Re: Piedmont Natural Gas Company, Inc. Petition for an Adjustment of Rates, Charges, and Tariffs Applicable to Service in Tennessee; Docket No.: 20-00086

Dear Mr. Taylor:

Enclosed for filing are Piedmont Natural Gas Company's ("Piedmont") responses to the Consumer Advocate's *First (Informal) Discovery Request* in the above-referenced docket. Native files can be found at the following link: https://mcguirewoods.sharefile.com/d-s0e6e4afd2b547d4b.

Some of the materials provided are confidential and proprietary trade secrets of Piedmont. Therefore, Piedmont respectfully requests that the Tennessee Public Utility Commission treat those materials in a manner consistent with that designation.

Thank you for your assistance with this matter. If you have any questions about this filing, you may reach me at the number shown above.

Sincerely,

/s/ James H. Jeffries IV

PIEDMONT NATURAL GAS COMPANY, INC.
Docket No. 20-00086
Consumer Advocate's First Discovery Request
Date Issued: August 17, 2020
Date Due: September 8, 2020

1-1. Refer to the Company's response to MFR #10 and provide the following information.

a. Provide a chart of accounts for all accounts listed in the trial balance. If the Company does not have an available chart of accounts (as indicated in the response to MFR 5) then fully explain the reason for this. Further explain how the Commission can obtain a specific description for each of the accounts used by Piedmont to record the transactions in its ledger.

b. Confirm whether the data included in this trial balance is for Tennessee only. If not, then provide a Tennessee only trial balance from May 2011 (the end of the last rate case in Docket 11-00144) through March 2020.

c. Provide a specific explanation of the differences between the "Reg Values" and "SEC Values" trial balance schedules.

RESPONSE:

a. See DR 1-1 attachment 1 for a comprehensive list of all accounts used by Piedmont. Piedmont follows the uniform system of accounts prescribed by FERC. FERC account descriptions are provided here: link

b. The data provided by the Company for its response to MFR item 10 was not specific to TN. See DR 1-1 attachments 2 through 20 for TN allocated income statements and total company balance sheets for May 2011 through March 2020. Please refer to MFR item 10 for 2018-March 2020 total company balance sheets. Piedmont does not have state specific balance sheets.

c. "Reg Values" represents the working trial balance for the Piedmont regulated utility. "SEC Values" represents the working trial balance for the Piedmont SEC

registrant that support the financial statements presented in the 10-K. The difference between the two is that the SEC registrant includes the Piedmont regulated utility in addition to activity for a legal entity that holds equity method investments (Pine Needle, Cardinal, Hardy Storage), and any accounting adjustments made specifically for the SEC reporting of our GAAP financial statements.

Consumer Advocate's First Discovery Request
Date Issued: August 17, 2020
Date Due: September 8, 2020

1-2. Refer to the Company's response to MFR #10. Update this response to provide a detailed monthly trial balance from May 2011 (the end of the last rate case in Docket 11-00144) through March 2020 for Tennessee and DEBS.

RESPONSE: For Tennessee monthly trial balances, please refer to the Company's response to DR 1-1. Please refer to DR 1-2 attachment 1 for DEBS monthly trial balances from October 2016 through March 2020.

Name and Title of Preparer: Nicole Aquilina, Accounting Manager II

Name and Title of Responsible Person: Bryan Manges, Director - Gas Utility & Infrastructure

Response provided by Piedmont Natural Gas Company, Inc. on September 8, 2020.

PIEDMONT NATURAL GAS COMPANY, INC.
Docket No. 20-00086
Consumer Advocate's First Discovery Request
Date Issued: August 17, 2020
Date Due: September 8, 2020

1-3. Refer to the Company's response to MFR #10. Provide a monthly trial balance that includes the detailed subaccounts for gas plant in service and accumulated depreciation from May 2011 (the end of the last rate case in Docket 11-00144) through March 2020 for Tennessee and DEBS

RESPONSE: See the 20 attached reports which contain the monthly plant in service roll forward reports generated from Piedmont's asset accounting system of record, PowerPlan. Each monthly report contains the month end balance in plant in service by plant utility account from May 2011 - March 2020 for Piedmont TN.

Please see the Company's response to Request No. 37 of this data request for the accumulated depreciation roll forward reports for Piedmont TN.

Since Piedmont was acquired by Duke Energy in October of 2016, Piedmont has provided the monthly roll forward reports for DEBS affiliate from October 2016 - March 2020.

Docket No. 20-00086
Consumer Advocate's First Discovery Request
Date Issued: August 17, 2020
Date Due: September 8, 2020

1-4. Refer to the Company's response to MFR #52 regarding the LDC's budgeting process and provide the following information.

a. Provide a copy of the board-approved capital budget for 2020 in the same format as the Attachment to MFR #52.

b. Provide a comparison of the actual capital expenditures and board-presented capital budgets by year from 2011 (date of the last rate case) through 2017 in the same format as the Attachment to MFR #52.

c. Provide a copy of the board-approved operating budget for 2020 for Tennessee operations and all affiliates.

d. Provide a copy of the actual operating expenditures and board-presented operating budgets by year from 2011 (date of the last rate case) through 2019 for Tennessee operations and all affiliates.

RESPONSE: Please see the three attachments. Note that the information in the attachments is for Total Piedmont, since capital and operating budgets are approved and reviewed at this level of detail.

Name and Title of Responsible Person: Joel Rutledge, Director - Finance Gas Segment

Response provided by Piedmont Natural Gas Company, Inc. on September 8, 2020.

PIEDMONT NATURAL GAS COMPANY, INC.
Docket No. 20-00086
Consumer Advocate's First Discovery Request
Date Issued: August 17, 2020
Date Due: September 8, 2020

1-5. Refer to the testimony and exhibits of Company witness Watson regarding the proposed Depreciation Rate Study and provide the following information.

a. Provide a copy of the Depreciation Rate Study, including all workpapers, in Excel format with formulas intact.

b. Provide a copy of all communication between Dane Watson and Alliance Consulting Group with the Company and its affiliates regarding the current depreciation study.

c. Provide a side-by-side comparison of the depreciation rates proposed in this Docket with the studies conducted by Alliance for depreciation rates approved by the Commission in Docket No. 18-00017 for Chattanooga Gas Company and Docket Nos. 14-00146 & 15-00089 for Atmos Energy Corporation, explaining any material differences.

d. Provide a calculation of the $155,695 impact from the implementation of Vintage Group Amortization rates as noted in Footnote 13 of Exhibit DAW-2, Page 71.

RESPONSE:

a. See the four attachments.

b. Please see attachments. Piedmont is producing non-privileged communications between Dane Watson and Alliance Consulting Group with the Company and its affiliates regarding the current depreciation study. Piedmonts objects to producing any communications that constitute attorney-client privilege, work product, or are subject to any other applicable privilege.

c. Piedmont has not performed a comparative analysis and objects to performing such an analysis on the basis that the request is unreasonable, irrelevant, over-reaching and imposes an undue burden on the Company.

d. Please see Exhibit DAW-2 Page 74 of 89 (Depreciation Study Report, Appendix B, Page 2 of 2) as provided in response to part a of this question for the calculation of the Vintage Group Amortization and the requested calculation of the $155,695 annual impact to true up the depreciation reserve at implementation. The Appendix shows a comparison of each account's book to theoretical reserve. The calculated difference, surplus or deficiency, is proposed to be amortized over a five year period.

For Piedmont, there were both surpluses and deficiencies among the accounts. For the accounts where a surplus is calculated (291, 295 and 298), the amount will reduce expense over a period of five years. For the accounts where a deficiency is calculated, it will increase expense over a period of five years. The net effect of these individual account calculations is a reserve deficiency of $778,473.97, which is proposed to be amortized over five years, resulting in the $155,694.79 annual amortization.

Subject: RE: PNG TN Preliminary Rates
Date: Wednesday, April 29, 2020 3:23:25 PM

Hi Denise,

Do you have a way to get more detail on what the assets are in both accounts? The listing I have does not show detail on the assets. In one of the provided files, it noted 26620 as S&I for compressor station, which there is no compressors in transmission currently. So, based on that it might make sense to do a transfer from 26620 into 26900 for plant and reserve. It would eliminate the negative rate on the book reserve scenario and the existing rate is the same for both accounts. I am not sure how PP does its allocated reserve calculation but I do see there is a little variance.

We can include this as a discussion point on our call, but I like the idea of a transfer to 26900 if it makes sense based on the specific assets. Of course Dane's input/agreement is required..

Thanks,
Rhonda

Cc: Dane Watson
Subject: RE: PNG TN Preliminary Rates

Rhonda,

You had a note on the draft results regarding the 26900 assets – I double checked and those assets are using depr group 26620 and therefore a 2.14% rate. I remember there being a similar issue on the NC study. I'm not exactly sure what happened her, but I can see that additions started happening in 2013 and it looks like they just used decided for some reason to use the 26620 rate. It looks like the recommended rate doesn't change that much. That explains why the 26620 looks like it's overdepreciated – I ran a NBV for the 26620 and 26900 assets for 12/2019. It is attached. This is a little different than what is shown on the "Accrual w/ Alloc Res" tab in the draft results. My theory being if we process a transfer in PP to a new depr group (26900 Depr group) and give it the same rate as the 26620 group, I think we would see Powerplan break out the reserve similar? I'm not sure. Thoughts on what you think we should do here?

Denise

OK, so let's try these. There is no difference between Exhibit DAW-2 and the other PDF other than naming. Thought it might be easier to keep one for the files and use the other for filing.

Good review, I was surprised the spell check didn't pick up at least one or two of these.

Hopefully this takes care of it, if you see something else, let me know.

Thanks,
Rhonda

Importance: High

Rhonda –

We have looked these over – there are only a few other minor edits that seem to be needed to the narrative and I think are just a result of edits being made. Can you take a look and make these changes quickly today? All appendices look good.

- Report pg 1- last sentence-" There are a number regulator stations on the transmission and distributions systems located across the service area where the pressure of the natural gas is reduced in order to meet system volume requirements. Suggest "there are a number OF regulator stations…"
- Pg 26 in Word doc, Pg 21 Report under heading Account 263.30 Compressor Equipment- per Word doc "in accordance with *standard* accounting practices", PDF says "in accordance with *current* accounting practices"
- Pg 31 in Word doc, Pg 25 in Report, last paragraph under Account 267.00 Mains- this sentence doesn't make sense: "cathodic protection was typically not applied to pipelines until the 1960s or later and external corrosion degradation many have contributed to a shorter life". I believe MANY was intended to be MAY.
- Report page 34 under Account 280.00 Services-bottom of 2nd paragraph- no space between 2020 and tornadoes
- Report page 35 under Account 281 Meters-last sentence- "Some meter groups (meter families) have failed in the past and been accordingly been replaced, but Company personnel would not expect a materially different life from existing. " . Suggest- 'and have accordingly been

replaced"

- Report page 37- second paragraph: "Discussions with Company personnel indicated that a pilot investment of approximately 500 meters using Itron 500G technology that is being considered by the Company." Suggest removal of the word 'that' as it pertains to a sentence that was struck in revision.

These are not major changes, so if you don't think you can make them today, we may just consider what you sent as Final, but wanted to run it by you.

Thanks,
Melissa

Pia,

Below is the detail on the CNG I provided to Rhonda Watts at Alliance. Let me know if you have any questions or concerns on how I traced the individual items to amounts referenced in docket 14-00086.

I believe we already discussed most of these assets currently sit in the tools account 294 – They wouldn't move to the CNG account 29002 after the study is approved with a new rate/curve/life.

Subject: RE: Depreciation Study and Testimony

Good Morning Rhonda,

Here is the detail I think you are looking for;

$327,662 was the building and that was placed into service Jun 2010 –
$4,738,298.91 was the "new" investment of $4.7 million referenced in Docket 14-00086, this was placed into service 2012-2014.

These 2 numbers give us the $5.0 million investment referenced on page 7 of testimony for Docket 14-00086. The actual total is $5,065,960.88 to tie to the $5.1 million referenced below.

Please let me know if you need further detail.

Melissa,

As Dane and I were reviewing a couple of the comments/edits, we came upon Pia's comment regarding the balance of CNG equipment. See below. I know your team evaluated and provided the detail that is included in the attached Accrual workpaper tab for "Reclass of CNG Equipment", but I do not have enough information to footnote why there is a difference, so I need your help here.

Account 290.02 CNG Equipment (25 R3)
This account consists of station structures and improvements, storage cylinders, compressors, dryers, priority panels, and dispensers used at the Company's CNG refueling stations. Currently, there is about $5.1 million [PPK1] in this account, which includes only approved rate base assets. There is no approved life or dispersion curve for this account.

If we need to discuss live, let me know.

Thanks,
Rhonda

*** Exercise caution. This is an EXTERNAL email. DO NOT open attachments or click links from unknown senders or unexpected email. ***

Hi Melissa,

In regard to Account 266.20, that is the account we transferred to 269.00. My question is, should we put it in Appendix A and footnote " if assets are added to use the whole life rate (1/ASL)", which we have the parameter in Appendix C? My thoughts are it might get used in the future and this way, you would have an approved rate. Otherwise, I would recommend deleting it from Appendix C. Please let me know what you prefer.

Also, I think I need to understand the note from Quynh regarding depreciation expense amounts and the changes that were made in the report in this regard, as it does not match up with our study Appendix A then. Even with the plant balance additions to Appendix A, those are either fully depreciated (Intangibles), Land, and an ARO of which are non-depreciable and/or have no rates, so I am unclear on how the accrual amount changes from what we calculated on Appendix A.

Last, who is best person to discuss the items at the bottom of the word document labeled "Items below to send to Alliance"? I think a quick call would make it easier to clear up a few of the questions I have.

Thanks,
Rhonda

Rhonda/Dane,

The Piedmont team has reviewed the Depreciation Study and have a few suggested edits/comments. Please see the attached word document with suggestions in tracked changes.

Also, the word document "PNG TN 2019 Depreciation Study Comments" file has comments related to the Appendices. The two main ones are that it appears when the appendices were converted to PDF some of the end of the lines fell off, so not sure if there's a different way to incorporate? Also, similar to NC, there is a desire to have all accounts listed on Appendix A so that it's a complete list even for accounts with $0 that weren't studied. We've attached an excel file with the balances to add in. Perhaps there's one more tickmark to add to those that they weren't studied as part of the study and

the rates should be 0.

Please let me know your thoughts and if we can get revised files early next week would be great.

Thanks!
Melissa

I just received these from Dane. I have not looked at the files yet. I know you all were waiting on these, so I thought I would send them right over.

Melissa, I will save these in the Depr Study folder

Denise

[PPK1]This amount was ordered by the TPUC in Docket 14-00086, to be $4.7 million, not $5.1 million. See the notes I most recently shared via email on 3/23/2020. If there is a strong reason to use $5.1 instead of $4.7 here, perhaps it can be footnoted here why the $5.1 is different than the $4.7 million.

Rhonda –

We have looked these over – there are only a few other minor edits that seem to be needed to the narrative and I think are just a result of edits being made. Can you take a look and make these changes quickly today? All appendices look good.

- Report pg 1- last sentence-" There are a number regulator stations on the transmission and distributions systems located across the service area where the pressure of the natural gas is reduced in order to meet system volume requirements. Suggest "there are a number OF regulator stations…"
- Pg 26 in Word doc, Pg 21 Report under heading Account 263.30 Compressor Equipment- per Word doc "in accordance with *standard* accounting practices", PDF says "in accordance with *current* accounting practices"
- Pg 31 in Word doc, Pg 25 in Report, last paragraph under Account 267.00 Mains- this sentence doesn't make sense: "cathodic protection was typically not applied to pipelines until the 1960s or later and external corrosion degradation many have contributed to a shorter life". I believe MANY was intended to be MAY.
- Report page 34 under Account 280.00 Services-bottom of 2nd paragraph- no space between 2020 and tornadoes
- Report page 35 under Account 281 Meters-last sentence- "Some meter groups (meter families) have failed in the past and been accordingly been replaced, but Company personnel would not expect a materially different life from existing. " . Suggest- 'and have accordingly been replaced"
- Report page 37- second paragraph: "Discussions with Company personnel indicated that a pilot investment of approximately 500 meters using Itron 500G technology that is being considered by the Company." Suggest removal of the word 'that' as it pertains to a sentence that was

struck in revision.

These are not major changes, so if you don't think you can make them today, we may just consider what you sent as Final, but wanted to run it by you.

Thanks,
Melissa

*** Exercise caution. This is an EXTERNAL email. DO NOT open attachments or click links from unknown senders or unexpected email. ***

Hi Melissa,

In regard to Account 266.20, that is the account we transferred to 269.00. My question is, should we put it in Appendix A and footnote " if assets are added to use the whole life rate (1/ASL)", which we have the parameter in Appendix C? My thoughts are it might get used in the future and this way, you would have an approved rate. Otherwise, I would recommend deleting it from Appendix C. Please let me know what you prefer.

Also, I think I need to understand the note from Quynh regarding depreciation expense amounts and the changes that were made in the report in this regard, as it does not match up with our study Appendix A then. Even with the plant balance additions to Appendix A, those are either fully depreciated (Intangibles), Land, and an ARO of which are non-depreciable and/or have no rates, so I am unclear on how the accrual amount changes from what we calculated on Appendix A.

Last, who is best person to discuss the items at the bottom of the word document labeled "Items below to send to Alliance"? I think a quick call would make it easier to clear up a few of the questions I have.

Thanks,
Rhonda

Rhonda/Dane,

The Piedmont team has reviewed the Depreciation Study and have a few suggested edits/comments. Please see the attached word document with suggestions in tracked changes.

Also, the word document "PNG TN 2019 Depreciation Study Comments" file has comments related to the Appendices. The two main ones are that it appears when the appendices were converted to PDF some of the end of the lines fell off, so not sure if there's a different way to incorporate? Also, similar to NC, there is a desire to have all accounts listed on Appendix A so that it's a complete list even for accounts with $0 that weren't studied. We've attached an excel file with the balances to add in. Perhaps there's one more tickmark to add to those that they weren't studied as part of the study and the rates should be 0.

Please let me know your thoughts and if we can get revised files early next week would be great.

Hi Melissa,

In regard to Account 266.20, that is the account we transferred to 269.00. My question is, should we put it in Appendix A and footnote " if assets are added to use the whole life rate (1/ASL)", which we have the parameter in Appendix C? My thoughts are it might get used in the future and this way, you would have an approved rate. Otherwise, I would recommend deleting it from Appendix C. Please let me know what you prefer.

Also, I think I need to understand the note from Quynh regarding depreciation expense amounts and the changes that were made in the report in this regard, as it does not match up with our study Appendix A then. Even with the plant balance additions to Appendix A, those are either fully depreciated (Intangibles), Land, and an ARO of which are non-depreciable and/or have no rates, so I am unclear on how the accrual amount changes from what we calculated on Appendix A.

Last, who is best person to discuss the items at the bottom of the word document labeled "Items below to send to Alliance"? I think a quick call would make it easier to clear up a few of the questions I have.

Thanks,
Rhonda

Importance: High

Rhonda/Dane,

The Piedmont team has reviewed the Depreciation Study and have a few suggested edits/comments. Please see the attached word document with suggestions in tracked changes.

Also, the word document "PNG TN 2019 Depreciation Study Comments" file has comments related to the Appendices. The two main ones are that it appears when the appendices were converted to PDF some of the end of the lines fell off, so not sure if there's a different way to incorporate? Also, similar to NC, there is a desire to have all accounts listed on Appendix A so that it's a complete list even for accounts with $0 that weren't studied. We've attached an excel file with the balances to add in. Perhaps there's one more tickmark to add to those that they weren't studied as part of the study and

the rates should be 0.

Please let me know your thoughts and if we can get revised files early next week would be great.

Thanks!
Melissa

Melissa, I will save these in the Depr Study folder

Denise

[PPK1]This amount was ordered by the TPUC in Docket 14-00086, to be $4.7 million, not $5.1 million. See the notes I most recently shared via email on 3/23/2020. If there is a strong reason to use $5.1 instead of $4.7 here, perhaps it can be footnoted here why the $5.1 is different than the $4.7 million.

Wendy,
Some example questions are below.
Do you repair meters?
What is the operational process for retiring meters? Would loop be replaced with pulling a meter?
What type of meter testing do you do? Have there been significant family failures in recent years?
How many total meters do you have? How many of your meters have ERTs?
When was the initial installation of ERTS and were there a significant number that could not be retrofit?
What is your practice related to the meter when an ERT fails? With the ERT when a meter fails?
What is your life expectation for the various meter types and ERTS?
Do you use premanufactured meter loops? If so, for how long?
Would regulators be normally replaced with the loop? Would the loop be replaced if needing to replace the regulator?
Etc…
Dane

*** Exercise caution. This is an EXTERNAL email. DO NOT open attachments or click links from unknown senders or unexpected email. ***

Good morning,

Just a couple of follow up questions on Meters, ERTs and then the meter loop (282-284.

Can you check to see about any salvage or cost of removal for Meters and ERTs accounts? Just want to be sure we capture both life and net salvage. When looking back at the Carolina-Corporate net salvage, it appears that salvage and cost of removal was being recorded to Account 281 only.

Also, we did not see any retirements in accounts 282-284 for the last two years (2018 and 2019), is there something going on here that can be addressed? It would be important just like the meters and ERTS to get the salvage and cost of removal. Follow up question, we do not see any salvage (wouldn't really expect much, if any) or cost of removal for 282-284 – when retiring and replacing the meter loop, do they charge any salvage/cost of removal or is it all rolled into the replacement or maybe charged to 281?

Hi Denise,

I may have asked this already, but what is the proper way to reference who we conducted the study for? Do we say Piedmont Natural Gas Tennessee? Or do we need to say Duke Energy, Piedmont Natural Gas, Tennessee Properties? Or some other variation?

Thanks,

Subject: RE: rates questions

I can't really tell what happened on the 28105.

I just spoke with Melissa and she would like to show what was approved, not necessarily what we are using – especially with the vehicles because it will look weird. We could be overstating if we use a 20% because some of those assets in the vehicle ranges are fully depreciated – I know they have to be because of age.

If you can just change the 3.33%, then I think we are good. No need to send a V4 – I'll just change on my side on V3

Glad we tie balances that is a good start. ☺

Now for the other questions:

- Good catch on 26330 – that should be 3.33%. I will make that change in my accrual file.
- 28105 – Do you have the background on why you are using 6.89% instead of the study 8.34%? When I look back we footnoted that the existing then was based on what is being

used from the allocation from Corporate to Tennessee. If that is still the case and 6.89% is that rate, I will footnote like we did previously. You don't want to get caught not using an authorized rate. Doubt they would care, since the 6.89% is less than 8.34%, but you know the principle to follow here.

- 292 – Strangely enough I don't see 292 included in Appendix A, but there is a rate calculation for auto (5 year) and heavy duty (10 year) (two different accounts) but the rate was calculated as if group, 4.55% and 6.11% respectively. On what hand I think it is more appropriate to show what you are using, but it could raise questions. Maybe, another footnote? Like we needed some more. ☺

I will show 28105 and 292 as you direct me. Let me know if there is concern about footnoting if we need to.

Thanks,
Rhonda

Subject: rates questions

Hi Rhonda,
I have a couple of questions – I tied out the study to the data provided – we look good on all that as far as balances. Where I have a question is on the "existing rates" on the Comparison tab- See attached file.

I see a difference in 26330 – my info shows the last study showed 3.33% and that is the rate we are using – should this be 3.33% instead of 3.30%?
In 28105 – the rate from the last study was 8.34% - but we are using 6.89% - should this reflect what we are actually using?
On the vehicles – we are actually using individual depreciation and they have a 5 year life – so 20% - should the rates shown be 20% because that is what we are using.

Thanks!

Denise

Docket No. 20-00086
Consumer Advocate's First Discovery Request
Date Issued: August 17, 2020
Date Due: September 8, 2020

1-8. Refer to the "Revenue Requirement TN" tab of the "QPB Exhibits_6-27-2020" spreadsheet that was included with the Company's filing. Specifically refer Cell F135 that computes the Company's proposed revenue conversion factor of 1.339565. Provide the following information related to this calculation.

a. Explain why the Company has omitted forfeited discounts from the revenue conversion factor calculation.

b. Explain why the Company has included a "Commission Fee Factor" within the revenue conversion factor calculation when the TPUC fee for the attrition year is based on current rates.

c. Explain why the Company has included a "Gross Receipts Tax Factor" within the revenue conversion factor calculation when the Gross Receipts Taxes for the attrition year is based on current rates.

RESPONSE:

a. The omission was an oversight.

b. The retention factor is used to properly calculate the additional revenue requirement related to the increase in revenue based on the proposed rates. The Regulatory Commission Fee adjustment uses the amount of attrition period revenues before the proposed change in rates. If the proposed rates are implemented, additional expense is incurred for the Regulatory Commission Fee because revenues would increase.

c. The retention factor is used to properly calculate the additional revenue requirement related to the increase in revenue based on the proposed rates. The Gross Receipts Tax adjustment uses the amount of attrition period revenues before the proposed

change in rates. If the proposed rates are implemented, additional expense is incurred for the Gross Receipts Tax because revenues would increase.

PIEDMONT NATURAL GAS COMPANY, INC.
Docket No. 20-00086
Consumer Advocate's First Discovery Request
Date Issued: August 17, 2020
Date Due: September 8, 2020

1-9. Refer to Exhibit PKP-2 which contains a redline copy of the Company's proposed tariff changes. In this Exhibit, it appears that the Company is proposing to delete all references to tariff rates and instead insert language to "Please Refer to Tariff Sheet No. 1". Explain the Company's rationale for deleting the specific base rates from each rate schedule in the Company's tariff. In addition, identify and provide a copy of the Company's proposed Tariff Sheet No. 1.

RESPONSE: Piedmont is proposing to strike the existing numerical rate and charge references shown within each individual Rate Schedule of the Tariff, and to instead simply reference "Tariff Sheet No. 1" therein. Presently, each Rate Schedule in the Tariff lists the amount of the Monthly Charge, the base margin rate component per therm ("Commodity Charge") and, where applicable, the base margin demand rate component per therm ("Demand Charge").

Tariff Sheet No. 1 is already a part of Piedmont's Commission-approved Tennessee Tariff. Currently in effect is "Sixty-Sixth Revised Sheet No. 1", which became effective September 1, 2020.*

Column <1> in Tariff Sheet No. 1 shows the amount of the monthly charge, the base margin rate component per therm and, where applicable, the base margin demand rate component per therm. Additionally, Tariff Sheet No. 1 shows in columnar format all the other rate components for each Rate Schedule, and a summary column with the total billing rate applicable for each Rate Schedule.

NOTES:

In accordance with the Tennessee Public Service Commission order in Docket U-7074 customers metered inside Davidson County are required to pay an additional 6.25% for collection of the Metro Franchise Fee. Customers served by the Ashland City, Fairview, Greenbrier, Hartsville, Mt. Juliet and White House systems are required to pay 5.0%. Customers served by the Franklin and Nolensville systems are required to pay 3%.

PIEDMONT NATURAL GAS COMPANY, INC.
Docket No. 20-00086
Consumer Advocate's First Discovery Request
Date Issued: August 17, 2020
Date Due: September 8, 2020

The rationale for this proposed Tariff change is to improve Piedmont's Tariff by removing duplicative and partial references, thereby yielding a more streamlined and cohesive document overall.

Proposed "Tariff Sheet No. 1" was presented in Exhibit_(KAC-4) in the direct testimony of Piedmont witness Kally Couzens and is attached hereto.

* Sixty-Sixth Revised Sheet No. 1 became effective September 1, 2020. Compared to the previously effective version of Tariff Sheet No. 1, the Sixty-Sixth Revised version amended the footnote in order to update the reference to the franchise fee for customers within the City of Franklin. The Franklin franchise fee rate to customers changed pursuant to the Negotiated Franchise Agreement with the Franklin, Tennessee that was approved by the TPUC on August 10, 2020 in Docket No. 20-00078.

Docket No. 20-00086
Consumer Advocate's First Discovery Request
Date Issued: August 17, 2020
Date Due: September 8, 2020

1-10. Refer to the "O&M Summary Schedule" tab of the "Revenue Requirement Summary" spreadsheet that was included with the Company's filing. Specifically refer Cell G39 of this spreadsheet that computes the Company's Accounting/Ratemaking Adjustments for Income Taxes. Provide a copy of the "Revenue Requirement.xlsx" spreadsheet referenced in the formula for this cell. In addition, provide a copy of all Company workpapers in Excel format with formulas intact that were used to prepare the current rate case that have not already been submitted.

RESPONSE: See attachment.

Response provided by Piedmont Natural Gas Company, Inc. on September 4, 2020.

PIEDMONT NATURAL GAS COMPANY, INC.
Docket No. 20-00086
Consumer Advocate's First Discovery Request
Date Issued: August 17, 2020
Date Due: September 8, 2020

1-11. Refer to the "30 Yr Avg" tab of the "SW Revenue Pro Forma _HDD NOAA Source Data" spreadsheet included with the Company's filing. Specifically refer to Cell AK110 of this spreadsheet which computes 306.10 as the cycle (aggregate from the 16th of the previous month to the 15th of the current month) normal heating degree days for April. Confirm and explain the Company's rationale for using the 30-year period ending March 2019 as a component for this calculation instead of the 30-year period ended March 2020.

RESPONSE: To compute monthly bill cycle heating degree days, Piedmont aggregates the daily heating degree days from the 16th of the previous month to the 15th of the current month. The computation of normal heating degree days, which uses a thirty-year average of daily heating degree days, simply follows this same monthly bill cycle timing rather than calendar month timing. For the month of April 2019, the first month of the Test Period, the Company computed normal daily heating degree days starting March 16th and ending April 15th using the previous thirty years (1990 to 2019) of actual heating degree days. Subsequent Test Period months were computed in the same manner using the previous thirty years of actual data for the respective bill cycle period.

Preparer: Kally Couzens, Manager - Rates & Regulatory Strategy

Responsible Person: Kally Couzens, Manager - Rates & Regulatory Strategy

Response provided by Piedmont Natural Gas Company, Inc. on September 4, 2020.

PIEDMONT NATURAL GAS COMPANY, INC.
Docket No. 20-00086
Consumer Advocate's First Discovery Request
Date Issued: August 17, 2020
Date Due: September 8, 2020

1-12. Refer to the "30 Yr Avg" tab of the "SW Revenue Pro Forma _HDD NOAA Source Data" spreadsheet included with the Company's filing. Specifically refer to Cell AK79 of this spreadsheet which computes 521.20 as the cycle (aggregate from the 16th of the previous month to the 15th of the current month) normal heating degree days for March. Confirm and explain the Company's rationale for using the 30-year average heating degree days of 15.90 for February 29th (leap day) as a component for this calculation instead of adjusting this amount to reflect that leap day only occurs once every 4 years.

RESPONSE: The thirty-year average heating degree days of 15.90 for February 29th (leap day) was computed by taking an average of the eight leap days that occurred from 1991 to 2020. The heating degree days for February 29th should have been adjusted to reflect that leap year occurs once every four years.

PIEDMONT NATURAL GAS COMPANY, INC.
Docket No. 20-00086
Consumer Advocate's First Discovery Request
Date Issued: August 17, 2020
Date Due: September 8, 2020

1-15. Provide the monthly billing determinants (usage, bills, billing demand, and any other tariff elements) in Excel and PDF format from May 2011 (the end of the last rate case in Docket 11-00144) through March 2020 by customer class (Residential, Commercial, Industrial, Public Authority, Interruptible Transportation, Firm Transportation and Special Contract) by Rate Schedule and by Rate Block (usage steps).

RESPONSE: Please see the Company's response to Request No. 13 (620B Reports in Excel and PDF) of this data request for monthly usage and bills by Rate Schedule from May 2011 through March 2020.

Also, please see the four attachments that contain the monthly billing demand determinants and usage by steps for the applicable Rate Schedules from May 2011 through March 2020.

Name and Title of Preparer: Doug Templeton - Rates & Regulatory Strategy Analyst

Name and Title of Responsible Person: Kally Couzens - Manager Rates & Regulatory Strategy

Subject: RE: TN Rate Case - CNG Customers
Attachments: TN CNG Proforma Information-20May2020.xlsx

We updated the ProForma spreadsheet with the requested information. See attached. Below are our responses to the questions you asked.

1) Do we expect the current 4 tariff CNG customers to have the same usage in the attrition period as the test period? Please provide a brief explanation if yes. If no, please provide the recommended adjustments and a brief explanation. *You can use the attached template to provide adjustment data.*
For (2) of the tariff CNG customers we expect them to have the same usage based on their historical usage, number of CNG trucks they have at their site, and the site limitations for adding more CNG trucks. For the other (2) tariff CNG customers we have included them on the attached spreadsheet along with an explanation on their anticipated change in usage.

2) Do we expect to add more tariff TN CNG customers between now and December 2021? If so, please provide the projected attrition period # of bills, usage Dts, demand Dts, etc. in the attached template.
Piedmont anticipates adding (1) additional tariff CNG customer. The requested information is provided on the attached spreadsheet under new customer.

3) It does not appear from our actuals that we apply the $0.50/therm compression charge to any of the existing 4 TN CNG customers. Please confirm that the compression facilities are customer owned.
If Piedmont owns the station, in North Carolina we are allowed to charge up to a $0.40/therm compression charge and in South Carolina we are allowed to charge up to a $0.50/therm compression charge. Piedmont does not have any stations and/or customers where Piedmont charges a compression fee in TN. The compression facilities for the existing (4) tariff TN CNG customers and the (1) new CNG customer are customer owned.

Let us know if you have any questions or need any additional information.

David

Subject: TN Rate Case - CNG Customers

Hi David,
The other day we spoke briefly about the Company's TN rate case and the work that I am doing on the sales and transportation revenue projections. Our test period for the rate case is April 2019 thru March 2020. In this test period, I am reflecting the billing determinates (actual bills and usage Dts) from 4 tariff TN CNG customers. Note, I am only concerned with regulated tariff CNG customers, not the public stations.

My question to your team is if we are projecting revenues for a forward looking attrition period that is January 2021 through December 2021, what adjustments are appropriate for these tariff CNG customers? Please keep in mind that any adjustments or lack of adjustments are subject to discovery by the intervenors in the rate case.

1) Do we expect the current 4 tariff CNG customers to have the same usage in the attrition period as the test period? Please provide a brief explanation if yes. If no, please provide the recommended adjustments and a brief explanation. *You can use the attached template to provide adjustment data.*

2) Do we expect to add more tariff TN CNG customers between now and December 2021? If so, please provide the projected attrition period # of bills, usage Dts, demand Dts, etc. in the attached template.

3) It does not appear from our actuals that we apply the $0.50/therm compression charge to any of the existing 4 TN CNG customers. Please confirm that the compression facilities are customer owned.

Remember that we are looking for reasonable and probable adjustments that we are comfortable explaining to the regulators or other rate case intervenors. Also, if you think I am missing anything, please let me know!

Please feel free to contact me with any questions. I am looking to have this information by the May 22nd if possible. Just let me know if that date is not feasible.

Thank you!!

Piedmont Natural Gas Company, Inc.
Docket No. 20-00086
CAD DR 1 Item 22c

BEFORE THE TENNESSEE REGULATORY AUTHORITY

NASHVILLE, TENNESSEE

October 28, 2010

IN RE:	)	
	)	
APPLICATION OF PIEDMONT NATURAL GAS COMPANY, INC. FOR APPROVAL OF NEGOTIATED GAS REDELIVERY AGREEMENT WITH BRIDGESTONE/FIRESTONE	)	**DOCKET NO. 10-00015**

ORDER GRANTING APPROVAL OF SPECIAL CONTRACT

This matter came before Director Eddie Roberson, Director Kenneth C. Hill and Director Sara Kyle of the Tennessee Regulatory Authority ("TRA" or the "Authority"), the voting panel assigned to this Docket, at a regularly scheduled Authority Conference held on September 27, 2010 for consideration of the *Petition* filed on February 2, 2010 by Piedmont Natural Gas Company, Inc. ("Piedmont" or "Company").

BACKGROUND

The *Petition* seeks approval of a Negotiated Gas Redelivery Agreement ("Agreement") with Bridgestone/Firestone ("Bridgestone"). The Consumer Advocate and Protection Division of the Office of the Attorney General ("Consumer Advocate") filed a *Petition to Intervene* on February 24, 2010. On March 30, 2010, an Order was issued convening a contested case and appointing a hearing officer. At a status conference held on August 12, 2010, the Hearing Officer granted the Consumer Advocate's intervention, identified the issues and set up a procedural schedule to set a date for Piedmont to clarify and correct the *Petition* and a date for the Consumer Advocate to respond. Piedmont submitted its *Clarification and Correction of Petition* on August 20, 2010, correcting the incorrect citation in the *Petition* of an order which

allowed the Company to recover one hundred percent margin loss rather than ninety percent. On August 26, 2010, the Consumer Advocate filed its *Statement of the Consumer Advocate's Intent Not to Contest the Negotiated Gas Redelivery Agreement.*

TERMS AND CONDITIONS OF NEGOTIATED GAS REDELIVERY AGREEMENT

The predecessor agreement between the Company and Bridgestone was approved by orders of the Authority issued on January 22, 1999 and April 4, 2003 in Docket Nos. 98-00339[1] and 02-01271,[2] respectively. The initial term of the contract expired on December 31, 2005, providing for automatic one-year renewals, with the requirement that these extensions be submitted for approval by the Authority. The Company failed to submit these renewals.[3] After discovery of the failure to file extensions, the Company and Bridgestone determined to renegotiate the rates of the special contract to avoid bypass of Piedmont's system and subsequently negotiated a new contract, effective October 27, 2009. According to Piedmont, the Agreement was not submitted to the Authority until four months later due to a delay in the executed agreement being sent back to the Company's corporate headquarters, focus on other dockets before the Authority and time required to research and draft a final petition for submission to the Authority.[4] Piedmont has been charging Bridgestone the new contract rates since November 2009 on a conditional basis, subject to Authority approval of the contract.[5]

Pursuant to the contract terms, Piedmont proposes to provide daily firm redelivery service up 250 Dths per day and interruptible redelivery service up to an additional 5,750 Dths

---

[1] *See In re: Application of Nashville Gas Company, A Division of Piedmont Natural Gas Company, for Approval of Negotiated Gas Redelivery Agreement with Bridgestone/Firestone*, Docket No. 98-00339.
[2] *See In re: Petition of Nashville Gas Company for Extension of Negotiated Gas Redelivery Agreement with Bridgestone/Firestone Industries*, Docket No. 02-01271.
[3] Piedmont states that their failure to submit the extensions was inadvertent and that they continued to serve Bridgestone under the previously approved rates. *Petition*, p. 3 (February 2, 2010).
[4] *Data Response* (February 23, 2010).
[5] *Id.*

per day.[6] Piedmont states that the new rates will provide margin to the Company equivalent to that provided under the current tariffs[7] but with more service flexibility than that allowed under the tariffs.

The initial term of this proposed Agreement is for five (5) years, with automatic one-year extensions ("Rollover Term(s)") unless one or both parties gives written notice of intent not to renew at least twelve (12) months prior to a new contract becoming effective.[8] The Company requests "in the event Piedmont's tariffed margin allocations are changed in a general rate case proceeding during the effective term of the Agreement, and such changed allocations create a margin loss under the Bridgestone Agreement, Piedmont reserves its right to request recovery of ninety percent of such margin loss consistent with the Authority precedent established in Docket Nos. 98-00339 and 02-01271."[9]

FINDINGS AND CONCLUSIONS

TRA Rule 1220-4-1-.07, states:

> Special contracts between public utilities and certain customers prescribing and providing rates, services and practices not covered by or permitted in the general tariffs, schedules, or rules filed by such utilities are subject to supervision, regulation, and control by the Authority. A copy of such special agreements shall be filed, subject to review and approval.

Following precedents set in prior dockets,[10] the panel noted that the Authority has established and considers four criteria. The criteria are whether:

1. Customer by-pass is imminent;

2. Such by-pass would be uneconomic;

---

[6] *Petition*, p. 4 (February 2, 2010).
[7] Rate Schedule No. 313 and Rate Schedule No. 314.
[8] Gas Redelivery Agreement, Article VII, Exhibit A to *Petition*.
[9] *Clarification and Correction of Petition*, p. 2 (August 20, 2010).
[10] *See e.g. In re: Application of Nashville Gas Company, a Division of Piedmont Natural Gas Company, for Approval of Negotiated Gas Redelivery Agreement with Visteon Corporation*, Docket No. 01-00530; *In re: Petition of Nashville Gas Company for Extension of Negotiated Gas Redelivery Agreement with State Industries*, Docket No. 02-01270; *In re: Petition of Nashville Gas Company for Extension of Negotiated Gas Redelivery Agreement with Bridgetsone/Firestone Industries, Docket No. 02-01271.*

3. The contract rates and terms are just and reasonable and are not unjustly preferential or unduly discriminatory; and

4. The contract rates are the highest that could be negotiated.

The panel found that the proposed contract meets the criteria for approval of a discounted long-term transportation contract. The panel also noted that Piedmont reserved the right to recover ninety percent of its margin loss related to negotiated rates as previously allowed by the TRA. The panel found that the Company should be allowed to request ninety percent of its margin loss resulting from the special contract rates consistent with the previous dockets. The panel also found that the agreement is both pro-consumer and pro-business.

Thereafter, the panel voted unanimously to approve the agreement for a five-year term, with an October 27, 2009 effective date and successive one-year terms. Piedmont shall be required to resubmit each year automatic extension following the initial five-year term to ensure that Bridgestone continues to meet the requirements for a long-term special contract and is reminded to submit the renewals in a timely manner.

IT IS THEREFORE ORDERED THAT:

The Negotiated Gas Redelivery Agreement by and between Piedmont Natural Gas Company, Inc. and Bridgestone/Firestone is approved.

Eddie Roberson, Director

Kenneth C. Hill, Director

Sara Kyle, Director

PIEDMONT NATURAL GAS COMPANY, INC.
Docket No. 20-00086
Consumer Advocate's First Discovery Request
Date Issued: August 17, 2020
Date Due: September 8, 2020

1-23. Refer to the "Minimum Margin Agreements" tab of the "1_Sales and Transportation Pro Forma Revenue -CONFIDENTIAL" spreadsheet included with the Company's filing. Provide the following information relating to Minimum Margin Agreements:

a. Provide a copy of the customer contracts establishing the monthly amount of Minimum Margin Agreement.

b. Cite and provide a copy of the Commission Order permitting the Company's establishment of a Minimum Margin Agreement with its customers.

c. Cite and provide a copy of the Company's tariff permitting the Company's establishment of a Minimum Margin Agreement with its customers.

RESPONSE:

a. See CONFIDENTIAL attachment.

b. Piedmont is not aware of, or in possession of, any Commission order that is responsive to this request.

c. The Company's Service Schedules and Service Regulations limit the Company's obligation to provide service to a new customer by requiring the Company to determine that service will be economically feasible (See Process for Obtaining Consent to New or Changed Service). Evaluating economic feasibility requires certain assumptions about projected customer usage. In cases where the costs of the facilities necessary to serve a new customer would render service economically infeasible, the Company has the choice of declining service, accepting a contribution in aid of construction in the amount of the negative net present value revealed by the feasibility analysis, or attempting to negotiate a special contract

with the customer (which would ultimately require TPUC approval if agreed to by the parties). Minimum margin agreements are intended to address situations where economic feasibility is marginal. The service provided to a customer signing such an agreement is based entirely upon the Company's tariffs (including billing rates) and is indistinguishable from service provided to other customers served under the same Service Schedule. Customers asked to execute a minimum margin agreement essentially provide a guarantee to the Company that if it does not use the amount of gas its feasibility analysis is based upon, which is provided by the customer, it will keep Piedmont whole with respect to the margin loss incurred as a result of its under-usage. Piedmont utilizes such agreements in all three states in which it operates (NC, SC and TN), and because the agreements constitute an economic guaranty rather than establishing the terms or rates for utility service, Piedmont does not file them for Commission approval in any state in which it operates. The agreements ultimately preserve the assumptions upon which service is extended, allow the extension of service to customers who might otherwise be denied gas service, and protect other customers from subsidizing service to a customer where that service might ultimately be determined to be infeasible.

Re: **Piedmont Natural Gas Company, Inc. Integrity Management Rider Monthly Report; Docket No. 13-00118**

Dear Mr. Taylor:

Enclosed please find an original and five (5) copies of Piedmont Natural Gas Company Inc.'s ("Piedmont" or "Company") Integrity Management Rider ("IMR" or "Rider") Monthly Report for the month ending November 30, 2019.

Paragraph 7 of Piedmont's Service Schedule 317 requires monthly IMR reports to be filed within 45 days after the end of the month for which the report is being filed. This filing consists of various schedules constituting Piedmont's IMR monthly report for the month ended November 30, 2019.

This material is also being filed today by way of email to the Tennessee Public Utility Commission docket manager, Ectory Lawless. Please file the original and four copies and stamp the additional copies as "filed." Then please return the stamped copy to me by way of our courier.

Thank you for your assistance with this matter. If you have any questions regarding this filing, you may reach me at the number shown above.

Very truly yours,

Paul S. Davidson

Re: Piedmont Natural Gas Company, Inc. Integrity Management Rider Monthly Report; Docket No.: 13-00118

Dear Mr. Taylor:

Enclosed is Piedmont Natural Gas Company, Inc.'s ("Piedmont" or the "Company") Integrity Management Rider ("IMR") Monthly Report for the month ending December 31, 2019.

Paragraph 7 of Piedmont's Service Schedule 317 requires monthly IMR reports to be filed within 45 days after the end of the month for which the report is being filed. This filing consists of various schedules constituting Piedmont's IMR monthly report for the month ended December 31, 2019.

This material is also being filed today by way of email to the Tennessee Public Utility Commission docket manager, Ectory Lawless. Please file the original of each and provide us a "filed" stamped copy of each via our office courier.

Very truly yours,

Paul S. Davidson /dg

Re: **Piedmont Natural Gas Company, Inc. Integrity Management Rider Monthly Report; Docket No.: 13-00118**

Dear Mr. Taylor:

Enclosed is Piedmont Natural Gas Company, Inc.'s ("Piedmont" or the "Company") Integrity Management Rider ("IMR") Monthly Report for the month ending January 31, 2020.

Paragraph 7 of Piedmont's Service Schedule 317 requires monthly IMR reports to be filed within 45 days after the end of the month for which the report is being filed. This filing consists of various schedules constituting Piedmont's IMR monthly report for the month ended January 31, 2020.

This material is also being filed today by way of email to the Tennessee Public Utility Commission docket manager, Ectory Lawless. Please file the original of each and provide us a "filed" stamped copy of each via our office courier.

Very truly yours,

Paul S. Davidson

Re: Piedmont Natural Gas Company, Inc. Integrity Management Rider Monthly Report; Docket No.: 13-00118

Dear Mr. Taylor:

Enclosed please find the original and five (5) copies Piedmont Natural Gas Company, Inc.'s ("Piedmont" or the "Company") Integrity Management Rider ("IMR") Monthly Report for the month ending February 29, 2020.

Paragraph 7 of Piedmont's Service Schedule 317 requires monthly IMR reports to be filed within 45 days after the end of the month for which the report is being filed. This filing consists of various schedules constituting Piedmont's IMR monthly report for the month ended February 29, 2020.

This material is also being filed today by way of email to the Tennessee Public Utility Commission docket manager, Tory Lawless. Please file the original and provide us a "filed" stamped copy of in the enclosed self-addressed stamped envelope.

Very truly yours,

/s/ Paul Davidson

Re: Piedmont Natural Gas Company, Inc. Integrity Management Rider Monthly Report; Docket No.: 13-00118

Dear Mr. Taylor:

Enclosed is Piedmont Natural Gas Company, Inc.'s ("Piedmont" or the "Company") Integrity Management Rider ("IMR") Monthly Report for the month ending March 31, 2020.

Paragraph 7 of Piedmont's Service Schedule 317 requires monthly IMR reports to be filed within 45 days after the end of the month for which the report is being filed. This filing consists of various schedules constituting Piedmont's IMR monthly report for the month ended March 31, 2020.

This material is also being filed today by way of email to the Tennessee Public Utility Commission docket manager, Ectory Lawless. Please file the original of each and provide us a "filed" stamped copy of each either by email, or return copy via U.S. Mail. I have enclosed a self-addressed, postage prepaid envelope should you choose the mail option.

Very truly yours,

Paul S. Davidson

Re: Piedmont Natural Gas Company, Inc.
Integrity Management Rider Monthly Report
Docket No.: 13-00118

Dear Mr. Taylor:

Enclosed is Piedmont Natural Gas Company, Inc.'s ("Piedmont") Integrity Management Rider ("IMR") Monthly Report for the month ending May 31, 2020.

Paragraph 7 of Piedmont's Service Schedule 317 requires monthly IMR reports to be filed within 45 days after the end of the month for which the report is being filed. This filing consists of various schedules constituting Piedmont's IMR monthly report for the month ended May 31, 2020.

This material is also being filed today by way of email to the Tennessee Public Utility Commission docket manager, Ectory Lawless. Please file the original of each and provide us a "filed" stamped copy via email to my assistant, Denise Guye, at denise.guye@wallerlaw.com.

Very truly yours,

Paul S. Davidson

Re: Piedmont Natural Gas Company, Inc. Integrity Management Rider Monthly Report; Docket No.: 13-00118

Dear Mr. Taylor:

Enclosed is Piedmont Natural Gas Company, Inc.'s ("Piedmont" or the "Company") Integrity Management Rider ("IMR") Monthly Report for the month ending June 30, 2020.

Paragraph 7 of Piedmont's Service Schedule 317 requires monthly IMR reports to be filed within 45 days after the end of the month for which the report is being filed. This filing consists of various schedules constituting Piedmont's IMR monthly report for the month ended June 30, 2020.

This material is also being filed today by way of email to the Tennessee Public Utility Commission docket manager, Ectory Lawless. Please file the original of each and provide us a "filed" stamped copy of each via email to denise.guye@wallerlaw.com.

Very truly yours,

Paul S. Davidson

1-27. Refer to the "June 2020 Billing Rates" tab of the "1_Sales and Transportation Pro Forma Revenue -CONFIDENTIAL" spreadsheet included with the Company's filing. Provide a copy of the monthly billing rates for each month of the test period (April 2019 – March 2020) in this same format.

RESPONSE: The versions of Tariff Sheet No. 1 in effect during each month of the Test Period are as follows:

- 04-2019: Fifty-Ninth Revised Sheet No.1 (eff. beginning November 2018)
- 05-2019: Sixtieth Revised Sheet No.1 (eff. beginning May 2019)
- 06-2019: Sixty-First Revised Sheet No.1 (eff. beginning June 2019)
- 07-2019: Sixty-First Revised Sheet No.1 (eff. beginning June 2019)
- 08-2019: Sixty-First Revised Sheet No.1 (eff. beginning June 2019)
- 09-2019: Sixty-First Revised Sheet No.1 (eff. beginning June 2019)
- 10-2019: Sixty-First Revised Sheet No.1 (eff. beginning June 2019)
- 11-2019: Sixty-Second Revised Sheet No.1 (eff. beginning November 2019)
- 12-2019: Sixty-Second Revised Sheet No.1 (eff. beginning November 2019)
- 01-2020: Sixty-Second Revised Sheet No.1 (eff. beginning November 2019)
- 02-2020: Sixty-Second Revised Sheet No.1 (eff. beginning November 2019)
- 03-2020: Sixty-Third Revised Sheet No.1 (eff. beginning March 2020)

Please see the attachment for each of these versions of Tariff Sheet No. 1.

PIEDMONT NATURAL GAS COMPANY, INC.
Docket No. 20-00086
Consumer Advocate's First Discovery Request
Date Issued: August 17, 2020
Date Due: September 8, 2020

Name and Title of Preparer: Cassandra Ramsey, Senior Rates & Regulatory Strategy Analyst

Name and Title of Responsible Person: Kally Couzens, Manager - Rates and Regulatory Strategy

Response provided by Piedmont Natural Gas Company, Inc. on September 2, 2020.

PIEDMONT NATURAL GAS COMPANY, INC.
Docket No. 20-00086
Consumer Advocate's First Discovery Request
Date Issued: August 17, 2020
Date Due: September 8, 2020

1-28. Refer to the "Normal vs. Special" tab of the "MFR 51 Attachment" spreadsheet included with the Company's response to MFR 51 that provides the monthly plant additions split between normal additions and special project additions from January 2017 through March 2020. Provide this same monthly information from May 2011 (the end of the last rate case in Docket 11-00144) through December 2016.

RESPONSE: See the Company's response to Request No. 4(b) for additions by category. Special projects were defined as all those categorized as Government Relocation, Government Reimbursable, System Infrastructure, New Services, New Business and Purchased Meters, ERTS and Regulators.

Name and Title of Preparer: Quynh Bowman, Director - Gas Rates & Regulatory Strategy

Name and Title of Responsible Person: Quynh Bowman, Director - Gas Rates & Regulatory Strategy

Response provided by Piedmont Natural Gas Company, Inc. on September 4, 2020.

PIEDMONT NATURAL GAS COMPANY, INC.
Docket No. 20-00086
Consumer Advocate's First Discovery Request
Date Issued: August 17, 2020
Date Due: September 8, 2020

1-29. Refer to the "Normal vs. Special" tab of the "MFR 51 Attachment" spreadsheet included with the Company's response to MFR 51 that provides the monthly plant additions split between normal additions and special project additions from January 2017 through March 2020. Provide the source and support for the monthly amounts contained on this spreadsheet by subaccount.

RESPONSE: See the 4 attachments. The source of this information is Power Plan, Piedmont's asset accounting system of record. The special projects are those categorized as Government Relocation, Government Reimbursable, System Infrastructure, New Services, New Business and Purchased Meters, ERTS and Regulators.

Name and Title of Preparer: Laura Hager, Lead Rates & Regulatory Strategy Analyst

Name and Title of Responsible Person: Quynh Bowman, Director - Gas Rates & Regulatory Strategy

Response provided by Piedmont Natural Gas Company, Inc. on September 4, 2020.

PIEDMONT NATURAL GAS COMPANY, INC.
Docket No. 20-00086
Consumer Advocate's First Discovery Request
Date Issued: August 17, 2020
Date Due: September 8, 2020

1-30. Refer to the "Additions and Retirements" tab of the "MFR 51 Attachment" spreadsheet included with the Company's response to MFR 51 that provides the monthly plant additions and retirements from January 2017 through March 2020. Provide this same monthly information from May 2011 (the end of the last rate case in Docket 11-00144) through December 2016.

RESPONSE: The source of the information provided in the Company's response to MFR Item 51 is Piedmont's asset accounting system, PowerPlan. PowerPlan is Piedmont's system of record for all capital assets. The information provided in MFR Item 51 was obtained from the monthly plant in service rollforward report, which is a PowerPlan system generated report. The monthly plant in service rollforward report is provided in the Company's response to Request No. 3 of this data request.

Name and Title of Preparer: Laura Hager, Lead Rates & Regulatory Strategy Analyst

Name and Title of Responsible Person: Quynh Bowman, Director - Gas Rates & Regulatory Strategy

PIEDMONT NATURAL GAS COMPANY, INC.
Docket No. 20-00086
Consumer Advocate's First Discovery Request
Date Issued: August 17, 2020
Date Due: September 8, 2020

1-32. Refer to the "CIAC" tab of the "MFR 51 Attachment" spreadsheet included with the Company's response to MFR 51 that provides the annual contributions in aid of construction from January 2017 through March 2020. Provide this same annual information from 2011 (the end of the last rate case in Docket 11-00144) through December 2016.

RESPONSE: Please see the Company's response to Request No. 39.

Name and Title of Preparer: Laura Hager, Lead Rates & Regulatory Strategy Analyst

Name and Title of Responsible Person: Quynh Bowman, Director - Gas Rates & Regulatory Strategy

Response provided by Piedmont Natural Gas Company, Inc. on September 3, 2020.

PIEDMONT NATURAL GAS COMPANY, INC.
Docket No. 20-00086
Consumer Advocate's First Discovery Request
Date Issued: August 17, 2020
Date Due: September 8, 2020

1-33. Refer to the spreadsheet attachment provided with the Company's response to MFR 52 that provides the forecasted plant additions by month from April 2020 through December 2021 for both Tennessee plant and joint plant. Provide the source and support by month for the plant additions contained in this spreadsheet.

RESPONSE: The information provided in the Company's response to MFR item 52 came from a query of Piedmont's asset accounting system of record, PowerPlan. Capital budget details are entered into PowerPlan once approved as part of the capital budgeting process, and then updated in PowerPlan as plans change. Project details such as expenditures by plant utility account, project number, project name, project description, project category and estimated project in service date are all entered into PowerPlan such that queries, such as the one used for MFR item 52, can be run to extract this data.

Name and Title of Preparer: Laura Hager, Lead Rates & Regulatory Strategy Analyst

Name and Title of Responsible Person: Quynh Bowman, Director - Gas Rates & Regulatory Strategy

Response provided by Piedmont Natural Gas Company, Inc. on September 3, 2020.

PIEDMONT NATURAL GAS COMPANY, INC.
Docket No. 20-00086
Consumer Advocate's First Discovery Request
Date Issued: August 17, 2020
Date Due: September 8, 2020

1-34. Refer to the spreadsheet attachment provided with the Company's response to MFR 52 that provides the forecasted plant additions by month from April 2020 through December 2021 for both Tennessee plant and joint plant. In addition, refer to the Company's response to MFR 53 that requested a copy of the authorization for the attrition year construction projects. The Company's response to MFR 53 indicates that there "...are no paper signed authorizations for any projects." However, in order to consider these attrition year construction projects within the rate case, the Consumer Advocate needs to confirm that these construction projects have by the Company's management. Therefore, provide an attestation from the Company's Chief Executive Officer and Chief Financial Officer that the need for the construction projects included in MFR 52 have been reviewed and the financing has been reserved for their construction.

RESPONSE: Duke Energy has a system of financial internal controls that management, including the CEO and CFO, must attest to as defined in the SEC rules. The entity level controls at Duke Energy include a Capitalization Policy and the appropriate review for approval of capital projects. See Duke Energy's 10-k filing at the following link for the CEO and CFO attestation in Item 9A (page 244): https://www.duke-energy.com/_/media/pdfs/our-company/investors/2019-duke-energy-form-10-k.pdf?la=en

Also included in the 10-k is the external auditor's opinion on internal control over financial reporting that Duke Energy maintained effective internal controls during the most recent fiscal year.

PIEDMONT NATURAL GAS COMPANY, INC.
Docket No. 20-00086
Consumer Advocate's First Discovery Request
Date Issued: August 17, 2020
Date Due: September 8, 2020

1-35. Provide a copy of the Company's construction budgets and actual construction expenditures for both Tennessee and joint plant by year from 2011 through 2019.

RESPONSE: See attachment. Budgeted and reported actuals are compared by management at a Total Piedmont level, not at a state jurisdictional level for Piedmont. IMR capital expenditures were tracked separately in the report. These reports were reviewed at monthly financial meetings with gas leadership.

Name and Title of Preparer: John Robson, Director - Gas FPA

Name and Title of Responsible Person: Joel Rutledge, Director - Finance Gas Segment

Response provided by Piedmont Natural Gas Company, Inc. on September 8, 2020.

PIEDMONT NATURAL GAS COMPANY, INC.
Docket No. 20-00086
Consumer Advocate's First Discovery Request
Date Issued: August 17, 2020
Date Due: September 8, 2020

1-36. Refer to the Company's response to MFR58 regarding common plant that is allocated to Nashville. The Company's response indicates that no plant is allocated to Tennessee, but instead a portion of the return on Duke Energy Business Service assets (PPE, Pension and Inventory) as well as a portion of depreciation expense is charged to Tennessee. Provide the following information related allocation:

a. Provide the monthly investment and accumulated depreciation by subaccount on total common plant (PPE, Pension and Inventory) that is allocated to Tennessee by month from May 2011 (the end of the last rate case in Docket 11-00144) through March 2020.

b. Provide the monthly depreciation expense by subaccount on total common plant (PPE, Pension and Inventory) that is allocated to Tennessee by month from May 2011 (the end of the last rate case in Docket 11-00144) through March 2020.

c. Provide a monthly reconciliation between the depreciation expense on joint plant actually charged to Tennessee and the depreciation expense calculated on common plant (PPE, Pension and Inventory) that is allocated to Tennessee by month from May 2011 (the end of the last rate case in Docket 11-00144) through March 2020.

d. Provide the source and support for the depreciation rates used to calculate depreciation expense that is allocated to Tennessee on total common plant (PPE, Pension and Inventory).

e. Provide a copy of all commission orders in Tennessee, North Carolina and South Carolina approving the Company's current depreciation rates on Duke Energy

Business Service assets (PPE, Pension and Inventory) that are allocated to different states.

f. Provide the source and support for the Tennessee allocation factors used to allocate depreciation expense and return on Duke Energy Business Service common assets (PPE, Pension and Inventory) by month from May 2011 (the end of the last rate case in Docket 11-00144) through March 2020.

RESPONSE: Piedmont was acquired by Duke Energy Corporation in October 2016. There was no activity of this nature recorded on Piedmont's books prior to January 1, 2017. Information is provided for January 2017 - March 2020. See attachment for the Company's responses to the individual subparts of this request.

Name and Title of Preparer: Jeff Masucci, Senior Financial Analyst

Name and Title of Responsible Person: Jeff Setser, Director - Allocations and Reporting

Response provided by Piedmont Natural Gas Company, Inc. on September 2, 2020.

PIEDMONT NATURAL GAS COMPANY, INC.
Docket No. 20-00086
Consumer Advocate's First Discovery Request
Date Issued: August 17, 2020
Date Due: September 8, 2020

1-37. Provide the monthly accumulated depreciation balance (direct and allocated) by subaccount from May 2011 (the end of the last rate case in Docket 11-00144) through March 2020 detailing the beginning monthly balance, accrual, retirements, cost of removal, salvage, other adjustments and the ending balance in Excel format with all formulas intact.

RESPONSE: See the 10 Excel attachments. Please note that TN Allocation percentage is updated after each fiscal year-end. Prior to November 2016, Piedmont's fiscal year ended each October 31. Piedmont had a 2-month stub fiscal year from November 2016 to December 2016. Starting in January 2017, Piedmont aligned its fiscal year with the calendar year so as to end each December 31.

Mr. Dane A. Watson, PE, CDP
Managing Partner
Alliance Consulting Group
101 E. Park Blvd., Suite 220
Plano, TX 75074

Subject: Piedmont Natural Gas Rate Case in Tennessee

Dear Mr. Watson:

The purpose of this Engagement Letter ("Engagement") is to retain your services as an expert on behalf of Piedmont Natural Gas (the "Company") in the 2020 rate case in Tennessee ("Rate Case"). The terms of the proposal under this Engagement are as follows:

1. The Company, through its Office of General Counsel, is retaining Dane A. Watson ("Mr. Watson") of Alliance Consulting Group to serve as a consulting expert and witness regarding the Rate Case. The fees and other amounts charged by Mr. Watson with respect to the Rate Case under this Engagement shall be the responsibility of the Company.

2. Mr. Watson will initially provide the Company with a depreciation study and a first draft of testimony estimated at $39,500. Upon the filing of any pre-filed testimony, Mr. Watson will be considered a testifying expert. As a testifying expert, Mr. Watson will make himself reasonably available to testify on behalf of the Company in depositions, hearings, trials and other proceedings as the Company may require in connection with this Rate Case, and Mr. Watson and his staff may also be required to perform other related services such as responding to data and discovery requests.

3. Mr. Watson agrees to perform services as directed by Brian S. Heslin ("Mr. Heslin") or another attorney within the Office of General Counsel of the Company, or by the Company's outside counsel, including, but not limited to:

a. preparing a depreciation study on Tennessee assets;

b. preparing an initial draft of written testimony;

c. responding to data requests;

d. defending his testimony as required;

e. evaluating intervener testimony and preparing and defending rebuttal testimony; and

f. providing other assistance in connection with the Rate Case within the scope of his area of expertise as requested by the Company's Office of General Counsel or its outside counsel.

Mr. Watson agrees to provide services in a professional and timely manner, recognizing that Commission deadlines are involved and that time is of the essence. Mr. Watson will be kept apprised of deadlines and given as much advance notice as practicable in order to facilitate scheduling and minimize conflicts.

4. The Company will pay Mr. Watson at the hourly rates noted in Attachment A for time spent on the Rate Case and the aforementioned services under this Engagement. The Company will also reimburse the direct, out-of-pocket expenses Mr. Watson incurs in the course of performing services in connection with the Rate Case under this Engagement. This includes estimated travel expenses for interviews, copy charges, research costs, and long-distance telephone charges. This also includes the PowerPlant royalty pass through of $1,082.50, up to an annual total of $2,706.25. In addition, the Company will provide offices and facilities for necessary staff during the Rate Case under this Engagement.

5. As a testifying expert, Mr. Watson understands that documents he sends, receives, and generates may become discoverable in litigation, including drafts and notes prepared prior to the time that his opinion, report or pre-filed testimony is finalized. Mr. Watson therefore agrees to preserve any written materials (including emails) that are sent, received, or generated in connection with the Rate Case under this Engagement.

6. Mr. Watson acknowledges and agrees that all information (whether printed, electronic, oral, or otherwise) that he and his staff send, generate, and receive in the course of this Engagement shall be confidential, and shall not be disclosed to any third party without the express consent of the Company's Office of General Counsel or its outside counsel. Mr. Watson and his staff will use such confidential information solely in connection with this Engagement, and for no other purpose. In addition, Mr. Watson and his staff will keep the fact of their retention in this Engagement confidential until he is formerly designated as a testifying expert or the Company's Office of General Counsel or its outside counsel otherwise authorize him to disclose the fact that he has been retained.

7. Mr. Watson may also be receiving certain confidential documents produced in discovery in the Rate Case. If a protective order is entered governing the use of such documents, Mr. Watson agrees that he will abide by its terms.

8. The Company may terminate this Engagement at any time by providing Mr. Watson with written notice of termination, in which event he will be paid for amounts owed through the date of termination. Because of the importance of Mr. Watson's service to the Company in relation to the Rate Case, if he is designated as a testifying expert, he may terminate this Engagement only for good cause, after giving the Company at least thirty (30) days prior

written notice of such cause and the opportunity to cure any default that may exist. The confidentiality provisions of this Engagement survive any termination hereof.

To accept the proposal under this Engagement, please execute where indicated below and email a scan to me. Please do not hesitate to contact me if you have any questions or if there are any further issues we need to discuss.

Again, I look forward to working with you.

Sincerely,

Brian S. Heslin

AGREED AND ACCEPTED:

Mr. Michael Morganti
Principal
Management Applications Consulting Inc.
1103 Rocky Drive, Suite 201
Reading, PA 19609

Subject: Piedmont Natural Gas 2020 Rate Case in Tennessee

Dear Mr. Morganti:

The purpose of this Engagement Letter ("Engagement") is to present a proposal pursuant to which you will serve as an expert on behalf of Piedmont Natural Gas (the "Company") in the 2020 rate case in Tennessee ("Rate Case"). The terms of the proposal under this Engagement are as follows:

1. The Company, through its Office of General Counsel, is retaining Management Applications Consulting, Inc. ("MAC") to serve as consulting experts and witnesses regarding the Rate Case. The fees and other amounts charged by you with respect to this Engagement shall be the responsibility of the Company.

2. You will initially provide us with a study of cash working capital (aka a lead-lag study) and a cost of service study. Paul M. Normand ("Mr. Normand") will serve as the expert filing testimony. As a testifying expert, Mr. Normand will be reasonably available to testify on behalf of the Company in depositions, hearings, trials and other proceedings as we may require in connection with this Rate Case. Mr. Normand and MAC staff may also be required to perform other related services such as responding to data and discovery requests.

3. You agree to perform services as directed by me or another attorney within the Office of General Counsel of the Company, or by the Company's outside counsel, including, but not limited to:

a. preparing a study of cash working capital (aka a lead-lag study);

b. preparing a class cost of service study;

c. responding to data requests;

d. defending your testimony as required;

e. evaluating intervener testimony and preparing and defending rebuttal testimony; and

f. providing other assistance in connection with the Rate Case within the scope of your area of expertise.

You agree to provide services in a professional and timely manner, recognizing that Commission deadlines are involved and that time is of the essence. We will keep you apprised of deadlines and give you as much advance notice as practicable in order to facilitate scheduling and minimize conflicts.

4. The Company will pay you at the hourly rates noted in Attachment A for time spent on the Rate Case and the aforementioned services under this Engagement. The Company will also reimburse the direct, out-of-pocket expenses you incur in the course of performing services in connection with the Rate Case under this Engagement, such as out-of-town travel expenses, copy charges, research costs, and long-distance telephone charges. In addition, the Company will provide offices and facilities for necessary MAC staff during the Rate Case under this Engagement.

5. As a testifying expert, it is understood that documents you send, receive, and generate may become discoverable in litigation, including drafts and notes prepared prior to the time that your opinion, report or pre-filed testimony is finalized. You therefore agree to preserve any written materials (including emails) that are sent, received, or generated in connection with the Rate Case under this Engagement.

6. You acknowledge and agree that all information (whether printed, electronic, oral, or otherwise) that you and MAC staff send, generate, and receive in the course of this Engagement shall be confidential, and shall not be disclosed to any third party without the express consent of the Company's Office of General Counsel or its outside counsel. You and MAC staff will use such confidential information solely in connection with this Engagement, and for no other purpose. In addition, you and MAC staff will keep the fact of your retention in this Engagement confidential until you are formerly designated as a testifying expert or the Company's Office of General Counsel or its outside counsel otherwise authorize you to disclose the fact that you have been retained.

7. You may also be receiving certain confidential documents produced in discovery in the Rate Case. If a protective order is entered governing the use of such documents, you and MAC staff will abide by its terms.

8. The Company may terminate this Engagement at any time by providing you with written notice of termination, in which event you will be paid for amounts owed through the date of termination. Because of the importance of your services to the Company in relation to the Rate Case, if you are designated as a testifying expert, you may terminate this Engagement only for good cause, after giving the Company at least thirty (30) days prior written notice of such cause

and the opportunity to cure any default that may exist. The confidentiality provisions of this Engagement survive any termination hereof.

To accept this proposal, please execute this Engagement where indicated below and email a scan to me. Please do not hesitate to contact me if you have any questions or if there are any further issues we need to discuss.

Again, I look forward to working with you.

Sincerely,

Brian S. Heslin

Mr. Robert B. Hevert
ScottMadden, Inc.
1900 West Park Drive, Suite 250
Westborough, MA 01581

Subject: Piedmont Natural Gas 2020 Tennessee Rate Case

Dear Mr. Hevert:

The purpose of this Engagement Letter ("Engagement") is to retain your services as an expert on behalf of Piedmont Natural Gas (the "Company") in the 2020 rate case in Tennessee ("Rate Case"). The terms of the proposal under this Engagement are as follows:

1. The Company, through its Office of General Counsel, is retaining Robert B. Hevert ("Mr. Hevert") of ScottMadden, Inc. to serve as a consulting expert and possibly a testifying expert regarding the Rate Case. The fees and other amounts charged by Mr. Hevert with respect to the Rate Case under this Engagement shall be the responsibility of the Company.

2. Mr. Hevert will provide the Company with his opinion regarding the Company's cost of equity and direct issues, as well as his opinions on any additional issues which may be requested in the future. Mr. Hevert will provide for review draft written testimony regarding the Company's cost of equity proposed in the Rate Case at any stage of the Rate Case (direct, rebuttal, etc.). Upon the filing of pre-filed testimony, Mr. Hevert will be considered a testifying expert. As a testifying expert, he will be reasonably available to testify on behalf of the Company in depositions, hearings, trials and other proceedings as the Company may require in the Rate Case. Mr. Hevert and his staff may also be required to perform other related services such as responding to data and discovery requests.

3. Mr. Hevert agrees to perform services as directed by Brian S. Heslin ("Mr. Heslin") or another attorney within the Office of General Counsel of the Company, or by the Company's outside counsel, including, but not limited to:

a. preparing preliminary estimates of the Company's cost of equity and analyses regarding likely recommendations of opponents under previously provided methodology;

b. conducting an independent study of the cost of equity capital of the Company;

c. preparing written testimony on his cost of equity findings and return on equity recommendation;

d. responding to data requests;

e. defending his testimony as required;

f. evaluating intervener testimony and preparing and defending rebuttal testimony; and

g. providing other assistance in the Rate Case within the scope of his area of expertise as requested by the Company's Office of General Counsel or its outside counsel.

Mr. Hevert agrees to provide services in a professional and timely manner, recognizing that Commission deadlines are involved and that time is of the essence. Mr. Hevert will be kept apprised of deadlines and given as much advance notice as practicable in order to facilitate scheduling and minimize conflicts.

4. The Company will pay Mr. Hevert at the hourly rates noted in Attachment A for time spent on the Rate Case and the aforementioned services under this Engagement. The Company will also reimburse the direct, out-of-pocket expenses Mr. Hevert incurs in the course of performing services in connection with the Rate Case under this Engagement, such as out-of-town travel expenses, copy charges, research costs, and long-distance telephone charges. In addition, the Company will provide offices and facilities for necessary staff during the Rate Case under this Engagement.

5. As a testifying expert, Mr. Hevert understands that documents sent, received, and generated may become discoverable in litigation, including drafts and notes prepared prior to the time that his opinion, report or pre-filed testimony is finalized. Mr. Hevert therefore agrees to preserve any written materials (including emails) that are sent, received, or generated in connection with the Rate Case under this Engagement.

6. Mr. Hevert acknowledges and agrees that all information (whether printed, electronic, oral, or otherwise) sent, generated, and received by him in the course of the Rate Case shall be confidential, and shall not be disclosed to any third party without the express consent of the Company's Office of General Counsel or its outside counsel. Mr. Hevert will use such confidential information solely in connection with the Rate Case, and for no other purpose. In addition, Mr. Hevert will keep the fact of his retention in this Engagement confidential until he is formerly designated as a testifying expert or the Company's Office of General Counsel or its outside counsel otherwise authorize him to disclose the fact that he has been retained.

7. Mr. Hevert may also be receiving certain confidential documents produced in discovery in the Rate Case. If a protective order is entered governing the use of such documents, Mr. Hevert agrees that he will abide by its terms. Notwithstanding anything contained in this Agreement to the contrary Mr. Hevert shall be allowed to retain one copy of deliverables to document the conduct of its work and its exercise of due professional care.

8. The Company may terminate this Engagement at any time by providing Mr. Hevert with written notice of termination, in which event he will be paid for amounts owed through the

date of termination. Because of the importance of Mr. Hevert's service to the Company in relation to the Rate Case, if he is designated as a testifying expert, he may terminate this Engagement only for good cause, after giving the Company at least thirty (30) days prior written notice of such cause and the opportunity to cure any default that may exist. The confidentiality provisions of this Engagement survive any termination hereof.

To accept the proposal under this Engagement, please execute where indicated below and email a scan to me. Please do not hesitate to contact me if you have any questions or if there are any further issues we need to discuss.

Again, I look forward to working with you.

Sincerely,

Brian S. Heslin

PIEDMONT NATURAL GAS COMPANY, INC.
Docket No. 20-00086
Consumer Advocate's First Discovery Request
Date Issued: August 17, 2020
Date Due: September 8, 2020

1-44. Refer to the "5H_Uncollectibles Adj" spreadsheet included with the Company's response to MFR 12 that provides the uncollectible accounts data for the test period. Provide this same information and format by month for January 2017 through March 2020.

RESPONSE: See attachment for uncollectible information for net charge offs by month for January 2017 - March 2020.

Name and Title of Preparer: Jenny Furr, Rates and Regulatory Strategy Manager

Name and Title of Responsible Person: Quynh Bowman, Director Rates and Regulatory Strategy

Response provided by Piedmont Natural Gas Company, Inc. on September 8, 2020.

PIEDMONT NATURAL GAS COMPANY, INC.
Docket No. 20-00086
Consumer Advocate's First Discovery Request
Date Issued: August 17, 2020
Date Due: September 8, 2020

1-45. Refer to the Company's response to MFR 56 regarding the average monthly balances for select accounts for 2019. Provide this same monthly information from May 2011 (the end of the last rate case in Docket 11-00144) through March 2020 in Excel format.

RESPONSE: See attachment.

Name and Title of Preparer: Nicole Aquilina, Manager - Accounting II

Name and Title of Responsible Person: Bryan Manges, Director - Gas Utility & Infrastructure

Response provided by Piedmont Natural Gas Company, Inc. on September 8, 2020.

PIEDMONT NATURAL GAS COMPANY, INC.
Docket No. 20-00086
Consumer Advocate's First Discovery Request
Date Issued: August 17, 2020
Date Due: September 8, 2020

1-46. Describe in detail the Company's methodology for allocating Corporate and other operating expenses to Tennessee. Provide a calculation of any percentages used with underlying assumptions by year for 2017 to 2020.

RESPONSE: See the 8 attachments for the computation of the Composite Allocation Factors for each fiscal year and the Net Plant Factors for each fiscal year.

Income statement items (with certain exception, as discussed in the next paragraph) that cannot be directly assigned to a jurisdiction are charged to a 2-state (NC/SC) or 3-state (TN/NC/SC) business unit and then allocated using the Composite Allocation Factors for state jurisdictional regulatory reporting purposes. The Composite Allocation Factors are updated annually in January using direct labor percentages, gross plant percentages, and customer count percentages as of December labor and plant from the prior year and March customer counts from the prior year. In general, income statement items that are recorded to a 2-state Piedmont business unit are allocated using the 2-state Composite Allocation Factor, and income statement items that are recorded to a 3-state Piedmont business units are allocated using the 3-state Composite Allocation Factor.

Depreciation expense related to 3-state Piedmont joint property and 2-state Piedmont joint property are allocated using the Net Plant Factor, as the activity in those accounts is driven by plant, not the factors used in calculating the Composite Allocation Factor. The same goes for AFUDC and certain income tax expense accounts.

PIEDMONT NATURAL GAS COMPANY, INC.
Docket No. 20-00086
Consumer Advocate's First Discovery Request
Date Issued: August 17, 2020
Date Due: September 8, 2020

Name and Title of Preparer: Doug Templeton - Rates & Regulatory Strategy Analyst

Name and Title of Responsible Person: Quynh Bowman - Director Gas Rates & Regulatory Strategy

Response provided by Piedmont Natural Gas Company, Inc. on September 8, 2020.

PIEDMONT NATURAL GAS COMPANY, INC.
Docket No. 20-00086
Consumer Advocate's First Discovery Request
Date Issued: August 17, 2020
Date Due: September 8, 2020

1-47. Provide a detailed calculation with explanation for the 22 accounting and pro forma adjustments listed on Exhibit QPB-7, Pages 3 through 5. If these adjustments are already provided on workpapers submitted in response to MFR Item 12, then reference the appropriate Excel file and tab names.

RESPONSE: Please see the MFR 12 Index. The MFR 12 Index was emailed by Piedmont's counsel to the Consumer Advocate Division on August 3, 2020 pursuant to the Consumer Advocate's request.

Name and Title of Preparer: Quynh Bowman, Director - Gas Rates & Regulatory Strategy

Name and Title of Responsible Person: Quynh Bowman, Director - Gas Rates & Regulatory Strategy

Response provided by Piedmont Natural Gas Company, Inc. on September 3, 2020.

PIEDMONT NATURAL GAS COMPANY, INC.
Docket No. 20-00086
Consumer Advocate's First Discovery Request
Date Issued: August 17, 2020
Date Due: September 8, 2020

1-48. Provide a salary & wage and benefit price-out using wage rates at March 31, 2020 including payroll capitalized, for every Tennessee direct employee and every other employee that allocates a portion of their time to Tennessee.

RESPONSE: See attachment. Consistent with the response provided by the Company for MFR Item 31, the salary information provided in response to this request is for employees who direct charged their time to any Piedmont business unit during the test period, including those business units not subject to Tennessee allocation (North Carolina direct BUs, South Carolina Direct BUs and PNG 2-state BUs).

In addition to the benefit loader rate provided within the attachment, incentive compensation is also recorded as a percentage of labor. The incentive compensation rate for 2020 for all non-union employees is 10.5%, except for DEBS employees. The rate for DEBS employees is 11.5%. The rate for union employees is 3%.

Name and Title of Preparer: Laura Hager, Lead Rates & Regulatory Strategy Analyst

Name and Title of Responsible Person: Quynh Bowman, Director - Gas Rates & Regulatory Strategy

Response provided by Piedmont Natural Gas Company, Inc. on September 8, 2020.

PIEDMONT NATURAL GAS COMPANY, INC.
Docket No. 20-00086
Consumer Advocate's First Discovery Request
Date Issued: August 17, 2020
Date Due: September 8, 2020

1-49. Provide the number of Tennessee direct employees and other allocated employees by year from 2011 (the end of the last rate case in Docket 11-00144) through 2019.

RESPONSE: See attachment for the total number of employees reported for Duke Energy Payroll Company 330 and Duke Energy Payroll Company 110. See further explanation in the attachment.

Name and Title of Preparer: Laura Hager, Lead Rates & Regulatory Strategy Analyst

Name and Title of Responsible Person: Quynh Bowman, Director - Gas Rates & Regulatory Strategy

Response provided by Piedmont Natural Gas Company, Inc. on September 4, 2020.

PIEDMONT NATURAL GAS COMPANY, INC.
Docket No. 20-00086
Consumer Advocate's First Discovery Request
Date Issued: August 17, 2020
Date Due: September 8, 2020

1-50. Provide the most current invoice for each type of insurance contained in Insurance Expense.

RESPONSE: See the information provided by the Company in MFR Item 36. The invoices shown under MFR Item 36 are the most current invoices for each type of insurance expense.

Name and Title of Preparer: Nicole Aquilina, Accounting Manager II

Name and Title of Responsible Person: Bryan Manges, Director - Gas Utility and Infrastructure

Response provided by Piedmont Natural Gas Company, Inc. on September 2, 2020.

PIEDMONT NATURAL GAS COMPANY, INC.
Docket No. 20-00086
Consumer Advocate's First Discovery Request
Date Issued: August 17, 2020
Date Due: September 8, 2020

1-51. Provide a copy of all lease agreements contained in Rent Expense.

RESPONSE: Copies of the lease agreements for Piedmont Row Drive LLC and Johnson Poss Government Relations were provided in the Company's response to MFR item 40. The majority of the remaining charges included in rent expense for the test period arise from DEBS (the service company) allocations including, as described in MFR item 58, a charge for return on DEBS assets (PPE, Pension and Inventory) that is charged to Piedmont's gl account 0931008.

Name and Title of Preparer: Laura Hager, Lead Rates & Regulatory Strategy Analyst

Name and Title of Responsible Person: Quynh Bowman, Director - Gas Rates & Regulatory Strategy

Responses provided by Piedmont Natural Gas Company, Inc. on September 8, 2020.

PIEDMONT NATURAL GAS COMPANY, INC.
Docket No. 20-00086
Consumer Advocate's First Discovery Request
Date Issued: August 17, 2020
Date Due: September 8, 2020

1-52. Provide the gross and net expenses after deducting salary and wages, by month from May 2011 (the end of the last rate case in Docket 11-00144) through March 2020 for all NARUC and FERC accounts 700 through 932.

RESPONSE: See attachment. Note that the requested information for calendar years 2017, 2018 and 2019 is not included in the attachment herein because it was already provided by the Company in its response to MFR Item 29.

FEDERAL RESERVE press release

For release at 10 a.m. EST March 3, 2020

The fundamentals of the U.S. economy remain strong. However, the coronavirus poses evolving risks to economic activity. In light of these risks and in support of achieving its maximum employment and price stability goals, the Federal Open Market Committee decided today to lower the target range for the federal funds rate by 1/2 percentage point, to 1 to 1-1/4 percent. The Committee is closely monitoring developments and their implications for the economic outlook and will use its tools and act as appropriate to support the economy.

Voting for the monetary policy action were Jerome H. Powell, Chair; John C. Williams, Vice Chair; Michelle W. Bowman; Lael Brainard; Richard H. Clarida; Patrick Harker; Robert S. Kaplan; Neel Kashkari; Loretta J. Mester; and Randal K. Quarles.

For release at 10 a.m. EST March 3, 2020

Decisions Regarding Monetary Policy Implementation

The Federal Reserve has made the following decisions to implement the monetary policy stance announced by the Federal Open Market Committee in its statement on March 3, 2020:

- The Board of Governors of the Federal Reserve System voted unanimously to set the interest rate paid on required and excess reserve balances at 1.10 percent, effective March 4, 2020.

- As part of its policy decision, the Federal Open Market Committee voted to authorize and direct the Open Market Desk at the Federal Reserve Bank of New York, until instructed otherwise, to execute transactions in the System Open Market Account in accordance with the following domestic policy directive:

> "Effective March 4, 2020, the Federal Open Market Committee directs the Desk to undertake open market operations as necessary to maintain the federal funds rate in a target range of 1 to 1-1/4 percent. In light of recent and expected increases in the Federal Reserve's non-reserve liabilities, the Committee directs the Desk to continue purchasing Treasury bills at least into the second quarter of 2020 to maintain over time ample reserve balances at or above the level that prevailed in early September 2019. The Committee also directs the Desk to continue conducting term and overnight repurchase agreement operations at least through April 2020 to ensure that the supply of reserves remains ample even during periods of sharp increases in non-reserve liabilities, and to mitigate the risk of money market pressures that could adversely affect policy implementation. In addition, the Committee directs the Desk to conduct overnight reverse repurchase operations (and reverse repurchase operations with maturities of more than one day when necessary to accommodate weekend, holiday, or similar trading conventions) at an offering rate of 1.00 percent, in amounts limited only by the value of Treasury securities held outright in the System Open Market Account that are available for such operations and by a per-counterparty limit of $30 billion per day.
>
> The Committee directs the Desk to continue rolling over at auction all principal payments from the Federal Reserve's holdings of Treasury securities and to continue reinvesting all principal payments from the Federal Reserve's holdings of agency debt and agency mortgage-backed securities received during each calendar month. Principal payments from agency debt and agency mortgage-backed securities up to $20 billion per month will continue to be reinvested in Treasury securities to roughly match the maturity composition of Treasury securities outstanding; principal payments in excess of $20 billion per month will continue to be reinvested in agency mortgage-backed securities. Small deviations from these amounts for operational reasons are acceptable.

The Committee also directs the Desk to engage in dollar roll and coupon swap transactions as necessary to facilitate settlement of the Federal Reserve's agency mortgage-backed securities transactions."

- In a related action, the Board of Governors of the Federal Reserve System voted unanimously to approve a 1/2 percentage point decrease in the primary credit rate to 1.75 percent, effective March 4, 2020. In taking this action, the Board approved requests to establish that rate submitted by the Boards of Directors of the Federal Reserve Banks of Minneapolis and New York.

This information will be updated as appropriate to reflect decisions of the Federal Open Market Committee or the Board of Governors regarding details of the Federal Reserve's operational tools and approach used to implement monetary policy.

More information regarding open market operations and reinvestments may be found on the Federal Reserve Bank of New York's website.

FEDERAL RESERVE BANK *of* NEW YORK *Serving the Second District and the Nation*

OPERATING POLICY

Statement Regarding Treasury Reserve Management Purchases and Repurchase Operations

March 12, 2020

The Open Market Trading Desk (the Desk) at the Federal Reserve Bank of New York has released a new monthly schedule of Treasury securities operations and has updated the current monthly schedule of repurchase agreement (repo) operations. Pursuant to instruction from the Chair in consultation with the FOMC, adjustments have been made to these schedules to address temporary disruptions in Treasury financing markets. The Treasury securities operation schedule includes a change in the maturity composition of purchases to support functioning in the market for U.S. Treasury securities. Term repo operations in large size have been added to enhance functioning of secured U.S. dollar funding markets.

- As a part of its $60 billion reserve management purchases for the monthly period beginning March 13, 2020 and continuing through April 13, 2020, the Desk will conduct purchases across a range of maturities to roughly match the maturity composition of Treasury securities outstanding. Specifically, the Desk plans to distribute reserve management purchases across eleven sectors, including nominal coupons, bills, Treasury Inflation-Protected Securities, and Floating Rate Notes. The distribution of purchases across sectors will be the same distribution as the Desk uses to reinvest principal payments from the Federal Reserve's holdings of agency debt and agency MBS in Treasury securities. The first such purchases will begin tomorrow, March 13, 2020.
- Today, March 12, 2020, the Desk will offer $500 billion in a three-month repo operation at 1:30 pm ET that will settle on March 13, 2020. Tomorrow, the Desk will further offer $500 billion in a three-month repo operation and $500 billion in a one-month repo operation for same day settlement. Three-month and one-month repo operations for $500 billion will be offered on a weekly basis for the remainder of the monthly schedule. The Desk will continue to offer at least $175 billion in daily overnight repo operations and at least $45 billion in two-week term repo operations twice per week over this period.

These changes are being made to address highly unusual disruptions in Treasury financing markets associated with the coronavirus outbreak. Reserve management purchases into the second quarter will continue to be conducted with this maturity allocation. The terms of operations will be adjusted as needed to foster smooth Treasury market functioning and efficient and effective policy implementation.

Detailed information on the schedule of Treasury purchases is provided on the Treasury Securities Operational Details page. Detailed information on the schedule and parameters of term and overnight repo operations are provided on the Repurchase Agreement Operational Details page.

Press Release

March 15, 2020

Coordinated Central Bank Action to Enhance the Provision of U.S. Dollar Liquidity

For release at 5:00 p.m. EDT

Share

The Bank of Canada, the Bank of England, the Bank of Japan, the European Central Bank, the Federal Reserve, and the Swiss National Bank are today announcing a coordinated action to enhance the provision of liquidity via the standing U.S. dollar liquidity swap line arrangements.

These central banks have agreed to lower the pricing on the standing U.S. dollar liquidity swap arrangements by 25 basis points, so that the new rate will be the U.S. dollar overnight index swap (OIS) rate plus 25 basis points. To increase the swap lines' effectiveness in providing term liquidity, the foreign central banks with regular U.S. dollar liquidity operations have also agreed to begin offering U.S. dollars weekly in each jurisdiction with an 84-day maturity, in addition to the 1-week maturity operations currently offered. These changes will take effect with the next scheduled operations during the week of March 16.[1] The new pricing and maturity offerings will remain in place as long as appropriate to support the smooth functioning of U.S. dollar funding markets.

The swap lines are available standing facilities and serve as an important liquidity backstop to ease strains in global funding markets, thereby helping to mitigate the effects of such strains on the supply of credit to households and businesses, both domestically and abroad.

For media inquiries, call 202-452-2955.

Implementation Note issued March 15, 2020

Decisions Regarding Monetary Policy Implementation

The Federal Reserve has made the following decisions to implement the monetary policy stance announced by the Federal Open Market Committee in its statement on March 15, 2020:

- The Board of Governors of the Federal Reserve System voted unanimously to set the interest rate paid on required and excess reserve balances at 0.10 percent, effective March 16, 2020.
- As part of its policy decision, the Federal Open Market Committee voted to authorize and direct the Open Market Desk at the Federal Reserve Bank of New York, until instructed otherwise, to execute transactions in the System Open Market Account in accordance with the following domestic policy directive:

  "Effective March 16, 2020, the Federal Open Market Committee directs the Desk to undertake open market operations as necessary to maintain the federal funds rate in a target range of 0 to 1/4 percent. The Committee directs the Desk to increase over coming months the System Open Market Account holdings of Treasury securities and agency mortgage-backed securities (MBS) by at least $500 billion and by at least $200 billion, respectively. The Committee instructs the Desk to conduct these purchases at a pace appropriate to support the smooth functioning of markets for Treasury securities and agency MBS.

  The Committee also directs the Desk to continue conducting term and overnight repurchase agreement operations to ensure that the supply of reserves remains ample and to support the smooth functioning of short-term U.S. dollar funding markets. In addition, the Committee directs the Desk to conduct overnight reverse repurchase operations (and reverse repurchase operations with maturities of more than one day when necessary to accommodate weekend, holiday, or similar trading conventions) at an offering rate of 0.00 percent, in amounts limited only by the value of Treasury securities held outright in the System Open Market Account that are available for such operations and by a per-counterparty limit of $30 billion per day.

  The Committee directs the Desk to continue rolling over at auction all principal payments from the Federal Reserve's holdings of Treasury securities and to reinvest all principal payments from the Federal Reserve's holdings of agency debt and agency mortgage-backed securities received during each calendar month in agency mortgage-backed securities. Small deviations from these amounts for operational reasons are acceptable.

  The Committee also directs the Desk to engage in dollar roll and coupon swap transactions as necessary to facilitate settlement of the Federal Reserve's agency mortgage-backed securities transactions.

- In a related action, the Board of Governors of the Federal Reserve System voted unanimously to approve a 1-1/2 percentage point decrease in the primary credit rate to 0.25 percent, effective March 16, 2020. In taking this action, the Board approved requests to establish that rate submitted by the Boards of Directors of the Federal Reserve Banks of Minneapolis and New York.

This information will be updated as appropriate to reflect decisions of the Federal Open Market Committee or the Board of Governors regarding details of the Federal Reserve's operational tools and approach used to implement monetary policy.

More information regarding open market operations and reinvestments may be found on the Federal Reserve Bank of New York's website .

Agencies announce two actions to support lending to households and businesses

Board of Governors of the Federal Reserve System

Federal Deposit Insurance Corporation

Office of the Comptroller of the Currency

For release at 12:00 p.m. EDT

Share

The federal bank regulatory agencies today announced two actions to support the U.S. economy and allow banking organizations to continue lending to households and businesses:

- Allowing early adoption of a new methodology on how certain banking organizations are required to measure counterparty credit risk derivatives contracts; and
- Providing an optional extension of the regulatory capital transition for the new credit loss accounting standard.

The "standardized approach for measuring counterparty credit risk" rule, also known as SA-CCR, was finalized by the agencies in November 2019, with an effective date of April 1. It reflects improvements made to the derivatives market since the 2007-2008 financial crisis, such as central clearing and margin requirements. To help improve current market liquidity and smooth disruptions, the agencies will permit banking organizations to early adopt SA-CCR for the reporting period ending March 31.

Additionally, the agencies issued an interim final rule that allows banking organizations to mitigate the effects of the "current expected credit loss," or CECL, accounting standard in their regulatory capital. Banking organizations that are required under U.S. accounting standards to adopt CECL this year can mitigate the estimated cumulative regulatory capital effects for up to two years. This is in addition to the three-year transition period already in place. Alternatively, banking organizations can follow the capital transition rule issued by the banking agencies in February 2019.

The changes will be effective immediately and the agencies will accept comments on the CECL interim final rule for 45 days.

Federal Reserve announces establishment of a temporary FIMA Repo Facility to help support the smooth functioning of financial markets

For release at 8:30 a.m. EDT

Share

The Federal Reserve on Tuesday announced the establishment of a temporary repurchase agreement facility for foreign and international monetary authorities (FIMA Repo Facility) to help support the smooth functioning of financial markets, including the U.S. Treasury market, and thus maintain the supply of credit to U.S. households and businesses. The FIMA Repo Facility will allow FIMA account holders, which consist of central banks and other international monetary authorities with accounts at the Federal Reserve Bank of New York, to enter into repurchase agreements with the Federal Reserve. In these transactions, FIMA account holders temporarily exchange their U.S. Treasury securities held with the Federal Reserve for U.S. dollars, which can then be made available to institutions in their jurisdictions. This facility should help support the smooth functioning of the U.S. Treasury market by providing an alternative temporary source of U.S. dollars other than sales of securities in the open market. It should also serve, along with the U.S. dollar liquidity swap lines the Federal Reserve has established with other central banks, to help ease strains in global U.S. dollar funding markets.

The Federal Reserve provides U.S. dollar-denominated banking services to FIMA account holders in support of Federal Reserve objectives and in recognition of the U.S. dollar's predominant role as an international currency. The FIMA Repo Facility, which adds to the range of services the Federal Reserve provides, will be available beginning April 6 and will continue for at least 6 months.

Trump signs $484B coronavirus relief package into law

Friday, April 24, 2020 12:47 PM ET

By Alison Bennett
Market Intelligence

President Donald Trump signed a measure April 24 that will give the Small Business Administration more than $300 billion in new funding for emergency loans to small companies dealing with the economic fallout of the coronavirus.

The action came after the House overwhelmingly passed the $484 billion Paycheck Protection Program and Health Care Enhancement Act on April 23. The Senate passed the bill via unanimous consent April 21.

The measure grants the SBA $310 billion in additional money for its Paycheck Protection Program, designed to provide small businesses with loans of up to $10 million that will be forgiven if 75% of the money is allocated to payroll and 25% to rent, utilities and mortgage interest.

As a result of intense negotiations between Democrats and Republicans, $60 billion of the $310 billion is designated specifically for smaller lenders, which lawmakers hope will ensure the money ends up going to small businesses.

Of that $60 billion, $30 billion will go to loans made by insured depository institutions and credit unions with assets between $10 billion and $50 billion, while the remaining $30 billion will be set aside for loans made by community banks, small insured depository institutions and credit unions with assets less than $10 billion.

That carve-out was welcomed by the Independent Community Bankers of America, which lobbied for specific funding for smaller lenders.

"These funds will help small-business customers in urban, suburban and rural communities weather the COVID-19 emergency," ICBA President and CEO Rebeca Romero Rainey said following the House vote.

The PPP began as part of the $2 trillion Coronavirus Aid, Relief, and Economic Security Act and originally had $349 billion in funds, but that money ran out in less than two weeks. Despite the additional cash infusion, some stakeholders fear the new funding will also run dry quickly due to the large number of loan applications still in the pipeline and a huge wave of new applications expected.

In addition to the PPP money, the new legislation will give the SBA $50 billion for disaster relief loans and $10 billion for emergency Economic Injury Disaster Loan grants. It also clarifies that agricultural enterprises are eligible for PPP loans.

The law will also provide $75 billion for hospitals and $25 billion for coronavirus testing. Democrats had strongly sought more money for state and local governments but were not able to secure it in this relief package.

Federal Reserve takes additional actions to provide up to $2.3 trillion in loans to support the economy

For release at 8:30 a.m. EDT

Share

The Federal Reserve on Thursday took additional actions to provide up to $2.3 trillion in loans to support the economy. This funding will assist households and employers of all sizes and bolster the ability of state and local governments to deliver critical services during the coronavirus pandemic.

"Our country's highest priority must be to address this public health crisis, providing care for the ill and limiting the further spread of the virus," said Federal Reserve Board Chair Jerome H. Powell. "The Fed's role is to provide as much relief and stability as we can during this period of constrained economic activity, and our actions today will help ensure that the eventual recovery is as vigorous as possible."

The Federal Reserve's role is guided by its mandate from Congress to promote maximum employment and stable prices, along with its responsibilities to promote the stability of the financial system. In support of these goals, the Federal Reserve is using its full range of authorities to provide powerful support for the flow of credit in the economy.

The actions the Federal Reserve is taking today to support employers of all sizes and communities across the country will:

- Bolster the effectiveness of the Small Business Administration's Paycheck Protection Program (PPP) by supplying liquidity to participating financial institutions through term financing backed by PPP loans to small businesses. The PPP provides loans to small businesses so that they can keep their workers on the payroll. The Paycheck Protection Program Liquidity Facility (PPPLF) will extend credit to eligible financial institutions that originate PPP loans, taking the loans as collateral at face value;
- Ensure credit flows to small and mid-sized businesses with the purchase of up to $600 billion in loans through the Main Street Lending Program. The Department of the Treasury, using funding from the Coronavirus Aid, Relief, and Economic Security Act (CARES Act) will provide $75 billion in equity to the facility;
- Increase the flow of credit to households and businesses through capital markets, by expanding the size and scope of the Primary and Secondary Market Corporate Credit Facilities (PMCCF and SMCCF) as well as the Term Asset-Backed Securities Loan Facility (TALF). These three programs will now support up to $850 billion in credit backed by $85 billion in credit protection provided by the Treasury; and
- Help state and local governments manage cash flow stresses caused by the coronavirus pandemic by establishing a Municipal Liquidity Facility that will offer up to $500 billion in lending to states and municipalities. The Treasury will provide $35 billion of credit protection to the Federal Reserve for the Municipal Liquidity Facility using funds appropriated by the CARES Act.

The Main Street Lending Program will enhance support for small and mid-sized businesses that were in good financial standing before the crisis by offering 4-year loans to companies employing up to 10,000 workers or with revenues of less than $2.5 billion. Principal and interest payments will be deferred for one year. Eligible banks may originate new Main Street loans or use Main Street loans to increase the size of existing loans to

businesses. Banks will retain a 5 percent share, selling the remaining 95 percent to the Main Street facility, which will purchase up to $600 billion of loans. Firms seeking Main Street loans must commit to make reasonable efforts to maintain payroll and retain workers. Borrowers must also follow compensation, stock repurchase, and dividend restrictions that apply to direct loan programs under the CARES Act. Firms that have taken advantage of the PPP may also take out Main Street loans.

The Federal Reserve and the Treasury recognize that businesses vary widely in their financing needs, particularly at this time, and, as the program is being finalized, will continue to seek input from lenders, borrowers, and other stakeholders to make sure the program supports the economy as effectively and efficiently as possible while also safeguarding taxpayer funds. Comments may be sent to the feedback form until April 16.

To support further credit flow to households and businesses, the Federal Reserve will broaden the range of assets that are eligible collateral for TALF. As detailed in an updated term sheet, TALF-eligible collateral will now include the triple-A rated tranches of both outstanding commercial mortgage-backed securities and newly issued collateralized loan obligations. The size of the facility will remain $100 billion, and TALF will continue to support the issuance of asset-backed securities that fund a wide range of lending, including student loans, auto loans, and credit card loans.

The Municipal Liquidity Facility will help state and local governments better manage cash flow pressures in order to continue to serve households and businesses in their communities. The facility will purchase up to $500 billion of short term notes directly from U.S. states (including the District of Columbia), U.S. counties with a population of at least two million residents, and U.S. cities with a population of at least one million residents. Eligible state-level issuers may use the proceeds to support additional counties and cities. In addition to the actions described above, the Federal Reserve will continue to closely monitor conditions in the primary and secondary markets for municipal securities and will evaluate whether additional measures are needed to support the flow of credit and liquidity to state and local governments.

All of the facilities mentioned above are established by the Federal Reserve under the authority of Section 13(3) of the Federal Reserve Act, with approval of the Treasury Secretary.

The Federal Reserve remains committed to using its full range of tools to support the flow of credit to households and businesses to counter the economic impact of the coronavirus pandemic and promote a swift recovery once the disruptions abate.

Note: Components may not sum to totals because of rounding.

1. Includes securities lent to dealers under the overnight securities lending facility; refer to table 1A.
2. Face value of the securities.
3. Compensation that adjusts for the effect of inflation on the original face value of inflation-indexed securities.
4. Guaranteed by Fannie Mae, Freddie Mac, and Ginnie Mae. The current face value shown is the remaining principal balance of the securities.
5. Reflects the premium or discount, which is the difference between the purchase price and the face value of the securities that has not been amortized. For U.S. Treasury securities, Federal agency debt securities, and mortgage-backed securities, amortization is on an effective-interest basis.
6. Cash value of agreements, which are collateralized by U.S. Treasury and federal agency securities.
7. Refer to the note on consolidation accompanying table 5.
8. Dollar value of foreign currency held under these agreements valued at the exchange rate to be used when the foreign currency is returned to the foreign central bank. This exchange rate equals the market exchange rate used when the foreign currency was acquired from the foreign central bank.
9. Revalued daily at current foreign currency exchange rates.
10. Includes accrued interest, which represents the daily accumulation of interest earned, and other accounts receivable.
11. Cash value of agreements, which are collateralized by U.S. Treasury securities, federal agency debt securities, and mortgage-backed securities.
12. Includes deposits held at the Reserve Banks by international and multilateral organizations, government-sponsored enterprises, designated financial market utilities, and deposits held by depository institutions in joint accounts in connection with their participation in certain private-sector payment arrangements. Also includes certain deposit accounts other than the U.S. Treasury, General Account, for services provided by the Reserve Banks as fiscal agents of the United States.
13. Includes the liability for earnings remittances due to the U.S. Treasury.

H.4.1

5. Statement of Condition of Each Federal Reserve Bank, February 5, 2020 (continued)

1. Includes securities lent to dealers under the overnight securities lending facility; refer to table 1A.
2. Face value of the securities.
3. Includes the original face value of inflation-indexed securities and compensation that adjusts for the effect of inflation on the original face value of such securities.
4. Guaranteed by Fannie Mae, Freddie Mac, and Ginnie Mae. The current face value shown is the remaining principal balance of the securities.
5. Reflects the premium or discount, which is the difference between the purchase price and the face value of the securities that has not been amortized. For U.S. Treasury securities, Federal agency debt securities, and mortgage-backed securities, amortization is on an effective-interest basis.
6. Cash value of agreements, which are collateralized by U.S. Treasury and federal agency securities.
7. Refer to the note on consolidation below.
8. Dollar value of foreign currency held under these agreements valued at the exchange rate to be used when the foreign currency is returned to the foreign central bank. This exchange rate equals the market exchange rate used when the foreign currency was acquired from the foreign central bank.
9. Revalued daily at current foreign currency exchange rates.
10. Includes accrued interest, which represents the daily accumulation of interest earned, and other accounts receivable.
11. Cash value of agreements, which are collateralized by U.S. Treasury securities, federal agency debt securities, and mortgage-backed securities.
12. Includes deposits held at the Reserve Banks by international and multilateral organizations, government-sponsored enterprises, designated financial market utilities, and deposits held by depository institutions in joint accounts in connection with their participation in certain private-sector payment arrangements. Also includes certain deposit accounts other than the U.S. Treasury, General Account, for services provided by the Reserve Banks as fiscal agents of the United States.
13. Represents the estimated weekly remittances due to U.S. Treasury. The amounts on this line represent the residual net earnings that the Federal Reserve Banks remit to the U.S. Treasury after providing for the costs of operations, payment of dividends, and the amount necessary to maintain a $6.825 billion surplus.

Note on consolidation:

On June 26, 2008, the Federal Reserve Bank of New York (FRBNY) extended a loan to Maiden Lane LLC (ML) under the authority of section 13(3) of the Federal Reserve Act. ML was formed to acquire certain assets of Bear Stearns and to manage those assets through time to maximize repayment of the credit extended and minimize disruption to financial markets. On June 14, 2012, the remaining outstanding balance of the senior loan from FRBNY to ML was repaid in full, with interest. On November 15, 2012, the remaining outstanding balance of the subordinated loan from JPMorgan Chase & Co. to ML was repaid in full, with interest. FRBNY was the primary beneficiary of ML because it received any residual returns and could have absorbed any residual losses should they have occurred. Consistent with generally accepted accounting principles, the assets and liabilities of ML were consolidated with the assets and liabilities of FRBNY in the preparation of the statements of condition shown on this release. As a consequence of the consolidation, the extension of credit from FRBNY to ML was eliminated, the net assets of ML appeared as assets on the previous page (and in table 1 and table 4), and the liabilities of ML to entities other than FRBNY, including those with recourse only to the ML portfolio holdings, were included in other liabilities in this table (and table 1 and table 4).

Note: Components may not sum to totals because of rounding.
...Not applicable.

1. Loans includes primary, secondary, and seasonal loans and credit extended through the Primary Dealer Credit Facility, Money Market Mutual Fund Liquidity Facility, Paycheck Protection Program Liquidity Facility, and other credit extensions. Loans exclude the loan from the Federal Reserve Bank of New York (FRBNY) to Commercial Paper Funding Facility II LLC, which was eliminated when preparing the FRBNY's statement of condition consistent with consolidation under generally accepted accounting principles.
2. Face value. For inflation-indexed securities, includes the original face value and compensation that adjusts for the effect of inflation on the original face value of such securities.
3. Face value.
4. Guaranteed by Fannie Mae, Freddie Mac, and Ginnie Mae. The current face value shown is the remaining principal balance of the securities.
5. Face value of commercial paper held by Commercial Paper Funding Facility II LLC.
6. Cash value of agreements.
7. Dollar value of foreign currency held under these agreements valued at the exchange rate to be used when the foreign currency is returned to the foreign central bank. This exchange rate equals the market exchange rate used when the foreign currency was acquired from the foreign central bank.

H.4.1

3. Supplemental Information on Mortgage-Backed Securities

Millions of dollars

Account name	Wednesday Apr 29, 2020
Mortgage-backed securities held outright[1]	1,604,720
Residential mortgage-backed securities	1,597,206
Commercial mortgage-backed securities	7,514
Commitments to buy mortgage-backed securities[2]	301,251
Commitments to sell mortgage-backed securities[2]	0
Cash and cash equivalents[3]	27

1. Guaranteed by Fannie Mae, Freddie Mac, and Ginnie Mae. The current face value shown is the remaining principal balance of the securities.
2. Current face value. Includes residential and commercial mortgage-backed securities. Residential mortgage-backed securities generally settle within 180 calendar days and include commitments associated with outright transactions, dollar rolls, and coupon swaps. Commercial mortgage-backed securities generally settle within three business days.
3. This amount is included in other Federal Reserve assets in table 1 and in other assets in table 4 and table 5.

Note: Components may not sum to totals because of rounding.

1. Includes securities lent to dealers under the overnight securities lending facility; refer to table 1A.
2. Face value of the securities.
3. Compensation that adjusts for the effect of inflation on the original face value of inflation-indexed securities.
4. Guaranteed by Fannie Mae, Freddie Mac, and Ginnie Mae. The current face value shown is the remaining principal balance of the securities.
5. Reflects the premium or discount, which is the difference between the purchase price and the face value of the securities that has not been amortized. For U.S. Treasury securities, Federal agency debt securities, and mortgage-backed securities, amortization is on an effective-interest basis.
6. Cash value of agreements, which are collateralized by U.S. Treasury and federal agency securities.
7. Loans includes primary, secondary, and seasonal loans and credit extended through the Primary Dealer Credit Facility, Money Market Mutual Fund Liquidity Facility, Paycheck Protection Program Liquidity Facility, and other credit extensions.
8. Refer to the note on consolidation accompanying table 5.
9. Dollar value of foreign currency held under these agreements valued at the exchange rate to be used when the foreign currency is returned to the foreign central bank. This exchange rate equals the market exchange rate used when the foreign currency was acquired from the foreign central bank.
10. Revalued daily at current foreign currency exchange rates.
11. Includes accrued interest, which represents the daily accumulation of interest earned, and other accounts receivable. Also includes net portfolio holdings of Maiden Lane LLC.
12. Cash value of agreements, which are collateralized by U.S. Treasury securities, federal agency debt securities, and mortgage-backed securities.
13. Includes deposits held at the Reserve Banks by international and multilateral organizations, government-sponsored enterprises, designated financial market utilities, and deposits held by depository institutions in joint accounts in connection with their participation in certain private-sector payment arrangements. Also includes certain deposit accounts other than the U.S. Treasury, General Account, for services provided by the Reserve Banks as fiscal agents of the United States.
14. Includes the liability for earnings remittances due to the U.S. Treasury.

H.4.1

5. Statement of Condition of Each Federal Reserve Bank, April 29, 2020 (continued)

1. Securities include outright holdings of U.S. Treasury securities, federal agency debt securities, and mortgage-backed securities, including securities lent to dealers under the overnight securities lending facility; refer to table 1A. Mortgage-backed securities are guaranteed by Fannie Mae, Freddie Mac, and Ginnie Mae. Unamortized premiums and discounts are the differences between the purchase price and the face value of the securities that have not been amortized. For U.S. Treasury securities, federal agency debt securities, and mortgage-backed securities, amortization is on an effective-interest basis. Repurchase agreements reflect the cash value of agreements, which are collateralized by U.S. Treasury and federal agency securities. Loans includes primary, secondary, and seasonal loans and credit extended through the Primary Dealer Credit Facility, Money Market Mutual Fund Liquidity Facility, Paycheck Protection Program Liquidity Facility, and other credit extensions.
2. Refer to note on consolidation below.
3. Dollar value of foreign currency held under these agreements valued at the exchange rate to be used when the foreign currency is returned to the foreign central bank. This exchange rate equals the market exchange rate used when the foreign currency was acquired from the foreign central bank.
4. Revalued daily at current foreign currency exchange rates.
5. Includes items in process of collection, bank premises, accrued interest (which represents the daily accumulation of interest earned), and other accounts receivable. Also includes Net portfolio holdings of Maiden Lane LLC; refer to the note on consolidation for additional information.
6. Cash value of agreements, which are collateralized by U.S. Treasury securities, federal agency debt securities, and mortgage-backed securities.
7. Includes deposits held at the Reserve Banks by international and multilateral organizations, government-sponsored enterprises, designated financial market utilities, and deposits held by depository institutions in joint accounts in connection with their participation in certain private-sector payment arrangements. Also includes certain deposit accounts other than the U.S. Treasury, General Account, for services provided by the Reserve Banks as fiscal agents of the United States.
8. Represents the estimated weekly remittances due to U.S. Treasury. The amounts on this line represent the residual net earnings that the Federal Reserve Banks remit to the U.S. Treasury after providing for the costs of operations, payment of dividends, and the amount necessary to maintain a $6.825 billion surplus.

Note on consolidation:

On April 14, 2020, the Federal Reserve Bank of New York (FRBNY) began extending loans to the Commercial Paper Funding Facility II LLC (CPFF II LLC) under the authority of section 13(3) of the Federal Reserve Act. CPFF II LLC is a limited liability company formed to purchase three-month U.S dollar-denominated commercial paper by eligible issuers. The assets of the CPFF II LLC are used to secure the loan from the FRBNY and the amount provided by U.S. Treasury as credit protection to the FRBNY.

The FRBNY is the managing member of CPFF II LLC. Consistent with generally accepted accounting principles, the assets and liabilities of the CPFF II LLC have been consolidated with the assets and liabilities of the FRBNY in the preparation of the statements of condition shown on this release. As a consequence of the consolidation, the loan from the FRBNY to CPFF II LLC is eliminated, the net assets of the CPFF II LLC appear as assets on the previous page (and in table 1 and table 4), and the liabilities of the CPFF II LLC to entities other than the FRBNY, including those with recourse only to the portfolio holdings of the CPFF II LLC are included in other liabilities in this table (and table 1 and table 4).

"COVID Recession": Black Swan Motivates Active Monetary & Fiscal Policy

This time in economic history will forever be marked with footnotes and asterisks denoting the "COVID Recession." This period is unique for the enormous numbers we'll see in the plunge in GDP, the height of the unemployment rate, the magnitude of the federal budget deficit and the rapid surge in the Federal Reserve balance sheet. Footnotes and asterisks are justified because the cause of this recession is not economic; it's a world-wide disease epidemic. It is truly a Black Swan event that precludes conventional economic modeling.

GDP seen down 27.8% in Q2 but up in Q3. As an indication of the uncertainty involved, consider the outlook for GDP in the Blue Chip Financial Forecasts survey during April 27-28: the average of the forecasts for Q2 is -27.8%, with the "highest" -6.0% and the lowest -45.0% (all SAAR). In April, the average estimate was -15.9%. The average for Q3 shows that GDP should return to positive growth, 7.4%, while the range runs from -41.7% to +55.0%. As an indication that those extreme numbers are not totally huge outliers, the bottom ten forecasts average -13.5% and the top ten average +26.1%.

But interest rates fairly steady. Forecasts that are not nearly so extreme are interest rates. Key to this expected stability is the expectation that the Federal Reserve will continue to be very accommodative. This was strongly indicated by the FOMC statement and Chairman Jerome Powell's comments at the press conference following the April 28-29 meeting. He expects that they will leave the key interest rate unchanged for "a good while" at what they call the "lower bound", 0% to 0.25%. The Blue Chip panel believes this could take until the middle of 2021. As we will describe shortly, the Fed is certainly providing support to borrowers, just not through further reductions in the key interest rate to below zero.

The forecast panel believes longer-term interest rates could actually rise somewhat in coming months. The 10-year Treasury yield, currently just under 0.60%, is projected to edge upward by about 10 basis points each quarter, thus reaching 1.00% at about the end of 2020. This trend is lower than the April forecasts by roughly 15-20 basis points. Corporate bond yields, though, would look fairly flat. AAA-rated bonds would dip slightly this quarter and next but return to their recent 2.80% later in the year. Quality spreads are significant, with BBB bonds widening from their recent 100 basis points over AAA to 170. However, consensus forecasts for those mid-quality yields show them holding pretty steady, so the spread over AAA would narrow again during 2021 back toward the more recent amounts. That's obviously as the economy moves through its recovery and risk is seen to be diminishing.

Major credit expansion by Fed. In the midst of the extreme economic conditions, such moderate moves in interest rates, especially in the longer-term, might be surprising. They likely reflect the repeated assurances from the Fed that they will provide and/or support almost whatever credit is needed throughout the economy. The overall result for the Fed's balance sheet is an increase since the end of February of $2.4 trillion or 58% to $6.6 trillion. In a Special Question, the Blue Chip Financial Forecasts panel indicated that they see the Fed's total assets reaching $8.6 trillion by year-end, which would basically mean a doubling of the size of the Fed's balance sheet. Just yesterday, April 30, the Fed published a new term sheet intended to help establish the Main Street Lending Program, the main outreach to small- and medium-sized businesses. Small businesses themselves are eligible for the Paycheck Protection Program, as their own banks can grant loans to them and receive backing from the Federal Reserve. The Fed is also preparing to initiate the Municipal Lending Facility, which would provide up to $500 billion to states, counties and cities in the Fed's first outreach to state and local governments.

Panel says more fiscal support needed. Fiscal policy is very active as well at the present time. The CARES Act provided $2.2 trillion in various aid programs and this was subsequently augmented with $484 billion more. The forecast panel believes overwhelmingly that still more is required to help stabilize the economy; in another Special Question their estimates of the additional amount range from $800 billion to $2.0 trillion, averaging $1.4 trillion. They then estimate the budget deficit this fiscal year at $3.315 trillion compared to $978 billion in fiscal 2019. For fiscal 2021, the deficit would decrease to $2.234 trillion.

The duration of social distancing regulations. The other policy issue at present is the social distancing regulation itself. What will happen as social distancing requirements ease? States are starting very gradually to open up, to permit more businesses to operate and more activities to take place outside the home. In another Special Question, the majority of survey respondents believe that the most strict and moderately strict social distancing requirements could be ended in May. But some participants believe moderate requirements will be maintained through September. Almost everyone believes that so-called relaxed constraints, that is, the opening of all venues and permitting non-essential travel, will not be undone until at least mid-summer or – more likely – October. These notions depend on the incidence of the disease and its severity.

People's willingness to socialize expected to vary. There is one more notable source of uncertainty: what are people actually willing to do even after government mandates have been lifted? Are they willing to go back to work or to sit next to people in a baseball stadium or a movie theater? Fewer members of the Blue Chip panel have views on this, but of the 38 panelists who addressed the Special Questions, 21 of them did respond to it. For the most strict constraints, that is, people who just want to stay home for safety's sake, 16% of the population would feel that way and do so for about seven months. Panelists believe 30% of the population would want to limit their activities, perhaps just going to work or doing required shopping, and they would do that for seven months. Finally those who are most willing to be active in society, with just maintaining some distance would be 48% of the population and they would do so for eight months. Clearly there's no way to gauge the prospects for these strategies, but the feelings that might motivate people do need to be allowed for. To do that, one could be conservative in growth expectations basically until year-end – and then hope there's not a second round of the disease.

Carol Stone, CBE (Haver Analytics, New York, NY)

Forecasts for interest rates and the Federal Reserve's Major Currency Index represent averages for the quarter. Forecasts for Real GDP, GDP Price Index and Consumer Price Index are seasonally-adjusted annual rates of change (saar). Individual panel members' forecasts are on pages 4 through 9. Historical data: Treasury rates from the Federal Reserve Board's H.15; AAA-AA and A-BBB corporate bond yields from Bank of America-Merrill Lynch and are 15+ years, yield to maturity; State and local bond yields from Bank of America-Merrill Lynch, A-rated, yield to maturity; Mortgage rates from Freddie Mac, 30-year, fixed; LIBOR quotes from Intercontinental Exchange. All interest rate data are sourced from Haver Analytics. Historical data for Fed's Major Currency Index are from FRSR H.10. Historical data for Real GDP and GDP Chained Price Index are from the Bureau of Economic Analysis (BEA). Consumer Price Index (CPI) history is from the Department of Labor's Bureau of Labor Statistics (BLS).

Forecasts of panel members are on pages 10 and 11. Definitions of variables are as follows: [1]Monetary policy rates. [2]Government bonds are yields to maturity. [3]Foreign exchange rate forecasts for U.K., Australia and the Euro are U.S. dollars per currency unit. For the U.S dollar, forecasts are of the U.S. Federal Reserve Board's AFE Dollar Index.

International Now comes the hard part—digesting the deluge of dismal economic data. The global economy is likely embarking on the worst recession since the Great Depression with nearly every major government having shut down large parts of its economy to slow the spread of the coronavirus. The Great Lockdown, as named by the IMF, appears to be working as the spread of the virus is slowing down markedly. However, the price has been an abrupt and monumental collapse in economic activity that has never been seen before in the history of modern (post WWII) data collecting.

Flash PMIs for April collapsed to levels well below previous lows. For example, the euro area flash PMI plunged to 13.5 in April, by far the lowest reading on record, vs. a low of 36.2 during the global financial crisis. Moreover, goods-producing sectors are usually the hardest hit during a recession as service-producing sectors typically do not experience the large imbalances that engender retrenchment as do manufacturing and construction. However, in the current environment, the service-producing sectors are being hit even harder than goods-producing sectors as the spread of the virus has led to large parts of the service sectors being shut down.

Monetary and fiscal authorities have responded in size. Where there was room, policy interest rates have been lowered, and our forecast panel expects them to remain there for at least the next 12 months. Furthermore, many central banks have reintroduced, increased, or initiated asset purchase programs (so called quantitative easing) as well as created myriad lending facilities. Market rates have responded with the yield on 10-year government bonds testing all-time lows. Our panel expects these yields to be range-bound for the next six months and then to begin to rise modestly over the ensuing six months.

As the crisis unfolded in the US, the Fed immediately announced a return to QE which was subsequently made limitless, restarted its alphabet soup of lending facilities that had been employed during the global financial crisis and even dreamed up new ones, importantly the Main Street Lending Facility, which it recently extended to include a wider range of businesses and riskier credits, and a lending facility for state and local governments. It has already purchased more than $1.6 trillion of assets since mid-March. Our forecast panel expects the Fed to add another $2 trillion to its balance sheet by the end of this year and another $400 billion in 2021. The $2+ trillion package enacted by US Federal government last month was recently boosted by $450+ billion; our panel looks for another $1.4 trillion of support to come.

After initially responding rather modestly, the Bank of Japan, at its April 27 meeting, announced that there would now be no limits to its asset purchases. It also significantly expanded its credit facilities (a much larger range of collateral and acceptable borrowers). Moreover, the government announced a significant increase in the already large supplemental budget that had been enacted in early April. The European Central Bank and the Bank of England have been relatively quiet lately after having fired policy bazookas in March. Still, the ECB has already purchased nearly €100 billion in securities during April in its new PEPP program and with euro area GDP plunging 3.8% q/q not annualized in Q1, it has just made the terms of the upcoming TLTRO-IIIs (targeted long-term refinancing operations) even more generous and introduced a series of approximately one-year LTROs.

China and Europe are the first to begin to restart their stalled economies and may provide lessons for others. The Chinese economy began to reopen in March but rebounded only modestly from the collapse in February. The official composite PMI rose to 53.0 in March after having fallen to 28.9 in February. This suggests a resumption of previous growth rather than a snapback in activity. Led by Germany, some European economies are just beginning to reopen. European data are not very timely. May PMIs will provide the first look at how the economies have responded—the flash reports are released on May 22.

Small Businesses and Oil Market Shocked by COVID-19, but Don't Rush Reopening

We love tales of successful entrepreneurship. We admire tech titans who start by cobbling together computers in a parent's garage, researchers who spend years perfecting and then producing revolutionary medical therapies, and small people with big ideas who overcome serial failure to produce an overriding success. Their creativity, drive and dedication serve as an example for others to follow.

But small businesses are not only a source of inspiration. Small businesses are the growth drivers of modern economies. They are a vital source of innovation and employment, and they are fixtures within their communities. Unfortunately, small businesses have been placed at significant risk by the coronavirus. Governments around the world are racing to support them before they fail.

The definition of small-and-medium-sized enterprise (SME) has some local variation. The European Union (EU) defines a medium-size company as one with up to 250 workers, while the U.S. Small Business Administration (SBA) typically supports businesses of up to 500. According to the World Bank, SMEs account for the majority of businesses globally, representing over 90% of all firms and over 50% of employment worldwide.

In high income, Organization for Economic Cooperation and Development (OECD) countries, SMEs account for the vast majority of companies (99% of all firms), about 70% of employment and more than half of value added. SMEs in emerging markets (EMs) represent a little less than half of total employment and about one-third of gross domestic product (GDP). If one accounts for the large informal sector in countries like India, their importance is likely to be even greater than is reflected in formal statistics.

Entrepreneurship has long been vital to global economic policy. It represents a path to prosperity for those willing to work hard and serves as a source of constant economic renewal. An OECD survey shows that SMEs participate significantly in a range of innovative work: For example, SMEs account for about 20% of patents in biotechnology-related fields in Europe.

Recognizing the importance of the small business sector, countries around the world have established agencies to aid them. The U.S. SBA was created in 1953 to guarantee loans to SMEs. SMEs have been a focal point in shaping the EU's enterprise policy. And China has worked hard over the past few years to diversify away from large state-owned enterprises and encourage the formation of more fledgling firms.

But with over half of the world population now under some of lockdown, smaller bus are bearing the brunt of reductions in global demand. According to a survey of over 1,500 small firms in the United States, 51% of owners said they will be able to continue operations for less than three months in the current economic environment. A February survey of China's SMEs revealed that only one-third had enough cash to cover fixed expenses for a month. At a European level, about 90% of SMEs have experienced business losses of at least 50%.

Policymakers across the world are making unprecedented efforts to help SMEs stay in business and sustain their employment. Those measures include temporary tax relief, direct financial support, loan subsidies and moratoriums on debt repayments. Some prominent examples are:

- In the U.S., SBA's new Paycheck Protection Program will forgive loans if they are used to maintain payrolls. Its initial $349 billion of funding was consumed within two weeks, and this week's fresh tranche of $310 billion will meet high demand when it is released.

- Among European nations, France took the lead on SME funding, with French banks offering more state-backed loans than other countries in Europe. The Italian Banking Association agreed to a large-scale moratorium on debt repayments, including mortgages and repayments of small loans and revolving credit lines for businesses. The U.K. announced cash grants of £10,000 for eligible small businesses and up to £25,000 for SMEs in retail, hospitality and leisure; a 100% business tax holiday has been established for the next 12 months.

- The Reserve Bank of Australia has established a term funding facility of at least $50 billion for the banking system, including credit support to small- and medium-sized businesses.

- Asian economies including South Korea and Singapore are offering flexibility for repayments of existing loans. India increased the threshold for starting insolvency proceedings against SMEs in default by a factor of 100.

Even though many small firms might manage their way through this crisis without permanent scars, the hurdles are only going to increase in the aftermath of the Great Lockdown. Access to credit has always been a challenge in this sector; the crisis could do damage to the banks and investment pools that have traditionally arranged financing for younger companies. International capital has grown as a resource, but advancing protectionism could restrict inbound investment. In one recent example, India amended its foreign direct investment rules to halt the acquisition of Indian businesses by neighboring countries, with an eye on China. Australia and the European Union are considering similar moves.

Though the current support measures might help alleviate some pain, they are likely to fall short of providing relief to all who have been affected by this unprecedented crisis. Widespread bankruptcies are a potential byproduct of prolonged virus containment measures. Considering the World Bank's estimate that 600 million jobs will be needed in the next decade to absorb the growing global workforce, governments will have to ensure SMEs not only survive but are ready to thrive when growth resumes. Substantial assistance is on offer to SMEs, but it is also vital to ensure that the support schemes are easily accessible and topped up where necessary.

Every business leader can share war stories of times when they faced difficult circumstances, only to survive and emerge even stronger. Today's circumstances, though, may fall beyond the capacity of even the most intrepid entrepreneurs to adapt and overcome. Policy will need to raise the odds that small businesses survive; for their sake, and for ours.

Losing Energy. If these were normal times, the biggest story in the global economy would be the collapse in oil prices. Crude has been in retreat for six weeks; conditions reached a strange nadir this week when some spot and futures prices for a barrel of oil went below zero. That extreme resulted from technical factors in the energy markets. But fundamentally, there is a glut of petroleum accumulating, and it may take a long time for it to dissipate.

About 70% of fuel derived from oil is used for transportation: road, rail, sea and air. When COVID19 first emerged, factory shutdowns in China

interrupted supply chains and left rail cars and tankers idle. As the virus spread to other countries, social distancing measures led to tens of thousands of cancelled flights, a steep decline in car traffic, and further impairment of shipping. Restrictions on movement are still spreading and strengthening, and will likely take some time to relax. In all, petroleum demand has collapsed by about 20% from former levels.

On the supply side, global oil production has remained strong. Failure to agree on output restrictions led to a damaging battle between Saudi Arabia and Russia. The oil market was almost literally being flooded with crude, to the point where storage began to reach capacity in some places. If the intent of the Saudis was to punish overproducers, or to do damage to competitors, the effort has been a success.

In a landmark arrangement, the United States joined an agreement with the Organization of Petroleum Exporting Countries (OPEC) and Russia in a plan to reduce production. (The prospect of the U.S. collaborating with OPEC to reduce oil supply would have been anathema twenty years ago.) The new guidelines went into effect this week, but will not be nearly enough to bring prices back to their levels of early this year.

Prices are too low to support new development, so companies that supply equipment and engineering expertise will see their business dwindle. Existing wells are being closed off at a rapid pace, because the cost of extraction is far above the prevailing market price. This has been especially harsh for U.S. and Canadian producers. Some smaller energy companies have borrowed substantial sums through bond markets; some analysts are expecting default rates on those issues to approach 20% by the end of this year.

The American shale industry has appealed for federal relief, noting the strategic importance of energy independence. But other industries are at the head of the line. There are also those who note that some oil producers (and the investors who finance them) inherently take risks that the public should not have to backstop.

In the U.S., energy-producing states are going to see an extra measure of unemployment and additional declines in tax revenue. On a broader scale, energy-producing countries will feel a pinch if oil prices remain low. For countries that are heavily dependent on petroleum proceeds, significant holes will appear in their national budgets. Some will fill these holes by drawing down their financial reserves; those without reserves will struggle to sustain public spending and social stability.

In normal times, cheap fuel would be a boon to consumers and importers. But because driving and flying have been so severely curtailed, the benefit to households will be limited. If there is any consolation at all, it is that air quality in many parts of the world has improved, at least temporarily. Many forecasters are still predicting oil prices to return to the $50 range in the next year or so. That outlook is predicated on the assumption that economic conditions will normalize at a reasonable pace, which is not at all certain. The global energy industry, and the communities that depend on it, are facing a very difficult interval ahead.

Argumentum ad Absurdum. Tradeoffs are central to economics: Debt vs. savings, free markets vs. regulations, risks vs. rewards. We relish spirited debate around these balancing acts. Keep us talking long enough, and we may argue both sides of an issue. But sometimes, a clear answer emerges.

We think this applies to the debate over the post-quarantine recovery. A reader of the situation may conclude that communities are fighting with epidemiologists over when to lift economic restrictions. If only those meddling doctors would stand down, some say the economy would bounce back. We disagree.

A return to robust economic activity requires a populace that feels safe to leave their homes, go to businesses, earn income and spend it. Rushing a return to business-as-usual too soon could lead to a second wave of infections, which could be even more commercially and psychologically harmful than the current outbreak. And reopening businesses does not guarantee a return to business-as-usual, amid lingering public concern that crowded areas may be unsafe for some time to come.

The desire to reopen is understandable. Our incomes are down, our jobs and businesses are at risk, and frankly, we're bored. Quarantine measures reduce the spread of infections, but paradoxically, fewer infections can make us think the risk was overstated. Officials in Japan and Singapore found themselves fighting a second wave of infections after initial restrictions mitigated the risk and were then relaxed. We also take heed from the 1918-1920 influenza pandemic: regions that practiced aggressive social distancing saw less severe outbreaks and greater economic activity when the disease subsided.

Today's Great Lockdown is a circumstance we have no choice but to accept. This is a public health crisis, and health experts must determine the appropriate timing and pace of resuming activity. In the long run, following their instructions will likely lead to the best economic outcomes.

Carl R. Tannenbaum, Ryan James Boyle, Vaibhav Tandon (Northern Trust)

The Decline in Economic Activity is Breathtaking.

The economic numbers are coming in even worse than most economists expected. We really cannot wrap our minds around these enormous levels of changes, so it is hard to forecast the total collapse that we are starting to see. And the April numbers, which will reflect a whole month, are likely to be a lot worse.

Which brings us to the equity markets. The spread of the virus may be easing, at least we hope. New York looks like it is near or at the peak, but other areas are starting to heat up. Every state is now involved. Starting to open the economy in two weeks (May 1st) is hardly likely and when the economy does start to open, it is not going to happen quickly or easily. Yet investors have been exuberant the last three weeks. Is it rational or irrational? Where is Alan Greenspan when we need him? First quarter earnings are just starting to come in and for most firms they are gruesome. And that was with less than one month of a shutdown. What happens when we have two or even three months of restricted activity in a quarter followed by a slow, rolling reopening? It is hard to comprehend why businesses would invest in this type of economy. Businesses may start opening, but which ones? Without wide scale testing capacity, can we really open retail establishments that require social contact? The rest of the world is also going to slowly reopen and who knows when that will happen. And state and local governments are already starting to downsize as tax revenues are crashing. It is one thing to say that the government and the Fed are pouring trillions into the economy, but it is another to say that demand will recover to anywhere close to what it had been in February. And if it doesn't, firms will not see demand raise enough to keep the government funded workers, so layoffs and business closings could resume. Households will have used up some of the money they were given and if they don't have jobs (the unemployment rate could still be double-digits in July), spending will fade. And that could trigger a significant increase in loan losses and pressure on financial institutions. That is the prospect for the summer/fall economy. And what if the reopening has a set back due to a resurgence in parts of the country, even if those relapses are minor? So, where are the profits going to come from? I am just an economist, but I simply don't see what investors are seeing and to be honest, what other economists are saying is going to happen. I focus on the underlying factors that will drive future economic growth and earnings and while we will see an initial upturn once the economy reopens, the strength and length of that recovery is not clear at all.

Joel Naroff (Naroff Economics)

Special Questions:

1. a. Where do you see the federal funds rate at year-end 2020? 0.166% at year-end 2021? 0.305%

   b. How large do you estimate the Fed's balance sheet at year-end 2020? 8,611 bil$ at year-end 2021? 9,033 bil$

2. a. To date roughly $2.7 trillion of COVID related federal aid is in the pipeline. Do you believe this is enough?

Yes	No
9%	91%

   b. If not, how much more aid do you estimate will be needed? 1.4 tril$

   c. How large do you see the budget deficit in FY 2020? 3,315 bil$ FY 2021? 2,234 bil$

3. With 22 million people filing for unemployment insurance and an oil contract selling at a negative price, the economy is acting pretty weak.

   a. How long do you believe this evident recession will last? 5.8 months

   b. What month would show the weakest activity?

Mar 2020	Apr 2020	May 2020	Jun 2020	Later
3%	76%	16%	3%	3%

   c. What do you think will be the peak monthly unemployment rate for the U.S. in 2020? 17.5 %

   d. When would that be?

Apr	May	Jun	Jul	Oct	Nov
24%	49%	12%	6%	3%	6%

4. a. By the end of what month do you forecast mandated social distancing measures to be lifted for a majority of the population?

	May	Jun	Jul	Aug	Sep	Oct or later
Strict (stay at home orders)	41%	47%	6%	0%	3%	3%
Moderate (opening socially distant venues)	6%	44%	25%	19%	6%	0%
Relaxed (opening of all venues, non-essential travel, with social distancing recommendations)	0%	10%	0%	13%	16%	61%

   b. After mandated social distancing measures are relaxed, will there be a share of the population that chooses to socially distance and for how long?

	% of Population	Months
Strict (choose to stay home)	16%	7.7
Moderate (limit activity to minimize unnecessary contact)	30%	7.2
Relaxed (engage in normal everyday activities while trying to remain physically distant)	48%	7.6

5. In Q1 2020, the Covid-19 triggered massive capital outflows from Emerging Markets. The G-20 called for a suspension of debt service for the world's poorest countries from May to the end of 2020.

   a. Do you think the timeline will need to be extended?

Yes	No
93%	7%

   b. Do you think the suspension will need to be broadened to middle-income Emerging Market countries?

Yes	No
46%	54%

News Release

TRANSMISSION OF MATERIALS IN THIS RELEASE IS EMBARGOED UNTIL
8:30 A.M. (Eastern) Thursday, April 16, 2020

COVID-19 Impact
The COVID-19 virus continues to impact the number of initial claims and insured unemployment.

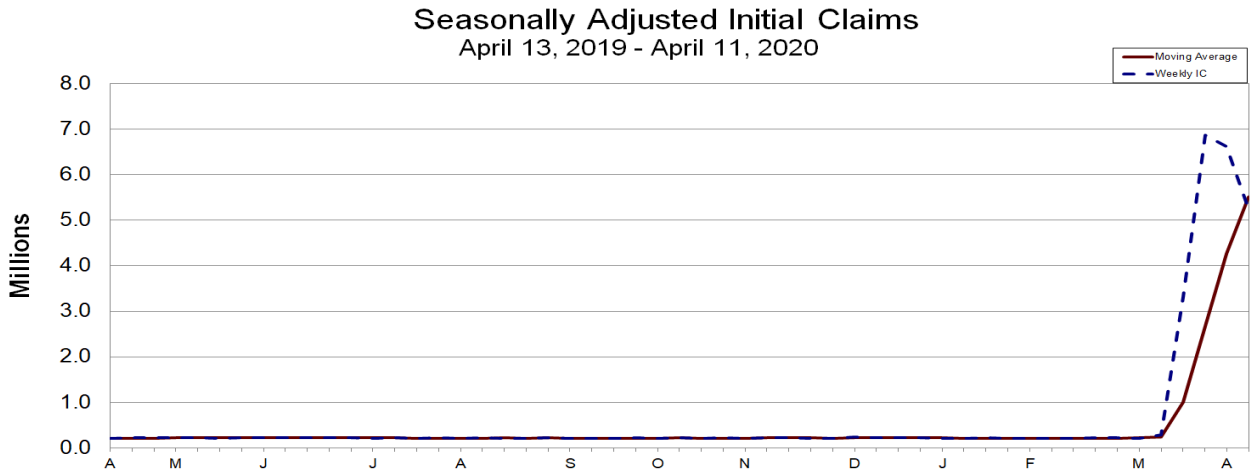
UNEMPLOYMENT INSURANCE WEEKLY CLAIMS

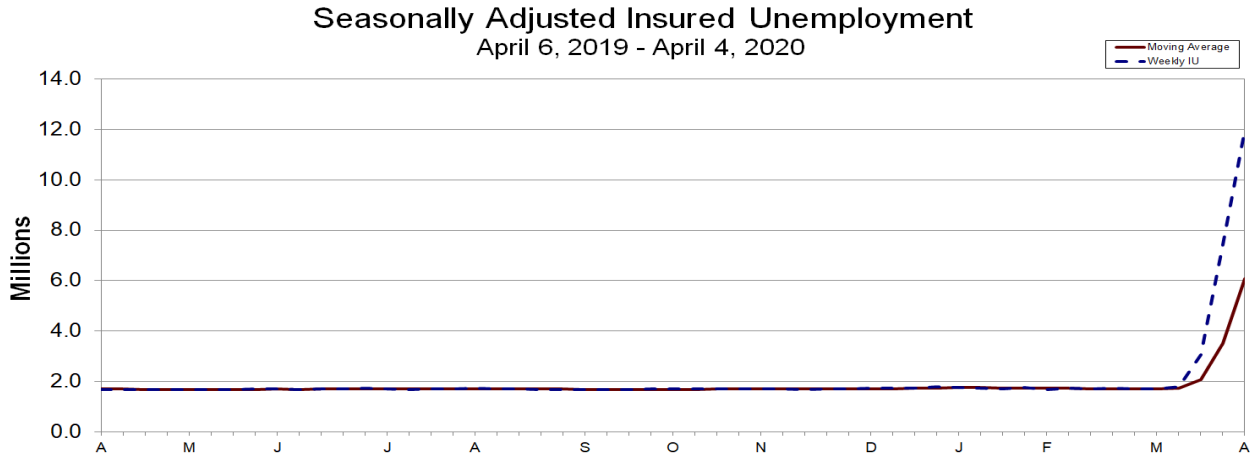
SEASONALLY ADJUSTED DATA

In the week ending April 11, the advance figure for seasonally adjusted **initial claims** was 5,245,000, a decrease of 1,370,000 from the previous week's revised level. The previous week's level was revised up by 9,000 from 6,606,000 to 6,615,000. The 4-week moving average was 5,508,500, an increase of 1,240,750 from the previous week's revised average. The previous week's average was revised up by 2,250 from 4,265,500 to 4,267,750.

The advance seasonally adjusted **insured unemployment rate** was 8.2 percent for the week ending April 4, an increase of 3.1 percentage points from the previous week's unrevised rate. This marks the highest level of the seasonally adjusted insured unemployment rate in the history of the seasonally adjusted series. The previous high was 7.0 percent in May of 1975.

The advance number for seasonally adjusted **insured unemployment** during the week ending April 4 was 11,976,000, an increase of 4,530,000 from the previous week's revised level. This marks the highest level of seasonally adjusted insured unemployment in the history of the seasonally adjusted series. The previous week's level was revised down by 9,000 from 7,455,000 to 7,446,000. The 4-week moving average was 6,066,250, an increase of 2,568,500 from the previous week's revised average. The previous week's average was revised down by 2,250 from 3,500,000 to 3,497,750.

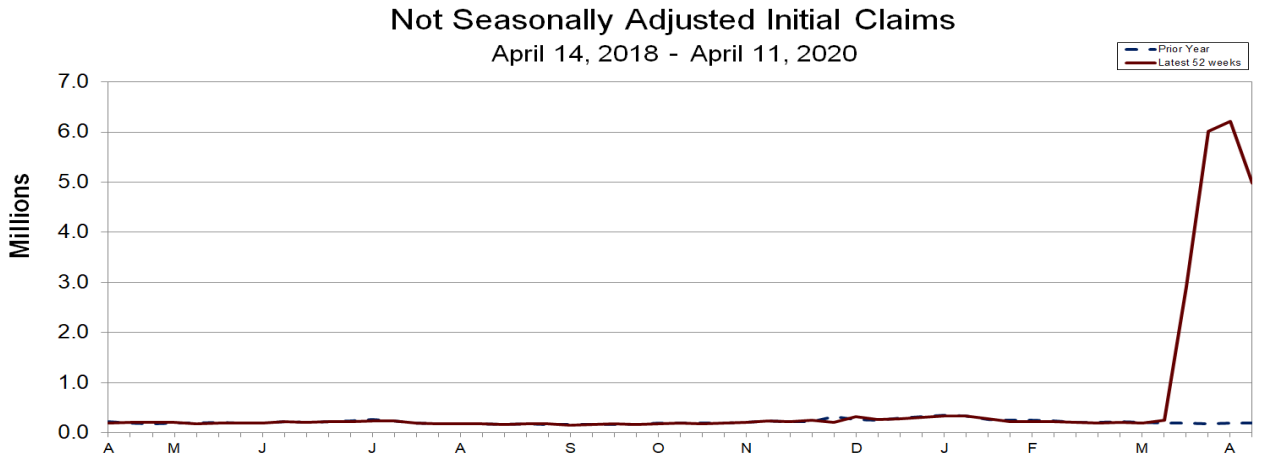


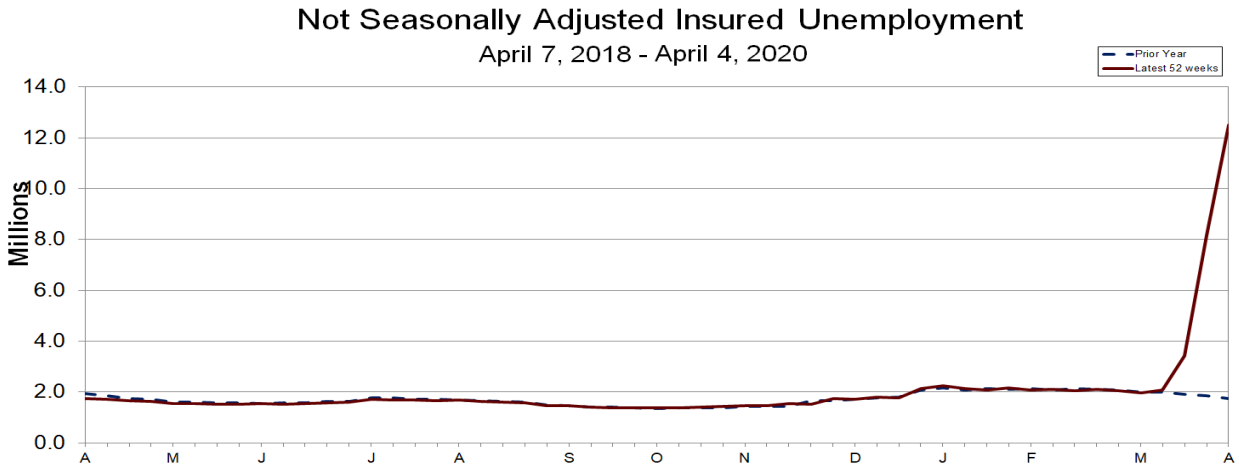


UNADJUSTED DATA

The advance number of actual initial claims under state programs, unadjusted, totaled 4,971,823 in the week ending April 11, a decrease of 1,239,576 (or -20.0 percent) from the previous week. The seasonal factors had expected an increase of 59,534 (or 1.0 percent) from the previous week. There were 196,364 initial claims in the comparable week in 2019.

The advance unadjusted insured unemployment rate was 8.6 percent during the week ending April 4, an increase of 3.0 percentage points from the prior week. The advance unadjusted number for persons claiming UI benefits in state programs totaled 12,526,711, an increase of 4,358,440 (or 53.4 percent) from the preceding week. The seasonal factors had expected a decrease of 379,746 (or -4.6 percent) from the previous week. A year earlier the rate was 1.2 percent and the volume was 1,730,108.





The total number of people claiming benefits in all programs for the week ending March 28 was 8,206,806, an increase of 4,759,027 from the previous week. There were 1,890,578 persons claiming benefits in all programs in the comparable week in 2019.

No state was triggered "on" the Extended Benefits program during the week ending March 28.

Initial claims for UI benefits filed by former Federal civilian employees totaled 3,395 in the week ending April 4, an increase of 944 from the prior week. There were 2,044 initial claims filed by newly discharged veterans, an increase of 292 from the preceding week.

There were 11,008 former Federal civilian employees claiming UI benefits for the week ending March 28, an increase of 1,630 from the previous week. Newly discharged veterans claiming benefits totaled 6,328, an increase of 849 from the prior week.

The highest insured unemployment rates in the week ending March 28 were in Rhode Island (11.9), Pennsylvania (9.8), Nevada (9.6), Washington (9.3), Connecticut (8.9), Massachusetts (8.7), Minnesota (8.7), Michigan (8.5), Ohio (8.4), and Georgia (8.2).

The largest increases in initial claims for the week ending April 4 were in Georgia (+256,312), Michigan (+84,219), Arizona (+43,488), Texas (+38,982), and Virginia (+34,872), while the largest decreases were in California (-139,511), Pennsylvania (-127,037), Florida (-58,599), Ohio (-48,097), and Massachusetts (-41,776).

Note: Advance claims are not directly comparable to claims reported in prior weeks. Advance claims are reported by the state liable for paying the unemployment compensation, whereas previous weeks reported claims reflect claimants by state of residence. In addition, claims reported as "workshare equivalent" in the previous week are added to the advance claims as a proxy for the current week's "workshare equivalent" activity.

*Denotes OUI estimate.
**Denotes state estimate.

Figures appearing in columns showing over-the-week changes reflect all revisions in data for prior week submitted by state agencies.

1. The Unemployment Compensation program for Federal Employees (UCFE) and the Unemployment Compensation for Ex-servicemembers (UCX) exclude claims filed jointly under other programs to avoid duplication.
2. Rate is not seasonally adjusted. The source of U.S. total covered employment is BLS.

TECHNICAL NOTES

This news release presents the weekly unemployment insurance (UI) claims reported by each state's unemployment insurance program offices. These claims may be used for monitoring workload volume, assessing state program operations and for assessing labor market conditions. States initially report claims directly taken by the state liable for the benefit payments, regardless of where the claimant who filed the claim resided. These are the basis for the advance initial claims and continued claims reported each week. These data come from ETA 538, Advance Weekly Initial and Continued Claims Report. The following week initial claims and continued claims are revised based on a second reporting by states that reflect the claimants by state of residence. These data come from the ETA 539, Weekly Claims and Extended Benefits Trigger Data Report.

A. Initial Claims

An initial claim is a claim filed by an unemployed individual after a separation from an employer. The claimant requests a determination of basic eligibility for the UI program. When an initial claim is filed with a state, certain programmatic activities take place and these result in activity counts including the count of initial claims. The count of U.S. initial claims for unemployment insurance is a leading economic indicator because it is an indication of emerging labor market conditions in the country. However, these are weekly administrative data which are difficult to seasonally adjust, making the series subject to some volatility.

B. Continued Weeks Claimed

A person who has already filed an initial claim and who has experienced a week of unemployment then files a continued claim to claim benefits for that week of unemployment. Continued claims are also referred to as insured unemployment. The count of U.S. continued weeks claimed is also a good indicator of labor market conditions. Continued claims reflect the current number of insured unemployed workers filing for UI benefits in the nation. While continued claims are not a leading indicator (they roughly coincide with economic cycles at their peaks and lag at cycle troughs), they provide confirming evidence of the direction of the U.S. economy.

C. Seasonal Adjustments and Annual Revisions

Over the course of a year, the weekly changes in the levels of initial claims and continued claims undergo regularly occurring fluctuations. These fluctuations may result from seasonal changes in weather, major holidays, the opening and closing of schools, or other similar events. Because these seasonal events follow a more or less regular pattern each year, their influence on the level of a series can be tempered by adjusting for regular seasonal variation. These adjustments make trend and cycle developments easier to spot. At the beginning of each calendar year, the Bureau of Labor Statistics provides the Employment and Training Administration (ETA) with a set of seasonal factors to apply to the unadjusted data during that year. Concurrent with the implementation and release of the new seasonal factors, ETA incorporates revisions to the UI claims historical series caused by updates to the unadjusted data.

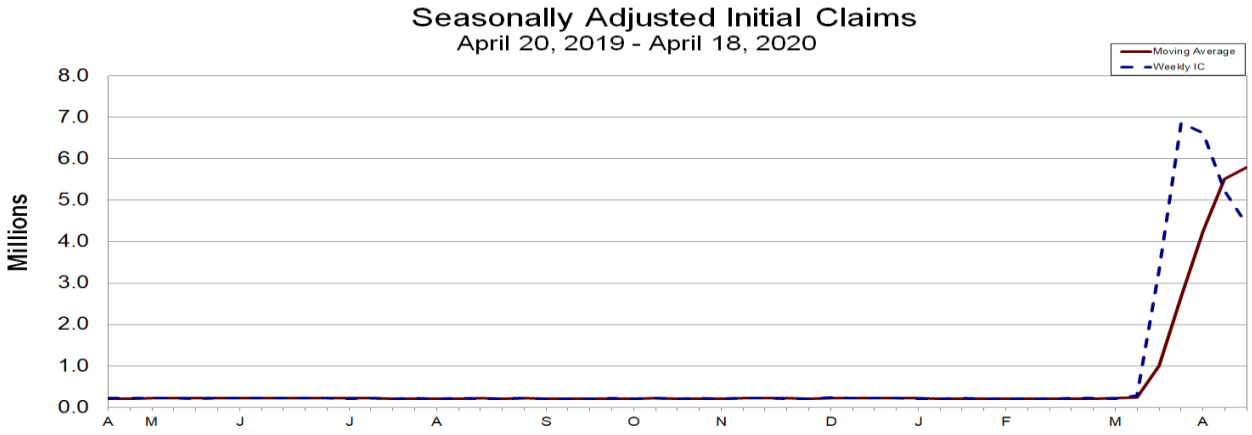
COVID-19 Impact
The COVID-19 virus continues to impact the number of initial claims and insured unemployment.

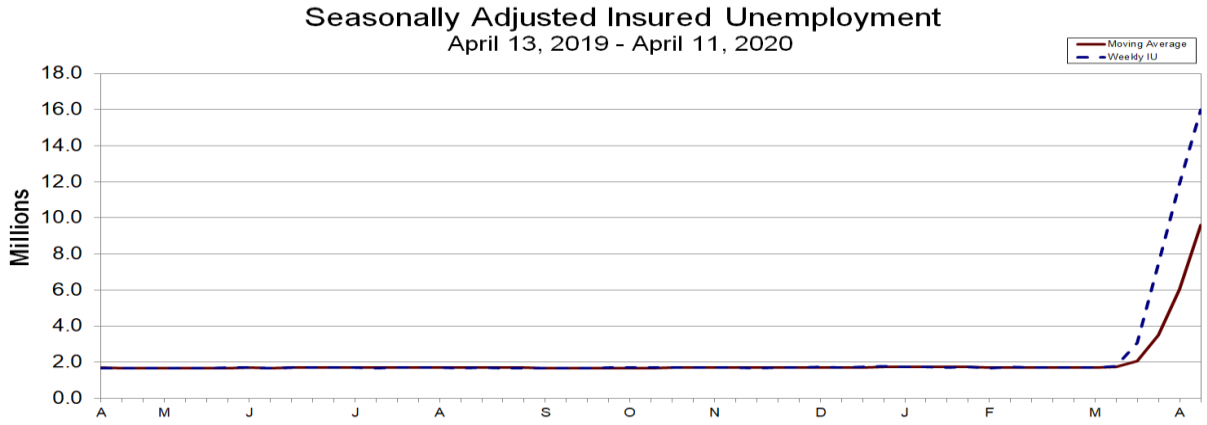
UNEMPLOYMENT INSURANCE WEEKLY CLAIMS

SEASONALLY ADJUSTED DATA

In the week ending April 18, the advance figure for seasonally adjusted **initial claims** was 4,427,000, a decrease of 810,000 from the previous week's revised level. The previous week's level was revised down by 8,000 from 5,245,000 to 5,237,000. The 4-week moving average was 5,786,500, an increase of 280,000 from the previous week's revised average. The previous week's average was revised down by 2,000 from 5,508,500 to 5,506,500.

The advance seasonally adjusted **insured unemployment rate** was 11.0 percent for the week ending April 11, an increase of 2.8 percentage points from the previous week's unrevised rate. This marks the highest level of the seasonally adjusted insured unemployment rate in the history of the seasonally adjusted series. The advance number for seasonally adjusted **insured unemployment** during the week ending April 11 was 15,976,000, an increase of 4,064,000 from the previous week's revised level. This marks the highest level of seasonally adjusted insured unemployment in the history of the seasonally adjusted series. The previous week's level was revised down by 64,000 from 11,976,000 to 11,912,000. The 4-week moving average was 9,598,250, an increase of 3,548,000 from the previous week's revised average. The previous week's average was revised down by 16,000 from 6,066,250 to 6,050,250.

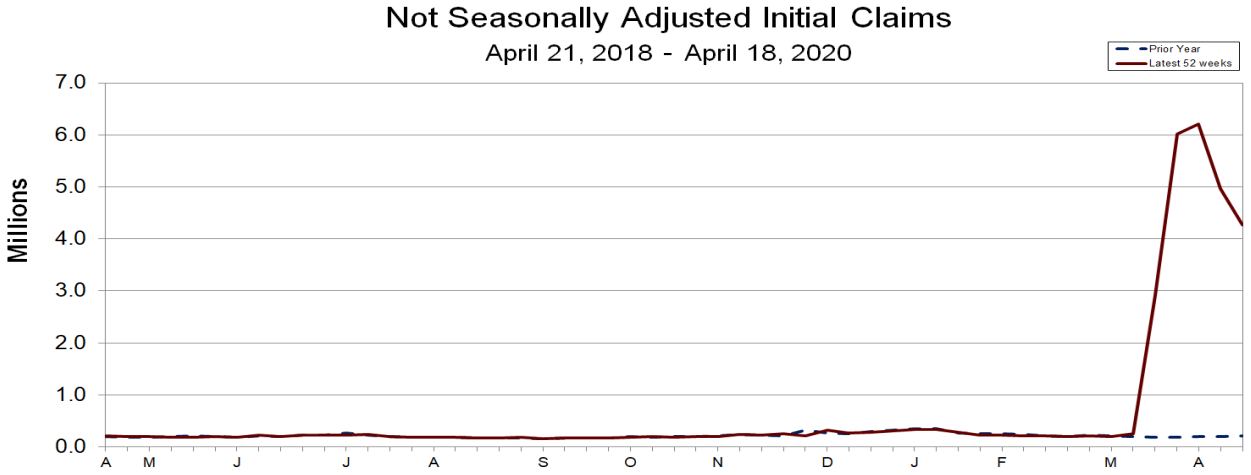


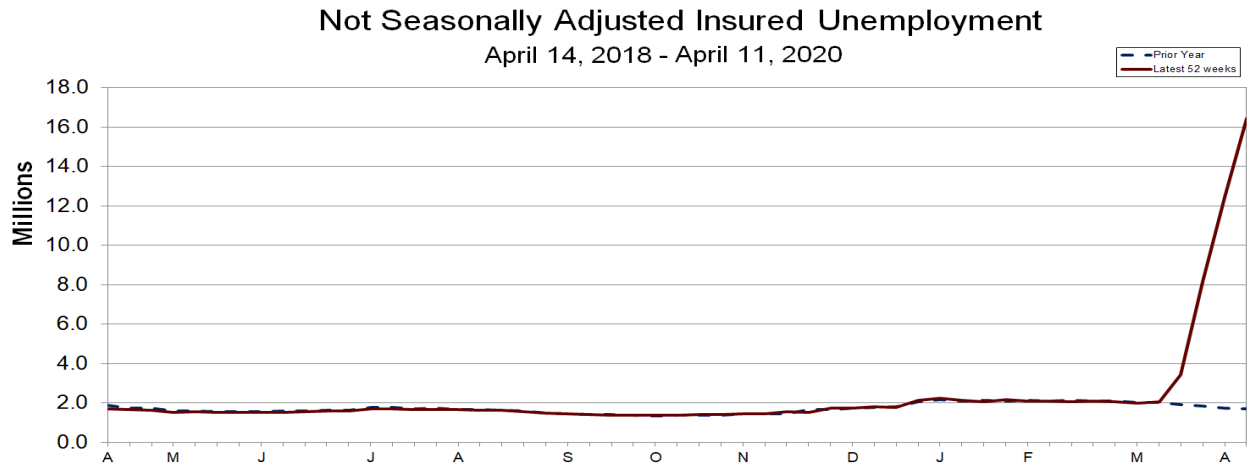


UNADJUSTED DATA

The advance number of actual initial claims under state programs, unadjusted, totaled 4,267,395 in the week ending April 18, a decrease of 697,173 (or -14.0 percent) from the previous week. The seasonal factors had expected an increase of 83,790 (or 1.7 percent) from the previous week. There were 211,762 initial claims in the comparable week in 2019.

The advance unadjusted insured unemployment rate was 11.3 percent during the week ending April 11, an increase of 2.7 percentage points from the prior week. The advance unadjusted number for persons claiming UI benefits in state programs totaled 16,438,933, an increase of 3,978,614 (or 31.9 percent) from the preceding week. The seasonal factors had expected a decrease of 202,510 (or -1.6 percent) from the previous week. A year earlier the rate was 1.2 percent and the volume was 1,703,576.





The total number of people claiming benefits in all programs for the week ending April 4 was 12,506,993, an increase of 4,300,016 from the previous week. There were 1,757,864 persons claiming benefits in all programs in the comparable week in 2019.

No state was triggered "on" the Extended Benefits program during the week ending April 4.

Initial claims for UI benefits filed by former Federal civilian employees totaled 2,844 in the week ending April 11, a decrease of 551 from the prior week. There were 1,821 initial claims filed by newly discharged veterans, a decrease of 223 from the preceding week.

There were 11,562 former Federal civilian employees claiming UI benefits for the week ending April 4, an increase of 535 from the previous week. Newly discharged veterans claiming benefits totaled 7,068, an increase of 727 from the prior week.

The highest insured unemployment rates in the week ending April 4 were in Michigan (17.4), Rhode Island (15.0), Nevada (13.7), Georgia (13.6), Washington (13.2), New Hampshire (12.2), Minnesota (11.9), New York (11.9), Montana (11.7), and Ohio (11.6).

The largest increases in initial claims for the week ending April 11 were in Colorado (+58,246), New York (+50,250), Missouri (+10,668), Florida (+10,534), and North Carolina (+2,733), while the largest decreases were in California (-263,342), Michigan (-166,347), New Jersey (-73,416), Georgia (-70,551), and Ohio (-66,874).

Note: Advance claims are not directly comparable to claims reported in prior weeks. Advance claims are reported by the state liable for paying the unemployment compensation, whereas previous weeks reported claims reflect claimants by state of residence. In addition, claims reported as "workshare equivalent" in the previous week are added to the advance claims as a proxy for the current week's "workshare equivalent" activity.

*Denotes state estimate.

TECHNICAL NOTES

This news release presents the weekly unemployment insurance (UI) claims reported by each state's unemployment insurance program offices. These claims may be used for monitoring workload volume, assessing state program operations and for assessing labor market conditions. States initially report claims directly taken by the state liable for the benefit payments, regardless of where the claimant who filed the claim resided. These are the basis for the advance initial claims and continued claims reported each week. These data come from ETA 538, Advance Weekly Initial and Continued Claims Report. The following week initial claims and continued claims are revised based on a second reporting by states that reflect the claimants by state of residence. These data come from the ETA 539, Weekly Claims and Extended Benefits Trigger Data Report.

A. Initial Claims

An initial claim is a claim filed by an unemployed individual after a separation from an employer. The claimant requests a determination of basic eligibility for the UI program. When an initial claim is filed with a state, certain programmatic activities take place and these result in activity counts including the count of initial claims. The count of U.S. initial claims for unemployment insurance is a leading economic indicator because it is an indication of emerging labor market conditions in the country. However, these are weekly administrative data which are difficult to seasonally adjust, making the series subject to some volatility.

B. Continued Weeks Claimed

A person who has already filed an initial claim and who has experienced a week of unemployment then files a continued claim to claim benefits for that week of unemployment. Continued claims are also referred to as insured unemployment. The count of U.S. continued weeks claimed is also a good indicator of labor market conditions. Continued claims reflect the current number of insured unemployed workers filing for UI benefits in the nation. While continued claims are not a leading indicator (they roughly coincide with economic cycles at their peaks and lag at cycle troughs), they provide confirming evidence of the direction of the U.S. economy.

C. Seasonal Adjustments and Annual Revisions

Over the course of a year, the weekly changes in the levels of initial claims and continued claims undergo regularly occurring fluctuations. These fluctuations may result from seasonal changes in weather, major holidays, the opening and closing of schools, or other similar events. Because these seasonal events follow a more or less regular pattern each year, their influence on the level of a series can be tempered by adjusting for regular seasonal variation. These adjustments make trend and cycle developments easier to spot. At the beginning of each calendar year, the Bureau of Labor Statistics provides the Employment and Training Administration (ETA) with a set of seasonal factors to apply to the unadjusted data during that year. Concurrent with the implementation and release of the new seasonal factors, ETA incorporates revisions to the UI claims historical series caused by updates to the unadjusted data.

Household data: cpsinfo@bls.gov * www.bls.gov/cps
Establishment data: cesinfo@bls.gov * www.bls.gov/ces

Media contact: (202) 691-5902 * PressOffice@bls.gov

(NOTE: On May 11, 2020, BLS corrected errors in national estimates for seasonally adjusted all employees in professional and technical services, professional and business services, private service-providing, service-providing, total private, and total nonfarm. Tables affected are Summary table B, B-1, B-4, and B-5. The corrected change in total nonfarm employment for April is 37,000 lower than initially reported. Estimates in the LABSTAT database and in this news release were corrected for February, March, and April 2020. BLS also corrected other supporting documentation on www.bls.gov/ces/.)

THE EMPLOYMENT SITUATION -- APRIL 2020

Total nonfarm payroll employment fell by 20.5 million in April, and the unemployment rate rose to 14.7 percent, the U.S. Bureau of Labor Statistics reported today. The changes in these measures reflect the effects of the coronavirus (COVID-19) pandemic and efforts to contain it. Employment fell sharply in all major industry sectors, with particularly heavy job losses in leisure and hospitality.

This news release presents statistics from two monthly surveys. The household survey measures labor force status, including unemployment, by demographic characteristics. The establishment survey measures nonfarm employment, hours, and earnings by industry. For more information about the concepts and statistical methodology used in these two surveys, see the Technical Note.

Household Survey Data

In April, the unemployment rate increased by 10.3 percentage points to 14.7 percent. This is the highest rate and the largest over-the-month increase in the history of the series (seasonally adjusted data are available back to January 1948). The number of unemployed persons rose by 15.9 million to 23.1 million in April. The sharp increases in these measures reflect the effects of the coronavirus pandemic and efforts to contain it. (See table A-1. For more information about how the household survey and its measures were affected by the coronavirus pandemic, see the box at the end of the news release.)

In April, unemployment rates rose sharply among all major worker groups. The rate was 13.0 percent for adult men, 15.5 percent for adult women, 31.9 percent for teenagers, 14.2 percent for Whites, 16.7 percent for Blacks, 14.5 percent for Asians, and 18.9 percent for Hispanics. The rates for all of these groups, with the exception of Blacks, represent record highs for their respective series. (See tables A-1, A-2, and A-3.)

The number of unemployed persons who reported being on temporary layoff increased about ten-fold to 18.1 million in April. The number of permanent job losers increased by 544,000 to 2.0 million. (See table A-11.)

In April, the number of unemployed persons who were jobless less than 5 weeks increased by 10.7 million to 14.3 million, accounting for almost two-thirds of the unemployed. The number of unemployed persons who were jobless 5 to 14 weeks rose by 5.2 million to 7.0 million. The number of long-term unemployed (those jobless for 27 weeks or more), at 939,000, declined by 225,000 over the month and represented 4.1 percent of the unemployed. (See table A-12.)

The labor force participation rate decreased by 2.5 percentage points over the month to 60.2 percent, the lowest rate since January 1973 (when it was 60.0 percent). Total employment, as measured by the household survey, fell by 22.4 million to 133.4 million. The employment-population ratio, at 51.3 percent, dropped by 8.7 percentage points over the month. This is the lowest rate and largest over-the-month decline in the history of the series (seasonally adjusted data are available back to January 1948). (See table A-1.)

The number of persons who usually work full time declined by 15.0 million over the month, and the number who usually work part time declined by 7.4 million. Part-time workers accounted for one-third of the over-the-month employment decline. (See table A-9.)

The number of persons at work part time for economic reasons nearly doubled over the month to 10.9 million. These individuals, who would have preferred full-time employment, were working part time because their hours had been reduced or they were unable to find full-time jobs. This group includes persons who usually work full time and persons who usually work part time. (See table A-8.)

The number of persons not in the labor force who currently want a job, at 9.9 million, nearly doubled in April. These individuals were not counted as unemployed because they were not actively looking for work during the last 4 weeks or were unavailable to take a job. (See table A-1.)

Persons marginally attached to the labor force--a subset of persons not in the labor force who currently want a

job--numbered 2.3 million in April, up by 855,000 over the month. These individuals were not in the labor force, wanted and were available for work, and had looked for a job sometime in the prior 12 months but had not looked for work in the 4 weeks preceding the survey. Discouraged workers, a subset of the marginally attached who believed that no jobs were available for them, numbered 574,000 in April, little changed from the previous month. (See Summary table A.)

Establishment Survey Data

Total nonfarm payroll employment fell by 20.5 million in April, after declining by 881,000 in March. The April over-the-month decline is the largest in the history of the series and brought employment to its lowest level since January 2011 (the series dates back to 1939). Job losses in April were widespread, with the largest employment decline occurring in leisure and hospitality. (See table B-1. For more information about how the establishment survey and its measures were affected by the coronavirus, see the box note at the end of the news release.)

In April, employment in leisure and hospitality plummeted by 7.7 million, or 47 percent. Almost three-quarters of the decrease occurred in food services and drinking places (-5.5 million). Employment also fell in the arts, entertainment, and recreation industry (-1.3 million) and in the accommodation industry (-839,000).

Employment declined by 2.5 million in education and health services in April. In health care, employment declined by 1.4 million, led by losses in offices of dentists (-503,000), offices of physicians (-243,000), and offices of other health care practitioners (-205,000). Employment also declined in social assistance (-651,000), reflecting job losses in child day care services (-336,000) and individual and family services (-241,000). Employment in private education declined by 457,000 over the month.

Professional and business services shed 2.2 million jobs in April. Sharp losses occurred in temporary help services (-842,000) and in services to buildings and dwellings (-259,000).

In April, employment in retail trade declined by 2.1 million. Job losses occurred in clothing and clothing accessories stores (-740,000), motor vehicle and parts dealers (-345,000), miscellaneous store retailers (-264,000), and furniture and home furnishings stores (-209,000). By contrast, the component of general merchandise stores that includes warehouse clubs and supercenters gained 93,000 jobs.

In April, manufacturing employment dropped by 1.3 million. About two-thirds of the decline was in durable goods manufacturing (-914,000), which saw losses in motor vehicles and parts (-382,000) and in fabricated metal products (-109,000). Nondurable goods manufacturing shed 416,000 jobs.

Employment in the other services industry declined by 1.3 million in April, with nearly two-thirds of the decline occurring in personal and laundry services (-797,000).

Government employment dropped by 980,000 in April. Employment in local government was down by 801,000, in part reflecting school closures. Employment also declined in state government education (-176,000).

Construction employment fell by 975,000 in April, with much of the loss in specialty trade contractors (-691,000). Job losses also occurred in construction of buildings (-206,000).

Employment fell in transportation and warehousing in April (-584,000). Transit and ground passenger transportation and air transportation lost 185,000 jobs and 141,000 jobs, respectively.

Wholesale trade shed 363,000 jobs in April, largely reflecting losses in the durable and nondurable goods components.

Employment in financial activities fell by 262,000 over the month, with the vast majority of the decline occurring in real estate and rental and leasing (-222,000).

Employment in information fell by 254,000 in April, driven by a decline in motion picture and sound recording industries (-217,000).

Mining lost 46,000 jobs in April, with most of the decline occurring in support activities for mining (-33,000).

In April, average hourly earnings for all employees on private nonfarm payrolls increased by $1.34 to $30.01. Average hourly earnings of private-sector production and nonsupervisory employees increased by $1.04 to $25.12 in April. The increases in average hourly earnings largely reflect the substantial job loss among lower-paid workers; this change, along with earnings increases, put upward pressure on the average hourly earnings estimates. (See tables B-3 and B-8.)

The average workweek for all employees on private nonfarm payrolls increased by 0.1 hour to 34.2 hours in April. In manufacturing, the workweek declined by 2.1 hours to 38.3 hours, and overtime declined by 0.9 hour to 2.1 hours. The average workweek for production and nonsupervisory employees on private nonfarm payrolls increased by 0.1 hour to 33.5 hours. (See tables B-2 and B-7.)

The change in total nonfarm payroll employment for February was revised down by 24,000 from +275,000 to +251,000, and the change for March was revised down by 180,000 from -701,000 to -881,000. With these revisions, employment changes in February and March combined were 204,000 lower than previously reported. (Monthly revisions result from additional reports received from businesses and government agencies since the last published estimates and from the recalculation of seasonal factors.)

_____

The Employment Situation for May is scheduled to be released on Friday, June 5, 2020, at 8:30 a.m. (EDT).

Coronavirus (COVID-19) Impact on April 2020 Establishment and Household Survey Data
Data collection for both surveys was affected by the coronavirus (COVID-19) pandemic. The household survey is generally collected through in-person and telephone interviews, but personal interviews were not conducted for the safety of interviewers and respondents. The household survey response

rate, at 70 percent, was about 13 percentage points lower than in months prior to the pandemic. In the establishment survey, approximately one-fifth of the data is collected at four regional data collection centers. Although these centers were closed, about half of the interviewers at these centers worked remotely to collect data by telephone. Additionally, BLS encouraged businesses to report electronically. The collection rate for the establishment survey in April was 74.9 percent, essentially unchanged from collection rates prior to the pandemic.

In the establishment survey, workers who are paid by their employer for all or any part of the pay period including the 12th of the month are counted as employed, even if they were not actually at their jobs. Workers who are temporarily or permanently absent from their jobs and are not being paid are not counted as employed, even if they are continuing to receive benefits. The length of the reference period does vary across the respondents in the establishment survey; one-third of businesses have a weekly pay period, slightly over 40 percent a bi-weekly, about 20 percent semi-monthly, and a small amount monthly.

There was a change to the estimation method used in the establishment survey for April. Business births and deaths cannot be adequately captured by the establishment survey as they occur. Therefore, the establishment survey estimates use a model to account for the relatively stable net employment change generated by business births and deaths. Due to the impact of the COVID-19 pandemic, the relationship between the two was no longer stable in April. Therefore, the establishment survey made modifications to the birth-death model. For more information, see www.bls.gov/cps/employment-situation-covid19-faq-april-2020.pdf.

In the household survey, individuals are classified as employed, unemployed, or not in the labor force based on their answers to a series of questions about their activities during the survey reference week (April 12th through April 18th). Workers who indicate they were not working during the entire survey reference week and expect to be recalled to their jobs should be classified as unemployed on temporary layoff. In April, there was an extremely large increase in the number of persons classified as unemployed on temporary layoff.

However, there was also a large increase in the number of workers who were classified as employed but absent from work. As was the case in March, special instructions sent to household survey interviewers called for all employed persons absent from work due to coronavirus-related business closures to be classified as unemployed on temporary layoff. However, it is apparent that not all such workers were so classified.

If the workers who were recorded as employed but absent from work due to "other reasons" (over and above the number absent for other reasons in a typical April) had been classified as unemployed on temporary layoff, the overall unemployment rate would have been almost 5 percentage points higher than reported (on a not seasonally adjusted basis). However, according to usual practice, the data from the household survey are accepted as recorded. To maintain data integrity, no ad hoc actions are taken to reclassify survey responses.

News Release

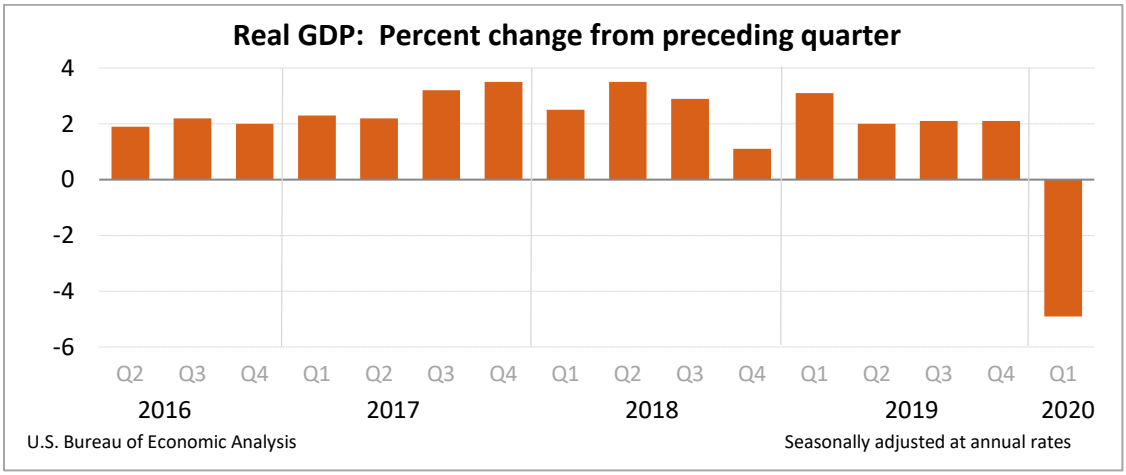
EMBARGOED UNTIL RELEASE AT 8:30 A.M. EDT, WEDNESDAY, APRIL 29, 2020 BEA 20-19

Technical: Lisa Mataloni (301) 278-9083 gdpniwd@bea.gov
Media: Jeannine Aversa (301) 278-9003 Jeannine.Aversa@bea.gov

Gross Domestic Product, First Quarter 2020 (Advance Estimate)

Real gross domestic product (GDP) decreased at an annual rate of 4.8 percent in the first quarter of 2020 (table 1), according to the "advance" estimate released by the Bureau of Economic Analysis. In the fourth quarter of 2019, real GDP increased 2.1 percent.

The GDP estimate released today is based on source data that are incomplete or subject to further revision by the source agency (see “Source Data for the Advance Estimate” on page 2). The "second" estimate for the first quarter, based on more complete data, will be released on May 28, 2020.



Coronavirus (COVID-19) Impact on the Advance First-Quarter 2020 GDP Estimate

The decline in first quarter GDP was, in part, due to the response to the spread of COVID-19, as governments issued “stay-at-home” orders in March. This led to rapid changes in demand, as businesses and schools switched to remote work or canceled operations, and consumers canceled, restricted, or redirected their spending. The full economic effects of the COVID-19 pandemic cannot be quantified in the GDP estimate for the first quarter of 2020 because the impacts are generally embedded in source data and cannot be separately identified. For more information, see the Technical Note.

The decrease in **real GDP** in the first quarter reflected negative contributions from personal consumption expenditures (PCE), nonresidential fixed investment, exports, and private inventory investment that were partly offset by positive contributions from residential fixed investment, federal government spending, and state and local government spending. Imports, which are a subtraction in the calculation of GDP, decreased (table 2).

The decrease in PCE reflected decreases in services, led by health care, and goods, led by motor vehicles and parts. The decrease in nonresidential fixed investment primarily reflected a decrease in equipment, led by transportation equipment. The decrease in exports primarily reflected a decrease in services, led by travel.

Current-dollar GDP decreased 3.5 percent, or $191.2 billion, in the first quarter to a level of $21.54 trillion. In the fourth quarter, GDP increased 3.5 percent, or $186.6 billion (tables 1 and 3).

The **price index for gross domestic purchases** increased 1.6 percent in the first quarter, compared with an increase of 1.4 percent in the fourth quarter (table 4). **The PCE price index** increased 1.3 percent, compared with an increase of 1.4 percent. Excluding food and energy prices, the PCE price index increased 1.8 percent, compared with an increase of 1.3 percent.

Personal Income and Outlays

Current-dollar personal income increased $95.2 billion in the first quarter, compared with an increase of $144.1 billion in the fourth quarter. The deceleration was more than accounted for by a deceleration in compensation that was partly offset by an acceleration in personal current transfer receipts (table 8).

Disposable personal income increased $76.7 billion, or 1.9 percent, in the first quarter, compared with an increase of $123.7 billion, or 3.0 percent, in the fourth quarter. **Real disposable personal income** increased 0.5 percent, compared with an increase of 1.6 percent.

Personal outlays decreased $253.5 billion, after increasing $118.8 billion. The decrease was mainly accounted for by a decrease in PCE.

Personal saving was $1.60 trillion in the first quarter, compared with $1.27 trillion in the fourth quarter. The **personal saving rate**—personal saving as a percentage of disposable personal income—was 9.6 percent in the first quarter, compared with 7.6 percent in the fourth quarter.

Source Data for the Advance Estimate

Information on the source data and key assumptions used in the advance estimate is provided in a Technical Note that is posted with the news release on BEA's Web site. A detailed "Key Source Data and Assumptions" file is also posted for each release. For information on updates to GDP, see the "Additional Information" section that follows.

U.S. DEPARTMENT OF COMMERCE

Upcoming Annual Update of the National Income and Product Accounts

BEA will release results from the 2020 annual update of the National Income and Product Accounts on July 30, 2020, in conjunction with the advance estimate of GDP for the second quarter of 2020. For estimates of real GDP and its major components, the span of the update will cover the most recent five years (2015-2019) and the first quarter of 2020. Estimates of income and saving will be subject to revision from 1999 through the first quarter of 2020. More information on the 2020 annual update will be included in the forthcoming May *Survey of Current Business* article, "GDP and the Economy."

Definitions

Gross domestic product (GDP) is the value of the goods and services produced by the nation's economy less the value of the goods and services used up in production. GDP is also equal to the sum of personal consumption expenditures, gross private domestic investment, net exports of goods and services, and government consumption expenditures and gross investment.

Gross domestic income (GDI) is the sum of incomes earned and costs incurred in the production of GDP. In national economic accounting, GDP and GDI are conceptually equal. In practice, GDP and GDI differ because they are constructed using largely independent source data.

Current-dollar estimates are valued in the prices of the period when the transactions occurred—that is, at "market value." Also referred to as "nominal estimates" or as "current-price estimates."

Real values are inflation-adjusted estimates—that is, estimates that exclude the effects of price changes.

The ***gross domestic purchases price index*** measures the prices of final goods and services purchased by U.S. residents.

The ***personal consumption expenditure price index*** measures the prices paid for the goods and services purchased by, or on the behalf of, "persons."

Personal income is the income received by, or on behalf of, all persons from all sources: from participation as laborers in production, from owning a home or business, from the ownership of financial assets, and from government and business in the form of transfers. It includes income from domestic sources as well as the rest of world. It does not include realized or unrealized capital gains or losses.

Disposable personal income is the income available to persons for spending or saving. It is equal to personal income less personal current taxes.

Personal outlays is the sum of personal consumption expenditures, personal interest payments, and personal current transfer payments.

Personal saving is personal income less personal outlays and personal current taxes.

The ***personal saving rate*** is personal saving as a percentage of disposable personal income.

Profits from current production, referred to as corporate profits with inventory valuation adjustment (IVA) and capital consumption adjustment (CCAdj) in the National Income and Product Accounts (NIPAs), is a measure of the net income of corporations before deducting income taxes that is consistent with the value of goods and services measured in GDP. The IVA and CCAdj are adjustments that convert inventory withdrawals and depreciation of fixed assets reported on a tax-return, historical-cost basis to the current-cost economic measures used in the national income and product accounts. Profits for domestic industries reflect profits for all corporations located within the geographic borders of the United States. The rest-of-the-world (ROW) component of profits is measured as the difference between profits received from ROW and profits paid to ROW.

For more definitions, see the Glossary: National Income and Product Accounts.

Statistical conventions

Annual-vs-quarterly rates. Quarterly seasonally adjusted values are expressed at annual rates, unless otherwise specified. This convention is used for BEA's featured, seasonally adjusted measures to facilitate comparisons with related and historical data. For details, see the FAQ "Why does BEA publish estimates at annual rates?" Quarterly not seasonally adjusted values are expressed only at quarterly rates.

Bureau of Economic Analysis
U.S. DEPARTMENT OF COMMERCE

Percent changes. Percent changes in quarterly seasonally adjusted series are displayed at annual rates, unless otherwise specified. For details, see the FAQ "How is average annual growth calculated?" Percent changes in quarterly not seasonally adjusted values are calculated from the same quarter one year ago. All published percent changes are calculated from unrounded data.

Calendar years and quarters. Unless noted otherwise, annual and quarterly data are presented on a calendar basis.

Quantities and prices. Quantities, or "real" volume measures, and prices are expressed as index numbers with a specified reference year equal to 100 (currently 2012). Quantity and price indexes are calculated using a Fisher-chained weighted formula that incorporates weights from two adjacent periods (quarters for quarterly data and annuals for annual data). For details on the calculation of quantity and price indexes, see Chapter 4: Estimating Methods in the NIPA Handbook.

Chained-dollar values are calculated by multiplying the quantity index by the current dollar value in the reference year (2012) and then dividing by 100. Percent changes calculated from real quantity indexes and chained-dollar levels are conceptually the same; any differences are due to rounding. Chained-dollar values are not additive because the relative weights for a given period differ from those of the reference year. In tables that display chained-dollar values, a "residual" line shows the difference between the sum of detailed chained-dollar series and its corresponding aggregate.

Updates to GDP

BEA releases three vintages of the current quarterly estimate for GDP: "Advance" estimates are released near the end of the first month following the end of the quarter and are based on source data that are incomplete or subject to further revision by the source agency; "second" and "third" estimates are released near the end of the second and third months, respectively, and are based on more detailed and more comprehensive data as they become available.

The table below shows the average revisions to the quarterly percent changes in real GDP between different estimate vintages, without regard to sign.

Vintage	Average Revision Without Regard to Sign (percentage points, annual rates)
Advance to second	0.5
Advance to third	0.6
Second to third	0.3
Note - Based on estimates from 1993 through 2018. For more information on GDP updates, see Revision Information on the BEA Web site.	

Annual and comprehensive updates are typically released in late July. Annual updates generally cover at least the 5 most recent calendar years (and their associated quarters) and incorporate newly available major annual source data as well as some changes in methods and definitions to improve the accounts. Comprehensive (or benchmark) updates are carried out at about 5-year intervals and incorporate major periodic source data, as well as major conceptual improvements.

Unlike GDP, an advance current quarterly estimate of GDI is not released because data on domestic profits and on net interest of domestic industries are not available. For fourth quarter estimates, these data are not available until the third estimate.

1. Real gross domestic income is gross domestic income deflated by the implicit price deflator for gross domestic product.

Note. Users are cautioned that particularly for components that exhibit rapid change in prices relative to other prices in the economy, the chained-dollar estimates should not be used to measure the component's relative importance or its contribution to the growth rate of more aggregate series. For accurate estimates of the contributions to percent changes in real gross domestic product, use table 2.

1. Food excludes personal consumption expenditures for purchased meals and beverages, which are classified in food services.

2. This index is a supplemental measure that is based on household expenditures for which there are observable price measures. It excludes most implicit prices (for example, financial services furnished without payment) and the final consumption expenditures of nonprofit institutions serving households.

1. Gross domestic income deflated by the implicit price deflator for gross domestic product.

2. Food excludes personal consumption expenditures for purchased meals and beverages, which are classified in food services.

3. This index is a supplemental measure that is based on household expenditures for which there are observable price measures. It excludes most implicit prices (for example, financial services furnished without payment) and the final consumption expenditures of nonprofit institutions serving households.

Note. Estimates under the *Percent change from the preceding year* columns are calculated from annual data. Estimates under the *Percent change fourth quarter to fourth quarter* columns are calculated from fourth quarter values relative to the same quarter one year prior.

COVID-19: The Outlook For North American Regulated Utilities Turns Negative

April 2, 2020

Key Takeaways

- We are revising our assessment of the North America regulated utility industry to negative from stable.
- We expect that the utility industry will remain a high-credit-quality investment-grade industry.
- We expect that the industry's median rating, which is 'A-', could weaken to the 'BBB+' level.
- Prior to the coronavirus outbreak in North America about 25% of the utilities had a negative outlook or ratings that were on CreditWatch with negative implications.
- Additionally, many utilities with a stable outlook have minimal financial cushion at the current rating level.
- We expect COVID-19 will weaken the industry's 2020 funds from operations (FFO) to debt by about 100 basis points.

S&P Global Ratings acknowledges a high degree of uncertainty about the rate of spread and peak of the coronavirus outbreak. Some government authorities estimate the pandemic will peak about midyear, and we are using this assumption in assessing the economic and credit implications. We believe the measures adopted to contain COVID-19 have pushed the global economy into recession (see our macroeconomic and credit updates here: www.spglobal.com/ratings). As the situation evolves, we will update our assumptions and estimates accordingly.

S&P Global Ratings is revising downward its assessment of the North America utility industry to negative from stable. The North America utility industry consists of about 250 water, gas, and electric utilities. While we expect the sector to remain an investment-grade industry, we nevertheless project a modest weakening of credit quality within the industry. Credit quality had been gradually weakening prior to the COVID-19 outbreak with about 25% of companies on negative outlook or with ratings on CreditWatch with negative implications. We view COVID-19 as a source of incremental pressure and expect that the recession will lead to an increasing number of downgrades and negative outlooks. Currently, the median rating within the industry is 'A-' and over the next 12 months, we expect that the industry median could move to 'BBB+'.

Credit Quality Was Weakening Even Before COVID-19

The North America regulated utility industry's credit quality was already weakening prior to COVID-19. This reflected companies' more consistent ability to manage credit measures closer to the downgrade threshold, leaving very minimal financial cushion at the current rating level. We generally view the industry's cash flows as more predictable and steady than most other corporate industries. Even so, unless a management team can proactively implement corrective actions, a utility with minimal financial cushion at the current rating coupled with an unexpected material event, typically results in a negative outlook or a downgrade.

The industry has faced many unexpected events and credit obstacles over the past two years. Some of these include safety (NiSource Inc.), wildfires (PG&E Corp., Edison International, and Sempra Energy), large capital projects (Southern Co., SCANA Corp., Eversource Energy, Duke Energy Corp., and Dominion Energy Inc.), utility acquisition (Fortis Inc., Emera Inc., ENMAX Corp., and NextEra Energy Inc.), and nonutility acquisitions (DTE Energy Co.). Each of these instances have either significantly reduced the prior cushion at the current rating level, triggered negative outlooks, or downgrades.

Also pressuring the industry's credit quality is the critical focus on environmental, social, and governance (ESG) factors. Over the past decade, the industry has done an outstanding job to significantly reduce its greenhouse gas emissions and reduce its reliance on coal-fired generation.

However, there are individual companies such as American Electric Power Co. Inc., Ameren Corp., and Evergy Inc. that despite having long-term plans to reduce their reliance on coal-fired generation, will continue to rely heavily on that fuel source for the next decade, possibly pressuring credit quality.

Rating Upgrades And Downgrades

Over the past decade, there have been generally more upgrades than downgrades in the sector. This has strengthened the utilities' credit quality since the financial recession and currently, the median rating within the industry is 'A-'.

When analyzing our rating upgrades and downgrades in the sector for 2019, even prior to COVID-19, we note a weakening of credit quality.

THIS WAS PREPARED EXCLUSIVELY FOR USER TED WOOD.

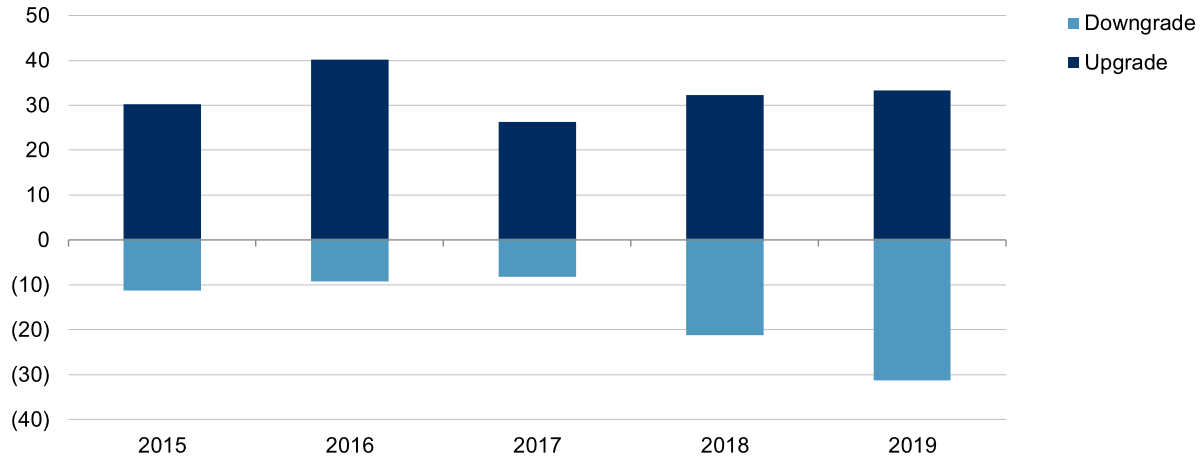
Chart 5

North American Regulated Utilities Upgrades And Downgrades



Source: S&P Global Ratings.

Copyright © 2020 by Standard & Poor's Financial Services LLC. All rights reserved.

While 2019 may initially appear to be similar to prior years with upgrades outpacing downgrades at 33 to 31, the underlying analysis tells a different story. In 2019, about 60% of the upgrades were attributed to S&P Global Ratings' revised group rating methodology criteria. Under the revised criteria, we placed more emphasis on the regulation of a utility allowing for a subsidiary with effective regulation and with a stand-alone credit profile that is higher than its group to potentially be rated higher. Absent the revised criteria, downgrades would have outpaced upgrades by 30 to 13 in 2019. This is a clear indication that even before COVID-19, the credit quality of the North America regulated utility sector had weakened.

Operating With Minimal Financial Cushion

While many companies with a negative outlook such as Puget Energy Inc. have minimal financial cushion at their current rating level, many others with a stable outlook also have minimal financial cushion at their current rating level. Companies with a stable outlook and minimal financial cushion include Exelon Corp., ALLETE Inc., American Water Works Co. Inc., Edison International, AVANGRID Inc., DPL Inc., CenterPoint Energy Inc., and Madison Gas & Electric Co. As the financial effects of COVID-19 continue to take hold, we expect that even companies with stable outlooks may experience ratings downward pressure. This is another reason that underscores our assessment that the industry outlook has turned negative.

How COVID-19 May Affect The Sector

In general, we assume that the U.S. will experience more than a 12% contraction in GDP during the second quarter and estimate the pandemic will peak between June and August (Global Macroeconomic Update, March 24: A Massive Hit To World Economic Growth, March 24, 2020).

For the North America utility industry, we expect that COVID-19 will reduce the commercial and

THIS WAS PREPARED EXCLUSIVELY FOR USER TED WOOD.
NOT FOR REDISTRIBUTION UNLESS OTHERWISE PERMITTED.

industrial (C&I) usage (North American Regulated Utilities Face Additional Risks Amid Coronavirus Outbreak, March 19, 2020). While some utilities will be able to offset some of the lower C&I usage through various regulatory mechanisms that include decoupling of revenues mechanisms and formula rates, many others will see a weakening of sales. Furthermore, as the recession continues to take hold, we expect bad debt expense will increase as it becomes increasingly more difficult for customers to pay their bills. While many utilities can defer these costs for future recovery, as these balances grow, historically we have seen incidents where utilities negotiate with their commission's to write off some of these costs as part of a larger agreement. Overall, we expect that these effects will result in a weakening of credit measures.

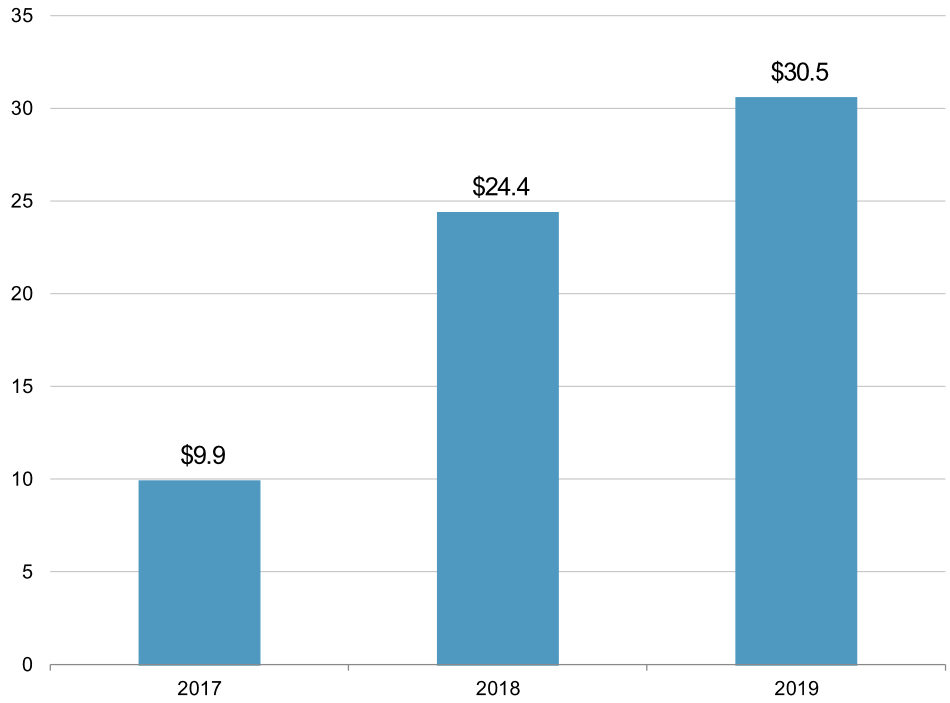
On a positive note, the industry continues to exhibit adequate liquidity and access to the debt markets, despite uneven performance of the commercial paper market for tier 2 issuers. The industry is benefiting from proactive risk management of establishing large credit facilities, having good access to additional liquidity through new term loans from banks, and public issuance of utility debt. These positive developments contrast to the last financial recession, when many utilities fully drew on their available credit lines and access to the banks or to the public debt market was effectively shut for many weeks.

Yet availability to the equity markets remains extraordinarily challenging. In 2019, the industry issued more than $30 billion in equity to preserve credit quality and heading into 2020 many companies within the industry assumed equity issuances as part of their financing plans. Given the industry's negative discretionary cash flow because of its high capital spending and lack of access to the equity markets, we expect that this will also lead to a weakening of credit measures.

**THIS WAS PREPARED EXCLUSIVELY FOR USER TED WOOD.
NOT FOR REDISTRIBUTION UNLESS OTHERWISE PERMITTED.**

Chart 6

North American Regulated Utilities Equity Issuance In Billions



Source: S&P Global Ratings.

Another area of concern are utilities that rely to various degrees on nonutility businesses that have commodity exposure (S&P Global Ratings Cuts WTI And Brent Crude Oil Price Assumptions Amid Continued Near-Term Pressure, March 19, 2020). These include OGE Energy Corp., CenterPoint Energy Inc., DTE Energy Co., Dominion Energy Inc., Public Service Enterprise Group Inc., NextEra Energy Inc., and Exelon Corp. While many of them are well hedged in the near term, volumetric risk and a longer-term weakening of commodity prices could have a material effect on their credit measures. Overall, assuming that the effects of COVID-19 is only temporary, we would expect that the industry's 2020 FFO to debt will weaken by about 100 basis points, consistent with our revised negative outlook for the industry.

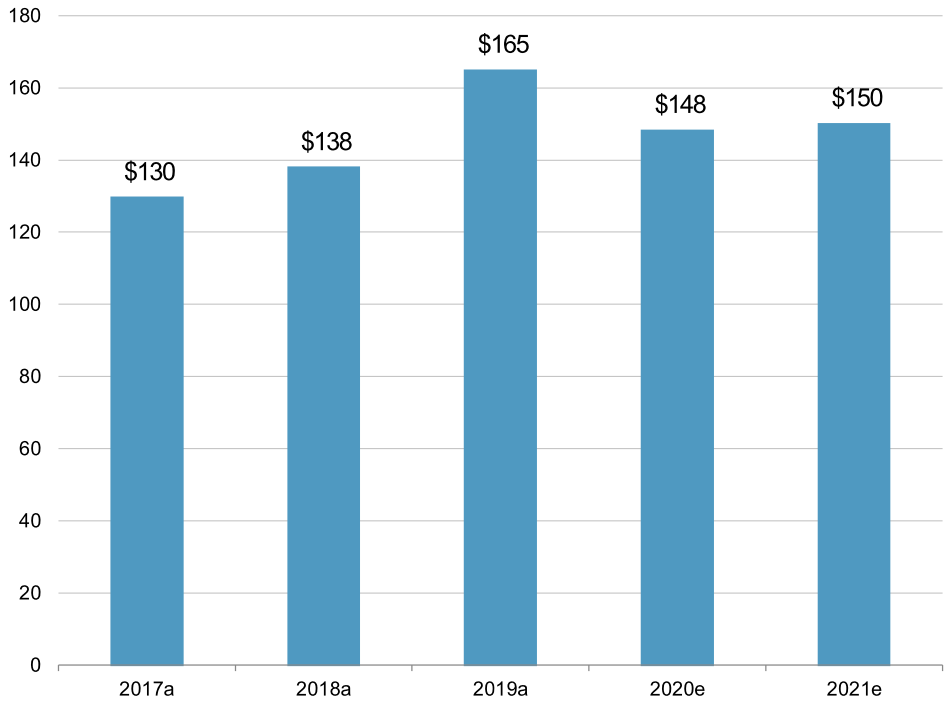
The Industry Has Levers

Depending on the severity of the recession, the industry has important levers that could mitigate some of the risks. This includes reducing capital spending and dividends. Currently, we estimate that 2020 capital spending will approximate $150 billion.

THIS WAS PREPARED EXCLUSIVELY FOR USER TED WOOD.
NOT FOR REDISTRIBUTION UNLESS OTHERWISE PERMITTED.

Chart 7

North American Regulated Utilities Capital Expenditures In Billions



a--actual. e--estimate. Source: S&P Global Ratings.

Based on our conversations with the companies within the industry there is a wide range as to how deeply a utility can reduce its capital spending and still maintain safe and reliable services. Some utilities can only reduce capital spending by as little as 15%, others by as much as 60%. Our analysis indicates that the majority of utilities could reduce their capital spending on a temporary basis by about 40% and maintain safe operations. Should the recession prolong, we would expect that the industry would generally first reduce capital spending and only afterward cut dividends. There is precedent that during times of high financial stress, utilities have reduced their dividends and we would expect that the industry, if necessary, would use this lever, acting prudently to preserve credit quality.

Credit quality of the North America regulated utility industry was already weakening prior to COVID-19. We believe that incremental challenges that the industry will face from this recession exacerbates financial pressure and underpins our revised negative outlook for the industry. However, we also expect that this industry's credit quality will continue to outperform most other corporate industries despite these challenges. Furthermore, we expect that the utilities will use the levers available to them to reduce credit risks and limit the financial impact from COVID-19. Overall, while we expect a weakening to the industry's credit quality, we continue to firmly believe that this industry will remain a high-quality, investment-grade industry.

This report does not constitute a rating action.

S&P credits utilities' moves to bolster liquidity against virus impacts

Author **Ellie Potter**

Theme **Energy**

While the coronavirus pandemic has shaken industries all over the world, S&P Global Ratings expects the North American regulated utility sector to maintain its investment grade credit profile, helped by proactive measures the industry has taken to ensure liquidity through revolving credit facilities and issuing debt.

Many utilities entered into 364-day term loans during the first quarter to lock in liquidity at "reasonable rates," a move Ratings viewed positively. Doing so allowed the sector to "circumvent the volatile commercial paper markets, strengthening the industry's near-term liquidity position," S&P analysts wrote in a May 4 report.

"Despite the challenges associated with the economic downturn, the utility industry has preserved its investment-grade profile and maintaining adequate liquidity in part by securing multiyear revolving credit facilities

that are sized to sufficiently cover cash needs over a 12-month period," S&P Global Ratings said.

This response marks a contrast from the 2008 financial crisis when many utilities drew down credit facilities, weakening liquidity, S&P Global Ratings noted. Another positive contrast is the utility industry issuing a record amount of long-term debt in the first quarter, demonstrating healthy access to capital markets.

"Notably, holding companies, in addition to their utilities, were able to access the capital markets — another key difference compared to 2008," Ratings analysts wrote.

READ MORE: *Sign up for our weekly coronavirus newsletter* ***here****, and read our latest coverage on the crisis* ***here****.*

While the industry has performed well so far, the report cautioned that utilities' credit quality may weaken as companies with little financial cushion continue to weather the financial storm brought on by the COVID-19 outbreak. Ratings lowered its outlook for the sector from stable to negative in early April as a result.

But S&P Global Ratings expects capital spending by utilities to remain "robust," so long as access to capital markets remains, and the agency does not materially lower its economic outlook forecast.

Under the assumption that the virus will peak around mid-year, Ratings economists expect U.S. GDP to contract 5.2% in 2020 and headline unemployment to reach as high as 19% in May, according to the report. The credit rating agency said it took more than 680 rating actions and nearly 730 outlook revisions or CreditWatch placements globally over a six-week

period amid the outbreak and weakened oil market. The energy sector, followed by the banking industry, had the most affected issuers within the broader corporate ratings environment.

Utilities often operate with negative discretionary cash flow, so their "consistent access" to capital markets has proven critical to credit quality, according to the report.

"Importantly, should current economic conditions significantly weaken from S&P Global Ratings' base-case scenario or regular access to the debt markets subside, utilities would likely need to pull available levers to preserve liquidity and ultimately, credit quality," Ratings said. "This could include some form of reduction in capital spending, operating and maintenance costs, and dividends."

The sector has kept its essential services up and running, with many utilities requiring employees to use personal protective equipment and exercise social distancing for face-to-face interactions, according to the report. Companies have also allowed some staff to work remotely and enabled others to remain onsite at critical facilities throughout the pandemic.

Correlations Going to 1: Amid Market Collapse, U.S. Stock Fund Factors Show Little Differentiation

We don't see connections between portfolio characteristics and returns when looking through the lens of our Factor Profile data.

David Carey, **Tom Lauricella**
Mar 6, 2020

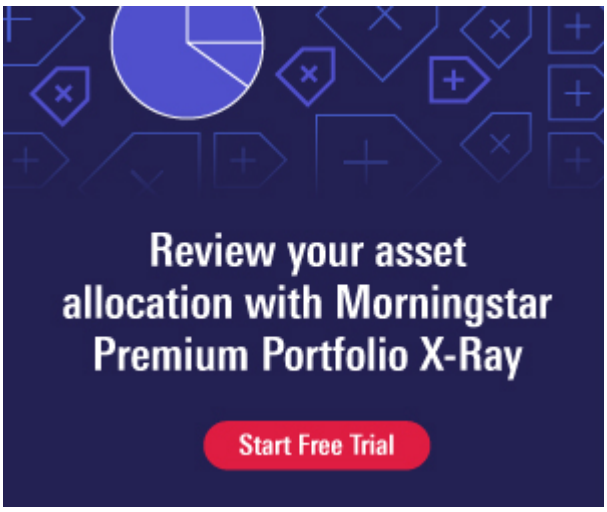
Editor's note: Read the latest *on how the coronavirus is rattling the markets and what investors can do to navigate it.*

There's an old saying in the financial markets that, during a time of crisis, "Correlations go to 1."

The meaning here is that when there's a panicked rush to the exits--as global stock markets have seen amid the spread of the coronavirus--all stocks are punished equally and indiscriminately. And fund investors have seen this sell first, ask questions later exodus in their portfolios.

While losses may just feel like losses, all market declines aren't alike. Often a market drop will see the asset classes or sectors that had done the best heading into the sell-off reverse course and post the largest declines. In that kind of environment, investments that had lagged tend to be more buoyant. In addition, in an orderly stock market retrenchment, defensive sectors such as higher-yielding stocks will also outperform.

But that hasn't been the case during the coronavirus market collapse.



No hidden fees. No surprises. TD Ameritrade

This sell-everything environment can be seen first through overall returns. On average, all nine categories of U.S. diversified stock funds lost between 10.8% and 11.6% starting from Feb. 19--when the S&P 500 hit a record high--and Feb. 27. That margin is a very narrow range for a chaotic market.

The run-for-the-hills mentality also became clear when we scouted for connections--or, in this case, a lack of connections--between portfolio characteristics and returns by looking at funds through the lens of Morningstar's Factor Profile data. This data set measures a fund's portfolio based on seven metrics: size, style, yield, momentum, quality, volatility, and liquidity.

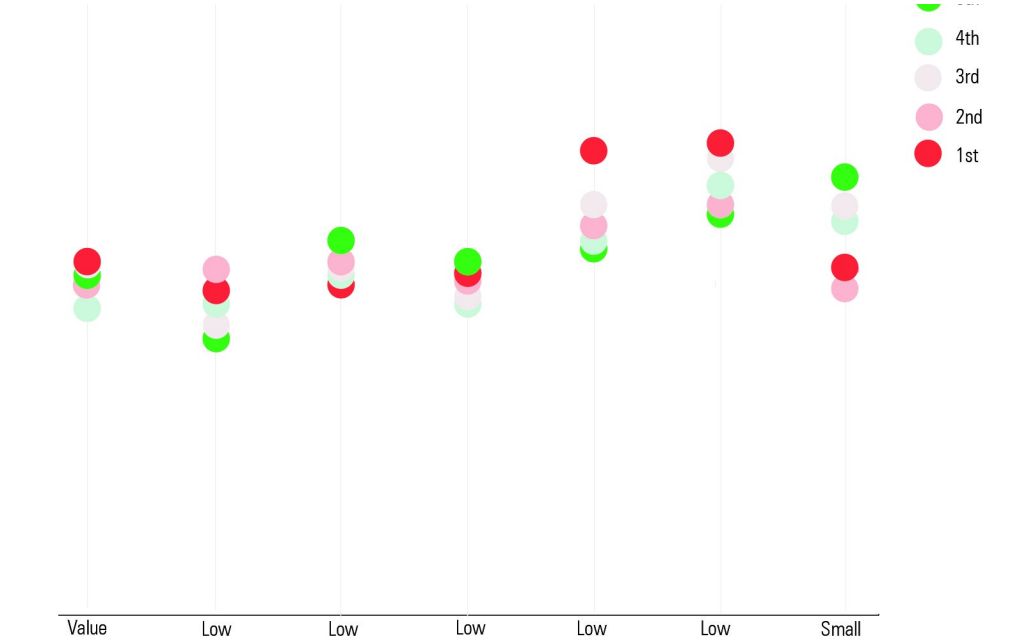
When we measure fund performance against these factors, we can see clear patterns of a "correlations go to 1" market. For this article, we focused on the universe of U.S. diversified-stock funds.

Between Feb. 19 and Feb. 27, whether funds tended to invest in growth or stocks, high yield or low yield, or strong or weak momentum, there was little overall differentiation. There was only a tiny bit more shelter to be found from the storm in funds focused on lower-volatility stocks.

U.S. Diversified Stock Fund Average Factor Exposures Broken Down by Return Quintiles, Feb. 19-27

Style	Yield	Momentum	Quality	Volatility	Liquidity	Size
Growth	High	High	High	High	High	Large

1-Week Return Quintile Rank
5th

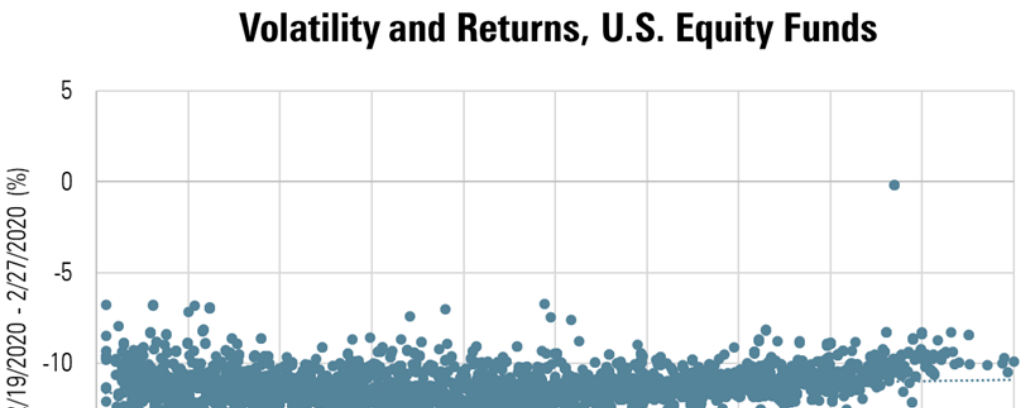


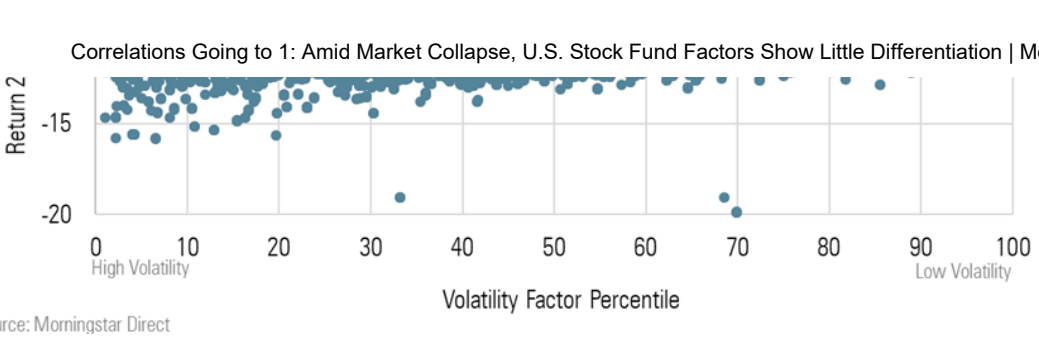
Source: Morningstar Direct, 1-Week Return is 2/19/2020 - 2/27/2020

As highlighted in our article "What's Driving U.S. Stock Fund Returns? ," during the three years ended Dec. 31, funds focused on the biggest, fastest-growing companies or stocks that were already on an uptrend performed better than funds that loaded up on smaller, undervalued companies or those without a clear uptrend or downtrend in place.

Volatility

Not too surprisingly, one of the characteristics that played out slightly better over the course of the recent sell-off were portfolios dominated by low-volatility stocks. Yet, the returns are still negative across the board regardless of high- or low-volatility exposure and the gap between.



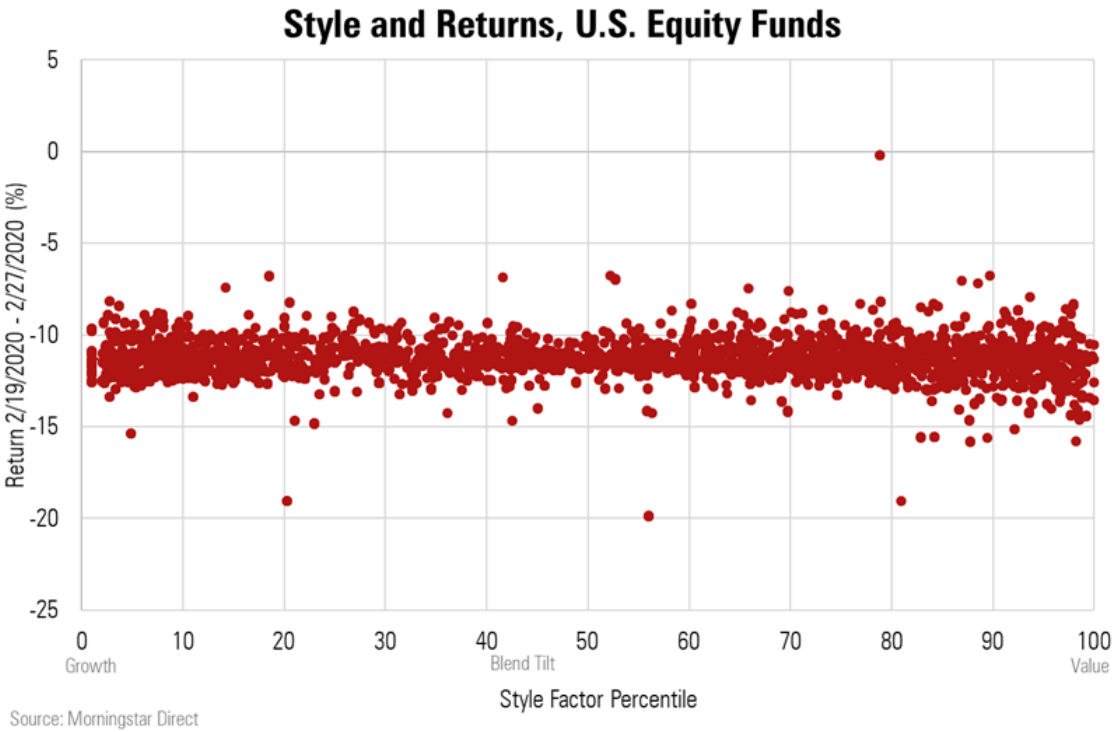


Source: Morningstar Direct

Value Versus Growth

The outperformance of growth strategies over value during the market's bull run has been one of the stock market's most dominant trends in the past three years. Value funds have had only sporadic bouts of outperformance recently, such as during last August's stock market slide, which was sparked by fears of a U.S. recession.

But in the virus sell-off, there's been little distinction.

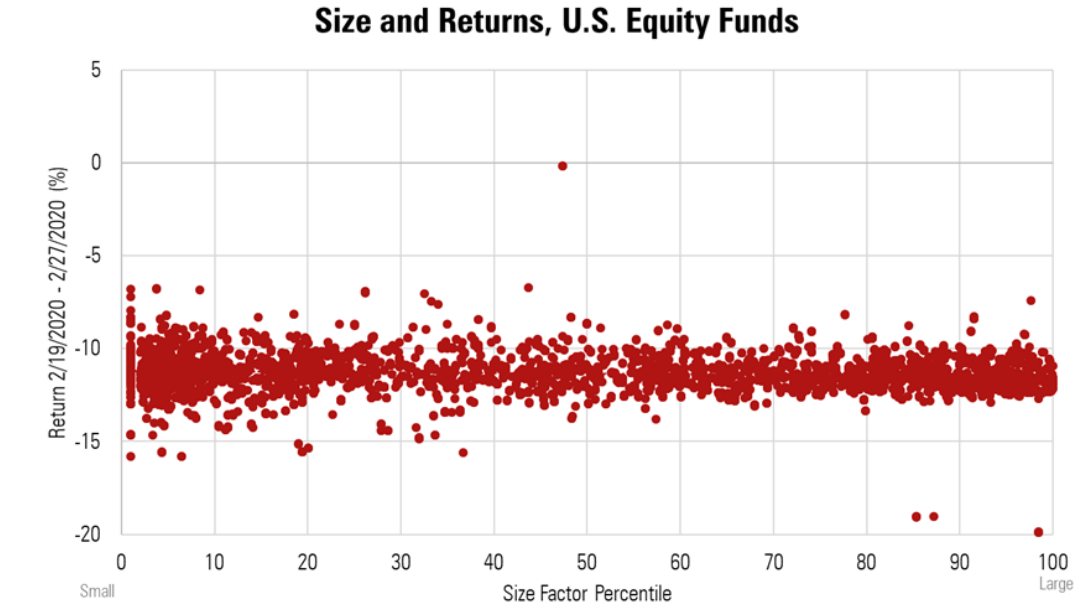


Source: Morningstar Direct

During the Feb. 19-27 time period, value funds posted an average loss of 11.25% versus a 11.11% average drop for growth funds.

Size

Another clear trend over the past few years has been the outperformance of portfolios with larger-cap stocks. But again, since Feb. 19, on average there was no material differentiation in performance based on market capitalization. Returns of small- and large-cap stocks were nearly identical since Feb. 19, with small caps posting a negative 10.94% return compared with large-cap returns of negative 11.30%.



Source: Morningstar Direct

Yield

Yield can often offer investors a safe haven when markets get turbulent. This time around, yield exposure did not affect fund performance.

Regulated Electric and Gas Utilities – US

Dividends a major source of cash if coronavirus downturn is prolonged

Shareholder dividends provide US regulated utilities with a significant source of internal cash that could help them offset the impact of a potentially prolonged coronavirus-related economic downturn. We expect US GDP to contract 2% in 2020, which will include a steep 4.3% contraction in the first half of the year, before recovering to 2.3% growth in 2021 (see "Global Macro Outlook 2020-21 [March 25, 2020 Update]: The coronavirus will cause unprecedented shock to the global economy"). As recessionary indicators build, some utilities will reassess their dividend policy.

In 2019, we estimate US utilities paid out $28.1 billion in shareholder dividends, or almost 70% of aggregate net income. As a critical infrastructure sector, most investors view utilities as an attractive asset class during periods of market volatility. A predictable dividend policy, and effective constituency outreach programs with regulators help contribute to a 10-year average cumulative probability of default that is about four times lower than all non-financial corporates.

Dividends are authorized by a company's board of directors. The disclosure of dividend policies is one of the factors we consider when examining a company's corporate governance practices (see "Non-financial companies – Global: Corporate governance assessments for publicly traded non-financial companies"). We also look at the degree of consistency with which companies comply with its stated dividend policies. That said, the ability to adjust capital dividend payments in response to significant market shocks is a credit positive (see "Utilities and power companies - Corporate governance assessments show generally credit-friendly characteristics").

In a prolonged economic downturn, boards of directors are likely to review dividend plans as an option to conserve cash. We think utilities with high payout ratios are more likely to scale back dividend plans. CenterPoint Energy Inc.(Baa2 stable), which had a payout ratio of 86% in 2019 announced a 48% reduction in its dividend on 1 April 2020 driven primarily by a reduction in cash flow from its Enable Midstream Partners, LP (Baa3 stable) investment. The dividend reduction translates to approximately $275 million in annual savings based on 2019 average shares outstanding. For fiscal year 2019, other utilities with high payout ratios include Dominion Energy Inc. (Baa2 stable), PNM Resources Inc. (Baa3 stable), FirstEnergy Corp. (Baa3 stable) and NiSource Inc. (Baa2 stable).

This document has been prepared for the use of Kenneth Kenny and is protected by law. It may not be copied, transferred or disseminated unless authorized under a contract with Moody's or otherwise authorized in writing by Moody's.

[1] Based DPS growth guidance or EPS growth guidance and payout ratio target announced before the deterioration in economic conditions
[2] In 2019, Dominion had $1.3 billion in non-cash impairments in addition to roughly $500 million of one-time merger related expenses that reduced net income
[3] Payout ratio elevated due to negative impact on earnings of non-cash impairment associated with the disallowance of certain coal plant upgrade capital
Sources: FactSet, company documents and Moody's Investors Service

From a credit perspective, companies with high payout ratios stand out because the incremental cash outflow for growing dividends requires more financing. Some utilities, such as Dominion and FirstEnergy, indicated a reduction in dividend growth rate before the pandemic, in part to manage their payout ratios down, and reduce their need for incremental debt. For now, most utilities are still holding onto their publicly announced dividend growth guidance. Before the coronavirus outbreak, we were estimating growth in dividends by about 5% in 2020, up to roughly $30 billion from about $28 billion in 2019.

This document has been prepared for the use of Kenneth Kenny and is protected by law. It may not be copied, transferred or disseminated unless authorized under a contract with Moody's or otherwise authorized in writing by Moody's.

If the coronavirus-fueled economic recession were to reduce the aggregate net income of US regulated utilities by 10% to $36 billion, from about $40 billion in 2019, the average dividend payout ratio would jump to about 80%.

Slower dividend growth helps future cash flow

We do not expect to see a widespread reduction in utility dividends, but the dividend growth rate could decline materially. Utilities with above-average payout ratios benefit from slower dividend growth, especially if cash flow declines. Of the utilities with high payout ratios, the ones most likely to scale back their dividend plans are those with significant debt balances and little flexibility to cope with cash flow deterioration.

Although the ratio of cash flow from operations before changes in working capital (CFO pre-WC) to debt is weighted most heavily in our regulated electric and gas utilities methodology, the next most important ratio is CFO pre-WC less dividends to debt, commonly referred to as retained cash flow (RCF) to debt. The RCF-to-debt ratio provides insight into dividend policies and how management balances the interests of shareholders, fixed-income investors and other stakeholders.

This document has been prepared for the use of Kenneth Kenny and is protected by law. It may not be copied, transferred or disseminated unless authorized under a contract with Moody's or otherwise authorized in writing by Moody's.

Exhibit 2

Retained cash flow (CFO pre-WC less dividends) to debt ratios could pressure high dividend payers

Ranked by ratio of (CFO pre-WC) less dividends to debt (2019)

Company	2019 (CFO PreWC - Dividends)	2019 Adjusted Debt	2019 (CFO PreWC - Dividends)/Debt
Edison International	($1,359)	$20,671	-6.6%

Utilities view dividend reductions as a last resort

Dividend reductions are uncommon in the utilities sector and companies usually consider them only after taking other credit strengthening measures, such as curtailing discretionary capital expenditures and reducing O&M costs. Nevertheless, during times of market volatility, shifting macroeconomic fundamentals, or company-specific developments that stress liquidity, some utilities have turned to sharp reductions (or suspensions) of their dividend to conserve cash, as shown in Exhibit 5.

Exhibit 3

Historical dividend reductions have been used as a means to conserve cash when necessary

US regulated utility dividend reductions and suspensions since 2008

Company	Year	Previous year payout ratio	% reduction in dividend	Year over year cash savings ($mm) [1]	Primary driver
CenterPoint Energy, Inc.	2020	86%	48%	$275	Underperforming midstream investment
SCANA Corporation	2018	-295%	80%	$135	Abandonment of nuclear project
PG&E Corporation	2017	69%	100%	$1,021	California wildfires
FirstEnergy Corp.	2014	176%	35%	$316	Underperforming unregulated power business
Exelon Corporation	2013	148%	41%	$467	Underperforming unregulated power business
Empire District Electric Company	2011	109%	100%	$25	Service territory devastated by tornado
Ameren Corporation	2009	88%	39%	$196	Unregulated power; challenging business and financial market conditions
Great Plains Energy, Inc.	2009	144%	50%	$62	Economic and financial market uncertainty
Constellation Energy Group, Inc.	2009	-26%	50%	$108	Unregulated power; challenging business and financial market conditions
PNM Resources, Inc.	2008	94%	46%	$13	Underperforming unregulated electric retail business

[1] Represents the difference between total cash dividends paid in the year the dividend reduction took effect and the previous year; CenterPoint estimated based on difference in annualized dividends per share and 2019 average shares outstanding

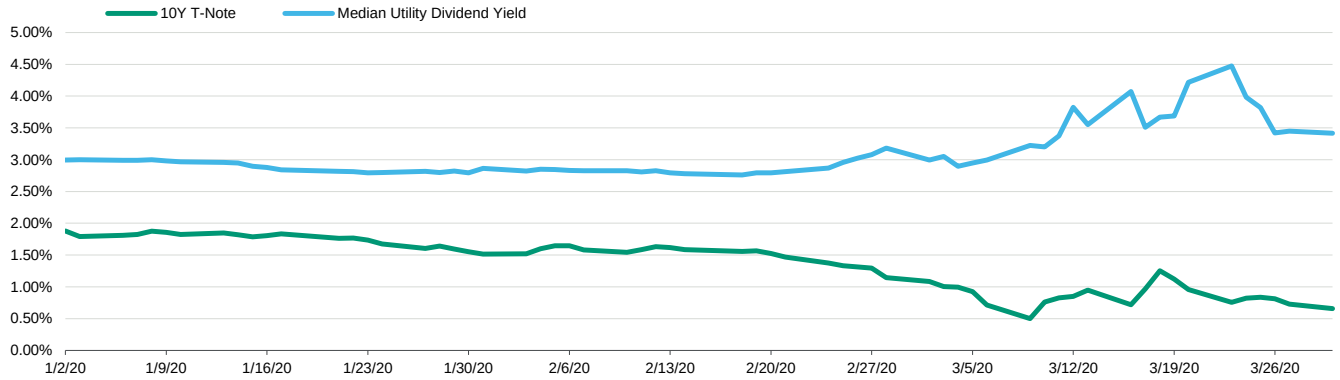
Sources: Company documents and Moody's Investors Service

The recent widening in the spread between 10-year US Treasury yields and the median utility dividend yield indicates a degree of investor uncertainty about the sustainability of dividends. For the companies included in this report, we saw the 2020 year-to-date median dividend yield peak in March at 4.5%, with the dividend yields of CenterPoint and PPL Corporation (Baa2 stable) far exceeding the median at 9.6% and 8.9%, respectively.

Exhibit 4

Widening spread points to investor uncertainty about dividend sustainability

Year-to-date median dividend yield of US utility holding companies and 10-year US Treasury yields as of 30 March 2020



Note: Median utility dividend yield based on the 38 electric and gas utility parent companies identified in this report

Moody's Investors Service, Inc., a wholly-owned credit rating agency subsidiary of Moody's Corporation ("MCO"), hereby discloses that most issuers of debt securities (including corporate and municipal bonds, debentures, notes and commercial paper) and preferred stock rated by Moody's Investors Service, Inc. have, prior to assignment of any credit rating, agreed to pay to Moody's Investors Service, Inc. for credit ratings opinions and services rendered by it fees ranging from $1,000 to approximately $2,700,000. MCO and Moody's investors Service also maintain policies and procedures to address the independence of Moody's Investors Service credit ratings and credit rating processes. Information regarding certain affiliations that may exist between directors of MCO and rated entities, and between entities who hold credit ratings from Moody's Investors Service and have also publicly reported to the SEC an ownership interest in MCO of more than 5%, is posted annually at www.moodys.com under the heading "Investor Relations — Corporate Governance — Director and Shareholder Affiliation Policy."

Additional terms for Australia only: Any publication into Australia of this document is pursuant to the Australian Financial Services License of MOODY'S affiliate, Moody's Investors Service Pty Limited ABN 61 003 399 657AFSL 336969 and/or Moody's Analytics Australia Pty Ltd ABN 94 105 136 972 AFSL 383569 (as applicable). This document is intended to be provided only to "wholesale clients" within the meaning of section 761G of the Corporations Act 2001. By continuing to access this document from within Australia, you represent to MOODY'S that you are, or are accessing the document as a representative of, a "wholesale client" and that neither you nor the entity you represent will directly or indirectly disseminate this document or its contents to "retail clients" within the meaning of section 761G of the Corporations Act 2001. MOODY'S credit rating is an opinion as to the creditworthiness of a debt obligation of the issuer, not on the equity securities of the issuer or any form of security that is available to retail investors.

Additional terms for Japan only: Moody's Japan K.K. ("MJKK") is a wholly-owned credit rating agency subsidiary of Moody's Group Japan G.K., which is wholly-owned by Moody's Overseas Holdings Inc., a wholly-owned subsidiary of MCO. Moody's SF Japan K.K. ("MSFJ") is a wholly-owned credit rating agency subsidiary of MJKK. MSFJ is not a Nationally Recognized Statistical Rating Organization ("NRSRO"). Therefore, credit ratings assigned by MSFJ are Non-NRSRO Credit Ratings. Non-NRSRO Credit Ratings are assigned by an entity that is not a NRSRO and, consequently, the rated obligation will not qualify for certain types of treatment under U.S. laws. MJKK and MSFJ are credit rating agencies registered with the Japan Financial Services Agency and their registration numbers are FSA Commissioner (Ratings) No. 2 and 3 respectively.

MJKK or MSFJ (as applicable) hereby disclose that most issuers of debt securities (including corporate and municipal bonds, debentures, notes and commercial paper) and preferred stock rated by MJKK or MSFJ (as applicable) have, prior to assignment of any credit rating, agreed to pay to MJKK or MSFJ (as applicable) for credit ratings opinions and services rendered by it fees ranging from JPY125,000 to approximately JPY250,000,000.

MJKK and MSFJ also maintain policies and procedures to address Japanese regulatory requirements.

This publication does not announce a credit rating action. For any credit ratings referenced in this publication, please see the ratings tab on the issuer/entity page on www.moodys.com for the most updated credit rating action information and rating history.

Supreme Court of the United States
BLUEFIELD WATERWORKS & IMPROVEMENT CO.
v.
PUBLIC SERVICE COMMISSION OF WEST VIRGINIA et al.
No. 256.

Argued January 22, 1923.
Decided June 11, 1923.

In Error to the Supreme Court of Appeals of West Virginia.

Proceedings by the Bluefield Waterworks & Improvement Company against the Public Service Commission of the State of West Virginia and others to suspend and set aside an order of the Commission fixing rates. From a judgment of the Supreme Court of West Virginia, dismissing the petition, and denying the relief (89 W. Va. 736, 110 S. E. 205), the Waterworks Company bring error. Reversed.

Constitutional Law 92 298(1.5)

92 Constitutional Law
92XII Due Process of Law
92k298 Regulation of Charges and Prices
92k298(1.5) k. Public Utilities in General. Most Cited Cases
Rates which are not sufficient to yield a reasonable return on the value of the property used in public service at the time it is being so used to render the service are unjust, unreasonable, and confiscatory, and their enforcement deprives the public utility company of its property, in violation of the Fourteenth Amendment of the Constitution.

Constitutional Law 92 298(3)

92 Constitutional Law
92XII Due Process of Law
92k298 Regulation of Charges and Prices
92k298(3) k. Water and Irrigation Companies. Most Cited Cases
Under the due process clause of the Fourteenth Amendment of the Constitution, U.S.C.A., a waterworks company is entitled to the independent judgment of the court as to both law and facts, where the question is whether the rates fixed by a public service commission are confiscatory.

of Charges. Most Cited Cases
Since the investors take into account the result of past operations as well as present rates in determining whether they will invest, a waterworks company which had been earning a low rate of returns through a long period up to the time of the inquiry is entitled to return of more than 6 per cent. on the value of its property used in the public service, in order to justly compensate it for the use of its property.

170B Federal Courts
170BVII Supreme Court
170BVII(E) Review of Decisions of State Courts
170Bk504 Nature of Decisions or Questions Involved
170Bk504.1 k. In General. Most Cited Cases
(Formerly 106k394(6))
A proceeding in a state court attacking an order of a public service commission fixing rates, on the ground that the rates were confiscatory and the order void under the federal Constitution, is one where there is drawn in question the validity of authority exercised under the state, on the ground of repugnancy to the federal Constitution, and therefore is reviewable by writ of error.

****675 *680** Messrs. Alfred G. Fox and Jos. M. Sanders, both of Bluefield, W. Va., for plaintiff in error.
Mr. Russell S. Ritz, of Bluefield, W. Va., for defendants in error.

***683** Mr. Justice BUTLER delivered the opinion of the Court.
Plaintiff in error is a corporation furnishing water to the city of Bluefield, W. Va., ****676** and its inhabitants. September 27, 1920, the Public Service Commission of the state, being authorized by statute to fix just and reasonable rates, made its order prescribing rates. In accordance with the laws of the state (section 16, c. 15-O, Code of West Virginia [sec. 651]), the company instituted proceedings in the Supreme Court of Appeals to suspend and set aside the order. The petition alleges that the order is repugnant to the Fourteenth Amendment, and deprives the company of its property without just compensation and without due process of law, and denies it equal protection of the laws. A final judgment was entered, denying the company relief and dismissing its petition. The case is here on writ of error.

[1] 1. The city moves to dismiss the writ of error for the reason, as it asserts, that there was not drawn in question the validity of a statute or an authority exercised under the state, on the ground of repugnancy to the federal Constitution.

The validity of the order prescribing the rates was directly challenged on constitutional grounds, and it was held valid by the highest court of the state. The prescribing of rates is a legislative act. The commission is an instrumentality of the state, exercising delegated powers. Its order is of the same force as would be a like enactment by the Legislature. If, as alleged, the prescribed rates are confiscatory, the order is void. Plaintiff in error is entitled to bring the case here on writ of error and to have that question decided by this court. The motion to dismiss will be denied. See ***684**Oklahoma Natural Gas Co. v. Russell, 261 U. S. 290, 43 Sup. Ct. 353, 67 L. Ed. 659, decided March 5, 1923, and cases cited; also Ohio Valley Co. v. Ben Avon Borough, 253 U. S. 287, 40 Sup. Ct. 527, 64 L. Ed. 908.

2. The commission fixed $460,000 as the amount on which the company is entitled to a return. It found that under existing rates, assuming some increase of business, gross earnings for 1921 would be $80,000 and operating expenses $53,000 leaving $27,000, the equivalent of 5.87 per cent., or 3.87 per cent. after deducting 2 per cent. allowed for depreciation. It held existing rates insufficient to the extent of 10,000. Its order allowed the company to add 16 per cent. to all bills, excepting those for public and private fire protection. The total of the bills so to be increased amounted to $64,000; that is, 80 per cent. of the revenue was authorized to be increased 16 per cent., equal to an increase of 12.8 per cent. on the total, amounting to $10,240.

As to value: The company claims that the value of the property is greatly in excess of $460,000. Reference to the evidence is necessary. There was submitted to the commission evidence of value which it summarized substantially as follows:

a. Estimate by company's engineer

	on. basis of reproduction new, less. depreciation, at prewar prices.	$ 624,548 00
b.	Estimate by company's engineer on. basis of reproduction new, less. depreciation, at 1920 prices.	1,194,663 00
c.	Testimony of company's engineer. fixing present fair value for rate. making purposes.	900,000 00
d.	Estimate by commissioner's engineer on. basis of reproduction new, less. depreciation at 1915 prices, plus. additions since December 31, 1915, at. actual cost, excluding Bluefield. Valley waterworks, water rights,. and going value.	397,964 38
e.	Report of commission's statistician. showing investment cost less. depreciation.	365,445 13
f.	Commission's valuation, as fixed in. case No. 368 ($360,000), plus gross. additions to capital since made. ($92,520.53).	452,520 53

***685** It was shown that the prices prevailing in 1920 were nearly double those in 1915 and pre-war time. The company did not claim value as high as its estimate of cost of construction in 1920. Its valuation engineer testified that in his opinion the value of the property was $900,000-a figure between the cost of construction in 1920, less depreciation, and the cost of construction in 1915 and before the war, less depreciation.

The commission's application of the evidence may be stated briefly as follows:

As to 'a,' supra: The commission deducted $204,000 from the estimate (details printed in the margin), [FN1] leaving approximately $421,000, which it contrasted with the estimate of its own engineer, $397,964.38 (see 'd,' supra). It found that there should be included $25,000 for the Bluefield Valley waterworks plant in Virginia, 10 per cent. for going value, and $10,000 for working capital. If these be added to $421,000, there results $500,600. This may be compared with the commission's final figure, $460,000.

FN1

Difference in depreciation allowed.	$ 49,000
Preliminary organization and development. cost.	14,500
Bluefield Valley waterworks plant.	25,000
Water rights.	50,000
Excess overhead costs.	39,000
Paving over mains.	28,500
	$204,000

© 2006 Thomson/West. No Claim to Orig. U.S. Govt. Works.

***686** As to 'b' and 'c,' supra: These were given no weight by the commission in arriving at its final figure, $460,000. It said:

'Applicant's plant was originally constructed more than twenty years ago, and has been added to from time to time as the progress and development of the community required. For this reason, it would be unfair to its consumers to use as a basis for present fair value the abnormal prices prevailing during the recent war period; but, when, as in this case, a part of the plant has been constructed or added to during that period, in fairness to the applicant, consideration must be given to the cost of such expenditures made to meet the demands of the public.'

****677** As to 'd,' supra: The commission, taking $400,000 (round figures), added $25,000 for Bluefield Valley waterworks plant in Virginia, 10 per cent. for going value, and $10,000 for working capital, making $477,500. This may be compared with its final figure, $460,000.

As to 'e,' supra: The commission, on the report of its statistician, found gross investment to be $500,402.53. Its engineer, applying the straight line method, found 19 per cent. depreciation. It applied 81 per cent. to gross investment and added 10 per cent. for going value and $10,000 for working capital, producing $455,500. [FN2] This may be compared with its final figure, $460,000.

'The books of the company show a total gross investment,

FN2 As to 'e': $365,445.13 represents investment cost less depreciation. The gross investment was found to be $500,402.53, indicating a deduction on account of depreciation of $134,957.40, about 27 per cent., as against 19 per cent. found by the commission's engineer.

As to 'f,' supra: It is necessary briefly to explain how this figure, $452,520.53, was arrived at. Case No. 368 was a proceeding initiated by the application of the company for higher rates, April 24, 1915. The commission made a valuation as of January 1, 1915. There were presented two estimates of reproduction cost less depreciation, one by a valuation engineer engaged by the company, ***687** and the other by a valuation engineer engaged by the city, both 'using the same method.' An inventory made by the company's engineer was accepted as correct by the city and by the commission. The method 'was that generally employed by courts and commissions in arriving at the value of public utility properties under this method.' and in both estimates 'five year average unit prices' were applied. The estimate of the company's engineer was $540,000 and of the city's engineer, $392,000. The principal differences as given by the commission are shown in the margin. [FN3] The commission disregarded both estimates and arrived at $360,000. It held that the best basis of valuation was the net investment, i. e., the total cost of the property less depreciation. It said:

FN3

		Company Engineer.	City Engineer.
1.	Preliminary costs.	$14,455	$1,000
2.	Water rights.	50,000	Nothing
3.	Cutting pavements over. mains.	27,744	233
4.	Pipe lines from gravity. springs.	22,072	15,442
5.	Laying cast iron street. mains.	19,252	15,212
6.	Reproducing Ada springs.	18,558	13,027
7.	Superintendence and. engineering.	20,515	13,621
8.	General contingent cost.	16,415	5,448
		$189,011	$63,983

since its organization, of $407,882, and that there has been charged off for depreciation from year to year the total sum of $83,445, leaving a net investment of

© 2006 Thomson/West. No Claim to Orig. U.S. Govt. Works.

$324,427. * * * From an examination of the books * * * it appears that the records of the company have been remarkably well kept and preserved. It therefore seems that, when a plant is developed under these conditions, the net investment, which, of course, means the total gross investment less depreciation, is the very best basis of valuation for rate making purposes and that the other methods above referred to should ***688** be used only when it is impossible to arrive at the true investment. Therefore, after making due allowance for capital necessary for the conduct of the business and considering the plant as a going concern, it is the opinion of the commission that the fair value for the purpose of determining reasonable and just rates in this case of the property of the applicant company, used by it in the public service of supplying water to the city of Bluefield and its citizens, is the sum of $360,000, which sum is hereby fixed and determined by the commission to be the fair present value for the said purpose of determining the reasonable and just rates in this case.'

In its report in No. 368, the commission did not indicate the amounts respectively allowed for going value or working capital. If 10 per cent. be added for the former, and $10,000 for the latter (as fixed by the commission in the present case), there is produced $366,870, to be compared with $360,000, found by the commission in its valuation as of January 1, 1915. To this it added $92,520.53, expended since, producing $452,520.53. This may be compared with its final figure, $460,000.

The state Supreme Court of Appeals holds that the valuing of the property of a public utility corporation and prescribing rates are purely legislative acts, not subject to judicial review, except in so far as may be necessary to determine whether such rates are void on constitutional or other grounds, and that findings of fact by the commission based on evidence to support them will not be reviewed by the court. City of Bluefield v. Waterworks, 81 W. Va. 201, 204, 94 S. E. 121; Coal & Coke Co. v. Public Service Commission, 84 W. Va. 662, 678, 100 S. E. 557, 7 A. L. R. 108; Charleston v. Public Service Commission, 86 W. Va. 536, 103 S. E. 673.

In this case (89 W. Va. 736, 738, 110 S. E. 205, 206) it said:
'From the written opinion of the commission we find that it ascertained the value of the petitioner's property for rate making [then quoting the commission] 'after ***689** maturely and carefully considering the various methods presented for the ascertainment of fair value and giving such weight as seems proper to every element involved and all the facts and circumstances disclosed by the record.''

[2] [3] The record clearly shows that the commission, in arriving at its final figure, did not accord proper, if any, weight to the greatly enhanced costs of construction in 1920 over those prevailing about 1915 and before the war, as established by uncontradicted ****678** evidence; and the company's detailed estimated cost of reproduction new, less depreciation, at 1920 prices, appears to have been wholly disregarded. This was erroneous. Missouri ex rel. Southwestern Bell Telephone Co. v. Public Service Commission of Missouri, 262 U. S. 276, 43 Sup. Ct. 544, 67 L. Ed. 981, decided May 21, 1923. Plaintiff in error is entitled under the due process clause of the Fourteenth Amendment to the independent judgment of the court as to both law and facts. Ohio Valley Co. v. Ben Avon Borough, 253 U. S. 287, 289, 40 Sup. Ct. 527, 64 L. Ed. 908, and cases cited.

We quote further from the court's opinion (89 W. Va. 739, 740, 110 S. E. 206):
'In our opinion the commission was justified by the law and by the facts in finding as a basis for rate making the sum of $460,000.00. * * * In our case of Coal & Coke Ry. Co. v. Conley, 67 W. Va. 129, it is said: 'It seems to be generally held that, in the absence of peculiar and extraordinary conditions, such as a more costly plant than the public service of the community requires, or the erection of a plant at an actual, though extravagant, cost, or the purchase of one at an exorbitant or inflated price, the actual amount of money invested is to be taken as the basis, and upon this a return must be allowed equivalent to that which is ordinarily received in the locality in which the business is done, upon capital invested in similar enterprises. In addition to this, consideration must be given to the nature of the investment, a higher rate ***690** being regarded as justified by the risk incident to a hazardous investment.'
'That the original cost considered in connection with the history and growth of the utility and the value of the services rendered constitute the principal elements to be considered in connection with rate making, seems to be supported by nearly all the authorities.'

[4] The question in the case is whether the rates prescribed in the commission's order are confiscatory and therefore beyond legislative power. Rates which are not sufficient to yield a reasonable return on the value of the property used at the time it is being used to render the service are unjust, unreasonable and confiscatory, and their enforcement deprives the public utility company of its property in violation of the Fourteenth Amendment. This is so well settled by numerous decisions of this court that citation of the cases is scarcely necessary:

© 2006 Thomson/West. No Claim to Orig. U.S. Govt. Works.

'What the company is entitled to ask is a fair return upon the value of that which it employs for the public convenience.' Smyth v. Ames (1898) 169 U. S. 467, 547, 18 Sup. Ct. 418, 434 (42 L. Ed. 819).
'There must be a fair return upon the reasonable value of the property at the time it is being used for the public. * * * And we concur with the court below in holding that the value of the property is to be determined as of the time when the inquiry is made regarding the rates. If the property, which legally enters into the consideration of the question of rates, has increased in value since it was acquired, the company is entitled to the benefit of such increase.' Willcox v. Consolidated Gas Co. (1909) 212 U. S. 19, 41, 52, 29 Sup. Ct. 192, 200 (53 L. Ed. 382, 15 Ann. Cas. 1034, 48 L. R. A. [N. S.] 1134).
'The ascertainment of that value is not controlled by artificial rules. It is not a matter of formulas, but there must be a reasonable judgment having its basis in a proper consideration of all relevant facts.' Minnesota Rate Cases (1913) 230 U. S. 352, 434, 33 Sup. Ct. 729, 754 (57 L. Ed. 1511, 48 L. R. A. [N. S.] 1151, Ann. Cas. 1916A, 18).
***691** 'And in order to ascertain that value, the original cost of construction, the amount expended in permanent improvements, the amount and market value of its bonds and stock, the present as compared with the original cost of construction, the probable earning capacity of the property under particular rates prescribed by statute, and the sum required to meet operating expenses, are all matters for consideration, and are to be given such weight as may be just and right in each case. We do not say that there may not be other matters to be regarded in estimating the value of the property.' Smyth v. Ames, 169 U. S., 546, 547, 18 Sup. Ct. 434, 42 L. Ed. 819.
'* * * The making of a just return for the use of the property involves the recognition of its fair value if it be more than its cost. The property is held in private ownership and it is that property, and not the original cost of it, of which the owner may not be deprived without due process of law.'

Minnesota Rate Cases, 230 U. S. 454, 33 Sup. Ct. 762, 57 L. Ed. 1511, 48 L. R. A. (N. S.) 1151, Ann. Cas. 1916A, 18.

In Missouri ex rel. Southwestern Bell Telephone Co., v. Public Service Commission of Missouri, supra, applying the principles of the cases above cited and others, this court said:
'Obviously, the commission undertook to value the property without according any weight to the greatly enhanced costs of material, labor, supplies, etc., over those prevailing in 1913, 1914, and 1916. As matter of common knowledge, these increases were large. Competent witnesses estimated them as 45 to 50 per centum. * * * It is impossible to ascertain what will amount to a fair return upon properties devoted to public service, without giving consideration to the cost of labor, supplies, etc., at the time the investigation is made. An honest and intelligent forecast of probable future values, made upon a view of all the relevant circumstances, is essential. If the highly important element of present costs is wholly disregarded, such a forecast becomes impossible. Estimates for to-morrow cannot ignore prices of to-day.'

[5] ***692** It is clear that the court also failed to give proper consideration to the higher cost of construction in 1920 over that in 1915 and before the war, and failed to give weight to cost of reproduction less depreciation on the basis of 1920 prices, or to the testimony of the company's valuation engineer, based on present and past costs of construction, that the property in his opinion, was worth $900,000. The final figure, $460,000, was arrived ****679** at substantially on the basis of actual cost, less depreciation, plus 10 per cent. for going value and $10,000 for working capital. This resulted in a valuation considerably and materially less than would have been reached by a fair and just consideration of all the facts. The valuation cannot be sustained. Other objections to the valuation need not be considered.

3. Rate of return: The state commission found that the company's net annual income should be approximately $37,000, in order to enable it to earn 8 per cent. for return and depreciation upon the value of its property as fixed by it. Deducting 2 per cent. for depreciation, there remains 6 per cent. on $460,000, amounting to $27,600 for return. This was approved by the state court.

[6] The company contends that the rate of return is too low and confiscatory. What annual rate will constitute just compensation depeds upon many circumstances, and must be determined by the exercise of a fair and enlightened judgment, having regard to all relevant facts. A public utility is entitled to such rates as will permit it to earn a return on the value of the property which it employs for the convenience of the public equal to that generally being made at the same time and in the same general part of the country on investments in other business undertakings which are attended by corresponding, risks and uncertainties; but it has no constitutional right to profits such as are realized or anticipated in ***693** highly profitable enterprises or speculative ventures. The return should be reasonably sufficient to assure confidence in the financial soundness of the utility and should be adequate, under efficient and economical management, to maintain and support its credit and enable it to raise the money necessary for the proper discharge of its public duties. A

© 2006 Thomson/West. No Claim to Orig. U.S. Govt. Works.

rate of return may be reasonable at one time and become too high or too low by changes affecting opportunities for investment, the money market and business conditions generally.

In 1909, this court, in Willcox v. Consolidated Gas Co., 212 U. S. 19, 48-50, 29 Sup. Ct. 192, 53 L. Ed. 382, 15 Ann. Cas. 1034, 48 L. R. A. (N. S.) 1134, held that the question whether a rate yields such a return as not to be confiscatory depends upon circumstances, locality and risk, and that no proper rate can be established for all cases; and that, under the circumstances of that case, 6 per cent. was a fair return on the value of the property employed in supplying gas to the city of New York, and that a rate yielding that return was not confiscatory. In that case the investment was held to be safe, returns certain and risk reduced almost to a minimum-as nearly a safe and secure investment as could be imagined in regard to any private manufacturing enterprise.

In 1912, in Cedar Rapids Gas Co. v. Cedar Rapids, 223 U. S. 655, 670, 32 Sup. Ct. 389, 56 L. Ed. 594, this court declined to reverse the state court where the value of the plant considerably exceeded its cost, and the estimated return was over 6 per cent.

In 1915, in Des Moines Gas Co. v. Des Moines, 238 U. S. 153, 172, 35 Sup. Ct. 811, 59 L. Ed. 1244, this court declined to reverse the United States District Court in refusing an injunction upon the conclusion reached that a return of 6 per cent. per annum upon the value would not be confiscatory.

In 1919, this court in Lincoln Gas Co. v. Lincoln, 250 U. S. 256, 268, 39 Sup. Ct. 454, 458 (63 L. Ed. 968), declined on the facts of that case to approve a finding that no rate yielding as much as 6 per cent. ***694** on the invested capital could be regarded as confiscatory. Speaking for the court, Mr. Justice Pitney said:
'It is a matter of common knowledge that, owing principally to the World War, the costs of labor and supplies of every kind have greatly advanced since the ordinance was adopted, and largely since this cause was last heard in the court below. And it is equally well known that annual returns upon capital and enterprise the world over have materially increased, so that what would have been a proper rate of return for capital invested in gas plants and similar public utilities a few years ago furnishes no safe criterion for the present or for the future.'

In 1921, in Brush Electric Co. v. Galveston, the United States District Court held 8 per cent. a fair rate of return. FN4

FN4 This case was affirmed by this court June 4, 1923, 262 U. S. 443, 43 Sup. Ct. 606, 67 L. Ed. 1076.

In January, 1923, in City of Minneapolis v. Rand, the Circuit Court of Appeals of the Eighth Circuit (285 Fed. 818, 830) sustained, as against the attack of the city on the ground that it was excessive, 7 1/2 per cent., found by a special master and approved by the District Court as a fair and reasonable return on the capital investment-the value of the property.

[7] Investors take into account the result of past operations, especially in recent years, when determining the terms upon which they will invest in such an undertaking. Low, uncertain, or irregular income makes for low prices for the securities of the utility and higher rates of interest to be demanded by investors. The fact that the company may not insist as a matter of constitutional right that past losses be made up by rates to be applied in the present and future tends to weaken credit, and the fact that the utility is protected against being compelled to serve for confiscatory rates tends to support it. In ***695** this case the record shows that the rate of return has been low through a long period up to the time of the inquiry by the commission here involved. For example, the average rate of return on the total cost of the property from 1895 to 1915, inclusive, was less than 5 per cent.; from 1911 to 1915, inclusive, about 4.4 per cent., without allowance for depreciation. In 1919 the net operating income was approximately $24,700, leaving $15,500, approximately, or 3.4 per cent. on $460,000 fixed by the commission, after deducting 2 per cent. for depreciation. In 1920, the net operating income was approximately $25,465, leaving $16,265 for return, after allowing for depreciation. Under the facts and circumstances indicated by the record, we think that a rate of return of 6 per cent. upon the value of the property is substantially too low to constitute just compensation for the use of the property employed to render the service.

The judgment of the Supreme Court of Appeals of West Virginia is reversed.

Mr. Justice BRANDEIS concurs in the judgment of reversal, for the reasons stated by him in Missouri ex rel. Southwestern Bell Telephone Co. v. Public Service Commission of Missouri, supra.

Supreme Court of the United States
FEDERAL POWER COMMISSION et al.
v.
HOPE NATURAL GAS CO.
CITY OF CLEVELAND
v.
SAME.
Nos. 34 and 35.

Argued Oct. 20, 21, 1943.
Decided Jan. 3, 1944.

Separate proceedings before the Federal Power Commission by such Commission, by the City of Cleveland and the City of Akron, and by Pennsylvania Public Utility Commission wherein the State of West Virginia and its Public Service Commission were permitted to intervene concerning rates charged by Hope Natural Gas Company which were consolidated for hearing. An order fixing rates was reversed and remanded with directions by the Circuit Court of Appeals, 134 F.2d 287, and Federal Power Commission, City of Akron and Pennsylvania Public Utility Commission in one case and the City of Cleveland in another bring certiorari.

Reversed.

Mr. Justice REED, Mr. Justice FRANKFURTER and Mr. Justice JACKSON, dissenting.

On Writs of Certiorari to the United States Circuit Court of Appeals for the Fourth Circuit.

As respects rates for natural gas, from the investor or company point of view it is important that there be enough revenue not only for operating expenses but also for the capital costs of the business, which includes service on the debt and dividends on stock, and by such standard the return to the equity owner should be commensurate with the terms on investments in other enterprises having corresponding risks, and such returns should be sufficient to assure confidence in the financial integrity of the enterprise so as to maintain its credit and to attract capital. Natural Gas Act, § § 4(a), 5(a), 15 U.S.C.A. § § 717c(a), 717d(a).

Mr. M. M. Neeley, of Charleston, W. Va., for State of West Virginia, as amicus curiae by special leave of Court.

Mr. Justice DOUGLAS delivered the opinion of the Court.
The primary issue in these cases concerns the validity under the Natural Gas Act of 1938, 52 Stat. 821, 15 U.S.C. s 717 et seq., 15 U.S.C.A. s 717 et seq., of a rate order issued by the Federal Power Commission reducing the rates chargeable by Hope Natural Gas Co., 44 P.U.R.,N.S., 1. On a petition for review of the order made pursuant to s 19(b) of the Act, the ***594** Circuit Court of Appeals set it aside, one judge dissenting. 4 Cir., 134 F.2d 287. The cases ****284** are here on petitions for writs of certiorari which we granted because of the public importance of the questions presented. City of Cleveland v. Hope Natural Gas Co., 319 U.S. 735, 63 S.Ct. 1165.

Hope is a West Virginia corporation organized in 1898. It is a wholly owned subsidiary of Standard Oil Co. (N.J.). Since the date of its organization, it has been in the business of producing, purchasing and marketing natural gas in that state. [FN1] It sells some of that gas to local consumers in West Virginia. But the great bulk of it goes to five customer companies which receive it at the West Virginia line and distribute it in Ohio and in Pennsylvania. [FN2] In July, 1938, the cities of Cleveland and Akron filed complaints with the Commission charging that the rates collected by Hope from East Ohio Gas Co. (an affiliate of Hope which distributes gas in Ohio) were excessive and unreasonable. Later in 1938 the Commission on its own motion instituted an investigation to determine the reasonableness of all of Hope's interstate rates. In March ***595** 1939 the Public Utility Commission of Pennsylvania filed a complaint with the Commission charging that the rates collected by Hope from Peoples Natural Gas Co. (an affiliate of Hope distributing gas in Pennsylvania) and two non-affiliated companies were unreasonable. The City of Cleveland asked that the challenged rates be declared unlawful and that just and reasonable rates be determined from June 30, 1939 to the date of the Commission's order. The latter finding was requested in aid of state regulation and to afford the Public Utilities Commission of Ohio a proper basic for disposition of a fund collected by East Ohio under bond from Ohio consumers since June 30, 1939. The cases were consolidated and hearings were held.

FN1 Hope produces about one-third of its annual gas requirements and purchases the rest under some 300 contracts.

FN2 These five companies are the East Ohio Gas Co., the Peoples Natural Gas Co., the

© 2006 Thomson/West. No Claim to Orig. U.S. Govt. Works.

River Gas Co., the Fayette County Gas Co., and the Manufacturers Light & Heat Co. The first three of these companies are, like Hope, subsidiaries of Standard Oil Co. (N.J.). East Ohio and River distribute gas in Ohio, the other three in Pennsylvania. Hope's approximate sales in m.c.f. for 1940 may be classified as follows:

Local West Virginia. sales.	11,000,000
East Ohio.	40,000,000
Peoples.	10,000,000
River.	400,000
Fayette.	860,000
Manufacturers.	2,000,000

Local West Virginia

Hope's natural gas is processed by Hope Construction & Refining Co., an affiliate, for the extraction of gasoline and butane. Domestic Coke Corp., another affiliate, sells coke-oven gas to Hope for boiler fuel.

On May 26, 1942, the Commission entered its order and made its findings. Its order required Hope to decrease its future interstate rates so as to reflect a reduction, on an annual basis of not less than $3,609,857 in operating revenues. And it established 'just and reasonable' average rates per m.c.f. for each of the five customer companies. [FN3] In response to the prayer of the City of Cleveland the Commission also made findings as to the lawfulness of past rates, although concededly it had no authority under the Act to fix past rates or to award reparations. 44 P.U.R.,U.S., at page 34. It found that the rates collected by Hope from East Ohio were unjust, unreasonable, excessive and therefore unlawful, by $830,892 during 1939, $3,219,551 during 1940, and $2,815,789 on an annual basis since 1940. It further found that just, reasonable, and lawful rates for gas sold by Hope to East Ohio for resale for ultimate public consumption were those required ***596** to produce $11,528,608 for 1939, $11,507,185 for 1940 and $11.910,947 annually since 1940.

FN3 These required minimum reductions of 7¢ per m.c.f. from the 36.5¢ and 35.5¢ rates previously charged East Ohio and Peoples, respectively, and 3¢ per m.c.f. from the 31.5¢ rate previously charged Fayette and Manufacturers.

The Commission established an interstate rate base of $33,712,526 which, it found, represented the 'actual legitimate cost' of the company's interstate property less depletion and depreciation and plus unoperated acreage, working capital and future net capital additions. The Commission, beginning with book cost, made ****285** certain adjustments not necessary to relate here and found the 'actual legitimate cost' of the plant in interstate service to be $51,957,416, as of December 31, 1940. It deducted accrued depletion and depreciation, which it found to be $22,328,016 on an 'economic-service-life' basis. And it added $1,392,021 for future net capital additions, $566,105 for useful unoperated acreage, and $2,125,000 for working capital. It used 1940 as a test year to estimate future revenues and expenses. It allowed over $16,000,000 as annual operating expenses-about $1,300,000 for taxes, $1,460,000 for depletion and depreciation, $600,000 for exploration and development costs, $8,500,000 for gas purchased. The Commission allowed a net increase of $421,160 over 1940 operating expenses, which amount was to take care of future increase in wages, in West Virginia property taxes, and in exploration and development costs. The total amount of deductions allowed from interstate revenues was $13,495,584.

Hope introduced evidence from which it estimated reproduction cost of the property at $97,000,000. It also presented a so-called trended 'original cost' estimate which exceeded $105,000,000. The latter was designed 'to indicate what the original cost of the property would have been if 1938 material and labor prices had prevailed throughout the whole period of the piece-meal construction of the company's property since 1898.' 44 P.U.R.,N.S., at pages 8, 9. Hope estimated by the 'percent condition' method accrued depreciation at about 35% of ***597** reproduction cost new. On that basis Hope contended for a rate base of $66,000,000. The Commission refused to place any reliance on reproduction cost new, saying that it was 'not predicated upon facts' and was 'too conjectural and illusory to be given any weight in these proceedings.' Id., 44 P.U.R.,U.S., at page 8. It likewise refused to give any 'probative value' to trended 'original cost' since it was 'not founded in fact' but was 'basically erroneous' and produced 'irrational results.' Id., 44 P.U.R., N.S., at page 9. In determining the amount of accrued depletion and depreciation the Commission, following Lindheimer v. Illinois Bell

© 2006 Thomson/West. No Claim to Orig. U.S. Govt. Works.

Telephone Co., 292 U.S. 151, 167-169, 54 S.Ct. 658, 664-666, 78 L.Ed. 1182; Federal Power Commission v. Natural Gas Pipeline Co., 315 U.S. 575, 592, 593, 62 S.Ct. 736, 745, 746, 86 L.Ed. 1037, based its computation on 'actual legitimate cost'. It found that Hope during the years when its business was not under regulation did not observe 'sound depreciation and depletion practices' but 'actually accumulated an excessive reserve' [FN4] of about $46,000,000. Id., 44 P.U.R.,N.S., at page 18. One member of the Commission thought that the entire amount of the reserve should be deducted from 'actual legitimate cost' in determining the rate base. [FN5] The majority of the ***598** Commission concluded, however, that where, as here, a business is brought under regulation for the first time and where incorrect depreciation and depletion practices have prevailed, the deduction of the reserve requirement (actual existing depreciation and depletion) rather than the excessive reserve should be made so as to ****286** lay 'a sound basis for future regulation and control of rates.' Id., 44 P.U.R.,N.S., at page 18. As we have pointed out, it determined accrued depletion and depreciation to be $22,328,016; and it allowed approximately $1,460,000 as the annual operating expense for depletion and depreciation. [FN6]

FN4 The book reserve for interstate plant amounted at the end of 1938 to about $18,000,000 more than the amount determined by the Commission as the proper reserve requirement. The Commission also noted that 'twice in the past the company has transferred amounts aggregating $7,500,000 from the depreciation and depletion reserve to surplus. When these latter adjustments are taken into account, the excess becomes $25,500,000, which has been exacted from the ratepayers over and above the amount required to cover the consumption of property in the service rendered and thus to keep the investment unimpaired.' 44 P.U.R.,N.S., at page 22.

FN5 That contention was based on the fact that 'every single dollar in the depreciation and depletion reserves' was taken 'from gross operating revenues whose only source was the amounts charged customers in the past for natural gas. It is, therefore, a fact that the depreciation and depletion reserves have been contributed by the customers and do not represent any investment by Hope.' Id., 44 P.U.R.,N.S., at page 40. And see Railroad Commission v. Cumberland Tel. & T. Co., 212 U.S. 414, 424, 425, 29 S.Ct. 357, 361, 362, 53 L.Ed. 577; 2 Bonbright, Valuation of Property (1937), p. 1139.

FN6 The Commission noted that the case was 'free from the usual complexities involved in the estimate of gas reserves because the geologists for the company and the Commission presented estimates of the remaining recoverable gas reserves which were about one per cent apart.' 44 P.U.R.,N.S., at pages 19, 20.

The Commission utilized the 'straight-line-basis' for determining the depreciation and depletion reserve requirements. It used estimates of the average service lives of the property by classes based in part on an inspection of the physical condition of the property. And studies were made of Hope's retirement experience and maintenance policies over the years. The average service lives of the various classes of property were converted into depreciation rates and then applied to the cost of the property to ascertain the portion of the cost which had expired in rendering the service.

The record in the present case shows that Hope is on the lookout for new sources of supply of natural gas and is contemplating an extension of its pipe line into Louisiana for that purpose. The Commission recognized in fixing the rates of depreciation that much material may be used again when various present sources of gas supply are exhausted, thus giving that property more than scrap value at the end of its present use.

Hope's estimate of original cost was about $69,735,000-approximately $17,000,000 more than the amount found by the Commission. The item of $17,000,000 was made up largely of expenditures which prior to December 31, 1938, were charged to operating expenses. Chief among those expenditures was some $12,600,000 expended ***599** in well-drilling prior to 1923. Most of that sum was expended by Hope for labor, use of drilling-rigs, hauling, and similar costs of well-drilling. Prior to 1923 Hope followed the general practice of the natural gas industry and charged the cost of drilling wells to operating expenses. Hope continued that practice until the Public Service Commission of West Virginia in 1923 required it to capitalize such expenditures, as does the Commission under its present Uniform System of Accounts. [FN7] The Commission refused to add such items to the rate base stating that 'No greater injustice to consumers could be done than to allow items as operating expenses and at a later date include them in the rate base, thereby placing multiple charges upon the consumers.' Id., 44 P.U.R.,N.S., at page 12. For the same reason the Commission excluded from the rate base about $1,600,000 of expenditures on properties which Hope acquired from other utilities, the latter having charged those payments to operating expenses. The Commission disallowed certain other overhead items amounting to

© 2006 Thomson/West. No Claim to Orig. U.S. Govt. Works.

over $3,000,000 which also had been previously charged to operating expenses. And it refused to add some $632,000 as interest during construction since no interest was in fact paid.

FN7 See Uniform System of Accounts prescribed for Natural Gas Companies effective January 1, 1940, Account No. 332.1.

Hope contended that it should be allowed a return of not less than 8%. The Commission found that an 8% return would be unreasonable but that 6 1/2% was a fair rate of return. That rate of return, applied to the rate base of $33,712,526, would produce $2,191,314 annually, as compared with the present income of not less than $5,801,171.

The Circuit Court of Appeals set aside the order of the Commission for the following reasons. (1) It held that the rate base should reflect the 'present fair value' of the ***600** property, that the Commission in determining the 'value' should have considered reproduction cost and trended original cost, and that 'actual legitimate cost' (prudent investment) was not the proper measure of 'fair value' where price levels had changed since the investment. (2) It concluded that the well-drilling costs and overhead items in the amount of some $17,000,000 should have been included in the rate base. (3) It held that accrued depletion and depreciation and the annual allowance for that expense should be computed on the basis of 'present fair value' of the property not on the basis of 'actual legitimate cost'.

****287** The Circuit Court of Appeals also held that the Commission had no power to make findings as to past rates in aid of state regulation. But it concluded that those findings were proper as a step in the process of fixing future rates. Viewed in that light, however, the findings were deemed to be invalidated by the same errors which vitiated the findings on which the rate order was based.

Order Reducing Rates. Congress has provided in s 4(a) of the Natural Gas Act that all natural gas rates subject to the jurisdiction of the Commission 'shall be just and reasonable, and any such rate or charge that is not just and reasonable is hereby declared to be unlawful.' Sec. 5(a) gives the Commission the power, after hearing, to determine the 'just and reasonable rate' to be thereafter observed and to fix the rate by order. Sec. 5(a) also empowers the Commission to order a 'decrease where existing rates are unjust * * * unlawful, or are not the lowest reasonable rates.' And Congress has provided in s 19(b) that on review of these rate orders the 'finding of the Commission as to the facts, if supported by substantial evidence, shall be conclusive.' Congress, however, has provided no formula by which the 'just and reasonable' rate is to be determined. It has not filled in the ***601** details of the general prescription [FN8] of s 4(a) and s 5(a). It has not expressed in a specific rule the fixed principle of 'just and reasonable'.

FN8. Sec. 6 of the Act comes the closest to supplying any definite criteria for rate making. It provides in subsection (a) that, 'The Commission may investigate the ascertain the actual legitimate cost of the property of every natural-gas company, the depreciation therein, and, when found necessary for rate-making purposes, other facts which bear on the determination of such cost or depreciation and the fair value of such property.' Subsection (b) provides that every natural-gas company on request shall file with the Commission a statement of the 'original cost' of its property and shall keep the Commission informed regarding the 'cost' of all additions, etc.

[1] [2] When we sustained the constitutionality of the Natural Gas Act in the Natural Gas Pipeline Co. case, we stated that the 'authority of Congress to regulate the prices of commodities in interstate commerce is at least as great under the Fifth Amendment as is that of the states under the Fourteenth to regulate the prices of commodities in intrastate commerce.' 315 U.S. at page 582, 62 S.Ct. at page 741, 86 L.Ed. 1037. Rate-making is indeed but one species of price-fixing. Munn v. Illinois, 94 U.S. 113, 134, 24 L.Ed. 77. The fixing of prices, like other applications of the police power, may reduce the value of the property which is being regulated. But the fact that the value is reduced does not mean that the regulation is invalid. Block v. Hirsh, 256 U.S. 135, 155-157, 41 S.Ct. 458, 459, 460, 65 L.Ed. 865, 16 A.L.R. 165; Nebbia v. New York, 291 U.S. 502, 523-539, 54 S.Ct. 505, 509-517, 78 L.Ed. 940, 89 A.L.R. 1469, and cases cited. It does, however, indicate that 'fair value' is the end product of the process of rate-making not the starting point as the Circuit Court of Appeals held. The heart of the matter is that rates cannot be made to depend upon 'fair value' when the value of the going enterprise depends on earnings under whatever rates may be anticipated. [FN9]

FN9 We recently stated that the meaning of the word 'value' is to be gathered 'from the purpose for which a valuation is being made. Thus the question in a valuation for rate making is how much a utility will be allowed to earn. The basic

© 2006 Thomson/West. No Claim to Orig. U.S. Govt. Works.

question in a valuation for reorganization purposes is how much the enterprise in all probability can earn.' Institutional Investors v. Chicago, M., St. P. & P.R. Co., 318 U.S. 523, 540, 63 S.Ct. 727, 738.

***602** [3] [4] [5] [6] [7] We held in Federal Power Commission v. Natural Gas Pipeline Co., supra, that the Commission was not bound to the use of any single formula or combination of formulae in determining rates. Its rate-making function, moreover, involves the making of 'pragmatic adjustments.' Id., 315 U.S. at page 586, 62 S.Ct. at page 743, 86 L.Ed. 1037. And when the Commission's order is challenged in the courts, the question is whether that order 'viewed in its entirety' meets the requirements of the Act. Id., 315 U.S. at page 586, 62 S.Ct. at page 743, 86 L.Ed. 1037. Under the statutory standard of 'just and reasonable' it is the result reached not the method employed which is controlling. Cf. ****288**Los Angeles Gas & Electric Corp. v. Railroad Commission, 289 U.S. 287, 304, 305, 314, 53 S.Ct. 637, 643, 644, 647, 77 L.Ed. 1180; West Ohio Gas Co. v. Public Utilities Commission (No. 1), 294 U.S. 63, 70, 55 S.Ct. 316, 320, 79 L.Ed. 761; West v. Chesapeake & Potomac Tel. Co., 295 U.S. 662, 692, 693, 55 S.Ct. 894, 906, 907, 79 L.Ed. 1640 (dissenting opinion). It is not theory but the impact of the rate order which counts. If the total effect of the rate order cannot be said to be unjust and unreasonable, judicial inquiry under the Act is at an end. The fact that the method employed to reach that result may contain infirmities is not then important. Moreover, the Commission's order does not become suspect by reason of the fact that it is challenged. It is the product of expert judgment which carries a presumption of validity. And he who would upset the rate order under the Act carries the heavy burden of making a convincing showing that it is invalid because it is unjust and unreasonable in its consequences. Cf. Railroad Commission v. Cumberland Tel. & T. Co., 212 U.S. 414, 29 S.Ct. 357, 53 L.Ed. 577; Lindheimer v. Illinois Bell Tel. Co., supra, 292 U.S. at pages 164, 169, 54 S.Ct. at pages 663, 665, 78 L.Ed. 1182; Railroad Commission v. Pacific Gas & E. Co., 302 U.S. 388, 401, 58 S.Ct. 334, 341, 82 L.Ed. 319.

***603** [8] [9] The rate-making process under the Act, i.e., the fixing of 'just and reasonable' rates, involves a balancing of the investor and the consumer interests. Thus we stated in the Natural Gas Pipeline Co. case that 'regulation does not insure that the business shall produce net revenues.' 315 U.S. at page 590, 62 S.Ct. at page 745, 86 L.Ed. 1037. But such considerations aside, the investor interest has a legitimate concern with the financial integrity of the company whose rates are being regulated. From the investor or company point of view it is important that there be enough revenue not only for operating expenses but also for the capital costs of the business. These include service on the debt and dividends on the stock. Cf. Chicago & Grand Trunk R. Co. v. Wellman, 143 U.S. 339, 345, 346, 12 S.Ct. 400, 402, 36 L.Ed. 176. By that standard the return to the equity owner should be commensurate with returns on investments in other enterprises having corresponding risks. That return, moreover, should be sufficient to assure confidence in the financial integrity of the enterprise, so as to maintain its credit and to attract capital. See State of Missouri ex rel. South-western Bell Tel. Co. v. Public Service Commission, 262 U.S. 276, 291, 43 S.Ct. 544, 547, 67 L.Ed. 981, 31 A.L.R. 807 (Mr. Justice Brandeis concurring). The conditions under which more or less might be allowed are not important here. Nor is it important to this case to determine the various permissible ways in which any rate base on which the return is computed might be arrived at. For we are of the view that the end result in this case cannot be condemned under the Act as unjust and unreasonable from the investor or company viewpoint.

We have already noted that Hope is a wholly owned subsidiary of the Standard Oil Co. (N.J.). It has no securities outstanding except stock. All of that stock has been owned by Standard since 1908. The par amount presently outstanding is approximately $28,000,000 as compared with the rate base of $33,712,526 established by ***604** the Commission. Of the total outstanding stock $11,000,000 was issued in stock dividends. The balance, or about $17,000,000, was issued for cash or other assets. During the four decades of its operations Hope has paid over $97,000,000 in cash dividends. It had, moreover, accumulated by 1940 an earned surplus of about $8,000,000. It had thus earned the total investment in the company nearly seven times. Down to 1940 it earned over 20% per year on the average annual amount of its capital stock issued for cash or other assets. On an average invested capital of some $23,000,000 Hope's average earnings have been about 12% a year. And during this period it had accumulated in addition reserves for depletion and depreciation of about $46,000,000. Furthermore, during 1939, 1940 and 1941, Hope paid dividends of 10% on its stock. And in the year 1942, during about half of which the lower rates were in effect, it paid dividends of 7 1/2%. From 1939-1942 its earned surplus increased from $5,250,000 to about $13,700,000, i.e., to almost half the par value of its outstanding stock.

As we have noted, the Commission fixed a rate of return which permits Hope to earn $2,191,314 annually. In determining that amount it stressed the importance of maintaining the financial integrity of the ****289** company. It considered the financial history of Hope and a vast

© 2006 Thomson/West. No Claim to Orig. U.S. Govt. Works.

array of data bearing on the natural gas industry, related businesses, and general economic conditions. It noted that the yields on better issues of bonds of natural gas companies sold in the last few years were 'close to 3 per cent', 44 P.U.R.,N.S., at page 33. It stated that the company was a 'seasoned enterprise whose risks have been minimized' by adequate provisions for depletion and depreciation (past and present) with 'concurrent high profits', by 'protected established markets, through affiliated distribution companies, in populous and industralized areas', and by a supply of gas locally to meet all requirements,***605** 'except on certain peak days in the winter, which it is feasible to supplement in the future with gas from other sources.' Id., 44 P.U.R.,N.S., at page 33. The Commission concluded, 'The company's efficient management, established markets, financial record, affiliations, and its prospective business place it in a strong position to attract capital upon favorable terms when it is required.' Id., 44 P.U.R.,N.S., at page 33.

[10] [11] [12] In view of these various considerations we cannot say that an annual return of $2,191,314 is not 'just and reasonable' within the meaning of the Act. Rates which enable the company to operate successfully, to maintain its financial integrity, to attract capital, and to compensate its investors for the risks assumed certainly cannot be condemned as invalid, even though they might produce only a meager return on the so-called 'fair value' rate base. In that connection it will be recalled that Hope contended for a rate base of $66,000,000 computed on reproduction cost new. The Commission points out that if that rate base were accepted, Hope's average rate of return for the four-year period from 1937-1940 would amount to 3.27%. During that period Hope earned an annual average return of about 9% on the average investment. It asked for no rate increases. Its properties were well maintained and operated. As the Commission says such a modest rate of 3.27% suggests an 'inflation of the base on which the rate has been computed.' Dayton Power & Light Co. v. Public Utilities Commission, 292 U.S. 290, 312, 54 S.Ct. 647, 657, 78 L.Ed. 1267. Cf. Lindheimer v. Illinois Bell Tel. Co., supra, 292 U.S. at page 164, 54 S.Ct. at page 663, 78 L.Ed. 1182. The incongruity between the actual operations and the return computed on the basis of reproduction cost suggests that the Commission was wholly justified in rejecting the latter as the measure of the rate base.

In view of this disposition of the controversy we need not stop to inquire whether the failure of the Commission to add the $17,000,000 of well-drilling and other costs to ***606** the rate base was consistent with the prudent investment theory as developed and applied in particular cases.

[13] [14] [15] Only a word need be added respecting depletion and depreciation. We held in the Natural Gas Pipeline Co. case that there was no constitutional requirement 'that the owner who embarks in a wasting-asset business of limited life shall receive at the end more than he has put into it.' 315 U.S. at page 593, 62 S.C. at page 746, 86 L.Ed. 1037. The Circuit Court of Appeals did not think that that rule was applicable here because Hope was a utility required to continue its service to the public and not scheduled to end its business on a day certain as was stipulated to be true of the Natural Gas Pipeline Co. But that distinction is quite immaterial. The ultimate exhaustion of the supply is inevitable in the case of all natural gas companies. Moreover, this Court recognized in Lindheimer v. Illinois Bell Tel. Co., supra, the propriety of basing annual depreciation on cost. [FN10] By such a procedure the ****290** utility is made whole and the integrity of its investment maintained. [FN11] No more is required. [FN12] We cannot approve the contrary holding ***607** of United Railways & Electric Co. v. West, 280 U.S. 234, 253, 254, 50 S.Ct. 123, 126, 127, 74 L.Ed. 390. Since there are no constitutional requirements more exacting than the standards of the Act, a rate order which conforms to the latter does not run afoul of the former.

FN10 Chief Justice Hughes said in that case (292 U.S. at pages 168, 169, 54 S.Ct. at page 665, 78 L.Ed. 1182): 'If the predictions of service life were entirely accurate and retirements were made when and as these predictions were precisely fulfilled, the depreciation reserve would represent the consumption of capital, on a cost basis, according to the method which spreads that loss over the respective service periods. But if the amounts charged to operating expenses and credited to the account for depreciation reserve are excessive, to that extent subscribers for the telephone service are required to provide, in effect, capital contributions, not to make good losses incurred by the utility in the service rendered and thus to keep its investment unimpaired, but to secure additional plant and equipment upon which the utility expects a return.'

FN11 See Mr. Justice Brandeis (dissenting) in United Railways & Electric Co. v. West, 280 U.S. 234, 259-288, 50 S.Ct. 123, 128-138, 74 L.Ed. 390, for an extended analysis of the problem.

FN12 It should be noted that the Act provides no specific rule governing depletion and depreciation. Sec. 9(a) merely states that the

© 2006 Thomson/West. No Claim to Orig. U.S. Govt. Works.

> Commission 'may from time to time ascertain and determine, and by order fix, the proper and adequate rates of depreciation and amortization of the several classes of property of each natural-gas company used or useful in the production, transportation, or sale of natural gas.'

The Position of West Virginia. The State of West Virginia, as well as its Public Service Commission, intervened in the proceedings before the Commission and participated in the hearings before it. They have also filed a brief amicus curiae here and have participated in the argument at the bar. Their contention is that the result achieved by the rate order 'brings consequences which are unjust to West Virginia and its citizens' and which 'unfairly depress the value of gas, gas lands and gas leaseholds, unduly restrict development of their natural resources, and arbitrarily transfer their properties to the residents of other states without just compensation therefor.'

West Virginia points out that the Hope Natural Gas Co. holds a large number of leases on both producing and unoperated properties. The owner or grantor receives from the operator or grantee delay rentals as compensation for postponed drilling. When a producing well is successfully brought in, the gas lease customarily continues indefinitely for the life of the field. In that case the operator pays a stipulated gas-well rental or in some cases a gas royalty equivalent to one-eighth of the gas marketed. [FN13] Both the owner and operator have valuable property interests in the gas which are separately taxable under West Virginia law. The contention is that the reversionary interests in the leaseholds should be represented in the rate proceedings since it is their gas which is being sold in interstate ***608** commerce. It is argued, moreover, that the owners of the reversionary interests should have the benefit of the 'discovery value' of the gas leaseholds, not the interstate consumers. Furthermore, West Virginia contends that the Commission in fixing a rate for natural gas produced in that State should consider the effect of the rate order on the economy of West Virginia. It is pointed out that gas is a wasting asset with a rapidly diminishing supply. As a result West Virginia's gas deposits are becoming increasingly valuable. Nevertheless the rate fixed by the Commission reduces that value. And that reduction, it is said, has severe repercussions on the economy of the State. It is argued in the first place that as a result of this rate reduction Hope's West Virginia property taxes may be decreased in view of the relevance which earnings have under West Virginia law in the assessment of property for tax purposes. [FN14] Secondly, it is pointed out that West Virginia has a production tax [FN15] on the 'value' of the gas exported from the State. And we are told that for purposes of that tax 'value' becomes under West Virginia law 'practically the substantial equivalent of market value.' Thus West Virginia argues that undervaluation of Hope's gas leaseholds will cost the State many thousands of dollars in taxes. The effect, it is urged, is to impair West Virginia's tax structure for the benefit of Ohio and Pennsylvania consumers. West Virginia emphasizes, moreover, its deep interest in the conservation of its natural resources including its natural gas. It says that a reduction of the value of these leasehold values will jeopardize these conservation policies in three respects: (1) ****291** exploratory development of new fields will be discouraged; (2) abandonment of lowyield high-cost marginal wells will be hastened; and (3) secondary recovery of oil will be hampered. ***609** Furthermore, West Virginia contends that the reduced valuation will harm one of the great industries of the State and that harm to that industry must inevitably affect the welfare of the citizens of the State. It is also pointed out that West Virginia has a large interest in coal and oil as well as in gas and that these forms of fuel are competitive. When the price of gas is materially cheapened, consumers turn to that fuel in preference to the others. As a result this lowering of the price of natural gas will have the effect of depreciating the price of West Virginia coal and oil.

> FN14 West Penn Power Co. v. Board of Review, 112 W.Va. 442, 164 S.E. 862.

> FN15 W.Va.Rev.Code of 1943, ch. 11. Art. 13, ss 2a, 3a.

West Virginia insists that in neglecting this aspect of the problem the Commission failed to perform the function which Congress entrusted to it and that the case should be remanded to the Commission for a modification of its order. [FN16]

> FN16 West Virginia suggests as a possible solution (1) that a 'going concern value' of the company's tangible assets be included in the rate base and (2) that the fair market value of gas delivered to customers be added to the outlay for operating expenses and taxes.

We have considered these contentions at length in view of the earnestness with which they have been urged upon us. We have searched the legislative history of the Natural

© 2006 Thomson/West. No Claim to Orig. U.S. Govt. Works.

Gas Act for any indication that Congress entrusted to the Commission the various considerations which West Virginia has advanced here. And our conclusion is that Congress did not.

[16] [17] We pointed out in Illinois Natural Gas Co. v. Central Illinois Public Service Co., 314 U.S. 498, 506, 62 S.Ct. 384, 387, 86 L.Ed. 371, that the purpose of the Natural Gas Act was to provide, 'through the exercise of the national power over interstate commerce, an agency for regulating the wholesale distribution to public service companies of natural gas moving interstate, which this Court had declared to be interstate commerce not subject to certain types of state regulation.' As stated in the House Report the 'basic purpose' of this legislation was 'to occupy' the field in which such cases as ***610**State of Missouri v. Kansas Natural Gas Co., 265 U.S. 298, 44 S.Ct. 544, 68 L.Ed. 1027, and Public Utilities Commission v. Attleboro Steam & Electric Co., 273 U.S. 83, 47 S.Ct. 294, 71 L.Ed. 549, had held the States might not act. H.Rep. No. 709, 75th Cong., 1st Sess., p. 2. In accomplishing that purpose the bill was designed to take 'no authority from State commissions' and was 'so drawn as to complement and in no manner usurp State regulatory authority.' Id., p. 2. And the Federal Power Commission was given no authority over the 'production or gathering of natural gas.' s 1(b).

[18] The primary aim of this legislation was to protect consumers against exploitation at the lands of natural gas companies. Due to the hiatus in regulation which resulted from the Kansas Natural Gas Co. case and related decisions state commissions found it difficult or impossible to discover what it cost interstate pipe-line companies to deliver gas within the consuming states; and thus they were thwarted in local regulation. H.Rep., No. 709, supra, p. 3. Moreover, the investigations of the Federal Trade Commission had disclosed that the majority of the pipe-line mileage in the country used to transport natural gas, together with an increasing percentage of the natural gas supply for pipe-line transportation, had been acquired by a handful of holding companies. [FN17] State commissions, independent producers, and communities having or seeking the service were growing quite helpless against these combinations. [FN18] These were the types of problems with which those participating in the hearings were pre-occupied. [FN19] Congress addressed itself to those specific evils.

FN17 S.Doc. 92, Pt. 84-A, ch. XII, Final Report, Federal Trade Commission to the Senate pursuant to S.Res.No. 83, 70th Cong., 1st Sess.

FN18 S.Doc. 92, Pt. 84-A, chs. XII, XIII, op. cit., supra, note 17.

FN19 See Hearings on H.R. 11662, Subcommittee of House Committee on Interstate & Foreign Commerce, 74th Cong., 2d Sess.; Hearings on H.R. 4008, House Committee on Interstate & Foreign Commerce, 75th Cong., 1st Sess.

611** The Federal Power Commission was given*292** broad powers of regulation. The fixing of 'just and reasonable' rates (s 4) with the powers attendant thereto [FN20] was the heart of the new regulatory system. Moreover, the Commission was given certain authority by s 7(a), on a finding that the action was necessary or desirable 'in the public interest,' to require natural gas companies to extend or improve their transportation facilities and to sell gas to any authorized local distributor. By s 7(b) it was given control over the abandonment of facilities or of service. And by s 7(c), as originally enacted, no natural gas company could undertake the construction or extension of any facilities for the transportation of natural gas to a market in which natural gas was already being served by another company, or sell any natural gas in such a market, without obtaining a certificate of public convenience and necessity from the Commission. In passing on such applications for certificates of convenience and necessity the Commission was told by s 7(c), as originally enacted, that it was 'the intention of Congress that natural gas shall be sold in interstate commerce for resale for ultimate public consumption for domestic, commercial, industrial, or any other use at the lowest possible reasonable rate consistent with the maintenance of adequate service in the public interest.' The latter provision was deleted from s 7(c) when that subsection was amended by the Act of February 7, 1942, 56 Stat. 83. By that amendment limited grandfather rights were granted companies desiring to extend their facilities and services over the routes or within the area which they were already serving. Moreover, s 7(c) was broadened so as to require certificates***612** of public convenience and necessity not only where the extensions were being made to markets in which natural gas was already being sold by another company but in other situations as well.

FN20 The power to investigate and ascertain the 'actual legitimate cost' of property (s 6), the requirement as to books and records (s 8), control over rates of depreciation (s 9), the requirements for periodic and special reports (s 10), the broad powers of investigation (s 14) are among the chief powers supporting the rate making function.

© 2006 Thomson/West. No Claim to Orig. U.S. Govt. Works.

[19] These provisions were plainly designed to protect the consumer interests against exploitation at the hands of private natural gas companies. When it comes to cases of abandonment or of extensions of facilities or service, we may assume that, apart from the express exemptions [FN21] contained in s 7, considerations of conservation are material to the issuance of certificates of public convenience and necessity. But the Commission was not asked here for a certificate of public convenience and necessity under s 7 for any proposed construction or extension. It was faced with a determination of the amount which a private operator should be allowed to earn from the sale of natural gas across state lines through an established distribution system. Secs. 4 and 5, not s 7, provide the standards for that determination. We cannot find in the words of the Act or in its history the slightest intimation or suggestion that the exploitation of consumers by private operators through the maintenance of high rates should be allowed to continue provided the producing states obtain indirect benefits from it. That apparently was the Commission's view of the matter, for the same arguments advanced here were presented to the Commission and not adopted by it.

FN21 Apart from the grandfather clause contained in s 7(c), there is the provision of s 7(f) that a natural gas company may enlarge or extend its facilities with the 'service area' determined by the Commission without any further authorization.

We do not mean to suggest that Congress was unmindful of the interests of the producing states in their natural gas supplies when it drafted the Natural Gas Act. As we have said, the Act does not intrude on the domain traditionally reserved for control by state commissions; and the Federal Power Commission was given no authority over***613** 'the production or gathering of natural gas.' s 1(b). In addition, Congress recognized the legitimate interests of the States in the conservation of natural gas. By s 11 Congress instructed the Commission to make reports on compacts between two or more States dealing with the conservation, production and transportation of natural gas. [FN22] The Commission was also ****293** directed to recommend further legislation appropriate or necessary to carry out any proposed compact and 'to aid in the conservation of natural-gas resources within the United States and in the orderly, equitable, and economic production, transportation, and distribution of natural gas.' s 11(a). Thus Congress was quite aware of the interests of the producing states in their natural gas supplies. [FN23] But it left the protection of ***614** those interests to measures other than the maintenance of high rates to private companies. If the Commission is to be compelled to let the stockholders of natural gas companies have a feast so that the producing states may receive crumbs from that table, the present Act must be redesigned. Such a project raises questions of policy which go beyond our province.

FN22 See P.L. 117, approved July 7, 1943, 57 Stat. 383 containing an 'Interstate Compact to Conserve Oil and Gas' between Oklahoma, Texas, New Mexico, Illinois, Colorado, and Kansas.

FN23 As we have pointed out, s 7(c) was amended by the Act of February 7, 1942, 56 Stat. 83, so as to require certificates of public convenience and necessity not only where the extensions were being made to markets in which natural gas was already being sold by another company but to other situations as well. Considerations of conservation entered into the proposal to give the Act that broader scope. H.Rep.No. 1290, 77th Cong. 1st Sess., pp. 2, 3. And see Annual Report, Federal Power Commission (1940) pp. 79, 80; Baum, The Federal Power Commission and State Utility Regulation (1942), p. 261.
The bill amending s 7(c) originally contained a subsection (h) reading as follows: 'Nothing contained in this section shall be construed to affect the authority of a State within which natural gas is produced to authorize or require the construction or extension of facilities for the transportation and sale of such gas within such State: Provided, however, That the Commission, after a hearing upon complaint or upon its own motion, may by order forbid any intrastate construction or extension by any natural-gas company which it shall find will prevent such company from rendering adequate service to its customers in interstate or foreign commerce in territory already being served.' See Hearings on H.R. 5249, House Committee on Interstate & Foreign Commerce, 77th Cong., 1st Sess., pp. 7, 11, 21, 29, 32, 33. In explanation of its deletion the House Committee Report stated, pp. 4, 5: 'The increasingly important problems raised by the desire of several States to regulate the use of the natural gas produced therein in the interest of consumers within such States, as against the Federal power to regulate interstate commerce in the interest of both interstate and intrastate consumers, are deemed by the committee to warrant further intensive study and probably a more retailed and comprehensive plan for the handling thereof than that which would have been provided by the stricken subsection.'

© 2006 Thomson/West. No Claim to Orig. U.S. Govt. Works.

64 S.Ct. 281
51 P.U.R.(NS) 193, 320 U.S. 591, 64 S.Ct. 281, 88 L.Ed. 333
(Cite as: 51 P.U.R.(NS) 193, 64 S.Ct. 281)

[20] It is hardly necessary to add that a limitation on the net earnings of a natural gas company from its interstate business is not a limitation on the power of the producing state either to safeguard its tax revenues from that industry [FN24] or to protect the interests of those who sell their gas to the interstate operator. [FN25] The return which ****294** the Commission***615** allowed was the net return after all such charges.

FN24 We have noted that in the annual operating expenses of some $16,000.000 the Commission included West Virginia and federal taxes. And in the net increase of $421,160 over 1940 operating expenses allowed by the Commission was some $80,000 for increased West Virginia property taxes. The adequacy of these amounts has not been challenged here.

FN25 The Commission included in the aggregate annual operating expenses which it allowed some $8,500,000 for gas purchased. It also allowed about $1,400,000 for natural gas production and about $600,000 for exploration and development.

It is suggested, however, that the Commission in ascertaining the cost of Hope's natural gas production plant proceeded contrary to s 1(b) which provides that the Act shall not apply to 'the production or gathering of natural gas'. But such valuation, like the provisions for operating expenses, is essential to the rate-making function as customarily performed in this country. Cf. Smith, The Control of Power Rates in the United States and England (1932), 159 The Annals 101. Indeed s 14(b) of the Act gives the Commission the power to 'determine the propriety and reasonableness of the inclusion in operating expenses, capital, or surplus of all delay rentals or other forms of rental or compensation for unoperated lands and leases.'

It is suggested that the Commission has failed to perform its duty under the Act in that it has not allowed a return for gas production that will be enough to induce private enterprise to perform completely and efficiently its functions for the public. The Commission, however, was not oblivious of those matters. It considered them. It allowed, for example, delay rentals and exploration and development costs in operating expenses. [FN26] No serious attempt has been made here to show that they are inadequate. We certainly cannot say that they are, unless we are to substitute our opinions for the expert judgment of the administrators to whom Congress entrusted the decision. Moreover, if in light of experience they turn out to be inadequate for development of new sources of supply, the doors of the Commission are open for increased allowances. This is not an order for all time. The Act contains machinery for obtaining rate adjustments. s 4.

FN26 See note 25, supra.

[21] [22] But it is said that the Commission placed too low a rate on gas for industrial purposes as compared with gas for domestic purposes and that industrial uses should be discouraged. It should be noted in the first place that the rates which the Commission has fixed are Hope's interstate wholesale rates to distributors not interstate rates to industrial users [FN27] and domestic consumers. We hardly ***616** can assume, in view of the history of the Act and its provisions, that the resales intrastate by the customer companies which distribute the gas to ultimate consumers in Ohio and Pennsylvania are subject to the rate-making powers of the Commission. [FN28] But in any event those rates are not in issue here. Moreover, we fail to find in the power to fix 'just and reasonable' rates the power to fix rates which will disallow or discourage resales for industrial use. The Committee Report stated that the Act provided 'for regulation along recognized and more or less standardized lines' and that there was 'nothing novel in its provisions'. H.Rep.No.709, supra, p. 3. Yet if we are now to tell the Commission to fix the rates so as to discourage particular uses, we would indeed be injecting into a rate case a 'novel' doctrine which has no express statutory sanction. The same would be true if we were to hold that the wasting-asset nature of the industry required the maintenance of the level of rates so that natural gas companies could make a greater profit on each unit of gas sold. Such theories of rate-making for this industry may or may not be desirable. The difficulty is that s 4(a) and s 5(a) contain only the conventional standards of rate-making for natural gas companies. [FN29] The ***617** Act of February 7, 1942, by broadening s 7 gave the Commission some additional authority to deal with the conservation aspects of the problem. [FN30] But s 4(a) and s 5(a) were not changed. If the standard****295** of 'just and reasonable' is to sanction the maintenance of high rates by a natural gas company because they restrict the use of natural gas for certain purposes, the Act must be further amended.

FN27 The Commission has expressed doubts over its power to fix rates on 'direct sales to industries' from interstate pipelines as distinguished from 'sales for resale to the industrial customers of distributing companies.' Annual Report, Federal Power Commission (1940), p. 11.

© 2006 Thomson/West. No Claim to Orig. U.S. Govt. Works.

FN28. Sec. 1(b) of the Act provides: 'The provisions of this Act shall apply to the transportation of natural gas in interstate commerce, to the sale in interstate commerce of natural gas for resale for ultimate public consumption for domestic, commercial, industrial, or any other use, and to natural-gas companies engaged in such transportation or sale, but shall not apply to any other transportation or sale of natural gas or to the local distribution of natural gas or to the facilities used for such distribution or to the production or gathering of natural gas.' And see s 2(6), defining a 'natural-gas company', and H.Rep.No. 709, supra, pp. 2, 3.

FN29 The wasting-asset characteristic of the industry was recognized prior to the Act as requiring the inclusion of a depletion allowance among operating expenses. See Columbus Gas & Fuel Co. v. Public Utilities Commission, 292 U.S. 398, 404, 405, 54 S.Ct. 763, 766, 767, 78 L.Ed. 1327, 91 A.L.R. 1403. But no such theory of rate-making for natural gas companies as is now suggested emerged from the cases arising during the earlier period of regulation.

FN30 The Commission has been alert to the problems of conservation in its administration of the Act. It has indeed suggested that it might be wise to restrict the use of natural gas 'by functions rather than by areas.' Annual Report (1940) p. 79.

The Commission stated in that connection that natural gas was particularly adapted to certain industrial uses. But it added that the general use of such gas 'under boilers for the production of steam' is 'under most circumstances of very questionable social economy.' Ibid.

[23] [24] It is finally suggested that the rates charged by Hope are discriminatory as against domestic users and in favor of industrial users. That charge is apparently based on s 4(b) of the Act which forbids natural gas companies from maintaining 'any unreasonable difference in rates, charges, service, facilities, or in any other respect, either as between localities or as between classes of service.' The power of the Commission to eliminate any such unreasonable differences or discriminations is plain. s 5(a). The Commission, however, made no findings under s 4(b). Its failure in that regard was not challenged in the petition to review. And it has not been raised or argued here by any party. Hence the problem of discrimination has no proper place in the present decision. It will be time enough to pass on that issue when it is presented to us. Congress has entrusted the administration of the Act to the Commission not to the courts. Apart from the requirements of judicial review it is not ***618** for us to advise the Commission how to discharge its functions.

Findings as to the Lawfulness of Past Rates. As we have noted, the Commission made certain findings as to the lawfulness of past rates which Hope had charged its interstate customers. Those findings were made on the complaint of the City of Cleveland and in aid of state regulation. It is conceded that under the Act the Commission has no power to make reparation orders. And its power to fix rates admittedly is limited to those 'to be thereafter observed and in force.' s 5(a). But the Commission maintains that it has the power to make findings as to the lawfulness of past rates even though it has no power to fix those rates. FN31 However that may be, we do not think that these findings were reviewable under s 19(b) of the Act. That section gives any party 'aggrieved by an order' of the Commission a review 'of such order' in the circuit court of appeals for the circuit where the natural gas company is located or has its principal place of business or in the United States Court of Appeals for the District of Columbia. We do not think that the findings in question fall within that category.

FN31 The argument is that s 4(a) makes 'unlawful' the charging of any rate that is not just and reasonable. And s 14(a) gives the Commission power to investigate any matter 'which it may find necessary or proper in order to determine whether any person has violated' any provision of the Act. Moreover, s 5(b) gives the Commission power to investigate and determine the cost of production or transportation of natural gas in cases where it has 'no authority to establish a rate governing the transportation or sale of such natural gas.' And s 17(c) directs the Commission to 'make available to the several State commissions such information and reports as may be of assistance in State regulation of natural-gas companies.' For a discussion of these points by the Commission see 44 P.U.R.,N.S., at pages 34, 35.

[25] [26] The Court recently summarized the various types of administrative action or determination reviewable as orders under the Urgent Deficiencies Act of October 22, ***619** 1913, 28 U.S.C. ss 45, 47a, 28 U.S.C.A. ss 45, 47a, and kindred statutory provisions. Rochester Tel. Corp. v. United States, 307 U.S. 125, 59 S.Ct. 754, 83 L.Ed. 1147. It was there pointed out that where 'the order sought to be reviewed does not of itself adversely affect complainant but only affects his rights adversely on the contingency of future administrative action', it is not

© 2006 Thomson/West. No Claim to Orig. U.S. Govt. Works.

reviewable. Id., 307 U.S. at page 130, 59 S.Ct. at page 757, 83 L.Ed. 1147. The Court said, 'In view of traditional conceptions of federal judicial power, resort to the courts in these situations is either premature or wholly beyond their province.' ****296**Id., 307 U.S. at page 130, 59 S.Ct. at page 757, 83 L.Ed. 1147. And see United States v. Los Angeles s.l.r. c/o., 273 U.S. 299, 309, 310, 47 S.Ct. 413, 414, 415, 71 L.Ed. 651; Shannahan v. United States, 303 U.S. 596, 58 S.Ct. 732, 82 L.Ed. 1039. These considerations are apposite here. The Commission has no authority to enforce these findings. They are 'the exercise solely of the function of investigation.' United States v. Los Angeles & S.L.R. Co., supra, 273 U.S. at page 310, 47 S.Ct. at page 414, 71 L.Ed. 651. They are only a preliminary, interim step towards possible future action-action not by the Commission but by wholly independent agencies. The outcome of those proceedings may turn on factors other than these findings. These findings may never result in the respondent feeling the pinch of administrative action.

Reversed.

Mr. Justice ROBERTS took no part in the consideration or decision of this case.

Opinion of Mr. Justice BLACK and Mr. Justice MURPHY.

We agree with the Court's opinion and would add nothing to what has been said but for what is patently a wholly gratuitous assertion as to Constitutional law in the dissent of Mr. Justice FRANKFURTER. We refer to the statement that 'Congressional acquiescence to date in the doctrine of Chicago, etc., R. Co. v. Minnesota, supra (134 U.S. 418, 10 S.Ct. 462, 702, 33 L.Ed. 970), may fairly be claimed.' That was the case in which a majority of this Court was finally induced to expand the meaning ***620** of 'due process' so as to give courts power to block efforts of the state and national governments to regulate economic affairs. The present case does not afford a proper occasion to discuss the soundness of that doctrine because, as stated in Mr. Justice FRANKFURTER'S dissent, 'That issue is not here in controversy.' The salutary practice whereby courts do not discuss issues in the abstract applies with peculiar force to Constitutional questions. Since, however, the dissent adverts to a highly controversial due process doctrine and implies its acceptance by Congress, we feel compelled to say that we do not understand that Congress voluntarily has acquiesced in a Constitutional principle of government that courts, rather than legislative bodies, possess final authority over regulation of economic affairs. Even this Court has not always fully embraced that principle, and we wish to repeat that we have never acquiesced in it, and do not now. See Federal Power Commission v. Natural Gas Pipeline Co., 315 U.S. 575, 599-601, 62 S.Ct. 736, 749, 750, 86 L.Ed. 1037.

Mr. Justice REED, dissenting.

This case involves the problem of rate making under the Natural Gas Act. Added importance arises from the obvious fact that the principles stated are generally applicable to all federal agencies which are entrusted with the determination of rates for utilities. Because my views differ somewhat from those of my brethren, it may be of some value to set them out in a summary form.

The Congress may fix utility rates in situations subject to federal control without regard to any standard except the constitutional standards of due process and for taking private property for public use without just compensation. Wilson v. New, 243 U.S. 332, 350, 37 S.Ct. 298, 302, 61 L.Ed. 755, L.R.A.1917E, 938, Ann.Cas.1918A, 1024. A Commission, however, does not have this freedom of action. Its powers are limited not only by the constitutional standards but also by the standards of the delegation. Here the standard added by the Natural Gas Act is that the rate be 'just ***621** and reasonable.' [FN1] Section 6 [FN2] ****297** throws additional light on the meaning of these words.

FN1 Natural Gas Act, s 4(a), 52 Stat. 821, 822, 15 U.S.C. s 717c(a), 15 U.S.C.A. s 717c(a).

FN2 52 Stat. 821, 824, 15 U.S.C. s 717e, 15 U.S.C.A. s 717e:

'(a) The Commission may investigate and ascertain the actual legitimate cost of the property of every natural-gas company, the depreciation therein, and, when found necessary for rate-making purposes, other facts which bear on the determination of such cost or depreciation and the fair value of such property.

'(b) Every natural-gas company upon request shall file with the Commission an inventory of all or any part of its property and a statement of the original cost thereof, and shall keep the Commission informed regarding the cost of all additions, betterments, extensions, and new construction.'

When the phrase was used by Congress to describe allowable rates, it had relation to something ascertainable. The rates were not left to the whim of the Commission. The rates fixed would produce an annual return and that annual return was to be compared with a theoretical just and reasonable return, all risks considered, on the fair value of the property used and useful in the public service at the time of the determination.

Such an abstract test is not precise. The agency charged

© 2006 Thomson/West. No Claim to Orig. U.S. Govt. Works.

with its determination has a wide range before it could properly be said by a court that the agency had disregarded statutory standards or had confiscated the property of the utility for public use. Cf. Chicago, M. & St. P.R. Co. v. Minnesota, 134 U.S. 418, 461-466, 10 S.Ct. 462, 702, 703-705, 33 L.Ed. 970, dissent. This is as Congress intends. Rates are left to an experienced agency particularly competent by training to appraise the amount required.

The decision as to a reasonable return had not been a source of great difficulty, for borrowers and lenders reached such agreements daily in a multitude of situations; and although the determination of fair value had been troublesome, its essentials had been worked out in fairness to investor and consumer by the time of the enactment***622** of this Act. Cf. Los Angeles G. & E. Corp. v. Railroad Comm., 289 U.S. 287, 304 et seq., 53 S.Ct. 637, 643 et seq., 77 L.Ed. 1180. The results were well known to Congress and had that body desired to depart from the traditional concepts of fair value and earnings, it would have stated its intention plainly. Helvering v. Griffiths, 318 U.S. 371, 63 S.Ct. 636.

It was already clear that when rates are in dispute, 'earnings produced by rates do not afford a standard for decision.' 289 U.S. at page 305, 53 S.Ct. at page 644, 77 L.Ed. 1180. Historical cost, prudent investment and reproduction cost [FN3] were all relevant factors in determining fair value. Indeed, disregarding the pioneer investor's risk, if prudent investment and reproduction cost were not distorted by changes in price levels or technology, each of them would produce the same result. The realization from the risk of an investment in a speculative field, such as natural gas utilities, should be reflected in the present fair value. [FN4] The amount of evidence to be admitted on any point was of course in the agency's reasonable discretion, and it was free to give its own weight to these or other factors and to determine from all the evidence its own judgment as to the necessary rates.

> FN3 'Reproduction cost' has been variously defined, but for rate making purposes the most useful sense seems to be, the minimum amount necessary to create at the time of the inquiry a modern plant capable of rendering equivalent service. See I Bonbright, Valuation of Property (1937) 152. Reproduction cost as the cost of building a replica of an obsolescent plant is not of real significance.

'Prudent investment' is not defined by the Court. It may mean the sum originally put in the enterprise, either with or without additional amounts from excess earnings reinvested in the business.

> FN4 It is of no more than bookkeeping significance whether the Commission allows a rate of return commensurate with the risk of the original investment or the lower rate based on current risk and a capitalization reflecting the established earning power of a successful company and the probable cost of duplicating its services. Cf. American T. & T. Co. v. United States, 299 U.S. 232, 57 S.Ct. 170, 81 L.Ed. 142. But the latter is the traditional method.

***623** I agree with the Court in not imposing a rule of prudent investment alone in determining the rate base. This leaves the Commission free, as I understand it, to use any available evidence for its finding of fair value, including both prudent investment and the cost of installing at the present time an efficient system for furnishing the needed utility service.

My disagreement with the Court arises primarily from its view that it makes no ****298** difference how the Commission reached the rate fixed so long as the result is fair and reasonable. For me the statutory command to the Commission is more explicit. Entirely aside from the constitutional problem of whether the Congress could validly delegate its rate making power to the Commission, in toto and without standards, it did legislate in the light of the relation of fair and reasonable to fair value and reasonable return. The Commission must therefore make its findings in observance of that relationship.

The Federal Power Commission did not, as I construe their action, disregard its statutory duty. They heard the evidence relating to historical and reproduction cost and to the reasonable rate of return and they appraised its weight. The evidence of reproduction cost was rejected as unpersuasive, but from the other evidence they found a rate base, which is to me a determination of fair value. On that base the earnings allowed seem fair and reasonable. So far as the Commission went in appraising the property employed in the service, I find nothing in the result which indicates confiscation, unfairness or unreasonableness. Good administration of rate making agencies under this method would avoid undue delay and render revaluations unnecessary except after violent fluctuations of price levels. Rate making under this method has been subjected to criticism. But until Congress changes the standards for the agencies, these rate making bodies should continue the conventional theory of rate ***624** making. It will probably be simpler to improve present methods than to devise new ones.

But a major error, I think was committed in the disregard

© 2006 Thomson/West. No Claim to Orig. U.S. Govt. Works.

by the Commission of the investment in exploratory operations and other recognized capital costs. These were not considered by the Commission because they were charged to operating expenses by the company at a time when it was unregulated. Congress did not direct the Commission in rate making to deduct from the rate base capital investment which had been recovered during the unregulated period through excess earnings. In my view this part of the investment should no more have been disregarded in the rate base than any other capital investment which previously had been recovered and paid out in dividends or placed to surplus. Even if prudent investment throughout the life of the property is accepted as the formula for figuring the rate base, it seems to me illogical to throw out the admittedly prudent cost of part of the property because the earnings in the unregulated period had been sufficient to return the prudent cost to the investors over and above a reasonable return. What would the answer be under the theory of the Commission and the Court, if the only prudent investment in this utility had been the seventeen million capital charges which are now disallowed?

For the reasons heretofore stated, I should affirm the action of the Circuit Court of Appeals in returning the proceeding to the Commission for further consideration and should direct the Commission to accept the disallowed capital investment in determining the fair value for rate making purposes.

Mr. Justice FRANKFURTER, dissenting.
My brother JACKSON has analyzed with particularity the economic and social aspects of natural gas as well as ***625** the difficulties which led to the enactment of the Natural Gas Act, especially those arising out of the abortive attempts of States to regulate natural gas utilities. The Natural Gas Act of 1938 should receive application in the light of this analysis, and Mr. Justice JACKSON has, I believe, drawn relevant inferences regarding the duty of the Federal Power Commission in fixing natural gas rates. His exposition seems to me unanswered, and I shall say only a few words to emphasize my basic agreement with him.

For our society the needs that are met by public utilities are as truly public services as the traditional governmental functions of police and justice. They are not less so when these services are rendered by private enterprise under governmental regulation. Who ultimately determines the ways of regulation, is the decisive aspect in the public supervision of privately-owned utilities. Foreshadowed nearly sixty years ago, Railroad Commission Cases (Stone v. Farmers' Loan & Trust Co.), 116 U.S. 307, 331, 6 S.Ct. 334, 344, 388, 1191, 29 L.Ed. 636, it was decided more than fifty ****299** years ago that the final say under the Constitution lies with the judiciary and not the legislature. Chicago, etc., R. Co. v. Minnesota , 134 U.S. 418, 10 S.Ct. 462, 702, 33 L.Ed. 970.

While legal issues touching the proper distribution of governmental powers under the Constitution may always be raised, Congressional acquiescence to date in the doctrine of Chicago, etc., R. Co. v. Minnesota, supra, may fairly be claimed. But in any event that issue is not here in controversy. As pointed out in the opinions of my brethren, Congress has given only limited authority to the Federal Power Commission and made the exercise of that authority subject to judicial review. The Commission is authorized to fix rates chargeable for natural gas. But the rates that it can fix must be 'just and reasonable'. s 5 of the Natural Gas Act, 15 U.S.C. s 717d, 15 U.S.C.A. s 717d. Instead of making the Commission's rate determinations final, Congress***626** specifically provided for court review of such orders. To be sure, 'the finding of the Commission as to the facts, if supported by substantial evidence' was made 'conclusive', s 19 of the Act, 15 U.S.C. s 717r; 15 U.S.C.A. s 717r. But obedience of the requirement of Congress that rates be 'just and reasonable' is not an issue of fact of which the Commission's own determination is conclusive. Otherwise, there would be nothing for a court to review except questions of compliance with the procedural provisions of the Natural Gas Act. Congress might have seen fit so to cast its legislation. But it has not done so. It has committed to the administration of the Federal Power Commission the duty of applying standards of fair dealing and of reasonableness relevant to the purposes expressed by the Natural Gas Act. The requirement that rates must be 'just and reasonable' means just and reasonable in relation to appropriate standards. Otherwise Congress would have directed the Commission to fix such rates as in the judgment of the Commission are just and reasonable; it would not have also provided that such determinations by the Commission are subject to court review.

To what sources then are the Commission and the courts to go for ascertaining the standards relevant to the regulation of natural gas rates? It is at this point that Mr. Justice JACKSON'S analysis seems to me pertinent. There appear to be two alternatives. Either the fixing of natural gas rates must be left to the unguided discretion of the Commission so long as the rates it fixes do not reveal a glaringly had prophecy of the ability of a regulated utility to continue its service in the future. Or the Commission's rate orders must be founded on due consideration of all the elements of the public interest which the production and distribution of natural gas involve just because it is natural gas. These elements are reflected in the Natural Gas Act, if that Act be applied as

© 2006 Thomson/West. No Claim to Orig. U.S. Govt. Works.

an entirety. See, for ***627** instance, ss 4(a)(b)(c)(d), 6, and 11, 15 U.S.C. ss 717c(a)(b)(c)(d), 717e, and 717j, 15 U.S.C.A. ss 717c(a-d), 717e, 717j. Of course the statute is not concerned with abstract theories of ratemaking. But its very foundation is the 'public interest', and the public interest is a texture of multiple strands. It includes more than contemporary investors and contemporary consumers. The needs to be served are not restricted to immediacy, and social as well as economic costs must be counted.

It will not do to say that it must all be left to the skill of experts. Expertise is a rational process and a rational process implies expressed reasons for judgment. It will little advance the public interest to substitute for the hodge-podge of the rule in Smyth v. Ames, 169 U.S. 466, 18 S.Ct. 418, 42 L.Ed. 819, an encouragement of conscious obscurity or confusion in reaching a result, on the assumption that so long as the result appears harmless its basis is irrelevant. That may be an appropriate attitude when state action is challenged as unconstitutional. Cf. Driscoll v. Edison Light & Power Co., 307 U.S. 104, 59 S.Ct. 715, 83 L.Ed. 1134. But it is not to be assumed that it was the design of Congress to make the accommodation of the conflicting interests exposed in Mr. Justice JACKSON'S opinion the occasion for a blind clash of forces or a partial assessment of relevant factors, either before the Commission or here.

The objection to the Commission's action is not that the rates it granted were too low but that the range of its vision was too narrow. And since the issues before the Commission involved no less than the ****300** total public interest, the proceedings before it should not be judged by narrow conceptions of common law pleading. And so I conclude that the case should be returned to the Commission. In order to enable this Court to discharge its duty of reviewing the Commission's order, the Commission should set forth with explicitness the criteria by which it is guided ***628** in determining that rates are 'just and reasonable', and it should determine the public interest that is in its keeping in the perspective of the considerations set forth by Mr. Justice JACKSON.

By Mr. Justice JACKSON.

Certainly the theory of the court below that ties rate-making to the fair-value-reproduction-cost formula should be overruled as in conflict with Federal Power Commission v. Natural Gas Pipeline Co. [FN1] But the case should, I think, be the occasion for reconsideration of our rate-making doctrine as applied to natural gas and should be returned to the Commission for further consideration in the light thereof.

FN1 315 U.S. 575, 62 S.Ct. 736, 86 L.Ed. 1037.

The Commission appears to have understood the effect of the two opinions in the Pipeline case to be at least authority and perhaps direction to fix natural gas rates by exclusive application of the 'prudent investment' rate base theory. This has no warrant in the opinion of the Chief Justice for the Court, however, which released the Commission from subservience to 'any single formula or combination of formulas' provided its order, 'viewed in its entirety, produces no arbitrary result.' 315 U.S. at page 586, 62 S.Ct. at page 743, 86 L.Ed. 1037. The minority opinion I understood to advocate the 'prudent investment' theory as a sufficient guide in a natural gas case. The view was expressed in the court below that since this opinion was not expressly controverted it must have been approved. [FN2] I disclaim this imputed***629** approval with some particularity, because I attach importance at the very beginning of federal regulation of the natural gas industry to approaching it as the performance of economic functions, not as the performance of legalistic rituals.

FN2 Judge Dobie, dissenting below, pointed out that the majority opinion in the Pipeline case 'contains no express discussion of the Prudent Investment Theory' and that the concurring opinion contained a clear one, and said, 'It is difficult for me to believe that the majority of the Supreme Court, believing otherwise, would leave such a statement unchallenged.' (134 F.2d 287, 312.) The fact that two other Justices had as matter of record in our books long opposed the reproduction cost theory of rate bases and had commented favorably on the prudent investment theory may have influenced that conclusion. See opinion of Mr. Justice Frankfurter in Driscoll v. Edison Light & Power Co., 307 U.S. 104, 122, 59 S.Ct. 715, 724, 83 L.Ed. 1134, and my brief as Solicitor General in that case. It should be noted, however, that these statements were made, not in a natural gas case, but in an electric power case-a very important distinction, as I shall try to make plain.

I.

Solutions of these cases must consider eccentricities of the industry which gives rise to them and also to the Act of Congress by which they are governed.

The heart of this problem is the elusive, exhaustible, and irreplaceable nature of natural gas itself. Given sufficient money, we can produce any desired amount of railroad,

© 2006 Thomson/West. No Claim to Orig. U.S. Govt. Works.

bus, or steamship transportation, or communications facilities, or capacity for generation of electric energy, or for the manufacture of gas of a kind. In the service of such utilities one customer has little concern with the amount taken by another, one's waste will not deprive another, a volume of service and be created equal to demand, and today's demands will not exhaust or lessen capacity to serve tomorrow. But the wealth of Midas and the wit of man cannot produce or reproduce a natural gas field. We cannot even reproduce the gas, for our manufactured product has only about half the heating value per unit of nature's own. FN3

FN3 Natural gas from the Appalachian field averages about 1050 to 1150 B.T.U. content, while by-product manufactured gas is about 530 to 540. Moody's Manual of Public Utilities (1943) 1350; Youngberg, Natural Gas (1930) 7.

****301** Natural gas in some quantity is produced in twenty-four states. It is consumed in only thirty-five states, and is ***630** available only to about 7,600,000 consumers. FN4 Its availability has been more localized than that of any other utility service because it has depended more on the caprice of nature.

FN4 Sen.Rep. No. 1162, 75th Cong., 1st Sess., 2.

The supply of the Hope Company is drawn from that old and rich and vanishing field that flanks the Appalachian mountains. Its center of production is Pennsylvania and West Virginia, with a fringe of lesser production in New York, Ohio, Kentucky, Tennessee, and the north end of Alabama. Oil was discovered in commercial quantities at a depth of only 69 1/2 feet near Titusville, Pennsylvania, in 1859. Its value then was about $16 per barrel. FN5 The oil branch of the petroleum industry went forward at once, and with unprecedented speed. The area productive of oil and gas was roughed out by the drilling of over 19,000 'wildcat' wells, estimated to have cost over $222,000,000. Of these, over 18,000 or 94.9 per cent, were 'dry holes.' About five per cent, or 990 wells, made discoveries of commercial importance, 767 of them resulting chiefly in oil and 223 in gas only. FN6 Prospecting for many years was a search for oil, and to strike gas was a misfortune. Waste during this period and even later is appalling. Gas was regarded as having no commercial value until about 1882, in which year the total yield was valued only at about $75,000. FN7 Since then, contrary to oil, which has become cheaper gas in this field has pretty steadily advanced in price.

FN5 Arnold and Kemnitzer, Petroleum in the United States and Possessions (1931) 78.

FN6. Id. at 62-63.

FN7. Id. at 61.

While for many years natural gas had been distributed on a small scale for lighting, FN8 its acceptance was slow, ***631** facilities for its utilization were primitive, and not until 1885 did it take on the appearance of a substantial industry. FN9 Soon monopoly of production or markets developed. FN10 To get gas from the mountain country, where it was largely found, to centers of population, where it was in demand, required very large investment. By ownership of such facilities a few corporate systems, each including several companies, controlled access to markets. Their purchases became the dominating factor in giving a market value to gas produced by many small operators. Hope is the market for over 300 such operators. By 1928 natural gas in the Appalachian field commanded an average price of 21.1 cents per m.c.f. at points of production and was bringing 45.7 cents at points of consumption. FN11 The companies which controlled markets, however, did not rely on gas purchases alone. They acquired and held in fee or leasehold great acreage in territory proved by 'wildcat' drilling. These large marketing system companies as well as many small independent owners and operators have carried on the commercial development of proved territory. The development risks appear from the estimate that up to 1928, 312,318 proved area wells had been sunk in the Appalachian field of which 48,962, or 15.7 per cent, failed to produce oil or gas in commercial quantity. FN12

FN8 At Fredonia, New York, in 1821, natural gas was conveyed from a shallow well to some thirty people. The lighthouse at Barcelona Harbor, near what is now Westfield, New York, was at about that time and for many years afterward lighted by gas that issued from a crevice. Report on Utility Corporations by Federal Trade Commission, Sen.Doc. 92, Pt. 84-A, 70th Cong., 1st Sess., 8-9.

FN9 In that year Pennsylvania enacted 'An Act to provide for the incorporation and regulation of natural gas companies.' Penn.Laws 1885, No. 32, 15 P.S. s 1981 et seq.

FN12. Id. at 63.

***632** With the source of supply thus tapped to serve centers of large demand, like Pittsburgh, Buffalo, Cleveland, Youngstown, Akron, and other industrial communities, the distribution of natural gas fast became big business. Its advantages as a ****302** fuel and its price commended it, and the business yielded a handsome return. All was merry and the goose hung high for consumers and gas companies alike until about the time of the first. World War. Almost unnoticed by the consuming public, the whole Appalachian field passed its peak of production and started to decline. Pennsylvania, which to 1928 had given off about 38 per cent of the natural gas from this field, had its peak in 1905; Ohio, which had produced 14 per cent, had its peak in 1915; and West Virginia, greatest producer of all, with 45 per cent to its credit, reached its peak in 1917. FN13

FN13. Id. at 64.

Western New York and Eastern Ohio, on the fringe of the field, had some production but relied heavily on imports from Pennsylvania and West Virginia. Pennsylvania, a producing and exporting state, was a heavy consumer and supplemented her production with imports from West Virginia. West Virginia was a consuming state, but the lion's share of her production was exported. Thus the interest of the states in the North Appalachian supply was in conflict.

Competition among localities to share in the failing supply and the helplessness of state and local authorities in the presence of state lines and corporate complexities is a part of the background of federal intervention in the industry. FN14 West Virginia took the boldest measure. It legislated a priority in its entire production in favor of its own inhabitants. That was frustrated by an injunction***633** from this Court. FN15 Throughout the region clashes in the courts and conflicting decisions evidenced public anxiety and confusion. It was held that the New York Public Service Commission did not have power to classify consumers and restrict their use of gas. FN16 That Commission held that a company could not abandon a part of its territory and still serve the rest. FN17 Some courts admonished the companies to take action to protect consumers. FN18 Several courts held that companies, regardless of failing supply, must continue to take on customers, but such compulsory additions were finally held to be within the Public Service Commission's discretion. FN19 There were attempts to throw up franchises and quit the service, and municipalities resorted to the courts with conflicting results. FN20 Public service commissions of consuming states were handicapped, for they had no control of the supply. FN21

FN21 The New York Public Service Commission said: 'While the transportation of natural gas through pipe lines from one state to another state is interstate commerce * * *, Congress has not taken over the regulation of

© 2006 Thomson/West. No Claim to Orig. U.S. Govt. Works.

that particular industry. Indeed, it has expressly excepted it from the operation of the Interstate Commerce Commissions Law (Interstate Commerce Commissions Law, section 1). It is quite clear, therefore, that this Commission can not require a Pennsylvania corporation producing gas in Pennsylvania to transport it and deliver it in the State of New York, and that the Interstate Commerce Commission is likewise powerless. If there exists such a power, and it seems that there does, it is a power vested in Congress and by it not yet exercised. There is no available source of supply for the Crystal City Company at present except through purchasing from the Porter Gas Company. It is possible that this Commission might fix a price at which the Potter Gas Company should sell if it sold at all, but as the Commission can not require it to supply gas in the State of New York, the exercise of such a power to fix the price, if such power exists, would merely say, sell at this price or keep out of the State.' Lane v. Crystal City Gas Co., 8 New York Public Service Comm.Reports, Second District, 210, 212.

****303 *634** Shortages during World War I occasioned the first intervention in the natural gas industry by the Federal Government. Under Proclamation of President Wilson the United States Fuel Administrator took control, stopped extensions, classified consumers and established a priority for domestic over industrial use. [FN22] After the war federal control was abandoned. Some cities once served with natural gas became dependent upon mixed gas of reduced heating value and relatively higher price. [FN23]

FN22 Proclamation by the President of September 16, 1918; Rules and Regulations of H. A. Garfield, Fuel Administrator, September 24, 1918.

FN23 For example, the Iroquois Gas Corporation which formerly served Buffalo, New York, with natural gas ranging from 1050 to 1150 b.t.u. per cu. ft., now mixes a by-product gas of between 530 and 540 b.t.u. in proportions to provide a mixed gas of about 900 b.t.u. per cu. ft. For space heating or water heating its charges range from 65 cents for the first m.c.f. per month to 55 cents for all above 25 m.c.f. per month. Moody's Manual of Public Utilities (1943) 1350.

Utilization of natural gas of highest social as well as economic return is domestic use for cooking and water ***635** heating, followed closely by use for space heating in homes. This is the true public utility aspect of the enterprise, and its preservation should be the first concern of regulation. Gas does the family cooking cheaper than any other fuel. [FN24] But its advantages do not end with dollars and cents cost. It is delivered without interruption at the meter as needed and is paid for after it is used. No money is tied up in a supply, and no space is used for storage. It requires no handling, creates no dust, and leaves no ash. It responds to thermostatic control. It ignites easily and immediately develops its maximum heating capacity. These incidental advantages make domestic life more liveable.

FN24 The United States Fuel Administration made the following cooking value comparisons, based on tests made in the Department of Home Economics of Ohio State University:
Natural gas at 1.12 per M. is equivalent to coal at $6.50 per ton.
Natural gas at 2.00 per M. is equivalent to gasoline at 27¢ per gal.
Natural gas at 2.20 per M. is equivalent to electricity at 3¢ per k.w.h.
Natural gas at 2.40 per M. is equivalent to coal oil at 15¢ per gal.
Use and Conservation of Natural Gas, issued by U.S. Fuel Administration (1918) 5.

Industrial use is induced less by these qualities than by low cost in competition with other fuels. Of the gas exported from West Virginia by the Hope Company a very substantial part is used by industries. This wholesale use speeds exhaustion of supply and displaces other fuels. Coal miners and the coal industry, a large part of whose costs are wages, have complained of unfair competition from low-priced industrial gas produced with relatively little labor cost. [FN25]

FN25 See Brief on Behalf jof Legislation Imposing an Excise Tax on Natural Gas, submitted to N.R.A. by the United Mine Workers of America and the National Coal Association.

Gas rate structures generally have favored industrial users. In 1932, in Ohio, the average yield on gas for domestic consumption was 62.1 cents per m.c.f. and on industrial,***636** 38.7. In Pennsylvania, the figures were 62.9 against 31.7. West Virginia showed the least spread, domestic consumers paying 36.6 cents; and industrial, 27.7. [FN26] Although this spread is less than ****304** in other parts of the United States, [FN27] it can hardly be said to be

© 2006 Thomson/West. No Claim to Orig. U.S. Govt. Works.

64 S.Ct. 281
51 P.U.R.(NS) 193, 320 U.S. 591, 64 S.Ct. 281, 88 L.Ed. 333
(Cite as: 51 P.U.R.(NS) 193, 64 S.Ct. 281)

self-justifying. It certainly is a very great factor in hastening decline of the natural gas supply.

FN26 Brief of National Gas Association and United Mine Workers, supra, note 26, pp. 35, 36, compiled from Bureau of Mines Reports.

FN27 From the source quoted in the preceding note the spread elsewhere is shown to be:

State.	Industrial	Domestic
Illinois.	29.2	1.678
Louisiana.	10.4	59.7
Oklahoma.	11.2	41.5
Texas.	13.1	59.7
Alabama.	17.8	1.227
Georgia.	22.9	1.043

About the time of World War I there were occasional and short-lived efforts by some hard-pressed companies to reverse this discrimination and adopt graduated rates, giving a low rate to quantities adequate for domestic use and graduating it upward to discourage industrial use. FN28 ***637** These rates met opposition from industrial sources, of course, and since diminished revenues from industrial sources tended to increase the domestic price, they met little popular or commission favor. The fact is that neither the gas companies nor the consumers nor local regulatory bodies can be depended upon to conserve gas. Unless federal regulation will take account of conservation, its efforts seem, as in this case, actually to constitute a new threat to the life of the Appalachian supply.

FN28 In Corning, New York, rates were initiated by the Crystal City Gas Company as follows: 70¢ for the first 5,000 cu. ft. per month; 80¢ from 5,000 to 12,000; $1 for all over 12,000. The Public Service Commission rejected these rates and fixed a flat rate of 58¢ per m.c.f. Lane v. Crystal City Gas Co., 8 New York Public Service Comm. Reports, Second District, 210.
The Pennsylvania Gas Company (National Fuel Gas Company group) also attempted a sliding scale rate for New York consumers, net per month as follows: First 5,000 feet, 35¢ ; second 5,000 feet, 45¢ ; third 5,000 feet, 50¢ ; all above 15,000, 55¢ . This was eventually abandoned, however. The company's present scale in Pennsylvania appears to be reversed to the following net monthly rate; first 3 m.c.f., 75¢ ; next 4 m.c.f., 60¢ ; next 8 m.c.f., 55¢ ; over 15 m.c.f., 50¢ . Moody's Manual of Public Utilities (1943) 1350. In New York it now serves a mixed gas.
For a study of effect of sliding scale rates in reducing consumption see 11 Proceedings of Natural Gas Association of America (1919) 287.

II.

Congress in 1938 decided upon federal regulation of the industry. It did so after an exhaustive investigation of all aspects including failing supply and competition for the use of natural gas intensified by growing scarcity. FN29 Pipelines from the Appalachian area to markets were in the control of a handful of holding company systems. FN30 This created a highly concentrated control of the producers' market and of the consumers' supplies. While holding companies dominated both production and distribution they segregated those activities in separate ***638** subsidiaries, FN31 the effect of which, if not the purpose, was to isolate ****305** some end of the business from the reach of any one state commission. The cost of natural gas to consumers moved steadily upwards over the years, out of proportion to prices of oil, which, except for the element of competition, is produced under somewhat comparable conditions. The public came to feel that the companies were exploiting the growing scarcity of local gas. The problems of this region had much to do with creating the demand for federal regulation.

FN29 See Report on Utility Corporations by Federal Trade Commission, Sen. Doc. 92, Pt. 84-A, 70th Cong., 1st Sess.

FN30 Four holding company systems control over 55 per cent of all natural gas transmission lines in the United States. They are Columbia Gas and Electric Corporation, Cities Service Co., Electric Bond and Share Co., and Standard Oil Co. of New Jersey. Columbia alone controls nearly 25 per cent, and fifteen companies account for over 80 per cent of the total. Report on Utility Corporations by Federal Trade Commission, Sen. Doc. 92, Pt. 84-A, 70th Cong., 1st Sess., 28.
In 1915, so it was reported to the Governor of West

© 2006 Thomson/West. No Claim to Orig. U.S. Govt. Works.

Virginia, 87 per cent of the total gas production of that state was under control of eight companies. Steptoe and Hoffheimer, Legislative Regulation of Natural Gas Supply in West Virginia, 17 West Virginia Law Quarterly 257, 260. Of these, three were subsidiaries of the Columbia system and others were subsidiaries of larger systems. In view of inter-system sales and interlocking interests it may be doubted whether there is much real competition among these companies.

FN31 This pattern with its effects on local regulatory efforts will be observed in our decisions. See United Fuel Gas Co. v. Railroad Commission, 278 U.S. 300, 49 S.Ct. 150, 73 L.Ed. 390; United Fuel Gas Co. v. Public Service Commission, 278 U.S. 322, 49 S.Ct. 157, 73 L.Ed. 402; Dayton Power & Light v. Public Utilities Commission, 292 U.S. 290, 54 S.Ct. 647, 78 L.Ed. 1267; Columbus Gas & Fuel Co. v. Public Utilities Commission, 292 U.S. 398, 54 S.Ct. 763, 78 L.Ed. 1327, 91 A.L.R. 1403, and the present case.

The Natural Gas Act declared the natural gas business to be 'affected with a public interest,' and its regulation 'necessary in the public interest.' FN32 Originally, and at the time this proceeding was commenced and tried, it also declared 'the intention of Congress that natural gas shall be sold in interstate commerce for resale for ultimate public consumption for domestic, commercial, industrial, or any other use at the lowest possible reasonable rate consistent with the maintenance of adequate service in the public interest.' FN33 While this was later dropped, there is nothing to indicate that it was not and is not still an accurate statement of purpose of the Act. Extension or improvement of facilities may be ordered when 'necessary or desirable in the public interest,' abandonment of facilities may be ordered when the supply is 'depleted to the extent that the continuance of service is unwarranted, or that the present or future public convenience or necessity ***639** permit' abandonment and certain extensions can only be made on finding of 'the present or future public convenience and necessity.' FN34 The Commission is required to take account of the ultimate use of the gas. Thus it is given power to suspend new schedules as to rates, charges, and classification of services except where the schedules are for the sale of gas 'for resale for industrial use only,' FN35 which gives the companies greater freedom to increase rates on industrial gas than on domestic gas. More particularly, the Act expressly forbids any undue preference or advantage to any person or 'any unreasonable difference in rates * * * either as between localities or as between classes of service.' FN36 And the power of the Commission expressly includes that to determine the 'just and reasonable rate, charge, classification, rule, regulation, practice, or contract to be thereafter observed and in force.' FN37

FN35 Id., s 717c(e).

FN36 Id., s 717c(b).

FN37 Id., s 717d(a).

In view of the Court's opinion that the Commission in administering the Act may ignore discrimination, it is interesting that in reporting this Bill both the Senate and the House Committees on Interstate Commerce pointed out that in 1934, on a nationwide average the price of natural gas per m.c.f. was 74.6 cents for domestic use, 49.6 cents for commercial use, and 16.9 for industrial use. FN38 I am not ready to think that supporters of a bill called attention to the striking fact that householders were being charged five times as much for their gas as industrial users only as a situation which the Bill would do nothing to remedy. On the other hand the Act gave to the Commission what the Court aptly describes as 'broad powers of regulation.'

FN38 Sen. Rep. No. 1162, 75th Cong., 1st Sess. 2.

***640** III.

This proceeding was initiated by the Cities of Cleveland and Akron. They alleged that the price charged by Hope for natural gas 'for resale to domestic, commercial and small industrial consumers in Cleveland and elsewhere is excessive, unjust, unreasonable, greatly in excess of the price charged by Hope to nonaffiliated companies at wholesale for resale to domestic, commercial and small industrial consumers, and greatly in excess of the price charged by Hope to East Ohio for resale to certain favored industrial consumers in Ohio, and therefore is further unduly discriminatory between consumers and between classes of service' (italics supplied). The company answered admitting differences in prices to affiliated and nonaffiliated companies and justifying them by differences in conditions of delivery.****306** As to the allegation that the contract price is 'greatly in excess of the price charged by Hope to East Ohio for resale to

© 2006 Thomson/West. No Claim to Orig. U.S. Govt. Works.

certain favored industrial consumers in Ohio,' Hope did not deny a price differential, but alleged that industrial gas was not sold to 'favored consumers' but was sold under contract and schedules filed with and approved by the Public Utilities Commission of Ohio, and that certain conditions of delivery made it not 'unduly discriminatory.'

The record shows that in 1940 Hope delivered for industrial consumption 36,523,792 m.c.f. and for domestic and commercial consumption, 50,343,652 m.c.f. I find no separate figure for domestic consumption. It served 43,767 domestic consumers directly, 511,521 through the East Ohio Gas Company, and 154,043 through the Peoples Natural Gas Company, both affiliates owned by the same parent. Its special contracts for industrial consumption, so far as appear, are confined to about a dozen big industries.

***641** Hope is responsible for discrimination as exists in favor of these few industrial consumers. It controls both the resale price and use of industrial gas by virtue of the very interstate sales contracts over which the Commission is exercising its jurisdiction.

Hope's contract with East Ohio Company is an example. Hope agrees to deliver, and the Ohio Company to take, '(a) all natural gas requisite for the supply of the domestic consumers of the Ohio Company; (b) such amounts of natural gas as may be requisite to fulfill contracts made with the consent and approval of the Hope Company by the Ohio Company, or companies which it supplies with natural gas, for the sale of gas upon special terms and conditions for manufacturing purposes.' The Ohio company is required to read domestic customers' meters once a month and meters of industrial customers daily and to furnish all meter readings to Hope. The Hope Company is to have access to meters of all consumers and to all of the Ohio Company's accounts. The domestic consumers of the Ohio Company are to be fully supplied in preference to consumers purchasing for manufacturing purposes and 'Hope Company can be required to supply gas to be used for manufacturing purposes only where the same is sold under special contracts which have first been submitted to and approved in writing by the Hope Company and which expressly provide that natural gas will be supplied thereunder only in so far as the same is not necessary to meet the requirements of domestic consumers supplied through pipe lines of the Ohio Company.' This basic contract was supplemented from time to time, chiefly as to price. The last amendment was in a letter from Hope to East Ohio in 1937. It contained a special discount on industrial gas and a schedule of special industrial contracts, Hope reserving the right to make eliminations therefrom and agreeing that others might be added from time to ***642** time with its approval in writing. It said, 'It is believed that the price concessions contained in this letter, while not based on our costs, are under certain conditions, to our mutual advantage in maintaining and building up the volumes of gas sold by us (italics supplied).' [FN39]

FN39 The list of East Ohio Gas Company's special industrial contracts thus expressly under Hope's control and their demands are as follows:

****307** The Commission took no note of the charges of discrimination and made no disposition of the issue tendered on this point. It ordered a flat reduction in the price per m.c.f. of all gas delivered by Hope in interstate commerce. It made no limitation, condition, or provision as to what classes of consumers should get the benefit of the reduction. While the cities have accepted and are defending the reduction, it is my view that the discrimination of which they have complained is perpetuated and increased by the order of the Commission and that it violates the Act in so doing.

The Commission's opinion aptly characterizes its entire objective by saying that 'bona fide investment figures now become all-important in the regulation of rates.' It should be noted that the all-importance of this theory is not the result of any instruction from Congress. When the Bill to regulate gas was first before Congress it contained***643** the following: 'In determining just and reasonable rates the Commission shall fix such rate as will allow a fair return upon the actual legitimate prudent cost of the property used and useful for the service in question.' H.R. 5423, 74th Cong., 1st Sess. Title III, s 312(c). Congress rejected this language. See H.R. 5423, s 213 (211(c)), and H.R. Rep. No. 1318, 74th Cong., 1st Sess. 30.

The Commission contends nevertheless that the 'all important' formula for finding a rate base is that of prudent investment. But it excluded from the investment base an amount actually and admittedly invested of some $17,000,000. It did so because it says that the Company recouped these expenditures from customers before the days of regulation from earnings above a fair return. But it would not apply all of such 'excess earnings' to reduce the rate base as one of the Commissioners suggested. The reason for applying excess earnings to reduce the investment base roughly from $69,000,000 to $52,000,000 but refusing to apply them to reduce it from that to some $18,000,000 is not found in a difference in the character of the earnings or in their reinvestment. The reason assigned is a difference in bookkeeping treatment many years before the Company was subject to regulation. The $17,000,000, reinvested chiefly in well

© 2006 Thomson/West. No Claim to Orig. U.S. Govt. Works.

drilling, was treated on the books as expense. (The Commission now requires that drilling costs be carried to capital account.) The allowed rate base thus actually was determined by the Company's bookkeeping, not its investment. This attributes a significance to formal classification in account keeping that seems inconsistent with rational rate regulation. FN40 Of ***644** course, the ****308** Commission would not and should not allow a rate base to be inflated by bookkeeping which had improperly capitalized expenses. I have doubts about resting public regulation upon any rule that is to be used or not depending on which side it favors.

FN40 To make a fetish of mere accounting is to shield from examination the deeper causes, forces, movements, and conditions which should govern rates. Even as a recording of current transactions, bookkeeping is hardly an exact science. As a representation of the condition and trend of a business, it uses symbols of certainty to express values that actually are in constant flux. It may be said that in commercial or investment banking or any business extending credit success depends on knowing what not to believe in accounting. Few concerns go into bankruptcy or reorganization whose books do not show them solvent and often even profitable. If one cannot rely on accountancy accurately to disclose past or current conditions of a business, the fallacy of using it as a sole guide to future price policy ought to be apparent. However, our quest for certitude is so ardent that we pay an irrational reverence to a technique which uses symbols of certainty, even though experience again and again warns us that they are delusive. Few writers have ventured to challenge this American idolatry, but see Hamilton, Cost as a standard for Price, 4 Law and Contemporary Problems 321, 323-25. He observes that 'As the apostle would put it, accountancy is all things to all men. * * * Its purpose determines the character of a system of accounts.' He analyzes the hypothetical character of accounting and says 'It was no eternal mold for pecuniary verities handed down from on high. It was-like logic or algebra, or the device of analogy in the law-an ingenious contrivance of the human mind to serve a limited and practical purpose.' 'Accountancy is far from being a pecuniary expression of all that is industrial reality. It is an instrument, highly selective in its application, in the service of the institution of money making.' As to capital account he observes 'In an enterprise in lusty competition with others of its kind, survival is the thing and the system of accounts has its focus in solvency. * * * Accordingly depreciation, obsolescence, and other factors which carry no immediate threat are matters of lesser concern and the capital account is likely to be regarded as a secondary phenomenon. * * * But in an enterprise, such as a public utility, where continued survival seems assured, solvency is likely to be taken for granted. * * * A persistent and ingenious attention is likely to be directed not so much to securing the upkeep of the physical property as to making it certain that capitalization fails in not one whit to give full recognition to every item that should go into the account.'

***645** The Company on the other hand, has not put its gas fields into its calculations on the present-value basis, although that, it contends, is the only lawful rule for finding a rate base. To do so would result in a rate higher than it has charged or proposes as a matter of good business to charge.

The case before us demonstrates the lack of rational relationship between conventional rate-base formulas and natural gas production and the extremities to which regulating bodies are brought by the effort to rationalize them. The Commission and the Company each stands on a different theory, and neither ventures to carry its theory to logical conclusion as applied to gas fields.

IV.

This order is under judicial review not because we interpose constitutional theories between a State and the business it seeks to regulate, but because Congress put upon the federal courts a duty toward administration of a new federal regulatory Act. If we are to hold that a given rate is reasonable just because the Commission has said it was reasonable, review becomes a costly, time-consuming pageant of no practical value to anyone. If on the other hand we are to bring judgment of our own to the task, we should for the guidance of the regulators and the regulated reveal something of the philosophy, be it legal or economic or social, which guides us. We need not be slaves to a formula but unless we can point out a rational way of reaching our conclusions they can only be accepted as resting on intuition or predilection. I must admit that I possess no instinct jby which to know the 'reasonable' from the 'unreasonable' in prices and must seek some conscious design for decision.

The Court sustains this order as reasonable, but what makes it so or what could possibly make it otherwise,

© 2006 Thomson/West. No Claim to Orig. U.S. Govt. Works.

***646** I cannot learn. It holds that: 'it is the result reached not the method employed which is controlling'; 'the fact that the method employed to reach that result may contain infirmities is not then important' and it is not 'important to this case to determine the various permissible ways in which any rate base on which the return is computed might be arrived at.' The Court does lean somewhat on considerations of capitalization and dividend history and requirements for dividends on outstanding stock. But I can give no real weight to that for it is generally and I think deservedly in discredit as any guide in rate cases. FN41

FN41 See 2 Bonbright, Valuation of Property (1937) 1112.

Our books already contain so much talk of methods of rationalizing rates that we must appear ambiguous if we announce results without our working methods. We are confronted with regulation of a unique type of enterprise which I think requires considered rejection of much conventional utility doctrine and adoption of concepts of 'just and reasonable' rates and practices and of the 'public interest' that will take account of the peculiarities of the business.

The Court rejects the suggestions of this opinion. It says that the Committees in reporting the bill which became the Act said it provided 'for regulation along recognized and more or less standardized lines' and that there was 'nothing novel in its provisions.' So saying it sustains a rate calculated on a novel variation of a rate base theory which itself had at the time of enactment of the legislation been recognized only in dissenting opinions. Our difference seems to be between unconscious innovation, FN42 and the purposeful ****309** and deliberate innovation I ***647** would make to meet the necessities of regulating the industry before us.

FN42 Bonbright says, '* * * the vice of traditional law lies, not in its adoption of excessively rigid concepts of value and rules of valuation, but rather in its tendency to permit shifts in meaning that are inept, or else that are ill-defined because the judges that make them will not openly admit that they are doing so.' Id., 1170.

Hope's business has two components of quite divergent character. One, while not a conventional common-carrier undertaking, is essentially a transportation enterprise consisting of conveying gas from where it is produced to point of delivery to the buyer. This is a relatively routine operation not differing substantially from many other utility operations. The service is produced by an investment in compression and transmission facilities. Its risks are those of investing in a tested means of conveying a discovered supply of gas to a known market. A rate base calculated on the prudent investment formula would seem a reasonably satisfactory measure for fixing a return from that branch of the business whose service is roughly proportionate to the capital invested. But it has other consequences which must not be overlooked. It gives marketability and hence 'value' to gas owned by the company and gives the pipeline company a large power over the marketability and hence 'value' of the production of others.

The other part of the business-to reduce to possession an adequate supply of natural gas-is of opposite character, being more erratic and irregular and unpredictable in relation to investment than any phase of any other utility business. A thousand feet of gas captured and severed from real estate for delivery to consumers is recognized under our law as property of much the same nature as a ton of coal, a barrel of oil, or a yard of sand. The value to be allowed for it is the real battleground between the investor and consumer. It is from this part of the business that the chief difference between the parties as to a proper rate base arises.

It is necessary to a 'reasonable' price for gas that it be anchored to a rate base of any kind? Why did courts in the first place begin valuing 'rate bases' in order to 'value' something else? The method came into vogue ***648** in fixing rates for transportation service which the public obtained from common carriers. The public received none of the carriers' physical property but did make some use of it. The carriage was often a monopoly so there were no open market criteria as to reasonableness. The 'value' or 'cost' of what was put to use in the service by the carrier was not a remote or irrelevant consideration in making such rates. Moreover the difficulty of appraising an intangible service was thought to be simplified if it could be related to physical property which was visible and measurable and the items of which might have market value. The court hoped to reason from the known to the unknown. But gas fields turn this method topsy turvy. Gas itself is tangible, possessible, and does have a market and a price in the field. The value of the rate base is more elusive than that of gas. It consists of intangibles-leaseholds and freeholds-operated and unoperated-of little use in themselves except as rights to reach and capture gas. Their value lies almost wholly in predictions of discovery, and of price of gas when captured, and bears little relation to cost of tools and supplies and labor to develop it. Gas is what Hope sells and it can be directly priced more reasonably and easily and accurately than the

64 S.Ct. 281
51 P.U.R.(NS) 193, 320 U.S. 591, 64 S.Ct. 281, 88 L.Ed. 333
(Cite as: 51 P.U.R.(NS) 193, 64 S.Ct. 281)

components of a rate base can be valued. Hence the reason for resort to a roundabout way of rate base price fixing does not exist in the case of gas in the field.

But if found, and by whatever method found, a rate base is little help in determining reasonableness of the price of gas. Appraisal of present value of these intangible rights to pursue fugitive gas depends on the value assigned to the gas when captured. The 'present fair value' rate base, generally in ill repute, FN43 is not even ****310** urged by the gas company for valuing its fields.

> FN43 'The attempt to regulate rates by reference to a periodic or occasional reappraisal of the properties has now been tested long enough to confirm the worst fears of its critics. Unless its place is taken by some more promising scheme of rate control, the days of private ownership under government regulation may be numbered.' 2 Bonbright, Valuation of Property (1937) 1190.

***649** The prudent investment theory has relative merits in fixing rates for a utility which creates its service merely by its investment. The amount and quality of service rendered by the usual utility will, at least roughly, be measured by the amount of capital it puts into the enterprise. But it has no rational application where there is no such relationship between investment and capacity to serve. There is no such relationship between investment and amount of gas produced. Let us assume that Doe and Roe each produces in West Virginia for delivery to Cleveland the same quantity of natural gas per day. Doe, however, through luck or foresight or whatever it takes, gets his gas from investing $50,000 in leases and drilling. Roe drilled poorer territory, got smaller wells, and has invested $250,000. Does anybody imagine that Roe can get or ought to get for his gas five times as much as Doe because he has spent five times as much? The service one renders to society in the gas business is measured by what he gets out of the ground, not by what he puts into it, and there is little more relation between the investment and the results than in a game of poker.

Two-thirds of the gas Hope handles it buys from about 340 independent producers. It is obvious that the principle of rate-making applied to Hope's own gas cannot be applied, and has not been applied, to the bulk of the gas Hope delivers. It is not probable that the investment of any two of these producers will bear the same ratio to their investments. The gas, however, all goes to the same use, has the same utilization value and the same ultimate price.

To regulate such an enterprise by undiscriminatingly transplanting any body of rate doctrine conceived and ***650** adapted to the ordinary utility business can serve the 'public interest' as the Natural Gas Act requires, if at all, only by accident. Mr. Justice Brandeis, the pioneer juristic advocate of the prudent investment theory for man-made utilities, never, so far as I am able to discover, proposed its application to a natural gas case. On the other hand, dissenting in Commonwealth of Pennsylvania v. West Virginia, he reviewed the problems of gas supply and said, 'In no other field of public service regulation is the controlling body confronted with factors so baffling as in the natural gas industry, and in none is continuous supervision and control required in so high a degree.' 262 U.S. 553, 621, 43 S.Ct. 658, 674, 67 L.Ed. 1117, 32 A.L.R. 300. If natural gas rates are intelligently to be regulated we must fit our legal principles to the economy of the industry and not try to fit the industry to our books.

As our decisions stand the Commission was justified in believing that it was required to proceed by the rate base method even as to gas in the field. For this reason the Court may not merely wash its hands of the method and rationale of rate making. The fact is that this Court, with no discussion of its fitness, simply transferred the rate base method to the natural gas industry. It happened in Newark Natural Gas & Fuel Co. v. City of Newark, Ohio, 1917, 242 U.S. 405, 37 S.Ct. 156, 157, 61 L.Ed. 393, Ann.Cas.1917B, 1025, in which the company wanted 25 cents per m.c.f., and under the Fourteenth Amendment challenged the reduction to 18 cents by ordinance. This Court sustained the reduction because the court below 'gave careful consideration to the questions of the value of the property * * * at the time of the inquiry,' and whether the rate 'would be sufficient to provide a fair return on the value of the property.' The Court said this method was 'based upon principles thoroughly established by repeated secisions of this court,' citing many cases, not one of which involved natural gas or a comparable wasting natural resource. Then came issues as to state power to ***651** regulate as affected by the commerce clause. Public Utilities Commission v. Landon, 1919, 249 U.S. 236, 39 S.Ct. 268, 63 L.Ed. 577; Pennsylvania Gas Co. v. Public Service Commission, 1920, 252 U.S. 23, 40 S.Ct. 279, 64 L.Ed. 434. These questions settled, the Court again was called upon in natural gas cases to consider state rate-making claimed to be invalid under the Fourteenth Amendment. United Fuel Gas Co. v. Railroad Commission of Kentucky, 1929, 278 U.S. 300, 49 S.Ct. 150, 73 L.Ed. 390; United Fuel Gas Company v. Public Service Commission of West Virginia, 1929, 278 U.S. 322, 49 S.Ct. 157, 73 L.Ed. 402. Then, as now, the differences were 'due ****311** chiefly to the difference in value ascribed by each to the gas rights and leaseholds.' 278 U.S. 300, 311, 49 S.Ct. 150, 153, 73 L.Ed. 390. No one seems to have questioned that the rate

© 2006 Thomson/West. No Claim to Orig. U.S. Govt. Works.

base method must be pursued and the controversy was at what rate base must be used. Later the 'value' of gas in the field was questioned in determining the amount a regulated company should be allowed to pay an affiliate therefor-a state determination also reviewed under the Fourteenth Amendment. Dayton Power & Light Co. v. Public Utilities Commission of Ohio, 1934, 292 U.S. 290, 54 S.Ct. 647, 78 L.Ed. 1267; Columbus Gas & Fuel Co. v. Public Utilities Commission of Ohio, 1934, 292 U.S. 398, 54 S.Ct. 763, 78 L.Ed. 1327, 91 A.L.R. 1403. In both cases, one of which sustained, and one of which struck down a fixed rate the Court assumed the rate base method, as the legal way of testing reasonableness of natural gas prices fixed by public authority, without examining its real relevancy to the inquiry.

Under the weight of such precedents we cannot expect the Commission to initiate economically intelligent methods of fixing gas prices. But the Court now faces a new plan of federal regulation based on the power to fix the price at which gas shall be allowed to move in interstate commerce. I should now consider whether these rules devised under the Fourteenth Amendment are the exclusive tests of a just and reasonable rate under the federal statute, inviting reargument directed to that point ***652** if necessary. As I see it now I would be prepared to hold that these rules do not apply to a natural gas case arising under the Natural Gas Act.

Such a holding would leave the Commission to fix the price of gas in the field as one would fix maximum prices of oil or milk or coal, or any other commodity. Such a price is not calculated to produce a fair return on the synthetic value of a rate base of any individual producer, and would not undertake to assure a fair return to any producer. The emphasis would shift from the producer to the product, which would be regulated with an eye to average or typical producing conditions in the field.

Such a price fixing process on economic lines would offer little temptation to the judiciary to become back seat drivers of the price fixing machine. The unfortunate effect of judicial intervention in this field is to divert the attention of those engaged in the process from what is economically wise to what is legally permissible. It is probable that price reductions would reach economically unwise and self-defeating limits before they would reach constitutional ones. Any constitutional problems growing out of price fixing are quite different than those that have heretofore been considered to inhere in rate making. A producer would have difficulty showing the invalidity of such a fixed price so long as he voluntarily continued to sell his product in interstate commerce. Should he withdraw and other authority be invoked to compel him to part with his property, a different problem would be presented.

Allowance in a rate to compensate for gas removed from gas lands, whether fixed as of point of production or as of point of delivery, probably best can be measured by a functional test applied to the whole industry. For good or ill we depend upon private enterprise to exploit these natural resources for public consumption. The function which an allowance for gas in the field should perform ***653** for society in such circumstances is to be enough and no more than enough to induce private enterprise completely and efficiently to utilize gas resources, to acquire for public service any available gas or gas rights and to deliver gas at a rate and for uses which will be in the future as well as in the present public interest.

The Court fears that 'if we are now to tell the Commission to fix the rates so as to discourage particular uses, we would indeed be injecting into a rate case a 'novel' doctrine * * *.' With due deference I suggest that there is nothing novel in the idea that any change in price of a service or commodity reacts to encourage or discourage its use. The question is not whether such consequences will or will not follow; the question is whether effects must be suffered blindly or may be intelligently selected, whether price control shall have targets at which it deliberately aims or shall be handled like a gun in the hands of one who does not know it is loaded.

We should recognize 'price' for what it is-a tool, a means, an expedient. In public****312** hands it has much the same economic effects as in private hands. Hope knew that a concession in industrial price would tend to build up its volume of sales. It used price as an expedient to that end. The Commission makes another cut in that same price but the Court thinks we should ignore the effect that it will have on exhaustion of supply. The fact is that in natural gas regulation price must be used to reconcile the private property right society has permitted to vest in an important natural resource with the claims of society upon it-price must draw a balance between wealth and welfare.

To carry this into techniques of inquiry is the task of the Commissioner rather than of the judge, and it certainly is no task to be solved by mere bookkeeping but requires the best economic talent available. There would doubtless be inquiry into the price gas is bringing in the ***654** field, how far that price is established by arms' length bargaining and how far it may be influenced by agreements in restraint of trade or monopolistic influences. What must Hope really pay to get and to replace gas it delivers under this order? If it should get more or less than that for its own, how much and why? How far are such prices influenced by pipe line access to

© 2006 Thomson/West. No Claim to Orig. U.S. Govt. Works.

markets and if the consumers pay returns on the pipe lines how far should the increment they cause go to gas producers? East Ohio is itself a producer in Ohio. [FN44] What do Ohio authorities require Ohio consumers to pay for gas in the field? Perhaps these are reasons why the Federal Government should put West Virginia gas at lower or at higher rates. If so what are they? Should East Ohio be required to exploit its half million acres of unoperated reserve in Ohio before West Virginia resources shall be supplied on a devalued basis of which that State complains and for which she threatens measures of self keep? What is gas worth in terms of other fuels it displaces?

FN44 East Ohio itself owns natural gas rights in 550,600 acres, 518,526 of which are reserved and 32,074 operated, by 375 wells. Moody's Manual of Public Utilities (1943) 5.

A price cannot be fixed without considering its effect on the production of gas. Is it an incentive to continue to exploit vast unoperated reserves? Is it conducive to deep drilling tests the result of which we may know only after trial? Will it induce bringing gas from afar to supplement or even to substitute for Appalachian gas? [FN45] Can it be had from distant fields as cheap or cheaper? If so, that competitive potentiality is certainly a relevant consideration. Wise regulation must also consider, as a private buyer would, what alternatives the producer has ***655** if the price is not acceptable. Hope has intrastate business and domestic and industrial customers. What can it do by way of diverting its supply to intrastate sales? What can it do by way of disposing of its operated or reserve acreage to industrial concerns or other buyers? What can West Virginia do by way of conservation laws, severance or other taxation, if the regulated rate offends? It must be borne in mind that while West Virginia was prohibited from giving her own inhabitants a priority that discriminated against interstate commerce, we have never yet held that a good faith conservation act, applicable to her own, as well as to others, is not valid. In considering alternatives, it must be noted that federal regulation is very incomplete, expressly excluding regulation of 'production or gathering of natural gas,' and that the only present way to get the gas seems to be to call it forth by price inducements. It is plain that there is a downward economic limit on a safe and wise price.

FN45 Hope has asked a certificate of convenience and necessity to lay 1140 miles of 22-inch pipeline from Hugoton gas fields in southwest Kansas to West Virginia to carry 285 million cu. ft. of natural gas per day. The cost was estimated at $51,000,000. Moody's Manual of Public Utilities (1943) 1760.

But there is nothing in the law which compels a commission to fix a price at that 'value' which a company might give to its product by taking advantage of scarcity, or monopoly of supply. The very purpose of fixing maximum prices is to take away from the seller his opportunity to get all that otherwise the market would award him for his goods. This is a constitutional use of the power to fix maximum prices, ****313**Block v. Hirsh, 256 U.S. 135, 41 S.Ct. 458, 65 L.Ed. 865, 16 A.L.R. 165; Marcus Brown Holding Co. v. Feldman, 256 U.S. 170, 41 S.Ct. 465, 65 L.Ed. 877; International Harvester Co. v. Kentucky, 234 U.S. 216, 34 S.Ct. 853, 58 L.Ed. 1284; Highland v. Russell Car & Snow Plow Co., 279 U.S. 253, 49 S.Ct. 314, 73 L.Ed. 688, just as the fixing of minimum prices of goods in interstate commerce is constitutional although it takes away from the buyer the advantage in bargaining which market conditions would give him. United States v. Darby, 312 U.S. 100, 657, 61 S.Ct. 451, 85 L.Ed. 609, 132 A.L.R. 1430; Mulford v. Smith, 307 U.S. 38, 59 S.Ct. 648, 83 L.Ed. 1092; United States v. Rock Royal Co-operative, Inc., 307 U.S. 533, 59 S.Ct. 993, 83 L.Ed. 1446; Sunshine Anthracite Coal Co. v. Adkins, 310 U.S. 381, 60 S.Ct. 907, 84 L.Ed. 1263. The Commission has power to fix ***656** a price that will be both maximum and minimum and it has the incidental right, and I think the duty, to choose the economic consequences it will promote or retard in production and also more importantly in consumption, to which I now turn.

If we assume that the reduction in company revenues is warranted we then come to the question of translating the allowed return into rates for consumers or classes of consumers. Here the Commission fixed a single rate for all gas delivered irrespective of its use despite the fact that Hope has established what amounts to two rates-a high one for domestic use and a lower one for industrial contracts. [FN46] The Commission can fix two prices for interstate gas as readily as one-a price for resale to domestic users and another for resale to industrial users. This is the pattern Hope itself has established in the very contracts over which the Commission is expressly given jurisdiction. Certainly the Act is broad enough to permit two prices to be fixed instead of one, if the concept of the 'public interest' is not unduly narrowed.

FN46 I find little information as to the rates for industries in the record and none at all in such usual sources as Moody's Manual.

The Commission's concept of the public interest in natural

© 2006 Thomson/West. No Claim to Orig. U.S. Govt. Works.

gas cases which is carried today into the Court's opinion was first announced in the opinion of the minority in the Pipeline case. It enumerated only two 'phases of the public interest: (1) the investor interest; (2) the consumer interest,' which it emphasized to the exclusion of all others. 315 U.S. 575, 606, 62 S.Ct. 736, 753, 86 L.Ed. 1037. This will do well enough in dealing with railroads or utilities supplying manufactured gas, electric, power, a communications service or transportation, where utilization of facilities does not impair their future usefulness. Limitation of supply, however, brings into a natural gas case another phase of the public interest that to my mind overrides both the owner ***657** and the consumer of that interest. Both producers and industrial consumers have served their immediate private interests at the expense of the long-range public interest. The public interest, of course, requires stopping unjust enrichment of the owner. But it also requires stopping unjust impoverishment of future generations. The public interest in the use by Hope's half million domestic consumers is quite a different one from the public interest in use by a baker's dozen of industries.

Prudent price fixing it seems to me must at the very threshold determine whether any part of an allowed return shall be permitted to be realized from sales of gas for resale for industrial use. Such use does tend to level out daily and seasonal peaks of domestic demand and to some extent permits a lower charge for domestic service. But is that a wise way of making gas cheaper when, in comparison with any substitute, gas is already a cheap fuel? The interstate sales contracts provide that at times when demand is so great that there is not enough gas to go around domestic users shall first be served. Should the operation of this preference await the day of actual shortage? Since the propriety of a preference seems conceded, should it not operate to prevent the coming of a shortage as well as to mitigate its effects? Should industrial use jeopardize tomorrow's service to householders any more than today's? If, however, it is decided to cheapen domestic use by resort to industrial sales, should they be limited to the few uses ****314** for which gas has special values or extend also to those who use it only because it is cheaper than competitive fuels? FN47 And how much cheaper should industrial***658** gas sell than domestic gas, and how much advantage should it have over competitive fuels? If industrial gas is to contribute at all to lowering domestic rates, should it not be made to contribute the very maximum of which it is capable, that is, should not its price be the highest at which the desired volume of sales can be realized?

> FN47 The Federal Power Commission has touched upon the problem of conservation in connection with an application for a certificate permitting construction of a 1500-mile pipeline from southern Texas to New York City and says: 'The Natural Gas Act as presently drafted does not enable the Commission to treat fully the serious implications of such a problem. The question should be raised as to whether the proposed use of natural gas would not result in displacing a less valuable fuel and create hardships in the industry already supplying the market, while at the same time rapidly depleting the country's natural-gas reserves. Although, for a period of perhaps 20 years, the natural gas could be so priced as to appear to offer an apparent saving in fuel costs, this would mean simply that social costs which must eventually be paid had been ignored.
> 'Careful study of the entire problem may lead to the conclusion that use of natural gas should be restricted by functions rather than by areas. Thus, it is especially adapted to space and water heating in urban homes and other buildings and to the various industrial heat processes which require concentration of heat, flexibility of control, and uniformity of results. Industrial uses to which it appears particularly adapted include the treating and annealing of metals, the operation of kilns in the ceramic, cement, and lime industries, the manufacture of glass in its various forms, and use as a raw material in the chemical industry. General use of natural gas under boilers for the production of steam is, however, under most circumstances of very questionable social economy.' Twentieth Annual Report of the Federal Power Commission (1940) 79.

If I were to answer I should say that the household rate should be the lowest that can be fixed under commercial conditions that will conserve the supply for that use. The lowest probable rate for that purpose is not likely to speed exhaustion much, for it still will be high enough to induce economy, and use for that purpose has more nearly reached the saturation point. On the other hand the demand for industrial gas at present rates already appears to be increasing. To lower further the industrial rate is merely further to subsidize industrial consumption and speed depletion. The impact of the flat reduction ***659** of rates ordered here admittedly will be to increase the industrial advantages of gas over competing fuels and to increase its use. I think this is not, and there is no finding by the Commission that it is, in the public interest.

There is no justification in this record for the present discrimination against domestic users of gas in favor of industrial users. It is one of the evils against which the Natural Gas Act was aimed by Congress and one of the evils complained of here by Cleveland and Akron. If

© 2006 Thomson/West. No Claim to Orig. U.S. Govt. Works.

Hope's revenues should be cut by some $3,600,000 the whole reduction is owing to domestic users. If it be considered wise to raise part of Hope's revenues by industrial purpose sales, the utmost possible revenue should be raised from the least consumption of gas. If competitive relationships to other fuels will permit, the industrial price should be substantially advanced, not for the benefit of the Company, but the increased revenues from the advance should be applied to reduce domestic rates. For in my opinion the 'public interest' requires that the great volume of gas now being put to uneconomic industrial use should either be saved for its more important future domestic use or the present domestic user should have the full benefit of its exchange value in reducing his present rates.

Of course the Commission's power directly to regulate does not extend to the fixing of rates at which the local company shall sell to consumers. Nor is such power required to accomplish the purpose. As already pointed out, the very contract the Commission is altering classifies the gas according to the purposes for which it is to be resold and provides differentials between the two classifications. It would only be necessary for the Commission to order ****315** that all gas supplied under paragraph (a) of Hope's contract with the East Ohio Company shall be ***660** at a stated price fixed to give to domestic service the entire reduction herein and any further reductions that may prove possible by increasing industrial rates. It might further provide that gas delivered under paragraph (b) of the contract for industrial purposes to those industrial customers Hope has approved in writing shall be at such other figure as might be found consistent with the public interest as herein defined. It is too late in the day to contend that the authority of a regulatory commission does not extend to a consideration of public interests which it may not directly regulate and a conditioning of its orders for their protection. Interstate Commerce Commission v. Railway Labor Executives Ass'n, 315 U.S. 373, 62 S.Ct. 717, 86 L.Ed. 904; United States v. Lowden, 308 U.S. 225, 60 S.Ct. 248, 84 L.Ed. 208.

Whether the Commission will assert its apparently broad statutory authorization over prices and discriminations is, of course, its own affair, not ours. It is entitled to its own notion of the 'public interest' and its judgment of policy must prevail. However, where there is ground for thinking that views of this Court may have constrained the Commission to accept the rate-base method of decision and a particular single formula as 'all important' for a rate base, it is appropriate to make clear the reasons why I, at least, would not be so understood. The Commission is free to face up realistically to the nature and peculiarity of the resources in its control, to foster their duration in fixing price, and to consider future interests in addition to those of investors and present consumers. If we return this case it may accept or decline the proffered freedom. This problem presents the Commission an unprecedented opportunity if it will boldly make sound economic considerations, instead of legal and accounting theories, the foundation of federal policy. I would return the case to the Commission and thereby be clearly quit of what now may appear to be some responsibility for perpetrating a shortsighted pattern of natural gas regulation.

U.S. 1944.
Federal Power Commission v. Hope Natural Gas Co.

BEFORE THE TENNESSEE PUBLIC UTILITY COMMISSION

NASHVILLE, TENNESSEE

January 30, 2020

IN PETITION OF TENNESSEE WATER SERVICE, INC. FOR ADJUSTMENT OF RATES AND CHARGES, APPROVAL OF A QUALIFIED INFRASTRUCTURE INVESTMENT PROGRAM, AND MODIFICATION TO CERTAIN TERMS AND CONDITIONS FOR THE PROVISION OF WATER SERVICE	))))))	**DOCKET NO. 19-00028**

ORDER

This matter came before Chair Robin L. Morrison,[1] Commissioner Herbert H. Hilliard, and Commissioner David F. Jones of the Tennessee Public Utility Commission (the "Commission" or "TPUC"), the voting panel assigned to this docket, during a regularly scheduled Commission Conference held on November 4, 2019, for consideration of the *Petition* filed by Tennessee Water Service, Inc. ("TWS" or "Company") on February 28, 2019 seeking an adjustment of rates and charges, approval of qualified infrastructure investment program, and modification to certain terms and conditions for the provision of water service. TWS amended its *Petition* on March 22, 2019, to remove its request for a Qualified Infrastructure Investment Program.

I. SUMMARY

Setting utility rates is a complicated process entailing the analysis of financial data and the projection of a public utility's revenues, operating expenses, and rate base to arrive at a rate that will allow a utility the opportunity to earn a reasonable rate of return. The rate case process allows for the intervention of interested parties and generally includes the participation of the Tennessee Attorney General's Office, which represents the interests of utility customers through the Consumer

[1] Commission Vice Chair Kenneth C. Hill was originally assigned to the Hearing Panel but recused himself on October 14, 2019. Chair Morrison replaced him. Transcript of Commission Conference, p. 34 (October 14, 2019).

Advocate Unit ("Consumer Advocate"). Rate cases entail a multitude of accounting and financial issues that include troves of documents and thousands of calculations, sponsored by witnesses who are subject to discovery requests and cross-examination. Using the evidentiary record developed by the parties, the Commission sets rates that are just and reasonable. The record of this rate case, as with all matters before the Commission, is available online through the Commission's website for public inspection.

The tragedy and destruction brought by the wildfires in Sevier County, Tennessee, in November of 2016 and its consequences weigh heavily over this matter. There are no known instances within the Commission's history in which a public utility has lost 95% of its customer base and in such a disastrous manner. This is the first instance and, hopefully, the last. Nevertheless, service has been restored at great cost and, in this proceeding, the Commission must look at the facts and financial data before it and set rates.

The Commission has not been blind to the plight of all involved. There have been understandably forthright and emotional appeals from customers about the amount of the rates and matters of insurance coverage. One issue in this matter pertains to what extent, if any, the Company should be penalized for its failure to have an insurance policy that could have at the very least offset some of the extensive damage caused by the wildfires. As explained within this order, the insurance issue has been concluded with the Company forgoing nearly 50% of the cost of the replacement of the under-insured assets.[2] As such, customers will benefit from new assets with a longer and more efficient service life. Furthermore, recovery of the remaining 50% of the Company's investment is spread over sixty-six years. By spreading the cost over a longer period, the burden on customers is lowered considerably. It must be noted here that the decision of the Commission was not unanimous. Commissioner Hilliard did not vote with the majority on the basis

[2] *See* pp. 34-39 of this *Order*, *Section VI, G.10. Regulatory Liability – Uninsured Property.*

that the Company's alleged negligence in not having appropriate insurance entitled the Company to no recovery.[3] To the extent the majority's conclusion on the insurance issue impacted numerous calculations in the majority's revenue deficiency, Commissioner Hilliard did not vote with the majority.

Nevertheless, one must bear in mind that this issue is but one of many considered by the Commission in the context of a rate case. Even assuming the Commission adopted every position of the Consumer Advocate in this matter, including penalizing the Company for 100% of their investment in replacing fire damaged water facilities, the customers of TWS would still face a significant rate increase.

Average Monthly Customer Bill
Under Company and Consumer Advocate Rate Proposals vs. Commission Decision

Company	Consumer Advocate	Commission Decision
$125	$87	$96

Unfortunately, the cost of providing water service is going to be higher when there are fewer customers. A conventional wisdom in ratemaking is that the greater the number of customers, the easier it is to spread and lower the cost of service. Here, the number of customers is far below the level of customers that existed before the wildfires. With time, the number of customers should grow. With other dynamic factors subject to change, it is likely the Company's rates will need to be reviewed in the near future.

[3] Transcript of Commission Conference, pp. 30-31 (November 4, 2019): "Commissioner Hilliard: I voted no primarily because I think the company should have had to put aside the $700,000. I thought their explanation for why they did not adequately insure the facilities was inadequate. I also thought it was very negligent not to insure something at a bare premium where the deductible was higher than what you'd actually get paid if you actually had a loss."

II. BACKGROUND AND *PETITION*

TWS is a public utility subject to the Commission's jurisdiction, providing water service to customers located in the Chalet Village Subdivision ("Chalet Village") in Sevier County, Tennessee. In November 2016, devastating wildfires spread over nearly 180,000 acres throughout Gatlinburg, Tennessee, ultimately claiming fourteen lives. In addition to the tragic loss of life, the wildfires caused devastating property damage to both homes and businesses in the community. TWS had approximately 580 water connections prior to the wildfire, but only 57 remained after the wildfires. The Company, in turn, filed an *Emergency Petition for Emergency Relief* in Commission Docket No. 17-00108. Subsequent to a public hearing and based upon the evidentiary record in that proceeding, the Commission ordered the following:

> Tennessee Water Service, Inc. is authorized to create two regulatory asset accounts to defer: a) actual operating losses beginning January 1, 2017 until its next rate case or otherwise ordered; and b) returns on identified capital projects necessary to repair fire damage and restore the water system to operational status; such returns to be accrued on the actual amount of the capital assets placed into service at Tennessee Water Service, Inc.'s currently-authorized rate of return of 6.89% and beginning on the date the capital asset is placed into service and continuing until its next rate case unless ordered otherwise.
>
> Tennessee Water Service, Inc. is authorized to accrue and defer reasonable and necessary case expenses.
>
> Tennessee Water Service, Inc. shall increase the minimum service charge for all current and future customers by $7. Tennessee Water Service, Inc. is not authorized to charge inactive customers or lot owners the minimum service charge.
>
> The Operational Cost Pass-through Mechanism, as modified by the Consumer Protection and Advocate Division of the Office of the Tennessee Attorney General, is approved.
>
> Tennessee Water Service, Inc. shall file quarterly reports detailing the accounting transactions and account balances for its deferred operating losses, returns on capital assets, rate case expenses, and the amount of quarterly revenues and the amount of aggregate revenues collected from active customers as a result of the minimum service charge increase.

> Tennessee Water Service, Inc. shall file a rate case petition no later than July 1, 2019, unless an order from the Tennessee Public Utility Commission extending this deadline for good cause is obtained.[4]

This *Petition* was filed February 28, 2019 and initially sought a revenue requirement of $469,767, representing a 177% increase over pro-forma rate revenues at present of $169,323.[5] The Company initially sought to increase the minimum monthly charge from $25.70 over a three-year phase in period to $95.00 per month.[6] After the first 1,000 gallons of usage, the Company proposed a three-year phased in volumetric charge of $20.65 per 1,000 gallons.

The Company further proposed a Private Fire Service charge. In addition, the Company sought a Qualified Infrastructure Investment Program ("QIIP") in accordance with Tenn. Code Ann. § 65-5-103 to address a continuing need to maintain and upgrade infrastructure to provide safe and reliable water service.

III. TRAVEL OF THE CASE

The Consumer Advocate filed a *Petition to Intervene* on April 3, 2019. The parties commenced the submission of discovery requests and responses. The Consumer Advocate submitted Pre-filed Testimony of William H. Novak on July 12, 2019, which proposed that a more modest rate increase of approximately $73,000.[7]

On August 30, 2019, TWS filed copies of the legal notices concerning the Hearing date and the proposed rate changes that were published in appropriate newspapers of general circulation, as required by TPUC Rule 1220-4-1-.05.

IV. THE HEARINGS AND POST HEARING FILINGS

The Hearing on the merits of the *Petition* commenced in Nashville and was held on

---

[4] *In re: Petition of Tennessee Water Service, Inc. for Approval of an Interim Emergency Wildfire Restoration Surcharge, Interim Emergency Water Service Availability Surcharge, Interim Emergency Make-Whole Surcharge, and an Interim Emergency Operation Cost Pass-Through Mechanism*, Docket No. 17-00108, *Final Order*, Ordering Clauses 2-7 (February 21, 2018).
[5] Dante M. DeStefano, Pre-filed Direct Testimony, p. 8 (February 28, 2019).
[6] *Id.* at 4.
[7] William H. Novak, Pre-filed Direct Testimony, p. 8 (July 8, 2019).

September 9, 2019 as noticed by the Commission on August 30, 2019. Participating in the Hearing were the following parties and their respective counsel:

> Tennessee Water Service, Inc. - Ryan Freeman, Esq., Baker, Donelson, Bearman, Caldwell & Berkowitz, P.C., 633 Chestnut Street, Suite 1900, Chattanooga, Tennessee, 37450.
>
> Consumer Advocate Unit – Wayne M. Irvin, Esq. Office of the Tennessee Attorney General, Financial Division, Consumer Advocate Unit, P.O. Box 20207, Nashville, Tennessee 37202-0207.

The panel heard testimony from Company witnesses, Catherine E. Heigel, Dante DeStefano, Anthony Gray, Jared Deason, and J. Bryce Mendenhall. The Consumer Advocate presented witness testimony from William H. Novak. In addition to offering the opportunity for live public comment, a public comment was made telephonically during the Hearing.

Additional filings and pre-filed testimony were submitted before the Hearing Panel reconvened on October 14, 2019, during a regularly scheduled Commission Conference for a supplemental hearing regarding the extent of regulatory liability that is appropriate for TWS.[8] The supplemental hearing was duly noticed on October 1, 2019. At the supplemental hearing, the Hearing Panel heard public comment.

The voting panel assigned to this matter reconvened on November 4, 2019 and deliberated, announcing findings and conclusions upon consideration of the entire record, including all exhibits and the testimony of witnesses. With the exception of a matter concerning a regulatory liability adjustment to account for a lack of proper insurance, the Hearing Panel voted unanimously in favor of the findings and conclusions. Commissioner Herbert Hilliard dissented from a majority of the Hearing Panel with respect to the regulatory liability finding.[9]

---

[8] *Pre-Hearing Order*, p. 1 (October 4, 2019).

[9] Transcript of Commission Conference, pp. 30-31 (November 4, 2019). Although Commissioner Hilliard's dissent has a cascade effect on the mathematical conclusions of multiple calculations adopted herein, he does not dissent from the principles and policy decisions applied to the remainder of the issues.

V. CRITERIA FOR ESTABLISHING JUST AND REASONABLE RATES

The Commission has jurisdiction to set the rates of public utilities operating in the State of Tennessee.[10] In setting rates for public utilities, the Commission balances the interests of the utilities subject to its jurisdiction with the interests of Tennessee consumers, i.e., it is obligated to fix just and reasonable rates.[11] A public utility possesses the burden of proof on a petition to prove an adjustment of its rates is warranted.[12]

The Commission must also approve a rate that provides the regulated utility an opportunity to earn a just and reasonable return on its investments.[13] The Commission considers petitions for a rate increase, filed pursuant to Tenn. Code Ann. § 65-5-103, in light of the following criteria:

1. The investment or rate base upon which the utility should be permitted to earn a fair rate of return;

2. The proper level of revenues for the utility;

3. The proper level of expenses for the utility;

4. The rate of return the utility should earn; and

5. Other factors specific to a matter that warrants an investigation to determine the impact on a utility and its rates.

There is no single, precise measure of the fair rate of return a utility is allowed an opportunity to earn. Therefore, the Commission must exercise its judgment in making an appropriate determination. The Commission, however, is not without guidance in exercising its judgment:

> A public utility is entitled to such rates as will permit it to earn a return on the value of the property which it employs for the convenience of the public equal to that generally being made at the same time and in the same general part of the country on investments in other business undertakings which are attended by corresponding risks and uncertainties; but it has no constitutional right to profits such as are realized or anticipated in highly profitable enterprises or speculative ventures. The return

[10] Tenn. Code Ann. §§ 65-4-101(6); 65-4-104; 65-5-101, *et seq.*
[11] Tenn. Code Ann. § 65-5-101 (2018).
[12] Tenn. Code Ann. § 65-5-103(a) (2018).
[13] *Bluefield Water Works and Improvement Company v. Public Service Commission of the State of West Virginia*, 262 U.S. 679, 43 S.Ct. 675 (1923).

> should be reasonably sufficient to assure confidence in the financial soundness of the utility and should be adequate, under efficient and economical management, to maintain and support its credit and enable it to raise the money necessary for the proper discharge of its public duties.[14]

In addition, the United States Supreme Court has determined that regulated utilities are entitled to a return that is "just and reasonable."[15] The rate a utility is permitted to charge should enable it "to operate successfully, to maintain its financial integrity, to attract capital, and to compensate investors for the risks assumed."[16]

The general standards to be considered in establishing the fair rate of return for a public utility are financial integrity, capital attraction and setting a return on equity that is commensurate with returns investors could achieve by investing in other enterprises of corresponding risk.[17] Thus, rates established must allow a company to cover its operating expenses and provide an opportunity to earn a fair rate of return on a company's investment used to provision service. Further, a rate should be reasonable not only when it is first established, but also for a reasonable time thereafter.[18]

The Commission has wide discretion with regard to setting rates. The Commission may "utilize an historical test period, a forecast period, a combination of these where necessary, or any other accepted method of rate making necessary to give a fair rate of return."[19] The Supreme Court noted in *Powell Tel. Co. v. Tennessee Pub. Serv. Comm'n* that, "there is no statutory nor decisional law that specifies any particular approach that must be followed by the Commission. Fundamentally, the establishment of just and reasonable rates is a value judgment to be made by the Commission in the exercise of its sound regulatory judgment and discretion."[20] Accordingly, the

Commission is not limited to adopting any particular approach or to adopting a specific test period in making known and measurable adjustments to produce just and reasonable rates.[21]

Applying these principles and criteria, and upon consideration of the entire record, including all exhibits and the testimony of the witnesses, the panel made the following findings and conclusions. It should be noted here that some calculations contain numbers rounded to the nearest whole number.

VI. FINDINGS AND CONCLUSIONS

A. TEST PERIOD AND ATTRITION PERIOD

In a rate case, the Commission must decide the appropriate test period and attrition period to be utilized in the calculation of rates. Selecting the test period has the stated purpose of providing an indication of the rate of return that will be produced during the period under the existing rate structure in the reasonably foreseeable future. The test period takes into consideration the effect of calculations related to revenues, expenses, and investments.

The Company selected a historical test period of the twelve months ending September 30, 2018 and an attrition period of the twelve months ending December 31, 2020. The Consumer Advocate adopted the same review periods.[22] However, the Consumer Advocate also utilized monthly data for the three-year period ended September 30, 2016 to form a "pre-fire" snapshot for analysis in order to properly consider the impact of the significant impact on the wildfires such as loss of customers.[23] The panel voted unanimously to adopt the attrition period of the twelve months ending December 31, 2020.

B. REVENUES

The primary difference between the parties' water sales forecasts is the application of the tariff's base charge to water usage. The Company's forecast is based on providing customers with up to 2,000 gallons of water per month in the base charge per the Company's current billing practice; however, the Consumer Advocate includes only 1,000 gallons in the base charge per the Company's tariff.[24] The Company has been incorrectly applying its tariff rate by implementing the $25.70 monthly charge for the first 2,000 gallons of water rather than the first 1,000 gallons of water. As a result, the Company has been under-collecting from customers by $6.30 per customer monthly dating back to the implementation of the emergency rate order in Docket No. 17-00108.[25] Another material difference is that the Consumer Advocate projects monthly customer usage that is 601 gallons (4,080 – 3,479) more than the Company's, which is based on normalized, pre-fire water sales for the three years ended September 30, 2016.[26]

The Hearing Panel concluded that the Consumer Advocate's corrected water sales forecast should be adopted because the forecast is based upon the correct application of the Company's current tariff, and it reflects normalized, pre-fire water usage and water loss rates. As such, the Commission forecasts Attrition Year Water Sales at present rates of $248,782, which is $78,370 more than the Company's water sales forecast of $170,412.

With respect to the category of "Other Revenue", the Company did not originally include any amount for Other Revenue, but it subsequently amended its case to adopt the Consumer Advocate's forecast of Other Revenue for the Attrition Year. The Consumer Advocate projected Other Revenue of $4,919, based upon the average Other Revenue per bill for the three years ended September 30, 2016, and applied this average to the projected customer bills for the Attrition Year.

---

[24] *Id.* at 12.
[25] *Id.*
[26] *Id.* at 12-13.

The Hearing Panel found that the Consumer Advocate's calculations were reasonable and accurate for projection of Other Revenue at present rates. Additionally, the Company agrees with the Consumer Advocate's forecast. Based on corrections to water sales, the panel voted unanimously to adopt a forfeited discount rate of 1.4773% ($3,675/$248,782).

C. Operations and Maintenance Expenses

For the Company's Operations and Maintenance Expenses, the Company forecasted $224,451 and Consumer Advocate forecasted $141,752. The Hearing Panel adopted a forecast of $141,466. The table below provides a breakdown of these expenses, followed by an examination of each expense listed.

	Company	Consumer Advocate	Commission Decision
Purchased Power	$ 8,723	$ 8,527	$ 8,667
Maint. & Repair	50,190	23,240	23,622
Maint. Testing	1,920	1,876	1,908
Chemicals	243	111	241
Transportation	2	5	2
Outside Services	5,842	1,986	5,829
Office Supplies	2,954	2,882	2,935
Pension Benefits	6,924	6,769	6,880
Rent	2,047	1,492	2,037
Insurance	3,401	3,324	3,379
Office Utilities	2,386	1,575	2,370
Miscellaneous	1,525	1,431	1,515
Purchased Water	116,937	60,295	61,301
Bad Debt	1,187	600	610
Regulatory	0	0	0
Salary & Wages	20,170	27,639	20,170
Total	$224,451	$141,752	$141,466

C.1. Purchased Power, Maintenance Testing, Transportation, Office Supplies, Pension Expenses, Insurance, and Miscellaneous Expenses

With respect to Purchased Power; Maintenance Testing; Transportation; Office Supplies; Pension Benefits; Insurance; and Miscellaneous, the Company determined the three-year, pre-fire average amount for the three years ended September 30, 2016, and, using the midpoint of the Test

Year to the midpoint of the Attrition Year, it inflated the pre-fire average amount for 27 months (7.58%) and divided by the three-year average number of customers to determine an expense amount per customer.[27] The per-customer amount was then multiplied by a projected 313 customer count to arrive at the Attrition Year forecast.[28]

The Consumer Advocate also used the same three-year, pre-fire average as a basis to forecast these expense categories; however, it used the end of the Test Year to the midpoint of the Attrition Year to inflate the pre-fire average amount by 21 months (5.85%) in order to compute its expense amount per customer.[29] The per-customer amount was then multiplied by a projected 311 customer count to arrive at the Attrition Year forecast. Both the Company and the Consumer Advocate used a 3.3% CPI as an annual inflator. The difference in growth rates is due to the Company starting at the midpoint of the Test Year and inflating for 27 months to arrive at a compounded growth rate of 7.58%; whereas, the Consumer Advocate started at the end of the Test Year and inflated for 21 months to arrive at a compounded growth rate of 5.85%. [30]

The pre-fire average is farther removed in time than the typical, most-recently completed test year generally employed in rate cases. Under the unique facts of this case, the Hearing Panel found such methodology necessary here and the Company's compounded growth rate to be reasonable. Due to ongoing fire recovery efforts in 2017 and 2018 affecting routine operations, both parties normalize the test period by developing a pre-fire, three-average for 2014 through 2016 for purchased power, maintenance testing, transportation, office supplies, pension benefits, insurance, and miscellaneous expenses. The Hearing Panel concluded the pre-fire average amounts to be a reasonable basis for projecting these expenses for the Attrition Year. It should be noted that the differences in the parties' methodology here are not significant. For all the expense categories

[27] Anthony Gray, Pre-filed Direct Testimony, p. 3-4 (February 28, 2019).
[28] *Id.*
[29] William H. Novak, Pre-filed Direct Testimony, p. 7, fn 8. (July 12, 2019).
[30] *Id.*

discussed here, the Company projects a total of $25,449, as compared to the Consumer Advocate's $24,814; a difference of only $635 for all of the aforementioned expenses combined.

Based on this analysis, the Commission utilized a forecast for each of these expense categories by applying the compounded growth rate of 7.58% to the pre-fire averages to compute an expense amount per customer, and then multiplied that amount by 311 customers projected for the Attrition Period to arrive at the expense forecast. Accordingly, the Hearing Panel voted unanimously to adopt expenses in the following amounts: Purchased Power of $8,667, Maintenance Testing of $1,908, Transportation of $2; Office Supplies of $2,935; Pension Benefits of $6,880; Insurance of $3,379; and Miscellaneous Expense of $1,515.

C.2. Maintenance and Repair Expenses

With respect to Maintenance and Repair expenses, the Company used a per-customer average of selected maintenance accounts for the three years ended September 30, 2016, inflated for 27 months (7.58%), and applied to projected Attrition Year customers of 311 to determine a portion of its forecast.[31] The Company then added the booked contract operator expense for the year ended September 30, 2018 to this amount to arrive at its total Attrition Year forecast of $50,173 for Maintenance and Repair. After the Hearing, the Company submitted a revised forecast of 50,190, which was based on Attrition Year customers of 313 as opposed to the 311 included in its original forecast.[32]

The Consumer Advocate used a three-year average of individual maintenance accounts inflated for 21 months (5.85%) to determine an Attrition Year amount of $23,240.[33] The Company projected $26,950 more than the Consumer Advocate. The primary difference between the Company and the Consumer Advocate is the amount forecasted for contract operator expense. The

[31] Anthony Gray, Pre-filed Direct Testimony, p. 3 (February 28, 2019).
[32] Tennessee Water Service's Late Filed Exhibits, Exhibit 6, Schedule 7 (September 10, 2019).
[33] William H. Novak, Pre-filed Testimony, pp. 13-14 (July 12, 2019).

Consumer Advocate used a pre-fire, three-year average of $20,893 to normalize this expense, whereas the Company used the 2018 Test Year ended September 30, 2018, amount of $47,444 for its basis.[34]

The Hearing Panel found that post-fire restoration of the water system is largely complete and the pre-fire average is more reflective of Maintenance and Repair expense on a going-forward basis; thus, Maintenance and Repair expense should return to pre-fire normalized amounts. Much of the system has been rebuilt and replaced with new plant. As such, it is reasonable to expect a downward trend in Maintenance and Repair expense over the next few years. Based on using the pre-fire average inflated by the Company's forecasted growth of rate of 7.58%, the Hearing Panel voted unanimously to adopt $23,622 as the Maintenance and Repair expense for the Attrition Year.

C.3. Chemicals and Office Utilities

Like most of its other expense projections, the Company determined the three-year, pre-fire average amount for the three years ended September 30, 2016, and inflated the pre-fire average for 27 months (7.58%) and divided by the three-year average number of customers to determine the expense amount per customer. The per-customer amount was then multiplied by a projected 313 customer count to arrive its Attrition Year forecast of Chemicals of $243 and Office Utilities of $2,386.[35] The Consumer Advocate, however, used the post-fire test year ended September 30, 2018, as its basis for projecting one account comprising the Chemicals expense and one account comprising the Office Utilities expense.[36] Other than pointing out that the landscaping expense dropped significantly during the test period, the Consumer Advocate did not explain why it used the

[34] *Id.*
[35] Anthony Gray, Pre-filed Direct Testimony, p. 3 (February 28, 2019).
[36] William H. Novak, Pre-filed Direct Testimony, CA Exhibit, Schedule 7 (July 12, 2019).

post-fire amounts for these two accounts as opposed to the pre-fire average it used for all the other accounts which make up these expense categories.[37]

Here, the Hearing Panel found it reasonable and consistent to use the pre-fire average for all accounts. Therefore, the Chemicals and Office Utilities expense forecasts was computed by inflating the pre-fire average by 7.58% to determine a per-customer amount and then multiplying that amount by 311 customers projected for the Attrition Year. Based on this calculation, the Hearing Panel voted unanimously to adopt Chemicals expense of $241 and Office Utilities expense of $2,370.

C.4. Outside Services and Rent

With respect to Outside Services and Rent, the Company based its forecasts on the three-year, pre-fire average amount inflated by 7.58% just as it did with most of its other expenses. However, the Company added pro-forma adjustments for these two expense categories. The Company made pro-forma adjustments to reflect an estimated corporate allocation of Outside Services and estimated new corporate office rent, neither of which was included in the test period. As adjusted to reflect these pro-forma items, the Company forecasted Outside Services of $5,842 and Rent of $2,047.[38] The Consumer Advocate used a three-year, pre-fire average inflated by 5.85% to determine an Attrition Year forecast of $1,986 for Outside Services and $1,492 for Rent.[39] The primary differences between the Company and the Consumer Advocate are the pro-forma adjustments added by the Company.

The Hearing Panel found the pro-forma adjustments for Outside Services and Rent appear reasonable and reflect known and measurable adjustments. Using a forecast based on a three-year, pre-fire average inflated by 7.58%, as applied to projected Attrition Year customers of 311, to arrive

[37] *Id.* at 16.
[38] Tennessee Water Service's Late-Filed Exhibits, Exhibit 6, Schedule 7, (September 10, 2019).
[39] William H. Novak, Pre-filed Direct Testimony, p. 14 (July 12, 2019).

at Outside Services of $2,041 and Rent of $1,517 with the addition of the Company's pro-forma adjustments, the Hearing Panel voted unanimously to adopt Outside Services of $5,829 and Rent of $2,037.

C.5. Purchased Water

With respect to Purchased Water, in projecting Attrition Year expense the Company computed the average per-customer purchased water for the year ended September 30, 2018, inflated by 7.58%, and multiplied by an annual customer count of 311 to arrive at an Attrition Year forecast of $116,937. Embedded in this amount is a lost and unaccounted for water rate of 71.52%. The Consumer Advocate computed the average per-customer purchased water for the three years ended September 30, 2016, inflated that amount by 5.85%, and applied the projected customer count of 311 to arrive at $60,295 of purchased water expense for the Attrition Year.[40] Embedded in the Consumer Advocate's forecast is an average lost and unaccounted for water rate of 14.83%.

The Company's purchased water forecast is 94% greater than the Consumer Advocate's. The primary difference is the much higher water loss rate included in the Company's forecast. The Company's use of the test year ended September 30, 2018, likely explains the higher water loss rate than the pre-fire rate assumed by the Consumer Advocate. During the Company's test year, the system was still undergoing major fire damage repairs and recovery. Since those recovery efforts are largely completed, water loss rates during the Attrition Year should normalize to pre-fire levels. Indeed, since much of the system has been replaced with new plant, it is reasonable to assume that future water loss rates should decline over historic levels. For these reasons, the Hearing Panel accepted the Consumer Advocate's methodology for computing purchased water with the application of an inflation factor of 7.58% to the pre-fire average. Thus, the Hearing Panel voted unanimously to adopt Purchased Water of $61,301 for the Attrition Year.

[40] *Id.*, at 18.

C.6. Bad Debt Expense

With respect to Bad Debt, the Company projected bad debt based upon the booked amount for the year ended September 30, 2018, expressed as a percentage of water sales for the same period, and it then applied this percentage to its projected water sales for the Attrition Year to arrive at $1,187. The Consumer Advocate used the per-customer average for the three years ended September 30, 2016, inflated by 5.85% and multiplied by the projected customer count of 311 to arrive at its Attrition Year forecast of $600. Staff reviewed the calculations of both parties and found them to be accurate. A concern here is the Company's projection essentially doubled the historic average of bad debt expense. No evidence was offered to support such a sharp increase in bad debt expense over historic pre-fire levels. Here, the methodology of the Consumer Advocate, which normalizes the forecast based on pre-fire operations, provides a reasonable and acceptable basis for determining Attrition Year bad debt expense. For these reasons, the Hearing Panel voted unanimously to adopt Bad Debt expense of $610 for the Attrition Year.

C.7. Salary and Wages

With respect to Salary and Wages, the Company projected salary and wages based upon the amounts booked for the year ended September 30, 2018, reduced by a non-recurring amount and by capitalized labor to arrive at its Attrition Year forecast of $20,170. The Consumer Advocate used a three-year, pre-fire average inflated by 5.85%, and applied to the Attrition Year customer count of 311 to arrive at its Salary and Wage forecast of $27,639.[41] The Consumer Advocate did not reduce its forecast to reflect capitalized labor.

The panel found that the Company's projection is based on a more recent booked amount that better reflects current employee levels while also recognizing adjustments for non-recurring

[41] William H. Novak, Pre-filed Direct Testimony, p. 19 (July 12, 2019).

and capitalized labor amounts. Therefore, the Hearing Panel voted unanimously to adopt Salaries and Wages of $20,170 for the Attrition Year.

D. Depreciation and Amortization Expenses

Below is a table outlining each party's forecast and the Commission's decision with respect to Depreciation and Amortization Expenses:

	Company	Consumer Advocate	Commission Decision
Depreciation	$ 42,735	$ 42,735	$ 42,735
Amortz. CIAC	15,213	15,213	15,213
Amortz. Excess Deferred Taxes	2,245	2,769	2,769
Amortz. ITC	48	48	48
Amortz. Deferred Operating Losses	41,788	20,894	20,894
Amortz. Deferred Return on Incremental Plant	17,298	8,649	5,757
Amortz. Deferred Rate Case Cost	17,940	17,940	20,638
Amortz. Uninsured Property	5,730	11,619	5,730
Total	$ 107,985	$ 107,985	$ 66,264

D.1. Depreciation Expense

With respect to Depreciation Expense, the Company originally projected $39,613 for Depreciation Expense; in its Late-Filed Exhibit, however, the Company agreed with the Consumer Advocate's projected $42,735 Depreciation Expense.[42] The Consumer Advocate began with December 2019 depreciation expense in the amount of $3,239 based on a balance of $2,590,658. Thereafter, the Consumer Advocate applied .13% to the average balance to determine the monthly depreciation for the Attrition Year. The twelve-month total is $42,735. The Hearing Panel voted unanimously to adopt Depreciation Expense for the Year in the amount of $42,735.

[42] Tennessee Water Service's Late-Filed Exhibits, Exhibit 6, Schedule 6 (September 10, 2019).

D.2. Amortization of Contributions in Aid of Construction

With respect to Amortization of Contributions in Aid of Construction, the Company and the Consumer Advocate projected the Attrition Year expense based upon the twelve month amortization ($1,268 * 12) of this account resulting in an Amortization expense of $15,213. The Hearing Panel found the calculations were accurate and corresponded to the amortization utilized in determining the Attrition Year Contribution in Aid of Construction balance. For these reasons, the Hearing Panel voted unanimously to adopt $15,213 as the Amortization of Contributions in Aid of Construction.

D.3. Amortization of Regulatory Liability Excess Deferred Taxes

With respect to Amortization of Regulatory Liability Excess Deferred Taxes, the Company adopted in a late-filed exhibit the amount of $2,245. The Consumer Advocate projected the Attrition Year balance to be $2,769. The Hearing Panel found the Consumer Advocate's calculations to be accurate and the amortization correlates to the Regulatory Liability Excess Deferred Tax projected balance of $71,917 adopted by both parties. For these reasons, the Hearing Panel voted unanimously to adopt $2,769 for the Amortization of Regulatory Liability Excess Deferred Taxes.

D.4. Amortization of Investment Tax Credits

With respect to the Amortization of Investment Tax Credits, both the Company and the Consumer Advocate agree on the Attrition Year amount of $48. This amount is based upon an amortization of $4.00 per month being applied to the unamortized investment tax credit balance. The Hearing Panel found the calculations to be accurate and voted unanimously to adopt $48 as the Amortization of Investment Tax Credit for the Attrition Year.

D.5. Amortization of Deferred Operating Losses

In Commission Docket No. 17-00108, the Company was authorized to establish a regulatory account to defer operating losses.[43] Additionally, the Commission delayed setting an amortization period until the Company's rate proceeding where recovery would be addressed.[44]

Both parties agree on the Deferred Operating Loss balance at the end of the Test Year of $208,941. The difference between the parties for this expense is the Company amortized this amount over five years, while the Consumer Advocate amortized this amount over ten years. Whether to amortize for five or ten years or any period is a matter of reasonableness may be employed to prevent or lessen rate shock to consumers. Here, ratepayers are burdened with significant additional cost resulting from the wildfires and the longer amortization period minimizes the monthly bill increase. For this reason, the Hearing Panel found a ten-year amortization period for Deferred Operating Loss to be appropriate and voted unanimously to adopt Amortization of Deferred Operating Losses of $20,894.

D.6. Amortization of Deferred Return on Incremental Plant

Both parties agree on the Deferred Return on Incremental Plant balance at the end of the Test Year of $86,486, with the Company recommending an annual amortization of $17,297, and the Consumer Advocate recommending $8,648.[45] The reason for the difference between the parties for this amortization expense is the Company amortized this amount over five years, while the Consumer Advocate chose a ten-year amortization period.

Imputing the Company's proposed regulatory liability amount of $382,016 and recalculating the deferred returns using the same methodology as the parties, the Deferred Return on Incremental Plant balance at the end of the Test Year is $57,574. Taking into consideration the rate impact on

---

[43] *In re: Petition of Tennessee Water Service, Inc. for Approval of an Interim Emergency Wildfire Restoration Surcharge, Interim Emergency Water Service Availability Surcharge, Interim Emergency Make-Whole Surcharge, and an Interim Emergency Operation Cost Pass-Through Mechanism*, Docket No. 17-00108, *Final Order*, p. 10 (February 21, 2018).
[44] *Id.*
[45] William H. Novak, Pre-filed Direct Testimony, p. 32 (July 12, 2019).

customers, particularly the burden of significant additional costs resulting from the wildfires, a longer amortization period which minimizes the monthly bill increase is reasonable. Therefore, the Hearing Panel voted unanimously to adopt a ten-year amortization period for Deferred Return on Incremental Plant as appropriate and Amortization of Deferred Return on Incremental Plant of $5,757.

D.7. Amortization of Deferred Rate Case Costs

The Company originally proposed $21,691, however, the Company later agreed with and adopted the Consumer Advocate's projected $17,940 for the Attrition Year.[46] The Consumer Advocate based its projection on costs of $30,000 as cap in Commission Docket No. 17-00108 plus an estimated cost of $59,700 for this docket with a five-year amortization period.[47] The Company has supplemental rate case expense of $13,488[48] in this case and amortized this amount over five years as well to bring the total annual amortization to $20,638. The Hearing Panel found that considering TWS is a small company and that there was more than one hearing, along with the complex facts of this case, allowing recovery of the supplemental rate case expense is reasonable. For these reasons, the Hearing Panel found the five-year amortization period of rate case cost to be appropriate and voted unanimously to adopt $20,638 as Amortization of Deferred Rate Case Costs for the Attrition Year.

D.8. Amortization of Uninsured Property

With respect to the Commission's finding of a Regulatory Liability for Uninsured Property by taking the Company's proposed amount of $382,016, a Majority of the Hearing Panel voted that this amount shall be amortized over 66.67 years (1.5% amortization rate) through the Attrition Year

[46] Tennessee Water Service's Late-Filed Exhibits, Exhibit 6, Schedule 6 (September 10, 2019).
[47] William H. Novak, Pre-filed Direct Testimony, p. 33 (July 12, 2019).
[48] *TWS Supplemental Hearing Costs Filing*, (October 17, 2019).

to arrive at the midpoint balance of $8,041 of accumulated amortization and annual amortization expense of $5,730 ($382,016 * 1.5%). [49]

E. General Taxes

General Taxes consist of Payroll, Franchise, Gross Receipts, Property and Commission Regulatory Fees. The chart below provides a breakdown of the General Taxes category, the positions of the parties, and the decision of the Commission.

	Company	Consumer Advocate	Commission Decision
Payroll	$ 1,940	$ 723	$ 1,940
Franchise	1,792	1,122	1,122
Gross Receipts	3	144	144
Property	15,139	18,188	18,188
Utility Commission	0	267	1,054
Total	$ 18,874	$ 20,444	$ 22,448

E.1. Payroll Taxes

The Company's projected Salary & Wage expense of $20,170 is based upon the booked amount for the year ended September 30, 2018. The corresponding payroll tax general ledger amount at September 30, 2018 was adjusted consistent with the Salary and Wage adjustment to arrive at an Attrition period expense of $1,940. The Consumer Advocate based its projection of $723 upon the average of pre-fire years and inflated for 21 months (5.85%).[50] The Company's forecast corresponds to payroll tax general ledger amount at September 30, 2018 and was adjusted consistent with the Salary and Wage adjustment. For this reason, the Hearing Panel voted unanimously to adopt the Company's projected Payroll Expense of $1,940.

E.2. Franchise Tax

The Company projected $1,792 franchise taxes using the same amount of the Test Year ending September 30, 2016. The Consumer Advocate calculated the per customer average

[49] *See* Findings with respect to Rate Base in Section *G.9. Regulatory Liability – Uninsured Property* of this Order. Commissioner Hilliard dissented from the Majority decision with respect to the amount of the regulatory liability.
[50] William H. Novak, Pre-filed Direct Testimony, p. 21 (July 12, 2019).

franchise tax based up FY 14-15-16 ($3.41) times the number of customers (311) times the 21-month inflation factor of 5.85% to determine franchise taxes of $1,122 and more accurately reflect an appropriate level of Attrition Period expense. For this reason, the Hearing Panel voted unanimously to adopt $1,122 as Franchise Taxes for the Attrition Year.

E.3. Gross Receipts Tax

The Company projected the gross receipt tax year amount of $3 based solely on the Test Year amount. The Consumer Advocate calculated the Test Year average per customer of $0.44 times the number of customers (311) times the 21-month inflation rate of 5.85% to arrive at $144. The Consumer Advocate's methodology and calculation more accurately reflect an appropriate level of Attrition Year expense. For this reason, Hearing Panel voted unanimously to adopt $144 as Gross Receipts tax for the Attrition Year.

E. 4. Property Tax

The Company used the general ledger amount for the real estate tax account ($8,383) and the general property tax account balance ($6,757) for the operating company and the parent at September 30, 2018 to calculate $15,139 in property taxes for the Attrition Year. The Consumer Advocate used the post-fire average per customer for general taxes times the customer count of 311 ($9,804) to determine general property taxes. Real estate taxes ($8,383) were based solely on the booked amount for the October 1, 2017 to September 30, 2018. The total Attrition Year taxes are projected to be $18,188.

Here, the panel found the methodology used by the Consumer Advocate is preferable because it is based upon a customer count which should be more reflective of actual costs. For this reason, the Hearing Panel voted unanimously to adopt $18,188 for Property Tax Expense for the Attrition Year.

E. 5. Inspection Fees

The Company projected zero for Inspection fees and the Consumer Advocate projected $267.[51] Pursuant to Tenn. Code Ann. §65-4-303, regulatory inspection fees are based upon the gross receipts, before any deductions, of the previous year. In its *Petition,* the Company listed Test Year revenues of $86,295 and the Consumer Advocate listed Test Year revenues of $86,299. The Company under-billed customers for the previous year, due to the mis-application of their tariff. The Company should take greater care in applying its tariff correctly. For this reason, Hearing Panel calculates the inspection fee of $1,054 based upon the projected Attrition Year revenues of $253,701, less bad debt expense of $610. (($248,782-$610-$5,000)/1,000) *$4.25).

F. State Excise and Federal Income Taxes

Excise Taxes are calculated by applying the statutory rate of 6.5 % to Net Income before Federal Income Taxes. Federal Income Taxes are calculated by applying the statutory rate of 21% to Net Income less Excise Taxes. Based upon the Net Income adopted by the Hearing Panel, State Excise Taxes of negative $783 and Federal Income Taxes of negative $2,366 are adopted for the Attrition Year.

G. Rate Base

Rate Base is the total of the investor funded or supplied plant, facilities, and other investments used by the utility in provisioning service to its customers. Thus, Rate Base represents the investment on which a fair rate of return is applied to arrive at the net operating income requirement. The following table presents the comparative Rate Base calculations of the Company, the Consumer Advocate, and the Hearing Panel's decision:

[51] William H. Novak, Pre-filed Direct Testimony, p. 21 (July 12, 2019).

Attrition Year	Company	Consumer Advocate	Commission Decision
Additions:			
Utility Plant In Service	$ 2,624,827	$ 2,624,827	$ 2,624,827
Working Capital	15,798	12,612	12,827
Deferred Operating Losses	198,494	198,494	198,494
Deferred Return on Incremental Plant Investment	82,162	82,162	54,695
Deferred Rate Case Cost	80,730	80,730	92,869
Total Additions	$ 3,002,011	$ 2,998,825	$ 2,983,712
Deductions:			
Acc. Depreciation	$ 436,926	$ 436,926	$ 436,926
CIAC	633,347	633,347	633,347
Acc. Deferred Income Taxes	57,687	57,687	57,687
Reg.Liability - Excess Deferred Taxes	71,917	71,917	71,917
Reg.Liability-Uninsured Property	382,016	757,006	372,193[52]
Total Deductions	$ 1,581,893	$ 1,956,883	$ 1,572,070
RATE BASE	$ 1,420,118	$ 1,041,942	$ 1,411,642

G.1. Utility Plant In Service

Utility Plant In Service represents the gross property, plant and equipment employed by the utility to provide service to customers. The Consumer Advocate computed Utility Plant In Service by starting with the September 30, 2018 plant account balances of $1,819,060 for the utility and the allocated plant of $26,317 from the parent company.[53] Anticipated projects in the amount of $870,530 were added and $91,081 was deducted for projected retirements. The two major assets added were for tank/booster station rehabilitation placed in service in January 2019 for $331,483,

[52] Commissioner Hilliard dissented from the Majority's decision, stating the regulatory liability should have been for the full 757,000 investment. Transcript of Commission Conference, pp. 30-31 (November 4, 2019).
[53] William H. Novak, Pre-filed Direct Testimony, pp. 23-24 (July 12, 2019).

and well/booster station rehabilitation placed in service in June 2019 for $443,126. These rehabilitation projects were necessary to recover the system from damages sustained as a result of the 2016 wildfires.[54] The Company agreed with the Consumer Advocate's projected $2,624,827 Plant in Service for the Attrition Year.[55]

The Hearing Panel found the methodology and outcome used by the Consumer Advocate reasonable and voted unanimously to adopt Plant In Service of $2,624,827 for the Attrition Year.

G.2. Working Capital

Working Capital represents the utility's investment in the cash-on-hand requirement needed to pay its bills timely. For small company rate cases such as this one, working capital requirements are generally computed by taking one-eighth of net cash operating expenses (i.e., expenses that require cash payments to vendors), which equates to a 45-day lag (365/8). Purchased water, however, may be excluded based on the contention that this expense is paid for after associated revenues are received.

The Company computed Working Capital by adding Maintenance Expense, General Expense, and General Taxes forecasted for the Attrition Year and multiplying the total by one-eighth, which results in a Working Capital Allowance of $15,798. The Consumer Advocate calculated Working Capital by adding its forecasted Attrition Year Maintenance Expense, General Expense, Other Operating Expense, and General Taxes and subtracting Purchased Water, and then multiplying the total by one-eighth, which results in a Working Capital Allowance of $12,612.[56]

The Hearing Panel found the Consumer Advocate's methodology to be consistent with sound ratemaking principles. Moreover, the Company's methodology excludes forecasted Other Operating Expense without explanation. With adjustments for forecasts for Maintenance Expense,

[54] J. Bryce Mendenhall, Pre-filed Direct Testimony, pp. 4-5 (February 28, 2019).
[55] Tennessee Water Service's Late Filed Exhibits, Exhibit 6, Schedule 2 (September 10, 2019).
[56] William H. Novak, Pre-filed Direct Testimony, CA Exhibit, Schedule 4.

General Expense, Other Operating Expense, General Taxes and Purchased Water, the Hearing Panel voted unanimously to adopt a Working Capital Allowance of $12,827 for the Attrition Year.

G. 3. Deferred Operating Losses

Because of the devastating wildfires in November 2016 that caused the Company to lose over 90% of its customer base, the Commission in Docket No. 17-00108 authorized the Company to create a regulatory asset account to defer its reasonable operating losses from January 1, 2017 through this rate case proceeding. [57]

The Company sought $245,305 in operating losses through December 2018 which it proposed to recover over a five-year period with an annual amortization of $49,061.[58] The Company further proposed recovery of 2019 losses in a separate surcharge outside of the rate case.[59]

The Consumer Advocate computed the Deferred Operating Loss by starting with the balance in the regulatory asset account of $208,941 as of September 30, 2018. This balance agrees with the Company's response to Commission Staff's data request of August 28, 2019, which appropriately includes the revenue generated from the $7.00 service charge increase authorized by the Commission in Docket No. 17-00108. The Consumer Advocate then selected a ten-year amortization period for recovery of the deferred losses, which results in an annual amortization amount of $20,894 ($208,941/10).[60] It then applied monthly amortization of $1,741 ($208,941/(10*12)) through the Attrition Year to arrive at the midpoint account balance of $198,494 for the Attrition Year. This amount represents the average unrecovered operating losses deferred from January 1, 2017 through September 30, 2018, on which the Company should earn a fair return.

---

[57] *In re: Petition of Tennessee Water Service, Inc. for Approval of an Interim Emergency Wildfire Restoration Surcharge, Interim Emergency Water Service Availability Surcharge, Interim Emergency Make-Whole Surcharge, and an Interim Emergency Operation Cost Pass-Through Mechanism*, Docket No. 17-00108, *Final Order*, p. 10 (February 21, 2018).
[58] Dante M. DeStefano, Pre-filed Direct Testimony, p. 7 (February 28, 2019).
[59] *Id.* 8.
[60] William H. Novak, Pre-filed Direct Testimony, p. 29 (July 12, 2019).

Further, consistent with the Commission's order in Docket No. 17-00108, the Consumer Advocate recommends the Company be allowed to continue deferring its operational losses for the period October 1, 2018 until the new rates ordered in this proceeding become effective on January 1, 2020.[61] The Company will be allowed recovery of these additional deferred losses in a future rate proceeding. The Company came to agree with the Consumer Advocate's projected $198,494 of deferred losses.[62]

The Hearing Panel found the Consumer Advocate's methodology complied with the Commission's Final Order in Docket No. 17-00108, and adopted a ten-year amortization period for Deferred Operating Losses and voted unanimously to adopt average Deferred Operating Losses of $198,494, as well as annual amortization of $20,894, for the Attrition Year. Additionally, pursuant to the Commission's order in Docket No. 17-00108, the Hearing Panel directed the Company to continue deferring its reasonable operating losses for the period of October 1, 2018 through December 31, 2019 for potential future recovery.

G.4. Deferred Return on Incremental Plant Investment

In Docket No. 17-00108, the Commission authorized the Company to create a regulatory asset to account for the returns on the plant investments required to recover the system from the 2016 wildfires.[63] The order permitted the returns to be computed from the time such new plant was placed in service until this rate case proceeding at the then-authorized rate of return of 6.89%.[64] The primary investments made during this time was the tank/booster station rehabilitation project of $331,483 placed in service in January 2019 and the well/booster station rehabilitation project of

---

[61] *Id.*
[62] Tennessee Water Service's Late Filed Exhibits, Exhibit 6, Schedule 2 (September 10, 2019).
[63] *In re: Petition of Tennessee Water Service, Inc. for Approval of an Interim Emergency Wildfire Restoration Surcharge, Interim Emergency Water Service Availability Surcharge, Interim Emergency Make-Whole Surcharge, and an Interim Emergency Operation Cost Pass-Through Mechanism*, Docket No. 17-00108, *Final Order*, p. 10 (February 21, 2018).
[64] *Id.*

$443,126 placed in service in May 2019, along with additional, smaller incremental plant additions.[65]

The Consumer Advocate computed the Deferred Return on Incremental Plant Investment by determining actual and forecasted plant additions, depreciation, and plant retirements for the period January 1, 2017 through December 31, 2019, and then applying the annual return of 6.89% to the resulting net plant investments over this period. Using this methodology, the Consumer Advocate calculated deferred returns of $86,486 for the period.[66] The Consumer Advocate then selected a ten-year amortization period for recovery of the deferred returns and then applied monthly amortization of $721 ($86,486/ (10*12)) through the Attrition Year to arrive at the midpoint account balance of $82,162 for the Attrition Year.[67] The Company adopted the Consumer Advocate's projected $82,162 in a late-filed exhibit.[68]

The Hearing Panel found the methodology and calculations of the Consumer Advocate to be accurate and reasonable. Nevertheless, the deferred returns should take into account the Company's admission of liability for failure to properly insure the destroyed assets. The Consumer Advocate did not reduce the deferred returns for any imputed insurance proceeds that may have been collected if the assets were insured. Taking into account the Majority's decision with respect to the finding of a regulatory liability for a lack of sound insurance coverage, the Majority of the Hearing Panel found it appropriate to reduce the deferred returns by imputing $382,016 of putative insurance proceeds to offset the tank/booster and well/booster rehabilitation projects.[69] Using the same methodology as the Consumer Advocate, but for the insurance imputation, the Hearing Panel found deferred returns of $57,574 for the period January 1, 2017 through December 31, 2019. The

[65] J. Bryce Mendenhall, Pre-filed Direct Testimony, pp. 4-5 (February 28, 2019); Dante M. DeStefano, Pre-filed Direct Testimony, Schedule C (February 28, 2019).
[66] William H. Novak, Pre-filed Direct Testimony, p. 32 (July 12, 2019).
[67] *Id.*
[68] Tennessee Water Service's Late-Filed Exhibits, Exhibit 6, Schedule 3 (September 10, 2019).
[69] *See* Section *G.9. Regulatory Liability – Uninsured Property* of this Order; Commissioner Hilliard dissented with the Majority of the Hearing Panel with respect to the insurance related regulatory liability determination.

Hearing Panel voted unanimously to adopt the ten-year amortization period for recovery of the deferred returns and then applied monthly amortization of $480 ($57,574/ (10*12) through the Attrition Year to arrive at the midpoint account balance of $54,695 for the Attrition Year and an annual amortization amount of $5,757 ($480*12).

G.5. Deferred Rate Case Cost

In Docket No. 17-00108, the Commission authorized the Company to defer up to $30,000 of the costs for that case for recovery in this proceeding.[70] The Company filed information showing that the costs for Docket No. 17-00108 were $48,757.[71] The Company further filed information showing forecasted costs of $59,700 for the hearing on the merits in the current docket and $13,488 of costs for the supplemental hearing in this docket.

The Consumer Advocate began with the Test Year balance of $48,757 and adjusted it to the $30,000 cap set by the Commission in Docket No. 17-00108.[72] Projected costs for this docket of $59,700 were added to produce a balance of $89,700. A five-year amortization period was selected and monthly amortization of $1,495 ($89,700/(5*12)) was applied through the Attrition Year to arrive at an average Attrition Year balance of $80,730 for Rate Base and annual amortization of $17,940 ($1,495*12) for expenses.[73] In the original filing, the Company did not project any rate case costs; however, the Company agreed with the Consumer Advocate's projected amount of $80,730 in a late-filed exhibit.[74]

The Hearing Panel found the calculations of the Consumer Advocate to be accurate. Based upon the late-filed exhibit, the Company also agreed with the Consumer Advocate's calculations

---

[70] *In re: Petition of Tennessee Water Service, Inc. for Approval of an Interim Emergency Wildfire Restoration Surcharge, Interim Emergency Water Service Availability Surcharge, Interim Emergency Make-Whole Surcharge, and an Interim Emergency Operation Cost Pass-Through Mechanism*, Docket No. 17-00108, *Final Order*, p. 10 (February 21, 2018).
[71] *Tennessee Water Service Inc. Response to TPUC Data Request*, DR2, #4 (August 28, 2019).
[72] William H. Novak, Pre-filed Direct Testimony, p. 33-34 (July 12, 2019).
[73] *Id.*
[74] Tennessee Water Service's Late Filed Exhibits, Exhibit 6, Schedule 2 (September 10, 2019).

and five-year amortization period. However, neither the Consumer Advocate nor the Company updated its exhibits to include the $13,488[75] of costs for the supplemental hearing. The Hearing Panel found it appropriate to add these costs to Deferred Rate Case Cost and determined the estimated rate case costs to be $103,188. Applying a five-year amortization period with a monthly amortization of $1,720 ($103,188/(5*12) through the Attrition Year, the Hearing Panel voted unanimously to adopt an average Attrition Year balance of $92,869 for Rate Case Cost and annual amortization of $20,638 ($1,720*12) for expenses.

G.6. Accumulated Depreciation

Accumulated Depreciation recognizes all of the prior depreciation of plant, and this account is netted against gross plant to arrive at the net plant amount on which the Company should earn a fair rate of return. The Consumer Advocate calculated Attrition Year Accumulated Depreciation by using the Test Year balance of $459,597 and adding depreciation expense recognized for the Test Year of $68,410 and subtracting the accumulated depreciation associated with retirements (removal of plant) in the amount of $91,081.[76] In a late-filed exhibit, the Company revised its Accumulated Depreciation amount to agree with the Consumer Advocate in the amount of $436,926.[77]

The Hearing Panel found the calculations accurate and reasonable and voted unanimously to adopt the Consumer Advocate's result of an average Accumulated Depreciation of $436,926 for the Attrition Year.

G.7. Contributions In Aid of Construction

Contributions In Aid of Construction generally represent investments in utility plant that are funded by the utility's customers, developers, or other outside parties. Since the utility's investors did not have any capital outlay associated with these investments, they should not be permitted to

[75] *TWS Supplemental Hearing Costs Filing*, (October 17, 2019).
[76] William H. Novak, Pre-filed Direct Testimony, p. 25 (July 12, 2019).
[77] Tennessee Water Service's Late Filed Exhibits, Exhibit 6, Schedule 2 (September 10, 2019).

earn a return on them. Thus, Contributions In Aid of Construction are deducted from Rate Base to reduce the investment base on which a fair return is computed. Contributions In Aid of Construction are amortized as an offset to depreciation expense over the life of the contributed plant.

The Company and the Consumer Advocate agree that the balance of this account is $633,347.[78] This is based upon the September 2018 account balance of $659,969 with monthly amortization of $1,268 applied for 21 months to arrive at an average balance of $633,347 for the Attrition Year. The Hearing Panel found the calculations accurate and voted unanimously to adopt Contributions In Aid of Construction of $633,347 for the Attrition Year.

G.8. Accumulated Deferred Income Taxes

Accumulated Deferred Income Taxes ("ADIT") recognize that the utility may generally deduct more expenses for tax purposes than for regulatory purposes in the same accounting period, thereby reducing its tax liability in the current year. The most significant portion of ADIT relates to differences in the methods used for computing depreciation expense for tax purposes versus ratemaking purposes. Because these differences cause the utility to pay lower taxes in the current year than the amount of taxes collected from customers through service rates, the benefit of the preferential tax treatment is flowed through to customers by deducting the ADIT from Rate Base in order to offset the returns paid by customers to the investors.

The Consumer Advocate computed ADIT by starting with the Test Year balance for the operating company and the parent in the amount of $54,013.[79] Additions to the deferred account were made by using the midpoint balance of the tax effect on the depreciation timing differences of

[78] *Id.*
[79] *Id.* at 26.

new assets placed in service in the amount of $3,675. In late-filed exhibit, the Company revised its ADIT amount to agree with the Consumer Advocate in the amount of $57,687.[80]

The Hearing Panel found the calculation to be accurate and voted unanimously to adopt ADIT of $57,687 for the Attrition Year.

G.9. Regulatory Liability – Excess Deferred Taxes

The Regulatory Liability for Excess Deferred Taxes represents the amount of excess ADIT that should be returned to ratepayers as a result of the Tax Cuts and Jobs Act. Since the corporate tax rate was reduced from 35% to 21%, the booked amount of ADIT was reduced to recognize that the associated deferred taxes will be paid in the future at the new 21% rate, rather than the higher 35% rate that was in effect when the taxes were originally deferred. The amount of the ADIT reduction, or Excess Deferred Taxes, was collected from customers through rates, but since the higher taxes will never be paid due to the reduction in the corporate tax rate, they must be returned to the ratepayers. Amortization of a regulatory liability is the mechanism used to effectuate the return of Excess Deferred Taxes.

With regard to the amortization of Excess Deferred Taxes, the IRS requires Excess Deferred Taxes related to depreciation timing differences on certain assets to be amortized over the life of the related assets. This category is known as protected Excess Deferred Taxes. Both the Consumer Advocate and the Company agree that protected Excess Deferred Taxes should be amortized over 49 years.[81] The Test Period amount of protected Excess Deferred Taxes of $72,183 was amortized through the Attrition Year at $123 per month ($72,183/(49*12)) to arrive at a midpoint protected Excess Deferred Taxes balance of $69,973 for the Attrition Year.

With regard to unprotected Excess Deferred Taxes, the IRS allows state commissions to choose any amortization period for return of this amount to ratepayers. The Consumer Advocate

[80] Tennessee Water Service's Late-Filed Exhibits, Exhibit 6, Schedule 2 (September 10, 2019).
[81] William H. Novak, Pre-filed Direct Testimony, p. 26 (July 12, 2019);

recommended a three-year amortization period and amortized the Test Period amount of unprotected Excess Deferred Taxes of $3,888 through the Attrition Year at $108 per month ($3,888/(3*12)) to arrive at a midpoint unprotected Excess Deferred Taxes balance of $1,944 for the Attrition Year. Initially, the Company recommended a five-year amortization period for unprotected Excess Deferred Taxes; however, in a late filed exhibit, the Company revised its Regulatory Liability for Excess Deferred Taxes to agree with the Consumer Advocate.[82]

The Hearing Panel found the Consumer Advocate's calculations to be accurate and voted unanimously to adopt a total Regulatory Liability for Excess Deferred Taxes of $71,917 ($69,973 protected plus $1,944 unprotected) and annual amortization of $2,769.

G.10. Regulatory Liability – Uninsured Property

The Consumer Advocate proposed a Regulatory Liability for Uninsured Property of $757,006 based on its contention that some of the assets destroyed by the wildfires should have been fully covered by insurance.[83] According to the Consumer Advocate, had such insurance coverage been properly in place, the Company would have collected sufficient insurance proceeds to replace the destroyed assets, thereby eliminating the need for investor-funded investments for such replacements and, consequently, lowering the Rate Base on which a return is paid by customers.

Thus, the Regulatory Liability for Uninsured Property recommended by the Consumer Advocate essentially removes the rate impact of replacing the destroyed assets. Effectively, the regulatory liability amount proposed here requires the Company to shoulder the full cost of the investments made to recover from the wildfire that the Consumer Advocate contends should have been fully insured. The Consumer Advocate's intent is to completely offset the tank/booster station

[82] Tennessee Water Service's Late-Filed Exhibits, Exhibit 6, Schedule 3 (September 10, 2019).
[83] William H. Novak, Pre-filed Direct Testimony, p. 38 (July 12, 2019).

rehabilitation project costing $331,483 placed in service in January 2019 and a well/booster station rehabilitation project costing $443,126 placed in service in May 2019.[84]

As such, the Consumer Advocate computed a Regulatory Liability for Uninsured Property by taking the cost of the uninsured replacements and amortizing them over 66.67 years (1.5% amortization rate) which is the same as the economically useful life of the assets recognized in the Plant In Service and related Depreciation calculations.[85] Using this methodology, the Consumer Advocate computed accumulated amortization of the regulatory liability through the Attrition Year to arrive at the midpoint balance of $14,175 of accumulated amortization and annual amortization expense of $11,619. The Consumer Advocate also determined the ADIT related to the uninsured assets by computing the tax effect on the deprecation timing differences of uninsured assets through the midpoint of the Attrition Year to arrive at an incremental ADIT balance of $3,426. Based on these calculations, the Consumer Advocate computed and recommended a Regulatory Liability for Uninsured Property of $757,006 ($331,483 + $443,126 - $14,175 - $3,428).

Here, the Company admitted that some of the destroyed property was under-insured and that a Regulatory Liability is appropriate to recognize the Company's failure to properly insure the plant.[86] Thus, the issue is not whether the Company was imprudent. With the Company's admission, the issue for the Hearing Panel is the extent to which its failure should be recognized in new rates. The Company contends that, based upon a proxy project completed in nearby Sugar Mountain, North Carolina immediately prior to the November 2016 wildfires, the Company should have insured the destroyed plant for $432,016.[87] The Company asserts this level of insurance coverage would have been reasonable because it is based upon the actions the Company should

---

[86] Transcript of Hearing, pp. 40-41, 50 (September 9, 2019); Transcript of Commission Conference, p. 70 (October 14, 2019).
[87] J. Bryce Mendenhall, Pre-filed Rebuttal Testimony, pp. 6-7 (August 16, 2019).

have taken in 2016 to insure the property in light of the information available to the Company at that time.[88] As the insurance policy the Company has in place for other assets contains a $50,000 casualty loss deductible, the Company asserts that a Regulatory Liability for Uninsured Property of $382,016 should be recognized ($432,016 - $50,000).[89]

The Consumer Advocate, however, argues the Company's assumptions and computations are too speculative and hypothetical to be used for ratemaking purposes. The Consumer Advocate maintains the Sugar Mountain proxy project is a diversionary and unsupported assertion and not comparable to the Company's Chalet Village projects at issue in this docket and, therefore, should be rejected.[90] The Company maintains that it would be unreasonable to use hindsight to hold it accountable for the unforeseen circumstances of the wildfires that devastated the system.[91]

In response to the destruction of the wildfires, the Company invested $757,006 to re-establish water service to replace assets it concedes were not properly insured. The Company has taken responsibility for the lack of insurance and has agreed to absorb half of those costs to replace the property damaged by the wildfires.[92] The Company maintains its proposition is not an arbitrary splitting of the baby, but rather based on several arguments, including the use of a proxy as a basis of insurance coverage it should have had.

Company witness Bryce Mendenhall testified that the Sugar Mountain project should have been used by the Company at that time to determine an appropriate replacement cost for insurance coverage of the destroyed assets. In support of the Sugar Mountain proxy, the Company asserted the geography, common materials, labor, and other costs such as engineering and design relatively comparable between the Sugar Mountain and Chalet Village booster station projects.[93] Mr.

[91] Transcript of Hearing, p. 53 (September 9, 2019).
[92] *Id.*
[93] *Id.* at 167-169.

Mendenhall also testified that disasters, such as the wildfires, can create a premium on reconstruction of damaged assets due to supply and demand pressure on contract labor and materials and that the Company received only one qualified bid to complete the rehabilitation projects at Chalet Village.[94] The Company reported that only one bid was received for the replacement of the booster station and only one bid was received for the Clubhouse project from a bidder with qualifications and certification.[95]

A basic tenet of just and reasonable rates requires a utility to have the opportunity to earn a reasonable rate of return for investments for used and useful plant.[96] Rates should be fair to both the ratepayer and the utility. On one hand, the Consumer Advocate frames this matter as a near zero-sum proposition in which the full cost of the replacements should be removed from rate base as a result of the Company's imprudence. However, the Majority of the panel found that requiring the Company to forgo 100% of its investment through the application of hindsight three years after the wildfires and the rebuilding of assets destroyed in the fire would be punitive and unreasonable.

Based on the evidentiary record before it, a Majority of the Hearing Panel found the regulatory liability amount proposed by the Company to be reasonable.[97] This result requires the Company to forgo 49.3% of the total cost of replacement while providing the customers with the benefit of replacement assets that will have a longer service life. One must consider the age of the plant that was replaced and the circumstances in which it was replaced. The destroyed well and tank booster stations were existing when the Company acquired the utility and was granted its certificate of convenience and necessity ("CCN") in 1984, making the plant more than 30 years old at the time

[95] *Id.*
[96] *Bluefield Water Works and Improvement Company v. Public Service Commission of the State of West Virginia*, 262 U.S. 679, 692-693 (1923).
[97] Commissioner Herbert H. Hilliard dissented from the Majority- Transcript of Commission Conference, pp. 30-31 (November 4, 2019): "Commissioner Hilliard: I voted no primarily because I think the company should have had to put aside $700,000. I thought their explanation for why they were not adequately insure the facilities was inadequate. I also thought it was very negligent not to insure something at a bare premium where the deductible was higher than what you'd actually get paid if you actually had a loss."

of the 2016 wildfires. The tank and well booster stations have been completely replaced with new plant that will undoubtedly serve the customers far longer than the destroyed plant would have. Moreover, it is reasonable to assume that routine maintenance and repair costs will decline in the foreseeable future due to the replacement of the aging assets with new plant. Customers therefore will likely receive the benefits of longer service life and reduced costs due to the installation of the new plant.

Further, the Commission does not by rule or order specifically require utilities to fully insure against all possible casualty losses or otherwise endorse specific insurance coverage parameters, although insurance coverage or the reasonableness of a policy is certainly a consideration for the Commission. A public utility does not have license to conduct its affairs recklessly. Nevertheless, the Commission has authorized recovery of nonrecurring, extraordinary costs from ratepayers for uninsured casualty losses that were beyond the utility's control. For instance, in Docket Nos. 08-00201, 12-00051, and 13-00121, the Commission authorized the creation of regulatory assets for recovery of storm-damage costs from ratepayers incurred as a result of devastating winter storms.[98] And in Docket No. 11-00180 the Commission authorized Berry's Chapel Utility, Inc. to create a regulatory asset for recovery of specific flood-damage costs from ratepayers incurred as a result of catastrophic flooding that occurred in Middle Tennessee in May 2010.[99] The wildfires in 2016 certainly qualify as an extraordinary event beyond the control of a public utility. Thus, it is consistent with the Commission's prior ratemaking decisions and policy to permit the Company to

[99] *See In Re: Petition of Berry's Chapel Utility, Inc. to Recover Costs to Repair Flood Damage and to Refund Customer Service Fees*, Docket No. 11-00180, *Final Order*, pp. 15-17, (August 21, 2012).

recover the uninsured casualty losses sustained in this case which were undoubtedly extraordinary and beyond the utility's control.

Finally, allowing the Company recovery of costs related to restoring the water system from the fire damage is consistent with the Commission's previous order on this issue in Docket No. 17-00108. In that docket, the Commission authorized the Company to establish a regulatory asset to accrue and defer the returns on the capital projects necessary to repair the fire damage and restore the system to operational status. Those capital projects have been identified in this proceeding as the tank and well booster station rehabilitation projects. And by entering the rate order in Docket No. 17-00108, the Commission determined that probable future recovery of the capital costs related to these projects was proper and in accordance with the ratemaking and regulatory accounting principles established by the Commission's Uniform System of Accounts.

Based on the foregoing, the Majority of the Hearing Panel authorized a Regulatory Liability for Uninsured Property by taking the proposed amount of $382,016 amortized over 66.67 years (1.5% amortization rate) through the Attrition Year to arrive at the midpoint balance of $8,041 of accumulated amortization and annual amortization expense of $5,730 ($382,016 * 1.5%). The ADIT related to the underlying property was determined by computing the tax effect on the deprecation timing differences through the midpoint of the Attrition Year to arrive at an incremental ADIT balance of $1,782. Based on these calculations, the Majority of the Hearing Panel voted to authorize a Regulatory Liability for Uninsured Property of $372,193 ($382,016 - $8,041 - $1,782).

H. REVENUE CONVERSION FACTOR

The Revenue Conversion Factor represents the multiple figure needed to convert the operating revenue deficiency to the revenues necessary to the produce that income. Specifically, taxes and other fees must be collected on top of the revenue in order for the necessary amount of revenues to be collected by the Company to cover its revenue deficiency. As stated by the

Consumer Advocate, the Commission traditionally includes the forfeited discount in its revenue conversion factor and the Company offers no explanation for its exclusion.[100] The Advocate further states that the Commission has also traditionally treated the inspection fee as a prepaid tax instead of including it as a component of the revenue conversion factor.

The Hearing Panel voted unanimously to adopt a forfeited discount factor of 0.014773, an uncollectible ratio of 0.002452, a state excise tax rate of 6.5% and a federal income tax rate of 21% which yields a recommended revenue conversion factor of 1.337392.

I. RATE OF RETURN AND COST OF CAPITAL

The goal of regulatory rate setting is to ensure a fair rate of return on a company's investments while ensuring the safety and reliability of the service provided. The fair rate of return standard descends from court decisions in the *Hope* and *Bluefield* cases.[101] A fair rate of return is achieved when (1) the return is comparable to other businesses that bear similar risks; (2) the allowed return is sufficient to ensure financial integrity; and (3) the company can attract, at reasonable cost, credit to meet its capital requirements.

The Company proposes a capital structure that is a 50%/50% split of long-term debt and equity. The Company notes that this capital structure is consistent with the recent history of TWS's parent, Utilities, Inc. ("UI"). TWS is a wholly-owned subsidiary of UI.[102] The Company proposes a cost of equity of 10.50%. The Company and its parent company are not publicly traded. The Company estimates the cost equity for use in the proceeding using an ensemble of the discounted cash flow and capital asset pricing models applied to a comparison group of natural gas and water

[100] William H. Novak, Pre-filed Direct Testimony, p. 42 (July 12, 2019).
[101] *Bluefield Water Works & Improvement Co. v. P.S.C. of West Virginia*, 262 U.S. 679 (1923) and F.P.C. v. Hope Natural Gas Co., 320 U.S. 591 (1944).
[102] Dante M. DeStefano, Pre-filed Direct Testimony, p. 10 (February 29, 2019).

utilities.[103] The Company proposes a cost of debt of 5.04%. [104] The resulting overall rate of return based upon the Company's capital structure, debt cost, and equity return is 7.77%.[105]

The Consumer Advocate notes that, for this case, it "has no objection to the Cost of Capital proposed by the Company that produces an overall return of 7.7%."[106] Based upon the positions taken by the parties, there is no controversy concerning the overall cost of capital of 7.77%. At the Hearing, Consumer Advocate witness Novak stated that "It's my understanding that the company and the Consumer Advocate had agreed to the cost of capital prior to the company's filing" and "we are not contesting the company's cost of capital."[107]

The Company proposes a capital structure that is a 50%/50% split of long-term debt and equity. Similarly, in an order issued February 21, 2019, the North Carolina Utilities Commission established a capital structure of 50.91% equity and 49.09% long-term debt for an affiliate of TWS.[108] As such, the panel found the proposed capital structure of a 50%/50% split of long-term debt and equity is reasonable for use in this proceeding. Similarly, the North Carolina Commission set the cost of debt to be 5.68%. The panel also found the proposed debt cost in this proceeding of 5.04% is comparable and thus, reasonable.

The Hearing Panel voted unanimously to adopt the 7.77% overall rate of return and the 10.5% equity return. The related Interest Expense is calculated by applying the adopted weighted cost of debt to the adopted rate base amount. Using the adopted rate base of $1,411,642 and weighted cost of debt of 2.52%, Interest Expense for the Attrition Year is $35,573, the Hearing Panel voted unanimously to adopt Interest Expense for the Attrition Year of $35,573.

[108] Tennessee Water Service Inc's Responses to First Informal Discovery Request of the Consumer Advocate Unit Item 6 (April 10, 2019).

J. REVENUE DEFICIENCY

Based upon the foregoing, the Majority of the Hearing Panel found that the Company will experience a Revenue Deficiency of $111,020 for the Attrition Year ending December 31, 2020, at presently-authorized service rates. Thus, new rates should be designed and implemented which will generate additional annual water service revenues of $111,020. This increase in revenues will afford the Company a reasonable opportunity to earn its recommended fair rate of return of 7.77%.

K. RATE DESIGN AND OTHER TARIFF CHANGES

Rate design covers the manner in which new rates reflecting the revenue deficiency are recovered from customers. This section also includes changes to the tariff, or terms and conditions of service.

K.1. Rate Design

The Company proposed to phase in rates over a three-year period in order to avoid rate shock, but it should be noted that TWS requested $300,444 in additional revenues – an amount that exceeds the Majority Panel's revenue deficiency of $111,020. TWS is also proposed new rates for private fire service. The Company's proposed rate design was as follows:

	Current	Year 1	Year 2	Year 3
Monthly Flat Rate (Includes 2,000 gallons)	$25.70	$50.00	$74.00	$94.00
Per Gallon Charge (Over 2,000 Minimum)	$13.30	$16.50	$19.00	$20.65
Private Fire Service				
Multi-Use Line	$ 0.00	$11.33	$24.00	$35.80
Fire Only Line	$ 0.00	$22.67	$48.00	$71.60

Based upon the Company's recommended rate design, which includes a lower monthly average water usage level, the average monthly water bill would be approximately $125 prior to sales tax.

The Consumer Advocate calculates a revenue deficiency of $73,087, and the following rates without a phase in:[109]

	Current	Proposed
Monthly Flat Rate (Includes 1,000 gallons)	$25.70	$33.39
Per Gallon Charge (Over 1,000 Minimum)	$13.30	$17.28

While the Consumer Advocate does not oppose the implementation of private fire service, it does not believe that TWS has identified a significant need for the tariff and has not presented justification to support the proposed rates.[110] Based upon the Consumer Advocate's recommended rate design, the average monthly water bill would be approximately $87 prior to sales tax.

The goal of overall rate design is to establish a system of rates that will enable a utility to generate sufficient revenues to cover expenses needed to operate the utility, plus an equity return for investors. There are often, however, many factors that are taken into consideration when designing rates, including those related to economics and social considerations. For example, a social consideration may be to establish rates for residential customers that are affordable but not necessarily reflective of the actual cost of service. Thus, in some cases, rates for certain services or classes of services (i.e., industrial and large commercial) may be priced further above cost in order to maintain residential services at affordable rates. In this case, however, TWS serves only residential customers so the revenue deficiency must be recovered solely from residences.

As concluded herein the Majority of the Hearing Panel calculated an annual revenue deficiency of $111,020 which is based upon forecasted attrition period revenues, expenses, applicable taxes, and a rate base with a fair return. Many factors go into these calculations and especially important to rate design is forecasted attrition period number of customers and average

[109] William H. Novak, Pre-filed Direct Testimony, p. 45-46 (July 12, 2019).
[110] William H. Novak, Pre-filed Supplemental Testimony, pp. 4-5 (July 31, 2019).

customer water usage. Since revenue calculations are based upon 3,732 annual customer bills with an average monthly usage number 4,080 gallons, it is appropriate to also use these amounts in order develop a rate design that will recover the necessary annual revenue deficiency.

Here, there are primarily two rate components: (1) an existing flat monthly rate of $25.70 which includes a set amount of usage [currently it includes the initial 1,000 gallons of usage] and (2) an existing $13.30 charge for each additional 1,000 gallons used above the minimum. Since rates were established in the emergency petition in Docket No. 17-00108, however, the Company has incorrectly applied its tariff by including 2,000 gallons in the minimum monthly flat rate and charging usage rates in excess of 2,000 gallons used monthly.[111] This is most unfortunate as it may cause much confusion for ratepayers when rates are changed.

The Hearing Panel found that the Company's proposed private fire service offerings are reasonable and also recommends approval of the proposed rates which are expected to generate additional revenues of $1,289 annually, leaving the remaining $109,731 revenue deficiency to be collected from the monthly flat rate and water usage component. Based upon this remaining revenue deficiency, the Hearing Panel voted unanimously to adopt a Monthly flat rate of $50.00 for the first 1,000 gallons of water used. Any additional water used beyond the first 1,000 gallons is subject to a volumetric charge of $14.95 per 1,000 gallons. A comparison between the prior rates and the new rates is below.

	Current	**Commission**
Monthly Flat Rate (Includes 1,000 gallons)	**$25.70**	**$50.00**
Per Gallon Charge (Each additional 1,000 gallons)	**$13.30**	**$14.95**

In this case, the Consumer Advocate used average water usage based upon the three years preceding the wildfire to compute rates. The rationale is that current volumes may not be as reliable

[111] William H. Novak, Pre-filed Direct Testimony, p. 12 (July 12, 2019).

due to a number of factors. Illustrative of this fact is that the Company's most recent two years of water usage indicates a water loss percentage of 30.43% for the twelve months ending September 30, 2017 and 71.52% for the ending September 30, 2018. The historical water loss percentage for the three years prior to the wildfires averaged only 14%. Moreover, the Company's recent volumes could be impacted by water used in company testing and maintenance of facilities, construction clean-up and possibly other factors such as the size of new homes, newer construction efficiencies and water conservation efforts of consumers. Due to these uncertainties, the rate design adopted by the Hearing Panel increases the Company's fixed revenue recovery to approximately 52% of total revenues, thereby minimizing the revenue impacts of potentially inaccurate water usage levels and high water loss percentages. In this manner, the Company's revenues are more likely to remain stable, and thus more predictable, by recovering more fixed costs through fixed charges, as opposed to relying on the recovery of fixed charges through revenue streams collected via volumetric usage charges. Based upon the proposed customer levels and average water usage, the average water bill will be approximately $96 monthly.

K.2. Operational Cost Pass Through Mechanism

In Docket No. 17-00108, the Commission implemented an Interim Emergency Operational Cost Pass Through Mechanism ("OCPTM") as proposed by TWS and modified by the Consumer Advocate.[112] This mechanism authorized TWS to pass through to customers nondiscretionary increases or decreases in costs incurred for purchased water and purchased electricity such that if the price of purchased water or electricity increased or decreased, the Company could adjust customer rates accordingly. In fact, the tariff required TWS to make semi-annual filings with the

[112] *In re: Petition of Tennessee Water Service, Inc. for Approval of an Interim Emergency Wildfire Restoration Surcharge, Interim Emergency Water Service Availability Surcharge, Interim Emergency Make-Whole Surcharge, and an Interim Emergency Operation Cost Pass-Through Mechanism*, Docket No. 17-00108, *Final Order*, p. 11 (February 21, 2018).

Commission to adjust customer rates for changes in these expenses; however the Company never made the requisite filings to utilize the mechanism.

In the instant docket, TWS wants to make the mechanism permanent because it argues the overall rate proposal does not include a method to recover increases in production costs. Additionally, the Company contends the OCPTM will provide benefits beyond the attrition year where variable costs will inevitably rise.[113] The Consumer Advocate reasons that the mechanism be terminated because it is recommending that the Company be allowed to continue deferring operating losses through December 31, 2019.[114] The Consumer Advocate argues this deferment makes the continuation of the mechanism no longer necessary.

The panel found that the uncertainty in water usage levels as discussed above makes it difficult to calculate an accurate amount of purchased water. Additionally, this uncertainty makes it difficult to establish a baseline for the amount of electricity needed to pump the water. Moreover, the panel further found that the Company's overall operations during the near future could be quite volatile (not just purchased water and electricity) due the number of customers added, changes in water usage, and efficiencies experienced with a more efficient water system. Thus, it is quite likely that a review of rates will be necessary in the next two years once these variables are better known. Accordingly, the Hearing Panel voted unanimously to terminate this mechanism until such time that the Company's operations are more stable so a sound baseline can be established on which to compare future changes.

K.3. Qualified Infrastructure Improvement Program

The Company proposed a Qualified Infrastructure Improvement Program ("QIIP") mechanism to be implemented in order for the Company to recover its qualifying incremental non-revenue producing plant infrastructure investment relating to:

---

[113] Dante M. DeStefano, Pre-filed Direct Testimony, pp. 6-7 (August 16, 2019).
[114] William H. Novak, Pre-filed Rebuttal Testimony, pp. 43-44 (July 12, 2019).

> *Distribution Infrastructure* – a Replacement distribution and transmission mains and valves installed as replacements for existing facilities, reinforcement of existing facilities or otherwise ensuring reliability of existing facilities; Hydrants, Services, Meters and Meter Installations – installed as in-kind replacements, reinforcements or ensuring reliability of existing facilities; Unreimbursed funds related to capital projects to relocate facilities required by government highway projects; Capitalized tank repairs and maintenance that serve to replace, reinforce, otherwise ensure reliability of existing facilities.
>
> *Production and Pumping Infrastructure* – Replacement of water treatment facilities and equipment installed as replacements for existing facilities, reinforcements of existing facilities or otherwise ensuring reliability of existing facilities; Raw Water and Finished Water pumping equipment and structures installed as replacements, reinforcements or otherwise reliability of existing facilities.[115]

In essence the Company would provide a forecast of QIIP investment and begin collecting appropriate carrying charges via a customer surcharge. At year end, TWS would true-up the budget to actual investment along with a true-up over/under collections from consumers. The Consumer Advocate offered no opinion on this mechanism.

The Hearing Panel found the QIIP was not in the public interest at this time and voted unanimously that the request be denied. The main emphasis has been and should continue to be for TWS to build facilities necessary to service customers. Within the QIIP, the Company plans to establish more reliable facilities and improve them. While added reliability is important, the emphasis has to be to provide basic service that is reasonably affordable. In light of the major rate increases that customers are about to realize, adding infrastructure that is not absolutely necessary to actually serve customers at this time could very well make rates unaffordable and unreasonable.

However, the Hearing Panel noted that if a project becomes necessary to furnish service, and absent repairing or replacing the infrastructure would result in inadequate or loss of service, the Company may petition for emergency relief in the form of additional deferred accounting and present its case. Moreover, if a local government entity requires the utility to replace, move or otherwise cause the Company to spend money on capital projects, the Company has the option to

[115] Dante M. DeStafano, Pre-filed Direct Testimony, Exhibit 7, Original Sheet No. 19 (February 28, 2019).

file an emergency petition for necessary relief. Finally, the Company's earnings volatility in the near future will make it quite likely that an overall review of rates will be necessary in the next two years.

K.4. Other Miscellaneous Tariff Changes

In addition to the aforementioned tariff provisions relating to the private fire service, OCPTM, and the QIIP, TWS provides several other miscellaneous tariff changes in its tariff.

In addition to requiring a third party to pay the new 21% tax rate on all Contribution-in-aid of Construction ("CIAC"), TWS proposes to also collect the 6.5% Tennessee state excise tax rate on CIAC. The Consumer Advocate, however, correctly points out the Tennessee state excise tax does not apply to CIAC.[116] Moreover, the Commission decided this very topic in its order issued on October 1, 2018, in Docket 18-00001, *Order Approving Staff Report and Recommendation.* [117] Within that order, the Commission ordered all small water and wastewater utilities to file a tariff with a CIAC gross up factor of 26.58%, which excludes excise tax. TWS, however, failed to submit the required tariff. The Consumer Advocate had no objection to the remaining miscellaneous changes to TWS's tariff.[118]

The Hearing Panel directed TWS to file a tariff for CIAC reflecting a 26.58% gross up factor and to file the specific tariff language attached to the October 1, 2018 order issued in Docket No. 18-00001 and voted unanimously to approve the remaining miscellaneous tariff changes.

IT IS THEREFORE ORDERED THAT:

1. The rates filed by Tennessee Water Service, Inc. on February 28, 2019 are denied;

[116] William H. Novak, Pre-field Supplemental Testimony, p. 2 (July 31, 2019).
[117] *In Re: Tennessee Public Utility Commission Investigation of Impacts of Federal Tax Reform on the Public Utility Revenue Requirements*, Docket No. 18-00001, *Order Approving Staff Report and Recommendations*, pp. 3-4.
[118] William H. Novak, Pre-filed Supplemental Testimony, pp. 4-5 (July 31, 2019).

2. For purposes of the rates herein, the attrition period Revenues for the twelve months ending December 31, 2020, are $248,782 in Water Sales and $4,919 in other Revenues, and a forfeited discount rate of 1.4773%;

3. For purposes of the rates herein, the Operations and Maintenance Expenses for the attrition period are $141,466.

4. For purposes of the rates herein, Depreciation Expense for the attrition period is $42,735; (2) Amortization of Contributions in Aid of Construction of $15,213; and (3) Amortization of Investment Tax Credit of $48.

5. The (1) Amortization of Regulatory Liability for Excess Deferred Taxes of $2,769, with a 49-year amortization period for Protected Excess Deferred Taxes and a three-year amortization period for Unprotected Excess Deferred Taxes; and (2) Amortization of Regulatory Liability for Uninsured Property of $5,730, with a 66.67-year amortization period consistent with the associated uninsured plant.

6. The (1) a ten-year amortization period for Deferred Operating Loss with an annual amortization of $20,894; (2) a ten-year amortization period for Deferred Return on Incremental Plant Investment with an annual amortization of $5,757; and (3) a five-year amortization period for Deferred Rate Case Expense with an annual amortization of $20,638. The Company is authorized to continue deferring its reasonable operating losses as agreed to by the parties through December 31, 2019, for potential future recovery.

7. For purposes of the rates herein, the Net State Excise Tax is calculated using the statutory rate of 6.5% and Federal Income Taxes are calculated using the 21% statutory rate for the for the attrition period. Other Taxes for the attrition period are approved as follows: Payroll Tax of $1,940, Franchise Tax of $1,122, Gross Receipts Tax of $144, Property Tax of $18,188; and Inspection Fees of $1,054.

8. For purposes of the rates herein, Rate Base is $1,411,642 for the attrition period;

9. For purposes of the rates herein, the Net Operating Income is $26,672 for the attrition period based on current rates prior to application of taxes for additional attrition period revenues;

10. For purposes of the rates herein, the overall Revenue Conversion Factor of 1.337392 based upon a forfeited discount factor of 0.014773, an uncollectible ratio of 0.002452, a state excise tax rate of 6.5% and a federal income tax rate of 21%.

11. For purposes of the rates herein, the capital structure is composed of 50.00% debt and 50.00% equity; debt cost of 5.04% and an equity return of 10.50% with an overall rate of return of 7.77%;

12. For purposes of the rates herein, using the adopted Rate Base of $1,411,642 and weighted cost of debt of 2.52%, Interest Expense is calculated in the amount of $36,573 for the attrition period.

13. For purposes of the rates herein, the Revenue Deficiency of $111,020 is established for the attrition period.

14. The Monthly Flat Rate for the first 1,000 gallons of water usage shall be increased from $25.70 to $50.00 per month.

15. The volumetric charge for each 1,000 gallons above the first 1,000 gallon water usage shall be increased from $13.30 to $14.95 per 1,000 gallons.

16. The proposed Private Fire Service rates of $35.80 for multi-use lines and $71.60 for Fire-Only lines are approved.

17. The existing Interim Emergency Operational Cost Pass Through Mechanism is terminated.

18. The proposed Qualified Infrastructure Improvement Program surcharge is denied as it is not in the public interest at this time.

19. Tennessee Water Service Inc. is to file a tariff regarding Contributions in Aid of Construction to reflect a 26.58% gross up factor, and to file the specific tariff language attached to the October 1, 2018 order issued in Commission Docket No. 18-00001.

20. The rates approved herein shall become effective January 1, 2020.

21. Any person who is aggrieved by the Commission's decision in this matter may file a Petition for Reconsideration with the Commission within fifteen days from the date of this Order; and

22. Any person who is aggrieved by the Commission's decision in this matter has the right to judicial review by filing a Petition for Review in the Tennessee Court of Appeals, Middle Section, within sixty days from the date of this Order.

Chair Robin L. Morrison and Commissioner David F. Jones concur. Commissioner Herbert H. Hilliard dissents in part where noted herein.

by interest payments; preferred stockholders are compensated by fixed dividend payments; and the firm's remaining income belongs to its common stockholders and serves to "pay the rent" on stockholders' capital. Management may either pay out earnings in the form of dividends or retain earnings for reinvestment in the business. If part of the earnings is retained, an *opportunity cost* is incurred: Stockholders could have received those earnings as dividends and then invested that money in stocks, bonds, real estate, and so on. *Thus, the firm should earn on its retained earnings at least as much as its stockholders themselves could earn on alternative investments of equivalent risk.*

What rate of return can stockholders expect to earn on other investments of equivalent risk? The answer is k_s, because they can earn that return simply by buying the stock of the firm in question or that of a similar firm. Therefore, if our firm cannot invest retained earnings and earn at least k_s, then it should pay those earnings to its stockholders so that they can invest the money themselves in assets that do provide a return of k_s.

Whereas debt and preferred stocks are contractual obligations which have easily determined costs, it is not at all easy to estimate k_s. However, three methods can be used: (1) the Capital Asset Pricing Model (CAPM), (2) the discounted cash flow (DCF) model, and (3) the bond-yield-plus-risk-premium approach. These methods should not be regarded as mutually exclusive—no one dominates the others, and all are subject to error when used in practice. Therefore, when faced with the task of estimating a company's cost of equity, we generally use all three methods and then choose among them on the basis of our confidence in the data used for each in the specific case at hand.

SELF-TEST QUESTIONS

What are the two types of common equity whose costs must be estimated? Explain why there is a cost for retained earnings.

THE CAPM APPROACH

As we saw in Chapter 5, the Capital Asset Pricing Model is based on some unrealistic assumptions, and it cannot be empirically verified. Still, because of its logical appeal, the CAPM is often used in the cost of capital estimation process.

Under the CAPM we assume that the cost of equity is equal to the risk-free rate plus a risk premium that is based on the stock's beta coefficient and the market risk premium as set forth in the Security Market Line (SML) equation:

$$k_s = \text{Risk-free rate} + \text{Risk premium}$$
$$= k_{RF} + (k_M - k_{RF})b_i.$$

Given estimates of (1) the risk-free rate, k_{RF}, (2) the firm's beta, b_i, and (3) the required rate of return on the market, k_M, we can estimate the required rate of

$$k_p = \frac{\text{div}}{P}$$

where k_p = The cost of preferred stock
div = The promised dividend on the preferred stock
P = The market price of the preferred stock

If the current market price is not available, use yields on similar-quality issues as an estimate. For a fixed-life or callable preferred stock issue, estimate the opportunity cost by using the same approach as for a comparable debt instrument. In other words, estimate the yield that equates the expected stream of payments with the market value. For convertible preferred issues, option-pricing approaches are necessary.

STEP 3: ESTIMATE THE COST OF EQUITY FINANCING

The opportunity cost of equity financing is the most difficult to estimate because we can't directly observe it in the market. We recommend using the capital asset pricing model (CAPM) or the arbitrage pricing model (APM). Both approaches have problems associated with their application, including measurement difficulty. Many other approaches to estimating the cost of equity are conceptually flawed. The dividend yield model (defined as the dividend per share divided by the stock price) and the earnings-to-price ratio model substantially understate the cost of equity by ignoring expected growth.

The Capital Asset Pricing Model

The CAPM is discussed at length in all modern finance texts (for example, see Brealey and Myers, 1999, or Copeland and Weston, 1992).[6] These detailed discussions will not be reproduced here. (In this section, we assume that you are generally familiar with the principles that underlie the approach.) The CAPM postulates that the opportunity cost of equity is equal to the return on risk-free securities plus the company's systematic risk (beta) multiplied by the market price of risk (market risk premium). The equation for the cost of equity (k_s) is as follows:

[6] T. Copeland and J. Weston, *Financial Theory and Corporate Policy*, 3rd ed. (Reading, MA: Addison-Wesley, 1992); and R. Brealey and S. Myers, *Principles of Corporate Finance*, 5th ed. (New York: McGraw-Hill, 1999).

For Blue Ridge Paper Products, Inc., d/b/a Evergreen Packaging:

Adam Olls and Jeffrey D. McKinney, Bailey & Dixon, LLP, 434 Fayetteville Street, Suite 2500, Raleigh, NC 27601

BY THE COMMISSION: On February 17, 2016, Public Service Company of North Carolina, Inc. (PSNC or the Company), filed its Letter of Intent to File for authority to adjust and increase its retail natural gas rates and charges pursuant to Commission Rule R1-17(a).

On March 3, 2016, the Carolina Utility Customers Association, Inc. (CUCA), filed a Petition to Intervene, which was granted by the Commission on March 7, 2016.

On March 31, 2016, PSNC filed an Application for a General Rate Increase (Application) seeking a general increase in and revisions to its rates and charges, implementation of a new Integrity Management Tracker mechanism, implementation of new depreciation rates, updates and revisions to the Company's service regulations and tariffs, and proposed funding for gas distribution research activities conducted by the Gas Technology Institute. Included with its Application was information and data required by NCUC Form G-1, pursuant to Commission Rule R1-17(b)(12). In addition, the Application was supported by the direct testimony and exhibits of Company witnesses: D. Russell Harris, President and Chief Operating Officer of PSNC and President of Gas Operations for South Carolina Electric & Gas Company (SCE&G); Jimmy E. Addison, Executive Vice President and Chief Financial Officer of PSNC, SCANA Corporation, and the other subsidiaries of SCANA; George B. Ratchford, Vice President – Gas Operations for PSNC; Sharon D. Boone, Business Unit Controller of PSNC; James A. Spaulding, Financial Accounting Manager for PSNC; Candace A. Paton, Rates & Regulatory Manager for PSNC; Rose M. Jackson, General Manager – Supply & Asset Management for SCANA Services, Inc.; Robert B. Hevert, Partner of ScottMadden, Inc.; and John J. Spanos, Senior Vice President of Gannett Fleming Valuation and Rate Consultants, LLC.

By Order Scheduling Investigation and Hearing, Suspending Proposed Rates, Establishing Intervention and Testimony Dates and Discovery Guidelines, and Requiring Public Notice issued April 26, 2016, and corrected in the Errata Order issued on April 27, 2016 (collectively, Scheduling Order), the Commission declared the Company's Application to be a general rate case pursuant to G.S. 62-137 and suspended the proposed rates for a period of up to 270 days from and after May 1, 2016. In addition, the Scheduling Order set the matter for public witness and expert witness hearings, required the Company to give notice of the hearings, established discovery guidelines, and established a date for petitions to intervene and for the prefiling of direct testimony by the Public Staff and other intervenors, and established a date for the filing of rebuttal testimony by the Company.

On May 31, 2016, Blue Ridge Paper Products Inc. d/b/a Evergreen Packaging (Evergreen) filed a Petition to Intervene. Evergreen's Petition was granted by Commission Order dated June 2, 2016.

On June 13, 2016, the Attorney General filed its Notice of Intervention pursuant to G.S. 62-20. Also on this date, PSNC, on behalf of attorney B. Craig Collins, filed a Motion for Admission to Practice pursuant to G.S. 84-4.1 seeking an order from the Commission allowing Mr. Collins to appear before the Commission on behalf of PSNC in this proceeding. By Order dated June 14, 2016, the Commission granted the request of Mr. Collins for admission pro hac vice in the present docket.

On June 16, 2016, PSNC filed affidavits of publication of public notice.

Between June 22, 2016 and September 21, 2016, the Commission received four consumer statements of position regarding PSNC's rate increase proposal.

On June 23, 2016, PSNC filed its Certification that it had provided Notice of Hearing to each of its customers.

On August 8, 2016, the Public Staff filed a Motion for Extension of Time in which it sought an extension of the dates for filing Public Staff, Intervenor, and Company rebuttal testimony. The Commission approved a shortened extension of time by Commission Order dated August 9, 2016.

On August 12, 2016, PSNC and the Public Staff filed a Joint Motion for Extension of Time in which the parties requested the Commission to reconsider its prior order and grant the extension period originally requested. The Commission approved the extension by Order dated August 17, 2016. On August 17, 2016, the Public Staff by verbal motion requested that the Commission grant the Public Staff and Intervenors an extension until noon of the following day within which to file their testimony. This motion was granted by Order dated August 17, 2016.

On August 18, 2016, PSNC, CUCA, Evergreen, and the Public Staff (Stipulating Parties) filed a Partial Stipulation resolving most of the issues between these parties. On the same date, the Public Staff filed the direct testimony and exhibits of James G. Hoard, Director, Accounting Division; Michelle M. Boswell, Staff Accountant, Natural Gas Section, Accounting Division; Julie G. Perry, Supervisor of the Natural Gas Section of the Accounting Division; and Jan A. Larsen, Director of the Natural Gas Division.

On August 22, 2016, PSNC filed a Motion for Extension of Time in which it sought a two-day extension of time for PSNC to file a list of hearing witnesses and estimate of cross-examination times. On the same date, the Stipulating Parties filed a corrected page 7 of the Partial Stipulation.

On August 23, 2016, the Commission issued an Order granting PSNC's request for an extension of time to file the witness list and cross-examination estimate.

On August 24, 2016, PSNC filed the supplemental testimony of Robert B. Hevert. On the same date, PSNC filed its Witness List and Motion to Excuse Witnesses, wherein the Company, after consulting with all of the parties of record, provided the

proposed order of appearance of witnesses and estimates of cross-examination times. PSNC also requested in the filing that Company witnesses Harris, Boone, Spaulding, Jackson, and Spanos and Public Staff witness Larsen be excused from appearing at the expert witness hearing, since none of the parties had questions for these witnesses. PSNC also filed a Motion for Extension of Time requesting an extension until noon on August 25, 2016, for PSNC to file its rebuttal and supplemental testimony.

On August 23, 2016, the matter came on for a public witness hearing in Gastonia as scheduled. No person appeared to testify as a public witness.

On August 24, 2016, a public witness hearing was held in Asheville as scheduled. No person appeared to testify as a public witness.

By Order dated August 25, 2016, the Commission granted the Company's extension of time to file rebuttal and supplemental testimony.

On August 25, 2016, PSNC filed the supplemental testimony of Candace A. Paton, the rebuttal testimony of Jimmy E. Addison, and the rebuttal testimony of Candace A. Paton. On the same date, the Stipulating Parties filed an Amended Partial Stipulation. The Public Staff also filed an Amended Exhibit C, which amended page 2 of Public Staff witness Larsen's original filed Exhibit C in support of the Amended Partial Stipulation.

Also on August 25, 2016, a public witness hearing was held in Statesville as scheduled. No person appeared to testify as a public witness.

On August 29, 2016, the Commission issued an Order Denying in Part Motion to Excuse Witnesses, in which the Commission excused only Company witnesses D. Russell Harris, James A. Spaulding, and John J. Spanos from attending the expert witness hearing. In addition, the Commission accepted their testimony and exhibits into evidence.

Also on August 29, 2016, the Stipulating Parties filed a Stipulation and Exhibits by and between the Stipulating Parties resolving all issues between them. On the same date, PSNC filed the supporting supplemental testimony and Exhibits of Candace A. Paton, and the Public Staff filed witness Boswell's Revised Exhibit 1 in support of the Stipulation.

On August 29, 2016, a public witness hearing was held in Raleigh as scheduled. No person appeared to testify as a public witness.

On August 30, 2016, the Commission convened the final public witness hearing and the expert witness hearing in Raleigh as scheduled. No person appeared to testify as a public witness. On the same date, the Stipulating Parties filed an Amended Stipulation, which made corrections to the Stipulation filed on the previous day.

At the hearing, the Company reported, and the Stipulating Parties confirmed, that following substantial negotiations a comprehensive agreement had been reached between the Company, the Public Staff, CUCA, and Evergreen, and that this agreement resolved all issues in the case as between those parties, and that this agreement was reflected in the Amended Stipulation.

At the hearing, the various prefiled direct and supplemental testimony and exhibits of the following Company witnesses were offered and accepted into evidence by the Commission: D. Russell Harris, Jimmy E. Addison, Robert B. Hevert, John J. Spanos, George B. Ratchford, Sharon D. Boone, James A. Spaulding, Candace A. Paton, and Rose M. Jackson. Company witnesses Addison, Hevert, Ratchford, Boone, Paton, and Jackson testified at the hearing. The various prefiled direct testimony and exhibits of the following Public Staff witnesses were offered and accepted into evidence by the Commission: Michelle Boswell, Julie Perry, and Jan Larsen. Public Staff witnesses Boswell and Larsen testified at the hearing.

On September 1, 2016, the Public Staff filed two late-filed exhibits pertaining to the supporting workpapers and the calculation of the lead-lag working capital reflected in the Amended Stipulation pursuant to Commission request.

On September 6, 2016, PSNC filed Late-Filed Exhibits B and D and Revised Exhibit C to the Amended Stipulation.

On September 14, 2016, PSNC filed a letter with the Commission stating that it had reviewed the two late-filed exhibits filed by the Public Staff on September 1, 2016, which included work papers with updated adjustments to working capital, and agreed that the exhibits accurately reflect the information that Presiding Commissioner Brown-Bland requested PSNC to provide.

On October 10, 2016, PSNC and the Public Staff filed a Joint Proposed Order.

On October 10, 2016, the Attorney General filed a post-hearing Brief.

On October 14, 2016, PSNC filed a motion requesting leave to file a Reply Brief, and filed its proposed Reply Brief.

On October 19, 2016, the Attorney General filed a motion for leave to file a Response Brief, and filed his Response Brief.

The Commission hereby accepts the filing of PSNC's Reply Brief and the Attorney General's Response Brief.

Based upon the verified Application, the testimony and exhibits received into evidence at the hearings, the Amended Stipulation, the late-filed exhibits, and the record as a whole, the Commission makes the following:

FINDINGS OF FACT

Jurisdiction

1. PSNC is a corporation organized and existing under the laws of the State of South Carolina, duly authorized to do business in and engaged in the business of transporting, distributing, and selling natural gas within North Carolina.

2. PSNC is a public utility within the meaning of G.S. 62-3(23).

3. The Commission has jurisdiction over, among other things, the rates and charges, rate schedules, classifications, and practices of PSNC in its capacity as a public utility.

4. In the Application in this docket, PSNC is seeking approval of: (a) a general increase in and revisions to the rates and charges for customers served by the Company; (b) certain changes to the cost allocation, rate designs, and practices underlying existing rates for the Company; (c) changes to the Company's existing service regulations and tariffs; (d) implementation of a new Integrity Management Tracker (IMT) mechanism; (e) implementation of new depreciation rates; (f) proposed funding of gas distribution research and development activities conducted by the Gas Technology Institute (GTI); (g) authority to include $2,000,000 related to distribution integrity management program operations in the Company's cost of service; and (h) implementation of a rate decrement to refund to its customers over a one-year period the Company's excess deferred income tax balance as of December 31, 2015.

5. The Company is properly before the Commission with respect to the relief sought in the Application in this proceeding pursuant to the provisions of Chapter 62 of the North Carolina General Statutes, and the Commission's Rules.

Test Period

6. The parties submitting evidence in this case with respect to revenue, expenses, and rate base levels used a test period of the twelve months ended December 31, 2015, adjusted for certain known and measurable changes through June 30, 2016, or thereafter, and the Amended Stipulation was based upon the same test period.

7. The appropriate test period for use in this proceeding is the twelve months ended December 31, 2015, updated for certain known and measurable changes through June 30, 2016, or thereafter.

Amended Stipulation

8. In summary, the Amended Stipulation executed by PSNC, the Public Staff, CUCA, and Evergreen resolves all issues in this docket, and is actively supported or not opposed by all parties to this docket with the exception of the Attorney General.

9. After carefully reviewing the Amended Stipulation, the Commission finds and concludes that the Amended Stipulation is the product of give-and-take in settlement negotiations among the Stipulating Parties, and is material evidence entitled to be given appropriate weight by the Commission.

Revenue Increase

10. The Application seeks an increase in annual revenues for the Company of $41,583,020. The Amended Stipulation provides for a total increase in annual revenues for the Company of $19,054,160, of which $276,576 is recovered through the proposed increase in other operating revenues. The Commission finds and concludes that the revenue increase agreed upon in the Amended Stipulation is just, reasonable and appropriate for use in this proceeding.

Rate Base

11. The Stipulating Parties agreed that the original cost of the Company's used and useful property, or property to be used and useful within a reasonable time after the test period, in providing natural gas utility service to the public within North Carolina is $946,722,235, consisting of gas plant in service of $1,839,643,565, and working capital – lead lag of $13,714,498, reduced by accumulated depreciation of $657,141,088, working capital – other of $7,817,284, and accumulated deferred income taxes of $241,677,456, as set forth in Paragraph 4 and Exhibit A of the Amended Stipulation, the Public Staff Late-Filed Exhibit I, and reflected on Schedule 1 hereto. These provisions of the Amended Stipulation are just, reasonable and appropriate for use in this docket.

Revenues and Operating Expenses

12. The Stipulating Parties agree that the Company's end-of-period *pro forma* revenues under present rates for use in this proceeding are $434,445,667, comprised of $430,126,449 of sales and transportation revenues, $792,254 of special contract revenues, and $3,526,964 of other operating revenues, as set forth in Paragraph 5 and Exhibit A of the Amended Stipulation. The Amended Stipulation further details that the Company's *pro forma* annual operating revenues under the agreed upon rates, which are appropriate for use in this proceeding are $453,499,827, comprised of $448,904,033 of sales and transportation revenues, $792,254 of special contract revenues, and $3,803,540 of other operating revenues, as set forth in Paragraph 5 and Exhibit A of the Amended Stipulation. These provisions of the Amended Stipulation are just, reasonable and appropriate for use in this docket.

13. The Stipulating Parties agreed that the Company's operating expenses are $201,794,646, including actual investment currently consumed through reasonable actual depreciation, as set forth on Public Staff Late-Filed Exhibit I. These provisions of the Amended Stipulation are just, reasonable and appropriate for use in this docket.

Capital Structure

14. The capital structure set forth in Paragraph 5.B. of the Amended Stipulation and supported by expert witness evidence, consisting of 52.0% common equity, 44.62% long-term debt at a cost of 5.52%, and 3.38% short-term debt at a cost of 0.77%, is just, reasonable and appropriate for use in this docket.

Return

15. Based on the expert witness evidence and the Amended Stipulation, the overall rate of return that the Company should be allowed the opportunity to earn on the cost of the Company's used and useful property is 7.53%, as set forth in Paragraph 5.D. and Exhibit A of the Amended Stipulation. This overall rate of return is just, reasonable and appropriate for use in this docket.

16. Based on the expert witness evidence and the Amended Stipulation, the rate of return on common equity that the Company should be allowed the opportunity to earn in this docket is 9.70%, as set forth in Paragraph 5(C) of the Amended Stipulation. This rate of return on common equity is just, reasonable and appropriate for use in this docket.

17. The authorized levels of overall rate of return and rate of return on common equity set forth above are supported by competent, material, and substantial record evidence, are consistent with the requirements of G.S. 62-133, and are fair to PSNC's customers in light of changing economic conditions or otherwise.

18. With respect to the foregoing ultimate findings on the appropriate overall rate of return on rate base and allowed rate of return on common equity for use in this proceeding, the Commission relies on the following more specific findings of fact:

a. The overall rate of return on rate base and allowed rate of return on common equity underlying PSNC's current base rates are 8.54% and 10.60% respectively.[1]

[1] See In the Matter of Application of Public Service Company of North Carolina, Inc., for a General Increase in its Rates and Charges, Order Approving Partial Rate Increase and Requiring Conservation Program Filing and Reporting, Docket No. G-5, Sub 495 (Oct. 24, 2008) (2008 Rate Order).

b. PSNC's current base rates became effective on November 1, 2008 and have been in effect since that date except for adjustments due to the Company's Customer Usage Tracker mechanism and state tax changes.

c. In its Application, PSNC sought approval for rates which were based on an overall rate of return on rate base of 8.14% and an allowed rate of return on common equity of 10.60%.

d. In the Amended Stipulation, the Stipulating Parties seek approval of an overall rate of return on rate base of 7.53% and an allowed rate of return on common equity of 9.70%.

e. The current Commission authorized allowed rate of return on common equity underlying Piedmont Natural Gas Company, Inc.'s base rates is 10.0%.[2]

f. The current Commission authorized allowed rate of return on common equity for Duke Energy Carolinas, LLC, Duke Energy Progress, LLC and Dominion North Carolina Power is 10.2%.[3]

g. Since January 1, 2014, a total of 24 of the 54 authorized rates of return on equity for natural gas utilities were 9.70% or above, with the average authorized rate of return on equity in all such cases being 9.65%.

h. In determining the rate of return on equity for PSNC, it is inappropriate to rely on past rate of return on equity determinations authorized for other utilities without evidence tying those determinations to the facts of this case. It is, however, appropriate to note such past determinations as a check or as corroboration of the Commission's decision regarding the cost of equity demonstrated by the evidence in the present proceeding.

i. The stipulated overall rate of return on rate base of 7.53% and allowed rate of return on common equity of 9.70% are supported by credible, competent, material, and substantial evidence.

j. Continuous safe, adequate, and reliable natural gas service by PSNC is essential to the well-being of the people, businesses, institutions and economy of PSNC's North Carolina service area.

---

[2] Order Approving Partial Rate Increase and Allowing Integrity Management Rider, Docket No. G-9, Sub 631 (December 17, 2013).

[3] Order Granting General Rate Increase, Docket No. E-7, Sub 1026 (September 24, 2013); Order Granting General Rate Increase, Docket No. E-2, Sub 1023 (May 30, 2013); and Order Granting General Rate Increase, Docket No. E-22, Sub 479 (December 12, 2012).

k. The rate of return on PSNC's equity approved by the Commission appropriately balances the benefits received by PSNC's customers from PSNC's provision of safe, adequate, and reliable natural gas in support of the well-being of the people, businesses, institutions, and economy of North Carolina, with the difficulties that some of PSNC's customers will experience in paying PSNC's increased rates.

l. Substantial expert evidence presented in this matter, uncontroverted by other expert testimony on the subject, indicates that the overall economic climate in North Carolina and PSNC's service territory (as well as nationally) continues to improve. This evidence includes data and projections from reliable sources indicating that in the few months before the hearing in this matter: (i) unemployment rates were declining; (ii) real gross domestic product growth was continuing; (iii) median household income was growing; (iv) total personal income and disposable income was increasing; (v) personal consumption was improving; (vi) wages and salaries were increasing; (vii) the number of mortgages past due decreased; (viii) North Carolina exports were materially increasing; (ix) residential construction permits were increasing; and (x) housing market indicators were mostly positive. No public witnesses appeared at the public hearings held in Gastonia, Asheville, Statesville, and Raleigh.

m. The 9.70% rate of return on equity takes into account the impact of changing economic conditions on consumers. The authorized revenue amount available to pay a return on equity is lower for PSNC because the Amended Stipulation reduced downward PSNC's requested revenue requirement, and this reduction is intertwined with the decision on rate of return on equity in that it affects the earnings available to investors and the rates customers will pay.

n. No party submitted evidence showing that any regulatory commission applies increments or decrements to the return on equity to account for economic conditions or customer ability to pay.

o. PSNC has made significant capital investments since its last rate case in 2008, much of which relates to the Company's integrity management programs in compliance with federal regulations to enhance the safety and integrity of its natural gas transmission facilities. Additionally, the Company plans to make significant capital investments in the future.

p. Access to capital at reasonable rates is critical to PSNC's ability to fund its ongoing capital investment requirements and PSNC's provision of safe, adequate, and reliable natural gas.

q. Establishing an allowed rate of return on common equity at a rate of 9.70% is as low as reasonably possible without unduly jeopardizing PSNC's ability to access capital on reasonable terms.

r. The 9.70% return on equity and the 52.00% equity financing approved by the Commission in this case results in a cost of capital that will enable PSNC by sound management to produce a fair return for its shareholders, considering changing economic conditions, and is just, reasonable and fair to PSNC's customers. It appropriately balances PSNC's need to obtain financing and maintain a strong credit rating with its customers' need to pay the lowest possible rates.

Throughput

19. For the purpose of this proceeding, the appropriate level of adjusted sales and transportation volumes is 937,082,412 therms, which is comprised of 491,921,582 therms of sales quantities, 316,664,980 therms of transportation quantities, and 128,495,850 therms of special contract quantities. The appropriate level of lost and unaccounted for gas is 7,027,614 therms and company use gas is 870,521 therms. The appropriate level of purchased gas supply is 499,819,717 therms, consisting of sales volumes and company use and lost and unaccounted for gas.

Cost of Gas

20. The total cost of gas reasonable and appropriate for use in this proceeding is $180,388,055, as described in Paragraph 7.B. and Exhibit E of the Amended Stipulation and consisting of $110,682,356 in commodity costs, $1,777,080 in company use and lost and unaccounted for costs, and $67,928,619 in fixed gas costs.

21. The Benchmark Commodity Cost of Gas reasonable and appropriate for use in this proceeding is $0.225 per therm, as described in Paragraph 7.A. of the Amended Stipulation subject to any filed changes in such rate prior to implementation of effective rates in this docket.

22. The fixed gas costs that should be embedded in the proposed rates and used in true-ups of fixed gas costs for periods subsequent to the effective date of rates in this docket, in proceedings under Commission Rule R1-17(k), subject to any filed changes in such costs prior to the effective date of rates in this docket, are those derived from the fixed gas cost allocation percentages discussed in Paragraph 5 of the Amended Stipulation and set forth in Exhibit C to the Amended Stipulation.

Rate Design

23. The rate design and rates, including volumetric rates, fixed monthly charges, and other charges, as described in Paragraph 5 of the Amended Stipulation and reflected in the columns entitled "Monthly Facilities Charges" and "Energy Charges" on Exhibit B of the Amended Stipulation (as the same may be adjusted for any changes in the Company's Benchmark or changes in Demand and Storage Charges prior to the effective date of the rates in this docket), are just, reasonable and appropriate for use in this docket.

Integrity Management Tracker

24. The IMT attached to the Amended Stipulation in Exhibit H is just, reasonable, appropriate and consistent with G.S. 62-133.7A, and should be approved and implemented as provided in Paragraph 10 of the Amended Stipulation, and Rider E of the Company's tariffs.

Customer Usage Tracker Factors

25. The "R" values, baseload and heat sensitive factors set forth on Late Filed Exhibit D to the Amended Stipulation and reflected in Paragraph 6 of the Amended Stipulation are reasonable and appropriate for use with the Company's Customer Usage Tracker (CUT) mechanism on or after the effective date of rates, and should be approved.

Amortization of Deferred Regulatory Assets

26. The proposed amortization of certain deferred regulatory assets, as set forth and described in Paragraphs 5(G) through 5(I) of the Amended Stipulation, is just, reasonable and appropriate and should be approved.

Implementation of State Income Tax Changes

27. The Stipulating Parties' agreement to decrease the North Carolina corporate income tax reflected in rates pursuant to North Carolina Session Law 2015-241, and as set forth in Paragraph 8 of the Amended Stipulation, is just, reasonable and appropriate and should be approved.

Depreciation Rates

28. The Stipulating Parties' agreement regarding the depreciation rates proposed by the Company as set forth in Paragraph 9 of the Amended Stipulation is just, reasonable and appropriate and should be approved effective January 1, 2017.

Changes to Tariff Rules and Regulations

29. PSNC's Tariff and Rules and Regulations included in witness Paton's Exhibit 4, with the exception of the Summary of Rates and Charges, Riders C and E, and the Transportation Pooling agreement, are just, reasonable and appropriate and should be approved. In addition, revised Riders C and E and the revised Transportation Pooling Agreement, as described in Paragraph 11 and Exhibit H of the Amended Stipulation, are just, reasonable and appropriate and should be approved.

Excess Deferred Income Taxes

30. The Stipulating Parties agreed to implement a temporary decrement in rates to refund excess deferred income taxes (EDIT) over a one-year period, as set forth in Paragraph 12 of the Amended Stipulation, and further agreed that any balance remaining after the twelve-months should be transferred to the All Customers' Deferred Account. This proposed treatment is just, reasonable and appropriate and should be approved.

Conservation Program Expenditures

31. The Stipulating Parties' agreement to continue funding of conservation programs at a level of $750,000 per year, as reflected in test year operating expenses and set forth and described in Paragraph 13 of the Amended Stipulation, is just, reasonable and appropriate and should be approved.

Gas Technology Institute Research Funding

32. The funding of GTI research and development activities of $268,631 per year, as discussed in Paragraph 14 of the Amended Stipulation and set forth in the Public Staff Late-Filed Exhibit I, is just, reasonable and appropriate and should be approved.

Miscellaneous Matters

33. Use of the overall rate of return, adjusted for income taxes, as the Allowance for Funds Used During Construction rate for the Company is just, reasonable and appropriate, and should be approved.

34. The Stipulating Parties agreed that beginning with the month in which rates become effective in this docket, PSNC will use an interest rate of 6.6% per annum as the applicable interest rate on all amounts over-collected or under-collected from customers reflected in PSNC's Sales Customers Only, All Customers, and Hedging Deferred Gas Cost Accounts. The Stipulating Parties also agreed that the methods and procedures used by PSNC for the accrual of interest on the Deferred Gas Cost Accounts will remain unchanged. These provisions of the Amended Stipulation are just, reasonable and appropriate and should be approved.

35. The Stipulating Parties agreed that PSNC shall file its GS-1 Report in a format similar to the ES-1 Reports filed by the electric utilities. This is reasonable and appropriate and should be approved.

36. Beginning with the January 2017 report, PSNC shall add to its monthly report on the SCANA Utility Money Pool the net daily balance of loans and receipts, and the total net interest amount on the balances. This information will be provided for the month, and for the calendar year to date.

Consumer Statements of Position

37. Although not evidence in this proceeding, the Commission has read and given appropriate consideration to the consumer statements of position received by the Commission, the Public Staff and the Attorney General.

Acceptance of Amended Stipulation

38. The Commission finds and concludes in light of the evidence presented that the provisions of the Amended Stipulation are just and reasonable to the customers of PSNC and to all parties to this proceeding, and serve the public interest. Therefore, the Amended Stipulation should be approved in its entirety. In addition, it is entitled to substantial weight and consideration in the Commission's decision in this matter.

Just and Reasonable Rates

39. The Commission finds and concludes that the rates approved herein are just and reasonable to the customers of PSNC, to PSNC, and to all parties to this proceeding, and serve the public interest.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 1-5

The evidence supporting these findings is contained in the Company's verified Application, the testimony and exhibits of the Company's witnesses, the Form G-1 that was filed with the Application, and the Commission's records as a whole. These findings are jurisdictional and procedural in nature and are not contested by any party.

On March 31, 2016, PSNC filed a verified Application for an increase in its base rates. In summary, the application seeks a $41,583,020 increase in PSNC's annual North Carolina revenues. This would be an overall increase of 9.66% in PSNC's revenue. Further, the application seeks approval of a 10.6% rate of return on common equity (ROE), an 8.14% overall return on rate base, and a capital structure of 53.5% common equity, 3.38% short-term debt, and 43.12% long-term debt. PSNC's present authorized ROE and overall return are 10.6% and 8.54%, respectively. PSNC's present authorized capital structure is 54% common equity, 10.5% short-term debt, and 35.5% long-term debt. Its authorized cost of debt is 3.25% for short-term debt and 6.96% for long-term debt. See Order Approving Partial Rate Increase, Docket No. G-5, Sub 495 (Oct. 24, 2008) (2008 Rate Order). The Application states that during the 12-month test period PSNC's overall rate of return on its North Carolina retail rate base was 7.84%.

According to the Application, since its last general rate case in 2008 PSNC's business has been impacted by a heightened awareness of and focus on pipeline safety, low and stable natural gas prices, the opportunity to acquire additional pipeline capacity, PSNC's need to invest in pipeline enhancement projects, and the expanded use of technology to more efficiently serve its customers. PSNC states that it has added 77,025 customers, installed over 1,424 miles of transmission and distribution mains, invested

approximately $609 million in its utility property, and incurred over $19 million in deferred environmental and pipeline safety costs.

In its Application, PSNC requests approval of a rider to its rates to provide for ongoing recovery of its capital costs related to pipeline safety improvements and management. In addition, PSNC recommends new annual depreciation rates based on a depreciation study conducted pursuant to Commission Rule R6-80. Further, PSNC seeks to update and revise certain tariff provisions, including changes to its industrial tariff and pooling agreement, and a new Medium General Service rate. Moreover, PSNC requests approval of a rate decrement for one year to refund to its customers an excess accumulated income tax balance of $7.3 million. PSNC requests that its new rates be effective on November 1, 2016.

PSNC is a public utility within the meaning of G.S. 62-3(23). Therefore, pursuant to G.S. 62-30, et seq., the Commission has jurisdiction to consider and decide PSNC's Application for a rate increase.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 6-7

The evidence supporting these findings is contained in the Company's verified Application, the testimony and exhibits of the Company's witnesses, and the Form G-1 that was filed with the Application.

The Company filed its Application and exhibits using a test period of the twelve months ended December 31, 2015. In its Order of April 26, 2016, the Commission ordered the parties to use a test period of the twelve months ended December 31, 2015, with appropriate adjustments. The Amended Stipulation is based upon the test period ordered by the Commission, and this test period is not contested by any party. In the Amended Stipulation, the Stipulating Parties agreed to make appropriate adjustments to the test period data for circumstances occurring or becoming known through June 30, 2016, or thereafter. These adjustments were not contested by any party.

The Commission finds and concludes that the Company's use of a test period of the twelve months ended December 31, 2015, with appropriate adjustments, comports with the requirements of G.S. 62-133 and Commission Rule R1-17, and is appropriate for use in this proceeding.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 8-9

These findings are supported by the testimony of Company witness Paton, Public Staff witness Hoard, and the provisions of the Partial Stipulation and the Amended Stipulation.

On August 25, 2016, PSNC, CUCA, Evergreen, and the Public Staff (Stipulating Parties) filed an Amended Partial Stipulation resolving most of the issues between the Stipulating Parties. For example, in Paragraph 5.H. the Stipulating Parties stated that they

agreed that it is appropriate to amortize and allow recovery of the balance of PSNC's deferred asset representing manufactured gas plant (MGP) clean-up costs, but did not agree on the balance of the deferred asset or the amount of the annual amortization expense. Similarly, in Paragraph 5.I., the Stipulating Parties stated that they agreed it is appropriate to amortize and allow recovery of the balance of PSNC's deferred asset representing PSNC's pipeline integrity management (PIM) costs, but did not agree on the balance of the deferred asset or the amount of the annual amortization expense.

On August 25, 2016, the Public Staff filed the direct testimony and exhibits of James G. Hoard, Director, Accounting Division. Witness Hoard testified to the ongoing disagreement between PSNC and the Public Staff regarding the treatment of MGP clean-up costs, and PSNC's deferred PIM costs. In summary, witness Hoard testified to adjustments made to the amortization of PSNC's MGP and PIM costs that, if accepted by the Commission, would substantially reduce the Company's recovery of those costs in this rate proceeding.

On August 29, 2016, the Stipulating Parties filed the Amended Stipulation. The Amended Stipulation recites that it is filed on behalf of PSNC, the Public Staff, CUCA, and Evergreen. The Amended Stipulation further states that it represents a complete and integrated settlement of all matters at issue between the Stipulating Parties.

In her supplemental testimony filed on August 29, 2016, PSNC witness Paton testified that the Stipulating Parties engaged in substantial discovery regarding the issues involved in PSNC's Application. Witness Paton further stated that the Public Staff spent several days at PSNC's office in Gastonia and at SCANA's corporate office in Cayce, South Carolina, performing audits and interviewing Company employees. In addition, she testified that after lengthy negotiations in multiple meetings and conference calls, the Stipulating Parties reached a partial settlement on all but one issue in the case.[4] Witness Paton further testified that the Stipulating Parties reached agreement on the remaining issue, which resulted in the filing of the Amended Stipulation on August 29, 2016. Moreover, witness Paton testified that the Amended Stipulation was the result of give-and-take negotiations in which each Stipulating Party made substantial compromises on individual issues in order to obtain a compromise from other Stipulating Parties on other issues. She testified that the end result is a settlement in which each party believes that the aggregate results are fair to PSNC and its customers.

As the Amended Stipulation has not been adopted by all of the parties to this docket, the Commission's determination of whether to accept or reject the Amended Stipulation is governed by the standards set out by the North Carolina Supreme Court in State ex rel. Utils. Comm'n v. Carolina Util. Customers Ass'n, Inc., 348 N.C. 452, 500 S.E.2d 693 (1998) (CUCA I), and State ex rel. Utils. Comm'n v. Carolina Util. Customers Ass'n, Inc., 351 N.C. 223, 524 S.E.2d 10 (2000) (CUCA II). In CUCA I the Supreme Court held that

[4] Witness Paton referenced "one issue in the case," which perhaps grouped the amortization of MGP and PIM deferred costs as one amortization issue.

> [A] stipulation entered into by less than all of the parties as to any facts or issues in a contested case proceeding under Chapter 62 should be accorded full consideration and weighed by the Commission with all other evidence presented by any of the parties in the proceeding. The Commission must consider the nonunanimous stipulation along with all the evidence presented and any other facts the Commission finds relevant to the fair and just determination of the proceeding.
>
> The Commission may even adopt the recommendations or provisions of the nonunanimous stipulation as long as the Commission sets forth its reasoning and makes "its own independent conclusion" supported by substantial evidence on the record that the proposal is just and reasonable to all parties in light of all the evidence presented.

348 N.C. at 466, 500 S.E.2d at 703.

However, as the Court made clear in CUCA II, the fact that fewer than all of the parties have adopted a settlement does not permit the Court to subject the Commission's Order adopting the provisions of a nonunanimous stipulation to a "heightened standard" of review. 351 N.C. at 231, 524 S.E.2d at 16. Rather, the Court said that Commission approval of the provisions of a nonunanimous stipulation "requires only that the Commission ma[k]e an independent determination supported by substantial evidence on the record [and] ... satisf[y] the requirements of chapter 62 by independently considering and analyzing all the evidence and any other facts relevant to a determination that the proposal is just and reasonable to all parties." Id. at 231-32, 524 S.E.2d at 16 (emphasis added).

The Commission gives substantial weight to the testimony of PSNC witness Paton regarding the Stipulating Parties' efforts in negotiating the Amended Stipulation. Further, the Commission gives some weight to the fact that there was only an Amended Partial Stipulation as of August 25, 2016, and that the Public Staff filed testimony in support of its position on the unresolved issues. The Public Staff's filing of testimony in preparation for litigating the contested issues indicates the Public Staff's resolve and determination to fully represent the using and consuming public.

As a result, the Commission finds and concludes that the Amended Stipulation is the product of the give-and-take between the Stipulating Parties during their settlement negotiations in an effort to appropriately balance PSNC's need for increased revenues and its customers' needs to receive safe, adequate and reliable natural gas service at the lowest possible rates. In addition, the Commission finds and concludes that the Amended Stipulation was entered into by the Stipulating Parties after substantial discovery and negotiations, and that it represents a proposed negotiated resolution of the matters in dispute in this docket that is supported, or not opposed, by all parties except the Attorney General. As a result, the Amended Stipulation is material evidence to be given appropriate weight in this proceeding.

EVIDENCE AND CONCLUSIONS FOR FINDING OF FACT NO. 10

This finding is supported by the Application, the direct testimony and Exhibits of Company witness Boone, the supplemental testimony of Company witness Paton, the Amended Stipulation, the Public Staff's Late Filed Exhibit I, and the direct testimony of Public Staff witness Boswell.

Revised Boone Exhibit 6, attached to the direct testimony of Company witness Boone, indicates that the Company filed for a total revenue increase in this proceeding of $41,583,021. The Amended Stipulation, in Exhibit A, indicates that pursuant to the agreement of the Stipulating Parties the Company should be allowed to increase annual revenues by $19,054,160, of which $276,576 would be recovered through the proposed increase in other operating revenues. This increase in revenues is further reflected in the supplemental testimony and exhibits of Company witness Paton and the Revised Public Staff's Late Filed Exhibit 1. These findings are not contested by any party.

Based upon the evidence recited above and the cumulative testimony and evidence supporting the individual components of the stipulated revenue increase discussed throughout this Order, including the discussion and analysis related to the proper rate of overall return and return on common equity for use in this proceeding, the Commission finds, in the exercise of its independent judgment, that the stipulated revenue increase in this case is just, reasonable, and appropriate for use in this proceeding.

EVIDENCE AND CONCLUSIONS FOR FINDING OF FACT NO. 11

The evidence supporting this finding is contained in the Company's verified Application, the testimony and exhibits of the Company's witnesses, the Form G-1 that was filed with the Application, and the Amended Stipulation.

The reasonable original cost of the Company's used and useful property, or property to be used and useful within a reasonable time after the test period, in providing natural gas utility service to the public within North Carolina, less that portion of the cost that has been consumed by depreciation expense, is described and set forth in Paragraph 4 and Exhibit A to the Amended Stipulation, Public Staff Late Filed Exhibit I. The amounts shown on Exhibit A to the Stipulation are the result of negotiations among the Stipulating Parties in this docket, as described in the Amended Stipulation, the direct testimony of Public Staff witness Boswell, and the supplemental testimony of Company witness Paton. The stipulated reasonable original cost of the Company's used and useful property, or property to be used and useful within a reasonable time after the test period, in providing natural gas service to the public, less depreciation expense, is not contested by any party.

No other party presented evidence on these matters.

The Commission has carefully reviewed these amounts, as well as all record evidence relating to the Company's rate base, which collectively constitute the only evidence in this docket regarding the Company's rate base, and concludes that the stipulated amounts are appropriate for use in this docket.

EVIDENCE AND CONCLUSIONS FOR FINDING OF FACT NO. 12

The evidence supporting this finding is set forth in the Amended Stipulation, Public Staff Late Filed Exhibit I, the supplemental testimony of Company witness Paton, and the direct testimonies of Public Staff witnesses Boswell and Larson.

The end of test period *pro forma* revenues under the Company's present and stipulated proposed rates are set forth in Paragraph 5 and Exhibit A to the Amended Stipulation, and Public Staff Late Filed Exhibit I to the Amended Stipulation. These amounts are the result of negotiations among the Stipulating Parties in this docket following an extensive audit of the Company's filed case by the Public Staff and are described in the Amended Stipulation. No other party submitted evidence on the Company's *pro forma* revenues, and the stipulated *pro forma* revenues are not challenged by any party.

The Commission has carefully reviewed these amounts, as well as all record evidence relating to *pro forma* revenues, and concludes based on its own independent judgment that the stipulated *pro forma* revenues are reasonable and appropriate for use in this docket.

EVIDENCE AND CONCLUSIONS FOR FINDING OF FACT NO. 13

The evidence supporting this finding is set forth in the testimony of Company witness McLeod, Public Staff Late Filed Exhibit I and the Amended Stipulation.

The Company's reasonable operating expenses, including actual investment currently consumed through reasonable actual depreciation, are set forth in Exhibit A to the Amended Stipulation, Public Staff Late Filed Exhibit I. The amounts shown on Exhibit A to the Amended Stipulation are the result of negotiations among the Stipulating Parties in this docket, as described in the Amended Stipulation and the supplemental testimony of Company witness Paton, and are not contested by any party.

The Commission has carefully reviewed these amounts, as well as all record evidence relating to the Company's reasonable operating expenses, and concludes that the stipulated reasonable operating expenses, including actual investment currently consumed through reasonable actual depreciation, are appropriate for use in this docket.

EVIDENCE AND CONCLUSIONS FOR FINDING OF FACT NO. 14

The evidence for this finding is contained in the prefiled direct testimony of PSNC witness Jimmy E. Addison, the prefiled direct and supplemental testimony of PSNC witness Robert B. Hevert, the hearing testimony of witness Addison and witness Hevert, and the Amended Stipulation.

In the Application, and as explained by PSNC witness Addison in his direct testimony, the Company proposed a capital structure reflecting long-term debt of 43.12%, short-term debt of 3.38%, and equity of 53.50%. The short-term debt reflected the estimated average of gas inventory for the 13 months ending June 30, 2016, consistent with Commission practice. The long-term debt and equity figures reflected actual balances adjusted for forecasted changes through June 30, 2016. Witness Addison testified that PSNC planned to issue $100 million in unsecured long-term debt in June of 2016.

In his direct testimony, witness Hevert discussed the generally accepted approaches to developing the appropriate capital structure for a regulated natural gas distribution company, and explained how the capital structure affects the cost of capital and overall level of risk for the company. He explained that the capital structure should enable the company to maintain its financial integrity, thereby enabling access to capital at competitive rates under a variety of economic and financial market conditions. Witness Hevert then presented and provided support for his proxy group, described his analysis of the proxy companies' capital structures, and concluded based on his review that a capital structure consisting of 53.50% common equity, 3.38% short-term debt, and 43.12% long-term debt is reasonable and appropriate for PSNC. Witness Hevert explained the concept of maturity matching. He stated that, because it is perpetual in nature, adding equity to the capital structure extends the weighted average life of long-term liabilities, and mitigates incremental refinancing risk, but that relying more heavily on debt as the means of financing long-lived assets increases the risk of refinancing maturing obligations during less accommodating market environments.

Following settlement negotiations between PSNC, the Public Staff, CUCA and Evergreen, as reflected in Paragraph 5.B. of the Amended Stipulation, the Stipulating Parties proposed a capital structure of 52.00% common equity, 3.38% short-term debt and 44.62% long-term debt. The Stipulating Parties agreed to use 5.52% for the cost of long-term debt and agreed to use 0.77% for the cost of short-term debt.

In his supplemental testimony and associated exhibits, witness Hevert addressed the capital structure agreed to in the Partial Stipulation dated August 18, 2016 among PSNC, the Public Staff, CUCA, and Evergreen. (The Stipulating Parties filed two amended stipulations on August 25, 2016 and August 30, 2016, but those amended agreements did not adjust the capital structure reflected in the Partial Stipulation filed on August 18, 2016, to which witness Hevert testified.) In his supplemental testimony, witness Hevert stated that the capital structure ratios agreed upon by the Stipulating Parties fall well within the range of those in place at the proxy companies (from the first

calendar quarter of 2014 through the second calendar quarter of 2016), and that on that basis, he believed the stipulated capital structure to be reasonable.

No other party submitted testimony on the issue of the appropriate capital structure for the Company.

The proposed stipulated capital structure was also supported by the hearing testimony of PSNC witnesses Hevert and Addison. At the hearing in this matter, in response to cross-examination by the Attorney General, witness Addison confirmed that PSNC issued $100 million in unsecured long-term debt in June 2016 at a rate of 4.13%. Witness Addison also explained that PSNC operates in a “lumpy” business, in which it raises both debt and equity capital as needed to make required investments in rate base, which in turn results in different proportions of debt and equity at different points in time for the Company. He explained that if the debt ratio of capital structure is increased too much, the cost of debt would also increase due to the increased risk to debt investors. He testified that because PSNC’s actual equity component is slightly higher than 53.5%, but it will only receive the 9.70% stipulated ROE on the 52.0% equity contained in the stipulated capital structure, if the Commission approves the Amended Stipulation the shareholders’ actual return will be lower than the Company’s authorized return on equity. Witness Addison also explained the reasons for the differences in capital structure between PSNC and its parent company SCANA.

Also at the hearing, witness Hevert further supported witness Addison’s discussion of the reasons for higher cost of equity as compared to cost of debt. One of those reasons is that equity holders bear the “residual risk,” meaning they are last in line to receive cash flows generated by the Company, and receive what is left after the debt holders, who have a contractual claim on cash flows, are paid. Another reason is that the cost of debt is specified while the cost of equity is based on observable market information. Witness Hevert also testified that with respect to the proxy companies, the comparison to be made is the extent to which PSNC’s capital structure is consistent with the range of the proxy companies, rather than with their average, and that including short-term debt in the capital structure does not affect his conclusion that 52% equity in PSNC’s capital structure is reasonable. In various contexts, witness Hevert reiterated the value of using multiple sources of data in order to produce the range for capital structure.

Witness Hevert also discussed his rationale for looking primarily to the operating company level for determining the appropriate capital structure. He testified that utilities in general are required to finance very large, essentially irreversible long-lived investments, and have to be able to enter the capital markets at any given point in time, regardless of market conditions, and do not have the ability or option to defer those decisions. He noted that there are a number of approaches to developing the appropriate capital structure, and the reasonableness of the approach used depends on the nature and circumstances of the subject company. He testified that if a company does not issue its own securities, it may be reasonable to look to the parent’s capital structure, or to develop a “hypothetical” capital structure based on the proxy companies or other industry data. However, if the

company issues its own securities, as does PSNC, and if its capital structure is reasonable in reference to industry practice, it is not necessarily important to look at the parent company's capital structure. Witness Hevert concluded that in PSNC's case it is reasonable to look at the operating company level in setting the appropriate capital structure, rather than looking at SCANA.

Counsel for the Attorney General questioned witnesses Addison and Hevert about other approaches to viewing capital structure. On redirect, witness Hevert stated that the Value Line common equity ratios for the proxy companies include 55% for Atmos, 58% for New Jersey Resources, 56% for Northwest Natural, and 49% for Laclede. He noted that these data showed that distribution companies had much higher equity ratio expectations from Value Line as compared to SCANA, the holding company, with a 46% equity ratio.

On October 10, 2016, the Attorney General filed a post-hearing Brief. In summary, the Attorney General states that small increases or decreases in the ratio of equity financing versus debt make a large difference in the utility's revenue requirement, because equity is much more expensive, particularly when the cost of income taxes is taken into account. The Attorney General includes several tables demonstrating the impact of different capital structures on the Company's revenue requirement. In addition, the Attorney General criticizes witness Hevert's updated capital structure evidence included in his supplemental testimony because witness Hevert added two more recent calendar quarters to his original analysis of eight quarters. The Attorney General states that when the average equity ratio is calculated for witness Hevert's proxy companies using the same eight periods as in his original testimony, the equity ratio averages 49.69%, and when calculated using the most recent eight periods, the equity ratio averages 48.73%. Moreover, the Attorney General asserts that PSNC's holding company, SCANA, maintains an equity ratio that has typically been less than 45% during the last five years. In addition, the Attorney General notes that during the 56 months from March 2010 through October 2014 PSNC loaned money to the SCANA Utility Money Pool (UMP) in all but one month. The Attorney General interprets this to mean that PSNC had more cash available for its operating costs than PSNC needed. In conclusion the Attorney General states that it is reasonable and appropriate for PSNC to use a 45% equity ratio.

On October 14, 2016, PSNC filed a Reply Brief. With regard to the Attorney General's arguments on capital structure, PSNC submits that the Attorney General on several occasions makes inferences that are not supported by the witnesses' testimony. As an example, PSNC notes the Attorney General's argument concerning PSNC's loans to the UMP. PSNC contends that witness Addison's testimony actually supports the conclusion that PSNC's loans to the UMP coincide with issuances of long-term debt, noting his testimony that "PSNC is going to be moving back into that period where they're going to likely be a net borrower until the points that we go out and issue long-term debt." (T Vol. 5, p. 117) Further, PSNC states that this is borne out by the reports the Company filed in Docket No. G-5, Sub 422, on financings it made in March 2010 and February 2011, and the reports of its UMP activities filed in

Docket No. G-5, Sub 484, as referenced in Commissioner Brown-Bland's question to witness Addison. (T Vol. 5, p. 116)

In addition, PSNC maintains that the Attorney General's focus on the average equity ratios of witness Hevert's proxy companies is inapposite for two reasons. First, the equity balances used by witness Hevert are end-of-month, and therefore not necessarily representative of the average balances during the course of the month. Secondly, it is the range of results and not the average that is relevant to the analysis of the proxy group's capital structure.

On October 19, 2016, the Attorney General filed a Response Brief. With regard to PSNC's loans to the SCANA UMP, the Attorney General takes issue with PSNC's characterization of witness Addison's testimony as showing these loans coincided with issuances of long-term debt by PSNC. Rather, the Attorney General notes that witness Addison testified that during "the historical period" from 2010 to 2014, PSNC did not have as many capital investments to make as it will prospectively, "so we've not had to issue a great deal of long-term debt, anything like that, not been into the commercial paper markets a lot in the past." (T Vol. 5, p 117)

With respect to witness Hevert's conclusion regarding the equity ratios of his proxy companies, the Attorney General notes that witness Hevert's support of a 52% equity ratio for PSNC means that his position is at the high end of the equity range for the proxy group. The Attorney General posits that this is a pattern in witness Hevert's results, wherein he tends to recommend the high end of the range rather than the mid or low points.

The Attorney General's contentions with regard to witness Hevert's proxy group of utilities and their average equity financing are not persuasive. The Commission does not view witness Hevert's addition of two more current quarters to his analysis as discrediting witness Hevert's conclusions. In addition, the data and analytical tool used by witness Hevert was intended to produce a meaningful range of equity ratios for his proxy companies. The Attorney General attempts to use the data and tool for a different purpose – to compute the average equity ratios of the proxy companies. The Commission is not persuaded that the use of the data in this manner produces probative or reliable evidence regarding the equity ratios of the proxy companies.

With regard to the comparison of the capital structure of SCANA with that of PSNC, witness Addison explained that one reason for SCANA's higher debt ratio is approximately $700 million in debt that SCANA issued to purchase PSNC and is now being carried by SCANA. He described this as an unusual situation for SCANA, noting that it is the only time that SCANA has issued debt during his tenure as chief financial officer. Witness Addison also noted that SCANA's other regulated utilities have a capital structure similar to that of PSNC.

The Attorney General did not provide a witness or affirmative evidence that would support a capital structure, particularly a 45% common equity component of

capital structure. Indeed, no expert witness provided an analysis after the Amended Stipulation that showed 52% as the appropriate level of equity financing for PSNC. Therefore, the Commission must consider the evidence and exercise its independent judgment in determining the appropriate capital structure for PSNC in the context of setting PSNC's rates.

The Commission gives substantial weight to witness Addison's testimony regarding the Company's effort to find the appropriate balance between equity and debt financing. The Commission finds credible his explanation that increasing the debt ratio of PSNC's capital structure too much can lead to an increase in the cost of debt, as debt investors see more risk in the higher debt level. The Commission also gives significant weight to witness Addison's testimony regarding the reasons for the differences in capital structure between PSNC and its parent company SCANA. The Commission finds credible his explanation that one reason SCANA has a higher debt ratio is its issuance of approximately $700 million of debt to finance the purchase of PSNC.

In addition, the Commission gives significant weight to witness Hevert's testimony regarding the differences in the financing needs of holding companies and operating companies. The Commission finds credible witness Hevert's explanation that utilities generally are required to finance very large, long-lived investments, and may find it necessary to enter the capital markets at any given time. Thus, the appropriate mix of debt and equity for a public utility operating company can be significantly different from that of its holding company.

Based on the above-discussed capital structure testimony of witnesses Addison's and Hevert, the Commission finds their recommendations regarding the appropriate capital structure of PSNC to be substantial and credible evidence.

Based upon the evidence described above and the record in this docket as a whole, the Commission finds and concludes that the amended stipulated capital structure and costs of long-term and short-term debt are fair and reasonable, and appropriate for use in this proceeding.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 15-18

The evidence supporting these findings is contained in the Application, the prefiled direct and supplemental testimony and Exhibits of Company witnesses Addison and Hevert, the hearing testimony of witnesses Addison and Hevert, and the Amended Stipulation. No other party submitted expert testimony on the appropriate overall rate of return on rate base (ROR or Overall Return) or allowed rate of return on common equity (ROE) appropriate for use in this proceeding.

Summary of the Evidence on Return

PSNC's current allowed rate of return on common equity, established by the Commission in 2008 in Docket No. G-5, Sub 495, is 10.6%.[5] Its current approved overall rate of return on rate base is 8.54%.[6] In its Application, PSNC proposed that the allowed rate of return on common equity in this proceeding be established at 10.6%. This proposed rate of return on common equity, in conjunction with the other elements of the Company's proposed capital structure, resulted in a proposed overall rate of return on rate base for the Company of 8.14%.

PSNC's original return on common equity request was supported by the direct testimony and Exhibits of PSNC witnesses Addison and Hevert. Witness Hevert, who holds a Bachelor of Arts degree in business and economics and a Master of Business Administration with a concentration in finance, and is designated as a Chartered Financial Analyst and is a Partner with the ScottMadden, Inc. consulting firm, served as PSNC's cost of equity witness. Witness Hevert filed direct testimony and 13 exhibits in support of PSNC's request for 10.6% return on equity. He explained that the cost of equity is the return that investors require to make an equity investment in a company, that it should reflect the return that investors require in light of the company's risks and the returns available on comparable investments, and that it differs from the cost of debt because it is neither directly observable nor a contractual obligation.

Witness Hevert's direct testimony and Exhibits document the specific analyses he conducted in support of PSNC's rate filing and provides a detailed description of the results of his analyses and resulting cost of equity recommendations. He applied the Constant Growth and Multi-Stage forms of the Discounted Cash Flow (DCF) model, the Capital Asset Pricing Model (CAPM), and the Bond Yield Plus Risk Premium approach to develop his ROE recommendation.

Witness Hevert testified that it is important for a utility to be allowed the opportunity to earn a return adequate to attract equity capital at reasonable terms and commensurate with the returns expected elsewhere in the market for investments of equivalent risk, because that enables the utility to provide service while maintaining financial integrity. He stated that the Commission's decision should provide PSNC with the opportunity to earn an ROE that is (1) adequate to attract capital at reasonable terms, thereby enabling it to continue to provide safe and reliable natural gas service; (2) sufficient to ensure its financial integrity; and (3) commensurate with returns on investments in enterprises having corresponding risks. He discussed the need to select a group of proxy companies to determine the cost of equity, and how he selected the proxy group for this case.

According to witness Hevert, the results of his Constant Growth DCF analysis produced a range of 8.14% to 11.32% ROE, the results of his Multi-Stage DCF analysis

[5] See 2008 Rate Order.
[6] Id.

were a range of 8.96% to 10.07%, and the results of his Multi-Stage DCF analysis that used the current proxy group P/E ratio to calculate the terminal value was a range of 9.26% to 11.97%. The results of witness Hevert's CAPM analysis showed a range of 9.13% to 11.42%. The results of his Bond Yield Risk Premium analysis indicated an ROE range from 9.98% to 10.39%. Based on his analyses, Witness Hevert concluded that a rate of return on common equity in the range of 10.00% to 10.75% represents the range of equity investors' required rate of return for investment in natural gas utilities such as PSNC. Within that range, he recommended an ROE of 10.6%.

Witness Hevert explained that his ROE recommendation also took into consideration several additional factors, including (1) the combined dilutive effects of operating expense increases and increasing capital investments on the Company's operating income; (2) the Company's relatively high capital expenditure program; (3) the Company's relatively small size; (4) the effect of the proposed infrastructure recovery mechanism on the Company's cost of equity; and (5) the regulatory environment in which the Company operates. He also considered equity flotation costs. With regard to the regulatory environment, he noted that North Carolina is generally considered to be a constructive regulatory jurisdiction, and that authorized ROEs tend to be correlated with the degree of regulatory supportiveness (utilities in jurisdictions considered to be more supportive tend to be authorized somewhat higher returns). He did not, however, make any specific adjustment to his ROE estimates for the effect of these factors.

Witness Hevert also considered the economic conditions in North Carolina in arriving at his ROE recommendation. He noted that the rate of unemployment has fallen substantially in North Carolina and the U.S. generally since late 2009 and early 2010, with December 2015 rates of 5.60% in the state and 5.30% in PSNC's service territory. He also noted that in 2014 the state exceeded the national rate for real gross domestic product growth, and that since 2009 median household income in North Carolina has grown at a somewhat faster annual rate than the national median income. In addition, while housing permits and housing starts experienced a decline from late 2015 to early 2016, total personal income, disposable income, personal consumption, and wages and salaries were generally on an increasing trend. Witness Hevert also testified to recent business expansions in the state. Based on all of these factors, witness Hevert opined that North Carolina and the counties contained within PSNC's service area continue to steadily emerge from the economic downturn that prevailed during the Company's 2008 rate case, and have experienced significant economic improvement during the last several years, that is projected to continue. In his opinion, PSNC's proposed ROE was fair and reasonable to PSNC, its shareholders and its customers, considering the impact of changing economic conditions.

Witness Hevert also addressed the capital market environment, and reiterated that the current market is one in which it is important to consider a broad range of data and models when determining the cost of equity, as exemplified by his use of the DCF, CAPM and Bond Yield Plus Risk Premium approaches.

In his direct testimony, witness Addison, Executive Vice President and Chief Financial Officer for PSNC, stated that, based on his training, experience, and knowledge of the financial community and how it perceives PSNC, he agreed with witness Hevert's conclusion that a 10.60% ROE is appropriate in this case. Witness Addison explained that adopting an unduly low ROE would ignore the changing economic conditions being experienced nationally and in North Carolina and could increase the cost of capital, a cost ultimately borne by PSNC's customers.

As reflected in Paragraph 5.C. of the Amended Stipulation, the Stipulating Parties agreed to a stipulated ROE of 9.70%. As stated in Paragraph 5.D. of the Amended Stipulation, the Stipulating Parties also agreed that PSNC should be allowed to earn an overall rate of return on its rate base of 7.53%.

The overall return on rate base and the proposed allowed rate of return on common equity set forth in the Amended Stipulation were supported by the supplemental testimony of PSNC witness Hevert and the hearing testimony of witnesses Hevert and Addison.

In his supplemental testimony and associated exhibits, witness Hevert addressed the agreed-upon ROE and overall rate of return agreed to in the August 18, 2016 Partial Stipulation. As with capital structure discussed above, while the Stipulating Parties filed two amended stipulations – one on August 25, 2016 and one on August 30, 2016 - those amended agreements did not adjust the stipulated ROE and overall rate of return reflected in the Partial Stipulation filed on August 18, 2016, to which witness Hevert testified. Witness Hevert testified to his understanding that the Stipulating Parties agreed to an ROE of 9.70%, with an overall rate of return of 7.53%. Witness Hevert stated that he supported PSNC's decision to agree to the stipulated ROE, explaining that although 9.70% is somewhat below the lower bound of his recommended range (i.e., 10.00%), he recognized that the Partial Stipulation represents a give and take among the Stipulating Parties regarding multiple issues that would otherwise be contested. He stated further that if the Company determined that the terms of the Partial Stipulation, taken as a whole, are such that it will be able to raise the external capital required to continue the investments required to provide safe and reliable service, and that it will be able to do so when needed and at reasonable cost rates, then he appreciated and respected that decision, and viewed the 9.70% stipulated ROE as a reasonable resolution of an otherwise contentious issue.

In his supplemental testimony, witness Hevert also updated his cost of capital analysis. He considered the stipulated ROE in the context of authorized returns for other natural gas utilities, finding that since January 1, 2014, a total of 24 of 54 returns authorized for natural gas utilities were 9.70% or above, with the average authorized ROE over all such cases being 9.65%. He again testified that North Carolina is generally considered to have a constructive regulatory environment, and in that context noted that the stipulated ROE is a reasonable, though conservative, measure of PSNC's cost of equity.

Witness Hevert also updated his review of economic conditions in North Carolina with respect to those factors for which updated data was available. He found that by 2015, North Carolina's real GDP exceeded its 2010 level by nearly 7.00%, and that from 2013 through 2015 the state's average rate of real GDP growth was somewhat higher than the national average. As to the rate of unemployment, he found that although North Carolina's December 2015 seasonally adjusted unemployment rate of 5.60% was somewhat higher than the U.S. average of 5.00%, by June 2016 both the national and North Carolina unemployment rates fell to 4.90%, with the rate in PSNC's service territory being only slightly higher at 5.14%. He found that personal income and consumption in the state have continued to expand at the national level. Finally, he reported that in its August 2016 "Snapshot of North Carolina," the Federal Reserve Bank of Richmond (FRB-Richmond) concluded that North Carolina's economy strengthened as total employment grew notably, household conditions continued to improve, and housing market indicators were mostly positive. The FRB-Richmond also observed that: (1) North Carolina employers added 19,400 jobs in June and almost every industry expanded payrolls that month; (2) the state's unemployment rate fell 0.2 percentage points to 4.90% in June and declined 0.9 percentage points since June 2015, and during the first quarter of 2016, the share of mortgages with payments 90 or more days past due fell 0.2 percentage point to 1.50%; and (3) North Carolina issued 5,210 new residential permits in June, up 7.10% from the prior month and up 11.9% from June 2015. Witness Hevert also noted that the models used to estimate the cost of equity reflect capital markets and therefore general economic conditions. He noted further that given that changes in economic conditions in North Carolina are related to the domestic economy, it is reasonable to conclude that both are reflected in ROE estimates. In summary, witness Hevert stated that it continues to be his view that on balance, the regional economic challenges in the state are substantially similar to those in the rest of the country, and that economic data regarding North Carolina and the United States do not alter the cost of equity estimates, or his recommendation, one way or the other.

Finally, witness Hevert considered the stipulated overall rate of return, stating that it is consistent with the average return authorized across the country, but lower than those returns authorized in the top-ranked regulatory jurisdictions, and that the stipulated overall rate of return is, like the stipulated ROE, reasonable, though in his opinion a conservative estimate of PSNC's overall investor-required rate of return.

At the hearing, in response to cross-examination by the Attorney General, witness Addison reiterated that two reasons for the higher cost of equity than cost of debt is that the equity investor requires more return commensurate with the higher risk associated with equity, and that while interest on debt is tax-deductible, equity earnings are not.

Witness Hevert also responded to cross examination by the Attorney General regarding his use of the DCF, CAPM, and Bond Yield Plus Risk Premium approaches to determine a recommended ROE range for PSNC. Witness Hevert confirmed the nature of his ROE recommendations in recent electric rate cases in North Carolina. He also

explained the value of using diverse sources of data for purposes of conducting the constant growth DCF analysis, discussed why he uses projected earnings to determine growth for the same analysis rather than another metric such as projected dividends, and testified that using different sources for the GDP for his multi-stage DCF would produce different results. During this discussion he answered questions from the Attorney General related to data on natural gas companies that are comparable to PSNC provided by Value Line. He also responded to questions regarding the source data he used for risk premiums for his CAPM analysis, and testified that use of some alternative sources would result in very low estimated ROEs that would have significant adverse impacts to the Company's financial standing. With regard to his Bond Yield Plus Risk Premium approach, witness Hevert clarified the nature and value of the numerous authorized rates of return on equity he used in that analysis, which in turn reflect market data.

In response to questioning by Chairman Finley, witness Hevert confirmed his belief that equity investors make investment decisions based on the risks they observe for the companies in which they are interested. He also clarified the distinction between expected and required returns, such that if the return that an investor requires is higher than the return that investor expects, that investor will choose not to invest. Witness Hevert testified that if a company operates in a state with poor economic conditions, such that many of its customers are unable to pay their bills, that company would have a large amount of uncollected revenues for the services it provided, which would in turn cause that company's risk to increase and the cost of equity that the equity investor would require to be higher. He testified further that, if the rate of return on equity was based on current economic conditions, and if in that scenario the investor was penalized during poor economic conditions by giving him less rate of return, symmetry would suggest that a higher return on equity would be provided during robust economic conditions. Witness Hevert also testified that, in comparison to the economic conditions that existed when previous electric rate cases were decided involving Duke, Progress, and Dominion North Carolina Power that were referenced by the Attorney General, the North Carolina economy has improved. Witness Hevert explained that the unemployment rate in the state is down considerably and is now approximately equal to the national rate, and that state GDP growth has expanded with projections for continued expansion. He agreed that the investment community looks upon the Commission, together with the state legislature and executive branch, as providing a constructive regulatory environment. He also agreed that the previous cases referenced by the Attorney General were, after remand to the Commission, reapproved at the same rates.

In response to further questioning by Chairman Finley, witness Hevert testified that, if it became a permanent requirement in North Carolina that the Commission change the rate of return on equity based on customers' ability to pay, that would have a negative impact on the constructive regulatory environment in the state. He explained that would be a departure from the Commission's past practice and would also be a departure from well-established practice of other regulatory commissions, which added together would add a considerable amount of risk. Witness Hevert further confirmed in response to questioning by Chairman Finley that other regulatory commissions will take economic conditions into consideration. He testified that, in this way, such commissions

balance the interests of investors and ratepayers. However, he stated that he was unaware of any regulatory commissions that apply adjustments to the return on equity to account for economic conditions or customer ability to pay.

No other party presented direct evidence on the Company's cost of capital or overall rate of return on rate base.

Legal Standards Applicable to Rate of Return Findings by the Commission

The Commission's analysis of and decision on rate of return on rate base and allowed rate of return on common equity in this case is governed by the United States Supreme Court's Hope and Bluefield decisions,[7] the requirements of G.S. 62-133, and the North Carolina Supreme Court decisions interpreting and applying each of the foregoing to rate of return decisions by the Commission.

In Bluefield, the United States Supreme Court established the basic framework for rate of return regulation of public utilities. On this subject, the Court held that:

> A public utility is entitled to such rates as will permit it to earn a return on the value of the property which it employs for the convenience of the public equal to that generally being made at the same time and in the same general part of the country on investments in other business undertakings which are attended by corresponding risks and uncertainties; . . . The return should be reasonably sufficient to assure confidence in the financial soundness of the utility and should be adequate, under efficient and economical management, to maintain and support its credit and enable it to raise the money necessary for the proper discharge of its public duties.

Bluefield, 262 U.S. at 692-93.

In the subsequent Hope decision, the Court expanded on its analysis by stating:

> From the investor or company point of view it is important that there be enough revenue not only for operating expenses but also for the capital costs of the business. These include service on the debt and dividends on the stock…. By that standard the return to the equity owner should be commensurate with the returns on investments in other enterprises having corresponding risks. That return, moreover, should be sufficient to assure confidence in the financial integrity of the enterprise, so as to maintain its credit and to attract capital.

[7] Federal Power Comm'n v. Hope Natural Gas Co., 320 U.S. 591 (1944) (Hope); Bluefield Waterworks & Imp. Co. v. Public Service Comm'n of W. Va., 262 U.S. 679 (1923) (Bluefield).

Hope, 320 U.S. at 603.

The Commission has looked to the Hope and Bluefield standards as guidance for setting rates. In Docket No. E-7, Sub 1026, the Commission noted that:

> First, there are, as the Commission noted in the DEP Rate Order, constitutional constraints upon the Commission's return on equity decision, established by the United States Supreme Court decisions in Bluefield Waterworks & Improvement Co., v. Pub. Serv. Comm'n of W. Va., 262 U.S. 679 (1923) (Bluefield), and Fed. Power Comm'n v. Hope Natural Gas Co., 320 U.S. 591 (1944) (Hope). To fix rates that do not allow a utility to recover its costs, including the cost of equity capital, would be an unconstitutional taking. In assessing the impact of changing economic conditions on customers in setting an ROE, the Commission must still provide the public utility with the opportunity, by sound management, to (1) produce a fair profit for its shareholders, in view of current economic conditions, (2) maintain its facilities and service, and (3) compete in the marketplace for capital. State ex rel. Utilities Commission v. General Telephone Co. of the Southeast, 281 N.C. 318, 370, 189 S. E.2d 705, 757 (1972). As the Supreme Court held in that case, these factors constitute "the test of a fair rate of return declared" in Bluefield and Hope. Id. at 7.

The Commission must balance the interests of investors and customers in setting the rate of return on equity. As the Commission has stated, "…the Commission is and must always be mindful of the North Carolina Supreme Court's command that the Commission's task is to set rates as low as possible consistent with the dictates of the United States and North Carolina Constitutions."[8] In that regard, the return should be neither excessive nor confiscatory; it should be the minimum amount needed to meet the Hope and Bluefield Comparable Risk, Capital Attraction, and Financial Integrity standards.

The Commission also has found that the role of cost of capital experts is to recommend to the Commission the investor-required return, not to estimate increments or decrements of return in connection with consumers' economic environment. As the Commission pointed out:

---

[8] North Carolina Utilities Commission, Docket No. E-7, Sub 1026, Order Granting General Rate Increase, at 24 (Sept. 24, 2013); see also North Carolina Utilities Commission, Docket No. G-9, Sub 631, Order Approving Partial Rate Increase and Allowing Integrity Management Rider at 26, (Dec. 17, 2013) (noting North Carolina Supreme Court's determination that the provisions of G.S. 62-133 "effectively require the Commission to fix rates as low as may be reasonably consistent with the requirements of the Due Process Clause of the Fourteenth Amendment to the Constitution of the United States, those of the State Constitution, Art. I, § 19, being the same in this respect"), DNCP Remand Order at 40 ("the Commission in every case seeks to comply with the North Carolina Supreme Court's mandate that the Commission establish rates as low as possible within Constitutional limits.").

> … adjusting investors' required costs based on factors upon which investors do not base their willingness to invest is an unsupportable theory or concept. The proper way to take into account customer ability to pay is in the Commission's exercise of fixing rates as low as reasonably possible without violating constitutional proscriptions against confiscation of property. This is in accord with the "end result" test of Hope. This the Commission has done.[9]

The Supreme Court agreed, and upheld the Commission's Order on Remand.[10] The Supreme Court has also, however, made clear that the Commission "must make findings of fact regarding the impact of changing economic conditions on customers when determining the proper ROE for a public utility."[11] In Cooper II, which addressed an appeal of the Commission's order on Dominion North Carolina Power's previous base rate application, the Supreme Court directed the Commission on remand to "make additional findings of fact concerning the impact of changing economic conditions on customers."[12] The Commission made such additional findings of fact in its order on remand.[13]

On October 10, 2016, the Attorney General filed a post-hearing Brief. With regard to the appropriate ROE for PSNC, the Attorney General contends that the stipulated 9.70% ROE is a higher ROE than what is adequate. As an example of the interrelationship between changes in the ratio of equity financing versus debt and the impact on the ROE, the Attorney General states that the proposed overall rate of return in the present case, 7.53%, is higher than the overall rate of return the Commission approved for Piedmont three years ago, 7.51%, in Docket No. G-9, Sub 631, even though the approved ROE for Piedmont was 10.0%. Further, the Attorney General asserts that capital costs have trended downward since Piedmont's rate case.

In its Reply Brief, PSNC asserts that the Attorney General's citation to the Transcript, Vol. 5, p. 75, does not support the above assertion. PSNC states that on this page of the Transcript PSNC witness Addison testified on cross-examination that Piedmont's lower overall rate of return in Docket No. G-9, Sub 631, as compared to the stipulated rate of return in this case, may have been due to the lower percentage of equity in Piedmont's capital structure as compared to the stipulated equity in this case. Further, PSNC states that witness Addison also testified that the 9.70% stipulated return

[13] DNCP Remand Order, at 4-10.

on equity in the present docket is higher than PSNC's embedded cost of long-term debt of approximately 5.5%.

In addition, PSNC asserts that there is no evidence that capital costs have trended downward since Piedmont's rate case. Rather, PSNC contends that witness Hevert's direct testimony indicates that capital costs have increased since Piedmont's rate case, noting that witness Hevert testified that "since December 2013, relative volatility has increased, suggesting greater increasing uncertainty in the natural gas utility industry"; "credit spreads have increased"; "[t]o the extent that credit spreads have increased, it is an observable measure of the capital markets' increased risk aversion"; and "increased risk aversion clearly is associated with an increased Cost of Equity." (T Vol. 5, p. 204)

In his Response Brief, the Attorney General states that the full Transcript citation should have been Vol. 5, pp. 73-75. Further, he notes that the point of comparing Piedmont's cost of equity and capital structure is to highlight the fact that the lower ROE in this case is deceptive because the 52% equity ratio offsets it.

With regard to the downward trend in capital costs, the Attorney General notes witness Hevert's testimony that stock prices for utilities went up in late 2015 and early 2016, which effectively reduced the dividend yield for shareholders. In turn, this tended to produce a lower cost of capital under the Constant Growth DCF analysis.

Most of the Attorney General's ROE argument focuses on criticism of the techniques used and results obtained by witness Hevert. With respect to witness Hevert's DCF analysis, the Attorney General asserts that there are two features that skew his results. One is his reliance on what the Attorney General calls "the most extreme data." That is, witness Hevert calculates his "High ROE" from the highest growth data that exists. However, as the Attorney General notes, witness Hevert also calculates a "Low ROE" from the lowest growth data, but his recommended ROE range draws from the high results, not the low results. The other feature that the Attorney General contends skews witness Hevert's DCF results upward is his over-reliance on sources of data that reflect five-year projections of annual growth in earnings per share -- Zack's, First Call, and Value Line -- without consideration of other factors available to investors for measuring growth. For example, the Attorney General points out that there are 15 measures of growth provided in Value Line reports for witness Hevert's proxy companies, including the annual rates of change per share for revenues, cash flow, earnings, dividends, and book value, each provided for the past 10 years, the past 5 years, and as estimates for future years.

In its Reply Brief, PSNC contends that the Attorney General's assertion that witness Hevert considered only the high range of his analysis is not supported by the record. PSNC cites witness Hevert's cross-examination testimony stating that he took into account both the high and low estimates of the growth data, and notes that his Table 2: Summary of Constant Growth DCF Results (T Vol. 5, p. 147) shows that his recommended ROE range of 10.00% to 10.75% did not draw only from the high results,

which ranged from 11.08% to 11.32%, but was within the overall range of high and low results.

With regard to the Attorney General's criticism that witness Hevert's DCF study did not consider factors other than earnings growth, PSNC cites witness Hevert's cross-examination testimony explaining why it was appropriate to use earnings growth and not the other factors. For example, witness Hevert stated that it was better to use earnings growth than dividends "simply because … the dividends are derived from earnings. You cannot pay dividends unless you have earnings." (T Vol. 6, p. 25) He further testified that he did not give historical earnings growth any weight, in part, "because a lot of analysts will already look at historical earnings growth and they would be reflected in the earnings projected." (T Vol. 5, p. 26)

In response, the Attorney General notes that witness Hevert agreed that the "mean high" estimate in his Constant Growth DCF study reflects the highest result based on the multiple growth data sources he used, and the "mean low" estimate reflects the lowest result, and that his 10.6% ROE recommendation is higher than the midpoint between the mean results and the highest results. With regard to witness Hevert's exclusive use of earnings growth, the Attorney General points out that other measures of growth are available to investors, and that relying on only one factor may have distorted witness Hevert's results, and asserts that this was illustrated by the Value Line information available to investors provided as an attachment to the Attorney General's Brief, as well as the box showing the growth data for Laclede Group.

With regard to witness Hevert's Multi-Stage DCF analysis, the Attorney General contends that his results are skewed upward by his use of a 5.31% long-term growth rate that he calculated, rather than using lower growth rates available from reliable sources such as the Social Security Administration (SSA), 4.35%, and the Energy Information Administration (EIA), 4.24%. In its Reply Brief, PSNC states that witness Hevert explained during cross-examination that the SSA and EIA growth rates are "not necessarily" lower than his if scenarios other than the SSA's and EIA's reference cases are considered. He stated that these alternative scenarios produce high and low case scenarios, and concluded that his estimate was "well within the range" of the high and low case scenarios that SSA and EIA provide. (T Vol. 6, pp. 33-34)

In response, the Attorney General notes witness Hevert's cross-examination testimony that he used the SSA and EIA rates in recent testimony that he filed in a Missouri rate case.

With respect to witness Hevert's CAPM analysis, the Attorney General asserts that his results are skewed because instead of relying on a published market source to estimate the risk premium associated with stocks, generally, compared to risk-free investments, witness Hevert derived his own risk premium estimates by performing a DCF study using data obtained from Bloomberg and Value Line. The Attorney General presents calculations derived by substituting the risk premium provided in a "Client Alert" issued by Duff & Phelps, an investor service that publishes data on the market

risk premium and investor expectations regarding that parameter, which produces lower CAPM results.

In reply, PSNC states that in witness Hevert's cross-examination testimony he notes that the Duff & Phelps estimated risk premium of 5% to 5.5% is not their CAPM approach but only one component of their "building block approach" under which other risk factors would be layered on to this component to calculate the cost of equity. (T Vol. 6, pp. 40-41) PSNC also states that witness Hevert testified that using this 5% to 5.5% risk premium would produce a cost of equity of only 7.49%, which would result in significant negative market consequences. PSNC further states that the Attorney General concedes that "data published by Duff & Phelps … may not be appropriate to determine a point-estimate for the cost of equity capital in this proceeding …." See Attorney General's Brief, at pp. 23-24.

The Attorney General responds that PSNC's position is contrary to the following statement in the Duff & Phelps Client Alert summary that was introduced as Attorney General Hevert Cross-Examination Exhibit 5:

> The ERP [Equity Risk Premium] is a key input used to calculate the cost of equity capital within the context of the Capital Asset Pricing Model (CAPM) and other models.

With respect to witness Hevert's Bond Yield Plus Risk Premium analysis, the Attorney General asserts that this approach does not rely on financial market data, but rather on the authorized rates of return that have been established by regulatory agencies for other utilities. The Attorney General states that the authorized rates of return were determined in other jurisdictions based on policies and underlying data estimates of market conditions that are not provided in the record in this case, and, therefore, it is not appropriate for the Commission to determine PSNC's ROE based on such evidence. In support of his position, the Attorney General cites State ex rel. Utilities Comm'n v. Cooper, 367 N.C. 430, 443, 758 S.E.2d 635, 643 (2014); and State ex rel. Utilities Comm'n v. Public Staff, 331 N.C. 215, 225, 415 S.E.2d 354, 361 (1992).

In conclusion, the Attorney General submits that PSNC has not shown that a 9.70% ROE is required. Rather, the Attorney General maintains that market-based data indicates that the Company's cost of equity is at least 35 basis points lower than 9.70%.

As witness Hevert testified, the cost of equity is not precisely quantifiable. Therefore, financial analysts use a number of quantitative models to develop estimates from market data. Witness Hevert further testified that analysts must exercise some judgment in making assumptions and using proxies. The Attorney General's criticisms of witness Hevert's DCF and CAPM analyses constitute disagreements with witness Hevert about some of his judgments in choosing the market data that he uses in his quantitative models. The Commission is not persuaded that the Attorney General's criticisms undermine or reduce the credibility of witness Hevert. Rather, the Attorney General's criticisms go to the weight of witness Hevert's DCF and CAPM analyses and testimony,

and the Commission has given those criticisms due consideration in weighing witness Hevert's analyses and testimony.

With regard to witness Hevert's Bond Yield Plus Risk Premium (Bond Plus) analysis, the Commission has not relied on that analysis or witness Hevert's testimony regarding the Bond Plus analysis to arrive at its ROE decision. Instead, the Commission has considered it as a check or as corroboration with regard to other evidence on ROE in this proceeding. That check allows the Commission to ensure that its ROE decision is not vastly out of line with rates of return authorized for regulated utilities in other jurisdictions.

The Attorney General did not provide a witness or affirmative evidence that would support a ROE lower than the stipulated 9.70%. Indeed, no expert witness provided an analysis after the Amended Stipulation that showed 9.70% as the appropriate level of ROE for PSNC. Therefore, the Commission must consider the evidence and exercise its independent judgment in determining the appropriate ROE for PSNC in the context of setting PSNC's rates. With these legal principles in mind, the Commission now turns to the analysis and weighing of the evidence in this proceeding relating to a determination of the appropriate overall rate of return on rate base and allowed return on common equity for use in this proceeding.

Analysis of the Evidence

In order to reach an appropriate independent conclusion regarding return on equity, the Commission should evaluate the available evidence, particularly that presented by conflicting expert witnesses. State ex rel. Utils. Comm'n v. Cooper, 366 N.C. 484, 739 S.E.2d 541, 546-47 (2013) (Cooper).

In addition to its evaluation of the expert evidence, the Commission must also make findings of fact regarding the impact of changing economic conditions on customers when determining the proper return on equity for a public utility. Cooper, 366 N.C. at 491, 739 S.E.2d at 548. There is no specific and discrete numerical basis for quantifying the impact of economic conditions on customers. However, the impact on customers of changing economic conditions is embedded in the return on equity expert witnesses' analyses. The Commission noted this in its Order Granting General Rate Increase in Docket No. E-22, Sub 479: "This impact is essentially inherent in the ranges presented by the return on equity expert witnesses, whose testimony plainly recognized economic conditions – through the use of econometric models – as a factor to be considered in setting rates of return." Order Granting General Rate Increase, Docket No. E-22, Sub 479, at 38 (2012) (DNCP Rate Order).

The only evidence in this proceeding related to the determination of an overall rate of return on rate base or allowed rate of return on common equity is provided in the testimony and exhibits of PSNC's witnesses Addison and Hevert. Therefore, the substantial expert return on equity evidence that is entitled to the greatest weight is not contradicted by any direct cost of capital expert testimony. Witness Hevert indicated in

his supplemental testimony that, although the stipulated ROE is somewhat below the lower bound of his recommended range (i.e., 10.0%), he views the 9.70% stipulated ROE as a reasonable resolution of an otherwise contentious issue. Witness Hevert also presented supplemental testimony in which he updated his analysis of the changing economic conditions in North Carolina. The analysis included a review of a number of economic statistics regarding the condition of the economy in North Carolina that continue to indicate improving economic conditions. Based on this analysis witness Hevert testified that economic conditions in the state do not alter his cost of equity estimates or recommendations one way or the other.

In his direct testimony, witness Addison testified to the importance of PSNC maintaining its ability to access national capital markets on reasonable terms in this time of financial uncertainty, an ability that ultimately benefits PSNC's ratepayers. He noted that return on equity is a key consideration for investors when assessing whether to invest in a company like PSNC. He highlighted the Company's significant and ongoing capital needs as well as the important and real financial consequences that the Commission's determinations regarding rate of return can have in the capital markets and the terms under which PSNC can access those markets.

The Attorney General questioned witness Hevert about various aspects of his analysis, but did not provide any affirmative evidence that would support a return on common equity lower than the 9.70% proposed in the Amended Stipulation. The Attorney General's cross-examination established only that the outcomes of the DCF and CAPM analyses would have been different had witness Hevert, for example, used different sources for the growth estimate in the third stage of the multi-stage DCF analysis, or had he used another approach to the CAPM method. The Commission finds witness Hevert to be a credible witness in this case and accepts witness Hevert's support of the 9.70% ROE as probative evidence for purposes of establishing a return on common equity for PSNC in this proceeding. The Commission notes that witness Hevert's direct and supplemental testimony is the only economic rate of return testimony in this case.

There is no record evidence in this case establishing meaningful customer opposition to the stipulated overall rate of return on rate base of 7.53% or the stipulated rate of return on common equity of 9.70%, or suggesting that the stipulated rates are either unfair or would cause substantial hardship to PSNC's customers. No public witnesses appeared at any of the four public hearings held to receive public testimony.

The lack of substantive evidence of consumer opposition to PSNC's stipulated rate increase does not relieve the Commission of its obligation to reach its own independent conclusion as to whether the Amended Stipulation is just and reasonable, fair to customers, the Company and its shareholders in light of changing economic conditions, and otherwise sufficient to satisfy the requirements of G.S. 62-133. Further, even though the record evidence does not establish this fact with respect to any specific PSNC customer, the Commission of its own experience acknowledges and accepts as true the proposition that some percentage of PSNC's customers, particularly those living on fixed

incomes, are economically vulnerable and may struggle to pay an increase in PSNC's rates granted in this docket. Likewise, the Commission must keep this in mind as it undertakes to balance the interests of customers with the constitutional requirements of establishing adequate rates for PSNC.

As noted above, the record evidence in this proceeding supports the legitimacy and reasonableness of the levels of return on rate base and allowed rate of return on common equity reflected in the Amended Stipulation. In light of this fact, the question for the Commission becomes whether the Amended Stipulation represents an appropriate balancing of the interests of customers, the Company, and shareholders, by establishing rates that are as low as may be reasonably consistent with the requirements of due process. As explained below, the Commission concludes, based on its own independent judgment, that the Amended Stipulation satisfies the requirements of North Carolina law in this respect.

First, in his supplemental testimony witness Hevert acknowledges that the stipulated allowed rate of return on common equity of 9.70% is below what he recommended as the range of returns for PSNC. However, witness Hevert indicates that his support for the stipulated ROE is based on the fact that the stipulated ROE represents the give and take among the Stipulating Parties regarding multiple and otherwise contested issues. Finally, he presents a detailed updated review of economic conditions in the State, concludes that these data support his initial conclusion that economic conditions in North Carolina continue to improve, and notes that the changing economic conditions in North Carolina do not impact his recommendations in this case.

It is also significant to note that the direct testimony of PSNC witnesses Addison and Hevert establish without question that PSNC is actively engaged in a significant capital investment program that will continue for the next several years that is driven by federal pipeline safety and integrity requirements and that access to capital on reasonable terms is critical to PSNC in order to fund that investment.

Conclusions on Return

The Commission understands that rate increases are not favored by ratepayers and that some portion of any utility's customer base will find it difficult to pay their utility bills from time to time. The Commission further acknowledges that it is the Commission's primary responsibility to protect the interests of utility customers in setting rates for public utilities by complying with the legal principles discussed earlier in this Order. It is also the Commission's responsibility to abide by the constitutional requirements of the Hope and Bluefield cases as reflected in the provisions of G.S. 62-133 and to balance the interests of customers and the utilities which the Commission regulates in that process.

The Commission gives substantial weight to witness Hevert's DCF analysis, particularly on the basis of mean growth rates. Witness Hevert testified that for each of his proxy companies he calculated mean, mean high and mean low results. Based on 30-day, 90-day and 180-day averages, the rate of return on equity range based on

witness Hevert's mean growth rate analysis is from 8.33% to 10.01%. This range provides support for the stipulated rate of return on equity of 9.70%, particularly in light of the Supreme Court's decision in State ex rel. Utils. Comm'n v. Gen. Tel. Co. of the Southeast, 285 N.C. 671, 681, 208 S.E.2d 681, 670 (1974) (a "zone of reasonableness extending over a few hundredths of one percent" exists within which the Commission may appropriately exercise its discretion in choosing a proper rate of return on equity).

In addition, the Commission gives substantial weight to witness Hevert's supplemental testimony in support of the stipulated 9.70% ROE. He testified that although the Stipulated ROE is somewhat below the lower bound of his recommended range (i.e., 10.0%), he recognized that the Stipulation represents the give-and-take among the Stipulating Parties regarding multiple issues that would otherwise be contested by the Stipulating Parties. In addition, he relied on PSNC's determination that the terms of the Amended Stipulation, taken as a whole, are such that PSNC will be able to raise the capital required to continue the investments required to provide safe and reliable service, and that it will be able to do so when needed and at a reasonable cost.

The Commission also gives substantial weight to witness Hevert's testimony that although the stipulated ROE falls within the range of analytical results presented in his direct testimony, current capital market conditions are such that the models used to estimate the cost of equity continue to produce a wide range of sometimes conflicting estimates.

The Commission finds it credible that although witness Hevert's three DCF analyses reflect a range of 8.14% to 11.97%, the average of the nine mean DCF results is 9.78%, as can be calculated using the mean results in Table 9a on page 94 of his direct testimony. This average mean of 9.78% is only eight basis points higher than the stipulated 9.70% ROE.

The Commission also gives substantial weight to witness Hevert's testimony that it is important to keep in mind that the models used to estimate the cost of equity reflect capital markets and, therefore, general economic conditions. Given that changes in economic conditions in North Carolina are related to the domestic economy, it is reasonable to conclude that both are reflected in ROE estimates.

The Commission also finds credible witness Hevert's testimony that it is his view that on balance, economic data regarding North Carolina and the United States do not alter the cost of equity estimates, or his recommendation, one way or the other.

In his Brief, the Attorney General contends that even though the stipulated 9.70% ROE appears to move the rate of return gradually toward the lower cost of capital reflected in financial market data, that appearance is deceptive because it ignores the offsetting effect of the higher stipulated equity ratio. The Attorney General further states that the overall rate of return – taking into account the ROE along with other factors proposed in this case – is actually higher at 7.53% than the overall rate of return the Commission fixed for Piedmont three years ago in Docket No. G-9, Sub 631 (which was

7.51%) although Piedmont's ROE was fixed at 10% in that case and capital costs have trended downward. (T5 p 75) Further, the Attorney General states that PSNC appears to be giving customers a lower profit (ROE), but is more than taking it all back by raising the ratemaking equity ratio, absent any showing that PSNC has significantly increased business risk that would warrant such a high equity ratio.

The Commission is not persuaded by the Attorney General's analysis, for two reasons. First, the difference in the Piedmont overall rate of return, 7.51%, and the stipulated overall rate of return, 7.53%, is not significant given the differences in the two utilities and the passage of three years since the Piedmont overall rate of return was established. Secondly, to the extent that comparisons with prior rates are helpful, it is more instructive to note that PSNC's overall rate of return, ROE, and equity ratio will all be significantly lower under the Amended Stipulation than those approved in PSNC's 2008 Rate Order. In the 2008 Rate Order, the approved overall rate of return, ROE, and equity ratio were 8.54%, 10.6% and 54%, respectively. In the present case, the stipulated overall rate of return, ROE, and equity ratio are 7.53%, 9.7% and 52%, respectively.

Consumers pay rates, a charge in cents per therm for the natural gas they consume. They do not pay a rate of return on equity. To the extent that the Commission makes downward adjustments to rate base, reduces the approved common equity component of capital structure, disallows test year expenses or increases pro forma test year revenues, the Commission reduces the rates consumers pay during the future period rates will be in effect. However, the utility's investors' compensation for the provision of service to consumers takes the form of return on investment. As the North Carolina Supreme Court has stated:

> The "rate of return" on equity, PSNC's outstanding common stock, "is a percentage that the Commission concludes should be earned on the value of the utility's investment, commonly referred to as the 'rate base.'" Carolina Util. Customers Ass'n, 348 N.C. at 461, 500 S.E.2d at 700. Several variables factor into determining a "just and reasonable" rate of return, including:
>
> > (1) The rate base which earns the return; (2) the gross income received by the applicant from its authorized operations; (3) the amount to be deducted for operating expenses, which must include the amount of capital investment currently consumed in rendering the service; and (4) what rate constitutes a just and reasonable rate of return on the predetermined rate base.
>
> Id. at 461-62, 500 S.E.2d at 700.

State ex rel. Utils. Comm'n v. Carolina Util. Customers Ass'n, 351 N.C. 223, 232, 524 S.E.2d 10, 17 (2000) (emphasis added).

To the extent the Commission makes adjustments to reduce the overall cost of service, the Commission reduces the rates consumers otherwise must pay irrespective of its determination of rate of return on equity expressed as a percentage, in this case 9.70%. To the extent these adjustments reflect current economic conditions, and consumers' ability to pay, these adjustments reduce not only consumers' rates but also the return on equity, expressed in terms of dollars that investors actually earn. This is also in accord with the end result test of Hope.

In the present case, PSNC's initial Application requested a $41,583,020 increase in PSNC's annual North Carolina revenues. That revenue increase would require an over-all rate increase of 9.66%. In addition, PSNC requested a 10.6% rate of return on common equity, an 8.14% overall return on a rate base of $949,341,460, and a capital structure that included 53.5% common equity. These are the "big picture" numbers. However, the crucial details of PSNC's general rate Application, as in all general rate cases, are in the hundreds of line items in NCUC Form G-1 that detail the Company's cost of service.

PSNC's Application is supported by substantial and credible evidence that, standing alone, could form the basis of a decision by the Commission to approve a $41,583,020 increase in PSNC's annual North Carolina revenues. However, the details of PSNC's Application, including the cost of service line items, are reviewed by the Public Staff and, in some rate cases, by other intervenors. The Public Staff typically recommends numerous adjustments to the utility's cost of service items, some adjustments increasing an item and some adjustments decreasing another item. These adjustments are presented by the Public Staff in its testimony, or, as in the present docket, in a settlement agreement with the utility.

In the present docket, the Public Staff's adjustments are shown in Exhibit A, Page 2, of the Amended Stipulation. There are about 40 adjustments, some up and some down. For example, an adjustment reducing PSNC's service company charges by $3,228,865 is made on line 34, and an adjustment adding $91,901 to PSNC's cost of materials and supplies is made on line 9. However, the end result of all the adjustments is a reduction in PSNC's revenue requirement from the requested $41,583,020 to the stipulated amount of $19,054,160. Thus, the numerous adjustments made by the Public Staff, and approved herein by the Commission, reduce the total annual base revenues to be received by PSNC from ratepayers by $22,528,860, including a reduction of approximately $6,000,000 in the return to be paid to equity investors.[14] Although the ROE downward adjustment produces a direct reduction in the authorized rate of return on investment financed by equity investors, the numerous other downward adjustments reflected on Exhibit A further reduce the dollars the investors actually have the opportunity to receive. Thus, while the equity investor's cost was calculated under the terms of the Amended Stipulation by applying a rate of return on equity of 9.70%, instead

[14] Compare Boone Exhibit 6, p. 2, Statement Showing Rates of Return after Adjustments for Proposed Rates, line 3, with Public Staff Late-Filed Exhibit I, Schedule 4, Return on Equity and Original Cost Rate Base, line 3.

of the 10.6% requested in the Application, based in part on existing macroeconomic conditions affecting customers' ability to pay, this is only one of many approved adjustments that reduces ratepayer responsibility and equity investor reward.

This is not to say that the Commission accepts the stipulated 9.70% rate of return on equity merely because it is lower than the 10.6% requested by PSNC. Rather, it is to emphasize that each of the approximately 40 adjustments made by the Public Staff, and accepted herein by the Commission, reflects the fact that ratemaking, and the impact of rates on consumers, must be viewed as an integrated process where the ratemaking end result is what directly affects customers. The Commission's acceptance of the foregoing ratemaking adjustments, including the 9.70% rate of return on equity, reflects the Commission's application of its subjective, expert judgment under the Public Utilities Act that the end result is in compliance with the Commission's responsibility to establish rates as low as reasonably permissible without transgressing constitutional constraints.

Solely focusing on the authorized rate of return on equity in assessing the impact of the Commission's decision on consumers' ability to pay in the current economic environment would fail to give a true and accurate picture of the issues presented to the Commission for decision and the totality of the Commission's order. Such an analysis would also be inconsistent with Hope and the Carolina Util. Customers Ass'n cases. For example, when the Commission approves, in part due to current economic conditions, a reduction in the investment against which the authorized 9.70% rate of return on equity is multiplied to produce the dollars in return on equity investment, the financial impact is a reduction in the rates paid by ratepayers and a reduction in the amount received by equity investors, the same result as if the Commission had instead reduced the 9.70% rate of return on equity.

As previously noted from the Hope decision, it is the "end result" of the Commission's order that must be examined in determining whether the order produces just and reasonable rates. Therefore, the Commission cannot, as suggested by the Attorney General, simply conclude that 9.70% "exceeds the ROE that is adequate" for PSNC. Instead, the Commission has incorporated into its analysis all of the myriad factors that make up PSNC's revenue requirement, including the rate of return on equity and the impact of the Commission's decision regarding the consumers' ability to pay in the current economic environment. Based on that impact and the total effect of the rate order, the Commission concludes that a 9.70% rate of return on equity produces just and reasonable rates for PSNC and for its ratepayers. Any further reduction in the authorized rate of return on equity is not justified by the evidence.

Based on the above-discussed cost of equity testimony of witness Hevert, the Commission finds his recommendations regarding the appropriate cost of equity for PSNC to be substantial and credible evidence.

After a careful review of all the evidence in this case, and adhering to the requirements of the above cited legal precedents, the Commission finds that the overall rate of return on rate base and the allowed rate of return on common equity, as well as

the resulting customer rates provided for under the Amended Stipulation, are just and reasonable, fair to both PSNC and its customers, and appropriate for use in this proceeding and should be approved. The rate increase approved herein, as well as the rates of return underlying such rates, are just, reasonable and fair to customers considering changing economic conditions, and are required in order to allow PSNC, by sound management, to produce a fair return for its shareholders, maintain its facilities and provide services in accordance with the reasonable requirements of its customers in the territory covered by its franchise, and to compete in the market for capital funds on terms that are reasonable and that are fair to its customers and existing investors.

EVIDENCE AND CONCLUSIONS FOR FINDING OF FACT NO. 19

The evidence supporting this finding of fact is set forth in the verified Application, the testimony of the Company's witnesses, and the Amended Stipulation.

The level of adjusted sales and transportation volumes used in the Amended Stipulation is 937,082,412 therms. The sales and transportation throughput volume level is derived as follows:

Sales	491,921,582
Transportation	316,664,980
Special Contract	128,495,850
Total Throughput	937,082,412

The level of purchased gas supply is 499,819,717 therms, and is derived as follows:

Sales	491,921,582
Company Use and Lost & Unaccounted For	7,898,135
Purchased Gas Supply	499,819,717

The throughput level and level of purchased gas supply are the result of negotiations among the Stipulating Parties, as described in the Amended Stipulation, and are not opposed by any party. No other party submitted evidence on the Company's throughput.

The Commission has carefully reviewed the evidence regarding the appropriate throughput level in this docket and concludes that the stipulated throughput levels are a fair and reasonable approximation of the Company's *pro forma* adjusted sales and transportation volumes. The Commission has also carefully reviewed the purchased gas supply level and concludes that it is a fair and reasonable approximation of the Company's *pro forma* purchased gas supply level.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 20-22

The evidence for these findings is contained in the verified Application, the testimony of the Company's witnesses, and the Amended Stipulation.

The test period cost of gas is set forth in Paragraph 7 and Exhibit E to the Amended Stipulation. The amounts shown on Exhibit E to the Amended Stipulation are the result of negotiations among the Stipulating Parties in this docket. The Amended Stipulation reflects the following agreements among the parties regarding PSNC's cost of gas:

Commodity Costs	$110,682,356
Company Use and Lost and Unaccounted For	$1,777,080
Fixed Costs	$67,928,619
Total Cost of Gas	$180,388,055

The stipulated cost of gas is not contested by any party to this proceeding. The Commission has carefully reviewed these amounts, as well as all record evidence relating to the *pro forma* cost of gas, and concludes that the stipulated cost of gas is reasonable and appropriate for use in this docket.

Under the Commission's procedures for truing-up fixed gas costs in proceedings under Commission Rule R1-17(k), it is necessary and appropriate to determine the amount of fixed gas costs that are embedded in the rates approved herein. In the Amended Stipulation, the Stipulating Parties agree that for the purpose of this proceeding and future proceedings under Commission Rule R1-17(k) during the effective period of rates approved in this proceeding, the appropriate amount of fixed gas costs to be allocated to each rate schedule is as set forth in Exhibit C to the Amended Stipulation. No party contests this allocation and no other party submitted evidence supporting a different allocation.

The Commission has carefully examined these amounts, as well as all record evidence on fixed gas cost allocations, and concludes that the stipulated allocations of fixed gas costs are fair and reasonable.

Under the Commission's procedures for establishing rates and truing-up commodity gas costs, it is necessary to establish a Benchmark Commodity Cost of Gas (Benchmark) embedded in sales customer rates. The Amended Stipulation provides that in establishing rates for this proceeding, the parties have agreed to use PSNC's current Benchmark of $0.225 per therm subject to any filed changes in such rate prior to implementation of revised rates in accordance with the Commission's final order in this docket. No party contests the use of a $0.225 per therm Benchmark in establishing rates for this proceeding and no other party submitted evidence on this issue. The

Commission has carefully examined this proposal and concludes that the use of a $0.225 per therm Benchmark for purposes of establishing rates in this proceeding is fair and reasonable.

EVIDENCE AND CONCLUSIONS FOR FINDING OF FACT NO. 23

The evidence for this finding is contained in the Amended Stipulation, as supported by the direct and supplemental testimony of Company witness Paton and the testimony and revised exhibits of Public Staff witness Larsen.

The stipulated rate design and rates, necessary and appropriate to provide PSNC a reasonable opportunity to recover the stipulated revenue requirement in this docket, are reflected in Exhibit B to the Amended Stipulation. On Exhibit B, PSNC has included a new Medium General Service rate schedule 140 (MGS Rate 140) applicable to commercial and small industrial customers who use more than 25,000 but less than 60,000 therms per year. According to witness Paton, the larger customers who will move to MGS Rate 140 will no longer distort the average usage levels for the Small General Service Rate 125. Witness Larsen agreed with the Company's reasoning for creating the MGS Rate 140 and recommended that it be approved.

In addition, Exhibit B to the Amended Stipulation reflects that the Stipulating Parties have agreed to an additional usage tier for Rate Schedule 175. The additional usage tier for Rate 175 is also shown on Public Staff witness Larsen's Amended Exhibit C, page 2 of 2. The Stipulating Parties agreed that the additional usage tier will not result in any revenue shifting between rate classes.

The computations on Exhibit B show that the proposed rates will produce the revenues calculated under the rate design, as well as the proposed gas costs rates approved for use in this proceeding. The Commission has carefully reviewed these rates, as well as all record evidence relating to the proper rates to be implemented in this proceeding, and concludes that the stipulated rates are just and reasonable.

A portion of the rate increase will be recovered through the increase in reconnect fees. At the evidentiary hearing, Public Staff witness Larsen testified that the proposed reconnect fee of $80 for residential customers during regular working hours was justified. During questions from the Commission, witness Larsen stated that the Public Staff requested justification of the increase in a data request sent to the Company, and PSNC responded that the increase reflected an annual inflation adjustment since 2006 of approximately two percent per year. Witness Larsen further testified that there was an in-depth analysis performed a number of years ago where all of the components of the cost of reconnecting gas service were analyzed. Witness Larsen cited the various steps and tasks involved in this process. Witness Larsen stated that, in today's dollars, the result is it costs almost $100 for a reconnect. He testified that customers avoid paying the monthly facilities charge while they are disconnected. Witness Larsen concluded that $80 was reasonable and did not exceed the cost that the Company had to incur to provide that service.

The Commission has carefully reviewed the cost components of the reconnection process and concludes that the proposed reconnect fees proposed by PSNC and agreed upon by the Stipulating Parties are fair and reasonable.

EVIDENCE AND CONCLUSIONS FOR FINDING OF FACT NO. 24

The evidence supporting this finding is contained in the Application, the direct testimony of Company witness Ratchford, the direct and supplemental testimony of Company witness Paton, the direct testimony of Public Staff witness Perry, the Amended Stipulation, and Rider E of the Company's tariffs.

In its Application, PSNC indicated that it was incurring substantial and ongoing capital expenses associated with efforts to comply with federal pipeline safety and integrity management requirements. In order to address the magnitude and impact of its capital investments required to comply with federal pipeline safety and integrity requirements on a going-forward basis, and as authorized by G.S. 62-133.7A, PSNC proposed the adoption of an IMT mechanism in its tariffs. According to PSNC, this mechanism would allow the capital cost of pipeline integrity activities to be recovered in a timelier manner than they would be if PSNC had to wait for a general rate case.

In his direct testimony, Company witness Ratchford testified to the Company's ongoing capital investments driven by compliance with federal pipeline safety and integrity requirements and emphasized the importance of pipeline safety to the Company, its customers, and the public in general. Witness Ratchford set out a detailed description of the federal Transportation Integrity Management Plan (TIMP) and Distribution Integrity Management Plan (DIMP) processes required of the Company. He also described in some detail the Company's evolving techniques and efforts to comply with TIMP and DIMP requirements as well as the Company's future planned compliance activities. In his testimony, witness Ratchford described the nature of TIMP and DIMP compliance activities and the fact that federal regulation was an actively evolving process that could generate substantial additional compliance requirements in the future and that the full scope of those requirements could not be known at this time. Witness Ratchford also explained that the IMT mechanism proposed by the Company to track these costs would allow the capital cost of pipeline integrity activities to be recovered in a timelier manner than if PSNC were required to wait for a general rate case. He explained that, in this way, the Company's customers are not subjected to a large, one-time rate increase, and the amount of the increase is reduced by minimizing debt expense on the capital necessary to make integrity management improvements, as well as minimizing general rate cases and their associated expenses.

In her direct testimony, witness Paton explained the Company's proposed IMT mechanism and provided a proposed form of such tracker in Paton Exhibit 4.

Witness Paton testified that in broad terms, the IMT provides for PSNC to adjust its rates biannually in order to recover the revenue requirement associated with Integrity Management Plant Investment and associated costs incurred by PSNC resulting from

prevailing federal standards for pipeline integrity and safety that are not otherwise included in current base rates.

Public Staff witness Perry testified that after several months of discussions, PSNC and the Public Staff agreed to a modified form of the IMT mechanism filed by the Company. Witness Perry stated that the IMT mechanism will assist PSNC in the implementation and timely recovery of costs associated with its investment of capital in compliance with the requirements of federal and state laws and regulations regarding pipeline integrity (including both transmission and distribution integrity), reliability and safety.

Witness Perry testified that the Public Staff has had approximately 2 ½ years of experience auditing the Piedmont Natural Gas, Inc. IMR mechanism.[15] This experience was very helpful in discussions with PSNC regarding its proposed IMT. The Amended Stipulation includes a provision that sets out how to determine excluded costs from the Company's Integrity Management Plant Investment using both the exclusion percentages based on PSNC's budgeted integrity management (IM) projects, as well as the direct assignment approach for specific IM projects that have a significant non-IM component. Witness Perry testified that the Public Staff and PSNC agreed that the excluded reasonable and prudent costs shall be eligible for inclusion in recoverable rate base in PSNC's next general rate case proceeding.

The Amended Stipulation further stated that the Stipulating Parties agreed that costs incurred for system expansion/improvement or routine maintenance, repair and replacement of system components that are not required to comply with federal gas pipeline safety requirements shall not be included in amounts recovered under the IMT mechanism.

Witness Perry also stated that the Public Staff and PSNC worked hard to determine a fair and reasonable approach to enable the Company to recover its prudently incurred capital investment and associated costs of complying with federal gas pipeline safety requirements.

No other party submitted evidence on the issue of the proposed IMT mechanism.

In the Attorney General's Brief, the Attorney General states several concerns about the proposed IMT. In summary, the Attorney General acknowledges that the legislature authorized the Commission in G.S. 62-133.7A to adopt a rate adjustment mechanism to allow the recovery of prudent costs of compliance with federal pipeline safety requirements. Nevertheless, the Attorney General contends that the IMT is not in the public interest because PSNC has not shown that there is a need for such rate adjustment mechanism, and any benefit it offers to investors is outweighed by disadvantages to consumers, such as frequent additional rate increases, an expedited

[15] See Order Approving Partial Rate Increase and Allowing Integrity Management Rider (G-9, Sub 631, December 17, 2013); and Order Approving Stipulation (G-9, Sub 631, November 23, 2015).

review, no regard for offsetting cost factors, and a lack of meaningful public input. The Attorney General further contends, based on testimony by PSNC witness Addison, that the IMT is not needed to address investor concerns about timely recovery of capital costs.

In its Reply Brief, PSNC takes issue with the Attorney General's interpretation of witness Addison's testimony regarding investor concerns. PSNC submits that the Commission's rejection of the IMT would be viewed by investors as a sign of an unsupportive regulatory environment, particularly when the IMT is a part of a near-unanimous settlement.

The Commission has carefully considered the evidence in this proceeding related to the proposed IMT mechanism, as well as the Attorney General's concerns, and has reached the following conclusions. First, the Commission concludes that the form of IMT mechanism attached in Exhibit H to the Amended Stipulation falls within the scope of G.S. 62-133.7A. That statute authorizes the Commission to adopt "a rate adjustment mechanism to enable the company to recover the prudently incurred capital investment and associated costs of complying with federal gas pipeline safety requirements, including a return based on the company's then authorized return." In this case, the proposed form of IMT attached to the Amended Stipulation provides for the recovery of return, taxes, and depreciation on capital investment associated with federal gas pipeline safety requirements in a manner consistent with the statute and in the same fundamental manner that PSNC is permitted to recover those items of its cost of service in a general rate case proceeding. This approach to IM cost recovery is reasonable and consistent with statutory requirements and normal regulatory practices.

Second, the Commission concludes that the IMT mechanism proposed for adoption and implementation in the Amended Stipulation is beneficial to customers because it provides for the use of both the exclusion percentages determined using PSNC's budgeted IM projects, as well as the direct assignment approach for specific projects that have a significant non-IM component.

Third, the proposed IMT Rider expressly provides for Commission review of the mechanism at the earlier of PSNC's next general rate case proceeding or four years from the implementation of the mechanism and also specifically grants any party the right to apply to the Commission to terminate or modify the mechanism at any time on the grounds that the rider mechanism, as approved by the Commission, is no longer in the public interest.

Fourth, consistent with the requirements of G.S. 62-133.7A, the Commission concludes that adoption and implementation of the IMT mechanism as reflected in Rider E of the Company's tariffs and attached to the Amended Stipulation as Exhibit H is in the public interest. The Commission finds the uncontested evidence of PSNC's required capital expenditures on TIMP/DIMP compliance convincing. It is equally persuaded that regular and repeated general rate case proceedings, otherwise necessary to reflect such investments in PSNC's rate base, would be a detriment to PSNC and its customers, and would serve no purpose other than to increase regulatory

costs paid by ratepayers and the regulatory burden on all parties who participate in PSNC's general rate proceedings. The Commission recognizes, as the Attorney General points out, that separately accounting for TIMP/DIMP compliance costs and addressing them through the IMT mechanism on an intra-rate case basis effectively isolates those costs from other aspects of PSNC's cost of service. The Commission is satisfied that the public interest is protected from any potentially adverse impacts from such treatment through a variety of means, including the limited nature of the costs recoverable through the mechanism, using the exclusion percentages determined using PSNC's budgeted IM projects, as well as the direct assignment approach for specific IM projects, the special contract crediting provision contained therein, the mandatory and permissive review provisions contained in the rider, and the Commission's general and continuing oversight of the Company's earnings. The Commission also concludes that the tracker provides an overall benefit to customers since it would allow the capital cost of pipeline integrity activities to be recovered in a timelier manner than if PSNC were required to wait for a general rate case, and therefore avoids subjecting the Company's customers to a large, one-time rate increase. In addition, the amount of the increase is reduced by minimizing debt expense on the capital necessary to make integrity management improvements, as well as minimizing general rate cases and their associated expenses. Further, the tracker is subject to Commission review after four years.

With respect to the Attorney General's concerns about the expedited nature of the review process and ensuring meaningful public input, the Commission is not persuaded that the expedited procedure is a detriment to the Commission's decision-making process, or that there will be a lack of opportunity for meaningful public input. As Public Staff witness Perry testified, the Public Staff has about 2 ½ years of experience auditing the Piedmont Natural Gas, Inc., IMR mechanism. Similarly, the Commission has that same level of experience in reviewing the evidence and making decisions regarding the proper implementation of Piedmont's IMR. Further, the Commission is not aware of any complaints from parties to the Piedmont IMR dockets or the public that the semi-annual reviews have not afforded interested persons a full and fair opportunity to be heard. In addition, if the Commission receives such complaints with regard to its reviews of PSNC's IMT, the Commission has the authority and the procedural tools to remedy those concerns.

Finally, the Commission believes that implementation of the proposed IMT mechanism will promote public safety by supporting the timely recovery of costs associated with pipeline safety and integrity expenditures by the Company. Safety and reliability of utility infrastructure is of critical importance to the State and the Commission, and this mechanism facilitates the accomplishment of that goal.

Based on the foregoing, and in the absence of any evidence to the contrary, the Commission finds the Integrity Management Tracker mechanism as reflected in Rider E of the Company's tariffs and described in Paragraph 10 and attached as Exhibit H to the Amended Stipulation to be just, fair, reasonable, in the public interest, and appropriate for adoption in this proceeding.

EVIDENCE AND CONCLUSIONS FOR FINDING OF FACT NO. 25

The evidence for this finding is contained in the Amended Stipulation reflected in Paragraph 6 and Late Filed Exhibit D.

Under PSNC's CUT mechanism, certain baseload and heat factors, as well as "R" values, are needed in order to make the calculations periodically required under that mechanism. The Stipulating Parties have provided updated factors in this proceeding as reflected in Paragraph 6 and Late Filed Exhibit D of the Amended Stipulation. These values are not contested by any party and no other party has offered evidence supporting other factors. Based on the Amended Stipulation, and the entire record of evidence in this proceeding, the Commission finds and concludes that the updated CUT factors, including the "R" values, identified on Late Filed Exhibit D to the Amended Stipulation are reasonable and appropriate and should, therefore, be approved.

EVIDENCE AND CONCLUSIONS FOR FINDING OF FACT NO. 26

The evidence for this finding is contained in the Company's initial filing and the Amended Stipulation.

In PSNC's Application, supported by the direct testimony of Company witness Boone, the Company proposed to amortize and recover a number of previously deferred regulatory assets including PIM and manufactured gas plant (MGP) O&M costs. It also proposed to amortize and recover DIMP O&M costs. In Paragraph 5 of the Amended Stipulation, the Stipulating Parties propose certain agreed upon changes to the Company's proposed amortizations and recovery of PIM, MGP, and DIMP O&M costs. The Stipulating Parties support the five year amortization periods set forth in Paragraph 5 of the Stipulation and the ongoing interim deferral mechanism for PIM and DIMP O&M costs. No party has opposed the proposals contained in Paragraph 5 of the Amended Stipulation and no other evidence has been submitted regarding these issues.

The Commission has carefully considered the proposed amortization periods and related matters set forth in Paragraph 5 of the Amended Stipulation, as well as all record evidence on the amortization of these regulatory assets, and concludes that the stipulated amortization treatment and specified amortization periods are consistent with the Commission's prior treatment of similar costs and are otherwise fair and reasonable and should be approved. The Commission further concludes that the proposed continuation of the existing regulatory asset treatment for ongoing PIM and DIMP O&M costs is fair and reasonable and should be approved.

EVIDENCE AND CONCLUSIONS FOR FINDING OF FACT NO. 27

The evidence for this finding is contained in the North Carolina General Statutes, the Amended Stipulation, the supplemental testimony of Company witness Paton, and the testimony of Public Staff witness Boswell.

North Carolina Session Law 2015-241 established a prospective downward adjustment in the North Carolina corporate income tax rates to be effective for tax year 2017. The Amended Stipulation states that PSNC will make downward adjustments to its rates to recognize the reduction in the state corporate income tax rate to 3% beginning January 1, 2017. In the Amended Stipulation, the Stipulating Parties further agreed to work together on determining the appropriate revenue requirement reduction and effectuating such reductions and to file notice of such rate reductions with the Commission prior to implementation. No party opposed this plan to adjust PSNC's rates for reductions in income tax expense and no other evidence on this issue was presented to the Commission in this docket.

The Commission has considered the proposed adjustment to corporate income tax set forth in Paragraph 8 of the Amended Stipulation, as well as all evidence of record regarding the corporate tax changes effectuated by North Carolina Session Law 2015-241, and concludes that the stipulated treatment is consistent with the Commission's prior treatment of other tax reductions and is otherwise fair and reasonable and should be approved.

EVIDENCE AND CONCLUSIONS FOR FINDING OF FACT NO. 28

The evidence for this finding is set forth in the direct testimony of Company witnesses Spanos and Boone, the testimony of Public Staff witness Boswell, and in the Amended Stipulation.

In the Amended Stipulation, the Stipulating Parties agreed that the revised depreciation rates, as presented in the deprecation study filed along with and supported by Company witness Spanos' direct testimony, should be implemented effective January 1, 2017. Public Staff witness Boswell testified that the Public Staff reviewed the depreciation study, found no issues with the new depreciation rates, and recommends approval of the proposed depreciation rates. No party contested the implementation of PSNC's revised depreciation rates as proposed in the Amended Stipulation and no other party submitted any additional evidence on this issue.

Based on the direct testimony of Company witnesses Spanos and Boone and the Amended Stipulation, the Commission concludes that implementation of the revised depreciation rates filed in the instant docket, effective January 1, 2017, as proposed in the Amended Stipulation, is just and reasonable and should be approved for use in this docket.

EVIDENCE AND CONCLUSIONS FOR FINDING OF FACT NO. 29

The evidence for this finding is contained in the direct testimony of Company witnesses Paton and Jackson and the Amended Stipulation.

Company witnesses Paton and Jackson testified to proposed additional changes in the Company's tariffs and service regulations and the reasons underlying those changes. Witness Paton testified that minor changes were made to PSNC's rate schedules, including: (1) adding language stating that the rate schedules are subject to the Integrity Management Tracker; (2) adding language to the Large General Service and transportation rate schedules to indicate a change in billing to state the customer's consumption on the basis of dekatherms rather than therms; and (3) other minor changes as noted on Paton Exhibit 4.

With regard to changes to PSNC's service regulations, witness Paton testified that the Company is proposing several minor changes, including: (1) deleting current Section 29, which addresses the methodology for determining rate service priority pursuant to Commission Rules R6-12 and R6-19.2, and providing this information in a new Rider B to the tariff; (2) adding a provision allowing reclassification of a customer outside of the annual review period under certain circumstances; (3) adding language in Section 21 regarding gas quality and measurement; and (4) adding new Section 29 to clarify the customer's responsibility for paying certain taxes. Witness Paton further stated that PSNC is proposing other minor changes to its riders for clarification, formatting and grammatical corrections.

Witness Paton also testified regarding proposed additional language in Section 21 to address gas quality and measurement. With respect to gas quality, the language in Section 21 assumes that all gas will be delivered by an interstate pipeline and will be, "subject to the quality specifications of the interstate transporter's Federal Energy Regulatory Commission-approved contract." The Commission asked what would happen if gas was produced in North Carolina and put into PSNC's system. Witness Paton responded that she didn't know that the Company, "contemplated anything above and beyond what's coming off the interstate now." (T Vol. 6, p. 121) Witness Jackson responded that the Company had been contacted about biogas projects over the past few years and had contemplated installing a chromatograph at the site where the supply source would come into PSNC's system. When asked whether PSNC would have responsibility for the quality of biogas it accepts, witness Jackson responded that "The producer is required to meet the gas quality standard so that our customers will not be impacted." (T Vol. 6, p. 166) No party objected to the adoption of the proposed language in Section 21 dealing with gas quality. The Commission notes that, should parties seek to place gas into PSNC's system from a North Carolina location, it could be necessary to clarify and amend this section. Further, the language in this Section should not be seen as intended to bar or hinder the development of gas supplies in North Carolina.

With regard to the use of a weighted average BTU content of gas entering PSNC's system, the Commission asked about differences in heat content from different sources of supply. Witness Paton responded that, in the past, PSNC used only one BTU reading, but now that the Company has gas coming from different directions, a weighted average of the BTU content of the gas at different take-off stations is used. Witness Paton added that the difference has not been significant. When asked how much variance would be acceptable, she responded that the use of a system–wide average BTU factor "would balance out any of the pricing concerns." (T Vol. 6, p. 123) No party objected to the adoption of the proposed language in Section 21 dealing with the measurement of gas and the conversion from cubic feet to therms or dekatherms using a weighted average BTU content.

Witness Jackson testified that PSNC reviewed its tariffs and guidelines governing interruptible service following the failure of numerous customers to curtail their usage during an unusually cold period in January 2014. She testified that PSNC is recommending changes in those tariffs and guidelines to improve the Company's ability to serve its firm customers in the event of a curtailment. Regarding proposed changes to Rider A, Curtailment of Service under Commission Rule R6-19.2 and Emergency Services, witness Jackson testified to the following changes: (1) elimination of on-peak emergency service, resulting in one level of emergency service with a single assessment rate; (2) an increase in the assessment rate for Unauthorized Gas from $2.50 per therm to $5.00 per therm, or $50.00 per dekatherm; and (3) removal of the allowance of 10 therms per day for pilot usage, and modification of the rider to allow a maximum of 10 dekatherms per day in Emergency service without prior authorization from PSNC. Witness Jackson testified that these changes will be more effective in deterring noncompliance with curtailment, and more efficient for the Company to administer.

Witness Jackson further testified to two changes being made to PSNC's interruptible Rate Schedules 150, 160, 165 and 180. The first change requires customers to provide and update contact information for two authorized representatives. The second change adds language describing some of the costs, not addressed in Rider A, that a customer may incur for taking Unauthorized Gas during a curtailment event. Witness Jackson described a third change, needed only for Rate Schedule 180, to clarify that non-compliance with a curtailment order may result in PSNC valving off the customer's gas service. Witness Jackson stated that PSNC is proposing these changes to make the curtailment process more effective and efficient.

Finally, witness Jackson described several changes to PSNC's Transportation Pooling Agreement designed to improve the transportation nomination process and encourage poolers to maintain balance in their deliveries of gas to PSNC's system.

Company witness Paton filed Exhibit 4 with her direct testimony. Exhibit 4 includes the Company's proposed tariffs, Rules and Regulations and Transportation Pooling Agreement. For the most part, the Stipulating Parties accepted the tariffs, Rules and Regulations as filed in Paton Exhibit 4. However, the Stipulating Parties made changes to

Riders C and E, and the Transportation Pooling Agreement. Those changes are reflected in Exhibit H to the Amended Stipulation. No party objected to these changes.

The Commission has carefully reviewed these changes to the Company's service regulations, tariffs, riders and the Transportation Pooling Agreement. The Commission finds and concludes that they are just, fair and reasonable and should be approved.

EVIDENCE AND CONCLUSIONS FOR FINDING OF FACT NO. 30

The evidence for this finding is contained in the Application, the direct testimony of Company witness Paton, and the Amended Stipulation.

In its Application, PSNC proposed to refund over a one-year period the EDIT as set forth in Paton Exhibit 13. In the Amended Stipulation, the Stipulating Parties agreed, in Paragraph 12, that it was appropriate to implement a temporary decrement in rates to refund the EDIT as set forth in Paton Exhibit 13 over a one year period. The parties also agreed that in accordance with North Carolina Session Law 2013-316 (House Bill 998), PSNC will refund the additional EDIT over a one-year period, and any amount remaining after twelve months shall be transferred to the All Customers' Deferred Account. No party has contested the refund of EDIT as proposed in the Application and agreed to in the Amended Stipulation, and no other party has presented any additional evidence on this issue.

The Commission has carefully considered the refund of EDIT as proposed in the Amended Stipulation, as well as all of the evidence in the record, and concludes that it is fair and reasonable and should be approved. The Commission further finds that any amount of EDIT remaining after twelve months should be transferred to the All Customers' Deferred Account.

EVIDENCE AND CONCLUSIONS FOR FINDING OF FACT NO. 31

The evidence supporting this finding is contained in the Amended Stipulation.

In Paragraph 13 of the Amended Stipulation, the Stipulating Parties proposed to continue funding of conservation programs at a level of $750,000 per year, as reflected in test year operating expenses. No party contested the continued level of conservation spending or recovery of conservation dollars provided in the Amended Stipulation.

The Commission has carefully considered the proposed continuous level and treatment of conservation funding in the Amended Stipulation and finds it to be fair and reasonable. As a general statement, the Commission believes that energy conservation and efficiency serve the public interest and that conservation measures provide long-term and year-round benefits to PSNC's customers and to the public as a whole.

Based on the foregoing, the Commission concludes that the amount of conservation spending provided for by the Amended Stipulation, and the recovery of those costs through rates, is appropriate for this docket and should be approved.

EVIDENCE AND CONCLUSIONS FOR FINDING OF FACT NO. 32

The evidence for this finding is contained in the Application, the direct testimony of Company witness Ratchford, the Amended Stipulation, Public Staff Late-Filed Exhibit I, and the direct testimony of Public Staff witness Boswell.

In its Application, PSNC proposed to include in its cost of service in this proceeding $275,000 for the funding of GTI research into natural gas pipeline safety and reliability. In his direct testimony, Company witness Ratchford indicated that the Company's proposal to include a contribution to GTI in this case was targeted at GTI's Operations Technology Development (OTD) initiative. Witness Ratchford described the OTD initiative as a program specifically targeted towards developing tools and technologies that will assist local distribution companies such as PSNC in meeting the requirements associated with their TIMP and DIMP.

In Public Staff Late-Filed Exhibit I, witness Boswell demonstrated that PSNC's proposal of $275,000 for the funding of GTI was based on an estimate of the number of meters as of December 31, 2016, multiplied by $0.50 per meter. The Amended Stipulation reflects a downward adjustment to the actual number of meters on June 30, 2016, found in Public Staff Late-Filed Exhibit I.

In the Amended Stipulation, the Stipulating Parties agreed, in Paragraph 14, "that the Company may fund research and development activities through annual payments to GTI that have been included in operating expenses in this proceeding."

No party has contested the funding of GTI proposed in the Application and agreed to in the Amended Stipulation and no other party has presented evidence on this issue.

The Commission has carefully considered the GTI funding proposed in the Amended Stipulation, and concludes that the funding of GTI at the level of $268,631 per year to support the development of new technologies, practices and processes which enhance the safety and reliability of natural gas transmission systems is in the public interest and is also fair and reasonable and should be approved.

EVIDENCE AND CONCLUSIONS FOR FINDINGS OF FACT NOS. 33 – 35

The evidence supporting these findings is contained in the testimony and exhibits of the Company and Public Staff, and in the Amended Stipulation.

In PSNC's last general rate case in Docket No. G-5, Sub 495, the Stipulating Parties agreed that the appropriate Allowance for Funds Used During Construction

(AFUDC) rate for the Company should be the overall rate of return, adjusted for income taxes. In that docket, Company witness Paton testified in response to a question from the Commission that the AFUDC rate would remain in effect until the Company's next general rate case proceeding, which is the docket now before the Commission. The Stipulating Parties in this docket agreed to continue using the overall rate of return, adjusted for income taxes. The Commission finds that the continued use of the overall rate of return for the AFUDC rate, adjusted for income taxes, is just, reasonable and appropriate and should be approved.

PSNC has been applying the statutory maximum of 10% authorized in G.S. 62-130(e) to balances in its Sales Customers Only, All Customers, and Hedging Deferred Gas Cost Accounts. The Stipulating Parties agreed in the Amended Stipulation that beginning with the month in which the Order is issued, PSNC will use an interest rate of 6.6% per annum as the applicable interest rate on all amounts over-collected or under-collected from customers reflected in its Sales Customers Only, All Customers, and Hedging Deferred Gas Cost Accounts. The methods and procedures used by PSNC for the accrual of interest on the Deferred Gas Cost Accounts will remain unchanged.

In response to a question from the Commission, PSNC witness Paton stated that the 6.6% is also applied to the balances in the Customer Utilization Tracker (Rider C) and the Integrity Management Tracker (Rider E). Those two riders explicitly call for a reevaluation of the rate every year, and witness Paton confirmed that the 6.6% rate applied to Deferred Gas Cost Accounts would also be reevaluated annually.

The Commission finds that a reduction in the interest rate applied to the balances in the Sales Customers Only, All Customers, and Hedging Deferred Gas Cost Accounts with the rate to be reevaluated annually is just, reasonable and appropriate and should be approved.

Public Staff witness Perry testified that the Stipulating Parties agreed to changes in certain PSNC reporting requirements including filing the GS-1 Report in a format similar to the ES-1 filed by the electric utilities, effective with filings after January 1, 2017. No party opposed this change, which is administrative in nature. The Commission finds that requiring PSNC to file its GS-1 report in a format similar to the ES-1 filed by the electric utilities is reasonable and appropriate and should be approved.

EVIDENCE AND CONCLUSIONS FOR FINDING OF FACT NO. 36

The evidence for this finding is contained in the hearing testimony of Company witness Addison.

The Commission questioned PSNC witness Addison about PSNC's participation in the SCANA Utility Money Pool (UMP). It was noted that the monthly reports provided by PSNC to the Commission in Docket No. G-5, Sub 484 disclosed a distinctive trend of PSNC being far more often a lender than a borrower in its UMP transactions, and

generally lending far more than it has borrowed. Witness Addison was asked what benefits he saw PSNC receiving from its participation in the SCANA UMP.

He responded that “The Pool is set up so that the different Companies can take advantage of each other’s cash flow or investment abilities at different points in time.” Witness Addison testified that PSNC is “moving back into that period where they’re going to be a net borrower.” (T Vol. 5, p. 117) However, he also testified that:

> PSNC has not had as much capital to invest in the business as it does prospectively, so we've not had to issue a great deal of long-term debt, anything like that, not been into the commercial paper markets a lot in the past. That has changed now and so now PSNC is a net borrower just like SCE&G is. (T Vol. 5, p. 117)

Witness Addison further testified that the UMP has allowed PSNC to earn some return when it has had excess cash. He stated that participation in the UMP is a prudent and efficient use of PSNC's capital. He pointed out that SCANA could have altered its dividend policies, and moved more PSNC cash to SCANA, “but we wanted to keep that capital structure, maintain those credit ratings at PSNC, so we've kept the dividend payouts ratio very similar over the period of time.” (T Vol. 5, p. 118)

To help the Commission monitor PSNC’s activity in the SCANA UMP, the Commission finds good cause to require PSNC to add to the information provided in its monthly UMP report filed in Docket No. G-5, Sub 484. Beginning with the January 2017 report, PSNC shall report the net daily balance of loans and receipts, and the total net interest amount on the balances. This information will be provided for the month, and for the calendar year to date.

EVIDENCE AND CONCLUSIONS FOR FINDING OF FACT NO. 37

The evidence supporting this finding of fact is contained in the consumer statements of position received by the Commission, the Public Staff and the Attorney General. The following is a summary of these statements.

Bruce Sampsell, from Chapel Hill, submitted a consumer statement of position to the Public Staff stating that for the past 15 years the returns on equity for both gas and electric utilities have been declining. He provided an economic analysis and other documentation. He further noted that there is absolutely no sound rationale to support PSNC’s request for a 10.6% ROE. Mr. Sampsell urged the Public Staff to carefully review his submissions as it considers what rate increases and authorized ROE percentage are justified in this circumstance.

Marie Christy, from Kannapolis, submitted a consumer statement of position to the Attorney General’s office stating that she lives by herself on a fixed income. She stated that gas prices have come down all over the nation, but not for heating gas. Ms. Christy stated that she will soon be 75 years old and lives alone. Her only income is

from Social Security. She said she bundles up and keeps her heat low, but still the bills are high.

Bill Raleigh submitted a consumer statement of position by email to the Commission stating that he recently received notification from PSNC of a proposed increase in residential gas pricing. He stated that in 2008, wellhead pricing for gas was just short of $8.00 per thousand cubic feet (tcf) and today it is $3.00 per tcf. The increase requested is supposedly for infrastructure improvements. With the price of gas dropping since 2008 he questions why that increase in operating income was not used for the improvements and why is it needed now if we have been able to exist since 2008. Based on the above and other noted considerations, he does not believe an increase is warranted at this time.

Diana Asbury submitted a consumer statement of position by email to the Commission stating that she seeks help on behalf of those on a limited/fixed income, herself included, for the 9.7% rate increase requested by PSNC. She acknowledges that rate increases are a way of life, but the requested percentage is too high for the senior community. The extra $3.41 per month that bills would increase may not sound like a lot but to the senior community, it could mean a loaf of bread or a container of milk. She stated that for those on a limited/fixed income who are having difficulties making ends meet any increase causes a hardship.

The Commission is aware that some areas of the state, including portions of PSNC's service territory, continue to have significant levels of unemployment and include significant numbers of low-income customers. As a result, the Commission has fully considered the negative impacts of the proposed rate increase on PSNC's customers and weighed those against PSNC's need to remain financially sound so that the Company is able to continue providing all of its customers safe, adequate and reliable natural gas service.

EVIDENCE AND CONCLUSIONS FOR FINDING OF FACT NO. 38

The evidence supporting this finding of fact is contained in the testimony and exhibits of the Company and Public Staff, and in the Amended Stipulation.

As fully discussed above, the provisions of the Amended Stipulation are the product of the give-and-take of settlement negotiations between PSNC, the Public Staff, CUCA, and Evergreen. Comparing the Amended Stipulation to PSNC's Application, and considering the direct testimony of the Public Staff witnesses, the Commission observes that there are provisions of the Amended Stipulation that are more important to PSNC, and, likewise, there are provisions that are more important to the Public Staff. For example, PSNC is intent on obtaining approval for the IMT, which it views as imperative to a fair recovery of its costs of pipeline safety. On the other hand, the Public Staff is intent on limiting the IMT recovery to those costs directly related to pipeline safety, as indicated by the restrictions placed on the IMT in Paragraph 10.B. of the Amended Stipulation

The end result is that the Amended Stipulation strikes a fair balance between the interests of PSNC and its customers. As discussed above, the Commission has fully evaluated the provisions of the Amended Stipulation and concludes, in the exercise of its independent judgment, that the provisions of the Amended Stipulation are just and reasonable to all parties to this proceeding in light of the evidence presented, and serve the public interest. Therefore, the Commission approves the Amended Stipulation in its entirety.

EVIDENCE AND CONCLUSIONS FOR FINDING OF FACT NO. 39

The evidence for this finding of fact is contained in the Application, the testimony and exhibits of the PSNC and Public Staff witnesses, and the record as a whole.

Pursuant to G.S. 62-30, et seq., the Commission is required to set just and reasonable rates for North Carolina's regulated public utilities. In summary, under G.S. 62-133(a) the Commission is required to set rates that are “fair both to the public utilities and to the consumer.” In order to strike this balance between the utility and its customers, the two most important factors the Commission considers are (1) the utility's reasonable and prudent cost of property used and useful in providing adequate, safe and reliable service to ratepayers, and (2) a rate of return on the utility's rate base that is both fair to ratepayers and provides an opportunity for the utility through sound management to attract sufficient capital to maintain its financial strength. See G.S. 62-133(b).

PSNC's continued operation as a safe and reliable source of natural gas for its customers is vitally important to PSNC's individual customers, as well as to the community and business entities served by PSNC, and the economy in general. PSNC presented credible and substantial evidence of its need for increased capital investment to, among other things, meet the requirements of pipeline safety laws, expand and upgrade its pipeline and other infrastructure to serve new customers, and expand the use of technology to more efficiently serve its customers.

For example, PSNC witness Harris testified that the Company has strengthened its pipeline safety efforts in response to the federal Pipeline and Hazardous Materials Safety Administration's (PHMSA's) transmission and distribution pipeline safety regulations. Witness Harris stated that the PHMSA regulations place a great deal of responsibility on PSNC, and are complex, costly and subject to continued change.

In addition, witness Harris testified that since 2008 PSNC has added 77,025 customers, 1,424 miles of transmission and distribution mains, and 83,866 service lines. He also described significant system improvements made by PSNC, such as new compressor stations, and new transmission and high-pressure distribution pipelines.

Further, witness Harris testified that since 2008 PSNC has completed the conversion to automated meter reading, and enhanced its computer-aided dispatch system to enable service calls to be routed more efficiently. Witness Harris also testified

that PSNC has 154 vehicles that operate on compressed natural gas (CNG), and that in 2015 alone the Company saved more than $300,000 by using CNG, compared to the cost of using gasoline and diesel fuel.

These are representative examples of the capital investments made by PSNC since its last rate case in order to continue providing safe and efficient service to its customers. Based on all of the evidence, the Commission finds and concludes that the rates established herein strike the appropriate balance between the interests of PSNC's customers in receiving safe, adequate and reliable natural gas service at the lowest possible rates, and the interests of PSNC in maintaining the Company's financial strength at a level that enables the Company to attract sufficient capital. As a result, the Commission concludes that the rates established by this Order are just and reasonable under the requirements of G.S. 62-30, et seq.

IT IS, THEREFORE, ORDERED as follows:

1. That the Amended Stipulation is hereby approved in its entirety.

2. That the Company is hereby authorized to adjust its rates and charges in accordance with the Amended Stipulation and this Order (as such rates may be adjusted for any changes in the Benchmark, and changes in Demand and Storage Charges prior to the effective date of the revised rates) effective for service rendered on and after November 1, 2016.

3. That the Company is authorized to implement the Integrity Management Tracker as described in Paragraph 10 of the Amended Stipulation and Rider E to the Company’s tariffs.

4. That the Company is authorized to implement the changes to its Rate Schedules and Service Regulations contained in Paton Exhibit 4 and attached to the Amended Stipulation as Exhibit H for periods effective on and after November 1, 2016.

5. That the Company shall file clean versions of the new and revised tariffs and service regulations to comply with this Order within five (5) days from the date of this Order. Rider E of such filing shall include the appropriate percentages for Section III.(f) and Section IV.(b).

6. That in the true-up of fixed gas costs for periods subsequent to November 1, 2016, in proceedings under Commission Rule R1-17(k), the Company shall use the fixed gas costs allocations set forth in Exhibit C to the Amended Stipulation.

7. That the Customer Usage Tracker mechanism factors set forth on Late-Filed Exhibit D to the Amended Stipulation are approved for use in the implementation of the provisions of that mechanism subsequent to November 1, 2016.

8. That the Company shall refund the EDIT as set forth in Paragraph 12 of the Amended Stipulation, and any balance that remains at the end of twelve months shall be transferred to the All Customers' Deferred Account.

9. That for quarters ending after the effective date of the Order in this docket, the Company shall begin utilizing a revised NCUC GS-1 Earnings Surveillance Report format that is similar to the format of ES-1 Earnings Surveillance Report that is submitted to the Commission by the electric utilities.

10. That beginning November 1, 2016, the Company shall use 6.60% as the applicable interest rate on all amounts over-collected or under-collected from customers reflected in its Sales Customers Only, All Customers, and Hedging Deferred Gas Cost Accounts. The methods and procedures used by the Company for the accrual of interest on the Deferred Gas Cost Accounts shall remain unchanged.

11. That beginning with its January 2017 UMP monthly report in Docket No. G-5, Sub 484, regarding the SCANA Utility Money Pool, PSNC shall report the net daily balance of loans and receipts, and the total net interest amount. This information shall be provided for the month, and for the calendar year to date.

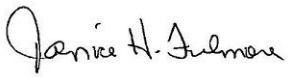
12. That the Company is authorized to implement the other actions, practices, principles, and methods agreed upon in the Amended Stipulation.

13. That the Company shall send the notice attached hereto as Attachment A to its customers beginning with the billing cycle that includes the rate changes approved herein.

ISSUED BY ORDER OF THE COMMISSION.

This the __28th__ day of October, 2016.

NORTH CAROLINA UTILITIES COMMISSION



Janice H. Fulmore, Deputy Clerk

STATE OF NORTH CAROLINA
UTILITIES COMMISSION
RALEIGH

DOCKET NO. G-5, SUB 565

BEFORE THE NORTH CAROLINA UTILITIES COMMISSION

In the Matter of		
Application of Public Service Company	)	
of North Carolina, Inc. for a General	)	PUBLIC NOTICE
Increase in its Rates and Charges	)	

NOTICE IS HEREBY GIVEN that the North Carolina Utilities Commission (Commission) issued an Order allowing Public Service Company of North Carolina, Inc. (PSNC or the Company) to increase its rates and charges by approximately $19 million annually, or 4.39% overall, effective for service rendered on and after November 1, 2016.

On March 31, 2016, PSNC filed an application seeking a general increase in its rates and charges, implementation of a new Integrity Management Tracker mechanism, implementation of new depreciation rates, updates and revisions to the Company's service regulations and tariffs, and proposed funding for gas distribution research activities conducted by the Gas Technology Institute (GTI).

In its application, the Company requested an increase of approximately $41.6 million annually. The Company stated that the rate increase was needed because it has, since its last general rate case in 2008, greatly expanded natural gas service in its rapidly growing service area by making significant capital improvements to its system, and has invested substantial additional capital in order to comply with federal environmental and pipeline safety and integrity regulations and requirements. In support of its request for a rate increase, the Company explained that the increase is necessary in order to allow PSNC to access capital markets on reasonable terms, earn a fair return on its investment, and allow the Company to continue investing in the growth, safety, and reliability of its system.

The increase approved by the Commission was the result of a stipulation (Stipulation) entered into between the Company and other parties to the proceeding, including the Public Staff – North Carolina Utilities Commission. The Commission notes that the increase to specific classes of customers will vary in order to have each customer class pay its fair share of the cost of providing service.

Overall, the Commission has approved a residential rate increase for the Company of 4.0%. This represents an increase to the typical residential bill of approximately $24

per year or $2.00 per month. These approved increases are associated with allowed expenses and return on investment only and do not contemplate increases or decreases that may occur in association with gas cost adjustments to rates as allowed by North Carolina law.

The Commission has also approved an Integrity Management Tracker mechanism, which will allow the Company to recover the capital related costs of compliance with federal pipeline and distribution integrity management requirements on an intra-rate case basis. This mechanism will facilitate timely recovery of costs related to capital investment needed to comply with federal law and will help to avoid frequent general rate proceedings.

A list of approved rates can be obtained from the Company's website, www.psncenergy.com, or at the Office of the Chief Clerk of the Commission, Dobbs Building, 430 North Salisbury Street, Raleigh, North Carolina, where copies of the Commission's Order and the Stipulation are available for review by any interested person. The Commission's Order, the Stipulation, and other filings in this docket, can be viewed/printed from the Commission's website at http://www.ncuc.net using the Docket Search function.

VIII. ULTIMATE FINDINGS AND CONCLUSIONS 111

IX. ORDER 113

because customers pay for these items before HECO pays them to governmental authorities. The remaining components require working cash because HECO must pay for these expenses before its customers pay for the service provided by these items. The working cash requirement is calculated by multiplying the average net collection lag by the average daily operating expenditure amount.

HECO calculates its working cash requirements for the test year at $1,785,000 under present rates, and $462,000 at proposed rates. The Consumer Advocate's revised estimates are $1,609,000 at present rates, and $965,000 at proposed rates. DOD's revised estimates are $1,829,000 at present rates, and $898,000 at proposed rates.

The Consumer Advocate and DOD accept HECO's calculated revenue and expense lag days used to determine working cash requirements. The difference in the parties' estimates stems from the differences in their estimates for the various components of the working cash calculation. In attached Exhibit B, we reflect the level of expenses approved by this decision and order and the net lag days. As presented there, we adopt as reasonable, the working cash requirement of $1,879,000 at present rates and $818,000 at proposed rates.

VI.

RATE OF RETURN

A. Introduction

In deciding what constitutes a fair rate of return on HECO's rate base, we adhere, as in past rate cases, to the guidelines set forth in Bluefield Waterworks and Improvement Co. v.

Pub. Serv. Comm'n, 262 U.S. 679 (1923), and Fed. Power Comm'n v. Hope Natural Gas Co., 320 U.S. 591 (1944). The guidelines prescribe that a fair return must:

1. be commensurate with returns on investment in other enterprises having corresponding risks and uncertainties;

2. provide a return sufficient to cover the capital costs of the business, including service on the debt and dividends on the stock; and

3. provide a return sufficient to assure confidence in the financial integrity of the enterprise to maintain its credit and capital-attracting ability.

HECO submits that a fair rate of return on its rate base for the test year is 9.67 per cent, with a rate of return on common equity of 12.75 per cent. The Consumer Advocate proposes a rate of return on rate base of 8.94 per cent, with a rate of return on common equity of 11.25 per cent. DOD recommends a 9.21 per cent rate of return, with a return on common equity of 11.8 per cent.

All parties agree that a fair rate of return should be equal to the composite cost of capital. This composite cost represents the carrying cost of money received from investors to finance the net rate base. It is the sum of the weighted earnings requirements of each element of HECO's capital structure. HECO's capital structure includes: (1) short-term debt, (2) long-term debt, (3) preferred stock, and (4) common equity.

The parties utilized the same capital structure in their rate of return analyses. They agree on the costs of short-term and long-term debt and preferred stock, but disagree on the cost of common equity. In the sections that follow, we examine and discuss each capital structure component.

B. Capital Structure

The parties agree that an average test year capital structure should be used, as prescribed by the commission in recent rate cases.[12] The Consumer Advocate and DOD agree with HECO's projected average 1994 test year capital structure, as follows:

	Amount in Thousands	Per Cent of Total
Short-term debt	$45,240	5.56 %
Long-term debt	315,065	38.69 %
Preferred stock	59,582	7.32 %
Common equity	394,492	48.44 %
Total	814,379	100.00 %

The proposed structure is consistent with HECO's declared aim to manage its capital structure so as to achieve certain average target ratios. It is also consistent with the average test year capital structure prescribed by the commission in recent rate cases.[13] The commission agrees with the parties that the proposed structure is reasonable. The debt ratio is similar to the debt ratio in HECO's last rate case and the capital structure is close to management's target.

Light Co., Inc., Docket No. 6999, Decision and Order No. 11893 (Oct. 2, 1992); In re Hawaiian Elec. Co., Inc., Docket No. 6998, Decision and Order No. 11699 (Jun. 30, 1992); In re Gasco, Inc., Docket No. 6434, Decision and Order No. 11464 (Apr. 32, 1992); and In re Hawaiian Elec. Co., Inc., Docket No. 6531, Decision and Order No. 11317 (Oct. 17, 1991).

[13]See In re Hawaiian Elec. Co., Inc., Docket No. 6998, Decision and Order No. 11699 (1992); In re Hawaii Elec. Light Co., Inc., Docket No. 6999, Decision and Order No. 11701 (1992); In re Gasco, Docket No. 6343, Decision and Order No. 11564 (1992).

C. Cost of Short-Term Debt

HECO's projected cost of short-term debt is 4.0 per cent. This estimate is based on HECO's cost of issuing commercial paper. HECO calculated the weighted average cost for HECO commercial paper borrowings for the first half of 1993 at 3.51 per cent. With short-term interest rates expected to increase, HECO estimates that a 4.0 per cent average cost of short-term debt for 1994 is reasonable. The Consumer Advocate and DOD agree with HECO's estimate. We agree that 4.0 per cent is a reasonable estimate of HECO's average cost of short-term debt.

D. Cost of Long-Term Debt

HECO initially estimated the average cost of long-term debt at 7.04 per cent. HECO subsequently revised its estimate to 7.07 per cent to reflect the actual rates for bonds issued in 1993. The revenue bonds issued in 1993 were sold at a discount of 2.0 per cent. The 7.07 per cent represents the embedded composite interest rate for HECO's projected long-term debt. It reflects (1) HECO's annual interest expense, (2) the annual amortization of debt premiums and issuance expenses for outstanding debt issue, (3) the annual amortization of the differential between interest earned and the sum of interest expenses and issuance costs related to undrawn proceeds from the sale of special purpose revenue bonds, and (4) the amortization of the discount on the 1993 bond issuance.

HECO used those methodologies approved by the commission in past rate cases in calculating its projected average cost of long-term debt. The parties agree with HECO's projection, and we accept the projected cost as reasonable.

E. Cost of Preferred Stock

HECO's estimate of the effective annual cost of its preferred stock is 7.3 per cent. HECO derived the effective rate of 7.3 per cent by dividing the average annual requirement of $4,349,000 by the average net proceeds of preferred stock outstanding of $59,580,000. It calculated the annual requirement by adding the annual dividends to the annual amortization of issue expense for series O, Q, and R over the lives of each issue in proportion to the amount of the issues outstanding in each year.

The Consumer Advocate and DOD agree with HECO's cost of preferred stock. We also concur and find 7.3 per cent to be a reasonable cost of preferred stock for test year 1994.

F. Cost of Common Equity

HECO submits that it should be allowed to earn a return on common equity of at least 12.75 per cent. HECO urges that the return allowed on common equity must be commensurate with returns on investments in other enterprises having corresponding risks and uncertainties, and must provide a return sufficient to assure confidence in the financial integrity of the enterprise so as to maintain its credit and capital-attracting ability. The Consumer Advocate proposes a return on common equity of 11.25 per cent. DOD proposes a return of 11.8 per cent.

The parties agree that the cost of common equity should be derived from market information. The parties also agree that multiple methods should be employed in determining the cost of common equity due to the judgment and limitations inherent in all methods. The parties further agree that the methods employed

should be expectational and forward-looking. However, the differences in the parties' recommended rates of return result from, among other things, (1) the use of different methodologies in determining appropriate return on equity, (2) the use of different groups of companies as comparables to HECO, (3) the use of market data from different sources, (4) the use of market data at different points in time, (5) disagreement about adjustment of the rate of return to reflect issuance cost, (6) differing assessments about HECO's business risks, and (7) differences in judgment.

1. Proxies Used

HECO's common stock is not publicly traded. Therefore, the use of the comparables technique to estimate the cost of common equity is appropriate. The comparables technique calculates the cost of common equity for a portfolio of companies whose risks are comparable to those of HECO. It assumes that the rate of return on common equity for the proxy companies is a valid estimate of the return necessary for HECO. Adjustments, based on judgment, can be made to the rate of return to account for differences between the financial, operating, and business characteristics of the comparable companies and those of HECO.

In In re Hawaiian Elec. Co., Inc., Docket No. 6531, Decision and Order No. 11317 (1991), we identified the criteria by which the appropriateness of the use of a company as a proxy is determined. We stated that a proxy company should: (1) have almost all of its revenues derived from electric operation; (2) be primarily a electric utility; (3) have tradeable common stock; (4) not be a holding company with more than one subsidiary;

(5) have a common equity ratio of 35 per cent to 50 per cent; (6) be small; (7) be substantially a regulated company; (8) have no major generating plants under construction; and (9) have stock and bond ratings similar to that of HECO.

We reaffirmed this criteria in HECO's last rate case. See Docket No. 6998, Decision and Order No. 11699. However, in Docket No. 7000, Decision and Order No. 13429, we took note of the changes in circumstances that have arisen since we established the comparables criteria in Docket No. 6531. We took particular note of the heavy construction program that HECO and its subsidiaries have embarked upon and of the rising competition in the generation of electric power. We offered that, in light of these changes, it may be appropriate for the commission's comparables criteria to be now applied advisedly.

HECO selected as its comparable electric companies those possessing the following characteristics: (1) electric business providing 90 per cent or more of company revenues; (2) regulated entity; (3) small in size; (4) regulatory environment similar to HECO's; (5) common equity ratio or financial risk similar to HECO's; (5) nuclear risk similar to HECO's; (6) minimal diversification outside of core electric business; (7) no construction of large, base load generating plant; and (8) stocks and bond rating similar to HECO's. Six companies met the standards: Atlantic Energy, Central Louisiana Electric, Delmarva Power, KU Energy, Puget Sound Power & Light, and Southwestern Public Service. All of these companies have

Value Line safety rank of 1 or 2,[14] and the average Standard & Poor's bond rating of the companies is A, two notches above HECO's BBB+.[15] In terms of regulatory environment, and common equity ratios, these companies are comparable to HECO. None of the companies is diversified in any significant way and none is building large, base load generating plants. With this group of comparables, HECO performed the discounted cash flow (DCF) analysis, market equity risk premium (MERP) test, and the capital asset pricing model (CAPM) analysis.

Contending that the risks of electric companies are no different from those of other non-electric companies, HECO also used as comparables a group of 329 companies (each with a Value Line safety rank of 1 or 2) included in the Value Line universe of 1,600 companies. HECO performed a comparable risk discounted cash flow (CRDCF) analysis on this group of Value Line companies. HECO justifies the use of these companies on the ground that (1) investors do not wear blinders and they require comparable returns for comparable risk or a fair risk-adjusted return among investments with different risks; and (2) Value Line safety rank is a measure of risk, and the safety ranks of the Value Line 329 companies it selected are comparable to the safety ranks of HECO's electric comparable companies.

The Consumer Advocate used three sets of criteria in selecting its electric comparables: general characteristics,

---

[14]HEI's Value Line safety rank is 3. This ranking reflects HEI's non-utility business to some degree.

[15]HECO asserts that it had difficulty finding companies rated triple B by S&P with Value Line safety rank of 2 or better.

operating characteristics, and financial characteristics. The criteria grouped under general characteristics included (1) publicly-traded electric utility regulated primarily by one state commission; (2) geographical diversity; (3) not a holding company; and (4) no significant non-utility operations. Criteria under operating characteristics included: (1) total revenues less than $800 million; (2) electric revenues at least 80 per cent of total revenues; (3) no nuclear generation; and (4) purchased power at least 5 per cent of supply but not greater than 50 per cent. Criteria under financial characteristics included: (1) senior secured debt rated at least Baa3, but not greater than A1 by Moody's; (2) senior secured debt rated at least BBB-, but no greater than A+ by Standard & Poor's; (3) common equity ratio greater than 40 per cent, but less than 50 per cent; (4) allowance for funds used during construction less than 25 per cent of earnings; and (5) no reduction in common dividend in five years.

The selection criteria used by the Consumer Advocate in this docket differ from those it used in Docket No. 6998 (the last HECO rate case) in the following respects. The Consumer Advocate added the general characteristic category of criteria; it lowered the minimum bond rating and the maximum dollar revenue allowable; and it added a purchase power criterion. The Consumer Advocate deemed the following companies (out of the approximately 90 major electric utilities covered by Value Line and Merrill Lynch) to have met the criteria: Central Louisiana Electric, Empire District Electric, Idaho Power, Interstate Power, and Nevada Power. With this group of comparables, the Consumer Advocate applied the DCF approach and the CAPM.

DOD attempted to follow the commission's criteria in selecting its group of comparables. It asserts that it had difficulty finding a group that met all of the criteria without exception. DOD initially selected the following as comparables: Central Maine Power, Central Hudson Gas & Electric, Cincinnati Gas & Electric, DQE, Minnesota Power & Light, New York State Electric & Gas, Portland General Corporation, PSI Resources, Public Service of Colorado, and Puget Sound Power. In oral testimony, DOD eliminated Central Maine Power from the group of comparables. Due to changes in circumstances, Central Main Power no longer satisfies the standards of comparability. All remaining companies have Standard & Poor's bond rating within one step of HECO's BBB+ rating and Value Line betas of 0.65 or 0.70. (HECO's Value Line beta is 0.70.) To this group of comparables, DOD applied the DCF method, the CAPM, and a very limited version of the comparable earnings test to determine the rate of return on common equity.

DOD also used HEI, HECO's parent company, as a proxy for HECO, and applied the DCF, risk premium (RP), CAPM, and the comparable earnings tests to HEI. In addition, DOD used Moody's 24 electric companies as comparables and applied the RP test to this group.

2. The Methodologies Applied

As noted above, HECO applied the DCF, the MERP, and the CAPM tests to its group of electric comparables and the CRDCF model to a group of Value Line companies to determine the cost of common equity for HECO. The Consumer Advocate applied the DCF method and the CAPM to its group of comparables. DOD applied the DCF, the

CAPM, and a limited version of the comparable earnings test to its group of comparables and to HEI. DOD also used the RP model on HEI and Moody's 24 electrics. In addition, as a check, it applied the DCF, CAPM, and the limited version of the comparable earnings approaches to HECO's group of electric comparables.

The DCF method is a stock valuation approach to estimating the cost of common equity. The most commonly applied version of the DCF method is the constant growth DCF. In this method, the required rate of return is the sum of (1) the current dividend yield, represented by the ratio of expected next-period dividends to current stock price, and (2) the expected constant dividend growth rate. The underlying theory of the constant growth DCF method is that the market price an investor pays for a share of stock represents the present value of expected future dividend yields, grown at a constant rate. The future flow of dividend yields is discounted at a rate reflecting investor preference for current income and investor assessment of dividend realization risk. Thus, the rate of return on common equity capital under the DCF model is the rate that compensates investors for risk and time, assuming that the security is efficiently priced. Estimation of the DCF rate of return requires estimates of the current dividend yield and the dividend growth rate.

The CRDCF method is procedurally identical to the DCF method. In this docket, the CRDCF method is the DCF method applied by HECO to the Value Line companies. As already noted, the underlying assumptions in the use of the CRDCF method are that the risks in electric utilities are comparable to the risks in other non-electric utility companies and that investors consider a

variety of stocks when investing and they require comparable returns for comparable risks or a fair risk-adjusted return among investments with different risks.

Under the RP method, the rate of return is the sum of (1) the rate of return on risk-free, long-term debt and (2) a risk premium for the additional risk associated with the stock in question. The proxy for the risk-free rate is generally the rate on long-term United States government bonds. The risk premium is the difference between the rate on long-term United States government bonds and the expected return on the common stock. The RP method uses the DCF analysis of investor expected returns to calculate the equity risk premium

The MERP test is similar to the RP test. The difference is that, while the RP method uses CDF-derived expected returns of the stock in question and expected bond returns, the MERP test uses the actual market returns of both stock and bonds to determine the equity risk premium.

The CAPM is a variation of the risk premium approach. As in the RP method, the required rate of return under the CAPM is the sum of (1) a risk-free component, which constitutes the floor on expected return and is generally measured by the return on long-term United States government bonds, and (2) a risk premium component, which represents an additional return over the riskless rate required to compensate investors for bearing additional risk. However, the risk premium under the CAPM is proportional to the "nondiversifiable" (or "systematic") risk of the security in question (the security-specific risk that cannot be eliminated through diversification).

The nondiversifiable risk is obtained by applying the appropriate beta to the amount by which the average market return exceeds the risk-free rate of return. Beta is a measure of the relative risk of a security compared to the risk of the average market stock. The beta for the market is set equal to one. A stock with a beta greater than one is more risky than the average market stock, and a stock with a beta less than one is less risky than the average market stock. The use of CAPM to determine the rate of return on common equity requires estimates of the risk-free rate, the stock's beta, and the rate of return on the market.

3. The Parties' Analyses

a. HECO

HECO's estimate of the rate of return on common equity is based on calculations made by its expert witness, Charles A. Benore, first vice-president, PaineWebber, Inc. Mr. Benore first applied the market equity RP test to his group of comparables. Initially he estimated the cost of common equity on the RP method at 12.0 per cent, without issuance costs. With issuance costs of 30 basis points, Mr. Benore's initial cost of common equity was 12.3 per cent. In his calculation, Mr. Benore used the average daily closing yields of long-term United States government bonds of 6.92 per cent for the month beginning April 28, 1993, to May 27, 1993. For the risk premium, Mr. Benore first determined the average equity risk premium for the last economic cycle, 1983 to 1991, for each of his comparable companies. He then averaged the values of the three companies with the highest values to derive an average risk premium of 5.1 per cent. He average only

the three highest values to compensate for HECO's higher risk as compared to the comparable companies. He derived his cost of common stock equity by combining the risk free rate of 6.92 per cent and the risk premium of 5.1 per cent. In rebuttal, Mr. Benore increased the cost of common equity initially derived by 0.5 per cent to account for the higher returns on electric stocks now required by investors as a result of increased competition in the electric industry.[16] However, there is some confusion in Mr. Benore's calculation. Mr. Benore's revised cost of common equity on the market equity RP method is 12.2 per cent, including issuance costs, 0.1 per cent less than his initial calculation of 12.3 per cent.

Mr. Benore's application of the CAPM model to his group of comparable companies resulted initially in cost of common equity of 12.7 per cent, before issuance costs, and 13.0 per cent with issuance costs. In arriving at this result, Mr. Benore used as the risk free rate the average yield to maturity on long-term United States government bonds of 6.92 per cent for the month of May 1993. For beta, Mr. Benore used an adjusted beta of 0.92. The adjusted beta is the weighted average based on the proportion of the stocks of the comparable companies held by institutional and individual investors, using the Value Line beta for the institutional investors and a beta of 1.0 for individual investors. Mr. Benore justifies the use of an adjusted beta by noting that

---

[16]Mr. Benore notes a shift in investors' requirement of electric stocks from about 90 basis points less to about 40 basis points more than yields on treasury bonds during the period July 1993 to October and November 1993. Mr. Benore used DOD's group of electric comparables for this analysis.

(1) for beta to work, adequate diversification is crucial, (2) the minimum number of stocks needed to be held by an investor for proper diversification is fifteen, (3) individual investors typically own only about three stocks, and (4) 78 per cent of the shares of the comparable companies are owned by individuals. For the average expected market return, Mr. Benore used 13.1 per cent. The 13.1 per cent is the sum of the blended growth rate of 10.2 per cent for Standard & Poor's 500[17] and the yield on a 12-month forward dividend of 2.9 per cent.

On rebuttal, Mr. Benore revised the results obtained through the application of the CAPM to account for the higher returns now required by investors on electric stocks because of increased competition in the electric industry. Mr. Benore deemed that an upward adjustment should be made to his initial calculation. Taking into account the inability of individual investors to diversify away competition risk, Mr. Benore increased the cost of common stock indicated by the CAPM by two-thirds of the 0.5 per cent cost of common not captured by the equity risk premium model, or 0.3 per cent. (Mr. Benore's use of two-thirds is derived from the premise that, on the average, two-thirds of the shares of electric power companies are owned by individuals.) Again, as in the risk premium revised calculation, there is some confusion in the resulting recommended cost of common equity under the CAPM. Mr. Benore's revised CAPM cost of common equity is 13.1 per cent,

[17]The blended growth rate, as calculated by Mr. Benore, is the dividend growth for the last five years and the projected earnings growth for the next five years, with more weight given to projected growth rate.

including issuance costs, just 0.1 per cent more than his initial calculation.

Mr. Benore's initial calculation of the cost of common equity under the DCF model, as applied to his group of electric comparables, was 10.1 per cent, including issuance costs of 30 basis points. On rebuttal, Mr. Benore revised his calculation to 10.2 per cent, including issuance costs. In computing dividend yield, Mr. Benore increased the current dividend by the applicable growth rate at the normal, dividend change, timing pattern for the comparable companies. Where dividend had not been increased on a regular basis and four quarters or more of time had passed without a dividend increase, Mr. Benore increased dividend in the second quarter of 1993. For stock price, Mr. Benore used the average price for a 20-day trading period, beginning April 28, 1993, to May 27, 1993. To the yield derived (dividing forward dividend by price), Mr. Benore added the growth rate derived from Value Line and International Brokers Estimate System (IBES). The growth rate is a blending of the historical and projected growth rates.[18] Mr. Benore then applied the DCF equation and derived a cost of common equity for each of the comparable electric companies. He eliminated the lowest three results, to reflect HECO's higher risks, and averaged the three highest results to obtain a DCF cost of common equity of 9.8 per cent, before issuance costs, and

[18]Mr. Benore derived the blended growth rate by first averaging Value Line projected dividend per share (DPS) growth rate and Value Line projected earnings per share (EPS) growth rate. He then averaged the average Value Line projected growth rate and the IBES projected growth rate. Finally, Mr. Benore averaged the average Value Line and IBES growth rate and Value Line historical five-year DPS growth.

10.1 per cent with issuance costs. On rebuttal he revised his calculation to 10.2 per cent, with issuance costs.

Mr. Benore's application of the DCF method to the group of 329 Value Line companies resulted initially in a cost of common equity of 13.0 per cent, with issuance costs. For his calculation, Mr. Benore used the average yield of 3.66 per cent for the 329 companies, based on a June 1, 1993, Value Line report,[19] and an average last five-year growth rate of 9.0 per cent.[20] As a check on his calculation, Mr. Benore calculated the DCF cost of common stock of 25 companies having Value Line safety rank of 1 or 2 and Value Line beta of 0.90. This calculation produced a 13.2 per cent cost of common equity. Noting that his group of electric comparable companies also have Value Line safety ranks of 1 or 2 and an adjusted beta of 0.92, Mr. Benore would have us accept the result of his DCF calculation, using Value Line companies, as a reasonable index of HECO's cost of common equity. On rebuttal, Mr. Benore revised the cost to 13.2 per cent, with issuance costs.

The average of Mr. Benore's calculations of the costs of common equity, utilizing the MERP method, the CPM, the DCF model applied to his electric comparable, and the DCF model applied to the Value Line companies, is 12.2 per cent (based on the revised

---

[19]In calculating the DCF cost of common equity, based on his electric comparables, Mr. Benore used an average period price, rather than a spot price. In the case of the Value Line 329 companies, Mr. Benore used a spot price on the ground that the number of companies involved made the average yield likely to be unbiased.

[20]Per Value Line, the dividend growth rate of the 329 Value Line companies for the past five years averaged 9.6 per cent, and the projected earnings and dividends growth rate averaged 8.4 per cent. The average of the averages equals 9.0 per cent.

figures). Mr. Benore argues that because of the downward bias inherent in the DCF test, as applied to his electric comparables, the results of the electric comparable-DCF test should be disregarded. Mr. Benore offers that the current inflated prices of electric common stocks and the consequent excessive price-to-book ratio produce absurd DCF results. Without the electric utility DCF result, the average cost of common equity of all tests is 12.8 per cent. Mr. Benore recommends a cost of common equity for HECO of 12.75 per cent.

b. The Consumer Advocate

The Consumer Advocate's proposed cost of common equity is based on calculations made by its expert witness, J. Robert Malko, professor of finance, College of Business, Utah State University. Dr. Malko made two DCF calculations, one based on historical growth and the other on projected growth. For historical growth, Dr. Malko averaged Value Line's past five-year and 10-year historical growth rates for each of his comparable companies.[21] The average ranged from 1.8 per cent to 5.5 per cent for his group of comparable companies. For projected growth rate, Dr. Malko consulted (1) Value Line forecasts of growth in earnings, dividends, and book value and (2) IBES estimates of earnings growth.[22] Dr. Malko settled on a range of projected growth rate of

---

[21]Based on Value Line Investment Survey, 1993 edition.

[22]The Value Line forecasts are from Value Line Investment Survey, 1993 edition. The IBES forecasts are those contained in the November 18, 1993, issue. Dr. Malko represents he focused primarily on mean earnings growth estimate from IBES, using the high and low values to assess the disparity in estimates, and he used Value Line forecasts as the lower bound. Dr. Malko further

1.5 per cent to 3.5 per cent. For dividend, Dr. Malko used Value Line's forecast, and for price, Dr. Malko used the current market price taken from the March 1, 1994, issue of the Wall Street Journal. The calculation, using an average historical growth rate, produced a range of returns on common equity for Dr. Malko's group of comparable companies of 9.1 per cent to 11.9 per cent, with a mean of 10.5 per cent. The use of the projected growth rates produced a range of 9.3 per cent to 10.1 per cent, with a mean of 9.8 per cent. Averaging the results of the historical growth calculation and the projected growth calculation produced a range of 9.2 per cent to 11.0 per cent.

Dr. Malko also made two CAPM calculations, one based on historical returns and the other on projected expected returns. Dr. Malko would use the CAPM (or any other risk premium model) to calculate the cost of common equity only in conjunction with the DCF method. CAPM does not incorporate dividend yield into the pricing of securities (whereas DCF does). Dr. Malko believes that beta is not the only risk factor priced by the market, that dividends are also an important factor that explains stock price. Dr. Malko contends that CAPM will underestimate the cost of equity for electric utilities because they tend to have low betas. Low beta stocks have higher returns than the CAPM predicts, and high beta stocks have lower returns than CAPM predicts.

For his CAPM calculation, Dr. Malko used a five-year United States treasury note for the risk free rate. He used a

---

represents that his dividend growth forecasts are all slightly below the IBES mean earnings growth estimate. He considers his estimate to be a conservative estimate, allowing for any overestimation of earnings growth.

five-year treasury note because it represents a mid-point between a 30-day treasury note and a 30-year treasury note. He notes that a 30-year treasury note contains a maturity premium to compensate investors for interest rate risk[23] and a 30-day note has volatility. Neither is, thus, risk free. Further, Dr. Malko believes that a five-year treasury note is consistent with equity investors' planning horizon and results in little or no maturity premium considering current interest rates. Dr. Malko used a risk free rate of 5.9 per cent, as noted in the March 1, 1994, issue of the Wall Street Journal.

For beta, Dr. Malko used the average betas published in Merrill Lynch Security Risk Evaluation, November 1993, and in Value Line Investment Survey, 1993 edition.[24] The Merrill Lynch betas ranged from 0.57 to 0.73, with an average of 0.62. The Value Line betas ranged from 0.45 to 0.65, with an average of 0.55. Dr. Malko averaged the Merrill Lynch average and the Value Line average to derive a beta of 0.59.

For historical expected excess returns for each of his comparable companies, Dr. Malko extracted data from Ibbotson Associates' Stocks, Bonds, Bills, and Inflation 1993 Year Book. Both the intermediate-term United States government bonds

---

[23]A risk that interest rate may rise or fall during the 30-year period. A 30-year treasury bond is issued at a rate that is fixed over the 30-year period.

[24]Merrill Lynch betas are raw betas, based on the S&P 500 composite index, using straight regression based on five years of monthly returns or 60 observations. Value Line betas are derived from regression analysis between weekly per cent changes in the price of stock and weekly per cent changes in the New York Stock exchange composite indices over a five-year period. Value Line reports betas are adjusted for tendency to converge toward 1.0.

(five-year bonds) and common stock total returns were measured from 1926 to 1992. The common stock total return index was based on the S&P composite index. The arithmetic mean of the intermediate-horizon risk premiums equaled 7.30 per cent. For the projected expected excess returns, Dr. Malko used Value Line data. Using February 25, 1994, Value Line data, Dr. Malko calculated a projected excess return of 7.30 (the same excess return or risk premium as calculated using historical data).

Since the historical and projected excess returns were the same, the CAPM calculation using historical expected excess return and the CAPM calculation using projected expected excess return produced the same result. Adding the risk free rate (5.9 per cent) and the product of beta times the excess return on the market resulted in a CAPM cost of common equity for the comparable companies between 9.7 per cent to 10.8 per cent, with an average of 10.2 per cent.

Dr. Malko's recommended cost of common equity for HECO is 11.25. This cost represents the high end of the results of his DCF and CAPM calculations. He acknowledges that the 11.25 per cent is higher than the averages of his DCF estimates (10.0 per cent) and his CAPM estimates (10.2 per cent). However, he recommends the higher end because HECO's business risks are higher than those for his portfolio of comparable companies as evidenced by, among other things, HECO's split bond ratings, significant construction program, and purchased power obligations.

c. DOD

DOD's proposal on the cost of common equity is based on calculations made by its expert witness, John B. Legler, professor of banking and finance at the University of Georgia. Dr. Legler first calculated the cost of common equity utilizing the DCF method. He calculated the DCF results for HEI and his group of comparable electric companies. For HEI, Dr. Legler used a growth rate ranging from 4.5 per cent to 5.5 per cent. The growth rate was derived from historical earnings and dividend growth rates, retention growth rate,[25] and Value Line forecasts. For price, Dr. Legler initially used $38.02, the average HEI's stock price for the three-month period August 1993 to October 1993. For dividend, Dr. Legler used the expected dividend for 1994 of $2.33.[26] The resulting calculation produced a DCF cost of common equity for HEI of 10.6 per cent to 11.6 per cent. At the price prevailing on October 29, 1993 ($37.785), the DCF results ranged from 10.7 per cent to 11.7 per cent. Dr. Legler subsequently revised his estimates, using the December 1993 to February 1994 prices. Based on the December to February average, Dr. Legler calculated HEI's DCF cost of common equity at 11.23 per cent to 12.3 per cent.

For his group of electric comparables, Dr. Legler initially calculated a DCF cost of common stock of 8.20 per cent to 9.23 per cent, based on average stock prices between August 1993 to

---

[25]Retention growth rate is the product of percentage of earnings retained times earned rate of return on equity.

[26]The $2.33 was derived by adding to current dividend of $2.32, $0.01 increase in dividend for the next year. HEI had increased its dividend by $0.01 a share in the fourth quarter of each of the last several years.

October 1993, and 8.37 per cent to 9.45 per cent, based on October 29, 1993 stock prices. On oral testimony, Dr. Legler revised his results to reflect the elimination of Central Maine Power from his group of electric comparables and to reflect the average stock prices between December 1993 and February 1994, and the stock price prevailing on February 28, 1994. As revised, the DCF cost of common equity for Dr. Legler's group of electric companies range from 8.63 per cent to 9.66 per cent, based on the average December to February prices, and from 8.88 per cent to 9.96 per cent, based on February 28, 1993, stock prices.

Dr. Legler does not believe that primary reliance should be had on the traditional risk premium (RP) method of estimating cost of common equity, due to volatile conditions and interest rate risk in the long-term bond market. Despite his reservations, Dr. Legler performed risk premium analyses on HEI and Moody's 24 electrics. Risk premiums are based on the differentials between the expectant returns on stocks and on long-term debt. The stock returns are based upon the DCF method.

For HEI, Dr. Legler calculated the risk premium on both retention (or sustainable) growth and analyst's forecasted growth. The retention growth rate is based on Value Line's projected data for earnings per share, dividends per share, and return on equity from its published reports on HEI towards the end of each year, 1978 to 1993; and the analysts' forecasted growth rate is based on Value Line's direct forecasted dividend growth rates. Dr. Legler derived the risk premium for HEI by first estimating HEI's cost of equity for the first of January of each year beginning 1979, based on the data in Value Line's report published toward the end of the

previous year, and then comparing each year's estimate to the 30-year treasury bond rate for December of the previous year. He also compared the expected return on HEI stock to the existing bond yield at the time Dr. Legler assumed to be the reported December Moody's public utility bond yield for the single-A rating class of the previous year. The difference between the DCF calculated return on equity and the then-current bond yield constituted the risk premium. Dr. Legler, then, averaged the risk premiums of the years in question.[27] Dr. Legler's calculations resulted in an average risk premium, based on the DCF analysis using Value Line's retention growth, of 2.75 per cent, relative to the treasury bond yield for the period 1979 to 1994. Relative to the treasury bond yield for the last five-year period, 1990 to 1994, the premium averaged 2.19 per cent. Relative to appropriate utility bond rates, the risk premium averaged 4.48 per cent for the period 1979 to 1994, and 1.17 per cent for the shorter period. The risk premium, based on the DCF estimated returns using Value Line's direct dividend growth forecasts, averaged 4.46 per cent relative to treasury bond and 2.87 per cent relative to utility bonds for the longer period, and 2.43 per cent and 1.05 per cent, respectively for the shorter term.

For the long-term debt component of the risk premium model, Dr. Legler initially used the November 4, 1993, 30-year United States government bond rate of 6.17 per cent. He also used the November 4, 1993, single-A rated public utility bond rate of 7.27 per cent. Dr. Legler in his written testimony calculated the

[27]In averaging the risk premium results for the years 1979 to 1994, Dr. Legler excluded all negative risk premiums.

cost of common equity for HEI, based on long-term risk premium and treasury bond yield, at 8.92 per cent, at the retention growth rate, and 10.63 per cent, at Value Line's forecasted dividend growth rate. Based on short-term risk premium and treasury bond yield, Dr. Legler calculated the cost of common equity for HEI at 8.36 per cent at the retention growth rate and 8.51 per cent at the Value Line's forecasted dividend growth rate. Dr. Legler calculated the cost of common equity for HEI, based on long-term risk premium and utility bond yield, at 8.75 per cent, at the retention growth rate, and 10.14 per cent at the Value Line's forecasted dividend growth rate; based on short-term risk premiums and utility bond yield, Dr. Legler calculated the cost of common equity for HEI at 8.31 per cent at the retention growth rate and 8.44 per cent at the Value Line's forecasted dividend growth rate.

Dr. Legler applied the risk premium analysis to Moody's 24 electrics in a manner similar to the application of the method to HEI, except for the calculation of the growth rates. For Moody's 24 electrics, Dr. Legler based the growth rate, first, on a five-year moving average historical retention growth rate and, second, on a five-year historical dividend growth rate. The application of the risk premium method to Moody's 24 electrics produced a risk premium, relative to treasury bond, averaging 10.03 per cent, based on the historical retention growth rate, and 4.41 per cent, based on the historical dividend growth rate. Relative to utility bond yield, the calculation produced a risk premium averaging 9.49 per cent, based on the historical retention growth rate, and 10.04 per cent, based on the historical dividend growth rate.

Dr. Legler posited that overall, the cost of common equity, based on the risk premium model, should be about 10.6 per cent. On oral testimony, however, Dr. Legler acknowledged the rise in 30-year treasury bond rates of roughly 60 basis points since he prepared his written testimony. Therefore, he revised his estimate of the risk premium cost of equity to 11.2 per cent.

Dr. Legler is skeptical about using CAPM in estimating the cost of common equity. He asserts that ordinarily he does not use CAPM. However, he prepared calculations of the cost of common equity using the CAPM because this commission has in the past utilized the results of CAPM analysis in determining the cost of common equity. Dr. Legler used both the S&P betas and the Value Line betas in his calculation of the cost of common equity. Dr. Legler notes that Value Line reports that its betas are adjusted for their long-term tendency to converge towards 1.0.[28] Dr. Legler questions the truth of that statement, but applied Value Line's betas, nonetheless. S&P betas are unadjusted, raw betas. Value Line betas and S&P betas for Legler's group of electric comparables averaged 0.67 and 0.51, respectively. HEI's Value Line beta is 0.70, and its S&P beta is 0.59.

Based on the long-term historical market premium of 7.3 per cent and a risk-free 30-year United States Treasury bond rate of about 6.2 per cent, Dr. Legler calculated, in his written testimony, a cost of common equity for his group of comparables of 11.09 per cent, based on Value Line average beta, and 9.92 per cent, based on S&P average beta. For HEI, Dr. Legler derived a

---

[28]Arnold Bernhard, How to Use the Value Line Investment Survey, at 61.

cost of common equity of 11.31 per cent, based on Value Line beta, and 10.51 per cent, based on S&P beta. For comparison, Dr. Legler calculated the cost of common equity for Mr. Benore's group of comparables, using the average Value Line average beta of 0.62 and average S&P beta of 0.44 per cent for that group of comparables. The results were 10.73 per cent, based on Value Line average beta, and 9.41 per cent, based on S&P average beta. In light of the rise in United States Treasury bond rates, in oral testimony Dr. Legler raised the CAPM cost of common equity for his comparable electrics, based on Value Line average beta, from 11.09 per cent to 11.7 per cent.

Dr. Legler performed a limited comparable earnings analysis. Dr. Legler did not perform the standard, traditional comparable earnings test in this docket, primarily because of the difficulty in determining what companies are comparable to the utility in question. Dr. Legler rejected the use of industrials as the only basis of comparison because of questionable comparability of the measured earnings and differences in risks of regulated and unregulated companies. Dr. Legler posits that his DCF analysis parallels the traditional comparable earnings approach and leads to the same conclusion.

However, Dr. Legler reviewed Value Line's direct estimates of the returns on book equity for the groups of comparable electrics and HEI. Value Line average projected returns for 1993, 1994, and 1996-1998 are 11.4 per cent, 11.3 per cent, and 11.7 per cent, respectively, for Legler's group of comparables. They are 9.5 per cent, 10.0 per cent, and 11.0 per cent, respectively, for HEI; and 12.0 per cent, 11.9 per cent, and

12.6 per cent, respectively for Mr. Benore's group of electric comparables. Dr. Legler concludes that these estimates suggest the reasonableness of his own estimates for his group of comparable electrics.

Based on the commission's precedent of considering the results of all three methodologies--DCF, RP, and CAPM--of averaging the average of the RP and CAPM results and the DCF result, Dr. Legler in his written testimony recommended a cost of common equity for HECO ranging between 10.8 per cent and 11.3 per cent, without issuance costs, and 11.0 per cent and 11.5 per cent with issuance costs of 20 basis points. In developing this range, Dr. Legler utilized (1) the mid-point of the HEI DCF results using average prices (11.3 per cent), (2) the upper end of HEI risk premium results based on longer-term risk premiums (10.6 per cent), and (3) the CAPM range of 9.9 per cent to 11.1 per cent. He also considered the trend in the stock market, the recent interest rates, and HECO's relative riskiness. For purposes of calculating a weighted average cost of capital, Dr. Legler recommended a cost of common equity of 11.25 per cent, the mid-point of the range. On oral testimony, Dr. Legler noted that his revisions place his DCF estimate at about 11.8 per cent, the RP estimate at about 11.2 per cent, and the CAPM estimate at 11.7 per cent, for a weighted average of 11.6 per cent. With 20 basis points added for issuance costs, the revised recommended cost of common equity is 11.8 per cent.

4. Discussion

a. HECO's comparables and methodologies

Primary issues in determining HECO's appropriate rate of return on common equity in this docket are HECO's use of the comparable risk DCF method and its use of "adjusted" beta in its CAPM analysis. In addition to the group of companies selected in accordance with the commission's criteria, HECO used as comparable companies 325 out of the universe of 1600 Value Line companies and applied the DCF method to that group of companies. As applied to this group of companies, the DCF method is re-named the comparable risk DCF. The comparable risk DCF method applied to the 329 Value Line companies having a safety ranking of 1 or 2 produced a cost of common equity of 13.2 per cent, a result far greater than the results produced by HECO's use of other methodologies.

Mr. Benore defends the use of the Value Line companies on the basis of that investors do not invest only in electric stocks and that investors require comparable returns for comparable risks. The sole basis for equating the risks of HECO to the risks of 329 Value Line companies is the similar Value Line safety ratings for the 329 Value Line companies and the six electric companies selected by HECO as electric comparables. In Decision and Order No. 11699, Docket No. 6998 (HECO's last rate case) and in Decision and Order No. 11893, Docket No. 6999 (HELCO's last rate case), we rejected the results of the application of the CRDCF model to the S&P 500 on the ground that the use of the S&P composite index of 500 common stocks is a departure from the use of "comparables" as we defined that term in Docket No. 6531. We noted in those decisions that S&P 500 companies are significantly more risky than

electric companies, since S&P companies operate in an environment where competition is more pronounced than in the environment in which electric utilities exist. Then, in Decision and Order No. 13429, Docket No. 7000 (MECO's last rate case) we rejected the use of Value Line companies for the same reason we rejected the use of the S&P 500 common stocks. We indicated there that the use of Value Line safety rankings as the sole criterion for determining comparability of the Value Line companies with HECO is insufficient and that comparables should be chosen on the basis of several indices to ensure that they are close to the utility in question in terms of risk, financial strength, and other characteristics. We noted in footnote 34 of Decision and Order No. 13429 some other possible criteria that could be applied.

As noted earlier, in Decision and Order No. 13429, we did acknowledge that it may now be appropriate, in light of changing circumstances, for the criteria for the selection of comparable companies, established by the commission in October 1991 in Docket No. 6531, to be applied advisedly. However, as stated in Decision and Order No. 13429, the commission will not accept Value Line companies as proxies for HECO, based solely on the asserted comparable risks determined through the application of Value Line safety ratings.

HECO's adjustment of betas in the computation of the cost of common equity using the CAPM was addressed in Decision and Order No. 13429, Docket No. 7000. We know of no one, other than Mr. Benore, in behalf of HECO, proposing weighting beta by the proportion of the stock held by institutions and by individuals. We know of no jurisdiction that has accepted such adjustment, and

we know of no text on finances that validates adjustments of beta to account for holdings by individual investors of stocks in a minimal number of companies. We note Dr. Legler's observations that Mr. Benore's adjustment of betas allows institutional investors to receive a return greater than they require and rewards individual investors for their failure to diversify away risk at the expense of ratepayers, and that under Mr. Benore's beta adjustment approach, two utilities with the same beta may have different required returns, depending on the percentage of one or the other types of investors in each.

A comment is also in order concerning HECO's use of the market equity risk premium model. In the application of this model, HECO applied the actual returns (as contrasted to expected returns) on bonds and stocks derived during the last economic cycle, 1983 to 1991, to determine equity risk premium. In Decision and Order No. 13429, Docket No. 7000 (MECO's last rate case), we expressed our preference for the use of expected returns, since investors invest based on return expectations. We acknowledged that the difference between expected returns and realized returns should diminish over a long period, as lower returns experienced over short-run periods are offset by higher returns over other short-run periods. However, we questioned Mr. Benore's use of the actual returns during the economic cycle 1983 to 1991. (Mr. Benore testified for MECO in that docket.) We questioned the sufficiency of the length of that period for the difference between expected returns and realized returns to narrow. In this docket, Mr. Benore represents that the equity risk premium has been relatively stable from one economic cycle to another, citing the average equity risk

premium of 6.5 per cent for the 1976 to 1982 economic cycle, as compared to the average equity risk premium of 6.3 per cent over the 1983 to 1991 economic cycle. We are not satisfied that the economic cycle of 1983 to 1991 provides a sufficient length of time for the actual returns over that period to be used in determining equity risk premium. However, as we did in Decision and Order No. 13429 for MECO, we will use Mr. Benore's results of the equity risk premium test, based on actual returns, as an indicator of the cost of HECO's common equity.

b. DOD's comparables

HECO objects to the use of HEI by DOD in calculating the cost of HECO's common equity. However, DOD notes that a parent company is sometimes used as a proxy for the utility in question. We are aware that HEI is not the same as HECO. HEI is a holding company with a number of subsidiaries, a number of which are not regulated electric utilities. For purposes of this docket, however, we will consider the results produced by DOD's application of the various costing methods in determining HECO's cost of common equity. The use of HEI tended to produce results on the higher end of the range of results produced by the various methodologies.

While we accept the results of the application of the various costing methodologies to HEI, we do not accept the results of the RP method applied to Moody's 24 electrics. There is nothing in the record to show on what basis Moody's 24 electrics may be deemed to be comparable to HECO. In Decision and Order No. 13429, we rejected the use of S&P 24 electrics by MECO solely on the basis of bond ratings falling within one rating of MECO's bonds. As

stated there, comparables should be chosen on the basis of a number of indices.

c. Commission's calculation of the cost of common equity

As in other dockets, experts disagree on the relative merits of the various methods of determining the cost of common equity. In this docket, both Dr. Malko and Dr. Legler would use the risk premium method and the CAPM with caution. On the other hand, Mr. Benore would give little, if any, weight to results produced by the traditional constant growth DCF. The position asserted by Mr. Benore in this docket is the same as that he advanced in Dockets No. 6998, No. 6999, and No. 7000. We are cognizant of the limitations of the DCF method. There are, however, shortcomings to be found in other methods, as well. Again, as before, we will consider the DCF, the RP, and the CAPM results in determining a utility's cost of common equity. The results of the DCF method and the combined results of the RP method and CAPM should be given equal weight.

The determination of a reasonable cost of common equity is ultimately a matter of informed judgment. We begin our analysis with the range of rates of return on common equity offered by each of the parties' witnesses. HECO presented four estimates, using four different methodologies: MERP, CAPM, electric utility DCF, and Value Line comparable risk DCF. We discard the result of the comparable risk DCF for the reasons stated above concerning utilization of Value Line companies as comparables to HECO. Although we have reservations about the use of a short period by

HECO in calculating equity risk premium in its MERP analysis, we will use HECO's MERP result with caution, since it is close to DOD's RP and CAPM results. We also discard the result of HECO's CAPM analysis because of the beta adjustments made by Mr. Benore. We will use all of the results of the DCF and CAPM analyses conducted by the Consumer Advocate. We also accept the results of all of the calculations made by DOD, except the results of the application of the RP method to Moody's 24 electrics, for the reason stated earlier. We acknowledge the concerns of HECO about the ability of HECO to earn the allowed return under the Consumer Advocate's and DOD's calculated results. However, any deficiency in the Consumer Advocate's or DOD's analyses can be accounted for in our final determination of HECO's cost of common equity.

The following summarizes the parties' calculations of the cost of common equity.

Party	Methodology	ROE With Issuance Cost	ROE Without Issuance Cost
HECO	DCF	10.2%	9.9%
HECO	MERP	12.2%	11.9%
CA	DCF		10.0%
CA	CAPM		10.2%
DOD	DCF	12.0%	11.8%
DOD	RP	11.4%	11.2%
DOD	CAPM	11.9%	11.7%

In our calculations below, we ignore issuance costs. We consider issuance costs later in our discussion. If we average HECO's, the Consumer Advocate's, and DOD's DCF results we derive an average DCF cost of common equity of 10.6 per cent. The Consumer Advocate's and DOD's CAPM results average 11.0 per cent. The

average of HECO's MERP and DOD's RP and CAPM results is 11.4 per cent. If we follow our past practice of averaging the results produced by the DCF approach and the risk premium method (including the MERP and CAPM results), we calculate a cost of common equity of 11.0 per cent.

We now consider the arguments raised by HECO. HECO asserts that the results obtained from the application of the DCF model should be given little, if any, weight, due to the downward bias inherent in the results, that adjustments must be made for MECO's higher risks as compared to those of the comparable companies selected pursuant to the commission's criteria, and that issuance cost should be included in any computation. We agree with HECO that there is currently a downward bias in the DCF model. However, we do not consider such downward bias as justifying the total elimination of the results derived from the application of the DCF model. We consider the use of the results of the DCF model, with caution, and make such adjustments as we deem appropriate in our final cost of common equity.

We also agree that HECO's business risk is higher than the business risks of the comparables used by all of the parties. The reliance on imported oil as fuel source, the lack of interconnection with reliable outside sources of power, and the need for capital investments are factors that make investment in HECO more risky than investments in other companies. In addition, the current national and local economic conditions and HECO's minimal investment grade bond rating are matters of concern. Taking all of these risk factors into consideration, we believe that an upward adjustment of 115 basis points to the 11.0 per cent

cost of common equity derived above is appropriate. Such an adjustment is necessary to allow for HECO's business and financial risks. It also recognizes the effects of national and local economies and the currently increasing interest rates. By this adjustment the rate of return on common equity rises to 12.15 per cent.

The 12.15 per cent is higher than HECO's, the Consumer Advocate's, or DOD's calculated return on common equity, without issuance costs. It is close to HECO's MERP result and to DOD's DCF and CAPM results, with issuance costs. We, thus, consider it unnecessary to consider in this docket the relative merits of allowing for stock issuance costs, although HECO strenuously argues for issuance costs of 30 basis points and DOD recommends issuance costs of 20 basis points. Upon consideration of all factors, we conclude that a rate of return of 12.15 per cent on common equity is reasonable.

G. Cost of Capital

As a result of our conclusions regarding the average-year capital structure and the cost of the various component parts of HECO's capital structure, the overall weighted cost of capital for HECO for test year 1994 is 9.38 per cent.

	Capitalization Amount (000s)	Per Cent	Cost Rate	Weighted Capital Cost
Short-term debt	45,240	5.56	4.00%	0.22%
Long-term debt	315,065	38.69	7.07%	2.74%
Preferred stock	49,582	7.32	7.30%	0.53%
Common equity	394,000	48.44	12.15%	5.89%
Total	$814,379	100.00		9.38%

Upon weighing all the evidence in this proceeding, a fair and reasonable return to HECO in its properties actually used and useful for public utility purposes is 9.38 per cent for test year 1994. This return, in the commission's opinion, satisfies the guidelines set forth in Bluefield and Hope.

VII.

COST OF SERVICE, REVENUE ALLOCATION, AND RATE DESIGN

A. Cost of Service

In its embedded cost of service study, HECO followed these three major steps in allocating the utility's total cost to the various rate classes: (1) functionalization of costs and rate base items into the major operating functions of production, transmission, and distribution; (2) classification of these functions into energy-related, demand-related, and customer-related cost components; and (3) allocation of these cost components to the various rate classes.

In the functionalization step, HECO assigned all costs associated with generation, including fuel cost and purchased power expense, to the production function. It assigned all costs associated with transferring power from power plants to substations or between switching stations at transmission voltage levels to the transmission function. It assigned all costs associated with delivering power from transmission voltage levels through the distribution system to the customer to the distribution function.

In the classification step, HECO followed the cost classification rationale contained in NARUC's Electric Utility Cost Allocation Manual. Following that rationale, HECO assigned the

XVI. ORDER 530

XVII. PARTIAL DISSENT OF COMMISSIONER WESTBROOK 532

I. INTRODUCTION

On November 6, 2015, Massachusetts Electric Company ("MECo") and Nantucket Electric Company ("Nantucket Electric"), together doing business as National Grid ("National Grid" or "Company") filed a petition with the Department of Public Utilities ("Department") for an increase in its base distribution rates for electric customers. National Grid was last granted an increase in electric distribution rates in 2009 in Massachusetts Electric Company/Nantucket Electric Company, D.P.U. 09-39 (2009). The Department docketed the instant matter as D.P.U. 15-155, and suspended the effective date of the proposed rate increase until October 1, 2016, to investigate the propriety of the Company's petition.

MECo and Nantucket Electric are regulated investor-owned public utilities incorporated in Massachusetts (Exh. NG-MLR-1, at 23). Both companies operate as wholly owned subsidiaries of National Grid USA, which is an indirect wholly owned subsidiary of National Grid plc, a public limited company incorporated under the laws of England and Wales (Exh. NG-MLR-1, at 23).[1] National Grid is engaged in the retail distribution and sale of electricity across a Massachusetts service territory that serves approximately 1.3 million customers in 172 cities and towns (Exh. NG-MLR-1, at 23).

In the instant filing, the Company seeks a combined increase in base distribution rate revenues of $201.9 million (Exh. NG-RRP-2, at 1 (Rev. 3)).[2] The Company contends that its

---

[1] National Grid USA also owns affiliated electric and gas distribution companies operating in Rhode Island and New York, while National Grid plc owns and operates electricity transmission, gas transmission and distribution networks in the United Kingdom (Exh. NG-MLR-1, at 23).

[2] On September 12, 2016, the Company advised the Department of the need to file amended Annual Returns for calendar years 2014 and 2015 to correct a purported error

petition also includes a $68.7 million decrease in revenues recovered in charges outside of base rates (Exh. NG-RRP-2, at 1 (Rev. 3)). Thus, the Company claims that its petition requests a net increase in annual delivery revenues of $133.2 million, or an approximately 20.3 percent increase in current annual delivery revenues (Exh. NG-RRP-2, at 1 (Rev. 3)).

As part of this filing, National Grid also seeks to continue, with several proposed modifications, its capital investment recovery mechanism ("CapEx"), which was approved in D.P.U. 09-39 and permits the Company to recover the revenue requirement associated with incremental capital investments. Further, National Grid seeks to continue, with several proposed modifications, its storm contingency fund, which originally was approved in New England Electric System, D.T.E. 99-47 (2000) and permits the Company to recover costs associated with certain storm-restoration activities. In addition, the Company offers several rate design-related proposals and a tariff intended to recover incremental property tax expense. The cost of service component of the Company's filing is based on a test year of July 1, 2014, through June 30, 2015 (Exhs. NG-MLR-1, at 3; NG-RRP-1, at 6).

II. PROCEDURAL HISTORY

On November 16, 2015, the Attorney General of the Commonwealth of Massachusetts filed a notice of intervention pursuant to G.L. c. 12, § 11E(a). On December 1, 2015, the

---

regarding the recording of plant in service for fiscal years ending March 31, 2013 through 2016 (Cover Letter at 1, dated September 12, 2016). According to National Grid, now that the costs are correctly recorded, the Company will experience a net increase to operating expense of approximately $200,000 annually that will not be reflected in new distribution rates set in this proceeding (Cover Letter at 1). The Company does not seek to incorporate into the record in the instant case these amended Annual Returns, or the corrected recording of plant and expenses (Cover Letter at 1). Nevertheless, the Department finds that the Company's filing is extra-record material to which we give no probative weight. The Department will not consider these materials in evaluating the Company's instant petition for a base rate increase.

Department granted full party status to the Department of Energy Resources ("DOER") and the Low-Income Weatherization and Fuel Assistance Program Network ("Low Income Network"), limited participant status to PowerOptions, Inc., and joint limited participant status to NSTAR Electric Company, NSTAR Gas Company and Western Massachusetts Electric Company, together doing business as Eversource Energy. On December 10, 2015, the Department granted limited participant status to Solar Energy Industries Association. The following day, the Department granted limited participant status separately to The Berkshire Gas Company, and jointly to The Energy Consortium ("TEC") and Associated Industries of Massachusetts ("AIM"). On December 14, 2015, the Department granted limited participant status to The Alliance for Solar Choice. On December 17, 2015, the Department granted limited participant status to Brightergy, LLC.

On January 14, 2016, the Department granted limited intervenor status to Acadia Center; Vote Solar; Direct Energy Business, LLC, Direct Energy Services, LLC, and Astrum Solar, Inc. d/b/a Direct Energy Solar (collectively as "Direct Solar"); Energy Freedom Coalition of America, LLC ("EFCA"); and Northeast Clean Energy Council, Inc. ("NECEC"). See Massachusetts Electric Company and Nantucket Electric Company, D.P.U. 15-155, Interlocutory Order (January 14, 2016).

Pursuant to notice duly issued, the Department held five public hearings in the Company's service territory: (1) in Brockton on March 15, 2016; (2) in Nantucket on March 21, 2016; (3) in Worcester on March 30, 2016; (4) in Great Barrington on April 4, 2016; and (5) in Lawrence on April 6, 2016. The Department also received written comments from public officials and several National Grid ratepayers.

The Department held 15 days of evidentiary hearings from May 2, 2016, through May 26, 2016. In support of the Company's filing, the following witnesses, all of whom are employed by National Grid USA Service Company, Inc. ("NGSC"), provided testimony: (1) Marcy L. Reed, president – Massachusetts; (2) Michael D. Laflamme, vice president, regulation and pricing – New England; (3) Margaret H. Kinsman, director of revenue requirements group – New England; (4) Maureen P. Heaphy, vice president of compensation, benefits and pensions; (5) James H. Patterson, Jr., director of network strategy – New England; (6) Stefan Nagy, analyst, program strategy; (7) John E. Walter, principal engineer, outdoor lighting and attachments group; (8) Jeanne A. Lloyd, principal program manager (electric pricing), regulation and pricing group – New England; (9) Peter T. Zschokke, director, regulatory strategy; (10) Scott M. McCabe, manager (electric pricing), regulation and pricing group – New England; (11) Timothy Roughan, director, energy/environmental policy; (12) Daniel J. DeMauro, Jr., director, IS Regulatory Compliance; (13) David H. Campbell, vice president, corporate finance; (14) Christopher P. Murphy, acting vice president, chief information officer; (15) Ryan Moe, senior specialist for vegetation strategy; (16) Daniel Bunszell, vice president, electric operations – New England; (17) Gladys Sarji, customer satisfaction and regulatory compliance; (18) Nancy Concemi, director, New England call center; and (19) John B. Currie, director, revenue and regulation – New England. In addition to NGSC personnel, the following outside consultants provided testimony on behalf of National Grid: (1) Robert B. Hevert, managing partner, Sussex Economic Advisors; (2) Ronald E. White, president, Foster Associates Consultants, LLC; (3) Howard Gorman, president, HSG Group, Inc.; and (4) Wayne S. Watkins, Pro Unlimited, Inc.

The Attorney General sponsored the testimony of the following witnesses:[3] (1) J. Randall Woolridge, Ph.D., professor of finance, Pennsylvania State University; (2) David J. Effron, consultant, Berkshire Consulting Services; (3) Donna Ramas, principal, Ramas Regulatory Consulting, LLC; (4) Timothy Newhard, analyst, Attorney General's Office of Ratepayer Advocacy; (5) Kyle Connors, analyst, Attorney General's Office of Ratepayer Advocacy; (6) Daniel O'Neill, president, O'Neill Management Consulting; (7) Charles Fijnvandraat, principal, Fijnvandraat Consulting Group; (8) Scott Rubin, consultant; and (9) William Dunkel, principal, William Dunkel and Associates.

The Low Income Network sponsored the testimony of John G. Howat, senior policy analyst, National Consumer Law Center, and Marina Levy, research assistant, National Consumer Law Center. Acadia Center sponsored the testimony of Abigail Anthony, Ph.D., director, grid modernization and utility reform, Acadia Center. Direct Energy sponsored the testimony of Frank Lacey, principal, Electric Advisors Consulting. EFCA sponsored the testimony of Tim Woolf, vice president, Synapse Energy Economics, Inc., and Melissa Whited, senior associate, Synapse Energy Economics, Inc. NECEC sponsored the testimony of R. Thomas Beach, principal consultant, Crossborder Energy. Finally, Vote Solar sponsored the testimony of Nathan Phelps, program manager, distributed generation regulatory policy, Vote Solar.

---

[3] On December 15, 2015, the Department approved the Attorney General's retention of experts and consultants at a cost of $250,000, pursuant to G.L. c. 12, § 11E(b). See D.P.U. 15-155, Order on Attorney General Retention of Experts and Consultants (2015).

On June 17, 2016, the Department received initial briefs/comments from the Attorney General, DOER, the Low Income Network, Acadia Center, Direct Energy, EFCA, NECEC, NSTAR Electric Company and Western Massachusetts Electric Company (collectively as "Eversource") and Vote Solar. National Grid submitted its initial brief on July 1, 2016.

On July 18, 2016, the Department received reply briefs from the Attorney General, DOER, the Low Income Network, Acadia Center, Direct Energy, EFCA, NECEC, Vote Solar, PowerOptions, Inc., and, collectively, from TEC and AIM. The Company submitted its reply brief on July 25, 2016. The evidentiary record consists of more than 3800 exhibits and responses to 97 record requests.

III. NATIONAL GRID'S USE OF A SPLIT TEST YEAR

A. Introduction

The cost of service component of the Company's filing is based on a test year of July 1, 2014, through June 30, 2015, a non-calendar or "split" test year (see Exhs. NG-MLR-1, at 3; NG-RRP-1, at 6).[4] Non-calendar test years have, on occasion, been accepted by the Department – most recently for water companies. See, e.g., Plymouth Water Company, D.P.U. 14-120, at 16 (2015); Milford Water Company, D.P.U. 12-86, at 1 (2013); Colonial Water Company, D.P.U. 11-20 (2011); Massachusetts-American Water Company, D.T.E. 00-105 (2001). As discussed in further detail below, the Department recently expressed its strong preference for a calendar year test year and noted that any company that seeks to rely on a split test year faces a

[4] A test year that spans two calendar years, as opposed to a test year based on a calendar year, is often referred to as a "split" test year. NSTAR Gas Company, D.P.U. 14-150, at 45, n.26 (2015); Plymouth Water Company, D.P.U. 14-120, at 12, 16 (2015). A test year, whether a calendar test year or a split test year, comprises a period of twelve consecutive calendar months.

high burden to demonstrate as a threshold matter that its proposed test year is reviewable and reliable and represents a full accounting of the company's operations for the period. D.P.U. 14-120, at 16 & n.11.

In support of its split test year filing, National Grid retained the independent accounting firm of PricewaterhouseCoopers, LLC ("PwC") to review the Company's operations and verify the accuracy of its non-calendar year test year financial data (Exhs. NG-RRP-1, at 6-7; NG-RRP-3).[5] PwC's review was performed under the attestation standards of the American Institute of Certified Public Accountants (Exh. NG-RRP-3, at 4). On October 30, 2015, PwC issued a report ("PwC Report") of its findings, which the Company submitted as part of the initial filing in this case (Exh. NG-RRP-3).

The scope of PwC's examination encompassed transactions recorded by the Company and NGSC (Exh. NG-RRP-3, at 4). PwC reviewed selected transactions that occurred during the test year in order to form an opinion on the accuracy of those transactions (Exh. NG-RRP-3, at 4). The transactions reviewed included vendor costs, labor costs and employee expense costs (Exh. NG-RRP-3, at 5).[6] PwC also examined general ledger journal entries relating to operating expense general ledger accounts (Exh. NG-RRP-3, at 5). The PwC Report describes the sampling method used for each cost area (Exh. NG-RRP-3, at 5). The PwC Report also

---

[5] The Company does not seek inclusion of the costs incurred for this review in this proceeding (Exhs. DPU-4-9; DPU-4-10; AG-15-1, at 2 (corrected)).

[6] For example, PWC performed the following tests with respect to vendor costs: (1) compare the cost recorded in the Company's ledger to the underlying vendor support such as an invoice or similar document; (2) review the underlying vendor information for the details of the services performed and identify whether services relate to the entity to which they were charged; and (3) review the underlying vendor information for the details of the services performed and identify whether the services were performed in support of the capital program (Exh. NG-RRP-3, at 6).

describes the testing procedures performed to ensure that costs were incurred, accurately calculated to reflect the underlying transaction, allocated to the correct operating company (where applicable), properly allocated among capital and expense (where applicable), and consistent with Company policy (Exh. NG-RRP-3, at 6). PwC examined, on a test basis, evidence supporting management's assertions regarding costs and performed other such procedures as PwC considered necessary under the circumstances (Exh. NG-RRP-3, at 27, 46). PwC concluded that the selected costs, in all material respects, were accurate (Exh. NG-RRP-3, at 27, 46).

B. Positions of the Parties

1. Attorney General

The Attorney General submits that because the Department establishes a utility's cost of service using test year data, and that the resulting distribution rates may be in effect for five years or more, a utility's test year financial information must be "accurate, verifiable, and verified" (Attorney General Brief at 8). Further, the Attorney General contends that the use of a spilt test year, rather than a calendar year, is problematic because it does not conform to the annual reporting periods or requirements set forth by the Department, the Federal Energy Regulatory Commission ("FERC"), and the Securities and Exchange Commission (Attorney General Brief at 8). She asserts that in the instant case, because National Grid chose to file its base rate case using a split test year, the Company must comply with the directives set forth in D.P.U. 14-120 to ensure that the record contains reliable and verifiable financial information (Attorney General Brief at 9-10).

In this regard, the Attorney General argues that National Grid failed to comply with the split test year filing requirements set forth in D.P.U. 14-120, because the Company: (1) failed to show that its test year account balances tie back to its Annual Returns to the Department;[7] and (2) failed to provide an audit of the test year amounts that resulted in an unqualified opinion letter (Attorney General Brief at 9).[8] With respect to the first point, the Attorney General contends that the Company's requested rate increase is based on unverified worksheets (Attorney General Brief at 9). Further, the Attorney General claims that the PwC Report does not support the notion that the Company's account balances tie back to the Annual Return (Attorney General Reply Brief at 5). The Attorney General asserts that because a calendar year test year ties back to a company's Annual Return, the same level of verification is required for a split test year filing (Attorney General Reply Brief at 5). According to the Attorney General, the Department cannot on its own verify the accuracy of the Company's test year data and instead an

---

7 Electric distribution companies, such as National Grid, must file an Annual Return with the Department annually on or before March 31. G.L. c. 164, § 83; 220 C.M.R. § 79.00, Introduction. The Annual Return includes the FERC Form 1 prescribed by FERC. 220 C.M.R. § 79.04(1). The FERC Form 1 presents financial and other operating data based on a calendar year ending December 31. 18 C.F.R. § 141.1(b)(2). The use of a calendar test year ensures that test year amounts tie back to the amounts included in the Annual Returns, and offers a level of assurance that the amounts have been properly recorded and are generally available for review. D.P.U. 14-120, at 11.

8 As explained by the American Institute of Certified Public Accountants ("AICPA"), an unqualified opinion presented in a report on the audit of financial statements states that the financial statements present fairly, in all material respects, the financial position, results of operations, and cash flows of the entity in conformity with generally accepted accounting principles. AICPA Professional Standards, Reports on Audited Financial Statements, AU § 508.10, located at http://www.aicpa.org/Research/Standards/AuditAttest/DownloadableDocuments/AU-00508.pdf.

unqualified opinion letter is necessary for such verification (Attorney General Reply Brief at 3, 5, citing D.P.U. 14-120 at 11 & 16, n.11).

With respect to the audit requirement, the Attorney General argues that the Company's financial records were simply reviewed by an independent third party (i.e., PwC) and not audited as required by the Department in D.P.U. 14-120 (Attorney General Brief at 9, n.5, citing Exh. NG-RRP-1, at 6). In this regard, the Attorney General argues that PwC's review and subsequent report does not equate to an unqualified opinion letter from an independent auditor attesting to the accuracy of the financial information used to develop the cost of service in this case (Attorney General Brief at 9; Attorney General Reply Brief at 5). Further, the Attorney General rejects any notion that PwC's review of the Company's financial information was more thorough than a financial audit (Attorney General Reply Brief at 5). Thus, the Attorney General asserts that the Company has failed to meet its burden to provide an adequate record sufficient to enable the Department to conduct a meaningful review (Attorney General Reply Brief at 3, citing Town of Hingham v. Dep't. of Telecom. and Energy, 433 Mass. 198, 213-214 (2001)).[9]

Based on the above considerations, the Attorney General asserts that the Department should consider as a factor in setting National Grid's allowed rate of return, the Company's

[9] In particular, the Attorney General identifies three areas where she argues that a financial audit could have prevented the submission of inaccurate data to the Department: (1) the Company's purported overstatement of its depreciation expense caused by the inclusion of $100 million in plant retirements in the test year-end plant balance; (2) the Company's purported overstatement of net plant due to the failure to record $26 million in salvage; and (3) the Company's purported omission of certain project reports relating to plant additions (Attorney General Reply Brief at 4, citing Exhs. AG-18-19; AG-30-1, Att.; RR-AG-28). These issues are discussed in Sections III and VIII.E below. According to the Attorney General, a proper audit likely would have revealed additional significant inaccuracies that would be highly relevant to this proceeding (Attorney General Reply Brief at 4).

failure to meet the directives of D.P.U. 14-120 in using a split test year. Specifically, the Attorney General recommends that the Department should set the Company's allowed return on equity ("ROE") at the lowest end of the range of reasonableness (Attorney General Brief at 10, citing Fitchburg Gas and Electric Light Company, D.T.E. 02-24/25, at 231 (2002); Attorney General Reply Brief at 6).

2. Company

National Grid argues that it prepared its filing in compliance with the directives set forth in D.P.U. 14-120 (Company Brief at 9, citing Exh. NG-RRP-1, at 6-7). First, the Company argues that it developed financial statements that directly tie to the Company's 2014 Annual Return and to data submitted to FERC on FERC Forms 1 and 3-Q,[10] which are signed and sworn to by an officer of the Company (Company Brief at 9, 14, citing Exhs. NG-RRP-1, at 6-7; AG-1-2; WP-NG-RRP-1(a)(b)(c); Tr. 9, at 1395-1400; RR-AG-29; Company Reply Brief at 15). More specifically, the Company argues that these financial statements incorporate data submitted to FERC on FERC Form 1 for the calendar year 2014, which comprise the first six months of the test year, and FERC Form 3-Q for the year to date periods ending June 30, 2014 and June 30, 2015 (Company Brief at 9, 14, citing Exhs. NG-RRP-1, at 6-7; AG-1-2; WP-NG-RRP-1(a)(b)(c); Tr. 9, at 1395-1400; RR-AG-29; Company Reply Brief at 15). The Company contends that these financial statements provide the Department with a direct tie to data included in the Company's 2014 Annual Return and allow for a meaningful year-to-year comparison of twelve months of data to the annual data provided in the Annual Returns (Company Brief at 9,

---

[10] FERC Form 3-Q presents financial and operating data on a calendar quarter basis, with a FERC Form 3-Q filed for each calendar quarter. 18 C.F.R. § 260.300. The Department does not require companies to submit their FERC Form 3-Q.

citing Exh. NG-RRP-1, at 6-7). The Company asserts that the Attorney General has not raised any specific instances of how these financial statements fail to tie back to the 2014 Annual Return, FERC Form 1 or FERC Form 3-Q (Company Brief at 14).

Second, National Grid argues that the PwC Report provides a solid foundation for the Department to review and analyze the Company's financial records used to develop the cost of service because it is an extensive third-party review of the test year data designed to verify data integrity and accuracy (Company Brief at 9, 15, citing Exhs. NG-RRP-1, at 6-11; NG-RRP-3). According to National Grid, there is no requirement set forth in D.P.U. 14-120 that the test year data is to be included in a routine annual audit or that the Company needs to obtain an unqualified opinion (Company Reply Brief at 13). Instead, the Company argues that D.P.U. 14-120 requires a showing that the test year amounts have been "properly audited," and that the PwC Report is sufficient to meet that requirement (Company Reply Brief at 13). In this regard, the Company asserts that PwC's review: (1) was performed under appropriate industry standards; and (2) was more thorough than the Company's annual financial audit conducted by PwC, particularly in relation to the specific financial data forming the cost of service in this proceeding (Company Brief at 10-11, 15, citing Exhs. NG-RRP-1, at 6-7; NG-RRP-3, at 4-5; AG-15-1, at 8, 9 (Corrected); Tr. 9, at 1399-1400, 1522-1523; Company Reply Brief at 13).

According to the Company, the PwC Report shows that: (1) the costs charged to the operating companies from the service companies were recorded accurately; (2) on a net basis, the costs were allocated appropriately to the various operating companies, consistent with the appropriate cost allocation manual; (3) the findings associated with the cost data provided in the scope of testing were not material to the service companies involved or to any one business unit;

and (4) there were no other pertinent facts identified during the review process indicating that the cost should be allocated differently (Company Brief at 12, citing Exhs. NG-RRP-3; AG-15-2, at 10 (Supp.)). The Company asserts that there is no evidence to suggest that a different type of audit would have produced different results (Company Reply Brief at 13-14).

Based on the foregoing, National Grid argues that the PwC Report substantiates the Company's use of a split test year in this proceeding and meets the threshold requirements set forth by the Department in D.P.U. 14-120 (Company Brief at 13). Thus, the Company asserts that the Department should find that the Company has met its burden with respect to using a split test year, and it should reject the Attorney General's recommendation that an adjustment to the allowed rate of return is warranted (Company Brief at 13, 16; Company Reply Brief at 15-16).

C. Analysis and Findings

1. Introduction

It is well-established Department precedent that base rate filings are based on an historic test year, adjusted for known and measurable changes. NSTAR Gas Company, D.P.U. 14-150, at 45; D.P.U. 14-120, at 12, 16; Investigation into Rate Structures that will Promote Efficient Deployment of Demand Resources, D.P.U. 07-50-A at 52-53 (2008); Eastern Edison Company, D.P.U. 1580, at 13-17, 19 (1984); Massachusetts Electric Company, D.P.U. 136, at 3 (1980); Chatham Water Company, D.P.U. 19992, at 2 (1980); Massachusetts Electric Company, D.P.U. 18204, at 4 (1975); New England Telephone and Telegraph Company, D.P.U. 18210, at 2-3 (1975); Boston Gas Company, D.P.U. 18264, at 2-4 (1975). See also Massachusetts Electric Company v. Department of Public Utilities, 383 Mass. 675, 680 (1981). In establishing rates pursuant to G.L. c. 164, § 94 ("§ 94"), the Department examines a test year on the basis that

the revenue, expense, and rate base figures during that period, adjusted for known and measurable changes, provide the most reasonable representation of a distribution company's present financial situation, and fairly represent its cost to provide service. D.P.U. 14-120, at 9; see Ashfield Water Company, D.P.U. 1438/1595, at 3 (1984).

The selection of the test year is largely a matter of a distribution company's choice, subject to Department review and approval. Fitchburg Gas and Electric Light Company, D.P.U. 15-80/D.P.U. 15-81, at 146 (2016); citing D.P.U. 07-50-A at 51; Boston Edison Company, D.P.U. 1720, Interlocutory Order at 7-11 (January 17, 1984). The Department requires that the historic test year represent a twelve-month period that does not overlap with the test year used in a previous rate case unless there are extraordinary circumstances that render a previous Order confiscatory. D.P.U. 14-150, at 45, n. 26; Massachusetts Electric Company, D.P.U. 19257, at 12 (1977). The test year is generally the most recent twelve-month period for which financial information exists. D.P.U. 14-150, at 45 n.26; Boston Edison Company v. Department of Public Utilities, 375 Mass. 1, 24, cert. denied, 439 U.S. 921 (1978).

As noted above, the Department has expressed strong preference for a test year cost of service based on a calendar year as opposed to a split test year. D.P.U. 14-120, at 12, 16; see also D.P.U. 14-150, at 45, n.26. Although the Department has, on occasion, accepted a non-calendar test year, see D.P.U. 14-120, at 10, 16; D.P.U. 12-86, at 1; D.P.U. 11-20; D.T.E. 00-105, we also have recognized that there are significant complications associated with the use of a split test year that can call into question the use of such data to establish rates. D.P.U. 14-120, at 10; see AT&T Communications of New England, Inc., D.P.U. 90-133-A at 5-6 (1991). For example, test year amounts associated with a split test year will not tie back to

amounts included in the Annual Returns submitted to the Department, which are prepared on a calendar-year basis. D.P.U. 14-120, at 11. The use of a split test year also limits the Department's ability to review year-to-year changes in expense levels. D.P.U. 14-120, at 11. This limitation is of significant concern to the Department because reliance on a split test year may create an improper incentive for utilities to book expenses into a certain time period for purposes of creating an inflated test year expense. D.P.U. 14-120, at 11. Another complication associated with use of split test years involves year-end accounting for accrued revenues and expenses which, if not properly recognized in the rate setting process, may result in distorted measurement of net operations. D.P.U. 14-120, at 11; see The Berkshire Gas Company, D.P.U. 1490, at 35-37 (1983).

It also is well established that the burden is with a company to satisfy the Department that the company's proposal will result in just and reasonable rates. D.P.U. 14-120, at 11-12; Boston Gas Company, D.T.E. 03-40, at 52, n.31 (2003), citing The Berkshire Gas Company, D.T.E. 01-56-A at 16 (2002); New England Gas Company, D.P.U. 10-114, at 22 (2011); Boston Gas Company, D.P.U. 93-60, at 212 (1993); Blackstone Gas Company, D.P.U. 19579, at 2-3 (1978).[11] Therefore, given the importance of the concerns discussed above and their significance for ratepayers, the Department affirms its very clear preference to use an historic calendar year test year to establish rates. D.P.U. 14-120, at 11-12.

As we noted in D.P.U. 14-120, at 12, any decision to rely on a non-calendar test year will carry with it a high burden for a company to demonstrate that its proposed rates are just and

---

[11] That the burden of proof is always with those who take the affirmative in pleading is a long-held tenet in Massachusetts jurisprudence. Phelps v. Hartwell, 1 Mass. 71, 73 (1804).

reasonable. Specifically, any company that seeks to rely on a split test year, as a threshold matter, must demonstrate by clear and convincing evidence that its proposed test year is reviewable and reliable and represents a full accounting of the company's operations for the period. D.P.U. 14-120, at 16; see D.P.U. 19579, at 2-4; Cape Cod Gas Company/Lowell Gas Company, D.P.U. 18571/18572, at 4-14 (1976). Further, at a minimum, a company that proposes to use a split test year must be prepared to make a threshold showing:

> (1) of how its test year account balances tie back to the account balances as reported in the Annual Returns;
>
> (2) that the amounts have been properly audited (or, in the case of a small water company that is not a subsidiary of a publicly traded entity, otherwise verified) and are available for review;
>
> (3) that a meaningful year-to-year review of changes in expense levels and revenues is possible, such that the Department can determine whether the company's test year expenses and revenues are representative of its ongoing costs and revenues, are reasonable in amount, and account for any seasonal variability; and
>
> (4) that the company has properly recognized accruals booked to reserve accounts, including any end of period reconciliations of those account balances.

D.P.U. 14-120, at 16 n.11.

2. Discussion

As noted above, the Attorney General's challenge to the propriety of National Grid's reliance on a split test year rests on two main arguments: (1) that the Company failed to show that its test year account balances tie back to the Annual Return to the Department; and (2) that the Company failed to provide an audit of the test year amounts that resulted in an unqualified opinion letter (Attorney General Brief at 9). However, we will address all four split test year threshold requirements set forth in D.P.U. 14-120.

First, the Company provided audited financial statements for the fiscal year ending March 31, 2015 (Exh AG-1-2, Att. 3 (3g) & (4g)).[12] While the Company's audited financial statements are not prepared using the same twelve-month period as the test year, the Department finds such statements helpful in ensuring that the Company's test year account balances have been verified, especially given that nine of the twelve months were the subject of the audit of the fiscal year ended March 31, 2015 (Exh. AG-1-2, Att. 3 (3g), (4g); Tr. 9, at 1397). The Company also provided the FERC Form 1s for the calendar years ending December 31, 2014 and December 31, 2015 (Exh. AG-1-2, Atts. 4 (1f), (2f); RR-AG-29, Atts. 1, 3). Further, the Company provided its Annual Returns to the Department for calendar years ended December 31, 2014 and December 31, 2015 (Exh. AG-1-2, Atts. 7 (1f), (2f); RR-AG-29, Atts. 2, 4). In addition, the Company provided FERC Form 1 financial statements containing financial information for the twelve months ended June 30, 2015 (Exhs. NG-RRP-1 at 6; WP-NG-RRP-1(a), (b), (c)). Based on our review of this information, we find that it is possible, though not easily discernible, to tie the Company's test year account balances back to the account balances as reported in the Annual Returns. See D.P.U. 14-120, at 16 n.11.

Next, the Company provided audited financial statements for the fiscal years ended 2009 through 2014 (Exh. AG-1-2, Atts. 3 (3a) through (4g)). In addition, the Company provided the

---

12 A financial audit is an examination of historical financial statements performed in accordance with generally accepted auditing standards, with a report issued on the results stating an opinion whether the financial statements present the audited entity's financial position, results of operations, and cash flows in conformity with generally accepted accounting principles. AICPA Professional Standards, Reports on Audited Financial Statements, AU § 508, n.1, §§ 508.07.08, located at http://www.aicpa.org/Research/Standards/AuditAttest/DownloadableDocuments/AU-00508.pdf; see also D.P.U. 14-120, at 15.

FERC Form 1s for calendar years ending December 31, 2009 and December 31, 2013 (Exh. AG-1-2, Atts. 4 (1a) through (2f)). We conclude that this information, when reviewed in conjunction with the test year data and the PwC Report (as discussed in greater detail below), allows for a meaningful review of year-to-year changes in expense levels in order to determine whether the Company's test year expenses and revenues are representative of its ongoing costs and revenues, are reasonable in amount, and account for any seasonal variability. See D.P.U. 14-120, at 16 n.11.

Further, we find that the test year amounts have been properly audited and are available for review. In particular, we are not persuaded by the Attorney General's argument that the Company's financial statements are unreliable because they lack verification through an unqualified opinion letter. While the PwC Report does not represent an unqualified opinion letter, we find that it does provide an independent and extensive review of the Company's test year cost of service data that is sufficient to make the D.P.U. 14-120 threshold showing. As noted, the record contains several of the Company's annual financial audits (Exh. AG-1-2, Att. 3 (3g) & (4g); Tr. 9 at 1397). As discussed below, in this instance PwC's review was, in a number of ways, likely more extensive than the scope of these financial audits.

The record shows that PwC performed an extensive review of over 4,500 individual invoice transactions relevant to the Company's cost of service in this case, including vendor costs, labor costs, employee expense costs, and general ledger journal entries relating to operating expense general ledger accounts (Exh. NG-RRP-3, at 4-5; Tr. 9, at 1522-1523). Thus, PwC's review encompassed a wide range of expense activity on a transactional level, as opposed

to a review of a smaller sample population of transactions, which is typically done in a financial audit (Exh. NG-RRP-1, at 8-9; Tr. 9, at 1399-1400).

For each cost area, the PwC Report clearly describes the methods used to select which transactions were reviewed (Exh. NG-RRP-3, at 5). Further, the PwC Report describes the extensive testing procedures performed to verify the propriety of costs incurred by the Company in the split test year (Exhs. NG-RRP-3, at 6; NG-RRP-1, at 7-8). The record shows that for each of the charges it reviewed, PwC examined relevant supporting documentation, such as invoices, expense reports, receipts, time sheets and other documents (Exhs. NG-RRP-3, at 6; AG-15-1, at 8 (corrected)). Further, for each charge, PwC confirmed that it was: (1) incurred during the split test year; (2) accurate; (3) properly allocated to the correct company or companies (where applicable) and to expense or capital (where applicable); (4) properly allocated in accordance with National Grid USA's Cost Allocation Policies and Procedures Manual ("CAM"); and (5) not accounted for as below-the-line for ratemaking purposes (Exhs. NG-RRP-1, at 7-8; NG-RRP-3, at 6, 30; AG-15-1, at 8 (corrected)). Thus, PwC's review was likely more extensive for ratemaking purposes than a financial audit, which tends to focus on whether the Company has properly maintained its financial records consistent with accounting requirements. See D.P.U. 14-120, at 15. If PwC found that there was inadequate support for a particular charge or if it had questions regarding a particular charge, it undertook a further examination of the charge, including requesting additional documentation to support the charge and, frequently, following up with the business process owner to understand the allocation related to a particular charge (Exh. NG-RRP-1, at 8). In instances where the Company could not provide sufficient support for the charge or a clear explanation of the charge allocation, PwC flagged the charge as

a proposed adjustment or considered whether a different bill pool or direct charge would have been more appropriate to use as a basis for cost allocation (Exh. NG-RRP-1, at 8). Based on the quality and comprehensiveness of PwC's review, we find that there is a sufficient basis to conclude that the Company's test year amounts have been properly "audited" in order to satisfy the split test year threshold requirement as set forth in D.P.U. 14-120. D.P.U. 14-120, at 16 n.11.[13]

Finally, PwC reviewed beginning and end-of-year accruals in order to review the allocation of costs among monthly periods during the split test year (Exhs. NG-RRP-1, at 9; NG-RRP-3, at 14, 24). In particular, PwC identified all vendor cost invoices that had service dates prior to the beginning of the test year and compared the amount recognized as a cost in the test year to the amount accrued at the beginning of the test year and reversed during the test year, in order to test the elimination of out-of-period charges in the test year data (Exh. NG-RRP-3, at 14, 24). PwC then reviewed accruals recorded at the end of the test year and compared the amounts of supporting calculations (Exhs. NG-RRP-1, at 9; NG-RRP-3, at 14, 24). Further, PwC reviewed a number of invoices received after the test year to determine if those invoices related to services performed in the test year and, for those invoices that did, compared the

---

[13] In light of this finding, we need not address the Attorney General's argument that the Department cannot, on its own, verify the Company's test year data. Further, we are not persuaded by the Attorney General's argument that use of a calendar year test year and an unqualified opinion letter would have prevented the Company's purported overstatement of depreciation and net plant, or its alleged failure to file certain project reports at the outset of the case (Attorney General Reply Brief at 4). While we expect National Grid to present a filing that is as complete and accurate as possible, these concerns are not sufficient to call into question the reviewability of the Company's entire rate request. Instead, the Department will determine the appropriate ratemaking treatment of these items, under the circumstances identified by the Attorney General, in the relevant sections of this Order.

invoice to the accruals at the end of the test year to determine an appropriate adjustment to test year costs (Exh. NG-RRP-1, at 9).[14] Based on these findings, we conclude that through the PwC Report, the Company has shown that it has properly recognized accruals booked to reserve accounts, including any end of period reconciliations of those account balances. D.P.U. 14-120, at 16 n.11.

3. Conclusion

Based on the above considerations, the Department finds that National Grid has satisfied the split test year threshold requirements set forth in D.P.U. 14-120 and has demonstrated by clear and convincing evidence that its financial data is reviewable and reliable and represents a full accounting of the Company's operations for the test year period. D.P.U. 14-120, at 16; see D.P.U. 19579, at 2-4; D.P.U. 18571/18572, at 4-14. Therefore, we conclude that there is sufficient reviewable and reliable information in the record to evaluate National Grid's filing based on a test year for the twelve months ending June 30, 2015. Further, we decline to make any specific adjustment to the Company's ROE due to the use of a split test year, as recommended by the Attorney General. However, while we accept PwC's findings for purposes of determining the accuracy and reviewability of the financial information submitted by the Company in this case, we do not accept the PwC Report as a proxy for establishing the appropriate cost of service in this case. As we have noted in prior cases, while audited financial statements are of considerable assistance in the ratemaking process, an audit does not establish either the reasonableness per se of the reported costs or the ratemaking treatment to be accorded

[14] For this aspect of its examination and verification process, PwC reported a net decrease to test year costs for the Company in the amount of $1,094,601 (Exhs. NG-RRP-1, at 9; NG-RRP-3, at 7, 24). The Company states that this amount was offset by findings in other elements of PwC's review (Exh. NG-RRP-1, at 9).

to such costs. D.P.U. 14-120, at 15; citing Boston Edison Company, D.P.U./D.T.E. 97-95, at 77 (2001); Reclassification of Accounts of Gas and Electric Companies, D.P.U. 4240, Introductory Letter (May 19, 1941); Boston Gas Company v. City of Newton, 425 Mass. 697, 706 (1997). The Department will evaluate the reasonableness of costs and appropriate ratemaking treatment in the specific sections of this Order that follow.

Finally, we emphasis that our findings here are limited to the specific facts and circumstances of this case and in no way change the Department's clear preference for companies to use a calendar year test year as the norm. D.P.U. 14-120, at 16. We reiterate that any company that seeks to rely on a split test year must, at a minimum threshold level, make a prima facie showing by clear and convincing evidence that its proposed test year is reviewable and reliable and represents a full accounting of the company's operations for the period. D.P.U. 14-120, at 16; see D.P.U. 19579, at 2-4; D.P.U. 18571/18572, at 4-14. Failure to make such a robust showing will result in dismissal of the company's rate proceeding.

IV. REVENUE DECOUPLING MECHANISM

A. Introduction

In D.P.U. 07-50-A at 4-5, 32, 81-82, the Department directed each electric and gas distribution company to propose a full revenue decoupling mechanism ("RDM") in its future base distribution rate proceedings. The Department stated that the objective of revenue decoupling is the "elimination of financial barriers to the full engagement and participation by the Commonwealth's investor-owned distribution companies in demand-reducing efforts." D.P.U. 07-50-A at 4. The Department concluded that "a full decoupling mechanism best meets our objectives of (1) aligning the financial interests of the companies with policy objectives

regarding the efficient deployment of demand resources, and (2) ensuring that the companies are not harmed by decreases in sales associated with any increased use of demand resources." D.P.U. 07-50-A at 31-32.

In directing electric distribution companies to adopt full revenue decoupling, the Department acknowledged that decoupling would remove the opportunity to earn additional revenue from growth in sales between base distribution rate proceedings and further acknowledged that such revenue typically funded, among other things, increased operation and maintenance ("O&M") expenses as well as system reliability and capital investment projects. D.P.U. 07-50-A at 48, 87. Accordingly, the Department stated that it would consider company-specific proposals that account for the effects of increased capital investments and inflation on target revenue. D.P.U. 07-50-A at 49-50.[15]

The Department approved the Company's revenue decoupling provision in its last base distribution rate proceeding. D.P.U. 09-39, at 61-92. National Grid's current revenue decoupling tariff provision includes two components that operate in concert: (1) a traditional RDM reconciliation with full revenue decoupling; and (2) the Company's CapEx mechanism (Exh. NG-PP-1, at 82-83). In the RDM reconciliation, the annual target revenue ("ATR") set in the Company's base distribution rate proceeding is adjusted by the cumulative CapEx cost recovery for the upcoming year (Exh. NG-PP-1, at 83). The adjusted ATR is reconciled against billed base distribution revenue and CapEx factor revenue (Exh. NG-PP-1, at 83). The Company is authorized to collect up to three percent of total revenues through the resulting revenue decoupling adjustment factors ("RDAFs") (Exh. DPU-18-21, Att. at 5 (M.D.P.U. No. 1289,

---

15 See Section VII.B for a discussion of the Company's proposal regarding capital investments.

Sheet 4, § V)). Each year's ATR is greater than the prior year's ATR because the CapEx cost recovery cumulates year-over-year from additional capital investments (Exh. NG-PP-1, at 83). Additionally, the total amount that the Company seeks recovery of through the RDM will eventually reach and exceed the three-percent cap because National Grid measures the entire annual CapEx cost recovery against the three-percent cap, instead of the change in CapEx cost recovery from year-to-year (Exh. NG-PP-1, at 85-86). Moreover, the current revenue decoupling provision does not permit the Company to apply a revenue cap separately to its RDM reconciliation component and to its CapEx recovery component (Exh. NG-PP-1, at 85). Instead, the three-percent cap is compared to the total amount to be recovered by both the traditional RDM reconciliation component and the CapEx cost recovery component (Exh. NG-PP-1, at 86).

B. Company Proposal

The Company proposes to remove the CapEx cost recovery from the current revenue decoupling provision tariff and move this component to a separate tariff and operate it as an independent cost recovery mechanism (see Section V) (Exhs. NG-PP-1, at 81; NG-PP-23, at 176-182 (proposed M.D.P.U. Nos. 1277, 1278)).[16] The Company proposes that the remaining components of the revenue decoupling provision will govern the operation of National Grid's traditional RDM reconciliation.

In particular, the Company proposes to continue the traditional RDM reconciliation component in its revenue decoupling provision, with updated target revenues set at the proposed base rate revenue requirement for each customer class and modifications to the revenue cap

[16] The Company proposes to apply a separate revenue cap to the independent CapEx recovery component (Exhs. NG-PP-1, at 81-82; NG-PP-23, at 176-182 (proposed M.D.P.U. Nos. 1277, 1278)).

(Exhs. NG-PP-1, at 81; NG-PP-23, at 180-182 (proposed M.D.P.U. No. 1278)). National Grid's current and proposed ATRs by rate class are shown in the following table:

Rate Class	**Current ATR**	**Proposed ATR**
Rate R-1/R-2	$306,532,557	$451,769,965
Rate R-4	$347,350	$599,269
Rate G-1	$97,267,709	$97,070,193
Rate G-2	$56,298,775	$91,441,732
Rate G-3	$106,895,246	$140,607,030
Street lighting	$20,525,360	$17,639,752
Total	$587,866,996	$799,127,941

(Exhs. NG-PP-23, at 181 (proposed M.D.P.U. No. 1278, at sheet 2); NG-PP-24, at 259; DPU-18-21, Att. at 4). National Grid proposes to submit annual RDM filings by January 15 to reconcile its actual revenues to the ATR pursuant to its revenue decoupling provision, with the RDAFs to take effect on March 1 (Exhs. NG-PP-1, at 82; NG-PP-23, at 182 (proposed M.D.P.U. No. 1278, at sheet 3)).

However, the Company proposes two modifications to the RDM cap: (1) the revenue that forms the basis for the RDM cap will reflect total revenue and include an adjustment for electric supply for those customers who took service from a competitive supplier during the year; and (2) a three-percent cap will be applied to both under- and over-recoveries of the RDM reconciliation between billed revenue and ATR (Exhs. NG-PP-1, at 82; NG-PP-23, at 182 (proposed M.D.P.U. No. 1278, at sheet 3); DPU-18-23).

Finally, in the Company's 2015 annual RDM reconciliation filing, the Department directed National Grid to adjust its ATR, not its distribution revenues, to account for the sale of street lighting assets, and the Company amended its revenue decoupling provision tariff accordingly (see Exh. DPU-18-21, Att. (M.D.P.U. No. 1289)). Massachusetts Electric Company and Nantucket Electric Company, D.P.U. 14-136-A at 11 (January 21, 2016). The primary

revision to the revenue decoupling provision tariff was the addition of the "Streetlight Sales Adjustment" definition (Exh. DPU-18-21, Att. at 3 (M.D.P.U. No. 1289, at sheet 2)).[17]

C. Positions of the Parties

National Grid argues that the proposed modifications to its revenue decoupling provision align it with the operation of RDMs in place for other distribution utilities (Company Brief at 164).[18] No other party addressed the Company's proposed modifications to the traditional RDM reconciliation on brief.

D. Analysis and Findings

In Section V.D below, the Department allowed the Company to continue the operation of its CapEx mechanism in a separate tariff, with modifications, including its separation from the revenue decoupling provision and operation as a distinct reconciling mechanism. Thus, in this section we will address the Company's remaining proposed revisions to its traditional RDM reconciliation component of its current revenue decoupling provision.

---

[17] According to the Company, "'Streetlight Sales Adjustment' shall mean the annual cumulative dollar adjustment to each year's ATR as a result of selling its streetlighting equipment pursuant to G.L. c. 164 § 34A subsequent to the effective date of new base distribution rates resulting from a general rate case. The Streetlight Sales Adjustment shall be a downward adjustment to each year's ATR and shall be calculated as the proceeds received by the Company from the sale of its streetlighting equipment multiplied by the avoided cost of no longer owning, operating, and maintaining such equipment, stated as a percentage, as determined by the Company's final streetlight revenue requirement. The Streetlight Sales Adjustment shall be set to zero and calculated for new streetlight sales effective with the subsequent implementation of new base distribution rates as provided for above. The Streetlight Sales Adjustment is pursuant to the Department's directive in D.P.U. 14-136-A" (Exh. DPU-18-21, Att. at 3).

[18] The Company does not specify whether these utilities are gas or electric utilities (Exh. NG-PP-1, at 84). However, the Company states that gas utility targeted infrastructure replacement programs demonstrate similar language on the application of revenue caps (Exh. NG-PP-1, at 84).

The Department has determined that a RDM must be consistent with our precedent related to rate continuity, fairness, and earnings stability. Investigation into Rate Structures that will Promote Efficient Deployment of Demand Resources, D.P.U. 07-50, at 12 (2007). The Department has found that the application of a revenue cap in the context of a RDM is consistent with this precedent. D.P.U. 14-150, at 20; Fitchburg Gas and Electric Light Company, D.P.U. 11-01/D.P.U. 11-02, at 116 (2011). Moreover, the Department has previously stated that revenue decoupling adjustments should be large enough to avoid intergenerational inequity and unfairness in rates but small enough to preserve continuity in rates. Western Massachusetts Electric Company, D.P.U. 10-70, at 45 (2011); D.P.U. 09-39, at 87.

The Company proposes two modifications to the RDM cap. First, the Department evaluates the Company's proposal to include an adjustment for electric supply for those customers who took service from a competitive supplier during the year. We find that this proposed adjustment is consistent with decoupling mechanisms in use by other utilities. See, e.g., D.P.U. 15-80/D.P.U. 15-81, at 24. Therefore, the Department accepts the Company's proposal.

Next, we address the proposed three-percent cap to be applied to the RDM reconciliation between billed revenue and ATR. The Company proposes to cap the total RDM reconciliation (excluding CapEx cost recovery) at three-percent of total revenues, including an adjustment for electric supply for those customers who took service from a competitive supplier during the year, and to apply the three-percent cap to both under- and over-recoveries of the RDM reconciliation balance (Exhs. NG-PP-1, at 82; NG-PP-23, at 182 (proposed M.D.P.U. No. 1278, at sheet 3); DPU-18-23). In previously approving a three-percent cap in the Company's revenue decoupling

provision (which included CapEx cost recovery), the Department stated that it is appropriate to continually evaluate and monitor changes in the market that could violate our existing ratemaking goals and render the three-percent cap inappropriate. D.P.U. 09-39, at 88. The Department expressed that it may review and modify such a cap, as necessary, over the course of the Company's revenue decoupling adjustment filings. D.P.U. 09-39, at 88.

Although the Company's three-percent cap is consistent with the revenue decoupling provision approved in its previous base distribution rate proceeding, the three-percent cap was applied to an RDM adjustment that previously included a RDM reconciliation balance with an adjustment for CapEx cost recovery. D.P.U. 09-39, at 87-88. The three-percent cap was compared to the total amount to be recovered by both the traditional RDM reconciliation component and the CapEx cost recovery component (Exh. NG-PP-1, at 86). However, given that we have approved the continuation of the CapEx mechanism as a separate mechanism from the revenue decoupling tariff provision (see Section V.D below), it is now more appropriate to set National Grid's cap on the annual revenue decoupling adjustment at one-percent cap of total revenue. We conclude that a one-percent cap based on total revenues ensures continuity, fairness, and earnings stability. Any amount above the one-percent cap will be deferred with interest calculated at the customer deposit rate until there is sufficient room under a future cap to recover the deferral balance (Exhs. NG-PP-1, at 84; NG-PP-23, at 182 (proposed M.D.P.U. No. 1278, at sheet 3)).

Additionally, the purpose of the one-percent cap is to protect customers from large revenue decoupling adjustments. D.P.U. 15-80/D.P.U. 15-81, at 24-25; D.P.U. 14-150, at 21. However, no such protection is necessary in the event of a decoupling adjustment credit.

D.P.U. 15-80/D.P.U. 15-81, at 24-25; D.P.U. 14-150, at 21. Accordingly, the Department declines to accept the Company's proposal to apply the revenue cap to over-recoveries of ATR, which would result in a credit to customers (see Exh. DPU-18-23). The Department finds that the one-percent revenue cap shall apply only to under-recoveries of ATR.

Based on the foregoing, the Department directs the Company to modify the language of its revenue decoupling provision tariff to include a revenue decoupling adjustment cap that is based on one-percent of total Company revenues from the previous calendar year. National Grid is also directed to include language in its revenue decoupling provision tariff that ensures that the revenue decoupling adjustment cap is applied only to under-recoveries to be collected from ratepayers in the RDAFs.

With respect to the ATRs proposed in this filing, we note that they are calculated from the revenue requirements proposed by the Company to be collected from each rate class (Exhs. NG-RRP-2, at 1 (Rev. 1); NG-PP-23, at 180-182 (proposed M.D.P.U. No. 1278)). As noted below in Schedule 1, the Department has approved a different revenue requirement than that proposed by the Company. As such, the Company is directed, in its compliance filing, to file new ATRs by rate class based on the revenue requirement for each rate class approved in this Order.

Further, in D.P.U. 14-136-A, the Department directed the Company to adjust its ATRs to account for the sale of street lighting assets. D.P.U. 14-136-A at 11. The Company added a definition to its revenue decoupling provision for "Streetlight Sales Adjustment" (see n.17 above) in compliance with that Order (Exh. DPU-18-21, Att. at 8). The Department directs the

Company in its compliance filing to include these tariff modifications, as approved in D.P.U. 14-136-A, in its revenue decoupling provision tariff.

Finally, the Department reiterates that the RDM allows companies to modify, on an annual basis, base distribution rates as a result of changes in sales in order to promote the efficient deployment of demand resources. D.P.U. 09-39, at 9, 62-63. Revenue decoupling was intended to provide distribution companies with better financial incentives to pursue a cleaner, more efficient energy future. D.P.U. 07-50-A at 1. Moreover, the Department noted that the conclusions reached in D.P.U. 07-50-A represented general statements of policy. D.P.U. 14-150, at 16-17; Investigation into Rate Structures that will Promote Efficient Deployment of Demand Resources, D.P.U. 07-50-B, at 28-29 (2008).

The Department acknowledges that we have our own concerns about the appropriateness of including street lighting rate classes in a revenue decoupling provision. Currently, the Company does not offer energy efficiency programs directed towards street lighting, and street lighting use is not metered and, as such, distribution revenues are fixed (Tr. 6, at 805-806; Tr. 8, at 1201-1202). Additionally, revenue decoupling was not intended to compensate a company for the sale of street lighting assets. D.P.U. 14-136-A, at 10; see D.P.U. 07-50-A. In the Department's decoupling investigation, we did not contemplate this potential issue, and the model we adopted to decouple rates for all future ratemaking proceedings was silent on street lighting rate classes in RDM. D.P.U. 07-50-B at 26.

For these reasons, the Department expects to address the issue of street lighting rate classes included in the revenue decoupling provisions in a future proceeding. In this regard, the Department puts the Company, and all electric distribution companies, on notice that it has

concerns with the inclusion of street lighting rate classes in RDMs, and that we will consider removing street lighting rate classes from RDMs in each electric distribution company's next base distribution rate proceeding. Thus, as part of the initial filing in its next base distribution rate proceeding, each electric distribution company must address and provide justification for the continued inclusion of street lighting rate classes in each company's respective revenue decoupling provision.

V. CAPITAL INVESTMENT RECOVERY MECHANISM

A. Introduction

In the Company's last base rate case, the Department approved National Grid's revenue decoupling provision, which included a CapEx mechanism allowing the Company to recover an annual revenue requirement on incremental capital investments up to a $170 million cap (hereinafter referred to as the "investment cap"). D.P.U. 09-39, at 82.[19] In addition to the $170 million cap, the approved revenue decoupling provision includes a rate cap limiting the annual revenue decoupling adjustment (including the CapEx revenue requirement adjustment to the Annual Target Revenue ("ATR")) to three percent of total revenue (hereinafter referred to as the "rate cap"). D.P.U. 09-39, at 82, 87-88.

Incremental capital investment for each year since the CapEx mechanism commenced is defined as annual capital investment, less the Company's depreciation expense allowed in its last base rate proceeding (Exh. NG-RRP-1, at 54). National Grid calculates each investment vintage year's revenue requirement using an average rate base methodology, incorporating accumulated depreciation and accumulated deferred income taxes associated with that vintage year's

[19] A review of the Company's capital investments made between the date of the decision in D.P.U. 09-39 and the end of the test year in this case is discussed in Section VII.B below.

investments (Exh. NG-RRP-1, at 54). The CapEx mechanism does not allow for the recovery of the revenue requirement for the year of investment for each vintage year, and the Company recovers the revenue requirement for the second year of each vintage beginning March 1st of the subsequent year (Exh. NG-RRP-1, at 54).[20]

B. Company Proposal

National Grid proposes to continue its existing CapEx mechanism with several modifications, including changing its name to the capital investment recovery mechanism ("CIRM") (Exhs. NG-MLR-1, at 16; NG-RRP-1, at 61-62; NG-PP-23, at 178 (proposed M.D.P.U. No. 1277); DPU-32-22). The Company proposes to: (1) separate the CIRM from the traditional RDM reconciliation, and operate the mechanisms under separate tariffs; (2) increase the annual investment cap on capital expenditures from $170 million to $285 million; (3) include property taxes in the computation of the CIRM revenue requirement; and (4) apply a one-percent rate cap to the change in annual revenue requirement in the CIRM (Exhs. NG-RRP-1, at 61-62; NG-PP-23, at 178 (proposed M.D.P.U. No. 1277); DPU-32-22).

As set forth in great detail below, the Attorney General opposes all of the proposed modifications. Instead, the Attorney General recommends that the Department should eliminate the CIRM entirely, or, in the alternative, do the following: (1) maintain the investment cap at $170 million, or in the alternative, set the cap at $183 million; (2) limit the scope of capital investments eligible for recovery; (3) include metrics, goals, and/or reporting to provide accountability of customer benefits associated with the Company's capital investments, and to

[20] The Company's current CapEx mechanism, and proposed capital investment recovery mechanism, imposes a 14-month lag on the recovery of the second year revenue requirement for each vintage investment year (Exh. DPU-6-17).

verify that costs are reasonable; (4) include an O&M offset, representing the savings associated with the capital investments; and (5) adjust the rate of return in the CIRM downward to reflect risk reduction associated with the Company's recovery of capital investment with little to no regulatory lag (Exh. AG-DO-CF-1, at 8, 11-12, 18-20; Attorney General Brief at 88-94; Attorney General Brief at 49-53).

C. Positions of the Parties

1. Attorney General

a. Introduction

The Attorney General initially recommends discontinuance of the CIRM (Attorney General Brief at 85). The Attorney General maintains that her recommended modifications are necessary to control costs and limit spending to projects that are necessary to provide safe and reliable service (Attorney General Reply Brief at 52, citing Exh. NG-JHP-1, at 29). The Attorney General's specific arguments in support of these positions are discussed in further detail below.

b. Elimination of the CapEx/CIRM

The Attorney General recommends elimination of the CIRM entirely (Attorney General Brief at 85). According to the Attorney General, the Department allows alternative regulatory mechanisms only in cases of "extraordinary circumstances," where a company has demonstrated its need to recover incremental costs associated with specific programs between base distribution rate cases (Attorney General Brief at 85, citing Boston Gas Company/Colonial Gas Company/Essex Gas Company, D.P.U. 10-55, at 121-122, 132-133 (2010); D.P.U. 09-39, at 79-80, 82; Bay State Gas Company, D.P.U. 09-30, at 133-134 (2009)). The Attorney General

rejects any notion that the Company's investment needs are extraordinary, and she claims that many of these investments will be eligible for recovery through a separate recovery mechanism pending in the Grid Modernization Investigation, D.P.U. 15-120 (Attorney General Brief at 86, citing Company Brief at 97; Attorney General Reply Brief at 48, citing Exh. AG-DO-CF-1, at 12). Therefore, the Attorney General asserts that the Company failed to produce evidence of "extraordinary circumstances" to justify the continuation of the CIRM (Attorney General Brief at 86; Attorney General Reply Brief at 47).

Moreover, the Attorney General argues that the Company is not in a unique position, nor is it under significant pressure to maintain a high degree of system reliability and resiliency, as it claims, because all utilities must invest in their systems for reliability (Attorney General Brief at 86, citing Exh. NG-RRP-1, at 101; Attorney General Reply Brief at 47). Thus, the Attorney General argues that the Company's investment obligations are not extraordinary, but "standard operating procedure" (Attorney General Brief at 86; Attorney General Reply Brief at 47).

Further, the Attorney General dismisses the Company's claim that the CIRM is necessary due to revenue decoupling (Attorney General Brief at 86, citing Exh. NG-RRP-1, at 96-98). According to the Attorney General, the Department has previously rejected other companies' requests for a CIRM when those companies were unable to provide "compelling evidence of lost growth in sales" (Attorney General Brief at 86, citing Fitchburg Gas and Electric Light Company, D.P.U. 13-90, at 36 (2014); D.P.U. 11-01/D.P.U. 11-02, at 109-111; D.P.U. 10-70, at 47; D.P.U. 07-50-A at 50). In this regard, the Attorney General contends that revenue decoupling ensures the Company will be compensated for lost sales revenue associated with energy efficiency programs and distributed generation ("DG"), which the Company admits is

causing its sales forecast to show declining growth (Attorney General Brief at 86-87, citing Exh. DPU-6-14, at 2; Attorney General Reply Brief at 48).[21] Therefore, the Attorney General asserts that because revenue decoupling will not remove the Company's ability to retain additional revenue between its base rate proceedings, there is no need for an additional recovery mechanism. (Attorney General Brief at 87, citing D.P.U. 10-70, at 47).

Additionally, the Attorney General alleges that the Company is financially healthy and highly liquid, and therefore, there is no need for the CIRM (Attorney General Reply Brief at 48). According to the Attorney General, the Company was allowed $40 million in base distribution rates for income taxes in its last base rate proceeding, but because of tax benefits the Company has not and will not pay income taxes for many years (Attorney General Reply Brief at 48, n.18, citing D.P.U. 09-39, at 457; Exh. NG-RRP-2, at 2, 30). Moreover, the Attorney General contends that the Company had sufficient cash available to lend hundreds of millions of dollars to its affiliates through the National Grid USA money pool over the last two years (Attorney General Reply Brief at 48, n.2 citing Exh. AG-1 (National Grid USA Money Pool Report)).

The Attorney General also argues that the Department should consider National Grid's proposed CIRM in conjunction with the Company's other reconciling mechanisms (Attorney General Reply Brief at 48). According to the Attorney General, the Company charges ratepayers on an annual basis for the following: (1) pensions and post-retirement benefits other than pensions ("PBOP") costs; (2) storm costs; (3) energy efficiency program costs; and (4) wind energy contract remuneration (Attorney General Reply Brief at 49, citing Exh. NG-RRP-2, at 2-3). The Attorney General argues that approving the CIRM and allowing these other

[21] The Attorney General also notes that the Company receives compensation and incentives related to energy efficiency programs (Attorney General Reply Brief at 48).

reconciling mechanisms exposes ratepayers to an excessive share of risk (Attorney General Reply Brief at 49).

Finally, the Attorney General claims that the CIRM requires an annual prudency review and cost reconciliation, thereby adding to the Department's administrative burden (Attorney General Brief at 87). The Attorney General maintains that based on the Company's prior CIRM experience,[22] future prudency reviews will likely evolve into exhaustive investigations (Attorney General Brief at 87-88, citing docket D.P.U. 10-79; Exh. AG-DO-CF-1, at 35-56). For all these reasons, the Attorney General asserts that the Company's CIRM proposal is not in the best interest of ratepayers and should be discontinued (Attorney General Brief at 87-88; Attorney General Reply Brief at 48). As noted above, in the alternative, the Attorney General asserts that the Department should retain the current investment cap and make specific modifications to the Company's proposal, each of which are discussed below.

c. Investment Cap

The Attorney General argues that the CIRM "significantly reduces and potentially eliminates the important incentive that regulatory lag provides" to control costs because the Company is allowed to recover a return on and of its capital expenditures in the year that they are incurred (Attorney General Brief at 92, citing D.P.U. 09-39, at 80-81; Attorney General Reply Brief at 50, citing D.P.U. 09-39, at 80-81). According to the Attorney General, the Department has found that in the absence of regulatory lag, a cap on the annual CIRM cost recovery would protect ratepayers from over-investment in capital infrastructure and still provide the Company

[22] The Attorney General claims that in National Grid's first CapEx investigation, the Company failed to provide project documentation in a timely manner and its filing ultimately lacked clear, cohesive, reviewable project documentation (Attorney General Brief at 88, citing Exh. AG-DO-CF-1, at 35-56).

with sufficient funds to ensure safe and reliable electric service (Attorney General Brief at 92, citing D.P.U. 09-39, at 81-82; Attorney General Reply Brief at 50). In this regard, the Attorney General contends that the Company budgeted for capital spending to align with the $170 million investment cap allowed by the Department when initially approving the CIRM (Attorney General Brief at 92, citing Exhs. DPU-6-7; DPU-18-5).[23] Thus, the Attorney General contends that the $170 million investment cap is an effective means of cost control, and National Grid may include plant additions above the investment cap in the rate base proposal in the Company's next base rate proceeding (Attorney General Brief at 92-93, citing D.P.U. 09-39, at 82-83). Further, she argues that increasing the investment cap will likely lead to a corresponding increase in unfettered capital spending, evident from the Company's capital investment forecast (Attorney General Brief at 92-93, citing Exh. AG-DO-CF-1, at 20; Attorney General Brief at 87, citing Exh. NG-JHP-1, at 29). For these reasons, the Attorney General recommends setting the investment cap at $170 million so as to balance the risk associated with the CIRM between shareholders and ratepayers (Attorney General Brief at 92, citing Exh. AG-DO-CF-1, at 20; D.P.U. 09-39, at 80-81; Attorney General Reply Brief at 48, 49, 50, citing Exh. AG-DO-CF-1, at 20; D.P.U. 09-39, at 80–81.).

In the alternative, if the Department decides to increase the investment cap from $170 million, the Attorney General argues that the Department should set the cap based on a representative level of historic spending, and not on forecasted spending (Attorney General Brief at 93; Attorney General Reply Brief at 50, citing D.P.U. 1580, at 13–17, 19; D.P.U. 136, at 3;

---

[23] However, she also alleges that the $170 million investment cap has not prevented the Company from exceeding it (Attorney General Reply Brief at 50, citing RR-DPU-13, Att.).

D.P.U. 19992, at 2; D.P.U. 18204, at 4; D.P.U. 18210, at 2–3; D.P.U. 18264, at 2-4; Attorney General Reply Brief at 51).[24] According to the Attorney General, when the Department grants a capital recovery mechanism, it bases it on an average of historical expenditures, not on company projections. (Attorney General Reply Brief at 51, citing D.P.U. 15-80/D.P.U. 15-81, at 53; D.P.U. 09-39, at 82). Therefore, the Attorney General asserts that the investment cap should be based on a five-year average of plant additions (excluding cost of removal), instead of a three-year average[25] that the Department used to establish the $170 million investment cap (Attorney General Brief at 93, citing D.P.U. 09-39, at 82; D.P.U. 15-80/D.P.U. 15-81, at 53). The Attorney General maintains that a five-year average of plant additions (excluding cost of removal) is more appropriate than a three-year average because the Company's plant additions in 2013 and 2015 were not representative of a typical year (Attorney General Brief at 93, citing RR-DPU-9; RR-DPU-14).[26] Further, the Attorney General maintains that a five-year average for plant additions of $183 million provides an appropriate balance of sufficient funding for the Company and ensuring safe and reliable service (Attorney General Brief at 93, citing RR-DPU-14; Attorney General Reply Brief at 49, 51).

---

24 The Attorney General alleges that the Company's proposed $285 million cap is based on future projections (Attorney General Reply Brief at 50-51).

25 The Attorney General calculates the Company's three-year average of plant additions (excluding cost of removal) at $197 million (Attorney General Brief at 93, citing RR-DPU-9).

26 The Attorney General explains that the Company's spending in 2015 was significantly higher than the prior years (i.e., $259 million in 2015; $180 million in 2014; $151 million in 2013; and $139 million in 2012), and in 2013, storm restoration efforts and issues related to the SAP implementation affected the Company's plant additions (Attorney General Brief at 93, citing RR-DPU-9; RR-DPU-14).

d. Modifications to the CapEx/CIRM

i. Scope

The Attorney General recommends that the Department direct the Company to narrow the scope of its CIRM to a certain category of spending (Attorney General Brief at 88; 89-90; Attorney General Reply Brief at 48, 49-50, 51). According to the Attorney General, a capital cost recovery mechanism is most effective when it is targeted to provide specific improvements and goals, and allows interested parties to track the costs associated with specific investment activities (Attorney General Brief at 88, citing D.P.U. 10-70, at 47-50; D.P.U. 10-55, at 66). The Attorney General explains that capital cost recovery mechanisms used by other states are more narrow and targeted compared to the Company's CIRM, and these mechanisms recover specific capital costs such as solar, renewable energy, or smart grid investments (Attorney General Brief at 88-89, citing Exh. AG-DO-CF-1, at 10-11; Tr. 15, at 1601-1603, 1683; Attorney General Reply Brief at 48-49, citing Tr. 15, at 1683). Additionally, the Attorney General explains that Connecticut Light and Power's ("CL&P") capital cost recovery mechanism authorizes recovery of specific projects that improve storm hardening infrastructure, and in 2013, represented an annual revenue requirement of $34.9 million (Attorney General Brief at 89, citing RR-NG-2, at 1; Attorney General Reply Brief at 52). The Attorney General does not make a specific recommendation regarding a spending category to limit the scope of the Company's CIRM, but she acknowledges that the Company already recovers costs for solar investments, smart grid technologies, and storm-related costs separately from the CIRM and base rates (Attorney General Brief at 89, citing Exhs. NG-RRP-1, at 107-110; AG-DO-CF-1, at 12; Tr. 15, at 1683).

ii. Benefits

The Attorney General recommends that the CIRM include a mechanism to account for customer benefits achieved in conjunction with annual capital spending (Attorney General Brief at 90, citing Exh. AG-DO-CF-1, at 13). The Attorney General claims that there is no evidence that National Grid's proposed CIRM will contribute to cost-effective, safe, and reliable service (Attorney General Brief at 90). For example, the Attorney General explains that the budget for "Asset Condition," which covers the replacement of assets the Company believes will fail, is forecasted to increase 116 percent over historical spending (Attorney General Brief at 90, citing Exh. NG-JHP-1, at 19-20). The Attorney General expects that this increase in spending would lead to a decrease or leveling out in the budget for "Damage/Failure," which covers the costs for the replacement of failed assets (Attorney General Brief at 90, citing Exh. NG-JHP-1, at 19). The Attorney General claims, however, that the Company's "Damage/Failure" budget category forecast for 2017-2019 increases 32 percent over historical spending (Attorney General Brief at 91, citing Exh. AG-7-5, Att.). From this data, the Attorney General contends that the Company is planning to replace assets with a low probability of failure to increase the costs recovered through the CIRM, thereby providing the Company with an opportunity for "gold-plating" (Attorney General Brief at 90-91, citing Exh. AG-7-5, Att.).

Further, the Attorney General maintains that other utilities include reports on the effectiveness of their capital cost recovery mechanisms (e.g., TIRF programs[27] include reports on leaks and CL&P provides data on system resiliency) (Attorney General Brief at 91,

[27] TIRF refers to targeted infrastructure recovery factor programs that are designed to allow for annual recovery by gas distribution companies of the revenue requirement associated with incremental investment for the replacement of leak-prone infrastructure. See, e.g., D.P.U. 09-30, at 121.

citing Exh. AG-DO-CF-1, at 13, 16; RR-NG-2, Att. 2, at 11-12). The Attorney General asserts that there should be greater accountability in the Company's CIRM mechanism because it is much broader than a TIRF or CL&P's capital cost recovery mechanism (Attorney General Brief at 91). Therefore, the Attorney General recommends that the Department require the Company to re-engage with stakeholders to establish metrics, goals, and reporting requirements to ensure that the investments made in the CIRM deliver benefits to customers at a reasonable cost (Attorney General Brief at 91, citing Exh. AG-DO-CF-1, at 16-17; Attorney General Reply Brief at 52, n.20).

iii. O&M Offset

The Attorney General alleges that through the CIRM, National Grid will complete system replacements and enhancements, and as a result, the number and cost of failures will decline (Attorney General Brief at 91, citing Tr. 2, at 251-252; Attorney General Reply Brief at 52). For example, the Attorney General explains that the installation of reclosers on circuits would limit the area crews that the Company would need to patrol to locate outages (Attorney General Brief at 91, citing Exh. AG-DO-CF-Rebuttal-1, at 8; Attorney General Reply Brief at 52, citing Exh. AG-DO-CF-Rebuttal-1, at 8). The Attorney General maintains that with a decline in outages, the Company also should experience lower O&M expenses (Attorney General Brief at 92, citing Exh. AG-DO-CF-Rebuttal-1, at 8; Attorney General Reply Brief at 52, citing Exh. AG-DO-CF-Rebuttal-1, at 8). Therefore, the Attorney General recommends that the Company's CIRM include an O&M offset associated with the O&M savings resulting from additional capital investments (Attorney General Brief at 91-92, citing Exhs. AG-DO-CF-1, at 18; AG-DO-CF-Rebuttal-1, at 8; Attorney General Reply Brief at 50, 52, 53).

iv. Rate of Return

The Attorney General argues that if the Department decides to allow the CIRM as proposed by the Company, the Department should adjust downward the rate of return that the Company is allowed in the CIRM (Attorney General Brief at 94; Attorney General Reply Brief at 49, citing D.P.U. 07-50-A, at 71; Bay State Gas Company, D.T.E. 05-27, at 302 (2005); D.T.E. 02-24/02-25, at 229; D.T.E. 03-40, at 363; Western Massachusetts Electric Company, D.P.U. 18731, at 59 (1977)). The Attorney General argues that a lower rate of return is reflective of the Company's reduction in risk associated with the recovery of most, if not all, of its capital investments in between base rate proceedings, with little regulatory lag (Attorney General Brief at 94, citing Exh. AG-DO-CF-1, at 20).

2. PowerOptions

PowerOptions argues that the Department must take a close look at proposed tracking mechanisms, such as the proposed CIRM, and decide whether they are warranted and in the best interest of ratepayers (PowerOptions Reply Brief at 9, citing D.P.U. 15-80/D.P.U. 15-81, at 47; D.P.U. 13-90, at 36; D.P.U. 11-01/D.P.U. 11-02, at 111; D.P.U. 10-70, at 51-52.) According to PowerOptions, while the tracking mechanisms benefit utility companies in terms of timely cost recovery, they are administratively onerous with annual filings requiring review by all interested parties, require numerous reconciliations and true-ups, and often result in additional charges to customers beyond base rates (PowerOptions Reply Brief at 9-10). Further, PowerOptions notes that the Department has found that where a company failed to demonstrate there were extraordinary circumstances that prevented it from acquiring the capital necessary to make required investments in its infrastructure, approval of a capital cost recovery mechanism was

neither warranted nor in the best interests of ratepayers (PowerOptions Reply Brief at 10, citing D.P.U. 15-80/D.P.U. 15-81 at 54; D.P.U. 11-01/D.P.U. 11-02, at 111; D.P.U. 10-70, at 50-52).

Based on these considerations, PowerOptions argues that the Department must take a close look at whether extraordinary circumstances prevent National Grid from acquiring the capital necessary to make required investments in its infrastructure (PowerOptions Reply Brief at 10). PowerOptions contends that if the Department allows the CIRM, then it must decide whether an investment cap increase to $285 million is warranted and, if so, the Department needs to determine the process to ensure that there is appropriate oversight over these investments and proper review of the Company's three-year capital investment plan (PowerOptions Reply Brief at 10-11).

3. Company

a. Introduction

National Grid submits that its capital investments are increasing: (1) to maintain a resilient, modern electric grid substantially improved through technology; and (2) to meet customers' expectations for reliable service and information (Company Brief at 165). According to the Company, two modifications will improve the CIRM's operation (Company Brief at 166). First, National Grid proposes to increase the current investment cap of $170 million to $285 million, representative of the Company's actual plant additions during the test year (Company Brief at 166). Second, the Company proposes to include property tax expense in the computation of the revenue requirement because it is the "normal course for capital investment recovery mechanisms approved by the Department in other contexts" (Company Brief at 166).

The Company disagrees with the Attorney General's recommendation to eliminate the CIRM, and it rejects the Attorney General's alternative recommended modifications. The Company's positions regarding these issues are discussed in further detail below.

b. Elimination of the CapEx/CIRM

The Company argues that discontinuing the CIRM is implausible, especially considering the Commonwealth's energy efficiency programs, DG resources, and demand response programs that have been put in place since 2008 (Company Brief at 168). According to National Grid, the Department has recognized the direct impact on the Company's business when average consumption declines as a result of these conservation initiatives, namely the Company's inability to retain incremental sales revenue to support capital investment on a year-to-year basis (Company Brief at 168-169). National Grid acknowledges that revenue decoupling reimburses the Company for lost sales revenue due to reductions in consumption since setting its ATR (Company Brief at 165-166). However, the Company maintains that revenue decoupling also negates growth in sales that would have supported increases in the Company's cost of service between base rate proceedings (Company Brief at 165-166).[28] Thus, National Grid disagrees with the Attorney General's assertion that, through decoupling, the Company already is reimbursed and made whole for sales losses due to energy efficiency (Company Reply Brief at 69, citing Attorney General Reply Brief at 48).

Instead, National Grid contends that revenue decoupling does not return the value of sales volumes to the Company that is over and above the test year and were historically available to fund capital expenditures between base rate proceedings (Company Reply Brief at 70).

---

[28] National Grid attributes increases in the cost of service largely to capital investment since its last base rate proceeding (Company Brief at 165-166).

According to National Grid, the Attorney General has failed to discredit evidence provided by the Company that the CIRM is necessary as a result of the Department's efforts to promote energy efficiency, demand resources, renewable energy, and DG (Company Reply Brief at 69, citing Exh. DPU-6-14). Thus, National Grid argues that if its revenues are decoupled from sales, the Company must retain its CIRM with the proposed modifications (Company Brief at 169-170).

Further, National Grid claims that its declining sales forecast demonstrates the success of the Department's efforts to achieve the objectives in D.P.U. 07-50-A (Company Brief at 170). According to the Company, without the downward sales pressure from DG and energy efficiency, the Company would have realized sales growth to offset its plant additions (Company Brief at 170, 171, citing Exh. DPU-6-14, Att.; Company Reply Brief at 69). According to the Company, the Attorney General did not rebut, evaluate, critique, or challenge: (1) the Company's sales forecast; or (2) that the Company's energy efficiency savings as a percent of total kilowatt hour ("kWh") delivery have doubled since 2010 (Company Reply Brief at 69; Company Brief at 168, citing Exh. NG-MLR-1, at 13).

Moreover, National Grid disputes the Attorney General's argument that the Company receives compensation and incentives for its energy efficiency programs (Company Reply Brief at 70). National Grid maintains that energy efficiency program costs are passed through to customers and any incentives that the Company receives are not sufficient to fund the Company's plant additions (Company Reply Brief at 70). For all these reasons, the Company asserts that the Attorney General did not provide creditable evidence in support of her position to discontinue the Company's CIRM (Company Reply Brief at 70).

c. Investment Cap

In response to the Attorney General, the Company argues that the current $170 million investment cap is insufficient for recovery of annual capital expenditures (Company Brief at 173). According to the Company, it has exceeded the $170 million cap by a total of $178 million since the CIRM's implementation (Company Brief at 173). Additionally, the Company argues that its plant additions and cost of removal in the test year alone exceeded the $170 million cap by more than $100 million (Company Brief at 173). Therefore, the Company asserts that the Attorney General's recommendation to set the investment cap at either $170 million or $183 million is not supported by record evidence (Company Reply Brief at 73).

In support of the proposed $285 million investment cap, the Company argues that it is under pressure to meet expanding service requirements and increased investment in distribution infrastructure (Company Brief at 166, citing Exh. NG-RRP-1, at 60). The Company maintains that it cannot meet the growing demand for capital investment without the CIRM, and that it will need to spend up to the $285 million investment cap to continue to meet its capital investment goals over the next three years (Company Brief at 167, citing Exh. NG-RRP-1, at 60; Company Reply Brief at 72, citing Exh. NG-JHP-1, at 29). The Company notes that it invested approximately $1.3 billion in its system between the end of 2008 and June 30, 2015 (Company Brief at 166, citing Exh. NG-RRP-1, at 60). Further, National Grid points out that it incurred $260 million in plant in service and $25 million in cost of removal in the test year (Company Brief at 166-167, citing Exh. DPU-32-22). Therefore, the Company asserts that a $285 million investment cap, based on actual capital expenditures in the test year, is more representative of the

Company's actual and projected investments (Company Brief at 174, citing Exh. NG-JHP-1, at 29).

National Grid also argues that increasing the investment cap to $285 million is in the best interest of ratepayers because it will contribute to maintaining service at current levels and assist the Company in complying with the Department's service-reliability metrics (Company Brief at 176, citing Exh. AG-7-5; Company Reply Brief at 73). National Grid claims that an investment cap based on a historical three-year or five-year average will not achieve the intended capital investment cost recovery and will render the CIRM moot (Company Brief at 174). In the alternative, the Company suggests that the Department approve a rolling three-year average investment cap, up to $285 million (Company Brief at 174, citing Exh. NG-JHP-Rebuttal-1, at 4-5; Tr. 2, at 256-277; Company Reply Brief at 73, citing Exh. NG-JHP-Rebuttal-1, at 4-5; Tr. 2, at 256-277).

d. Property Taxes

National Grid notes that the Attorney General did not challenge the Company's proposal to include property taxes in the CIRM (Company Reply Brief at 73). In support of the property tax modification, the Company explains that the current CIRM does not allow for recovery of property tax associated with annual capital additions made after the test year, which National Grid claims contradicts the Department's standard practice (Company Brief at 167, citing Exh. NG-RRP-1, at 62). The Company maintains that every other capital recovery mechanism approved by the Department includes property tax recovery, except for the recent mechanism approved for Fitchburg Gas and Electric Light Company (Company Brief at 162, 167, citing D.P.U. 15-80/D.P.U. 15-81, at 54; Tr. 1, at 95-96; Boston Edison

Company/Cambridge Electric Light Company/Commonwealth Electric Company, D.T.E./D.P.U. 06-82-A, at 53, 61 (2010)). The Company purports that incremental capital investment causes incremental increases in property tax (Company Brief at 167, citing Exh. DPU-10-2). Thus, National Grid argues that property taxes are directly attributable to the Company's capital additions and an unavoidable element of the CIRM revenue requirement (Company Brief at 167, citing Exh. NG-RRP-1, at 62). Additionally, the Company adds that the Department did not perform an investigation that would provide a foundation to exclude property tax from the CIRM (Company Brief at 167).

Moreover, National Grid claims that it did not originally propose to include property taxes in its CapEx proposal in D.P.U. 09-39 because the mechanism was one of four proposed rate recovery mechanisms: (1) the approved RDM; (2) the approved CapEx mechanism; (3) a proposed CapEx mechanism to recover projected capital investments; and (4) a proposed adjustment mechanism for net inflation (Company Brief at 161-162, citing D.P.U. 09-39, at 10). National Grid claims that it did not propose to recover property taxes in the approved CapEx mechanism because its proposed net inflation adjustment mechanism would have adjusted its total operating expense, including property taxes (Company Brief at 162, citing D.P.U. 09-39, Exh. NG-HSG-RR-8, at 2). The Company asserts that the Department did not "correct for this purposeful exclusion when it approved capital-cost recovery, while denying the net inflation adjustment" (Company Brief at 162). National Grid describes this result as an "inadvertent exclusion" and a "mistake" by the Department in D.P.U. 09-39 (Company Brief at 162). Therefore, National Grid concludes that there is no basis to exclude property taxes in the

calculation of the CIRM revenue requirement in the instant proceeding (Company Brief at 167; Company Reply Brief at 73).

e. Response to Attorney General's Recommended Modifications

The Attorney General recommends several modifications to the CIRM that National Grid claims lack justification, are unsubstantiated, and are contrary to the purposes of the CIRM (Company Brief at 176; Company Brief at 171-172, citing Attorney General Brief at 88; Company Reply Brief at 70). The Company argues that the Attorney General failed to provide persuasive testimonial evidence to support her recommended modifications to the proposed CIRM (Company Reply Brief at 71-72, citing Tr. 15, at 1602-1605, 1607-1608, 1613, 1617-1618, 1622-1628, 1630-1632). Further, National Grid contends that the Attorney General did not provide analytical support for any of her proposed modifications (Company Reply Brief at 71).

i. Scope

National Grid claims that the Attorney General's recommendation to narrow the scope of cost recovery in the Company's proposed CIRM, based on the design of capital cost recovery mechanisms in other jurisdictions, is unsubstantiated (Company Brief at 172, citing Attorney General Brief at 89; Tr. 15, at 1600-1609). In particular, the Company argues that the Attorney General's evidence of CL&P's storm hardening cost recovery mechanism is actually tied to a capital budget recovered though CL&P's base rates on a future test year basis (Company Brief at 172, citing RR-NG-2, Att. at 1, 8). Therefore, National Grid asserts that capital cost recovery is more favorable to electric distribution utilities in Connecticut than Massachusetts, a fact that the Company claims the Attorney General failed to recognize (Company Brief at 172-173).

ii. Benefits

The Company rejects the Attorney General's recommendation that the Department should include metrics to improve the accountability of customer benefits from the Company's capital spending in the CIRM (Company Brief at 176). The Company maintains that the Attorney General did not explain how the Department's existing service-quality metrics are deficient or suggest an alternative mechanism to include in the CIRM (Company Brief at 176).

iii. O&M Offset

National Grid contends that the Attorney General did not support her position to include an O&M offset in the CIRM (Company Brief at 176; Company Reply Brief at 73). The Company maintains that the O&M offset in the gas system enhancement plan cost recovery mechanism represents the elimination of a discrete O&M expense caused by gas leaks that no longer need repairs because the leaky pipe was replaced (Attorney General Brief at 176). According to the Company, there are no similarities in O&M savings between the CIRM and the gas system enhancement plan (Company Brief at 176; Company Reply Brief at 73).

iv. Rate of Return

Finally, the Company claims that the Attorney General did not rebut the Company's evidence showing that a deduction to the cost of capital is not warranted or appropriate (Company Brief at 176). Therefore, National Grid asserts that the Attorney General's modification to the rate of return on invested capital should be denied (Company Brief at 173, 176).

D. Analysis and Findings

1. Introduction

In D.P.U. 07-50-A at 48, the Department recognized that full revenue decoupling for electric companies would, all other things being equal, remove the opportunity for companies to retain additional revenues from sales growth between base rate proceedings -- revenues that companies could have used to pay for increased O&M costs, costs related to system reliability, and capital expansion projects. See D.P.U. 11-01/D.P.U. 11-02, at 73-74, 107; D.P.U. 10-70, at 47. The Department also recognized that changes in a distribution company's costs could arise from inflationary pressures on the prices of the goods and services it uses. D.P.U. 07-50-A at 49; see also D.P.U. 10-70, at 53. Accordingly, the Department stated that, along with revenue decoupling, it would consider company-specific proposals that adjust target revenues to account for capital spending and inflation but that a company would bear the burden of demonstrating the reasonableness of its proposal. D.P.U. 07-50-A at 50; see also D.P.U. 11-01/D.P.U. 11-02, at 107-108; D.P.U. 10-70, at 47.

In prior cases, when deciding whether to adopt a new capital cost recovery mechanism, the Department closely examined whether the mechanism was warranted and whether it was in the best interest of ratepayers. D.P.U. 13-90, at 36; D.P.U. 11-01/D.P.U. 11-02, at 111; D.P.U. 10-70, at 51-52; D.P.U. 09-39, at 80-84.[29] The Department has allowed capital cost recovery mechanisms in cases where a company has adequately demonstrated its need to recover

[29] National Grid was the first electric distribution company to receive approval for a CapEx mechanism following revenue decoupling. D.P.U. 09-39, at 80-84. Subsequently, the Department approved a CapEx mechanism for Fitchburg Gas and Electric Light Company. D.P.U. 15-80/D.P.U. 15-81, at 50. The Department also previously rejected a CapEx mechanism for Western Massachusetts Electric Company. D.P.U. 10-70, at 52.

incremental costs associated with capital expenditure programs between base rate proceedings. D.P.U. 10-55, at 121-122, 132-133; D.P.U. 09-39, at 79-80, 82; D.P.U. 09-30, at 133-134. Conversely, without compelling evidence of lost growth in sales, the Department has declined to approve a capital cost recovery mechanism as an element of decoupling. D.P.U. 13-90, at 36; D.P.U. 11-01/D.P.U. 11-02, at 109-111; D.P.U. 10-70, at 47; see also D.P.U. 07-50-A at 50. The Department has found that, where a company failed to demonstrate that there were extraordinary circumstances that prevented it from acquiring the capital necessary to make required investments in its infrastructure, approval of a capital cost recovery mechanism was neither warranted nor in the best interests of ratepayers. D.P.U. 11-01/D.P.U. 11-02, at 111; D.P.U. 10-70, at 50, 52.

2. Continuation of the CapEx/CIRM

National Grid acknowledges that the CapEx mechanism approved by the Department in D.P.U. 09-39 has not provided the Company with the level of benefits expected when originally proposed (Exh. NG-RRP-1, at 60-62). Thus, the Company proposes to increase the investment cap in its CIRM from $170 million to $285 million and apply a one-percent rate cap to the change in annual revenue requirement (Exhs. NG-RRP-1, at 61-62; DPU-32-22). Additionally, National Grid argues that the current CapEx mechanism does not provide for recovery of property taxes, a direct component of capital investment (Exhs. NG-RRP-1, at 62; DPU-10-2). Accordingly, the Company has proposed a modified CIRM that includes an investment cap of $285 million and for recovery of property taxes based on the ratio of test year property taxes to rate base (Exh. NG-RRP-1, at 61-62).

The Company must meet its service requirements and investment in distribution infrastructure, which has steadily increased since its last rate case (Exhs. NG-RRP-1, at 60; NG-MLR-1, at 6; DPU-18-5). See Boston Edison Company, Cambridge Electric Light Company, and Commonwealth Electric Company, D.T.E./D.P.U. 06-107-B at 57 (2009) (a monopoly service provider has a public service obligation to provide reliable service at the lowest cost to customers); Boston Edison Company, D.P.U. 85-266-A/D.P.U. 85-271-A at 6-7 (1986); Boston Edison Company, D.P.U. 86-71, at 15-16 (1986). National Grid invested approximately $1.3 billion in its electric distribution system from 2009 through June 30, 2015, and its actual expenditures on capital investment have exceeded the $170 million annual investment cap by an aggregate $178 million over the same period (Exhs. NG-RRP-1, at 60-61; AG-7-5, Att.; AG-16-2, Att.). The Company expects that its workload will increase significantly to provide safe and reliable service and it forecasts capital expenditures to increase from $302 million in 2015 to $311 million in 2017 (Exhs. DPU-10-6; DPU-18-5; AG-7-5). Moreover, the Company's test year plant additions were more than twice the level of the Company's depreciation expense of $127 million (Exhs. NG-RRP-1, at 60; NG-RRP-2, at 5 (Rev. 3)). Accordingly, National Grid would be unable to fully fund its test year level of capital expenditures, much less fully fund its projected increases in capital expenditures, through its base rate depreciation expense.[30]

National Grid also is experiencing an unprecedented level of DG and energy efficiency installations on its system, which cause diminishing sales revenues and increasing workload and expenses to administer the interconnection process for these installations (Exhs. NG-MLR-1,

[30] Depreciation expense is a non-cash expense associated with the use of an asset. Utilities often use depreciation expense as a funding source for capital expenditures.

at 13, 19; DPU-6-21). The Company ranks fifth in the United States in solar interconnections, at 405.3 megawatts ("MW") of interconnected DG solar over the period 2009-2015 (Exh. NG-MLR-1, at 19-20). Without the effect of increasing DG and energy efficiency, the Company's sales forecast derived solely on the basis of economic data would show positive sales growth over a five-year planning period (Exh. DPU-6-14, at 3). Thus, the Company estimates that DG and energy efficiency are reducing sales by approximately 2.3 percent cumulatively per year based on historical installations, and could increase to sales reductions of 6.5 percent cumulatively per year over a five-year planning period, based on additional installations (Exhs. DPU-6-14, at 4; DPU-6-14, Att. at 21).

Based on these considerations, the Department finds that the Company has adequately demonstrated its need to recover incremental costs associated with capital expenditure programs between base distribution rate cases. Accordingly, we will allow the operation of the Company's CIRM. D.P.U. 15-80/D.P.U. 15-81, at 47; D.P.U. 10-55, at 121-122, 132-133; D.P.U. 09-39, at 79-80, 82; D.P.U. 09-30, at 133-134. In this regard, we further find that the CIRM shall operate independent of the Company's revenue decoupling provision. Although the Department stated that we would consider proposals to adjust ATR in an RDM, separating the mechanisms produces the same result for the Company. The RDM reconciliation will annually true-up the over- or under-recovery of base distribution rates, while the CIRM will annually true-up the over- or under-recovery of the Company's allowed annual capital expenditure. See D.P.U. 07-50-A at 50. Separating the CIRM component from the RDM allows for administrative efficiency and the application of separate rate caps.

National Grid proposes an annual rate cap on the CIRM revenue requirement at one percent of total revenues (Exh. NG-PP-23, at 178, (proposed M.D.P.U. No. 1277, at sheet 3)). The Department finds that a one-percent rate cap adequately protects ratepayers from excessive annual increases to distribution rates. See D.P.U. 10-55, at 133. To the extent that the application of the one-percent rate cap results in a CIRM revenue requirement that is less than that calculated, National Grid shall defer the difference and include in the CIRM reconciliation for recovery in the subsequent year. Carrying charges shall be calculated on the average deferred balance using the customer deposit rate (Exh. NG-PP-23, at 178 (proposed M.D.P.U. No. 1277, at sheet 3)). Additionally, the one-percent rate cap is consistent with other capital tracking mechanisms approved for utilities in Massachusetts. See, e.g., D.P.U. 15-80/D.P.U. 15-81, at 53-54; D.P.U. 10-55, at 133.

The Department now allows the Company's CIRM to operate separately from the Company's revenue decoupling provision. Below, the Department addresses the Company's proposed modification to increase the investment cap to $285 million and to include property taxes in the annual revenue requirement. We also address the Attorney General's recommended modifications to the CIRM.

3. Investment Cap

The Company proposes to increase its investment cap to $285 million, based on its test year plant additions and cost of removal (Exhs. NG-RRP-1, at 61; DPU-10-6, Att.; RR-DPU-9; RR-DPU-14). The Attorney General asserts that the investment cap should remain at $170 million, or in the alternative, be set at $183 million, representing the five-year average of

plant additions, excluding cost of removal (Exh. AG-DO-CF-1, at 8; Attorney General Brief at 93, citing RR-DPU-14).

Capital cost recovery mechanisms reduce and potentially eliminate the important incentive that regulatory lag provides to companies to maintain an appropriate balance between investing in capital improvements and incurring O&M expenses. D.P.U. 09-39, at 81. To reach a balance between: (1) providing the Company with sufficient capital funding to ensure the safety and reliability of the electric service that it provides to its ratepayers; and (2) protecting its ratepayers against the incentive the Company has to overinvest in capital infrastructure in order provide earnings to its shareholders, the Department has directed companies to implement investment caps. D.P.U. 15-80/D.P.U. 15-81, at 53; D.P.U. 09-39, at 81-82.

After review of the record and the arguments of the parties, the Department finds it appropriate to implement an investment cap based on the historical three-year average of capital spending, or $249 million (Exh. DPU-10-6 & Att.).[31] We conclude that using this three-year average of capital spending as the limit on CIRM revenue requirement is appropriate because it is representative of National Grid's current capital investment needs and, as such, strikes the appropriate balance between: (1) providing the Company with sufficient funds to ensure safe and reliable electric service; and (2) protecting ratepayers from over-investment in capital infrastructure. D.P.U. 15-80/D.P.U. 15-81, at 53; D.P.U. 09-39, at 82.[32]

---

[31] The $249 million historical three-year average of capital spending (including cost of removal) is calculated based on capital spending of approximately $176 million in 2013, $270 million in 2014, and $302 million in 2015 (Exh. DPU-10-6 & Att.).

[32] The Department expects the Company's first CIRM filing to reflect six months of capital investments (i.e., July 1, 2015-December 31, 2015). Therefore, the Department directs the Company to prorate the annual $249 million investment cap (i.e., $124.5 million) to

The Department makes no determination regarding the optimal level of investment the Company should make in its distribution infrastructure in order to provide safe and reliable electric service to its ratepayers in satisfaction of its public service obligation.[33] The Company's maintenance and replacement activities may lead the Company to identify capital investments that exceed the level of the three-year average

4. Property Taxes

In D.P.U. 15-80/D.P.U. 15-81, the Department excluded property taxes from Fitchburg Gas and Electric Light Company's capital cost recovery mechanism on the basis that capital cost recovery mechanisms are not intended to provide a company with dollar-for-dollar recovery of capital investments between rate cases, and are intended to provide rate relief in between base distribution rate cases to fund capital investments that otherwise were available to be funded through sales growth prior to decoupling. D.P.U. 15-80/D.P.U. 15-81, at 54. Based on the record in this proceeding, however, it is apparent that the exclusion of property taxes does not provide the appropriate rate relief between base rate proceedings to fund capital investments that were available to be funded through sales growth prior to revenue decoupling (Exhs. NG-RRP-1, at 62; DPU-10-2; Tr. 1, at 95-96; Tr. 9, at 1533-1535). Further, based on the record in this proceeding, the Department is persuaded that property taxes are directly attributable to the Company's capital additions (Exhs. NG-RRP-1, at 62; DPU-10-2; Tr. 1, at 95-96; Tr. 9, at 1533-1535). Incremental increases in property taxes are inextricably linked to incremental

---

account for only six months of capital investment in the first annual CIRM filing following this Order.

[33] In this regard, the Department relies on the Company to make sound management, business, and engineering decisions.

capital investment funded through the CIRM. Moreover, under the Company's current CapEx mechanism, the Company's return on rate base was 1.18 percent (compared to its authorized return of 8.14 percent) (Exhs. NG-MLR-1, at 4; AG-16-1). See also Massachusetts Electric Company and Nantucket Electric Company, D.P.U. 09-39-A at 38 (2010). The Department concludes property taxes represent a significant cost related to capital investments, and excluding them from the CIRM may contribute to earnings erosion and may negatively affect capital investment.

We recognize that the Department's decision today shifts from the policy direction previously stated in D.P.U. 15-80/D.P.U. 15-81. However, we find that the change here is necessary in order to provide the Company with a necessary and appropriate level of rate relief. Moreover, the Department's goal in the inclusion of property taxes in the CIRM is to mitigate the need for base rate relief prior to the five-year interval prescribed by § 94, ultimately to the benefit of ratepayers. Further, we note that permitting the Company to recover property taxes associated with CIRM investments will not result in dollar-for-dollar recovery of all property taxes. The Company proposes to include property taxes in its CIRM using a ratio of total annual property taxes paid in the test year to total taxable net plant in service in the test year (Exhs. NG-PP-23, at 176 (proposed M.D.P.U. No. 1277, at sheet 1); DPU-18-8, Att.). Based on the Company's original cost of service data, the property tax rate for the CIRM calculation is 2.63 percent (Exhs. NG-RRP-2, at 28, 30 (Rev. 1); DPU-18-8). The Company multiplies the 2.63 percent property tax rate by net plant to determine the property tax expense recoverable through the CIRM (Exh. DPU-18-8). Because National Grid is not permitted to recover the revenue requirement associated with the investment vintage year, the full property tax expense

on CIRM investments are not fully realized in the CIRM until the third year's revenue requirement calculation (Exh. DPU-18-8). Therefore, property taxes recoverable in the CIRM are not actual incurred expenses on the new CIRM investment in the vintage year.[34]

Further, based on a CIRM with an investment cap of $285 million (i.e., the Company's proposal), National Grid would not collect property taxes for the first year of the investment, and in the second and third years of the CIRM, it would collect approximately $3 million and $6 million, respectively, associated with only the first year of capital investment (Exh. DPU-18-8, Att. at 1). In addition, to the extent that the Company's annual capital investment exceeds the investment cap, the Company will not recover property taxes associated with these investments until its next base rate case. Therefore, the Company's CIRM retains a measure of regulatory lag. For all of the foregoing reasons, the Department allows the Company's proposal to include property taxes in the calculation of the CIRM revenue requirement.

5. Attorney General's Modifications

The Department declines to adopt the Attorney General's recommendations to limit the scope of the CIRM and to implement an O&M offset. The Attorney General did not provide persuasive evidence on how or what to limit the scope of the CIRM or provide sufficient quantification of any O&M offset (see Exhs. AG-DO-CF-1, at 11-12, 18-19;

[34] Moreover, the property tax expense associated with CIRM investments is not based on actual property tax bills. Thus, annual incremental property taxes associated with CIRM investments are not recovered on a dollar-for-dollar basis.

AG-DO-CF-Rebuttal-1, at 7-9).[35] Finally, we find that the Attorney General did not substantiate with appropriate analysis her recommendation for a lower rate of return applicable to the CIRM. Therefore, we decline to adopt her recommendation. The Department discusses the Company's overall rate of return, and whether the approved CIRM reduces risk, in Section XII.E below.

Regarding benefits, the Attorney General recommends that the Department require the Company to re-engage with stakeholders to establish metrics, goals, and reporting requirements to ensure that the investments made in the CIRM deliver benefits to customers at a reasonable cost (Attorney General Brief at 91, citing Exh. AG-DO-CF-1, at 16-17; Attorney General Reply Brief at 52, n.20). See D.P.U. 09-39, at 84. After the Department's directive in D.P.U. 09-39, the Company coordinated three meetings to develop capital spending metrics for future years (Exh. DPU-18-6). National Grid was unable to reach an agreement on the purpose or iteration of the metrics as of April 4, 2012 (Exh. DPU-18-6). The Company stated that because the annual CapEx mechanism proceedings were suspended, it did not re-engage stakeholders to reach an agreement (Exh. DPU-18-6).

With this Order, the previous CapEx mechanism proceedings will be resolved (see Section VII.B.6). However, the Company will continue to make future CIRM filings. Thus, the Department directs the Company to continue to work toward the development of a capital plan that includes goals and metrics by which to measure and quantify its success. Accordingly, within 120 days of the date of this Order, National Grid shall provide the Department with a report detailing the Company's efforts to develop such goals and metrics. In conjunction with this report, the Company shall update and file the Proposed Capital Plan Metrics Capital Plan

[35] Despite making this recommendation, the Attorney General could not point to any such category or external factor to limit the scope of the CIRM (Exh. AG-DO-CF-1, at 11-12).

labeled as Exhibits AG-4-9-A and AG-4-9-B in docket D.P.U. 11-60. Upon review of the Company's filing, the Department will determine the appropriate next steps.

6. Conclusion

The Department allows the Company's proposal to operate the CIRM outside of the RDM. The Department also approves a modified investment cap of $249 million, a one-percent rate cap, and the Company's proposal to include property taxes in the CIRM revenue requirement. In compliance with this Order, the Department directs the Company to modify its CIRM tariff according to the foregoing directives. Further, the Company shall make all future CIRM filings in compliance with the directives set forth in Section VII.B.5.b.viii below.

VI. STORM COST RECOVERY MECHANISM

A. Introduction

1. Background of the Storm Fund

Pursuant to a rate plan settlement in D.T.E. 99-47 ("D.T.E. 99-47 Settlement"), the Department approved the collection by the Company of $4.3 million annually in base rates for contribution to a storm fund. In accordance with the terms of the D.T.E. 99-47 Settlement, the Company was permitted to access the storm fund when the cost of responding to an individual storm exceeded $1.25 million. D.T.E. 99-47 Settlement, Att. 5. The D.T.E. 99-47 Settlement also established a cap on the storm fund balance of $20 million, adjusted for inflation, applicable to the storm fund. D.T.E. 99-47 Settlement at 15. In the event the cap was exceeded (either positive or negative), the excess or deficiency was to be recovered or refunded over a five-year period. D.T.E. 99-47 Settlement, at 15. Finally, the D.T.E. 99-47 Settlement provided for

interest to be applied on the storm fund balance (or deficit) at the customer deposit rate. D.T.E. 99-47 Settlement, Att. 5.

In the Company's last base rate case, D.P.U. 09-39, the Department approved the Company's proposal to continue the storm fund, but also determined that several modifications to the storm fund were necessary. D.P.U. 09-39, at 205-213. The Department maintained the annual storm fund collection of $4.3 million in base rates. D.P.U. 09-39, at 207. However, the Department rejected the Company's request to recover through the storm fund all expenses associated with an individual storm that exceeds $1.25 million in restoration costs, and instead permitted the Company to recover only the costs in excess of $1.25 million. D.P.U. 09-39, at 207. Further, the Department rejected the Company's proposal to carry a credit balance in the storm fund at the customer deposit rate and a deficit balance at the weighted average cost of capital ("WACC"). D.P.U. 09-39, at 207. Instead, the Department found it appropriate for the storm fund balance (whether credit or deficit) to accrue interest at the Company's WACC determined in that proceeding. D.P.U. 09-39, at 208.

In addition, National Grid proposed to remove the cap on the fund balance on the credit side and, if the storm fund had a deficit balance in excess of $8.6 million, include on an annual basis the amount in excess of $8.6 million as a distribution adjustment with carrying costs at the Company's WACC. D.P.U. 09-39, at 208. The Department rejected this proposal and instead continued the symmetrical cap of $20 million. D.P.U. 09-39, at 208. The Department found that in the event the cap was exceeded as the result of a surplus, then the amount over the cap collected from ratepayers in that year would be returned in the following year. D.P.U. 09-39,

at 208.[36] In the event the cap was exceeded as a result of a deficiency, the Company would have the option to propose to the Department an alternative method for recovery of incremental costs that exceed the cap. D.P.U. 09-39, at 208-209.

Finally, the Department found that in order to recover any costs from the storm fund, National Grid must obtain approval from the Department by demonstrating that the costs the Company seeks to recover from the fund are storm related, incremental, exceed the $1.25 million threshold, and were prudently incurred. D.P.U. 09-39, at 209. National Grid was directed to submit as part of its filing a report that outlines the total number and costs of all storms that occurred in the past year. D.P.U. 09-39, at 209.

2. Storm Cost Recovery Filings

Pursuant to the directives set forth in D.P.U. 09-39, the Company petitioned the Department in March 2013 for recovery of the $212 million storm fund deficit balance related to 14 storms that took place between February 2010 and February 2013. Massachusetts Electric Company and Nantucket Electric Company, D.P.U. 13-59, at 1-2, 4 & n.2 (2013). The Department approved a Storm Fund Replenishment Adjustment Factor ("SFRF")[37] designed to replenish the storm fund by $40 million annually for three years, beginning on May 4, 2013.

---

[36] The Department found that consistent with the treatment of the recovery and reconciliation of pension costs and gas costs (220 C.M.R. § 6.08(2) for gas costs), the amount of storm costs to be reconciled would be returned through a kWh delivery surcharge with carrying costs on the reconciliation of forecast to actual recovery at the prime rate. D.P.U. 09-39, at 208, citing NSTAR Pension, D.T.E. 03-47-A at 46 (2003).

[37] Also referred to in other cases as the Storm Fund Replenishment Adjustment.

D.P.U. 13-59, at 14.[38] The Department also directed National Grid to file for a prudency review, no later than May 31, 2013, to include all supporting invoices for storm events that occurred between 2010-2011, and to file no later than December 31, 2013, for storm events occurring through February 2013. D.P.U. 13-59, at 2, 15.

Pursuant to the Department's directives in D.P.U. 13-59, the Company filed for recovery of the deficit balance in the storm fund associated with the incremental costs for eight storms that occurred between February 2010 and October 2011, and for eight storms that occurred between January 2012 and March 2013. Massachusetts Electric Company and Nantucket Electric Company, D.P.U. 13-85, at 1 (2016).[39] In D.P.U. 13-85, the Department approved the recovery of costs associated with these storms. D.P.U. 13-85, at 101, 106.[40] The Department also extended the SFRF through June 2018, because it will eliminate the storm fund deficiency associated with these 16 storms and will avoid approximately $7.6 million in carrying changes, to the benefit of ratepayers. D.P.U. 13-85, at 105.

According to the Company, between November 2013 and February 2015, there have been nine additional storms that qualify for recovery under the storm fund (Exh. NG-RRP-1,

---

38 In a separate proceeding, the Department approved the transfer to the SFRF of recovery of outstanding costs related to a 2008 ice storm. Massachusetts Electric Company and Nantucket Electric Company, D.P.U. 14-85, at 7 (2014).

39 The 16 storms for which the Company sought cost recovery included the 14 aforementioned storms and two additional storms that occurred in 2013.

40 The final amount of approved costs is subject to confirmation by the Department following the Company's compliance filing in that proceeding. D.P.U. 13-85, at 101, 106.

at 67-68).[41] Thus, since 2010, there have been 25 storms that qualified for recovery through the storm fund (Exh. NG-RRP-1, at 68, 75). The net amount of incremental O&M expense eligible for reimbursement from the storm fund for these 25 events in total is $243 million (Exh. NG-RRP-2, at 26 (Rev. 3)).

B. Company Proposal

The Company proposes to continue its storm fund and to maintain the current $1.25 million cost-per-storm threshold for accessing the storm fund (Exhs. NG-RRP-1, at 68-69; DPU-21-17). However, the Company proposes four modifications to the current storm fund. First, the Company proposes to extend the SFRF to August 2019 in order to continue the more rapid replenishment of the existing storm fund to account for the nine additional qualifying storm event costs that took place after the Company's filing in D.P.U. 13-85, and to minimize the carrying costs associated with those storms (projected to be $32 million at the start of the rate year) (Exhs.NG-RRP-1, at 68-69, 78, 82; NG-RRP-6c, at 2). In this regard, the Company also proposes to transfer the deficit balance to be collected through the SFRF to a separate regulatory asset, and reset the storm fund balance to zero (Exh. NG-RRP-1, at 78). Further, the Company proposes that any residual balance (either positive or negative) remaining in the regulatory asset at the end of the extended recovery period (i.e., August 2019) then would be transferred to the Company's storm fund (Exh. NG-RRP-1, at 78-79).

Second, the Company proposes to increase from $4.3 million to $14 million, the amount collected annually through base rates and designated to the storm fund (Exhs. NG-RRP-1, at 69, 85-86; NG-RRP-2, at 4, 26 (Rev. 3)). The Company states that based on its history of storm

[41] The Company has not yet filed for a prudency review of these nine storms (Exh. NG-RRP-1, at 82).

events since its last rate case this proposal provides a more appropriate amount for the base-rate contribution, balances customer rate impact, and normalizes cost recovery for extraordinary storm events (Exh. NG-RRP-1, at 69, 86). In calculating the proposed base rate amount, the Company first eliminated from consideration $150 million in costs related to the three costliest storms that occurred between 2009 and June 30, 2015 (Exhs. NG-RRP-1, at 86; NG-RRP-2, at 26).[42] The Company then took an average of the remaining $93 million in storms costs ($243 million in net incremental storm costs minus $150 million) over the number of months between the end of the test year in D.P.U. 09-39 and the end of the test year in the instant proceeding, or 78 months, to arrive at an annualized amount of $14.0 million (Exhs. NG-RRP-1, at 86; NG-RRP-2, at 26 (Rev. 3)).

Third, the Company proposes to increase the storm fund's symmetrical cap on the balance in the fund from $20 million to $30 million to coincide with its proposed increase in the annual base rate contribution for storm costs (Exhs. NG-RRP-1, at 88-89). The Company states that it is necessary to raise the cap to $30 million in order to minimize the potential for frequent rate changes, either positive or negative (Exh. NG-RRP-1, at 89).

Fourth, the Company proposes to modify the current method by which carrying costs are applied to storm costs that are recovered through the storm fund, so that interest will accrue on incremental storm costs when such costs are filed for recovery with the Department (as opposed to when these costs are incurred) (Exh. NG-RRP-1, at 87). In this regard, the Company proposes that interest will accrue on the combination of the storm fund reserve and the costs related to the

---

42 These three storms were: (1) Tropical Storm Irene in August 2011; (2) the October snowstorm in October 2011; and (3) Nor'easter Nemo in February 2013 (Exh. NG-RRP-1, at 86).

storms filed for storm fund cost recovery (Exh. NG-RRP-1, at 88). If the storm fund balance is in a surplus, then the Company proposes that interest will accrue at a carrying charge rate equivalent to the Company's pre-tax WACC, as determined by the Department (Exh. NG-RRP-1, at 87). Conversely, if the combined storm fund balance is in a deficit, then the amount in deficit (up to the $30 million cap) would accrue interest at the Company's customer deposit rate (Exh. NG-RRP-1, at 88). Further, any storm fund deficit in excess of the proposed $30 million storm cap would accrue interest at a carrying charge rate equivalent to the pre-tax WACC (Exh. NG-RRP-1, at 88).

C. Positions of the Parties

1. Attorney General

The Attorney General argues that National Grid's storm fund should be eliminated because the Company failed to demonstrate that: (1) storm costs represent "extraordinary circumstances"; and (2) the storm fund is in the best interest of ratepayers (Attorney General Brief at 94-97, citing D.P.U. 13-90, at 14; Attorney General Reply Brief at 53, 57-58). Instead, the Attorney General asserts that the Company should recover storm costs through base distribution rates at a representative historical level (Attorney General Brief at 95). According to the Attorney General, if a storm results in extraordinary costs, National Grid could: (1) request from the Department deferral of these costs for consideration of recovery in its next base rate case; or (2) file for storm cost recovery through a base rate case proceeding, thereby allowing the storm costs to be weighed along with other factors affecting the Company's financial stability (Attorney General Brief at 95). On this last point, the Attorney General notes that annual rate cases should not be the norm if the storm fund is discontinued, and that the Company has a

fiduciary obligation to act in the best interest of ratepayers and provide safe, reliable, and least-cost service (Attorney General Reply Brief at 57-58, citing D.P.U. 10-70, at 229 n.123; Incentive Regulation, D.P.U. 94-158, at 3 (1995); Integrated Resource Planning, D.P.U. 94-164, at 51-52 (1995)).

Alternatively, the Attorney General argues that if the Department continues the Company's storm fund, three revisions should be made. First, she contends that the cost-per-storm threshold to access the storm fund should be increased from $1.25 million to $2.4 million (Attorney General Brief at 98; Attorney General Reply Brief at 56-57). According to the Attorney General, storm costs have increased over time and this proposed threshold more accurately reflects the increase in costs (Attorney General Brief at 98, citing Exh. DPU-AG-1-9; Attorney General Reply Brief at 55-56). She also contends that under the current threshold of $1.25 million, the Company accesses the storm fund on average 4.5 times per year (i.e., 25 storms over a five and one half year period) (Attorney General Brief at 98, citing Exh. DPU-AG-1-19; Attorney General Reply Brief at 56).[43] Thus, she claims that many storms considered by the Company to be "major" are actually more likely to be "routine" (Attorney General Brief at 98, citing Exh. AG-DO-CF-Rebuttal-1, at 3-4; Attorney General Reply Brief at 56). The Attorney General asserts that increasing the threshold to $2.4 million likely would reduce storm fund access to, on average, 2.7 times per year and ensure that only those events that clearly fall outside of normal risk built into rates would be eligible for storm fund recovery (Attorney General Brief at 98, citing Exh. AG-1-19; Attorney General Reply Brief at 56-57).

---

[43] The Attorney General's five and one half year period appears to be 2010 to the end of the test year in this case (Exh. DPU-AG-1-19 & Att.)

Second, the Attorney General argues that the amount collected annually through base rates and designated to the storm fund should increase from $4.3 million to $4.8 million (Attorney General Brief at 99, citing Exh. AG-DO-CF-1, at 29; RR-DPU-50; Attorney General Reply Brief at 53 n.21). In this regard, she contends that if the storm fund threshold had been $2.4 million rather than $1.25 million, and if the five costliest storms of the 25 storms at issue were excluded from consideration,[44] only 15 storms would have qualified for storm fund cost recovery (Attorney General Brief at 99, citing Exh. AG-DO-CF-1, at 29). According to the Attorney General, the annualized amount of the net incremental O&M expense associated with these 15 storms was $4,766,284, thereby justifying the recommended representative level of $4.8 million (Attorney General Brief at 99, citing Exh. AG-DO-CF-1, at 29; RR-DPU-50).

Third, the Attorney General argues that the carrying charge applied to any unrecovered balance in the storm fund should be set at the customer deposit rate and not the WACC (Attorney General Brief at 98; Attorney General Reply Brief at 53).[45] According to the Attorney General, the application of the WACC to deferred storm fund-eligible costs has permitted the Company to recover $81 million in interest between 2010 and 2015 (Attorney General Brief at 98, citing Exhs. NG-RRP-6b, at 2; AG-DO-CF-1, at 27-28; Attorney General Reply Brief at 54). Further, the Attorney General contends that the application of the WACC to deferred storm

---

44 These five storms are: (1) Tropical Storm Irene in August 2011; (2) the October snowstorm in October 2011; (3) Nor'easter Nemo in February 2013; (4) Hurricane Sandy in October 2012; and (5) Blizzard Juno in January 2015 (Attorney General Brief at 99, citing Exh. AG-DO-CF-1, at 29).

45 The Company's current pre-tax WACC is 11.48 percent (Exh. NG-RRP-6a). The Company's customer deposit rate is 0.69 percent, which is equivalent to the average rate paid on two-year United States Treasury notes for the twelve months ended December 31, 2015, as stated in the Federal Reserve Statistical Release.

fund-eligible costs has led to considerable risk and cost inappropriately being transferred to ratepayers (Attorney General Brief at 98; Attorney General Reply Brief at 54). Thus, she asserts that to avoid this risk transfer, and because she argues that the deferral of storm costs is short-term, the Department should adopt the customer deposit rate as the appropriate carrying charge (Attorney General Brief at 98-99; Attorney General Reply Brief at 54-55).[46]

2. PowerOptions

PowerOptions argues that the Company's storm fund must be carefully examined and that preparing for storms, and properly repairing the distribution system after storms, are part of "doing business" in New England (PowerOptions Reply Brief at 11). Further, PowerOptions contends that if the Company's storm fund is continued, the Department should adopt the Attorney General's recommendations to raise the cost-per-storm threshold to access the storm fund from $1.25 million to $2.4 million (PowerOptions Reply Brief at 11). PowerOptions agrees with the Attorney General that increasing the threshold likely will reduce the number of storms that qualify for storm fund recovery and ensure that only those larger-scale storm events that clearly fall outside of normal risk built into rates would be eligible for such recovery (PowerOptions Reply Brief at 11).

3. Company

National Grid asserts that the storm fund should continue, and the Company rejects the various arguments raised by the Attorney General in support of terminating the fund (Company Brief at 183-189). In particular, the Company argues that the storm fund provides a necessary

[46] The Attorney General states that if the Department raises the cost-per-storm threshold to $2.4 million and if the customer deposit rate is used to accrue carrying charges on the deficit, the $20 million cap on the fund balance "will likely suffice" (Exh. AG-DO-CF-1, at 29).

means of cost recovery that appropriately correlates to the strict requirements imposed on electric companies for immediate and unqualified response to storms (Company Brief at 183-184). In this regard, the Company contends that there is no feasible manner by which the magnitude of storm costs now incurred simply could be deferred for later recovery in a future rate case, and that annual rate cases would be necessary to achieve a level of recovery that would satisfy the Company's rating agencies (Company Brief at 184, 187). National Grid asserts that such an outcome would be detrimental to ratepayers and the financial integrity of the Company (Company Brief at 184).

The Company proposes to maintain the $1.25 million threshold that currently applies to determine eligibility for storm fund recovery (Company Brief at 179). The Company rejects the Attorney General's recommendation to increase the cost-per-storm threshold to access the storm fund from $1.25 million to $2.4 million (Company Brief at 189). According to the Company, the Attorney General's recommended threshold is not based on any analysis whatsoever, but is simply a "mathematical computation to back into a recommendation concluding that only two storms a year should qualify" (Company Brief at 190-191). Conversely, the Company contends that the $1.25 million is set at a point that draws a distinct line between events that require a response using resources that are contemplated in base rates and those events that involve costs that are not included in base rates, which are largely related to the costs of external crew complements called into pre-stage for relatively larger impact events (Company Brief at 191). Further, the Company notes that between 2010 and 2015, there were 240 discrete storm events that caused the Company to incur incremental repair and restoration costs, but only 25 of these events (or approximately ten percent) qualified for storm fund

recovery (Company Brief at 190, 192, citing Exh. NG-RRP-1, at 66-68). Thus, the Company asserts that the $1.25 million threshold is appropriate (Company Brief at 192). However, the Company notes that in the event the Department does raise the threshold, a corresponding increase in base rates is necessary to fund storm costs for those storms that would not meet the threshold (Company Brief at 191-192; Company Reply Brief at 74).[47]

With respect to National Grid's proposal to increase the annual base rate contribution to the storm fund to $14.0 million, the Company argues that the current annual contribution of $4.3 million is not sufficient because the number of qualifying events is increasing due to prevailing weather patterns and the strict emergency response requirements placed on the Company by Massachusetts law and the Department's regulations (Company Brief at 179-180, citing Exh. DPU-32-10). Further, the Company argues that if the Department does not increase the current amount of $4.3 million collected annually through base rates and contributed to the storm fund, there will continue to be a relatively greater need to defer and delay storm-cost recovery (Company Reply Brief at 74).

Next, National Grid argues that its proposal with respect to carrying costs is designed to more equitably share with ratepayers the risk related to major storms (Company Brief at 180, citing Exh. NG-RRP-1, at 87-88). National Grid contends that it cannot defer hundreds of millions of dollars for multiple years, with another five years or more needed for recovery,

---

[47] The Company maintains that large storm costs are not appropriate for the "ebb and flow" of base ratemaking treatment because: (1) it is not possible to reasonably identify a "representative" level of major storm events; and (2) as the threshold increases, there is an increase in the "win or loss" that occurs for the ratepayers and Company (Company Brief at 192). However, the Company argues that if the threshold is set at $2.4 million, as recommended by the Attorney General, the Department should increase base rates by $5.2 million (Company Reply Brief at 74, citing Exh. NG-RRP-Rebuttal-1, at 12; RR-DPU-46).

without recovery of adequate carrying costs (Company Reply Brief at 74). Thus, the Company asserts that any changes to the storm fund that build in delay and deferral must be accompanied by adequate carrying costs (Company Reply Brief at 74).

Finally, the Company argues that its symmetrical cap proposal is designed to protect against substantial accumulation of fund balances creating an oversized surplus or potentially harmful deficit (Company Brief at 181, citing Exh. DPU-21-18). The Company contends that given recent qualifying storm events, an increase in the symmetrical cap on the fund balance from $20 million to $30 million is a necessary change to minimize the potential for frequent rate changes, to accommodate the greater level of annual customer contribution proposed in this case, and to provide for more stable rates for customers (Company Brief at 181, citing Exhs. NG-RRP-1, at 89; DPU-21-18). Thus, according to the Company, the proposed symmetrical cap and the base distribution rate contribution are intended to work in conjunction with one another to establish rate stability for customers (Company Brief at 181).

D. Analysis and Findings

1. Introduction

The Department's primary objective for allowing a storm fund is to levelize storm restoration costs of major storms on ratepayers. D.P.U. 13-90, at 13, citing D.P.U. 10-70, at 201-202; D.P.U. 09-39, at 206. However, the Department has recognized that recent experience, both with National Grid and other electric utilities, has demonstrated that the use of storm funds may shift the burden of cost recovery disproportionately to ratepayers without providing commensurate benefits. D.P.U. 13-90, at 13. As such, the Department has put all electric distribution companies on notice that if they seek continuation of a storm fund in their

next base distribution rate case, they must demonstrate why the continuation of a storm fund is in the best interest of ratepayers. D.P.U. 13-90, at 14-15.

2. Continuation of the Storm Fund

Since the Company's last rate case, the Department has devoted significant time and resources to the improvement of each electric utility's storm response. As a result, storm response requirements are now more formalized, more comprehensive, and more rigorous. See, e.g., G.L. c. 164, § 1J; 220 C.M.R. § 19.03 (setting forth standards for the acceptable performance for emergency preparation and restoration of service for electric and gas companies); Investigation by the Department of Public Utilities into the Storm Preparation and Response of Massachusetts Electric Company and Nantucket Electric Company, D.P.U. 11-85-A/11-119-A at 153 (2012) (imposing penalties for Company's failure to restore service to its customers in a safe and reasonably prompt manner). In order to meet these requirements, electric distribution companies are expected to properly prepare for and implement storm response measures that restore power safely and expeditiously. These obligations require the Company to devote substantial resources to achieving the desired results. Further, as recent history indicates, the frequency and severity of major storm events has increased (see, e.g., Exh. DPU-32-4, Att. (25 major storms since 2009)). Not surprisingly, the costs of responding to those events to restore power for customers in an expeditious fashion have increased as well.

We acknowledge that National Grid's current storm fund mechanism has not provided the desired balance between cost recovery and rate stability. In particular, the overall number of major storms in the past six and a half years contributed to a large storm fund deficit that

expanded even further due to the accumulation of a significant amount in carrying charges. The number of these storms themselves could not have been anticipated when the storm fund mechanism was developed for the Company, although we have certainly seen a trending to more severe storms over the past several years than previously experienced. As a result, without a storm fund mechanism it is unlikely that during this time frame the Company could have absorbed these costs without filing a base rate case, or even multiple rate cases, which could have resulted in an increase in rates to ratepayers for other costs.

Therefore, we find that if properly structured, the Company's storm fund can provide for adequate recovery of storm costs from customers in a manner that is designed to create rate stability. On that basis we conclude that the storm fund shall continue, but with several important modifications, as discussed below.[48]

3. Modifications to the Storm Fund

a. Cost-Per-Storm Threshold

Currently, for any storm for which National Grid incurs more than $1.25 million in costs, the Company is permitted to access the storm fund for reimbursement of only that portion of the costs that exceed $1.25 million. D.P.U. 09-39, at 207. The Company's current threshold of $1.25 million per storm was first established in the D.T.E. 99-47 Settlement and was maintained following the Department's adjudication of the proposed modifications to the storm fund in D.P.U. 09-39. It stands to reason that per-storm restoration costs have increased since 2009. Thus, we find that it is appropriate to increase the cost-per-storm threshold to reflect the general

[48] Further, we note that pursuant to § 94, the Company must file its next base rate case within five years. At that time, the Department will have another opportunity to review the modified storm fund and determine whether it should continue even further.

increase in costs and to prevent the inclusion in the storm fund of future storm events of a more routine nature.

The Attorney General recommends that the cost-per-storm threshold should be increased to $2.4 million to better reflect the frequency of "truly" major storms (Attorney General Brief at 98, citing Exh. DPU-AG-1-19; Attorney General Reply Brief at 56-57). The Company did not propose an increase to the cost-per-storm threshold, but argues that any such increase must come with a corresponding increase to the amount collected through base rates to address smaller storms that do not qualify for storm fund recovery (Exh. NG-RRP-Rebuttal-1, at 12; RR-DPU-46).[49]

The Department has considered the arguments and has reviewed the record concerning the cost-per-storm threshold (Exhs. NG-RRP-Rebuttal-1, at 9-10; NG-DEB-Rebuttal-1, at 3-7; AG-DO-CF-1, at 28; AG-DO-CF-Rebuttal-1, at 4-5; DPU-21-18; DPU-32-2; AG-6-1; DPU-AG-1-19 & Att.; Tr. 15, at 1633-1649, 1670-1676, 1680-1681; RR-DPU-46; RR-DPU-51). The Department finds that it is appropriate to increase the threshold to account for the effect of inflation on costs during this period. Absent an inflation adjustment to the current threshold to bring incremental O&M service restoration costs to present value terms, the cost of a storm in 2009 (in present value dollars) would be less than the cost of that same storm in 2015. Therefore, the Department finds that the threshold should be increased by inflation based on the gross domestic product price index ("GDP-PI") from the U.S. Bureau of Economic Analysis for the period between 2009 and June 30, 2015, which would increase the current $1.25 million

[49] The Company collects through base rates (1) an annual amount for contribution to the storm fund reserve, and (2) an annual amount to cover costs up to the cost-per-storm threshold and for smaller storm events that do not qualify for the storm fund.

threshold by approximately ten percent to approximately $1.5 million.[50] We find that this increased cost-per-storm threshold provides an appropriate balance between providing the Company with necessary access to the storm fund to recover costs associated with major storms and ensuring that the routine storms are not contributing to a storm fund deficit balance.

Further, we find that the increase in the cost-per-storm threshold applicable to the storm fund also necessitates changes in the amount the Company collects through base rates to (1) contribute to the storm fund, and (2) recover O&M costs up to the $1.5 million threshold for storms that qualify for the storm fund, as well as costs associated with smaller storm events that no longer qualify for storm fund recovery. These issues are discussed in the next section.

b. Amounts Collected through Base Rates

i. Annual Contribution to the Storm Fund

National Grid's current $4.3 million annual base rate contribution to the storm fund was established in the Company's last rate case. D.P.U 09-39, at 207. The Company proposes to increase the annual base rate contribution to the storm fund by $9.7 million to $14.0 million (Exhs. NG-RRP-1, at 69, 85-86; NG-RRP-2, at 4, 26 (Rev. 3)). The Company argues that the current annual contribution of $4.3 million is not sufficient because the number of qualifying events is increasing due to prevailing weather patterns and increased costs associated with the strict emergency response requirements placed on the Company by Massachusetts law and the Department's regulations (Company Brief at 179-180, citing Exh. DPU-32-10). Conversely, the Attorney General argues that a $500,000 increase of the annual contribution to $4.8 million is

---

50 GDP-PI sourced from U.S. Bureau of Economic Analysis http://www.bea.gov/iTable/iTable.cfm?ReqID=9&step=1#reqid=9&step=3&isuri=1&904=2015&903=4&906=q&905=2016&910=x&911=0 (see also Exh. WP-NG-RRP-16).

more appropriate (Attorney General Brief at 99, citing Exh. AG-DO-CF-1, at 29; RR-DPU-50; Attorney General Reply Brief at 53 n.21).

A storm fund is intended to provide a level of rate stability for customers, but only if it actually allows for recovery of storm costs over time without requiring a change to customer rates. As evidenced by the number of major storms since the Company's last rate case and the resulting significant deficit balance in the storm fund, the annual base rate contribution amount of $4.3 million has proven to be insufficient to maintain rate stability. See, e.g., D.P.U. 13-85, at 101, 106 (approving the recovery of costs associated with 16 major storms); D.P.U. 13-59 (approving the recovery of $120 million in storm costs over a three-year period). Thus, we conclude that an increase to the annual base rate contribution to the storm fund is warranted.

In this regard, the Department strives to set a new annual contribution amount that would permit the Company to recover storm costs over time without generating a surplus or deficit balance in the storm fund that would exceed the symmetrical cap.[51] We recognize the uncertainty in achieving this result given the unpredictable nature of the weather in general, and storm events in particular. The Department is in no better position to predict the frequency of future storm events than is the Company or the Attorney General. Further, we acknowledge that while data associated with past major storm events provides a historical perspective regarding the frequency, severity, and costs of major storms, such information is not necessarily predictive of future events. However, notwithstanding these considerations, we conclude that the Company's storm fund history is instructive in the context of setting the parameters for the fund's continuation.

---

[51] The symmetrical cap is discussed in further detail below.

The Department has reviewed the record supporting the positions advanced by the Company and the Attorney General (e.g., Exhs. NG-RRP-1, at 69, 85-86; NG-RRP-2, at 26 (Rev. 3); NG-RRP-Rebuttal-1, at 10-11; AG-DO-CF-1, at 29; DPU-21-18; DPU-23-2; DPU-32-1; DPU-32-4, Att.; DPU-32-10; DPU-32-16; DPU-AG-1-19, Att.). Further, the Department has considered the number of major storms that have occurred between the Company's last rate case and the end of the test year; the incremental costs of these storms; the number of storms with incremental costs so high that they should be deemed statistical outliers; and the number of storms that would not have been eligible for storm fund recovery if the cost-per-storm threshold was $1.5 million (Exhs. NG-RRP-2, at 26 (Rev. 3); DPU-32-4, Att.). Based on these considerations and our review of the record, we find that setting the annual base rate funding at $10.5 million provides sufficient funds to levelize the rate impact for major storms that are eligible for recovery through the fund while also decreasing the likelihood that the fund will have a large deficiency balance. We find that neither the Company's proposal nor the Attorney General's recommendation achieves an appropriate balance. Therefore, we decline to adopt the Company's proposal or the Attorney General's recommendation.

As noted above, the Company proposes to increase the $4.3 million annual base rate contribution to the storm fund by $9.7 million for a total of $14.0 million (Exhs. NG-RRP-1, at 69, 85 86; NG-RRP-2, at 4, 26 (Rev. 3)). The Department finds that the appropriate level of O&M expense is $10.5 million, which represents an increase of $6.2 million over the test year amount. Accordingly, the Department will reduce the Company's proposed cost of service by $3.5 million ($9.7 million less $6.2 million).

ii. Annual O&M Expense

As noted above, the Company argues that if the Department increases the cost-per-storm threshold to access the storm fund, an increase in the test year amount collected through base rates is warranted (Company Reply Brief at 6 n.4, 74, citing Exh. NG-RRP-Rebuttal-1, at 12; RR-DPU-46; see also Tr. 8, at 1318-1319). During the test year, the Company experienced six major storms that would qualify for storm fund recovery (Exh. DPU-32-4, Att.; Tr. 8, at 1318-1319; RR-DPU-46, Att.). Thus, built into test year O&M is $7.5 million, representing the threshold amount for each storm (i.e., $1.25 million x six major storms) (Tr. 8, at 1318-1319). The Attorney General does not specifically address this issue.

Given that the frequency of storms events varies significantly each year, the test year level of O&M costs associated with storms events may not be representative of the Company's future costs. Therefore, we find that it is appropriate to normalize the level of base rate recovery to derive a more representative amount of O&M expense associated with storm events. This evaluation results in approximately three storms per year qualifying for storm fund recovery (18 storms/6.5 years).[52] Applying a $1.5 million cost-per-storm threshold to each of the three storms yields $4.5 million in O&M costs to be recovered in base rates. This amount is $3.0 million less than the $7.5 million the Company recovered in the test year at the $1.25 million threshold. Further, the Department finds that it is appropriate to include in O&M expense the costs associated with one test year storm (a wind/rain storm in July 2014) that would

[52] Between 2009 and the end of the test year, the four costliest storms were: (1) Tropical Storm Irene in August 2011; (2) the October snowstorm in October 2011; (3) Hurricane Sandy in October 2012; and (4) Nor'easter Nemo in February 2013 (Exh. DPU-32-4, Att.). The additional three storms excluded from consideration were: (1) Hurricane Earl in September 2010; (2) a wind/snow storm in November 2013; and (3) a wind/rain storm in July 2014 (Exhs. NG-RRP-2, at 26 (Rev. 3); DPU-32-4, Att.).

not have qualified for storm fund recovery under the $1.5 million threshold and, therefore, would be subject to base rate recovery (see Exhs. NG-RRP-2, at 26 (Rev. 3); DPU-32-4, Att.; see also n.52 above). The cost associated with this one storm (net of Verizon New England, Inc. ("Verizon") billings)[53] is $1,396,743 (RR-DPU-46 & Att.).

As noted, the Company's test year level of O&M expense includes $7.5 million associated with six major storms. The Department has determined that the appropriate level of O&M expense is $5,896,743 ($4,500,000 + $1,396,743). Accordingly, the Department will reduce the Company's proposed cost of service by $1,603,257 ($7,500,000 less $5,896,743).

c. Storm Fund Cap

In the Company's last rate case, the Department determined that to limit the balance in the storm fund that may be used to recover incremental costs from major storms and to prevent the fund from having a deficit balance that is excessive, it was appropriate for the storm fund to have a symmetrical cap (positive and negative) of $20 million. D.P.U. 09-39, at 208. We find that it remains appropriate for the storm fund to continue to have a symmetrical cap on the storm fund balance.

The Company proposes to increase the storm fund's symmetrical cap from $20 million to $30 million to coincide with its proposed increase in the annual base rate contribution for storm costs (Exhs. NG-RRP-1, at 88-89). The Company contends that given recent qualifying storm events, an increase in the symmetrical cap from $20 million to $30 million is a necessary change in order to minimize the potential for frequent rate changes, accommodate the greater level of

---

[53] Because of joint ownership of certain facilities, Verizon and the Company share in the cost of storm restoration work. See Massachusetts Electric Company and Nantucket Electric Company d/b/a National Grid, D.P.U. 11-56, at 6 n.9 (2013); D.P.U. 09-39, at 212-213 & n.122.

annual customer contribution proposed in this case, and provide more stable rates for customers (Company Brief at 181, citing Exh. NG-RRP-1, at 89; DPU-21-18). The Attorney General states that if the Department raises the cost-per-storm threshold to $2.4 million and if the customer deposit rate is used to accrue carrying charges on the deficit, the $20 million cap "will likely suffice" (Exh. AG-DO-CF-1, at 29).

In an effort to minimize the potential for frequent rate changes (either positive or negative) and to realign the risks associated with storm cost recovery to protect ratepayers' interests, the Department finds that a symmetrical cap of $30 million on the storm fund balance is appropriate. Further, in order to prevent the storm fund from falling into a significant deficit as the result of a single major storm event, we find that it is necessary to exclude from storm fund eligibility any single storm event that exceeds $30 million in incremental costs (exclusive of Verizon costs). The Company may seek to defer these costs for recovery in its next base rate case. We recognize that given the recent history of storm events, this change to the storm fund mechanism could trigger the filing of a base rate case if multiple storms of a significant magnitude occur during the period in between base rate case filings. However, we find that excluding storms that exceed $30 million in incremental costs, in conjunction with the other modifications approved in this Order, will provide necessary rate stability for customers and help ensure that the storm fund works as intended.

d. Carrying Costs on the Storm Fund Balance

The Company's current storm fund balance accrues interest at the pre-tax WACC, which is 11.48 percent (Exh. NG-RRP-6a at 1). See also D.P.U. 09-39, at 207-208; D.P.U. 09-39-A, at 38. As noted above, the objective of a storm fund is to levelize the cost recovery for major

storms on distribution rates. The use of a storm fund is not intended to shift the financial risk of paying for major storms from electric distribution companies to ratepayers. D.P.U. 09-39, at 205; D.P.U. 10-70, at 200. Rather, it is the Company's allowed ROE that is designed, in part, to recognize these business risks. D.P.U. 09-39, at 205; D.P.U. 10-70, at 200; D.P.U. 1720, at 88-89. Since 2009, the Company has accrued approximately $81 million in interest associated with the costs of the 25 major storms that have qualified for the storm fund (Exh. NG-RRP-6b at 2). We find that a continuation of this result would inappropriately overcompensate the Company for its costs of carrying the storm fund costs. Therefore, the interest rate must be modified.

As noted above, the Company proposes that interest will accrue on incremental storm costs when such costs are filed for recovery with the Department (as opposed to when these costs are incurred) (Exh. NG-RRP-1, at 87). The Company proposes that interest accrue on the combination of the storm fund reserve and the costs related to the storms beginning when filed for storm fund cost recovery (Exh. NG-RRP-1, at 88). If the storm fund balance is in a surplus, then the Company proposes that interest will accrue at a carrying charge rate equivalent to the Company's pre-tax WACC, as determined by the Department (Exh. NG-RRP-1, at 87). Conversely, if the combined storm fund balance is in a deficit, then the amount in deficit (up to the $30 million cap) would accrue interest at the Company's customer deposit rate (Exh. NG-RRP-1, at 88). Further, any storm fund deficit in excess of the proposed $30 million storm cap would accrue interest at a carrying charge rate equivalent to the pre-tax WACC (Exh. NG-RRP-1, at 88).

We find that the Company's proposal for carrying charges to accrue on incremental storm costs when such costs are filed for recovery with the Department will reduce the interest costs paid by ratepayers, and likely will encourage the Company to expedite its filing for cost recovery. Thus, we approve this aspect of the Company's proposal. However, we are not persuaded that the remaining proposed modifications are sufficient to ensure that the carrying costs associated with major storms are appropriately determined. Rather, in order to properly reflect the cost of this balance, the Department finds that the prime rate is a more reasonable carrying charge to be applied to storm fund balances, irrespective of whether the balance represents a surplus or deficit. Accordingly, the Department modifies the carrying charge component of the Company's storm fund. The Company's storm fund shall accrue interest on the combination of the storm fund balance and the costs related to the storms filed for storm fund cost recovery. The interest rate shall be the prime rate,[54] irrespective of whether the storm fund balance represents a surplus or a deficit.

e. Extension of the SFRF and Transfer of the Current Storm Fund Balance

As noted above, in a separate proceeding, the Department extended the SFRF to June 2018 in order to continue collection of the current storm fund balance. D.P.U. 13-85, at 105. National Grid proposes to extend the SFRF an additional 14 months to August 2019, in order to replenish the existing storm fund to account for the nine additional qualifying storm costs that took place after the Company's filing in D.P.U. 13-85, and to minimize the carrying cost associated with those storms (Exhs. NG-RRP-1, at 68-69, 78). Further, the Company proposes to transfer the deficit balance to be collected through the SFRF to a separate regulatory

[54] The prime rate calculated in accordance with 220 C.M.R. § 6.08(2).

asset, and to reset the storm fund balance to zero (Exh. NG-RRP-1, at 78). In addition, the Company proposes that any residual balance (either positive or negative) remaining in the regulatory asset at the end of the extended recovery period (i.e., August 2019) then would be transferred to the Company's storm fund (Exh. NG-RRP-1, at 78-79). Finally, the Company proposes that the regulatory asset continue to accrue interest at the pre-tax WACC (Exh. DPU-21-12, at 1). No parties addressed these matters on brief.

The storm fund mechanism, as modified in the instant case, will be applicable to storms occurring after the date of this Order. Therefore, we find that the Company's proposal to transfer the balance associated with the current storm fund balance to a separate regulatory asset and extend the SFRF an additional 14 months to continue to collecting that balance is reasonable and appropriate. Further, the record demonstrates that under the Company's proposal, customers would benefit from a reduction in carrying charges as a result of extending the SFRF through August 2019 (Exh. DPU-18-2). The Company estimates the reduction of interest at approximately $19.7 million (Exh. DPU-18-2). Additionally, we find it appropriate to transfer any residual balance to the storm fund at the end of the extended recovery period. Based on these considerations, we approve the Company's proposal.

4. Conclusion

Based on the above findings, the Department directs the Company to continue its storm fund with the modifications set forth herein. The modified storm fund shall apply to any qualifying storms that occur after the date of this Order.

The current storm balance shall be recovered through August 2019 consistent with the findings above. Further, consistent with the Department's findings in D.P.U. 13-85, at 105, the

Department directs the Company to file as part of its compliance filing in this case a revised Storm Fund Replenishment Provision tariff to replace M.D.P.U. 1292.

Finally, consistent with the findings above, the Department has reduced the Company's proposed cost of service by (1) $3.5 million relative to the annual base rate contribution to the storm fund, and (2) $1,603,257 relative to the annual amount in base rates to cover costs up to the cost-per-storm threshold and for smaller storm events that do not qualify for the storm fund. These reductions are shown as combined adjustments on the Department's Schedules.

VII. RATE BASE

A. Overview

The Company's test year rate base was $1,760,316,969, based on a total net utility plant in service of $4,084,097,215 (Exh. NG-RRP-2, at 30 (Rev. 3)). To this amount, the Company proposes to add $39,210,328 in rate base adjustments for a total proposed rate base of $1,799,527,297 (Exh. NG-RRP-2, at 30 (Rev. 3)). The Company's total proposed rate base consists of: $2,307,263,848 in net utility plant in service, $23,231,040 in net materials and supplies, and $68,019,916 in cash working capital; less, $569,147,565 in deferred income taxes and $29,839,942 in customer deposits (Exh. NG-RRP-2, at 30 (Rev. 3)).[55]

B. Plant Additions

1. Introduction

In D.P.U. 09-39, the Department approved the current CapEx mechanism, which allows recovery of the revenue requirement associated with the Company's annual capital expenditures, net of the amount recovered in base rates through depreciation expense. D.P.U. 09-39, at 79, 82.

[55] Minor discrepancies in any of the amounts appearing in this section are due to rounding.

The Department capped the amount of capital spending the Company could recover through the CapEx mechanism based on an annual investment of $170 million. D.P.U. 09-39, at 82.[56] Pursuant to D.P.U. 09-39, the Company files a Capital Investment Report ("CapEx filing") by July 1st of each year containing information and project documentation relating to the capital placed in service during the prior calendar year ("CY"). D.P.U. 09-39, at 85. By November 1st of the filing year, the Company must file its CapEx factors that incorporate the costs associated with the capital placed in service, up to the allowed cap, into a rate adjustment effective March 1st of the following year. D.P.U. 09-39, at 85.

From 2010 through 2015, National Grid made annual CapEx filings and proposed annual CapEx factors to recover capital additions made in 2009 through 2014, up to the allowed cap. The Company's annual CapEx filings were docketed as D.P.U. 10-79 (2009 CY additions), D.P.U. 11-60 (CY 2010 additions), D.P.U. 12-48 (CY 2011 additions); D.P.U. 13-84 (CY 2012 additions), D.P.U. 14-95 (CY 2013 additions), and D.P.U. 15-84 (CY 2014 additions). The Company's CapEx mechanism is a component of the Company's RDM tariff and, therefore, the CapEx factors were filed as part of the Company's RDM filings.[57]

During the pendency of the first CapEx filing, D.P.U. 10-79, the Attorney General, pursuant to G.L. c. 25, § 5, requested an independent audit of the Company's record keeping,

---

[56] While the Department limited the Company's allowed recovery under CapEx mechanism to $170 million, we made no determination on how much capital investment the Company should make. D.P.U. 09-39, at 82-83. The Department found that if National Grid's capital expenditures exceeded the amount it could recover through its CapEx mechanism, the Company could seek to include such investment in rate base in its next base rate proceeding. D.P.U. 09-39, at 82-83.

[57] The RDM filings were docketed as D.P.U. 10-152, D.P.U. 11-117, D.P.U. 12-115, D.P.U. 13-175, D.P.U. 14-136, and D.P.U. 15-154.

accounting practices, and process for developing the filing, which was docketed and commenced in D.P.U. 11-18. Audit of National Grid's Calendar Year 2009 Capital Investment Program, D.P.U. 11-18-F at 1 (2016). The Department allowed the Company to recover its proposed revenue requirement through the CapEx factors, subject to further investigation, and placed the prudency review in D.P.U. 10-79 on hold during the pendency of the audit. Massachusetts Electric Company and Nantucket Electric Company, D.P.U. 10-152, at 5 (2011); Massachusetts Electric Company and Nantucket Electric Company, D.P.U. 10-79, Interlocutory Order on Filing Requirements at 5-7 (June 14, 2011) ("D.P.U. 10-79 Interlocutory Order"). In light of the concerns giving rise to the Attorney General's audit request, the Department also issued filing guidelines for future CapEx filings to be made during the pendency of the audit. D.P.U. 10-79 Interlocutory Order at 5-7. The audit was completed in 2015 and the Department issued a final Order accepting the final audit report on February 26, 2016. D.P.U. 11-18-F.[58] Consistent with the process for D.P.U. 10-79, the Department allowed the Company to recover its proposed revenue requirement, subject to further investigation, through the CapEx factors[59] for each subsequent year that the audit was pending, but placed the prudency review of all capital

---

58 The auditor found an adjustment of $1.2 million, which the Department directed the Company to correct in this proceeding. D.P.U. 11-18-F, at 15.

59 As noted above, the CapEx factors were filed as part of the following RDM filings: Massachusetts Electric Company and Nantucket Electric Company, D.P.U. 11-117, at 2 (2012); Massachusetts Electric Company and Nantucket Electric Company, D.P.U. 12-115, at 3 (2013); Massachusetts Electric Company and Nantucket Electric Company, D.P.U. 13-175, at 4 (2014); Massachusetts Electric Company and Nantucket Electric Company, D.P.U. 14-136, at 3 (2015); Massachusetts Electric Company and Nantucket Electric Company, D.P.U. 15-154, at 4 (2016).

investments on hold during the pendency of the audit.[60] In summary, the Department allowed the Company to recover its proposed revenue requirements associated with the capital additions made from 2009 through 2014 subject to further investigation, but did not fully adjudicate the CapEx filings, made no findings that the associated capital additions were prudent and used and useful, and did not issue any final Orders while the audit was pending. Thus, the Company, in this rate case, seeks a determination of the prudence and used and usefulness of the capital additions that were the subject of the annual CapEx filings for investment years 2009 through 2014, plus any capital additions during those years that exceeded the $170 million cap, as well as capital additions placed in service in the first six months of 2015 (the second-half of the test year in this proceeding), in order for those additions to be included in rate base (Exh. NG-JHP-1, at 13-14).[61]

2. Investment Activity

From January 1, 2009 through June 30, 2015, National Grid completed $1,189,550,456 in plant additions and incurred $93,778,658 in cost of removal, which resulted in an increase in utility plant of $1,283,329,114 (Exhs. DPU-10-6, Att.; AG-7-5, Att.; RR-DPU-12; RR-DPU-13, Att.).[62] National Grid identified 1418 capital projects that were completed during this period

---

60 The following CapEx dockets were placed on hold: D.P.U. 11-60; D.P.U. 12-48; D.P.U. 13-84; D.P.U. 14-95; D.P.U. 15-84.

61 In the absence of the CapEx mechanism, the Company would have sought inclusion in rate base of all capital additions placed in service since its last rate case, which is effectively what the Company seeks now because the CapEx filings were not fully adjudicated.

62 The Company's investment activity is broken down as follows: (1) $463,986,528 for 62 blanket projects; (2) $217,111,440 for 100 program projects; (3) $509,652,488 for 1,253 specific projects; and (4) a $1,200,000 negative adjustment to reflect an error for a double

(Exhs. DPU-7-23, Att. (Rev.); DPU-7-23, Att. (Supp.); RR-DPU-12). National Grid groups its capital projects into three categories: (1) specific projects, (2) blanket projects, and (3) program (or other annual) projects (Exh. NG-JHP-4, at 1). As part of its initial filing in this case, the Company provided the filings made in each of the previous CapEx dockets as well as documentation relating to the first six months of 2015. For each project the Company seeks to include in rate base, the Company also provided a spreadsheet with the project number, a brief project description, the total amount authorized, the total amount expended, and the total amount closed to plant (Exh. DPU-7-23, Att. (Rev.)). As discussed below, the Attorney General challenges the sufficiency of the documentation provided for 20 specific projects, two storm program projects, 32 blanket projects, and 47 program projects (Attorney General Brief at 12-19).

3. Project Documentation

With exceptions noted below, the Company provided the following documentation for specific projects over $50,000 and for all blanket and program projects: (1) a project summary sheet that includes project number, project descriptions, approved amount, total to date project spending, project status, approval history, and in-service additions and cost of removal figures; (2) a project approval report showing approval amounts and dates and screen-prints from the PowerPlan system;[63] (3) documentation relating to the approved amounts (such as walk-in

---

charge to the Company for the cost of materials associated with a limited subset of capital work that was subcontracted out to third parties in 2009 through 2012 (RR-DPU-12).

63 Screen-prints may also be from older systems including PowerPlant and Primavera Portfolio Management (Exh. NG-JHP-4, at 3).

documents, re-approval forms, distribution capital investment group papers,[64] United States Sanctioning Committee ("USSC")[65] sanction papers, and study documents); (4) a retirement report showing any retirements related to the project in the relevant year; (5) a direct/indirect summary report for in-service asset additions showing project-level costs for property placed in service during the relevant year; (6) a work order asset addition report showing closings to plant in-service; and (7) a project cost summary showing project spending for a given year (see, e.g., Exhs. NG-JHP-3; NG-JHP-4). For blanket and program projects the Company also provided a fiscal year variance analysis report and a fiscal year closure paper (Exh. NG-JHP-4, at 12, 13).[66]

4. Positions of the Parties

a. Attorney General

i. Introduction

The Attorney General argues that the Company failed to provide clear and reviewable documentation demonstrating the prudence of its capital additions for $56 million in variances

64 This group is an executive management group that approves projects with projected scope and costs above established thresholds (Exh. NG-JHP-3(a) at 12 (prefiled testimony)).

65 The USSC is a group within National Grid USA that provides executive management review of proposed major capital funding projects and other proposed commitments deemed appropriate for such review, and to administer a consistent and comprehensive sanctioning process for such funding projects and commitments across the organization (RR-DPU-43, Att. 3, at 17).

66 As described more fully below, the Company did not initially provide blanket project closure papers for fiscal years 2013 and 2014. Further, the Company initially did not provide closure papers for six program projects over $1 million or reauthorization forms for 14 program projects over $100,000.

(Attorney General Brief at 11, Attorney General Reply Brief at 12).[67] Specifically, the Attorney General contends that the Company failed to provide: (1) adequate explanations for 20 specific projects that had cost variances totaling $6.5 million; (2) adequate variance explanations for two storm capital program projects,[68] with cost variances totaling $11.7 million; and (3) closing papers and documentation for 31 blanket and 47 program projects with unfavorable cost variances totaling $37.8 million (Attorney General Brief at 11, 14, 19; Attorney General Reply Brief at 12). Therefore, the Attorney General claims that the Department should exclude $56 million from the Company's rate base because it did not meet its burden of demonstrating the propriety of these additions to rate base (Attorney General Brief at 11; Attorney General Reply Brief at 6). The Attorney General asserts that the Company bears the burden of demonstrating the propriety of additions to rate base through clear and cohesive reviewable evidence and cannot simply provide a "cascade" of documents and point to the overall volume as evidence of prudence (Attorney General Reply Brief at 8, citing D.P.U. 14-150, at 42–43 (2015)).

Further, the Attorney General challenges the Company's claims that its capital budgeting and authorization processes is evidence of "reasonable mechanisms to control costs and manage

---

67 In her initial brief, the Attorney General sought disallowance of $68.6 million that included $50.4 million in blanket and program costs. The $50.4 million amount included 27 program projects, or $18.2 million, and 32 blanket projects, or $32.2 million (Attorney General Brief at 11-19). On reply, the Attorney General reduced this amount by $12.6 million, the amount of one blanket project (CBS0004), due to an accounting error that the Company corrected (Attorney General Reply Brief at 6, citing Company Brief at 123).

68 On brief the Attorney General and the Company both refer to the storm projects as storm capital "blanket" projects, but these storm projects appear on the Company's list of program projects and in the program project variance analysis reports (see, e.g., Exhs. DPU-7-23, Att. (Supp.); NG-JHP-3(e), JLG-8, at PGRM-1190). Hereinafter, we refer to these storm projects as program, not blanket, projects.

projects within established budget parameters" with respect to blanket and program projects because the Company did not follow its own procedures for cost management and control (Attorney General Reply Brief at 7, citing Company Brief at 119). Specifically, with respect to blanket projects the Attorney General contends that the Company did not prepare closure papers at the end of the fiscal year ("FY"), upon the actual closure of those projects in FYs 2013 and 2014 (Attorney General Reply Brief at 8, citing Company Brief at 118). Instead, the Attorney General claims that the Company created the documentation years after the closure of the projects, on April 26, 2016, following multiple requests by the Department and the Attorney General for their production (Attorney General Reply Brief at 8, citing Exhs. DPU-20-1 through DPU-20-82; DPU-20-31 (Supp.); DPU-20-35 (Supp.); AG-21-1). Similarly, the Attorney General argues that the Company did not complete closure papers and/or final cost documentation for program projects in FYs 2013 and 2014, as well as for several projects in fiscal year 2015, until after the close of the evidentiary hearings in this proceeding (Attorney General Reply Brief at 8, citing Exh. NG-JHP-Rebuttal-1, at 20; Tr. 3, at 435–36). The Attorney General, therefore, asserts that the timing of the completion of this documentation calls into question the efficacy of the Company's process to control costs and, moreover, the prudency of the Company's capital expenditures related to these blanket and program projects (Attorney General Reply Brief at 8).

ii. Specific Projects

The Attorney General argues that the Department should exclude $6.5 million in variance amounts relating to 20 specific projects for which the Company did not provide variance

explanations (Attorney General Brief at 11-12).[69] The Attorney General contends that the Department specifically sought information relating to the cost over-runs, but that the Company did not provide any explanations (Attorney General Brief at 11-12). Instead, the Attorney General claims that the Company simply cited to its own internal policies to: (1) provide a variance explanation only when project costs differ by more than ten percent; and (2) consider only the combined variance of projects managed as part of the same effort, rather than to provide the variances associated with each project (Attorney General Brief at 13-14). The Attorney General asserts that the Company's reliance on its internal policies is insufficient because the Department has specifically held that "a company's internal project cost estimation policies cannot . . . override, the company's obligation to demonstrate to the Department the prudence of its capital project costs" (Attorney General Brief at 14, citing D.P.U. 14-150, at 87). The Attorney General, therefore, recommends that the Department exclude $6.5 million from rate base because the Company failed to carry its burden of production with respect to these cost variances (Attorney General Brief at 14, citing D.T.E. 03-40, at 52, n.31; D.T.E. 01-56-A at 16).

iii. Storm Capital Programs

The Attorney General argues that the Department should disallow $11.7 million in cost variances related to two storm programs because the Company failed to provide an explanation for the cost variances that occurred during FYs 2010 and 2012 (Attorney General Brief at 19, citing Exhs. DPU-19-1; DPU-19-2). The first program includes two FY 2010 projects, C014821

[69] These projects include: C008666; C005339; C014549; C023591; C036385; C028886; C002364; C002388; C012018; C012502; C024120; C005342; CD01253; C001423; C028871; C029104; C031552; CD01174; C031324; C002504 (Attorney General Brief at 12).

and C014822, totaling a $2.4 million variance (Attorney General Brief at 19-20).[70] The second program includes one FY 2012 project, C014821, with a $9.3 million variance (Attorney General Brief at 20). The Attorney General claims that the Company's closure papers do not explain the reason for the cost overruns, and that the Company has evaded any adequate explanation as requested, and required, by the Department (Attorney General Brief at 20). Further, with respect to the FY 2012 variance, the Attorney General asserts that the Department conducted an investigation into the subject storms, found that the Company acted imprudently, and imposed substantial fines (Attorney General Brief at 20, citing D.P.U. 11-85-A/D.P.U. 11-119-A). Further, the Attorney General asserts that although the Company could not predict restoration costs, it should "honor the spirit of its own processes," which contemplate that variance analyses can contribute to "lessons learned" (Attorney General Reply Brief at 10-11, n.6, citing Company Brief at 118-119). The Attorney General, therefore, recommends that the Department exclude from rate base the $11.7 million variance for these storm program projects (Attorney General Brief at 20).

iv. Blanket & Program Projects

The Attorney General argues that the Department should exclude from rate base $37.8 million in cost variances, $18.2 million for 47 program projects,[71] and an additional $19.6

---

70 These projects are titled "BSW Storm Cap Confirm Proj" and "N&G Storm Cap Confirm Proj," respectively.

71 These projects include: C005490; C005500; C005432; C005543; C005563; C006642; C005439; C005441; C005444; C005449; C016492; C005469; C005475; C005480; C059664; C006138; C028147; C032015; C032016; C032018; C033822; C025810; C032270; C032272; CD00017; C025619; C014821; C021594; C022216; C022217; C016120; C016121; C018594; CD00259; C025326; C025813; C027898; C027927;

million for 31 blanket projects[72], because the Company failed to carry its burden to show that these cost variances were prudently incurred (Attorney General Brief at 15). As an initial matter, the Attorney General contends that the Company did not comply with the D.P.U. 10-79 Interlocutory Order, which required the Company to produce as part of its initial filing "project details for capital projects placed in service costing more than $50,000, including the project cover sheet, approved amount, actual cost, cost variance information, and other applicable documentation such as the appropriate number of units associated with the actual capital placed in service, project sanction, re-sanction, and closure papers" (Attorney General Brief at 14, citing D.P.U. 10-79 Interlocutory Order at 7 n.3). Despite this filing requirement, the Attorney General claims the Company failed to provide in its initial filing closure papers for all of the program and blanket projects in FYs 2013 and 2014, as well as several program projects for FY 2015 (Attorney General Brief at 15).

Further, the Attorney General challenges the Company's eventual production of the requisite documentation relating to blanket projects (filed on May 3, 2016) and program projects (filed on June 2, 2016) as untimely (Attorney General Brief at 16-18). With respect to the blanket projects, the Attorney General argues that National Grid failed to provide the aforementioned documentation during discovery and filed them on May 3, 2016, just twelve hours before the Company's plant additions witness was scheduled to testify (Attorney General

---

C031398; C031774; C032024; C035584; C049352; C032572; C033764; C033765; CD01258.

[72] These projects include: CBN0002; CBN0004; CBN0010; CBN0011; CBN0012; CBN0014; CBN0015; CBN0016; CBN0017; CBN0022; CBS0010; CBS0011; CBS0014; CBS0020; CBS0022; CBW0002; CBW0006; CBW0010; CBW0011; CBW0014; CBW0016; CBW0020; CN00420; CNM0002; CNM0004; CNM0010; CNM0011; CNM0014; CNM0017; CNM0020; CNM0022.

Brief at 18). According to the Attorney General, due to the volume and nature of the documents, she did not have any time to conduct discovery or review the material in order to effectively cross-examine the Company's witness (Attorney General Brief at 18, citing D.P.U. 14-150, at 49; D.P.U. 10-70, at 194 n. 98, 200). Accordingly, the Attorney General recommends that the Department exclude from rate base $19.6 million in blanket projects' variances for which the Company failed to timely file closure papers (Attorney General Brief at 18).

With respect to the program projects, the Attorney General asserts that the closure papers for the program projects in question, if filed at all, were filed late on June 2, 2016 (Attorney General Brief at 16). As discussed in the next section below, the Attorney General moved to strike this documentation from the record, and urged the Department not to consider them (Attorney General Brief at 16). Accordingly, the Attorney General recommends that the Department exclude from rate base $18.2 million in program projects' variances for which the Company failed to timely file closure papers (Attorney General Brief at 16).

The Attorney General rejects any notion that she seeks disallowance of the aforementioned costs because "a piece of paper is missing from the file . . . ." (Attorney General Reply Brief at 9, citing Company Brief at 123). She argues that this mischaracterization trivializes both the Company's management process and the prudency review process conducted by the Department in this rate case (Attorney General Reply Brief at 9, citing Company Brief at 123). The Attorney General contends that she did not target project costs for disallowance because one piece of paper was missing, but because variance amounts were not supported by the documentation that the Company itself claims is used to "note reasons for any overspending

during the fiscal year and [detail] the Company's actions to keep overall capital spending within budgeted amounts" (Attorney General Reply Brief at 9, citing Exh. AG-DO-CF-1, at 52–53).

Further, the Attorney General argues that the late filing of the closure papers is not inconsequential, as it relates to the Company's burden to provide, at a minimum, documentation that allows the Department to evaluate the prudence of each of the capital projects, and to make a determination that each project was placed in service during the test year and is used and useful (Attorney General Reply Brief at 9, citing Company Brief at 123; Bay State Gas Company, D.P.U. 13-75, at 105 (2014); Fitchburg Gas and Electric Light Company, D.T.E. 99-118, at 8 (2001)).[73]

b. Company

i. Introduction

National Grid argues that the record contains sufficient evidence for the Department to find that the capital additions submitted for approval in this proceeding were prudently incurred and are used and useful in providing service to customers (Company Brief at 113). The Company claims that it provided actual computations and thousands of pages of supporting documentation including: project cover sheets; approved amounts; actual costs; cost variance information' project sanction, re-sanction, and closure papers; and a detailed explanation of the processes that the Company uses to manage both the allocation and cost of capital expenditures

[73] The Attorney General argues that in several instances the Company provided documentation in April, May, or June, after the discovery deadline had passed and testimony had been filed, and, therefore, too late for the Department, the Attorney General, or other intervenors to conduct a thorough and probative evaluation of the contents of the documentation for prudency purposes (Attorney General Reply Brief at 9-10, citing Exhs. NG-JHP-Rebuttal-2 (filed April 19, 2016); DPU-20-31 (Supp.), DPU-20-35 (Supp.) (filed May 3, 2016); NG-JHP-Rebuttal-2 (Supp.) (filed June 2, 2016)).

(Company Brief at 113, citing Exhs. NG-JHP-1, at 9, 21-23; NG-JHP-3; NG-JHP-4; NG-JHP-Rebuttal-2; NG-JHP-Rebuttal-2 (Supp.); DPU-20-31 through 20-53 (Supp.)).

The Company also argues that its capital budgeting and authorization process assures cost containment (Company Brief at 119). The Company contends that it conducts a detailed, multi-tiered capital-planning process to control costs and manage projects within the established budget parameters (Company Brief at 115, citing Exh. NG-JHP-1, at 21-23). Specifically, the Company points to its Delegation of Authority ("DOA") and Sanctioning/Re-sanctioning policies for projects with costs under $1 million and at or above $1 million as reasonable mechanisms to control costs and manage projects within the established budget parameters (Company Brief at 116-118, citing RR-DPU-43, Atts. 2, 3). Further, the Company argues that its Capital Funding Project Overrun Report is the primary vehicle employed for cost-control purposes (Company Brief at 119). According to the Company, this monthly report identifies the funding projects that have exceeded or are forecasted to exceed the authorized DOA amount, after which the responsible individual must complete a written plan to bring the affected funding project within DOA limits within ten days and seek management re-sanction of those funding projects that exceed the authorized spending limit no later than 60 days after notification (Company Brief at 115, 119, citing RR-DPU-43, Atts. 2, 3).

Further, the Company contends that the Attorney General's argument relating to the timing of filing certain documents amounts to form over substance, does not raise a challenge to the prudence or used and usefulness of any capital project, and is insufficient to justify disallowance of $56 million in capital investment costs (Company Brief at 123, 128; Company Reply Brief at 16). The Company contends that there is no requirement for a petitioner to

present every piece of paper associated with a project in the initial filing, and that no additional document can be provided during the case or the project is subject to disallowance (Company Brief at 123). Thus, the Company asserts that the Department should not disallow the costs of substantial work projects put in place for the benefit of the distribution system on the basis that a piece of paper is missing from the file, rather than on the basis of any inquiry into the nature, scope, conduct or completion of the project (Company Brief at 123-124).

ii. Specific Projects

The Company argues that it has provided detailed information for all specific projects as required under the standard for inclusion in rate base, which demonstrate that the capital additions were prudently made and are used and useful (Company Brief at 119, citing Exh. NG-JHP-1, at 9-11).[74] The Company contends that for specific projects costing more than $50,000, it provided: the project cover sheet; approved amount; actual cost; cost variance information; the appropriate number of units associated with the actual capital placed in service; and project sanction, re-sanction, and closure papers (Company Brief at 119, citing Exh. NG-JHP-1, at 9-11). Further, the Company claims that all 20 of the projects have variances of less than ten percent (Company Reply Brief at 17). In this regard, the Company notes that its policy is to evaluate and document project cost variances only if the aggregate costs of the suite of funding projects exceeds "tolerance," which for these projects was ten percent (Company Brief at 124; Company Reply Brief at 17). Further, the Company argues that it

[74] Of the $6.5 million for which the Attorney General recommends exclusion, the Company argues that approximately $3.2 million is attributable to O&M expenditures, and another $1.2 million represents costs incurred on funding projects that are not yet placed in service, and, therefore, are not part of the Company's rate base request (Company Brief at 122).

submitted to the Department documentation including variance analyses with the Company's rebuttal testimony on April 19, 2016 (Company Reply Brief at 17, citing Exh. NG-JHP-Rebuttal-2). Therefore, the Company asserts that the Department should reject the Attorney General's recommended disallowance (Company Brief at 124; Company Reply Brief at 17-18).

iii. Storm Capital Programs

The Company argues that it provided sufficient variance explanations regarding these programs to warrant recovery of the $11.7 million in costs recommended for disallowance by the Attorney General (Company Brief at 127, Company Reply Brief at 19). In this regard, the Company contends that for storm programs it uses a budgetary method used to set aside a dedicated amount of money each year for mandatory work necessary to restore power after significant storm damage (Company Brief at 127). The Company contends that because storms are unpredictable, it is prepared to overspend the budgeted amounts to complete restoration efforts as necessary (Company Brief at 127). Thus, the Company asserts that any failure to explain why it was unable to accurately predict restoration costs is not a legitimate basis for disallowance (Company Brief at 127). Moreover, the Company notes that the Attorney General first challenged the variance explanations on brief, after having had substantial opportunity to inquire about an explanation provided nearly four years ago in the Company's CapEx filing in D.P.U. 12-48, and again in the Company's initial filing in this proceeding (Company Brief at 128, citing Attorney General Brief at 20).

iv. Blanket and Program Projects

The Company disagrees with the Attorney General's assertion that the late filing of documentation relating to blanket and program projects is a valid basis for disallowing $37.8 million in blanket and program projects (Company Brief at 125). The Company argues that its closure papers adequately support inclusion of the program and blanket projects in rate base (Company Brief at 125). Specifically, the Company contends that it is not required to anticipate and provide with the initial filing the entire evidentiary record in support of each component of its rate filing because it is the function of the adjudicatory process to establish an evidentiary record upon which the Department can base a decision on the matters at issue (Company Brief at 125). Further, the Company notes that it did include in its initial filing both summary and project-specific documentation for every project over $100,000, and that this documentation provided more than sufficient information to facilitate the efficient conduct of the proceeding (Company Brief at 125, citing Exhs. NG-JHP-3; NG-JHP-4).

In addition, the Company argues that it submitted the majority of the closure papers sought by the Attorney General on May 3, 2016, after providing notice in rebuttal testimony of its intent to make the supplemental filing (Company Brief at 126, citing Exhs. NG-JHP-Rebuttal-1, at 19; NG-JHP-Rebuttal-2). The Company notes that the Attorney General did not object to the Company's production plan (Company Brief at 126).

5. Analysis and Findings

a. Motion to Strike

i. Introduction

The Hearing Officer adjourned hearings on May 26, 2016 (Tr. 15, at 1695). On June 2, 2016, National Grid filed a supplemental response to information request DPU-7-23 and a supplemental attachment to the rebuttal testimony of one of its witnesses (Exhs. DPU-7-23 (Supp.); NG-JHP-Rebuttal-2 (Supp.)). On June 10, 2016, the Attorney General filed a motion to strike these documents as extra-record information. On June 17, 2016, National Grid filed a response to the Attorney General's motion to strike.

Exhibit DPU-7-23 (Supp.) contains an additional worksheet showing that certain of the Company's capital projects are part of a larger group of projects. Exhibit NG-JHP-Rebuttal-2 (Supp.) contains reauthorization documents and closure papers for certain program projects placed in service in FYs 2013, 2014, and 2015.

ii. Positions of the Parties

(A) Attorney General

The Attorney General argues that the documents filed on June 2, 2016,[75] constitute extra-record evidence for which the Company is required to file a motion to reopen the record and make a showing of good cause pursuant to 220 C.M.R. § 1.11(8) (Attorney General Motion at 1, 2). Further, she contends that the Department has made clear that, except for updates to routine information already provided in the record (e.g., property tax bills) a motion to reopen the record must be filed and granted before the testimony or exhibits are "thrust upon the trier of

[75] The Attorney General contends that the information provided was voluminous, provided additional final cost information for certain blanket and program costs, and contained substantial changes to previously filed record evidence (Attorney General Motion at 1).

fact," noting that "one cannot unring a bell" (Attorney General Motion at 2, quoting Boston Gas Company, D.P.U. 88-67 (Phase II) at 7 (1989)). Thus, the Attorney General asserts that if the Department allows the subject documents into the record, it will deny the Attorney General's and other intervenors' due process rights to conduct discovery and cross-examination,[76] and will result in rates that are not just and reasonable (Attorney General Motion at 1-4, citing G.L. c. 30A § 11(3); 220 C.M.R. §§ 1.11; D.P.U. 10-70, at 195-96; MediaOne/New England Telephone, D.T.E. 99-42/43, p. 17-18 (1999); Fitchburg Gas and Electric Light Company, D.T.E. 98-51, at 9 (1998); New England Telephone and Telegraph Company, D.P.U. 94-50, at 62 (1995); Boston Edison Company, D.P.U. 90-335, at 7-8 (1992); Payphone Inc., D.P.U. 90-171, at 4-5 (1991)).

Further, the Attorney General argues that even if the Company had filed a motion to reopen the record, it could not have made a showing of good cause because much of the supplemental material concerned activity that occurred several years ago and should have been filed with the Company's initial filing (Attorney General Motion at 3, citing D.P.U. 14-150, at 50). Additionally, she notes that the Company failed to timely provide the subject documentation in response to information requests issued during the proceedings (Attorney General Motion at 3, citing Exhs. DPU-7-23; AG-21-2). The Attorney General further asserts that "good cause" is an important safeguard to intervenors' procedural due process rights and that no good cause can exist for the late-filing of these materials because the Company had

[76] The Attorney General also argues that because the Company filed the Supplemental Material so close to the briefing deadline, the Attorney General did not have adequate time for even a cursory review of the documents prior to filing briefs (Attorney General Motion at 1, citing D.P.U. 10-70, at 195-196).

ample time and multiple opportunities to supply the supplemental materials (Attorney General Motion at 3).

(B) Company

National Grid argues that the evidentiary record did not close on May 26, 2016, because the Department made provisions for the Company to provide the subject documentation after the conclusion of evidentiary hearings (Company Response at 3). Specifically, the Company argues that during the May 3, 2016, evidentiary hearing, the Hearing Officer recognized that the Company provided some of its closure papers with its rebuttal testimony, but that some had not been compiled (Company Response at 3, citing Tr. 3, at 435). The Company argues that the Hearing Officer then issued Record Request DPU-13 for the Company to update its blankets and programs plant additions with actual cost information once the remaining closure papers were completed (Company Response at 3, citing Tr. 3, at 438). Additionally, National Grid claims that the Hearing Officer accepted the Company's representation that the actual cost information for blanket and programs would not be known until June 1, 2016, and, therefore, extended the due date for the Company's response to Record Request DPU-13 from May 12 to June 1, 2016 (Company Response at 3, citing Tr. 3, at 435-336, 438). Thus, National Grid argues that the Hearing Officer explicitly left the evidentiary record open for the production of this documentation, and the Company provided the information in conjunction with the supplemental attachment to the rebuttal testimony and the response to Record Request DPU-13 (Company Response at 5). Accordingly, the Company argues that it was not required to file a motion to reopen the record (Company Response at 5).

Further, the Company argues that even if the Hearing Officer had not left the evidentiary record open to receive the subject documentation, the Attorney General fails to cite any Department decision, regulation or rule to support the notion that the evidentiary record is closed on the last day of evidentiary hearings, absent specific exceptions or requests to keep open the record (Company Response at 4). According to the Company, it is the Department's long-standing practice to keep the record open after the close of evidentiary hearings for admission of information relevant to its determinations, including specified updates to schedules and responses to record requests (Company Response at 4, citing Cambridge Electric Light Company, D.P.U. 92-250 (1993); The Berkshire Gas Company, D.P.U. 90-121 (1990)).

Moreover, the Company argues it has a continuing obligation to update the record if it obtains new information pertinent to the proceeding and is also under a continuing obligation to "seasonably amend its responses to discovery, direct examination, and cross-examination as soon as it obtains information that a response was incorrect or incomplete or that a response, though correct when made, is no longer true or complete" (Company Response at 5, quoting Bay State Gas Company, D.P.U. 12-25, at 106-107 (2012); citing 220 C.M.R. § 1.06(6)(c)(5); D.P.U. 09-30, at 174; D.T.E. 02-24/25, at 32-33; Riverside Steam and Electric Company, D.P.U. 88-123-B at 57-58 (1991); Aquarion Water Company of Massachusetts, D.P.U. 08-27-B at 22 (2010)). The Company contends that this obligation continues beyond evidentiary hearings and even after a base rate case proceeding has concluded (Company Response at 5, citing D.P.U. 12-25, at 106-107). In this regard, National Grid claims that capital project documentation, relevant to the Department's review of the Company's petition, should be

accepted into evidence even if filed after the close of evidentiary hearings and unaccompanied by a motion to reopen the record (Company Response at 6, citing D.P.U. 10-55, at 190).

Finally, the Company argues that accepting the subject documentation into the record would not prejudice the Attorney General (Company Response at 6). The Company contends that most of its closure papers supporting the blanket and program capital projects were filed in its rebuttal testimony (Company Response at 6, citing Exhs. NG-JHP-Rebuttal-1, at 19-20). Further, National Grid asserts that the Attorney General had adequate notice of the Company's intention to file supplemental closure papers after the conclusion of evidentiary hearings and should have raised any concerns at the May 3, 2016 evidentiary hearing when reasonable accommodations could have been made to the briefing schedule (Company Response at 7).

iii. Analysis and Findings

First, the Department will not strike Exhibit DPU-7-23 (Supp.) because we find that it simply was an alternative presentation of an earlier version of the response, modified to show which specific projects were part of larger groups (compare Exh. DPU-7-23, Att. (Rev.) with Exh. DPU-7-23, Att. (Supp.)). In addition, in the supplemental response to information request DPU 7-23, the Company replicated its response to Record Request DPU-12 and separated the total investment for specific projects into two amounts – one for standalone specific projects and one for specific projects that were part of a group (compare Exh. DPU-7-23, Att. (Supp.) with RR-DPU-12). The total number of projects, the cost information for the projects, and the associated revenue requirement did not change with the filing of the supplemental response to information request DPU 7-23 (Exhs. DPU-7-23, Att. (Rev.); DPU-7-23, Att. (Supp.); NG-RRP-2; NG-RRP-2 (Rev. 3); RR-DPU-12).

However, unlike the materials contained in Exhibit DPU-7-23 (Supp.), the documentation filed with Exhibit NG-JHP-Rebuttal-2 (Supp.) does contain an additional eighty pages of reauthorization documents and closure papers for certain program projects placed in service in FYs 2013, 2014, and 2015, that were not previously provided earlier in the docket (Exh. NG-JHP-Rebuttal-2 (Supp.)). Given that these documents were filed a full week after evidentiary hearings ended, and that there was no valid explanation offered as to why these documents were not produced prior to that time given multiple requests for the type of information included herein, neither the Department nor the intervening parties had the opportunity to inquire about them through discovery or cross examination.

Further, despite the Company's argument to the contrary, we find that the record was not left open, either expressly or implicitly, for the production of these documents. At the close of evidentiary hearings, the record was left open for the production of specific information that did not include the subject documentation (Tr. 15, at 1691-1693). Additionally, the Hearing Officer's inquiry earlier in the hearings regarding the status of documents did not constitute a ruling on the propriety of allowing the information into the evidentiary record (Tr. 3, at 435). Further, we find that the Hearing Officer's issuance of Record Request DPU-13 was in no way related to the production of the subject documents. This Record Request asked the Company to update information, which previously was provided in the response to Exhibit AG-7-5, regarding annual capital expenditures since 2009 (Tr. 3, at 436-438). The Hearing Officer did not include in this record request any specific project documentation for any capital additions, let alone the subject documents that ultimately were filed on June 2, 2016 (Tr. 3, at 436-438).

Additionally, we note that the documents filed with Exhibit NG-JHP-Rebuttal-2 (Supp.) should have been produced with the initial filing in this case, particularly those documents that pertain to investments that were placed in service in 2013 and 2014. At a minimum, these materials should have been made available in response to the discovery process that occurred prior to evidentiary hearings, or during the filing of rebuttal testimony, once it became known that these materials were still omitted from the case. Pursuant to the Company's own capital authorization policies, these documents should have been completed at the close of the fiscal years for 2013 and 2014, and available well in advance of their filed date (RR-DPU-43, Atts. 2-3). Further, these documents should have been provided as part of the Company's annual CapEx filings in July 2014 and July 2015.

Based on these considerations, we conclude that the reauthorization documents and closure papers for certain program projects placed in service in FY 2013, 2014, and 2015, produced on June 2, 2016, in Exhibit NG-JHP-Rebuttal-2 (Supp.), were not timely filed. Further, we find that the Attorney General was precluded from conducting a meaningful review of these documents and from inquiring about the specific program projects either through discovery or cross examination. Consequently, the Department allows the Attorney General's motion to strike and will not consider these documents in the determination of whether these projects qualify for inclusion in the Company's rate base.

b. Plant Additions

i. Standard of Review

For costs to be included in rate base the expenditures must be prudently incurred and the resulting plant must be used and useful to ratepayers. Western Massachusetts Electric Company,

D.P.U. 85-270, at 20 (1986). The prudence test determines whether cost recovery is allowed at all, while the used and useful analysis determines the portion of prudently incurred costs on which the utility is entitled to a return. D.P.U. 85-270, at 25-27.

A prudence review involves a determination of whether the utility's actions, based on all that the utility knew or should have known at that time, were reasonable and prudent in light of the extant circumstances. Such a determination may not properly be made on the basis of hindsight judgments, nor is it appropriate for the Department merely to substitute its own judgment for the judgments made by the management of the utility. Attorney General v. Department of Public Utilities, 390 Mass. 208, 229-230 (1983). A prudence review must be based on how a reasonable company would have responded to the particular circumstances and whether the company's actions were in fact prudent in light of all circumstances that were known, or reasonably should have been known, at the time a decision was made. D.P.U. 93-60, at 24-25; D.P.U. 85-270, at 22-23; Boston Edison Company, D.P.U. 906, at 165 (1982). A review of the prudence of a company's actions is not dependent upon whether budget estimates later proved to be accurate but rather upon whether the assumptions made were reasonable, given the facts that were known or that should have been known at the time. Massachusetts-American Water Company, D.P.U. 95-118, at 39-40 (1996); D.P.U. 93-60, at 35; Fitchburg Gas and Electric Light Company, D.P.U. 84-145-A at 26 (1985).

The Department has cautioned utility companies that, as they bear the burden of demonstrating the propriety of additions to rate base, failure to provide clear and cohesive reviewable evidence on rate base additions increases the risk to the utility that the Department will disallow these expenditures. Boston Gas Company/Colonial Gas Company/Essex Gas

Company, D.P.U. 10-55-B at 13-16 (2013); D.P.U. 09-30, at 144-145; Boston Gas Company, D.P.U. 96-50 (Phase I) at 21-24 (1996); Massachusetts Electric Company, D.P.U. 95-40, at 7-8 (1995); D.P.U. 93-60, at 25-26; The Berkshire Gas Company, D.P.U. 92-210, at 24 (1993). In addition, the Department has stated that:

> In reviewing the investments in main extensions that were made without a cost benefit analysis, the [c]ompany has the burden of demonstrating the prudence of each investment proposed for inclusion in rate base. The Department cannot rely on the unsupported testimony that each project was beneficial at the time the decision was made. The [c]ompany must provide reviewable documentation for investments it seeks to include in rate base.

D.P.U. 92-210, at 24.

ii. Introduction

The Company reported a total of $1,189,550,457 in rate base additions and $93,788,658 in cost of removal for a combined capital investment total of $1,283,329,114 from January 1, 2009 through June 30, 2015 (Exhs. NG-JHP-1, at 5; DPU-7-23, Att. (Supp.)). National Grid reported 1,257 specific projects for $509,652,488; 62 blanket projects for $463,986,528; and 99 program projects for $217,111,440 (Exh. DPU-7-23 Att. (Supp.); RR-DPU-12). The Company then reduced its total plant additions by $1,200,000 to correct an error found in the D.P.U. 11-18 audit to arrive at the total investment of $1,189,550,457 (Exhs. NG-JHP-1, at 12; DPU-7-23, Att. (Supp.); RR-DPU-12)). We find that this correction is appropriate.

iii. Capital Authorization Policies

As noted above, National Grid groups its capital projects into three categories: (1) specific projects; (2) blanket projects; and (3) program (or other annual) projects (Exh. NG-JHP-4, at 1). A specific project is approved for the total cost of a defined body of work and will be closed once the work is complete (Exh. NG-JHP-4, at 1; RR-DPU-43, Att. 2, at 9).

In other words, specific projects are set up to perform a specifically identified scope of work that can span multiple years and can contain one or many work orders at any given time (Exh. NG-JHP-4, at 1, 8, 12). A blanket project is set up to collect high volume, smaller dollar work orders within a certain budget classification (Exh. NG-JHP-4, at 8; RR-DPU-43, Att. 2, at 8). A program project contains work orders for similar types of construction following a specific strategy (e.g., recloser installations) (Exh. NG-JHP-4, at 12; RR-DPU-43, Att. 2, at 9). Blanket and program projects are budgeted and approved annually (Exh. NG-JHP-4, at 12). Other annually-approved projects, such as storm-related projects, are categorized as "program" projects in order to indicate that they are not blanket projects (Exh. NG-JHP-4, at 12).

The Company maintains a written DOA policy,[77] and written sanctioning procedures,[78] for specific, blanket, and program projects (RR-DPU-43 and Atts. 1-3). A DOA is an authorization to enter into contracts, other external commitments, or to take (or not) other actions that might result in an obligation by National Grid (RR-DPU-43, Att. 2, at 8). A DOA is obtained at the funding project level (RR-DPU-43, Att. 2, at 8). Re-sanctioning is the process of receiving authorization to revise the existing approved cost, scope, or schedule (RR-DPU-43, Att. 2, at 8). The Company's capital authorization policies and procedures differ for projects

---

77 The Company has not made any material changes to its DOA policy since 2009 (RR-DPU-43).

78 Prior to May 2011, the Company's capital authorization process consisted of department-specific sanction committees, with separate processes and sanctioning templates (RR-DPU-43). On May 31, 2011, the Company began using the USSC for all utility services using a common template and single sanction procedure (RR-DPU-43). The USSC originally reviewed and approved all projects with estimated spending at or above $1 million (RR-DPU-43). In 2013, the Company's capital authorization policy was revised to focus the USSC's review and approval on projects greater than $8 million and to create a subcommittee responsible for reviewing and approving projects greater than $1 million, but at or less than $8 million (RR-DPU-43).

with expected costs of less than $1 million and for projects with expected costs at or above $1 million (RR-DPU-43 and Atts. 1-3).

(A) Projects Under $1 Million

The requested DOA specific projects with costs under $1 million constitute the gross expected expenditure (i.e., the Company does not subtract from the DOA amounts for anticipated contributions in aid of construction ("CIAC") or other contributions) (RR-DPU-43, Att. 2, at 4). The DOA for a specific funding project is revised prior to exceeding the approved DOA (RR-DPU-43, Att. 2, at 4).[79] Specific funding projects must be re-sanctioned as soon as the actual cost is, or is forecasted to be, ten percent above the authorized expenditure or $25,000, whichever is greater (RR-DPU-43, Att. 2, at 6).[80]

The responsible person must provide written justification for the re-sanctioning along with the new requested DOA amount for the funding project using a "Change in DOA Request Form" (RR-DPU-43, Att. 2, at 7). The higher the total cost of the funding project, the greater the level of detail is required in the documentation to properly justify the funding project re-sanction (RR-DPU-43, Att. 2, at 7). The justification must be clear, concise and accurate and should contain enough information to allow a full understanding of the reasons for the increase (RR-DPU-43, Att. 2, at 7). Once approval is obtained, the funding project DOA in the

---

79 In the event a funding project is originally estimated to be under $1 million but the forecasted or actual costs exceed $1 million, the funding project must be re-sanctioned pursuant to the policies applicable to projects with costs over $1 million, as described below (RR-DPU-43, Att. 2, at 6).

80 For all three types of projects the responsible individual must obtain re-sanction of all funding projects that exceed their authorized spending limit on a timely basis, but in no case later than 60 days after being notified that the project has exceeded the authorized spending limit (RR-DPU-43, Att. 2, at 6).

Company's computer system will be updated (RR-DPU-43, Att. 2, at 7). Specific projects may be grouped with other related specific projects and the Company considers these groups of projects at the aggregate level when determining whether the project is over budget (Tr. 3, at 426).

Blanket and program funding projects under $1 million are sanctioned at the start of each fiscal year to reflect the upcoming budget and routed for DOA approval (RR-DPU-43, Att. 2, at 5). Blanket work orders are linked to blanket funding projects and must not exceed $100,000 (RR-DPU-43, Att. 2, at 5). The DOA requested for blanket and program funding projects constitutes the gross expected expenditure (i.e., the Company does not subtract amounts for anticipated CIAC or other contributions) (RR-DPU-43, Att. 2, at 5). Blanket and program projects under $1 million are monitored on a monthly basis and revised with explanations within 60 days of the end of the fiscal year (RR-DPU-43, Att. 2, at 6). Blanket projects require a USSC closure paper[81] (RR-DPU-43, Att. 2, at 6).[82] Programs of less than $1 million require change in DOA forms, but do not require closure papers (Exh. NG-JHP-4, at 13; Tr. 3, at 431-432). Additionally, program projects under $100,000 do not require change in DOA forms or closure papers (Tr. 3, at 430-432).

---

[81] A closure paper is prepared at the completion of a funding project that details the financial and objective outcomes of the funding project (RR-DPU-43, Att. 3, at 13).

[82] We note that there appears to be an inconsistency in the Company's re-sanctioning procedures and other documentation with respect to whether closure papers are completed for program projects under $1 million (Compare RR-DPU-43, Att. 2, at 6 with Exh. NG-JHP-4, at 13). Based on other documentation in the record and the Company's testimony, it appears that the Company's policy is to not require a closure paper for program projects under $1 million (see, e.g., Exhs. NG-JHP-3(f), JHP-2, at 13; NG-JHP-4, at 13; Tr. 3, at 431-432). As noted below, the Department directs the Company to clarify the capital authorization policies on this point.

Additionally, capital funding project overrun reports are produced on a monthly basis (RR-DPU-43, Att. 2, at 7). These reports identify funding projects that have exceeded or are forecasted to exceed the authorized DOA basis (RR-DPU-43, Att. 2, at 7). Within ten business days, the responsible personnel must prepare a written plan to bring the affected funding project within DOA limits (RR-DPU-43, Att. 2, at 7).

For the Company's annual capital investment report filing, the Company prepares variance analysis reports for blanket and program funding projects on a fiscal-year basis (see, e.g., Exh. NG-JHP-4, at 18; Tr. 3, at 431-431). For purposes of providing variance explanations, the Company groups related blanket projects together and related program projects together (Tr. 3, at 431-431).

(B) Project Costs at or above $1 Million

For all types of projects at or above $1 million a sanction paper is used to approve the expenditure (RR-DPU-43, Att. 3, at 5). A sanction paper is the document submitted to the USSC for project approval and is considered the final approval to undertake the funding project (RR-DPU-43, Att. 3, at 16). A sanction, as opposed to a partial sanction, is generally prepared for the full scope and cost of the funding project (RR-DPU-43, Att. 3, at 16). Generally the costs are expected to have a variance tolerance of plus or minus ten percent (RR-DPU-43, Att. 3, at 16). The funding project amount to be sanctioned, and for which a DOA is requested, shall be the gross expected expenditure (i.e., the Company does not subtract amounts for anticipated CIAC or other contributions) (RR-DPU-43, Att. 3, at 5). Closure papers are required for all funding projects of $1 million or greater (RR-DPU-43, Att. 3, at 9).

A specific funding project of over $1 million must be re-sanctioned within 60 days of notification that the cost is forecasted to vary outside of the tolerance approved in the project sanction paper (RR-DPU-43, Att. 3, at 8). Re-sanction papers should not re-state the original need, but must include a detailed explanation of the new sanction requirements and why they have changed from those that were originally approved (RR-DPU-43, Att. 3, at 9). In addition, the re-sanction paper should include details of lessons learned including an explanation of any significant variances in cost (RR-DPU-43, Att. 3, at 9). If the lessons learned and explanations are not fully known at the time, they must be included in the closure paper (RR-DPU-43, Att. 3, at 9). Specific funding project closure papers shall be completed as soon as possible after all work orders and projects are closed (RR-DPU-43, Att. 3, at 9). Related specific funding projects shall be included in one investment document (RR-DPU-43, Att. 3, at 10). A funding project is related to another funding project if it cannot fully accomplish its intended purpose unless the other funding project is also carried out (RR-DPU-43, Att. 3, at 10). These related funding projects should be identified in a sanction paper (RR-DPU-43, Att. 3, at 11). The Company considers these groups of projects at the aggregate level when determining whether the project is over budget (Tr. 3, at 426).

Blanket and program funding projects at or above $1 million are approved for each fiscal year (RR-DPU-43, Att. 3, at 8). Blanket and program funding projects may not be segmented into smaller pieces in order to sanction the spending at a lower level of authority than would otherwise be required (RR-DPU-43, Att. 3, at 8). For blanket projects, a closure document is presented at the end of each fiscal year (Exh. NG-JHP-4, at 18, 2; RR-DPU-43, Att. 3, at 8). For program projects, a closure document is presented at the end of each fiscal year unless otherwise

specified in the strategy or sanction paper (Exh. NG-JHP-4, at 18, 2; RR-DPU-43, Att. 3, at 8). Program funding project closure papers shall be completed as soon as possible after all work orders and projects are closed (RR-DPU-43, Att. 3, at 9).

For the Company's annual CapEx filing, the Company prepares variance analysis reports for blanket and program funding projects on a fiscal-year basis (see, e.g., Exh. NG-JHP-4, at 18; Tr. 3 at 431-431). For purposes of providing variance explanations, the Company groups related blanket projects together and related program projects together (Tr. 3, at 431-431).

iv. Project Documentation

The Company provided project documentation at various points in this proceeding. As part of its initial filing, the Company provided the filings made in each of the previous CapEx filings, as well as documentation relating to capital investments made during the first six months of 2015 (Exhs. NG-JHP-3; NG-JHP-4). As noted above in Section VII.B.3, the Company provided, with its initial filing, various forms of documentation for specific projects over $50,000 and all blanket and program projects including: (1) a project summary sheet that includes project number, project descriptions, approved amount, total to date project spending, project status, approval history, and in-service additions and cost of removal figures; (2) a project approval report; (3) sanction papers; (4) a retirement report; (5) a direct/indirect summary report; (6) a work order asset addition report; (7) a project cost summary (see, e.g., Exhs. NG-JHP-3; NG-JHP-4). The Company also provided closure papers for some specific projects (see, e.g., Exhs. NG-JHP-3; NG-JHP-4). For blanket and program projects, the Company also

provided a fiscal year variance analysis report and a fiscal year closure paper (Exh. NG-JHP-4, at 12, 13).[83]

Over the course of the proceeding, the Company provided additional documentation including a variance explanation for a specific project, closure papers for 26 specific projects, closure papers for five specific projects and eight program projects (Exhs. DPU-17-23; AG-21-1, Atts. 1, 2; NG-JHP-Rebuttal-2, at 18-20). Additionally, on May 3, 2016, the Company provided closure papers for 22 blanket projects (Exhs. DPU-20-31 (Supp.); DPU-20-35 (Supp.)). Further, as noted above in Section VII.B.5.a.i, on June 2, 2016, the Company provided reauthorization documents and closure papers for certain program projects placed in service in FYs 2013, 2014, and 2015, which the Department has excluded from the evidentiary record as provided in Section VII.5.a.iii above (Exh. NG-JHP-Rebuttal-2 (Supp.)). On that date, the Company also provided a supplemental response to information request DPU-7-23, showing the Company's specific projects that are combined into a larger group of projects (Exh. DPU-7-23, Att. (Supp.)). As discussed below, the Attorney General challenges the sufficiency of the documentation provided for 20 specific projects, 32 blanket projects, 47 program projects, and two storm program projects (Attorney General Brief at 12-19).

The Department finds that a project cost document production threshold of $50,000 for specific projects is appropriate for a company the size of National Grid. See D.P.U. 14-150,

---

83 The Company initially did not provide closure papers for 31 specific projects, but provided them through discovery. Nor did it initially provide blanket project closure papers for fiscal years 2013 and 2014, which were provided at the beginning of hearings. Also, the Company initially did not provide closure papers for seven program projects over $1 million and reauthorization forms for 14 program projects over $100,000, but they were provided after the close of hearings and have been excluded from the record above.

at 58; New England Gas Company, D.P.U. 11-42, at 3 n.4 (2013); D.P.U. 10-114, at 81, n.67. Nevertheless, document production thresholds used by the Department in the discovery process do not mean that projects of a lower value are exempt from scrutiny or the requirement that a company maintain adequate documentation to support the prudence of these capital additions. D.P.U. 14-150, at 58. Rather, the Department and intervenors may inquire into any project regardless of its final cost. D.P.U. 14-150, at 58; D.P.U. 12-25, at 77; D.P.U. 10-55, at 188.

v. Specific Projects

The Company seeks inclusion of $509,652,488 in investments for 1,253 specific projects, including the cost of removal (Exh. DPU-7-23, Att. (Supp.); RR-DPU-12). There were 772 specific projects with in-service additions greater than $50,000 between January 1, 2009 and June 30, 2015 (Exh. DPU-10-12 (Att.)). Of those specific projects, 360 had variances in excess of ten percent (Exh. DPU-10-12 (Att.)). The Attorney General recommends that the Department exclude 20 of these projects from rate base because the Company did not provide a variance explanation (Attorney General Brief at 11-12).

We first consider the 752 uncontested specific projects. The Department has reviewed the information supporting the Company's completed projects, including all supporting documents described above (see, e.g., Exhs. NG-JHP-3; NG-JHP-4; RR-DPU-43 and Atts. 1-3; DPU-17-23; AG-21-1, Atts. 1, 2). Based on our review of the documents, the Department finds that the costs for these projects were prudently incurred and that the capital investments are used and useful. Accordingly, the Department will include the cost of the Company's uncontested specific projects in rate base. We now turn to the 20 contested specific projects.

A company is required to provide a reasonable explanation for cost variances, based on the specifics of each project, sufficient for the Department to evaluate the reasonableness and prudence of any cost variance. D.P.U. 14-150, at 50; D.P.U. 13-75, at 95, 105; D.P.U. 12-25, at 79-80, 82; D.P.U. 10-114, at 85-87; D.P.U. 10-55, at 179-180. If a company adequately justifies the reasons for any cost variance, the Department will consider the costs of the project eligible for inclusion in rate base. D.P.U. 14-150, at 50. If, however, a company is unable to justify the reasons for a cost variance, the Department will exclude the excess costs to the extent that the Company has not met its burden of proof. D.P.U. 14-150, at 50-51; D.P.U. 13-75, at 114; D.T.E. 03-40, at 68; D.P.U. 95-118, at 49-55. The Department has directed companies to address the cost variances for capital expenditures between the amount approved for projects and the actual amount required to complete the projects. D.P.U. 10-79, at 7. The Department has approved a company's use of authorized amounts that are refined over time for purposes of conducting a variance analysis because they are more reflective of the costs to be incurred by the Company in undertaking the approved project. D.P.U. 15-80/D.P.U. 15-81, at 75.

The Department requested an explanation for the variance on 23 specific projects (Exhs. DPU-17-1 through DPU-17-23). For 20 of these projects, the Company responded that the projects were part of a larger group of related projects that in the aggregate did not exceed the ten percent tolerance and, therefore, the Company did not perform a variance investigation (see, e.g., Exh. DPU-17-3). Based on the Company's internal policies, it groups related projects and considers these groups at the aggregate level when applying the threshold required for a variance explanation (see, e.g., Exh. DPU-17-3; Tr. 3, at 426-427). The Department finds that the Company's grouping practice is a sufficient project management tool for reviewing cost

control for the ratemaking treatment of plant additions. Therefore, the Department will not require variance analyses for specific projects within the groupings. In future filings involving plant additions, i.e., base rate case, CIRM filing, the Department will continue to review the Company's project management tools to ensure that there adequate cost control measures.

In any event, the Company stated that reauthorization documents adequately explain the reasons for a reauthorization at the specific project level (Tr. 3, at 425-429). With the documentation provided in the instant case, the Department will review the capital project documentation and closing reports for all specific projects that are part of a group of related projects to determine whether the expenditures are prudently incurred.

The Department has reviewed the documentation the Company provided for these 20 specific projects,[84] including all supporting documents (see, e.g., Exhs. NG-JHP-3; NG-JHP-4; JHP-Rebuttal-2; DPU-17-23; AG-21-1, Atts. 1,2). For the 20 specific projects, the Company provided various forms of documentation including, but not limited to, project summary sheets, project approval reports, authorization documents, retirement reports, asset addition reports, project cost summary reports, and closure papers.[85] The closure papers or re-sanction papers contain reasons for the reauthorization requests during the lifecycle of the project.[86] To the

---

84 The 20 specific projects are: C008666; C005339; C014549; C023591; C036385; C028886; C002364; C002388; C012018; C012502; C024120; C005342; CD01253; C001423; C028871; C029104; C031552; CD01174; C031324; and C002504.

85 The Company did not provide a closure paper for Project C008666, stating that the current sanction process did not exist at the time the project was progressing (Company Reply Brief at 17).

86 Exhs. NG-JHP-Rebuttal-2 at 13, 28, 39 44, 50, 57; NG-JHP-3(b), JLG-6 at SPCFC-1275; NG-JHP-3(c), JLG-6 at SPFC-1231, 1369; NG-JHP-3(d), JLG-6, at SPFC-6, 1112-1116; NG-JHP-3(f), JHP-6, at SPFC 1270-71, 2328; NG-JHP-4, at SPFC-357.

extent that these projects had a variance between the final approved amount and the actual spent amount,[87] that variance was less than ten percent and, therefore, would not trigger a separate variance explanation under the Company's policies (see, e.g., Exh. DPU-17-3; Tr. 3, at 392, 398, 426-427).

The explanations provided for the variances and reauthorizations during the lifecycle of the projects include unforeseen environmental issues, increases in project scope, revisions to design, increase in materials and labor costs, low estimates, project initially only given a partial sanction for preliminary engineering, and various other project-specific issues.[88] While most of these explanations were provided at the group level, not the individual project level, we find them sufficient, under the Company's current policies, to allow a determination of prudence. Based on our review of the documents, the Department finds that the costs for these projects were prudently incurred and that the capital investments are used and useful. Accordingly, the Department will include the cost of these 20 projects in rate base.

vi. Storm Capital Programs

The Company reported storm capital programs using five project numbers: C014821, C014822 C21594, C02216, and C22217. The Attorney General specifically challenges the sufficiency of the variance explanations for two storm program projects for fiscal year 2010,

---

87 We have approved a company's use of authorized amounts that are refined over time for purposes of conducting a variance analysis because they are more reflective of the costs to be incurred by the Company in undertaking the approved project. D.P.U. 15-80/D.P.U. 15-81, at 75.

88 See, e.g., Exhs. NG-JHP-Rebuttal-2 at 13, 28, 39 44, 50, 57; NG-JHP-3(a), JLG-6, at SPFC-1624; NG-JHP-3(c), JLG-6, at SPFC-1231, 1369; NG-JHP-3(d), JLG-6, at SPFC-6, 1112-1116; NG-JHP-3(e), JLG-6, at SPFC-3446; NG-JHP-3(f), JHP-6, at SPFC-1270-71; NG-JHP-4, at SPFC-357, 525.

projects C014821 and C014822, totaling a $ 2.4 million variance; and one fiscal year 2012 project, C014821, with a $9.3 million variance (Attorney General Brief at 20). Additionally, the Attorney General, as part of her challenge of program projects discussed below, contests the sufficiency of the documentation for storm programs C014821, C21594, C02216, and C22217, which span FYs 2013 through 2015.[89]

The Company provided closure papers and variance analysis reports with its initial filing for the two fiscal year 2010 projects and provided a closure paper containing a variance explanation for the fiscal year 2012 project (Exhs. NG-JHP-3(b), JLG-8, at PRGM-0329, 341; NG-JHP-3(d), JLG-8, at PRGM-163; DPU-19-1; DPU-19-2). The variance explanation for the fiscal year 2010 projects states that storm restoration programs are approved annually based on historic trends and that the cost of mandatory storm restoration activities are strictly dependent on size/scale of storms incurred during the year (Exh. NG-JHP-3(b), JLG-8, at PRGM-0329, 341). The variance explanation provided by the Company for the fiscal year 2012 project states that three major storms resulted in significant damage across the state's infrastructure (Exhs NG-JHP-3(d), JLG-8, at PRGM-163; DPU-19-40).[90] The Company also explained that in reporting the costs to the Department, the Company mistakenly used the budgeted amounts for the fiscal year and not the final authorized amount from the closure papers, and that if the correct amount had been used, the variance would be minimal (Exhs. DPU-19-1; DPU-19-2; DPU-19-40; see also Exh. DPU-7-23, Att. (Rev.)).

---

89 We address the fiscal year 2013-2015 storm programs in the section below.

90 The storms were a tornado in June 2011; Tropical Storm Irene in August 2011; and a major snowstorm in October 2011 (Exh. DPU-32-4).

We find that the variance explanations provided are sufficient for purposes of storm program projects. The Company establishes budgets for storm program projects based on multi-year historic trends (Exh. NG-JHP-1, at 19). The work performed to restore service is inherently unplanned and not fully quantifiable until after the work has been performed (Exh. NG-JHP-1, at 19). Therefore, we will not exclude these projects from rate base on this basis.

Further, we note that the Department imposed substantial fines on National Grid after determining that restoration efforts related to two storms were inadequate, in part, because the Company mobilized insufficient resources. D.P.U. 11-85-A/D.P.U. 11-119-A at 39-41. However, in this instance, we find that the Department's imposition of those fines does not automatically warrant a disallowance of the costs that the Company incurred in responding to these storms. D.P.U. 11-85-A/D.P.U. 11-119-A at 39-41. The Department did not make a finding that any of the costs the Company incurred in responding to the storm were imprudent under the standard of review for plant additions. D.P.U. 11-85-A/D.P.U. 11-119-A at 39-41. Instead, we stated that if the Company seeks recovery of storm costs in a future Department proceeding, the Department will determine whether the Company's storm expenses were prudently incurred in that proceeding and whether or not to deny any of the Company's storm related expenses. D.P.U. 11-85-A/D.P.U. 11-119-A at 39-41, citing Fitchburg Gas and Electric Light Company, D.P.U. 09-01-A at 195 (2009); D.P.U. 93-60, at 24. Based on our findings above, we conclude that the costs for these storm capital programs projects were prudently incurred and that the capital investments are used and useful.

vii. Blanket & Program Projects

The Company seeks inclusion of $217,111,440 in investment for 99 program projects and $463,986,528 for 62 blanket projects (Exh. DPU-7-23, Att. (Supp.); RR-DPU-12).[91] As noted above, for blanket projects, the Company provided project documentation consisting of: (1) fiscal year blanket project summary sheets; (2) project cost summaries; (3) fiscal year approval documents; (4) fiscal year summary project variance analyses[92] and closure papers;[93] (5) calendar year work order asset detail reports; (6) calendar year retirement reports; and (7) direct/indirect summary reports (see, e.g., Exhs. NG-JHP-3; NG-JHP-4, at 10-13). In its initial filing, the Company did not provide closure papers for 31 blanket projects for FYs 2013 and 2014;[94] the Company filed them on May 3, 2016 (Exhs. DPU-20-31 (Supp.); DPU-20-35 (Supp.)).

For program projects, the Company provided project documentation consisting of: (1) fiscal year program project summary sheets; (2) project cost summaries; (3) fiscal year

---

91 The Company's programs and blanket projects are often reauthorized for the next fiscal year using the same project number. There are 99 unique program project numbers and 62 unique blanket project numbers, many of which repeat from year to year (Exh. DPU-7-23, Att. (Rev.)).

92 See, e.g., Exhs. NG-JHP-3(b), JLG-7, at BLNK-122-125; NG-JHP-3(c), JLG-7, at BLNK-119-122; NG-JHP-3(e), JLG-7, at BLNK-3156-3161; NG-JHP-3(f), JHP-7, at BLNK-2799-2803.

93 See, e.g., Exhs. NG-JHP-3(b), JLG-7, at BLNK-126-149; NG-JHP-3(c), JLG-7, at LNK-123-129; NG-JHP-3(f), JHP-7, at BLNK-101-110; NG-JHP-4, at 92).

94 These projects include: CBN0002; CBN0004; CBN0010; CBN0011; CBN0012; CBN0014; CBN0015; CBN0016; CBN0017; CBN0022; CBS0010; CBS0011; CBS0014; CBS0020; CBS0022; CBW0002; CBW0006; CBW0010; CBW0011; CBW0014; CBW0016; CBW0020; CN00420; CNM0002; CNM0004; CNM0010; CNM0011; CNM0014; CNM0017; CNM0020; and CNM0022.

approval documents; (4) fiscal year summary project variance analyses[95] and closure papers;[96] (5) calendar year work order asset detail reports; (6) calendar year retirement reports; and (7) direct/indirect summary reports (Exhs. NG-JHP-3; NG-JHP-4, at 10-13). The Company initially did not file closure papers for seven program projects of over $1 million;[97] it filed six of them on June 2, 2016 (Exh. NG-JHP-Rebuttal-2 (Supp.)). The Company did not initially file reauthorization paperwork for 14 program projects over $100,000 and less than $1 million, but filed them on June 2, 2016 (Exh. NG-JHP-Rebuttal-2 (Supp.)).[98]

As noted above, the Attorney General argues that the Company's submission of closure papers on May 3, 2016, for 31 blanket projects was untimely and recommends disallowance of $19.6 million dollars associated with these projects. The Attorney General challenges 47 program projects arguing that closure papers,[99] if any, were filed on June 2, 2016, and

---

95 Exhs. NG-JHP-3(b), JLG-8, at PRGM-323-330; NG-JHP-3(c), JLG-8, at PGRM-270-274; NG-JHP-3(d), JLG-8, at PGRM-160-168; NG-JHP-3(e), JLG-8, at PGRM-1184-1191; NG-JHP-3(f), JHP-8, at PGRM-1149-1157.

96 Exhs. NG-JHP-3(b), JLG-8, at PRGM-331-343; NG-JHP-3(c), JLG-8, at PGRM-262-269; NG-JHP-3(d), JLG-8, at PGRM-156-168). Under the Company's capital authorization policies, program projects of less than $1 million do not require closure papers (Exh. NG-JHP-4, at 13).

97 On June 2, 2016, the Company filed closure papers for the following projects: C005490; C005500; C014821; C021594; C022216; and C022217. The Company did not file a closure paper for C006138.

98 On June 2, 2016, the Company filed Change in DOA forms for the following projects: C005543; C005469; C028147; C025810; C032270; CD00017; C025619; C025813; C027898; C031398; C031774; C035584; C049352; and CD01258.

99 The Attorney General argues that 47 program projects should be disallowed because, if closure papers were filed at all, they were filed after the close of the evidentiary hearings (Attorney General Brief at 16). We note that for 21 of the Attorney General's challenged projects, the Company filed closure papers (or other documentation) on June 2, 2016.

recommends disallowance of $18.2 million associated with these projects. The Attorney General, therefore, recommends disallowance of $ 37.8 million in blanket and program costs based on the lack of timeliness of filing the Company's closure papers.

(A) Blanket Projects

The Attorney General contests 31 of the Company's 62 blanket projects. We first consider the 31 uncontested blanket projects.[100] The Department has reviewed the information supporting the Company's 31 uncontested blanket projects including all supporting documents described above, with specific attention to the variance analyses (see, e.g., Exhs. NG-JHP-3; NG-JHP-4; RR-DPU-43 & Atts.). The Company provided reasons for variances including, but not limited to, increased residential applications for new business, increased applications for new attachments, increased levels of work relating to damage failures, increased equipment purchases, and various other project-specific reasons (see, e.g., Exhs. NG-JHP-3(b), JLG-7, at BLNK-122-125; NG-JHP-3(c), JLG-7, at BLNK-119-122; NG-JHP-3(e), JLG-7, at BLNK-3156-3161; NG-JHP-3(f), JHP-7, at BLNK-2799-2803). While these explanations were provided for a group of similar blanket projects, not the individual blanket projects, we find them sufficient, under the Company's current policies, to allow a determination of prudence. Based on our review of the documents, the Department finds that the costs for these projects were prudently incurred and that the capital investments are used and useful.

For the remaining 26 projects, the Company did not file any closure papers or documentation on June 2, 2016 (Company Brief at Appendix 1, Table 2).

100 The uncontested blanket projects are: CBN0009; CBN0013; CBS0002; CBS0004; CBS0006; CBS0009; CBS0012; CBS0013; CBS0015; CBS0016; CBS0017; CBS0025; CBW0004; CBW0009; CBW0012; CBW0013; CBW0015; CBW0017; CBW0022; CBW0070; CN00404; CN00504; CN00520; CNM0006; CNM0009; CNM0012; CNM0013; CNM0015; CNM0016; CNM0070; and CBW0025.

We now turn to the 31 contested blanket projects. The Company did not provide the FYs 2013 and 2014 blanket closing reports with its initial filing or during the discovery period. The Company did, however, provide closure papers for all of these projects on May 3, 2016 as a supplement to information requests propounded by the Department (Exhs. DPU-20-31 (Supp.); DPU-20-35 (Supp.)). We share the Attorney General's concern that the Company was unable to provide these closure papers with its initial filing. Pursuant to the Company's capital authorization policies, these closure papers should have been completed at the close of FYs 2013 and 2014 and available at the time the Company filed its petition in this case (see RR-DPU-43 & Atts. 1-3). We find, however, that the filing of these closure papers was not so late as to prevent the Department and the parties enough time to conduct an adequate review of their contents. In a base rate proceeding, it is not unusual for a petitioner to provide documents and information during the course of hearings that it has not previously provided in the initial filing. Indeed, parties are under a continuing obligation to supplement discovery responses throughout the course of a proceeding. D.P.U. 12-25, at 106-107, citing 220 C.M.R. § 1.06(6)(c)(5); D.P.U. 09-30, at 174; D.P.U. 08-27-B at 22; D.T.E. 02-24/25, at 32-33; D.P.U. 88-123-B at 57-58.

The Department is not persuaded that the Attorney General was prejudiced by the production of these documents on May 3, 2016, which was the second day of hearings and before the record closed. Further, although the documents were produced the day before the Company's witness was to testify, the witness appeared on two consecutive days. Additionally, the Department reserved several days at the end of the evidentiary hearings for additional cross examination, so the Attorney General could have recalled the witness at that time. Moreover, the

Company's production constituted two ten-page documents, one for each fiscal year. The documents were not so voluminous as to prevent the Attorney General from reviewing them during the course of the evidentiary hearings to at least determine if she needed the Company's witness to appear again. Instead, the Attorney General concluded her questioning of the witness on May 5, 2016, two days after the documents were filed, and never asked that the witness be made available for further questioning on this or any other subject (Tr. 3, at 457).

More importantly, the closure papers provided by the Company on May 3, 2016, were largely duplicative of the project documentation already provided as part of the Company's initial filing (Exhs. NG-JHP-3(d), NG-JHP-3(e), JLG-7; NG-JHP-3(f), JHP-7). Specifically, the cost information contained in the closure papers is the same as the cost information in the project summaries and project cost summaries (Exhs. NG-JHP-3(d), NG-JHP-3(e), JLG-7; NG-JHP-3(f), JHP-7). Similarly, the variance analyses contained in the closure papers are the same as the variance analyses in the 2013 and 2014 blanket variance analysis reports (Exhs. NG-JHP-3(e), JLG-7, at BLNK-3156-3161; NG-JHP-3(f), JHP-7, at BLNK-2799-2803).

Based on these considerations, we find that a reasonable examination of the documents produced on May 3, 2016, was feasible given the number, length and nature of the documents, and the timing of their production vis-à-vis the evidentiary hearing schedule. Therefore, the Department will not exclude these projects from rate base due to the timing of the project documentation. We do, however, expect that National Grid will abide by its own capital authorization policies (i.e., preparing closure papers at the close of the fiscal year) as a reasonable means of maintaining adequate cost controls. Specifically, we note that the closure paper is the opportunity for the Company to reflect upon and document the lessons learned and

to ensure that the Company has performed all close out activities (Exhs. DPU-20-31, at 3 (Supp.); DPU-20-35, at 3 (Supp.)). Given that the Company ultimately did provide sufficient cost information and variance analyses for the projects at issue, we find that the Company's failure to timely compile the closure papers (including documentation of lessons learned) is insufficient to support a finding that the Company failed to maintain adequate cost controls.

The Department has reviewed the information supporting the 31 contested blanket projects including all supporting documents described above, with specific attention to the variance analyses (see, e.g., Exhs. NG-JHP-3; DPU-20-1 through DPU-20-53; DPU-20-31 (Supp.); DPU-20-35 (Supp.); RR-DPU-43 & Atts.). The Company provided reasons for variances including, but not limited to, increased residential applications for new business, increased applications for new attachments, increased levels of work relating to damage failures, increased equipment purchases, and various other project-specific reasons (see, e.g., Exhs. NG-JHP-3(b), JLG-7, at BLNK-122-125; NG-JHP-3(c), JLG-7, at BLNK-119-122; NG-JHP-3(e), JLG-7, at 3156-3161; NG-JHP-3(f), JHP-7, at BLNK-2799-2803). While these explanations were provided for a group of similar blanket projects and not the individual blanket projects, we nevertheless find them sufficient under the Company's current policies to allow a determination of prudence. Based on our review of the documents, the Department finds that the costs for these projects were prudently incurred and that the capital investments are used and useful. Accordingly, the Department will include the cost of the Company's blanket projects in rate base.

(B) Programs

As noted above, the Attorney General challenges 47 total program projects arguing that closure papers, if filed at all, were filed after the close of evidentiary hearings. We first consider the 51 uncontested program projects.[101] The Department has reviewed the information supporting the Company's 51 uncontested program projects including all supporting documents described above, with specific attention to the variance explanations[102] and closing reports[103] (see, e.g., Exhs. NG-JHP-3; NG-JHP-4; RR-DPU-43 & Atts.). The Company provided reasons for variances including, but not limited to: increase in cost of transformers, carryover work from prior years due to weather or outages, incompatibility of parts purchased from different vendors, change in scope or strategy after initial budget was set, and other project-specific reasons (see, e.g., Exhs. NG-JHP-3(b), JLG-8, at PRGM-0323-0330; NG-JHP-3(c), JLG-8, at PGRM-270-274; NG-JHP-3(d), JLG-8, at PGRM-160-168; NG-JHP-3(e), JLG-8, at PGRM-1184-1191; NG-JHP-3(f), JHP-8, at PGRM-1149-1157). While these explanations were provided for a group of similar program projects, not the individual program projects, we

---

101 The uncontested program projects are: C004494; C005495; C005499; C007266; C005543; C005442; C005446; C005447; C005451; C005453; C030604; C026264; C026279; C026280; C005509; C005514; C005519; C024499; C005558; C005826; C006629; C014322; C014323; C014324; C025239; C025899; C027002; C008407; C008414; C008511; C016123; C017453; C023512; C036906; C001379; C025320; C025683; C026056; C031397; C031778; C031831; C023491; C032027; C032570; C026761; C026836; C039984; C017892; C029780; C037962; and CAP0004.

102 The Company provided variance explanations for fiscal years 2010 through 2015 (Exhs. NG-JHP-3(b), JLG-8, at PRGM-323-330; NG-JHP-3(c), JLG-8, at PGRM-270-274; NG-JHP-3(d), JLG-8, at PGRM-160-168; NG-JHP-3(e), JLG-8, at PGRM-1184-1191; NG-JHP-3(f), JHP-8, at PGRM-1149-1157).

103 The Company provided closing reports with its initial filing for fiscal years 2010, 2011, and 2012 (Exhs. NG-JHP-3(b), JLG-8, at PRGM-331-343; NG-JHP-3(c), JLG-8, at PGRM-262-269; NG-JHP-3(d), JLG-8, at PGRM-156-168).

find them sufficient, under the Company's current policies, to allow a determination of prudence. Based on our review of the documents, the Department finds that the costs for these projects were prudently incurred and that the capital investments are used and useful.

With respect to the 47 contested projects, the Attorney General argues that closure papers, if filed at all, were filed late on June 2, 2016, after the close of evidentiary hearings. First, we find that for 26 of the program projects the Company did not provide any documentation on June 2, 2016,[104] but did provide documentation with the initial filing as described above. The Department has reviewed the information supporting these 26 program projects including all supporting documents with specific attention to the variance explanations (see, e.g., Exhs. NG-JHP-3; NG-JHP-4; RR-DPU-43, Atts. 1-3).[105] The Department notes that the program projects are less than $100,000, and under the Company's capital authorization policies do not require variance analyses or closure papers (Tr. 3, at 430-432). Thus, we will not exclude these projects from rate base based on the fact that the Company did not submit closure papers. We further note, however, that the Company did provide some variance analyses, which include cost overruns due to carryover work from prior years caused by severe weather events or outages, additional work written to train workers, and changes in project scope (Exhs. NG-JHP-3(b), JLG-8, at PRGM-323-330; NG-JHP-3(c), JLG-8, at PGRM-270-274;

---

104 These consist of projects: C005432; C005563; C006642; C005439; C005441; C005444; C005449; C016492; C005475; C005480; C059664; C032015; C032016; C032018; C033822; C032272; C016120; C016121; C018594; CD00259; C025326; C027927; C032024; C032572; C033764; and C033765.

105 The Company provided variance explanations for fiscal years 2010 through 2015 (Exhs. NG-JHP-3(b), JLG-8, at PRGM-323-330; NG-JHP-3(c), JLG-8, at PGRM-270-274; NG-JHP-3(d), JLG-8, at PGRM-160-168; NG-JHP-3(e), JLG-8, at PGRM-1184-1191; NG-JHP-3(f), JHP-8, at PGRM-1149-1157).

NG-JHP-3(d), JLG-8, at PGRM-160-168; NG-JHP-3(e), JLG-8, at PGRM-1184-1191; NG-JHP-3(f), JHP-8, at PGRM-1149-1157). While these explanations were provided for a group of similar program projects, not the individual program projects, we find them sufficient, under the Company's current policies, to allow a determination of prudence. Based on our review of the documents, the Department finds that the costs for these projects were prudently incurred and that the capital investments are used and useful.

We now turn to the 21 program projects for which the Company filed documentation on June 2, 2016.[106] As discussed above in Section VII.5.a.iii, the Department has granted the Attorney General's motion to strike these documents from the record. Therefore, we will evaluate each of these program projects based on information regarding these projects that was in the record prior to the close of hearings (Exhs. NG-JHP-3; NG-JHP-4).

The Department has reviewed the information supporting the Company's 21 program projects, as described above, with specific attention to the variance explanations (see, e.g., Exhs. NG-JHP-3; NG-JHP-4; RR-DPU-43 & Atts.). The reasons for the variances include carryover work from prior years due to severe weather events or outages, additional work written to train workers, and changes in project scope (Exhs. NG-JHP-3(b), JLG-8, at PRGM-323-330; NG-JHP-3(c), JLG-8, at PGRM-270-274; NG-JHP-3(d), JLG-8, at PGRM-160-168; NG-JHP-3(e), JLG-8, at PGRM-1184-1191; NG-JHP-3(f), JHP-8,

---

106 These consists of projects: C005490; C005500; C014821; C021594; C022216; C022217; C005543; C005469; C028147; C025810; C032270; CD00017; C025619; C025813; C027898; C031398; C031774; C035584; C049352; and CD01258. Included in this number is one program project, C006138, for which the Company indicated it would be submitting a closure paper, but did not submit one with the June 2, 2016, filing. As explained below, however, we find that there is sufficient information in the record to evaluate the prudency of this project despite the absence of the closure paper.

at PGRM-1149-1157). The variance explanations for the 2013, 2014, and 2015 storm programs state that storm restoration programs are approved annually based on historic trends, that storm restoration work is mandatory, and that charges and adjustments from FY 2013 events such as Hurricane Sandy and the February Nemo storm were paid in FY 2014 (Exhs. NG-JHP-3(e), JLG-8, at PGRM-1190; NG-JHP-3(f), JHP-8, at PGRM-1155).

While these explanations were provided for a group of similar program projects, not the individual program projects, we find them sufficient, under the Company's current policies, to allow a determination of prudence. Based on our review of the documents, the Department finds that the costs for these projects were prudently incurred and that the capital investments are used and useful.

Additionally, as we stated above, we expect that National Grid will abide by its own capital authorization policies (i.e. preparing closure papers and reauthorization forms) as a reasonable means of maintaining adequate cost controls. Specifically, we note that the closure paper is the opportunity for the Company to reflect upon and document the lessons learned and ensure all close out activities have been performed (Exh. NG-JHP-1, at 17). However, given that National Grid did provide sufficient cost information and variance analyses for the projects at issue, we find that the Company's failure to timely compile and timely produce the closure papers is insufficient to support a finding that the Company failed to maintain adequate cost controls.

viii. Filing Requirements

The Company shall provide, as part of its next CIRM filing the following: (1) prefiled testimony; (2) for capital projects placed in service costing more than $50,000, project details

including: project summary sheet, project cost summary, approval documents such as sanction/authorization papers and re-sanction/reauthorization documents, as required by the Company's capital authorization policies, work order asset detail reports, retirement reports, and direct/indirect reports; (3) closure papers, as required by the Company's capital authorization policies; (4) variance analyses for all projects over $50,000 consistent with the Company's capital authorization policies; (5) fiscal year variance analysis reports for its blanket and program projects; (6) a list of cancelled projects and a description of the disposition of the associated charges; and (7) new policies or updates to policies since the previous CIRM filing, affecting the Company's methods of: (i) approving delegations of authority, sanctioning and re-sanctioning funding projects, (ii) charging capital versus expense, (iii) determining when a capital asset is in danger of failure and should be replaced as part of a damage/failure blanket capital authorization, and (iv) instituting any other changes in accounting, allocation, and/or operational matters.

In its next CIRM filing, the Company also shall explain the cost variances between the final amount approved and the actual amount required to complete the project. For blanket and program projects that are not reauthorized throughout the year, the Company shall explain cost variances between the initial budgeted amount and the actual amount required to complete the project. Further, the Company shall provide fiscal year-end variance reports for blanket and program projects for the fiscal year ending in the calendar year under review and the fiscal year following the calendar year under review. The Company shall also describe any cost control efforts it has undertaken in response to the variances.

Additionally, the Department notes some inconsistencies with respect to when the Company requires reauthorization documentation, closure papers, and variance analyses. In

order to review capital project documentation and understand the Company's complex capital project authorization process and blanket authorization policy, a significant amount of time during evidentiary hearings was devoted to exploring when closure papers and variance explanations are required (see Tr. 3, generally). Going forward, the Department directs the Company to provide all of its capital project documents in text searchable format with its CIRM filings. Moreover, the Department directs the Company to use consistent terminology, to the extent possible, and to ensure that policies are described consistently across documents (e.g., when closure papers are required for program projects). With the additional requirements for variance analyses directed above, the Company also shall document policies for performing variance analyses.

6. Conclusion

Based on all of the above findings, the Department approves the Company's proposed plant additions for inclusion in rate base. As a result of this decision, it no longer is necessary to review the prudency of the Company's capital additions in the following CapEx dockets: D.P.U. 10-79 (2009 CY additions), D.P.U. 11-60 (CY 2010 additions), D.P.U. 12-48 (CY 2011 additions); D.P.U. 13-84 (CY 2012 additions), D.P.U. 14-95 (CY 2013 additions), and D.P.U. 15-84 (CY 2014 additions). Accordingly, upon issuance of this Order, these dockets shall be closed.

C. Cash Working Capital Allowance

1. Introduction

In their day-to-day operations, utilities require funds to pay for expenses incurred in the course of business, including O&M expenses. These funds are either generated internally by a

company or through short-term borrowing. Department policy permits a company to be reimbursed for costs associated with the use of its funds or for the interest expense incurred on borrowing. D.P.U. 96-50 (Phase I) at 26, citing Western Massachusetts Electric Company, D.P.U. 87-260, at 22-23 (1988). This reimbursement is accomplished by adding a cash working capital component to the rate base calculation.

Cash working capital costs have been determined through either the use of a lead-lag study or a conventional 45-day O&M expense allowance. D.T.E. 03-40, at 92. In the absence of a lead-lag study, the Department has previously relied on a 45-day convention as reasonably representative of O&M working capital requirements. D.T.E. 05-27, at 98; Boston Gas Company, D.P.U. 88-67 (Phase I) at 35 (1988).[107] The Department has expressed concern that the 45-day convention, first developed in the early part of the 20th century, may no longer provide a reliable measure of a utility's working capital requirements. D.T.E. 03-40, at 92, citing D.T.E. 98-51, at 15; D.P.U. 96-50 (Phase I) at 27. In recent years, lead-lag studies have resulted in savings for ratepayers by reducing the cash working capital requirement below the 45-day convention. D.P.U. 11-01/D.P.U. 11-02, at 163, citing D.P.U. 10-114, at 108; D.P.U. 10-70, at 78; D.P.U. 10-55, at 204-205; D.P.U. 09-39, at 114; D.P.U. 09-30, at 151-152; New England Gas Company, D.P.U. 08-35, at 38 (2009); D.T.E. 05-27, at 99-100. For these reasons, the Department requires all electric and gas companies serving more than 10,000

---

107 When a fully developed and reliable lead-lag study is not available, FERC applies a 45-day convention to determine the cash working capital allowance. Carolina Power and Light Company, 6 FERC ¶ 61,154, at 61,296 (1979). As a result, companies occasionally refer to the 45-day convention as the "FERC convention." D.P.U. 11-01/D.P.U. 11-02, at 150 n.81.

customers to conduct a fully developed and reliable O&M lead-lag study.

D.P.U. 11-01/D.P.U. 11-02, at 164.

National Grid conducted a lead-lag study to determine its cash working capital requirements (Exh. NG-RRP-5). The Company proposed a cash working capital allowance of $68,019,916 using a net lead-lag factor of 5.70 percent, or 20.82 days (Exhs. NG-RRP-2, at 34 (Rev. 3); NG-RRP-8, at 6 (Rev. 3)).[108]

To determine its proposed cash working capital allowance, the Company first identified the following expense categories: (1) purchased power expense; (2) contract termination charges ("CTC");[109] (3) O&M expense; (4) transmission expense; (5) municipal taxes; (6) federal unemployment taxes; (7) state unemployment taxes; (8) FICA expense (both weekly and monthly);[110] (9) FICA and federal withholding (weekly and monthly); (10) state income tax withholding (weekly and monthly); and (11) incentive thrift (weekly and monthly) (Exh. NG-RRP-5, at 1 (Rev. 3)). The Company then determined a dollar-weighted period of time

---

108 The Company reported a total distribution working capital requirement of $68,019,916 from a total dollar amount of $1,192,500,103, resulting in a CWC factor of 5.70 percent, which equates to 20.82 days (Exh. NG-RRP-2, at 34 (Rev. 3)).

109 The CTC resulted from a FERC-approved wholesale settlement that restructured the wholesale contractual relationship between New England Power Company ("NEP") and MECo in the context of the restructuring the electric utility industry in Massachusetts. NEP terminated its all-requirements contractual agreement with MECo in exchange for the payment of CTC by MECo. New England Power Company, FERC Docket Nos. ER97-678-000 (1997) and ER98-6-000 (1998); New England Power Company, D.T.E. 97-94, at 11 (1998).

110 FICA refers to the Federal Insurance Contributions Act. Under FICA, an employer withholds three separate taxes from employees' wages: (1) Social Security tax; (2) Medicare tax; and (3) Medicare surtax. 26 U.S.C. §§ 3110(a) and (b). Also, FICA requires that the employer pay a matching employer share of (1) the Social Security tax and (2) the Medicare tax. 26 U.S.C. §§ 3111(a) and (b).

between the end date for the receipt of service from supplier and the payment date, producing expense lag factors as a percentage of total days in a calendar year ranging between a negative 1.59 percent for monthly state income tax withholding and 24.43 percent for state unemployment taxes (Exh. NG-RRP-5, at 8-24 (Rev. 3)).

Next, the Company developed separate revenue lags for both MECo and Nantucket Electric representing the time delay between the mailing of customers' bills and the receipt of the billed revenues from customers (Exh. NG-RRP-5, at 3 (Rev. 3)). The revenue lags were obtained by first averaging the twelve-month balances of accounts receivable and then dividing the result by the average monthly electric revenues, producing collection lag components of 38.88 days associated with MECo's O&M expenses, 39.07 days associated with MECo's property and payroll taxes, and 23.16 days for Nantucket Electric's overall expenses (Exh. NG-RRP-5, at 3, 9, 26 (Rev. 3)). National Grid then added a billing lag of 1.41 days, representing the average lag from the date a meter is read to the date the bill is sent to the customer (Exh. NG-RRP-5, at 3 (Rev. 3)). The sums of the collection lags and service lags, represented as a percentage of the number of days in a calendar year, are 11.04 percent for MECo's O&M expenses, 11.09 percent for MECo's property and payroll taxes, and 6.73 percent for Nantucket Electric's overall expenses (Exh. NG-RRP-5, at 3, 9 (Rev. 3)).

The Company then subtracted the respective expense lag factors determined above from their respective revenue lag factors and then blended the results for both MECo and Nantucket, producing consolidated cash working capital factors for each expense category ranging between a negative 17.25 percent for federal unemployment taxes and 16.49 percent for municipal taxes (Exh. NG-RRP-5, at 2 (Rev. 3)). These cash working capital factors were then multiplied by the

pro forma expense associated with these expense categories, producing a total cash working capital allowance associated with operating expenses other than purchased power and CTC of $44,540,304 (Exh. NG-RRP-5, at 26, 30 (Rev. 3)).

As part of this analysis, National Grid computed a separate cash working capital factor associated with purchased power and CTC (Exh. NG-RRP-5, at 30 (Rev. 3)). To determine the cash working capital associated with purchased power, the Company determined a 19.78-day lag for purchased power and 3.05-day lag for CTC, representing 5.42 percent and 0.84 percent of a calendar year, respectively (Exh. NG-RRP-5, at 30 (Rev. 3)). Subtracting these percentages from MECo's revenue lag of 11.09 percent and Nantucket Electric's revenue lag of 6.73 percent as determined above produced purchased power cash working capital factors of 5.39 percent and 5.89 percent for MECo and Nantucket Electric, respectively, along with CTC cash working capital factors of 1.90 percent and 1.31 percent for MECo and Nantucket Electric, respectively (Exh. NG-RRP-5, at 30 (Rev. 3)). The Company then weighted the results for the two companies, producing an overall purchased power cash working capital factor of 5.34 percent and a CTC cash working capital factor of 1.88 percent (Exh. NG-RRP-5, at 1-2 (Rev. 3)). These cash working capital factors were then multiplied by the pro forma expense associated with these expense categories, producing cash working capital allowances of $56,248,188 associated with purchased power and a negative $54,067 for CTC (Exh. NG-RRP-5, at 1 (Rev. 3)).

2. Positions of the Parties

a. Attorney General

The Attorney General does not challenge the Company's cash working capital calculations. However, she argues that if the Department allows National Grid to amortize its

outstanding hardship protected account balances, it also must adjust the Company's cash working capital allowance to recognize the fact that those accounts receivable will no longer affect the cash working capital requirement because removing those accounts will change the revenue lag (Attorney General Brief at 56-57; Attorney General Reply Brief at 33).

According to the Attorney General, the Company seeks to recover $40,982,476 in hardship protected accounts,[111] representing an annualized $491,789,712 in monthly accounts receivable balances that the Company uses as an input in the revenue lag calculation (Attorney General Brief at 57). The Attorney General argues that this balance represents 15.65 percent of the $3,142,435,793 in total revenues used to compute the revenue lag calculation (Attorney General Brief at 57). The Attorney General notes that the Company concedes that the recovery of the hardship protected accounts will have an effect on the cash working capital allowance (Attorney General Reply Brief at 33). Thus, the Attorney General asserts that if the Department accepts the Company's proposal to amortize its hardship accounts receivable balance, the accounts receivable balance used in the lead-lag study should be reduced by 15.65 percent ($491,789,712 / $3,142,435,793) to recognize the elimination of these accounts receivable from the overall balance of accounts receivable (Attorney General Brief at 57; Attorney General Reply Brief at 33). The Attorney General estimates that this elimination will reduce the average revenue lag by 15.65 percent, or 6.11 days (39.07 days x 0.1565 = 6.11 days) (Attorney General Brief at 57).

---

111 The $40,982,476 is based on National Grid's second revision to its revenue requirement calculation, the most recent available schedule at the time initial briefs were being prepared (Exh. NG-RRP-2, at 24 (Rev. 2). As noted in Section VIII.J.1 below, based on the Company's most recent revenue requirement calculations, the Company claims a total hardship protected account balance of $52,027,414 (Exh. NG-RRP-2, at 24 (Rev. 3)).

b. Company

National Grid argues that the Department should adopt the Company's lead-lag results and the Company's proposed cash working capital allowance (Company Brief at 21). Further, National Grid contends that the Attorney General's recommendation to reduce the Company's revenue lag for hardship protected accounts is baseless (Company Brief at 58; Company Reply Brief at 45-46). According to the Company, future recovery of these accounts receivable will be appropriately reflected in a future cash working capital study, and that attempting to recognize a pre-funding of these recoveries in the cash working capital study in this case is unwarranted and will understate the Company's true cash working capital requirement (Company Brief at 59; Company Reply Brief at 46). Therefore, National Grid asserts that the Department should reject the Attorney General's recommendation (Company Brief at 59; Company Reply Brief at 46).

3. Analysis and Findings

The purpose of conducting a cash working capital lead-lag study is to determine a company's "cash in-cash out" level of liquidity in order to provide the company an appropriate allowance for the use of its funds. D.P.U. 87-260, at 22-23. Such funds are either generated internally or through short-term borrowing. See D.P.U. 96-50 (Phase I) at 26. Department policy permits a company to be reimbursed for costs associated with the use of its funds and for the interest expense incurred on borrowing. D.P.U. 96-50 (Phase I) at 26; D.P.U. 87-260, at 22. The Department requires all electric and gas companies serving more than 10,000 customers to conduct a fully developed and reliable O&M lead-lag study. D.P.U. 11-01/D.P.U. 11-02, at 164. In the event that the lead-lag factor is not below 45 days, a company will face a high burden to justify the reliability of such a study and the reasonableness of the steps the company has taken

to minimize all factors affecting cash working capital requirements within its control, such as the collections lag. D.P.U. 11-01/D.P.U. 11-02, at 164.

The Attorney General argues that the Department should adjust the Company's cash working capital allowance to account for any recovery of hardship protected account receivable balance over 360 days (Attorney General Brief at 56-57; Attorney General Reply Brief at 33). As discussed further in Section VIII.J.3 below, the Department has allowed the Company to recover $40,607,637, representing the test year balances of these hardship accounts. Further, we find that the Company incurred the costs to provide the services that the hardship protected account receivables represent and will recover those costs prospectively over the five-year amortization period. To the extent that this recovery affects the revenue lag component of National Grid's cash working capital allowances, the change in the revenue lag component will be incorporated in future cash working capital studies. Therefore, the Department finds no need to recalculate the Company's revenue lag.

The Company has included in its lead-lag study cash working capital of $264,963,146 associated with energy efficiency activities (Exhs. NG-RRP-8, at 6 (Rev. 3); NG-RRP-5, at 8 (Rev. 3)). The Green Communities Act[112] specifies that energy efficiency-related costs must be collected through a fully reconciling funding mechanism, and the Department has approved the Energy Efficiency Surcharge ("EES") for this purpose. G.L. c. 25, §§ 19(a), 21(b)(2)(vii); Guidelines, §§ 2.9, 3.2.1. Therefore, the Department finds that these costs should be recovered through the EES and not through base rates. Accordingly, the Department has excluded $264,963,146 in energy efficiency-related expenses from the calculation of the Company's cash

[112] St. 2008, c. 169. An Act Relative to Green Communities.

working capital allowance. The exclusion of these expenses results in a composite lead-lag factor of 5.67 percent (see Schedule 6 below). The Department has reviewed the evidence in support of the Company's lead-lag study and, apart from the inclusion of energy efficiency-related cash working capital, we conclude that the Company properly calculated the revenue lags and expense leads (Exhs. NG-RRP-2, at 4, 34 (Rev.3); NG-RRP-5 (Rev 3); DPU-24-6; DPU-24-7, DPU-24-8, DPU-24-9; DPU-24-10; DPU-24-11; AG-24-14 & Att.; AG-24-15; AG-24-17; Tr. 6, at 872-873). The recalculated lead-lag factor of 5.67 percent is equivalent to 20.7 days, and thus lower than the results under the 45-day convention (Exh. NG-RRP-2, at 34 (Rev. 3); see also NG-RRP-5, at 1 (Rev. 3)).

Application of the cash working capital factor of 5.67 percent to the level of O&M and taxes other than income tax expense authorized by this Order produces a cash working capital allowance of $52,324,086 for the Company. The derivation of this cash working capital allowance is provided in Schedule 6 of this Order.

D. Materials and Supplies

1. Introduction

The Department typically allows a company to include a representative level of its materials and supplies balance in rate base, which is determined using a 13-month average balance. Boston Edison Company, D.P.U. 19991, at 16 (1979); Housatonic Water Works Company, D.P.U. 86-235, at 3-4 (1987); High Wood Water Company, D.P.U. 1360, at 7-8 (1983); Western Massachusetts Electric Company, D.P.U. 1300, at 29 (1983). In its initial filing, National Grid reported a balance of $24,453,573 for its materials and supplies based on a test

year-end balance (Exh. NG-RRP-2, at 30; Tr. 6, at 943-944). The Company later reduced the balance to $23,231,040 based on a 13-month average (Exh. NG-RRP-2, at 30 (Rev. 3)).

2. Positions of the Parties

a. Attorney General

The Attorney General argues that Department precedent requires a utility to use the 13-month average of materials and supplies inventories when calculating its rate base (Attorney General Brief at 22). The Attorney General claims that the Company's 13-month average balance of materials and supplies inventories is $22,852,218, and she urges the Department to use this balance in determining the Company's rate base (Attorney General Brief at 22, citing Exh. AG-2-3, Att.).

b. Company

The Company agrees that its materials and supplies balance should be based on a 13-month average (Company Brief at 20; Company Reply Brief at 16). However, the Company contends that the Attorney General erred in her calculation, and that the correct 13-month average balance is $23,231,039 (Company Brief at 20; Company Reply Brief at 16).[113]

3. Analysis and Findings

Utilities keep on hand various materials and supplies for use in the course of normal operations. The Department's long-standing practice has been to include a representative level of a company's materials and supplies balance in rate base. D.P.U. 19991, at 16. The

---

113 In its initial brief, the Company claimed that the 13-month average balance amounted to $22,473,396 (Company Brief at 20). The Company revised the amount to $23,231,039 in its reply brief (Company Reply Brief at 16). The Company's schedules show the amount at $23,231,040, a minor discrepancy likely due to rounding (Exh. NG-RRP-2, at 30 (Rev. 3)).

Department allows this adjustment to compensate a utility for the carrying cost associated with its inventory. Because of the month-to-month fluctuations in this account, a 13-month average balance is used. D.P.U. 86-235, at 3-4; D.P.U. 1360, at 7-8; D.P.U. 1300, at 29.

The Department has reviewed the Company's schedules and the monthly balances provided in the record (Exhs. NG-RRP-2, at 30 (Rev. 3); AG-2-3, Att.). Based on our review, we find that the Attorney General's calculation is based on the 13-month period from June 2014 through June 2015, whereas the Company's calculation is based on the 13-month period beginning July 2014 through July 2015 (see Exhs. NG-RRP-2, at 30 (Rev. 3); AG-2-3, Att.). In other words, the Attorney General's 13-month period includes the twelve months of the test year (July 2014 through June 2015) and the month preceding the test year, whereas the Company's 13-month period includes the twelve months of the test year and the month following the test year.[114]

The Department's 13-month convention requires the use of monthly balances for the twelve months of the test year, plus the month preceding the first month of the test year in order to calculate the 13-month average balance. See D.P.U 10-114, at 101-102 (approving the company's 13-month average that included the month preceding the test year); D.P.U. 86-235, at 3-4 (requiring the company to include the balance from the month preceding the test year in calculating the 13-month average balance). The Department, therefore, calculates the 13-month average balance of materials and supplies using the Company's monthly balances from June 2014 to June 2015, and we arrive at a total of $22,852,218 (see Exh. AG-2-3, Att.).

---

[114] Despite the representation provided by the Company regarding its calculations for the requested average in this matter, the Department notes that the Company's cost of service witness, when asked at the evidentiary hearings, calculated an average balance of $22,852,218 (Tr. 9, at 1438-1439).

Accordingly, the Department will further reduce the Company's proposed materials and supplies balance by $378,821.

E. Asset Retirement Obligations

1. Introduction

As part of its plant in service, the Company has included $332,000 in asset retirement obligations ("ARO") associated with general plant (Exh. NG-RRP-2, at 27, 30 (Rev. 3)).[115] An ARO represents estimated costs of future retirements that are not otherwise provided for in the net salvage factor used to derive the Company's depreciation accrual rates. D.P.U. 09-39, at 102. No party commented on brief about the Company's inclusion of AROs in its plant investment.

2. Analysis and Findings

The Uniform System of Accounts for Electric Companies ("USOA-Electric Companies"), codified as 220 C.M.R. § 51.00 et seq., specifies that AROs associated with general plant are to be booked to Account 399 (18 CFR Pt. 101, Balance Sheet Chart of Accounts, Electric Plant Instructions, Sec. 10(B)(2)).[116] Accounting requirements, however, do not necessarily dictate ratemaking treatment. D.P.U./D.T.E. 97-95, at 77; Massachusetts Electric Company, D.P.U. 92-78, at 79-80 (1992); Cape Cod Gas Company, D.P.U. 20103, at 18-19 (1979). The accounting systems prescribed by the Department, including the USOA-Electric

---

115 The Company reported no accumulated depreciation associated with its ARO as of the end of the test year (Exh. NG-RRP-2, at 27 (Rev. 3)).

116 The Department has adopted the USOA-Electric Companies prescribed by FERC, with several modifications. 220 C.M.R. § 51.01(1). The applicable FERC system of accounts, entitled Uniform System of Accounts Prescribed For Public Utilities and Licensees Subject to the Provisions of the Federal Power Act, are set forth at 18 CFR, Part 101.

Companies, represent systems whereby costs are categorized to provide the Department with information on utility operations and aid in the review of utility costs. The Department's ratemaking process takes into consideration many factors other than account balances. Therefore, the booking of a particular expense in accordance with the USOA-Electric Companies implies no judgment as to the reasonableness of that cost in a given instance, nor does it establish the per se treatment of that cost for ratemaking purposes. D.P.U./D.T.E 97-95, at 77; see also Boston Gas Company v. City of Newton, 425 Mass. 697, 706 (1997).

The Company's AROs represent estimated future removal costs in the form of balance sheet entries that do not represent plant in service. D.P.U. 09-39, at 103-104; see also Western Massachusetts Electric Company, D.T.E. 05-9, at 13 (2005). National Grid's proposal, in effect, seeks not only recognition of its future retirement costs, but also recovery of carrying charges on those future costs. Regardless of the requirements of financial reporting, there is no basis to provide any regulated utility with a return on costs that have not yet been incurred. D.P.U. 09-39, at 103-104. Moreover, the Department is not persuaded that the net salvage factors used in the Company's depreciation study (see Section VIII.E below) are insufficient to recognize the cost of retiring the underlying assets.

Based on the foregoing analysis, the Department finds that the Company has failed to justify the inclusion of ARO in rate base. Accordingly, the Department reduces National Grid's proposed rate base by $332,000.

VIII. OPERATIONS AND MAINTENANCE EXPENSES

A. Employee Compensation and Benefits

1. Introduction

When determining the reasonableness of a company's employee compensation expense, the Department reviews the company's overall employee compensation expense to ensure that its compensation decisions result in a minimization of unit-labor costs. D.P.U. 10-55, at 234; D.P.U. 96-50 (Phase I) at 47; D.P.U. 92-250, at 55. This approach recognizes that the different components of compensation (i.e., wages and benefits) are, to some extent, substitutes for each other and that different combinations of these components may be used to attract and retain employees. D.P.U. 92-250, at 55. In addition, the Department requires a company to demonstrate that its total unit-labor cost is minimized in a manner supported by its overall business strategies. D.P.U. 92-250, at 55.

A company is required to provide a comparative analysis of its compensation expenses to enable a determination of reasonableness by the Department. D.P.U. 96-50 (Phase I) at 47. The Department evaluates the per-employee compensation levels, both current and proposed, relative to the companies in the utility's service territory and utilities in the region that compete for similarly skilled employees. D.P.U. 96-50 (Phase I) at 47; D.P.U. 92-250, at 56; Bay State Gas Company, D.P.U. 92-111, at 103 (1992); D.P.U. 92-78, at 25-26.

National Grid's employee compensation program is known as the "Total Rewards Program" (Exh. NG-MPH-1, at 6). The Total Rewards Program encompasses fixed pay, variable pay, medical and dental insurances, life insurance, a 401(k) retirement savings plan, and pensions and post-retirement benefits (Exh. NG-MPH-1, at 6).

2. Non-Union Wages

a. Introduction

During the test year, National Grid booked $69,182,833 in payroll expense for non-union personnel, including base wages, variable pay, and overtime pay (Exh. NG-RRP-2, at 8-10). Of that amount, MECo and Nantucket Electric directly incurred $6,961,426 in payroll expense (Exh. NG-RRP-2, at 8). NGSC and other National Grid plc affiliates allocated, respectively, $61,428,586 and $792,821 to the Company's test year payroll expense (Exh. NG-RRP-2, at 9-10).[117]

The Company initially proposed an increase to non-union payroll expense of $3,710,260 based on: (1) a non-union wage increase of 3.5 percent effective July 1, 2016; and (2) the inclusion of 27 approved non-union NGSC positions vacated during the test year and unfilled as of June 30, 2015 (Exhs. NG-RRP-1, at 28-29; NG-RRP-2, at 8-10; NG-MPH-1, at 8-9; DPU-8-20, Att. at 1).[118] Based on revisions made during the proceeding, National Grid now proposes to increase non-union payroll expense by $1,965,104 (Exh. NG-RRP-2, at 8-10 (Rev. 3)). This change represents a reduction to the 2016 non-union wage increase from 3.5 percent to 3.2 percent, a reduction to the approved non-union NGSC positions from 27 to 25, and a correction to the allocation of NGSC salaries to the Company's payroll expense (Exhs. NG-RRP-2, at 8-10 (Rev. 3); NG-MPH-Rebuttal-1, at 8; NG-MPH-Rebuttal-3; NG-RRP-Rebuttal-1, at 15; DPU-8-20; AG-22-1, Att. at 1). The non-union wage increases were determined based on an industry compensation assessment performed by Towers Watson on

---

[117] Minor discrepancies in any of the amounts appearing in this section are due to rounding.

[118] Proposed adjustments for all approved positions are addressed in Section VIII.A.4 below.

behalf of the Company, projected increases in non-union base salaries, and an historical comparison of non-union base wage increases to union base wage increases (Exhs. NG-MPH-1, at 8-13; NG-MPH-2; NG-MPH-7; NG-MPH-8).

b. Positions of the Parties

i. Attorney General

The Attorney General's comments regarding non-union wage adjustments are specific to those made to include vacant positions and are addressed in Section VIII.A.4.b.i below (Attorney General Brief at 24-25).

ii. Company

The Company argues that its non-union compensation is market competitive and that the cost of service includes known and measurable changes occurring before the mid-point of the rate year (Company Brief at 94). Specifically, National Grid claims that the Towers Watson analyses demonstrate that the salary range for each of its six employee bands is competitive with the median market rate (Company Brief at 96, citing Exh. NG-MPH-1, at 6-7, 9, 12). Further, the Company argues that the aggregate non-union increase of 3.2 percent scheduled to take effect on July 1, 2016, is based on market studies currently available to National Grid and closely aligned with the relevant markets (Company Brief at 97, citing Exhs. NG-MPH-1, at 9, 12-13; NG-MPH-7; DPU-8-26). The Company asserts that its non-union salary increase is reasonable and should be approved by the Department for inclusion in the Company's cost of service (Company Brief at 97).

c. Analysis and Findings

The Department's well-established standard for post-test year non-union payroll adjustments requires a company to demonstrate that: (1) non-union salary increases are scheduled to become effective no later than six months after the date of the Department's Order; (2) if the increase has not occurred, that there is an express commitment by management to grant the increase; (3) there is an historical correlation between union and non-union raises; and (4) the non-union increase is reasonable. D.P.U. 85-266-A/85-271-A at 107; D.P.U. 96-50 (Phase I) at 42; D.P.U. 95-40, at 21; Fitchburg Gas and Electric Light Company, D.P.U. 1270/1414, at 14 (1983).

The Company provided a management commitment letter stating that a 3.2 percent payroll increase for non-union Company employees would take place on July 1, 2016 (Exh. NG-MPH-Rebuttal-3). Additionally, the Company provided a ten-year history of union and non-union wage increases (Exh. NG-MPH-8). Between 2006 and 2015, annual union wage increases were between 2.5 percent and 3.25 percent, and non-union wage increases were between 0.43 percent and 3.9 percent (Exh. NG-MPH-8). Based on this information, the Department finds that a sufficient correlation exists between union and non-union wage increases. See Fitchburg Gas and Electric Light Company, D.P.U. 07-71, at 76 (2008); Essex County Gas Company, D.P.U. 85-59-A at 18 (1988).

Finally, with respect to the reasonableness of the non-union wage increase, the Company sets total cash compensation equal to the median of the marketplace (Exh. NG-MPH-1, at 9). Specifically, National Grid participates in an annual market study performed by an independent third-party vendor, Towers Watson, and, using that study, compares overall pay of certain

benchmark positions to the 50th percentile of overall pay for comparable jobs in similarly sized companies (Exh. NG-MPH-1, at 9). The Towers Watson study concluded that the Company's non-union compensation levels are competitive against similarly sized energy services companies (those with revenues greater than $6 billion) as well as total sample energy services companies (Exh. NG-MPH-2, at 5). The Department determines that National Grid's review of industry compensation data is sufficient to confirm the reasonableness of its non-union salary levels. See D.P.U. 10-55, at 245; D.T.E. 05-27, at 109; D.T.E. 02-24/25, at 94.

Based on the above, we find that National Grid has demonstrated that: (1) there is an express management commitment to grant a 3.2 percent non-union wage increase; (2) there is an historical correlation between union and non-union payroll increases; and (3) the non-union wage increases are reasonable. Accordingly, we allow the Company's adjusted non-union payroll expense, subject to our findings below on staffing levels.

3. Union Wages

a. Introduction

During the test year, National Grid booked $72,861,689 in payroll expense for union personnel, including base wages, variable pay, and overtime pay (Exh. NG-RRP-2, at 8-10). Of that amount, MECo and Nantucket Electric directly incurred $57,915,195 in payroll expense (Exh. NG-RRP-2, at 8). NGSC and other National Grid plc affiliates allocated $11,965,079 and $2,981,415, respectively, to the Company's test year payroll expense (Exh. NG-RRP-2, at 9-10).

The Company initially proposed an increase to test year union payroll expense of $7,285,812 based on: (1) Company and NGSC union wage increases of 2.5 percent effective May 12, 2016; (2) affiliated companies' union wage increases of 2.0 percent and 2.5 percent

effective April 1, 2016 and May 12, 2016, respectively; (3) the inclusion of five approved union Company positions vacated during the test year and unfilled as of June 30, 2015; and (4) nine approved union NGSC positions vacated during the test year and unfilled as of June 30, 2015[119] (Exhs. NG-RRP-1, at 27-29; NG-RRP-2, at 8-10; NG-MPH-1, at 14-15; DPU-8-19, Att.; DPU-8-20, Att. at 1). Based on revisions made during the proceeding, National Grid now proposes to increase union payroll expense by $7,001,070 (Exh. NG-RRP-2, at 8-10 (Rev. 3)). This change represents a reduction to the total approved union positions from 14 to twelve and a correction to the allocation of NGSC salaries to the Company's payroll expense (Exhs. NG-RRP-2, at 8-10 (Rev. 3); DPU-8-19, Att.; DPU-8-20; AG-22-1, Att. at 1). The union wage increases were determined by currently effective collective bargaining agreements (Exhs. NG-MPH-1, at 14-15; AG-1-42, Atts. 1-17).

b. Positions of the Parties

i. Attorney General

The Attorney General's comments regarding union wage adjustments are specific to those made to include vacant positions and are addressed in Section VIII.A.4.b.i, below (Attorney General Brief at 22-25).

ii. Company

The Company states that its union compensation is market competitive and that the cost of service includes known and measurable changes occurring before the mid-point of the rate year (Company Brief at 94). Specifically, National Grid argues that the analysis provided demonstrates that the hourly rates paid to its union employees are within the range of

[119] Proposed adjustments for all approved positions are addressed in Section VIII.A.4 below.

surrounding utilities (Company Brief at 98, citing Exh. NG-MPH-9).[120] The Company also claims that it has illustrated the reasonableness of union wage levels (Company Brief at 98). Further, National Grid contends that the proposed union wage increases are based on currently effective collective bargaining contracts and, therefore, satisfy the Department's known and measurable requirement for post-test year union wage adjustments (Company Brief at 95, 97). Based on these considerations, the Company asserts that its union compensation costs are reasonable and should be approved by the Department for recovery (Company Brief at 97).

c. Analysis and Findings

The Department's standard for post-test year union payroll adjustments requires that three conditions be met: (1) the proposed increase must take effect before the midpoint of the first twelve months after the date of the rate increase; (2) the proposed increase must be known and measurable (i.e., based on signed contracts between the union and the company); and (3) the proposed increase must be reasonable. D.P.U. 11-01/D.P.U. 11-02, at 174; D.P.U. 96-50 (Phase I) at 43; D.P.U. 95-40, at 20; D.P.U. 92-250, at 35.

The Company's proposed union payroll adjustments appropriately include only those increases that have been granted before April 1, 2017, the midpoint of the first twelve months after the Department's Order in this proceeding (Exhs. NG-MPH-1, at 14-15; AG-1-42, Atts. 1-17). Further, because the union payroll increases are based on signed collective bargaining agreements, the Department finds that the proposed increases are known and measurable (Exh. AG-1-42, Atts. 1-17). Finally, with respect to the reasonableness of the union

[120] For seven positions, the Company compared its union wage pay levels with pay levels for nine other New England electric utilities (seven investor owned and two municipals), calculating median, average, and maximum pay rates for each position (Exh. NG-MPH-9).

wage increases, National Grid submitted a comparison of its union salaries to utilities throughout New England (Exhs. NG-MPH-1, at 15; NG-MPH-9). National Grid's hourly pay rates are comparable to those of other utility companies in the region for the selected union job titles (Exh. NG-MPH-9). Thus, we find that the Company has demonstrated the reasonableness of its union wage increases.

Based on the above, the Department finds that National Grid's union wage increases (1) take effect before the midpoint of the first twelve months after the rate increase; (2) are known and measurable; and (3) are reasonable. Accordingly, we allow the Company's proposed union payroll adjustments, subject to our findings below on staffing levels.

4. Employee Staffing Levels

a. Introduction

National Grid proposed adjustments for changes in staffing levels after the test year, calculating the wage expense based on the employee complement as of June 30, 2015 (Exh. NG-RRP-1, at 27). The Company initially proposed to include $362,627 in wages and salaries for five approved union Company positions that were vacated during the test year and remained unfilled as of June 30, 2015 (Exhs. NG-RRP-1, at 27; NG-RRP-2, at 8). Additionally, the Company initially proposed to include $3,060,864 in wages and salaries for nine approved union NGSC positions and 27 approved non-union NGSC positions that were vacated during the test year and remained unfilled as of June 30, 2015 (Exhs. NG-RRP-1, at 28-29; NG-RRP-2, at 9; DPU-8-20, Att.). Based on revisions made during the proceeding, National Grid now proposes to include $267,010 in wages and salaries for four approved union Company positions (Exhs. NG-RRP-2, at 8 (Rev. 3); NG-RRP-Rebuttal-1, at 36). The Company also proposes to

include $544,618 in wages and salaries for eight approved union NGSC positions and 25 approved non-union NGSC positions that were vacated during the test year and remained unfilled as of June 30, 2015 (Exhs. NG-RRP-2, at 9 (Rev. 3); NG-RRP-Rebuttal-1, at 15; AG-22-1, Att. at 1). These changing in staffing levels, and the corresponding decreases in expenses, were the result of position cancellations and a correction to the allocation of NGSC salaries to the Company's payroll expense (Exhs. NG-RRP-2, at 9 (Rev. 3); DPU-8-20; AG-22-1, Att. at 1).

b. Positions of the Parties

i. Attorney General

The Attorney General argues that the Department should reject the Company's proposal to include four Company and 33 NGSC vacant positions in its cost of service, including proposed increases to payroll expense, employee benefits costs, and payroll taxes (Attorney General Brief at 22-24). Specifically, the Attorney General claims that the Company has not established that the filling of the vacant positions is outside the normal ebb and flow of its workforce complement (Attorney General Brief at 23). Further, the Attorney General contends that the Company has provided no evidence that the employee level as of June 30, 2015, which does not include the vacant positions, is abnormal or unreflective of typical vacancy conditions (Attorney General Brief at 25). Thus, the Attorney General asserts that all four Company and 33 NGSC positions should be excluded from the cost of service in this case (Attorney General Brief at 23 and 25). The Attorney General recommends a pro forma wage and salary expense reduction of $145,272 to eliminate the four proposed Company positions, as well as reductions of $38,335 and $10,825 in associated employee benefits expenses and payroll taxes, respectively

(Attorney General Brief at 24, citing Exh. AG-DJE-Rebuttal-1, Sch. DJE-1). Additionally, the Attorney General recommends a pro forma wage and salary expense reduction of $374,509 to eliminate the 33 proposed NGSC positions, as well as reductions of $75,887 and $27,906 in associated employee benefits expenses and payroll taxes, respectively (Attorney General Brief at 25, citing Exhs. AG-DR-Rebuttal-1, at 4; NG-RRP-Rebuttal-2, column NG(c)).

ii. Company

The Company argues that its proposal to include four Company and 33 NGSC positions in the cost of service is narrower than the Attorney General suggests, is backed by Department precedent, and should be approved by the Department (Company Brief at 70-71). National Grid agrees with the Attorney General that is it reasonable to assume that the Company and NGSC will always have vacant positions (Company Brief at 70). However, the Company states that it does not seek to make adjustments for all Company and NGSC positions that were vacant as of June 30, 2015, but rather a narrow subset of those positions (Company Brief at 70). The Company maintains that its proposal covers only those Company and NGSC positions that were filled during the test year, were vacant as of June 30, 2015, and were filled prior to the filing of the instant case or prior to the expiration of this proceeding (Company Brief at 70). Additionally, National Grid contends that its request is similar to one previously approved by the Department for New England Gas Company (n/k/a Liberty Utilities (New England Natural Gas Company) Corp. d/b/a Liberty Utilities) (Company Brief at 71, citing D.P.U. 10-114, at 135). National Grid argues that New England Gas Company's proposal to include costs associated with a position filled during the 2009 test year, vacated as of 2010, and then filled by a temporary employee is analogous to the Company's proposal in this proceeding (Company Brief

at 71). Further, National Grid argues that the Department's approval of New England Gas Company's proposal renders the Company's own wage and salary adjustments appropriate (Company Brief at 71). Therefore, the Company asserts that the Department should approve the proposed adjustments (Company Brief at 71).

c. Analysis and Findings

Employee staffing levels routinely fluctuate because of retirements, resignations, hirings, terminations, and other factors. Massachusetts-American Water Company D.P.U. 88-172, at 12 (1989); D.P.U. 1270/1414, at 16-17. In recognition of this variability, the Department generally determines payroll expense on the basis of test year employee levels, unless there has been a significant post-test year change in the number of employees that falls outside the normal ebb and flow of a company's workforce. D.P.U. 90-121, at 80-81; D.P.U. 88-172, at 12.

National Grid asserts that the Department's approval of New England Gas Company's proposal to include a vacancy is analogous to its own proposal to include 37 vacancies (Company Brief at 71, citing D.P.U. 10-114, at 135). In fact, New England Gas Company's proposal was different in two significant ways. First, in D.P.U. 10-114, the position proposed for inclusion in the pro forma cost of service was not vacant at the end of the 2009 test year, while the positions in the instant case were vacant at the end of National Grid's test year. D.P.U. 10-114, at 135. Therefore, the positions in the instant case, unfilled on June 30, 2015, are rightfully excluded from an employee complement taken on that date. Additionally, New England Gas Company had removed temporary employee costs from 175 contract labor accounts, and the purpose of the proposed adjustment was to move the temporary employee cost into that company's pro forma payroll expense account. D.P.U. 10-114, at 135. Therefore, the

Department's decision in D.P.U. 10-114 allowed a proposal to move incurred, known, and measurable salary costs to the correct, permanent payroll expense account. This proposal is fundamentally different from National Grid's proposal in the instant case to increase the test year-end employee complement and associated payroll expense by 37 vacant positions.

Additionally, the Company argues that the 37 positions it proposes to include in its pro forma cost of service are appropriate because these positions were in place during the test year, temporarily vacated as of June 30, 2015, and filled before the expiration of this case (Company Brief at 70). The selection of the test year, however, is largely a matter of a distribution company's choice. See D.P.U. 07-50-A at 51. Of its own volition, the Company selected the twelve-month period ending June 30, 2015, as the test year (see Exhs. NG-MLR-1, at 3; NG-RRP-1, at 6). Subsequently, National Grid annualized base wages of its employee complement as of June 30, 2015 (Exh. NG-RRP-1, at 27). Any changes to the employee complement after this date would be considered a post-test year change, including those positions vacated as of June 30, 2015 and filled thereafter. Therefore, the Company must demonstrate that the filling of the 37 positions constitutes a significant post-test year change above and beyond the normal ebb and flow of employment levels in order for the Department to grant the proposed adjustments to payroll expense. D.P.U. 90-121, at 80-81; D.P.U. 88-172, at 12.

The Company made no explicit effort to demonstrate that the post-test year changes to employee levels were significant or outside the normal ebb and flow of the workplace. Nonetheless, the Department has analyzed the impact of filling the proposed vacancies on payroll expense levels as well as employee staffing levels. The four proposed union vacancies'

wages and salaries represent 0.46 percent of total test year union payroll O&M expense (Exh. NG-RRP-2, at 8 (Rev. 3)). The Company's share of the eight proposed union and 25 proposed non-union vacancies' wages and salaries represents 0.82 percent and 0.73 percent of the Company's shares of total union and non-union test year NGSC payroll O&M expense, respectively (Exh. NG-RRP-2, at 9 (Rev. 3)). These amounts, both less than one percent, do not represent significant changes to test year payroll expense. D.P.U. 90-121, at 80-81. Alternatively, using monthly employee levels, the four proposed union vacancies constitute 0.37 percent of the 1,070 union Company employees present in the last month of the test year (Exh. DPU-8-21, Att.). The eight proposed union and 25 proposed non-union vacancies comprise 0.57 percent of the 1,405.5 union and 0.66 percent of the 3,782 non-union NGSC employees present in the last month of the test year (Exh. DPU-8-22, Att.). These amounts, both less than one percent, also do not represent significant changes to test year employee levels.

Based on evidence provided in the instant case, the Department concludes that the 37 proposed vacancies do not constitute a significant post-test year change. Thus, the Department rejects the portion of the proposed salary and wage adjustments related to the approved positions vacated during the test year. The Department reduces the Company's proposed cost of service by $526,169.[121] In accordance with the above staffing level

[121] Of this amount, $145,273 reduces proposed adjustments to MECo and Nantucket Electric payroll expense and $380,896 reduces proposed adjustments to the Company's share of NGSC payroll expense. The two reductions are further broken down as follows: (1) $267,010 proposed union vacancy salaries * 1.025 union wage increase * 0.5308 O&M percentage of base wages = $145,273 reduction to proposed MECo and Nantucket Electric payroll expense adjustment; (2) ($97,542 proposed union vacancy salaries * 1.025 union wage increase * 0.5577 O&M percentage of base wages = $55,756) + ($447,076 proposed non-union vacancy salaries * 1.032 non-union wage increase * 0.7047 O&M percentage of base wages = $325,140) = $380,896 reduction to proposed

adjustments, concordant adjustments to health care expense will be addressed below. Further, concordant adjustments to payroll tax expense, group insurance expense, and employee thrift expense will be addressed in the payroll taxes section, below.

5. Variable Compensation

a. Introduction

National Grid's variable compensation program is called the "Annual Performance Plan" (Exh. NG-MPH-1, at 17). There are three components to the variable pay program: (1) performance metrics tied to overall Company financial results, including earnings per share and ROE; (2) performance metrics based on safety, reliability, customer responsiveness, cost competitiveness, and stewardship (collectively referred to as "Elevate targets"); and (3) performance metrics based on individual objectives (Exhs. NG-MPH-1, at 19; NG-MPH-4, at 1; NG-MPH-5, at 1; NG-MPH-6, at 1). The Company's non-union employees are classified into six salary categories ("Salary Bands") (see Exh. NG-MPH-1, at 19-20). Salary Band A consists of National Grid's most senior executives, Salary Bands B and C includes officers/directors, and Salary Bands D through F include managers, analysts, and all other non-union Company employees (Exh. NG-MPH-1, at 19-20). Each of the six Salary Bands, as well as all union employees, are assigned a particular combination of the above three components to arrive at the total Annual Performance Plan award (Exh. NG-MPH-1, at 19, 21). An eligible employee's maximum Annual Performance Plan award ranges from five percent to 40 percent of the same year's base wages, and varies by Salary Band (Exhs. NG-MPH-4, at 1; NG-MPH-5, at 1; NG-MPH-6, at 1).

Company share of NGSC payroll expense adjustment (see Exh. NG-RRP-2, at 8-9 (Rev. 3)).

For employees in Salary Bands A, B, and C, 20 percent of the Annual Performance Plan award is based on attaining Elevate targets, 40 percent is based on attaining financial metrics, and 40 percent is based on attaining employee-specific goals (Exhs. NG-MPH-1, at 19; NG-MPH-4, at 1; NG-MPH-5, at 1). For employees in Salary Bands D, E, and F, 50 percent of the Annual Performance Plan award is based on attaining Elevate targets and 50 percent is based on attaining employee-specific objectives (Exhs. NG-MPH-1, at 19; NG-MPH-6, at 1). In the case of all union employees, 100 percent of the Annual Performance Plan award is based on attaining Elevate targets (Exh. NG-MPH-1, at 19).

During the test year, the Company booked $10,638,165 in variable compensation for non-union personnel (Exh. NG-RRP-2, at 8-10). Of that amount, MECo and Nantucket Electric directly incurred $491,622 in variable compensation expense (Exh. NG-RRP-2, at 8). NGSC and other National Grid plc affiliates allocated $9,737,387 and $409,156, respectively, to the Company's test year variable compensation expense (Exh. NG-RRP-2, at 9-10). During the test year, National Grid also booked $2,349,884 in variable compensation for union personnel (Exh. NG-RRP-2, at 8-10). Of that amount, MECo and Nantucket Electric directly incurred $1,992,598 in variable compensation expense (Exh. NG-RRP-2, at 8). NGSC and other National Grid plc affiliates allocated $230,535 and $126,751, respectively, to the Company's test year variable compensation expense (Exh. NG-RRP-2, at 9-10).

National Grid initially proposed to increase non-union and union variable compensation by $346,642 and $56,160, respectively, to recognize the proposed 3.5 percent and 2.5 percent increases to test year wages (Exh. NG-RRP-2, at 8-10). Based on revisions made during the proceeding, the Company now proposes to increase non-union and union variable compensation

by $316,929 and $56,160, respectively (Exh. NG-RRP-2, at 8-10 (Rev. 3)). As noted above, this change results from a reduction to the 2016 non-union wage increase from 3.5 percent to 3.2 percent (Exhs. NG-RRP-2, at 8-10 (Rev. 3); NG-MPH-Rebuttal-1, at 8; NG-MPH-Rebuttal-3). Additionally, National Grid's proposed cost of service removes variable compensation for Salary Band A employees, the Company's most senior executives (Exh. NG-MPH-1, at 20).

b. Positions of the Parties

i. Attorney General

The Attorney General argues that the Department should remove the financial component of incentive compensation costs from National Grid's cost of service (Attorney General Brief at 31). The Attorney General claims that the Department has made it clear that if financial goals are used in incentive plans, they should be used as a threshold component only (Attorney General Brief at 31). Further, she notes that while the Company's efforts to reduce the portion of variable pay tied to meeting financial goals are commendable, the record shows that 40 percent of the potential incentive plan awards for Salary Bands B and C employees are based on financial targets such as earnings per share and ROE (Attorney General Brief at 34). The Attorney General maintains that the goals of earnings per share and ROE clearly focus on shareholder interests (Attorney General Brief at 35). Thus, she argues that the costs associated with the attainment of such goals should be excluded from costs charged to Massachusetts ratepayers (Attorney General Brief at 35). Specifically, she recommends reducing the Company's pro forma cost of service by $847,532 (Attorney General Brief at 35). The recommended reduction includes $756,422 to remove variable pay associated with achieving

financial metrics and $91,110 in concordant adjustments to group insurance, employee thrift, and payroll taxes (Attorney General Brief at 35).

ii. Company

The Company argues that the costs of its incentive compensation plan are reasonable and that the plan itself is reasonably designed to encourage good employee performance (Company Brief at 100). National Grid contends that excluding the entire variable pay component for its most senior executives, as it did in D.P.U. 09-39, contributes to the reasonableness of its overall incentive compensation cost level included in rates (Company Brief at 100). The Company also claims that the current incentive compensation structure is similar to plans previously approved by the Department in which a higher percentage of non-union variable pay was tied to meeting financial performance objectives (Company Brief at 101, citing D.P.U. 10-55; D.P.U. 09-39).

Nonetheless, National Grid recounts several steps it took to modify its variable pay program to better align with the Department's expectations following the Department's decision in D.P.U. 10-55 (Company Brief at 101). These steps include reducing the amount of variable pay tied to financial performance from 60 percent for Band A and B employees and 50 percent for Band C employees to 40 percent across all employees in Bands A through C, eliminating financial targets altogether for employees in Bands D through F, and adding customer satisfaction, safety and reliability targets for its officers and directors (Company Brief at 101). Finally, with respect to the financial metrics themselves, the Company states that it replaced line of business financial targets with earnings per share and ROE goals to emphasize quality of financial management, particularly in the area of internal cost containment (Company Brief at 101). Finally, National Grid claims that implementing cost containment measures, in pursuit

of a ROE goal, will delay base rate cases or limit the impact of those cases and thus will benefit customers (Company Brief at 102).

c. Analysis and Findings

The Department has traditionally allowed incentive compensation expenses to be included in a utility's cost of service if (1) the expenses are reasonable in amount, and (2) the incentive plan is reasonably designed to encourage good employee performance. D.P.U. 07-71, at 82-83; Massachusetts Electric Company, D.P.U. 89-194/195, at 34 (1990). For an incentive plan to be reasonable in design, it must both encourage good employee performance and result in benefits to ratepayers. D.P.U. 93-60, at 99.

The Department must first determine whether the costs associated with National Grid's Annual Performance Plan are reasonable in amount. First, the Company does not seek to recover variable pay for its most senior executives (Exh. NG-MPH-1, at 20). Next, the Company has provided the 2015 results of a Towers Watson assessment that compared total cash compensation, defined as base pay plus any incentive or variable compensation, to the median of the marketplace (Exh. NG-MPH-2, at 5). The Towers Watson study concluded that National Grid's non-union compensation levels are competitive against similarly sized energy services companies (those with revenues greater than $6 billion) as well as total sample energy services companies (Exh. NG-MPH-2, at 5). Based on our review of this evidence, the Department finds that National Grid has demonstrated that its incentive compensation costs are reasonable in amount. See D.P.U. 10-70, at 103; D.P.U. 09-39, at 140.

The Department must next determine whether the Company's Annual Performance Plan is reasonable in design. A portion of the Annual Performance Plan expense is tied to meeting

financial metrics such as earnings per share and ROE (Exhs. NG-MPH-1, at 19; NG-MPH-4, at 1; NG-MPH-5, at 1). The Attorney General argues that the Department should deny recovery of variable compensation related to financial metrics because the Company chose to continue to make financial goals components of the plan design upon which payouts are based, despite what the Attorney General maintains is the Department's clear parameters in a decision involving the Company's affiliate, Boston Gas Company (Attorney General Brief at 31, citing D.P.U. 10-55, at 253-254).

The Department has articulated its expectations on the use of financial targets in variable compensation plans and the burden to justify recovery of such costs in rates. D.P.U. 15-80/D.P.U. 15-81, at 115-116; D.P.U. 13-90, at 82-83; D.P.U. 11-01/D.P.U. 11-02, at 192-193; D.P.U. 10-70, at 105-106; D.P.U. 10-55, at 253-254. Specifically, where companies seek to include financial goals as a component of incentive compensation design, the Department expects to see the attainment of such goals as a threshold component, with job performance standards designed to encourage good employee performance (e.g., safety, reliability, customer satisfaction goals) used as the basis for determining individual incentive compensation awards. D.P.U. 13-90, at 82-83; D.P.U. 11-01/D.P.U. 11-02, at 192-193; D.P.U. 10-70, at 105-106; D.P.U. 10-55, at 253-254. Companies that nonetheless wish to maintain financial metrics as a component of the formula used to determine individual incentive compensation must be prepared to demonstrate direct ratepayer benefit from the attainment of these goals or risk disallowance of the related incentive compensation costs. D.P.U. 13-90, at 83; D.P.U. 11-01/D.P.U. 11-02, at 193; D.P.U. 10-70, at 106; D.P.U. 10-55, at 253-254.

National Grid's financial metrics do not operate as a threshold component, but rather are a direct component of overall incentive compensation plan design (Exh. NG-MPH-1, at 19-20). While we acknowledge the Company's decisions to reduce the portion of variable pay tied to financial metrics and to introduce customer satisfaction, safety, and reliability targets for officers and directors, the financial metrics still represent 40 percent of the incentive compensation payment calculation for employees in Salary Bands A, B, and C (Exhs. NG-MPH-1, at 19; NG-MPH-4, at 1; NG-MPH-5, at 1; NG-MPH-Rebuttal-1, at 6). Thus, National Grid must demonstrate direct ratepayer benefit from the attainment of earnings per share and ROE goals to recover this portion of incentive compensation costs from ratepayers. D.P.U. 10-55, at 253-254. The Company acknowledges this recovery standard and contends that customers benefit from cost containment measures that may be implemented in the pursuit of ROE and earnings per share goals, but has made no substantive demonstration of this claim (Exhs. NG-MPH-Rebuttal-1, at 5-6; DPU-8-28). Therefore, consistent with Department precedent, the Department finds that National Grid has failed to demonstrate that the financial metrics components of its incentive compensation plan are reasonably designed to encourage good employee performance and result in direct ratepayer benefits.

Accordingly, the Department reduces National Grid's proposed cost of service by $754,230[122] to remove the portion of the Company's incentive compensation expense attributable to the earnings per share and ROE measures (see Exh. DPU-8-29). In recognition of the above variable compensation expense adjustments, concordant adjustments to payroll tax expense will be addressed below.

---

[122] The Department's adjustment incorporates the non-union salary update of 3.2 percent provided in Exhibit NG-RRP-2, at 8-10 (Rev. 3).

B. Payroll Taxes

1. Introduction

During the test year, National Grid booked $10,584,314 in adjusted payroll taxes after removing $163,969 in qualified storm costs eligible for recovery through the storm fund (Exh. NG-RRP-2, at 29). The Company originally proposed to increase its cost of service by $819,226 to recognize the additional payroll taxes associated with its pro forma wage and salary expense (Exhs. NG-RRP-1, at 39; NG-RRP-2, at 29). Based on revisions made during the proceeding, National Grid now proposes to increase payroll tax expense by $388,624 (Exh. NG-RRP-2, at 29 (Rev. 3)). This change represents the removal of energy efficiency-related payroll taxes and the application of wage-based caps to several payroll tax categories (Exhs. NG-RRP-2, at 29 (Rev. 3); AG-20-16; Tr. 9 at 1420-1421; RR-DPU-2).

2. Positions of the Parties

a. Attorney General

As stated in Section VIII.A.4.b.i above, the Attorney General argues that the Department should reject National Grid's proposal to include four Company and 33 NGSC vacant positions in its cost of service (Attorney General Brief at 24-25). The Attorney General subsequently recommends associated payroll, payroll tax, and other employee compensation-related expense reductions (Attorney General Brief at 24-25). The Attorney General recommends a payroll tax expense reduction of $38,731, consisting of $10,825 in payroll taxes associated with the four Company vacant positions, and $27,906 in payroll taxes associated with the 33 NGSC vacant positions (Attorney General Brief at 24-25, citing Exhs. AG-DJE-Rebuttal-1, Sch. DJE-1; NG-RRP-Rebuttal-2, column NG(c)).

b. Company

National Grid argues that it calculated the change in payroll tax in proportion to its proposed labor and incentive compensation adjustments (Company Brief at 93, citing Exhs. NG-RRP-1, at 39; NG-RRP-2, at 29 (Rev. 2)). The Company claims that it increased payroll tax expense by 6.31 percent to account for a 6.31 percent increase in rate year salaries and wages as compared to test year salaries and wages (Company Brief at 93). National Grid argues that the Department should approve the Company's proposed adjustments to taxes other than income taxes (Company Brief at 93).

3. Analysis and Findings

The Department has examined the record related to the Company's payroll tax calculations (e.g., Exhs. NG-RRP-2, at 29 (Rev. 3); DPU-8-31; AG-20-16; Tr. 1, at 108-117; Tr. 9, at 1420-1421; RR-DPU-1; RR-DPU-2), and we find that three revisions must be made. First, the Department revises the percentage change in rate year salaries and wages used to calculate the initial payroll tax adjustment (Exh. NG-RRP-2, at 29, line 4 (Rev. 3)). Second, the Department revises the percentage of rate year payroll expense subject to increased Social Security tax used to calculate the final payroll tax adjustment (RR-DPU-1, Att. at 183; RR-DPU-2, Att.). Third, the Department will make necessary revisions to the Company's group insurance expense and employee thrift expense. These are explained in further detail below.

First, based on staffing level and incentive compensation expense adjustments discussed in Sections VIII.A.4.c and VIII.A.5.c above, the Department reduces the Company's most recent

rate year O&M salaries and wages figure by $1,280,399.[123] This reduction yields a revised percentage change in rate year salaries and wages of 5.41 percent.[124] Second, based on the disallowance of 37 vacancies discussed in Section VIII.A.4.c above, the Company's most recent calculation of rate year labor subject to payroll tax must not include these vacancies' salaries and wages (RR-DPU-1, Att. at 183). Removing these salaries and wages yields a revised percentage of rate year payroll expense subject to increased Social Security tax of 54.8 percent.[125] Applying these two changes yields a final payroll tax expense adjustment of $332,952.[126] Therefore, the Department reduces the Company's proposed cost of service by $55,672 ($388,624 - $332,952).

Finally, in accordance with the above revision to the percentage change in rate year salaries and wages used to calculate the payroll tax adjustment, the Department makes necessary revisions to group insurance expense and employee thrift expense adjustment calculations that

---

123 This amount includes a $526,169 staffing level reduction to payroll expense and a $754,230 variable compensation reduction to payroll expense (see also Exh. DPU-8-29).

124 (($151,010,695 proposed rate year O&M wages - $1,280,399 Department reduction to rate year O&M wages) - $142,044,523 test year O&M wages)/$142,044,523 = 0.0541 percentage change in rate year O&M wages (see Exh. NG-RRP-2, at 29, line 8-13 (Rev. 3)).

125 $813,257,570 total rate year labor below SS-FICA cap /$1,482,901,070 total rate year SS-FICA taxable labor = 0.548 proportion of rate year labor subject to tax increase (see RR-DPU-1, Att. at 183).

126 ($7,773,787 adjusted test year FICA expense * 0.0541 percentage change in rate year O&M wages * 0.548 proportion of rate year labor subject to tax increase = $230,646) + ($1,818,063 adjusted test year Medicare expense * 0.0541 percentage change in rate year O&M wages = $98,357) + ($68,744 adjusted test year NY Commuter Tax * 0.0541 percentage change in rate year O&M wages = $3,719) + ($4,236 adjusted test year Other payroll tax expense * 0.0541 percentage change in rate year O&M wages = $229) = $332,952 final payroll tax adjustment (see Exh. NG-RRP-2, at 29, line 5d (Rev. 3); RR-DPU-1, Att. at 183; RR-DPU-2).

use the percentage change figure. Using the 5.41 percentage change figure to increase adjusted test year expense, the Department finds that National Grid's final group insurance expense adjustment is equal to $74,455.[127] The Company proposed an adjustment to group insurance expense of $83,378 (Exh. NG-RRP-2, at 12 (Rev. 3)). Therefore, the Department reduces the Company's proposed cost of service by $8,923 ($83,378 - $74,455). Further, the Department increases National Grid's adjusted test year employee thrift expense by 5.41 percent to determine the final employee thrift expense adjustment of $259,221.[128] The Company proposed an adjustment to employee thrift expense of $302,492 (Exh. NG-RRP-2, at 13 (Rev. 3)). The Department thus reduces the Company's proposed cost of service by $43,272 ($302,492 - $259,221).

C. Medical and Dental Expenses

1. Introduction

National Grid's health care plans are self-insured (Exh. NG-MPH-1, at 23). National Grid booked $18,946,518 in test year medical and dental costs (Exh. NG-RRP-2, at 11). Of that amount, MECo and Nantucket Electric directly incurred $8,450,973 in health care expense (Exh. DPU-8-2). NGSC and affiliated companies allocated $10,260,676 and $234,869 to the Company's test year medical and dental expense, respectively (Exh. DPU-8-2). The Company

---

127 ($1,466,588 adjusted test year group insurance expense * 0.0541 percentage change in rate year O&M wages = $79,331) – $4,877 Company adjustment for management program = $74,455 final group insurance expense adjustment (see Exh. NG-RRP-2, at 12 (Rev. 3)).

128 $4,792,161 adjusted test year thrift expense * 0.0541 percentage change in rate year O&M wages = $259,221 final thrift expense adjustment (see Exh. NG-RRP-2, at 13 (Rev. 3)).

initially proposed a decrease to test year medical and dental expense of $250,830 based on 2016 working rates,[129] which also includes adjustments for five proposed Company positions and 36 proposed NGSC positions (Exhs. NG-RRP-1, at 29-30; NG-RRP-2, at 11). Based on revisions made during the proceeding, National Grid now proposes to decrease test year medical and dental expense by $263,968 (Exh. NG-RRP-2, at 11 (Rev. 3)). This change reflects a reduction to the total proposed Company positions from five to four, and a reduction to the total proposed NGSC positions from 36 to 33 (Exh. NG-RRP-2, at 11 (Rev. 3)).

2. Positions of the Parties

a. Attorney General

The Attorney General's comments regarding medical and dental expense adjustments are specific to those made to include vacant positions and are addressed in Section VIII.A.4.b.i above (Exhs. AG-DJE-1, at 6-7; AG-DR-1, at 8; AG-DJE-Rebuttal-1, at 2-3; AG-DR-Rebuttal-1, at 4).

b. Company

National Grid argues that its medical and dental costs are reasonable in amount (Company Brief at 104). Further, the Company contends that the Towers Watson studies included in the initial filing illustrate that the health care plans offered to non-union and union employees are close to and above the market medians, respectively (Company Brief at 104, citing Exh. NG-MPH-1, at 22). Additionally, National Grid claims that it has taken several steps

[129] Working rates are Towers Watson's, the Company's healthcare consultant, estimates of plan costs for the upcoming plan year. The working rates are based on enrollment data, at least twelve months of historical claims experience, marketplace trends, plan design changes, compliance-related fees, and other relevant factors that impact the cost of claims to be paid by the Company (Exhs. DPU-8-5; AG-13-17; AG-13-17, Atts. 1-2).

to control its medical and dental expenses (Company Brief at 104). In particular, the Company describes cost containment steps such as self-insuring its health and welfare plans, obtaining a volume discount for its new prescription drug plan, periodically soliciting bids for alternative health care providers, and moving benefits administration to a new, third party to provide better service at lower costs (Company Brief at 104).

National Grid also argues that its proposed adjustment to test year health costs conforms to Department requirements (Company Brief at 107). The Company explains that its rate year level of medical and dental expense is based on the test year-end actual employee plan elections and associated individual plan cost rates that are in effect for calendar year 2016 (Company Brief at 108, citing Exhs. NG-MPG-1, at 26; AG-13-17). Further, National Grid explains that the individual plan cost rates, developed by its external benefits consultant, Towers Watson, are derived on the basis of current and historical information pertaining to National Grid's employee base, including past claims experience, administrative fees and other elements (Company Brief at 108, citing Exh. AG-13-17). The Company argues that the Department should rely on the working rates because they are developed using actuarial principles similar to the analysis formerly used to generate insurance premiums, which the Department accepts as the basis for post-test year changes in health care insurance costs (Company Brief at 109). The Company also contends that its decision to self-insure and use working rates that do not include additional costs present in insurance premiums produces substantial benefits for customers in the form of reduced benefit costs (Company Brief at 109). Finally, the Company claims that the Department has expressly recognized that the use of working rates to identify the representative level of costs on a post-test year basis is a reasonable method for the rate-setting process (Company Brief at 110,

citing D.P.U. 92-210, at 43-44; D.P.U. 95-40, at 22). Thus, the Company asserts that the Department should rely on the working rates (Company Brief at 108).

3. Analysis and Findings

To be included in rates, medical and dental insurance expenses must be reasonable. D.P.U. 92-78, at 29-30; Nantucket Electric Company, D.P.U. 91-106/91-138, at 53 (1991). Further, companies must demonstrate that they have acted to contain their health care costs in a reasonable, effective manner. Berkshire Gas Company, D.T.E. 01-56, at 60 (2002); D.P.U. 96-50 (Phase I) at 46; D.P.U. 92-78, at 29; D.P.U. 91-106/91-138, at 53. Finally, any post-test year adjustments to health care expense must be known and measurable. D.T.E. 01-56, at 60; D.P.U. 96-50 (Phase I) at 46; North Attleboro Gas Company, D.P.U. 86-86, at 8 (1986).

As an initial matter, the Department finds that National Grid's medical and dental insurance expenses are reasonable and that the Company has taken reasonable and effective measures to contain health care costs (Exhs. NG-MPH-1, at 22-25; NG-MPH-3, at 23-30; NG-MPH-10, at 24-31; DPU-8-11; DPU-8-13; DPU-8-14). For example, the Company disaggregated its prescription drug programs from each medical plan and replaced them entirely with a CVS Caremark plan, providing volume discounts (Exh. NG-MPH-1, at 24). Additionally, National Grid introduced generic step therapy to the CVS Caremark plan in order to lower prescription drug costs (Exh. NG-MPH-1, at 24). The Company also held a competitive bidding process for alternative health care providers in 2015 that produced a five percent reduction in administrative fees beginning in 2016 across all populations administered by Blue Cross Blue Shield of Massachusetts, the Company's current national medical vendor (Exh. DPU-8-14).

Turning to National Grid's proposed post-test year decrease in medical and dental expense, the Company maintains that the working rates provided by Towers Watson are developed similarly to the historical insurance premiums that the Department accepts as the basis for post-test year changes in health care insurance costs and therefore should be relied upon (Company Brief at 108-109). The Department has previously denied recovery of pro forma health care expenses based on working rates derived from actuarial estimates encompassing a broad based pool of insured parties. D.P.U. 15-80/D.P.U. 15-81, at 137; D.P.U. 14-150, at 151; D.P.U. 13-90, at 94. In the current case, however, National Grid's working rates are derived using almost exclusively Company-specific data such as medical and prescription drug claims experience, enrollment figures, plan design details, administration costs, and fees (Exhs. DPU-13-10, Att.; DPU-28-1, Att.; DPU-28-2; DPU-28-3; Tr. 4, at 551-553; RR-AG-4; RR-AG-9; RR-AG-11). The Company's working rates rely in part on industry-wide "trend rates" and "margins" (Tr. 4, at 551-553; RR-DPU-20). The "trend rate" represents the expected annual increase in the average cost of medical services ("medical inflation") and is derived using historical gross cost experience from 467 employers including National Grid, other employers in the energy services sector, and general industry employers (Exh. DPU-28-2; RR-DPU-20). The "trend rate" is used to adjust National Grid's 2014 medical and prescription drug claims to 2016 dollars (Tr. 4, at 534-535; RR-AG-5). The "margin" is a load applied to the final working rates to account for fluctuations in claims and is derived by comparing National Grid's own claims experience to the market (Exh. DPU-28-2, at 2; Tr. 4, at 542 and 552). The "trend rate" and "margin" components both include Company data and would be included in rate year insurance cost calculations regardless of whether the Company chose to self-insure or rely on third-party

insurance carriers (Tr. 4, at 542). Based on the foregoing analysis, the Department finds that National Grid's working rates are sufficiently correlated with the Company's own experience (i.e., versus that of a broad based pool of insured entities) to warrant their use in determining the Company's health care expense in this proceeding.

Additionally, National Grid's decision to self-insure its medical and dental plans results in direct savings to ratepayers in the form of lower employee benefit costs (Tr. 4, at 523-524 and 542-543). The Department recognizes that disallowing National Grid's post-test year adjustments on the basis of working rates would provide a disincentive for companies to implement aggressive cost control measures, such as switching to self-insurance, when such measures otherwise would be deemed cost-effective. D.P.U. 95-40, at 26; D.P.U. 92-210, at 22. Therefore, the Department accepts the Company's proposed decrease to medical and dental expense of $263,968 (Exh. NG-RRP-2, at 11 (Rev. 3)).

In addition to National Grid's proposed medical and dental expense adjustment, the Department removes post-test year medical and dental expenses of $86,778 associated with 37 vacancies previously excluded from the Company's proposed cost of service in Section VIII.A.4.c.[130] Accordingly, the Department reduces the Company's proposed cost of service by $86,778.

---

130 ($63,043 medical and dental costs for proposed Company vacancies * .5234 O&M percentage of base wages = $32,994) + ($415,448 medical and dental costs for proposed NGSC vacancies * .1920 percentage of NGSC salary expenses allocated to Company payroll expense * .6744 O&M percentage of base wages = $53,783) = $86,778 reduction to proposed Company medical and dental expense adjustment (see Exh. NG-RRP-2, at 11 (Rev. 3)).

D. Uncollectible Expense

1. Introduction

During the test year, National Grid booked $62,292,694 in bad debt expense (uncollectible expense) related to its total operations (Exh. NG-RRP-2, at 4, 5, 19 (Rev. 3)). The Company proposes to decrease its total bad debt expense by $44,676,591 over the test year level based on the application of a bad debt ratio of 1.23 percent to delivery service revenues to arrive at delivery-related bad expense of $17,616,103 (Exhs. NG-RRP-1, at 23; NG-RRP-2, at 19 (Rev. 3)).[131]

The Company calculated its delivery service related bad debt ratio by dividing its total delivery service net write-offs for the twelve-month periods ending on June 30, 2013, June 30, 2014, and June 30, 2015 of $46,996,526 by its total delivery service retail revenues for that same three-year period of $3,826,016,551 (Exh. NG-RRP-2, at 19 (Rev. 3)). This calculation results in a bad debt ratio of 1.23 percent (Exh. NG-RRP-2, at 19 (Rev. 3)). The Company then multiplied the bad debt ratio of 1.23 percent by test year normalized delivery service revenues of $1,434,137,931,[132] to arrive at a bad debt expense of $17,616,103 (Exh. NG-RRP-2, at 19 (Rev. 3)).[133] The resulting bad debt expense of $17,616,103 represents a decrease of

---

131 The supply-related portion of the bad debt expense is recovered through basic service rates. Therefore, the bad debt ratio is applied to only the delivery service revenues.

132 In the calculation of delivery service revenues in its initial filing, the Company did not include the adjustments for the low-income discount (a $61,180,895 credit) and the net metering lost distribution revenues (a $23,760,587 credit) (RR-DPU-49 & Att.).

133 Any discrepancies in amounts are the result of rounding the bad debt ratio, which the Company computes using a floating decimal of 1.2283409 (see Exh. NG-RRP-2, at 19 (Rev. 3)).

$44,676,591 when compared to the Company's test year level of expense of $62,292,694 (Exh. NG-RRP-2, at 19 (Rev. 3)).

The Company also calculated a bad debt expense associated with the proposed revenue increase. The Company multiplied the bad debt ratio of 1.23 percent by its proposed revenue increase of $201,900,249, to arrive at a proposed bad debt adjustment of $2,480,023 (Exh. NG-RRP-2, at 2, 19 (Rev. 3)).

2. Positions of the Parties

The Company asserts that it has properly calculated its uncollectible expense adjustment consistent with the Department precedent (Company Brief at 54-55, citing D.P.U. 14-150, at 158; D.P.U. 07-71, at 106-109; D.P.U. 96-50 (Phase I) at 71). No other party addressed the Company's bad debt calculations on brief.

3. Analysis and Findings

The Department permits companies to include for ratemaking purposes a representative level of bad debt in their cost of service. D.P.U. 09-39, at 164; D.P.U. 96-50 (Phase I) at 70-71; Commonwealth Electric Company/Cambridge Electric Light Company, D.P.U. 89-114/90-331/91-80 (Phase I) at 137-140 (1991). The Department has found that the use of the most recent three years of data available is appropriate in the calculation of bad debt expense. D.P.U. 96-50 (Phase I) at 71. A company's bad debt ratio is derived by dividing the three-year delivery service net writ-offs by the delivery service billed revenues for the same period. Western Massachusetts Electric Company, D.P.U. 84-25, at 113-114 (1984); D.P.U. 1720, at 27; Massachusetts-American Water Company, D.P.U. 1700, at 22 (1984). This bad debt ratio is then multiplied by test year delivery service billed revenues, adjusted for any distribution revenues

increase or decrease that is approved in the current rate case. See D.P.U. 07-71, at 106-109; D.P.U. 96-50 (Phase I) at 71.

The Department has reviewed the Company's bad debt calculations, the materials supporting the calculations, and other related record evidence (Exhs. NG-RRP-1, at 23; NG-RRP-2, at 2, 4, 5, 19 (Rev. 3); WP-NG-RRP-12; AG-DJE-1, at 7-10 & Sch. DJE-2; NG-RRP-Rebuttal-1, at 37-39; AG-DJE-Rebuttal-1, at 3; DPU-12-8; DPU-12-9; DPU-12-10; AG-2-30; AG-14-8; Tr. 14, at 1574-1576; RR-DPU-49). The Department concludes that the method used by the Company to calculate its uncollectible expense adjustments is consistent with the Department precedent. D.P.U. 09-39, at 164; D.P.U. 07-71, at 106-109; D.P.U. 96-50 (Phase I) at 70-71; D.P.U. 89-114/90-331/91-80 (Phase I) at 137-140. Therefore, the Department approves the application of the Company's delivery service related bad debt ratio of 1.23 percent, applied to test year delivery service revenues (Exh. NG-RRP-2, at 2, 19 (Rev. 3)).

As set forth above, application of the 1.23 percent bad debt ratio to the test year normalized delivery service revenues of $1,434,137,931, produces a bad debt expense of $17,616,103 (Exh. NG-RRP-2, at 19 (Rev. 3)). During the test year, the Company booked $62,292,694 in bad debt expense related to its total operations (Exh. NG-RRP-2, at 4, 5, 19 (Rev. 3)). Accordingly, the Department approves the Company's proposed decrease to its test year cost of service in the amount of $44,676,591.

Further, as set forth above, the Company calculated a bad debt expense of $2,480,023 associated with its proposed revenue increase (Exh. NG-RRP-2, at 2, 19 (Rev. 3)). Applying the same 1.23 percent bad debt ratio set forth above to the distribution revenue increase approved in

this case of $169,670,239 results in a bad debt expense in the amount of $2,084,129. Accordingly, the Department reduces the Company's proposed cost of service by $395,894.

E. Depreciation Expense

1. Introduction

During the test year, National Grid booked $123,025,248 in depreciation expense (Exh. NG-RRP-2, at 27 (Rev. 3)).[134] The Company proposes to increase its depreciation expense by $3,650,455 to $126,675,703, based on a "technical update" of the depreciation study provided in the Company's previous rate case, D.P.U. 09-39 ("2009 Depreciation Study") (Exhs. NG-RRP-2, at 27 (Rev. 3); NG-REW-1, at 3; NG-REW-2). The technical update results in a reduction in the Company's current composite depreciation accrual rate from 3.19 percent to 3.18 percent (Exh. NG-REW-2, at 36).

The Company's depreciation accrual rates include a provision for salvage (Exhs. NG-REW-1, at 7; NG-REW-2, at 5). When National Grid retires plant, the associated scrap materials are initially returned to crew barns, where they are then transferred to 40-foot containers (Tr. 2, at 212-213). These containers are periodically shipped to National Grid's investment recovery operation in Syracuse, New York, where the materials are processed and sold at auction, with the proceeds credited to standing retirement work in progress blanket work

134 This amount excludes $2,527,499 in depreciation expense associated with Nantucket Electric's submarine cables and $1,671,463 in depreciation expense associated with SmartGrid (Exh. NG-RRP-2, at 27 (Rev 3)). The Company excluded this depreciation expense because the cost of the Nantucket submarine cables and these SmartGrid expenses are recovered through separate mechanisms (Exhs. DPU-31-6; DPU-31-7).

orders[135] (Exh. AG-18-9; Tr. 2, at 213). In March of 2015, National Grid transferred to their respective plant accounts $26,225,351 in salvage that had been accumulated in MECo's blanket work orders between 2007 and March 2015 to their respective plant accounts (Exhs. AG-18-9; AG-30-1, Att.).

2. Company's Depreciation Technical Update

The Company did not perform a full depreciation study in which projection curves, projection lives and future net salvage rates are estimated from a statistical analysis of recorded retirements and net salvage realized in the past (Exh. NG-REW-1, at 3). Instead, the Company performed a technical update ("2015 Technical Update") of the 2009 Depreciation Study (Exhs. NG-REW-1, at 3; NG-REW-2). A technical update generally retains the parameters developed and/or approved in the most recent full depreciation study, and adjusts depreciation rates for known and measurable changes in the age distributions of surviving plant, depreciation reserves, and average net salvage rates that have occurred over the passage of time (Exh. NG-REW-1, at 3). A technical update, therefore, is intended to align a company's depreciation rates with the accounting year during which the rates will become effective (Exh. NG-REW-1, at 3).

The 2009 Depreciation Study was based on plant data as of the end of the test year used in D.P.U. 09-39 (i.e., December 31, 2008), and employed the remaining life method (Exh. AG-3-40, at 19). Under the remaining life method, the net un-depreciated plant investment, net of salvage, is assigned through equal annual depreciation charges over the

135 Because of the limited amount of scrap materials generated by Nantucket Electric and prohibitive transport costs associated with ferrying containers off the island, scrap sales associated with Nantucket Electric are minimal (Exh. NG-DJD-Rebuttal-1, at 13; Tr. 2, at 220).

remaining estimated life of the property (Exh. AG-3-40, at 19). For most of its plant accounts, the Company uses the retirement rate method[136] to develop an average service life ("ASL") for each account by plotting life table data that were then fitted to Iowa-type survivor curves[137] to determine the appropriate survivor curve for these accounts[138] (Exh. NG-REW-1, at 6-7).

The steps involved in preparing a technical update generally include: (a) data collection; (b) calculation of service life statistics; (c) computation of average net salvage rates; (d) rebalancing of depreciation reserves; and (e) development of accrual rates (Exh. NG-REW-1, at 5). The Company explains that data was collected and applied by documenting plant accounting and depreciation reserve transactions from 2009 through 2014, and age distributions of surviving plant until December 31, 2014, which the Company's depreciation consultants then added to its 2009 Depreciation Study data (Exh. NG-REW-1, at 3). The Company matched accounting entries with transaction codes to identify and distinguish various types of plant accounting transactions (Exh. NG-REW-1, at 3-4).

The Company states that with the exception of certain general plant categories for which amortization accounting previously has been approved, the depreciation rates developed in the

---

136 The retirement rate method is an actuarial method of deriving survivor curves based on the average rates at which property of each age group is retired by the Company over the period of time included in the depreciation study (Exh. NG-6, at 77).

137 Iowa curves are frequency distribution curves that were initially developed at the Iowa State College Engineering Experiment Station during the 1920s and 1930s; these curves are widely accepted in determining average life frequencies for utility plant. Boston Edison Company/Cambridge Electric Light Company/Commonwealth Electric Company/Canal Electric Company, D.T.E. 06-40, at 66-67 n.44 (2006). Initially, 18 curve types were published in 1935; four additional survivor curves were identified in 1957. D.P.U. 09-39, at 168 n.106.

138 The ASL and Iowa curve are customarily reported as a combined figure; for example, a "75-R2.5" curve refers to an ASL of 75 years combined with an R2.5 Iowa curve.

2015 Technical Update were calculated using the straight line method, vintage group procedure, and remaining life techniques (Exh. NG-REW-1 at 7). The Company then developed composite life statistics for each required account (Exh. NG-REW-1, at 7).

3. Attorney General's Depreciation Analysis

The Attorney General challenges the underlying premises of the Company's proposed depreciation accrual rates. According to the Attorney General, National Grid's 2015 Technical Update was limited to updating various balances and salvage data, and that its failure to update projection curves, projection lives, future cost of removal and gross salvage rates resulted in accrual rates that are virtually identical to the Company's existing rates (Exh. AG-WDA-1, at 8-10).

The Attorney General identifies other deficiencies indicated by the 2015 Technical Update. First, the Attorney General contends that while the 2015 Technical Update indicates that National Grid's theoretical depreciation reserve[139] should be $1,492,421,587, the Company's salvage practices have resulted in a recorded depreciation reserve of $1,655,620,338, indicating a depreciation reserve surplus of $163,198,751 as of December 31, 2014[140] that continues to grow (Exhs. AG-WDA-1, at 8, 10, 13-15).

The Attorney General states that this surplus situation has been further exacerbated by the Company's failure to properly treat salvage (Exh. AG-WDA-1, at 10-15). The Attorney General

---

139 The theoretical depreciation reserve represents the amount that should be in the depreciation reserve if the depreciation accrual rates presently in effect were to remain in use until all of that company's plant in service as of that date of the reserve calculation has been retired (Exh. AG-WDA-5, at 3; Tr. 13, at 1509).

140 The Attorney General adds that because of the Company's failure to properly record salvage, the depreciation reserve surplus was actually $189,048,306 as of that date (Exh. AG-WDA-1, at 10).

explains that while the USOA-Electric Companies requires that salvage be credited to the depreciation reserve, the Company accumulated salvage in blanket work orders for a number of years, and only credited the salvage on March 15, 2015, after the completion of the 2015 Technical Update (Exh. AG-WDA-1, at 4-7). The Attorney General states that if the Company had adhered to the salvage recording requirements of the USOA-Electric Companies, an additional $25,849,645 relating to salvage for the years 2007 through 2014 would have been credited to National Grid's depreciation reserve as of December 31, 2014 (Exh. AG-WDA-1, at 5-8).[141]

Further, the Attorney General notes that according to the National Association of Regulatory Utility Commissioners' Public Utility Depreciation Practices Manual (August 1996) ("NARUC Manual"), a utility should take immediate action to reduce depreciation imbalances, such as the implementation of revised depreciation accrual rates (Exh. AG-WDA-1, at 12, 16-18), Despite this obligation, however, the Attorney General estimates that under the Company's proposed accrual rates, it would take over 500 years to pass this surplus back to customers (Exh. AG-WDA-1, at 10-11),

Next, the Attorney General contests National Grid's proposed accrual rates. Specifically, the Attorney General notes that National Grid's proposed ASLs are, on average, shorter than the Department-approved ASLs currently in use by Western Massachusetts Electric Company ("WMECo") and NSTAR Electric Company ("NSTAR Electric") for most of the larger plant

---

141 In her initial testimony, the Attorney General added the $25,849,645 surplus back to the Company's depreciation reserve to develop her proposed accrual rates (Exh. WDA-1, at 8; AG-WDA-3). On rebuttal testimony, the Attorney General determined that, given the complexities and relatively small dollar effects, no such adjustment was necessary, and thus revised her accrual rates accordingly (Exhs. AG-WDA-Rebuttal-1, at 4-5; AG-WDA-Rebuttal-2).

accounts (Exhs. AG-WDA-1, at 21; AG-WDA-4). The Attorney General performed an actuarial analysis for each Company plant account developing ASLs, Iowa curves, and salvage factors using the formulas and requirements for an actuarial analysis that are set forth in the NARUC Manual (Exhs. AG-WDA-34, at 9; AG-WDA-1, at 20-21; AG-WDA-4). Based on her analysis, the Attorney General calculated different accrual rates for 26 of the Company's 31 transmission, distribution, and depreciable general plant accounts (Exhs. AG-WDA-3, at 5, 9; AG-WDA-Rebuttal-2; AG-WDA-Rebuttal-3). These accrual rates produce a composite accrual rate of 2.77 percent versus the Company's proposed composite accrual rate of 3.18 percent (Exhs. AG-WDA-Rebuttal-1, at 4-5; AG-WDA-Rebuttal-2, at 2).

4. Positions of the Parties

a. Attorney General

i. Introduction

The Attorney General offers a number of recommendations concerning the Company's depreciation rates and practices (Attorney General Brief at 63-64). First, the Attorney General recommends that the Department require the Company to record salvage within 18 months of the retirement of its assets (Attorney General Brief at 63). Second, the Attorney General recommends that the Department adopt her depreciation accrual rates and reject the Company's 2015 Technical Update (Attorney General Brief at 63, citing Exhs. AG-WDA-1; AG-WDA-2; AG-WDA-3; AG-WDA-4; AG-WDA-Rebuttal-1; AG-WDA-Rebuttal-2). Finally, the Attorney General recommends that the Company's depreciation rates should be recalculated to account for retired plant that she contends had not been removed from National Grid's gross plant accounts (Attorney General Brief at 63-64).

ii. Salvage Accounting

The Attorney General argues that National Grid misrepresents its net rate base, that the Company has been doing so for several years, and has been commensurately over charging ratepayers (Attorney General Brief at 64). The Attorney General contends that from 2007 through 2014, National Grid failed to record $25,849,645 of salvage to its plant accounts at the time plant was retired, and instead allowed this balance to accumulate in retirement work in progress blanket work orders that had been kept open (Attorney General Brief at 65, citing Exhs. AG-18-9, AG-30-9). Further, the Attorney General claims that National Grid did not credit the accumulated salvage for those years to the depreciation reserve until March 31, 2015, as opposed to crediting salvage to the depreciation reserve when the assets were retired (Attorney General Brief at 65, citing Exh. NG-DJD-Rebuttal-1, at 4). In addition, she asserts that National Grid's failure to record salvage cannot be reasonably attributed to National Grid's SAP implementation issues because the Company had stopped recording salvage several years before the inception of the SAP project on November 5, 2012 (Attorney General Brief at 65-66, citing Exh. NG-MLK-1, at 29).

The Attorney General argues that National Grid's failure to properly record salvage violated the Department's accounting requirements (Attorney General Brief at 64-65; Attorney General Reply Brief at 46-47). More specifically, she contends that the Department requires electric distribution companies to maintain their books in accordance with the USOA-Electric Companies (Attorney General Brief at 65). According to the Attorney General, the USOA-Electric Companies requires that at the time depreciable utility plant is retired, the account shall be charged with both the book cost of the property being retired and the cost of

removal, and shall be credited with the salvage value and any other amounts recovered, such as insurance proceeds (Attorney General Brief at 65, citing 18 CFR Part 101, Account 108(B)).[142] Instead, the Attorney General alleges that the Company accumulated $25,849,645 of salvage in retirement work in progress blanket work orders from 2007 through 2014 that it kept open during this period (Attorney General Brief at 65, citing Exhs. NG-DJD-Rebuttal-1, at 4; AG-18-9; AG-30-9).

The Attorney General argues that the Company's violations of salvage accounting requirements had the effects of both inflating the Company's rate base and making it "impossible" to properly evaluate the Company's salvage rates used to derive its depreciation accrual rates (Attorney General Brief at 66, 69-70). According to the Attorney General, the Company's failure to record salvage in 2007 and 2008 attributable to MECo resulted in a rate base that was overstated by $4,992,994 (Attorney General Brief at 66, citing Exh. AG-30-1, Att. at 1). The Attorney General calculates that, based on the 7.85 percent overall rate of return granted to National Grid in D.P.U. 09-39, the Company has collected $391,950 in excessive returns during each of the years that the rates set by D.P.U. 09-39 have been in effect, thus producing an over-collection of over $2 million over the past six years (Attorney General Brief at 66-67). Moreover, the Attorney General points out that, because these dollars were included in base rates, the Department is "powerless" to return the money to customers due to the prohibition on retroactive ratemaking (Attorney General Brief at 67, citing Fitchburg Gas and Electric Light Company v. Department of Telecommunications and Energy, 440 Mass. 625,

---

142 The Attorney General points out that there is nothing in 220 C.M.R. § 51.02 or § 51.03 that modifies the USOA-Electric Companies' requirements regarding the recording of salvage (Attorney General Brief at 65).

637–38 (2004), citing Boston Edison Company v. Department of Public Utilities, 375 Mass. 1, 6 (1978)).

Further, the Attorney General argues that the Company's failure to properly record salvage has resulted in excessive charges being recovered through the CapEx mechanism (Attorney General Brief at 67).[143] Specifically, the Attorney General alleges that because the Company continued to withhold tens of millions of dollars in salvage since 2008 (the Company's test year in D.P.U. 09-39), this failure to properly record salvage would have caused the Company to overcharge customers in each and every year up to and including the 2014 reconciliation year in its CapEx dockets (Attorney General Brief at 67, citing Exh. AG-30-1, Att. 1).[144] However, the Attorney General asserts that because the CapEx is a reconciling mechanism, the Department can order retroactive adjustments and return these excess collections to ratepayers with interest (Attorney General Brief at 67, citing Fitchburg Gas and Electric Light Company v. Department of Telecommunications and Energy, 440 Mass. at 637–38 (holding that the rule against retroactive ratemaking does not apply to rate mechanisms outside of base rates); Fitchburg Gas and Electric Light Company, D.T.E. 99-66-A at 28 (2001)). Consequently, the Attorney General recommends that the Department open a proceeding to return the over-collection with interest to ratepayers (Attorney General Brief at 67).[145]

---

143 As discussed in Section V above, the Company's CapEx mechanism is now known as the CIRM.

144 The Attorney General identifies the following CapEx dockets: D.P.U. 10-79 (2009); D.P.U. 11-60 (2010); D.P.U. 12-48 (2011); D.P.U. 13-84 (2012); D.P.U. 14-95 (2013); and D.P.U. 15-82 (2014) (Attorney General Brief at 67).

145 The Attorney General provides that in the alternative, if the Department elects to keep the Company's capital tracker, the Department could direct the Company to refund

Additionally, the Attorney General recommends that the Department direct National Grid, on a to going forward basis, to credit salvage amounts to the accumulated provision for depreciation as required by the USOA-Electric Companies, and record such salvage amounts to the data file that would be used in a depreciation study within 18 months of National Grid's selling any Company asset or otherwise accruing salvage (Attorney General Brief at 68-69).

Finally, the Attorney General recommends that the Department set National Grid's allowed return on common equity at the lowest end of the range of reasonability, as a result of the Company's alleged systematic failure to maintain its salvage records in accordance with Department requirements (Attorney General Brief at 67-68; Attorney General Reply Brief at 47). The Attorney General considers this reduction to be reasonable and appropriate, and asserts that it will prevent National Grid and other companies from engaging in practices that result in the misrepresentation of their rate base in the future (Attorney General Brief at 69).

iii. Depreciation Analysis

The Attorney General notes that National Grid relies on the same life-curves as those approved in D.P.U. 09-39 (Attorney General Brief at 70; Attorney General Reply Brief at 36). The Attorney General maintains that as a result of the Company's use of these life-curves, National Grid has proposed to use in most cases shorter depreciation lives that are appropriate (Attorney General Brief at 70; Attorney General Reply Brief at 36). The Attorney General asserts that the Department should lengthen the Company's proposed depreciation lives for a number of reasons.

---

customers as part of its next capital investment report filing (Attorney General Brief at 67 n.26).

First, the Attorney General argues that the use of life curves will assist in remedying what she considers to be excess depreciation reserves. According to the Attorney General, the Company has a relatively large $163 million reserve surplus, a disparity that she maintains is growing and warrants immediate adjustment (Attorney General Brief at 70; Attorney General Reply Brief at 36, 40, citing Exh. NG-6, at 189). The Attorney General rejects the notion that when delayed retirements are included, the Company's pro forma excess reserve balance was only $77 million at the end of 2015 (Attorney General Reply Brief at 40-41). According to the Attorney General, the Company's reserve calculations fail to credit approximately $130 million in depreciation expense booked to both MECo's and Nantucket Electric's reserves for 2015 (Attorney General Reply Brief at 41, citing Exhs. NG-DJD-Rebuttal-2; AG-5; Tr. 2, at 202; Tr. 13, at 1486–1487). Thus, the Attorney General contends that had National Grid conducted its own analysis properly, factoring delayed retirements into the calculation actually suggests that the Company's depreciation reserve would have been $200 million, which is even higher than the surplus reported in its 2015 Technical Update (Attorney General Reply Brief at 41).

Second, the Attorney General argues that her proposed life curves fit the data better than those that the Company proposes to continue using (Attorney General Brief at 71). In this regard, the Attorney General contends that the Company's SAP implementation issues had no effect on her analysis of post-2008 data, because (1) the Company did not begin the SAP implementation process until late in 2012, and (2) her own sensitivity analyses demonstrates that, even if all of the data from the SAP implementation period were excluded, her recommended life curves still fit the data better than the Company's current life curves for all but one account (Attorney General Reply Brief at 37-38).

Third, the Attorney General points out that the Company's current ASLs are comparably shorter than those in effect for NSTAR Electric and WMECo (Attorney General Brief at 71; Attorney General Reply Brief at 36). The Attorney General argues that National Grid has failed to offer any evidence that a comparison of the Company to either NSTAR Electric or WMECo is inappropriate (Attorney General Reply Brief at 42).[146]

Finally, the Attorney General contends her depreciation witness is highly familiar with electric utility facilities, and was able to obtain all necessary information through the discovery process in order to analyze the Company's ASLs (Attorney General Reply Brief at 39-40). In this regard, she asserts that the Company's criticism that her witness failed to conduct a site visit of National Grid's facilities is without merit (Attorney General Reply Brief at 39).

Based on her analysis, the Attorney General proposes increased ASLs and different net salvage amounts for the Company's transmission and distribution plant accounts (Attorney General Brief at 71; Attorney General Reply Brief at 36). The Attorney General calculates that her recommended accrual rates produce a reduction of $15,937,950 in the Company's proposed annual depreciation expense (Attorney General Brief at 70, citing Exhs. AG-WDA-3-Rebuttal, at 2; NG-RRP-2, at 27.).

iv. Delayed Retirement

The Attorney General recommends that the Department adjust the Company's proposed depreciation expense for delayed retirements that are included in the Company's plant in service (Attorney General Brief at 82). According to the Attorney General, the Company concedes that

---

146 By way of example, the Attorney General contends that there is no record evidence suggesting that National Grid's underground conduit can be expected to have a shorter life than underground conduit installed in the service territories of other Massachusetts electric distribution companies (Attorney General Reply Brief at 39).

it overstates its gross plant in service for the test year by amounts that actually should have been booked as retirements (Attorney General Brief at 82, citing Tr. 2, at 228; RR-AG-28). The Attorney General claims that the Company's delinquency in reporting delayed retirements in the year in which they occurred is specifically prohibited by FERC and Department regulations (Attorney General Reply Brief at 45-46).[147] The Attorney General recommends that the Department set the Company's ROE at the lowest end of the range of reasonableness for its purported misrepresentation of gross and net plant resulting from delayed retirements (Attorney General Reply Brief at 46-47).

Further, the Attorney General recognizes that when National Grid retires plant booked to Account 101, it appropriately makes a corresponding adjustment to the accumulated depreciation reserve in Account 108, thus producing a rate base-neutral outcome (Attorney General Reply Brief at 43 n.14). Despite this rate base neutrality, however, the Attorney General points out that because depreciation expense is calculated based on gross plant in service and not net rate base, debits entries to Account 108 do not make the delayed retirements revenue neutral in terms of depreciation expense (Attorney General Reply Brief at 43). The Attorney General notes that while National Grid is correct in that delayed retirements should not trigger a rate base adjustment, the Company does not dispute that a commensurate accounting of depreciation expense is required (Attorney General Reply Brief at 43, citing Company Brief at 160).

In her initial brief, the Attorney General proposed to calculate the depreciation expense adjustment by multiplying her recommended composite depreciation accrual rate of 2.77 percent

147 The Company defines asset unitization as the process by which the charges accumulated in the completed construction not classified account at a gross level are classified by accounts and retirement units (Exh. NG-DJD-Rebuttal-1, at 10).

by $107,400,000 in gross plant, producing an adjustment of $2,974,980 (Attorney General Brief at 84-85). On her reply brief, the Attorney General accepted the Company's proposal to calculate the adjustment by multiplying a composite depreciation accrual rate by $52,697,141 in plant that actually had been physically retired prior to the end of the test year, but remained recorded on the books after June 30, 2015 (Attorney General Reply Brief at 43). Based on her proposed depreciation accrual rates, the Attorney General calculates an adjustment of $1,459,711 under this approach[148] (Attorney General Reply Brief at 43).

b. Company

i. Introduction

National Grid defends its decision to confine its depreciation analysis in this proceeding to its 2015 Technical Update (Company Reply Brief at 55-56). According to National Grid, the SAP stabilization process occurred from November 2012 to September 2014 (Company Reply Brief at 56). The Company argues that the stabilization process resulted in what it considered to be "unavoidable" disruptions in the processing of plant transactions and that these disruptions could have affected retirement and net salvage data recorded during this period, and, therefore, would have adversely affected the Company's ability to estimate projection curves, projection lives, and future net salvage rates (Company Reply Brief at 56, citing Exhs. NG-MLR-1, at 26-29; AG-3-1). Thus, the Company asserts that under these conditions, a full depreciation study using plant data documented before the SAP stabilization would have taken considerable time and effort to conduct, and had the potential to produce results that were unreliable and inconsistent with reasonable utility practice (Company Reply Brief at 56, citing Exh. AG-3-1,

[148] $52,697,141 * 2.77 percent = $1,459,711.

at 2). As such, the Company concludes that although under normal circumstances a full depreciation study would have been warranted, in this case, a technical update could support the analysis required for calculating depreciation expense, with the 2009 Depreciation Study being used for limited support (Company Reply Brief at 56).

ii. Salvage Accounting

National Grid argues that the Attorney General's recommendations concerning the crediting of salvage to accumulated depreciation are unnecessary (Company Brief at 157). According to the Company, after it first experienced SAP implementation issues, National Grid encountered delays in processing plant transactions, such as asset unitization and retirements (Company Brief at 157-158, citing Exhs. NG-DJD-Rebuttal-1, at 5; AG-29-4). The Company argues that even after the SAP system was stabilized, there was a backlog of transactions to be processed that caused a delay in recording salvage, as well as the need to resolve conversion, data, and mapping errors that had occurred (Company Brief at 157-158, citing Exh. NG-DJD-Rebuttal-1, at 6). The Company contends that had the retirements and associated cost of removal pertaining to work orders placed in service prior to December 31, 2014 been accounted for in the proper period, rather than through a retrospective correction, the pro-forma excess reserve would be approximately $77 million, an imbalance that National Grid represents as being within the ten-percent deviation that is acceptable in the utility industry (Company Brief at 159, citing Exh. NG-DJD-Rebuttal-1, at 12; Tr. 2, at 239).

Moreover, the Company attributes delays in unitizing the salvage proceeds associated with blanket work orders to the logistical challenge associated with classifying physical containers full of scrap materials generated from capital work orders for identification and

disaggregation into their respective FERC accounts (Company Brief at 156, citing Exh. NG-DJD-Rebuttal-1, at 10-11). National Grid maintains that it currently is not experiencing any undue delays in recording salvage due to SAP implementation issues, and considers there to be no need for an "arbitrary" 18-month requirement, particularly for situations where reasonable delays can occur in recording all transactions associated with asset retirements (Company Brief at 158).

Additionally, the Company denies the Attorney General's assertion that net rate base in any year 2007 through 2015 was overstated for ratemaking purposes (Company Brief at 155-156, citing Exh. AG-WDA-Rebuttal-1, at 4).[149] The Company contends that the delays cited by the Attorney General were primarily due to the delays in processing salvage material as noted above, and that such delays did not purposefully distort its net rate base or erroneously postpone booking salvage for the period of 2007 through 2014 (Company Brief at 155). As such, the Company argues that the Attorney General's assertions on this point should be disregarded (Company Brief at 156).

The Company also contends that the Attorney General's assertions regarding over-collection through the CapEx are groundless, because total plant additions and cost of removal surpassed the $170 million cap each year from 2009 through 2015 (Company Brief at 155, citing RR-DPU-13). The Company asserts that the annual accumulations totaling $25,849,645 of salvage would not have altered recovery under the CapEx in any one year (Company Brief at 155, citing RR-DPU-13). Thus, the Company rejects any notion that it

[149] National Grid asserts that the Attorney General's depreciation witness made no further mention of the Attorney General's allegations of an overstated rate base once the Company demonstrated that the witness's proposed adjustment was actually one-sided (Company Brief at 155-156).

"overstated" its net rate base in both D.P.U. 09-39 and its annual CapEx filings, and over-collected more than $2 million during the period in question through base rates and the CapEx (Company Brief at 155-157). For these reasons, National Grid argues that the Attorney General's recommendation to decrease the Company's ROE is baseless (Company Brief at 155).

iii. Depreciation Analysis

National Grid submits that it is not proposing to change the ASLs and survivor curves approved in its last rate case, D.P.U. 09-39 (Company Brief at 152, citing Exhs. NG-REW-1, at 4; NG-REW-2, at 17-18; AG-3-1). The Company asserts that its survivor curves were estimated in the 2009 Depreciation Study from a statistical analysis of past retirement experience along with forecasting for future changes (Company Brief at 152, citing Exh. NG-REW-1, at 4-5). The Company notes that beginning with its 2009 Depreciation Study, it next recorded statistics for each vintage in its technical update to account for known and measurable changes in the age distributions of surviving plant from December 31, 2008 through December 31, 2014 (Company Brief at 152, citing Exh. NG-REW-1, at 5).

The Company questions the Attorney General's proposed longer survivor curves, and denies the assertion that the Attorney General's curves have a statistically superior fit and that the reserve balance is increasing (Company Brief at 158, citing Attorney General Brief at 70-71). Rather, National Grid argues that the Attorney General's proposed ASL curves are faulty because they are based on inadequate historical data from 2009 and 2014, which was the result of the Company's SAP implementation issues (Company Brief at 158, citing Exh. AG 3-1).

iv. Delayed Retirement

The Company disputes the level of the Attorney General's proposed depreciation expense calculation (Company Brief at 160-161). National Grid contends that when it retires plant booked to Account 101, it appropriately makes a corresponding adjustment to the accumulated depreciation reserve in Account 108, which produces a rate base-neutral outcome and obviates the need for any rate base adjustment (Company Brief at 160). Moreover, the Company contends that the Attorney General's claimed $107,400,000 in retired plant actually includes $56,682,851 in plant that had been retired prior to December 31, 2014, but recorded on the Company's books prior to the end of the test year, and thus not recorded in the test year-end balance of gross plant (Company Brief at 161, citing RR-AG-28). Based on its determination that $52,697,141 in retirements was still on the Company's books as of the end of the test year, the Company considers that a depreciation expense adjustment of $1,675,769 would be warranted (Company Brief at 161).

5. Analysis and Findings

a. Standard of Review

Depreciation expense allows a company to recover its capital investments in a timely and equitable fashion over the service lives of the investments. D.T.E. 98-51, at 75; D.P.U. 96-50 (Phase I) at 104; Milford Water Company, D.P.U. 84-135, at 23 (1985); Boston Edison Company, D.P.U. 1350, at 97 (1983). Depreciation studies rely not only on statistical analysis but also on the judgment and expertise of the preparer. The Department has held that when a company reaches a conclusion about a depreciation study that is at variance with that witness's engineering and statistical analysis, the Department will not accept such a conclusion absent

sufficient justification on the record for such a departure. D.P.U. 92-250, at 64; The Berkshire Gas Company, D.P.U. 905, at 13-15 (1982); Massachusetts Electric Company, D.P.U. 200, at 21 (1980).

The Department recognizes that the determination of depreciation accrual rates requires both statistical analysis and the application of the preparer's judgment and expertise. D.T.E. 02-24/25, at 132; D.P.U. 92-250, at 64. Because depreciation studies rely by their nature on examining historic performance to assess future events, a degree of subjectivity is inevitable.[150] Nevertheless, the product of a depreciation study consists of specific accrual rates to be applied to specific account balances associated with depreciable property. A mere assertion that judgment and experience warrant a particular conclusion does not constitute evidence. Eastern Edison Company, D.P.U. 243, at 16-17 (1980); D.P.U. 200, at 20-21; Lowell Gas Company, D.P.U. 19037/19037-A at 23 (1977).

It thus follows that the reviewer of a depreciation study must be able to determine, preferably through the direct filing, and at least in the form of comprehensive responses to well-prepared discovery, the reasons why the preparer of the study chose one particular life-span curve or salvage value over another. The Department will continue to look to the expert witness for interpretation of statistical analyses, but will consider other expert testimony and evidence that challenges the preparer's interpretation and expects sufficient justification on the record for any variances resulting from the engineering and statistical analyses. D.P.U. 89-114/90-331/91-80 (Phase I) at 54-55. To the extent a depreciation study provides a

---

150 Subjectivity is especially relevant in the calculation of net salvage factors where the cost to demolish or retire facilities cannot be established with certainty until the actual event occurs. D.P.U. 92-250, at 66; D.P.U. 1720, at 44; D.P.U. 1350, at 109-110.

clear and comprehensive explanation of the factors that went into the selection of accrual rates, such an approach will facilitate Department and intervenor review.

b. Salvage Accounting

The USOA-Electric Companies specifies that salvage shall be charged or credited, as appropriate, to the depreciation reserve. 18 CFR Part 101, Electric Plant Instructions, § 10(B)(2), Account 108; 220 C.M.R. § 51.01. There is no specific time limit beyond a requirement that proper distributions be made upon the completion of a work order. 18 CFR Part 101, Electric Plant Instructions, § 10(B)(2), Account 108; 220 C.M.R. § 51.01.

While National Grid objects to the Attorney General's proposal that salvage be credited within 18 months, the Company recently has instituted measures intended to improve its recording of salvage. Until recently, it was not possible for the Company's investment recovery staff to develop engineering estimates that would allow scrap material to be unitized by FERC plant account (Tr. 2, at 215). The Company has now implemented a process wherein the plant accounting department and investment recovery staff will collaborate to generate engineering estimates to support the unitization of scrap metal proceeds associated with standing blanket work orders (Exh. NG-DJD-Rebuttal-1, at 13; Tr. 2, at 215, 234). The Company represents that this procedure will provide sufficient salvage data to conduct depreciation study analysis at least annually (Exh. NG-DJD-Rebuttal-1, at 13). The Department expects that National Grid's new unitization procedure will allow the Company to complete the salvage recording process well within the 18 months proposed by the Attorney General. We are aware that there may be situations where salvage may remain in a blanket work order for a longer period of time, but we expect that those situations will be relatively rare. Based on the foregoing analysis, the

Department finds that 18 months represents a reasonable period for National Grid to complete the recording of salvage. While we do not mandate the imposition of an 18-month turnaround period at this time, we expect the Company to take reasonable measures to achieve this 18-month objective.

The Company and Attorney General have raised issues concerning depreciation reserve balances, and their effect on both base rates and the CapEx. By their very nature, depreciation accruals are imprecise because they attempt to evaluate the effect of innumerable factors on a particular asset over the useful life of that asset, a process that is necessarily wrought with uncertainty and requires constant review and modification. D.P.U. 12-25, at 308; D.P.U. 200, at 20; Boston Gas Company, D.P.U. 19470, at 48-49 (1978). Consequently, a utility may have shortfalls or surpluses in its depreciation reserve. In the absence of evidence of mismanagement of a company's depreciation accrual rates, the Department will not substitute its own judgment for that of management. D.P.U. 12-25, at 90; Barnstable Water Company, D.P.U. 93-223-B at 6-7 (1994); D.P.U. 19470, at 49-50. Cf. Wannacomet Water Company, D.P.U. 13525 (1962) (company continued to use inadequate depreciation accrual rates even after Department directed corrective action, resulting in depreciation shortfall of 115 percent).

The 2015 Technical Update indicates a theoretical depreciation reserve of $1,492,421,587 as of December 31, 2014, versus a booked depreciation reserve of $1,655,620,338 as of that same date (Exh. NG-REW-2, at 40). While the Attorney General and Company each advocate various adjustments associated with retirements and cost of removal through June 30, 2015, even using the numbers offering the most favorable light to the Attorney General's position, the depreciation reserve surplus would be $189,348,096, representing 12.66

percent of the theoretical reserve provided in the 2015 Technical Update (Exh. NG-DJD-Rebuttal-2). The Department does not consider this depreciation reserve imbalance to be so excessive as to warrant corrective measures. D.P.U. 93-223-B at 5, 6-7 (no adjustment for depreciation reserve shortfall of 11.38 percent).[151] To the extent that National Grid's new salvage recording procedures produce a more accurate depiction of the role salvage plays in the development of National Grid's depreciation reserve and depreciation accrual rates, these improvements will be incorporated in the Company's next depreciation study.

Based on these considerations, the Department finds that the Company's salvage practices have not resulted in an overstatement of its rate base. The Department further finds that the Company's salvage practices have not resulted in an over-recovery of costs through the CapEx component. Accordingly, the Department declines to make any adjustment to the Company's ROE for its salvage recording practices. The Department directs National Grid to conduct a full depreciation study in conjunction with its next base rate case, and to provide that study as part of its initial filing in that case.

c. Depreciation Analysis

National Grid relies on the 2015 Technical Update as the basis for its proposed accrual rates. As described above, a technical update generally retains the parameters developed and/or approved in a company's most recent full depreciation study, and adjusts depreciation rates for known and measurable changes in the age distributions of surviving plant, depreciation reserves, and average net salvage rates that have occurred since the period covered by the full depreciation

151 Even at the $200 million depreciation reserve surplus claimed by the Attorney General on brief, the surplus would represent only 13.4 percent of the 2015 Technical Update's theoretical reserve.

study (Exh. NG REW-1, at 3). The Department has accepted the use of technical updates in lieu of a full analysis. See D.P.U. 95-118, at 159-161 (Department accepted technical update of cost allocation study originally based on 1989 data). In this case, however, a number of difficulties have been identified, particularly with respect to the recording of salvage. While the Department is persuaded that the Company's salvage recording practices have not resulted in excessive depreciation surpluses, we find that National Grid's salvage and retirement recording practices are such as to raise questions as to the validity of the 2015 Technical Update. Given these concerns, the Department finds that the 2015 Technical Update does not provide sufficient basis on which to revise National Grid's depreciation accrual rates. Therefore, the Department will not use the results of the 2015 Technical Update to determine the Company's depreciation accrual rates.

Turning to the Attorney General's depreciation analysis, the Company raises a number of concerns as to its reliability. First, National Grid challenges the Attorney General's consultant for his failure to conduct a site visit of the Company's facilities. As noted above, depreciation studies rely not only on statistical analysis, but also on the judgment and expertise of the preparer. Because depreciation studies involve consideration of a company's physical assets, the Department has emphasized the importance of a physical inspection of plant assets when conducting a depreciation study. D.P.U. 19037/19037-A at 23; see also D.T.E. 05-27, at 257-258. The Attorney General's consultant obtained what he considered to be all of the necessary information from Company management through discovery, supplemented by his familiarity with other electric distribution facilities (Tr. 13, at 1446-1448). While the Department recognizes that the Attorney General conducted extensive discovery on the issue of

depreciation, a site visit would have provided additional information that could have put the Company's written responses into perspective. At the very least, a site visit would have assisted in confirming the Company's responses to the witness through his own observations.

National Grid also challenges the Attorney General's comparison of the Company's ASLs with those of other Massachusetts utilities. While the Attorney General emphasized the dissimilarities of National Grid's ASLs to those of NSTAR Electric and WMECo, she did not demonstrate a significant level of familiarity with the latter two companies (Tr. 14, at 1467-1469). While different companies may have generally similar depreciation accrual rates, a greater familiarity with the characteristics of companies being used as comparisons to the company under examination will assist in identifying differing physical characteristics that may have an effect on depreciable lives and salvage factors.

Further, the Attorney General's analysis relies heavily on historical data from 2009 through 2014 (Exh. AG-WDA-9). Because of the implementation issues the Company experienced during the SAP implementation process, there were unavoidable disruptions in the processing of plant transactions (Exh. AG-3-1). These system disruptions could have affected retirement and net salvage data recorded during this period, and thus affected the statistical analyses required to estimate projection curves, projection lives, and future net salvage rates (Exh. AG-3-1).

More significantly, the Company's salvage and retirements recording practices resulted in the lack of sufficient data to develop a full depreciation study. During the first six months of calendar year 2015 (January 1, 2015 through June 30, 2015), the Company recorded approximately $56.7 million of retirements related to plant placed in service over the years prior

to December 31, 2014 (RR-AG-28). While this amount was recorded prior to the test year end and is appropriately recognized in this proceeding, these retirements were not included in the Company's December 31, 2014 plant balances, the point in time used by both the Company and Attorney General for the depreciation database (RR-AG-28, at 2-3). In addition, $50,695,664 in retirements associated with plant placed into service prior to December 31, 2014 was recorded by the Company after the end of the test year, June 30, 2015 (RR-AG-28). Had this information been fully accounted for, it is likely that a more reliable depreciation analysis could have been completed.

Finally, the Attorney General's analysis is largely confined to analysis of the Company's historic database, including partial retirement data through December 31, 2014 (Tr. 13, at 1446-1447). The Attorney General's analysis does not identify any physical changes in property attributable to retirement forces acting outside of the historical data (Tr. 13, at 1447). Although the Department has recognized that consideration of polynomials, conformance indices or hazard rates, can support the robustness of a depreciation study, the Attorney General's analysis does not take these factors into consideration (Exh. AG-WDA-2). See D.P.U. 15-81/D.P.U. 15-81, at 198 n.144; D.P.U. 09-39, at 183-190. Based on the foregoing analysis, the Department finds that the Attorney General's depreciation analysis does not provide a sufficient basis on which to revise National Grid's depreciation accrual rates.

In the absence of an acceptable depreciation study from either party, the Department has relied on the use of a company's then-current depreciation accrual rates. D.P.U. 13-75, at 216; D.P.U. 10-114; D.P.U. 243, at 17. In this case, the Department has rejected the use of both the Company's 2015 Technical Update and the Attorney General's depreciation study. Therefore,

the Department finds it appropriate to maintain the use of the Company's current depreciation accrual rates as derived in the 2009 Depreciation Study, and as modified in D.P.U. 09-39. The Department's calculation of the Company's depreciation expense is provided below.

d. Delayed Retirement

In order to derive a company's depreciation expense, depreciation accrual rates are applied to a company's gross depreciable plant in service. D.P.U. 14-150, at 199; D.P.U. 12-25, at 323. Both National Grid and the Attorney General agree that the Company's test year-end plant in service accounts include $52,697,141 in retirements that had been made prior to the end of the test year, but nonetheless remained in the Company's plant investment accounts (Company Brief at 161; Attorney General Reply Brief at 43). This error has no effect on the Company's rate base because when plant is retired, a corresponding entry is credited against the depreciation reserve. 18 CFR Part 101, Electric Plant Instructions, § 10(B); 220 C.M.R. § 51.01. Nonetheless, both parties agree that because depreciation expense is calculated on the basis of gross (versus depreciated) plant, an adjustment to depreciation expense remains warranted. Because this plant has been retired, the Department finds it appropriate to exclude any depreciation expense on these assets from cost of service. D.P.U. 14-120, at 36-37; Hutchinson Water Company, D.P.U. 85-194, at 7, 13 (1986).

The Company proposes to decrease depreciation expense by $1,675,769 (Company Brief at 161).[152] This adjustment appears to represent the $52,697,141 in retired plant multiplied by the Company's proposed composite depreciation accrual rate of 3.18 percent. The Attorney

[152] Examination of National Grid's revised revenue requirement schedules indicates that this adjustment has not been incorporated into the Company's revenue requirement calculations (Exhs. NG-RRP-2, at 5, 27 (Rev. 3); NG-RRP-8 (Rev. 3)).

General proposes to decrease depreciation expense by $1,459,711, which she derived by multiplying the $52,697,141 in retired plant by her proposed composite depreciation accrual rate of 2.77 percent (Attorney General Reply Brief at 43). In the absence of detailed plant accounts associated with these retired assets, the Department finds that the use of a composite depreciation accrual rate produces a reasonable level of depreciation expense associated with these retirements.

Neither the Company's nor the Attorney General's selected composite rates, however, had been in use at the time of these plant retirements. The Company's current depreciation accrual rates had been in effect at the time of the retirements; applying these rates to the December 31, 2014 plant balances used as the basis of the parties' depreciation calculations produce a composite accrual rate of 3.19 percent (Exh. NG-REW-1, at 9). On this basis, the Department finds it appropriate to base the depreciation adjustment on a composite depreciation accrual rate of 3.19 percent.

The $52,697,141 in retired plant, multiplied by a composite depreciation accrual rate of 3.19 percent, produces a depreciation expense associated with delayed retirements of $1,680,847. Accordingly, the Department reduces the Company's proposed depreciation expense by $1,680,847 for delayed retirements. Because the Company has made the necessary accounting adjustments to recognize the delayed retirements, the Department declines to make any adjustment to the Company's ROE related to delayed retirements.

e. Conclusion

In order to calculate National Grid's annual depreciation expense, the Department has applied the accrual rates approved by this Order to the Company's depreciable plant balances

included in rate base.[153] Based on this analysis, the Department calculates an annual depreciation expense, excluding depreciation associated with SmartGrid investments and Nantucket Electric's undersea cables, of $126,925,161 (Exh. NG-RRP-2, at 27 (Rev. 3)). Excluding the $1,680,847 in depreciation expense associated with unrecorded plant retirements produces a net overall depreciation expense of $125,244,314. This net overall depreciation expense represents an increase of $2,219,066 to the Company's test year depreciation expense, excluding that associated with SmartGrid investments and Nantucket Electric's undersea cables, of $123,025,248. National Grid has proposed an increase of $3,650,455 to its test year depreciation expense. Accordingly, the Department reduces the Company's proposed depreciation expense by $1,431,389.

F. Postage Expense

1. Introduction

During the test year, MECo booked $6,595,462 in postage expense (Exh. AG-1-34, Att. 6, at 17). The Company did not propose any adjustments to its test year postage expense, and thus included postage expense in the balance of test year O&M expenses subject to inflation ("residual O&M expense") component used to derive the inflation allowance (see Exh. NG-RRP-2, at 5-6, 23 (Rev. 3); Tr. 8, at 1358-1359).

153 For Accounts 392 (Transportation Equipment) and 396 (Power Operated Equipment), the Department applied a 6.67 percent amortization rate based on the 15-year amortization of general plant currently in use (Exh. NG-REW-2, at 46).

2. Positions of the Parties

a. Attorney General

The Attorney General argues that the Company failed to recognize that the United States Postal Service ("USPS") postage rates are decreasing, and proposes that the Department reduce the Company's proposed cost of service to eliminate the postage surcharge that was in effect during the test year (Attorney General Brief at 58). The Attorney General contends that the Postal Regulatory Commission ordered the USPS to remove a 4.3 percent exigent surcharge once it had collected $4.6 billion in surcharge revenues, which was expected to occur by April 10, 2016 (Attorney General Brief at 58, citing Exh. AG-14). The Attorney General asserts that the Company's test year cost of service should thus be reduced by $283,605,[154] in order to eliminate the now-terminated postage surcharge from postage expense (Attorney General Brief at 58).

Further, the Attorney General claims that National Grid has overstated its postage expense because the Company includes postage expense in its residual O&M expense (Attorney General Brief at 58). Thus, the Attorney General argues that the Company's residual O&M expense must be reduced by $6,595,462 to recognize that postage expense has been specifically adjusted in the cost of service (Attorney General Brief at 58).

b. Company

National Grid agrees with the Attorney General's recommendation to reduce test year postage expense by $283,605 in order to account for the elimination of the USPS's exigent surcharge of 4.3 percent (Company Brief at 75). The Company also agrees to reduce its residual O&M expense by $283,605 (Company Brief at 76). However, National Grid opposes the

[154] $6,595,462 x 0.043 = $283,605

Attorney General's proposal to exclude the remaining $6,311,857 in test year postage expenses from the residual O&M expense, because it maintains that postage rates are likely to experience inflationary pressures (Company Brief at 76).

The Company argues that the expiration of the exigent surcharge was the result of a regulatory directive to the USPS, rather than the product of reduced postal service operating costs, and it further notes that USPS rates are capped by law at the rate of inflation (Company Brief at 75, citing Exh. AG-14). Thus, National Grid contends that the Attorney General unreasonably assumes that USPS services are not subject to inflation, or that there will be no postage rate increases in the future to counteract, or mitigate, the termination of the exigent surcharge (Company Brief at 75). The Company asserts that given the "significant" strain that the elimination of the 4.3 percent surcharge will have on the USPS, the only reasonable conclusion is that postage rates will increase at the rate of inflation in the near future (Company Brief at 76). Therefore, the Company states that its adjusted postage expense should be included in the residual O&M expense (Company Brief at 76).

3. Analysis and Findings

The Department recognizes postage expense as a legitimate cost of doing business. If a postal rate increase – or, in this case, a decrease - occurs prior to the issue of an Order, that resulting rate fluctuation is eligible for inclusion in cost of service as a known and measurable change to test year expense. D.P.U. 14-150, at 206; D.P.U. 10-55, at 286; D.P.U. 08-35, at 108; D.T.E. 05-27, at 194; D.P.U. 88-172, at 23-24; Massachusetts Electric Company, D.P.U. 800, at 29-30 (1982). The elimination of the USPS' 4.3 percent exigent surcharge already has occurred and is quantifiable, and, therefore it is a known and measurable change (Exh. AG-14).

Accordingly, the Department accepts the proposed reduction of $283,605 to test year postage expense.

Turning to the remaining $6,311,857 in postage expense that National Grid seeks to retain in the residual O&M expense, the Company's argument that postage rates could increase in the near future due to inflationary pressures or due to the expiration of the exigent surcharge fails to recognize that postage rate changes are not subject to the same general pressure of inflation. While postage increases may be capped at the level of inflation, such increases are not automatic, but rather result from actions by the Postal Regulatory Commission. D.P.U. 1720, at 21-22. Consequently, future postage rate changes are not known and measurable. Accordingly, the Department rejects the Company's proposal to include postage expense in the residual O&M expense. Therefore, the Department will remove the full test year postage expense of $6,595,462 from the Company's residual O&M expense. The effect of this adjustment is shown on Table 1 of this Order.

G. Property Tax Expense

1. Introduction

During the test year, the Company booked $56,944,818 in property tax expense (Exhs. NG-RRP-1, at 2; NG-RRP-2, at 28 (Rev.3)). National Grid seeks to increase this amount by $2,331,371 to reflect the expected level of property taxes in the rate year (Exhs. NG-RRP-1, at 38; NG-RRP-2, at 28 (Rev. 3)). The Company calculated the estimated rate year level of property tax expense by applying current municipal tax rates to the latest property valuations provided by the Company to each municipality (Exhs. NG-RRP-1 at 38, NG-RRP-2, at 28

(Rev. 3); WP-NG-RRP-17 (Rev. 3); DPU-22-3).[155] The Company excluded from its proposed property tax expense third-party reimbursements associated with the rate year estimated figure, estimated Smart Grid-related property taxes, and property taxes related to construction work in progress ("CWIP") (Exhs. NG-RRP-1, at 39; NG-RRP-2, at 28 (Rev. 3); WP-NG-RRP-17 (Rev. 3); DPU-31-11; DPU-31-12; DPU-31-13).[156]

2. Positions of the Parties

National Grid argues that its proposed municipal property tax expense is calculated in a manner that is consistent with Department precedent, as the proposed expense is based on the most recent property tax bills that the Company received from the various municipalities in which it owns property (Company Brief at 92, citing D.T.E. 02-24/25 at 123; D.P.U. 96-50, at 109). The Company notes that it calculated the proposed adjustment beginning with an adjusted test year municipal tax expense of $56,944,818, and then calculated the estimated rate year level by applying current municipality tax rates to the latest property valuations provided by each municipality (Company Brief at 92, citing Exhs. NG-RRP-1, at 38, NG-RRP-2, at 28 (Rev. 2)). No other party addressed the Company's proposed property tax expense on brief.

---

155 For those communities that rely on the Reproduction Cost New Less Depreciation method (see Section IX below) to determine property valuations, the Company estimated the assessed values by first determining the percentage by which the assessed value exceeded the net book value of the Company's personal property in that community for the previous tax year, and then multiplying that percentage by the net book value of the personal property in that community for the current tax year (Exhs. NG-RRP-1, at 38-39; DPU-22-3).

156 The Company received third-party reimbursements from Lightower, a former affiliate of MECo (Exh. DPU-22-11). National Grid pays property taxes on Lightower assets that are attached to the Company's poles, and Lightower reimburses the Company for the property taxes on those assets (Exh. DPU-22-11).

3. Analysis and Findings

The Department's general policy is to base pro forma level of property taxes that should be included in the revenue requirement on the most recent property tax bills from communities in which it has property. D.P.U. 15-80/D.P.U. 15-81, at 166; D.P.U. 14-150, at 209; D.P.U. 12-25, at 330; D.P.U. 08-35, at 150; D.P.U. 96-50 (Phase I) at 108-109; Colonial Gas Company, D.P.U. 84-94, at 19 (1984). The Department holds the record open in a proceeding to receive from the utility the most current tax bills issued by cities and towns. D.P.U. 14-150, at 209; D.P.U. 88-67 (Phase I) at 165-166; D.P.U. 84-94, at 19.

The Company proposes to base its property tax expense on current tax assessments and tax rates, increased by a projection of future increases (Exhs. NG-RRP-1, at 38-39; NG-RRP-2, at 28 (Rev. 3); WP-NG-RRP-17 (Rev. 3); DPU-22-3). The Department generally has rejected the use of projected data to determine a company's property tax expenses. D.P.U. 14-150, at 209-210; D.P.U. 11-01/D.P.U. 11-02, at 280-281; D.P.U. 10-114, at 263; D.P.U. 09-39, at 244; D.P.U. 08-35, at 150; D.P.U. 96-50 (Phase I) at 109-110. Rather, the test year level of property tax expense, adjusted for known and measurable changes (i.e., the most recent property tax bills provided at the close of the record), provides the most reasonable representation of a company's property tax expense and fairly represents this component of its cost to provide service.[157] National Grid's projection of future increases of property tax expense, though derived

[157] In certain cases, such as where no property tax bills have yet been issued for a large post-test year plant addition that is being placed into service near the issue date of the Department's Order, the Department has allowed the associated property taxes to be based on the cost of the plant multiplied by the most recent property tax rate. D.P.U. 12-86, at 243-245; D.P.U. 95-118, at 148. That fact situation does not apply here. Further, the Department notes that in D.P.U. 13-75 and D.P.U. 12-25, it appears from the records that the subject company derived its post-test year property tax expense

from current tax assessments, is speculative and does not constitute a known and measurable change based on Department precedent. The Company has offered no persuasive reason to depart from our precedent here. Therefore, we decline to adopt the Company's proposed property tax calculation.

Based on the Company's most recent property valuations and actual property tax rates, National Grid's current property taxes payable to municipalities, fire districts, and water districts total $61,548,504 (Exh. DPU-22-4 & Atts.). The Department accepts this amount as known and measurable. The Department excludes from this total the property taxes associated with Lightower, Smart Grid and CWIP in the amount of $2,516,346 (Exh. NG-RRP-2, at 28 (Rev. 3)). Thus, the Company's final property tax expense is $59,032,158, which represents an increase over the test year amount of $2,087,340. The Company proposed to increase the test year amount of property tax expense by $2,331,371. Accordingly, we will reduce the Company's proposed cost of service by $244,031 ($2,331,371 minus $2,087,340).

Finally, we recognize that the recovery of property taxes is an important element of a company's operations. In addition to recovering a representative level of property tax expense through base rates, companies have proposed cost recovery mechanisms to address changes in property tax levels that occur between rate cases. For example, the Department has examined proposals to establish property tax recovery mechanisms outside of base rates to address fluctuations associated with the change in property valuation method used by municipalities.

---

adjustment based on a composite rate formula. However, neither Order discusses the reasons for this treatment or contains a justification for the departure from the Department's otherwise long-standing precedent. We find that there was no express intention on the Department's part to change its long-standing precedent on property tax expense and, therefore, neither case is dispositive of our treatment of the matter here.

D.P.U. 14-150, at 269-282; D.P.U. 12-25, at 324-334 (see also Section IX below). We also have examined proposals to include the recovery of property taxes as part of a capital investment recovery tracker. D.P.U. 15-80/D.P.U. 15-81, at 54-55 (see also Section V.D.4 above). The Department acknowledges that, with the exception of application for abatements where warranted, property taxes are largely outside of a company's control. We also recognize that a consistent ratemaking approach to property taxes may increase efficiencies and reduce administrative burdens.

Given these considerations, the Department will consider whether it is appropriate to explore alternative ratemaking proposals from distribution companies to address property tax changes between rate cases. Without prejudging the question of the propriety of any alternative ratemaking proposal, a company must demonstrate in its proposal that there would be no double recovery of property tax expense. The Department will consider such proposals in the context of an individual company's base rate proceeding.

H. Insurance Expense

1. Introduction

During the test year, the Company booked $5,909,663 in insurance premium expense (Exh. NG-RRP-2, at 17 (Rev. 3)). The Company has proposed to reduce its test year cost of service by $1,033,234 based on the most recently received insurance premium billings and their respective allocations to MECo and Nantucket Electric (Exhs. NG-RRP-1, at 33: NG-RRP-2, at 17 (Rev. 3)). Of the 14 types of insurance coverage represented by the proposed adjustment, four policies (i.e., Public (Excess) Liability, Business Interruption, Property, and Property

Terrorism insurance) are provided to the Company by National Grid Insurance USA LLC ("NGI USA"), a wholly owned subsidiary of National Grid USA (Exh. NG-RRP-2, at 17 (Rev. 3)).

2. Positions of the Parties

a. Attorney General

The Attorney General argues the Company's premium payments to NGI USA should not be included in insurance expense because (1) the Company has not demonstrated that it took reasonable measures to control costs associated with its NGI USA policies; (2) the Company has not complied with the Department's regulations on affiliate transactions; and (3) the NGI USA business interruption policy allows for double recovery (Attorney General Brief at 50-55). The Attorney General asserts that removing payments to NGI USA will result in a $2,414,233 reduction to the Company's insurance expense (Attorney General Brief at 50, citing Exh. NG-RRP-2, at 17 (Rev. 3)).

First, regarding cost containment, the Attorney General argues that the Department includes the most current cost of liability and property insurance as a reasonable cost of service. (Attorney General Brief at 50, citing Boston Gas Company/Essex Gas Company/Colonial Gas Company, D.P.U. 10-55, at 276 (2010)). However, to be included in the cost of service, the Attorney General contends that the Company must provide evidence that it undertook reasonable measures to control property and liability insurance expense (Attorney General Brief at 50, citing D.P.U. 10-55, at 275-276; New England Gas Company, D.P.U. 08-35, at 119-120 (2009); D.T.E. 05-27, at 133-134; Boston Gas Company, D.T.E. 03-40, at 184-185 (2003)). Further, the Attorney General claims that the Company's evidence of cost containment should be provided as a narrative in its initial filing (Attorney General Brief at 51, citing D.P.U. 10-55, at 276).

The Attorney General argues that despite these requirements, the Company's prefiled testimony is limited to representations that its proposed insurance expense is known and measurable on the basis of recent insurance bills received, and there is no demonstration that the Company undertook reasonable measures to controls such expenses (Attorney General Brief at 51, citing Exh. RRP-1, at 33). Further, the Attorney General contends that during the proceedings, the Company was unable to explain: (1) the measures it took to control costs related to NGI USA; (2) the basis for selecting NGI USA as the Company's carrier for public excess liability insurance, business interruption insurance, property insurance, and property terrorism insurance; and (3) the basis for any premium charged under any insurance policy (Attorney General Brief at 51-52, citing Exh. AG-1-63; Tr. 6, at 862, 864). Based on these considerations, the Attorney General asserts that there is no evidence in the record that would support how the premiums are determined and whether or not they were reasonable or prudent (Attorney General Brief at 52, citing Town of Hingham v. Department of Telecommunications and Energy, 433 Mass. 198, 213-214 (2001), citing Metropolitan District Commission v. Department of Public Utilities, 352 Mass. 18, 24 (1967); Wannacomet Water Company v. Department of Public Utilities, 346 Mass. 453, 463 (1963)).

Next, the Attorney General argues that even if the Department finds that the Company provided sufficient explanation of cost containment measures, the Company's premium payments to NGI USA should not be allowed as part of its cost of service because the payments violate the Department's affiliate transaction regulations (Attorney General Brief at 52).

According to the Attorney General, NGI USA is an affiliate of the Company, as defined by G.L. c. 164, § 85 ("§ 85") (Attorney General Brief at 53).[158]

In particular, the Attorney General contends that NGI USA was established to provide insurance coverage to National Grid's operating companies, thus being created to serve and benefit the Company (Attorney General Brief at 53, citing RR-AG-33). Further, the Attorney General claims that the Company discusses its "insurance captives" and "insurance subsidiary undertakings" in its annual reports to shareholders (Attorney General Brief at 53, citing Exh. AG-1-2-3(1g), Att., at 119, line 2-3, 133, 190).

The Attorney General asserts that Department regulation[159] and good utility practice require evidence that any affiliate services are priced at no more than market value. According

---

158 G.L. c. 164, § 85, provides, in pertinent part:

> . . . "affiliated company" shall mean any corporation, society, trust, association, partnership or individual (a) controlling a company subject to this chapter, either directly, by ownership of a majority of its voting stock or of such minority thereof as to give it substantial control of such company, or indirectly, by ownership of such a majority or minority of the voting stock of another corporation or association so controlling such company; or (b) so controlled by a corporation, society, trust, association, partnership or individual controlling as aforesaid, directly or indirectly, a company subject to this chapter; or (c) standing in such a relation to a company subject to this chapter that there is an absence of equal bargaining power between the corporation, society, trust, association, partnership or individual and the company so subject, in respect to their dealings and transactions.

159 220 C.M.R. § 12.04(3) provides:

> An Affiliated Company may sell, lease, or otherwise transfer an asset to a Distribution Company, and may also provide services to a Distribution Company, provided that the price charged to the Distribution Company is no greater than the market value of the asset or service provided.

to the Attorney General, the Department is required to carefully scrutinize affiliate transactions because "the exercise of control and the absence of an arm's length bargaining" may lead to "'excessive charges for services . . . .'" (Attorney General Brief at 53, citing D.P.U. 12-86, at 11; Public Utility Holding Co. Act of 1935, P.L. No. 333 (1935), 49 Stat. 803, § 1 (1935); Report of the Special Committee on Control and Conduct of Public Utilities, (1930 H. 1200, § 31)). Consequently, the Attorney General argues that if affiliate costs are excessive, they should be excluded from the revenue requirement (Attorney General Brief at 53-54, citing G.L. c. 164, § 94B)). In this regard, the Attorney General contends that National Grid failed to offer any evidence to demonstrate that the amount of premiums charged to the Company by NGI USA are at or below the market price (Attorney General Brief at 54, citing Exh. NG-RRP-2, at 17 (Rev. 3)). Thus, the Attorney General asserts that the Department should disallow these payments to be included in rates and the cost of service should be reduced by $2,414,233 (Attorney General Brief at 54).[160]

Finally, the Attorney General argues that the Company's cost for its business interruption insurance should be disallowed because a claim for loss of income under the policy would amount to double recovery (Attorney General Brief at 54). According to the Attorney General, the Company already is made whole for reductions to income through its RDM (Attorney General Brief at 54). Specifically, the Attorney General contends that National Grid pays annual premiums of $103,968 for a business interruption policy that indemnifies the Company for

---

[160] The Attorney General provides a breakdown of the premiums as follows: (1) $965,005 in Public (Excess) Liability Insurance premiums; (2) $103,968 in Business Interruption Premiums; (3) $1,296,816 in Property Insurance premiums; and (4) $48,444 in Property Terrorism Insurance premiums (Attorney General Brief at 54, citing Exh. NG-RRP-2, at 17 (Rev. 3)).

reductions to income as a result of the interruption or interference with the business (Attorney General Brief at 55, citing Exh. NG-RRP-2, at 17 (Rev. 3); RR-AG-30, Att. at 49). The Attorney General notes that "income" is defined in the policy as "the sum of gross earnings and/or sales and/or income and/or revenue derived from the [b]usiness." (Attorney General Brief at 53, citing RR-AG-30, Att. at 50). The Attorney General reasons that because National Grid's RDM makes the Company whole for reductions in revenues, the Company receives the same amount of revenue for its distribution services regardless of whether there is an interruption to the Company's operations (Attorney General Brief at 55, citing Exhs. NG-MLR-1; NG-RRP-1). Consequently, the Attorney General argues that a claim under the business interruption policy for reduced income would amount to a double recovery from customers (Attorney General Brief at 55). Therefore, the Attorney General asserts that costs for the Company's business interruption policy should be excluded from insurance expense and the Company's proposed cost of service should be reduced by $103,968 (Attorney General Brief at 55).

b. Company

First, regarding cost containment, National Grid disputes the Attorney General's claim that the Company has not demonstrated that it undertook reasonable measures to control costs associated with NGI USA, and challenges the Attorney General's position that such a demonstration is required a part of the initial filing (Company Brief at 61). The Company contends that in each of the cases relied on by the Attorney General, the petitioner sought an increase to test year insurance expense, and that the Department's reference to "reasonable efforts to control costs" pertained to the requested increase in expense (Company Brief at 61, citing D.P.U. 10-55, at 274-276 (requesting a post-test year increase of $376,488); D.P.U. 08-35,

at 119-120 (requesting a post-test year increase $225,993); D.T.E. 05-27, at 132 (requesting a post-test year increase of $94,997, subsequently adjusted); D.T.E. 03-40, at 184-185 (requesting a post-test year increase of $607,287)). National Grid notes that, in this case, the Company is seeking to decrease its test year expense, which, in itself, demonstrates that the Company has controlled costs so that the rate-year expense is less than the test year expense (Company Brief at 61). According to National Grid, there is no basis for disallowance of a significant amount of expense on the basis that the Company had an affirmative obligation to demonstrate cost control in the prefiled testimony where there is no increased cost requiring such demonstration (Company Brief at 63).

National Grid also challenges the Attorney General's claim that during the proceedings the Company was unable or failed to adequately respond to inquiries regarding the selection of NGI USA or the basis for recovery of insurance expense (Company Brief at 62-63, citing Exh. AG-1-63; Tr. 6, at 862-865; RR-AG-33). In this regard, National Grid notes that the Attorney General made no attempt to examine the reasons that insurance expense is decreasing (Company Brief at 63-64). The Company asserts that there is no basis for disallowance of insurance expense where there is no reasonable inquiry made into the proposed adjustment (Company Brief at 63).

Turning to its use of NGI USA, National Grid argues that the Department has previously found that the procurement of insurance coverage through "captive" or affiliated insurance companies can be effective to reduce costs to customers (Company Brief at 64). According to the Company, captive insurance companies are known to be a cost-efficient alternative to risk transfer because the arrangement leverages the use of reinsurance markets and puts the captive

insurance carriers in competition against markets that underwrite in the conventional direct insurance marketplace, thereby driving down the cost below what would be available solely by using conventional direct writing insurers (Company Brief at 64, citing Bay State Gas Company, D.P.U. 13-75, at 181, 193-194 (2013)).

Second, the Company argues that there is no evidence that the premium cost charges by NGI USA are "excessive" or above market (Company Brief at 64). According to the Company, mandates of NGI USA include providing insurance coverage to National Grid USA's operating companies at rates that are at or below those that can be achieved in the commercial insurance markets, as well as enhanced policy coverage beyond what is available in those markets (Company Brief at 64-65, citing RR-AG-33).

Moreover, the Company contends the Department does not routinely review or render determinations on whether insurance premiums charged by affiliates are at or below the market price where the petitioning utility is not asking for any increase in the test year amount (Company Brief at 65). The Company claims that a petitioning company cannot foresee every specific area of inquiry of interest to the other parties, and that the law places some obligation on other parties to raise issues during the preceding so that there is an opportunity for rebuttal (Company Brief at 65, citing Fitchburg Gas & Electric Light Co. v. Department of Public Utilities, 375 Mass. 571, 578 (1978); NYNEX, D.P.U. 86-33-G at 74 (1989); Fitchburg Gas and Electric Light Company, D.P.U. 1270/1414, at 33 (1983)). Therefore, the Company asserts that its arrangement with NGI USA does not result in a violation of the Department's affiliate regulations (Company Brief at 65).

Finally, the Company disputes the Attorney General's claim that the business interruption policy constitutes "double recovery" of expenses (Company Brief at 66). In this regard, the Company argues that it would never make an insurance claim, nor would it be lawfully eligible for a claim of lost revenues, where the revenues were recovered through the revenue-decoupling mechanism (Company Brief at 66). Further, the Company contends that the Attorney General ignores the other coverage protections that are not driven by reductions in consumption and would not be recovered through the ratemaking process, primarily relating to continuing operations, contractual agreements and other items (Company Brief at 66, citing RR-AG-30, Att.). National Grid claims that it would be unreasonable and imprudent for the Company to forego business interruption coverage and that the ultimate cost of not carrying such insurance would fall on the customers (Company Brief at 66-67). For these reasons, the Company concludes there is no unwarranted cost or "double recovery" of revenue loss that occurs due to the availability of this policy (Company Brief at 67).

3. Analysis and Findings

a. Introduction

Under current ratemaking practice, the Department will include the most current cost of liability and property insurance, based on a signed agreement, as a reasonable cost of service. D.P.U. 10-55, at 276; D.P.U. 09-30, at 218; D.T.E. 02-24/25, at 161; North Attleboro Gas Company, D.P.U. 86-86, at 8-10 (1986); D.P.U. 84-94, at 44. The Department requires companies to provide evidence that they undertook reasonable measures to control property and liability insurance expenses. D.P.U. 08-35, at 119-120; D.T.E. 05-27, at 133-134; D.T.E. 03-40, at 184-185.

b. Cost Containment

Concerning National Grid's efforts to control costs associated with its NGI USA policies, the cases relied on by the Attorney General each involve proposed increases to test year insurance expense. D.P.U. 10-55, at 274-276 (requesting a post-test year increase of $376,488); D.P.U. 08-35, at 119-120 (requesting a post-test year increase $225,993); D.T.E. 05-27, at 132 (requesting a post-test year increase of $94,997, subsequently adjusted); D.T.E. 03-40, at 184-185 (requesting a post-test year increase of $607,287). In this case, the Company is seeking to decrease test year insurance expense by $1,033,234 (Exhs. NG-RRP-1, at 33; NG-RRP-2, at 17 (Rev. 3)). In this instance, the Department finds that the reduced premium billings from NGI USA and the Company's proposed reduction in the cost of service constitute sufficient evidence that the Company has controlled its insurance costs.[161]

As stated above, the Department considers measures by utilities to control property and liability insurance expense to be important in reviewing a company's cost of service. The Department's review of these cost control measures typically focused on instances of increased costs. Efforts by utilities to manage their insurance coverage with a consideration of costs also are important where premium costs are decreased. Thus, the Department requires companies in their base rate cases to identify reasonable measures to control property and liability insurance expenses, whether the insurance costs are increasing or decreasing.

---

161 While the Company's insurance expense has increased since the 2008 test year used in its previous rate case, we are unable to conclude that an increase in costs over an eight-year period is in itself evidence of a failure in cost-containment efforts.

c. Affiliate Transactions

The Attorney General argues that, even if the Department finds that the Company demonstrates cost-control measures associated with its NGI USA insurance policies, the Company's premium payments to NGI USA should not be allowed as part of its cost of service because they violate the Department's affiliate transaction regulations (Attorney General Brief at 31). Specifically, the Attorney General claims that the Company has not demonstrated that its payments to NGI USA are not excessive, and that there is no evidence that the amount NGI USA charges the Company for premiums are at or below market price (Attorney General Brief at 31).

NGI USA provides insurance coverage to National Grid as a "captive" or affiliate insurance company. The Department previously has found that procurement of insurance coverage through "captive" or affiliated insurance companies can be effective to reduce costs to customers. Captive insurance companies are known to be a cost-efficient alternative to risk transfer because the arrangement leverages the use of reinsurance markets and puts the "captive" insurance carriers in competition against markets that underwrite in the conventional direct insurance marketplace, thereby driving down the cost below which would be available by solely using conventional direct writing insurers. Bay State Gas Company, D.P.U. 13-75, at 181, 193, 194; see also Boston Edison Company, D.P.U. 376, at 13-14 (1981).

We affirm our findings regarding the benefits of the procurement of insurance coverage through "captive" or affiliate insurance companies. Given this precedent and the absence of evidence in this case of excessive or above-market premiums paid by the Company to NGI USA, the Department allows these costs and finds no grounds to assert a violation of the Department's affiliate transaction rules. Further, within a substantial range, business decisions are matters for

a company's determination. Fitchburg Gas and Electric Light Company, 375 Mass. 571, 578 (1978). However, when a company's determination is challenged, it must come forward with evidence to support its decisions and show that they are not inconsistent with valid policies of the Department. 375 Mass. at 578-579. Regarding the use of affiliate insurance companies, the Department has not established any specific filing requirements or analysis for companies to support the associated insurance expenses. Also, the Attorney General's challenge was on brief, eliminating the opportunity for the Company to present evidence in support of its procurement of insurance coverage from NGI USA. See D.P.U. 95-118, at 143; The Berkshire Gas Company, D.P.U. 92-210, at 102 (1993); Commonwealth Gas Company, D.P.U. 87-122-B at 54 (1989). Based on the circumstances of this case, we rely on the business judgment of National Grid in procuring insurance coverage from NGI USA, and we do not reduce the Company's cost of service based on the challenge of the Attorney General.

Although the Department continues to recognize the benefits of jurisdictional companies' procuring insurance through affiliate insurance companies, we find that our review of this type of arrangement would be served by a company's production of specific information. Accordingly, where a company procures insurance coverage from an affiliate insurance company, the jurisdictional company shall in its base rate case provide the following information: (1) whether comparative studies are performed to identify the relationship between affiliate premiums and premiums available in commercial markets; (2) whether such a comparative analysis was performed during the test year; (3) whether there is documentation that the affiliate insurance company's premiums are lower than premiums to the company for comparable coverage in the

commercial insurance markets; and (4) whether affiliate insurance providers are able to provide broader coverage to the company than what is commercially available in the marketplace.

d. Business Interruption Policy

Finally, the Attorney General challenges the need for the Company's business interruption policy, because of the potential for "double recovery" through costs both recovered under the policy and recovered through the RDM (Attorney General Brief at 54). On a basic level, business interruption insurance covers the loss of income that a business suffers after a disaster. Under the coverage provided by NGI USA, National Grid is indemnified for "actual loss sustained" resulting directly from interruption of or interference with National Grid's operations, activities, or services due to an "occurrence"[162] affecting National Grid's property (RR-AG-30, Att. at 9, 27, 49). Actual loss sustained includes reduction in income, continuing obligations payable following the interruption or interference, the amount of a loss under a contractual agreement payable as a result of the interruption or interference, and extra expense incurred to continue usual operations, which are over and above normal costs to conduct operations (RR-AG-30, Att. at 49-51).

Based on our review of the record, we find that the Company's business interruption insurance coverage would not lead to double recovery. As National Grid represented, the Company could not make a claim for lost under its business interruption policy where the

[162] An occurrence includes such events as windstorm, tornadoes, hail, rainstorm, electrical storm, cyclones, hurricanes, similar storms and systems of winds of a violent and destructive nature, earthquake shock, volcanic eruption, tsunami, seaquake, tidal wave, sub-sea mud slide (RR-AG-30, Att. at 10).

revenues were recovered through its RDM.[163] In addition, the Company's policy covers more than a reduction in income, such as obligations payable following the interruption or interference, losses under contractual agreements that are payable as a result of the interruption or interference, and expenses incurred over and above the usual costs of operations (RR-AG-30, Att. at 49-51). These losses are not associated with customers' usage or distribution revenues.

Also, as stated above regarding National Grid's procurement of insurance coverage from NGI USA, with the absence of evidence in this case of double recovery or unreasonable insurance costs, the Department relies on the business judgment of National Grid in procuring business interruption insurance. Therefore, the Department does not reduce the Company's cost of service for its costs for business interruption insurance.

e. Conclusion

Based on the foregoing, the Department finds that the Company's insurance expense premiums are based on actual policy rates, and are thus known and measurable. Therefore, the Department approves the Company's proposed adjustments. Accordingly, the Department accepts the Company's proposal to reduce its test year insurance expense by $1,033,234.

I. Rate Case Expense

1. Introduction

Initially, the Company estimated it would incur $1,512,785 in rate case expense (Exhs. NG-RPP-1, at 35; NG-RRP-2, at 22). Based on its final invoices and projected costs to

---

163 Under the Company's RDM, the Department establishes the Company's target annual distribution revenues in base rate case. On an annual basis, the Company reconciles its actual distribution revenues to the target revenues, and collects from customers an amount less that its target revenues (or returns to customers an amount greater that its target revenues) (Revenue Decoupling Mechanism Provision, M.D.P.U. No. 1289).

complete the compliance filing, the Company proposes a final rate case expense of $1,245,607 (Exh. NG-RRP-2, at 22 (Rev. 3)). National Grid's proposed rate case expenses include costs related to legal support services, miscellaneous expenses associated with preparing the rate case (e.g. compact disc and flash drive preparation, bound copies of filings, tabs, couriers, etc.), and expert services related to the following: (1) marginal distribution cost study; (2) depreciation study; and (3) cost of capital/ROE (Exhs. NG-RRP-2, at 22 (Rev. 3); DPU-7-1; DPU-7-14 (Supp. 2); RR-AG-32, Atts.).

National Grid proposes to normalize its rate case expense over a period of five years (Exhs. NG-RRP-1 at 35; DPU-7-20). The Company argues that this normalization period is consistent with the provisions of § 94, which requires electric companies to file general rate cases no less frequently than at five-year intervals (Exhs. NG-RRP-1, at 35; DPU-7-20). Normalizing the Company's proposed rate case expense of $1,245,607 over five years produces an annual expense of $249,121 (Exh. NG-RRP-2, at 26 (Rev. 3)).

2. Positions of the Parties

a. Attorney General

The Attorney General argues that the Company has not met its burden to justify full recovery of rate case expense in this proceeding (Attorney General Brief at 60). Specifically, the Attorney General contends that the Company failed to limit the costs associated with outside witnesses, particularly in the areas of cost of capital/ROE and legal services, and failed to offer a proposal for shareholders to bear a portion of rate case expenses (Attorney General Brief at 61). According to the Attorney General, a request for proposals ("RFP") process is insufficient to adequately control rate case expense (Attorney General Brief at 61).

With respect to the retention of outside witnesses, the Attorney General argues that because National Grid is a large company, it should have assigned more internal company employees to sponsor testimony and more internal counsel to perform legal work on the rate case (Attorney General Brief at 61). Thus, the Attorney General asserts that the Department should exercise its discretion and reduce recovery of expenses associated with the Company's cost of capital witness and outside legal services by 50 percent (Attorney General Brief at 61).

Alternatively, the Attorney General recommends that shareholders should be assigned at least 30 percent of the cost of outside legal services (Attorney General Brief at 62; Attorney General Reply Brief at 34). In this regard, the Attorney General notes that the Company, after an RFP process, retained a legal service provider whose proposal was 30 percent higher than the next lowest bidder (Attorney General Brief at 62-63; Attorney General Reply Brief at 34). Further, she contends that the next highest bidder had substantial utility experience and prior experience practicing before the Department (Attorney General Brief at 62; Attorney General Reply Brief at 34). The Attorney General asserts that because the Company failed to show that the next highest bidder could not perform the work necessary to litigate this rate case shareholders should be responsible for 30 percent of the costs associated with the retained legal service provider (Attorney General Brief at 62-63; Attorney General Reply Brief at 34).

Finally, the Attorney General rejects any notion that predicting actual costs is difficult or that the bids provided by the selected legal service provider and the next highest bidder were difficult to compare because the providers used different "inputs and assumptions" in developing their respective bids (Attorney General Reply Brief at 34-35). According to the Attorney General, National Grid should have provided adequate inputs and assumptions for the bidding

firms to use in their estimates so that the Company could have an objective benchmark of comparison (Attorney General Reply Brief at 35). Further, she asserts that if the price structures and fees of these bids are truly incomparable because of widely different inputs and assumptions, then the Company did not conduct a "fair, open, and transparent" competitive bidding process (Attorney General Reply Brief at 35).

b. Company

The Company argues that it contained rate case expenses in several ways. First, the Company contends that it used internal personnel and resources whenever practicable given internal expertise and existing workload requirements (Company Brief at 80, 82). Second, National Grid claims that for certain non-routine work that required the use of outside consultants with specialized expertise or experience, the Company engaged in an RFP process to select the most qualified and cost-effective service provider (Company Brief at 80, 84-89).

With respect to the RFP process, the Company argues that it used an internal review committee to evaluate bids based on price and non-price factors, including vendor qualifications; relevant experience; capabilities and personnel to support the rate petition; proposed fee structure; and other factors (Company Brief at 79, citing Exh. DPU-7-2).[164] The Company concedes that it did not select the lower cost bidder for its depreciation analysis, cost of capital/ROE analysis, and legal services provider (Company Brief at 80, citing Exh. DPU-7-3).

---

164 In particular, the Company notes that each outside service provider executed a Project Statement, which contained a detailed scope of work with a "not-to-exceed" cost amount (Company Brief at 82, citing Exhs. DPU-7-15; DPU-7-16). According to the Company, any potential increase in costs would be reviewed, subject to negotiation and documented through a project change request (Company Brief at 82). Further, the Company notes that its engagement with outside service providers included written policies designed to control travel, lodging, meals and other similar expenses, and prohibited markups on expenses or direct costs (Company Brief at 82).

However, the Company argues that it gave proper consideration to price and non-price factors in selecting reasonably priced service providers who possessed expertise and experience, knowledge of Department ratemaking precedent and practice, familiarity with the Company's operations, and a comprehensive understanding of the tasks to be performed (Company Brief at 88, citing D.P.U. 13-75, at 241).

More specifically, National Grid justifies its retention of its depreciation-related service provider based on efficiencies gained through a past relationship and the provider's knowledge of the Company's operations (Company Brief at 80, citing Exh. DPU-7-3). With respect to its cost of capital/ROE service provider, the Company contends that a strict cost comparison among bids would inappropriately favor a bidder who underestimated the level of time and effort for litigation in this case (Company Brief at 80, citing Exh. DPU-7-3). Thus, the Company claims that it reviewed average hourly labor rates for different bidders and compared them on a normalized level of time, which resulted in the selected service provider having the lowest effective bid (Company Brief at 80, citing Exh. DPU-7-3).

Regarding legal counsel, the Company argues that it selected a legal services provider that has extensive rate case experience in Massachusetts, is thoroughly familiar with the Department's practices for rate case management, and offered a fee structure that was competitive with other RFP respondents (Company Brief at 80-81, citing Exh. DPU-7-3). On this last point, National Grid argues that when analyzed on a standard hourly fee basis, the selected service provider offered hourly rates that were significantly lower than other bidders, and its estimate of labor hours was more consistent with the actual number of hours needed to fully support the rate case (Company Brief at 85, citing Exh. DPU-7-3, Att.). National Grid

rejects the notion that choosing a legal service provider based solely on estimated costs is appropriate because each bidder uses its own inputs and calculus in developing bids, and total number of hours actually required to litigate the case is largely a function of the number of discovery requests received and the number and nature of the issues raised by intervenors, factors over which the Company has no control (Company Brief at 86). Thus, the Company asserts that a "hard cap" for recovery of rate case expense based on cost estimates is punitive (Company Brief at 86). Further, National Grid contends that there is no evidence to suggest that selecting a different legal service provider would have resulted in a lower actual costs, particularly since the actual hours that ultimately are spent litigating the case are unknown at the time that the RFP responses are submitted (Company Brief at 87).

Finally, National Grid argues that it properly considered shareholder responsibility for a portion of rate case expense (Company Brief at 82-83, citing Exh. DPU-7-20). In this regard, the Company contends that shareholders already bear a portion of rate case expense because: (1) the Department's ratemaking treatment of rate case expense does not guarantee dollar-for-dollar recovery; (2) if the Company files another base rate case before the expiration of the normalization period attributable to the rate case expense in this proceeding, the Company will not fully recover all of such rate expense; (3) to the extent rate case expense is not fully recovered, the Company's earned rate of return will be negatively impacted, which has a direct impact on shareholders; and (4) even if the normalization period matches the period between rate

cases exactly, the Company and its shareholders are not reimbursed for actual carrying costs (Company Brief at 83, citing Exhs. DPU-7-20; AG-8-19).[165]

Based on these considerations, the Company asserts that there is no basis for the Department to reduce the Company's rate case expense as recommended by the Attorney General (Company Brief at 85, 89).

3. Analysis and Findings

a. Introduction

The Department allows recovery for rate case expense based on two important considerations. First, the Department permits recovery of rate case expense that has been actually incurred, and, thus, is considered known and measurable. D.P.U. 10-114, at 219-220; D.P.U. 07-71, at 99; D.T.E. 05-27, at 157; D.T.E. 98-51, at 61-62. Second, such expenses must be reasonable, appropriate, and prudently incurred. D.P.U. 10-114, at 220; D.P.U. 09-30, at 227.

The overall level of rate case expense among utilities has been, and remains, a matter of concern for the Department. D.P.U. 10-114, at 241-242; D.P.U. 07-71, at 99; D.T.E. 03-40, at 147; D.T.E. 02-24/25, at 192; D.P.U. 93-60, at 145. Rate case expense, like any other expenditure, is an area in which companies must seek to contain costs. D.P.U. 07-71, at 99; D.T.E. 03-40, at 147-148; D.T.E. 02-24/25, at 192. All companies are on notice that the risk of non-recovery of rate case expense looms should they fail to sustain their burden to demonstrate cost containment associated with their selection and retention of outside service providers. D.P.U. 10-114, at 220; D.P.U. 09-39, at 289-293; D.P.U. 09-30, at 238-239; D.T.E. 03-40,

---

165 The Company also argues that, in this particular case, shareholders are bearing the costs related to the PwC Report, which was discussed above in Section III (Company Brief at 83).

at 152-154. Further, the Department has found that rate case expenses will not be allowed in cost of service where such expenses are disproportionate to the relief being sought. D.P.U. 10-114, at 220; D.P.U. 10-55, at 323; see also D.P.U. 93-223-B at 16-17.

b. Competitive Bidding

i. Introduction

The Department has consistently emphasized the importance of competitive bidding for outside services in a petitioner's overall strategy to contain rate case expense. See, e.g., D.P.U. 10-114, at 221; D.P.U. 09-30, at 227; D.T.E. 05-27, at 158-159; D.T.E. 03-40, at 148; D.T.E. 02-24/25, at 192. If a petitioner elects to secure outside services for rate case expense, it must engage in a competitive bidding process for these services. D.P.U. 10-114 at 221; D.P.U. 09-30, at 227; D.P.U. 07-71, at 99-100, 101; D.T.E. 03-40, at 153. In all but the most unusual of circumstances, it is reasonable to expect that a company can comply with the competitive bidding requirement. D.P.U. 10-55, at 342. The Department fully expects that competitive bidding for outside rate case services, including legal services, will be the norm. D.P.U. 10-55, at 342.

The requirement of having to submit a competitive bid in a structured and organized process serves several important purposes. First, the competitive bidding and qualification process provides an essential, objective benchmark for the reasonableness of the cost of the services sought. D.P.U. 10-114, at 221; D.P.U. 09-30, at 228-229; D.P.U. 07-71, at 101; D.T.E. 03-40, at 152. Second, it keeps even a consultant with a stellar past performance from taking the relationship with a company for granted. D.P.U. 10-114, at 221; D.P.U. 07-71, at 101;

D.T.E. 03-40, at 152. Finally, a competitive solicitation process serves as a means of cost containment for a company. D.T.E. 03-40, at 152-153.

The competitive bidding process must be structured and objective, and based on an RFP process that is fair, open, and transparent. D.P.U. 10-114, at 221, 224; D.P.U. 09-30, at 227-228; D.P.U. 07-71, at 99-100; D.T.E. 03-40, at 153. The timing of the RFP process should be appropriate to allow for a suitable field of potential service providers to provide complete bids, and provide the company with sufficient time to evaluate the bids. D.P.U. 10-114, at 221; D.P.U. 10-55, at 342-343. Further, the RFP issued to solicit service providers must clearly identify the scope of work to be performed and the criteria for evaluation. D.P.U. 10-114, at 221-222; D.P.U. 10-55, at 343.

The Department does not seek to substitute its judgment for that of a petitioner in determining which service provider may be best suited to serve the petitioner's interests, and obtaining competitive bids does not mean that a company must necessarily retain the services of the lowest bidder regardless of its qualifications. D.P.U. 10-114, at 222; D.T.E. 03-40, at 153. The need to contain rate case expense, however, should be accorded a high priority in the review of bids received for rate case work. D.P.U. 10-114, at 222; D.T.E. 03-40, at 153. In seeking recovery of rate case expenses, companies must provide an adequate justification and showing, with contemporaneous documentation, that their choice of outside services is both reasonable and cost effective. D.P.U. 10-114, at 222; D.T.E. 03-40, at 153.

ii. National Grid's Request for Proposal Process

The Company conducted a competitive bidding process to retain outside consultants associated with its: (1) marginal distribution cost study; (2) depreciation analysis; (3) cost of

capital/ROE analysis; and (4) legal services (Exhs. DPU-7-1; DPU-7-6; AG-8-14). The Company bears the burden to demonstrate that its choices of outside consultants and legal service provider are reasonable and cost effective. D.P.U. 10-55, at 343; D.P.U. 09-30, at 230-231; D.T.E. 03-40, at 153.

As an initial matter, we note that the Company evaluated the capabilities of its internal staff, including access to data, expertise, and experience, in determining whether to retain the selected outside service providers (Exh. DPU-7-5). We find that the Company's decision to retain outside consultants, rather than using internal personnel, to perform these tasks is reasonable given the complexity of the issues and the overall scope of this rate case.

The Company received at least three bids in each of the four categories for which it sought outside consultant services (Exhs. DPU-7-1, at 2; DPU-7-2). The record demonstrates that bids were internally reviewed through an analysis of a number of factors including strength of proposals, familiarity with the Company's operations, industry experience, cost, approach, and project management (Exh. DPU-7-2 & Atts.).

The Department has reviewed the bids associated with the four categories of rate case expense for which the Company conducted a competitive solicitation, as well as the scoring and evaluation material submitted by the Company and other evidence regarding the selection process, and we have considered the related arguments of the parties (Exhs. DPU-7-1 & Atts.; DPU-7-2 & Atts.; DPU-7-3; DPU-7-5). We are satisfied that the selection process was appropriate and that the bidders were scored and evaluated in a reasonable and equitable manner. We decline to substitute our judgment for that of the Company in evaluating each bidder against each criterion. Further, we find that National Grid gave appropriate weight to the billing

structures of the various bidders and any differences among them, and considered other important price factors, such as price caps and other cost-containment features, and important non-price factors as well, such as familiarity with Department precedent and the Company's operations (Exhs. DPU-7-1, Atts.; DPU-7-2) & Atts.; DPU-7-3; DPU-7-5; DPU-7-15; DPU-7-16; DPU-7-17).

The Company concedes that it did not select the lowest cost bidder for its depreciation consultant, cost of capital/ROE witness, or legal services provider (Company Brief at 80, citing Exh. DPU-7-3). The Attorney General challenges the retention of National Grid's cost of capital/ROE consultant and legal services provider because of this purported deficiency (Attorney General Brief at 61-62; Attorney General Reply Brief at 34).

The Department does not require a company to choose the lowest bidder, provided that the company adequately justifies its decision to do so. See D.P.U. 10-70 at 153; D.T.E. 03-40 at 153. As an initial matter, we note that although all three selected providers were not the lowest bidders, we conclude that the amount of the respective bids was not unreasonable or disproportionate to the overall scope of work provided by these providers (see Exhs. DPU-7-1, Atts. 2(c); 3(e), 4(b); DPU-7-14, Atts. 2, 3 (Supp. 2)).

With respect to the depreciation analysis, the record shows that the selected provider had performed similar work for the Company in the past and compiled historical asset data necessary to perform services in this case (Exhs. DPU-7-3, at 1; DPU-7-5, at 1-2). As such, it is reasonable to expect that the foundational process required for a new provider would be time consuming and require costs that the selected service provider did not incur (Exh. DPU-7-3, at 1). Based on these considerations, we conclude that it is unlikely that an alternative service provider could

duplicate these specialized services for a lower cost. Therefore, we find that the Company's selection of its depreciation-related consultant was reasonable, prudent and appropriate.

With respect to the cost of capital/ROE consultant, the record shows that the bids detailed different estimates of anticipated effort for the adjudicatory phase of the proceeding with no caps on cost (Exhs. DPU-7-1, Atts. 3(a) through (e); DPU-7-2, Att. 3; DPU-7-3, at 1). As a result, the Company performed a more detailed analysis of the bids and cost comparison (Exhs. DPU-7-2, Att. 3; DPU-7-3, at 2). The result of this analysis shows that the selected bidder compares favorably with the remaining bidders in terms of cost (Exh. DPU-7-2, Att. 3; DPU-7-3, at 2). In addition, the Company considered level of expertise, experience and litigation support that the selected provider would contribute to the proceeding, as well as the prior relationship and familiarity with the Company's operations (Exhs. DPU-7-2, Att. 3; DPU-7-3, at 2). In light of these factors, we find that the Company's selection of its cost of capital/ROE consultant was reasonable, prudent and appropriate.

Finally, with respect to the legal services provider, we find that National Grid gave appropriate weight to the billing structures of the various bidders and any differences among them, and considered other price factors, such as price caps, estimated hours of labor, and cost-containment features (Exhs. DPU-7-2 & Att. 4; DPU-7-3, at 2 & Att.). We are not persuaded by the Attorney General's suggestion that a comparison of cost estimates should have been the driving factor in the Company's decision. Rather, we conclude that National Grid appropriately considered other important factors in selecting its legal service provider, including the selected provider's rate case experience, knowledge of the electric industry and Department precedent, previous close working relationship with the Company, and familiarity with Company

operations (Exhs. DPU-7-2 & Att. 4; DPU-7-3, at 2 & Att.). Further, as noted above, the cost estimate provided was not unreasonable or disproportionate to the overall scope of work provided by this provider, particularly in light of the complexity of the case and the number of issues presented (see Exhs. DPU-7-1, Att. 4(b); DPU-7-14, Atts. 2, 3 (Supp. 2)). Based on these considerations, we find that the Company's selection of its legal service provider was reasonable, prudent and appropriate.

For all of the foregoing reasons, we conclude that the Company conducted a fair, open and transparent RFP process in selecting all of its outside consultants and legal services provider. Further, we find that the Company provided a sufficient justification for not selecting the lowest bidder for its depreciation analysis, cost of capital/ROE consultant, and legal services provider. Accordingly, we decline to adopt the Attorney General's recommendations to disallow a portion of rate case expense recovery on the basis that the Company failed to control costs by not selecting the lowest bidder.

c. Various Rate Case Expenses

The Department has directed companies to provide all invoices for outside rate case services that detail the number of hours billed, the billing rate, and the specific nature of the services performed. D.P.U. 10-114, at 235-236; D.T.E. 03-40, at 157; D.T.E. 02-24/25, at 193-194. The Department has reviewed the invoices provided by the Company and finds that such invoices are properly itemized (Exh. DPU-7-14, Att. 1 (Supp. 2)). Further, we find that the total costs associated with each service provider were reasonable, appropriate, proportionate to the overall scope of work provided, and prudently incurred (Exh. DPU-7-14, Att. 1 (Supp. 2)).

In addition, the Company seeks to include proposed miscellaneous costs of $133,603.64 (Exh. DPU-7-14, Att. 3 (Supp. 2)). These miscellaneous costs include costs related to case production expenses (Exh. DPU-7-14, Att. 3 (Supp. 2)). Neither the Attorney General nor any other party challenges the inclusion of these costs in rates. Nevertheless, the Company bears the burden of demonstrating that these costs are reasonable and appropriate and were prudently incurred. D.P.U. 10-114, at 220, 224-225; D.P.U. 95-118, at 115-119.

The Department has reviewed the invoices provided by the Company for these miscellaneous costs and finds that such invoices are properly itemized (Exh. DPU-7-14, Att. 1 (Supp. 2)). Further, given the nature and scope of this complex proceeding, the Department finds that these miscellaneous costs are reasonable and appropriate and were prudently incurred (Exh. DPU-7-14, Att. 1 (Supp. 2)).

d. Fees for Rate Case Completion

The Company has included $30,000 in its proposed rate case expense as a compliance phase flat fee for legal services (Exhs. DPU-7-14, Att. 2 (Supp. 2)). This amount is included in the proposed final rate case expense amount of $1,245,607 (Exhs. DPU-7-14, Att. 2 (Supp. 2); DPU-7-14, Att. 3, at 1 (Supp. 2)).

The Department's long-standing precedent allows only known and measurable changes to test year expenses to be included as adjustments to cost of service. D.P.U. 10-114, at 237; D.T.E. 03-40, at 161; D.T.E. 02-24/25 at 195; D.T.E. 98-51 at 61-62. Proposed adjustments based on projects or estimates are not known and measurable, and recovery of those expenses is not allowed. D.P.U. 10-114, at 237; D.T.E. 03-40, at 161-162; D.T.E. 02-24/25, at 196; D.T.E. 01-56, at 75. The Department does not preclude recovery of fixed fees for completion of

compliance filing work in a rate case but the reasonableness of the fixed fees must be supported by sufficient evidence. D.P.U. 10-114, at 237; D.T.E. 03-40, at 162; D.T.E. 02-24/25, at 196. Given an adequate showing of the reasonableness of fixed contracts for services to complete a case after the record closes and briefs are filed, a company may qualify to recover such expenses. D.P.U. 10-114, at 237; D.T.E. 03-40, at 162; D.T.E. 02-24/25, at 196. Documented and itemized proof is a prerequisite for recovery. D.P.U. 10-114, at 237; D.T.E. 03-40, at 162; D.T.E. 02-24/25, at 196. Assuming that the fixed fee agreement is properly supported, the fact that the consultants and the company have agreed to complete the service for a fixed fee gives the Department a level of confidence in the reasonableness of the level of effort and consequent expenditure to carry the case through to a compliance filing. D.P.U. 10-114, at 237; D.P.U. 10-55, at 338.

The Department has reviewed the Company's basis for its proposed fixed fee and has determined that this fixed fee is reasonable and supported by sufficient evidence (Exh. DPU-7-1, Att. 4(b)). Accordingly, we allow the Company to recover these costs as part of its rate case expenses.

e. Normalization of Rate Case Expense

The proper method to calculate a rate case expense adjustment is to determine the rate case expense, normalize the experience of an appropriate period, and then compare it to the test year level to determine the adjustment. D.P.U. 10-55, at 338-339; D.T.E. 05-27, at 163; D.T.E. 03-40, at 163; D.T.E. 02-24/25, at 197; D.T.E. 98-51, at 62; D.P.U. 95-40, at 58. The Department's practice is to normalize rate case expense so that a representative annual amount is included in the cost of service. D.P.U. 10-55, at 339; D.T.E. 05-27, at 163; D.T.E. 03-40, at 163;

D.T.E. 02-24/25, at 191; D.T.E. 01-56, at 77; D.T.E. 98-51, at 53; D.P.U. 96-50 (Phase I) at 77; D.P.U. 1490, at 33. Normalization is not intended to ensure dollar-for-dollar recovery of a particular expense; rather, it is intended to include in the cost of service a representative annual level of rate case expense. D.P.U. 10-55, at 339; D.T.E. 05-27, at 163; D.T.E. 03-40, at 163-164; D.T.E. 02-24/25, at 191; D.P.U. 96-50 (Phase I) at 77.

Typically, the Department determines the appropriate period for recovery of rate case expense by taking the average of the intervals between the filing dates of a company's last four rate cases, including the present case, rounded to the nearest whole number. D.P.U. 10-55, at 339; D.T.E. 05-27, at 163 n.105; D.T.E. 03-40, at 164 n. 77; D.T.E. 02-24/25, at 191. If the resulting normalization period is deemed unreasonable or if the company has an inadequate rate case filing history, the Department will determine the appropriate normalization period based on the particular facts of the case. South Egremont Water Company, D.P.U. 86-149, at 2-3 (1986).

The Company calculates a normalization period of six years, and states that its calculation is consistent with Department precedent (Exh. AG-8-20, Att.). However, the Company proposes a rate case expense normalization period of five years based on the directives set forth in § 94 that electric companies shall file general rate cases no less frequently than at five-year intervals (Exh. DPU-7-20). Neither the Attorney General nor any other party challenges the Company's proposal to normalize rate case expense over the five year period.

As an initial matter, we note that, under Department precedent, the Company incorrectly calculated its normalization period of six years (see Exh. AG-8-20, Att.). The correct application

of Department precedent would result in a normalization period of eight years.[166] However, we find that the § 94 requirement for electric companies to file rate cases every five years effectively caps the normalization period at five years. Therefore, in instances where a normalization period calculated pursuant to Department precedent results in a period greater than five years, such as in the instant case, we will instead impose a five-year normalization period.[167] Accordingly, the Department approves the Company's normalization period of five years.

f. Requirement to Control Rate Case Expense

The Attorney General argues that the Department should reduce a portion of National Grid's recovery of rate case expense because the Company failed to adequately control costs (Attorney General Brief at 62; Attorney General Reply Brief at 34). Based on our findings above, we decline to adopt the Attorney General's recommendations on this basis. Further, the Company has shown that it considered the issue of cost-sharing rate case expense between ratepayers and shareholders, and we find that the Company has provided sufficient justification for not proposing that shareholders bear a portion of the rate case expense incurred in this proceeding (Exhs. DPU-7-20; AG-8-19).

Since the establishment of the requirement for companies to propose a rate case expense cost-sharing arrangement, the Department has had an opportunity to evaluate companies'

---

166 Based on the Company's filing dates for the last four rate cases, between D.P.U. 15-155 and D.P.U. 09-39, the interval is 5.5 years; between D.P.U. 09-39 and D.P.U. 95-40, the interval is 14.16 years; and between D.P.U. 95-40 and D.P.U. 92-78, the interval is 3 years. The sum of these intervals, divided by three and rounded to the nearest whole number results in a normalization period of eight years: 22.66 years/3 = 7.55 (rounded to eight).

167 Where a normalization period calculated pursuant to Department precedent is less than five years, this lesser period shall apply.

responses. See, e.g., D.P.U. 14-150, at 224-227; D.P.U. 13-90, at 177-181; D.P.U. 13-75, at 245-246; D.P.U. 12-25, at 204-207. In each instance, we have accepted a company's decision not to propose a specific cost-sharing arrangement. As noted, we accept National Grid's explanation in this case as well.

We recognize that the Department's ability to disallow a company's recovery of rate case expense for failure to adhere to our strict requirements concerning competitive bidding, or for failure to pursue other reasonable cost-containment measures, or for failure to properly itemize rate case expense invoices, provides a sufficient incentive for companies to control rate case expense. Further, we recognize that the nature of normalized rate case expense recovery (i.e., not dollar-for-dollar recovery) is such that shareholders already absorb a portion of rate case expense, even in light of the § 94 requirement for electric companies to file rate cases every five years (see Exh. DPU-7-20).

Based on these considerations, we no longer will require companies to file a specific proposal for shareholders to bear a portion of rate case expense. However, we cannot overemphasize that this decision in no way minimizes our focus on the importance of cost containment. We will continue to closely scrutinize the RFP process to ensure that it is rigorous and demonstrates that outside service providers chosen are reasonable and cost effective. See D.P.U. 14-150, at 226-227; D.P.U. 13-90, at 177-178. In addition to a thorough RFP process, the Department expects cost containment provisions to be included in rate case expense and companies to be aggressive in their cost control measures. D.P.U. 14-150, at 226-227; D.P.U. 13-90, at 177-178. The Department will continue to exercise its discretion to disallow recovery of rate case expense where a company fails to adhere to these requirements, as well as

in instances where the amount of overall rate case expense appears to be excessive or disproportionate to the work performed.

4. Conclusion

The Company originally proposed an annual rate case expense of $302,557 based on an estimated total rate case expense of $1,512,785 (Exhs. NG-RPP-1, at 35; NG-RRP-2, at 22). The Company subsequently proposed to reduce the annual level of recovery by $53,436 to $249,121 based on a revised total rate case expense of $1,245,607 (Exh. NG-RRP-2, at 22 (Rev. 3)). Based on our findings above, the Department accepts a total rate case expense of $1,245,607. We also accept a normalization period of five years, which results in an annual level of rate case expense of $249,121. Accordingly, we need not make any further adjustments to the Company's rate case expense.

J. Amortization of Hardship Protected Accounts

1. Introduction

Hardship protected accounts are residential accounts that are protected from shut-off by the utility for nonpayment. 220 C.M.R. §§ 25.03, 25.05. To qualify for protected status from service termination, customers must demonstrate that they have a financial hardship and meet certain other requirements, such as a household member suffering from a serious illness or residing with a child under twelve months of age. See 220 C.M.R. §§ 25.03(1), 25.03(3), 25.05(3).[168] All qualified accounts are protected from shut-off for nonpayment year round,

[168] An account qualifies for protected status where the customer certifies that the customer has a financial hardship, and: (1) a person residing in the household is seriously ill; (2) a child under the age of twelve months resides in the household; (3) the customer takes heating service between the period November 15th and March 15th, and the service has not been shut off for nonpayment prior to November 15th; or (4) all adults residing in the

except for heating customers with a financial hardship. These heating accounts are protected from shut-off for nonpayment only during the winter moratorium period, November 15th through March 15th. 220 C.M.R. §§ 25.03(1)(a)3, 25.03(1)(b).

The Company states that because hardship protected accounts cannot be disconnected, the accounts remain active and continue to receive service despite slow or non-payment of amounts due (Exh. NG-RRP-1, at 49). Further, the Company notes that if an active hardship protected customer's account balance is in arrears, the Company is prohibited by the Department's regulations from collecting the overdue balance (Exh. NG-RRP-1, at 51). As a result, the active hardship protected customer accounts receivable balances in arrears increase over time (Exh. NG-RRP-1, at 51).

According to the Company, its hardship protected account receivable balance over 360 days[169] was $40,607,637 as of June 30, 2015, the end of the test year (Exhs. NG-RRP-1, at 36, 49-50; NG-RRP-2, at 24). The Company updated its active hardship protected balance over 360 days throughout the proceedings and reported a balance of $52,027,414, as of July 30, 2016 (Exh. WP-NG-RRP-13 (Rev. 3)). The Company proposes to recover the $52,027,414 over a five-year period, which results in an annual amortization expense of $10,405,483 (Exhs. NG-RRP-2, at 24 (Rev. 3); NG-RRP-8, at 2).

---

household are age 65 or older and a minor resides in the household. 220 C.M.R. § 25.03. Customers who are unable to pay an overdue bill and meet the income eligibility requirements for the Federal Low-Income Home Energy Assistance Program are deemed to have a financial hardship. 220 C.M.R. § 25.01(2).

169 That is, hardship protected account receivables overdue for payment more than 360 days.

2. Positions of the Parties

a. Attorney General

The Attorney General argues that the Department should reject National Grid's proposal to recover its hardship account receivable balance over 360 days because: (1) approving the recovery of these balances at this point would effectively write-off the accounts as bad debt before such determination can be made; and (2) eventually the Company will recover these balances either from the hardship customers themselves when they pay their bills or from the other customers through the bad debt expense and cash working capital allowance included in the cost of service (Attorney General Brief at 56). Further, the Attorney General contends that if the Company recovers these balances through rates, it will have no incentive to seek recovery of the balances from delinquent customers (Attorney General Brief at 56).

Alternatively, the Attorney General argues that if the Department approves the recovery of National Grid's hardship account receivables balance, the Department also should adjust the Company's cash working capital allowance to reflect the fact that the balances no longer will affect the revenue lag associated with its cash working capital requirement (Attorney General Brief at 57-58; Attorney General Reply Brief at 33). This alternative argument was addressed in Section VII.C.2.a above.

b. Company

The Company argues that the Department should reject the Attorney General's recommendations and instead approve the recovery of the hardship account receivable balance with no corresponding adjustment to its cash working capital allowance (Company Brief at 57-59; Company Reply Brief at 44-46). In particular, the Company contends that its proposal

is consistent with Department precedent, as it is limited to balances that are in arrears over 360 days and unlikely to be repaid by the account holders (Company Brief at 57-58; Company Reply Brief at 45). According to National Grid, unless its proposal is approved, the Company will be unable to recover the balances as bad debt until the account holders' protected status expires (Company Brief at 58; Company Reply Brief at 45). National Grid maintains that during this time the arrearages will continue to grow and add to the burden of all customers who eventually will be required to bear the costs through the Company's uncollectible expense (Company Brief at 58; Company Reply Brief at 45). Further, the Company rejects the notion that approval of its proposal would provide a disincentive for it to continue collection methods against delinquent customers (Company Brief at 58, citing Tr. 8, at 1375-1377; Company Reply Brief at 45).

Finally, National Grid argues that if its proposal is approved, the Department should not adjust the Company's cash working capital allowance (Company Brief at 58-59; Company Reply Brief at 45-46). This argument was addressed in Section VII.C.2.b above.

3. Analysis and Findings

Under current ratemaking practice, there is no cost of service mechanism for the Company to recover the balance of protected hardship accounts receivable. See D.P.U. 10-70, at 210-211, n.12. Public policy decisions and economic conditions persuade us to consider whether and how to treat these costs. D.P.U. 10-70, at 214. Unlike expenses that may be deferred for recovery in a subsequent rate case, the balance of protected hardship accounts receivable cannot be recovered in rates unless the asset is deemed impaired and written off. D.P.U. 10-70, at 210-211, n.12. However, because a utility's hardship protected accounts remain

active, the utility cannot write off the unpaid balance, and therefore, cannot recover the amounts as bad debt expense on a timely basis. D.P.U. 15-80/D.P.U. 15-81, at 169; D.P.U. 13-90, at 159; D.P.U. 10-70, at 213. Generally accepted accounting principles require that, without probable recovery of outstanding balances, a company must recognize an impairment loss through a charge to its income statement and establish a reserve account on its balance sheet for the impaired asset. D.P.U. 10-70, at 214-215.[170]

To provide for the probability of recovery and to avoid an impairment loss, the Department has permitted utilities to collect through distribution rates an amortized amount of significant protected hardship account receivables balances that are over 360 days past due. D.P.U. 15-80\D.P.U. 15-81, at 171; D.P.U. 14-150, at 236; D.P.U. 13-90, at 166; D.P.U. 10-70, at 219. The Company's protected hardship account receivables balance is in line with the levels experienced by Western Massachusetts Electric Company and Fitchburg Gas and Electric Light Company (Exhs. NG-RRP-1, at 36, 49-50; NG-RRP-2, at 3, 24 (Rev. 3)). D.P.U. 13-90, at 165 & n.110; D.P.U. 10-70, at 216 n.115, 219. Therefore, for purposes of determining ratemaking treatment for National Grid's active protected hardship account receivables, we find that its test year end balances are significant.

By allowing recovery in these circumstances, the Department seeks to provide for the probability of recovery of these older outstanding balances. In light of the record in this case, we see no reason to depart from this ratemaking treatment (Exh. NG-RRP-1, at 51-53). Based on these considerations, the Department allows National Grid to recover its test year balance of

---

170 See Statement of Financial Accounting Standards No. 144.

protected hardship account receivables in the amount of $40,607,637.[171] Accordingly, we deny the Company's proposal to recover $52,027,414.[172]

As noted above, the Company has proposed to amortize recovery of the balance over five years (Exhs. NG-RRP-1, at 36, 49-50; NG-RRP-2, at 24). Amortization periods are determined based on a case-by-case review of the evidence and underlying evidence. Aquarion Water Company of Massachusetts, D.P.U. 08-27, at 99 (2009); D.P.U. 93-223-B at 14; D.P.U. 84-145-A at 54. In this case, we consider the size of the balance to be recovered, the underlying facts giving rise to the accumulation of the balance, and the impact of recovery on ratepayers. Based on these considerations and the record in this case, the Department finds that five years is an appropriate amortization period. Amortizing the amount of $40,607,637 over five years produces an annual expense of $8,121,527 (Exhs. NG-RRP-1, at 36, 50; NG-RRP-2, at 24). Accordingly, we reduce the Company's proposed cost of service by $2,283,956 ($10,405,483 - $8,121,527).

As noted above, the Company sought to update the protected hardship account receivables balance throughout the course of this proceeding, and after the evidentiary hearings concluded (Exhs. NG-RRP-2, at 24 (Rev. 2), (Rev. 3)). However, the Department typically accepts post-hearing updates related to only a limited set of issues – most notably, updated

---

171 Recovery through amortization of protected account receivables balances greater than 360 days past due, which amounts to $40,607,637 as of June 30, 2015, balances the financial considerations of the Company and the bill impacts to ratepayers without hardship protected status. D.P.U. 10-70, at 219.

172 The Department acknowledges that in the recent NSTAR Gas Company base rate case, we approved the recovery of some post-test year protected hardship receivables account balances over 360 days. D.P.U. 14-150, at 236. In that case, however, the record did not provide the test year balance. We find that there was no express intention on the Department's part to change its precedent.

property tax bills and updated rate case expense totals. See, e.g., D.P.U. 93-223-B at 15; Hutchinson Water Company, D.P.U. 85-194-B at 4 (1986); Western Massachusetts Electric Company, D.P.U. 84-25-A, at 10 (1984). The Department does not find it appropriate to extend its post-hearing update practice to include updated protected hardship account receivable balances. Instead, we find that permitting recovery of the test year amount of receivables provides a measure of assurance of recovery of the older outstanding balances.

In addition, we direct the Company to track the accounts included in the balance of hardship protected receivables accounts allowed for recovery so that the associated costs are excluded from recovery through normal bad debt expense. D.P.U. 10-70, at 220. The Company shall credit through the Residential Assistance Adjustment Factor ("RAAF") any subsequent payments made by customers towards balances that the Company has amortized (Exh. NG-RRP-1, at 52). D.P.U. 10-70, at 221. In this regard, the Company shall modify its Residential Assistance Adjustment Provision accordingly. Finally, we direct each distribution company with hardship protected account receivable balances approved for recovery by the Department to provide as part of the initial filing in the company's next base rate case, the following information: (1) a detailed narrative of the company's collection efforts relative to outstanding hardship account balances recovered through amortization since the prior base rate case; and (2) the annual amount of payments made by customers against these hardship account balances since the prior rate case.

K. Amortization of ASC 740 Regulatory Asset

1. Introduction

On July 24, 2013, the Legislature passed An Act Relative to Transportation Finance, St. 2013, c. 46 ("Transportation Finance Bill"). In pertinent part, the Transportation Finance Bill repealed G.L. c. 63, § 52A, which provided for a state franchise tax rate of 6.5 percent for public utility corporations (see Exh. NG-RRP-1, at 46). See also St. 2013, c. 46, § 39. Consequently, utility corporations lost their separate tax status for tax years beginning on and after January 1, 2014, and became subject to the tax rates applicable to corporations pursuant to G.L. c. 63, § 39. (Exhs. NG-RRP-1, at 46; AG-2-36; Tr. 6, at 956). For National Grid, the tax rate increased from 6.5 percent to 8.0 percent (Exh. NG-RRP-1, at 46; AG-2-36; Tr. 6, at 956).

National Grid states that the increase in the franchise tax rate created an accumulated deferred income taxes deficiency on the Company's books (Exh. NG-RRP-1, at 46; Tr. 6, at 954-957). As a result, pursuant to Accounting Standards Codification 740 ("ASC 740") (formerly Statement of Financial Accounting Standard No. 109 ("FAS 109")), National Grid recorded an additional $11,907,760 in accumulated deferred income tax liability ($11,717,222 for MECo and $190,537 for Nantucket Electric) (Exhs. NG-RRP-1, at 46; NG-RRP-2, at 32 (Rev. 3); DPU-34-6; AG-2-36, Att. 1). The Company proposes to recover the $11,907,760 over a five-year period, which results in an annual deferred income tax amortization expense of $2,381,552 (Exhs. NG-RRP-2, at 32 (Rev. 3); DPU-34-6).

At the same time, the Company proposes to offset the accumulated deferred income tax deficiency with a cumulative deferred tax liability of $14,111,602 associated with a tax basis balance sheet true-up for MECo that also will be amortized over a five year period, which results

in a reduction of $2,822,320 in annual amortization expense (Exhs. NG-RRP-1, at 46; NG-RRP-2, at 32 (Rev. 3); AG-2-36-2; Tr. 6, at 957-958). Together, these two adjustments result in a net amortization amount of negative $440,768 ($2,381,552 - $2,822,320), which the Company proposes to record as a reduction to income tax expense (Exhs. NG-RRP-1, at 46; NG-RRP-2, at 32 (Rev. 3); NG-RRP-8, at 8 (Rev. 3); Tr. 6, at 961).

2. Positions of the Parties

a. Attorney General

The Attorney General argues that because the majority of the increase in deferred tax liability was property related, the increase in the deferred tax liability was not payable immediately, and will not be payable over the next five years (Attorney General Brief at 28, citing Exh. AG-DJE-4). Instead, the Attorney General contends that the tax liability will be paid back over the remaining life of the Company's property as that property depreciates (Attorney General Brief at 29). Therefore, the Attorney General asserts that the Company's proposed five-year amortization period is inappropriate because the Company would then recover the increased income taxes more rapidly than they are actually being paid (Attorney General Brief at 29).

The Attorney General argues that consistent with Department precedent, the appropriate amortization period for the plant-related ASC 740 regulatory assets is the estimated remaining service lives of the Company's plant assets (Attorney General Brief at 29, citing D.P.U. 13-75, at 269-270; D.T.E. 05-27, at 227-228 n. 136; D.P.U. 92-111, at 172-173; Attorney General Reply

Brief at 13-14).[173] The Attorney General points out that the Department recently reaffirmed that it was appropriate to recover deferred tax regulatory assets "over an amortization period reflective of the remaining life of the company's utility plant in service at the time" (Attorney General Brief at 29, citing D.P.U. 14-150, at 241). In addition, the Attorney General argues that the Company has provided no compelling reasons to depart from this precedent for plant-related items (Attorney General Reply Brief at 14).

The Attorney General argues that of the $11,907,760 in increased corporate excise tax, $10,077,661 is plant related and subject to an amortization period based on the remaining life of the Company's net plant in service (Attorney General Brief at 28-29, citing Exh. AG-DJE-1, at 13; Attorney General Reply Brief at 13-14). In this regard, the Attorney General argues that the Company's schedules show that the average remaining life of the Company's net plant in service as of the end of the test year is 18 years (Attorney General Brief at 29, citing Exh. NG-RRP-2, at 27). She states that amortizing the plant-related portion of the ASC 740 regulatory assets over 18 years reduces the Company's annual amortization to $559,870, which is $1,455,662 less than proposed by the Company (Attorney General Brief at 29, citing Exh. AG-DJE-1, Sch. DJE-4). Alternatively, the Attorney General notes that her own analysis of National Grid's average service lives and depreciation accrual rates show that the remaining life of the Company's net plant in service is 21 years, which would reduce the annual amortization of the plant-related portion of the regulatory asset to $479,889 ($10,077,661 ÷ 21) (Attorney General Brief at 30).

---

173 The Attorney General accepts the Company's proposed five-year amortization of non-plant related ASC 740 regulatory assets (Attorney General Reply Brief at 13-14).

Regarding the Company's proposed five-year amortization period of MECo's excess deferred income tax balance of $14,111,602, the Attorney General does not contest the Company's proposal (Attorney General Reply Brief at 14).

b. Company

The Company concedes in making its proposal that it was mindful of the Department's recent precedent relating to the amortization period of regulatory assets (Company Brief at 52, citing D.P.U. 14-150; D.P.U. 13-75). However, the Company argues that its proposal is intended to return to ratepayers the deferred tax balance sheet true-up over an accelerated period as opposed to returning the net credit to customers over a longer period as proposed by the Attorney General (Company Brief at 52, citing Tr. 6, at 959-960; Tr. 9, at 1482-1483). Therefore, the Company urges the Department to reject the Attorney General's proposed amortization period (Company Brief at 53).

3. Analysis and Findings

ASC 740 requires companies to recognize on their financial statements all previously unrecorded future income tax liabilities (see Exh. NG-RRP-1, at 46). See also D.P.U. 13-75, at 269; D.T.E. 05-27, at 227. The change in National Grid's state income tax expense arising from the enactment of the Transportation Finance Bill results in deficiencies in the Company's deferred state income tax reserve (Exhs. NG-RRP-1, at 46; AG-2-36). The Department has reviewed the Company's proposal and finds that National Grid may recover a regulatory asset of $11,907,760 as a result of the increase in the franchise tax rate (Exh. NG-RRP-2, at 32 (Rev. 3)).

As noted above, the Company claims that its proposed amortization period of five years is intended to return to ratepayers the deferred tax balance sheet true-up over an accelerated

period as opposed to returning the net credit to customers over a longer period as proposed by the Attorney General (Company Brief at 52, citing Tr. 6, at 959-960; Tr. 9, at 1482-1483). Notwithstanding the Company's argument, however, in the case of a deficiency in a deferred income tax reserve, such as that associated with the change in state income rate as a result of the Transportation Finance Bill, a longer recovery period serves to reduce the annual amortization, thus benefiting customers. More significantly, the Department has found that it is appropriate to recover ASC 740 regulatory assets over an amortization period reflective of the remaining life of the company's utility plant in service at the time, pursuant to the South Georgia method.[174] See, e.g., D.P.U. 14-150, at 241; D.P.U. 13-75, at 269-270; D.T.E. 05-27, at 227-228 n.136; D.P.U. 95-40, at 50; D.P.U. 92-111, at 172-173; Essex County Gas Company, D.P.U. 87-59, at 55-56 (1987). The Company has provided no compelling reasons to depart from this precedent for plant-related items.

Approximately 15 percent of the Company's accumulated deferred income taxes deficiency, however, is due to non-plant related book tax timing differences, which can be subject to a quicker turnaround than most plant items (Exh. DPU-34-6). The Department finds that it is appropriate to consider the shorter turnaround associated with non-plant related timing differences in determining the appropriate amortization period in this instance. D.P.U. 14-150, at 241-242.

---

174 Pursuant to the South Georgia method, accumulated deferred income tax deficiencies resulting from changes in tax rates are recovered on a straight-line basis, by amortizing the deficiency over the remaining regulatory life of the property. D.P.U. 14-150, at 241 n.145. This approach is referred to as the "South Georgia" method because it was first prescribed by the Federal Power Commission in South Georgia Natural Gas Company, FPC RP-77-32. D.P.U. 92-111, at 171 n.49; D.P.U. 87-59, at 55-56.
