Rules, Regulations, and Orders of the TRA and Laws of the State of Tennessee. N

SERVICE INTERRUPTION AND CURTAILMENT

Gas service under this schedule is subject to the provisions contained within TRA Rate Schedule No.306, "Schedule for Limiting and Curtailing Service" and Company's Service Regulations. S

APPLICABLE DOCUMENTS DEFINING OBLIGATIONS OF THE COMPANY AND ITS CUSTOMERS

The applicable documents defining the obligations of the Company and its Customers are those described in Section 1 of the Company's Service Regulations. N

Piedmont Natural Gas Company, Inc.
Docket No. 20-00086
CAD Data Request No. 1, Item 85

RATE SCHEDULE NO. 304
Interruptible General Sales Service

AVAILABILITY

Gas service under this rate schedule is available in the area served by the Company in the State of Tennessee **ON AN INTERRUPTIBLE BASIS** to any full requirements non-residential Customer whose average daily gas usage is reasonably anticipated to equal or exceed 500 therms per day. All Service under this Rate Schedule shall be contingent upon application to and consent by the Company to such Service, as provided in the Company's Service Regulations. Upon commencement of Service under this Rate Schedule, any reclassification or change in quantity or character of Service to Customer shall be subject to the provisions of this Rate Schedule 304 and the procedures set forth in the Company's Service Regulations. Service under this Rate Schedule is contingent upon the installation by the Company of telemetering equipment that reports daily consumption. N

CHARACTER OF SERVICE

The nature of Service provided by the Company to Customer under this Rate Schedule is interruptible sales service. N

Once a qualified Customer elects service under this Rate Schedule, all services will be provided under the terms and conditions of this Rate Schedule for a term extending through the following May 31. Upon meeting the qualifications contained therein, a Customer may receive service under Rate Schedule 309 concurrent with service provided under this Rate Schedule. Subject to the requirements set forth above, a Customer may, subject to the consent of the Company, elect to discontinue service under this Rate Schedule and receive service under Rate Schedule 314 by giving written notice to the Company prior to March 1 of any year. The Company will not withhold such consent provided (a) the Company continues to offer large general transportation Service under Rate Schedule 313, (b) the Company is able to provide Service under Rate Schedule 313 under commercially reasonable terms and conditions, and (c) the analyses applicable to reclassifications or changes in Service set forth in the Company's Service Regulations support such consent. If timely notice is received from Customer and consent is provided by Company, the Customer shall discontinue service under this Rate Schedule and Company shall provide Service under Rate Schedule 314 effective the first June 1 following the notice. N

Customers purchasing gas pursuant to this schedule shall maintain, in useable condition, alternate-fuel facilities with ample on-site alternate fuel capability for supplying 100% of the establishment's gas requirements during periods of gas interruption or curtailment. Such interruption or curtailment shall be immediately effective upon verbal or written notification by the Company, and Customer shall refrain from using gas until permitted to do so by the Company. It is understood and agreed that the Company will have the right to suspend gas service without further notice to the Customer in the event Customer fails to curtail Customer's use of gas in accordance with the Company's notice of curtailment.

All gas delivered pursuant to this Rate Schedule shall be metered by the Company separately from any gas delivered to Customer under any of the Company's other Rate Schedules. N

Reclassification of customers between rate schedules will be based upon procedures set forth in the Company's Service Regulations as approved by the Tennessee Regulatory Authority.

factor or use pattern, end use, impact on the local economy, Company's Service Regulations and The Rules, Regulations, and Orders of the TRA and Laws of the State of Tennessee.

SERVICE INTERRUPTION AND CURTAILMENT

Gas service under this schedule is subject to the provisions contained within TRA Schedule No. 306, "Schedule for Limiting and Curtailing Service" and the Company's Service Regulations. S

APPLICABLE DOCUMENTS DEFINING OBLIGATIONS OF THE COMPANY AND ITS CUSTOMERS N

The applicable documents defining the obligations of the Company and its Customers are those described in Section 1 of the Company's Service Regulations.

Piedmont Natural Gas Company, Inc.
Docket No. 20-00086
CAD Data Request No. 1, Item 85

SERVICE SCHEDULE NO. 306
Schedule for Limiting and Curtailing Service

This Service Schedule defines the types of curtailment that the Company may invoke from time to time due to the occurrence of extreme weather conditions, operating conditions or force majeure events, and describes the process and procedures to be followed in the implementation of gas service restrictions.

DISTRIBUTION PRESSURE CURTAILMENTS

Due to extreme weather conditions, operating conditions or force majeure events as defined in the Company's Tennessee Service Regulations, Rules and Regulations Governing Supply and Consumption of Gas, or the demands of the Company's firm Customers as the same may effect the Company's ability to provide interruptible service, the Company may experience localized pressure deficiencies. During such times and within the areas affected, the Company will curtail service to interruptible Customers served under Rate Schedule No. 304, Rate Schedule No.309, or Rate Schedule 314, by priority of their margin contribution to the Company (curtailing Customers with the lowest margin rate first) until the pressure situation can be alleviated. In the unlikely event that further interruption is required, the Company will proceed with curtailment by margin contribution considering end use, impact on the local economy, and The Rules, Regulations, and Orders of the TRA and Laws of the State of Tennessee.

SUPPLY OR CAPACITY RELATED CURTAILMENTS

In situations when supply and capacity services contracted by the Company are not sufficient to meet the full requirements of Customers desiring sales services from the Company, the Company will first curtail service to interruptible sales Customers receiving service under Rate Schedule No. 304 by priority of their margin contribution to the Company. Customers receiving discounted sales service under Rate Schedule No. 309 will also be curtailed according to the discounted rates. The Company reserves the right at the Company's discretion to purchase quantities being delivered to the Company by Customers under Rate Schedule 314 at market prices in order to serve Customers without operable alternative fuel capability. In the unlikely event that further interruption is required, the Company will proceed with curtailment by margin contribution considering end use, impact on the local economy, and The Rules, Regulations, and Orders of the TRA and Laws of the State of Tennessee.

EMERGENCY SERVICE

The Company will make every reasonable effort to deliver plant protection volumes to industrial and commercial Customers that do not have standby fuel systems sufficient to prevent damage to facilities or danger to personnel, or to Customers that find it impossible to continue operations on the Customer's standby or alternate energy source as a result of a bona fide existing or threatened emergency. This includes the protection of such existing material in process that would otherwise be destroyed, or deliveries required to maintain plant production. All emergency gas service is of a discretionary nature and implies no present or future obligation of the Company to any Customer to provide such service on either a temporary or continuing basis. Deliveries of gas hereunder shall be made pursuant only to advance operating arrangements between the Company's authorized personnel and the Customer and shall be subject to curtailment and interruption at any time should the Company deem it necessary.

Piedmont Natural Gas Company, Inc.
Docket No. 20-00086
CAD Data Request No. 1, Item 85

RATE FOR EMERGENCY SERVICE

If the Company has authorized the Customer to consume limited quantities of emergency gas as provided in the above paragraph, then all gas consumed by the Customer will be at a rate of $1.00 per therm plus the higher of two gas commodity indices, "Monthly Contract" and "Daily Price", until otherwise notified that either (1) further gas sales will be under the Customer's regular rate schedule or (2) complete curtailment is unavoidable and that further gas sales will be considered unauthorized. "Monthly Contract" shall be defined as the monthly contract index price for the applicable calendar month as published in Gas Daily under the designation, "Monthly Contract Index" and indicated specifically under "Citygates" for Tenn. Zone 6 (delivered)". "Daily Price" shall be defined as the daily price for gas defined by Gas Daily as stated in the "Daily Price Survey", "Citygates", "Tenn. Zone 6 (delivered)", "Midpoint" price. For Days of consumption when the "Monthly Contract Index" is not published, the "Monthly Contract Index" shall equal the corresponding "Daily Price" published for the first day of the month of flow. For days of consumption when the "Daily Price" is not published, the "Daily Price" shall equal the average of the corresponding index prices as published on the nearest preceding and nearest subsequent day. Revenues realized from emergency service transactions will be credited to the Actual Cost Adjustment (ACA) account as recovery of gas costs. C

UNAUTHORIZED OVER RUN PENALTY

If at any time a Customer exceeds specified contract entitlements or if during any curtailment period, any affected Customer takes, without the Company's advance written approval, a volume of natural gas in excess of the curtailment period quantity entitlement applicable to such Customer, said volume shall constitute an unauthorized over run volume. For each therm of such unauthorized over run volume taken by such Customer, such Customer shall pay to the Company a rate of $1.50 per therm plus the higher of two gas commodity indices, "Monthly Contract" and "Daily Price". "Monthly Contract" shall be defined as the monthly contract index price for the applicable calendar month as published in Gas Daily under the designation, "Monthly Contract Index" and indicated specifically under "Citygates" for Tenn. Zone 6 (delivered)". "Daily Price" shall be defined as the daily price for gas defined by Gas Daily as stated in the "Daily Price Survey", "Citygates", "Tenn. Zone 6 (delivered)", "Midpoint" price. For Days of consumption when the "Monthly Contract Index" is not published, the "Monthly Contract Index" shall equal the corresponding "Daily Price" published for the first day of the month of flow. For days of consumption when the "Daily Price" is not published, the "Daily Price" shall equal the average of the corresponding index prices as published on the nearest preceding and nearest subsequent day. The Customer shall be liable for the above charges together with and in addition to any incremental charges or assessments (including, but not limited to penalties) by the interstate pipeline during the time of the unauthorized usage by such Customer. The payment of a penalty for unauthorized over run volumes shall not under any circumstances be considered as giving any such Customer the right to take unauthorized over-run volumes, nor shall such payment be considered as a substitute for any other remedies available to the Company or any other Customer against the offending Customer for failure to adhere to its obligations under the provisions of this Rate Schedule. Revenues realized from unauthorized over run penalties will be credited to the Actual Cost Adjustment (ACA) account as recovery of gas costs. C

PAYMENT TERMS

All bills for service are due upon presentation and the net rates are applicable if payment is made on or before the last date of payment stated on the bill. Payments made after that date shall be for the gross amount which is greater by five percent (5%) than the net billing.

Piedmont Natural Gas Company, Inc.
Docket No. 20-00086
CAD Data Request No. 1, Item 85

RETURNED CHECK CHARGE

In the event a Customer's check for payment is returned to the Company marked NSF (Non Sufficient Funds) the Customer will be assessed a charge of $20.00.

ADJUSTMENTS

Bills for service are subject to adjustment caused by changes in the cost of purchased gas in accordance with Rule No. 1220-4-1-12 of the TRA Rules and Regulations and the operation of Rate Schedule 316. S

Purchased gas adjustments and all applicable taxes and fees are in addition to the above stated margin rates in accordance with The Rules, Regulations and Orders of the TRA and Laws of the State of Tennessee.

Piedmont Natural Gas Company, Inc.
Docket No. 20-00086
CAD Data Request No. 1, Item 85

RATE SCHEDULE NO. 307
Balancing, Cash-Out, and Agency Authorization

APPLICABILITY

The provisions of this Rate Schedule 307 shall apply to all tariffed transportation services provided by the Company under Rate Schedules 313 and 314, as well as all transportation special contracts, unless expressly provided otherwise therein.

LIMITATIONS ON INTRA-MONTH IMBALANCES

Receipts and deliveries of gas hereunder shall be at uniform rates of flow with no significant fluctuations or imbalances. Customers (or its Agent) are responsible to match daily gas deliveries into the Company's system with daily gas consumption by Customer as closely as possible. Any imbalances shall be corrected by the Customer (or its Agent), insofar as practicable, during the month in which they occur. Customers (or its Agent) are expected to proactively manage intra-month imbalances. Customer (or its Agent) may adjust its daily nominations during a month in order to correct any accumulated imbalance and maintain a monthly balance subject to the operating limitations of the Company. The Company reserves the right to limit the amount of such imbalances to avoid operating problems, comply with balancing requirements of the upstream pipeline(s), and to mitigate the need to acquire additional daily supply at prices that would adversely affect sales customers. The Customer (or its Agent) will be responsible for any imbalance charges assessed by upstream pipeline(s) in connection with any gas transported by the Customer under this Rate Schedule.

In the event Customer (or its Agent) fails to abide by the requirements set forth above, the Company shall have the right to curtail deliveries to Customer (Customers in a transportation pool operated by a single Agent will be curtailed on a pro rata basis based on nominated quantities) if an imbalance is negative or reducing Customer's nominated quantities if an imbalance is positive. The Customer will be responsible for any imbalance charges assessed by upstream pipeline(s) in connection with any gas transported by the Customer. The Company reserves the right to take other reasonable action to mitigate system operational problems. The Company will use its reasonable efforts to notify the Customer or the Customer's Agent before proceeding with a unilateral nomination reduction or delivery curtailment and will notify Customer of any reduction to Customer's nomination that has been instituted by the Company. The Company reserves the right to initiate Standby Sales Service if elected by the Customer pursuant to Rate Schedule 313 when, in the judgment of the Company, such action is necessary to reduce or eliminate operational problems resulting from the gas imbalances of the Customer. The Company will use reasonable efforts to notify the Customer or the Customers' Agent before initiating Standby Sales Service hereunder. N

By 11:30 am Eastern Time on the fifth business day prior to the beginning of each month, the Customer must inform the Company of the nominating Agent for gas to be transported. If no notification to the contrary is provided, the Agent providing service during the prior month shall be deemed to be the nominating Agent by default. By 11:30 am Eastern Time on the fourth business day prior to the beginning of each month, the Customer shall submit a timely and valid nomination for transportation. Changes to nominations for gas transportation within the month are due by 11:30 am Eastern Time on the business day prior to gas flow. The Company will have no obligation to accommodate "late" or "next day intraday" or "intraday" nomination changes.

Piedmont Natural Gas Company, Inc.
Docket No. 20-00086
CAD Data Request No. 1, Item 85

BALANCING ON UPSTREAM PIPELINE(S)

It shall be the Customer's responsibility to remain in balance on a daily and monthly basis with upstream pipeline(s) to avoid any assessment of penalties by such pipeline(s) against the Company. If the Company is assessed a penalty by an upstream pipeline, the Company shall have the right to pass-through all such penalties to the Customer or its Agent if the Customer has had an imbalance with the Company during the period for which the penalty was assessed.

MONTHLY IMBALANCE RESOLUTION

Any differences between the monthly quantities delivered to the Company's city gate facilities for the account of the Customer, and the monthly quantities consumed by the Customer as metered by the Company, shall be the monthly imbalance. The Percentage of Imbalance is defined as the monthly imbalance divided by the monthly quantities consumed by the customer. Unless the Company and Customer agree to correct imbalances "in kind," the imbalance shall be resolved monthly by "cashing out" the imbalances as they are known to exist at that time. If the Customer consumes more gas than it has delivered to the Company, the Customer will be deemed to be "short" by the amount of the deficiency, and the Company will sell the amount of the deficiency to the Customer by charging the price as specified below. If the Customer consumes less gas than has been delivered to the Company, the Customer will be deemed to be "long" by the amount of the surplus, and the Company will buy the amount of the surplus from the Customer by paying the price as specified below.

If Customer's monthly imbalance is less than or equal to 2% of the total monthly volume consumed or if the total aggregated monthly imbalance for the Agent is less than or equal to 2% of the total monthly volume consumed by all of the Agent's Customers in that transportation pool, and such imbalance or aggregated monthly imbalance is long, then the price paid by the Company will be the sum of (a) the average of the weekly "Weighted Index Price" as defined below plus (b) the pipelines Rate Schedule FT variable charges at the applicable pipeline percentages that comprise the "Weighted Index Price," including applicable fuel and surcharges, for delivery to the Company's city gate.

If Customer's monthly imbalance is less than or equal to 2% of the total monthly volume consumed, or if the total aggregated monthly imbalance for the Agent is less than or equal to 2% of the total monthly volume consumed by all of Agent's Customers in that transportation pool, and such imbalance is short, then the price paid by the Customer (or Agent) will be the sum of (a) the average of the weekly "Weighted Index Price" as defined below plus (b) the pipelines Rate Schedule IT charges at the applicable pipeline percentages that comprise the "Weighted Index Price," including applicable fuel and surcharges, for delivery to the Company's city gate.

If the Customer (or Agent) is "short" by more than 2% of the monthly volume consumed, the price paid by the Customer (or Agent) to the Company for each dekatherm of the total deficiency will be equal to the highest "Weighted Index Price" for any week beginning in the calendar month as published in *Natural Gas Week*, plus the pipelines Rate Schedule IT charges at the applicable pipeline percentages that comprise the "Weighted Index Price," including applicable fuel and surcharges, and deliver to the Company's city gate, times the premium percentage corresponding to the percentage of the deficiency listed in the table below.

If the Customer (or Agent) is "long" by more than 2% of the monthly volume consumed, the price paid by the Company to the Customer (or Agent) for each dekatherm of the total surplus will be equal to the lowest "Weighted Index Price" for any week beginning in the calendar month as published in *Natural Gas Week*, plus the pipelines Rate Schedule FT variable charges, including

N

Piedmont Natural Gas Company, Inc.
Docket No. 20-00086
CAD Data Request No. 1, Item 85

applicable fuel and surcharges, at the applicable pipeline percentages that comprise the "Weighted Index Price" and deliver to the Company's city gate, times the premium percentage corresponding to the percentage of the deficiency listed in the table below.

Percentage of the Imbalance	Short (Premium)	Long (Discount)
Over 2% & equal to or less than 5%	110%	90%
Over 5% & equal to or less than 10%	120%	80%
Over 10% & equal to or less than 15%	130%	70%
Over 15% & equal to or less than 20%	140%	60%
Over 20%	150%	50%

The "Weighted Index Price" shall be derived from the prices published in *Natural Gas Week* in the table Natural Gas Weekly Spot Prices for the following pipeline designations and weighted by the corresponding percentages set forth below:

TEXAS (SOUTH/EAST), Tenn Zone 0	X	.3028
+		
GULF COAST, Tenn 500 So LA Z1	X	.3806
+		
GULF COAST, Tenn 800 So LA Z1	X	.3166[1]

If an index listed in the table above fails to publish, the Company will use an average of the published corresponding Gas Daily indexes for the corresponding dates not published in Natural Gas Week. N

The Company will collect gross receipts tax on the incremental gas related charges.

Any difference between the actual cost of gas incurred by the Company and the Index price as defined in the previous paragraph will be accounted for in the Actual Cost Adjustment account in a manner consistent with Rule No. 1220-4-1-12 of the TRA Rules and Regulations. Increments or decrements which may result from the PGA adjustments will not apply to the cash-out of imbalances.

AGENCY AUTHORIZATION FORM

Certain Rate Schedules permit a Customer to appoint a Customer's Agent to act on its behalf with respect to nominations, imbalance resolution, and/or billing. Customer shall authorize a Customer's Agent by executing an Agency Authorization Form in the form attached to this Rate Schedule. In order to be considered a Customer's Agent, a third party must execute and be in compliance with all of the terms of the Customer Agent Agreement form set forth in Appendix A to the Company's Service Regulations. To the extent that the Agent appointed by the Customer is common to other Customers of the Company, the Company will permit such Agent to aggregate all such qualifying Customers' transportation quantities for purposes of administering service to such Agent. Once a Customer has designated an Agent, the Agent is then authorized to act on behalf of that Customer and as such, the Agent will be considered as the Customer in all corresponding references contained within this Rate Schedule. The Customer may not change

[1] These percentages are the ratio of the Company's Tennessee Gas Pipeline contract winter capacity in effect at the time of the Company's most recent general rate case.

Piedmont Natural Gas Company, Inc.
Docket No. 20-00086
CAD Data Request No. 1, Item 85

Agents within the calendar month without the permission of the Company, unless the Agent's right to conduct business on the Company's system has been suspended by the Company, in which case, the Customer may act without an Agent or may provide written notice to the Company of the new Customer's Agent designated by the Customer. The Company will provide reasonable notice to Customer in the event of any suspension of Customer's Agent and will provide copies to Customer, on an expeditious basis and by electronic or other means, of any formal notices issued to the Customer's Agent. All Agents must utilize the electronic means made available by the Company in order to submit nominations. The Company may recover from the Agent all costs incurred in providing the Agent access to the electronic bulletin board.

N

RATE SCHEDULE NO. 309
Special Availability Service

AVAILABILITY
Gas service under this rate schedule is available to any TRA Rate Schedule No. 303,304, 313, or 314, Customer when the Company has gas supplies or services that it cannot sell at its established fixed rates where the Company's distribution mains are suitable for supplying the desired service. On such occasions, the opportunity is lost to the Company and its Customers. This Rate Schedule is designed to permit the Company to sell such gas and services at special rates for the purpose of enabling the Company to compete with alternative fuels and services available for use by its Customers.

Gas service under this Rate Schedule is available on a limited term basis to Customers who are connected to the Company's distribution system and would otherwise qualify for commercial and industrial sales or transportation service. Gas service may be provided under this Rate Schedule only in the event that the Company has available supplies or services that cannot competitively be provided under other rate schedules. Service under this Rate Schedule is temporary and the Company has the right to discontinue such service. Gas service under this rate schedule will be curtailed prior to service under any other comparable rate schedule.

In the event a Customer has zero consumption during any billing month, this tariff will not apply and service shall be rendered pursuant to the Company's regular rate schedules for the class of service indicated for the purpose of determining a minimum bill and qualifying provisions.

BASE RATE
The Customer shall pay the Company for all gas supplied or services provided under this schedule at a predetermined rate negotiated prior to delivery for limited term periods up to seven consecutive months.

SERVICE AGREEMENTS
All Customers purchasing gas pursuant to this Rate Schedule shall be subject to the Company's standard contracts and/or service applications and subject to the Company's Service Regulations as filed with the TRA.

PAYMENT TERMS
All bills for service are due upon presentation and the above stated net rates are applicable if payment is made on or before the last date of payment stated on the bill. Payments made after that date shall be for the gross amount which is greater by five percent (5%) than the net billing.

RETURNED CHECK CHARGE
In the event a Customer's check for payment is returned to the Company marked NSF (Non Sufficient Funds) the Customer will be assessed a charge of $20.00.

ADJUSTMENTS
Bills for service are subject to adjustment caused by changes in the cost of purchased gas in accordance with Rule No. 1220-4-1-.12 of the TRA Rules and Regulations and the operation of Rate Schedule 316.

Piedmont Natural Gas Company, Inc.
Docket No. 20-00086
CAD Data Request No. 1, Item 85

Purchased gas adjustments and all applicable taxes and fees are in addition to the above stated base rates in accordance with The Rules, Regulations and Orders of the TRA and Laws of the State of Tennessee.

SERVICE AVAILABILITY

All requests for new and additional service or the transfer of existing service to higher priority end use will be supplied based upon the Company's judgment as to the available gas supply, Customer's load factor or use pattern, end use priority as specified by the Federal Energy Regulatory Commission (FERC), impact on the local economy, Company's Service Regulations, and The Rules, Regulations, and Orders of the TRA and Laws of the State of Tennessee. N

SERVICE INTERRUPTION AND CURTAILMENT

Gas service under this schedule is subject to the provisions contained within TRA Schedule No. 306, "Schedule for Limiting and Curtailing Service" and the Company's Service Regulations. S

TREATMENT OF NEGOTIATED MARGIN LOSSES

Margin losses under this rate schedule shall be recovered by the Company through the Company's Actual Cost Adjustment (ACA) as provided in the Company's Purchased Gas Adjustment (PGA) Rider (TRA Service Schedule No. 311).

Piedmont Natural Gas Company, Inc.
Docket No. 20-00086
CAD Data Request No. 1, Item 85

RATE SCHEDULE NO. 310
Resale Service

AVAILABILITY
Sales for Resale Service is available under this rate schedule to any qualified local distribution company who purchases natural gas for the purpose of reselling same, where the Company's distribution mains are suitable for supplying the desired service.

CHARACTER OF SERVICE
The nature of Service provided by Company to Customer under Rate Schedule 310 is firm sales for resale Service. N

MARGIN RATE

Demand Charge (per therm of billing demand)	$.80000
Commodity Charge (per therm)	$.09000

MONTHLY MINIMUM BILL
The minimum monthly bill shall be the monthly demand charge.

BILLING DEMAND
Demand determinants shall be those agreed to in the contract.

COMMODITY CHARGE
The rate per therm shall be billed on the quantity of gas delivered by Company to Customer's premises.

SERVICE AGREEMENTS
All customers purchasing gas pursuant to this schedule shall be subject to the Company's standard contracts and/or service applications and subject to the Company's Rules and Regulations as filed with the TRA.

PAYMENT TERMS
All bills for service are due upon presentation and the net rates are applicable if payment is made on or before the last date of payment stated on the bill. Payments made after that date shall be for the gross amount which is greater by five percent (5%) than the net billing.

RETURNED CHECK CHARGE
In the event a customer's check for payment is returned to the Company marked NSF (Non Sufficient Funds) the customer will be assessed a charge of $20.00.

The applicable documents defining the obligations of the Company and its Customers are those described in Section 1 of the Company's Service Regulations. N

Piedmont Natural Gas Company, Inc.
Docket No. 20-00086
CAD Data Request No. 1, Item 85

SERVICE SCHEDULE NO. 311
Purchased Gas Adjustment Rider

I. General Provisions.

A. This Purchased Gas Adjustment (PGA) Rider is intended to permit the Company to recover, in a timely fashion, the total cost of gas purchased for delivery to its customers and to assure that the Company does not over-collect or under-collect Gas Costs from its customers.

B. This Rider is intended to apply to all Gas Costs incurred in connection with the purchase, transportation and/or storage of gas purchased for general system supply, including, but not limited to, natural gas purchased from interstate pipeline transmission companies, producers, brokers, marketers, associations, intrastate pipeline transmission companies, joint ventures, providers of liquefied natural gas (LNG), liquefied petroleum gas (LPG), substitute, supplemental or synthetic natural gas (SNG), and other hydrocarbons used as feed-stock, other distribution companies and end-users, whether or not the Gas Costs are regulated by the Federal Energy Regulatory Commission and whether or not the provider of the gas, transportation or storage is affiliated with the Company.

C. To the extent practicable, any revision in the PGA shall be filed with the Authority no less than thirty (30) days in advance of the proposed effective date and shall be accompanied by the computations and information required by this Rider. It is recognized, however, that in many instances the Company receives less than 30 days notice from its Suppliers and that other conditions may exist which may prevent the Company from providing 30 days advance notice. Therefore, should circumstances occur where information necessary for the determination of an adjustment under this Rider is not available to the Company so that the thirty (30) days requirement may be met, the Company may, upon good cause shown, be permitted to place such rates into effect with shorter advance notice. T

D. The rates for gas service set forth in all of the Rate Schedules of the Company shall be adjusted pursuant to the terms of the PGA, or any specified portion of the PGA as determined by individual Rate Schedule(s).

E. No provision of this Rider shall supersede any provision of a Special Contract approved by the Authority. T

II. Definitions.

A. "Gas Costs" shall mean the total delivered cost of gas paid or to be paid to Suppliers, including, but not limited to, all commodity/gas charges, demand charges, peaking charges, surcharges, emergency gas purchases, over-run charges, capacity charges, standby charges, gas inventory charges, minimum bill charges, minimum take charges, take-or-pay charges and take-and-pay charges (except as provided below), storage charges, service fees and transportation charges and any other similar charges which are paid by the Company to its gas suppliers in connection with the purchase, storage or transportation of gas for the Company's system supply, including Company use and lost and unaccounted for gas. C

Piedmont Natural Gas Company, Inc.
Docket No. 20-00086
CAD Data Request No. 1, Item 85

B. **"Fixed Gas Costs"** shall mean all Gas Costs based on the Company's right to demand gas or transportation on a daily or seasonal peak; but unless otherwise ordered by the Authority, shall not include other charges paid for gas reserve dedication (e.g., reservation fees and gas inventory charges), minimum bill charges, minimum take charges, over-run charges, emergency gas charges, take-or-pay charges or take-and-pay charges (all of which shall be considered commodity costs). T

C. **"Gas Charge Adjustment"** shall mean the per unit amount billed by the Company to its customers solely for Gas Costs. The Gas Charge Adjustment shall be separately stated for firm customers and for non-firm customers.

D. **"Suppliers"** shall mean any person or entity, including affiliates of the Company, who locates, purchases, sells, stores and/or transports natural gas or its equivalent for or on behalf of the Company. Suppliers may include, but not be limited to, interstate pipeline transmission companies, producers, brokers, marketers, associations, intrastate pipeline transmission companies, joint ventures, providers of LNG, LPG, SNG, and other hydrocarbons used as feed-stock, other distribution companies and end-users.

E. **"Computation Period"** shall mean the twelve (12) month period utilized to compute Gas Costs. Such period shall be the twelve (12) month period ending on the last day of a month which is no more than 62 days prior to the filing date of a PGA.

F. **"Demand Billing Determinants"** shall mean the annualized volumes for which the Company has contracted with Suppliers as of the first day of the Filing Month.

G. **"Commodity Billing Determinants"** shall mean the total metered throughput, regardless of source, during the Computation Period, adjusted for known and measurable changes. Should the Company expect to purchase commodity gas from several Suppliers, the Company shall allocate to each supplier a percentage of the total metered throughput, regardless of source, during the Computation Period, adjusted for known and measurable changes. The percentage used to allocate among Suppliers shall be based on historical takes during the Computation Period, if appropriate; otherwise it shall be based upon the best estimate of the Company.

H. **"Filing Month"** shall mean the month in which a proposed revision is to become effective.

III. Computation and Application of the PGA.

The PGA shall consist of three major components: (1) the Gas Charge Adjustment; (2) the Refund Adjustment; and (3) the Actual Cost Adjustment (ACA).

A. Computation of Gas Charge Adjustment.

The Company shall compute the jurisdictional Gas Charge Adjustment at such time that the Company determines that there is a significant change in its Gas Costs.

1. **Formulas.** The following formulas shall be used to compute the Gas Charge Adjustment:

Piedmont Natural Gas Company, Inc.
Docket No. 20-00086
CAD Data Request No. 1, Item 85

$$Firm\ GCA = \left[\left(\frac{D \pm DACA}{SF}\right) - DB\right] + \left[\left(\frac{P + T + SR \pm CACA}{ST}\right) - CB\right]$$

$$Non\text{-}Firm\ GCA = \left(\frac{P + T + SR \pm CACA}{ST}\right) - CB$$

1. Definitions of Formula Components.

GCA = The Gas Charge Adjustment in dollars per Ccf/Therm, rounded to no more than five decimal places.

D = The sum of all fixed Gas Costs.

DACA = The demand portion of the ACA.

P = The sum of all commodity/gas charges.

T = The sum of all transportation charges.

SR = The sum of all FERC approved surcharges.

CACA = The commodity portion of the ACA.

DB = The per unit rate of demand costs or other fixed charges included in base rates in the most recently completed general rate case (which may be zero if the Company so elects and the Authority so approves). T

CB = The per unit rate of variable Gas Costs included in base rates in the most recently completed general rate case (which may be zero if the Company so elects and the Authority so approves). T

SF = Firm sales.

ST = Total sales.

2. Determination of Factors for Gas Charge Adjustment.

a. Demand Charges (Factor D)

All fixed Gas Costs that do not vary with the amount of gas purchased or transported, including, but not limited to, the product resulting from the multiplication of (1) the respective Demand Billing Determinants by (2) the

Piedmont Natural Gas Company, Inc.
Docket No. 20-00086
CAD Data Request No. 1, Item 85

demand rates effective the first day of the Filing Month and (3) any fixed storage charges.

b. Demand Actual Cost Adjustment (Factor DACA)

See Subsection C of Section III.

c. Purchased Commodity Charges (Factor P)

All commodity or other variable gas costs associated with the amount of gas purchased or transported including, but not limited to, the product resulting from the multiplication of (1) the respective Commodity Billing Determinants by (2) the respective supplier's commodity/gas rate which are known, or if not known which are reasonably anticipated, to be in effect on the first day of the Filing Month.

d. Transportation Charges (Factor T)

The transportation charges actually invoiced to the Company during the Computation Period or expected to be invoiced to the Company during the current period.

e. FERC Approved Surcharges (Factor SR)

The sum of all FERC approved surcharges, including gas inventory charges or its equivalent, actually invoiced or expected to be invoiced to the Company during the Computation Period or to be effective the first day of the Filing Month by respective Suppliers.

f. Actual Cost Adjustment (Factor ACA)

See Subsection C of Section III.

g. Firm Sales (Factor SF)

Total volumes billed to the Company's firm customers during the Computation Period, regardless of source, adjusted for known and measurable changes.

h. Total Sales (Factor ST)

Total volumes billed to all the Company's customers during the Computation Period, regardless of source, adjusted for known measurable changes.

3. Modification of Formulas.

The formulas set forth above are not designed for use with two-part demand/commodity rate schedules; therefore, the formulas may be modified for use with such rate schedules. In addition, the formulas may be modified from time to time to carry out the intent of this PGA Rider. Any amendment to the formulas shall be effective on the proposed effective date of the amendment unless the Authority shall act to suspend the proposed amendment within

T

Piedmont Natural Gas Company, Inc.
Docket No. 20-00086
CAD Data Request No. 1, Item 85

thirty days after the filing of the proposed amendment, in which case the proposed amendment shall be subject to notice and hearing.

4. Filing with the Authority. T

The computation of the Gas Charge Adjustment shall be filed in accordance with the notice requirements specified in Subsection C of Section I of this Rider, and shall remain in effect until a revised Gas Charge Adjustment is computed and filed pursuant to this Rider.

The Company shall file with the Authority a transmittal letter, an exhibit showing the computation of the Gas Charge Adjustment, a PGA tariff sheet, and any applicable revised tariff sheets issued by Suppliers. The transmittal letter shall state the PGA tariff sheet number, the service area(s), the primary reasons for revision, and the effective date. T

If the Company proposes to recover any Gas Costs relating to (1) any payments to an affiliate or (2) any payments to a non-affiliate for emergency gas, over-run charges, take-or-pay charges and take-or-pay charges (except as provided below) or (3) the payment of any demand or fixed charges in connection with an increase in contract demand, the Company must file with the Authority a statement setting forth the reasons why such charges were incurred and sufficient information to permit the Authority to determine if such payments were prudently made under the conditions which existed at the time the purchase decisions were made. T

Any filing of a rate change under this Rider shall be effective on the proposed effective date unless the Authority shall act to suspend the proposed change within thirty day after the filing, in which case the filing shall be subject to notice and hearing. T

The recovery of pipeline take-or-pay charges which were the subject of Docket No. U-87-7590 shall continue to be handled under procedures approved by the Authority in that docket until such time as such procedures may be modified or amended by further order of the Authority. T

B. Refund Adjustment.

The Refund Adjustment shall be separately stated for firm and non-firm customers, and may be either positive or negative.

1. Computation of Refund Adjustment.

The Company shall compute a Refund Adjustment on the last day of each calendar quarter using the following formulas:

$$Firm\ RA = \left(\frac{DR1 - DR2}{SFR}\right) + \left(\frac{CR1 - CR2 \pm CR3 \pm i}{STR}\right)$$

$$Non\text{-}Firm\ RA = \left(\frac{CR1 - CR2 \pm CR3 \pm i}{STR}\right)$$

Piedmont Natural Gas Company, Inc.
Docket No. 20-00086
CAD Data Request No. 1, Item 85

2. Definitions of Formula Components.

RA = The Refund Adjustment in dollars per Ccf/therm, rounded to no more than five decimal places.

DR1 = Demand refund not included in a currently effective Refund Adjustment, and received from Suppliers by check, wire transfer, or credit memo.

DR2 = A demand surcharge from a Supplier not includable in the Gas Charge Adjustment, and not included in a currently effective Refund Adjustment.

CR1 = Commodity refund not included in a currently effective Refund Adjustment, and received from Suppliers by check, wire transfer, or credit memo.

CR2 = A commodity surcharge from a supplier not includable in the Gas Charge Adjustment, and not included in a currently effective Refund Adjustment.

CR3 = The residual balance of an expired Refund Adjustment.

I = Interest on the "Refund Due Customers' Account," using the average monthly balance based on the beginning and ending monthly balances. The interest rates for each calendar quarter used to compute such interest shall be a rate 2% below the arithmetic mean (to the nearest one-hundredth of one percent) of the prime rate value published in the "Federal Reserve Bulletin" or in the Federal Reserve's "Selected Interest Rates" for the 4th, 3rd, and 2nd months preceding the lst month of the calendar quarter C

SFR = Firm sales as defined in the Gas Charge Adjustment computation, less sales under a transportation or negotiated rate schedule.

STR = Total sales as defined in the Gas Charge Adjustment computation, less sales under a transportation or negotiated rate schedule.

3. Modification of Formula.

The formulas set forth above are not designed for use with two-part demand/commodity rate schedules; therefore, the formulas may be modified for use with such rate schedules. In addition, the formulas may be modified from time to time to carry out the intent of this PGA Rider. Any amendment to the formulas shall be effective on the proposed effective date of the amendment unless the Authority shall act to suspend the proposed amendment within thirty days after the filing of the proposed amendment, in which case the proposed amendment shall be subject to notice and hearing. T

Piedmont Natural Gas Company, Inc.
Docket No. 20-00086
CAD Data Request No. 1, Item 85

4. **Filing with the Authority.** T

The computation of the Refund Adjustment shall be filed in accordance with the notice requirements specified in Subsection C of Section I this Rider, and shall remain in effect for a period of twelve (12) months or for such longer or shorter period of time as required to appropriately refund the applicable refund amount.

The Company shall file with the Authority a transmittal letter, exhibits showing the computation of the Refund Adjustment and interest calculations, and a PGA tariff sheet. The transmittal letter shall state the PGA tariff sheet number, the service area(s), the reason for adjustment, and the effective date. Should the Company have a Gas Charge Adjustment filing to become effective the same date as a Refund Adjustment, a separate transmittal letter and PGA tariff sheet shall not be necessary. T

C. **Actual Cost Adjustment.**

Commencing with the initial effective date of this Rider, the Company shall calculate the ACA monthly. The Company may, at its option, file monthly to include the ACA in its calculation of the Gas Charge Adjustment but shall be required to do so at least annually. The ACA shall be the difference between (1) revenues billed customers by means of the Gas Charge Adjustment and (2) the cost of gas invoiced the Company by Suppliers plus margin loss (if allowed by order of the Authority in another docket) as reflected in the Deferred Gas Cost account. The balance of said account shall be adjusted for interest at the rate provided for the calculation of interest with respect to the Refund Adjustment. The ACA shall be segregated into demand and commodity, and shall be added to or deducted from, as appropriate, the respective demand and commodity costs included in the Gas Charge Adjustment. Supplemental sheets showing the calculations of margin losses and cost savings shall also be provided. T

D. **Adjustments to Prior Period ACAs.**

In the event that circumstances warrant a correction to or restatement of a prior period ACA, such correction or restatement shall be made in accordance with the ACA calculation in effect for the time period(s) to which the correction or restatement relates. The resulting adjustment shall then be added to or deducted from the appropriate ACA in the next ensuing ACA filing with the Authority. T

E. **Annual Filing with the Authority.** T

Each year, the Company shall file with the Authority an annual report reflecting the transactions in the Deferred Gas Cost Account. Unless the Authority provides written notification to the Company within 180 days, the Deferred Gas Cost Adjustment Account shall be deemed in compliance with the provisions of this Rider.

IV. **Gas Cost Accounting.**

To appropriately match revenues with cost of purchased gas as contemplated under this rule, the Company shall originally record the cost of purchased gas in a "Deferred Gas Cost" account. Monthly, the Company

Piedmont Natural Gas Company, Inc.
Docket No. 20-00086
CAD Data Request No. 1, Item 85

shall debit "Natural Gas Purchases" with an amount equal to any gas cost component included in the Company's base tariff rates (base rate) plus the PGA rate, as calculated hereunder, multiplied by the appropriate sales volumes billed to customers. The corresponding monthly credit entry shall be made to the "Deferred Gas Cost" account.

Piedmont Natural Gas Company, Inc.
Docket No. 20-00086
CAD Data Request No. 1, Item 85

SERVICE SCHEDULE NO. 312
Equal Payment Plan (EPP)

AVAILABILITY

The Equal Payment Plan ("EPP" or "Plan") is available to customers receiving service under Rate Schedules 301 and 302 whose accounts are in good standing. Good standing shall be defined as not having been removed from the Plan within the last twelve (12) months for non-payment of bills. The Plan is designed to provide the customer the option of paying equal payments over a twelve-month period and is available during any month of the year. Under circumstances where a customer has a difficult time paying his monthly bills, EPP may be used to catch up the past due balance. The customer will be asked to pay as much of the old balance as possible to help keep future payments as low as possible. N

GENERAL TERMS AND CONDITIONS

At the customer's election, the Company will calculate payments under the Plan based on the customer's actual consumption history during the past 12-months adjusted for normal weather. The estimated monthly usage will be priced at the Company's currently approved margin rates plus an estimated purchased gas adjustment factor based on the forward-looking NYMEX futures prices for upcoming 12-month period. Applicable franchise fees and sales tax are then added to arrive at the estimated annual billing amount. If the customer has an outstanding balance, it will be added to the estimated annual amount. The monthly payment will be calculated by dividing the estimated annual billing amount by twelve. After 11 payments have been made, the customer will be sent a twelfth-month "true-up" bill reflecting any underage or overage of the total of the past 11 payments. Underages will be treated as debits and overages will be treated as credits and applied to the next billing. Refunds may be made by check if the overage exceeds $25.00. Unless otherwise requested, the customer will remain on EPP after the twelfth bill with a new monthly EPP amount calculated.

MID-YEAR ADJUSTMENTS

In order to avoid unusually large debit or credit balances to the customer's account, the Company may make mid-year adjustments to the EPP payments. During periods of highly volatile wholesale gas prices, more frequent EPP adjustments may be required to avoid unusually large debit or credit balances. The Company will notify the customer with a notation on the bill, bill insert or separate mailing of any adjustments to payments.

Piedmont Natural Gas Company, Inc.
Docket No. 20-00086
CAD Data Request No. 1, Item 85

RATE SCHEDULE NO. 313
Firm Transportation Service

AVAILABILITY

Gas service under this Rate Schedule is available in the area served by the Company in the State of Tennessee to any full requirements non-residential Customer whose average daily gas usage is reasonably anticipated to equal or exceed 500 therms per day. All Service under this Rate Schedule shall be contingent upon application to and consent by the Company to such Service, as provided in the Company's Service Regulations. Upon commencement of Service under this Rate Schedule, any reclassification or change in quantity or character of Service to Customer shall be subject to the provisions of this Rate Schedule 313 and the procedures set forth in the Company's Service Regulations. Service under this Rate Schedule is contingent upon the installation by the Company of telemetering equipment that reports daily consumption. N

CHARACTER OF SERVICE

The nature of service provided by Company to Customer under this Rate Schedule is firm transportation Service. N

Once a qualified Customer elects service under this Rate Schedule, all services will be provided under the terms and conditions of this Rate Schedule for a term extending through the following May 31. Upon meeting the qualifications contained therein, a Customer may receive service under Rate Schedule 309 concurrent with service provided under this Rate Schedule. Subject to the requirements set forth above, a Customer may, subject to the consent of the Company, elect to discontinue service under this Rate Schedule and receive service under Rate Schedule 303 by giving written notice to the Company prior to March 1 of any year. The Company will not withhold such consent provided (a) the Company continues to offer Large General Sales Service under Rate Schedule 303, (b) the Company is able to provide Service under Rate Schedule 303 under commercially reasonable terms and conditions, and (c) the analyses applicable to reclassifications or changes in Service set forth in the Company's Service Regulations support such consent. If timely notice is received from Customer and consent is provided by Company, the Customer shall discontinue service under this Rate Schedule and Company shall provide Service under Rate Schedule 303 effective the first June 1 following the notice. N

All gas delivered to pursuant to this Rate Schedule shall be metered by the Company separately from any gas delivered to Customer under any of the Company's other Rate Schedules. N

The Company will redeliver gas received by Company from upstream pipeline(s) for the Customer's account under this Rate Schedule in accordance with the Customer's scheduled and confirmed nominations and subject to the Company's Operating Conditions. N

APPLICABILITY

Transportation service is available under this Rate Schedule to any qualified Customer connected to the Company's system who has obtained an independent supply of natural gas and has arranged to have this supply delivered to one of the Company's existing delivery points for transportation by the Company to the Customer's facilities.

The Company will deliver gas previously transported by a connected pipeline for the Customer's account under this Rate Schedule on a day-to-day basis in accordance with the

Piedmont Natural Gas Company, Inc.
Docket No. 20-00086
CAD Data Request No. 1, Item 85

Customer's scheduled and confirmed nominations, subject to such maximum allowable daily deliveries as may be specified in the Gas Service Contract. The Company reserves the right to suspend service on any day when, in the Company's sole opinion, its operating conditions are such that suspension of service is necessary. The Company reserves the right to limit, allocate, or direct third party gas nominations among the interstate pipelines serving the Company's distribution system, when, in the Company's sole opinion, such action is necessary to maintain the operational integrity of the system. D

STANDBY SALES SERVICE

At the option of the Customer, an election may be made monthly to receive Standby Sales Service from the Company under this Rate Schedule for delivery to the Customer at the Company's city gate. The Customer will also receive Standby Sales Service as a default if the Customer or the Customer's agent fails to submit a timely and valid nomination for transportation service. In addition to paying the Monthly Standby Index Price set forth below for Standby Sales Service hereunder, the Customer will utilize the transportation services and incur the charges otherwise applicable under this Rate Schedule to cause such gas supplies to be delivered to the Customer's meter. The price which the Customer shall pay for the gas supplied under this paragraph will be the Monthly Standby Index Price defined as follows: "The weighted average index price for the applicable month as published in the first *Natural Gas Week* for such month in the table Natural Gas Weekly Spot Prices ,for:

TEXAS (SOUTH/EAST), Tenn Zone 1 Zone 0:South Texas		X	.3028
	+		
GULF COAST, Tenn 500 So La Z1 Louisiana		X	.3806
	+		
GULF COAST, Tenn 800 So La Z1		X	.3166

C

If the Customer nominates transportation service hereunder and purchases gas supplies from a third party supplier, and such Customer's consumption exceeds actual deliveries to the Company from such third party supplier to the point where operational problems are created for the Company, then the Company shall have the right, at it sole discretion, to initiate Standby Sales Service to the Customer. The price for such service shall be the same as set forth above except when the Company is required by such imbalance shortfall to purchase incremental volumes of gas supplies. In this case the Customer receiving Standby Sales Service will pay the higher of (on a daily basis) the Monthly Standby Index Price or the Daily Standby Index Price defined as follows:

The midpoint daily index price as published in Gas Daily for the day of consumption as stated in the "Daily Price Survey," for the "Tennessee 500 Leg." For days of consumption when the Gas Daily is not published, the Gas Daily price shall equal the price as published on the nearest subsequent day by Gas Daily.

Applicable firm transportation tariff commodity charges, fuel and any other surcharges as defined in the above transporters' FERC approved tariffs will be added to the above standby index prices. The Company will collect gross receipts tax on the incremental gas related charges.

Any difference between the actual cost of gas incurred by the Company and the Index price as defined in the previous paragraph will be accounted for in the Actual Cost Adjustment account in a manner consistent with Rule No. 1220-4-1-12 of the TRA Rules and Regulations. Increments or decrements which may result from the PGA adjustments will not apply to the standby index prices.

Piedmont Natural Gas Company, Inc.
Docket No. 20-00086
CAD Data Request No. 1, Item 85

MARGIN RATE

Monthly Charge	$800.00	I
Demand Charge (per therm of billing demand)	$.80000	
Commodity Charge (per therm)		R
1st Step (0-15,000 therms)	$.09682	
2nd Step (15,001-40,000 therms)	$.08953	
3rd Step (40,001-90,000 therms)	$.06450	
4th Step (Over 90,000 therms)	$.02764	

MONTHLY MINIMUM BILL

The minimum monthly bill shall be the Monthly Charge plus the Demand Charge multiplied by the billing demand determined as described below. T

MONTHLY CHARGE

A charge will be billed monthly to all Customers for the availability of gas service. This charge will be in addition to the Commodity Charge. The Monthly Charge will be billed from the date of initial service until service is terminated at the Customer's request. N

BILLING DEMAND

The billing demand shall be determined as follows:

Customer billing demand determinate shall be the highest daily usage during the period from November 1 to March 31 of the previous winter period as metered and reported to the Company by the telemetering equipment installed by the Company. Changes to the Customer's billing demand determinate will become effective June 1 of each year. The per unit charge may be adjusted from time to time to reflect rate changes, including, but not limited to, a general change in system rates or a change in pipeline capacity charges billed to the Company.

For Customers commencing initial gas service under this Rate Schedule and who do not have a consumption history from other services provided by the Company, the billing demand determinate shall be based upon a reasonable assumption of usage considering the connected load. If a Customer has received gas service from the Company prior to receiving service under this Rate Schedule but does not have daily telemetered records to determine peak day usage as described above, the Company shall determine a billing demand based on the greater of: 1) the month of highest consumption for the period to date multiplied by six percent (6%), or 2) 500 therms.

COMMODITY CHARGE

The rate per therm shall be billed on the quantity of gas delivered by Company to Customer's premises. N

SERVICE AGREEMENTS

All Customers receiving service under this Rate Schedule shall be required to execute the Company's standard contracts and/or service applications and shall be subject to the Company's Rules and Regulations as filed with and approved by the Tennessee Regulatory Authority (TRA).

Piedmont Natural Gas Company, Inc.
Docket No. 20-00086
CAD Data Request No. 1, Item 85

PAYMENT TERMS
All bills for service are due upon presentation and the net rates are applicable if payment is made on or before the last date of payment stated on the bill. Payments made after that date shall be for the gross amount which is greater by five percent (5%) than the net billing.

RETURNED CHECK CHARGE
In the event a Customer's check for payment is returned to the Company marked NSF (Non Sufficient Funds) the Customer will be assessed a charge of $20.00.

ADJUSTMENTS
Bills for transportation service are subject to adjustment caused by changes in the cost of purchased gas in accordance with Rule No. 1220-4-1-.12 of the TRA Rules and Regulations.

Purchased gas adjustments and all applicable taxes and fees are in addition to the above stated margin rates in accordance with the Rules, Regulations and Orders of the TRA and the Laws of the State of Tennessee.

SERVICE AVAILABILITY
All requests for new or additional service or the transfer of existing service to a higher priority end use will be considered based upon the Company's judgment as to the available gas supply, Customer's load factor or use pattern, end use, impact on the local economy, Company's Service Regulations, the TRA Rules and Regulations, Orders of the TRA, and the Laws of the State of Tennessee. N

SERVICE CURTAILMENT
Gas service under this schedule is subject to the provisions contained within TRA Schedule No. 306, "Schedule for Limiting and Curtailing Service" and Company's Service Regulations. S

BALANCING, CASH-OUT, AND AGENCY AUTHORIZATION
Service under this Rate Schedule shall be subject to all of the provisions and requirements of Rate Schedule 307, "Balancing, Cash-Out, and Agency Authorization." N

APPLICABLE DOCUMENTS DEFINING OBLIGATIONS OF THE COMPANY AND ITS CUSTOMERS
The applicable documents defining the obligations of the Company and its Customers are those described in Section 1 of the Company's Service Regulations. N

Piedmont Natural Gas Company, Inc.
Docket No. 20-00086

RATE SCHEDULE NO. 314
INTERRUPTIBLE TRANSPORTATION SERVICE

AVAILABILITY

Gas service under this Rate Schedule is available in the area served by the Company in the State of Tennessee **ON AN INTERRUPTIBLE BASIS** to any full requirements non-residential Customer whose average daily gas usage is reasonably anticipated to equal or exceed 500 therms per day. All Service under this Rate Schedule shall be contingent upon application to and consent by the Company to such Service, as provided in the Company's Service Regulations. Upon commencement of Service under this Rate Schedule, any reclassification or change in quantity or character of Service to Customer shall be subject to the provisions of this Rate Schedule 314 and the procedures set forth in the Company's Service Regulations. Service under this Rate Schedule is contingent upon the installation by the Company of telemetering equipment that reports daily consumption. N

CHARACTER OF SERVICE

The nature of Service provided by Company to Customer under this Rate Schedule is interruptible transportation service. N

Once a qualified Customer elects service under this Rate Schedule, all services will be provided under the terms and conditions of this Rate Schedule for a term extending through the following May 31. Upon meeting the qualifications contained therein, a Customer may receive service under Rate Schedule 309 concurrent with service provided under this Rate Schedule. Subject to the requirements set forth above, a Customer may, subject to the consent of the Company, elect to discontinue service under this Rate Schedule and receive service under Rate Schedule 304 and/or 310 by giving written notice to the Company prior to April 1 of any year. The Company will not withhold such consent provided (a) the Company continues to offer Interruptible General Sales Service under Rate Schedule 304, (b) the Company is able to provide Service under Rate Schedule 304 under commercially reasonable terms and conditions, and (c) the analyses applicable to reclassifications or changes in Service set forth in the Company's Service Regulations support such consent. If timely notice is received from Customer and consent is provided by Company, the Customer shall discontinue service under this Rate Schedule and Company shall provide Service under Rate Schedule 304/310, as applicable, effective the first June 1 following the notice. N

All gas delivered to pursuant to this Rate Schedule shall be metered by the Company separately from any gas delivered to Customer under any of the Company's other Rate Schedules. N

The Company will redeliver gas received by Company from upstream pipeline(s) for the Customer's account under this Rate Schedule in accordance with the Customer's scheduled and confirmed nominations and subject to the Company's Operating Conditions. N

Customers receiving services under this Rate Schedule shall maintain, in useable condition, alternate-fuel facilities with ample on-site alternate fuel capability for supplying 100% of the establishment's gas requirements during periods of gas interruption or curtailment. Such interruption or curtailment shall be immediately effective upon verbal or written notification by the Company, and Customer shall refrain from using gas until permitted to do so by the Company. It is understood and agreed that the Company will have the right to suspend gas service without further notice to the Customer in the event Customer fails to curtail Customer's use of gas in accordance with the Company's notice of curtailment.

SERVICE SCHEDULE NO. 315
Weather Normalization Adjustment (WNA) Rider

I. Provision for Adjustment

The base rates per therm (100,000 Btu) for gas service set forth in any rate schedules utilized by the Authority in determining normalized test period revenues shall be adjusted by an amount hereinafter described, which amount is referred to as the "Weather Normalization Adjustment".

The Weather Normalization Adjustment will be applicable for bills rendered on and after October 1 and continuing through the final billing cycle in April of each year. C

II. Definitions

For the purposes of this Rider:

"Authority" means the Tennessee Regulatory Authority.

"Relevant Rate Order" means the final order of the Authority in the most recent litigated rate case of the Company fixing the rates of the Company or the most recent final order of the Authority specifically prescribing or fixing the factors and procedures to be used in the application of this Rider.

III. Computation of Weather Normalization Adjustment

The Weather Normalization Adjustment shall be computed to the nearest one-hundredth cent per therm by the following formula:

$$WNA_i = R_i * \frac{(HSF_i(NDD-ADD))}{(BL_i + (HSF_i \times ADD))}$$

Where:

I = any particular rate schedule or billing classification within any particular rate schedule that contains more than one billing classification.

WNA_i = Weather Normalization Adjustment Factor for the i^{th} rate schedule or classification expressed in cents per therm.

R_i = weighted average base rate (base rate less any embedded gas cost) of temperature sensitive sales for the i^{th} schedule or classification utilized by the Authority in the Relevant Rate Order for the purpose of determining normalized test year revenues.

Piedmont Natural Gas Company, Inc.
Docket No. 20-00086
CAD Data Request No. 1, Item 85

HSF_i = heat sensitive factor for the i^{th} schedule or classification utilized by the Authority in the Relevant Rate Order for the purpose of determining normalized test year revenues.

NDD = normal billing cycle heating degree days utilized by the Authority in the Relevant Rate Order for the purpose of determining normalized test year revenues.

ADD = actual billing cycle heating degree days.

BL_i = base load sales for the i^{th} schedule or classification utilized by the Authority in the Relevant Rate Order for the purpose of determining normalized test year revenues.

IV. Filing with Authority

The Company will file as directed by the Authority (a) a copy of each computation of the Weather Normalization Adjustment, (b) a schedule showing the effective date of each such Weather Normalization Adjustment, and a schedule showing the factors or values derived from the Relevant Rate Order used in calculating such Weather Normalization Adjustment.

Piedmont Natural Gas Company, Inc.
Docket No. 20-00086
CAD Data Request No. 1, Item 85

SERVICE SCHEDULE NO. 316
Performance Incentive Plan

Applicability

The Performance Incentive Plan (the Plan) replaces the annual reasonableness or prudence review of the Company's gas purchasing activities overseen by the Tennessee Regulatory Authority (Authority or TRA). The Plan does not preclude the Authority from conducting an independent investigation into or examination of any aspect of the Plan or the Company's conduct thereunder. The Plan is designed to provide incentives to the Company in a manner that will produce rewards for its customers and its stockholders and improvements in the Company's gas procurement and capacity management activities. Each plan year (Plan Year) will begin July 1st. The annual provisions and filings herein would apply to this annual period. The Plan will continue until the Plan is either (a) terminated at the end of a Plan Year by not less than 90 days notice by the Company to the Authority or (b) the Plan is modified, amended or terminated by the Authority on a prospective basis.

Overview of Structure

The Plan establishes a predefined benchmark index to which the Company's commodity cost of gas is compared. It also addresses the recovery of gas supply reservation fees and the treatment of off-system sales and wholesale interstate sale for resale transactions. The net incentive benefits or costs will be shared between the Company's customers and the Company on a 75%-customers / 25%- stockholders basis for the Plan Year commencing on July 1, 2006.

The Plan also is designed to encourage the Company to actively market off-peak unutilized transportation and storage capacity on pipelines in the secondary market. It also addresses the sharing of asset management fees paid by asset managers, and other forms of compensation received by the Company for the release and/or utilization of the Company's transportation and storage assets by third-parties. The Company shall notify the TRA Staff and the Consumer Advocate and Protection Division of the Office of the Attorney General (CAD) of all "other forms of compensation" prior to inclusion of such compensation in the Plan. The net incentive benefits or costs of such activities will be shared between the Company's customers and the Company utilizing a 75%-customers / 25%-stockholders formula commencing on July 1, 2006.

Every three years the Company's activities under the Plan will be reviewed comprehensively by an independent consultant. The first triennial review shall occur in the autumn of 2008. The scope of the review may include all transactions and activities related to the Performance Incentive Plan, including, but not limited to, natural gas procurement, capacity management, storage, hedging, reserve margins, and off-system sales.

The Company is subject to a cap on overall incentive gains or losses of $1.6 million annually. In connection with the Performance Incentive Plan, the Company shall file with the Authority Staff,

Docket No. 20-00086
CAD Data Request No. 1, Item 85

and supply a copy to the Consumer Advocate and Protection Division of the Tennessee Attorney General (CAD), and update each year, a Three Year Supply Plan. The Company will negotiate/obtain firm capacity, interruptible capacity and/or gas supply pursuant to such plan. C

Commodity Costs

Each month the Company will compare its *total city gate commodity and cost of gas*[1] to a benchmark dollar amount. The benchmark gas cost will be computed by multiplying total actual purchase quantities for the month by a price index. The monthly price index is defined as:

$$I = F_f(P_0K_{0+P_1K_1}+P_cK_c+...P_\alpha K_\alpha) +F_0O+F_dD; \text{ where}$$
$$F_r+F_0+F_d =1; \text{ and}$$

I = the monthly city gate commodity gas cost index.

F_f = the fraction of gas supplies purchased in the first-of-the-month market which are transported to the city gate under the Company's FT, negotiated FT, and IT service agreements. C

P = the Inside FERC Gas Market Report price index for the first-of-the-month edition for a geographic pricing region, where subscript 0 denotes Tennessee Gas Pipeline (TGP) Rate Zone 0; subscript 1 denotes TGP Rate Zone 1; subscript C denotes Columbia Gulf Transmission (CGT) - mainline, and subscript α denotes new incremental firm services to which the Company may subscribe in the future.[2] The indices used for calculating Midwestern capacity shall be those produced by Natural Gas Intelligence for monthly purchases and Gas Daily for daily purchases. The commodity index prices will be adjusted to include the appropriate pipeline firm transportation (FT) and interruptible transportation (IT) commodity transportation charges and fuel retention to the city gate under the Company's FT, negotiated FT, and IT service agreements.[3] C

---

[1] Gas purchases associated with service provided under Texas Eastern Transmission Company Rate Schedule SCT shall be excluded from the incentive mechanism. The Company will continue to recover 100 percent of these costs through its PGA with no profit or loss potential. Extension or replacement of such contract shall be subject to the same competitive bidding procedures that will apply to other firm gas supply agreements. In addition, the Plan will measure storage gas supplies against the benchmark index during the months such quantities are purchased for injection. For purposes of comparing such gas purchase costs against the monthly city gate index price, the Company will exclude any commodity costs incurred downstream of the city gate to storage so that the Company's actual costs and the benchmark index are calculated on the same basis.

[2] To the extent that the Company renegotiates existing reservation fee supply contracts or executes new reservation fee supply contracts with commodity pricing provisions at a discount to the first-of-the-month price index, the Company shall modify the monthly commodity price index to reflect such discount.

[3] Capacity released for a month shall be excluded from the benchmark calculation for that month, excluding capacity released under an agreement where the Company maintains city gate delivery rights for the released capacity during such month.

Piedmont Natural Gas Company, Inc.
Docket No. 20-00086
CAD Data Request No. 1, Item 85

K = the fraction (relative to total maximum daily contract entitlement) of the Company's total firm, negotiated firm, and interruptible transportation capacity under contract in a geographic pricing region, where the subscripts are as above.[4] C

F_o = the fraction of gas supplies purchased in the first-of-the-month spot market which are delivered to the Company's system using transportation arrangements other than the Company's FT, negotiated FT, and IT contracts. C

0 = the weighted average of Inside FERC Gas Market Report first-of-the-month price indices, plus applicable IT rates and fuel retention, from the source of the gas to the city gate, where the weights are computed based on actual purchases of gas supplies purchased by the Company and delivered to the Company's system using transportation arrangements other than the Company's FT, negotiated FT, and IT contracts. C

F_d = the fraction of gas supplies purchased in the daily spot market.

D = the weighted average of daily average index commodity prices taken from Gas Daily for the appropriate geographic pricing regions, where the weights are computed based on actual purchases made during the month. The commodity index prices will be adjusted to include the appropriate transportation commodity charges and fuel retention to the city gate.

Gas Supply Reservation Fees

The Company will continue to recover 100% of gas supply reservation fee costs through its PGA with no profit or loss potential. For new contracts and/or contracts subject to renegotiation during the Plan Year, the Company will solicit bids for gas supply contracts containing a reservation fee.

Off-System Sales And Sale For Resale Transactions

Margin on off-system sales and wholesale sale-for-resale transactions using the Company's firm, negotiated firm, and interruptible transportation and capacity entitlements (the costs of which are recovered from the Company's ratepayers) shall be credited to the Plan and will be shared with ratepayers. Margin on such sales will be defined as the difference between the sales proceeds and the total variable costs incurred by the Company in connection with the transaction, including transportation and gas costs, taxes, fuel, or other costs. For purposes of gas costs, the Company will impute such costs for its related C
supply purchases at the benchmark first-of-the-month or daily index, as appropriate, on the pipeline and in the zone in which the sale takes place. The difference between the Company's

[4] Because the aggregate maximum daily contract quantities in the Company's FT contract portfolio vary by month over the course of the year, the weights will be recalculated each month to reflect actual contract demand quantities for such month. The contract weights, and potentially the price indices used, will also vary as the Company renegotiates existing or adds new FT contracts. As new contracts are negotiated, the Company shall modify the index to reflect actual contract demand quantities and the commodity price indices appropriate for the supply regions reached by such FT agreements. Citygate benchmark calculations shall be computed utilizing the Company's Design Day delivery requirements (deliveries required on a peak day).

Piedmont Natural Gas Company, Inc.
Docket No. 20-00086
CAD Data Request No. 1, Item 85

actual costs and such index price is taken into account under the Plan. After deducting the total transaction costs from the sales proceeds, any remaining margin will be credited to commodity gas costs and shared with customers on a 75%- customer / 25%-stockholders basis.

Capacity Management

To the extent the Company is able to release transportation or storage capacity, or generate transportation or storage margin associated with off-system or wholesale sales-for-resale, the associated cost savings and/or asset management fees, or other forms of compensation associated with such activities, shall be shared by the Company and customers according to the following sharing formula: 75%-customers / 25%-stockholders. The Company shall notify the TRA Staff and the Consumer Advocate and Protection Division of the Office of the Attorney General (CAD) of all "other forms of compensation" prior to inclusion of such compensation in the Plan.

Hedging Activities

The Company may engage in hedging transactions[5] within the PGA/ACA mechanism. Costs related to hedging transactions may be recovered through the ACA account; provided, however, that such costs recovered through the ACA account shall not exceed one percent (1%) of total annual gas costs.[6] Costs related to hedging transactions recoverable through the ACA account shall be defined as all direct, transaction related costs arising from the Company's prudent efforts to stabilize or hedge its commodity gas costs including, without limitation, brokerage fees, and the costs of financial instruments.

All costs related to hedging transactions, in addition to all gains and losses from hedging transactions, shall be credited/debited to the ACA account in the respective month that each hedging transaction closes. Costs related to hedging transactions that are incurred prior to the month that the hedging transaction closes shall be temporarily recorded in a separate, non-interest bearing account for tracking purposes.

Determination of Shared Saving

Each month during the term of the Plan, the Company will compute any gains or losses in accordance with the Plan. If the Company earns a gain, a separate Incentive Plan Account (IPA) will be debited with such gain. If the Company incurs a loss, that same IPA will be credited with such loss. During a Plan Year, the Company will be limited to overall gains or losses totaling $1.6 million. Interest shall be computed on balances in the IPA using the same interest rate and methods as used in the Company's Actual Cost Adjustment (ACA) account. The offsetting entries to IPA gains or losses will be recorded to income or expense, as appropriate. At its option, however, the Company may temporarily record any monthly gains in a non-regulatory deferred credit balance sheet account until results for the entire Plan Year are available.

---

[5] Hedging transactions, as used herein, shall include but not be limited to futures contracts, financial derivative products, storage swap arrangements, or other private agreements to hedge, manage or reduce gas costs.

[6] One percent (1%) of total annual gas costs, for the purposes of establishing a recovery cap, shall be computed from the most current audited and approved gas costs for the Company in a TRA docket as of the first day of the month, 12 months prior to the first day of the period under audit.

Piedmont Natural Gas Company, Inc.
Docket No. 20-00086
CAD Data Request No. 1, Item 85

Gains or losses accruing to the Company under the Plan will form the basis for a rate increment or decrement to be filed and placed into effect separate from any other rate adjustments to recover or refund such amount over a prospective twelve-month period. The Company is subject to a cap on overall incentive gains or losses of $1.6 million annually.

Each year, effective November 1, the rates for all customers, excluding transportation customers who receive no direct benefit from any gas cost reductions resulting from the Plan, will be increased or decreased by a separate rate increment or decrement designed to amortize the collection or refund of the June 30 IPA balance over the succeeding twelve month period. The increment or decrement will be established by dividing the June 30 IPA balance by the appropriate volumetric billing determinants for the twelve months ended June 30. During the twelve month amortization period, the amount collected or refunded each month will be computed by multiplying the billed volumetric determinants for such month by the increment or decrement, as applicable. The product will be credited or debited to the IPA, as appropriate. The balance in the IPA will be tracked as a separate collection mechanism. Subject to approval by the TRA, the Company may also propose to refund positive IPA balances on an intra-year basis by making direct bill credits to all customers (except transportation customers) where such direct bill credit would be beneficial to customers.

Filing with the Authority

The Company will file calculations of shared savings and shared costs quarterly with the Authority not later than 60 days after the end of each interim fiscal quarter and will file an annual report not later than 60 days following the end of each Plan Year. Unless the Authority provides written notification to the Company within 180 days of the annual reports, the Incentive Plan Account shall be deemed in compliance with the provisions of this Service Schedule. The Authority Staff may expand the time for consideration of the annual reports by up to an additional sixty (60) days upon written notification to the Company or longer by mutual agreement or upon a showing of good cause.

Periodic Index Revisions

Because of changes in the natural gas marketplace, the price indices utilized by the Company, and the composition of the Company's purchased gas portfolio may change. The Company shall, within sixty (60) days of identifying a change to a significant component of the mechanism, provide notice of such change to the Authority. Unless the Authority provides written justification to the Company within sixty (60) days of such notice, the price indices shall be deemed approved as proposed by the Company.

Gas Supply Incentive Compensation Program

The Company has in place a Gas Supply Incentive Compensation Program (the Program) designed to provide incentive compensation to selected Gas Supply non-executive employees involved in the implementation of the Company's Incentive Plan and Secondary Marketing Programs in a manner consistent with the benefits achieved for customers and shareholders through improvements in gas procurement and secondary marketing activities. Participants in

Piedmont Natural Gas Company, Inc.
Docket No. 20-00086
CAD Data Request No. 1, Item 85

the program receive incentive compensation as recognition for their contribution to the customers and shareholders of the Company through lower gas costs and gains related thereto. Performance measures are established for the Program each year.

During the time this tariff is in effect, the Company will continue to have in place the Gas Supply Incentive Compensation Program, as detailed to the Authority, as it relates to the Company's Incentive Plan. The Company will advise the Authority in writing of any changes to the Program, and unless the Company is advised within 60 days, said changes will become effective. The Authority may expand the time for consideration of such changes upon written notification to the Company. No filing for prior approval is required for changes in the performance measures.

Triennial Review

A comprehensive review of the transactions and activities related to the Performance Incentive Plan shall be conducted by an independent consultant once every three years. The initial triennial review shall be conducted in the autumn of 2008 and subsequent triennial reviews shall be conducted every third year thereafter. The TRA Staff, the CAD, and the Company shall make an effort to maintain a list of no less than five (5) mutually agreeable independent consultants or consulting firms qualified to conduct the aforementioned review. Any dispute concerning whether an independent consultant shall be added to the list shall be resolved by the TRA Staff, after consultation with the Company and the CAD. For each review, the TRA Staff shall select three (3) prospective independent consultants from that list. Each such consultant shall possess the expertise necessary to conduct the review. The TRA Staff shall provide the list of prospective independent consultants to the Company and the CAD via e-mail. The Company and the CAD shall have the right, but not the obligation, to strike one (1) of the prospective independent consultants from the list by identifying the stricken consultant in writing to the TRA Staff within thirty (30) days from the date the list is e-mailed. The TRA Staff shall select the independent consultant from those remaining on the list after the Company's and the CAD's rights to strike have expired. The cost of the review shall be reasonable in relation to its scope. Any and all relationships between the independent consultant and the Company, the TRA Staff, and/or the CAD shall be disclosed, and the independent consultant shall have had no prior relationship with either the Company, the TRA Staff, or the CAD for at least the preceding five (5) years unless the Company, the TRA Staff and the CAD agree in writing to waive this requirement. The TRA Staff, the CAD and the Company may consult amongst themselves during the selection process; provided, however, that all such communications between the parties shall be disclosed to any party not involved in such communication so that each party may participate fully in the selection process.

The scope of the triennial reviews may include all transactions and activities related either directly or indirectly to the Performance Incentive Plan as conducted by the Company or its affiliates, including, but not limited to, the following areas of transactions and activities: (a) natural gas procurement; (b) capacity management; (c) storage; (d) hedging; (e) reserve margins; and (f) off-system sales. The scope of each triennial review shall include a review of each of the foregoing matters as well as such additional matters as may be reasonably identified by the

Piedmont Natural Gas Company, Inc.
Docket No. 20-00086
CAD Data Request No. 1, Item 85

Company, the TRA Staff, or the CAD relative to the operation or results of the Performance Incentive Plan.

The Company, the TRA Staff, or the CAD may present documents and information to the independent consultant for the independent consultant's review and consideration. Copies of all such documents and information shall be presented simultaneously to the independent consultant and all other parties.

The independent consultant shall make findings of fact, as well as identify and describe areas of concern and improvement, if any, that in the consultant's opinion warrant further consideration; however, the independent consultant shall not propose changes to the structure of the Performance Incentive Plan itself. The independent consultant shall complete and issue a written report of its findings and conclusions by July 1 of the year immediately following the triennial review. The report deadline may be waived by the written consent of the TRA Staff, the Company, and the CAD.

The independent consultant shall not propose changes to the structure of the Performance Incentive Plan itself; however, the TRA Staff, the Company, or the CAD may use the report of the independent consultant as grounds for making recommendations or proposed changes to the Authority, and the TRA Staff, the Company, or the CAD may support or oppose such recommendations or proposed changes. Any proposed changes to the structure of the Performance Incentive Plan resulting from the initial triennial review or subsequent triennial reviews, whether adopted by agreement or pursuant to a ruling of the Authority, shall be implemented on a prospective basis only beginning with the incentive Plan Year immediately following such agreement or ruling.

The cost of the triennial reviews shall be paid initially by the Company and recovered through the ACA account. The TRA Staff may continue its annual audits of the IPA and the ACA account, and the triennial reviews shall not in any way limit the scope of such annual audits. The CAD retains all of its statutory rights, and the triennial reviews shall not in any way affect such rights.

Piedmont Natural Gas Company, Inc.
Docket No. 20-00086
CAD Data Request No. 1, Item 85

RATE SCHEDULE NO. 321
Residential Service-Standard Rate

AVAILABILITY

Gas service under this Rate Schedule is available in the area served by the Company in the State of Tennessee to any full requirements single private residences, including the separate private units of apartment houses and other multiple dwellings, actually used for residential purposes, which are separately metered where the Company's distribution mains are suitable for supplying the desired service.

Rate Schedule 321 applies to all residential customers whose base load usage in both of the cycle billing months of July and August is less than 15 therms. Base load usage will be based upon Customer's usage in the Company's most recent residential base load period adjusted for cycle length. Availability of this Rate Schedule for new Customers will be based on reasonably anticipated base load usage. Reclassification of customers between rate schedules will be based upon procedures set forth in the Company's Service Regulations as approved by the Tennessee Regulatory Authority.

MARGIN RATE	Winter (November-March)	Summer (April-October)
Customer Charge (per month)	$13.00	$10.00
Commodity Charge (per therm)	$.32000	$.27000

D

MONTHLY CUSTOMER CHARGE

A charge will be billed monthly to all Customers for the availability of gas service. This charge will be in addition to the commodity charge for gas delivered. The Customer charge will be billed from the date of initial service until service is terminated at the Customer's request

BACKUP SERVICE

When gas service is being supplied for use as a Backup Service for the dual-fuel heat pump or for similar use where the Customer's equipment is specifically designed by the manufacturer or is modified by the Customer or others for the purpose of using natural gas as the equipment's backup energy source, there shall be payable monthly in addition to all and other charges under this Rate Schedule a Backup Service Demand Charge individually determined for each Customer based upon the Customer's applicable gas equipment input rating. The per therm Demand Charge shall be equal to the unit Demand Charge applicable to the Company's firm industrial rate schedules.

Piedmont Natural Gas Company, Inc.
Docket No. 20-00086
CAD Data Request No. 1, Item 85

Input shall be based upon individual Customer's applicable gas equipment rating in:

$$\frac{\text{BTU/Hour x 10 hours}}{\text{100,000 BTU}} = \text{TH}$$

SERVICE AGREEMENTS
All Customers purchasing gas pursuant to this schedule shall be subject to the Company's standard contracts and/or service applications and subject to the Company's Service Regulations as filed with the TRA.

PAYMENT TERMS
All bills for service are due upon presentation and the net rates are applicable if payment is made on or before the last date of payment stated on the bill. Payments made after that date shall be for the gross amount which is greater by five percent (5%) than the net billing.

RETURNED CHECK CHARGE
In the event a Customer's check for payment is returned to the Company marked NSF (Non Sufficient Funds) the Customer will be assessed a charge of $20.00.

D

ADJUSTMENTS
Bills for service are subject to adjustment caused by changes in the cost of purchased gas in accordance with Rule No. 1220-4-1-.12 of the TRA Rules and Regulations.

Purchased gas adjustments and all applicable taxes and fees are in addition to the above stated margin rates in accordance with The Rules, Regulations and Orders of the TRA and Laws of the State of Tennessee.

SERVICE AVAILABILITY
All requests for new and additional service or the transfer of existing service to higher priority end use will be considered based upon the Company's judgement as to the available gas supply, Customer's load factor or use pattern, end use, impact on the local economy, and The Rules, Regulations, and Orders of the TRA and Laws of the State of Tennessee.

SERVICE INTERRUPTION AND CURTAILMENT
Gas service under this schedule is subject to the provisions contained within TRA Schedule No. 306, "Schedule for Limiting and Curtailing Service".

WEATHER NORMALIZATION ADJUSTMENT
Gas service under this schedule is subject to the provisions contained within TRA Schedule No. 315, "Weather Normalization Adjustment Rider".

RATE SCHEDULE NO. 362
Medium General Service – Value Rate

AVAILABILITY

Gas service under this Rate Schedule is available in the area served by the Company in the State of Tennessee to any full requirements non-residential Customer whose average daily usage is equal to or greater than 20 dekatherms per day but less than 50 dekatherms per day and whose Summer Load Percentage (SLP) is greater than 30%. Average daily gas usage will be based on the Customer's usage during the most recent calendar year ended on December 31 and adjusted for cycle length. SLP will be determined based upon the percentage of the Customer's total annual usage represented by the Customer's seven (7) month summer usage (April – October). Availability of this Rate Schedule for new Customers or for Customers without at least one full year of usage history will be based on reasonably anticipated usage.

Reclassification of customers between rate schedules will be based upon procedures set forth in the Company's Service Regulations as approved by the Tennessee Regulatory Authority.

MARGIN RATE	Winter (November-March)	Summer (April-October)
Customer Charge (per month)	$75.00	$75.00
Commodity Charge (per therm)		
1st 5,000 therms	$.35400	$.30300
Over 5,000 therms	$.35400	$.30300

D

MONTHLY CUSTOMER CHARGE

A charge will be billed monthly to all Customers for the availability of gas service. This charge will be in addition to the commodity charge for gas delivered. The Customer charge will be billed from the date of initial service until service is terminated at the Customer's request.

BACKUP RATE

When gas service is being supplied for use as a Backup Service for the dual-fuel heat pump or for similar use where the Customer's equipment is specifically designed by the manufacturer or is modified by the Customer or others for the purpose of using natural gas as the equipment's backup energy source, there shall be payable monthly in addition to all and other charges under this Rate Schedule a Backup Service Demand Charge individually determined for each Customer based upon the Customer's applicable gas equipment input rating. The per therm Demand Charge shall be equal to the unit Demand Charge applicable to the Company's firm industrial rate schedules.

Input shall be based upon individual Customer's applicable gas equipment rating in:

$$\frac{\text{BTU/Hour x 10 hours}}{} = \text{TH}$$

Piedmont Natural Gas Company, Inc.
Docket No. 20-00086
CAD Data Request No. 1, Item 85

100,000 BTU

SERVICE AGREEMENTS
All Customers purchasing gas pursuant to this schedule shall be subject to the Company's standard contracts and/or service applications and subject to the Company's Rules and Regulations as filed with the TRA.

PAYMENT TERMS
All bills for service are due upon presentation and the net rates are applicable if payment is made on or before the last date of payment stated on the bill. Payments made after that date shall be for the gross amount which is greater by five percent (5%) than the net billing.

RETURNED CHECK CHARGE
In the event a Customer's check for payment is returned to the Company marked NSF (Non Sufficient Funds) the Customer will be assessed a charge of $20.00.

ADJUSTMENTS
Bills for service are subject to adjustment caused by changes in the cost of purchased gas in accordance with Rule No. 1220-4-1-.12 of the TRA Rules and Regulations.

Purchased gas adjustments and all applicable taxes and fees are in addition to the above stated margin rates in accordance with The Rules, Regulations and Orders of the TRA and Laws of the State of Tennessee.

SERVICE AVAILABILITY
All requests for new and additional service or the transfer of existing service to higher priority end use will be considered based upon the Company's judgement as to the available gas supply, Customer's load factor or use pattern, end use, impact on the local economy, and The Rules, Regulations, and Orders of the TRA and Laws of the State of Tennessee.

SERVICE INTERRUPTION AND CURTAILMENT
Gas service under this schedule is subject to the provisions contained within TRA Schedule No. 306, "Schedule for Limiting and Curtailing Service".

WEATHER NORMALIZATION ADJUSTMENT
Gas service under this schedule is subject to the provisions contained within TRA Schedule No. 315, "Weather Normalization Adjustment Rider".

CAD Data Request No. 1, Item 85

APPENDIX A

CUSTOMER AGENT AGREEMENT

This Customer Agent Agreement ("Agreement") is made this _____ day of _____, 20__, by and between Piedmont Natural Company, Inc. ("Piedmont") and _____ ("Agent").

WHEREAS, Piedmont's natural gas transportation tariffs provide for the ability of customers receiving Piedmont's transportation services to designate and utilize a third-party agent for purposes of making nominations for and delivering natural gas to Piedmont on behalf of such customers and managing imbalances on the Piedmont system resulting from such activities; and

WHEREAS, in undertaking such activities on behalf of Piedmont's customers, such Agents have the capacity to create material economic and operational risks for Piedmont and its customers; and

WHEREAS, Agent desires to act as a Customer Agent on Piedmont's system; and

WHEREAS, Piedmont is willing to permit Agent to operate on its system under the terms and conditions set forth herein and under the parameters of Piedmont's approved tariffs and service regulations.

NOW, THEREFORE, in consideration of the premises, and other good and valuable consideration the receipt and sufficiency of which is hereby acknowledged, Piedmont and Agent agree as follows:

1. Establishment and Maintenance of Creditworthiness. Each Agent must establish credit with Piedmont in the form of a Letter of Credit, escrow deposit, parental guaranty, or otherwise, in form and substance acceptable to Piedmont, in an amount equal to or greater than the dollar value obtained by the following formula at all times:

> The higher of Agent's average daily load for the previous month or Agent's First-of-Month confirmed daily nomination quantity for the new month x 3 days x (NYMEX prompt month close) x 1.25.

Each month, prior to nominating transactions for the first of the month business, an evaluation will be made to ensure that the established credit does not fall below the value obtained from the formula shown above. In the event Agent's established credit falls below the value obtained through application of the formula shown above, either during this monthly evaluation or at any other time, Piedmont may require that the value of said Letter of Credit, escrow deposit, parental guaranty, or other form of assurance be changed at any time in order to reestablish adequate creditworthiness hereunder. In the event Agent fails to establish creditworthiness as set forth above, or fails to comply within 5 days with directions from Piedmont to increase the amount of its credit instruments as provided herein, then Agent's right to conduct business on the Piedmont system shall be suspended until such time as Agent shall be in compliance with the creditworthiness provisions set forth herein (including any requirements to increase said creditworthiness).

2. Customer Agent Imbalance Restrictions. Agent shall not create a cumulative intra-month imbalance which exceeds three times Agent's aggregate First-of-Month confirmed daily nomination quantity. If this cumulative month-to-date imbalance restriction is exceeded at any time, then Agent's authorization to conduct business on Piedmont's system shall be immediately suspended except to the extent of transactions designed to reduce Agent's cumulative month-to-date imbalance. Upon any such suspension, Agent's authorization to conduct business on the Piedmont system shall not be restored until such time as Agent is in full compliance with the provisions hereof and all applicable provisions of Piedmont's tariffs and service regulations.

3. Allocation of Imbalance Quantities/Penalties. Concurrent with the submission of monthly nominations, Agent shall provide Piedmont with a schedule of allocated nominations for customers to be served by Agent for the following month. This allocation shall serve as the basis for resolving imbalances with Agent's customers to the extent those imbalances are not resolved by Agent. In the event Agent fails to submit such schedule, and further fails to resolve any monthly imbalance during the term hereof, those imbalances and any attendant penalties shall be allocated to Agent's customers, *pro rata*, based upon the actual usage of each such customer during the month to which the unresolved imbalance and/or penalties is attributable.

4. Failure to Comply with Operational Notices, and Agent Creditworthiness and Imbalance Requirements. If Agent fails to adhere to the imbalance and credit requirements set forth above, or to obey specific instructions issued by Piedmont and designed to preserve the operational integrity of Piedmont's system, Agent (a) shall be subject to the Unauthorized Over Run Penalty provisions of Piedmont's Rate Schedule 306, and (b) shall have its right to transact business on Piedmont's system suspended.

5. Term. This Agreement shall become effective as of the date first written above and shall continue in full force or effect until terminated by either party hereto upon sixty (60) days written notice.

6. Supplemental Nature of Agreement. This Agreement is supplemental to the provisions of Piedmont's approved tariffs and service regulations, the provisions of which shall also apply to services rendered hereunder. As such, the restrictions and requirements set forth herein are cumulative in nature and in addition to any other imbalance or penalty provisions set forth in Piedmont's approved tariffs and service regulations.

7. Billing and Payment. Billings to Agent for any amounts due hereunder, and payments by Agent on such billings, shall be made in a manner consistent with the billing and payment provisions of the underlying transportation tariffs pursuant to which service is rendered.

8. Miscellaneous.

A. Modification. This Agreement may not be modified or amended except by the execution of a written agreement by the parties hereto.

B. Waiver. No failure by any party to enforce this agreement with respect to any default in the performance of any of the provisions of this Agreement shall operate or be construed to operate as a waiver thereof or of any similar future default.

C. Assignment. This Agreement may not be assigned by any party hereto without the express written consent of the other party hereto.

D. Jurisdiction. This Agreement and the respective obligations of the parties hereto are subject to all valid laws, orders, rules and regulations of the Tennessee Regulatory Authority and any other governmental bodies having jurisdiction.

E. Conflict of Laws. The construction, interpretation, and performance of this Agreement shall be in accordance with the substantive laws of the State of Tennessee without regard to any conflicts of laws provisions thereof.

IN WITNESS WHEREOF, the undersigned parties have executed this agreement as of the year and date first written above.

MAILING ADDRESS
Please submit to: Transportation & Pipeline Services
Piedmont Natural Gas Company
P.O. Box 33068
Charlotte, N.C. 28233

OR

Transportation & Pipeline Services
Fax Number: (704) 364-8320

Piedmont Natural Gas Company, Inc. (hereinafter referred to as "the Company"), in its Tennessee service territory, will make free service calls, within certain broad guidelines, around-the-clock on customer appliances connected to our mains. Those service requests requiring immediate attention will be answered as soon as possible. Those of less urgent nature will be answered on a scheduled basis according to the workload. In either case, the Company will make every effort to answer each customer's call promptly and to leave all appliances operating at maximum efficiency.

Free Services (1220-4-5-.06(iii))

The Company provides the following services at no charge to the customer during normal working hours (Mon - Fri, 8am - 5pm, excluding Holidays): [C]

- Install gas meters and regulators for new customers
- Turn-on, turn-off, & service gas meters
- Check for gas leaks
- Investigate the possible presence of carbon monoxide
- Cut off pilots
- Disconnect appliances (disconnect & cap existing pipe only) in connection with a meter turn-off
- Food Service equipment service including leveling, adjusting, or calibrating
- Diagnostic time or time to provide an estimate for jobbing work
- Quotes for appliance installation
- The first light-up of the heating season on central furnaces (a flat charge applies for each additional light-up) [C]
- Gaslight turn-on and re-lighting
- Service leased water heaters
- Service appliances other than central heating systems or gas air conditioners (no parts needed) including:
  - Service calls to diagnose problems
  - Check gas pressure
  - Adjust burners
  - Clean air mixers
  - Light pilots
  - Clean & adjust pilots
  - Examine flue connections & check draft
  - Check and calibrate thermostats & controls
  - Check appliance wiring & other electrical components
- Service non-central heating systems where safe and ready access is available including floor furnaces, wall furnaces, space heaters and unit heaters including: [C]
  - Service calls to diagnose problems
  - Gas and air adjustments on burners and pilot assemblies
  - Adjustments of controls and thermostats
  - Minor electrical repairs that do not require materials
- Service Arkla, Bryant, and other gas-fired air conditioners including:
  - Service calls to diagnose problems
  - Gas and air adjustments on burners and pilot assemblies

- Checks of controls and thermostats
- Pumping of water-cooled units to maintain operation
- Purging of non-condensables from air-cooled units

Note: When an appliance is not operating, every effort will be made to answer the call without delay, and in most circumstances, on the same day. Should repair work be required, parts needed to complete the repair will be ordered from the manufacturer and installed if the customer so desires. There is, however, a charge for this service.

The company will also provide immediate response to any hazardous situation that might cause threat to life or property after normal working hours (Mon – Fri, 5pm - 8am; Sat; Sun; & Holidays) at no charge, including:

- Fire or explosion
- Gas leak
- Damaged gas main or service (parts & labor may apply)
- Gas appliance that won't cut off
- Carbon monoxide investigation
- Leased water heater service within 24 hours

Services For Which There Are Charges

- Installation or connection of gas appliances
- Reconnects of gas appliances
- Disconnects of gas appliances except when performed in connection with a meter turn-off [N]
- Repair of gas appliances where parts are needed (except central systems)
- Repair or replacement parts, electrical equipment, or thermostats on Arkla or Bryant gas air conditioners beyond Service/Warranty Contract
- Cleaning condensers and condensate lines on gas A/C units
- Gaslight repairs and reconditioning
- Miscellaneous pipe work
- Change outs and reconnects of food service equipment
- Repair of gas air conditioning units installed after January 1, 1975; units on which the Warranty/Service Contract has expired; and units or installations not approved by the Company's Service Department
- Work involving replacement of filters and out-of-warranty parts [C]
- After hours work that requires a repair including commercial cooking and water heating equipment (the customer may be given the option for jobbing repair at the current overtime rate, if time and workload permits)

Work the Company Does Not Provide

- Replacement of filters in central heating equipment
- Installation, connection, or repair of unit heaters and central heating equipment
- Repair or replacement of unit heaters and other equipment requiring an electrician

Piedmont Natural Gas Company, Inc.
Docket No. 20-00086
CAD Data Request No. 1, Item 85

- Repair or installation of any equipment that has not been tested and approved by applicable US safety standards or where gas appliances are not used in accordance with the manufacturer's listing [C]
- Repairs on heating equipment that requires parts will not be made except on those units sold by the Company prior to May 1, 1974. In addition, the Company does not install furnace filters
- No work will be performed on electrical air conditioning units installed with a gas furnace (this work will be referred to the installer or mechanical contractor)

Charges for Work

Unless a charge for work contemplated by this Section 1 is specified herein, all work performed for Customers, on or related to appliances, fuel and gas lines (behind the Company's meter), gas lights or other equipment shall be performed at the Company's standard rates and charges. Such charges may be modified or adjusted from time to time at the Company's discretion. [N]

Use of Credit Cards by Customers

Company will accept credit card payments from residential customers receiving service under Rate Schedule 301 and from natural gas vehicle fuel customers receiving service, at Company-owned facilities, under Rate Schedule 342. Company will not accept credit card payment of bills from Customers receiving service under any other Rate Schedule or contract.

Termination Policy

Reasons for Termination of Service or Denial of Service (1220-4-5-.18)

Service may be refused or discontinued for any of the reasons listed below. Unless otherwise stated, the customer shall be allowed a reasonable time in which to comply with the rule before service is discontinued. [C]

1. Without notice in the event of a condition determined by the utility to be hazardous
2. Without notice in the event of customer use of equipment or the utility's service to others
3. Without notice in the event of tampering with the equipment furnished and owned by the utility
4. Without notice in the event of unauthorized use
5. For violation of and/or non-compliance with the utility's rules on file with and approved by the Tennessee Regulatory Authority
6. For failure of the customer to fulfill his contractual obligations for service and/or facilities subject to regulation by the Tennessee Regulatory Authority
7. For failure of the customer to permit the utility reasonable access to its equipment

8. For non-payment of bill provided that the utility has made a reasonable attempt to effectively collect and has given the customer written notice that he has at least five (5) days, excluding Sundays and holidays, in which to make settlement on his account or have his service denied
9. For failure of the customer to provide the utility with a deposit as authorized by 1220-4-5-.14 of the Tennessee Regulatory Authority Statutes
10. For failure of the customer to furnish such services, equipment, permits, certificates, and/or rights-of-way, as shall have been specified by the utility as a condition to obtaining service, or in the event such equipment or permission are withdrawn or terminated.

Insufficient Reasons for Denying Service (1220-4-5-.19)

The following shall not constitute sufficient cause for refusal of service to a present or prospective customer:

1. Delinquency in payment for service by a previous occupant of the premises to be served
2. Failure to pay for merchandise purchased from the utility
3. Failure to pay for a different type of class of public utility service
4. Failure to pay the bill of another customer as guarantor thereof
5. Failure to pay a back bill rendered in accordance 1220-4-5-.17(a) of Tennessee Regulatory Authority Statutes.

Disconnection

The Company has the right to shut off gas from any consumer who may be in arrears for a longer period than twenty (20) days in paying for gas furnished hereunder or under any other prior or subsequent agreement, or for gas used by the consumer at the consumer's present or any prior subsequent address. The said twenty-day period commences to run from the date the bill was rendered. The Company will not shut off gas for non-payment without first mailing a notice to the consumer giving him seven (7) calendar days to pay the bill in arrears.

The Company will not terminate service during any 24-hour period, as measured from 8:00 am on the planned date of termination, where the forecasted low temperature, as determined by the National Weather Service, is 32 degrees Farenheit or below.

Reinstating Service

If natural gas service is disconnected for nonpayment, service will be restored after the customer has paid the total amount past due, paid the reconnection charge and paid a deposit.

Third-Party Notification

At the customer's request, the Company will send a copy of any disconnection notice to a designated third party. However, the designated third party is not responsible for paying the bill.

Medical Emergencies and Life Support Devices

The Company will delay disconnection of gas service for 30 days if a physician, public health officer or social service official certifies in writing that discontinuing gas service will worsen an existing medical emergency for a permanent resident of the premises where services are rendered. A prompt request is important. During the 30-day extension, payment of the bill must be guaranteed by another person or entity that is acceptable to the Company.

The Company will not disconnect service at the service address if there are natural gas appliances that are critical to maintaining the health of one or more permanent residents. The Customer Service Department must be contacted to determine whether a gas appliance is considered a life-support device.

Notice of Rights and Remedies

Should the Customer request help in paying his natural gas bill the Company will provide the customer with a list of community agencies that provide aid in paying their natural gas bill. The company will also, in some cases, make alternative pay arrangements if the customer is temporarily unable to pay his natural gas bill. However, if such an agreement is made the customer gives up their right to dispute the amount due under the agreement. If the customer does not fulfill the terms of the agreement, the Company may disconnect service and a new pay agreement will not be offered before we disconnect service.

If the Customer wants to appeal an unfavorable decision regarding a natural gas bill, they may contact the Tennessee Regulatory Authority's Complaint Division, 460 James Robertson Parkway, Nashville, TN 37219 (615-741-3939 or 800-342-8359). This must be done before the net due date if the dispute involves a disconnection notice. The Company will not disconnect service for nonpayment of the disputed portion of the bill while it is being reviewed. The Customers right to appeal will not expire if delay on the Company's part makes it impossible to contact the TRA within the required time period. The Customer also has the right to suspend payment of the disputed portion of the bill while the dispute procedures mentioned above are in progress.

Process for Obtaining Consent to New or Changed Service

All Customers shall be required to make application to the Company for new or changed Service under any of the Company's Rate Schedules in such form and manner as may reasonably be required by the Company. Such applications shall be required in order to initiate Service under any Rate Schedule irrespective of whether Customer is then

N

receiving service under any other Company Rate Schedule and for changes in the quantity of Service to be provided under an existing Rate Schedule. At a minimum, such application shall set forth the date of the application, the name of the Applicant, the location of the Premises for which Service is requested, the type of Service applied for and estimated gas consumption. Prior to being obligated to provide Service to Customer pursuant to such application, Company shall conduct an examination and review of Customer's application for Service to determine: (1) that the Company has the operational ability to provide the Service requested, including the requisite upstream supply and/or capacity assets; (2) that the requested Service will not impede or interfere with the Company's ability to maintain Service to existing Customers with the same or a higher priority of service; (3) that provision of the requested Service will not have a materially adverse impact on the Company's ability to recover its approved margin; (4) that provision of the requested Service is economically feasible; and (5) that Customer is creditworthy as determined in accordance with the Commission's Rules and the Company's procedures. Provided that the Company's review and analysis indicates that Service can be provided as requested, the Company will then approve the requested Service. Company shall have no obligation to provide the requested Service absent such approval.

When the requested Service is to be provided to a Residential, Small or Medium General Service Customer, and the provision of such Service is economically feasible, the application and the Company's acceptance thereof may be oral at the Company's option. In such event, the Company's applicable Rate Schedules and these Service Regulations shall become effective and applicable to any Service rendered to such Applicant in the same manner as if the Company's standard written form of application for Service had been signed by the Applicant and accepted by the Company. Upon the provision of Service by the Company to such Customer, such oral service agreement shall be presumed to exist in any case where there is no written application accepted in writing by the Company.

In the event a Customer receiving Service under the Company's commercial or industrial (large general) sales Rate Schedules anticipates a significant reduction in its gas consumption, it shall provide prompt notice thereof to Company.

N

Customer Classifications

Residential Rate Service Classification. All Residential Rate Service shall be provided pursuant to the Company's Rate Schedule 301.

C

D

Commercial Rate Service Classification. All Commercial Rate Service shall be provided pursuant to the Company's Rate Schedules 302 and 352. Classification between Rate Schedules 302 and 352 shall be based on the following criteria:

A. Definitions: As used in Commercial Rate Service Classification, the following terms shall have the meanings assigned below:

Piedmont Natural Gas Company, Inc.
Docket No. 20-00086
CAD Data Request No. 1, Item 85

(1) "Annual Review Period" shall mean the twelve (12) months ended on December 31 of each year.

(2) "Actual Monthly Usage" shall mean the actual natural gas volumes consumed by the Customer during the highest month of consumption during the Annual Review Period as reflected on the Company's invoices for the Customer.

(3) "Classification Usage" shall mean the usage criteria that establishes the minimum and/or maximum average daily usage that must be maintained in order to receive service under a rate schedule. The classification usage for Rate Schedule 302 shall be less than an average of 20 dekatherms per day. The classification usage for Rate Schedule 352 shall equal or exceed an average of 20 dekatherms per day but be less than an average of 50 dekatherms per day. C

(4) "Involuntary Curtailment Days" shall mean those days or portions of days in the highest month of consumption during a given Annual Review Period where curtailment of the Customer's natural gas service was imposed by the Company's decision to curtail.

(5) "Service Days" shall mean 30 days less the number of Involuntary Curtailment Days.

(6) "Average Daily Usage" shall be the Customer's Actual Monthly Usage within the Annual Review Period divided by the number of Service Days.

B. Procedures:

(1) At the conclusion of the Annual Review Period of each year and prior to June 1st of the ensuing year, the Company will determine for each customer served under Rate Schedules 302 and 352 that Customer's Average Daily Usage. C

(2) Those customers currently receiving service under Rate Schedule 302 whose Average Daily Usage is equal to or exceeds 20 Dekatherms a day, will be transferred to Rate Schedule 352, effective on the first day of June following the most recent Annual Review Period. C D

(3) Those customers currently receiving service under Rate Schedule 352 whose Average Daily Usage in each of the most recent two (2) Annual Review Periods is less than 20 Dekatherms a day, will be transferred to Rate Schedule 302 effective on the first day of June following the second, and most recent, Annual Review Period. C

(4) Those customers currently receiving service under Rate Schedule 302 or 352 whose Average Daily Usage in each of the most recent two (2) Annual Review Periods is equal to or greater than 110% of 50 dekatherms per day will be transferred to Rate Schedule 303, 304, 313, or 314 as applicable. C

C. Exceptions: If a customer currently being billed under Rate Schedule 302 adds natural gas equipment that increases the Customer's Average Daily Usage to the point where the customer will qualify for Rate Schedule 352 the Company may, upon notification from the Customer and subject to installation verification by the Company, transfer the Customer to the new Rate Schedule prior to June 1 of that year. C

Industrial Rate Service Classification. Rate service classification under the Company's Rate Schedules, 303, 304, 313 and 314 shall be based on the following criteria:

A. Definitions: As used in rate service classification, the following terms shall have the meanings assigned below:

(1) "Annual Review Period" shall mean the twelve (12) months ended on December 31 of each year or the regularly scheduled meter reading nearest December 31.

(2) "Actual Monthly Usage" shall mean the actual natural gas volumes sold or transported for the Customer by the Company during the highest month of consumption during the Annual Review Period as reflected on the Company's invoices for the Customer.

(3) "Classification Usage" shall mean the usage criteria that establishes the minimum and/or maximum average usage that must be maintained in order to receive service under any rate schedule. For existing Customers, the classification usage for Rate Schedule 302, 332, 352, 362 shall not exceed an average usage of 55 dekatherms per day. For existing Customers, the classification usage for Rate Schedules 303, 304, 313 and 314 shall exceed an average usage of 45 dekatherms per day.

(4) "Involuntary Curtailment Days" shall mean those days or portions of days in the highest month of consumption during a given Annual Review Period where curtailment of the Customer's natural gas service was imposed by the Company's decision to curtail.

(5) "Service Days" shall mean 30 days less the number of Involuntary Curtailment Days plus the number of days that Customer consumed an alternative fuel to natural gas.

Piedmont Natural Gas Company, Inc.
Docket No. 20-00086
CAD Data Request No. 1, Item 85

(6) "Average Dekatherm per Day" shall be the Customer's Actual Monthly Usage within the Annual Review Period divided by the number of Service Days.

B. Procedure:

Step 1. During January and February of each year, the Company will determine for each Customer served under Rate Schedules, 303, 304, 313 and 314 the Customer's Average Dekatherm per Day usage for each of the two most recent Review Periods.

Step 2. A Rate Schedule 302 or 352 Customer whose usage is 110% of the 50 dekatherms threshold in the two most recent Review periods will be transferred to Rate Schedule 303, 304, 313 or 314, as applicable. A Rate Schedule 303, 304, 313 or 314 Customer whose usage is equal to or less than 90% of the 50 dekatherms threshold in both of the most recent two Review Periods will be transferred to the appropriate Small or Medium General Service Rate Schedule. Customers receiving service under Rate Schedules 303 or 304 shall be eligible to elect transportation service to be effective with the rate reclassification. C

All changes in rate classification under this section shall be effective on the first day of June following the review.

Step 3. Customers who are reclassified shall be notified of the change in rate schedule, and receive a copy of the tariff sheets applicable to his old and new rate schedules at least 21 days prior to the effective date of the change.

C. Exceptions: If a Customer adds or retires a major piece of gas-burning equipment, changes the hours of operations or otherwise materially alters the Customer's business that will clearly increase, or decrease, the Customer's consumption on an ongoing basis to a level that will change the Customer's ability to qualify the Customer for a particular rate schedule, the Customer shall report such changes to the Company and afford the Company an opportunity to inspect the change in equipment and to meet with the Customer to review and discuss the anticipated future level of consumption. If, after such inspection and meeting, the Company is satisfied that reclassification is appropriate, the reclassification will occur within two months after the new equipment is in place and operational, or the retirement is completed, and the first meter reading reflects the higher anticipated usage resulting from the new equipment or the lower anticipated usage resulting from the retirement. Any reclassification pursuant to this paragraph is subject to correction if actual experience so warrants. If the reclassification results in qualification for service under Rate 303 or 304, the Customer shall provide an election form one week prior to reclassification if a transportation election is

Piedmont Natural Gas Company, Inc.
Docket No. 20-00086
CAD Data Request No. 1, Item 85

desired. Otherwise, service will be provided under Rate Schedule 303 or 304, dependent upon rate qualification.

Requirements: Upon reclassification from Rate Schedules 302 or 352 to either Rate Schedule 303, 304, 313, or 314, Customer will be responsible for installing and maintaining, at the Customer's expense, a dedicated 110v electrical service in a location suitable to provide electrical service for the Company's telemetering equipment. C

Applicable Documents Defining Obligations of the Company and its Customers

The obligations of the Company to provide Service and the obligations of the Customer upon receipt of Service are governed by and set forth in (a) applicable statutes, including those set forth in Chapter 65 of the Tennessee Code Annotated, (b) applicable Tennessee Regulatory Authority Rules, Regulations, and Orders, (c) applicable tariffs or Rate Schedule(s), (d) these Service Regulations, (e) any application, agreement, Special Contract, or similar document executed by Customer and approved, as necessary, by the Authority pertaining to such service, and (f) any standard operating procedures of the Company reasonably necessary for the provision of such Service and administered on a nondiscriminatory basis. Copies of Chapter 65 of the Tennessee Code Annotated, applicable Authority Rules, Rate Schedules, and these Service Regulations are available from the Company for public inspection, as are copies of forms of applications, agreements, and other documents approved by the Authority. A copy of the Authority's Rules are available at the Authority's Web Site at www.state.tn.us/tra/. Unofficial copies of the Company's Rate Schedules and Service Regulations are also available at the Company's Web Site at www.piedmontng.com.The Company shall provide all new non-residential Customers with a copy of the applicable Rate Schedule(s) and written application for Service and/or other documents executed by the Company and the Customer pertaining to such Service. After a Customer has executed a written application and/or contract, no promise, statement or representation by an employee or agent of the Company or by any other person inconsistent with the written application and/or contract shall bind the Company to provide Service or to change the terms and conditions upon which Service will be rendered unless the same is in writing and is executed by an authorized representative of the Company. In the event there is a conflict between these Service Regulations and the provisions of the applicable currently effective Rate Schedule, the provisions of the Rate Schedule shall govern. The Authority Rules shall govern in the event of a conflict with these Service Regulations. The Company may not make any representation that conflicts with Authority Rules, its Rate Schedules or these Service Regulations. N

Piedmont Natural Gas Company, Inc.
Docket No. 20-00086
CAD Data Request No. 1, Item 85

Applicable Documents Subject to Change

All of the documents defining the obligations of the Company to provide Service and the obligations of the Customer upon the receipt of Service are subject to change from time to time upon order of or approval by the Authority and by other duly constituted governmental authorities. The Company does not undertake to advise any Customer of any such change except as may be required by the Commission or other duly constituted governmental authority. N

Priority of Service

The Company has established the following categories of service in order of priority:

1. Residential, small commercial (less than 50 MCF on a peak day), school, hospital, police protection, fire protection, sanitation, or correctional facility requirements
2. Essential agricultural requirements
3. Large commercial requirements (50 MCF or more on a peak day), firm industrial requirements for plant protection, feedstock and process needs, pipeline customer storage injection requirements, and firm industrial sales up to 300 MCF per day
4. All industrial requirements not specified in 2, 3, 5, 6, 7, 8, 9 or 10
5. Firm industrial requirements for boiler fuel use at less than 3,000 MCF per day, but more than 1,500 MCF per day, where alternate fuel capabilities can meet such requirements
6. Firm industrial requirements for large volume (3,000 MCF or more per day) boiler fuel use where alternate fuel capabilities can meet such requirements
7. Limited Availability requirements of less than 300 MCF per day, where alternate fuel capabilities can meet such requirements
8. Limited Availability requirements of more than 300 MCF per day but less than 1,500 MCF per day, where alternate fuel capabilities can meet such requirements
9. Limited Availability requirements of intermediate volumes (from 1,500 MCF per day through 3,000 MCF per day), where alternate fuel capabilities can meet such requirements
10. Limited Availability requirements of more than 3,000 MCF per day, but less than 10,000 MCF per day, where alternate fuel capabilities can meet such requirements
11. Limited Availability requirements of more than 10,000 MCF per day, where alternate fuel capabilities can meet such requirements.

Meter Turn On

There is no charge for meter turn on for a new customer. There will be a flat charge for meter turn on for an existing customer or member of same family or household. For turning on meters shut off for non-payment of bills there will be a flat charge for meter turn on plus payment of all past due bills. The Company may also secure an additional customer deposit. If an existing customer requests that his/her meter be turned off for the summer to

Piedmont Natural Gas Company, Inc.
Docket No. 20-00086
CAD Data Request No. 1, Item 85

avoid minimum bills during the summer period and then requests the Company to turn the meter back on, the flat charge for meter turn on will apply.

Gas Wastage (1220-4-5-.06(iv))

Excessive gas consumption without knowledge by the customer may possibly be the result of gas leakage or appliance malfunction. Gas bill adjustments generally will not be permitted for improper and/or inefficient operation of gas appliances or for gas leaks. Adjustments for all special cases will be based upon individual merit dependent upon such factors as prompt action by the customer, the nature of the problem, maintenance of facilities by the customer, the time period involved, etc. An example might possibly be a hot water relief valve stuck open or a broken hot water line on a gas water heater. All such special adjustments shall not exceed 35% of the wastage and shall be approved by the Director of Customer Service (residential) or the General Manager of Marketing (commercial). Wastage shall be based on Service Department inspection or Customer Service Department researches. The Director of Customer Service shall determine consumption rates. Duration of the adjustment shall not exceed 30 days. Where such gas appliance malfunction or gas leakage was directly caused by actions of Company personnel or occurred within 30 days of the date the work was performed by Company personnel, the Company will grant 100% credit of wastage to the customer. The amount of wastage will be approved by the Director of Customer Service and not exceed a period of 30 days. C

Title to Facilities

The title to all facilities including mains, gas service lines, meters, and accessory equipment up to and including the outlet of the meter assembly shall be vested in the Company, notwithstanding any charge which may be made to the customer for extending service.

Appliance Classifications

Major appliances

- natural gas heating systems utilized as primary heating source in the structure
- gas air conditioners
- gas water heaters

Minor appliances

- clothes dryers
- gas fireplaces
- gaslights
- grills
- incinerators
- log starters
- logs

General Installation / Connection & Repair Policy

The Company will provide equipment, labor, and materials to install, repair, and service gas-fired equipment. Such installations, repair, or service shall be charged at Company's standard rates and charges. The installations and repairs will be performed in accordance with all applicable codes and licensing requirements. The Company reserves the right to decline such work, on a non-discriminatory basis, if the conditions involved in such work are not consistent with the safe or efficient completion of such work. All natural gas appliance installations on Company lines shall comply with the current version of the International Fuel Gas Code adopted by local authorities. All appliances installed, repaired or serviced by Company must also be tested and approved by US safety standards and used in accordance with the manufacturer's listing. The Company reserves the right to refuse to connect those appliances which, in its judgment, do not conform to appropriate safety requirements. C

D

Water Heaters

The Company will install and repair, including dip tube replacement, residential water heaters on the basis of its standard rates and charges. For repairs of commercial gas water heaters, the customer is to be referred to local dealer or plumber. C

Dryers

The Company will install and repair residential dryers on the basis of the Company's standard rates and charges. Repair requests on commercial gas clothes dryers, other thermocouples or other parts normally stocked by our storeroom, will be referred to the appropriate dealer for servicing. C

Gas Grills

The Company, as part of its free service program, will make burner air and gas adjustments, check controls, and assist in problem diagnosis on a no-charge basis. Installations of and repairs on gas grills will be charged on the basis of the Company's standard rates and charges. Cleaning and painting of the grill will be the responsibility of customer. The Company may also perform the following on the basis of the Company's standard rates and charges: C

1. Post Replacement:;
2. Repairs to Cut or Damaged Tubing;
3. All Other Repairs.

Gaslights

With regard to gaslights, the Company will turn on, re-light and replace mantles without charge to the residential customer. Should the residential customer wish to replace the mantles himself, the Company will, upon request, mail to him replacement mantles for residential use in his gaslights without charge. Residential customers may also pick up free replacement mantles for use only in their gaslights at the Company's storeroom. The same gaslight service policies apply to commercial/industrial customers except they will be charged for the mantles. Subdivision entrances and multi-family developments do not qualify for residential use. Services do not include the painting of gaslights or glass cleaning; these are considered the owner's responsibilities.
The Company will recondition the customer's gaslight, including replacement of mantles, cleaning and/or replacement of glass panes as required, and painting repair of gaslight as necessary, for a flat labor charge plus cost of replacement parts (other than mantles). In the case of multiple gaslights on the same piece of property, the labor charge shall apply only to the first light. For each additional light on the same property, an additional charge plus parts (other than mantles) will apply. The same policy applies to commercial customers except they will also be charged for mantles. Installation of and repairs on gaslights, including those listed below, will be charged on the basis of the Company's standard rates and charges. The Company may also perform the following: C

1. Post and/or Light Head Replacement: All customers needing to purchase a gaslight head will be referred to the Home Energy Center;
2. Repairs to Cut or Damaged Tubing: A service representative can sometimes perform this work, but generally a three-man fitting crew is required.
3. Complete Replacement: The customer shall be referred to the Company's Home Energy Center. If the customer provides a replacement light head and post of the same basic type, the Company will connect the replacement;
4. All Other Repairs.

Gas Logs & Log Starters

All installations of or repairs on gas logs and log starters will be charged on the basis of the Company's standard rates and charges. C

Other Miscellaneous Residential Gas Appliances

All installations of or repairs on other approved gas appliances will be charged on the basis of the Company's standard rates and charges. C

D

Appliance Parts Broken by Company Personnel

From time to time when our service personnel are repairing a customer's gas appliance, other adjacent parts become broken during the course of the repair. Such instances leave a question as to whether the customer should be charged for that additional part. Such decisions shall be at the discretion of the supervisor involved. The following guidelines should be of assistance.

Piedmont Natural Gas Company, Inc.
Docket No. 20-00086
CAD Data Request No. 1, Item 85

No Charge to Customer

1. Breakage caused by negligence on part of our personnel. In such cases, the employee will be counseled to avoid repetition.
2. Accidental breakage of part considered "relatively new" and our representative was using care and attention to work procedures.

Charge to Customer

1. Parts that may be broken after customer first being warned that we will use care in repair but the customer will be responsible for all parts involved. If the service representative has doubts about the condition of the appliance, he should so warn the customer initially.
2. Any parts broken which are not "relatively new" and in process of normal repair with our representative using reasonable care in work procedures. Where we make a mistake we'll stand behind it, but we will not unilaterally absorb the cost of other parts broken, they will be considered part of the job.

Sales to Employees

The following is applicable for active permanent employees, retired employees and retiree's surviving wife or husband until such time as survivor remarries:

1. Employees may purchase Natural Gas Appliances and accessories at cost from the Company. Appliances must be purchased for use only in the employee's own home. C
2. Pipe, pipe fittings and similar material carried in stock by the Company may be purchased by employees at warehouse cost, but these also must be used in the employee's own home and all such purchases must be approved by the Company. C

There is no intent in these rules for employees to unfairly benefit from Company discounts. The giving of false information to obtain a discount from the Company will be considered a cause for discipline.

D

Liquid Propane Conversion to Natural Gas

Any new conversion customer converting from liquid propane (LP) to natural gas will receive gas service line and meter installation on the same basis as any other residential or commercial customer. C

Residential

Conversion of residential gas dryers, grills, logs, furnaces or other appliances shall be performed on the basis of the Company's standard rates and charges. C

Commercial

Conversion of AGA approved residential gas appliances or commercial gas appliances in a commercial structure will be performed on shall be performed on the basis of the Company's standard rates and charges. C

Temporary Conversions to Liquid Propane

When deemed necessary by the Company, new construction and conversion customers will be temporarily converted to liquid propane at no charge. The conversion back to natural gas will also be performed by the Company at no charge.

Piedmont Natural Gas Company, Inc.
Docket No. 20-00086
CAD Data Request No. 1, Item 85

Piedmont Natural Gas Company, Inc.

Company's Tennessee Service Regulations

Section 2 – METERS

Installation & Location

The Company performs standard meter installation at no charge to the customer. However, a customer desiring an underground meter installation will be charged for the additional cost. The most desirable and serviceable location for a new residential meter installation is on the outside of the structure, approximately four feet past the front wall, where it is not subject to damage from automobiles. The new meter shall be so located unless it is physically impractical or it interferes with customer's use of his property. C

The proper meter location for large outside commercial or industrial meters, especially those having multiple structures, is at the property line wherever possible. Under no circumstances shall a meter be located within 10 feet of a combustion air intake. Further, meters shall not be located within 3 feet of an ignition source such as heating or air conditioning equipment, water heaters, electric meters, switch gear, electric panels, etc.

The customer or owner must at all times provide a proper and accessible location for all meters and regulators. The following rules apply as well:

1. All meters installed on high-pressure services must be installed outdoors.
2. All "farm tap" meters shall be located at the main.
3. All meters served from standard and medium pressure mains shall be installed outdoors, except in those instances in which it is extremely difficult to do so or is very undesirable from the customer's viewpoint. In such cases, the meter may be installed indoors, at the discretion of the Company, if the installation conforms to applicable codes.
4. If a customer desires to use gas solely for swimming pool water heating, the meter shall be located at the house and the fuel line run from this point to the pool heater.
5. If located indoors, the meter shall not be located:
   a. Above the ground floor
   b. Less than 3 feet from a hot air furnace or boiler
   c. Less than 3 feet from a gas oven or hot water heater
   d. On or under stairways
   e. In bathrooms or adjoining clothes closets
   f. In small, unvented, or confined spaces
   g. Where subject to damage, extreme high temperature, or corrosion
   h. In entrances or exits so as to obstruct passage in any way
   i. Less than 10 feet from boilers or other sources of heat, if the meter capacity is 80B or larger

Piedmont Natural Gas Company, Inc.
Docket No. 20-00086
CAD Data Request No. 1, Item 85

Meter Relocation

Outside meters will be relocated when requested by the customer, however, the customer will be charged Time and Material.

Meter Testing

The Company maintains a regular program of meter testing and change-out to insure metering accuracy. Upon written request from the customer for a special test of his meter, the Company will inspect the meter at a reasonable time in accordance with provisions of Rules, Regulations and Statutes Governing Public Utilities as issued by the Tennessee Regulatory Authority. Such meters will be considered to register correctly if the error is not greater than plus or minus two percent (2%). If the meter is found to be registering incorrectly, the meter will be repaired or adjusted to conform to standards with no charge to the customer for testing or repair. If the meter is registering correctly, there will be a meter testing charge to the customer.

Meter Tampering or By-pass

The term "metered gas" is defined as "all gas that has passed through the customer's meter." It is Company policy to prosecute those persons involved where the Company finds evidence of meter tampering or by-pass. Such acts are illegal, as well as extremely dangerous, and Tennessee State Law provides for substantial punishment. In such cases, the customer or party involved will be charged for all gas used and the cost of meter repair including travel time and all other related expenses on a "Time and Materials" basis. At the Company's option, gas service may also be terminated. C

Meter Damage

The customer has a responsibility to provide reasonable protection for the Company's metering facilities from damage by his employees, customers, and the general public. It is not, however, his equipment and he cannot be expected to provide security such as guards, surveillance, enclosures, etc. to protect the Company's meters from acts of vandalism or from the general public. The Company selects and approves meter locations. If a location is in a drive, parking lot, alley, etc. where damage is likely, then it is the Company's responsibility to provide adequate protection such as posts, etc. In cases where the Company's metering facilities are damaged, with regard to actual damage responsibility, the following applies: C

1. If the customer or his employees cause damage (accidentally or purposely), then the customer should be billed for damages.
2. If a visitor, commercial vehicle, or general public vehicle damages a meter, damage relief should come from that person or firm causing the damage. Damage relief shall not come from the customer, unless it can be proven that the damage by a third party resulted from negligence on the customer's part.

Piedmont Natural Gas Company, Inc.
Docket No. 20-00086
CAD Data Request No. 1, Item 85

Piedmont Natural Gas Company, Inc.

Company's Tennessee Service Regulations

Section 3 – FUEL LINES

Customer gas fuel lines installed on Company mains shall comply with all applicable codes and provisions of the current version of the International Fuel Gas Code adopted by the county in which the gas facilities operate. The care and maintenance of all customer-owned underground fuel lines is the responsibility of the customer. All piping carrying metered gas is considered a fuel line. When in place in a finished building, hidden from view and not easily accessible, the piping is considered a concealed fuel line. All fuel lines will be (a) standard threaded and coupled or welded steel minimum schedule 40 pipe (depending on operating pressure), or (b) plastic pipe or tubing of the following types: TR-418 PE 2306 – orange color, Drisco 7000 or 8000 PE 3406 – black color, or approved equal. N

Fuel Lines May

- Be installed underground in accordance with applicable codes to include corrosion protection.
- Be installed to serve any number of buildings if all the buildings are located on a single or continuous tract of land with common ownership.
- Be concealed if installed in accordance with applicable codes.

Fuel Lines May Not

- Be smaller than 1-1/4" coated steel or 1-1/8" x.090 wt Polyethylene (PE) tubing if installed underground (unless serving only gaslights, grills, or logs). Fuel lines to remote heating units may be smaller as approved by the Service Department. The Service Department will determine the size of fuel lines for mobile homes.
- Extend to or across property under different ownership.
- Cross any public street, alley, or highway. Fuel lines shall be sized to have a minimum pressure drop between the meter outlet and any appliance of 0.3-inch water column. Those fuel lines served from standard pressure distribution systems will be sized on 0.2-inch water column pressure drop.

Installation Charges

All fuel lines will be installed at the customer's expense with one exception: when determined necessary, the Company may choose to install a fuel line instead of a service line. In this event, ownership with maintenance responsibility shall remain with the customer. In such cases, footage of fuel line installed shall be equal to the footage of service line that would be "free service" if the customer were served in the usual manner (a "farm tap" customer is an example). Charges for residential underground fuel lines will be on the basis of the Company's standard rates and charges. Pre-installation estimates may be obtained from the Service Department (for plastic tubing) or the Construction Department (for all other underground fuel lines). The customer at his expense will replace N

Piedmont Natural Gas Company, Inc.
Docket No. 20-00086
CAD Data Request No. 1, Item 85

any sidewalk or pavement cut. The customer will be charged on the basis of the Company's standard rates and charges for all fuel line repairs made by the Company.

Commercial or Industrial Fuel Lines

Commercial or Industrial fuel line piping work will be performed by the Company according to applicable codes and licensing requirements. If the Company installs a customer's underground fuel line, the charges will be based on the Company's standard rates and charges. N

Piedmont Natural Gas Company, Inc.
Docket No. 20-00086
CAD Data Request No. 1, Item 85

Company's Tennessee Service Regulations

Section 4 – SERVICE LINES

Service lines are pipes used to carry unmetered gas from the main to the customer's meter. The preferred route of the service line will be from the nearest adequate main to four (4) feet beyond the customer's nearest building wall. Service lines, service relocations, and extensions may be installed in accordance with applicable codes by either the Company or by a contractor approved by the Company. The complete installation must be inspected and approved, prior to being backfilled, by the appropriate Company representative. In general, service lines should not be laid on vacant property adjoining the building to be served if there is likelihood that a building will be constructed on the vacant property. Service line installation policies are subject to conditions of gas supply and the Company's limited service attachment programs.

Customer Types

Residential

The Company will install free of charge 100 feet of service line for one major appliance, as defined in Section 1, where no main extension is required. The gas service line must extend along the route selected by the Company. In the event that the above conditions are not met, the service line installed for the customer must provide a reasonable return to the Company. If the customer wishes the facilities to be constructed along a route other than the route selected by the Company and/or if the gas service line is more than the length allowed above and/or the service to be rendered to the customer will not produce a reasonable return to the Company, the Company may require the customer to pay the excess cost of constructing the facilities along the alternate route or in excess of the footage allowed and/or to make a contribution which will permit the Company to earn a reasonable return. In all cases any pavement or sidewalk cut will be replaced by and at the customer's expense.

Commercial or Industrial

For permanent use and where revenues provide a reasonable return to the Company, the Company will install free of charge 100 feet of service line measured from customer's property line or four feet past the nearest building wall, whichever is less.

Exceptions

In cases where there is exceptional cost due to length of service, high pressure main, paving (such as crossing major street), rock, etc., these service orders shall be reviewed by the Engineering Department on a case-by-case basis to determine if they meet the main extension policy provided in Section 5. N

Piedmont Natural Gas Company, Inc.
Docket No. 20-00086
CAD Data Request No. 1, Item 85

Excess Service

Excess service refers to that portion of the total cost of a service line installed for a customer that is in excess of the Company's justifiable investment and is that portion of service line cost paid for by the customer.

Repairs

Repairs to service lines damaged by others shall be charged at the Company's actual repair costs.

Service Extensions

A service extension includes all piping carrying unmetered gas from the termination of the previous service line to the inlet of the meter. Service extensions and relocations shall be installed at the customer's expense.

Branch Services

Branch services will be permitted only when the point of junction of the two services is either in the public right-of-way or on a customer's property. In the latter case, written and notarized permission of the property owner must be obtained and filed with the Register of Deeds of the appropriate county. In the case of services requiring in-line valves, the service must be branched in the public right-of-way, and the Construction Department must confirm presence of a valve in each branch.

Multiple Buildings on Same Lot

In those cases where two or more buildings are located on the same lot in such a manner as to be reasonably suited to subdividing, the Company will, if requested, run separate service lines to these buildings. However, if the buildings are not so situated (e.g. garage apartments or combination commercial and residential buildings), the Company will not run separate services except where the full cost of the additional service from main to meter, including paving, is borne by the customer.

Service Line Enlargements

If the load through an existing service is so increased as to require a larger service line, the Company will enlarge the existing service to a point four (4) feet beyond the customer's nearest outside building wall without charge. Any enlargement of the service line beyond this point will be at the customer's expense. Any fuel line changes will be at the customer's expense.

Shopping Centers

A shopping center shall be considered as a single structure containing a minimum of 7,500 square feet of floor space and a minimum of four (4) tenants or business stores operating within the structure. The Company shall install one service line and one bank of gas meters for each 12,000 square feet of floor space. The final number of meter banks shall

Piedmont Natural Gas Company, Inc.
Docket No. 20-00086
CAD Data Request No. 1, Item 85

be at the discretion of the Company, based upon the size and layout of the particular shopping center under consideration. C

Piedmont Natural Gas Company, Inc.

Company's Tennessee Service Regulations

Section 5 – MAINS

The Company has a policy of extending its main(s) to serve a new customer (or customers) provided such main extension is determined to be economically feasible. The criteria for economic feasibility shall be met when the total annual net revenue to be obtained from the customer (or customers) provides a rate of return that is equal to or greater than the overall cost of capital established in the Company's last general rate case.

The determination of the anticipated rate of return on the main extension will be based on a net present value (NPV) computation utilizing the following parameters:

1. Net revenues will be calculated by applying the applicable tariff margin rate to the estimated annual total usage and, where applicable, potential for future growth may be considered.
2. Estimated annual total usage shall be based on those appliances that will be in use during the first five (5) years of service, except as provided in paragraph 3 under "Main Extension Contract".
3. The required investment will be based upon engineering cost estimates as determined by the Company and will include the costs of all facilities required for providing service including material and labor costs associated with the installation of mains, service lines, metering and regulating equipment, easements, rights of way, street crossings, and all other required equipment or facilities.
4. The discount rate shall be equal to the overall cost of capital allowed in the Company's last general rate case adjusted for taxes and depreciation.
5. The discount period shall be equal to the economic useful life of the investment in the mains and services.
6. Main extensions producing a positive net present value at the end of the discount period shall be considered economically feasible.

Main Extension Contract

To the extent the net present value computation produces a negative result:

1. The customer shall pay to the Company an amount equal to the negative net present value at the end of the discount period, plus any additional funds required to provide for the payment of resulting taxes. This payment may be made in a lump sum or in periodic payments (without interest) -- annual, monthly, etc. C
2. If within three (3) years after the original installation, the customer making the payment adds additional major or minor appliances, the Company will refund to the customer (if paid in advance or credit his account if on extended terms), upon written request, an amount equal to the net annual revenues anticipated to be realized from the usage of the additional appliance(s).
3. In no case shall the customer making the payment be refunded more than he paid.

Piedmont Natural Gas Company, Inc.
Docket No. 20-00086
CAD Data Request No. 1, Item 85

The above provisions assume that only one customer will make the payments. If two or more customers make the payments, the contract will be adjusted to reflect this fact; for example, if two customers made equal payments and a refund is due because one of the two has added an additional appliance, then the entire refund shall be paid to him.

Exceptions

The Company may make exceptions to the main extension rule when system improvements are realized by the extension.

Main Relocation

If a customer requests a re-routing or relocation of a main located on a public right-of-way, the customer will be charged for this work. If the main is located on private property, such as an easement, railroad right-of-way, the case will be referred to the Engineering Department for determination as to whether a charge shall be made. The same will apply to relocations or re-routings requested by a contractor. Repairs to mains damaged by a contractor will be charged to the contractor on a "Time and Materials" basis.

Aboveground Facilities

If the above-ground facilities (such as post regulators, vent pipe, etc.) are so located that they seriously interfere with, or make impracticable, the owner's use of this property, the relocation of such facility will be done at no cost to the customer. An example of serious interference would be when the aboveground facility was located in front of a proposed narrow driveway. In all other cases, the cost of relocation will be charged to the customer. The charge, unless specified for any of the above items, will be either of the following, at the customer's option, prior to commencement of work: C

1. Estimated cost as determined by the Construction Department
2. Actual cost

Piedmont Natural Gas Company, Inc.

Company's Tennessee Service Regulations

Section 6 - Rules and Regulations Governing Supply & Consumption of Gas

The consumer agrees to the following rules and regulations, having made proper application and deposit for service with the Company.

1. Consumer is responsible for damage to any gas meter or equipment belonging to the Company placed on the premises occupied by the consumer and will immediately reimburse the Company for all costs of repairing or replacing same. In accordance with Item (1), Section 1220-4-5-. 18, Reasons for Denial of Service of the Tennessee Regulatory Authority's Rules and Regulations, a consumer may be refused service if consumer has damaged the Company's equipment or tampered with the lock on a meter. The Company will charge its standard rates and charges for a broken meter lock. C
2. Consumer will use gas supplied through Company's meter only. Use of other metering devices or bypassing equipment and tampering or adjustments on company-owned metering facilities by consumer are prohibited. The Company will not permit secondary meter billing.
3. In case the meter has failed to register the quantity of gas consumed, in whole or in part, the consumer will pay such reasonable sum as is ascertained to be due for the period involved.
4. The Company's authorized agents shall have access to consumer's premises at all reasonable times for the purpose of checking, reading, servicing, and disconnecting the meter; shutting off gas; and for such other purposes as the Company may deem advisable to protect its interests.
5. The Company shall be under no duty to inspect, repair, or maintain the service of other pipes, connections, equipment, or appliances located beyond the meter outlet on the premises of the consumer.
6. The consumer shall be liable and shall pay for all gas passing through the meter until it is turned off. When termination of service is requested, consumer must ensure that the Company receives either written or verbal notice at least two business days prior to the desired date of termination. Access to the meter must be provided. C
7. The consumer is entitled to the usual discount allowed by the Company if bills are paid within the first twelve days following the date bills are rendered. All gas bills are due when rendered and they will be considered as rendered when mailed to the address specified by the consumer. A residential, head of household consumer dependent on social security or other retirement check may request a net to gross discount waiver. Qualified consumers will be granted a net to gross discount waiver and the account will be monitored for continuing compliance.
8. The Company shall have the right to shut off gas from any consumer who may be in arrears for a longer period than twenty days in paying for gas furnished hereunder or under any other prior or subsequent agreement, or for gas used by consumer at

consumer's present or any prior or subsequent address, it being understood hereby that said twenty day period commences to run from date the bill is rendered as above defined. The Company will not shut off gas for non-payment without first mailing a notice to the consumer giving him seven days to pay for the bill in arrears. The Company will not terminate service during any 24-hour period, as measured from 8:00 am on the planned date of termination, where the forecasted low temperature, as determined by the National Weather Service, is 32 degrees Farenheit or below.

9. The Company is authorized to require the consumer to make a deposit, or increase any existing deposit, in such amount as the Company deems proper for its protection before restoring gas service. The deposit amount will not exceed two consecutive billing periods or ninety (90) days, whichever is less.
10. All consumer deposits will accrue simple interest on the principal at the rate approved by the Authority. D
11. The Company will charge $55.00 during the months of February through August and $85 for the months of September through January for turning on a meter for an existing consumer or member of the same family or household at same address. This charge applies only to those consumers who have previously elected to have the meter turned off without discontinuing service or whose account has been closed because of non-payment of a bill.
12. In the event gas is shut off because of consumer's failure to pay, a charge will be made for each restoration. The Company will charge $55.00 during the months of February through August and $85 for the months of September through January plus payment of past due gas bills for turning on meters shut off for non-payment of bill. The Company will not be liable for damages for shutting off gas or for delay in restoring service. An additional deposit may also be required.
13. At the Company's option, special discounts may be offered to the approved reconnect fee to encourage customers to have their service reinstated during non-peak turn-on periods. Such special discounts will be made upon a 1 day notice to the Authority and will be available on a nondiscriminatory basis within the classifications of Sections 11 and 12 above. Notification will include the time period during which the promotion will be conducted as well as the terms and conditions of the promotion.
14. The consumer agrees to notify Company in advance of any planned change in physical premise or environment around meter or service to determine impact on safety cases, meter reading, and meter maintenance.
15. In the event the Company is unable, wholly or in part, by reason of force majeure to carry out its obligations to provide service, the obligations of the Company so far as they are affected by such force majeure, shall be suspended during the continuance of any inability so caused but for no longer period, and such cause shall as far as possible be remedied with all reasonable dispatch. The term "force majeure" as employed above shall mean acts of God; extreme weather conditions; strikes, lockouts, or other industrial disturbances; acts of the public enemy; war; blockades; insurrections; riots; epidemics; landslides; lightning; earthquakes; fires; storms;

floods; washouts; arrests and restraints of governments and people; civil disturbances; explosions; breakage of or accidents to machinery, lines of pipe, or the Company's peak shaving plants; freezing of wells or lines of reduction in gas pressure by its suppliers; inability to obtain rights-of-way, permits, materials, equipment, or supplies for use in the Company's peak shaving plants; and any other causes whether of the kind herein enumerated or otherwise, not within control of the Company, and which by the exercise of due diligence the Company is unable to prevent or overcome. It is understood and agreed that the settlement of strikes or lockouts shall be entirely within the discretion of the Company, and the above requirement that any force majeure shall be remedied with all reasonable dispatch shall not require the settlement of strikes or lockouts when such course is inadvisable in the discretion of the Company.

16. When the Company in its discretion determines that it is necessary to curtail service to maintain the integrity of its distribution system or to provide for its or the public's safety, the Company shall have the right to curtail delivery of gas to any consumer.

17. In the event of a failure or interruption of service, the Company shall use all reasonable diligence to remove the cause or causes thereof, but the Company shall not be liable for any loss or damage resulting from such failure or interruption due to accidents, force majeure, extreme weather conditions, or causes beyond its control.

PIEDMONT NATURAL GAS COMPANY, INC.
Docket No. 20-00086
Consumer Advocate's First Discovery Request
Date Issued: August 17, 2020
Date Due: September 8, 2020

1-86. Provide a copy of all regulatory orders supporting the deferral and rate recovery associated with the Company's request to recover deferred Pension and OPEB costs, including but not necessarily limited to the order in TRA Docket 96-00977.

RESPONSE: Please see attachment for the Order in Docket No. 96-00977.

Amortized recovery of Piedmont's previous unamortized deferred pension balances was granted in Docket Nos. 99-00994, 03-00313 and 11-00144 (Piedmont general rate cases). Please see the Company's response to Request No. 85\ for the Orders issued in Docket Nos. 99-00994, 03-00313 and 11-00144.

Name and Title of Preparer: Jenny Furr, Rates and Regulatory Strategy Manager

Name and Title of Responsible Person: Quynh Bowman, Director Rates and Regulatory Strategy

Response provided by Piedmont Natural Gas Company, Inc. on September 8, 2020.

BEFORE THE TENNESSEE REGULATORY AUTHORITY

NASHVILLE, TENNESSEE

February 19, 1997

RECEIVED
FEB 24 1997
STATE ATTORNEY GENERAL
CONSUMER ADVOCATE DIVISION

In Re:	)	
	)	**Docket No.**
Application of Nashville Gas Company, a Division of Piedmont Natural Gas Company, Inc. for an Adjustment of its Rates and Charges	)	**96-00977**

ORDER

This matter came before the Tennessee Regulatory Authority (hereafter "Authority") upon the petition of Nashville Gas Company (hereafter "Company" or "Nashville Gas"), an operating division of Piedmont Natural Gas Company, Inc. (hereafter "Piedmont") for a general rate increase. This matter was heard by the Authority on November 13 and 14, 1996.

I. PROCEDURAL BACKGROUND

On May 31, 1996, the Company filed a petition with the Tennessee Public Service Commission (hereafter "TPSC") requesting a general increase in its rates and charges for natural gas service and approval of certain changes to its rate schedules, classifications, and practices. On June 6, 1996, the Consumer Advocate Division, Office of the Attorney General (hereafter "Advocate"), entered a notice of appearance with the TPSC.

On July 29, 1996, pursuant to Administrative Order No. 1,[1] the Company filed its petition to recommence, and its agreement with the Advocate which stipulated that the record before the TPSC would be considered as the record before the Authority.

---

[1] Effective July 1, 1996, the TPSC ceased to exist and the Authority was established. On July 18, 1996, the Authority issued its Administrative Order No. 1 in which it set forth the requirements upon which it would accept jurisdiction over any pending matters that had been brought before the TPSC and not completed prior to the TPSC's termination.

On August 27, 1996, the Authority ordered that all filings, including petitions, pre-filed testimony, petitions of intervenors, orders of the TPSC and all other matters that were filed before the TPSC with respect to the Company's request for a general rate increase be adopted as though filed with the Authority. On August 9, 1996, Associated Valley Industries group (hereafter "AVI"), a coalition of certain industrial users of natural gas, filed a petition to intervene. That petition was granted on August 20, 1996.

On September 13, 1996, a status conference was held before H. Edward Phillips, III, Associate Counsel of the Authority. On September 25, 1996, a Report and Recommendation was submitted to the Authority providing dates for the submission of any additional data requests and responses, for the filing of additional direct and rebuttal testimony and for a hearing. By Order dated October 7, 1996, the Authority adopted the procedural schedule set forth in the Report and Recommendation.

II. HEARING AND APPEARANCES

On November 13, 1996, a hearing was convened before the Directors of the Authority, at which time, the following appearances were entered by counsel:

FOR THE COMPANY:

T.G. Pappas, Esq.
Bass, Berry & Sims
2700 First American Center
Nashville, TN 37238-2700

Jerry W. Amos, Esq.
Amos & Jeffries, L.L.P.
1230 Renaissance Plaza
Greensboro, NC 27402

FOR THE ADVOCATE:

L. Vincent Williams, Esq.
Office of the Attorney General
426 - 5th Avenue, North
Nashville, TN 37243-0485

FOR AVI:

Henry Walker, Esq.
414 Union Street, Suite 1600
Boult, Cummings, Conners & Berry
Nashville, TN 37219

The Company presented testimony from Bill R. Morris, Gregory E. Aliff, Dr. Donald A. Dr. Murry, Charles W. Fleenor and John H. Maxheim. AVI presented the testimony of Donald Johnstone. The Advocate presented the testimony of Dr. Stephen N. Dr. Brown, Michael W. Warner, Daniel W. McCormac, and R. Terry Buckner.

At a regularly scheduled Authority Conference held on December 17, 1996, the Directors of the Authority, after public deliberation, announced their decision in this matter.

III. CRITERIA FOR ESTABLISHING JUST AND REASONABLE RATES

The Authority considers petitions seeking adjustments of rates and charges under Tenn. Code Ann. § 65-5-203, which requires:

> 1) that the Authority shall have the power upon written complaint, or upon its own initiative, to hear and determine whether the increase, change or alteration being sought by a public utility is just and reasonable;
>
> 2) that the burden of proof to show that the increase, change or alteration is just and reasonable shall be on the public utility making the same; and
>
> 3) in determining whether such increase, change or alteration is just and reasonable, the Authority shall take into account the safety, adequacy and efficiency or lack thereof of the service or services furnished by the public utility.

IV. TEST PERIOD

In a rate case, the Authority must, as a preliminary determination, decide which test period is appropriate. The purpose in the selection of a test period is to provide an indication of the rate of return that is likely to be produced under the existing rate structure in the reasonably foreseeable future after taking into consideration the estimated effect of reasonably expected revenues, expenses and investments.

All of the parties agreed that the Company's use of a test period from December 31, 1995, adjusted to October 31, 1997, was reasonable.

V. CONTESTED ISSUES

In its original filing, the Company requested a rate increase of $9,257,633. At the hearing, the Company agreed to reduce its request to $7,861,622[2] to reflect the fact that updated information obtained by the Company since the time of its filing required adjustments in Charitable Contributions, Operating Revenues-Forfeited Discounts, Operation and Maintenance Expenses, and Taxes Other Than Income and Retention Factor. The Advocate asserted that a rate increase was not just and that the Company should be ordered to reduce current rates by $775,415. AVI asserted that if a $4,600,000 or a $9,300,000 [3] rate increase were granted, then the industrial users should correspondingly receive either a one percent (1%) reduction in rates or a zero percent (0%) rate increase.[4] AVI's assertion is based upon its position that the Company's

---

[2] See Company's Hearing Exhibit No. 5

[3] See table appearing at p. 8 of the Pre-Filed Direct Testimony of Mr. Donald Johnstone. These figures cited to in the text above represent assumed rate increases for the purpose of illustrating the portion of the increase that AVI asserted should be passed on to the industrial users.

[4] *See supra* note 2.

industrial customers are currently paying a premium for natural gas supplied by the Company, and that these rates should be competitive.[5]

V. A. Rate Base:

Rate base is the Company's net investment, which is financed through investor supplied funds, in property used and useful in providing utility service. This is the amount of investment on which the Company should be allowed the opportunity to earn a fair and reasonable rate of return. At the hearing, the disputed issues were (1) whether the Company accurately calculated accumulated depreciation and the related depreciation expense, and (2) whether the Company correctly calculated the amount of its working capital.

A. I. Accumulated Depreciation:

At the hearing, the Company's witness, Mr. Morris, testified that the Advocate's proposed calculation for accumulated depreciation contained an error,[6] which if not corrected would result in an increase in the Company's revenue requirement. Further, Morris testified that the Advocate's proposal was based on an erroneous conclusion that the Company's attrition period accumulated depreciation was overstated by two months.[7] The Advocate did not rebut the Company's assessment that its original calculation of accumulated depreciation was in error. Therefore, the Authority accepts the Company's calculation of accumulated depreciation and depreciation expense of $101,595,670 and $11,067,061 respectively based on the supporting proof, and finds that this calculation is reasonable.

---

[5] To that end, AVI did not sponsor any witnesses to discuss the cost of service. Instead, AVI proffered only one witness who presented testimony on rate design.

[6] See Hearing Transcript Vol. I, p. 59, testimony of Mr. Bill Morris.

[7] See Hearing Transcript Vol. I, p. 59, testimony of Mr. Bill Morris.

A. ii. Working Capital:

The Advocate used 38 lag days for income tax expense, while the Company used a negative 106 lag days in the calculation of working capital.[8] The Company's calculation is due to its overpayment of estimated income tax liability. This overpayment and resulting refund causes the negative lag days used by the Company. The Advocate has used the forecasted tax expense included in their case to produce a positive lag day result. Whatever the reason for the overpayment, the Authority finds that it would be inappropriate to require ratepayers to fund any more for working capital relating to income tax expenses than necessary. We, therefore, adopt the 38 lag days proposed by the Advocate.

A. iii. TOTAL RATE BASE:

Adjusting Rate Base for accumulated depreciation and working capital produces a total rate base of $200,699,631. The Authority finds that this rate base is fair and reasonable and will permit the Company to earn a fair rate of return.

V. B. REVENUES & EXPENSES

The Company's current level of revenues and expenses will determine the current net income. The revenues represent dollars received from the Company's ratepayers in providing services while the expenses represent the cost of providing that same service.

B. i. Forfeited Discounts:

Forfeited Discounts are those revenues received by the Company from customers who pay their bills after the expiration of the discount period. The Company has included approximately $1,506,000 in their case for forfeited discounts while the Advocate has used

---

[8] See Pre-Filed Direct Testimony of Mr. Michael Warner at p. 3.

approximately $1,417,000 which was produced by the Advocate's use of an offsetting adjustment to the Revenue Conversion Factor, discussed below.[9] At the hearing, the Company agreed with the Advocate's calculation of this item, and proposed to adjust their case accordingly.[10] Therefore, the Authority finds that approximately $1,417,000 is the appropriate amount to include for forfeited discounts.

B. ii. Allocation of Demand Cost:

The Company has proposed to allocate a portion of their fixed gas costs to the gas commodity rates. This proposal has the effect of allocating a portion of the fixed costs of purchasing gas to all customers instead of just those firm customers who use gas on the coldest days. The Company has made this proposal to recognize the principal that all customers should bear a share of the fixed cost burden. There was no opposition from any party at the hearing to this proposal.

The Authority therefore finds that the Company's proposal to allocate a portion of gas demand costs to commodity rates is reasonable and appropriate. The Company is instructed to file its future Purchased Gas Adjustments and Actual Cost Adjustments in a manner that reflects this change.

B. iii. Removal of Gas Cost from Base Rates:

This item relates to the recommendation by the Authority Staff in its compliance audit to remove gas costs from base rates.[11] The Company's current tariff rates include separate amounts for base rates which contain gas costs and a purchased gas adjustment which contains adjusted gas costs.

---

[9] See Pre-Filed Testimony of Mr. Daniel McCormac at pp. 3-4.

[10] See Hearing Transcript Vol. I, p. 60, testimony of Mr. Bill Morris.

[11] See p. 13 of the Compliance Audit Report prepared by the Authority's Utility Rate Division Staff.

Since the Authority's current Purchased Gas Adjustment Rule (hereafter "PGA") allows gas utilities to "true-up" any over-recovery or under-recovery of gas costs, it is no longer necessary to consider gas costs in a rate case. Therefore, only the gross margin from gas sales should be considered in a rate case while the gas costs should be moved to the PGA calculation. This is the method approved by the TPSC for both United Cities Gas Company and Chattanooga Gas Company. Making this adjustment for Nashville Gas will create uniformity among the gas utilities regulated by the Authority and will simplify explaining (1) which components of a customer's bill we consider in a rate case and (2) which components are subject to the fluctuations of the natural gas markets. We, therefore, find that the Company should remove the gas cost from its base rates.

B. Iv. Sales Promotional Expenses:

This item represents both payroll and non-payroll expenses of Nashville Gas Company employees that perform sales promotional activities. The Company has included approximately $811,000 and $308,000 in their case for marketing payroll and non-payroll expenses respectively.[12] The Advocate has proposed to include approximately $303,000 or ($816,000 less) in marketing expenses than the Company as part of its overall adjustment for advertising expenses as discussed below. The Advocate contends that sales promotion expenses should be considered a component of advertising and, as such, should be included in the allowance for advertising.[13] Previously, the TPSC limited the Company to recover advertising expenses that were equivalent to only 0.5% of the company's gross revenues.

No party to this proceeding presented evidence that sufficiently demonstrated the TPSC ever meant to include sales promotion payroll and non-payroll expenses in the calculation of the advertising expense allowance. Further, the Advocate failed to present

---

[12] See Hearing Transcript Vol. I, p.64, testimony of Mr. Bill Morris.

[13] See Pre-Filed Testimony of Mr. Terry Buckner at p. 7.

evidence that demonstrated that these expenditures were unreasonable. Finally, the Company witnesses presented credible testimony regarding the necessity and the reasonableness associated with these expenditures. Therefore, based upon the evidence presented by the Company that these expenditures were prudent and reasonable for the services rendered, the Authority finds it proper to accept the Company's calculation for Sales Promotion Expense. Further, these payroll and non-payroll expenses are not to be included in the advertising expense allowance.

B. v. Advertising Expense:

The Company has included approximately $1,486,000 in their case for advertising which represents the amount actually spent in 1995. The Company's witness Mr. Maxheim admitted that this amount was greater than what the Company was allowed to recover by the TPSC. Further, Mr. Maxheim testified that the amount of the advertising expenditures that had exceeded the amount allowed by the TPSC were paid for by the Company's shareholders.

The Company seeks recovery of the entire amount requested for this expense. However, the Advocate has proposed that the Company be limited to recover an amount for these expenditures that is equal to 0.5% of gross revenues.[14]

It is the opinion of the majority of this agency that the evidence appearing in the record demonstrates that both the shareholders and the ratepayers derive some benefit from the company's advertising expenditures. Therefore, the shareholders should bear a portion of the cost of this expense.[15] Therefore, the majority finds that the proper level of

---

[14] See Pre-Filed Direct Testimony of Mr. Terry Buckner at p. 7.

[15] Chairman H. Lynn Greer voted not to approve this method of allocation for advertising expenses.

advertising expense to be allowed rate recovery shall be one-half of the amount requested by the company or approximately $743,000.

The Authority also directs its Staff to conduct a study of the appropriate allowance for advertising for all Class A gas utilities under the Authority's jurisdiction. The results of this study shall be reported to the Authority no later that May 31, 1997.

B. vi. Payroll Expenses:

Three issues were raised in this case regarding payroll expenses. These issues dealt with what should be the appropriate amounts allowed for the following expenses: corporate office payroll allocated from North Carolina to Tennessee operations, Tennessee Direct payroll, and the Company's Long Term Incentive Plan.

a) Corporate Allocated Payroll:

The first issue concerns the proper allocation of corporate payroll expenses from Piedmont's corporate office in North Carolina to Tennessee. During 1995, the Company consolidated some of its functions into Piedmont's corporate office in North Carolina. This consolidation replaced both payroll and non-payroll expenses that were historically associated with Tennessee. Now these expenses will be allocated to Nashville from the corporate office.[16] Although the Company made this consolidation in 1995, no expense was allocated to Tennessee until November 1, 1996, which coincides with the beginning of Piedmont's fiscal year. Prior to this time, this expense was allocated only to the Company's operations in North and South Carolina.

---

[16] See Hearing Transcript Vol. I, pp. 88-89, testimony of Mr. Bill Morris.

The Company has included $2,440,000 in allocated corporate wages in their rate case for this item.[17] This amount represents the allocation of those corporate employees who provide services to Tennessee.

The Advocate seeks to have the Authority approve the 1995 Tennessee payroll expenses[18] that did not reflect the direct or allocated expense changes that had actually occurred. The Advocate's position is inappropriate because it does not recognize the attrition period consolidation as a known and measurable occurrence. Therefore, the Authority finds that the Company's calculation of $2,440,000 in allocated corporate wages is just and appropriate.

b) Direct Payroll:

The second payroll issue relates to what is the proper amount of Tennessee direct payroll expenses. The Company has included $11,694,000 in their case for direct salaries & wages while the Advocate has only included $11,388,000 for a difference of $306,000. In this case, the Company has used the employee level at December 31, 1995, while the Advocate used the employee level as of August 31, 1996.[19] The total number of employees declined during 1996 due to consolidations of work functions between the Nashville and North Carolina offices. As a result, the Advocate was able to capture a lower employee level which produces the lower expense for the attrition period.

After careful consideration of the evidence in the record, the Authority finds that it is appropriate and reasonable to reduce the Company's Tennessee direct payroll expenses to $11,388,000. This reduction reflects the fact that the Company has reduced its number of employees since the filing of this case, and that this reduction of employees should be

---

[17] See Pre-Filed Rebuttal Testimony of Mr. Bill Morris at p. 14.

[18] See Pre-Filed Direct Testimony of Mr. Terry Buckner at pp. 10-11.

[19] See Pre-Filed Direct Testimony of Mr. Terry Buckner at p. 6.

reflected in the Authority's decision. Therefore, the Company's original filing is reduced by $306,000 for direct salaries & wages.

c) Long Term Incentive Plan:

The third payroll issue is the Long-Term Incentive Plan (LTIP) for upper management employees. The LTIP program is designed to provide additional compensation for top executives that achieve preset financial targets established by the Company. The Company has included approximately $600,000 in their rate request for LTIP while the Advocate has excluded the entire amount from its case.[20]

There was a great deal of testimony presented on this issue at the hearing. At issue here is whether funding for the LTIP should come from the ratepayers or from the company's shareholders through savings brought about by the plan. The record reflects the fact that both North and South Carolina permit the shareholders and ratepayers to share this expense at a ratio of twenty-five percent (25%) to seventy-five percent (75%) respectively. However, after much consideration, the majority finds that both the shareholders and ratepayers equally share in the benefits derived from the LTIP. Therefore, the majority finds that both the shareholders and ratepayers should fund the LTIP on a fifty-fifty percentage (50/50) ratio. Accordingly, the Company's original filing is reduced by approximately $300,000.[21]

B. vii. Injuries and Damages Expense:

Injuries and damages expense relates to premiums the Company pays for various

---

[20] See Pre-Filed Direct Testimony of Mr. Terry Buckner at pp. 11-12.

[21] Director Sara Kyle voted not to approve the allocation for this expense. See p. 105 of the December 17, 1996, Authority Conference Transcript.

liability insurance policies such as Fire Protection, Directors & Officers Liability, Automobile coverage, and their self-insured program for Worker's Compensation coverage. While the forecast for Worker's Compensation is based on an independent estimate from an outside actuary, the amounts for the remaining items are based on Company estimates.

The Company originally included approximately $967,000 in its case for injuries and damages expense. At the hearing, the Company reduced its request for this item to approximately $725,000 because of an error in their calculation of Worker's Compensation Insurance.[22] The error is worth approximately $240,000 as indicated in the Company's hearing exhibit.

The Advocate has included $650,000 in their calculation of injuries and damages expense. To calculate this expense the Advocate used an overall growth factor of 12.66% [23]to forecast the change in this expense. The Advocate has provided more justification for the use of this growth factor than the Company has for its own. The Authority, therefore, finds that the Advocate's calculation of $650,000 for Injuries & Damages expense is reasonable and appropriate.

B. viii. Pension Expense:

The Company originally included approximately $1,300,000 of net pension expense in its filing. This amount represents the expense that the Company plans to report in its financial statements during the next year. At the hearing, the Company lowered this amount to approximately $900,000.[24]

---

[22] See Hearing Transcript Vol. I, pp. 80-81, testimony of Mr. Bill Morris.

[23] See Pre-Filed Direct Testimony of Mr. Terry Buckner at p. 4.

[24] See Hearing Transcript Vol. I, p. 88, testimony of Mr. Bill Morris.

The Advocate proposes that the pension expense be excluded from the Company's request. The Advocate correctly demonstrated that the Company's plan is fully funded, and no contribution is necessary at this time.[25] For this reason, the Authority finds that to appropriately match the Company's current pension expense with its current ratepayers, the minimum required contribution should be adopted as the current pension expense.[26] Since the pension plan is fully funded, the Company's minimum required contribution for this case is zero dollars ($0.00), therefore the Authority adopts this dollar amount for the Company's pension expense.

The Advocate has further excluded approximately $350,000 in pension fund administrative costs. The administrative cost that the Advocate seeks to exclude, encompasses, but is not limited to the following fees, actuarial fees, investment manager fees, trustee fees, and audit fees. The Authority finds that the Company should recover the $350,000 in pension fund administrative costs, since this is a continuing prudent cost of the Company. Further, the Authority will permit the Company to establish a deferred asset for the difference between the amount of Pension expense funded, and the amount expensed on the Company's books.

B. Ix. <u>Allocation of Corporate Office Expenses:</u>

Since Piedmont operates in three states, it is necessary to allocate corporate expenses to each jurisdiction. Historically, these joint expenses have been allocated on the percentage of net plant in Tennessee to total net plant. This same allocation method, which is updated annually, is also used in the company's other jurisdictions outside Tennessee.

---

[25] See Pre-Filed Direct Testimony of Mr. Terry Buckner at pp. 8-9.

[26] See December 17, 1996, Authority Conference Transcript at p. 79.

The Advocate has applied an allocation factor based on Tennessee customers to total company customers.[27] The Advocate's rationale for allocating corporate expenses on customers instead of net plant is that the TPSC has used the customer allocation method in relation to other regulated gas utilities.

The Authority recognized that the TPSC has historically allowed Piedmont to allocate corporate office expenses to Tennessee ratepayers by the net plant allocation method. The basis for the applications of the net plant allocation method to Piedmont is not simply based upon the historical practices of the TPSC. Rather, evidence exists that demonstrates that Piedmont is permitted to use the net plant allocation method in both North and South Carolina, which are the other two jurisdictions in which Piedmont provides service. Therefore, the Authority should provide consistency in the application of the new plant allocation method between the jurisdictions. Moreover, consistency of treatment between the jurisdictions will prevent Piedmont from recovering more or less than one hundred percent (100%) of its prudently incurred corporate office expenses.[28] Therefore, it is for these reasons that the Authority finds that the Company's net plant allocation methodology is acceptable.

B. x. <u>Forecasting of Attrition Period Expenses:</u>

This issue has been separated into two categories and pertains to the differences between the Company and the Advocate's approaches in arriving at forecasted attrition period expenses that were not manually priced-out. The Advocate has reduced the Company's request by approximately $748,000 for these items. The Company has used a zero-based calculation on most of their expenses, while the Advocate chose to apply a growth factor based on the Gross Domestic Product (hereafter "GDP") to the entire amount.

---

[27] See Pre-Filed Direct Testimony of Mr. Terry Buckner at pp. 10-11.

[28] See Hearing Transcript Vol. I, p. 63, testimony of Mr. Bill Morris.

For the items that were not calculated on a zero-based method, the Company grew these amounts by a factor based on the Consumer Price Index (hereafter "CPI").

a) CPI vs. GDP Growth:

Of the $748,000 total reduction for this item, approximately $113,000 relates to the Company using a CPI growth factor[29] while the Advocate has used a GDP growth rate.[30] The CPI index relates to price changes in consumer goods, while the GDP index relates to the price changes for the entire economy. Since the expenses that are applied to a growth rate are not limited to consumer type items, the Authority is persuaded that the Advocate's use of the GDP index is more precise. For this reason, the Authority finds that the use of the GDP index is appropriate and that the company's request should be reduced by $113,000 to reflect this adjustment.

b) Zero-Based Items:

As stated above, the Advocate has applied their GDP growth rate to this entire amount, while the Company has chosen to price these amounts out separately. Of the $748,000 total proposed reduction for this item by the Advocate, approximately $635,000 relates to the different methods of calculation described above. Generally, it is preferable to price-out these expenses rather than apply a broad growth rate when possible. For this reason, the Authority finds that it shall accept the Company's method of zero-based calculation for these expenses.

The combination of these two items results in a net decrease of $113,000 from the Company's filing.

---

[29] See Pre-Filed Rebuttal Testimony of Mr. Bill Morris at pp. 8-11.

[30] See Pre-Filed Direct Testimony of Mr. Terry Buckner at pp. 3-6.

B. xi **Charitable Contributions:**

The Company originally proposed to recover certain charitable contributions in its rates. At the hearing, however, the Company agreed to remove this item as an issue and therefore exclude charitable contributions from their case.[31] Therefore the Authority finds that the company shall reduce its request by approximately $96,000.

B. xii. **Non-Recurring Expenses:**

Generally, non-recurring expenses are material expenditures made during the test period that are not likely, or expected to re-occur during the forecasted attrition period. In his pre-filed direct testimony, Advocate witness Buckner testified that he deducted approximately $145,000 of expenses that were described as non-recurring expenses.[32]

As part of an effort to allow the hearing to be completed on November 14, 1996, the Company and the Advocate reached an agreement that permitted the Advocate to enter all of the pre-filed testimony of Daniel McCormac, Terry Buckner and Mike Warner into the record while the Company waived cross-examination. However, both McCormac and Buckner were permitted to address matters raised during the hearing which were not addressed in their pre-filed testimony.

Thus, because of this agreement, the Company did not pose questions to Buckner that related to the nature of specific non-recurring expenses. However, despite the fact that no break-down is provided as to what specific expenses generate the full amount of the non-recurring expenditures, the Authority finds that is reasonable to expect a utility such as Nashville Gas to make certain expenditures that are non-recurring. Further, it is unreasonable to expect that the Company would have zero non-recurring expenses. The

---

[31] See Hearing Transcript Vol. II at p. 133, testimony of Mr. John Maxheim.

[32] See Pre-Filed Direct Testimony of Mr. Terry Buckner at p. 6.

Company has not provided an alternative figure to the one proposed by the Advocate, neither has the Company denied that it had non-recurring expenses for the attrition period. The Authority finds that the Advocate has proposed a reasonable reduction for the Company's non-recurring expenses. Therefore, the Authority finds that the Company shall reduce its request by approximately $145,000.

B. xiii. **Administrative Transferred Credit:**

Transferred Credits are accounting mechanisms used to allocate a portion of the Company's overhead expenses to construction costs and non-utility operations. As a result, the amount for transferred credits will either increase or decrease with corresponding changes in overhead expenses. Examples of overhead expenses that effect transferred credits include administrative employees salaries (both Corporate & Tennessee), pension expense, 401(k) expense, all insurance coverage, and miscellaneous employee benefits expense.

The Company has included approximately $1,306,000 in their case for transferred credits while the Advocate has included $1,487,000. According to the Advocate, the Company's figure contained an error of approximately $424,000.

At the hearing, the Company agreed with the Advocate that their original calculations were in error.[33] However, the Company contends that the actual effect of the error is approximately $484,000 and they have adjusted their case accordingly. The Advocate presented no objections to this revised calculation. Therefore, the Authority finds that the correct adjustment should be $484,000.

---

[33] See Hearing Transcript Vol. I, pp. 82-83, testimony of Mr. Bill Morris.

B. xiv. Employee Benefits Expense:

The Company has included expenses for country club dues, and fees for professional sports tickets and suites in the above-the-line utility operations. While these amounts were removed for rate case purposes, they still should not be booked as utility operating expenses. Therefore, the Authority finds and directs the Company to begin accounting for these expenses to a non-utility account.

VI. COST OF CAPITAL

The Authority in reaching a decision on a rate of return must give in-depth analysis and consideration to numerous factors, such as capital structure, cost of capital, and changes that can be reasonably anticipated in the foreseeable future.

VI. A. Capital Structure:

Company witness Dr. Murry proposes using the following capital structure based on the period ending October 31, 1997: 46.68% long term debt, 1.52% short term debt and 51.80% common stock equity. Alternatively, Advocate witness Dr. Brown suggests using the Company's 1995 capital structure of 48.8% long term debt, 1.60% short term debt and 49.6% common stock equity.

We find that the capital structure proffered by the Advocate is appropriate in this case. The Advocate's recommendation is based on verifiable and reasonably current data. Conversely, the suggested capital structure proposed by Company witness Dr. Murry is based on speculation for which he provides no convincing foundation. The table below summarizes the recommended capital structures.

	Long Term Debt	Short Term Debt	Equity
*NGC	46.68%	1.52%	51.8%
**CAD	48.80%	1.60%	49.6%

* The abbreviation "NGC" used in this table refers to Nashville Gas Company.
** The abbreviation "CAD" used in this table refers to the Consumer Advocate.

VI. B. Cost of Debt:

There is no disagreement between the parties concerning the cost of long-term and short-term debt; therefore, it is appropriate to use the cost rates put forth by both parties: 8.32% for long-term debt and 5.92% for short-term debt.

VI. C. Return on Equity:

Company witness Dr. Murry estimated the Company's cost of equity primarily using the Discounted Cash Flow (DCF) method, the Risk Premium method and the Capital Asset Pricing Model (CAPM). Dr. Murry's DCF estimates range from 9.31% to 15.19%.[34] His risk premium estimate is 13.21% using historical data and 12.97% using current data. His CAPM estimate was 13.12%. In his direct testimony, Dr. Murry recommends allowing a return on common equity between 13.00% and 13.25%. However, in his oral testimony Dr. Murry favors the lower bound of this range based on current market conditions. Advocate witness Dr. Brown uses two techniques to estimate the Company's cost of equity, the DCF and Risk Premium methods. These methods yield estimates of 11.48% and 10.64%, respectively. Dr. Brown recommends allowing a return on common equity of 11.00% based upon a monthly compounding of earnings.

Dr. Brown testified extensively that the approved cost of equity should be adjusted for monthly compounding of earnings. The Authority finds this adjustment inappropriate

[34] Actually, Dr. Murry's DCF estimate was of the overall cost of capital, from which a cost of equity estimate can be imputed.

because it assumes a constant monthly earnings rate not typical of a gas utility.[35] Further, this adjustment ignores variable dividend payments, and conflicts with the calculation of annual earnings elsewhere in this case. Finally, Dr. Brown did not produce any evidence that this theory has been applied in any other case. Therefore, the Authority finds that this theory is inappropriate for use in this rate case.

Dr. Murry testified to several criticisms of Dr. Brown's Risk Premium analysis of the cost of equity. However, Dr. Murry's most important criticism was that Dr. Brown inappropriately combines an estimated short term market risk premium with an estimated long term debt yield.[36] The Authority finds that Dr. Brown's use of inputs based on inconsistent time horizons is inappropriate.

Dr. Brown focuses his criticism on Dr. Murry's Risk Premium analyses using both historical and current data as well as his Comparable Earnings analysis. Dr. Murry uses the results of the latter only as a qualitative check on his other estimates. For all of these analyses, Dr. Brown alleges that Dr. Murry unjustifiably and inappropriately compares the Company to dissimilar firms. In addition to his criticisms of Dr. Murry's methodology, Dr. Brown argues that the approved cost of equity should be adjusted for monthly compounding which gives the Company an opportunity to earn more than the allowed annual rate.

After careful consideration of the testimony of both witnesses, and the evidence in the record, the Authority finds that the cost of equity is 11.50%. Moreover, the cost of equity being adopted by the Authority herein is within the range of DCF calculations proposed by both Dr. Murry and Dr. Brown.

---

[35] See Pre-Filed Rebuttal Testimony of Dr. Donald A. Murry at p. 7

[36] See Pre-Filed Rebuttal Testimony of Dr. Donald A. Murry at p. 8.

VI. D. Overall Cost of Capital:

Based on the approved capital structure which consists of 48.8% long-term debt, 1.60% short term debt and 49.6% common stock equity the Authority approves an overall rate of return of 9.85%.

VII. RATE INCREASE

After determining the appropriate Rate Base, Operating Income, and Fair Rate of Return, we can now calculate the appropriate revenue level and determine how much rates should be adjusted. Since the parties have agreed that the revenue conversion factor of 1.626747 as proposed by the Advocate is appropriate for this case, we will also use this to determine any rate adjustment.

Based on the findings and conclusions set forth above, the Authority concludes that the just and reasonable revenues, expenses, and rate base produce a rate increase of $4,417,290. The Authority further concludes that in order to permit the Company to earn the return determined to be just and reasonable, the Company should be allowed to increase its rates by $4,417,290. Further, a majority of the Authority has determined that this rate increase be effective beginning with service rendered on and after January 1, 1997.[37]

VIII. RATE DESIGN AND TARIFF CHANGES

Company witness Mr. Fleenor testified that he designed the Company's proposed rates using a cost of service study of existing rates along with traditional rate design principles and the desire to provide additional services to the ratepayers. The traditional rate design principles considered by Mr. Fleenor included (1) value of service, (2) the need

---

[37] Director Sara Kyle moved that the increase become effective on January 28, 1997. This motion failed for lack of a second, and as a result, the majority concluded that the increase would become effective on January 1, 1997. See December 17, 1996, Authority Conference Transcript at p. 115.

to avoid discrimination among classes of service, (3) system load equalization and (4) revenue stability. Mr. Fleenor also considered several non-economic factors. He testified that the main objective of his rate design was to continue to develop a design and structure that will enable the Company to continue to adapt to the many changes occurring in the natural gas industry and to recommend rate levels that more properly reflect cost and value of service. Based on the Company's rate design considerations and its original request to increase its rates by $9,257,633, the Company proposed to increase rates to the residential category by 9.3%, to the small commercial class by 5.3% and to the large commercial and industrial class by 2%.

The Advocate's witness Mr. McCormac did not recommend how a rate increase should be applied, however, he did suggest that any change in rates be spread equally among all customer classes.[38] AVI's witness Mr. Johnstone strongly advocated cost-based rates, and as a result proposed that there should be no increase in industrial rates. Finally, he suggested that if the full requested increase were not granted, then the industrial rates should be reduced by one percent (1%).[39]

After careful consideration of the testimony and exhibits of the parties, the Authority finds that the rate increase approved herein should be spread equally to all customers. It is the intent of the Authority to spread this increase to all ratepayers, including Interruptible Sales customers, Transportation customers, and Special Contract customers, in order to minimize the overall impact of this rate change. In addition, the Authority concludes that the residential customer charge should be increased from $6.00 per month to $7.00 per month.

The Company also proposed certain changes to its tariff language to permit the Company to respond to existing competitive conditions under FERC Order No. 636. Among other things, these changes include provisions for customers to elect sales or

---

[38] The Advocate proposed a decrease in rates of $775, 415.

[39] See Pre-Filed Direct Testimony of Mr. Donald Johnstone at p.8.

transportation service on an annual basis so that these customers will be prevented from switching back and forth as the price of spot gas and the price of gas under the Company's PGA varies from month to month. No party has objected to these provisions and the Authority finds them to be fair and reasonable. Therefore, the Company is instructed to take the appropriate action so the implementation of these provisions may not be unnecessarily delayed.

IX. DISPOSITION OF PROCEDURAL MOTIONS

The parties to the proceeding filed several motions concerning certain procedural issues. On November 12, 1996, the Company filed its Motion to Strike the Rebuttal Testimony of Advocate witness Dr. Stephen Brown. After hearing oral argument on this matter, the Authority denied the motion. The Authority noted that the Company would not be unduly prejudiced by the admission of the testimony, because the Company would have the opportunity to cross-examine the witness, attempt to impeach the witness and object to portions of the witness' testimony.

On November 13, 1996, the Advocate filed a Motion requesting disclosure of documents and records prepared by the Authority Staff in relation to this proceeding. The Directors of the authority permitted the Advocate to present oral argument. After careful consideration, the Authority denied the Advocate's motion. In denying the motion, the Authority asserted the deliberative privilege which protects the confidentiality of communication between a Director and certain staff members.

Finally, the Advocate made an oral motion for a one day continuance of the proceeding. The Advocate stated that late filed discovery responses by the Company warranted such continuance. After presentation of oral argument by the parties, the Authority denied the motion.

IT IS THEREFORE ORDERED:

(1) That the rates filed by Nashville Gas Company on May 31, 1996, are hereby denied;

(2) The Company is directed to file tariffs with the Authority that are designed to produce $4,417,290 in additional revenue, for service rendered on and after January 1, 1997, and any other tariffs necessary to be consistent with this Order;

(3) In future true-ups under its Purchase Gas Adjustment (PGA), the Company shall use the demand allocation percentages;

(4) That the residential customer charge shall be increased from $6.00 per month to $7.00 per month;

(5) That the Authority Staff shall conduct a study of the appropriate allowance for advertising for all Class A gas utilities under the Authority's jurisdiction. The results of this study shall be reported to the Authority no later that May 31, 1997;

(6) That the Company shall begin accounting for employee benefit expenses in a non-utility account;

(7) That the Company shall establish a deferred asset for the difference between the amount of Pension expense funded, and the amount expensed on the Company's books;

(8) That the Company shall exclude gas costs from its base rates, and shall instead file an appropriate Purchased Gas Adjustment to reflect all of its gas costs;

(9) Any party aggrieved with the Authority's decision in this matter may file a Petition for Reconsideration with the Authority within ten (10) days from and after the date of this Order; and

(10) Any party aggrieved with the Authority's decision in this matter has the right of judicial review by filing a Petition for Review in the Tennessee Court of Appeals, Middle Division, within sixty (60) days from and after the date of this Order.

PIEDMONT NATURAL GAS COMPANY, INC.
Docket No. 20-00086
Consumer Advocate's First Discovery Request
Date Issued: August 17, 2020
Date Due: September 8, 2020

1-87. Regarding the recovery of deferred environmental costs, respond to the following:

a. Has the Company investigated the extent to which legacy insurance policies were in place which would provide reimbursement, or the possibility of cost reimbursement associated with these environmental costs?

b. If such legacy insurance investigation has occurred provide copies of all documentation retained regarding that investigation, including copies of relevant legacy insurance policies.

c. If the Company has obtained any insurance reimbursements of its costs since January 1, 2011 provide the annual amount of such recovery and identify how such cost recovery has been recorded on its books and records.

d. If the Company has not investigated the extent to which legacy insurance policies were in place which may provide reimbursement, provide all justification for recovery of such costs when all avenues of insurance reimbursement have not been pursued.

RESPONSE:

a. The Company has not identified any legacy insurance policies that would provide for cost reimbursement associated with the deferred environmental expenses included for recovery in this proceeding.

b. Piedmont has not identified any relevant insurance policies.

c. Piedmont has not obtained any such insurance reimbursements.

d. The Company has not identified any legacy insurance policies that would provide for cost reimbursement associated with the deferred environmental expenses included for recovery in this proceeding.

Name and Title of Preparer: Arnold Garcia, Director - Insurance

Name and Title of Responsible Person: Arnold Garcia, Director - Insurance

Response provided by Piedmont Natural Gas Company, Inc. on September 2, 2020.

PIEDMONT NATURAL GAS COMPANY, INC.
Docket No. 20-00086
Consumer Advocate's First Discovery Request
Date Issued: August 17, 2020
Date Due: September 8, 2020

1-88. Regarding the Company's inclusion of Hedging Open Positions within its Working Capital balance within tab D within the 'WorkingCapital_Adj' file respond to the following:

a. Provide a comprehensive explanation of the Company's accounting for hedging transactions including how such gains and losses from hedging activity are recorded.

b. Identify the monthly hedging costs, gains and losses recorded in 2019 by account.

c. Indicate whether hedging gains and losses are recoverable from ratepayers through the Company's purchased gas mechanism or related mechanism.

d. Confirm that hedging costs are included within the ACA mechanism and such costs are recovered in fully from ratepayers.

e. Refer to the TPUC Staff report issued February 22, 2019 and indicate whether hedging gains and losses are reflected within the identified Gas Procurement Mechanism Gains/Losses of $549,154.

f. Provide a comprehensive explanation justifying the inclusion of this account within Rate Base.

RESPONSE:

a. • Hedge contracts purchased are a debit to account 182963 (TN Hedging Open Positions) and accounts payable is credited.

• Hedge contracts that have expired are removed from account 182963 (TN Hedging Open Positions) with a credit and a debit to 253142 (ACA - Nashville Gas Purchases)

• At month end the cost of open options is credited to account 253140 (TN ACA Hedging-Contra) and debited to 175001 (Deriv Assets). The gain is credited (loss debited) to 253211 (Deferred M/M Gain Loss) and offset to account 175001 (Deriv Assets).

b. See attachment.

c. Hedging costs and resulting gains or losses are reclassed from the hedging account (A/C 0182963) to the ACA Deferred account (A/C 0253142) as they expire or are exercised. Until they are expire or are exercised, the open positions remain in A/C 182963.

d. Hedging costs and resulting gains or losses are reclassed from the hedging account (A/C 0182963) to the ACA Deferred account (A/C 0253142) as they expire or are exercised. Until they are expire or are exercised, the open positions remain in A/C 182963.

e. No, hedging gains/losses are not reflected in the Gas Procurement Mechanism Gains/Losses.

f. Open hedging positions are not included in the deferred account and therefore not reflected in the Gas Procurement Mechanism Gains/Losses until they expire. The hedging plan allows for hedges to be made on a 12-month time horizon so hedges could theoretically be open for 12 months before they expire. In essence, Piedmont has paid for the hedging options which has been deemed to be a recoverable expense but does not recover it until it expires.

Date Issued: August 17, 2020
Date Due: September 8, 2020

1-89. Provide all available evidence documenting that the Deferred Pension Asset identified within tab "D" within the "WorkingCapital_Adj" file is in compliance with the February 19, 1997 Docket No. 96-00977 order referenced in Ms. Bowman's testimony, for each year in which such deferred balance was accumulated. Such documentation should clearly indicate the reference as to the nature of the pension 'cost' being deferred, whether it represents pension funding, GAAP expense or some other aspect of pension cost.

RESPONSE: Please see the Company's response to MFR Item 12 for Excel workpaper "5C_Pension Adj", Tab <1> Summary. This workpaper provides a rollforward of the 2011 TN Deferred Pension balance as approved in Docket No. 11-00144 to the end of the test period on March 31, 2020.

The costs that were deferred were funding amounts -- the TN portion of the Company's contributions to the pension plan -- in the period of time since the last general rate case.

Docket No. 20-00086
Consumer Advocate's First Discovery Request
Date Issued: August 17, 2020
Date Due: September 8, 2020

1-97. Refer to the PNG Balance Sheet – 2019 within MFR 11. Confirm whether balances associated with the following accounts are included within Rate Base:

a. 019001 ADIT Prepaid Federal Taxes

b. 0190002 ADIT Prepaid State Taxes

c. 0283100 ADIT Other Federal Taxes

d. 0283101 ADIT Other State Taxes

If such balances are incorporated within Rate Base, provide the monthly balances for these accounts for the period January 2018 – current.

RESPONSE: These four accounts were included in Rate Base as a part of Accumulated Deferred Income Taxes. Please see the Company's response to Request No. 96 which details the accounts included in ADIT.

See the attachment herein for the monthly balances of these four accounts from January 2018 to June 2020.

Name and Title of Preparer: Jenny Furr, Rates and Regulatory Strategy Manager

Name and Title of Responsible Person: Quynh Bowman, Director Rates and Regulatory Strategy

Response provided by Piedmont Natural Gas Company, Inc. on September 8, 2020.

PIEDMONT NATURAL GAS COMPANY, INC.
Docket No. 20-00086
Consumer Advocate's First Discovery Request
Date Issued: August 17, 2020
Date Due: September 8, 2020

1-98. Provide a comprehensive description of the nature of transaction giving rise to account i) 019001 ADIT Prepaid Federal Taxes and ii) 0190002 ADIT Prepaid State Taxes.

RESPONSE: FERC Accounts 190, 282, and 283 capture all ADIT balances. 0190001 ADIT Prepaid Federal Taxes and 0190002 ADIT Prepaid State Taxes capture the portion of ADIT balances, specifically Deferred Tax Assets that are not related to Property Plant & Equipment.

A deferred tax is an item that results from tax authorities recognizing revenue or expenses at a different time than that of the book accounting standards. In the case of a deferred tax asset, this timing difference results in an acceleration of taxable income, acceleration of a book deduction or tax due and therefore a tax liability earlier for tax when compared to book.

Docket No. 20-00086
Consumer Advocate's First Discovery Request
Date Issued: August 17, 2020
Date Due: September 8, 2020

1-104. Refer to the tabs PNG Balance Sheet – 2019 and PNG Bal Sheet March 2020 within MFR 11, specifically to the balances in Account 106 within each respective Balance Sheet. Please respond to the following questions:

a. The March 2020 balance (TN) of this account declined approximately $60 million from the balance at the end of December. Provide a comprehensive explanation of the information that became available to Piedmont which permitted the classification of this large balance within this ninety-day period and how it can assure the Commission of the accuracy of the accounting entries giving rise to the sharp decline in the balance of this account.

b. With respect to the $301 million balance at December 31, 2020 segregate the amounts by the year in which the underlying projects were deemed to be 'in service' and initially charged to account 106.

c. Provide a comprehensive explanation of what prevents the Company from working down this balance to levels representing 90 – 180 days of capital expenditures?

d. Provide copies of all due diligence information prepared or identified by Duke relative its review Piedmont's balances of Account 106 prior to its acquisition of Piedmont.

e. Provide copies of all Piedmont/Duke internal auditor reports which discuss in any way the relative balances of Account 106 issued during the period January 1, 2018 through July 31, 2020.

RESPONSE:

a. The decrease in the Account 106 balance from December of 2019 to March of 2020 is the result of capital project unitization efforts by the Company's asset accounting personnel. Capital project unitization transfers project costs from Account 106 to Account 101 once a project has been completed and all known and anticipated costs have been incurred and applied to the project. Much of the research that needed to be done in order to unitize the projects associated with this $60 million decrease was done prior to December 2019. Approximately half of the $60 million decrease was for a blanket project containing several years of service assets.

It is the responsibility of the project owner/manager to provide accurate estimates, identify and quantify property units installed or removed, identify the asset location, review project charges for appropriateness, and provide supporting details in order to categorize project charges by FERC utility account.

The Company's asset accounting personnel perform a high-level standard review for reasonableness by project prior to executing the unitization process. This is accomplished using system validations called Automatic Review for Closing (ARC) Rules, which are PowerPlan business rules used to validate whether updates or changes are need for the project to be unitized. Asset accounting addresses ARC failures prior to unitizing projects.

b. See attachment.

c. The Company strives to maintain timely project unitizations, while at the same time reducing the unitization backlog on older projects as quickly as reasonably possible. Timely is characterized as "completing" capital projects (e.g. receiving and paying

all project charges/invoices) within 6 months of the project in-service date; the unitization work begins upon project completion, with a timely goal of completing unitizations within 6 months of the project completion date.

The timeliness of unitization is affected by the divided focus of personnel to resolve the unitization backlog while simultaneously striving to keep the current projects unitized timely. In 2020, the pace of unitization is 34 projects per month for Tennessee projects, which outpaces the number of new projects added by almost double. Therefore, the pace of unitization is more than adequate to ensure timely unitization once the backlog is completely unitized.

d. No Duke due diligence information regarding Piedmont's Account 106 balances was identified.

e. The Internal Audit Department of Duke Energy Corporation has not conducted any audits related to Piedmont's account 106 balance between January 1, 2018 and July 31, 2020, therefore, there are no responsive documents to this request.

PIEDMONT NATURAL GAS COMPANY, INC.
Docket No. 20-00086
Consumer Advocate's First Discovery Request
Date Issued: August 17, 2020
Date Due: September 8, 2020

1-105. Refer to the Confidential response to MFR 55 for 2019. Provide a thorough summary describing the variance between actual and budgeted capital expenditures for the following: i) $14.5 million variance (68% over budget) between budgeted and actual expenditures for Residential and Commercial Additions and ii) $6 million variance (67% over budget) for Distribution Integrity expenditures. Such explanation should include (to the extent applicable) the identified material and quantity cost variances between budget and actual.

RESPONSE: See attachment.

Name and Title of Preparer: John Robson, Director - Gas FP&A

Name and Title of Responsible Person: Joel Rutledge, Director - Finance Gas Segment

Response provided by Piedmont Natural Gas Company, Inc. on September 8, 2020.

PIEDMONT NATURAL GAS COMPANY, INC.
Docket No. 20-00086
Consumer Advocate's First Discovery Request
Date Issued: August 17, 2020
Date Due: September 8, 2020

1-106. Provide a comprehensive explanation of the extent to which internal approval is required in those situations in which it becomes apparent that the total annual capital expenditures will exceed budgeted expenditures. Provide a copy of any such support submitted to management supported the additional expenditure of funds which may apply to 2017 – 2019 capital expenditures.

RESPONSE: Monthly, Piedmont reviews individual project cost projections as set forth in the original capital budget and makes adjustments as necessary to arrive at current projected costs by project. In-service dates are also adjusted based on projected construction delays or acceleration, specific to each project. All of these adjustments are constantly changing the expected spend during the fiscal year. If the projected spend exceeds the current authorized amount, an electronically generated approval is required based on appropriate authority levels. Final updates to capital project projections are determined at intervals during the year, usually the 4th, 8th and 11th months of the year. This is done at a Duke Energy Corporation level at a routine monthly finance meeting. Approved changes to capital project spend projections are then communicated to management of the Natural Gas Business segment.

Duke Energy's capital spend policy requires all capital projects estimated to exceed $50 million be approved by Duke Energy executive management. An internal document referred to as a whitepaper is created with all of the project components including cost and project description. In Nashville, Piedmont has one such project, Line 431 Ph II. The whitepaper for this project is attached.

Report to the Transaction & Risk Committee

Line 431 Phase II Project

1 – Executive Summary

1.1 – Transaction Summary

Piedmont Natural Gas (Piedmont) proposes to install a new 20" transmission pipeline (Line 431 Phase II) and 12" transmission lateral pipeline (Line 469) to functionally replace Piedmont Line 310 to support the Transmission Integrity Management Program (TIMP) as required by Federal Regulations. Line 310 will be reclassified from transmission to distribution operation after Line 431 Phase II is placed in-service. The project corridor begins at the intersection of new Line 431 Phase I tie-in to Line 310 in the Bordeaux neighborhood of Nashville, TN and will continue primarily in a dedicated easement to the Holts Holder pipeline interconnect station located in Whites Creek, TN (see map on page 3). The project is eligible for inclusion in the Integrity Management Rider (IMR) and is scheduled to be placed into service on or before October 15, 2020.

1.2 – Recommendation to Management

Piedmont requests regular funding of $62.7 million for the project. Project spend to through October 2019 is $3.5 million.

1.3 – Project Description

Business Unit	Natural Gas Business Unit					
Executive Sponsor	Victor Gaglio					
Project Location	Nashville, Tennessee					
Investment Date	2018-2021

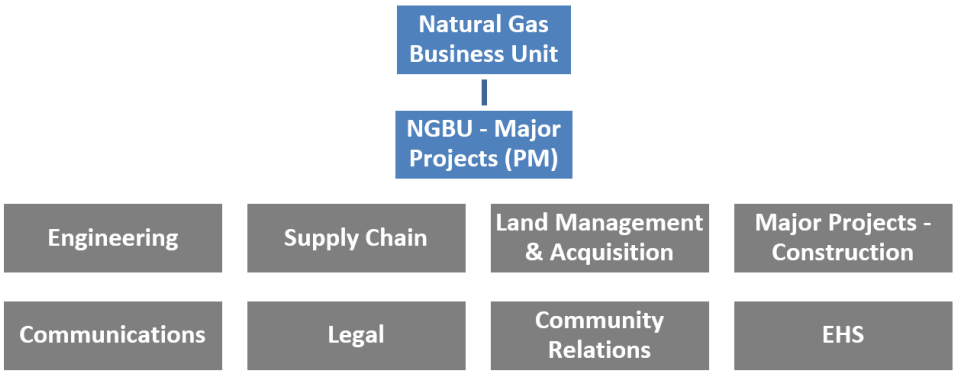
* References to the "Current Financial Plan" represent the current 8x4 financial plan.

2 – Transaction Description



2.1 – Strategic Rationale

Piedmont is committed to providing safe, reliable gas service and continues to expand our In-Line Inspection (ILI) program either through pipeline retrofits, where able, or through replacement projects. This project has been selected to be constructed to fulfill regulatory obligations to be able to inspect the integrity of our pipelines using latest techniques and technologies as well as to regain the prior level of deliverable capacity from Piedmont's Kinder-Portland Station (K-P) to serve Piedmont's Tennessee service area. Line 431 will functionally replace Line 310 as the main transmission line from K-P to the city of Nashville and Piedmont's Nashville LNG Plant (LNG). Specifically, Line 431 Phase 2 will complete the final phase of a continuous 20" transmission pipeline from K-P to LNG consisting of Line 301 Phase 1 (2004), Line 301 Phase 2 (2005) and Line 431 Phase 1 (2019).

Line 310 must remain in-service until Line 431 Phase II is operational. The current maximum allowable operating pressure (MAOP) of Line 310 is 735 PSIG. This line will have in-line inspection (ILI) in the first half of 2020. Any anomalies found will be addressed. After reclassifying to distribution operation, the new MAOP of Line 310 will be 75 PSIG, and this reclassified pipeline will become one of the major feeds to the northern Davidson County distribution system. Additionally, three regulator stations currently connected to Line 310 will be removed from service lowering operation and maintenance costs. After this reclassification, Line 310 will be removed from the Transmission Integrity Management Program. As a 12" distribution pipeline, it will meet all requirements of the Distribution Integrity Management Program. Line 431 will have a 1000 PSIG MAOP.

Historically, Line 310 and Line 309 were the main transmission lines from Holts Holder Valve Station into Nashville. Constructed in 1946, the 8" Line 309 was the original transmission line into Nashville but was retired in 2014 as part of TIMP review. Line 309 lacked adequate records and had integrity issues discovered by in line inspection. Therefore, the new 20" Line 431 will regain deliverable capacity lost by the retirement of Line 309. After completion of Line 431, Piedmont will be able to ILI the entire 20" pipeline from KP Station to the Nashville LNG plant.

2.2 – Background

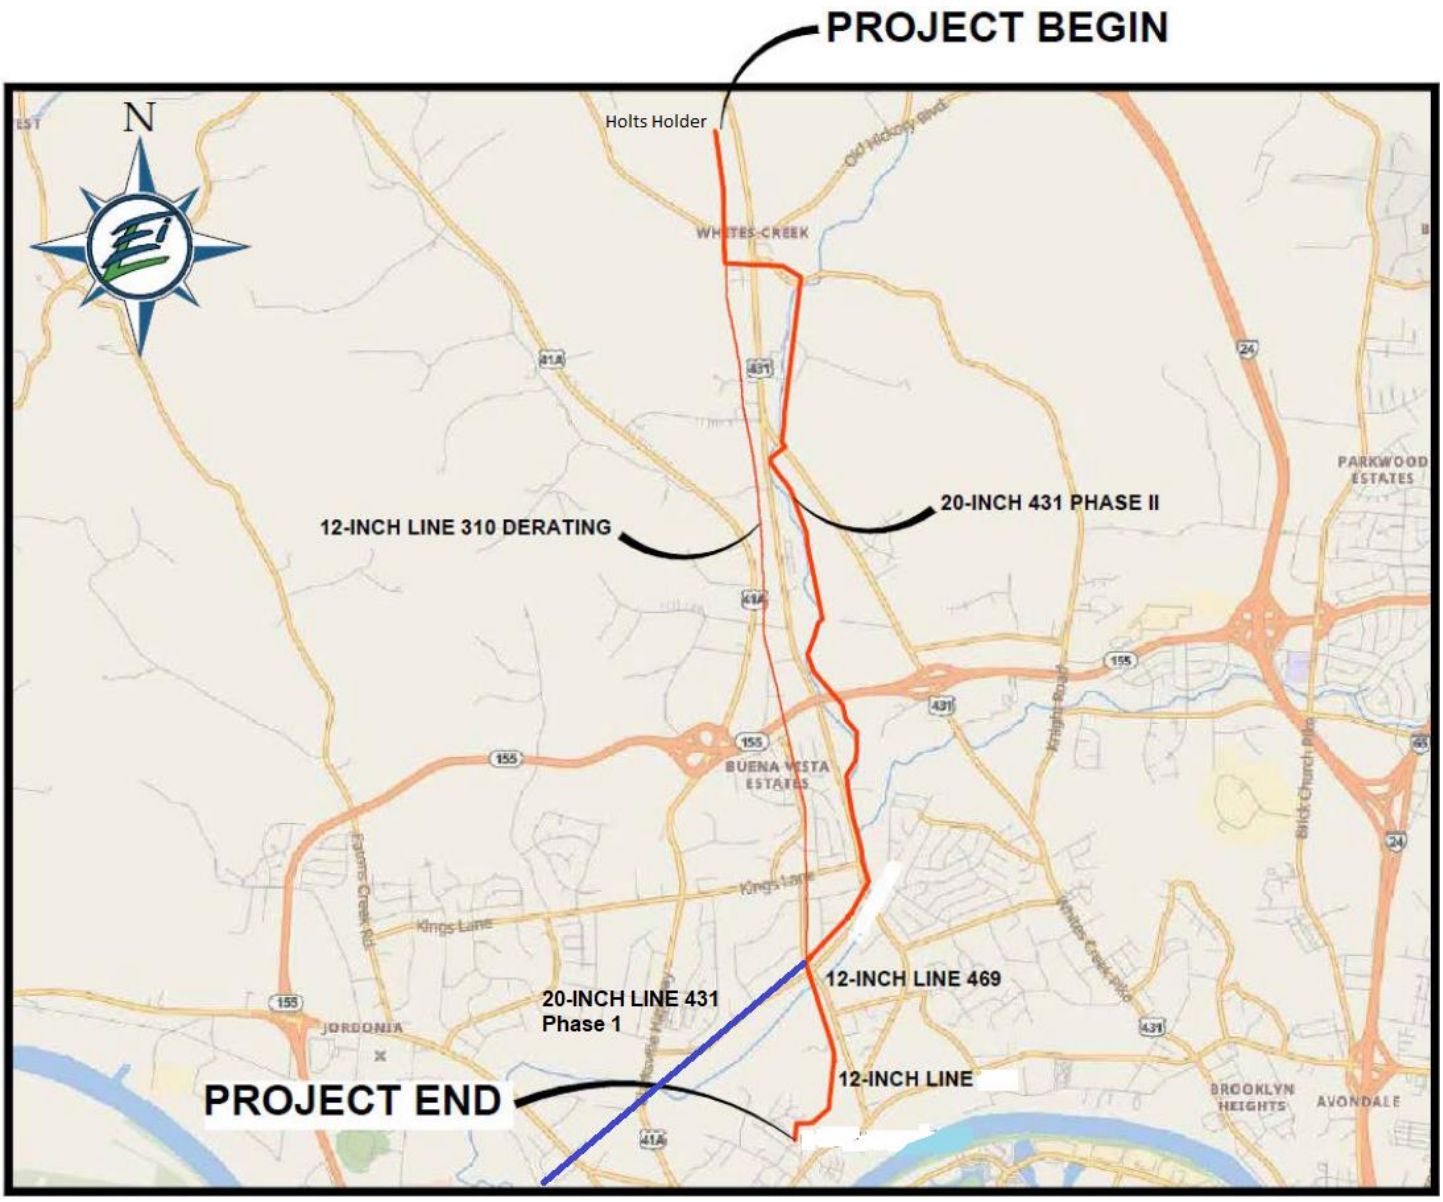
Constructed in 1956, Line 310 does not have adequate test records or other documentation to meet current regulatory requirements. Piedmont's Transmission Integrity Management department therefore advocates replacement of Nashville Line 310. System Planning evaluated the operation of the connecting pipelines (both 20") and lost capacity from the retirement of Line 309 to appropriately size the replacement pipeline. The existing easement for Line 310 acquired in 1955 and 1956 is 40' wide and is now adjacent to heavy residential development on both sides from Tucker Rd. in Bordeaux to Knight Dr. in Whites Creek - approximately 3.5 miles. This is not sufficient area to install a 20" pipeline safely, efficiently, or economically. The first 3,600' of Line 431 from Holts Holder heading south will be in the original easement which has been expanded to the company standard 50', and we have also acquired sufficient temporary construction easement to safely and efficiently build the pipeline. The new dedicated easement for Line 431 is primarily located in undevelopable land in floodway which reduces the probability of 3rd party damage.

2.3 – Scope

Line 431 scope includes the installation of a new pipeline and additional easements for permanent right of way and temporary construction workspace. The new, de-rated, and retired assets consist of the following:

Installation of approximately 5 miles of 20" x 0.375" steel pipeline (API 5L PSL-2 X65) and approximately 1 mile of 12" x 0.375" steel pipeline (API 5L PSL-2 X52)

- Eight (8) horizontal direction drills (~2.5 miles)
    - Seven (7) 20" diameter HDD's
        - HDD#1 - Old Hickory Bv, Earthman Creek trib. (900')
        - HDD#2 - Whites Creek Pk, Knight Dr, Earthman Fork Creek (1360')
        - HDD#3 - Fontanel Entertainment Complex, Metro greenway, Whites Creek (3435')
        - HDD#4 - Bates Nursery (1200')
        - HDD#5 - Green Lane, hilly topography, possible landslide issue (2064')
        - HDD#6 - Briley Pkwy (975')
        - HDD#7 - Whites Creek – 20", Buena Vista Ln (1060')
    - One (1) 12" diameter HDD
        - HDD#8 - Whites Creek – 12", Hartman Park (1820')
- One pressure regulator addition for the 75 PSIG distribution system to Bordeaux Station
- De-rate Line 310 from transmission to 75 PSIG distribution operation (5.25 miles)
- Retire three (3) regulator stations and one (1) farm tap from line 310



Project Overview Map

2.4 – Schedule & Milestones

Line 431 Phase 2 project was initiated in February 2018 for project design. The construction is scheduled to start in December 2019 with a forecasted in-service date by October 2020.

DATE	LINE 431 MILESTONES
FEB 2018	Project Design Initiation
MAR 2019	Refine Primary and Alternate Routes 60% Design Complete
SEP 2019	Complete Design RFP for Construction
OCT 2019	Receive all Permits
NOV 2019	Complete Easement Acquisition
DEC 2019	All Materials Received TRC Approval Construction Contractor Mobilization
SEP 2020	Mechanically Complete
OCT 2020	Pipeline In-Service

2.5 – Contractor/Vendor/Technology Selection

The engineering design firm and construction contractor selections are based upon a competitive bid process though PowerAdvocate. The bid lists for both engineering and construction were restricted to companies with a solid history of satisfactorily designing and constructing projects of this magnitude. The proposals were evaluated based on compliance with key project requirements, past performance, the strength of the proposed project team, bench strength, cost competitiveness and any unique strategies, capabilities or solutions identified in the proposals.

The project does not include utilization of any unique or first of a kind technology.

2.6 – Contractual Structure, Compliance & Legal Discussion

The competitively bid contract for engineering design services was awarded to Energy, Land and Infrastructure. The construction services bids are currently being evaluated and were bid to Troy Construction, Snelson Companies, Inc., Infrasource, Henkels & McCoy, and Price Gregory International.

Procurement of owner furnished material including pipe, fittings, equipment and valves were purchased through the NGBU Supply Chain department.

Easement acquisition services were contracted to a 3rd party firm, Croft and Associates, led by a Piedmont Land Agent, managing a team of land agents.

Cleveland Integrity Services, Inc, one of NGBU's preferred alliance inspection firms, has been selected for field inspection services. HDR, an Enterprise Engineer of Choice partner, will supply a dedicated horizontal direction drill consultant.

ACUREN, one of NGBU's preferred alliance non-destructive examination (NDE) firms, will be used to provide NDE services.

Pre-Construction permits have been acquired.

2.7 – Regulatory Recovery Requirements & Considerations

This project will create a utility asset providing benefit to Piedmont's general body of customers in Tennessee, and will therefore become part of Piedmont's regulated utility rate base. Capitalized costs associated with replacement of transmission pipelines under the NGBU TIMP are eligible for recovery via rates as part of Piedmont's Tennessee Public Utilities Commission (TPUC)-approved Tennessee Integrity Management Rider (IMR). The TN IMR is a favorable alternative regulatory mechanism that enables the Company to earn a return of and on its safety and integrity-related capital investment, which includes compensation for incremental depreciation expense. Absent the TN IMR, cost recovery on such capital investment would begin only after its inclusion in rate base as part of a general rate case proceeding.

Under the TN IMR, 100% of TIMP capital investment is eligible for rate relief. Such TN IMR capital expenditures occurring between November 1 and October 31 are eligible for recovery via rates starting the following January. Given the anticipated October 2020 in service date for this project, its costs recorded to CWIP through October 31, 2020 would be eligible for rate relief via the TN IMR beginning in January 2021. Rate relief for the remainder of the project cost would begin via the TN IMR rates effective January 2022.

2.8 – Environmental Issues & Discussion

Due to the size and scope of the project and the natural conditions in the project area, impacts to streams and wetlands are unavoidable, thus we have obtained a Section 404 Nationwide Permit 12 (NWP12) for Utility Line Activities from the U.S. Army Corps of Engineers (USACE) and an Aquatic Resource Alteration Permit (ARAP)/401 Water Quality Certification from TN Department of Environment and Conservation (TDEC). No impacts to protected species or to cultural resources are anticipated. All Section 7 and 106 clearances required by the USACE related to Waters of the U.S. (WOTUS) impacts have been obtained for the Project. Additional cultural resource investigations have been completed for the entire project alignment, access roads, laydown yards, and other temporary workspaces and avoidance and mitigation measures are to be employed to protect identified cultural resources.

The project has an Erosion and Sediment Control permit issued by TDEC due to land disturbances greater than 1 acre. A project specific Stormwater Pollution Prevention Plan (SWP3) has been developed and approved and erosion/sedimentation controls will be installed, maintained, and monitored as per the SWP3 and the permit. The permit will remain open and monitoring activities will continue until the permit can be closed out when the project is at final stabilization (70% cover) as defined by TDEC. The project SWP3 was developed to meet both TDEC and Metro Water Services permit requirements.

A Hydrostatic Pressure Test Water Discharge permit has also been acquired.

The project plans include HDDs which create a potential for Inadvertent Returns (IR) of drilling mud. An IR Contingency Plan has been developed and will be followed by the construction contractor. Drilling mud pressures and volumes will be closely monitored during HDD activities and any losses investigated as a potential IR. Regular pedestrian surveys will also occur along likely IR locations. Any identified IRs will be contained as appropriate and if required, drilling will cease until the IR can be contained and managed. The protocol for contacting Duke Energy and state/federal environmental regulators is detailed in the IR Contingency Plan.

Above-ground facilities have been sited to avoid FEMA 100-year floodplains. Workspace areas located within 100-year floodplains will be restored to pre-existing contours and re-vegetated with an appropriate seed mix. No alteration to flow pattern, profile, dimension, or volume is expected to result from project construction or operation, such alterations if they did occur could trigger the need for floodplain permitting.

2.9 – Accounting Issues

There are no known accounting issues associated with the project.

2.10 – Tax Issues

There are no known tax issues associated with the project.

2.11 – Insurance Issues

There are no known insurance issues associated with the project.

3 – Analysis

3.1 – Alternative Analysis

Considering the requirements outlined under Strategic Rational in Section 2.1, once TIMP determined replacement was necessary System Planning recommended the replacement pipeline size to be 20” to accommodate the NGBU design basis requirements for pipeline in-line inspection and to regain lost capacity from the retirement of Line 309.

The alternative of completely abandoning the affected line without replacement is not a viable option since Line 310 is the gas supply backbone for the Nashville, TN service area. Nashville is served primarily from K-P station in northwest Davidson County and by Columbia Gulf Stations 1 and 4 in southeast Davidson County via Line 383.

3.2 – Project Costs & Contingency

Primary variance from budget is related to higher than expected construction bids because of the design of eight horizontal directional rock drills, seven of which were not included in previous budget. Additionally, easement acquisition has been more expensive than originally estimated because of emerging project development plans on previously undesired properties.

The construction risks associated with Line 431 are encountering waters of the state, terrain features and subsurface limestone rock. However, this project will be utilizing proven construction installation technologies that have been used to install pipelines for decades so the construction risk is limited. Pre-selected construction companies will have the capability to provide multiple pipeline installation crews to limit schedule delays related to these risks.

The overall project costs broken out in major categories are as follows:

Description	Line 431 Pipeline and Facilities
Engineering	$ 1,421,058
Land	4,543,062
Materials/Equipment	4,732,753
Construction - Pipeline	34,597,663
Construction - Facility	50,000
Field Inspection	4,445,000
Internal Labor	792,288
Other Direct Costs	403,963
Contingency	6,981,500
Sub-Total	***58,250,869***
Overheads	3,253,149
Sub-Total	***61,054,018***
AFUDC	1,233,539
Grand Total	**$ 62,737,557**

3.3 – Key Assumptions

The project's key assumptions are as follows:

- Land – Easements/Right-of-Entry are currently in acquisition with approximately 40 of the 74 total parcels acquired or right-of-entry granted. Of the 34 remaining, 31 are Metropolitan Government of Nashville and Davidson County properties which are being negotiated collectively.
- Materials – All major materials have been procured and are being received at the project laydown yards to support on-time construction start.

3.4 – Financial Analysis

Financial Plan

Is the capital expenditure for the proposed project included in the current financial plan? (if yes, see below)	Yes
Do the project costs include any O&M amounts? (if yes, see below)	No
Will any O&M savings result from the project? (if yes, see below)	No
Will the project result in any incremental, ongoing O&M costs? (if yes, see below)	No

Financial Summary

Project Costs ($ in Millions)	2018	2019	2020	2021	2022	2023	2024

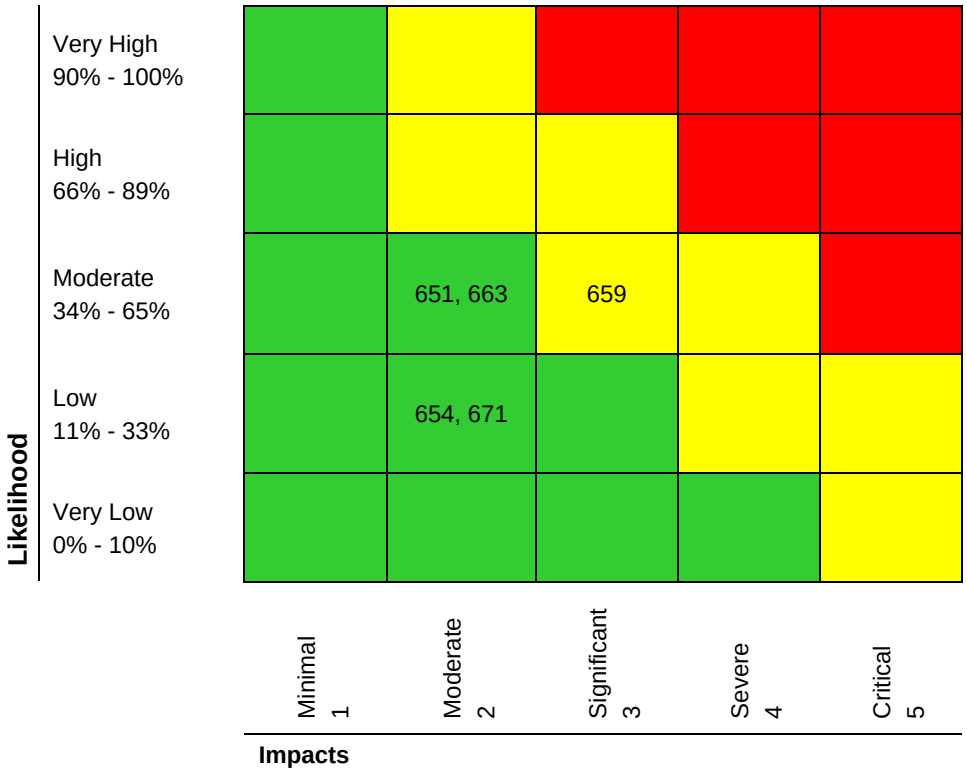
4 – Risks & Mitigations and Stakeholder Discussion

4.1 – Risks & Mitigations

Risk Matrix



Risk Description		Impact	Mitigation
659	Environmental Construction Impacts	F	Identify any areas of concern and provide detailed erosion and sediment control plan to contractor prior to construction. Require daily/weekly updates from contractor during entire construction.
663	Easements Not Obtained	F	Ensure land, materials and permits are on-schedule. Prioritize land acquisition to maximize time available for condemnation.
654	Community opposition	F, R	Coordinate with corporate communications. Have land agents investigate potential for contentious landowners. Engage Government and Community Relations when necessary.
651	Construction Interferences	F	Explicitly identify concerns in construction bid documents. Require construction contractor to provide excavation procedure that is accepted by Piedmont. Require soft digs on site.
671	Late Materials	F	Order all materials to provide delivery at least 30 days prior to start of construction. Perform bi-weekly review of delivery status prior to construction. Review material weekly during construction.
*Risk Matrix and Descriptions showing top five risks only. Complete Risk Register has been reviewed and approved by PMCoE.			
Impacts Explanations: F = Financial; R = Reputational; O = Operational, Legal and Compliance			

Enterprise Risks

None

4.2 – Stakeholder Discussion

Stakeholder	Discussion of Interest & Impact	Assessment
Customers	Customers will receive a more reliable supply of gas with increase in capacity	F
Community	We have informed Corporate Communications, Government Relations and Community Relations about this project. Our land agents and legal representatives are in contact with affected property owners.	F
Employees	This pipeline is needed to safely serve our customers.	F
Shareholders	Reduce future costs associated with pipeline failures.	F
Regulators	This project should be supported by the regulators as it improves pipeline integrity management conditions	F
Note: Favorable (F); Unfavorable (U); Neutral (N)		

5 – Assessment of Adhere to Corporate Governance

Fully complied with all corporate governance.

Sensitivities

As the TN IMR is designed to capture all capital incurred, whether the project is in service or still under construction there is no meaningful sensitivity around the timing of recover.

PIEDMONT NATURAL GAS COMPANY, INC.
Docket No. 20-00086
Consumer Advocate's First Discovery Request
Date Issued: August 17, 2020
Date Due: September 8, 2020

1-107. Provide a copy of any revisions to the PNG-TN 2020/2021 capital budget which have been submitted to management since June 1, 2020.

RESPONSE: N/A. There have been no such revisions since June 1, 2020.

Name and Title of Preparer: John Robson, Director - Gas Distribution Finance

Name and Title of Responsible Person: Joel Rutledge, Director - Finance Gas Segment

Response provided by Piedmont Natural Gas Company, Inc. on September 2, 2020.

PIEDMONT NATURAL GAS COMPANY, INC.
Docket No. 20-00086
Consumer Advocate's First Discovery Request
Date Issued: August 17, 2020
Date Due: September 8, 2020

1-108. With respect to any real-estate assets whose costs (including depreciation and/or return) are either direct charged or allocated to PNG-Tennessee identify whether any are a) currently listed for sale or b) not currently in use.

RESPONSE: Neither the PNG Tennessee plant in service balance in this rate case nor the CWIP balance in this rate case (both of which consist of Piedmont Tennessee direct property and an allocated portion of Piedmont 3-state joint property) includes any real estate assets currently listed for sale or any plant held for future use.

PIEDMONT NATURAL GAS COMPANY, INC.
Docket No. 20-00086
Consumer Advocate's First Discovery Request
Date Issued: August 17, 2020
Date Due: September 8, 2020

1-111. Of the residential customers with past due balances of 60 days or more as of June 30, 2020 identify the number of customers who also subscribe (or formerly subscribed prior to termination) to the voluntary Gas Line Coverage from HomeServe.

RESPONSE: As of July 7, 2020 (the oldest date available at this time), there were 473 Tennessee customers with gas line coverage that were past due 60 days. This amount is out of a total of 21,811 gas line coverage customers in Tennessee.

Response provided by Piedmont Natural Gas Company, Inc. on September 3, 2020.

PIEDMONT NATURAL GAS COMPANY, INC.
Docket No. 20-00086
Consumer Advocate's First Discovery Request
Date Issued: August 17, 2020
Date Due: September 8, 2020

1-112. Provide a comprehensive explanation of how Piedmont applies partial payments to outstanding balances due under the following hypothetical example: Assume a customer owes $200, which includes a past due balance for natural gas service of as well as past due balances for Gas Line Coverage charges (HomeServe). If a customer makes a payment of $100, will the payment be applied a) first to any outstanding balance due for natural gas service, b) pro-rata for all outstanding charges including Gas Line Coverage charges, or c) applied first to Gas Line Coverage charges, with residual amounts applied to the outstanding natural gas service balance?

RESPONSE: Payment is applied to the oldest balances first, with highest priority to regulated natural gas services. There is no proration.

For example, assume the customer owes $200 and is 66 days past due. Of this amount, assume that the total amount that is 60-89 days past due is $80, of which $10 is for gas line coverage and $70 is for regulated natural gas services. Also assume that the total amount that is 30-59 days past due is $60, of which $10 is for gas line coverage and $50 is for regulated natural gas services. Lastly, assume that the remaining $60 owed is for the current bill, of which $10 is for gas line coverage and $50 is for regulated natural gas services ($200 total amount owed, from oldest to newest balance, is $80 + $60 + $60).

A $100 payment on the customer's account would be first applied to $70 for natural gas service, then the $10 for gas line coverage, because these amounts are the associated with the oldest past due balance. The remaining $20 of the payment ($100 less the $80 applied

to the oldest past due balance) would be applied to the second oldest balance, which in this example is the balance that is between 30-59 days past due. Recall that in this category for this example, the customer owes $10 for gas line coverage and $50 for natural gas services. Since there only remains a $20 payment to apply, all of it would be applied to the regulated natural gas services portion of the 30-59 day past due balance.

Name and Title of Preparer: Melissa Churchill, Manager - Revenue Services

Name and Title of Responsible Person: Melissa Churchill, Manager - Revenue Services

Response provided by Piedmont Natural Gas Company, Inc. on September 3, 2020.

PIEDMONT NATURAL GAS COMPANY, INC.
Docket No. 20-00086
Consumer Advocate's First Discovery Request
Date Issued: August 17, 2020
Date Due: September 8, 2020

1-113. Refer to the tabs PNG Balance Sheet – 2019 and PNG Bal Sheet March 2020 within MFR 11, specifically to the balances in Account 106 and Account 108 within each respective Balance Sheet. Please respond to the following questions:

a. Has the Company calculated Depreciation Expense for the period January 1, 2017 – current on i) the entire monthly balance of Account 106 or ii) a portion of the monthly balance of Account 106?

b. Provide a comprehensive explanation how Depreciation Expense has been determined on Account 106 balances for the period January 1, 2017 through current. This discussion should incorporate an explanation of how the Company has assigned the unclassified balances to individual accounts for purposes of computing Depreciation Expense.

c. Provide a comprehensive explanation of the impact on Depreciation Expense and Accumulated Depreciation long-standing amounts of plant recorded to Account 106 are eventually classified within account 101 Plant in Service.

d. Provide the support for the accounting entries made to Depreciation Expense and Accumulated Depreciation associated with plant balances which were reclassified from Account 106 to Account 101 during the months of January 2020 through the end of March 2020.

RESPONSE:

a. Yes. Depreciation expense has been calculated on the entire balance of accounts 0101000 and 0106000.

b. Depreciation expense is calculated monthly by multiplying the depreciation rate for each utility account by the prior month balance in each utility account within general ledger accounts 0101000 and 0106000, divided by 12. Prior to project unitization, which is the process that transfers project costs from account 0106000 to 0101000, project charges within 0106000 are generally allocated to specific plant accounts in alignment with the total project cost estimate by plant account which is established at such time the project is approved.

c. The Company has not performed an analysis to determine such impact.

d. Piedmont uses group depreciation, which means depreciation is not recorded at an asset level. There is no way to isolate the entries recorded to depreciation expense and accumulated depreciation associated with just the plant balances reclassified from account 0106000 to account 0101000.

Date Issued: August 17, 2020
Date Due: September 8, 2020

1-114. Please document all assumptions made concerning the Company's balances of Account 106 incorporated into the Depreciation study of Mr. Watson.

RESPONSE: Piedmont provided Alliance Consulting with Account 106 balances including a utility account based on the construction estimate. The construction estimate is used to initially classify completed construction not classified, prior to unitization. Alliance Consulting used this detail to appropriately classify the asset balances to plant in service for purposes of the depreciation study.

Date Issued: August 17, 2020
Date Due: September 8, 2020

1-116. Confidential - Regarding retention costs included within the proposed revenue requirement, identify the total costs included in the revenue requirement proposal, the account(s) charged and the rationale for recovery of such costs.

RESPONSE: See attached for costs included within the proposed revenue requirement.

On a very limited basis, the Company enters into retention agreements with employees if it is determined that the employee's knowledge and skills are critical to retain to maintain safe and reliable business operations on behalf of our customers.

Name and Title of Preparer: Patti Doster, Lead Accounting Analyst

Name and Title of Responsible Person: David Dye, Manager - Accounting II

Response provided by Piedmont Natural Gas Company, Inc. on September 8, 2020.

PIEDMONT NATURAL GAS COMPANY, INC.
Docket No. 20-00086
Consumer Advocate's First Discovery Request
Date Issued: August 17, 2020
Date Due: September 8, 2020

1-117. Refer to the Company's Service Schedule No. 316, the Performance Incentive Plan. Specifically, refer to the 'Fourth revised page 5 of 7' and section "Gas Supply Incentive Compensation Program." Provide answers to the following:

a. What account are these charges recorded to?

b. What was the amount of compensation provided under this program for 2017, 2018, and 2019.

c. A detailed discussion describing how the amount of gas supply incentive compensation is calculated for an employee earning this type of compensation.

RESPONSE: The Gas Supply Incentive Compensation Program ("Program") was terminated in 2017. Neither the Test Period nor the Attrition Period for this rate case proceeding include costs associated with the Program.

a. Payments under the Program were charged to account 0920000.

b. 2016/2017 plan year awards were paid in March 2018 for the period November 1, 2016 – December 31, 2017 in the amount of $82,252.05. The Program ended with the plan year that ended December 31, 2017.

c. The amount of gas supply incentive compensation for an employee in the Program was calculated by first setting secondary marketing margin targets of Threshold, Target, Stretch and Super Stretch and percentages of annual salaries assigned for each employee participating in the Program for each level of target for the plan year. After the plan year was completed, a request of the actual secondary marketing margin booked to the ledger from Gas Accounting were requested and payouts were calculated based on each employee's salary. For example, assume

secondary marketing margin targets of $10,000,000 for Threshold, $12,000,000 for Target, $14,000,000 for Stretch, and $16,000,000 for Super Stretch and targets of 5%, 10%, 15% and 20% respectively for an employee whose salary is $100,000. If the actual secondary margin was $12,000,000, then the calculation would be 10% of $100,000 equating to a payout of $10,000.

1-118. Refer to "5F_OtherBen Adj.xlsx" as provided with the Company's filing. Specifically, provide the following regarding the Company's "Retirement Savings Plan":

a) All materials provided to employees outlining the program.

b) A descriptive explanation for the use of the term 'incentive' within the journal descriptions provided in Column P of tab "RSP details."

RESPONSE:

a. See the 6 attachments.

b. The term 'incentive' within the journal descriptions in Column P of tab 'RSP details' in the file "5F_OtherBen Adj.xlsx" refers to the Duke Energy Short-Term Incentive Plan. These journal entries are 401(k) match accruals based on the short-term incentive accruals. The short-term incentive plan (STI) is the annual cash incentive plan that is available to all employees at Duke Energy.

Important Changes to Your Pension Plan

For participants in the Retirement Plan of Piedmont Natural Gas Company, Inc.

[Insert date], 2017

Duke Energy is making important changes to the Retirement Plan of Piedmont Natural Gas Company, Inc. (the "Piedmont Retirement Plan") effective after Dec. 31, 2017. As you review this notice, please note that none of these changes affect the accrued pension benefit you have earned through Dec. 31, 2017. This communication does not include details for the post-retirement medical plan. We suggest that you keep this communication with your other benefit materials so that you may refer to it later. **You do not need to take action as a result of this communication; it is for informational purposes only.**

Overview of Changes

After Dec. 31, 2017, your accrued benefit under the Piedmont Retirement Plan will be frozen and merged into the Duke Energy Retirement Cash Balance Plan (the "RCBP"). Beginning Jan. 1, 2018, you will accrue a pension benefit under the RCBP's **cash balance formula**. Your total pension benefit will be the sum of your frozen Piedmont Retirement Plan benefit as of Dec. 31, 2017 *plus* your new cash balance formula benefit beginning Jan. 1, 2018.

As part of this change, it is important to note the following:

- This new cash balance formula will look different than your current pension formula. Your current pension formula is based on your final average earnings and service at retirement. The new cash balance formula is an "account-based" formula; your benefit is based on pay credits and interest credits added to a bookkeeping account.
- Even though the cash balance formula is expressed as an account, it is still a pension benefit and has the same protections as your current pension formula. Duke Energy is responsible for paying 100% of the cost of the cash balance account, and you do not make personal contributions to this account. Additionally, the cash balance account will not decrease in amount because it is not tied to the investment performance in the financial markets.
- Your Age 65 accrued benefit earned in the Piedmont Retirement Plan through Dec. 31, 2017 will remain intact and be frozen as of that date; it will not decrease as part of this change, but it will also not grow based on service or earnings after Dec. 31, 2017.

In addition to the changes to the pension plan, Duke Energy will provide you with the following enhancements to the Duke Energy Retirement Savings Plan ("RSP"), your 401(k) plan, beginning Jan. 1, 2018:

1. **Special three-year employer transition credit contribution** - You will receive an additional employer transition credit contribution to the RSP each pay period for a three-year transition period while you remain employed with Duke Energy through Dec. 31, 2020. These employer transition credit contributions are 100% paid by Duke Energy, and you do not have to make any personal contributions to the RSP in order to receive these contributions. Employer transition credit contributions are based on your years of vesting service as of Dec. 31, 2017 under the Piedmont Retirement Plan, as follows:
    - Less than 15 years 3% of pay
    - 15 – 24 years 4% of pay
    - 25 or more years 5% of pay

2. **Additional company match** – Duke Energy will provide an opportunity to earn an additional 1% match on eligible pay that you contribute to the RSP on a before-tax and/or Roth basis for a total matching contribution opportunity of 6% of eligible pay. This match opportunity is <u>not</u> limited to a three-year transition period as is the case for the employer transition credit contributions noted in (1) above; in other words, it is part of the RSP formula available to you beginning Jan. 1, 2018 as a Duke Energy employee.

More detailed information about the pension changes follows in the chart starting on page 2. To help you understand the impact of these changes, examples of how the pension plan changes may affect future benefits

of sample employees are provided starting on page 5. Keep in mind that these are examples only. The impact to your future pension benefit will depend on factors such as your age, service, pay, and the date you start receiving your pension benefit.

If you have questions about the pension plan or this notice, call HR Direct at 800.521.0802 for assistance. After Jan. 1, 2018, you can contact the Duke Energy MyHR™ Service Center at 888.465.1300 for information and help. Also, in February 2018, you can access *Your Benefits Resources*™ 24/7 for personalized benefits information and self-service transactional tools such as creating pension benefit estimates.

Pension Formula Summary and Changes

The chart below outlines some of the key features of the pension formula, including those that are changing and others that are remaining the same.

<table>
<tr><th>Plan Feature</th><th>Under the Current Provisions
(PNG)</th><th>Under the New Formula Provisions
(Starting Jan. 1, 2018)</th><th>Impact/Additional Information</th></tr>
<tr>
<td>Benefit formula</td>
<td>
Final average pay formula:

Greater of (a) + (b), or (c):

a) The accrued benefit under the plan in effect Dec. 31, 2007 (Dec. 31, 2008 for Nashville union)

PLUS

b) 1.2% x Average Pay[1] + 0.5% x Average Pay[1] above Social Security Covered Compensation, multiplied by Benefit Service[2] earned after 2007 (2008 for Nashville union); only Benefit Service[2] up to 35 years is counted in this formula

- OR -

c) 1.2% x Average Pay[1] + 0.5% x Average Pay[1] above Social Security Covered Compensation, multiplied by Benefit Service[2]; only Benefit Service[2] up to 35 years is counted in this formula

• Former NCNG and Progress Energy participants have a portion of their legacy benefit earned under a different formula than what is described above.

[1]Average Pay means the average of your 5 highest years (60 consecutive months) of pension eligible pay within your last 10 calendar years of employment.

[2]Benefit Service generally includes your completed years and months of employment. Special rules apply for employees who were part of certain acquisitions.
</td>
<td>
Cash balance formula:

Account-based formula with Pay Credits and Interest Credits added each month.

Pay Credits include both a Basic Pay Credit and an Excess Pay Credit.

The amount of the Basic Pay Credit added each month is based on your age and service[3] at the beginning of the year:

<table>
<tr><th>Age + Service (Points)[4]</th><th>Percent of Pensionable Pay Credited to Your Pension Account each Month</th></tr>
<tr><td>34 or less</td><td>4.0%</td></tr>
<tr><td>35 – 49</td><td>5.0%</td></tr>
<tr><td>50 – 64</td><td>6.0%</td></tr>
<tr><td>65 or more</td><td>7.0%</td></tr>
</table>
The amount of the Excess Pay Credit added each month is equal to 4% of Pensionable Pay above the Social Security Wage Base ($128,700 in 2018).

Interest Credits are added each month based on an annual effective fixed rate of 4%.

[3] Service generally includes your completed years and months of employment, including service with Nashville Gas, North Carolina Natural Gas, Progress Energy, Gaffney, and Reidsville.

[4] Your Points are generally equal to the sum of your age and years of applicable service as of Jan. 1 of the plan year, expressed in complete years.
</td>
<td>
Putting it all together:

Your total retirement benefit will be the sum of:

• Your final average pay formula benefit that is frozen as of Dec. 31, 2017[5]

plus

• Your new cash balance formula benefit for service and pay earned beginning Jan. 1, 2018.

The actual impact of the formula change to you will vary based on your pensionable pay, age, service, date of termination or retirement, and lump sum factors at time of termination.

[5] Your final average pay benefit is "frozen" as of Dec. 31, 2017, which means that it is calculated based on your Average Pay and Benefit Service as of Dec. 31, 2017. Average Pay and Benefit Service will not increase beyond Dec. 31, 2017. Former NCNG and Progress Energy participants have a portion of their legacy benefit earned under a different formula.

Plan Feature	Under the Current Provisions (PNG)	Under the New Formula Provisions (Starting Jan. 1, 2018)	Impact/Additional Information
How and when benefits are paid	• Normal retirement benefit is payable at age 65 as an annuity or equivalent lump sum. Other optional annuity forms are available. • Early retirement benefit is generally available as early as age 55 if you have at least 10 years of service. • Benefit is payable in a lump sum or annuity forms after employment ends, regardless of age. • The normal form of payment for married individuals is a 50% Joint and Survivor Annuity.	• Benefit is a lump sum equal to account balance at benefit commencement date. Benefit can be paid at any age after termination. • Benefit is also payable in annuity forms which are the actuarial equivalent of the account balance at benefit commencement date. • The normal form of payment for married individuals is a 100% Joint and Survivor Annuity.	• The current formula provides for early retirement subsidies for early retirement. The cash balance formula benefit is based on the account balance at benefit commencement date and does not include early retirement subsidies. • Beginning Jan. 1, 2018, for your total retirement benefit, the normal form of payment for married participants will be a 100% Joint and Survivor Annuity.
Pensionable pay considered in calculating benefits	Generally, pensionable pay is based on total pay, including base pay, overtime and bonus payments. If you are represented by one of the Company's bargaining units, your pensionable pay is generally the same as above, except for certain historical periods where pensionable pay included only base pay, and excluded overtime and bonuses. Pensionable pay is subject to pay limits specified by the IRS ($275,000 for 2018).	Generally, pensionable pay is based on total pay, including base pay, overtime and bonus payments. Pensionable pay is subject to pay limits specified by the IRS ($275,000 for 2018).	• The definition of pensionable pay is generally the same under the Current and New Provisions.
Disability benefits	If you have at least five years of Vesting Service and become disabled during your employment, you generally will continue to accrue in your final average pay benefit from date of disability to age 65. Your pension accrual will be similar to what you would have earned if you had continued employment with the Company, based on your rate of pay at the time disability is approved.	You are 100% vested in your cash balance account upon becoming disabled. Your disability event is otherwise treated the same as any other termination of employment. You can elect to receive your cash balance account benefit or leave it in the RCBP. If left in the RCBP, your account will earn Interest Credits, but not Pay Credits.	• If you are already accruing disability benefits in the Piedmont Retirement Plan or are in your disability waiting period on Dec. 31, 2017, your benefit will be based on the Current Provisions. In other words, your final average pay benefit will not be frozen on Dec. 31, 2017, but you will not earn any benefits under the new cash balance formula. However, if you return to work, after more than one year on a disability leave, your final average pay benefit will be frozen at that time, you will participate in the employer retirement contributions under the terms of the Duke Energy RSP, and you will not be eligible for future benefits from the RCBP. If you return after less than one year on disabilty leave, your final average pay benefit will be frozen and you will be transitioned to the RCBP as described in this notice, but effective on the date you return. • All employees who begin their disability waiting period on or after Jan. 1, 2018 will receive the disability benefit under the New Provisions.

Plan Feature	Under the Current Provisions (PNG)	Under the New Formula Provisions (Starting Jan. 1, 2018)	Impact/Additional Information
Pre-retirement survivor benefits	If you are vested and die prior to starting benefits, payments are made to your beneficiary(ies) under the 50% Joint and Survivor annuity option at your death, or can be payable in an equivalent immediate lump sum. Spouse beneficiaries may defer payment until Dec. 31 of the year in which you would have attained age 70½. You do not need to be married at the time of death to be eligible for death benefits. However, if you are married, you may only designate a beneficiary other than your spouse with written, notarized spousal consent.	If you die prior to starting benefits, your spouse or other designated beneficiary will receive a lump sum of your full cash balance account following your death. Spouse beneficiaries may defer payment until Dec. 31 of the year in which you would have attained age 70½, and your cash balance account will continue to earn Interest Credits. An annuity option also is available to spouse beneficiaries. You do not need to be married at the time of death to be eligible for death benefits. However, if you are married, you may only designate a beneficiary other than your spouse with written, notarized spousal consent.	Your total pre-retirement survivor benefit will be the sum of: • Your survivor benefit under the final average pay formula that is frozen as of Dec. 31, 2017 *plus* • The death benefit under the new cash balance formula beginning Jan. 1, 2018. • Under the cash balance formula, non-spouse beneficiaries may only receive a lump sum. • Final average pay formula survivor benefit will be based on the 100% Joint and Survivor annuity option. This is an enhancement from what is offered under the Current Provisions. • If you are married, you may only designate a beneficiary other than your spouse with written, notarized spousal consent.
Rehires	Rehired employees after the plan closure date of January 1, 2008 (or January 1, 2009 for Nashville union participants) are not allowed to earn additional benefits in the pension plan upon rehire. Their benefits are frozen at time of termination.	Rehired employees are not allowed to earn additional benefits in the pension plan upon rehire. Their benefits are frozen at time of termination.	Rehired employees on or after Jan. 1, 2018 will not be allowed to earn additional benefits in the pension plan upon rehire, and instead will be eligible for employer contributions under the terms of the Duke Energy RSP.
How benefits are funded	Paid for in full by Duke Energy	Paid for in full by Duke Energy	No change – the cash balance formula is part of a pension arrangement, where the company pays 100% of the cost.
Who bears the investment risk	Duke Energy	Duke Energy	No change – the cash balance formula is part of a pension arrangement, where the company bears the investment risk.
Pension Benefit Guaranty Corporation ("PBGC") Insurance Protection	PBGC insurance protection applies.	PBGC insurance protection applies.	No change – the cash balance formula is part of a pension arrangement protected by the PBGC.

Examples

Now that you have a better idea of how your pension formula will change, let's compare some benefit calculations under the Current Provisions and New Provisions effective Jan. 1, 2018, including the enhancements that are being made to the RSP. These examples show the potential benefits both before and after the changes for employees at various combinations of age, service and pay. While the employees in the following examples are fictitious, the benefit calculations are based on the actual provisions of the pension plan and the assumptions described below:

- Each employee's pensionable pay was assumed to increase at a rate of 3% each year
- Social Security Covered Compensation and Wage Base are assumed to increase 3% each year and qualified pay limits are assumed to increase 2.25% each year
- Each employee was assumed to defer 6% of pay in the RSP (i.e., enough to maximize his/her company match under the RSP beginning Jan. 1, 2018)
- The investment of RSP account balances is assumed to grow 6% annually
- Lump-sum benefits were converted to annuities using a current interest rate assumption and standard mortality table required by law.

Employee RSP contributions, employer matching contributions (other than the incremental 1% additional match opportunity) and social security benefits are not included in the benefit projections shown in the examples.

Keep in mind that different assumptions would produce different results. Remember, these are examples only. The impact of the pension formula changes on your pension benefit will depend on your age, service, pay, and the date you start your pension benefit. Although for most employees, the changes will result in a reduction in their rate of future benefit accrual, it is important to remember that the changes are being made to minimize differences among groups of employees at Duke Energy. It is not sustainable for Duke Energy to maintain legacy programs, and it would make it difficult to facilitate career development and job transfer opportunities across the company if programs were different.

Example 1

Meet Barry. Barry was hired right before the plan closed participation to new entrants in 2008. He is 35 years old with 10 years of service, and his pay is $40,000. The following table shows what Barry's benefit would be today, three years from today, at age 55, and at age 65, based on how he elects to receive his benefit (e.g., monthly annuity or lump sum).

If Barry chooses to retire at age 65 and take his pension benefit as a single life annuity, he will receive $1,678 per month for the rest of his life. He would also earn the equivalent of $390 per month, payable for the rest of his life, from the additional enhancements to the RSP that Duke Energy has provided. This includes i) employer transition credit contributions equal to 3% of pay from Jan. 1, 2018 to Dec. 31, 2020 and ii) an extra 1% of pay match opportunity beginning Jan. 1, 2018 that continues until he retires.

Retiring at age 65, but selecting the lump-sum benefit, Barry would receive a total pension of $288,535, and he would also be entitled to an additional benefit from enhancements to the RSP of $66,995.

As reflected in the chart on the next page and based on a number of assumptions described above, Barry's total benefit three years from now is projected to be *larger* than it would have been without the pension formula change, due to the enhancements to the RSP. However, in later years, his total benefit is projected to be *smaller* than it would have been without the pension formula change. In all cases, as shown in the chart, his pension benefit increases as he continues employment with the company.

Example 1 (continued)

	Accrued Monthly Benefit Payable as an Immediate Single Life Annuity				Accrued Benefit Payable as a Lump Sum			
Age at Termination	If No Changes Were Made to the Pension Formula	With Changes to the Pension Formula	Additional Benefit From Enhancements to the RSP[1]	Total Benefit With Changes	If No Changes Were Made to the Pension Formula	With Changes to the Pension Formula	Additional Benefit From Enhancements to the RSP	Total Benefit With Changes
35	$62	$62	$0	$62	$15,998	$15,998	$0	$15,998
38	$102	$99	$22	$121	$25,851	$24,951	$5,559	$30,510
55	$1,186	$706	$148	$854	$220,233	$142,793	$31,036	$173,829
65	$3,206	$1,678	$390	$2,068	$551,362	$288,535	$66,995	$355,530

Example 2

Meet Sarah. Sarah is in the middle of her career and wants to plan for retirement. She is 45 years old with 15 years of service, and her pay is $100,000. The following table shows what Sarah's benefit would be today, three years from today, at age 55, and at age 65, based on how she elects to receive her benefit (e.g., monthly annuity or lump sum).

If Sarah chooses to retire at age 65 and take her pension benefit as a single life annuity, she will receive $3,093 per month for the rest of her life. She would also earn the equivalent of $506 per month, payable for the rest of her life, from the additional enhancements to the RSP that Duke Energy has provided. This includes i) employer transition credit contributions equal to 4% of pay from Jan. 1, 2018 to Dec. 31, 2020 and ii) an extra 1% of pay match opportunity beginning Jan. 1, 2018 that continues until she retires.

Retiring at age 65, but selecting the lump-sum benefit, Sarah would receive a total pension benefit of $531,885, and she would also be entitled to an additional benefit from enhancements to the RSP of $86,946.

As reflected in the chart below and based on a number of assumptions described above, Sarah's total benefit three years from now is projected to be *larger* than it would have been without the pension formula change, due to the enhancements to the RSP. However, in later years, her total benefit is projected to be *smaller* than it would have been without the pension formula change. In all cases, as shown in the chart, her pension benefit increases as she continues employment with the company.

	Accrued Monthly Benefit Payable as an Immediate Single Life Annuity				Accrued Benefit Payable as a Lump Sum			
Age at Termination	If No Changes Were Made to the Pension Formula	With Changes to the Pension Formula	Additional Benefit From Enhancements to the RSP[1]	Total Benefit With Changes	If No Changes Were Made to the Pension Formula	With Changes to the Pension Formula	Additional Benefit From Enhancements to the RSP	Total Benefit With Changes
45	$407	$407	$0	$407	$96,770	$96,770	$0	$96,770
48	$625	$581	$75	$656	$143,998	$133,888	$17,372	$151,260
55	$1,838	$1,318	$175	$1,493	$341,405	$255,714	$36,695	$292,409
65	$6,152	$3,093	$506	$3,599	$1,058,027	$531,885	$86,946	$618,831

[1] For illustration purposes only. Annuity benefits are not payable from the RSP.

Example 3

Meet Margaret. Margaret has spent nearly all of her career with Piedmont Natural Gas and is also starting to plan for retirement. She is 50 years old with 25 years of service, and her pay is $80,000. The following table shows what Margaret's benefit would be today, three years from today, at age 55, and at age 65, based on how she elects to receive her benefit (e.g., monthly annuity or lump sum).

If Margaret chooses to retire at age 65 and take her pension benefit as a single life annuity, she will receive $2,885 per month for the rest of her life. She would also earn the equivalent of $300 per month, payable for the rest of her life, from the additional enhancements to the RSP that Duke Energy has provided. This includes i) employer transition credit contributions equal to 5% of pay from Jan. 1, 2018 to Dec. 31, 2020 and ii) an extra 1% of pay match opportunity beginning Jan. 1, 2018 that continues until she retires.

Retiring at age 65, but selecting the lump-sum benefit, Margaret would receive a total pension benefit of $496,106 under the new pension formula, and she would also be entitled to an additional benefit from enhancements to the RSP of $51,679.

As reflected in the chart below and based on a number of assumptions described above, Margaret's total benefit three years from now is projected to be *larger* than it would have been without the pension formula change, due to the enhancements to the RSP. However, in later years, her total benefit is projected to be *smaller* than it would have been without the pension formula change. In all cases, as shown in the chart, her pension benefit increases as she continues employment with the company.

	Accrued Monthly Benefit Payable as an Immediate Single Life Annuity				Accrued Benefit Payable as a Lump Sum			
Age at Termination	If No Changes Were Made to the Pension Formula	With Changes to the Pension Formula	Additional Benefit From Enhancements to the RSP[1]	Total Benefit With Changes	If No Changes Were Made to the Pension Formula	With Changes to the Pension Formula	Additional Benefit From Enhancements to the RSP	Total Benefit With Changes
50	$773	$773	$0	$773	$173,989	$173,989	$0	$173,989
53	$1,075	$1,019	$77	$1,096	$232,463	$220,249	$16,677	$236,926
55	$1,522	$1,352	$99	$1,451	$282,719	$254,930	$20,676	$275,606
65	$4,115	$2,885	$300	$3,185	$707,796	$496,106	$51,679	$547,785

Example 4

Meet Roger. Roger is nearing retirement and already has reached the service cap of 35 years under the Piedmont Retirement Plan final average pay formula. He is 60 years old with 35 years of service, and his pay is $85,000. The following table shows what Roger's benefit would be today, three years from today, and at age 65, based on how he elects to receive his benefit (e.g., monthly annuity or lump sum).

If Roger chooses to retire at age 65 and take his pension benefit as a single life annuity, he will receive $3,015 per month for the rest of his life. He would also earn the equivalent of $128 per month, payable for the rest of his life, from the additional enhancements to the RSP that Duke Energy has provided. This includes i) employer transition credit contributions equal to 5% of pay from Jan. 1, 2018 to Dec. 31, 2020 and ii) an extra 1% of pay match opportunity beginning Jan. 1, 2018 that continues until he retires.

Retiring at age 65, but selecting the lump-sum benefit, Roger would receive a total pension benefit of $518,569, and he would also be entitled to an additional benefit from enhancements to the RSP of $21,968.

[1] For illustration purposes only. Annuity benefits are not payable from the RSP.

As reflected in the chart below and based on a number of assumptions described above, the reduction in Roger's benefit due to the pension formula change is largely offset by the enhancement to the RSP. In all cases, as shown below in the chart, his pension benefit increases as he continues employment with the company.

	Accrued Monthly Benefit Payable as an Immediate Single Life Annuity				Accrued Benefit Payable as a Lump Sum			
Age at Termination	If No Changes Were Made to the Pension Formula	With Changes to the Pension Formula	Additional Benefit From Enhancements to the RSP[1]	Total Benefit With Changes	If No Changes Were Made to the Pension Formula	With Changes to the Pension Formula	Additional Benefit From Enhancements to the RSP	Total Benefit With Changes
60	$2,217	$2,217	$0	$2,217	$379,889	$379,889	$0	$379,889
63	$2,809	$2,682	$98	$2,780	$480,838	$460,124	$17,719	$477,843
65	$3,254	$3,015	$128	$3,143	$559,583	$518,569	$21,968	$540,537

Important Legal Notice

This document contains selected highlights of Duke Energy's employee benefits plans. If any statement herein, or any other communication, conflicts with applicable plan documents, the plan documents will govern. Duke Energy retains the right to amend, modify or terminate its benefits plans in any respect and at any time, and neither its benefits plans nor your plan participation will be considered a contract for future employment.

This notice, in connection with other information provided to you, is being distributed pursuant to Section 204(h) of the Employee Retirement Income Security Act of 1974, as amended ("ERISA"), which requires that participants be notified in writing of any changes to the Piedmont Retirement Plan that may result in a reduction in rate of future benefit accruals, and to provide a brief explanation of the change.

Because of the changes to the Piedmont Retirement Plan, there is a potential that benefits you earn under the Piedmont Retirement Plan (and the RCBP following the merger of the Piedmont Retirement Plan into the RCBP) may not be as great as those that would have been earned had you continued to earn benefits under the Piedmont Retirement Plan prior to the amendment.

The notice is based on information and assumptions in effect at the time of the notice (e.g., assumed pay increases, assumptions on interest rates and standard life expectancy tables, etc.). Duke Energy does not undertake any obligation to update or make any revisions to this notice, and no such revisions to this notice will be issued to reflect any changes, including, but not limited to, changes in policies, the adoption of plan amendments, or any other events or circumstances occurring after this notice is provided.

[1] For illustration purposes only. Annuity benefits are not payable from the RSP.

Important Notice concerning your rights under the Piedmont Natural Gas Company, Inc. 401(k) Plan (the "Piedmont 401(k) Plan"), the Piedmont Natural Gas Company, Inc. Money Purchase Pension Plan (the "Piedmont MPPP") and the Duke Energy Retirement Savings Plan (the "RSP")

This Notice is to inform you that your Piedmont 401(k) Plan account and/or Piedmont MPPP account will merge into the RSP after the close of business on Dec. 31, 2017, and it includes important information and deadlines that may require you to take action. The Piedmont 401(k) Plan and Piedmont MPPP will transition from their current service provider, Wells Fargo, to a new service provider, Fidelity Investments® ("Fidelity").

How to use this Guide

Follow these steps to make the most of the transition.

1. **Understand the key dates and deadlines**
   Read *Key dates and deadlines* beginning on page 3 to understand the calendar of events.

2. **Know what's changing**
   Read *What's changing* beginning on page 8 to understand how the Piedmont 401(k) Plan and Piedmont MPPP will transition. You should read this guide in conjunction with the enclosed RSP Summary Plan Description ("SPD") and the 2017 Investment Funds Summaries booklet to understand the features and investment funds available under the RSP.

3. **Take any needed actions**
   See *Actions to consider* on page 15 for steps that can help you plan for the changes.

For those who currently participate in the Piedmont MPPP, a 204(h) notice also is enclosed to advise you of future changes to that plan. Those who currently participate in the Retirement Plan of Piedmont Natural Gas Company, Inc. (the "Piedmont Retirement Plan") will receive a 204(h) notice in a separate mailing.

If you have questions about the RSP or this Notice, including the transition and the blackout period discussed on page 2, contact Fidelity's Duke Energy Customer Service Line at **800.376.4015** beginning Nov. 7, 2017. Representatives are available from 8:30 a.m. to 8:30 p.m. Eastern time (ET) on business days, except New York Stock Exchange ("NYSE") holidays.

This Notice serves as a supplement to your summary plan description for each of the plans, and constitutes part of a Section 10(a) Prospectus for the RSP covering securities that have been registered under the Securities Act of 1933. Note that certain information in this Notice (*e.g.*, contributions) does not apply to former employees,

beneficiaries and alternate payees. Also, if you are not a participant in both the Piedmont 401(k) Plan and Piedmont MPPP, the information about the plan in which you do not participate does not apply to you. Please keep a copy of this Notice as a reference.

You have a new plan: the RSP

The Piedmont 401(k) Plan and Piedmont MPPP will merge into the RSP after the close of business on Dec. 31, 2017.

As a result, and as explained further in this guide, a blackout period will take place in the plans. The blackout period is expected to begin at 4 p.m. ET on Dec. 7, 2017, and end during the week beginning Jan. 14, 2018; however, not all transactions will be restricted during the entire blackout period. Please read the chart showing key dates to determine the dates when specific transactions will be restricted in the Piedmont 401(k) Plan and/or Piedmont MPPP and the RSP.

Finally, as part of the transition, the investment funds available to you will change. After the close of market on Dec. 29, 2017, your fund balances in the Piedmont 401(k) Plan and/or Piedmont MPPP will transfer to the RSP based on the transition described in this guide.

Blackout period

It is important to note that merging the Piedmont 401(k) Plan and Piedmont MPPP into the RSP will require some behind-the-scenes work. As a result, you temporarily will be unable to complete certain transactions in the plans, including (as applicable) any loan, withdrawal, or distribution transactions, exchanges (transfers) between investment funds, changes to your future contribution percentages and changes to direct how your future contributions will be invested. This period, during which you will be unable to exercise these rights otherwise available under the plans, is called a “blackout period.”

Please see *Key dates and deadlines* for details about the activities that will be affected during the transition. We encourage you to carefully consider how this blackout period may affect your retirement planning, as well as your overall financial plan.

Please note the following important information:

For certain portions of the blackout period (as described in the chart below), you will be unable to direct or diversify the assets held in your Piedmont 401(k) Plan and/or Piedmont MPPP and RSP account for amounts transferred from the Piedmont 401(k) Plan and/or Piedmont MPPP. For this reason, it is very important that you review and consider the appropriateness of your current investments in light of your inability to direct or diversify those investments during the blackout period.

For your long-term retirement security, you should give careful consideration to the importance of a well-balanced and diversified portfolio, taking into account all of your assets, income and investments.

Key dates and deadlines

Review the following table to understand how account activities will be affected during the blackout period. Plan now for the transition and any transactions that you would like to make before the blackout period begins.

Date	Piedmont 401(k) Plan, Piedmont MPPP and RSP activities	What this means to you
Dec. 7, 2017 (after close of business)	**Blackout period begins for qualified domestic relations order ("QDRO") and beneficiary account set-up under the Piedmont 401(k) Plan and Piedmont MPPP.** This is the last day to submit QDRO or beneficiary documentation to Wells Fargo to establish an account for a QDRO alternate payee or beneficiary before the blackout period. The blackout on submitting QDRO and beneficiary documentation to Wells Fargo is expected to begin after the close of the NYSE, generally 4 p.m. ET, on Dec. 7, 2017.	**Want to set up a QDRO or beneficiary account before the blackout period?** Documentation must be submitted to Wells Fargo before the close of the NYSE, generally 4 p.m. ET to have a QDRO alternate payee or beneficiary account established before the blackout period. The next opportunity to request these transactions will be when the blackout period ends, scheduled during the week beginning Jan. 14, 2018. Call Wells Fargo at **800.SAVE123** for more information regarding submitting documentation.
Dec. 14, 2017 (before close of business)	**Last day to request and/or submit documentation for the following transactions for your Piedmont 401(k) Plan and Piedmont MPPP account.** • Submit hardship distribution documentation for the Piedmont 401(k) Plan • Submit loan payoff checks for the Piedmont 401(k) Plan • Submit home loan documentation for the Piedmont 401(k) Plan • Submit required minimum distribution (for participants who have attained age 70½) from the	**Want to request and/or submit documentation for one of these transactions before the blackout period?** You must submit your documentation to Wells Fargo before the close of the NYSE, generally 4 p.m. ET, to have these transactions completed before the blackout begins. Call Wells Fargo at **800.SAVE123** for more information regarding submitting documentation. Your next opportunity to request these transactions will be when the

	Piedmont 401(k) Plan • Submit documentation for a distribution from the Piedmont MPPP • Submit rollover contribution check and required documentation for the Piedmont 401(k) Plan	blackout period ends, scheduled during the week beginning Jan. 14, 2018.
Dec. 21, 2017 (before close of business)	**Last day to request the following transactions from your Piedmont 401(k) Plan.** • Request a general loan from the Piedmont 401(k) Plan • Request a distribution or withdrawal (if eligible) from the Piedmont 401(k) Plan	**Want to request one of these transactions before the blackout period?** Call Wells Fargo at **800.SAVE123** or log on to wellsfargo.com before the close of the NYSE, generally 4 p.m. ET, to request any of these transactions. Your next opportunity to request these transactions will be when the blackout period ends, scheduled during the week beginning Jan. 14, 2018.
Dec. 22, 2017 (before close of business)	**Last day to request the following transactions from your Piedmont 401(k) Plan and Piedmont MPPP account.** • Request changes to the investment of contributions or request an exchange ("transfer") among investment funds for the Piedmont 401(k) Plan and Piedmont MPPP* • Request changes to contribution rates or beneficiary elections for the Piedmont 401(k) Plan and Piedmont MPPP* • All other transactions for your Piedmont 401(k) Plan and Piedmont MPPP account	**Want to request one of these transactions before the blackout period?** Call Wells Fargo at **800.SAVE123** or log on to wellsfargo.com before the close of the NYSE, generally 4 p.m. ET, to request any of these transactions. Your next opportunity to request these transactions will be when the blackout period ends, during the week ending Jan. 6, 2018 for certain transactions and during the week beginning Jan. 14, 2018 for all transactions.

Date	Piedmont 401(k) Plan, Piedmont MPPP and RSP activities	What this means to you
Dec. 29, 2017	**Piedmont 401(k) Plan and Piedmont MPPP account valuation.** Your Piedmont 401(k) Plan and/or Piedmont MPPP account balance will be valued after the close of the NYSE, generally 4 p.m. ET, on Dec. 29, 2017.	**Impact to investment fund balances.** Your Piedmont 401(k) Plan and/or Piedmont MPPP account balance will be invested in your current investment funds until the close of the NYSE.
Jan. 2, 2018	**Money transfers.** Your Piedmont 401(k) Plan's and/or Piedmont MPPP's assets, valued after the close of the NYSE, generally 4 p.m. ET on Dec. 29, 2017, are scheduled to be transferred to the RSP's investment funds.	**Want to know how the Piedmont 401(k) Plan's and/or Piedmont MPPP's investment funds will transfer?** Read *Mapping of current investment funds* on page 7 to understand how investment funds will transfer. The Piedmont 401(k) Plan's and Piedmont MPPP's assets will be invested in the RSP's investment funds on Jan. 2, 2018. Contributions with respect to the Dec. 29, 2017 catch-up payroll will be invested in the RSP on, or as soon as practicable after, Jan. 2, 2018.

Date	Piedmont 401(k) Plan, Piedmont MPPP and RSP activities	What this means to you
During the week ending Jan. 6, 2018	**RSP Blackout and expected end of blackout period for certain transactions** The blackout generally continues under the RSP for your Piedmont 401(k) Plan's and/or Piedmont MPPP's assets. However, during the week ending Jan. 6, 2018, the following transactions are expected to be available (the "RSP transactions"): • Request changes to contributions, dividend or beneficiary elections* • Request changes to the investment of contributions* • Request an exchange ("transfer") among investment funds for your RSP account balance other than the amount attributable to your Piedmont 401(k) Plan's and/or Piedmont MPPP's assets.** • Request a distribution, withdrawal or loan (if eligible) for your RSP account balance other than the amount attributable to your Piedmont 401(k) Plan's and/or Piedmont MPPP's assets.**	**Want to name your beneficiary, or change future contributions or investment of contributions, or request certain other transactions?** When RSP transactions become available during the week ending Jan. 6, 2018, you can request the RSP transactions by logging on to **401k.com** or calling Fidelity's Duke Energy Customer Service Line at **800.376.4015**. Representatives are available Monday through Friday (excluding NYSE holidays), between 8:30 a.m. and 8:30 p.m. ET.

Date	Piedmont 401(k) Plan, Piedmont MPPP and RSP activities	What this means to you
During the week <u>beginning</u> Jan. 14, 2018	**Blackout period expected to end.** All transactions for the transferred Piedmont 401(k) Plan and Piedmont MPPP assets are expected to be available under the RSP. You can then: • Request a distribution, withdrawal or loan (if eligible) for your entire RSP account • Request an exchange ("transfer") among investment funds for your entire RSP account • Request a statement of your entire RSP account	**Want to check your investments or request transactions in your RSP account?** When the blackout period ends, you can view your account and request transactions or an account statement by logging on to **401k.com** or calling Fidelity's Duke Energy Customer Service Line at **800.376.4015**. Representatives are available Monday through Friday (excluding NYSE holidays), between 8:30 a.m. and 8:30 p.m. ET.

*See the "What's changing" section for important information about the contribution, beneficiary and investment elections that will apply under the RSP.

**Contributions with respect to the Dec. 29, 2017 catch-up payroll will be invested in the RSP on, or as soon as practicable after, Jan. 2, 2018, and will be considered part of your RSP account that is <u>not</u> attributable to your Piedmont 401(k) Plan's and/or Piedmont MPPP's assets.

The effective date of the changes described above and the end of the blackout period depend upon the accurate and timely transfer of data. To ensure accurate data transfer, the delivery of services described here could be delayed. You can determine whether the blackout period has started or ended by calling Fidelity's Duke Energy Customer Service Line at **800.376.4015**.

Note that any paycheck deductions for contributions to either the Piedmont 401(k) Plan or the RSP and applicable company matching contributions, will occur as scheduled for pay periods ending during the blackout period. **As a reminder, exempt (salaried) employees will be paid on a semi-monthly frequency beginning in January 2018.** A catch-up payroll for exempt (salaried) employees will be paid on Dec. 29, 2017 for the two-week period ending Dec. 31, 2017. Contributions with respect to the Dec. 29, 2017 catch-up payroll will be invested in the RSP on, or as soon as practicable after, Jan. 2, 2018.

If you have an outstanding loan under the Piedmont 401(k) Plan as of Dec. 31, 2017, the loan balance will transfer to the RSP and the loan maintenance fee described on

page 8 of the Investment Funds Summaries will apply. Additionally, if you are an exempt (salaried) employee, effective Jan. 1, 2018, any outstanding loan balance will be re-amortized and loan deductions will be made based on a semi-monthly pay frequency. No loan repayment deductions will be taken from the Dec. 29, 2017 catch-up payroll for exempt (salaried) employees.

Recordkeeping and trustee services for the RSP are provided by Fidelity Investments. Starting Nov. 7, 2017, if you have any questions, please call Fidelity's Duke Energy Customer Service Line at **800.376.4015**, Monday through Friday (excluding New York Stock Exchange holidays), from 8:30 a.m. to 8:30 p.m. ET, to speak with a service center representative.

What's changing

Mapping of current investment funds

Your existing Piedmont 401(k) Plan and/or Piedmont MPPP fund balances will transfer according to the following mapping table after the close of market on Dec. 29, 2017. Your Piedmont 401(k) Plan investment elections for future contributions will also transfer according to the following table and apply to all RSP contributions, employee and employer. However, if you are currently a participant in the RSP, your current RSP elections for future contributions will govern and not your Piedmont 401(k) elections for future contributions. Also note that your Piedmont MPPP investment elections for future contributions will not transfer to the RSP under any circumstances. You will find details on the RSP's investment funds in the enclosed 2017 Investment Funds Summaries booklet.

If you have a balance in Piedmont 401(k) Plan and/or Piedmont MPPP as of 4 p.m. ET on Dec. 29, 2017 or are directing contributions to the Piedmont 401(k) Plan as of 4 p.m. ET on Dec. 29, 2017		**Your account balances and Piedmont 401(k) contribution election will map to this RSP investment fund**
Wells Fargo Enhanced Stock Market Fund Harbor Capital Appreciation Institutional Fund Dodge & Cox Stock Fund	→	U.S. Equity S&P 500 Index Fund

If you have a balance in Piedmont 401(k) Plan and/or Piedmont MPPP as of 4 p.m. ET on Dec. 29, 2017 or are directing contributions to the Piedmont 401(k) Plan as of 4 p.m. ET on Dec. 29, 2017		Your account balances and Piedmont 401(k) contribution election will map to this RSP investment fund
JPMorgan Mid-Cap Value Institutional Fund Victory Munder Mid-Cap Core Growth Fund Victory Small Company Opportunity Fund I T. Rowe Price Horizons Fund		U.S. Equity Small/Mid Cap Blend Fund
Wells Fargo Stable Return Fund		Stable Value Fund
American Century Inflation-Adjusted Bond Institutional Fund Dodge & Cox Income Fund		Fixed Income Blend Fund
Vanguard Total International Stock Index Fund I American Funds EuroPacific Growth Fund R6		Non-U.S. Equity Blend Fund
American Funds – American Balanced Fund Capital Preservation Model Portfolio Fund Conservative Model Portfolio Fund All Weather Model Portfolio Fund Growth Model Portfolio Fund Aggressive Model Portfolio Fund		Target Retirement Date Fund closest to the year you will reach age 65*

*Refer to the table at the bottom of page 47 of the enclosed 2017 Investment Funds Summaries booklet that shows the date of birth and retirement date range associated with each Target Retirement Date Fund. The Target Retirement Date Funds are the qualified default investment alternative ("QDIA") under the RSP. See the 2017 Investment Funds Summaries booklet and SPD for the RSP for more information on the QDIA.

The transfer of assets depends on the timely liquidation and delivery of assets. A delay may result in a change to the above-noted date.

Your RSP contributions

- The RSP allows employees to contribute on a before-tax, Roth and after-tax basis. **After-tax contributions are not matched.**

- **Your before-tax contributions election will transfer from your Piedmont 401(k) Plan to the RSP** (unless you are already a participant in the RSP with an election on file). If you wish to update your contribution rate, you can do so by 4 p.m. ET on Dec. 22, 2017 under the Piedmont 401(k) Plan or after RSP transactions become available during the week ending Jan. 6, 2018. Note that, if you have not made an election to contribute to the Piedmont 401(k) Plan by Dec. 22, 2017, you will need to make an election under the RSP to make contributions to the RSP (*i.e.*, automatic enrollment under the RSP will not apply to you). If you wish to update the type of contribution that you are making, you can do so after RSP transactions become available during the week ending Jan. 6, 2018. Under the RSP, you may save up to 75% of your eligible pay, in whole or half percentages, on a before-tax, Roth and/or after-tax basis, but the total you contribute to your RSP account cannot be more than 75% of your eligible pay, subject to the annual Internal Revenue Service ("IRS") limits. In 2017, the annual IRS limit for before-tax and/or Roth contributions is $18,000.

  If your before-tax contribution election under the Piedmont 401(k) Plan is suspended at 4 p.m. ET on Dec. 22, 2017, you will need to make an election under the RSP to recommence your contributions after the suspension period.

- **If you will be age 50 or over at any time in a plan (calendar) year**, you are eligible to make before-tax and Roth "catch-up" contributions up to the IRS catch-up contribution limit ($6,000 for 2017). Since your company matching formula is a 100% match up to 6% of eligible pay, you can contribute $24,000 (for 2017) ratably over the year and the first 6% of your compensation contributed each pay period will be matched on each paycheck.

  For additional information about before-tax, Roth and after-tax contributions, please refer to page 4 of the enclosed SPD.

RSP employer matching contributions

- Each pay period, the company will match your before-tax and/or Roth contributions to the RSP, up to 6% of your eligible pay, subject to IRS limits. Note that after-tax contributions are not matched.

- The RSP includes a "true-up" feature for participants employed on the last day of the plan year (Dec. 31) who did not contribute at an even rate throughout the plan year and did not receive a full match as a result of contributing less than 6% for certain pay periods. For example, if, you are employed on the last day of the plan year and you made before-tax and/or Roth contributions of at least 6% of your eligible pay for the plan year, you will receive a true-up contribution after year-end, generally by Jan.

31, as needed for you to receive an aggregate matching contribution equal to 6% of your eligible pay for the plan year. The true-up contribution is subject to the applicable IRS and RSP limits for the plan year for which the true-up contribution applies. In no event will matching contributions be greater than the lesser of your eligible pay or the IRS compensation limit, multiplied by 6%.

RSP employer transition credit contributions

- If you are an active employee and participant under the Piedmont Retirement Plan on Dec. 31, 2017, beginning on Jan. 1, 2018 through Dec. 31, 2020, each pay period during which you are employed, the company will make employer transition credit contributions to your RSP account. Note that, effective Jan. 1, 2018, the Piedmont Retirement Plan will be merged into the Duke Energy Retirement Cash Balance Plan (the "RCBP"). See the RSP SPD for more information on the employer transition credit contributions.

RSP employer retirement contributions

- Beginning on Jan. 1, 2018, each pay period, the company will make employer retirement contributions to your RSP account of 4% of your eligible earnings if you are <u>not</u> an active participant in the RCBP, the successor to the Piedmont Retirement Plan. Note that contributions under the Piedmont MPPP formula will end as of Dec. 31, 2017. See the RSP SPD for more information on the employer retirement contributions.

RSP Eligible Earnings

- For your contributions, employer matching contributions, employer retirement contributions and employer transition credit contributions, eligible earnings generally include base pay plus overtime, unused vacation pay (when paid after termination of employment), most short-term incentive pay and lump sum merit pay. The amount you elect to save will be withheld automatically from your pay to the extent possible based on your eligible pay after other required paycheck deductions are taken.

RSP Auto-increase feature

The RSP has an auto-increase feature that permits you to have your RSP contributions increased each year automatically. You will have to elect the auto-increase feature after RSP transactions become available during the week ending Jan. 6, 2018 if you wish to have auto-increases apply to increase your contributions. Subject to IRS limits, you can choose to increase your RSP contributions by up to 2% every year, automatically. Auto-increases stop after your contributions reach 10%. You can opt into or out of this automatic increase feature at any time. No existing auto increase election in the Piedmont 401(k) Plan will transfer to the RSP.

RSP access to your savings – withdrawals and/or loans

Under certain conditions, you may take a withdrawal or loan from your RSP account (other than amounts attributable to the Piedmont MPPP, employer retirement contributions and employer transition credit contributions) while you work for Duke Energy. If you currently have an outstanding loan under the Piedmont 401(k) Plan, your loan will transfer to the RSP. The RSP permits up to two loans outstanding at a time, subject to IRS rules. If your pay frequency changes and you have an outstanding loan, your loan will be recalculated to reflect the updated pay schedule, resulting in a modest change in your loan payment amount. It follows that, if you are an exempt (salaried) employee, effective Jan. 1, 2018, any outstanding loan balance will be re-amortized and loan deductions will be made based on a semi-monthly pay frequency.

RSP Vesting

You are 100% vested in your contributions to the RSP and in employer transition credit contributions and employer matching contributions (including, effective Jan. 1, 2018, employer matching contributions previously made under the Piedmont 401(k) Plan). You become fully vested in employer retirement contributions and amounts attributable to the Piedmont MPPP upon three years of service or if you reach age 65, die or become disabled while employed. Satisfaction of the three-year vesting requirement for any non-vested Piedmont participants will be determined based on the sum of your actual Piedmont MPPP hours based vesting service on Dec. 31, 2017, actual RSP elapsed time vesting service beginning Jan. 1, 2018, and nine months of deemed vesting service provided on Dec. 31, 2017 for transition purposes.

You are eligible to take a distribution of your vested RSP account balance when your Duke Energy employment ends.

No safe harbor status

Unlike your current Piedmont 401(k) Plan, the RSP does not include a safe harbor formula under the IRS tax code. Because the RSP does not have a safe harbor formula, the RSP can contain certain features not available under the Piedmont 401(k) Plan, such as a true-up contribution for employees who are employed on the last day of the plan year. Note that it is expected that the RSP will pass IRS non-safe harbor discrimination testing without reducing contributions for highly compensated employees.

RSP Beneficiary Designations

Your online beneficiary elections generally **will not** transfer from your Piedmont 401(k) Plan or Piedmont MPPP to the RSP.

After RSP transactions become available during the week ending Jan. 6, 2018, you can elect your beneficiary designation under the RSP by logging on to 401k.com or calling Fidelity's Duke Energy Customer Service Line at **800.376.4015**.

If you do not make a beneficiary designation under the RSP, the RSP default provisions will apply (i.e., your spouse will be your beneficiary, and if you have no spouse, then your estate will be your beneficiary).

For Piedmont MPPP account balances transferred to the RSP, the following special rule will apply to your entire account under the RSP. If you designate a non-spouse beneficiary under the RSP while employed before the year in which you attain age 35, the designation expires on the first day of the year in which you attain age 35. You can again designate the same or another beneficiary (with spousal consent, as applicable) on or after the first day of the year in which you attain age 35 (or at any time after you are no longer employed).

Duke Energy Common Stock Fund dividend reinvestment elections

If you invest a portion of your RSP account in the Duke Energy Common Stock Fund, you may elect to receive Duke Energy common stock dividends attributable to your fund balance paid directly to you in cash or to have the dividends reinvested in the fund. If you make no election, the default is to have dividends reinvested in the fund. You may elect to change your dividend election at any time during the year, effective with the next dividend payment, with the exception of elections made during the 10-business-day period prior to the ex-dividend date. The ex-dividend date is generally 30 days prior to the dividend payment date. Refer to the Participant Fees section on page 8 of the enclosed Investment Funds Summaries booklet, which describes the RSP's fees associated with the payment of cash dividends. After RSP transactions become available d**uring the week ending Jan. 6, 2018**, you can view and update your dividend election by logging on to **401k.com** or calling Fidelity's Duke Energy Customer Service Line at **800.376.4015**. Note that contribution elections and transfers to the Duke Energy Common Stock Fund are restricted to 20%.

Military Leave

Under the RSP, military leave of absence pay is not included in eligible pay. Upon your return to Duke Energy employment following a military leave, you can make military make-up 401(k) contributions up to the amount you could have made if you did not go on the military leave and receive the corresponding company matching contribution. To make it easier for you to get the most from the RSP's matching contributions, the RSP has a default rule related to military leave make-up contributions. If you make before-tax and/or Roth contributions higher than the amount needed to receive the regular company matching contribution during any plan year, your additional contributions will be treated as military make-up contributions to the extent eligible for prior year company matching contributions, as long as the additional contributions are made within the required time limit. Any eligible company matching contributions on make-up contributions will be calculated and made annually. You must be still employed by Duke Energy in order to receive military make-up contributions.

RSP investment funds

The RSP offers a variety of investment funds as well as Fidelity BrokerageLink®, a self-directed brokerage account. For current investment fund information, including historical performance information, please read the enclosed 2017 Investment Funds Summaries booklet.

The investment options available through the RSP are institutional funds, not mutual funds. Institutional funds are investment vehicles generally available only to certain types of investors, such as corporate pension plans with a 401(k) plan structure. Participation in these funds is usually subject to minimum asset sizes, but typically has the key benefit of lower fees and lower net operating costs versus those offered by retail mutual funds available to the individual investor.

Financial Engines

RSP investment help will be available through Financial Engines, an independent investment advice and management service provider. Please read page 46 of the enclosed 2017 Investment Funds Summaries booklet for more information about the services available through Financial Engines.

Fidelity Services

How do I start using Fidelity NetBenefits®? If you have never used Fidelity NetBenefits or have not established a Fidelity NetBenefits username and password through a previous employer's plan at Fidelity, you must establish a Fidelity NetBenefits username and password. Establishing your Fidelity NetBenefits username and password is simple. After RSP transactions become available during the week ending Jan. 6, 2018, log on to Fidelity NetBenefits at **401k.com** and follow the prompts to *Register* to create your username and password or call Fidelity's Duke Energy Customer Service Line at **800.376.4015**.

By using Fidelity NetBenefits or calling Fidelity's Duke Energy Customer Service Line, you can: enroll to make payroll contributions; change the amount or type (before-tax, Roth, after-tax) of your payroll contributions; change your investment elections; request exchanges (transfers) between investments (subject to the blackout period); review your RSP account information and chart your retirement savings; model a loan, verify your loan balance or initiate a loan; and determine the amount available for a withdrawal and initiate a withdrawal or distribution.

Participant Fees

In general, there are three types of fees that may be charged to your RSP account balance, all of which are subject to change.

- Plan administrative fees include a recordkeeping fee and trustee fees. You will pay a recordkeeping fee of $9.00 per quarter, deducted from your RSP account.

- Asset-based fees reflect a fund's total annual operating expenses and include management operating expenses and other fees. These are often the largest component of retirement plan costs and are paid by all shareholders of a fund. The investments in your account will be reduced by asset-based fees. Typically, asset-based fees are expressed as a percentage of the average net assets invested in the fund and are often referred to as an "expense ratio." A fund's expense ratio may change over time due to investment manager changes and/or changes in the amount of assets held in the fund.

- Individual fees will be charged to your account only if you complete certain transactions. For example, there is a loan setup fee associated with a new loan.

Please refer to page 8 of the enclosed 2017 Investment Funds Summaries booklet for details about the RSP's fees.

Actions to consider

Review your investment mix

Check the way your investments will transfer from the Piedmont 401(k) Plan and/or Piedmont MPPP to the RSP to make sure they will continue to meet your investment objectives. After the blackout period ends, review your investment mix in light of the available investment funds under the RSP. For details about the funds, read the enclosed 2017 Investment Funds Summaries booklet.

- To request changes in your Piedmont 401(k) Plan and/or Piedmont MPPP account prior to the blackout period, call Wells Fargo at **800.SAVE123**.

- To request changes to your RSP account after the blackout period, contact Fidelity's Duke Energy Customer Service at **800.376.4015**.

Review your savings strategy

Check the way your contribution elections under the Piedmont 401(k) Plan will transfer to the RSP and make any needed adjustments.

- To request changes to your Piedmont 401(k) Plan contribution elections prior to the blackout period, call Wells Fargo at **800.SAVE123**.

- To request changes to your RSP contribution elections after RSP transactions become available during the week ending Jan. 6, 2018, contact Fidelity's Duke Energy Customer Service Line at **800.376.4015**.

Check your beneficiary designations

Your beneficiary elections under the Piedmont 401(k) Plan and Piedmont MPPP will <u>not</u> transfer to the RSP.

- To view your beneficiaries under the Piedmont 401(k) Plan and Piedmont MPPP prior to the blackout period, call Wells Fargo at **800.SAVE123**.

- To designate beneficiaries under the RSP after RSP transactions become available during the week ending Jan. 6, 2018, contact Fidelity's Duke Energy Customer Service Line at **800.376.4015**.

Important notice

Duke Energy retains the right to amend, modify or terminate any benefit plan at any time, for any reason. Participation in a benefit plan is not a promise or guarantee of future employment. If any statement in this guide, or in any other communication, conflicts with the applicable Piedmont 401(k) Plan, Piedmont MPPP and/or RSP plan documents, the plan documents govern. This Notice provides general investment education, and nothing herein shall be construed as an investment recommendation or investment advice.

The Piedmont 401(k) Plan and RSP are intended to constitute plans described in Section 404(c) of the Employee Retirement Income Securities Act of 1974, as amended ("ERISA"), and Title 29 of the Code of Federal Regulations Sections 2550.404c-1, so that fiduciaries of the Piedmont 401(k) Plan and the RSP may be relieved of liability for any losses that are the direct and necessary result of investment directions given by the Piedmont 401(k) Plan and RSP participants or beneficiaries. The investment mapping is intended to be either an investment to the RSP's qualified default investment alternative or a qualified change in investment options under ERISA 404(c), so that your prior investment instructions continue to be considered an exercise of investment direction after the blackout period.

Where to go for more help

Get answers to your questions by calling Fidelity's Duke Energy Customer Service Line at **800.376.4015**. Representatives are available from 8:30 a.m. to 8:30 p.m. ET on business days, except NYSE holidays.

Find easy-to-use planning tools by logging on to **401k.com** and clicking on the "Menu" button and selecting either the "Tools" or "Library" icon.

- Try the Contribution Calculator to see how much more you could accumulate in your RSP account by increasing the amount that you contribute from each paycheck.
- Explore the Full View® to see how you can securely view all your financial accounts in one place.

Before investing in any fund, please carefully consider the investment objectives, risks, charges and expenses. For this and other information, call or write Fidelity for a free prospectus or, if available, a summary prospectus. Read it carefully before you invest.

2017 November

Duke Energy Retirement Savings Plan
Summary Plan Description

Distribution Date: [Nov. 1, 2017]

Effective Date: Jan. 1, 2018 (except as otherwise provided)

INTRODUCTION

This booklet is the Summary Plan Description (“SPD”) for the Duke Energy Retirement Savings Plan (“RSP” or “Plan”) as in effect as of Jan. 1, 2018. The SPD reflects the following changes that are effective after the distribution date of this SPD:

- The merger of the Piedmont Natural Gas Company, Inc. 401(k) Plan (“Piedmont 401(k) Plan”) and Piedmont Natural Gas Company, Inc. Money Purchase Pension Plan (the “Piedmont MPPP”) into the RSP as of the close of Dec. 31, 2017.
- Prior to Jan. 1, 2018, employees on the payroll of Piedmont Natural Gas Company, Inc. and its affiliates (collectively, “Piedmont”) immediately prior to the Oct. 3, 2016 acquisition of Piedmont by Duke Energy Corporation ("Duke Energy") and its affiliates (the “Piedmont Acquisition”) and employees who are classified as employees of and paid on the Piedmont payroll after the Piedmont Acquisition generally were not eligible to participate in the RSP.
- Prior to Jan. 1, 2018, the RSP did not provide for employer transition credit contributions for eligible employees of Piedmont.
- Prior to Jan. 1, 2018, the RSP did not provide for employer retirement contributions to any employees covered by the collective bargaining agreement with IBEW System Council U-8.

Although the SPD describes the principal features of the RSP that are of general applicability, it is only a summary. Further, if your employment terminated prior to Jan. 1, 2018, some of the provisions of this SPD may not apply to you. The complete provisions of the RSP are set forth in the Plan documents, which are available upon request from the Duke Energy Benefits Committee (the "Benefits Committee"). An SPD is an overview and is written to be read in its entirety; descriptions of plan features should not be taken out of context. Changes to the RSP, pending revision of the SPD, will be communicated in Summaries of Material Modifications provided through newsletters, benefit statements, notices and/or enrollment materials. In the event of a conflict between an SPD or any other communication regarding the RSP and the Plan documents, the Plan documents will govern. Finally, the RSP may be amended only by proper corporate action and not by oral or written communications about the RSP. This SPD has been prepared by Duke Energy Corporation, and not Fidelity Investments ("Fidelity").

Neither the RSP, the SPD nor your Plan participation is an employment contract, nor do they give any employee the right to continue to be employed by Duke Energy.

HIGHLIGHTS OF THE PLAN

The RSP was developed so that you and Duke Energy can work together to provide savings for your retirement. The following highlights of the RSP are general in nature and do not apply to all participants in all cases.

Participation In Plan	• As an employee of a participating company, you are immediately eligible to make contributions to the RSP. Certain Duke Energy employees are excluded. • An account will be established in your name after you enroll or are automatically enrolled to make contributions to the RSP or if you are eligible to receive employer retirement contributions or employer transition credit contributions.
Your Contributions	• You may contribute up to 75% of your eligible pay on a before-tax, Roth, and/or after-tax basis, but the total you contribute cannot be more than 75% of your eligible pay, subject to Internal Revenue Service ("IRS") limits. • If you will be age 50 or over at any time in the current calendar year, your before-tax and/or Roth limit will include the "catch-up" contribution limit. • For IRS limits, see page 4.
Matching Contributions	• Each pay period, the company will match before-tax, and/or Roth dollars you save based on your formula and eligible pay for company matching contributions. • Unless you are a Midwest union employee who earns pay and service in the Traditional Program under a company pension plan, each pay period, the company will match 100% of before-tax and/or Roth dollars you save up to 6% of your eligible pay for company matching contributions, subject to IRS limits. • Matching contributions will never be more than the lesser of your eligible pay multiplied by your applicable formula for matching contributions or the Internal Revenue Code (the "Code") section 402(g) limit. • For formulas and eligible pay for company matching contributions, see page 5 and 6, respectively.
Employer Retirement Contributions	• If you are not an active participant in a company pension plan, the company will make employer retirement contributions to your RSP account for each pay period equal to 4% of your eligible pay, subject to IRS limits. • Enrollment is not required in order to receive employer retirement contributions; however, you can select the investment funds into which employer retirement contributions are invested. • For information on eligibility and eligible pay for the employer retirement contribution, see page 5 and 6, respectively.
Employer Transition Credit Contributions	• If you were an active participant in the Retirement Plan of Piedmont Natural Gas Company, Inc. ("Piedmont Retirement Plan") on Dec. 31, 2017, the company will make employer transition credit contributions to your RSP account for each pay period for the 3-year period ending Dec. 31, 2020, subject to continued employment and IRS limits. If you are accruing disability benefits or in your disability waiting period on Dec. 31, 2017, you will accrue disability benefits under the Piedmont Retirement Plan formula (and not receive employer transition credit contributions). • Enrollment is not required in order to receive employer transition credit contributions; however, you can select the investment funds into which employer transition credit contributions are invested. • For information on eligibility and amount of the employer transition credit contributions, see page 5 and 6, respectively.

Vesting	• You are 100% vested in your RSP account at all times, except that a vesting schedule applies to employer retirement contributions (including attributable earnings) and amounts attributable to the Piedmont MPPP.
RSP Investment Funds and Fidelity BrokerageLink®	• The RSP currently offers access to a variety of different fund options as well as Fidelity BrokerageLink, a self-directed brokerage account. Information about the RSP's investment funds and Fidelity BrokerageLink can be found in the current RSP Investment Funds Summaries booklet on Fidelity NetBenefits at www.401k.com.
Retirement Resources	• Financial Engines, an independent investment advice and management service provider, also is available to provide investment help through Online Advice and its Professional Management program. • Financial Engines' Online Advice tool is available to you at no cost. If you wish to actively manage your own RSP account, you can get Online Advice to help you build your investing strategy, plan for income and model Social Security. To access Online Advice, log on to your RSP account at www.401k.com and click on the link "Get Personalized Help from Financial Engines." • For a fee, if you want ongoing help from independent investment experts, you can enroll in Financial Engines' Professional Management program to get ongoing management and monitoring of your RSP account investments. Additionally, Professional Management with Income+, which provides help with income planning through retirement, is available to RSP participants at least age 55 and within seven years of their planned retirement date. Duke Energy has negotiated an annual fee for this service equal to 0.50% of your managed account balance, and you can cancel your participation at any time without penalty. • Fidelity NetBenefits has retirement planning tools, including Full View®. Full View allows you to securely view your investment, retirement, bank, loan, mortgage and credit card accounts in one place. To access Full View, log on to your RSP account at www.401k.com and click on the link "Full View" located on the "Tools" tab on the home page.
Where to Find Information – Service is Just a Click Away	• You can access Fidelity NetBenefits at www.401k.com. Through Fidelity NetBenefits you can: o Enroll to begin saving through the Plan o Designate your beneficiary o Change deferral and investment elections o Request exchanges (transfers) between investments o Review your RSP account information and chart your retirement savings o Model and/or initiate a loan and verify your loan balance o Determine the amount available for a withdrawal and initiate a withdrawal or distribution • You also may call Fidelity's Duke Energy Customer Service Line at 1-800-376-4015. Representatives are available Monday through Friday (excluding New York Stock Exchange holidays), 8:30 a.m. – 8:30 p.m. Eastern Standard Time.

PARTICIPATION IN THE PLAN

General Eligibility

Generally, unless excluded as outlined below, you will be eligible to participate in the RSP if you are all of the following:

- An employee of a Duke Energy participating company.
- Paid on Duke Energy's U.S. payroll system.

A complete list of participating companies and collective bargaining units for the RSP may be obtained by participants and beneficiaries upon written request to the Benefits Committee. Participants and beneficiaries may receive from the Benefits Committee, upon written request, information as to whether a particular employer is a participating company in the RSP and, if a participating company, the participating company's address. A participating company ceases to be a participating company when it is no longer, directly or indirectly, at least 80% owned by Duke Energy, or when its designation as a participating company is discontinued by Duke Energy.

You are not eligible for the RSP if:

- You are covered under a collective bargaining agreement and there is no provision in effect that expressly provides for participation in the RSP.
- You are a non-resident alien with no U.S. source of income, or you are not on Duke Energy's U.S. payroll system.
- You have waived eligibility for the RSP through any means, including a written agreement that governs your employment (including an offer letter setting forth terms and conditions of employment) or a general statement in the agreement, offer letter, or other written communication that states you are not eligible for benefits or the RSP.

Making Contribution and Investment Elections

When you become eligible to participate in the RSP, you can make your contribution and investment elections immediately by logging on to Fidelity NetBenefits at www.401k.com or calling Fidelity's Duke Energy Customer Service Line at 1-800-376-4015. If you have never used Fidelity NetBenefits or have not established a Fidelity username and password through a previous employer's plan at Fidelity, you must establish a Fidelity NetBenefits username and password by logging on to Fidelity NetBenefits and following the prompts to "Register" to create your username and password.

If you are an eligible new employee and do not enroll to make contributions, you will be automatically enrolled to make contributions to the RSP soon after becoming eligible to participate in accordance with automatic enrollment information provided to you. Your initial contribution will be a 6% before-tax contribution to a default investment fund (*e.g.,* the Target Retirement Date Fund closest to the year you will reach age 65). If you want to increase your before-tax (or make Roth and/or after-tax) contributions, invest in a different fund, or decrease or stop your contributions, simply access Fidelity NetBenefits or call Fidelity.

Note that, if you are eligible for employer retirement contributions or employer transition credit contributions, you will receive those contributions in the Plan automatically, subject to IRS limits. You, however, will want to make investment elections for the employer retirement contributions or employer transition credit contributions. If you do not make an investment election, your employer retirement contributions or employer transition credit contributions will be invested in a default investment fund (*e.g.*, the Target Retirement Date Fund closest to the year you will reach age 65).

Rollover Contributions

If you have an account in another qualified retirement plan or an Individual Retirement Account ("IRA"), you may be allowed in certain circumstances to transfer or "roll over" contributions from that account to the RSP. Fidelity may request information from you in order to determine whether the RSP will accept the rollover contribution. Before-tax, Roth and after-tax accounts may be directly rolled over to the RSP from another employer's plan. Roth IRAs and after-tax IRAs, on the other hand, may not be rolled over to the RSP. In addition, if you terminate or retire from Duke Energy and elect a lump-sum payment (or other qualifying distribution) from a Duke Energy pension plan, you can roll over that money to your RSP account as long as you have an account balance under the RSP. Contact Fidelity to request instructions for performing a rollover to the RSP.

YOUR CONTRIBUTIONS

- You may elect to save up to 75% of your eligible pay, in whole or half percentages on a before-tax, Roth, and/or after-tax basis, but the total you contribute cannot be more than 75% of your eligible pay, subject to IRS limits which may change annually. The amount you elect to save will be automatically withheld from your pay. If you will be age 50 or over at any time in the current calendar year, your before-tax and/or Roth limit will include the "catch-up" contribution limit.
- No separate election is needed to make "catch-up" contributions. Existing IRS limits on contributions, including "catch-up" contributions, are shown in the chart below, which compares certain features of before-tax, Roth and after-tax contributions. Note that after-tax contributions will not be matched.
- Your contributions to the RSP are voluntary. If you decide to contribute (or are contributing pursuant to the automatic enrollment provisions), you may change the percentage of eligible pay that you are contributing or stop contributing at any time. Subject to IRS limits, you also can increase your RSP contributions automatically by up to 2% every year, using the RSP's automatic increase feature. When you elect to increase your RSP contributions using the automatic increase feature, you select the anniversary date on which your auto-increases occur. Auto-increases stop after your contributions reach 10%. You can opt out of the automatic increase feature

at any time. Any change will be effective as soon as administratively practicable.

- You are 100% vested in your contributions to the RSP (and earnings on your contributions).

The following chart compares certain features of before-tax, Roth and after-tax contributions.

	Before-tax	Roth	After-tax
Federal Taxation of Contributions	No	Yes	Yes
Investment Earnings Taxed While in Plan	No	No	No
Federal Taxation of Distributions (if no permissible rollover is made)	Yes – contributions and earnings are taxed and may be subject to a 10% early distribution penalty tax	No - if qualified distribution* If not a qualified distribution – portion attributable to earnings is taxed and may be subject to a 10% early distribution penalty tax*	In part – portion attributable to earnings is taxed and may be subject to a 10% early distribution penalty tax
Counted Toward Annual IRS Code Section 402(g) Limit (for 2017, $18,000 or, $24,000 including "catch-up" contribution limit)**	Yes	Yes	No
Counted Toward IRS Annual Code Section 415(c)(1)(A) Limit (for 2017, $54,000 or, $60,000 including "catch-up" contribution limit)***	Yes	Yes	Yes
Withdrawal Restrictions	Yes – available upon hardship, disability, or attainment of age 59-1/2	Yes – available upon hardship, disability, or attainment of age 59-1/2	No – available at anytime
Eligible for Company Match****	Yes – Matching formula applies to combined before-tax, and/or Roth contributions.	Yes – Matching formula applies to combined before-tax, and/or Roth contributions.	No

*A qualified distribution is a distribution made after the fifth anniversary of the first day of the first tax year of your first Roth contribution to the RSP and one of the following: on or after your attainment of age 59-1/2, in the event of disability, or to a beneficiary after your death.

** If the amount you contribute to the RSP, together with your contributions to any other tax-qualified plan, exceeds the IRS annual limit in any calendar year, you must notify the Fidelity retirement service center in writing by March 1 of the following year to receive a corrective distribution.

*** Company matching contributions and any employer retirement contributions or employer transition credit contributions also count toward the IRS annual code section 415(c)(1)(A) limit.

**** Company matching contributions and earnings are taxed upon distribution regardless of whether the match was made with respect to before-tax or Roth contributions.

Certain higher-paid participants may be affected by IRS rules that "cap" the amount of employee and/or company contributions that can be made to the RSP. If these rules affect you in a particular year, you may be required to limit the amount of your contributions, and/or your excess contributions (along with earnings) will be returned to you. You will be notified if you are affected by these limits.

Your before-tax and Roth contributions (as well as wages attributable to after-tax contributions) are always included in wages for Social Security taxes. Although state and local income tax laws vary, they usually follow the federal rules. You may wish to consult a tax advisor to determine how your before-tax and Roth contributions will be taxed under your local laws.

Whether before-tax, Roth contributions and/or after-tax contributions are right for you depends on your personal circumstances. In general, you will want to maximize company matching contributions through making before-tax and/or Roth contributions. You should consult with your personal tax advisor regarding which type of contribution is best for you.

COMPANY CONTRIBUTIONS

- To add to your savings in the RSP, the company currently makes matching contributions to the RSP. See the Company Contributions Summary Chart below for the matching formula applicable to you.
- The following chart summarizes the company contributions that are made to the RSP:

COMPANY CONTRIBUTIONS SUMMARY CHART

	Company Matching Formula*			Employer Retirement Contribution*	Employer Transition Credit Contributions
Percentage of Eligible Pay	100% of before-tax and/or Roth contributions up to 6% of eligible pay	100% on before-tax and/or Roth contributions up to 3% of eligible pay and 50% on before-tax and/or Roth contributions on the next 2% of eligible pay**	100% on before-tax and/or Roth contributions up to 4% of eligible pay and 50% on before-tax and/or Roth contributions on the next 1% of eligible pay	4% of eligible pay with no contribution required	3%, 4%, or 5% of eligible pay based on years of vesting service as of Dec. 31, 2017
Applies to	Non-union and, unless described in the next two columns to the right, union employees represented by IBEW Locals 962, 962T; 1347, 1393, 1902, and System Council U-8; USW Locals 5541-06, 7202 and 12049; UWUA Local 600, and PPF 702.	Union employees represented by IBEW Local 1393, USW Locals 5541-06 and 12049; and UWUA Local 600, who participate in the Traditional Program under a company pension plan	Union employees represented by IBEW Local 1347, who participate in the Traditional Program under a company pension plan	Non-union and union employees covered by the RSP who do not participate in a company pension plan	Legacy Piedmont non-union and IBEW Local 1902 and PPF 702 represented employees who were active participants in the Piedmont Retirement Plan on Dec. 31, 2017. Contributions cease after Dec. 30, 2020.
Vesting Requirement of Contributions (Including Attributable Earnings)	No	No	No	100% upon completion of 3 years of service or, while employed, you attain age 65, die or become disabled.*** Amounts attributable to cash dividends on Duke Energy common stock are fully vested.**** The above 3-year vesting schedule also applies to amounts attributable to the Piedmont MPPP.****	No

*Company contributions (*i.e.*, matching, employer retirement and employer transition credit contributions) are invested in accordance with your current investment elections.

**Employees also are eligible for a company-made incentive matching contribution of up to 1% of eligible pay based on the

achievement of corporate goals and your making employee before-tax and Roth contributions with respect to 5% of your eligible pay for the year. That is, the incentive matching contribution will not be more than 1% of eligible pay and is based on a specified percentage (determined pursuant to corporate goals) of employee before-tax and Roth contributions made with respect to your eligible pay of up to 5% for the year.

***Your years of service for purposes of vesting generally includes your completed years and months of service from your hire date until your severance from service date. If you have a severance from service and return to work within 12 months of your severance from service date, you will receive service for your period of severance and your prior service will be restored. If you have a severance from service and return to work 12 or more months after your severance from service date, you will not receive any service for your period of severance. However, your prior service will be restored if you were vested in your RSP account on your severance from service date or you were reemployed after a period of severance of less than 60 months. The non-vested portion of any employer retirement contributions will be forfeited if you receive or are deemed to receive a distribution of the vested portion of your RSP account or if you have a period of severance of at least 60 months. If employer retirement contributions are forfeited and you are reemployed, the forfeiture will be restored only if your reemployment occurs prior to a period of severance of less than 60 months.

****For purposes of vesting in these contributions, vesting service of Piedmont employees will equal the sum of (a) vesting service under the Piedmont MPPP as of Dec. 31, 2017, (b) vesting service determined under the RSP's elapsed time method for periods on and after Jan. 1, 2018, and (c) an additional 9 months of vesting service.

- The RSP includes a make whole matching feature for participants employed on the last day of the plan year (Dec. 31) who did not contribute at an even rate throughout the plan year (and did not receive a full matching contribution as a result). The make whole matching contribution is subject to the applicable IRS and RSP limits for the plan year for which the make whole matching contribution relates.
- If you do not participate in a company pension plan (*i.e.*, in general, you were hired or rehired after the date specified in the chart below), the company provides an employer retirement contribution to the RSP equal to 4% of your eligible pay each pay period.

Employee Group	Hire or Rehire Date after
Legacy Piedmont non-union employees and IBEW Local 1902 represented employees	Dec. 31, 2007
PPF Local 702 represented employees	Dec. 31, 2008
Non-union employees (other than legacy Piedmont non-union employees) and USW Local 7202 represented employees	Dec. 31, 2013
IBEW Local 1347 represented employees	Dec. 31, 2014
IBEW Locals 962 and 962T represented employees	March 31, 2015
IBEW Local 1393 and UWUA Local 600 represented employees	Dec. 31, 2015
USW Locals 5541-06 and 12049 represented employees	Dec. 31, 2016
IBEW Systems Council U-8 represented employees	Dec. 31, 2017

- If you were an active participant in the Piedmont Retirement Plan on Dec. 31, 2017, the company provides employer transition credit contributions to the RSP equal to the applicable percentage of your eligible pay set forth in the chart below, based on your years of vesting service as of Dec. 31, 2017, for each pay period during the 3-year period ending Dec. 31, 2020.

Vesting Service as of Dec. 31, 2017	Percentage of Eligible Pay
less than 15 years	3%
at least 15 years, but less than 25 years	4%
25 or more years	5%

ELIGIBLE PAY

Eligible pay for purposes of employee contributions, matching contributions, employer retirement contributions and employer transition credit contributions is shown in the chart below.

Employee Classification	Employee Contributions	Matching Contributions	Employer Retirement Contributions	Employer Transition Credit Contributions
Non-union and union employees (other than IBEW System Council U-8) represented employees who do <u>not</u>	• Base pay • Overtime • Unused vacation pay (when paid after	Same as for Employee Contributions	Same as for Employee Contributions, except that before-tax contributions to the	Not applicable

Legacy Piedmont non-union and IBEW Local 1902 and PPF 702 represented employees who were active	• Base pay • Overtime • Unused vacation pay (when paid after	Same as for Employee Contributions	Not applicable	Same as for Employee Contributions, except that before-tax contributions to the Duke Energy Executive Savings Plan

participants in the Piedmont Retirement Plan on Dec. 31, 2017 and participate in a company sponsored pension plan	termination) • Most short-term incentive pay • Lump sum merit pay • See below*			are included

The amount you elect to save will be automatically withheld from your pay up to your elected contribution percentage, provided that your pay is sufficient after applicable taxes and other deductions are withheld. If your pay is not sufficient after applicable taxes and other deductions are withheld, partial deductions will be taken from your elected contribution percentage and may leave you with no pay.

Your eligible pay is subject to IRS compensation limits (for 2017, your eligible pay is limited to the first $270,000 paid to you).

* Amounts that you elect to defer are included if made from otherwise eligible pay, including amounts you elect to defer under the RSP on a before-tax basis, contributions you pay on a before-tax basis for coverage under the medical, vision and dental plan, amounts that you contribute to the health and dependent care spending accounts and health savings accounts, and amounts you pay for commuter benefits.

The following compensation items are not included: reimbursements and allowances for expenses; cash or non-cash fringe benefits; severance pay; moving expenses; non-qualified deferred compensation; cash in lieu of long-term incentive pay; bonuses for performance periods in excess of one year; long-term incentive payments (incentives attributable to multi-year performance period) and compensation in the form of, or otherwise based upon, the value of Duke Energy common stock; transition pay; military leave pay (including military differential wage payments); or any other compensation item that has been determined not to be eligible by the company. Compensation also does not include any amounts paid following termination of employment, except for the following if paid within 60 days following termination of employment – unused vacation, sick pay, short-term incentive pay or certain eligible compensation that would have been paid regardless of your employment termination.

** For part-time employees, actual basic compensation is used, including any lump sum pay increases to basic compensation and amounts that you elect to defer under the RSP on a before-tax basis, contributions you pay on a before-tax basis for coverage under the medical, vision and dental plan, amounts that you contribute to the health and dependent care spending accounts and health savings accounts, and amounts you pay for commuter benefits, in each case if made from otherwise eligible pay.

***Amounts that you elect to defer under the RSP on a before-tax basis, contributions you pay on a before-tax basis for coverage under the medical, vision and dental plan, amounts that you contribute to the health and dependent care spending accounts and health savings accounts, and amounts you pay for commuter benefits also are included if made from otherwise eligible pay. No other forms of compensation are included.

INVESTING THROUGH THE RSP

The RSP offers a variety of investment fund options as well as Fidelity BrokerageLink. When you enroll to make contributions, you will be required to choose how you want your future contributions under the RSP to be invested. If you are enrolled to make contributions through automatic enrollment, your future contributions will be invested in a default investment fund (*i.e.*, the Target Retirement Date Fund closest to the year you will reach 65) until you choose how you want your future contributions to be invested. If you are eligible to receive employer retirement contributions or employer transition credit contributions, those contributions will be invested in the same manner as your contributions (*i.e.*, pursuant to your investment election or, if you have not made an investment election, in the default investment fund). You may transfer existing balances in the default investment fund to other RSP investment funds.

You are responsible for directing the investments in your RSP account. You have the right to direct your RSP account balance as well as any future contributions among the RSP investment options. For current investment fund information, restrictions on transferring amounts to or between RSP investment funds, Fidelity BrokerageLink requirements, and fees associated with the RSP, please read the current *RSP Investment Funds Summaries* booklet. You should review the *RSP Investment Funds Summaries* booklet very carefully and consult your investment advisor when considering investment fund decisions for your RSP account. The *RSP Investment Funds Summaries* booklet can be obtained via Fidelity NetBenefits at www.401k.com or by calling Fidelity's Duke Energy Customer Service Line at 1-800-376-4015.

Statement of Your RSP Account

After the end of each calendar quarter, you will receive a statement that will detail your RSP account's activity for the quarter. You may elect to receive an electronic or paper copy of your statement by logging on to Fidelity NetBenefits at www.401k.com and updating "Your Profile" by clicking on the link "Mail Preferences" or by calling Fidelity's Duke Energy Customer Service Line at 1-800-376-4015. You may change

your statement delivery election at any time. Online RSP account information as well as Plan information and documents are available every day.

Company Stock – Voting and Dividend Election

If a portion of your RSP account is invested in the Duke Energy Common Stock Fund, you have the right to direct Fidelity Management Trust Company, the Trustee, on how to vote your RSP account's proportionate interest in Duke Energy common stock held by the Duke Energy Common Stock Fund as of the record date for the vote. See the Investment Funds Summaries booklet for more information.

Generally, Duke Energy pays quarterly cash dividends on its common stock, including shares held by the Duke Energy Common Stock Fund. You may elect to receive a cash payout of your RSP account's allocation of the current dividend or to have that allocation reinvested in the fund (with the option to transfer to one of the other investment funds available under the RSP). The dividend payout/reinvestment election may be made at any time during the year, effective with the next dividend payment, with the exception of elections made during the 10-business-day period prior to the ex-dividend date. The ex-dividend date is generally 30 days prior to the dividend payment date. If you have never made an election, the dividend allocation will remain in the RSP. Your RSP account's allocation of the current dividend is based on your account's investment in the fund at the time of the dividend.

Dividends paid to you in cash are taxable as a plan distribution (not as investment income) for the calendar year in which they are paid (even if paid from amounts attributable to Roth contributions). Dividends paid to you in cash are not subject to the 10% federal tax penalty for early distributions and are not eligible for a rollover to an IRA or similar plan. Dividends reinvested in the Duke Energy Common Stock Fund are subject to the same tax rules as other earnings under the RSP (*e.g.*, taxation generally is deferred until distribution and amounts distributed generally are eligible for rollover to an IRA or similar plan). Note that there currently is a $6 charge to issue a dividend check and a $3 charge to electronically transfer a dividend payout to your bank account.

Notice of Your Rights Concerning Employer Securities and RSP's Stock Restriction

This notice informs you of an important federal law that provides specific rights concerning investments in employer securities (company stock). Because you may now or in the future have investments in company stock through the Duke Energy Common Stock Fund under the RSP, you should take the time to read this notice carefully.

Your Rights Concerning Employer Securities
The RSP must allow you to elect to move any portion of your RSP account that is invested in company stock from that investment into other investment alternatives under the RSP. This right extends to all of the company stock held under the RSP. You may contact Fidelity's Duke Energy Customer Service Line at 1-800-376-4015 for specific information regarding this right, including how to make this election. In deciding whether to exercise this right, you will want to give careful consideration to the information below that describes the importance of diversification. All of the investment options under the RSP are available to you if you decide to diversify out of company stock.

The Importance of Diversifying Your Retirement Savings
To help achieve long-term retirement security, you should give careful consideration to the benefits of a well-balanced and diversified investment portfolio. Spreading your assets among different types of investments can help you achieve a favorable rate of return, while minimizing your overall risk of losing money. This is because market or other economic conditions that cause one category of assets, or one particular security, to perform very well often cause another asset category, or another particular security to perform poorly. If you invest more than 20% of your retirement savings in any one company or industry, your savings may not be properly diversified. Although diversification is not a guarantee against loss, it is an effective strategy to help you manage investment risk.

In deciding how to invest your retirement savings, you should take into account all of your assets, including any retirement savings outside of the RSP. No single approach is right for everyone because, among other factors, individuals have different financial goals, different time horizons for meeting their goals, and different tolerances for risk. Therefore, you should carefully consider the rights described in this notice and how these rights affect the amount of money that you invest in company stock through the RSP.

It also is important to periodically review your investment portfolio, your investment objectives, and the investment options under the RSP to help ensure that your retirement savings will meet your retirement goals.

For More Information
If you have any questions about your rights under this law, including how to make this election, contact Fidelity's Duke Energy Customer Service Line at 1-800-376-4015 or the Benefits Committee.

RSP's Employer Stock Restriction
To promote investment diversification, the following restrictions apply to the Duke Energy Common Stock Fund:

- Investment elections for future contributions into the Duke Energy Common Stock Fund (including rollover contributions and loan repayments) will be limited to 20 percent of the contribution.
- No exchanges (transfers) into the Duke Energy Common Stock Fund will be allowed if your investment in the Duke Energy Common Stock Fund is 20 percent or more of your RSP account balance, or if the exchange would result in your investment in the Duke Energy Common Stock Fund exceeding 20 percent of your RSP account balance. (There are no restrictions on your ability to exchange out of the Duke Energy Common Stock Fund.)
- If you elect to rebalance your entire RSP account in a single transaction, any allocation to the company stock fund will be restricted to no more than 20 percent of your RSP account balance.

LOANS

If you are actively employed by Duke Energy or any of its affiliated companies, you may borrow money from your RSP account balance. Amounts attributable to employer retirement contributions, employer transition credit contributions and Piedmont MPPP (collectively, the "Retirement Contributions") are not available to fund loans and are excluded from determining the maximum loan limit of 50% of your account balance.

Loan Limits

The minimum you may borrow is $1,000. The maximum you may borrow is the lesser of:

- $50,000, less your highest outstanding loan balance during the 12 months prior to the loan request, or
- 50% of your total vested account balance other than any amounts attributable to the Retirement Contributions. The Benefits Committee (or its delegate) specifies the maximum number of outstanding loans that are allowed from the RSP are two. Defaulted loans are considered outstanding loans and will count against the limit and will be considered when calculating the maximum available loan amount.

Source of Loan

Loans will be taken from sources (*e.g.*, before-tax) within your RSP account other than any amounts attributable to Retirement Contributions, in the sequence prescribed by the Benefits Committee (or its delegate). Within each of the available sources, money taken for the loan will be prorated across the various RSP investment funds in which these amounts are invested.

Rate of Interest

The interest rate on your loan is based on the prime lending rate plus 1% and will remain in effect for the term of the loan. The prime lending rate is based on the daily prime rate feed provided by Reuters at the close of business on the last business day of the month prior to the month in which your loan is made.

Loan Collateral

Generally, fifty percent (50%) of the value of your RSP account other than any amounts attributable to the Retirement Contributions, at the time of a loan will be collateral for the outstanding balance of the loan made to you.

Repaying Your Loan

The term of all loans, other than loans used to acquire your principal residence, is for a period of up to 58 months. Loans used to acquire a principal residence may be repaid over a term of up to 15 years. Repayments are to be made at regular intervals, as determined by the Benefits Committee (or its delegate).

Loan repayments, including interest, are made through after-tax payroll deductions except that, if payroll deductions to the Plan are not available at your payroll location, loan repayments are made in accordance with procedures prescribed by the Benefits Committee (or its delegate). The repayments will be paid back into various funds, according to your current investment election for your contributions. You may choose to prepay all or part of the unpaid balance of your loan in a lump sum payment at any time, without penalty. A prepayment can be made by certified check, money order or electronic funds transfer. If you have two outstanding loans and repay one of the loans, there is a 15-day waiting period from the time the loan is repaid until a new loan can be taken.

If you miss regular loan repayments for any reason, other than generally an approved unpaid leave of absence, the missed payments must be made up by the end of the following calendar quarter from which the loan repayments were missed. If the missed payments are not made, the unpaid principal and accrued interest will be deemed (or actually) distributed with corresponding income tax consequences.

If you have an outstanding loan balance at the time your employment terminates for any reason, other than by reason of death, you may continue to make loan payments over the loan's terms in accordance with procedures prescribed by the Benefits Committee (or its delegate).

WHEN YOU CAN RECEIVE YOUR RSP ACCOUNT

In-Service Withdrawals

Certain amounts may be withdrawn from the RSP while you are still employed by Duke Energy or any of its affiliated companies. The RSP provides for several different types of in-service withdrawals. You may make one withdrawal of each type per month. You cannot roll over these withdrawals back into the RSP. Amounts attributable to employer retirement contributions, employer transition credit contributions and Piedmont MPPP (employer contributions) are not available for in-service withdrawals.

Withdrawals will be withdrawn from investment funds on a prorated basis across the various RSP investment funds in which your RSP account is invested, unless you call Fidelity's Duke Energy Customer Service Line at 1-800-376-4015 and specify the investment funds from which you want the withdrawal to be taken.

Any-Time In-Service Withdrawals

You may, while employed, withdraw amounts associated with the following contributions at any time:

- Rollover contributions

- After-tax contributions
- ESOP contributions (amounts transferred from the Duke Energy Corporation Employees' Stock Ownership Plan, the TRASOP associated with the Employees Savings Plan of PanEnergy Corporation and Participating Affiliates, the Tax Credit Employee Stock Ownership Plan of PanEnergy Corp and Participating Affiliates, and Piedmont Natural Gas Company, Inc. Employee Stock Ownership Plan)
- Duke Energy company matching contributions made prior to Jan. 1, 2008 (*i.e.*, company matching contributions for persons who participated in the Duke Energy RSP prior to 2008)
- Progress Energy company matching contributions made prior to Jan. 1, 2010 (*i.e.*, the matured company account as transferred from the Progress Energy 401(k) Savings & Stock Ownership Plan (the "Progress Energy Plan"))

Age 59-1/2 Withdrawals

Generally, if you have attained age 59-1/2, you may, while employed, withdraw all vested amounts in your RSP account other than Retirement Contributions.

Disability Withdrawals

If you become totally disabled under a long term disability plan of Duke Energy or any of its affiliated companies, you may, while active, withdraw all amounts in your RSP account.

For amounts attributable to the Piedmont MPPP, amounts are distributable after you have been totally and permanently disabled for 12 months. For the Piedmont MPPP, total and permanent disability means a physical or mental condition arising after the date on which you complete an hour of service and totally and permanently prevents you from engaging in any occupation or employment for remuneration or profit, except for purpose of rehabilitation not incompatible with a finding of total and permanent disability, but does not include a disability (i) arising from or consisting of habitual drunkenness or addiction to narcotics, (ii) contracted, suffered or incurred while you were engaged in or resulted from your engaging in a criminal enterprise, (iii) that was intentionally self-inflicted, (iv) arose out of service in the armed forces of any country, (v) arose while you were on a leave of absence, or (vi) that resulted from your being engaged in some other occupation or business for profit.

For amounts attributable to the Piedmont 401(k) Plan, amounts are distributable after you are totally and permanently disabled. For the Piedmont 401(k) Plan, total and permanent disability means a physical or mental condition that totally and permanently prevents you from engaging in any occupation or employment for Duke Energy or any of its affiliated companies as evidenced by eligibility for benefits under the Social Security Act or determined as such by a licensed physician (as approved by the Plan Administrator).

Uniformed Services Withdrawals

The following contributions transferred from the Progress Energy Plan are available for withdrawal if you have been performing services in the uniformed services for at least 31 days: Progress Energy Plan participant deferrals, participant catch-up deferrals and company safe harbor matching contributions. If you take an in-service withdrawal in accordance with this provision, you will not be eligible to make contributions to the RSP for the six month period beginning on the date of the withdrawal.

Progress Energy Plan participant deferrals and participant catch-up deferrals transferred from the Progress Energy Plan are available for withdrawal if you are a member of a reserve component ordered or called to active duty for a period in excess of 179 days or for an indefinite period.

Hardship Withdrawals

You may, while employed, withdraw all amounts in your RSP account on account of financial hardship, except for any amounts attributable to Retirement Contributions, any safe harbor matching contributions, and earnings earned after 1988 with respect to your before-tax and/or Roth contributions. A financial hardship is limited to the need to pay for:

- The purchase of your principal residence (excluding mortgage payments).
- Tuition, related educational fees and room and board expenses for the next 12 months of post-secondary education for you, your spouse or your dependents.
- Expenses for medical care for you, your spouse or dependents that are not reimbursable through group health care coverage or insurance, but that would be deductible under tax rules without regard to income limits.
- The prevention of foreclosure on, or eviction from, your principal residence.
- Burial or funeral expenses for your deceased parent, spouse, child or dependent.
- Expenses to repair damages to your principal residence that would qualify for a casualty deduction under tax rules.

The withdrawal cannot be for more than the amount needed to pay for the actual expenses causing the financial hardship (plus any amounts necessary, up to an additional 25%, in order to pay applicable taxes).

In order to receive a hardship withdrawal, you must:

- Satisfy the RSP's requirements explained above.
- Be unable to satisfy the hardship from other sources, and you must have obtained all loans and withdrawals available from the RSP.

If you take a hardship withdrawal, your before-tax, Roth, and after-tax contributions to the RSP will be suspended for 6 months.

Benefits After Death

If you die before receiving your full RSP account balance, the vested balance of your RSP account other than the amount attributable to the Piedmont MPPP will be payable to your beneficiary in a lump sum payment as soon as practicable after your death, unless your beneficiary chooses to defer payment for up to five years from the date of your death. The death benefit attributable to the Piedmont MPPP may be distributed (i) for a non-spouse beneficiary, in the form of a complete distribution in a lump sum or payments over a period certain of monthly, quarterly or annual installments of up to 5 years, so long as payment in full is made within 5 years of the participant's death and (ii) for a spouse beneficiary, in the form of a complete distribution in a lump sum or payments over a period certain of monthly installments of up to 5 years or a complete distribution through the purchase of a single life annuity for the spouse's life, so long as payment in full is made by date you would have attained age 70½.

If you are married at the date of your death, your spouse will be your beneficiary unless you have elected another beneficiary on the prescribed form with your spouse's written consent, notarized by a notary public. Only RSP beneficiary designations made through Fidelity (or if transferred electronically as part of a plan merger) are valid. If a beneficiary designation is not made through Fidelity, RSP default provisions will apply (*i.e.*, your spouse will be your beneficiary and, if you have no spouse, then your estate will be your beneficiary).

If you have a Piedmont MPPP account under the RSP, the following special rule will apply to your entire account under the RSP. If you designate a non-spouse beneficiary under the RSP while employed before the year in which you attain age 35, the designation expires on the first day of the year in which you attain age 35. You can again designate the same or another beneficiary (with spousal consent, as applicable) on or after the first day of the year in which you attain age 35 (or at any time after you are no longer employed).

Special Distribution Rules

You must begin receiving distributions in the minimum amount required by law from your RSP account under the RSP no later than the later of:

- April 1 following the year in which you reach age 70-1/2, or
- The date your employment with Duke Energy terminates.

HOW YOUR RSP ACCOUNT IS PAID

Distributions

Following termination of employment from Duke Energy and its affiliated companies, you are entitled to receive the vested balance in your RSP account. If your vested balance is $1,000 or less, you will automatically receive a complete distribution of the vested balance in your RSP account. If your vested balance is greater than $1,000, may choose to receive a partial or complete distribution, monthly, quarterly or annual installments over a specified period (subject to IRS rules) or defer distribution or leave your account in the RSP until a later date, subject to provisions below for the portion of your account attributable to the Piedmont MPPP. A partial distribution can be implemented manually (*i.e.*, one partial distribution at a time) or automatically, through a Systematic Withdrawal Plan ("SWP"). There are three types of SWPs available: Flat Dollar Amount, meaning you chose to receive a fixed-dollar amount; Decrementing Counter, meaning the SWP is determined by multiplying your account balance by a counter that reduces each time a SWP is paid (*e.g.*, 1/10, 1/9, 1/8); and a Minimum Required Distribution (MRD), meaning the minimum required amount will be paid on either a monthly, quarterly or annual basis.

For the portion of your account attributable to the Piedmont MPPP, you may also elect complete distribution through the purchase of (i) if you are not married, a single life annuity for your life (ii) if you are married, a 100% or 50% joint and survivor annuity that provides monthly payments for your life and, after your death, monthly payments for your spouse's life equal to 100% (normal form) or, if you elect, 50%. If you are married, payment of the portion of your account attributable to the Piedmont MPPP is required in the normal form unless you obtain your spouse's written consent that is witnessed by a notary public to payment in another form (*e.g.*, lump sum).

Option to Receive Distribution in Duke Energy Common Stock

When you request a distribution, it generally will be paid to you in cash. You may, however, elect to receive the entire amount that is invested in the Duke Energy Common Stock Fund as of the date of distribution in whole shares of Duke Energy common stock, and cash for any fractional shares. Also, distribution in the form of a purchase of an annuity (as described above) is available for the portion of your account attributable to the Piedmont MPPP.

Taxes on Payments

If you are going to receive or rollover money from the RSP, you should review the IRS "Special Tax Notice Your Rollover Options" and discuss tax implications of the payment with your personal tax advisor. This is particularly appropriate if you are receiving money before age 59-1/2.

Rollovers

All or a part of a distribution that qualifies as an eligible rollover distribution can be rolled over within 60 days to another employer's eligible plan (if that plan accepts rollovers), a 403(b) contract, an eligible plan maintained by certain government employers, an IRA or Roth IRA. A distribution from Roth savings (including any earnings) can be rolled over only to another designated Roth account or to a Roth IRA. By using

a rollover, you generally can avoid paying current income tax on the distribution and, if it applies, the 10% tax penalty on early distributions. Note that, the amount of a direct rollover from non-Roth savings to a Roth IRA (reduced by any after tax amounts) will be taxed. In the event of your death, your spouse and, in limited circumstances with a direct rollover, your beneficiary also can use a rollover to avoid paying current income tax on an eligible rollover distribution. Eligible rollovers do not include:

- Loan proceeds when taking out a loan from the RSP.
- A hardship withdrawal.
- Any part of a payment that is part of a required minimum payment that must be paid to you after you reach age 70-1/2.
- ESOP dividends taken in cash.
- Payments to non-spouse alternate payees under a Qualified Domestic Relations Order.
- A distribution that is a series of substantially equal periodic payments for a specified period of 10 or more years or for your life or the joint lives of you and your designated beneficiary.

In a direct rollover, the distribution or withdrawal check or stock certificate will be in the name of the trustee or the custodian of the eligible plan and will be sent to you for your delivery to the trustee or custodian. In-kind rollovers may be permitted in certain circumstances.

IRS Publications 575 and 590 provide additional information about the tax treatment of plan distributions and rollovers. These publications are available from your local IRS office, on the IRS's website at www.irs.gov, or by calling 1-800-TAX-FORMS.

OTHER IMPORTANT INFORMATION

Claims and Appeal Procedures

If you have a claim for benefits or any grievance, complaint or claim concerning any aspect of the administration of the RSP, or the RSP's trust, including the administration of any investment fund, you must submit your written claim to the Retirement Benefits Department, c/o Duke Energy Corporation, 550 South Tryon (DEC 38D), Charlotte, NC 28202-1803 or in accordance with such other procedures as the Benefits Committee or its delegate prescribes. You must submit each claim no later than two years from the earliest of:

- in the case of any account balance or other account transaction information, the date such information was first made available to you,
- in the case of any payment or series of payments, the date of payment or the date the first in the series of payments was paid, or
- for all other claims, the date on which the action complained of first occurred.

Your claim must be in writing and include:

- a statement that it is a claim under the Duke Energy Retirement Savings Plan;
- your full name, mailing address and daytime telephone number;
- if applicable, a copy of your written designation of a representative, including the representative's full name, mailing address and daytime phone number; and
- a complete description of the claim, including any issue or information you or your representative want considered.

If your claim is denied, either in whole or in part, you or your representative will receive written notification within 90 days after receipt of your claim, unless special circumstances require an extension of time for processing the claim. If an extension is necessary, you will be notified, in writing, and the extension period will not be for more than 90 days. At any point in the claims process, you or your representative may request documents relevant to your claim from the Claims Committee, which documents will be provided free of charge.

If your claim is denied, a written notice of decision will contain (a) a statement of the specific reasons for the adverse determination, (b) a reference to the specific RSP provision(s) on which the decision is based, (c) a description of any additional material or information necessary for you to perfect your claim and an explanation of why the material or information is necessary, and (d) a description of the RSP's review procedures and the time limits applicable to the procedures, including a statement of your right to bring a civil action under Section 502(a) of the Employee Retirement Income Security Act of 1974, as amended, ("ERISA") following an adverse benefit determination on review.

If your claim is denied, you may file a written appeal with the Claims Committee c/o Duke Energy Corporation, 550 South Tryon Street (DEC38D), Charlotte, NC 28202 within 60 days after the claim for benefits was denied. The Claims Committee will then review the denied claim and give written notice of its final decision. Your appeal must be in writing and include:

- a statement that it is an appeal under the Duke Energy Retirement Savings Plan;
- your full name, mailing address and daytime telephone number;
- if applicable and not previously submitted, a copy of your written designation of a representative, including the representative's full name, mailing address and daytime telephone number; and
- a complete description of the appeal including a description of the original claim and any issue or information that you or your representative want considered.

The review will take into account all comments, documents, records and other information submitted by you, without regard to whether the information was submitted or considered in the initial benefit determination.

The final decision notice will be furnished within 60 days, or, if special circumstances require more time, within 120 days. The Claims Committee must promptly inform you, in writing, of the reason for the delay and the date you can expect to receive a notice. The notification of the Claims Committee's benefit determination review, if adverse to you, will contain (a) the specific reasons for the adverse determination, (b) a reference to the specific RSP provision(s) on which the decision is based, (c) a statement that you are entitled to receive, upon request to the Claims Committee and free of charge, reasonable access to, and copies of, all documents, records and other information relevant to your claim for benefits, and (d) a statement of your right to bring a civil action under Section 502(a) of ERISA following an adverse benefit determination review. You may, at any time during the claim denial or review process, hire an attorney – at your own expense – to represent you. You must first follow the RSP's claims procedures prior to filing any action or lawsuit, and any action or lawsuit must be filed no later than one year from the date of the decision on appeal. The RSP's proper name and your name should be used in any related formal correspondence.

The Plan Administrator may institute such additional procedures as appropriate.

Special Rules for Disability Determinations

With respect to a determination of total and permanent disability for amounts attributable to the Piedmont 401(k) Plan and Piedmont MPPP (other than determinations based on legibility for Social Security benefits), a claim decision will be provided within 45 days of receipt of the claim. If an extension is necessary, you will be notified and the extension will not be more than 30 days, but a second extension may be taken for an additional 30 days. Any extension notice will specify the circumstances requiring the extension and the date a decision can be expected. The extension notice also will explain the standards for approving a disability claim; state the unresolved issue(s) that prevent a decision from being reached, and describe any additional information needed to resolve the issue(s).

If your claim is denied, the following additional information will be provided: (i) If the claim denial is based on a medical necessity or experimental treatment or similar exclusion or limit, that an explanation of the scientific or clinical judgment for the determination, applying the terms of the Plan to your medical circumstances, is available upon request, free of charge. (ii) A statement that you are entitled to receive, upon request and free of charge, reasonable accesses to, and copies of, all documents, records and other information relevant to your claim. (iii) A discussion of the determination, including an explanation of the basis for disagreeing with or not following: (a) the views presented by you of health care professionals treating you and vocational professionals who evaluated you, (b) the views of medical or vocational experts whose advice was obtained on behalf of the Plan in connection with your determination, without regard to whether the advice was relied upon in making the determination, and (c) a disability determination regarding you made by the Social Security Administration.* (iv) Either the specific internal rules, guidelines, protocols, standards or other similar criteria of the Plan relied upon in making the determination or a statement that such rules, guidelines, protocols, standards or other similar criteria of the Plan do not exist.* (v) A statement displayed in any applicable non-English language clearly indicating how to access the language services provided by the Plan.*

You may request a review of the claim decision within 180 days, rather than 60 days. The review will not afford deference to the original claim denial and will be conducted by a Plan fiduciary different from the fiduciary who originally denied your claim. This fiduciary also cannot be subordinate to the fiduciary who originally denied your claim.

If the original denial of your claim was based on a medical judgment, the reviewing fiduciary will consult with an appropriate health care professional who has appropriate training and experience in the field of medicine involved in the medical judgment and who is neither a health care professional consulted on the original claim nor subordinate to such consulted health care professional. The review will identify the medical or vocational experts consulted on the original claim, without regard to whether the advice was relied upon in making the benefit determination. You may request, in writing, a list of those medical or vocational experts.

Before an adverse determination on review is issued, you will be provided, free of charge, with the following as soon as possible and sufficiently in advance of the date on which notice of the determination is required to give you a reasonable opportunity to respond prior to that date: (i) Any new or additional evidence considered, relied upon, or generated by (or at the direction of) the Plan, insurer, or other person making the determination in connection with the Claimant’s claim. (ii) If the determination is based on a new or additional rationale, the rationale.

You will receive notice of the reviewing fiduciary's final decision regarding your disability claim within 45 days, rather than 60 days, of the review request. If your claim or review is denied, the notice will state the following additional information:(i) If the claim denial on review is based on an exclusion or limit (such as a medical necessity requirement or an experimental treatment exclusion), that an explanation of the scientific or clinical judgment applying the exclusion or limit to your medical circumstances is available upon request, free of charge. (ii) A statement that you and the Plan may have other voluntary alternative dispute resolution options, such as mediation and that one way to find out what may be available is to contact the local U.S. Department of Labor Office and State insurance regulatory agency. (iii) A discussion of the determination, including an explanation of the basis for disagreeing with or not following: (a) the views presented by you of health care professionals treating you and vocational professionals who evaluate you, (b) the views of medical or vocational experts whose advice was obtained on behalf of the Plan in connection with the determination, without regard to whether the advice was relied upon in making the determination, and (c) a disability determination regarding you made by the Social Security Administration.* (iv) Either the specific internal

rules, guidelines, protocols, standards or other similar criteria of the Plan relied upon in making the determination or a statement that such rules, guidelines, protocols, standards or other similar criteria of the Plan do not exist.* (v) A statement displayed in any applicable non-English language clearly indicating how to access the language services provided by the Plan.* (vi) Any applicable contractual limitations period that applies to your right to bring an action under Section 502(a) of ERISA, including the calendar date on which the contractual limitations expires for the claim.*

*The Department of Labor has proposed delaying and/or eliminating these new requirements. The information will only be provided if required by applicable Department of Labor regulations.

Assignment of Rights

Your RSP account and other rights under the RSP may not be assigned, transferred or pledged to a third party and, generally, may not be involuntarily taken, such as by your creditors. The RSP will, however, in circumstances required by law, comply with a Qualified Domestic Relations Order that directs a portion of your RSP account balance to be paid to a former spouse or other dependent. The RSP also will offset your RSP account (i) to the extent that you received any overpayments from the RSP, (ii) to satisfy IRS federal tax liens, and (iii) in accordance with certain judgments regarding malfeasance with respect to the RSP.

Amendment or Termination of the RSP

While Duke Energy expects the RSP to continue, it reserves the right to amend, discontinue, or terminate the RSP at any time. Upon termination of the RSP, participants' accounts will be fully vested and distributed as permitted by law.

Benefits Are Not Guaranteed

Account balances (including your contributions and Retirement Contributions under the RSP are not insured by the Pension Benefit Guaranty Corporation ("PBGC"). Generally, the PBGC insures certain benefits under defined benefit plans in the event of a plan termination. The RSP, as a defined contribution plan, is not eligible for PBGC insurance. Your RSP benefit depends on a number of variable factors, such as how much you save and investment results. If the RSP investment funds in which your RSP account is invested experience losses, the value of your RSP account will decrease.

General Federal Tax Considerations of the RSP

The RSP is intended to qualify under Code section 401(a). Assuming the RSP meets the requirements of the Code, the following general income tax consequences will result:

- Duke Energy generally will be entitled to a deduction for amounts it contributes to the RSP.
- The RSP's trust will not be subject to federal income tax.

While on a Leave of Absence for Military Service

Under the Uniformed Services Employment and Reemployment Rights Act ("USERRA"), you are entitled to a military leave of absence, with reinstatement rights. If you are a participant in the RSP and you are placed on a military leave of absence, your contributions (before-tax, Roth, and/or after-tax), company matching contributions, employer retirement contributions, employer transition credit contributions and loan payments will not continue. If your return to employment following a military leave is timely, you will receive any employer retirement contributions and employer transition credit contributions that you would have received had you not gone on military leave. You also can make military make-up contributions (before-tax, Roth and/or after-tax contributions) up to the amount you could have made if you did not go on the military leave and receive the corresponding company matching contribution that you could have received.

For these contributions, any IRS and RSP limits will apply to the year to which the contribution relates, not the year in which the contribution is made. Your contributions, any employer retirement contributions, employer transition credit contributions and company matching contributions generally will be determined using deemed compensation for the period of uniformed service. The RSP includes the following default rule to make it easier to maximize your company matching contributions: If you make before-tax and/or Roth contributions in excess of the amount necessary to receive the regular company matching contribution for a plan year, the excess before-tax and Roth contributions will be treated as military make-up contributions to the extent eligible for prior year company matching contributions.

Once you return to active work, any suspended loan payments will resume immediately.

If you die while performing qualified military service, survivor benefits will include any additional benefits that would have been provided under the RSP had you returned to employment (immediately prior to your death) and then terminated employment on account of death.

Qualified Domestic Relations Order

Federal law permits payment of all or a portion of your RSP account to an alternate payee, provided that such a payment is made pursuant to a court order (in some cases a governmental agency), relating to child support, alimony, or marital property rights payments, that is a Qualified Domestic Relations Order or "QDRO." The RSP will determine the qualified status of any domestic relations order received. If you have questions about a Qualified Domestic Relations Order or to obtain, without charge, a copy of the RSP's procedures governing QDRO determinations (including model domestic relations orders), please contact the myHR Service Center at 1-888-465-1300 or access the QO Center website link located on Fidelity NetBenefits at www.401k.com.

Important Restrictions and Consequences

You may receive less than you expect from the RSP in the following situations:

- Your benefit is the value of your RSP account balance and you assume the risk of investment losses. Under section 404(c) of ERISA, Plan fiduciaries may be relieved of liability for any losses that are the direct and necessary result of the investment decisions you make.
- Your employment is terminated before you are vested in your entire benefit.
- Highly compensated employees may be required to reduce their contributions to satisfy IRS discrimination tests.
- All employees are subject to IRS benefit and contribution limits.
- All or part of your benefit is assigned to an alternate payee pursuant to a qualified domestic relations order (QDRO).
- You fail to keep the Benefits Committee (or its delegate) notified of your current address.
- The RSP may be amended or terminated at any time.
- Benefits may be eliminated or suspended as permitted by law.
- All or part of your benefit is offset to recoup overpayments made to you.
- If you are married, the normal form of payment for the amounts attributable to the Piedmont MPPP is a purchased qualified joint and surviving spouse annuity. You may elect a lump sum only with your spouse's consent (witnessed by a notary).
- Benefits under the RSP are paid only if the Benefits Committee (or its delegate, including the Claims Committee) decides in its discretion that the applicant is entitled to benefits under the RSP.

Fees

In making decisions regarding the RSP, you will want to consider the fees and expenses that will be charged to your RSP account. In general, fees can be classified into the following categories:

Plan Administrative Fees. Your RSP account is charged fees for general plan administration expenses (*e.g.*, recordkeeping services).

Plan Transaction Fees. Your RSP account will be charged fees for certain RSP transactions, including the following: (a) a loan set up fee for each loan transaction, (b) a per quarter, per loan, maintenance fee for loans received, (c) a fee for each in-service withdrawal, (d) a fee for each minimum required distribution, (e) a fee for each dividend payment distribution by check (a fee for each dividend payment distribution by electronic fund transfer (direct deposit)), (f) a fee for the return of excess deferrals resulting from your participation in multiple plans and (g) if applicable, a Financial Engines Professional Management fee. No separate fee is charged for establishing a Fidelity BrokerageLink account, but standard brokerage commission fees will be charged for transactions in the Fidelity BrokerageLink account.

Investment Fund Fees. Currently, there are no RSP-level transaction fees or expenses which affect your RSP account in connection with investing in or transferring from one RSP investment fund to another. Your RSP account, however, will be reduced by a number of expenses or fees associated with your investment choices, including fees charged by some or all of the following entities: the Trustee, investment advisors, investment managers, and securities brokers.

For additional information on RSP investment fund fees, refer to the current *RSP Investment Funds Summaries* booklet.

PLAN INFORMATION

Name and Type of Plan

The name of the plan is the Duke Energy Retirement Savings Plan and is commonly referred to as the Retirement Savings Plan or RSP. The RSP and this summary are subject to ERISA. The RSP is a defined contribution plan under ERISA, is an "ERISA 404(c) plan" because of your investment control over your RSP account, is intended to be a qualified plan under the Code, includes a cash or deferred arrangement under Code section 401(k), and includes the Duke Energy Common Stock Fund, which is an employee stock ownership plan.

Employer and Plan Identification Number

The employer identification number assigned by the IRS is: 20-2777218.

The Plan number assigned by Duke Energy is: 002 for the Duke Energy Retirement Savings Plan.

Plan Administrator and Sponsor As Well As Stock Issuer

The Duke Energy Benefits Committee is the plan administrator and is responsible for the administration of the Plan. You may obtain additional information about the RSP or contact the Benefits Committee at:

Benefits Committee
c/o Duke Energy Corporation
550 South Tryon Street (DEC38D)
Charlotte, NC 28202
704-382-4703

The Investment Committee generally determines the RSP investment funds available for participant selection under the RSP, retains investment managers, selects collective investment funds, issues investment guidelines and objectives, and monitors RSP investment fund performance (except for the Duke Energy Common Stock Fund, which is monitored by the Duke Energy Company Stock Investment Review

Committee). The Investment Committee and the Duke Energy Company Stock Investment Review Committee may be contacted at:

Investment Committee
Director, Long Term Investments
c/o Duke Energy Corporation
550 South Tryon Street (DEC40A)
Charlotte, NC 28202
704-382-4703

RSP Trustee and Funding

The RSP is funded through both employee and Duke Energy and other participating companies' contributions to the RSP's trust. The Trustee holds the assets of the RSP in a Master Trust.

The Trustee of the RSP's trust is:
Fidelity Management Trust Company
82 Devonshire Street
Boston, MA 02109

Agent for the Service of Legal Process

The agent for service of legal process upon the RSP is:

Corporate Secretary
c/o Duke Energy Corporation
550 South Tryon Street (DEC45A)
Charlotte, NC 28202

Legal process also may be served on the RSP Trustee or the Benefits Committee.

Plan Year

The Plan Year begins on Jan. 1 and ends on the following Dec. 31.

YOUR ERISA RIGHTS

As a participant in the RSP, you are entitled to certain rights and protections under ERISA. ERISA provides that all Plan participants shall be entitled to:

Receive Information About Your Plan Benefits

- Examine, without charge, at the plan administrator's office, all documents governing the Plan, including insurance contracts and collective bargaining agreements, and a copy of the latest annual report (Form 5500 Series) filed by the Plan with the U.S. Department of Labor and available at the Public Disclosure Room of the Employee Benefits Security Administration.

- Obtain, upon written request to the Benefits Committee, copies of documents governing the operation of the Plan, including insurance contracts and collective bargaining agreements, and copies of the latest annual report (Form 5500 Series) and updated summary plan description. The administrator may make a reasonable charge for the copies.

- Receive a summary of the Plan's annual financial report. The Benefits Committee is required by law to furnish each participant with a copy of this summary annual report.

- Obtain a benefit statement from the Plan, at no charge to you, at least once every twelve (12) months.

Prudent Actions by Plan Fiduciaries

In addition to creating rights for plan participants, ERISA imposes duties upon the people who are responsible for the operation of the employee benefit plan. The people who operate your Plan, called "fiduciaries" of the Plan, have a duty to do so prudently and in the interest of you and other Plan participants and other beneficiaries. No one, including your employer, your union, or any other person, may fire you or otherwise discriminate against you in any way to prevent you from obtaining a Plan benefit or exercising your rights under ERISA.

Enforce Your Rights

- If your claim for a Plan benefit is denied or ignored, in whole or in part, you have a right to know why this was done, to obtain copies of documents relating to the decision without charge, and to appeal any denial, all within certain time schedules.
- Under ERISA, there are steps you can take to enforce the above rights. For instance, if you request a copy of Plan documents or the latest annual report from the Plan and do not receive them within 30 days, you may file suit in a federal court. In such a case, the court may

require the Benefits Committee to provide the materials and pay you up to $110 a day until you receive the materials, unless the materials were not sent because of reasons beyond the control of the Benefits Committee. If you have a claim for benefits which is denied or ignored, in whole or in part, you may file suit in a state or federal court. In addition, if you disagree with the Plan's decision or lack thereof concerning the qualified status of a domestic relations order or a medical child support order, you may file suit in federal court. If it should happen that Plan fiduciaries misuse the Plan's money, or if you are discriminated against for asserting your rights, you may seek assistance from the U.S. Department of Labor, or you may file suit in a federal court. The court will decide who should pay court costs and legal fees. If you are successful, the court may order the person you have sued to pay these costs and fees. If you lose, the court may order you to pay these costs and fees, for example, if it finds your claim is frivolous.

Assistance With Your Questions

If you have any questions about this Plan, you should contact Fidelity's Duke Energy Customer Service Line at 1-800-376-4015 or the Benefits Committee. If you have any questions about this statement or about your rights under ERISA, or if you need assistance in obtaining documents from the Benefits Committee, you should contact the nearest office of the Employee Benefits Security Administration, U.S. Department of Labor, listed in your telephone directory or the Division of Technical Assistance and Inquiries, Employee Benefits Security Administration, U.S. Department of Labor, 200 Constitution Avenue N.W., Washington, D.C. 20210. You also may obtain certain publications about your rights and responsibilities under ERISA by calling the publications hotline of the Employee Benefits Security Administration.

401(k) transition

The Piedmont Natural Gas Company Inc. 401(k) Plan will merge into the Duke Energy Retirement Savings Plan (RSP) and you will participate in the RSP on and after Jan. 1, 2018.

In November, you will receive information that describes how your current Piedmont 401(k) account will transition to the RSP, along with information about the RSP and the investment funds available in the RSP effective as of Jan. 1, 2018.

Piedmont 401(k)	Duke Energy 401(k)
Piedmont 401(k) Plan • Company match – 100% of before-tax contributions up to **5%** of eligible pay • 500 hours in a 6-month period required for vesting for company match • Before-tax contributions only • Investment funds include a mix of retail mutual funds, along with risk-based model portfolios comprised of retail mutual funds	**Duke Energy Retirement Savings Plan (RSP)** • Company match – 100% of before-tax and Roth contributions up to **6%** of eligible pay • Immediate vesting for company match • Before-tax, Roth and/or after-tax contributions • Investment funds include o Institutional funds (not retail funds) o Duke Energy Common Stock Fund o Opportunity to enroll in BrokerageLink, a self-directed brokerage account that provides access to individual securities (for example, stocks, bonds, mutual funds and more)

Pension transition

After Dec. 31, 2017, your accrued pension benefit under the Retirement Plan of Piedmont Natural Gas Company Inc. (Piedmont Pension Plan) will freeze and merge into the Duke Energy Retirement Cash Balance Plan (RCBP) and you will retain all benefits accrued through Dec. 31, 2017. As shown on the following table, effective Jan. 1, 2018, you will begin accruing another pension benefit under a cash balance formula. Additionally, Duke Energy also will make employer transition credit contributions to your RSP account during your continued employment based on your vesting service as of Dec. 31, 2017, as shown in the following table. These contributions will end the earlier of Dec. 31, 2020 or your termination date.

At retirement, your vested pension benefit will have at least two parts – a final average pay benefit and a cash balance benefit. Importantly, you will not lose the benefits that you've accrued as of Dec. 31, 2017.

ERISA 204(h) Notice for Participants of the
Piedmont Natural Gas Company, Inc. Money Purchase Pension Plan

The purpose of this communication is to advise you of future changes to the Piedmont Natural Gas Company, Inc. Money Purchase Pension Plan (the "Piedmont MPPP") effective Dec. 31, 2017.

Background: Freezing of Piedmont MPPP benefits

In accordance with an amendment to the Piedmont MPPP, no additional contributions will be made to the Piedmont MPPP after Dec. 31, 2017[1]. That is, future accruals under the Piedmont MPPP will be frozen after Dec. 31, 2017. You will not lose any of the benefits you have earned under the Piedmont MPPP up to Dec. 31, 2017. Effective at the close of Dec. 31, 2017, your Piedmont MPPP account will be merged into the Duke Energy Retirement Savings Plan (the "RSP"). You will continue to earn service for Duke Energy employment for purposes of vesting in amounts attributable to the Piedmont MPPP under the RSP. Beginning Jan. 1, 2018, you will be eligible to participate in the RSP employer retirement contribution formula, which is described in further detail below.

Piedmont MPPP benefit formula prior to freeze

Prior to the freezing of future accruals, the Piedmont MPPP provided for an annual company contribution equal to 4% of eligible pay, plus an additional 4% of eligible pay in excess of the Social Security Wage Base. This contribution was contributed once per year into the Piedmont MPPP account in January, and was based on compensation from the prior calendar year. The Social Security Wage Base is determined each year by the Social Security Administration. In 2017, the Social Security Wage Base was $127,200. An employee must be employed on the last day of a year or have retired or died during the year to receive a contribution.

New provisions: RSP

Beginning Jan. 1, 2018, you will participate in the RSP employer retirement contribution formula, which provides a contribution of 4% of eligible pay to your RSP account. These contributions are made each pay period. These contributions are in addition to employer matching contributions under the RSP.

This Notice complies with the disclosure requirements under Section 204(h) of the Employee Retirement Income Security Act of 1974 as amended (ERISA), and section 4980F of the Internal Revenue Code of 1986, as amended, regarding the cessation of benefit accruals under the Piedmont MPPP. This document contains selected highlights of Duke Energy's employee benefits plans. If any statement herein, or any other communication, conflicts with applicable plan documents, the plan documents will govern. Duke Energy retains the right to amend, modify or terminate its benefits plans in any respect and at any time, and neither its benefits plans nor your plan participation will be considered a contract for future employment.

[1] Note that the contribution you earned on account of employment during 2017 will be credited to your Duke Energy Retirement Savings Plan account in January 2018.

a) A description of the business purpose for the travel.

b) How the travel relates to the provision of natural gas service.

c) The title(s) and company of the employee traveling.

d) Flight log of trip.

RESPONSE: The items that were selected in this data request total to $4,389.20 as allocated to Piedmont's Tennessee operations. They represent expenses charged to DEBS and allocated to Piedmont pursuant to the Cost Allocation Manual provided in the Company's response to item 57 of this data request. As seen in the CONFIDENTIAL attachment, there are over 800 transactions recorded on DEBS books which when allocated to Piedmont TN totals $4,389.20.

Piedmont would need to pull each transaction individually and analyze each item to adequately respond to this question. Given the time allowed to respond to this data request, Piedmont was unable to research over 800 transactions.

Piedmont did review the ten highest dollar transactions (ranging from $39.74 to $95.57) and noted the charges represent expense reports and accounts payable invoices related to

the administration of the corporate aviation function. The expenses selected are not necessarily related to a specific flight on corporate aircraft.

Piedmont suggests selecting a sample of these transactions for further analysis.

1-122. Refer "5K_OtherAG Adj.xlsx" as provided with the Company's Filing. Specifically, refer to tab "Other A&G Detail." For all charges to Accounts "921200 Office Expenses", "921600 Other", "92300 Outside Services Employed" with "Aviation Corporate Jets" or "Aviation Corporate Hanger" in column L "RC Long Descr CB"; provide a cost benefit analysis supporting the benefit of using a corporately owned aircraft over commercial airline for travel. This analysis should include all costs associated with ownership (including but not limited to insurance, pilot compensation, taxes, fuel, storage, return on the cost of the asset(s), etc.)

RESPONSE: The Company does not have a cost-benefit analysis regarding commercial flights versus use of corporate aircraft. Use of corporate aircraft is determined and reserved based on Duke Energy's Corporate Aviation policy. See attachment.

Applicability:	Senior Management Committee
Originator:	Aviation Services
Approval:	Vice President Administrative Services
Effective Date:	July 1, 2019
Revision Date:	**June 19, 2019**
Revision No:	5
Reissue Date:	

Statement of Purpose and Philosophy

Corporate Aviation is designed to maximize executive productivity, safety and security in support of Duke Energy's strategy and core business. This Corporate Aviation policy ("Policy") describes the general processes, expectations and authority for use of Duke Energy aircraft. The Chairman, President & CEO, as well as Senior Management Committee members, the Senior Vice President/Chief Nuclear Officer and the Senior Vice President of Nuclear Operations (Authorizers) may request and approve the use of corporate aircraft in accordance with this Policy and should familiarize themselves with the guidance and expectations outlined herein. When questions or interpretations of this Policy are warranted, the Managing Director of Aviation or the Vice President Administrative Services should be contacted.

Corporate Aviation - General Use Expectations

Corporate Aviation, including owned, leased, chartered and fractional aircraft, is the preferred form of domestic and international air travel for the Chairman, President and CEO (CEO) . Aviation studies will be conducted periodically to gauge continued feasibility of this guidance and all compensation and tax issues related to this guidance will be reviewed and approved by the Compensation Committee of the Duke Energy Board of Directors (the Board).

Senior Management Committee (SMC) members should, but are not required to, use Corporate Aviation for their business travel. When not utilizing Corporate Aviation, First Class or Business Class travel is the preferred method for commercial travel.

Roles and Responsibilities

- **Policy Development & Reporting:** The Managing Director of Aviation Services and the Vice President Administrative Services are accountable for the development, oversight and communication of this Policy. Reports will be provided as needed and authorized by the Vice President Administrative Services through his/her management chain to the CEO and/or Governance Committee of the Board.

- **Safety & Compliance:** The Managing Director of Aviation Services is responsible for ensuring that Corporate Aviation provides technical reviews and safety assessments of business travel on Duke Energy aircraft as well as private, non-Duke Energy aircraft directed for executive use by Corporate Aviation.

- **Executive Spacing Protocol:** The Corporate Aviation team is responsible for following the Executive Spacing Protocol as approved by the Governance Committee of the Board.

Priority Use Guidelines

Priority use and scheduling will always be given to the CEO and Board of Directors. Secondary priority will be given to SMC members.

General Use Guidelines

- Due to the confidential nature of travel by the Authorizers, Corporate Aviation will not provide travel information to other executives, or their representatives, relating to travel by others. Corporate Aviation remains committed to optimizing the use of corporate aircraft whenever possible.

- The CEO has blanket dispatch approval authority for herself, the Board, employees and non-employees.

- Authorizers have dispatch approval authority for (i) themselves, for (ii) employees in their respective organizations and (iii) non-employees who are conducting business for the Enterprise.

- SMC members have dispatch approval authority for non-employees who are conducting business for their respective organizations that is not directly associated with Duke Energy, (i.e. economic development).

- When an Authorizer cancels his/her travel plans and employees or non-employees were scheduled to accompany the Authorizer, the trip must be reapproved unless the manifest contains another Authorizer.

- When the original requester (non-Authorizer) cancels his/her travel plans, the trip must be reapproved unless the manifest contains another employee who is at a management level equivalent to or higher than the original requester.

- The Authorizer shall not delegate dispatch approval authority.
-
- SMC members may utilize Corporate Aviation for purely personal travel. Appropriate legal documents (e.g. time share agreements) must be executed prior to purely personal trips. Ride along personal travel (e.g. spouse accompanying an Authorizer on business), should be an infrequent occurrence. All personal travel must be in accordance with the Personal Use of Corporate Aviation Procedure.

- Duke Energy aircraft will not be used to transport elected officials or their staffs.
-
- Duke Energy aircraft should not be used to transport non-profit organization staff or guests, absent advanced approval by the Vice President Administrative Services. The only pre-approved non-profit uses of the aircraft are the Corporate Angel Network and the Special Olympics Cessna Airlift. The Vice President Administrative Services may approve other non-profit support which is consistent with the mission of Duke Energy.

PIEDMONT NATURAL GAS COMPANY, INC.
Docket No. 20-00086
Consumer Advocate's First Discovery Request
Date Issued: August 17, 2020
Date Due: September 8, 2020

1-123. Refer to MFR 11 Attachment.xlsx as provided with the Company's filing. Specifically, refer to tabs "TN Alloc Income Stmt – 2019" and "Tn Alloc IS March 2020." Provide responses to the following regarding Account "930250 – Buy/Sell Transf Employee Homes."

a. The title of the employee to whom the costs relate.

b. The employee's business unit.

c. Complete explanation of the purpose of the expenditure(s).

d. Why the Company believes these costs are recoverable from ratepayers.

e. Provide the Company's written corporate policy for how/when such costs can be reimbursed to an employee.

RESPONSE:

a. See CONFIDENTIAL attachment. As seen in Excel column Q on the second tab in the attachment, the total amount of relocation expense allocated to Tennessee operations during the test period is $10,736.08.

For transactions arising from accounts payable invoices from NEI Global Relocation Company, the employee title has been provided. This represents $3,632.71 (approx. 34%) of the total amount allocated to Tennessee. The remaining 103 transactions are largely journal entry transactions that would need to be analyzed individually to determine the job titles of the employees to whom the costs relate. Given the time allowed to respond to this data request, Piedmont was unable to complete this task. Piedmont suggests selecting a sample of the remaining transactions for further analysis.

b. All charges selected are related to employees of Business Unit 20013 Duke Energy Business Services (DEBS).

c. These charges represent some of the costs of various employee relocation expenses. The types of expenses can vary by employee and which relocation program they are under, but can include household goods and storage, home finding and rental finding assistance, temporary living assistance, and other expenses related to the relocation process.

d. These costs are normal and reasonable business expenses to attract and retain certain employees.

e. Duke Energy has various relocation programs to assist employees who are required to relocate for employment reasons. See CONFIDENTIAL attachments 1 through 5 for a description of the corporate relocation programs.

Name and Title of Preparer:

a. & b. Laura Hager, Lead Rates & Regulatory Strategy Analyst

c. Patti Doster, Lead Accounting Analyst

d. Quynh Bowman, Director - Gas Rates & Regulatory Strategy

e. Jennifer Edwards, Lead HR Consultant

a. & b. Quynh Bowman, Director - Gas Rates & Regulatory Strategy

c. David Dye, Accounting Manager II

d. Quynh Bowman, Director - Gas Rates & Regulatory Strategy

e. Jake Stewart, Manager – Compensation

Response provided by Piedmont Natural Gas Company, Inc. on September 8, 2020.

PIEDMONT NATURAL GAS COMPANY, INC.
Docket No. 20-00086
Consumer Advocate's First Discovery Request
Date Issued: August 17, 2020
Date Due: September 8, 2020

1-124. Refer to COS DR #15_TN Labor by O&M Acct 12mth ended 3-31-20 Rev 6-15-20 Updated MAC.xlsx. Specifically, refer to tab "TN O&M 4-2019-3-2020 All". Provide responses to the following regarding Resource Type Long Description "Directors' Saving Plan" charged to account 9200.

a. The title of the employee to whom the costs relate.

b. The employee's business unit.

c. The purpose of the expenditure

d. An explanation of how such costs are earned under the program

e. All materials provided to employees outlining the program

RESPONSE: The total amount recorded to Tennessee allocated operations during the test period 4/1/19 - 3/31/20 for Director's Savings Plan expense was a credit (reduction to expense) of $12,243.59.

a. The participants in the Director Savings Plan are not employees of Duke Energy, but rather, are members of the Board of Directors for the Company.

b. The costs associated with the plan participants is recorded on business unit 20013 - Duke Energy Business Services (DEBS).

c. The purpose of the expenditure is to record/adjust the liability to represent the obligation related to Directors' balances of deferred compensation.

d. Directors may elect to receive all or a portion of their annual cash compensation or eligible stock awards on a current basis or defer such compensation under the Directors' Savings Plan.

e. See CONFIDENTIAL attachment.
