Name and Title of Preparer: Lauren Crowe, Director – Gas Business Transformation and Improvement; and Melissa Churchill, Manager – Revenue Services

Customer-Focused Philosophy

In the Natural Gas Business Unit (NGBU), the primary group that interacts directly with our customer base is Field Customer Service. We operate and serve our customers with **E.A.S.E**. We serve our customers as the **E**xperts in Natural Gas, we show our customers **A**ppreciation, we perform work **S**afely, and we strive to be **E**asy to do business with. We promote a culture of continuous improvement and align the outcomes we are seeking for the operation and our customers with Key Initiatives and Performance measures that provide insights into the health of the NGBU.

I. Key Outcomes and Key Performance Measures

Our Key Outcomes

Happy and Loyal Customers,
Safe & Event Free Operations for Us and Our Customers,
Growing & Strong Performing Business, and
Be a Great Place to Work.

The Key Performance Indicators that we leverage specifically to evaluate **Customer Satisfaction** as well as **Operational Excellence** for safe and reliable service to our customers include:

- Enterprise CSAT/Net Promoter Score (NPS)
- Fastrack 2.0 Customer Survey
- Emergency Response Time
- Work Order Completion
- Appointments Met

Further explanation of metrics and historical reporting is included below.

II. Key Customer Service Initiatives

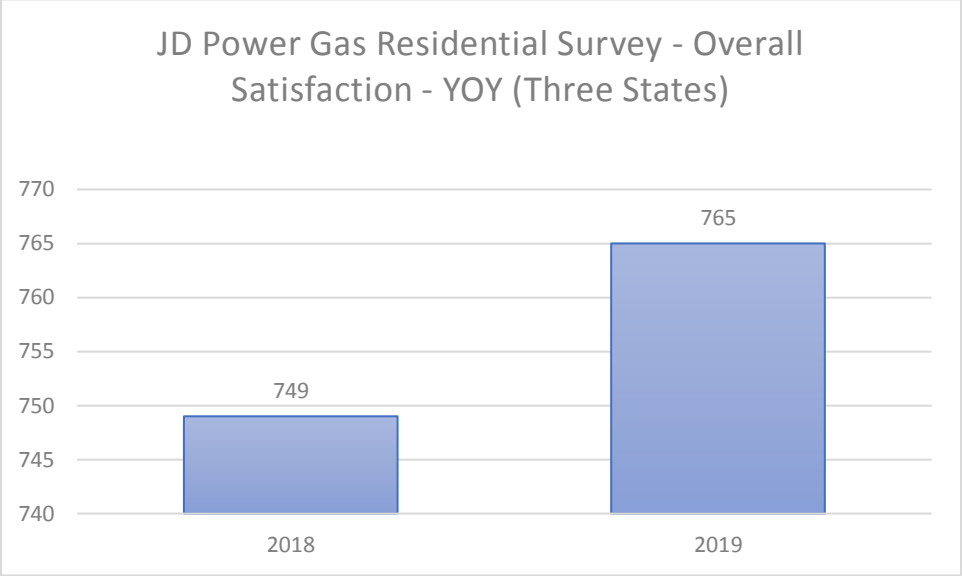
Several customer service initiatives and projects were implemented from 2018 – 2020 to continuously improve customer service and optimize work.

- Employee Soft Skills Training – Summer 2018
- Soft Close – April 2019
- Rapid Response – Spring/Summer 2019
- Work Optimization – Fall 2019
- Fastrack – Closed Loop Feedback – November 2019
- Customer Notifications - 2020
- Start Service – Web Enhancements - 2020

i. Enterprise CSAT/NPS

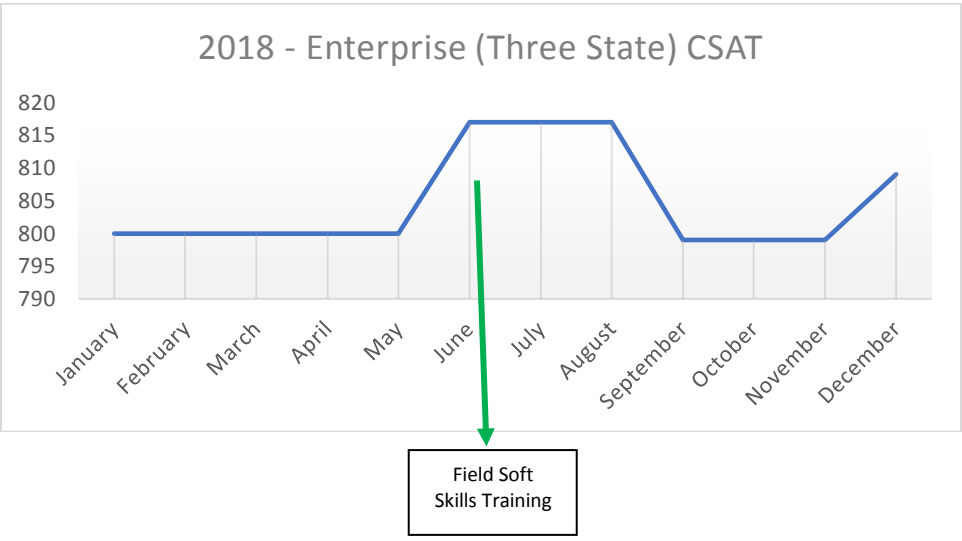
Note: There was a transition from 2018 to 2019 from the use of JD Power CSAT to NPS (Net Promoter score) as a measure of overall customer satisfaction. Both historical measures will be provided. As an organization, we continue to monitor our standings against other companies using JD Power utility company rankings as one way to ensure we remain current and keep best practices in mind. We are using our Customer Experience monitor survey scores and verbatims to provide us with direct "voice of our customer" feedback to guide our improvement priorities and initiatives. Please be advised CSAT/NPS are not capable of being broken down by state, so data will be presented for the entire PNG territory.

- **JD Power Residential Survey - Overall Satisfaction**

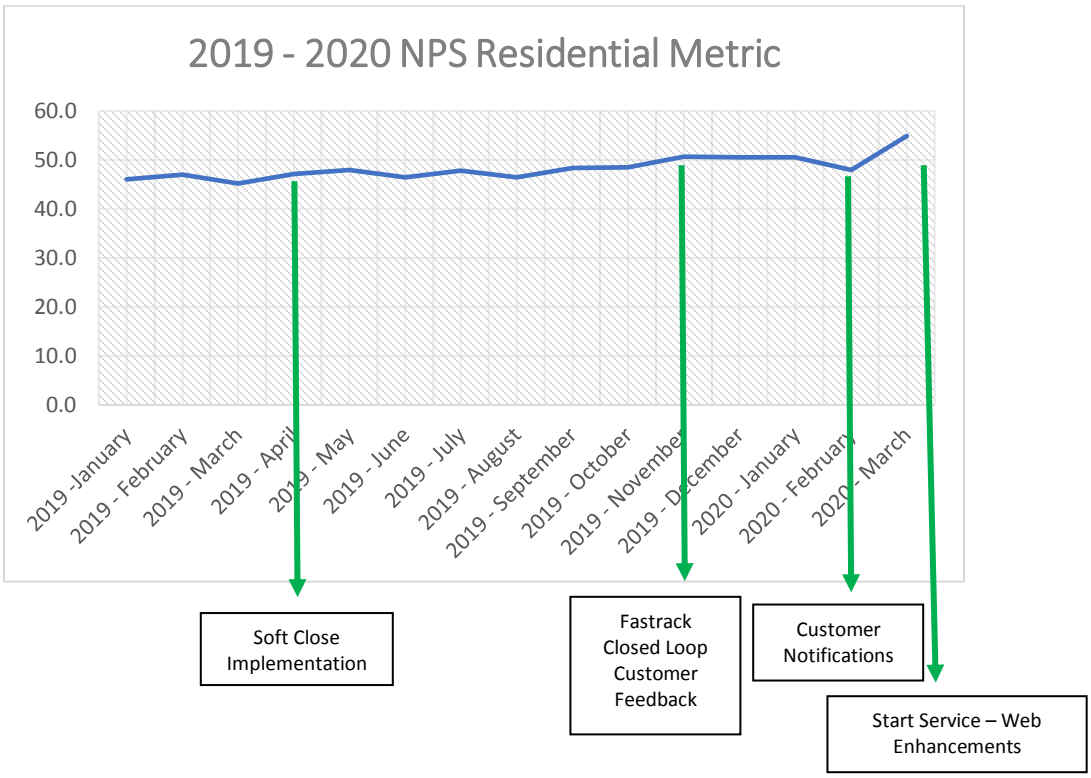


Note: 765 is considered top quartile.

- **Enterprise CSAT Definition:** Composite score is aligned with the Duke Energy Enterprise CSAT metric, made of 50% JD Power Business Gas Study, 25% JD Power Residential (as seen above), and 25% LSI Study of Overall Satisfaction.



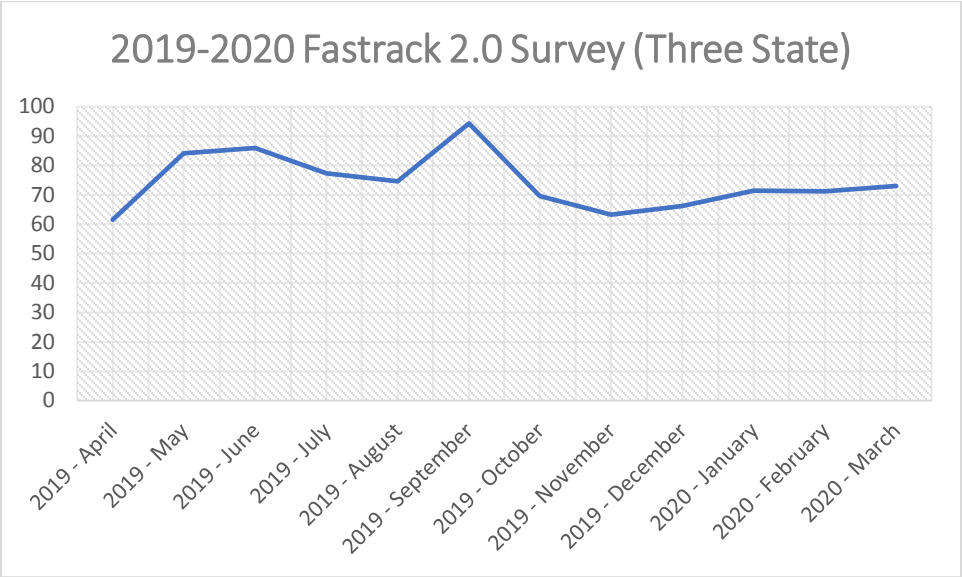
- **NPS (Net Promoter Score) Residential Definition:** Net Promoter or Net Promoter Score (NPS) is a management tool that can be used to gauge the loyalty of a company's customer relationships. Residential measures residential customers and SMB measures small / medium business. Customers are asked "How likely is it that you would recommend PNG to a friend or colleague?" Scores of 9-10 are considered promoters, 7-8 are considered passive, and 0-6 are considered detractors. Promoters minus detractors calculates the Net Promoter Score.



Note: YOY data not available since NPS was implemented in 2019

ii. Fastrack 2.0 Survey

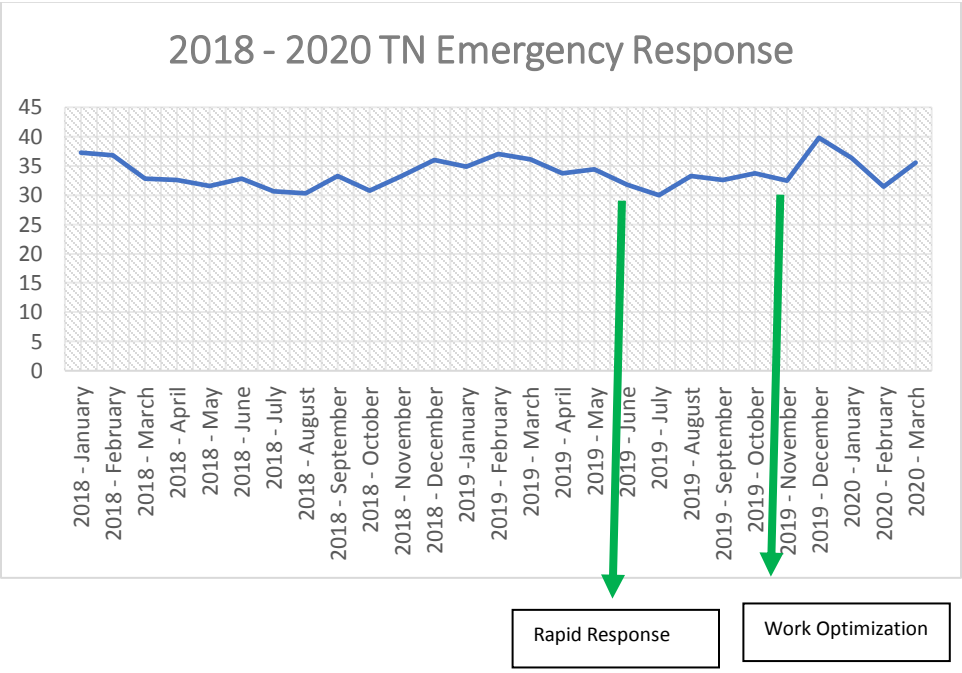
- This metric reflects Fastrack 2.0 survey results for Start and Transfer Service Orders and provides customers with the opportunity to provide feedback on their experience. This includes feedback from both residential and small/medium business customers on their experience for the entire service request life cycle. The metric represents the percentage of customers rating their 'Overall Satisfaction' 'an '8, 9, or 10' on a '0-10' scale.



Note: YOY data not yet available for Fastrack 2.0 since implementation was Spring 2019.

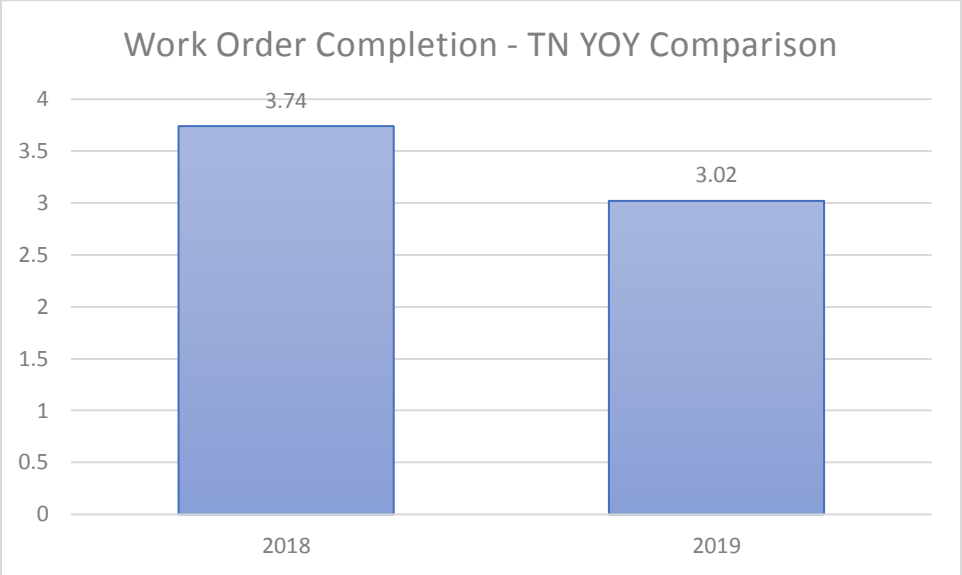
iii. Emergency Response Time

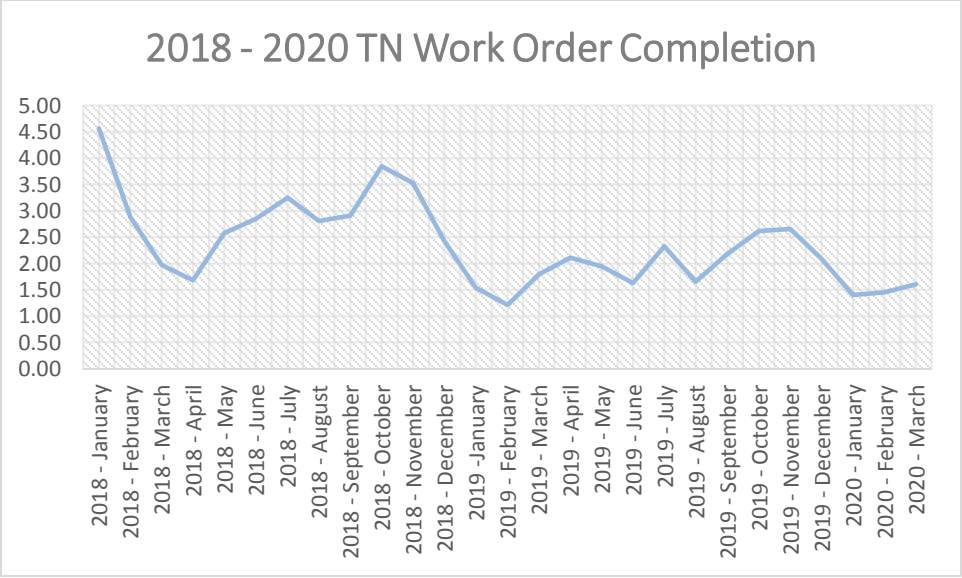
- Average number of minutes from order creation to arrival onsite for emergency job codes (Gas Leak, Fire/Explosion, Cut Line, No Gas, Equipment Won't Shut Off, and Carbon Monoxide).



iv. Work Order Completion

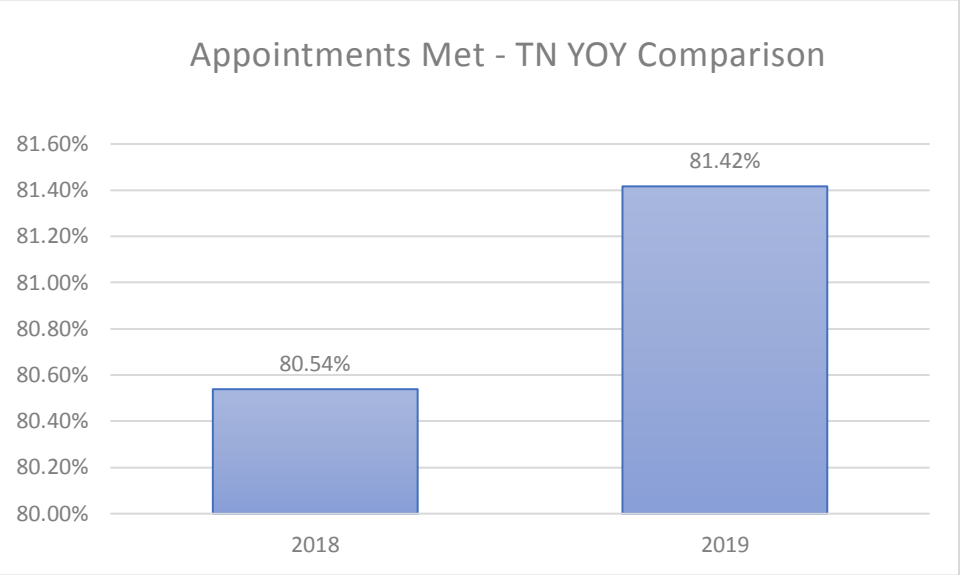
- Average amount of time (days) from order creation to order completion for customer-commit work orders. Intent of metric is to measure lead time for customer requests.



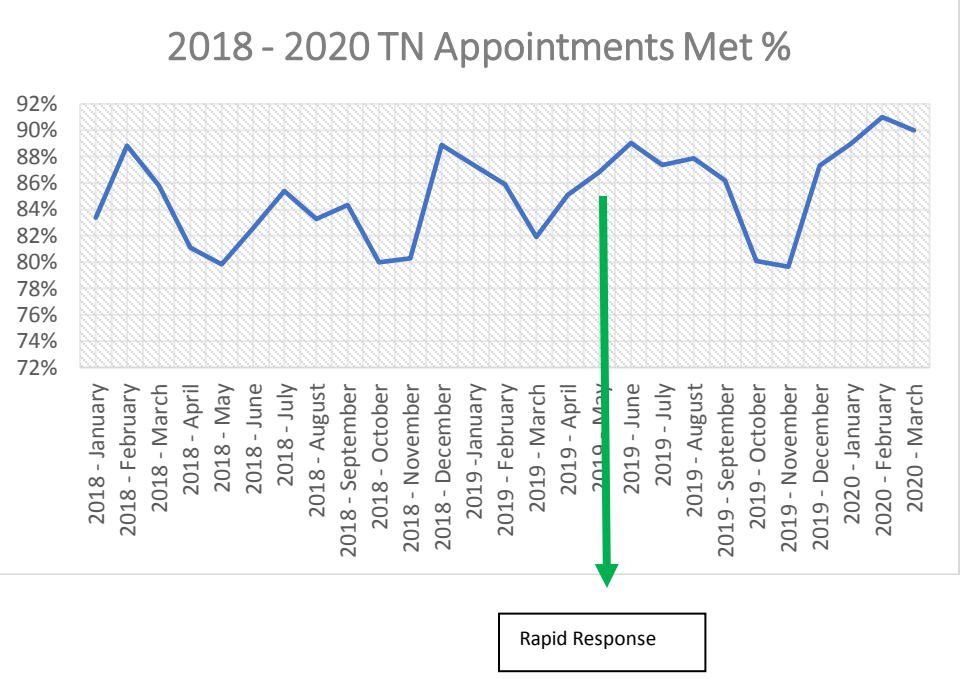


v. Appointments Met

- This is being reported on the Natural Gas Business Unit Scorecard for the first time in 2020. Appointments are considered 'met' if the technician arrives and completes work within the appointment window. Orders that require a customer to be home (excluding Unregulated Service orders) are included in this metric.



Note: Most LDC's measure an appointment met if the technician ARRIVES within the appointment window. Based on Voice of the Customer we understand a customer expects us to arrive AND complete the job within the appointment window, so we hold ourselves to this standard.



III. Key Improvement Initiatives

- **2018**

Note: 2018 was a heavy year for core integration activities within the NGBU. Our key areas of focus were maintaining current targets for Customer Satisfaction and Operational Excellence while we integrated with the larger Duke Energy corporation.

i. Employee Soft Skills Training - Summer

Targeted training for field employees to develop soft skills and improve their interactions with customers and increase overall satisfaction. This training was updated in summer of 2018 to include difficult or challenging scenarios with customers and how best to handle them for a positive customer experience.

- **2019**

i. Soft Close - April

Piedmont Natural Gas (PNG) reduced Field Customer Service (FCS) overtime in the Fall of 2019 due to the implementation of a "Soft Close" process. Historically, the customer tenant change-out process is a driver of peak FCS workload and resulting overtime in the Fall, because a customer may move-in without starting service prior to heating season. This Soft Close process reduces FCS time to activate gas service while providing more flexibility to the customer by not requiring the customer to be home for a turn-on provided certain safety parameters are met.

Note: Cost savings projected for Soft Close were considered in the 2019 budgeting process and Soft Close implementation allowed FCS to meet their 2019 O&M challenge.

ii. Rapid Response – Spring/Summer

Rapid Response is a process improvement initiative that allocates emergent and unplanned work to dedicated technicians with the intent of reducing disruptions for technicians with planned customer work. The intent of this improvement is to enable faster emergency response time, reduction in windshield time for technicians, and increased customer appointments met.

iii. Work Optimization - Fall

The Work Optimization initiative was kicked off on the heels of the Rapid Response Deployment by developing a Machine Learning algorithm that forecasts the following day's work and optimizes home locations and routes for technicians. By providing more efficient working locations, Field Customer Service and Scheduling were able to reduce same day balancing of work each morning, proactively plan for unplanned absences, and reduce Technician travel time.

Note: Phased deployment in the Fall of 2019, with TN on target for a May 2020 deployment.

iv. Fastrack – Closed Loop Feedback – November

Our Fastrack Survey system was implemented in the Spring of 2019. As the Fastrack survey system stabilized, a closed loop feedback system was implemented for "detractors" (rating a 0-6) on the survey. Local Field Customer Service leadership reviews detractor feedback and comments left by a customer and determines root cause and corrective action, as well as a follow up phone call to the customer if warranted. This allows the NGBU to uncover training/coaching opportunities for employees and identify areas within our business and operational processes that need improvement.

- **2020**

i. Customer Notifications

In early 2020, a dedicated team was created to design and deliver timely, relevant digital notifications via email/text to educate, inform, and empower the lives of our natural gas customers. The use cases for notifications to be developed throughout 2020 include billing reminders, payment confirmations, service notifications/reminders, EPP notifications, and more.

ii. **Start Service – Web Enhancements**

Dedicated team forming in Spring of 2020 to work on uplift of the Piedmont Natural Gas website. The outcome is to improve the customer experience and success rate of being able to initiate and schedule start/stop/transfer of service without having to call Customer Service.

Customer Service Initiatives and Performance Measures:

Piedmont's Customer Service Team is the main point of contact for all the Company's customers. While the contact centers are open Monday through Friday, 7:30 am to 7:00 pm Eastern Time, 24-hour Emergency response is available year-round. Customer account information is available 24 hours a day through the company's Interactive Voice Response (IVR). Piedmont also maintains a self-service website where customers can take advantage of the following online services:

- View Billing Information
- View Usage History for up to one year
- Setup Paperless Billing
- Pay a Bill
- Setup Automatic Bank Draft
- Schedule Start/Stop/Transfer of Service

Customer service goals are designed to exceed customer expectations by identifying and satisfying customer needs, setting and measuring quality standards and identifying areas for improvement. We accomplish these by ensuring that our employees receive training and coaching, are accountable for customer service delivery and ensuring open communication and alignment between Customer Service, Operations and other areas of the Company.

Piedmont's contact centers are designed to be virtual which means that agents are skilled to answer customer service calls from any of the three states within the service territory. As such, all metrics are reported for overall service performance. Nashville customers currently represent approximately 17% of Piedmont's customer base.

• 80/20 Service Level – Piedmont's contact centers are staffed to maintain a Service Level (SL) of answering 80% of customer calls in 20 seconds or less. For the past two years Piedmont has achieved the following service levels and Average Speeds of Answer (ASA):

FY 2019 88.4% SL and 18 sec ASA on 1.4M calls answered
FY 2018 79.5% SL and 53 sec ASA on 1.5M calls answered

• Call abandon rate measures the percent of callers that hang up before being answered by an agent. For the past two years Piedmont has achieved the following abandon percentages:

FY 2019 1.7% on 1.4M calls offered
FY 2018 4.6% on 1.6M calls offered

• Length of call and after call work are combined to identify Average Handle Time (AHT). This metric is needed in the development of staffing plans to provide phone support, for the past two years Piedmont has maintained the following AHT:

FY 2019 6:22 on 1.4M calls answered
FY 2018 6:41 on 1.5M calls answered

In April 2019, Piedmont implemented callback functionality into the IVR. This feature is offered whenever the expected wait time is greater than five minutes and gives customers the option to hang up, without losing their place in queue, and receive a system callback to speak with a live agent. In 2019, a total of 7,824 callers took advantage of this feature with an average callback time of 5:57.

• Interactive Voice Response (IVR) options are designed to allow customers the ability to self-serve without waiting in queue to speak with a live agent. For the past two years Piedmont has maintained the following IVR containment rates:

FY 2019 41.6% on 2.4M customer calls
FY 2018 41.6% on 2.7M customer calls

The Customer Service Team embarked upon a major Quality initiative to identify root causes for escalated (ESC) customer calls and to develop action plans to reduce them by implementing Verint Speech Analytics. Speech analytics is the process of analyzing customer call recordings with speech recognition software to find useful information and provide quality assurance. Speech analytics software also identifies words and analyzes audio patterns to detect emotions and stress in a speaker's voice.

• ESC Call Tracker – Used by Piedmont to identify the percentage of customer calls escalated to Team Leads or Supervisors. For the past two years the Piedmont ESC percentage was:

FY 2019 5.0% on 1.4M calls answered
FY 2018 6.2% on 1.5M calls answered

• Net Promoter Score (NPS) – Piedmont started using NPS in February 2019 as a tool to gauge the loyalty of the its customer relationships. An NPA can be as low as -100 (every respondent is a "detractor") or as high as +100 (every respondent is a "promoter"). NPS scores vary across industries, but a positive NPS (i.e., one that is higher than zero) is generally deemed good, a NPS of +50 is generally deemed excellent.

In 2019 Piedmont's NPS score for Nashville residential, commercial and industrial customers was +53.3.

• Customer Satisfaction (CSat) – Piedmont continues to measure real time CSat through a five-question post call survey that is designed to determine whether customers are satisfied with their call center experience. The survey option is given to customers that speak with either Piedmont internal call center agents or vendor agents. For the past two years Piedmont has maintained the following CSat scores:

FY 2019 92.65%
FY 2018 92.55%

Piedmont completed a major upgrade to its customer eBill offering. The purpose of the upgrade was to ensure that eBills are easier to understand and read, with the primary focus centered around customers who are subject for disconnection. Improvements include:

- The introduction to eBill now offers a guided option allowing the customer to access a brief video that demonstrates how eBill works.
- Ensuring that customers can more easily identify Past Due Amounts and Pending Disconnect Dates through banners and enhanced fonts.
- Final Notices with enhanced banners and fonts also highlight Past Due Amounts and Pending Disconnect Dates.

• On Line Services (OLS) Service Level – The company maintains a team of agents dedicated to answering customer inquiries via email that come on from the Piedmont website or directly into their email address. Piedmont's goal of a 96% response rate within 24 hours was established in 2019. Previously, the goal was set at a 45% response rate in two hours. To account for weekends and to standardize across business units, the service level metric was changed to the 24-hour format. For the past two years Piedmont has achieved the following OLS service levels:

FY 2019 97% in 24 hours
FY 2018 30% in 2 hours

• Payment Processing Improvement -- In May 2018 Piedmont migrated mailed payment handling from Excela to Duke Energy's in-house processing facility. This was a result of merger process consolidation, providing cost savings and also reducing customer frustration with the time it took for customer payments to be processed in Excela's Dallas, TX clearinghouse.

PIEDMONT NATURAL GAS COMPANY, INC.
2020 Tennessee General Rate Case
Minimum Filing Requirements

17. Identify the LDC's twenty-five (25) largest customers, based on volumes delivered, for the latest fiscal year. If the LDC projects a material change in the volumes delivered or rates charged to any such customer, provide a mailing address, contact person, telephone number, and the following information for each customer:

    a. Transportation and sales volumes by tariff and by month for the last three (3) fiscal years for each customer, including the step volume information for the appropriate classification.

    b. Copies of all correspondence and notes of discussion or meetings with these customers regarding their anticipated usage from the test period through the attrition period.

Response: Piedmont is reflecting a material change in attrition period usage for one of its top twenty-five (25) largest customers. Please see the two CONFIDENTIAL attachments.

PIEDMONT NATURAL GAS COMPANY, INC.
2020 Tennessee General Rate Case
Minimum Filing Requirements

19. Provide a list of the LDC's customers who have changed rate classes in the test period. Show the schedule movement and any adjustments you have made to the bills and usage for the attrition period. Provide the number of net additions by customer classification and by month for the latest 24 months.

Response: See redacted attachment. An unredacted version of this attachment is filed under seal.

PIEDMONT NATURAL GAS COMPANY, INC.
2020 Tennessee General Rate Case
Minimum Filing Requirements

20. Provide the number of the LDC's billing cycles per month and the identity of any specific groups of customers billed on a particular cycle.

Response: Each billing month consists of twenty-one (21) billing cycles. Billing cycles 19 & 20 have been decommissioned, thus no customers are billed under those two cycles. The last billing cycle each month is cycle 21, which covers all the large general service customers and resale service customers (i.e. customers served under Tariff Rate Schedules 303, 304, 310, 313 and 314), as well as some customers served under the residential and small/medium general service rate schedules. Billing cycles 1 through 18 contain a mix of residential and small/medium general customers only.

PIEDMONT NATURAL GAS COMPANY, INC.
2020 Tennessee General Rate Case
Minimum Filing Requirements

25. Provide a breakdown by source of all revenues shown as "Other Operating Revenues" for the test period and attrition period. Include the units and rates for each source.

Response: For the Test Period and the Attrition Period, the category of Other Revenues reflects the sum of revenues booked to the following accounts:

- GL 0487001: Customer bill payments made after the payment date stated on the customer bill are subject to a five percent (5%) gross billing charge. The difference between the net and gross billing charge is recorded to this account, and is commonly referred to as late payment charge revenue. The Company is proposing in this rate case to extend the number of days that customers have to pay their bill before the late payment charge is assessed. In light of this proposed change to customer payment terms and in light of the fact that the Company waived late payment charges for the majority of the last month of the test period (March 2020), the Company projects the attrition period revenues for late payment charges to be $655,752 less than the test period revenue amount.
- GL 0488000: The revenue recorded to this account is generated from charges from the Non-Sufficient Funds fee (NSF), the Reconnection fee and late payment charges for regulated non-gas services. The NSF charge is $20 per occurrence. The reconnection charge is $55 per occurrence during the months of February through August and $85 per occurrence for the months of September through January. The Company projects these attrition period revenues to be $10,507 higher than such test period revenues. The $10,507 adjustment reflects the removal of a one-time, non-recurring credit entry that was recorded in the test period.
- GL 0493000: The revenue recorded to this account reflects rent charged for gas utility property. The Company projects these attrition period revenues to be $848 less than the test period revenue amount due to the terms of a pending renewal lease agreement with an existing tenant.
- GL 0495022 & GL 0495024: The revenue in these two accounts represent transportation customer cash-outs of short imbalances. This revenue reflects the recovery of gas cost expense associated with the cash-out on these short imbalances during the test period. The Gas Sales & Transportation Pro Forma Revenue Computation incorporates total actual test period usage. So as to avoid duplicative pricing and revenue recognition in the attrition period, these test period cash-out revenues totaling $379,728 were not included in the attrition period.
- GL 0481203: The test period revenue transactions in this account were from CNG volume rebates related to usage at Piedmont's unregulated public CNG stations. These test period revenue transactions totaled $4,826, and were not included the attrition period because these test period transactions were erroneously recorded to regulated revenue in the test period.

The workpapers supporting the Other Revenue attrition period adjustments described herein can be found in Minimum Filing Requirement No. 12.

PREFACE

This 2020 volume of *An Economic Report to the Governor of the State of Tennessee* is the forty-fourth in a series of annual reports compiled in response to requests by state government officials for assistance in achieving greater interdepartmental consistency in planning and budgeting efforts sensitive to the overall economic environment. Both short-term, or business cycle-sensitive forecasts, and longer-term, or trend forecasts, are provided in this report.

The quarterly state forecast through the first quarter of 2022 and annual forecast through 2029 represent the collective judgment of the staff of the University of Tennessee's Boyd Center for Business and Economic Research in conjunction with the Quarterly and Annual Tennessee Econometric Models. The national forecasts were prepared by IHS Markit. Tennessee forecasts, current as of December 2019, are based on an array of assumptions, particularly at the national level, which are described in Chapter One. Chapter Two details evaluations for major sectors of the Tennessee economy, with an agriculture section provided by the University of Tennessee Institute of Agriculture. Chapter Three presents the long-run outlook and forecast for the state. Chapter Four discusses public health and wellbeing in Tennessee. It highlights poor health as an economic problem in the state, and shows that improving health across the state—over the long term—will lead to improved economic growth and prosperity for individuals and in distressed areas.

The primary purpose of this annual volume—published, distributed, and financed through the Tennessee Department of Finance and Administration, Tennessee Department of Economic and Community Development, the Tennessee Department of Revenue, and the Tennessee Department of Labor and Workforce Development—is to provide wide public dissemination of the most-current possible economic analysis to planners and decision-makers in the public and private sectors.

EXECUTIVE SUMMARY

THE U.S. ECONOMY

The U.S. economy remained strong in 2019. Inflation-adjusted gross domestic product (GDP) growth of 2.3 percent ensured the 2010s was a recession-free decade, the first such decade since records began in 1855. Growth should continue in 2020, at rates higher than comparable developed economies but slower than domestic growth in 2019.

The economic prosperity was shared throughout the different components of the economy. Personal incomes grew by 4.8 percent. The national savings rate reached 8.1 percent, up from 7.7 percent in 2018, and the highest level since 2012. Consumption increased by 2.6 percent, driven by a 4.8 percent increase in the consumption of durables.

Investment increased by just 2.0 percent in 2019. This represented of the weaker performing components of the economy, with substantial declines in certain sub-components of investment like nonresidential structures. This perhaps reflects uncertainty about the future, with after-tax profits of enterprises down by 1.2 percent in the year. If there is uncertainty about future profits, it was not reflected in the value of the S&P 500, which increased by over 20 percent in 2019. Similarly, the rate of unemployment, at 3.5 percent, is lower than it has been for decades.

Despite the strong growth in 2019, there are uncomfortable warning signs of decreased future growth. Notably, consumer sentiment declined in 2019. While the economy is growing it not does appear particularly resilient to negative shocks. Specifically, the Federal Reserve's decision to modestly increase interest rates appeared to have considerable negative consequences for the economy. An inverted yield curve, where short-term interest rates exceed long-term rates and historically a recessionary warning signal, occurred for the first time since mid-2007. The Fed changed course, reverting and lowering interest rates before year's end. The weakened sentiment is reflected in relatively low inflation rates, with a basket of consumer goods costing 1.8 percent more than last year.

While the aftermath of Tax Cuts and Jobs Act (TCJA) saw substantial increases in investment, the stimulatory effects of the cut are dissipating. Investment in Equipment grew by 1.6 percent in 2019, substantially lower than the 5.0 percent gains seen on average over the prior two years. While nonresidential fixed investment grew by 2.2 percent, residential fixed investment fell by 1.7 percent. More strikingly, investment in structures declined by 4.9 percent. Slower economy-wide growth will contribute to weak investment spending as there is a diminished need for new productive capacity. The OECD's Business Confidence Index for the United States fell every month of 2019, and now stands at its lowest level since mid-2009.

The changes in the economy are also reflected in demographic transitions. There are 1.5 million fewer people under the age of 21 in the U.S. today than there was in 2010. Fertility rates have fallen significantly below the natural replacement rate, with births among women aged 20-24 having fallen 30.7 percent since 2006. The total fertility rate in 2018 (1.73) was the lowest on record.

Surprisingly, life expectancy has actually fallen for some demographic groups. Life expectancy had grown considerably in the U.S. in a relatively short time-span. A person born in 1980 could expect to live 73.6 years, and thirty years later this had risen to 78.54 years, just shy of five additional years per person. Despite the economic growth, life expectancy stagnated during this decade. Using the most recent available figures, a person born in 2017 could expect to live precisely the same number of years (78.54) as someone born in 2010.

A similar trend emerges with international trade, where the overall picture is lackluster. Continued skirmishes with its major trading partners saw retaliatory measures against the U.S. Exports declined by 0.2 percent in 2019, causing a drag on growth. This was the first decrease since the Great Recession. Both imports and exports were affected by increased tariffs. While overall consumption within the economy grew by 2.6 percent in 2019, the growth of imports was more modest (1.5 percent).

THE U.S. ECONOMY, CONTINUED

Regardless of one's political beliefs, there is a strong possibility of a major reversal in U.S. trade policy within the next twelve months. With elections scheduled for November, the Trump administration can last a maximum of five more years. In contrast, President Xi Jinping faces fewer electoral challenges in China. The Chinese government can credibly commit to policies for a much longer horizon, even if the strategy is unpopular with the public. Retrenchment seems unlikely, and so there is limited scope for export growth to provide a path for continued growth. As this report goes to press, it appears that a new NAFTA will be approved by Congress.

The warning signs are not yet strong enough to expect a recession in the immediate future. Our projections and narrative for 2020 indicate slower but positive growth. GDP will increase by 2.1 percent, with the improvements in consumer sentiment driving consumption growth of 2.8 percent. Wages and salaries will increase by 3.3 percent, and unemployment will fall to another record low of 3.4 percent.

The increases in wages and salaries (3.3 percent) and personal income (3.9 percent) will be faster than increases in productivity, which is expected to grow by 1.1 percent. Productivity growth has been disappointing for a number of years, with growth rates averaging below 1.2 percent since 2010. In a pessimistic scenario (which we forecast as occurring with 35 percent probability) worse than expected productivity growth leads to a decrease in investment. This results in a sharp increase in unemployment (to 5.8 percent) and an immediate monetary response from the Federal Reserve. In the pessimistic scenario, GDP declines by 2.0 percent.

THE TENNESSEE ECONOMY

The Short-Term Economic Outlook

Both Tennessee and the U.S. are currently enjoying the longest economic expansion in recorded history, and both saw steady economic growth in 2018 and much of 2019. In Tennessee, inflation-adjusted state gross domestic product (real GDP) advanced at a 2.7 percent rate in 2018, which was slightly slower than nation's 2.9 percent rate of growth. As the already record-long expansion continues to push forward, labor markets at both the state and national level grow tighter and tighter, leaving less room for job growth going forward. As a result, both Tennessee and the U.S. saw nonfarm jobs increase by 1.7 percent in 2018, marking two consecutive years with job gains below 2.0 percent. The first three quarters of 2019 have brought more of the same, as state job growth has ranged from 1.2 to 1.9 percent per quarter. This is still a sign of healthy gains in the labor market. Job growth in the state's service sectors continue to show resiliency, as job growth in professional and business services, educational and health services, and leisure and hospitality services have all seen gains of 3.0 percent or more in the most recent quarter of 2019 (2019Q3). The manufacturing sector has also seen decent job gains recently, despite setbacks for the national economy. In 2018, manufacturing jobs expanded by a modest 1.3 percent, but have fared better in 2019, seeing job growth ranging from 1.4 percent up to 2.7 percent in the first three quarters of 2019. Manufacturing job growth has largely been driven by durable goods manufacturing, which saw gains of 3.6 percent in the most recent quarter of 2019, while jobs in nondurable goods manufacturing expanded by a more moderate 1.1 percent in the third quarter of 2019.

The state's unemployment rate (i.e. the percentage of the adult population that is not working but actively looking for work), has remained incredibly low by historical standards, falling to 3.5 percent for the 2018 year as a whole, and drifting down to 3.2 percent in the first quarter of 2019 before ticking back up to 3.5 percent in the third quarter. These incredibly low unemployment rates are suggestive of a very healthy and very tight labor market. A low labor

THE TENNESSEE ECONOMY, CONTINUED

force participation rate (59.7 percent in 2018) suggests that there is still a large portion of the state's adult population that is not working or actively looking for work. Finding ways to entice these individuals (back) into the labor market could be a potential avenue for future economic growth. Nonetheless, as the labor market continues to tighten, we are finally starting to see signs of income growth. In Tennessee, nominal personal income grew by a healthy 5.3 percent in 2018. This was slightly slower than the 5.6 percent rate of growth registered for the nation as a whole.

A number of temporary factors have helped stimulate both the state and national economies in recent years, including the 2017 Tax Cut and Jobs Act, which provided temporary stimulus to business and consumer spending, and the 2018 and 2019 Bipartisan Budget Acts which increased government spending. Upward momentum from some of these policies may continue into the first half of 2020 before fading, and then slower economic growth will likely follow. In addition, uncertainty surrounding U.S. trade policy and a systemic global economic slowdown could put downward pressure on economic growth in the short term. Thus, our short-term outlook (10 quarters ahead) calls for positive but slower economic growth in the near term. Our forecast does not point to a recession in the near term—though one is always possible—but we do project slower, positive economic growth going forward. In Tennessee, real GDP will fall from 2.7 percent in 2019, to 2.1 percent in 2020, and 1.6 percent in 2021. The state labor market will see moderate growth of 0.9 percent in 2020 and 0.5 percent in 2021. This is closely in line, but slightly slower than the projected national employment growth of 1.2 percent in 2020 and 0.8 percent in 2021. Tennessee's manufacturing sector will see employment growth of 0.6 percent in 2020 but face a contraction of 0.5 percent in 2021. Employment in the state's manufacturing sector will fare better than at the national level, where manufacturing employment will fall by 0.7 percent in 2020 and 1.8 percent in 2021.

Tennessee's unemployment rate will hover around 3.5 percent for the next two years, closely tracking the national unemployment rate, and nominal personal income will continue to show healthy growth (4.6 percent in 2020 and 4.7 percent in 2021). Nominal taxable sales are also projected to grow by 4.8 percent in 2020 and 4.7 percent in 2021. On a fiscal year (FY) basis, taxable sales will advance by 5.3 percent in FY 2019/20 and 4.7 percent in FY2020/21. Taxable sales growth will be higher in FY 2019/20 in part due to the recent U.S. Supreme Court decision in the *South Dakota v. Wayfair Inc.* case, which decided that states can mandate business without a physical presence in the state (e.g. internet merchants) to collect and remit sales and use taxes on transactions made in the state. Tennessee began taxing these online retailers (if their sales to Tennessee consumers exceeded $500,000 in the previous year) on July 1, 2019, so we are projecting an uptick in sales tax collections in 2019 and 2020.

Tennessee's Agricultural & Forest Industries & Rural Industries

The agri-forestry industrial complex encompasses the supply chain from farm and forest to consumers of final products and is a vital part of the state economy. The complex directly and indirectly contributed an estimated $81 billion to the Tennessee economy and supplies 342,000 jobs. Farming operations occupied 10.9 million acres in Tennessee, around 40.5 percent of the state's nearly 27 million acres of land area. Approximately half of this farmland is operated as cropland. Tennessee's largest row crops are corn, cotton, soybeans and wheat. For many, 2019 was a challenging production year, with wet planting conditions, followed by a late-season drought across a large portion of the state. Wet conditions and the flooding of the Mississippi River caused over 100,000 acres of corn, cotton, soybeans and wheat in several counties to not be planted.

Farm receipts from crops and livestock in the state was just over $3.5 billion, with $1.4 billion from animals and $2.1 billion from crops. The top ten commodities in the state accounted for over 84 percent of 2018 cash farm receipts. In terms of cash receipts, Tennessee ranks in the top 20 states

THE TENNESSEE ECONOMY, CONTINUED

for several commodities and in the top ten states for tobacco and cotton. The largest value of farm receipts was derived from soybeans, followed by cattle and calves. However, net farm income was $297 million in 2018, a decline from $1.4 billion in 2013 but an increase from the low of $203 million in 2016. Looking towards 2020, prices and producer profitability are unlikely to improve substantially without resolution of the trade dispute with China or a production disruption domestically or abroad.

In 2019, Tennessee farmers benefited from Federal support programs administered by the United States Department of Agriculture (USDA). In July 2018, the USDA announced $12 billion in funding for producers that have been adversely affected by retaliatory tariffs and international trade disruptions. China, Mexico, Canada, and the E.U. implemented retaliatory tariffs that have had a measurable impact on agricultural commodity prices, such as soybeans, pork, corn, dairy, sorghum, cotton, wheat, as well as nuts, vegetables, fruits, and berries. In July 2019, USDA announced additional funding of $16 billion. In 2019, payments will be made to producers on total planted acres (aggregated planted acres times the county payment rate), based on the commodities planted in the county. In Tennessee, county payment rates ranged from $16 (Anderson and Johnson counties) to $126 (Hardeman County) per planted acre. This support is in addition to that provided through the Farm Bill, which provided Tennessee crop producers with $125.5 million in direct payments from Agricultural Risk Coverage (ARC) and Price Loss Coverage (PLC) programs for the 2014-2017 crop years. Additionally, the federal government's portion of crop insurance premiums paid by Tennessee producers was $274.6 million for the 2014-2018 crop years.

Like many other states, the Tennessee has experienced an explosion in the number of farmers growing hemp and in the number of people interested in doing so. As of November 2019, the state had 3,800 producers licensed to grow up to 51,000 acres. The hemp is primarily grown for the cannabidiol (CBD) oil or other extracts that is obtained by processing components of the plant, particularly the plant's flower (bud). While enterprise budgets by UT Extension indicate that hemp may be profitable, rapidly changing market conditions and other concerns should make actual and potential producers quite wary. For example, all of the hemp under cultivation may not be harvested or if harvested, may not find a market.

Trade disruptions have resulted in reduced access to markets for U.S. agricultural production. In fiscal year (FY) 2019 (Oct. 2018-Sept. 2019), total U.S. agricultural exports, as reported by the USDA, were $136 billion, down 5 percent when compare to the previous fiscal year ($143 billion). Key exports in FY2019 for Tennessee included cotton ($678 million); prepared foods and beverages ($249 million); poultry products ($63 million); dairy products ($51 million); and tobacco ($37 million). During this period, Tennessee was also a leading exporter of two agriculture-related products: distilled spirits ($469 million) and forest products ($187 million). For many of these sectors, Tennessee exports were down significantly when compared to the previous fiscal year. Tennessee's agricultural exports in FY2019 were slightly above $1.4 billion, down 4 percent when compared to the previous fiscal year. This overall decline was, in part, driven by a decline in exports to China, which were down by 37 percent. Product categories where Tennessee experienced more significant declines include cotton and tobacco. Two major declines for the State are in agriculture-related categories: distilled spirits and forest products. In FY2019, Tennessee distilled spirits exports in FY2019 were $469 million, down 35 percent. Tennessee forest products exports in FY2019 were $187 million, down 34 percent.

The Long-Term Economic Outlook

Over the past ten years, the state economy has been on an extended growth spurt, starting with the end of the Great Recession in the summer of 2009, with no intervening economic

THE TENNESSEE ECONOMY, CONTINUED

contractions. Since 2010 when the economy began to show material signs of improvement, the state economy has created 496,300 jobs reflecting a compound growth rate of 1.8 percent, ahead of the pace of job creation for the nation. Importantly, this historical window captures a rebound in the manufacturing sector which has seen uninterrupted growth since 2011. Job growth has been concentrated in the state's metropolitan areas, especially the Middle Tennessee region centered around Nashville. Rural areas of the state have struggled, and many counties have lost jobs.

One of the most remarkable features of this ongoing expansion has been the unemployment rate. After peaking above 10 percent in 2009, the unemployment rate drifted down and bottomed out in February, 2019 at 3.2 percent. While the national rate also fell, Tennessee's current unemployment rate is below the national rate. As with nonfarm job growth, unemployment rates tend to be the lowest in the state's metropolitan areas; unemployment rates in rural Tennessee remain elevated. The disparity between urban and rural is largely a reflection of differences in educational attainment and health status of the population, with both measures showing much greater strength in larger cities.

Tennessee's gross domestic product (GDP) saw compound annual growth of 4.2 percent between 2009 and 2019 compared to 4.0 percent growth for the nation. Output growth in the manufacturing sector has been especially robust, reflecting both hiring gains and improvements in productivity.

Tennessee's long-term outlook extends to 2029 and generally reflects ongoing growth for the state economy. However, growth is expected to be muted over the next decade. One reason is that the momentum behind the current expansion is waning as the economy confronts the constraints of full employment, best illustrated by tight labor markets across the state and the nation. Another reason is that the next ten years are expected to produce slower growth in employment due to underlying demographic factors that will constrain labor force growth. Finally, economy-wide productivity gains have been modest, and this is expected to continue for the foreseeable future. Together these factors will hold back overall output growth.

Between 2019 and 2029, the state's GDP should be up 1.7 percent on a compound basis, slightly lower than the nation's rate of output growth. Manufacturing is expected to see output growth slow but remain in the black. However, manufacturing sector employment is expected to contract starting early in the 2020s.

Overall nonfarm employment will see modest growth of just 0.7 percent (compound annual growth rate) between 2019 and 2029. The unemployment rate should remain very low by historical standards but slowly drift upward, ultimately reaching 4.1 percent.

PUBLIC HEALTH AND ECONOMIC WELLBEING IN TENNESSEE

The goal of Chapter 4 is to highlight poor health as an economic problem in the state, and to show that improving health across the state, over the long term, will lead to improved economic growth and prosperity for individuals and in distressed areas. We show that Tennesseans are more likely than their counterparts across the U.S. to exit the labor force before retirement age, starting at approximately age 50. We show that the increased likelihood of labor force exit is preceded by increased incidence of chronic illness, and further preceded by higher rates of smoking, obesity, and sedentary lifestyles. We then expand the discussion to show that both across the U.S. and in Tennessee specifically, poor population health predicts slower economic

PUBLIC HEALTH AND ECONOMIC WELLBEING IN TENNESSEE, CONTINUED

growth while improved access to care predicts stronger growth. Altogether, these results indicate that poor population health is leading Tennessee to grow at less than full potential.

In discussing how to address population, this chapter develops a framework for improving population health based on evidence from a wide body of research. Health is produced by behavioral considerations, access and usage of clinical care, community and environmental factors, and policy considerations. This chapter discusses previous research on the types of health interventions that have been successful, and documents aspects of health care for which access to services may be problematic, particularly for rural Tennesseans.

The caveat with investing in public health, as with investing in accessible and affordable education, is that the costs are immediate, but the benefits are gradually accrued over time. When individuals become healthier, jobs obviously do not instantly materialize in their local areas. Rather, these benefits come to pass because of coordinated efforts by health programs and economic and community development. While progress is likely to be slow, we conclude that investments in improving the health outlook of individuals in Tennessee has the capacity to improve the strength of the overall state economy and its attractiveness to existing and new industry.

1.4. ALTERNATE SCENARIOS

1.1. INTRODUCTION

The U.S. economy continued to grow in 2019, rounding out the tenth consecutive year of output growth. The 2010s will go down in history as the first full-decade without a recession since records began in 1855.

Personal income grew by 4.8 percent in 2019, resulting in a 2.6 percent increase in consumption and a savings rate of 8.1 percent. Nonresidential fixed investment rose 2.2 percent, with investment in equipment up by 1.6 percent. Inflation is relatively low, with a basket of consumer goods costing 1.8 percent more than last year. The S&P 500 Index opened in January at 2500 and in December had risen to 3100, growth of 24 percent.

The unemployment rate, at 3.7 percent, is at its lowest value recorded in decades. Importantly, the low unemployment rate is concurrent with an increase in the prime age (under 65) labor force participation rate, which has seen growth six years in a row.

The growth of the U.S. economy, expanding overall by 2.3 percent in 2019, continues to impress by international standards. The OECD predicts growth rates of 1.3 percent in Canada, 0.7 percent in Japan and Germany, and 1.2 percent in the Euroarea and the United Kingdom.

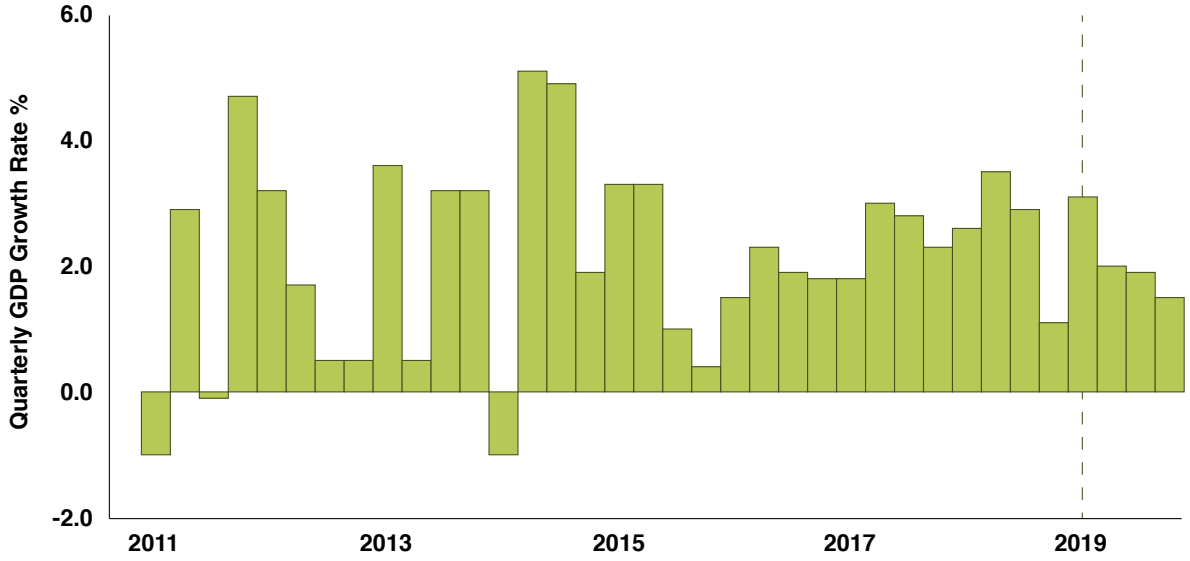
1.1. INTRODUCTION, CONTINUED

Figure 1.2: GDP Growth was Positive, but Slowing, in 2019



Source: Bureau of Economic Analysis; IHS Markit™(copyright).

Consumption is the largest component of the economy and more than three-quarters (78.0 percent) of overall growth is attributable to growth in consumption. There are two major sub-components of consumption, goods and services, both of which grew in 2019. Goods growth contributed 0.83 percentage points to gross domestic product (GDP) growth, and services boosted it by 0.94 percentage points.

Investment also aided growth, contributing 0.35 percentage points to the overall total. This is down sharply from 2018, when tax-inspired growth in investment contributed 0.87 percentage points to GDP growth.

Declines in exports provided a drag on growth, as did the international trade deficit in general. As the U.S. struggled with retaliatory tariffs from trading partners, the value of exports declined for the first time since 2009. The value of imports grew by 1.5 percent.

With GDP growing, unemployment low, stock markets rising, and inflation manageable, the overall view of the macroeconomy is unambiguously positive. However, there are signs that the economy may be approaching its peak with slower growth on the horizon. While a recession seems unlikely in the near-term, there is evidence of weakened growth. Consumer Sentiment was lower at the end of 2019 than it was entering it. Similarly, while nonresidential fixed investment grew by 2.2 percent in the year, residential fixed investment declined by 1.7 percent. Investment in structures declined by 4.9 percent, and the real value of exports declined for the first time in a decade. The difference between long- and short-term interest rates, traditionally an early warning signal for a recession, became negative in 2019 (See page 14 of this report for more.) The U.S. manufacturing sector is now showing signs of contraction.

Overall while GDP growth should remain positive, growth is forecast to decline every year of the next five years. The Federal Reserve has responded to the increased uncertainty by loosening monetary policy, lowering the Federal Funds rate closer to the zero lower-bound. While this has eased financial markets, it restricts the ability of the Fed to counteract a recession. The imprudent repeated deficits of the federal government in this strong economic climate will similarly provide little ammunition to engage in countercyclical fiscal policy in the case of an economic downturn.

1.2. THE U.S. ECONOMY: YEAR IN REVIEW

The U.S. economy grew for the tenth straight year in 2019. Nominal GDP rose to $21.4 trillion, and the unemployment rate fell to 3.7 percent. Helped by strong consumption growth and boosted by the trillion-dollar federal deficit, GDP growth was 2.7, 2.3, 2.0 percent in quarters 1 through 3. With fourth quarter growth of 2.1 percent expected, the average growth rate of the economy for 2019 will be 2.3 percent. This represents a slowdown relative to 2018, when growth was 2.9 percent. Growth in the economy is set to continue, albeit at a slower pace, with growth of 2.1 percent expected next year.

Consumption

Personal consumption expenditure is the largest single component of GDP, and will comprise 69.7 percent of GDP in 2019. This is up slightly on 2018's 69.4 percent and represents a growing trend of an increased consumption share, up from 67.7 percent in 2013.

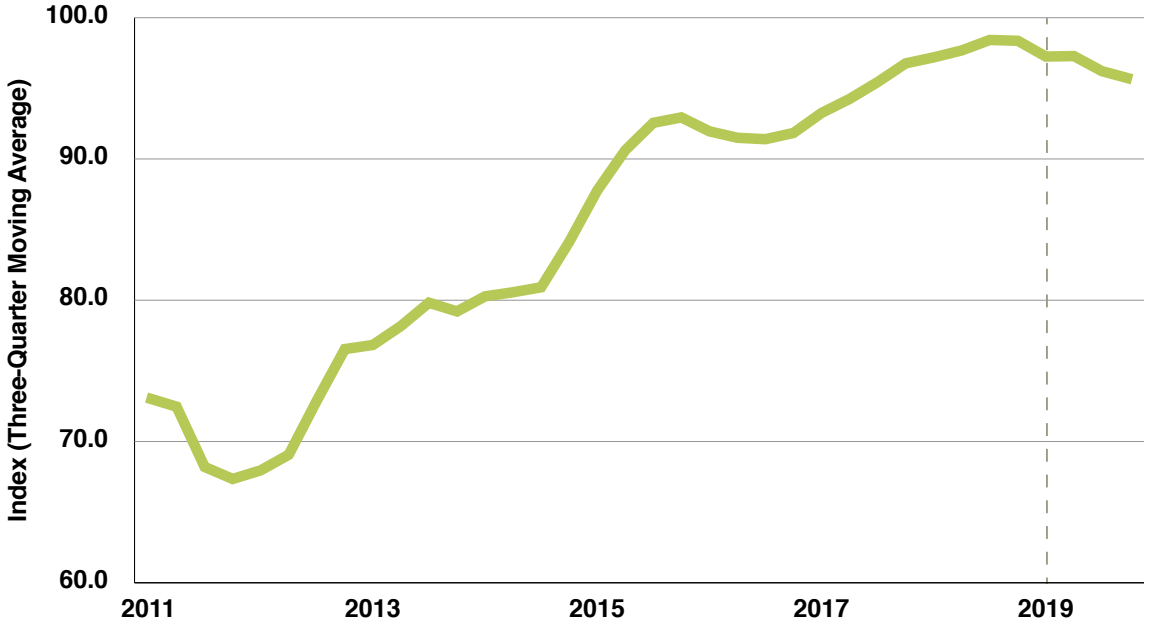
The growth in GDP has been disproportionately driven by consumption patterns, with over three-quarters (78 percent) of the increase in GDP attributable to increases in consumption. Much of the growth was experienced in the second quarter of the year, with consumption up 4.6 percent. This compares with growth rates of 1.1, 2.9, and 2.7 percent in the other respective quarters.

The deceleration in GDP growth is noticeable, with consumption growth up 2.6 percent overall this year compared to 3.0 percent in 2018. This is more pronounced in population-adjusted terms, with per capita consumption up 1.9 percent in 2019 compared to 2.4 percent in 2018. This represents the slowest per capita increase since 2013.

Personal consumption comprises three parts: durable goods, such as cars and computers; nondurable goods, such as food and tobacco; and services such as health care and electricity.

Comprising 64.4 percent of the total, services is by far the largest component of overall consumption. Consumption of services provided a slight drag on the growth of overall consumption, with services up only 2.0 percent this year (down from growth of 2.5 percent in 2018). Health care service expenditure, which itself represents

Figure 1.3: Consumer Sentiment Fell Slightly in 2019



Note: consumer sentiment index includes two lags to generate a moving average.
Source: IHS Markit™(copyright).

1.2. THE U.S. ECONOMY: YEAR IN REVIEW, CONTINUED

11.8 percent of GDP, grew by 3.1 percent. This represented significantly higher growth than the 2.4 percent and 2.9 percent experienced in 2017 and 2018 respectively. With growth of 7.5 percent in 2019, the telecommunication services sector saw its fastest growth this decade.

Durables consumption grew by 4.8 percent in 2019. This was by far the fastest growing component of consumption, but was significantly down on the 6.3 percent increase in the prior year.

The declining consumer preference for new automobiles continued in 2019, with real spending declining by 11.3 percent. This compounds the previous experience of five-year negative growth in the sector, with purchases of used automobiles also down 1.0 percent in the year.

Consumers are switching their preference to light trucks and SUVs, which are up 1.2 percent for the year. This sector has seen continuous growth for a decade, and now comprise 59.8 percent of registered vehicles in the country. A decade ago, the U.S. produced about as many cars as light trucks. This year the domestic industry produced 9.6 million light trucks, more than twice the 4.7 million number of cars.

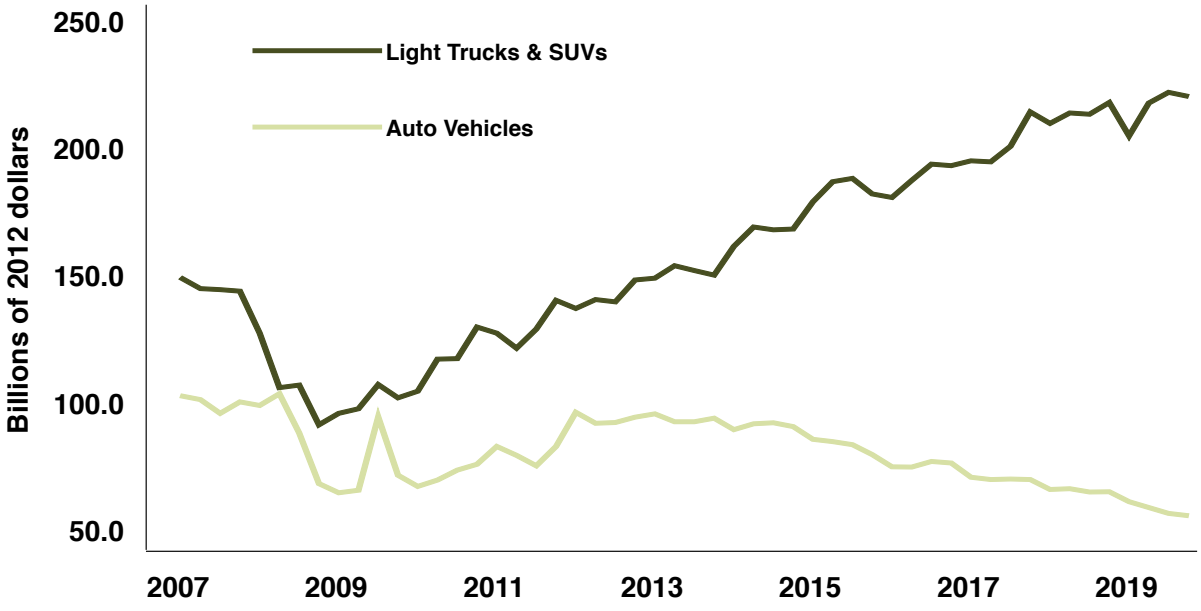
Nondurables consumption was up 3.5 percent in 2019, accelerating from the 3.0 percent seen in 2018 and the largest one-year increase this decade. The largest increase was in pharmaceutical & other medical products which surged 8.0 percent in the year. By way of comparison, consumption of food & beverages increased by 2.2 percent. Tobacco saw the largest single-unit decline, with sales down 3.4 percent.

Investment

Investment represents 18 percent of the U.S. economy in 2019. A driver of future growth, fixed nonresidential investment represented the bulk of this. At 14.4 percent of GDP, nonresidential fixed investment is considerably larger than the other two subcomponents of investment, residential investment and changes in inventories.

Investment in equipment rose 1.6 percent over the year, with rates of -0.1, 0.8, -3.8, and 1.1 percent the specific quarterly figures. This represents a significant decline in investment in 2017 and 2018, which averaged over 5.0 percent per year. The most notable sector in this regard was aviation. Aircraft sales were down 33.8

Figure 1.4: Spending on New Auto Vehicles Continues to Decline, in Real Terms



Source: IHS Markit™(copyright).

1.2. THE U.S. ECONOMY: YEAR IN REVIEW, CONTINUED

percent this year, driven in large part by the grounding of Boeing's 737 MAX. The nature of that industry means it is known for volatility; growth is expected to rebound to 26.9 percent next year.

Investment in intellectual property products increased 8.0 percent in 2019, the strongest increase in the decade. Investment in research and development was up 7.4 percent for the year, and has increased by a cumulative 47.3 percent in real terms since 2010.

The rate of investment in structures fell by 4.9 percent in 2019, canceling out the gains of 4.1 percent in 2018. Of particular note was mining and petroleum, where investment fell 7.9 percent. This is in the context of huge policy-driven increases in investment of 24.2 and 40.9 percent in 2018 and 2017 respectively, so investment remains relatively high overall. Continued decreases are forecast for 2020 (12.1 percent decrease) and 2021 (8.1 percent decrease).

Residential fixed investment fell 1.7 percent in the year. Growth in housing starts was modest, up only 5,000 off a 2018 base of 1.25 million. Though modest in 2019, this represents a 25 percent increase in the 1 million homes started in 2014. Investment in single-family homes fell by 7.6 percent in real terms. Sales of existing homes also shows signs of weak growth, from 5.34 million to 5.36 million transactions. With relatively low increases in supply but the population continually increasing, there was upward pressure on prices. Houses prices are up nationally by 3.3 percent, and the median house price rose by 4.0 percent. The rental vacancy rate stayed constant at 6.9 percent.

Business inventories increased by 2.6 percent in real terms in 2019. This was driven by increases in nonfarm inventories, with farm inventories actually 4.7 percent lower in quarter four of 2019 than twelve months prior. Nonfarm inventories were volatile over the year and particularly elevated at the start of the year, with nearly 39.8 percent of the annual increase occurring in the first quarter of 2019. The relatively lower increases in quarters two through four constituted a flow correction, resulting in an overall increase in nonfarm inventories of 3.1 percent. As nonfarm inventories are more than ten times the size of farm inventories, the growth in the former resulted in a weighted average that more than overcame the reduction in the latter.

1.2. THE U.S. ECONOMY: YEAR IN REVIEW, CONTINUED

Interest Rates

Governing much more than mortgage costs, interest rates are perhaps the single most important set of prices in the economy. In addition to being a key determinant of investment and consumer spending, interest rates affect exchange rates. Higher interest rates increase the demand for the dollar. This heightened demand for the domestic currency consequently makes foreign currency relatively cheaper. Therefore cheaper foreign currency, which encourages imports and dampens exports, is a side-effect of higher interest rates. In turn, higher imports provide a drag on growth.

Monetary policy is governed by the Federal Reserve Board. Having previously held interest rates at remarkably low levels since the Great Recession, the Fed increased interest rates from early 2017 (0.7 percent rate) through mid-2019 (2.4 percent rate). Amid concerns about deteriorating economic performance, the Federal Reserve reverted course slightly in August, lowering the rate to 2.2 percent. This was followed by a further reduction in the target rate to 1.7 percent in October.

Yields on U.S. Treasury bills followed much the same pattern as the Federal Funds rate. The bond-equivalent yield on a 6-month Treasury bill started at 2.51 percent in quarter one, before falling to 2.34, 1.96, and 1.61 percent in quarters two through four respectively.

Notably, yields inverted in the third quarter of 2019 when the rate on the 3-month Treasury-bill (2.02 percent) was priced higher than the rate on a 6-month Treasury-bill (1.96 percent). Such inversions have historically been predictors of impending recession. We discuss this relationship in greater detail on page 14.

Government Purchases

The economic footprint of the federal government continues to grow. Building on growth of 2.9 percent in 2018, federal expenditures grew by another 3.3 percent in 2019. This was the fourth straight year of increases, and the largest single-year growth in the sector since 2010, when the U.S. was recovering from the effects of the Great Recession.

Expenditure increases were focused in defense, which saw growth of 4.6 percent. Although some of the increase in defense spending was in labor compensation (1.2 percent growth), much of it was in gross investment (5.8 percent growth). Growth in nondefense components was more modest, with real increases restricted to 1.4 percent. Labor compensation in nondefense actually fell by 0.7 percent in real terms.

State & local expenditures also grew in 2019, but at 1.6 percent the increase was about half that of the federal level. The overall growth comprised a 1.1 percent increase in consumption (such as wages & salaries, which grew by 0.6 percent) and a 4.2 percent increase in gross investment (such as equipment, which grew by 4.0 percent).

Government expenditure must be paid for either by current taxpayers or by future taxpayers through increased debt. Examination of budget deficits shows that policymakers are heavily reliant on the latter. In 2019, federal outlays will exceed receipts by nearly $1 trillion. This represents a deficit of 5.41 percent of GDP – higher than the 4.91 percent deficit of 2018 and a considerable increase on the 3.71 percent deficit from 2017. Since 2017, current expenditures have increased by 12.9 percent but current receipts have increased by just 3.2 percent. While some sources of revenue have increased since 2017 (such as personal current taxes, up 5.8 percent), these gains have been largely offset by reductions in other taxes (such as revenue from the corporate income tax, which is down 54.4 percent) over the same period.

The expanding gulf between revenues and expenditures is less pronounced on the state and local side, where many jurisdictions are bound by balanced budget requirements. Current receipts increased by 4.5 percent in 2019, far in excess of the 3.1 percent increase in current expenditures. In contrast to the federal government, state and local agencies have seen growth rates in current receipts exceed current expenditures for each of the past three years.

1.2. THE U.S. ECONOMY: YEAR IN REVIEW, CONTINUED

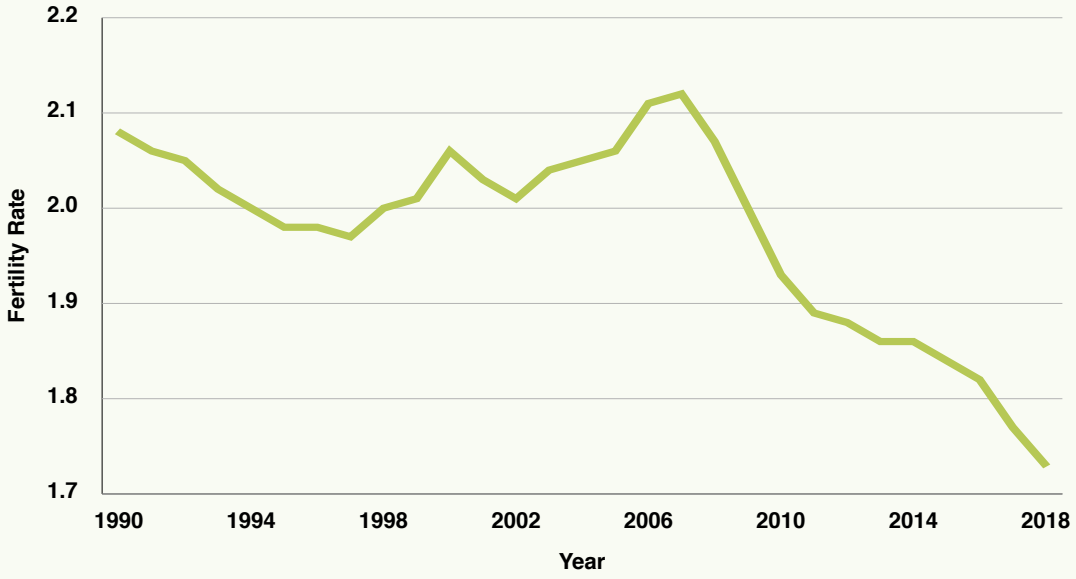
The Declining Fertility Rate

The population of the U.S. stands at 330.1 million people. There are three major factors that influence the change in population: net migration, the number of deaths, and the number of births. Migration persists as a heated political topic, but there is less discussion about the determinants and effects of fertility and mortality on the population.

Research has been conducted on the aging of society, primarily in terms of the future funding of the social security system. People living longer will shift the demographic pyramid up and require higher taxes on the working population.

Separately to the fact that people are living longer, fertility is declining. Although the overall population of the U.S. has grown by 20 million people since the start of the decade, the number of people under the age of 21 has decreased. Relative to 2010, there are 1.5 million fewer young people in the U.S. today. Indeed, the total fertility rate reached an historic low in 2018.

Figure 1.6: Total Fertility Rate



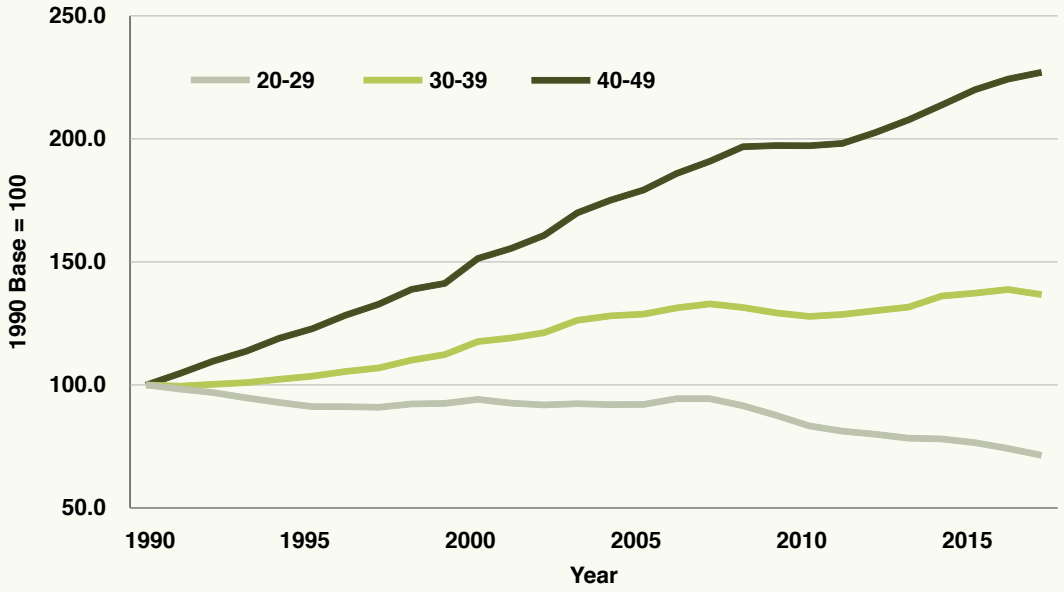
Sources: Organisation for Economic Co-operation and Development, Centers for Disease Control and Prevention.

It is natural to investigate the causes of the decline in the birth rate. An obvious candidate, but ultimately one that is untrue, is an increase in terminations. The termination rate has fallen in recent years. In fact, researchers from the Centers for Disease Control and Prevention have shown that the abortion rate is now at its lowest rate since the *Roe v. Wade* case in 1973.

Continued on Page 8

1.2. THE U.S. ECONOMY: YEAR IN REVIEW, CONTINUED

Figure 1.7: Decline in Overall Fertility is Driven by Younger Women



Source: Human Fertility Database, humanfertility.org.

The Declining Fertility Rate, continued from Page 7

Economic research has proposed an alternative hypothesis: fertility delays. The data from a recent paper show that the declines in fertility are overwhelmingly concentrated among young women. Among 20 to 24 year-olds, births have fallen from 92.3 per thousand women in 2006 to 64.0 per thousand women in 2017.

The declines are even more dramatic for teenagers: for 15 to 19 year-olds, births have fallen from 26.4 per thousand women in 2006 to just 12.0 per thousand women in 2017, a decrease of 54.5 percent.

Conversely, women in their thirties and forties have shown increases in fertility. Take women aged 32 as one example. In 1990, their fertility rate was 8.1 children per thousand women. By 2017, this had risen to 10.3 children per thousand women. The increase is even more dramatic for older cohorts: in 1990, the unweighted average fertility rate for women in their forties was 2.7 children per thousand women; by 2017 this was up to 6.2 children. That represents a more than doubling of the rate, an increase of 130 percent. This pattern is consistent with women delaying fertility, but not at a rate which can overcome the decline for younger women.

1.2. THE U.S. ECONOMY: YEAR IN REVIEW, CONTINUED

International Trade

The year experienced a continuation of skirmishes in the U.S. trade disputes with China, the European Union, and others. While the political narrative has been focused on restricting imports through heightened tariffs, retaliatory measures created a commensurate drag on exports.

This is reflected in the poor performance of exports of goods and services which declined 0.2 percent in 2019. This is the first decline since the Great Recession, and is considerably poorer than the 4.2 percent average growth rate in the other years of the decade.

Some of the poor export performance can be explained by the troubles faced by Boeing, as exports of aircraft declined 7.9 percent in the year. However, this was more than compensated for by the 7.7 percent increase in petroleum and products, a sector which is more than twice the size of aviation. Services exports, too, declined in 2019. A 0.7 percent reduction in services exports represents a $6 billion drag on GDP growth.

Despite the decrease in exports, the value of goods and services imported in the country grew in 2019. Imports have grown every year this decade, and by 1.5 percent in 2019. Good imports grew by a modest 0.9 percent, the low rate driven in part by a 7.8 percent reduction in petroleum. Heightened importation of consumer goods (4.8 percent), vehicles and parts (4.5 percent) and foods, feeds and beverages (3.2 percent) continued in 2019.

The importation of services grew by 3.9 percent, significantly higher than the 1.6 percent growth in 2018. With exports down and imports up, the trade deficit grew to $653 billion. For context, this is more than three times the value of all exported consumer goods.

Inflation & Prices

There are many measures of price changes. The Consumer Price Index (CPI) is the most-cited measure, and includes a large basket of goods. Core inflation is very similar to the CPI, but excludes food and energy. In addition to the consumer-side of the market, there are measures of producer prices including the costs of materials.

Overall, the CPI rose 1.8 percent in 2019. This indicates increasing consumer prices, but at a lower rate than last year (2.4 percent) or the year before (2.1 percent). Core inflation was higher, at 2.2 percent. This was slightly up on the prior year of 2.1 percent. The difference between CPI and core inflation is due to the different trajectories of food and energy. Food prices grew by 1.9 percent, a significant acceleration of the 0.3 percent, 0.9 percent, and 1.4 percent experienced in 2016-2018. Energy prices fell 2.4 percent, a welcome rebalancing after increases of 8.0 percent and 7.4 percent in the previous two years.

Producer prices also increased slightly in 2019. While core inflation was 2.2 percent, a 4.9 percent reduction in energy prices resulted in finished goods increasing by 0.7 percent. Intermediate materials fell by 1.5 percent, and crude materials fell by 7.2 percent. Gas fuels fell by 27.0 percent.

The Labor Market

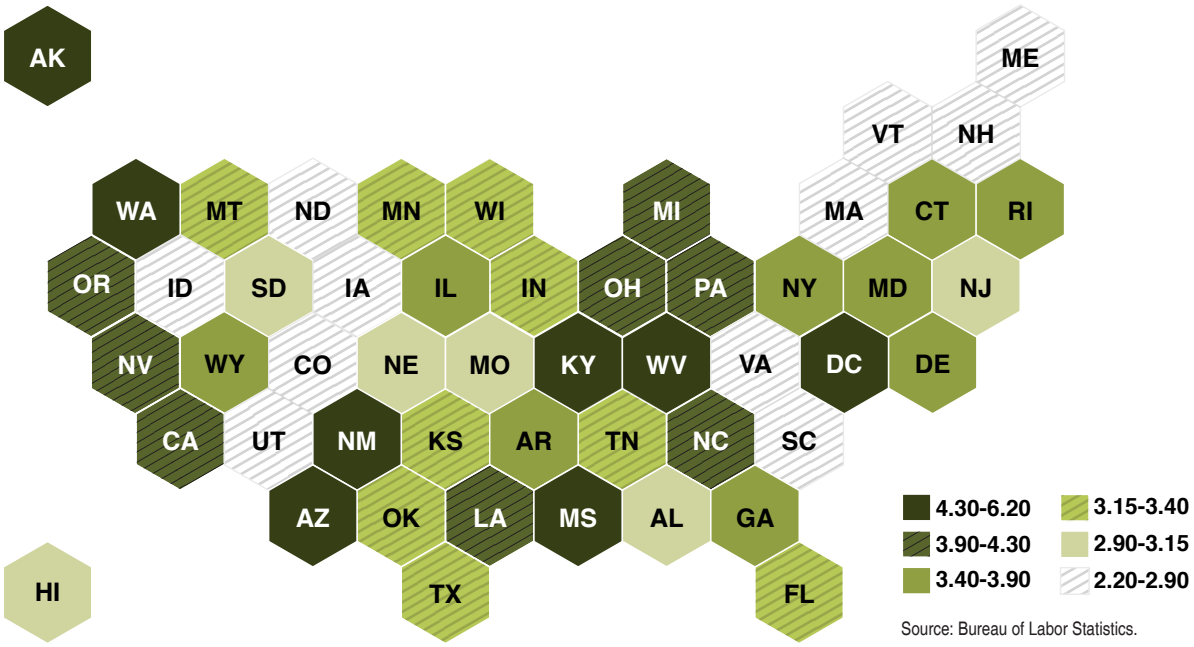
The unemployment rate, which averaged 3.7 percent over the course of 2019, is at its lowest level in decades. Having started the year at the relatively low rate of 3.9 percent in quarter one, steady declines see the rate entering 2020 at 3.5 percent.

While low overall, unemployment varies considerably across borders and types of people. As of September, Vermont recorded the lowest level of unemployment in the country at just 2.2 percent. Unemployment is also notably low in Iowa, New Hampshire, and North Dakota, all of which recorded rates of 2.5 percent. Tennessee ranks joint 25th in the nation, with unemployment at 3.5 percent. The labor markets in Washington, D.C., Mississippi, and Alaska, are less buoyant, as they all recorded unemployment rates in excess of 5.0 percent.

The large and persistent differences between groups of people (by age, gender, etc.) are perhaps more surprising than differences in unemployment by geographical location. Generational differences are quite stark. The unemployment rate for young people aged 16 to 19 years is 12.3 percent, more than three times the 3.2 percent observed for people aged 20 and over. The unemployment rate for the foreign-born population is 2.9 percent,

1.2. THE U.S. ECONOMY: YEAR IN REVIEW, CONTINUED

Figure 1.8: Variations in Unemployment Rates, by State (2019)



notably below the 3.4 percent -recorded for native born. The participation rate for males (aged 20 years and over) is 71.6 percent, substantially higher than the corresponding 59.2 percent for females.

The population of the U.S. stands at 330 million people, up 0.7 percent on the previous year. Of course many of these are children, students, retirees, or otherwise not in the labor force. The labor force itself comprises 163.5 million people which implies a labor force participation rate of 63.1 percent, up 0.2 percentage points on the previous year.

The participation rate was significantly higher at the turn of the century (67.1 percent) than today (63.1 percent). Much analysis has focused on this decline as the cause of economic worry. However, the prime aged labor force participation rate, at 72.6 percent in 2019, is at its highest level since the Great Recession. In reality, much of the decline in the participation can be explained by changes in the age profile of the population. In 2000, there were 35.1 million people (12.4 percent of total, about one person out of every eight) aged 65 and up. That number has now increased to 54.5 million, representing about one person out of every six (16.5 percent). Older people are less likely to work. Nonetheless, as people live longer it is unsurprising that they spend longer in the labor market. The participation rate of people aged 65 and up has increased from 12.9 percent in 2000 to 19.5 percent in 2019.

Productivity & Wages

Wages and salaries grew by 3.0 percent in 2019, matching the increase of 2018. Benefits (including health insurance) increased by 2.1 percent, resulting in total compensation increasing by 2.7 percent.

On average, people work 32.3 hours per week. This has been relatively constant throughout the decade, as 32.3 hours per week matches the level recorded in 2010. Manufacturing workweeks are longer, averaging 41.6 hours in 2019. This is down from the 42.1 hours in 2018, and is at the lowest level since 2012. Hourly compensation is $43.90, up from $42.20 in 2018. Compensation attributable

1.2. THE U.S. ECONOMY: YEAR IN REVIEW, CONTINUED

to employees grew to 63.1 percent of national income, the highest level since 2009.

Nonfarm productivity increased by 1.3 percent in 2019, a rather poor showing with important implications for the nation's growth path. This was helped by a 3.7 percent increase in the capital stock, which has grown by more than 3.0 percent every year since 2013. Manufacturing output per hour increased by 0.4 percent in 2019, a decrease on the 0.7 percent gain in 2018. Collectively, potential GDP increased by 2.0 percent, beating the 1.9 percent increase last year, and representing the largest increase over the decade.

1.3. THE U.S. FORECAST

We forecast that the U.S. economy will continue to expand in 2020. Growth in real GDP will be 1.9, 2.0, 2.1, and 2.3 percent in quarters one through four, generating an average growth rate of 2.1 percent. This is slightly slower than the growth rate of 2.3 percent experienced in 2019. As the stimulatory effects of the Tax Cuts and Jobs Act continue to dissipate, growth will continue to slow in 2021 (2.0 percent) and 2022 (1.6 percent) in the baseline forecast. Slower global growth, tariffs and labor scarcity will contribute to the slower growth outlook.

Consumption

Consumer spending is expected to remain strong, with growth of 2.8 percent in 2020 and 2.4 percent in 2021 forecasted. While down on the 3.0 percent and 2.6 percent experienced over the past two years, this represents strong growth on an historical basis.

Increased consumption will be most noticeable with 5.2 percent growth in durable goods. This reflects optimistic consumer sentiment, ongoing job gains and confidence in the strength of the economy. Consumers will continue to shift away from automobiles, with negative growth of 8.1 percent and 4.2 percent expected in 2020 and 2021. Some of this will be captured in traditional substitutes like light trucks, which will see growth of 3.9 and 7.9 percent over the next two years.

Consumption of nondurable goods will also increase, with growth of 3.2 percent forecast for 2020. This should slow to 1.9 percent in 2021, and to 1.4 percent in 2022. The consumption of services will see a relatively slower expansion, with 2.3 percent growth forecast for 2020. Health care (2.9 percent) and food services (5.5 percent) will be among the biggest winners in the services sector.

The Labor Market

The buoyant labor market should continue in 2020. Wages and salaries should grow by 3.3 percent in 2020, substantially above the 1.1 percent increase in nonfarm output per hour. This will result in the compensation of employees increasing to 63.3 percent of national income in 2020, and rising above 64 percent by 2025.

Entering the year at 3.5 percent, the national rate of unemployment will fall to 3.4 percent by the end of 2020.

Investment and Interest Rates

Investment will continue to grow in 2020 but at a modest pace. Slower economy-wide growth will diminish the need to acquire new equipment and expand structures capacity. With growth of 1.7 percent forecast, investment growth will not match the TCJA-fueled expansion of 2018 (6.8 percent) and be more line with 1.6 percent experienced in 2019. With investment growth lagging the overall growth rate of the economy, fixed nonresidential investment as a percent of GDP will fall to 13.3 percent in 2020. Assuming the recertification

1.3. THE U.S. FORECAST, CONTINUED

of Boeing's 737 MAX can compensate for a disastrous 2019, investment in aviation is expected to be a big winner in 2020 with 26.9 percent growth.

A volatile element of investment is the rate of change of inventories. In 2019, the dollar value of nonfarm inventories increased by $80 billion. Volatility will continue with inventories expected to increase in value by a much more modest $15 billion in 2020.

Residential construction will pick up considerably in 2020, with growth of 0.4 percent arresting the negative growth rates in 2018 and 2019. The sector will start 1.3 million new homes in 2020, and average house prices are expected to grow by 3.1 percent. Much of this will be at the higher-end of the market: median house price increases, at 1.8 percent, will be more modest.

Federal Budget

In 2020 federal receipts will amount to 17.1 percent of GDP, slightly up on 2019, but substantially below the 18.0-18.9 percent raised in 2013-2017. In contrast, expenditures will grow to 22.3 percent of GDP, the highest level since 2012. The difference will amount to 5.2 percent of GDP. Thus the federal government will continue to increase the national debt, with the deficit predicted to exceed $1 trillion in both 2020 and 2021. The national debt currently stands at 80.3 percent of GDP. This will increase to 82.5 percent in 2020, and 84.5 percent in 2021. The debt-to-GDP ratio will exceed 90 percent by 2025. This contrasts with the much more modest 33.6 percent recorded at the start of the millennium.

1.3. THE U.S. FORECAST, CONTINUED

International Trade

The forthcoming year will see a minor thaw in the U.S. trade skirmishes, with both imports and exports forecast to increase in 2020. Following a decline of exports by 0.2 percent in 2019, growth (of 2.1 percent) will return in 2020. Service exports will increase 1.6 percent, a significant improvement on the reduction of 0.7 percent in 2019. The growth in goods exports will be spread throughout the economy with capital goods increasing by 5.6 percent and consumer goods by 1.0 percent. As noted above, much of the increase is predicated on the resumption of Boeing 737 MAX sales.

Imports will grow faster than exports. Forecasted import growth of 2.4 percent in 2020, coupled with growth rates exceeding 4.0 percent each year in 2021-2023, will expand the trade deficit to over $1 trillion. The largest growth area for imports is services, which is set to grow by 2.9 percent in 2020. This is slower than the rate for 2019, but remains higher than the forecasted growth in goods (2.3 percent). Importation of petroleum will increase by 3.9 percent in 2019, and of consumer goods by 5.1 percent. Imports of vehicles and parts will fall by 1.2 percent, the first decline since 2009.

Inflation & Prices

The CPI will continue its modest growth with rates of 1.6, 2.4, 1.4, and 0.7 percent forecast in quarters one through four of 2020. The 2020 average rate of 1.9 percent is slightly above the 1.8 percent of 2018, and the general trend will be replicated in 2021 with the cost of the basket of goods increasing by 1.8 percent. Core inflation, which excludes food and energy, will be slightly higher than CPI inflation. This is because of a predicted 2.5 percent decline in energy prices.

Producer prices will grow by 1.0 percent in 2020. This is a slower rate than consumer prices, in part because of producers' heavier reliance on crude materials which are forecast to fall by 7.2 percent. The gradual increase in producer prices will continue in subsequent years, with inflation of 1.0 percent and 2.3 percent forecast for 2021 and 2022 respectively.

Having fallen from 2.4 percent to below 1.9 percent, interest rates were lower at year-end 2019 than they were in January. The Federal Reserve will likely maintain its relatively looser monetary policy through 2020, as rates are likely to remain below 1.7 percent for the year on average, before rising above 2.0 percent in 2021.

1.3. THE U.S. FORECAST, CONTINUED

Predictors of the Next Recession

The economy of the United States has grown every year since the Great Recession. In aggregate, GDP has grown by 25 percent since 2009. That increase has been shared among a population that has increased by 7.3 percent. A remarkable fact of the recovery is that the 2010s will be remembered as the first decade without a recession since records began in the Antebellum period.

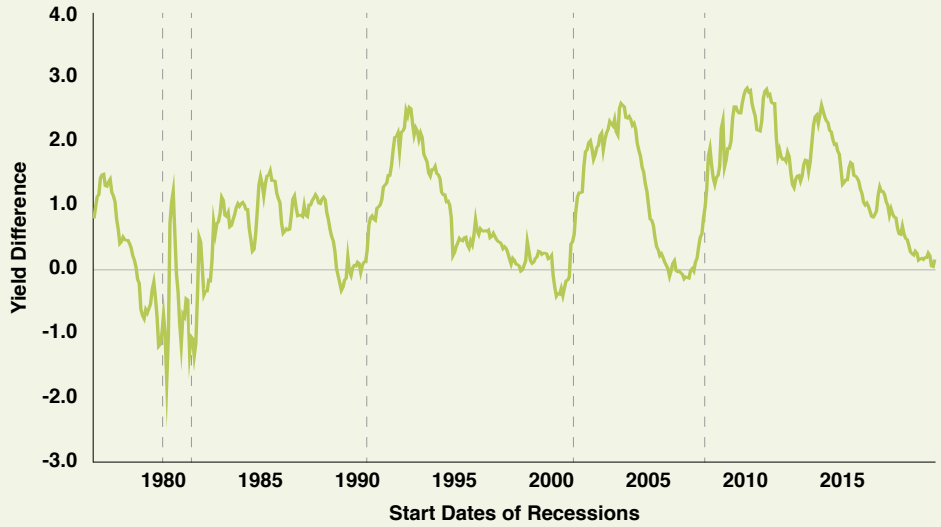
While the economy has remained resilient in recent years, future downturns are somewhat inevitable. Policymakers have two major levers to combat recessions: fiscal and monetary policy. Recent historical choices have resulted in both of these levers left with little slack. Monetary policy has for years been struggling near the zero lower bound for interest rates, providing the Federal Reserve with less room to maneuver in case of financial market distress. Expansionary fiscal policy is the other principal way to overcome an economic downturn, though Congressional approval for increased expenditure seems unlikely when the federal government is already running a large deficit. With fewer policy options available under poor economic conditions, predicting a recession becomes more important.

Yield curves graph the difference between interest rates of different durations. An *Inverted Yield Curve* is perhaps the best-known predictor of a recession. The relationship between an inverted yield curve signaling a recession has been known since the 1980s. In general, a longer-term horizon ties up money for longer and thus demands a higher a rate of return. Consequently, the yield on a 10-Year bond is higher than the yield on a 5-Year bond, which in turn commands more of a yield than a 1-Year bond and so on.

This relationship is not always true and the phenomenon of a longer bond yielding less than a shorter bond is referred to as a "yield curve inversion", or an "inverted yield curve". U.S. Treasury yields inverted in the third quarter of 2019, when the rate on the 3-month Treasury-bill (2.02 percent) became slightly higher than the rate on a 6-month Treasury -bill (1.96 percent). Such inversions rarely persist for a long time period, and the unusual pattern had dissipated by quarter four. Nonetheless, yield curve inversions are predictors of recessions.

Continued on Page 15

Figure 1.11: Recession Predictor: Yield Curve



Source: Federal Reserve Bank.

1.3. THE U.S. FORECAST, CONTINUED

Predictors of the Next Recession, continued from Page 14

Figure 1.11 shows the difference between yields on 10-year and 2-year Treasury bonds. The yields on 10-year maturities are typically higher, and so the difference is usually positive. Yield curve inversions cause the difference to drop below zero. Consistent with the inversion for the 3-month and 6-month maturities, the gap between yields on 10-year and 2-year maturities has been closing. We can see that historically this has served as advanced warning of a recession, although the exact timing varies across the decades. The experience in recent years has been a significant contraction in the yield curve, signaling that financial markets are somewhat worried about recession.

As statistical agencies must first collect and analyze the data, quarterly GDP statistics are typically published with a slight lag. This means that policymakers often discover that the economy is in recession after it has started. The difference in time between a recession starting and a recession being declared can be quite large. For example, the National Bureau of Economic Research did not pinpoint December 2007 as the start of the Great Recession until over a year after that date. The Sahm Curve has recently been found to provide a recession indicator that operates closer to real-time.

The Sahm Curve, named for economist Claudia Sahm, plots the change in the unemployment rate relative to the previous year. As unemployment data are released every month, policymakers can update the Sahm Curve at much greater frequency than official GDP statistics. Sahm noted that an increase in unemployment by 0.5 percentage points within one year is a very good predictor of immediate recession, and that any policy responses to this increase "would have been triggered only in recessions." Figure 1.12 shows a sharp increase in the Sahm Curve has been a precise predictor of recent recessions. We recommend that concerned policymakers should consider the Sahm Curve as a clearer, faster recessionary warning signal than an inverted yield curve.

Sahm, Claudia (2019) *Direct Stimulus Payments to Individuals.* In Boushey, Heather, and Ryan Nunn and Jay Shambaugh (Eds.) "Recession Ready: Fiscal Policies to Stabilize the American Economy" (pp. 67--92). Hamilton Project, Brookings Institution.
Stock, James H., and Mark W Watson. "Forecasting output and inflation: The role of asset prices." *Journal of Economic Literature* 41.3 (2003): 788-829.

Source: Federal Reserve Economic Database, NBER. Dashed lines represent the start of recessions.

1.4. ALTERNATE SCENARIOS

In the pessimistic scenario, loss of consumer confidence and increased aversion to risk could result in a recession. In the *Economic Report to the Governor of 2018,* we placed this as a relatively low probability (25 percent) event and indeed it did not transpire. While still less likely than our baseline prediction, we increase the probability of the pessimistic scenario to 35 percent.

While no recession is desirable, the decline in real GDP under the pessimistic outlook is a manageable 2.0 percent. The pessimistic scenario predicts a recession beginning toward the end of 2020 and lasting less than a year. The driver of the decline is a sharp reduction in the rate of fixed business investment, as expectations of future profits decrease. In turn, unemployment increases to 5.8 percent and inflation falls from 2.1 percent to 1.1 percent.

The Federal Reserve would react to the adverse economic conditions, lowering interest rates to return the unemployment rate to lower levels. With interest rates already low by historical standards, the ability of monetary policy to guide macroeconomic conditions is curtailed. The large debt overhang from years of relatively loose fiscal policy would also restrict the ability of policymakers to avoid recession or mitigate its consequences. As a result, the economy recovers only slowly throughout the remainder of 2021, resulting in overall growth of 0.1 percent of output.

In the optimistic scenario, faster-than-expected productivity gains results in GDP growth of 3.4 percent in 2020. We consider this scenario quite unlikely, assigning it a probability of 10 percent. This is lower than the 15 percent probability given to the optimistic scenario last year, reflecting a more cautious outlook.

Increasing productivity gains increase GDP growth, but when paired with low unemployment and high interest rates, they also result in higher wages. Supposing productivity growth reaches an annual average rate of 2.7 percent, we forecast investment to rise by 4.4 percent and a 3.3 percent increase in consumer spending.

With increased investment and GDP growth, unemployment will fall to 3.1 percent. The Federal Reserve will respond by increasing the Funds Rate to over 3.0 percent. This will ensure inflation remains at reasonable levels. The S&P 500 would increase by 6.5 percent, continuing its growth of 21.7 percent in 2019.

2.1. INTRODUCTION

Both Tennessee and the nation have now seen positive economic growth for more than 10 consecutive years, making this the longest economic expansion on record, dating back to the 1850s. The state unemployment rate averaged 3.5 percent during the third quarter of 2019, and has now been below 4 percent for two full years, suggesting that the economy is hovering around its full employment level (i.e. everyone who is willing and able to work is doing so).[1] As a result, labor force growth is largely constrained to new entrants from school, migrants, and those remaining on the sidelines (i.e. not participating in the labor force), and, there is less room for job growth going forward. Evidence of this can already be seen in the labor market, where job growth in Tennessee has slowed from 2.5 percent in 2016, down to 1.6 percent in 2017, and 1.8 percent in 2018. In addition to the tightening labor market, there are other headwinds in sight that could limit economic growth at both the state and national levels. A cloud of uncertainty surrounding trade policy with China coupled with a global economic slowdown has led to a more moderate pace of growth for much of 2019 in the form of weakened business spending and lower net exports (exports minus

[1] Even at this "full employment" level, structural and frictional unemployment still exist, and therefore the unemployment rate remains above zero. Structural unemployment occurs when there is a mismatch between the skill set of the unemployed and the employer's needs or if the unemployed live in a region that is too far from the available jobs and are unable to move. Structural unemployment is often a long-term issue. Frictional unemployment occurs when workers spend time searching for the right job, or due to quitting/being terminated from a current job. Frictional unemployment is generally shorter-term for most individuals.

2.1. INTRODUCTION, CONTINUED

imports). Calls of an imminent recession were louder than usual this past summer and fall, but seem to have abated as the Federal Reserve cut the federal funds rate three times since July 2019 to help stimulate the economy. Thus, while our short-term forecast (10 quarters ahead) does not call for a recession, we do project slower positive economic growth in the near term.

To that end, the short-term outlook calls for steady economic growth through 2020 before slightly moderating in 2021. A number of temporary factors will help boost growth this year, including the spending stimulus associated with the 2018 and 2019 Bipartisan Budget Acts, and the stimulative effects associated with the Federal Reserve's rate reductions. By mid-2020 we should also see the hiring of around 350 thousand temporary workers nationwide for the 2020 Census which will help to temporarily boost economic activity across the country. However, this forecast presumes that the Federal Reserve will reverse course and start to raise interest rates again by the end of 2020. In addition, the effects of fiscal stimulus will start to wane, and a slowing of economic growth will commence in 2021. These factors are reflected in our forecast, which calls for a 2.1 percent increase in inflation-adjusted state gross domestic product (real GDP) in 2020 and a much slower 1.6 percent increase in 2021. Similarly, nonfarm jobs in Tennessee will grow by 0.9 percent in 2020 but slow to 0.5 percent in 2021. A comparable pattern is expected for the nation as a whole, where nonfarm jobs will grow by 1.2 percent in 2020 but only 0.8 percent the year after. In the manufacturing sector, we have seen some pullback in both orders and output due to the ongoing trade war with China as well as a systemic slowdown of global economic growth. As a result, manufacturing employment in Tennessee will only grow by 0.6 percent in 2020 and then contract by 0.5 percent in 2021. The slowdown will be even more pronounced in the national economy, where manufacturing employment—which is already contracting--is projected to fall by 0.7 percent in 2020 and 1.8 percent in 2021. A less pessimistic outlook for the state manufacturing sector is due in part to the planned Volkswagen expansion in Chattanooga that should add 1,000 new jobs in the early part of the new decade, and should help to offset some of the expected employment losses from other areas of the state's manufacturing sector.

The state unemployment rate is expected to average 3.5 percent in each of the next two years. Nominal personal income will grow by 4.6 percent in 2020 and 4.7 percent in 2021. On a fiscal year (FY) basis, personal income should advance by 4.9 percent in FY 2019/20 and 4.5 percent in FY 2020/21.

2.2. THE CURRENT ECONOMIC ENVIRONMENT

The Labor Market

The labor markets in both the state and nation continue to tighten as the current economic expansion grows more mature and the economies hover around full employment. In Tennessee, nonfarm jobs grew by 1.7 percent in 2018, representing a gain of over 50 thousand jobs compared to the year prior. Job growth in Tennessee was on par with the nation, which also recorded a 1.7 percent growth rate. This is the second consecutive year that the state registered job growth below 2 percent, but this is still a sign of healthy gains in the labor market. Moreover, with nearly 3.1 million workers in the state labor market, this is the fifth consecutive year that state employment levels exceeded their pre-recession peak of 2.8 million. However, it took 7 years for the state labor market to regain all of the jobs lost during the recession. So while this has been a very long expansionary period, job growth during this expansion has been somewhat soft.

For perspective, **Table 2.1** reports nonfarm job growth trends for all southeastern states since

2.2. THE CURRENT ECONOMIC ENVIRONMENT, CONTINUED

Table 2.1: Nonfarm Employment Growth across the Southeast Since the Great Recession

	Employment (in thousands)		
	Dec-07	Oct-19	Growth Dec. 2007 to Oct. 2019
Florida	7,930.6	9,079.0	14.5%
South Carolina	1,949.0	2,185.0	12.1%
Georgia	4,171.3	4,641.4	11.3%
Tennessee	**2,805.6**	**3,119.9**	**11.2%**
North Carolina	4,166.1	4,589.1	10.2%
United States	138,409.0	151,945.0	9.8%
Virginia	3,779.6	4,029.7	6.6%
Arkansas	1,206.6	1,282.2	6.3%
Kentucky	1,858.0	1,964.5	5.7%
Alabama	2,032.1	2,091.8	2.9%
Louisiana	1,938.0	1,990.6	2.7%
Mississippi	1,160.1	1,171.2	1.0%
West Virginia	729.4	733.3	0.5%

Source: Bureau of Labor Statistics.

the first month of the Great Recession, December 2007. Over the twelve-year period, nonfarm employment in the nation was up 9.8 percent. Florida, South Carolina, Georgia, Tennessee, and North Carolina were the only southeastern states to see stronger job growth than the national average. Florida had the strongest job growth at 14.5 percent, while Tennessee was fourth in the region at 11.2 percent. By comparison, employment in West Virginia and Mississippi only grew by 0.5 percent and 1.0 percent respectively over the past twelve years.

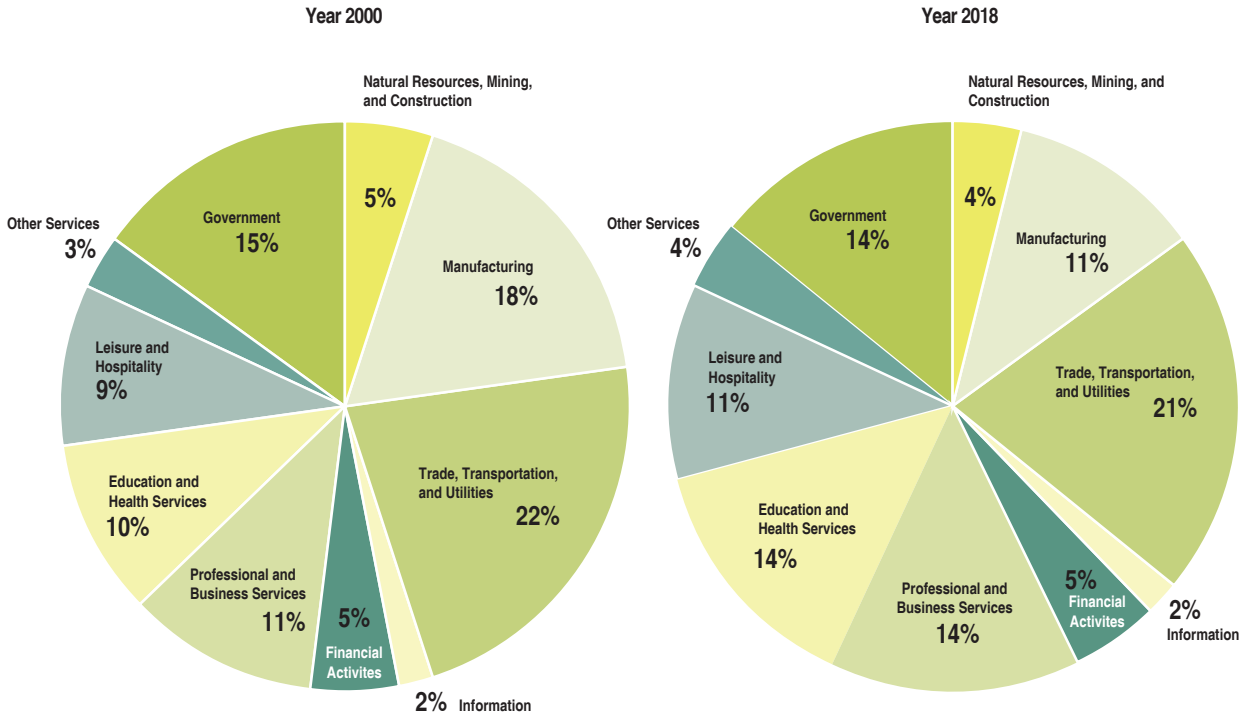
In 2018, most broad sectors of the Tennessee economy saw some job growth. The only exception being the information sector, which contracted by 1.1 percent compared to the year prior, equivalent to a loss of 500 jobs. The information sector, with roughly 45,000 workers statewide, has the smallest labor force among all broad sectors in the state, and the number of information sector workers has generally trended downward since even before the Great Recession. In contrast, the natural resources, mining, and construction sector saw the strongest rate of job growth in 2018, expanding by 3.9 percent and gaining 4,900 jobs compared to the year prior. Similarly, Tennessee's service sectors saw healthy job gains in 2018, and for much of the current expansion these sectors have helped buoy overall job growth in the state. In 2018, jobs in other services grew by 3.3 percent or 3,800 jobs, leisure and hospitality jobs increased by 3.1 percent, equivalent to a net addition of 10,300 workers, and the financial activities sector saw job growth of 2.5 percent or 4,000 workers. In addition, jobs in professional and business services expanded by 1.5 percent, representing an increase of 6,100 more workers. In total, there are over 1.5 million service sector workers in the state, which accounts for roughly 50 percent of the state workforce.

Figure 2.1 shows how the composition of workers in Tennessee has changed since the beginning of the millennium. In 2000, 18 percent of the Tennessee workforce was employed in the manufacturing sector, but this share has fallen dramatically over the past two decades and is down to 11 percent as of 2018. By contrast, there has been a large upswing in service sector workers, as the percentage of workers in leisure and hospitality has risen by 2 percent, the percentage of professional and business services workers is up 3 percent, and the percentage of education and health services workers has grown by a robust 4 percent. Thus, the labor force composition in Tennessee has shifted dramatically away from manufacturing and towards service-providing industries. This is a trend that we have seen play out nationwide as well.

The manufacturing sector saw modest job growth of 1.3 percent in 2018, representing an increase of 4,500 more workers than the number in 2017. The state's manufacturing sector has now seen job growth in eight consecutive years. However, manufacturing employment in Tennessee grew at a much slower rate than in the nation, which saw 2.0 percent growth compared to the year prior. Within Tennessee's manufacturing sector, jobs in the nondurable goods sector grew by 1.8 percent and jobs in the durable goods sector expanded by a more moderate 1.0 percent pace.

2.2. THE CURRENT ECONOMIC ENVIRONMENT, CONTINUED

Figure 2.1: Tennessee's Workforce Has Largely Shifted From Manufacturing to the Service Sector



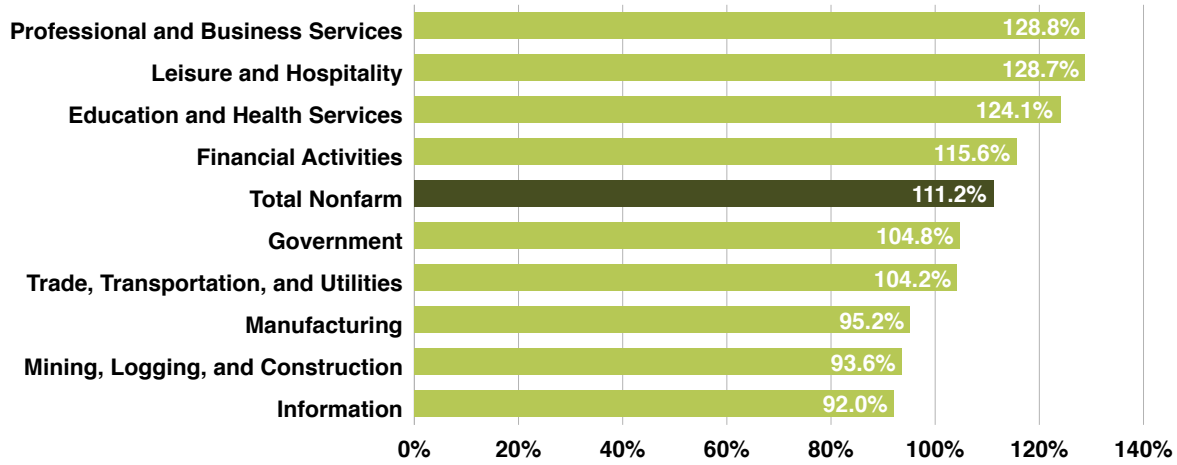
Source: Bureau of Labor Statistics.

In the durable goods sector, the computer and electronics subsector showed the strongest growth, advancing by 4.8 percent, followed by miscellaneous durables, which saw job growth of 4.3 percent—these are some of the smaller subsectors in durable goods manufacturing. The transportation equipment subsector, which accounts for a third of all durable goods manufacturing workers, faced job losses of 0.6 percent in 2018. This is consistent with national light vehicle sales peaking and now trending down. In the nondurable goods sector, jobs in the beverage and tobacco subsector grew by 6.1 percent, marking four consecutive years of robust job growth. Miscellaneous nondurable goods and chemical manufacturing also saw decent job gains of 3.6 percent and 2.2 percent respectively.

Figure 2.2 shows how much employment growth each sector in Tennessee has seen since December 2007. Employment levels in most broad sectors of the state economy have fully recovered since the Great Recession. The service sectors have seen the strongest gains, with employment in professional and business services expanding by 28.8 percent and jobs in leisure and hospitality increasing by 28.7 percent since 2007. Conversely, employment levels in information, manufacturing, and the mining, logging, and construction sector have still not fully recovered from the recession, for reasons distinct to their respective sectors. The information sector, which includes industries such as print publishing and TV broadcasting, has faced consistent job losses since before the Great Recession, in part due to the internet. Today, more people get their news online and rely less on print publications such as magazines and newspapers, and more people are cutting their cable cords or getting a larger portion of their television entertainment from streaming services that are not headquartered in Tennessee and therefore do not employ as many Tennessee workers. The manufacturing

2.2. THE CURRENT ECONOMIC ENVIRONMENT, CONTINUED

Figure 2.2: Job Levels in Most Tennessee Sectors Have Fully Recovered Since the Great Recession



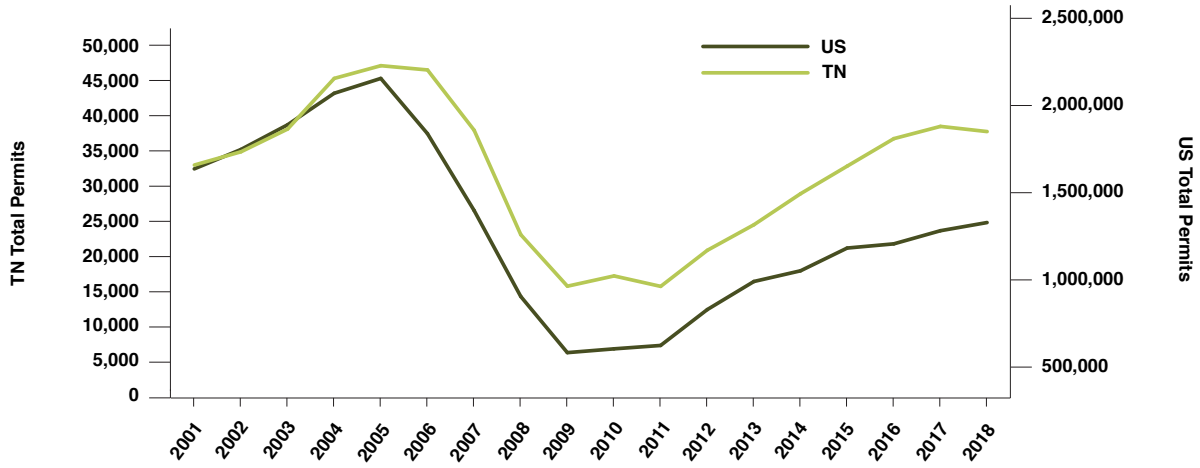
Source: Bureau of Labor Statistics.

sector saw some of the largest job losses of any industry during the recession, shedding roughly 100 thousand jobs between 2006 and 2010. And while manufacturing has made a considerable rebound during the current expansion, many business owners are relying more heavily on advanced manufacturing and automation to produce more goods with fewer workers. As a result, manufacturing employment levels have still yet to fully rebound from the losses faced during the recession. Finally, the mining, logging, and construction sector also has not fully rebounded since the Great Recession. Prior to the recession, construction activity and employment were overly (and unhealthily) inflated due to the housing boom/bubble. Once the housing bubble burst, we saw steep job losses in this sector, and both employment levels and production have not gotten back to the inflated level that we saw before the recession. In addition to Figure 2.2, which shows that employment levels in the construction sector have still not fully recovered, **Figure 2.3** presents data on building permits (authorized construction of new privately-owned housing units) at both the state and national level, both of which have been on an upward trajectory since 2011 but are still well below their pre-recession peak levels. This is consistent with national data on existing home sales, which is also well below its pre-recession peak. There are a number of possible reasons as to why building permits (and the housing market as a whole) have been slow to recover. Fist, builders and developers are not putting up enough new homes due to rising construction costs, trouble finding skilled labor, and a shortage of buildable lots. In addition, many single family homes, especially those underwater, were converted into rental units in the wake of the Great Recession. These factors have led to a low-inventory issue in the housing market, which has put upward pressure on house prices across much of the nation and dampened house sales.

Figure 2.4 shows how employment growth varies across all Tennessee counties in March of 2019 (the most recent county-level data available). Between March 2018 and March 2019, statewide employment grew by 2.0 percent. During this period, 58 counties saw positive employment growth, 37 of which saw gains that outpaced the state average. The strongest growth rates were recorded in Hancock County (up 12.2 percent) and Fentress County (up 8.6 percent), though both counties are relatively small so these large percentage gains reflect modest gains in the number of jobs (just 103 new jobs in Hancock and 410 new jobs in Fentress). By comparison, Davidson County, with over 500,000 workers, saw job growth of 3.2 percent and added a state-best 15,000 new jobs over the 12-month

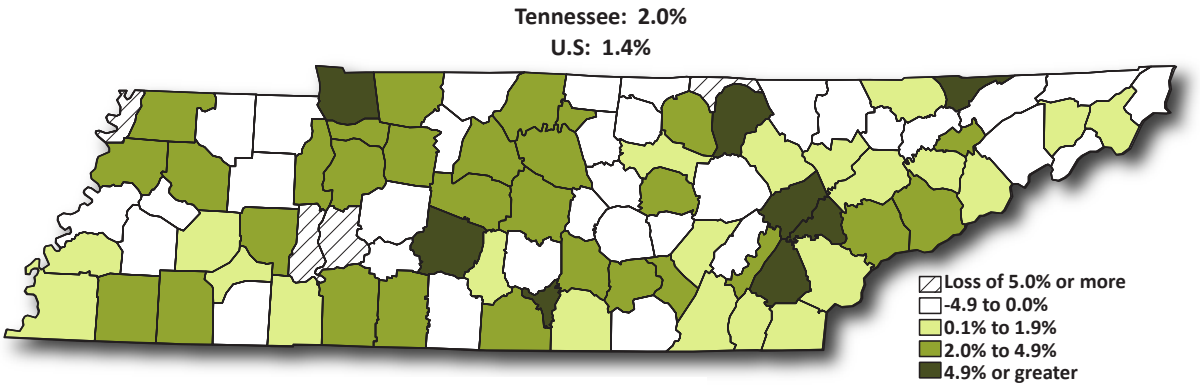
2.2. THE CURRENT ECONOMIC ENVIRONMENT, CONTINUED

Figure 2.3: Building Permits in both the US and Tennessee are Still Well Below Pre-Recession Peak Levels



Source: U.S. Census Bureau

Figure 2.4: Most Tennessee Counties Are Seeing Some Employment Growth in the First Quarter of 2019



Note: Growth of total employment covered by the state unemployment insurance program.
Source: Bureau of Labor Statistics.

period. In a distant second was Shelby County, where 5,336 additional jobs were created, and Williamson County with 5,141 more jobs. During this same period, there were three counties where employment remained flat, and 34 counties to report job losses. The steepest declines were in Pickett County (down 17.4 percent) and Perry County (down 9.6 percent), representing losses of 205 and 200 jobs respectively.

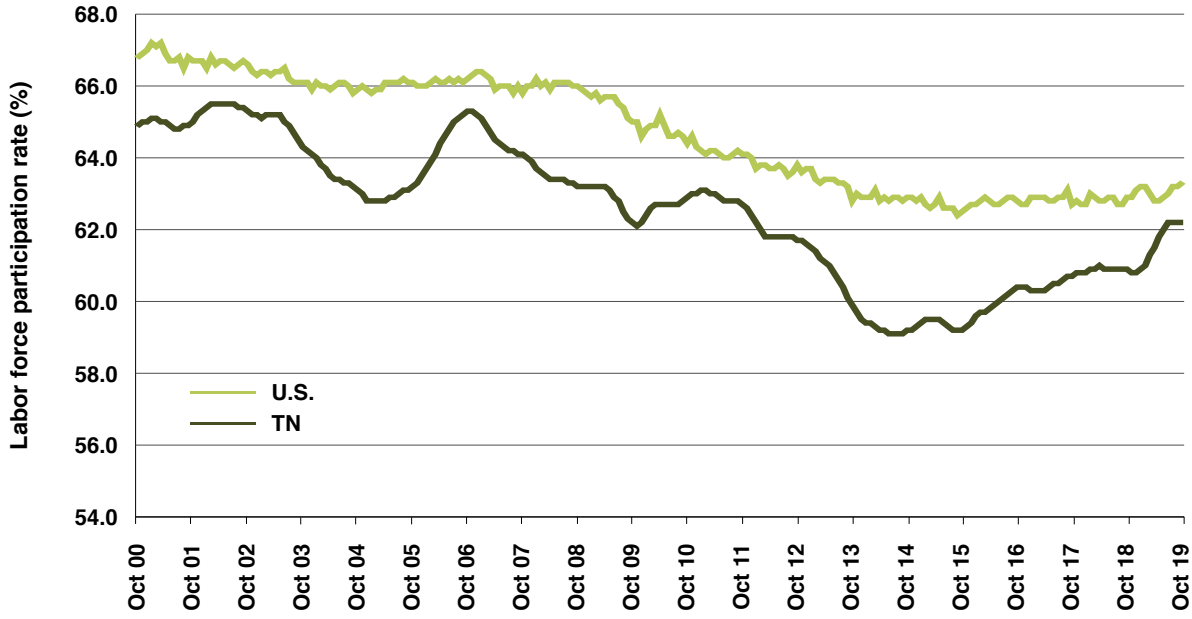
Tennessee's civilian labor force, which includes those working and those unemployed but actively seeking employment, notched upward by 1.7 percent in 2018. This was driven by a 2.0 percent increase in the number of employed people in Tennessee. As a result, the labor force participation rate ticked upward from 59.3 percent in 2017 to 59.7 percent in 2018. Tennessee's labor force participation rate had been on a downward trend since the fourth quarter of 2006. From 2000 through 2005, the state participation rate hovered between 64 and 65 percent, then fell to around 62 percent during the recession, and more worryingly continued to fall for much of the ensuing expansion, dropping as low as 57.9 percent during the third quarter of 2014. More recent data has the participation rate trending upward again, reaching 61.2 percent in the most recent quarter

2.2. THE CURRENT ECONOMIC ENVIRONMENT, CONTINUED

(third quarter of 2019), but still well below the pre-recession trend. This pattern is not unique to Tennessee. **Figure 2.5** presents monthly labor force participation rates for both the state and the nation from January 2000 through 2019, and shows that the national participation rate has also been trending downward since 2000, well before the Great Recession. There are a number of possible reasons for lower labor force participation rates, including (but not limited to) more younger people going to school, and more importantly, more people from the Baby Boom generation retiring. There is also still a relatively large group of 340 thousand discouraged workers in the country who could potentially be coaxed back into the labor force. This is nonetheless a great improvement, as the number of discouraged workers was over 500,000 just 12 months ago, and above 1.0 million in 2010. More worryingly, the state participation rate has consistently been below that of the nation's. This is likely due in part to lower levels of educational attainment and poorer health status for Tennesseans. However, a recent upward trend in the state's participation rate has led to a narrowing of this gap.

The number of unemployed people (i.e. not working but actively looking for employment) in Tennessee fell by 5.2 percent in 2018, but rose dramatically in both the second and third quarter of 2019. This increase in unemployed could suggest that more people are entering the labor force (by beginning to look for a job) but have yet to find work, which is a good sign, and is consistent with the recent uptick in labor force participation at the state level. The state's unemployment rate, measured as the percentage of the adult population that is not working but actively searching for a job, has also been remarkably low, falling to 3.5 percent for the 2018 year as a whole, and ticking as low as 3.2 percent in the first quarter of 2019 before drifting back up to 3.5 percent in the third quarter. These incredibly low unemployment rates are suggestive of a very healthy and very tight labor market. However, a low unemployment rate coupled with low labor force participation also implies that there is a large swath of the state population that is not working

Figure 2.5: Since 2000, Labor Force Participation Rates for Both Tennessee and the U.S. Have Been Declining, but the State Rate has Seen a Recent Uptick



Source: Bureau of Labor Statistics.

2.2. THE CURRENT ECONOMIC ENVIRONMENT, CONTINUED

(a component in the labor force participation rate) and not actively looking for work (a component in the labor force participation rate and the unemployment rate). Finding ways to pull these individuals back into the labor force could be a boon for economic growth.

Figure 2.6 presents seasonally adjusted unemployment rates for all southeastern states for October 2019. Tennessee's monthly unemployment rate of 3.4 percent is slightly lower than the national rate of 3.6 percent, but both are very low compared to historic norms. Virginia and South Carolina recorded the lowest rates for the region, both at 2.6 percent, followed by Alabama at 2.8 percent. Conversely, Mississippi and West Virginia had the highest unemployment rates in the southeast, at 5.5 percent and 4.8 percent respectively.

Figure 2.7 displays non-seasonally adjusted county-level unemployment rates across the state for September 2019. Only five Tennessee counties had unemployment rates of 5.0 percent or higher. Clay County had the highest unemployment rate at 5.6 percent, followed by Hardeman (5.4 percent), and Hancock (5.2 percent). Additionally, Lauderdale and Rhea both registered unemployment rates of 5.0 percent. In contrast, there were 21 counties with rates at or below 3.0 percent, including Williamson and Sevier tied with the lowest county rates in the state at 2.3 percent. The map also shows that the counties containing or located near the larger metro areas have the lower unemployment rates.

Income and Taxable Sales

A continued tightening of the labor market and low unemployment rates have finally put some upward pressure on nominal personal income at both the state and national level. After growing by only 3.8 percent in 2017, state personal income growth accelerated to 5.3 percent in 2018. This was slightly below the 5.6 percent rate recorded for the nation as a whole. In Tennessee, personal income gains have been driven in large part by strong wage and salary growth, which advanced by 5.1 percent in 2018. In addition, rent, interest, and dividend income shot up by 8.1 percent, and transfer payments grew by 5.1 percent. At the national level, wages for those at the lower end of the income distribution have been rising more rapidly. This is notable since these workers typically spend a larger percentage of their take-home pay, which could have stimulative effects on economic growth. There is also evidence of wage growth among new hires, while wages for experienced workers has remained somewhat stagnant.[2]

Per capita income in Tennessee also saw some accelerated growth in 2018. Following lackluster growth of 2.9 percent in 2017, Tennessee saw per capita income gains of 4.4 percent in 2018. However, per capita income in the nation grew at a slightly faster rate of 4.9 percent. As a result Tennessee's per capita income level of $46,904 is still well below the national average of $54,374. For more context, **Figure 2.8** presents nominal per capita income levels for all southeastern states in the second quarter of 2019. At $48,658 per person, Tennessee's per capita income level was slightly below the regional average ($49,051) and well below the national average ($56,541). However, this is an issue for the southeast region as a whole. Virginia, at $59,921 per person, is the only southeastern state with per capita income above the national average. By comparison, Mississippi has the lowest average income in the region, at $39,163 per person, followed by West Virginia at $42,409.

Figure 2.9 reports per capita personal income in current dollars across all Tennessee counties in 2018. At $94,872 per person, Williamson County has the highest per capita income level in Tennessee, by a wide margin. In fact, Williamson County has the third-highest average income level among all counties in the southeast region, only behind Goochland, Virginia ($100,545) and Arlington, Virginia ($95,198), and has the 22nd highest average

Source: U.S. Bureau of Economic Analysis.

income level among all counties in the nation. In addition to Williamson County, Davidson, at $66,060 per person, and Fayette, at $55,364, are the only Tennessee counties with average income levels above the national average of $54,374. There were six additional counties with income levels above the state average of $46,904 per person: Hamilton, Knox, Shelby, Wilson, Sumner, and Loudon, all of which house or are in close proximity to the state's larger metro areas. Conversely, the state's lowest per capita income levels are in some of the more rural counties, with eight Tennessee counties recording per capita income levels below $30,000 per year (Bledsoe, Hancock, Hardeman, Lake, Lauderdale, Morgan, Scott, and Wayne). The lowest of such were in Lake County ($23,230) and Bledsoe County ($26,281), both of which are only around 2 times the 2018 U.S. poverty threshold of $12,784 for a one person household.[3]

Taxable sales showed incredibly robust growth in 2018. Growth in personal income is one of the main drivers of sales, and while personal income grew at a healthy clip of 5.3 percent in 2018, taxable sales advanced by an even faster 6.8 percent. This is the sixth consecutive year with taxable sales growth exceeding income growth. Strong gains in other retail and service sales was a major factor for overall taxable sales growth in 2018, increasing by 8.6 percent for the year. Sales in the transportation and communications sector were also up 8.9 percent, and purchases from manufacturers grew by 8.3 percent. Taxable sales from auto dealers saw the slowest growth among all broad categories, increasing by only 3.6 percent compared to the year prior. This also marks two consecutive years of relatively slow auto sales growth, and is consistent with a slowdown in national auto sales, which peaked in 2016 and have since slowed over the last few years. On a fiscal year (FY) basis, nominal taxable sales grew by 5.4 percent in FY 2018-19.

New Business Filings, A Leading Indicator?

Statistical analysis suggests that new business filings in Tennessee (i.e. the creation of newly incorporated companies), as collected by the Tennessee Secretary of State's office, is a good leading indicator for broader economic activity in the state. More specifically, growth of new business filings suggests future growth in the Tennessee economy with regards to nonfarm employment, personal income, and total tax revenues. In the third quarter of 2019, new business filings grew by a robust 8.2 percent compared to the same time last year. This suggests that the state economy should see continued economic growth in the near term.

Figure 2.10 shows that new business filings have expanded for 31 consecutive quarters. Furthermore, we have now seen robust year-over-year growth of 8.0 percent or more in seven of the last eight quarters, dating back to the fourth quarter of 2017. New filings growth has largely been driven by the creation of new domestic limited liability corporations (LLCs), which have expanded by 10 percent or more in each of the last eight quarters. In total, there were 11,585 new business filings in the third quarter of 2019, 84.5 percent of which were from domestic firms, and foreign entities accounted for the remaining 15.5 percent. A large proportion of these new filings were concentrated in the four largest counties: Davidson, Shelby, Knox, and Hamilton, which saw a combined 6,856 new filings, and accounted for 59.2 percent of all third quarter filings in the state.

Figure 2.10:
The Number of New Business Filings in Tennessee has Increased for 31 Consecutive Quarters

2.2. THE CURRENT ECONOMIC ENVIRONMENT, CONTINUED

State Finances across the Nation

In total, states collected $742.9 billion in tax revenues during the first three quarters of FY2018-19 (2018Q3 – 2019Q1), representing a 3.5 percent increase compared to the same period last year. Corporate income tax revenues saw the strongest growth, increasing by a robust 25.9 percent compared to last fiscal year-to-date (F-YTD), sales tax revenues grew by 5.5 percent, and motor vehicle fuel tax collections expanded by 4.3 percent.[4] Conversely, personal income tax collections fell by 1.7 percent, due to a spike in state income tax payments in late-2017 and early-2018 in response to the Federal Tax Cut and Jobs Act.

State tax revenues grew in all regions with the exception of the Mideast (Delaware, Maryland, New Jersey, New York, and Pennsylvania), which saw a 0.1 percent decline in revenue collections. The decline in the Mideast was largely due to reductions in personal income tax collections in both New Jersey and, to a larger extent, New York due to income tax shifting in response to federal tax policy. In contrast, the Southwest region saw the strongest revenue growth, as collections expanded by 10.9 percent, followed by the Great Lakes region with gains of 4.4 percent.

The Southeastern States and Tennessee

Total tax collections among the southeastern states (Alabama, Arkansas, Florida, Georgia, Kentucky, Louisiana, Mississippi, North Carolina, South Carolina, Tennessee, Virginia, and West Virginia) grew by 3.8 percent during this F-YTD, and slightly outpaced the 3.5 percent rate of growth registered for the nation as a whole.[5]

In Tennessee, total tax revenues grew by 5.9 percent during this F-YTD. Tax revenue growth during this period was largely driven by strong sales tax revenue collections, which were up 5.9 percent compared to last F-YTD, and motor vehicle fuel tax revenues which grew by 7.4 percent. More recent tax collections data from the Tennessee Department of Revenue show that as of October 2019, Tennessee tax collections totaled $3.82 billion for the fiscal year to date (August 2019 – October 2019), representing a $303.8 million or 8.6 percent increase over last F-YTD. The bulk of these revenue gains stem from revenue growth in the sales and use tax and franchise and excise tax. Sales tax collections have grown by $145.2 million or 6.3 percent and franchise and excise tax collections are up $84.1 million or 17.1 percent for the F-YTD. These two categories account for 75 percent of the total tax revenue growth realized thus far during the fiscal year. Motor vehicle fuel taxes have also seen healthy growth during the fiscal year, with gasoline tax revenues, which saw a 1-cent per gallon tax increase associated with the IMRPOVE Act, growing by $10.9 million or 4.9 percent, and motor vehicle fuel tax revenues, which saw a 3-cent per gallon tax hike, up by a robust $33.3 million or 50.9 percent. In addition to the tax rate increase, one-time payments by railroad companies may be an additional factor helping to buoy motor vehicle fuel tax revenues.

[5] ibid

2.3. SHORT-TERM OUTLOOK

The Tennessee economy will continue to grow at a decent clip in 2019 before slowing to a more moderate pace in 2020, and more muted growth in 2021. Government policies including the 2017 tax cuts and both the 2018 and 2019 Bipartisan Budget acts will continue to bolster economic activity in 2019 and to a lesser extent 2020, but as these temporary effects continue to wane we will

2.3. SHORT-TERM OUTLOOK, CONTINUED

see slower growth in 2021. The Federal Reserve cut the federal funds rate three times since July 2019 as insurance against rumbles of a recession, which should also have stimulative effects through 2019 and much of 2020, but it is believed that they may start raising rates again by the end of 2020. In addition to a tightening of monetary policy (i.e. the Fed raising interest rates), a few other downside risks are apparent, including a global economic slowdown and uncertainty surrounding trade policy. These factors are built into our forecast, as Tennessee's inflation-adjusted gross domestic product (real GDP) will advance by 2.7 percent in 2019, and then slow to 2.1 percent in 2020 and further down to 1.6 percent in 2021. The slower expected pace of growth (in both 2020 and 2021) is also due to the fact that many sectors of the state economy are operating at or near full employment and have little room for further growth.

A summary of the short-term outlook is provided in **Table 2.2**. Nonfarm jobs are projected to increase by 0.9 percent in 2020 and 0.5 percent in 2021, slightly below the pace of job growth projected for the nation as a whole (1.2 percent in 2020 and 0.8 percent in 2021). **Figure 2.11** shows that these projections reflect an ongoing downward trend in job growth at both the state and national levels. Manufacturing employment, which has also seen slower growth in each of the last three years is projected to expand by a meager 0.6 percent in 2020 before contracting by 0.5 percent in 2021. However, this seems rosy compared to national projections, which call for employment losses in each of the next two years. Nationwide, manufacturing employment will fall by 0.7 percent in 2020 and 1.8 percent in 2021. Overall, nonfarm job growth in Tennessee will be propped up by gains in the service sectors, especially professional and business services which will see job growth of 2.9 percent in 2020 and 2.7 percent in 2021. Financial activities, education and health services, and leisure and hospitality will also see decent job gains over the next two years.

Boyd Center for Business and Economic Research, University of Tennessee

Tennessee Econometric Model

2.3. SHORT-TERM OUTLOOK, CONTINUED

Tennessee's unemployment rate will tick up slightly but remain low over the short-term outlook horizon, averaging 3.5 percent per year in both 2020 and 2021. In 2020, the number of employed people will grow by 1.7 percent while the number unemployed will increase by 5.6 percent. This suggests that a number of people still on the sidelines will enter the labor market by starting their job search. However, since there is generally a lag between starting the job search and beginning to work, we will see an uptick in the number of unemployed people. Similarly, the labor force participation rate will start to slowly increase, advancing from 60.8 percent in 2019 to 61.4 percent in 2020, as the number of people working or not working but actively searching for work grows.

Nominal personal income in Tennessee will grow by 4.6 percent in 2020 and 4.7 percent in 2021, outpacing national income growth in both years. Wage and salary income, which accounts for nearly 50 percent of state personal income, will advance by 3.8 percent in 2020 and 3.9 percent in 2021. Transfer payments, such as those through Social Security, Medicare, and Medicaid, will see the strongest growth as the state population continues to age, increasing by 6.5 percent in 2020 and 6.2 percent in 2021. On a fiscal year basis, nominal personal income will grow by 4.9 percent in 2019/20 and 4.5 percent in 2020/21.

Taxable sales in Tennessee will expand by 4.8 percent in 2020 and 4.7 percent in 2021. This represents a slight slowdown compared to 2019, as auto sales and purchases in transportation and communication have both slowed. Conversely, other retail and service sales are projected to grow by 7.2 percent in 2020 and 6.5 percent in 2021. Part of this influx is due to the U.S. Supreme Court decision in the *South Dakota v. Wayfair Inc.* case of 2018, which decided that states can mandate that businesses without a physical presence in the state (e.g. internet merchants) collect and remit sales and use taxes on transactions made in the state. Tennessee began taxing these online retailers (if their sales to Tennessee consumers exceeded $500,000 in the previous year) on July 1, 2019, so we should see an uptick in sales tax collections in 2019 and 2020. To the extent that these online sales are captured in the other retail and service category, much of the increase should be seen in this category. In contrast, we have seen muted growth in the manufacturing sector due to a global economic slowdown and a cloud of uncertainty surrounding trade policy with China. As a result, taxable purchases from manufacturers will slow from its strong pace of 8.3 percent in 2018, down to 6.8 percent in 2019, and 3.0 percent in 2020. On a fiscal year basis, taxable sales will grow by 5.3 percent in FY 2019/20 and 4.7 percent in FY2020/21.

2.4. TENNESSEE FORECAST AT A GLANCE

- Tennessee's inflation-adjusted GDP will increase by 2.1 percent in 2020 followed by slightly slower pace of 1.6 percent growth in 2021.
- Nonfarm employment in Tennessee will expand by 0.9 percent in 2020 and 0.5 percent in 2021, while manufacturing employment will grow 0.6 percent this year but contract by 0.5 percent in 2021.
- The state's unemployment rate will continue to hover around an annual average of 3.5 percent over the next two years.
- Nominal personal income in Tennessee will grow at a healthy rate of 4.6 percent in 2020 and 4.7 percent in 2021, and nominal taxable sales will expand by 4.8 percent in 2020 and 4.7 percent in 2021.

2.5. TENNESSEE'S AGRICULTURAL AND FOREST INDUSTRIES AND RURAL ECONOMY

Introduction

Tennessee's agri-forestry industrial complex encompasses the supply chain from farm and forest to consumers of the end products, such as retail foods, clothing, paper, and furniture. The agri-forestry industrial complex includes crop and livestock farming, timber removal and sawmills, and agricultural inputs production, such as agricultural machinery, fertilizers, soil amendments, and herbicides. The complex also includes downstream manufacturers of food and fiber goods (i.e., food and beverage products, textiles and textile products, wood, paper, and furniture products) that demand goods from farmers and first-stage forestry operations. This section of the report focuses on economic indicators for three main areas related to the agri-forestry industrial complex: a) primary agriculture and forestry, which includes farming and first-stage forestry; b) secondary agriculture and forestry, which includes manufacturing and processing facilities; and c) well-being indicators for rural communities, which provide important infrastructural, resource, and labor support for the agri-forestry industrial complex.[6] In 2019, Tennessee's agri-forestry industrial complex was significantly impacted by the ongoing trade war primarily between the U.S. and China. A special feature focuses on the trade war and how trade policies affected Tennessee's agri-forestry sector.

Agriculture and Primary Forestry

Agricultural Land Use and Farm Size

In 2018, farming operations occupied 10.9 million acres in Tennessee, around 40.5 percent of the state's nearly 27.0 million acres of land area. Approximately 48.6 percent of the farmland in Tennessee was operated as cropland in 2017. Tennessee's farming industry is characterized by two types of farming operations: larger farms that rely primarily on farm income and small farms, many of which are operated by part-time farmers. Of Tennessee's 70,000 farming operations, average farm size in 2017 was around 156 acres, compared with the U.S. average of 441 acres. Tennessee ranks 9th in the U.S. in terms of the number of farming operations (USDA/NASS, 2019a, 2019b).

Tennessee's Crops and Livestock

The 2018 value of cash farm receipts from crops and livestock in Tennessee was just over $3.5 billion, with $1.4 billion from animals and $2.1 billion from crops (**Table 2.3**). Overall, Tennessee ranks 30th in the U.S. in cash farm receipts (USDA/ERS, 2019a). The top ten Tennessee agricultural products in value of cash farm receipts are listed in **Table 2.3**, along with the state's ranking for each commodity/product. In 2018, the largest value of cash farm receipts was derived from soybeans, followed by cattle and calves. These were followed in magnitude by broilers, corn, cotton, hay, dairy products, tobacco, wheat, and hogs. The top ten commodities in the state accounted for over 84 percent of 2018 cash farm receipts. In terms of cash receipts, Tennessee ranks in the top 20 states for several commodities (**Table 2.3**) and in the top ten states for tobacco and cotton. For many commodities, following national trends, price declines pushed cash receipts downward on average from 2014 to 2018 (excluding cotton, hay, and hogs). Wheat and dairy products experienced the largest average annual declines at 14.3 percent and 10.7 percent, respectively, while hay, cotton, and hogs experienced the largest positive increases at 6.3 percent, 3.4 percent, and 3.0 percent, respectively. Changes in production and price driving these trends will be discussed in the crops and livestock sections of this chapter.

Livestock, Poultry, and Dairy Industries

Animals and animal products accounted for 39.8 percent ($1.4 billion) of Tennessee agricultural receipts in 2018. Based on 2018 cash receipts, cattle and calves was the second largest agricultural sector in Tennessee with cash receipts totaling $549.0 million, which accounted for 15.5 percent of total agricultural cash receipts. Broiler production continues to close

[6] Defined as the primary industries typically associated with agriculture and forest operations, such as growing crops, the breeding and feeding of livestock, and the management and logging of trees. Also included in the industrial complex are input supplying industries and value-added subsectors, which include food and beverage manufacturing, apparel and textiles, and forestry products manufacturing.

*Italics indicate at least top 20 ranking in the US
Source: USDA/ERS, 2019a

the gap on cattle and calves and was a close third, totaling more than $525.0 million and representing 14.8 percent of cash receipts. Dairy products and milk (3.1 percent of cash receipts); hogs (2.2 percent); and chicken eggs (2.0 percent) rounded out the top five Tennessee ranking for animals and animal products based on cash receipts in 2018 (USDA/ERS, 2019b). Tennessee markets for animals and animal products are influenced by national and international market forces. Thus, changes in the national and international market impact local prices, production, and receipts.

The key issues impacting the 2019 animals and animal products markets have been associated with trade agreements, tariffs, and African Swine Fever. Through the first week of October 2019, year-to-date red meat (beef, veal, pork, lamb/mutton) production was 2.1 percent higher than the previous year and was just shy of 41.0 billion pounds (USDA/AMS, 2019a). Similarly, poultry (chicken, turkey, duck) production through the end of September was 2.4 percent greater than the same nine months in 2018 and totaled 34.9 billion pounds (USDA/AMS, 2019b). Milk production the first eight months of 2019 was unchanged from the previous year, even though average monthly dairy cow inventory was down 86,000 head for the year (USDA/NASS, 2019c).

International demand for meat remains strong but varies depending on the meat source. U.S. beef exports from January through August decreased 3.8 percent compared to 2018 and totaled 1.47 billion pounds. Total beef export value over the first eight months of 2019 totaled $4.80 billion, a decrease of 2.6 percent compared to 2018. Pork exports the first eight months of 2019 were 4.7 percent higher than 2018 and totaled 3.0 billion pounds. Total pork export value totaled $3.7 billion, an increase of 3.6 percent compared to 2018 (USMEF, 2019). On the dairy side, exports of most dairy products the first seven months of 2019 were less than the previous year. The total aggregate volume of U.S. dairy exports through July were 2.6 billion pounds, which is a decrease of 13.2 percent compared to 2018, while total dairy export value is up 2.8 percent to $3.4 billion (USDEC, 2019).

Calf (500- to 600-pound steer) and feeder cattle (700- to 800-pound steer) prices in Tennessee through the first nine months of 2019 decreased 4.8 and 4.3 percent, respectively, compared to 2018 (USDA/AMS, 2019c). The price pressure in 2019 likely stems from increased meat production, trade issues, and feed price uncertainty. Some of this negative price

2.5. TENNESSEE'S AGRICULTURAL AND FOREST INDUSTRIES AND RURAL ECONOMY, CONTINUED

pressure may subside with completed trade deals with Canada, Mexico, and Japan. Alternatively, Tennessee milk prices for the Appalachian and Southeast Federal Milk Marketing Orders through the first eight months of 2019 increased 11.0 percent and 10.8 percent, respectively, compared to the same eight months in 2018 (USDA/AMS, 2019d).

Tennessee ranked 16th nationally in terms of total cattle and calve inventory as of January 1, 2019 (1.80 million head, including 914,000 beef cows and 36,000 dairy cows), which is the same ranking as a year ago. Tennessee ranks 12th in total beef cow numbers, with Kentucky being the only state east of the Mississippi River with a larger beef cow inventory (USDA/NASS, 2019d). The state is ranked 3rd nationally in meat goat numbers at 89,000 head (USDA/NASS, 2019e).

The beef, pork, and poultry sectors have continued to expand production, but expansion is slowing in the beef industry. Expansion in all three industries is expected to continue slowing in 2020. The dairy industry also continues to expand production nationally despite a continued contraction in the number of dairy farms and dairy cows. Tennessee beef cattle numbers are expected to remain steady in 2020, while dairy cattle numbers will likely decline further.

Row Crop Production

In terms of harvested acreage, Tennessee's four largest row crops are corn, cotton, soybeans, and wheat. Based on 2018 national cash receipts by commodity, Tennessee ranks 19th in corn production ($385.3 million; 0.8 percent of U.S. total); 10th in cotton production ($267.8 million; 3.3 percent of U.S. total); 16th in soybean production ($697.9 million; 1.8 percent of U.S. total); and 19th in wheat production ($91.6 million; 1.0 percent of U.S. total) (USDA/ERS, 2019b). Harvested acreage, production, and yield from 2014 to 2019 for the four principal row crops are shown in **Table 2.4**. In 2019, harvested acreage for Tennessee row crops were estimated to be 1.4 million acres of soybeans, 920,000 acres of corn, 400,000 acres of cotton, and 220,000 acres of wheat. Soybean acreage was down 17.0 percent from 2018 and 17.0 percent below the previous five-year average; corn acreage was up 33.0 percent compared to 2018 and 21.0 percent greater than the five-year average; cotton acreage was up 13.0 percent compared to 2018 and 48.0 percent higher than the five-year average; and wheat acreage was down 25.0 percent from 2018 and 39.0 percent lower than the five-year average (USDA/NASS, 2019a). Soybean acreage was down due to lower prices as a result of higher U.S. soybean stocks and reduced exports to China. Corn acres were up, as winter/spring prices favored planting corn over soybeans. The higher corn price relative to soybeans was due to a combination of lower national soybean prices and greater corn basis certainty in Tennessee. Wheat acres were down as a result of lower prices and a challenging fall planting season in West Tennessee due to excess moisture. Cotton acres were up year-over-year as winter and early spring price ratios favored planting cotton and corn over soybeans. Cotton prices dropped substantially over the course of the 2019 crop year. State average corn and soybean yields for 2019 are projected to be 175 bushels per acre (an all-time state record if realized) and 47 bushels per acre, respectively. Cotton yield (1,128 pounds per acre) is projected to be the highest on record. Wheat yield was 67 bushels per acre, 2 bushels per acre greater than last year and 1 bushel below the five-year average. In Tennessee, 2019 was a challenging production year with wet planting conditions and a late season drought across a large portion of the state. For the 2019 crop, the wet conditions/flooding of the Mississippi River caused 106,684 acres of corn, cotton, soybeans, and wheat in Lake, Dyer, Lauderdale, Tipton, and Shelby counties to be prevented from being planted (USDA/FSA, 2019a).

Prices received by Tennessee producers are influenced by local, national, and global market forces. Increased global production, as a result of higher row crop commodity prices from 2010-2013, has led to record or near-record global stocks for corn, soybeans, and wheat, pushing prices lower. Global cotton prices have been adversely affected by increased synthetic fiber production and loss of market share to competing fibers. Additionally, 2018-2019 trade disruptions with China, Canada, Mexico, and the E.U. have adversely affected prices

2.5. TENNESSEE'S AGRICULTURAL AND FOREST INDUSTRIES AND RURAL ECONOMY, CONTINUED

for Tennessee and U.S. producers. Nationally, U.S. producers had a challenging planting season with 18.26 million acres of corn, cotton, soybeans, and wheat prevented from being planted, the most on record (USDA/FSA, 2019a). In spite of planting challenges, projected national average yields are estimated to be near national trend line for corn, cotton, soybean, and wheat. U.S. beginning stocks for the 2019-20 marketing year for corn, cotton, soybeans, and wheat are estimated at 2.11 billion bushels (down 1.2 percent), 4.9 million bales (up 15.5 percent), 913 million bushels (up 108.0 percent), and 1.1 billion bushels (down 1.7 percent). Current stocks are restrictive to short-term price improvements.

Trade disruptions have resulted in reduced access to markets for U.S. agricultural production, especially China. Trade restrictions/tariffs have a negative impact on the prices Tennessee producers receive for their commodities. Currently, 2019 marketing year average corn prices are 3.5 percent above the five-year average and 3.2 percent above 2018; soybean prices are 4.3 percent below the five-year average and 5.3 percent above 2018; wheat prices are 1.5 percent above the five-year average and 1.9 percent below 2018; and cotton prices are 1.4 percent below the five-year average and 9.3 percent below 2018 (**Table 2.5**).

Table 2.4: Tennessee Harvested Acres, Production, and Yield for Corn, Cotton, Soybeans, and Wheat, 2014-2019*

	2014	2015	2016	2017	2018	2019*	5-Year Average	Change 5-Year Average to 2018	Change 2018 to 2019

2.5. TENNESSEE'S AGRICULTURAL AND FOREST INDUSTRIES AND RURAL ECONOMY

United States Department of Agriculture (USDA) Trade Retaliation Programs

On July 24, 2018, the USDA announced $12 billion in funding for producers that have been adversely affected by retaliatory tariffs. China, Mexico, Canada, and the E.U. implemented retaliatory tariffs that have had a measurable impact on agricultural commodity prices, such as soybeans, pork, corn, dairy, sorghum, cotton, wheat, as well as nuts, vegetables, fruits, and berries. For the 2018 production year, the USDA provided three tariff-mitigating programs: 1) Market Facilitation Program, 2) Food Purchase and Distribution Program, and 3) Agricultural Trade Promotion Program. On July 25, 2019, USDA continued support for the three tariff mitigating programs.

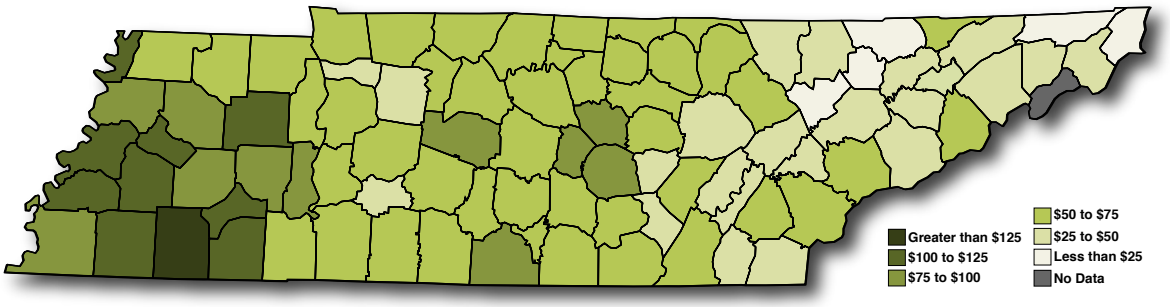
Market Facilitation Program

2018: The Market Facilitation Program (MFP) was authorized under the Commodity Credit Corporation (CCC) Charter Act and provided payments to producers of soybeans, sorghum, corn, wheat, cotton, dairy, and hogs. The support was intended to help farmers manage disrupted markets and deal with surplus commodities resulting from the impacts of retaliatory tariffs (USDA, 2018). USDA Farm Service Agency Service Centers accepted applications from September 4, 2018, to January 15, 2019. The 2018 MFP payment rates were:

- Cotton $0.06 per pound
- Corn $0.01 per bushel
- Dairy $0.12 per cwt.
- Hogs $8.00 per head (number of head as of August 1, 2018)
- Sorghum $0.86 per bushel
- Soybeans $1.65 per bushel
- Wheat $0.14 per bushel

2019: MFP payment rates were changed from commodity-specific rates in 2018 to county-specific payment rates in 2019. In 2019, MFP payments will be made to producers on total planted acres (aggregated planted acres times the county payment rate), based on the commodities planted in the county. In Tennessee, county payment rates ranged from $16 (Anderson and Johnson Counties) to $126 (Hardeman County) per planted acre. No payment rate was issued for Unicoi County (**Figure 2.12**). Payment limitations to individual legal entities apply.

Figure 2.12: 2019 MFP Payment Rates by County in Tennessee



Anderson: $16	Claiborne: $21	Fentress: $53	Hawkins: $36	Lauderdale: $105	Meigs: $36	Roane: $31	Trousdale: $63

2.5. TENNESSEE'S AGRICULTURAL AND FOREST INDUSTRIES AND RURAL ECONOMY, CONTINUED

Food Purchase and Distribution Program

2018: The Food Purchase and Distribution Program was authorized under the CCC Charter Act and implemented through the Agricultural Marketing Service (AMS) to purchase surplus supplies of 31 commodities and food products (USDA, 2018). USDA AMS purchased processed commodity and food products to be delivered to schools, food banks, and households across the country as a component of the nation's food safety net. For 2018, purchases were projected at $1.4 billion.

2019: Purchases of pork, dairy, beef, lamb, citrus, apples, strawberries, blueberries, apricots, plumes/prunes, pears, figs, sweet corn, raisins, potatoes, onions, and processed foods in 2019 through the FPDP are projected to be $1.359 billion. Purchasing will begin October 1, 2019, and distributions will commence in January 2020. Commodities and products purchased through this program will be distributed to states for use in the network of food banks and food pantries that participate in the Emergency Feeding Assistance Program (TEFAP), elderly feeding programs such as the Commodity Supplemental Food Program (CSFP), tribes that operate the Food Distribution Program on Indian Reservations (FDPIR), and child nutrition programs such as the National School Lunch Program (USDA, 2019). Other channels of distribution may be explored.

Agricultural Trade Promotion Program

In August 2018, $200 million will be added to the Agricultural Trade Promotion Program (ATP) as part of the relief package to assist farmers affected by trade retaliation. In March 2019, an additional $100 million was approved for ATP as part of the second relief package. The Foreign Agricultural Service (FAS) administers the ATP under authority of the CCC. In Tennessee, there is an infrastructure in place for participation in the ATP program. The Tennessee Department of Agriculture (TDA) has worked with FAS on trade promotion of agricultural and food products produced in Tennessee and has participated in FAS-sponsored trade missions as part of a state-level trade promotion. Additionally, the Southern United States Trade Association (SUSTA), of which the state of Tennessee is a member, helps small- and medium-sized companies in the South promote food and agricultural products to foreign markets (Best, Smith and Muhammad, 2018). Through the Market Access Program, FAS has partnered with SUSTA and businesses to share the costs of overseas marketing and promotional activities that build export markets for U.S. agricultural products. Funding for SUSTA is primarily provided by the Market Access Program, which is also administered by FAS and operates similar to the ATP (Best, Smith, and Muhammad, 2018; USDA, 2019).

Federal Government Payments

The previous Farm Bill (the Agricultural Act of 2014) provided Tennessee crop producers with $125.5 million in direct payments from Agricultural Risk Coverage (ARC) and Price Loss Coverage (PLC) programs for the 2014-2017 crop years (USDA/FSA, 2019b); 2018 payments were not available at the time of publication). Additionally, the federal government's portion of crop insurance premiums paid by Tennessee producers was $274.6 million for the 2014-2018 crop years (USDA/RMA, 2019). Cotton producers received additional support from the federal government through the Cotton Transition Assistance (CTAP) and Cotton Ginning Cost Share (CGCS) programs. **Figure 2.13** depicts the estimated federal government support per planted acre for corn, cotton, soybean, and wheat for ARC/PLC, crop insurance premiums, CTAP, CGCS, and MFP programs. The recently authorized Farm Bill (Agricultural Improvement Act of 2018) will be implemented by USDA FSA in winter/spring 2019-20. Minor changes were made between the 2014 and 2018 Farm Bills, but the core of the row-crop safety net remains largely unchanged for the 2019-2023 crop years. The new Farm Bill does not fundamentally change the ARC/PLC or crop insurance programs. Payments to producers for the 2019-2023 crop years will be determined by market forces.

2.5. TENNESSEE'S AGRICULTURAL AND FOREST INDUSTRIES AND RURAL ECONOMY, CONTINUED

2.5. TENNESSEE'S AGRICULTURAL AND FOREST INDUSTRIES AND RURAL ECONOMY, CONTINUED

Commodity Market Trends and Outlook

Livestock, Poultry, and Dairy Outlook

U.S. meat protein production will continue to increase in 2020 from the beef, pork, and poultry industries. It is unlikely domestic demand for meat protein will be able to keep up with supply to provide much needed price support. It will be important to move more meat protein through the export market to support prices. This support is sure to come through the U.S.-Korea Free Trade Agreement (KORUS), which has already demonstrated its significance to the U.S. meat protein industries. The bilateral agreement between the United States and Japan should also help the U.S. beef industry to recapture some market share in Japan. Additionally, the completion of the United States-Mexico-Canada Agreement (USMCA), if finalized, should support domestic animal and animal product prices. The wild card from a trade standpoint remains China. It does not appear progress has been made between the two countries, which keeps the largest population market closed to significant U.S. meat protein exports. The one bright spot for U.S. meat producers coming from China is that African Swine Fever has wreaked havoc on the Chinese swine herd, which likely means China will continue to look to international markets to fulfill their meat protein needs. The export market will be integral to growth or contraction in meat protein and dairy product industries.

Prices are expected to be steady across the meat and dairy complex in 2020 compared to 2019. If there are time periods of lower prices compared to year-ago prices, it will likely be due to increased production. However, continued resolution of trade conflicts and increases in exports could support market prices, resulting in steady to slightly higher prices in the latter half of 2020 compared to 2019. Tennessee producer profitability hinges on focusing on efficiencies and value-added opportunities as well as cost management. Specifically, beef and pork production are expected to increase in 2020, placing pressure on prices, but strong demand will keep prices from deflating. Poultry production will be steady to slightly higher with little change in prices, while dairy production will be fairly steady with slightly higher prices in 2020.

Row Crops Outlook

Looking towards 2020, prices and producer profitability are unlikely to improve substantially without resolution of the trade dispute with China or a production disruption domestically or abroad. Producer profitability for the 2019-20 marketing year will be largely contingent on payments from the federal government. For the 2019-20 marketing year, Tennessee farm-gate prices are projected to be $4.50-$5.75 for wheat; $3.50-$4.50 for corn; $8.00-$9.75 for soybeans; and $0.60-$0.70 for cotton. Key factors for producer profitability in 2019-20 include government program payments, trade, adverse weather events, access to financing, interest rates, exchange rates, regulations and policies, and global economic growth. Given several years of low to negative margins, it is likely that some producers will exit the agricultural industry in the upcoming year. Consolidation in the row crop industry and associated agricultural service sectors remains likely as high-cost producers exit the industry.

U.S. and Tennessee Agricultural Trade Outlook

In fiscal year (FY) 2019 (Oct. 2018-Sept. 2019), total U.S. agricultural exports, as reported by the USDA, were $136 billion, down 5 percent when compare to the previous fiscal year ($143 billion). Trade tensions with major markets for U.S. agricultural exports, particularly China, is the primary reason for this decline. Key exports in FY2019 for Tennessee included cotton ($678 million); prepared foods and beverages ($249 million); poultry products ($63 million); dairy products ($51 million); and tobacco ($37 million). During this period, Tennessee was also a leading exporter of two agriculture-related products: distilled spirits ($469 million) and forest products ($187 million) (USDA/FAS, 2019a). For many of these sectors, Tennessee exports were down significantly when compared to the previous fiscal year, which is discussed in more detail later in the section. Although reported by USDA, these values

2.5. TENNESSEE'S AGRICULTURAL AND FOREST INDUSTRIES AND RURAL ECONOMY, CONTINUED

are compiled by U.S. Census and may not include bulk commodities (i.e., corn and soybeans) and other shipments that are consolidated with exports from other states and usually attributed to port states such as Louisiana, Georgia, or South Carolina.

The USDA's Economic Research Service (ERS) calculates state exports using a methodology that accounts for the level of production in the state relative to other states and on a calendar-year basis. Consequently, the number reported by ERS is usually different from what is reported by the U.S. Census. According to ERS (**Table 6**), Tennessee agricultural exports were $1.47 billion in 2018, down 2.9 percent when compared to the previous year (**Table 7**). Of the 50 states, Tennessee ranked 27th in total agricultural exports in 2018. In 2018, major export categories for Tennessee included soybeans ($299 million, 16th largest state); cotton ($217 million, 10th); other feed grains ($88 million, 20th); corn ($102 million, 19th); tobacco ($84 million, 3rd); wheat ($55 million, 19th); beef and veal ($68 million, 25th); and broiler meat ($52 million, 17th) (USDA/ERS, 2019c).

According to USDA, FY2020 (fiscal year) agricultural exports are projected to be $137 million, which is an increase of $2.5 billion when compared to FY2019. This anticipated increase is primarily driven by expected increases in exports of pork, beef, soybeans, and horticultural products. Pork exports are projected at $6.3 billion, up $800 million from FY 2019 due to expected higher volumes and prices, partially resulting from the repeal of Mexico's retaliatory tariffs and an increase in global pork demand due to the African Swine Fever epidemic. Beef and veal exports are projected at $7.8 billion, up $300 million from FY 2019 due to expected higher volumes and prices. Horticultural exports are projected to increase by $500 million to $35.5 billion. Soybean exports are expected to rise by $400 million to $16.8 billion on higher volumes. Cotton exports are projected up $100 million to nearly $6 billion.

Canada and Mexico are the most important markets for U.S. agricultural exports. Agricultural exports to Canada are expected to increase by $400 million to $21.5 billion, and exports to Mexico are expected to increase by $500 million to $19.8 billion. China is also an important market for U.S. agricultural exports. Despite current trade tensions, U.S. agricultural exports to China are expected to increase by $200 million in FY2020 to $7.5 billion due to expected higher demand for imported pork due to African Swine Fever (Daugherty and Jiang, 2019).

Table 2.6: Tennessee Agricultural Exports Reported by ERS, 2017 and 2018

Product	Million $	US Rank	% Change	U.S. Rank (2018)
Beef and veal	61.1	26	10	25

2.5. TENNESSEE'S AGRICULTURAL AND FOREST INDUSTRIES AND RURAL ECONOMY, CONTINUED

Impacts of the Trade War on Tennessee Agricultural and Agriculture-Related Exports

In FY2019, the top destinations for U.S. agricultural exports included Canada ($24 billion); Mexico ($19 billion); EU-28 ($13 billion); Japan ($12 billion); China ($10 billion); and South Korea ($8 billion) (USDA/FAS, 2019a). In the previous fiscal year, there were trade tensions between the U.S. and each of these countries/regions either due to their response to U.S. steel and aluminum tariffs, the U.S. pulling out of pending trade agreements or renegotiating existing agreements, and a tit-for-tat trade war with China. Fortunately, the U.S. was able to renegotiate the U.S.-Korea Trade Agreement (signed September 2018). Tensions with Canada and Mexico eased with the renegotiation of the North American Free Trade Agreement (NAFTA), renamed the United States-Mexico-Canada Agreement (USMCA). However, the USMCA remains stalled in Congress. In October 2019, the U.S. signed the U.S.-Japan Trade Agreement, where Japan has agreed to significantly lower tariffs on U.S. agriculture (**See Information Box: United States and Japan Sign Trade Agreement**). An agreement with the EU-28 (or EU-27 assuming Britain's exit from the EU) remains elusive. Trade tensions with China have yet to be resolved, resulting in significant loss for U.S. agriculture. U.S. agricultural exports to these top markets have remained relatively unchanged in FY2019 when compared to FY2018. China is the noted exception. U.S. agricultural exports to China in FY2019 were down 38 percent when compared to the previous fiscal year.

United States and Japan Sign Trade Agreement

On October 7, 2019, the U.S. Trade Representative and Japan Ambassador to the U.S. signed the U.S.-Japan Trade Agreement. The U.S.-Japan Trade Agreement will eliminate or reduce tariffs on many agricultural products. In effect, the Agreement provides U.S. agriculture the same advantages given to CP-TPP countries selling in the Japanese market. With Japan's $5 trillion economy, this Agreement will expand U.S. food and agricultural exports, increase farm income, generate more rural economic activity, and promote job growth (USTR, 2019; USDA/FAS 2019b).

In 2018, Japan signed the Comprehensive and Progressive Agreement for Trans-Pacific Partnership (CPTPP) (TPP minus the U.S.) and an agreement with the European Union (EU). These agreements put U.S. agricultural exports to Japan at a competitive disadvantage with respect to countries that have existing trade agreements with Japan (e.g., Australia, New Zealand, Canada, and EU). The new U.S.-Japan Trade Agreement is expected to put U.S. agriculture on a more level playing field by eliminating or reducing tariffs comparable to what Japan has afforded other countries.

Of the $14.1 billion in U.S. food and agricultural products exported to Japan in 2018, $5.2 billion were already duty free (imported at a zero-percent tariff rate). Under the first stage of the Agreement, Japan will eliminate or reduce tariffs on an additional $7.2 billion of U.S. food and agricultural products. When implemented, over 90 percent of U.S. food and agricultural exports to Japan will either be duty free or receive preferential tariff access. Under the Agreement, Japan has agreed to do the following:

- Reduce tariffs on products such as fresh and frozen beef and pork;
- Provide U.S.-specific quota access for wheat and wheat products;
- Immediately eliminate tariffs on almonds, walnuts, blueberries, cranberries, sweet corn, grain sorghum, broccoli, and many other products; and
- Provide staged tariff elimination for products such as cheeses, processed pork, poultry, beef offal, ethanol, wine, frozen potatoes, oranges, fresh cherries, egg products, and tomato paste.

One of the more important aspects of the agreement are tariff reductions for U.S. beef and pork products. At nearly $3 billion, Japan is a leading market for U.S. beef and pork exports. In 2018, the U.S. exported $2.1 billion of beef and beef products to Japan. Under the Agreement, Japan has agreed to reduced tariffs on chilled and frozen beef from 38.5 percent to 9 percent in 15 years. Additionally, Japan will fully eliminate tariffs on processed beef products, which are as high as 50 percent, in five-15 years. In 2018, the U.S. exported $1.6 billion of pork and pork products to Japan. Japan is the U.S.'s largest export market for pork. Japan's tariffs on muscle cuts from the U.S. will be eliminated over a nine-year period, and tariffs on processed pork products will be phased down to zero within five years.

2.5. TENNESSEE'S AGRICULTURAL AND FOREST INDUSTRIES AND RURAL ECONOMY, CONTINUED

China's retaliatory tariffs (as well as other countries) on U.S. agriculture were mostly imposed in July and August of 2018. This allows for comparing exports pre- (FY2018) and post- (FY2019) trade war. Tennessee's agricultural exports in FY2019 were slightly above $1.4 billion, down 4 percent when compared to the previous fiscal year (**Table 2.7**). This overall decline was, in part, driven by a decline in exports to China, which were down by 37 percent. Product categories where Tennessee experienced more significant declines include cotton and tobacco. Tennessee cotton exports in FY2019 in total and to China were $678 million and $36 million, respectively, down 10 percent overall, with exports to China down 41 percent. Tennessee tobacco exports were primarily impacted by tariffs in the EU-28. In FY2019, Tennessee tobacco exports decreased to $37 million, down 35 percent; exports to the EU in FY2019 ($18 million) were down 20 percent. Two major declines for the State are in agriculture-related categories: distilled spirits and forest products. In FY2019, Tennessee distilled spirits exports in FY2019 in total and to the EU were $469 million and $278 million, respectively, down 35 percent and 42 percent. This decline was due to retaliatory tariffs in the EU on Tennessee Whiskey. Tennessee forest products exports in FY2019 in total and to China were $187 million and $46 million, respectively, down 34 percent and 64 percent, due to the retaliatory tariffs in China on Tennessee log and lumber exports. The country, overall, has experienced similar declines in cotton and tobacco exports. Note that in FY2019, U.S. cotton exports were down 8 percent and tobacco down 30 percent. For distilled spirits and forest products, Tennessee exports are down by a larger percent when compared to the U.S. overall. Note that U.S. distilled spirits and forestry exports were down 15 percent and 18 percent in FY2019 (USDA/FAS, 2019a).

Table 2.7: Tennessee Agricultural Exports (Total Agriculture and Select Products) Before and After the Start of the Trade War

Partner	Product	FY2018 Million $	FY2019 Million $	% Change
World	Total Agriculture	1,470	1,412	-4

Infrastructure

Tennessee's on-farm grain storage capacity in 2018 was 100 million bushels, whereas off-farm storage facilities including all elevators, warehouses, terminals, merchant mills, other storage, and oilseed crushers provided 75 million bushels of storage capacity (USDA/NASS, 2019f). Cumulatively from 2006 to 2018, the Tennessee Agricultural Enhancement Program (TAEP) invested nearly $86 million in 13,394 projects to enhance the storage for grain, hay, and livestock feed (TAEP, 2019). However, growth in agricultural production outpaces the expansion of storage capacity. It is estimated that Tennessee's total storage capacity in 2019 will be short by 72.6 million bushels for crop production and stocks, making Tennessee's rank as the fourth state in terms of crop storage shortage (USDA/AMS, 2019e).

Trucking remains the most utilized mode for commodities, including agricultural products, in domestic markets. In 2016, more than two-thirds of the $700 billion freight in Tennessee was transported by truck (TRIP, 2019). The share of the freight travel by combination trucks on Tennessee's rural interstates roads ranked the top six in the nation. However, the road infrastructure has not met the increasing demand for commerce. About 13 percent of the major roads in the state are in poor or mediocre condition, while five percent of the state's bridges are structurally deficient (TRIP, 2019). The poor road and bridge conditions not only adversely

2.5. TENNESSEE'S AGRICULTURAL AND FOREST INDUSTRIES AND RURAL ECONOMY, CONTINUED

affect regional development and accessibility, but also connect with the safety issue: Tennessee's fatality rate on rural roads is among the highest in the nation.

In April 2019, Governor Bill Lee and the Tennessee Department of Transportation (TDOT) Commissioner Clay Bright announced a three-year transportation program with a priority given to infrastructure needs in distressed and at-risk counties (TDOT, 2019). More than $2 billion in total will be invested for 139 individual project phases during the period. The comprehensive program emphasized bridge repairs and replacements and continue to enhance the IMPROVE Act signed in 2017 that supports infrastructure investment in all 95 counties.

Inland waterways and rail transportation primarily serve the export-oriented agricultural products. A recent study suggests that Tennessee soybean exports via inland waterways in 2016 generated more than $221 million in GDP and nearly 4,900 jobs (Informa, 2019). Meanwhile, corn exports through waterways contribute $35 million of GDP and 1,284 jobs to the state.

Farmers Markets, CSAs, Wineries, and the Green Industry

As reported in prior years, the "local foods" movement, along with technical and financial assistance provided by the USDA, TDA, the University of Tennessee Institute for Agriculture (UTIA), and other agencies, has helped increase direct marketing by farmers. While farmers markets remain an important component of local food sales, their growth has slowed nationally and in Tennessee. Tennessee added a net of three farmers market in 2019 (from 131 to 134) compared to the rapid expansion in prior years (e.g., from 99 in 2013) (USDA/AMS, 2019f). Nationally, the number of farmers markets increased by only 0.6 percent from 2018 to 2019. A growing interest in intermediated sales of local foods (to institutions or to businesses that sale to consumers such as grocery stores and restaurants) is probably a major reason for the slowdown in the growth in number of farmers markets. Still, analysis reported in last year's Governors Report indicates that Tennessee has room to grow additional farmers markets.

Our analysis of Tennessee farmers markets, based on the data provided by the USDA's AMS, indicates that 64.2 percent (86) accept credit cards and 33.6 percent (45) accept SNAP payments. Well over half report baked goods (88), eggs (81), and meat (71) vendors. Among the 134 farmers markets, 39 markets (29 percent) report organic product vendors. All of these values only changed slightly from those reported last year.

Community supported agriculture (CSA) and food hubs are other expanding components of local foods markets, both nationally and in Tennessee. In a CSA, consumers (buying members) make advanced payment for a farm's products and in return receive a share of the production on a consistent basis throughout the growing season (Demuth, 1993). Farmers are assured of a return for their efforts before production, and consumers are assured of an adequate and timely supply of locally produced products. Our analysis of data provided by TDA indicates that 90 CSAs (a slight decline from 2018) and two food hubs currently operate in the state. Among the CSAs, 28.9 percent (26) were found in East Tennessee, 58.9 percent (53) in Middle Tennessee, and 12.2 percent (11) in West Tennessee.

As indicated in last year's report, and based on a 2015 survey conducted by USDA/NASS (2017), 4,148 farms in Tennessee reported local sales valued at $58.7 million.[7] Among these farms, 90.4 percent (3,748) reported direct sales to consumers, totaling $41.4 million in value or sales of $11,050 per farm. Survey results also imply that direct sales are growing. Among the 3,748 producers, 39.2 percent have been direct marketing for less than five years, while 33.1 percent have been selling directly to consumers for six to 10 years. Further, the 3,748 producers is an increase over the 3,679 farmers in 2012 and 3,581 farmers in 2007 with direct sales to consumers. The $41.4 million is more than twice the value of direct sales ($19.2 million) reported by Tennessee farmers for 2012 (USDA/NASS, 2012).

[7] The 2017 Agricultural Census had questions regarding the sale of local food and value-added production. However, the coverage of the 2015 survey is apparently more complete, so we report those results.

2.5. TENNESSEE'S AGRICULTURAL AND FOREST INDUSTRIES AND RURAL ECONOMY, CONTINUED

Among the 4,148 responding farms, 3,748 farms provide value-added products (i.e., they physically transformed the product) with $29.6 million in value-added sales (or 50.4 percent of all directly marketed sales in value terms). The 400 farmers who sell locally to institutional (such as school systems) or retail (such as grocery stores) buyers or through other intermediaries (such as food hubs) are generally larger operations with local food sales of $43,265 per farm.

Cattle and other livestock producers are also becoming interested in finishing and processing cattle for local and regional markets. Based on survey results (McLeod, 2017), over three-fourths of Tennessee cattle producers expressed interest in supplying an in-state federally inspected cattle processing facility. Interest in a Tennessee meat brand continues to grow. Some of these producers are growing purely grass-fed or pastured-raised animals. Linking to local and regional markets and access to federally inspected processing facilities remain a challenge for livestock producers interested in meeting the growing demand for locally sourced meat. Although research indicates that a small, well-managed, federally inspected processing facility could be profitable (Hughes et al., 2017), the state has not witnessed strong growth in the number of such facilities. The temporary closing of a facility in East Tennessee was a bottleneck for producers seeking to process cull beef and dairy cattle regionally.

Similar to prior years, other new or nontraditional agricultural ventures also continue to grow in Tennessee. According to the 2017 Agriculture Census, the state has 644 agritourism venues, up from 616 in 2012 and 510 in 2007. Total receipts from agritourism activity increased to $14.5 million in 2017 from $11.9 million in 2012.

Analysis of the most recent data (2019) released by the U.S. Bureau of Labor Statistics (BLS, 2019) indicates that growth of the Tennessee wine and grape industry may have leveled off. Direct-hired jobs in the Tennessee winery industry was 447 workers in the first quarter of 2019, a slight decrease from the same time last year. The state now has 89 bonded wineries, including several cideries (where hard cider is produced), an increase of 47 from 2012. However, growth in Tennessee grape production from 645 bearing acres in 2012 to 747 bearing acres in 2017 (an increase of 15.8 percent over five years) has not matched the growth in the number of wineries. This result implies that many state wineries rely on out-of-state sources.

The craft beer industry and the craft distillery industry in Tennessee are growing rapidly. An estimated 159 breweries are now in Tennessee, which is an increase of over six-fold from the 26 in 2010. As of the first quarter of 2019, 75 breweries report an average of 788 workers with a first quarter payroll of $5.0 million versus 26 breweries reporting 148 workers in 2014. The brewing industry continues to be concentrated in urban centers. Farmers seeking to produce hops and other inputs for that industry are small in number and face several challenges. Likewise, the number of distilleries reporting employment has increased from 19 in 2014, to 35 in the first quarter of 2018, to 39 in the first quarter of 2019. Farmers are increasing production of corn and other grains as inputs for the Tennessee whiskey industry (Tharel, 2017).

As reported in previous years, the green industry (ornamental horticulture including nursery and turfgrass producers) remains an important component of Tennessee agriculture, especially in Middle Tennessee. As of 2017, nursery sales were valued at $135.0 million, a slight increase from 2012 at $132.1 million but with a decline of 10 percent in the number of farms from 570 in 2012 to 513 in 2017 (USDA/NASS, 2019a, 2019b).

Also, like many other states, the state has experienced an explosion in the number of farmers growing hemp and in the numbers of people interested in doing so. As of November 2019, the state had 3,800 producers licensed to grow up to 51,000 acres (Tennessee Department of Agriculture, 2019). The hemp is primarily grown for the cannabidiol (CBD) oil or other extracts that is obtained by processing components of the plant, particularly the plant's flower (bud). While enterprise budgets by Cui and Smith (2019) indicate that the crop may be profitable, rapidly changing market conditions and other concerns should make actual and potential producers quite wary. For example, all of the hemp under cultivation may not be harvested

2.5. TENNESSEE'S AGRICULTURAL AND FOREST INDUSTRIES AND RURAL ECONOMY, CONTINUED

or if harvested, may not find a market. One claim is that 50-70 percent of the hemp planted in the U.S. this year will not be processed (Fly Intel, 2019). Access to processing facilities (especially in-state processing that live up to contracts) for locally grown hemp continues to be an area of concern.

Financial Indicators for Tennessee Farming Industries

Several measures can be used to indicate the financial well-being of farms and farm operators in Tennessee. **Table 2.8** presents financial data from 2013-2018 for the Tennessee farming sector. The value of farm production declined from just under $5.1 billion in 2013 to $4.2 billion in 2018 (USDA/ERS 2019a). Net farm income was $297 million in 2018 (down from $1.4 billion in 2013 but up from the low of $203 million in 2016), averaging $4,240 per operation. Net cash farm income on a per-acre basis was $27/acre. The net farm income ratio (net farm income/value of production) during 2013 to 2018 ranged from 5 to 28 percent efficiency in converting production to net farm income, with a downtick from 10 percent in 2017 to 7 percent in 2018. The interest expense ratios for the farming sector, holding at 6 percent or less, reflect a low debt burden and interest payment level relative to production. Times interest earned is another measure of ability to cover debt payments, specifically interest payments. For all years, the values are greater than one, implying sufficient cash to meet interest payments, and in 2018, the value was 2.13. The state's capital consumption ratio, or the percent of production needed to cover the sector's capital consumption, was relatively low for the 2013 to 2018 period, ranging between 13 percent and 20 percent. In 2018, the state's farming sector had an operating expense ratio of 0.74, suggesting 74 percent of the value of production was used to cover operating expenses. The 2018 estimated market value of land and buildings on farms was $42.7 billion or around $610,548 per farm in Tennessee.

Tennessee's farm structure is characterized by many small farming operations; however, a relatively few larger farms make up the majority of farm sales (USDA/NASS, 2019b). According to the 2017 Census of Agriculture, about 36 percent of farmers in Tennessee cite farming as their principal occupation. This illustrates the importance of other sources of rural income to economic sustainability of the agricultural sector. The average age of farm operators in Tennessee is 58 years old. Over 35 percent of farmers are 65 and older. About 14.9 percent of principal operators are beginning farmers, having less than five years of experience. This is up from the value of 8 percent in the 2012 Census. Over 73 percent of principal operators had 10 years or more of farming experience.

Table 2.8: Indicators of Financial Well-Being of the Tennessee Farm Sector, 2013-2018

	2013	2014	2015	2016	2017	2018
Value of Production (mill $)	$5,104	$4,893	$4,578	$4,007	$4,284	$4,203

2.5. TENNESSEE'S AGRICULTURAL AND FOREST INDUSTRIES AND RURAL ECONOMY, CONTINUED

Primary Forestry in Tennessee

In 2016, the state's 144 sawmill establishments employed 2,157 workers with a total payroll of $72.7 million, while the state's 140 logging establishments employed 845 workers with a total payroll of $25.6 million (US Census Bureau, 2018). From 2010 through 2016, average annual growth rates in employees, payroll, and establishments for sawmills (NAICS 321113) were 2.2 percent, 7.2 percent, and -2.8 percent, respectively. For logging (NAICS 1133), the average annual growth rates over the same period were 3.6 percent, 7.6 percent, and -0.2 percent, respectively, for employees, payroll, and establishments. The dominant forest type in the state is oak-hickory, accounting for an estimated 9.9 million acres (Tennessee Forestry Association, 2017). Of the close to 14.0 million acres in forest, 83.4 percent is privately owned with federal and state/local forests comprising 10.0 percent and 6.6 percent, respectively. For 2015, average annual sawtimber[8] removals on timberland[9] were estimated at 1.4 billion board feet. Of that value, the majority of the removals, 86.3 percent, were from private landowners (1.2 billion board feet); followed by other non-federal public (141.7 million board feet); state (42.9 million board feet); and other federal entities (3.5 million board feet). The predominant species removed on other federal lands were red and white oaks, and for state lands, yellow poplar and white and red oaks. For privately owned lands, white and red oaks, yellow poplar, loblolly/shortleaf pines, and hickory were the predominant species removed (USDA/FS, 2019).

Food, Fiber, and Forestry Manufacturing in Tennessee

Value of Shipments, Number of Establishments, and Employees

The state's 1,668 food and fiber processing and manufacturing facilities employed 78,714 workers, with a payroll of $3.7 billion in 2016 (**Table 2.9**). The value of shipments originating

[8] Commercial tree species with at least a 12-foot sawlog or two noncontiguous sawlogs 8 feet or longer and meeting regional specifications for freedom from defect. Softwoods must be at least 9.0 inches in diameter at breast height (d.b.h.); hardwoods must be at least 11.0 inches d.b.h. (USDA/FS, 2019).

[9] Forestland producing or is capable of producing crops of industrial wood and not withdrawn from timber utilization by statute or administrative regulation (USDA/FS, 2019).

Table 2.9: Tennessee Food, Fiber, and Forestry Manufacturing, 2016[a]

Manufacturing Industry (NAICS)	Employees (number)	Payroll (mill $)	Establishments (number)	Shipments (mill $)
Food (311)	36,062	$1,718	344	$20,642
Animal Slaughtering/	10,519	$382	66	$3,872
Processing	3,481	$226	135	$6,244
(3116)	2,400	$115	45	$905
Beverage & Tobacco Products (312)	1,627	$65	131	$414
Textile Mills (313)	2,492	$75	86	$281
Textile Product Mills (314)	475	$13	29	$45
Apparel (315)	11,055	$427	465	$2,785
Leather & Allied Products (316)	10,319	$629	122	$5,866
Wood Products (321)	10,803	$441	311	$2,049
Paper (322)	78,714	$3,709	1,668	$39,231
Furniture & Related Products (337)	10,803	$441	311	$2,049
Total	*78,714*	*$3,709*	*1,668*	*$39,231*

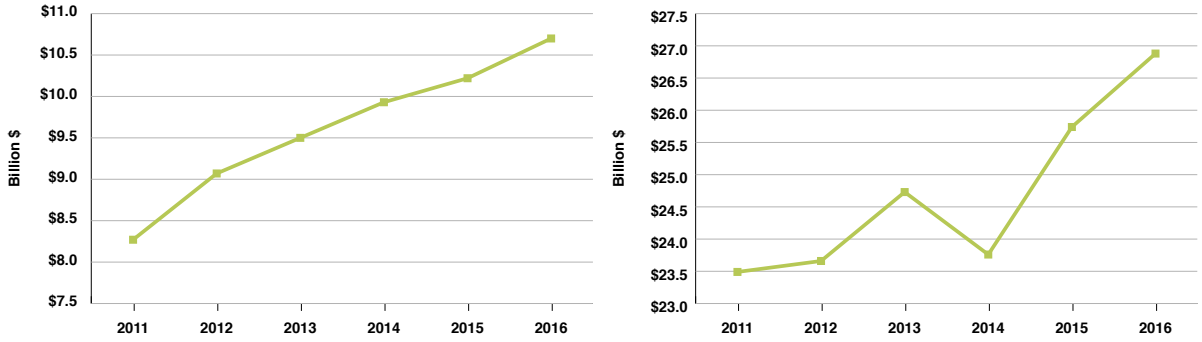
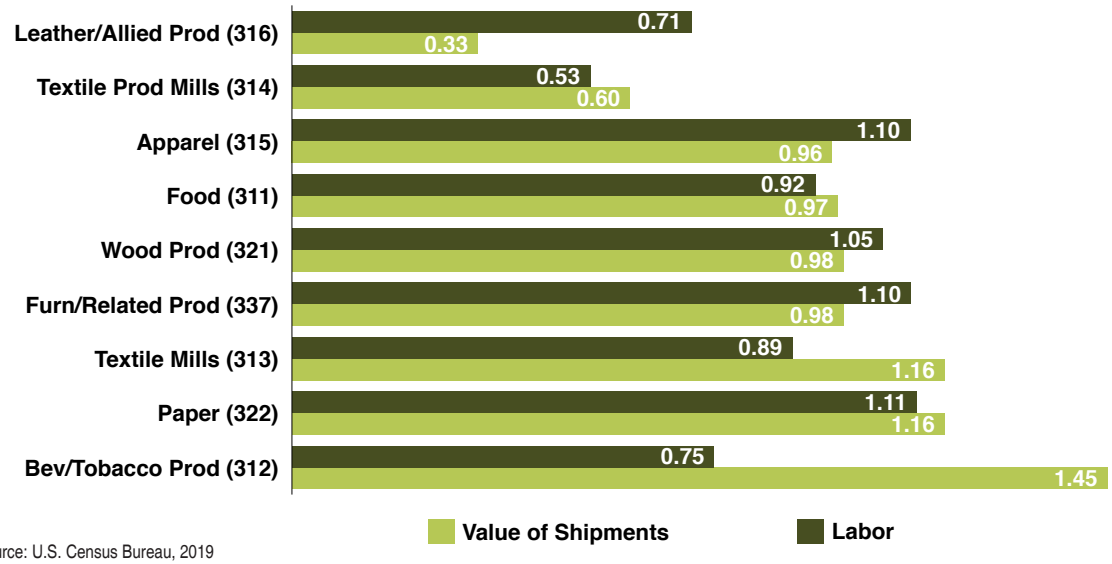
2.5. TENNESSEE'S AGRICULTURAL AND FOREST INDUSTRIES AND RURAL ECONOMY, CONTINUED

Figure 2.14: Value of Shipments From Tennessee Agri-Forestry, 2010-2016



Source: U.S. Census Bureau, 2019

Figure 2.15: Tennessee Agri-forestry Manufacturing Location Quotients (LQ), 2016



Source: U.S. Census Bureau, 2019

from these industries was $39.2 billion (US Census Bureau, 2018). By comparison, the state's overall manufacturing employment was 308,966 workers in 2016, and the value of shipments was $149.1 billion. Thus, food- and fiber-related manufacturing in Tennessee employed more than 1 in 4 manufacturing workers and generated nearly $1 out of every $4 in manufacturing shipments. Food processing accounted for 52.6 percent of the values of food- and fiber-related manufacturing shipments, followed by beverage and tobacco products at 15.9 percent and paper products at 15.0 percent.

Figure 2.14 displays the growth in value of shipments from 2010 through 2016 for Tennessee's food, beverage, and tobacco products manufacturing (NAICS 311 and 312 combined) and wood, paper, and furniture products (NAICS 321, 322, and 337 combined). Other than a 3.9 percent decline in shipments in 2014, food, beverage, and tobacco products manufacturing experienced 4.2 percent average annual growth from 2010 to 2016. During this same period, forest products manufacturing also experienced an average annual growth of 4.2 percent.

The location quotients (LQ) displayed in **Figure 2.15** reflect the concentration

2.5. TENNESSEE'S AGRICULTURAL AND FOREST INDUSTRIES AND RURAL ECONOMY, CONTINUED

of Tennessee's agri-forestry manufacturing compared with the U.S., based upon 2016 value of shipments and labor.[10] An LQ greater than one indicates Tennessee's manufacturing is more concentrated toward that particular manufacturing industry than the U.S. For value of shipments, the state's manufacturing is more concentrated toward beverages and tobacco (1.45), paper (1.16), and textile mills (1.16) compared to the U.S. However, for food manufacturing, only the LQ is less than one (0.97). For labor, paper, apparel, furniture industries, and wood products the LQs are greater than one, suggesting that Tennessee's manufacturing industries' labor is more concentrated toward these industries than the U.S. From 2007 to 2014, textile product mills and textile mills declined 62.4 percent and 38.3 percent, respectively. For this same time frame, beverage and tobacco products increased 44.8 percent, followed by food processing (25.8 percent), paper (15.6 percent), wood products (2.5 percent), and furniture industries (1.9 percent).

Economic Impacts from the Agri-forestry Industrial Complex

In 2017, the agri-forestry industrial complex directly contributed (without multiplier effects) $53.0 billion in economic activity to the state's economy, adding 177.0 thousand jobs. The agri-forestry industrial complex contributed $16.1 billion in value-added. When accounting for multiplier effects, the agri-forestry industrial complex added $81.0 billion to Tennessee's economy or 11.8 percent of the state's economic activity, accounting for 342.0 thousand jobs or 8.6 percent of all jobs. Agriculture, with multiplier effects, accounted for 8.3 percent of the state's economy and generated $56.8 billion in output, adding close to 244,000 jobs, with over 92,000 employed (both full- and part-time) directly in agricultural production (Menard, English and Jensen, 2019).

The 2017 economic activity multipliers for agricultural commodities and forestry activities (i.e., logging, sawmills, and pulp-, paper-, and paperboard-mills) ranged from 1.030 to 1.851 for economic activity. Sawmill's output multiplier of 1.84 indicates that for every dollar invested in the sawmill industry, an additional $0.84 of economic activity is generated. Employment multipliers for agriculture and forestry ranged from 1.03 to 4.81. Logging's employment multiplier of 2.376 indicates that for every job created in the sawmill industry, an estimated 1.376 additional jobs are added in other industries (Menard, English and Jensen, 2019).

Rural Economies and Well-Being

Rural communities and their resources are important contributors to the health of the agri-forestry industrial complex. In 2018, about 22.4 percent of Tennessee's population lived in counties classified as rural.[11] As classified here, rural counties had 2018 populations of 28,601 on average, while counties not classified as rural had average populations of 124,197 (**Table 2.10**). The state continues to become more urban in nature, as population growth in rural counties averaged 1.9 percent growth from 2010-2018, while counties classified as urban averaged 8.1 percent growth from 2010-2018. The data in Table 8 show that rural counties had lower median household incomes, lower percentages of people aged 25 and over with four-year college degrees or greater, and higher unemployment and poverty rates than their urban counterparts.

Several poverty indicators were used to calculate a score: these included low education, high unemployment, child poverty, greater than 15 percent food insecurity, and less than average

[10] LQs measure a region's industrial specialization relative to a larger geographic unit (usually the nation). An LQ is computed as an industry's share of a regional total for some economic statistic (in this case, value of shipments) divided by the industry's share of the national total for the same statistic.

[11] This study defines rural using the ERS/USDA Rural/Urban Continuum categories of a) non-metro-urban population of 2,500 to 19,999, not adjacent to a metro area; b) non-metro-completely rural or less than 2,500 urban population, adjacent to a metro area; and c) non-metro-completely rural or less than 2,500 urban population, not adjacent to a metro area (USDA/ERS, 2017).

2.5. TENNESSEE'S AGRICULTURAL AND FOREST INDUSTRIES AND RURAL ECONOMY, CONTINUED

Table 2.10: Population, Household Income, Education Level, Unemployment, Poverty, and Food Insecurity Across Rural County Status, Tennessee

Measure	Rural	Not Rural
2018 Average Population Per County	28,601	124,197
2010-2018 Population Change	1.9%	8.1%
2013-2017 Median Household Income (2016$)	$39,583	$52,561
2013-2017 Education Level, Persons 25 and Over (5-Yr Avg)		
- Have Not Completed a High School Degree	19.3%	15.01%
- High School Degree or Higher	80.7%	85.0%
- Completed 4-Yr College or Higher	13.63%	20.4%
2014-2018 Unemployment Rates (Percent)	5.8%	4.6%
2013-2017 Poverty Rates	19.41%	15.78%
Persistent 2013	27.27%	20.55%
Child Poverty Rates	28.30%	14.29%
2017 Food Insecurity Rates	14.02 %	12.45%
Poverty Indicator Score	1.92	0.95

Sources: (USDA/ERS, 2015a; USDA/ERS, 2015b; USDA/ERS, 2016, Feeding America, 2016.

median household income for Tennessee's counties.[12] A county is scored as a 5 if it exhibited all five indicators or 0 if they exhibited none. As shown in Table 8, on average, rural counties scored 1.92, while non-rural counties scored 0.95.

Summary

According to USDA, the 2018 value of cash farm receipts from crops and livestock in Tennessee was just over $3.5 billion, with $1.4 billion from animals and $2.1 billion from crops. Net farm income was $297 million in 2018 (down from $1.4 billion in 2013 but up from the low of $203 million in 2016), averaging $4,240 per operation. Farming operations occupied 10.9 million acres in Tennessee, around 40.5 percent of the state's nearly 27.0 million acres of land area. Approximately half of the farmland in Tennessee was operated as cropland.

Looking towards 2020, crop prices and producer profitability are unlikely to improve substantially without resolution of the trade dispute with China or a production disruption domestically or abroad. The previous Farm Bill (the Agricultural Act of 2014) provided Tennessee crop producers with $125.5 million in direct payments from Agricultural Risk Coverage (ARC) and Price Loss Coverage (PLC) programs for the 2014-2017 crop years. Additionally, the federal government's portion of crop insurance premiums paid by Tennessee producers was $274.6 million for the 2014-2018 crop years. Producer profitability for the 2019-20 marketing year will be largely contingent on payments from the federal government.

Animals and animal products are a major portion of the Tennessee agricultural economy, with cattle and calves and poultry being the dominant sectors. These markets are driven by domestic and international supply and demand factors, which provides local producers little to no leverage to control the market. U.S. meat protein production will continue to increase in 2020 from the beef, pork, and poultry industries. The key issues impacting the animals and animal products markets have been associated with trade agreements, tariffs, and African Swine Fever.

Like many other states, the Tennessee has experienced an explosion in the number of farmers growing hemp and in the number of people interested in doing so. As of November 2019, the state had 3,800 producers licensed to grow up to 51,000 acres. The hemp is primarily grown for the cannabidiol (CBD) oil or other extracts that is obtained by processing components of the plant, particularly the plant's flower (bud). While enterprise budgets by UT Extension indicate that hemp may be profitable, rapidly changing market conditions and other concerns should make actual and potential producers quite wary. For example, all of the hemp under cultivation may not be harvested or if harvested, may not find a market.

[12] *Low-Education County:* At least 20 percent or more of the residents age 25 to 64 did not have a high school diploma or equivalent during 2012-16.
High-unemployment county: Greater than 10 percent of residents age 25-64 were unemployed in 2012-16.
Persistent related-child-poverty county: 20 percent or more of related children under 18 years old were poor as measured by the 1980, 1990, and 2000 decennial censuses and the American Community Survey five-year estimates for 2007-11 (USDA/ERS, 2017).

2.5. TENNESSEE'S AGRICULTURAL AND FOREST INDUSTRIES AND RURAL ECONOMY, CONTINUED

One claim is that 50-70 percent of the hemp planted in the U.S. this year will not be processed.

In fiscal year 2019, Tennessee exports were $1.4 billion, down 4 percent when compared to the previous fiscal year. This overall decline was, in part, driven by a decline in exports to China, which were down by 37 percent. Tennessee cotton exports were down 10 percent overall, with exports to China down 41 percent; tobacco exports were down 35 percent; distilled spirits exports were down 35 percent; and forest products exports were down 34 percent, primarily due to the trade war and retaliatory tariffs in China and other countries. In fiscal year 2020, the USDA is projecting agricultural exports at $137 million, which is an increase of $2.5 billion when compared to the previous year. This anticipated increase is primarily driven by expected increases in exports of pork, beef, soybeans, and horticultural products, as well as potential increased exports to Canada, Mexico, Japan, and even China. Projections for the U.S. suggest that Tennessee agricultural exports will increase in 2020.

CHAPTER 3: THE TENNESSEE ECONOMY: LONG-TERM OUTLOOK

IN THIS CHAPTER —

3.1. INTRODUCTION

3.2. NONFARM EMPLOYMENT
- THE IMPACTS OF AUTONOMOUS VEHICLES ON TENNESSEE EMPLOYMENT AND TAX REVENUES

3.3. UNEMPLOYMENT

3.4. POPULATION & LABOR FORCE

3.5. ARTIFICIAL INTELLIGENCE IN THE ECONOMY

3.6. INCOME, EARNINGS & OUTPUT

3.7. FORECAST AT A GLANCE

3.1. INTRODUCTION

The previous chapter explored Tennessee's economic performance over the past ten quarters and provided the short-term economic outlook for the state extending out ten quarters into the future. That *cyclical forecast* projected ongoing growth for the state economy, although with reduced rates of expansion for key metrics like nonfarm employment. The current chapter takes a longer-term perspective by examining the state's growth path over the past ten years and the economic outlook extending out to 2029. The *trend forecast* presented here for the state connects the dots between short-term cyclical projections and long-term projections.

As the name implies, cyclical forecasts are built around the ups and downs of the business cycle. This is the classic boom-bust cycle that most are familiar with from history. The current cycle is truly unique, as it started in the summer of 2009 with the economy bottoming out from the pressures of the Great Recession. Most long windows of time like this would have included a recession. But as of today, the state and national economies are enjoying the longest expansion in the historical record dating back to the middle of the 1850s. As documented in Chapter 2 for the state and Chapter 1 for the nation, the economy continues to expand, but by most measures the economy is cooling. Rates of job growth are slowing, the U.S. manufacturing sector is showing signs of contraction and further reductions in the unemployment rate have stalled. This is not a recessionary environment or outlook, but instead one that is characterized by an economy confronting the constraints of full employment. There are clearly headwinds, including ongoing trade wars and tariffs, but the fact is that the economy is simply running out of capacity for further strong growth. The labor market offers a sound example, with demographic forces holding back stronger growth in the labor force and thus the pace of nonfarm job creation. As the pace of employment growth slows, so too does income. As income growth slows, sales slow, and then production slows. These trends characterize the current short-run performance of the economy.

Long-term (or trend) economic growth is driven by just a small number of factors. Primary ingredients include population growth, which directly influences the labor force; private sector

3.1. INTRODUCTION, CONTINUED

capital investment, that accounts for equipment, intellectual property and buildings held by business; public infrastructure, ranging from roads to airports to broadband; and productivity growth, which captures improved efficiency of inputs used to produce privately and publicly produced goods and services.

One important factor missing from this list is *labor force quality*. Early models of long-term growth developed by economists placed emphasis on labor in terms of its quantity—the number of people and hours of work. However, it is especially clear today that the quality of the labor force is in fact a critical ingredient to economic growth and development and the wellbeing of workers and their families. What is labor force quality? It captures formal education, informal training and on-the-job experience, along with health status, all of which influence the productivity of the worker. Tennesseans tend to have poor health status compared to their counterparts across the country that weakens overall economic performance and individual wellbeing. And while Tennessee has traditionally trailed the nation in terms of educational attainment, the state is now making impressive investments in education that will bear fruit in the future.

The long-term forecast for Tennessee includes the short-term cyclical forecast for the next ten quarters and then connection to the trend forecast which extends to 2029. In the short-term, expect growth to moderate relative to the last several years. As the economy reverts to trend, growth will see slight acceleration. This muted outlook is a reflection of two important underlying trends. First, labor force growth is expected to slow due to core demographic trends that will limit the number of new entrants to the labor market. Second, the economy continues to yield rather disappointing gains in productivity. This is not trivial as a one-half percentage point gain in productivity would boost output growth by a similar amount. The nation and state remain stuck in a low-productivity trap.

Tennessee's inflation-adjusted gross domestic product (GDP) will see compound annual growth of 1.7 percent between 2019 and 2029 versus 2.0 percent growth for the national economy. In the next several years, unemployment rates will stay in the mid 3 percent range, rising to above 4 percent at the end of the forecast horizon. Tennessee nonfarm jobs will be at a 0.7 percent compound annual rate, ahead of the nation's pace of job creation. By 2021, both the state and national economies will see ongoing jobs losses in manufacturing, reversing the short-lived trend that dates back to 2011.

3.2. NONFARM EMPLOYMENT

Tennessee nonfarm employment is projected to be up just 1.6 percent in 2019, the second-lowest rate of job growth since 2010 when jobs slid 0.2 percent. Job growth turned to the black and registered a 1.8 percent gain in 2011, and since that time jobs have seen sustained but now slowing growth. Since 2010, the state has created 496,300 jobs for a simple growth rate of 19.0 percent. While the national economy saw a roughly similar pattern of job growth, the gain was slower at 16.1 percent. All broad sectors of the state economy have posted gains in the past five years.

One of the bright spots in the ongoing economic expansion is the growth of jobs in the manufacturing sector. For both Tennessee and the U.S., manufacturing jobs began contracting in the late 1990s, a pattern that was amplified over the course of the Great Recession with dramatic setbacks in 2009: manufacturing jobs in Tennessee were down 14.4 percent compared to an 11.6 percent loss for the nation. But since 2011, manufacturing has seen a resurgence, with steady gains in jobs that are expected to continue through 2019. Recent national data point to a weakening of the manufacturing

3.2. NONFARM EMPLOYMENT, CONTINUED

sector, including monthly job losses. Data for Tennessee have yet to turn to the red. The third quarter of 2019 produced a 2.7 percent seasonally-adjusted increase in manufacturing sector employment in Tennessee. Job growth has been healthy in both durable goods and nondurable goods manufacturing.

Tennessee's performance relative to peer states in the Southeast is shown in **Table 3.1** for the 2009–2019 period. Based on these data from the Bureau of Labor Statistics, Tennessee saw slightly stronger nonfarm employment growth and much stronger manufacturing job growth than the nation. Two states in the Southeast—Florida and South Carolina—outperformed Tennessee in nonfarm job creation. West Virginia and Louisiana experienced especially weak nonfarm job growth between 2009 and 2019, with gains of just 2.9 percent and 4.2 percent respectively. Tennessee's 16.2 percent jump in manufacturing jobs was roughly twice the pace of the nation (8.3 percent) and placed it fourth in the Southeast, just behind South Carolina, Kentucky and Florida.

Figure 3.1 shows where job growth has taken place, as well as where losses have materialized between 2009 and 2018. The broad Middle Tennessee corridor has seen the strongest pace of job creation, along with many counties in East Tennessee. What is striking—if not alarming—is that 16 of the state's 95 counties actually experienced reductions in employment over this long window of time, while another 17 counties posted growth of less than 10.0 percent—half the state average growth rate of 19.2 percent. Van Buren and Hancock Counties experienced withering employment contractions in excess of 25 percent. This widespread loss of jobs in rural Tennessee is consistent with a pattern that is taking place across the country.

A modest renaissance has taken place in manufacturing in both Tennessee and for the national economy. Between 2009 and 2018, manufacturing employment in Tennessee was up 13.5 percent while U.S. manufacturing jobs were up at the slower rate of 7.1 percent. (See **Figure 3.2**.) As with most other economic data for the state, the strength tends to be concentrated in Middle and East Tennessee. Eight counties had setbacks of 25 percent or greater; 28 counties had employment losses in the manufacturing sector.

The overall nonfarm employment outlook for Tennessee and the nation extending to 2029 is shown in **Figure 3.3**, along with history dating back to 2009. As is clear from the figure, job growth is expected to slow appreciably in the years ahead, though job contractions and economy-wide recession are not expected. This rather anemic job outlook is in part a reflection of labor market constraints and an increasingly limited pool of workers to draw into employment. The dearth of available workers will be a primary factor in slowing the pace of output growth for the state and the nation in the near term as well as the long term.

Table 3.2 presents Tennessee's long-term employment outlook by broad sector. The state economy is expected to produce stronger nonfarm job growth and manufacturing job growth than the nation, as noted above. While Tennessee will lose manufacturing jobs, it is still expected to capture migrating manufacturing jobs from elsewhere around the U.S. as well as some gains in key sectors like transportation equipment. Good examples include Denso and Volkswagen (the latter which just announced 1,000 new jobs to be created in support of electric vehicle production). While only one sector (information) lost jobs between 2009 and 2019, three sectors (manufacturing; trade, transportation and utilities; and information) are expected to suffer setbacks by 2029. Professional and business services, along with education and health services, will enjoy the strongest growth.

The forecast for the manufacturing sector is presented in **Figure 3.4**. U.S. manufacturing employment is expected to experience contraction in 2020 and the remaining years of the long-term outlook. The state economy is expected to begin to see job losses in manufacturing beginning in 2021. While a very

small gain in jobs is projected for 2023, the overall outlook for manufacturing employment is negative. Even modest productivity gains will ensure that manufacturing output continues to grow despite setbacks in employment. Note that while the net number of jobs in manufacturing will decline, there will still be significant job opportunities through quits and terminations and new business startups.

Details on the past and projected future of the manufacturing sector and its main components are provided in **Table 3.3**. The next decade will clearly be a reversal of fortunes for manufacturing with a compound annual loss of 0.1 percent compared to the 1.6 percent growth of the past decade. While 51,200 jobs were created between 2009 and 2019, 4,100 jobs will be lost in the next ten years. Durable goods is projected to eke out a small gain, but nondurable goods manufacturing will witness job losses. A handful of sectors will see net gains in employment, including wood products, nonmetallic minerals, transportation equipment, miscellaneous durable goods, food, beverage and tobacco, and miscellaneous nondurable goods.

3.2. NONFARM EMPLOYMENT, CONTINUED

The Impacts of Autonomous Vehicles on Tennessee Employment and Tax Revenues

The adoption of autonomous vehicles (AVs) will bring major changes to the industry as fleets of self-driving vehicles begin to dominate the market. AVs will cause the immediate retreat of internal combustion engines and fossil fuel as each AV will be equipped with an electric engine. Car ownership will decrease as fleets of AVs become the dominant means of transportation.

Current Vehicle-Related Employment

Tennessee will be impacted by AVs because the state economy has a robust vehicle sector that spans many industries and employs hundreds of thousands of Tennesseans, with vehicle-related employment accounting for 16.46 percent of total. Vehicle-related employment is defined as being composed of three categories (Table 3.4): vehicle manufacturing employment, vehicle support industries' employment, and employment in vehicle intensive-use occupations.

Manufacturing

Tennessee accounts for 7 percent (72,507 jobs) of total vehicle manufacturing jobs in the U.S., compared with the 2 percent of the nation's population. Most of these state workers make vehicle parts. Tennessee is home to over 900 auto parts suppliers.

Vehicle Intensive

The largest share of vehicle-related employment is in vehicle intensive-use occupations. This category includes motor vehicle operator occupations and other on-the-job driver occupations where driving is a significant requirement. Given the state's geographic advantage, many transportation-related industries make their home in Tennessee. Trucking (60,350 workers) represents most of the state's motor vehicle operator employment.

Motor Vehicle Support

Motor vehicle support industries such as automobile dealers, gasoline stations, auto repair and maintenance, and auto parts accessories and tire stores comprise 70 percent of employment in this category. In total, motor vehicle support industries provide 118,993 jobs for Tennesseans and account for 4.1 percent of all employment in the state.

Vehicle-Related Employment Outlook

Manufacturing

The shift to electric vehicles will change many vehicle component parts and may create a mismatch between the skills required to make electric vehicles and parts and the skills of existing workers. More importantly, fleet ownership will reduce total vehicles, reducing the number of workers demanded. The impact on Tennessee depends on the ability to transition from making internal combustion engine parts and vehicle assembly to making electric and AV parts and assembling these vehicles. In any event, manufacturing employment related to transportation equipment is likely to fall over the next several decades unless Tennessee increases market share.

Continued on Page 61

Table 3.4: Vehicle-Related Employment, Tennessee and the U.S., 2017

	Tennessee		U.S.	
	Employment	Share	Employment	Share
Total Employment	**2,930,932**	**100.0%**	**143,859,855**	**100.0%**

3.2. NONFARM EMPLOYMENT, CONTINUED

The Impacts of Autonomous Vehicles, continued from Page 60

Vehicle Intensive

Workers in vehicle-intensive occupations are at the greatest risk of job loss from AVs. Motor vehicle operators like taxi drivers and truck drivers may see immediate job losses as AVs replace 100 percent of the tasks performed by these workers. Not all vehicle-intensive occupations will see as many job losses because the occupation requires tasks outside of operating a motor vehicle, such as ambulance drivers. Lastly, public sector employment may decline more slowly if policymakers are reticent to replace workers with AVs in order to limit the transitional effects on people.

Motor Vehicle Support

The impact of AVs on vehicle-support industries differs. Many support services will be eliminated or reduced, while others may see an increase in demand for services—at least in the near-term.

Revenue Impacts

AVs will impact state revenues both directly and indirectly. Direct impacts arise from taxes on vehicle-related activity and total 16 percent of the $14.5 billion in tax revenues collected in FY17-18 (Figure 3.5). Most revenue from existing taxes on transportation-related activity will be diminished or lost. The shortfall in revenues is a result of a tax structure that is dependent on a large numbers of vehicles that require fossil fuels.

Revenue Impacts

AVs will impact state revenues both directly and indirectly. Direct impacts arise from taxes on vehicle-related activity and total 16 percent of the $14.5 billion in tax revenues collected in FY17-18 (Figure 3.5). Most revenue from existing taxes on transportation-related activity will be diminished or lost. The shortfall in revenues is a result of a tax structure that is dependent on a large numbers of vehicles that require fossil fuels.

Taxes (such as the sales tax) will be indirectly affected as AV's disrupt the economy through employment transitions. While job losses will occur, the losses may be offset as AVs create new employment opportunities and shift consumer preferences. Thus, the net effect is difficult to forecast, but Tennessee will likely see revenue losses during some intervals as most taxes are linked to economic activity, and vehicle-related employment makes up 16.5 percent of jobs in Tennessee.

Punchline

The onset of AVs will impact employment and tax revenues in Tennessee. Tennessee's large vehicle-related employment and tax structure, which is dependent on large numbers of vehicles that use fossil fuels, make the state sensitive to the transition. Industrial recruitment and retention initiatives and training programs are among policies that will need to be reassessed to ensure that they are meeting the needs of Tennesseans as the state grapples with this change in industrial structure.

This information comes from "Potential Impacts of Autonomous Vehicles on Tennessee's Economy," a Boyd Center for Business and Economic Research study by Bill Fox, Alex Norwood and Vickie Cunningham, completed for the State of Tennessee.

Source: State of Tennessee, The Budget, Fiscal Year 2019-2020; and Tennessee Department of Revenue, Revenue Collections, June 2018.

3.3. UNEMPLOYMENT

The economy's impressive growth streak has caused the unemployment rate to dip to record lows. Tennessee's seasonally-adjusted unemployment rate bottomed out at 3.2 percent in February and held steady until a slight uptick in May to 3.3 percent. For perspective, Tennessee's unemployment rate averaged 10.5 percent in 2009, the last year of the Great Recession; the U.S. unemployment rate was 9.3 percent in the same year. The state unemployment rate has consistently fallen below the nation's unemployment rate dating back to December 2016. This long-term improvement in the unemployment rate has dramatically reduced the number of discouraged workers (i.e., individuals who exit the labor force because of poor employment prospects) and underemployed workers (i.e., those who would like to work more hours but are unable to do so because of employer constraints).

Hidden behind these national and regional unemployment figures is substantial variation for subregions and certain demographic groups of the population. In general, in Tennessee and across the nation, rural communities are experiencing sustained and elevated rates of unemployment. In a significant number of rural communities, as noted above, job counts are in decline and population growth rates are negative as able-bodied individuals leave to seek employment opportunities elsewhere, typically in metropolitan regions. This generally characterizes the urban-rural divide in Tennessee. While metropolitan areas enjoy systematically lower unemployment rates than their rural counterparts, pockets of elevated unemployment rates still exist but are invisible at the county level. The pockets are concentrated in metropolitan areas where levels of educational attainment tend to be low and job opportunities are relatively scarce.

Figure 3.6 shows historical unemployment rates for the U.S., the Southeastern states and Tennessee dating back to 2009, along with national and state projections out to 2029. As one would expect, the series tend to track one another over time. Both the state and national rates of unemployment are expected to rise as the trend outlook takes hold in the forecast. History is very likely to repeat itself and produce relatively high unemployment rates for rural places and for individuals with poor health status and/or low levels of educational attainment.

3.4. POPULATION AND LABOR FORCE

As discussed in the introduction to this chapter, labor force growth is one of the primary ingredients to long-term economic growth. In the short-run, when population is fixed, strong economic conditions draw people into the labor force while weak economic conditions can cause people to withdraw from the labor force. In the long-run, population growth (including net migration from other states and from abroad) dictates the available pool of people for the labor force.

Figure 3.7 includes two maps of Tennessee, one capturing the last decade of population growth and the second providing the forecast out to 2029. Middle Tennessee has been—and will continue to be—the growth pole for the state. Thirty-one counties lost population in the last decade. The next ten years will once again be a challenge for rural Tennessee, while metropolitan Tennessee struggles with the management of its strong population growth. While the state population was up 8.6 percent between 2009 and 2019, growth will slow to 7.6 percent in the decade ahead.

Historically, Tennessee has had a lower rate of labor force participation than the nation. There are many possible explanations for this pattern, including lower levels of educational attainment and relative poor health status. A complementary view of the labor force participation rate is the employment-to-population ratio. **Figure 3.8** shows historical and projected figures on the employment-to-population ratio for Tennessee and the U.S. Consistent with labor force participation rate data, the U.S. has generally had a higher share of population that has been employed compared to Tennessee. The long-term forecast indicates that the gap will be narrowed as the current economic expansion continues into the next decade.

3.5. ARTIFICIAL INTELLIGENCE IN THE ECONOMY

There is a growing debate among policymakers on the impacts of technology and artificial intelligence (AI) on the economy. While advancements in technology are predicted to lead to economic growth and prosperity as a whole, there is a growing fear over whether AI and other technological advancements will replace jobs. According to a 2017 survey by Pew Research, three quarters of Americans are worried about a future in which robots and computers diminish job prospects and increase economic inequality.[1] However, the extent to which technological developments will impact the American workforce is unclear. There are a multitude of studies that try to quantify the impact of AI on different sectors of the economy, but conclusions vary. If AI develops in the same general fashion as other technological innovation, there will be both winners and losers.

Most policymakers agree that automation and AI will create worker displacement problems in the near future, just like the emergence of other technologies and their application over the course of history. However, quantifying who will be most affected has proven difficult. Previous studies looking at the impact of AI on the labor market have generally concluded that white-collar jobs are most susceptible to automation.[2] Recent work by Michael Webb, a Ph.D. student at Stanford University, and the Brookings Institute reveal that occupations with high levels of education will be most exposed to automation and AI. Occupations such as market research analysis, sales managers, programmers, and management analysists are increasingly likely to be exposed to AI. However, it is important to note that exposure is not necessarily negative. Specifically, high exposure to AI could mean changes in duties, but not necessarily the loss of jobs.

Regardless of which types of jobs may be more exposed to automation, the pace at which automation technologies displace workers will depend on rates of development, adoption, and economic growth. In a study conducted by the Mckinsey Global Institute, they conclude that 75 million to 375 million workers (3-14 percent of global workforce) will need to switch occupational categories by 2030.[3] Further, the impact may be more prominent in rural communities. However, even with increased levels of automation, the demand for work could increase with economic prosperity. If AI creates efficiency gains for the economy, growth will take place elsewhere as these efficiency gains are realized.

The Bureau of Labor Statistics (BLS) estimates that the labor force will increase from 157 million in 2015 to 186 million in 2060, an increase of 29 million while the labor force participation rate will fall. However, the composition of the labor force is changing.[4] The labor force participation rate of workers aged 55 and older has been increasing since 1996. And, while the BLS predicts that this rate will fall in the long run, a report by Deloitte Review predicts that the labor force participation rate of those 55 and older will increase from 2014–2024.[5] Older generations of workers are typically less adaptable to changes in technology making them more likely to drop out of the labor force entirely rather than complete displaced worker training. Therefore, older workers may exit the work force at higher rates than other age groups.

The education level of an average American has been increasing in recent decades. The percentage of Americans aged 25+ who have completed a 4-year college degree has risen from

3.5. ARTIFICIAL INTELLIGENCE IN THE ECONOMY, CONTINUED

17 to 33 percent since 1980.[6] Further, the share of master's degree holders in the labor force increased from 4 percent in 1999 to 7 percent in 2015.[7] As technology improves, education requirements will increase. Since 2010, nearly two thirds of the 13 million new jobs created in the U.S. required medium or advance levels of digital skills. However, differences in education attainment could lead to higher income inequality. Over the past three decades, the earnings gain between those with a high school diploma and college education doubled. Further, mean wages in "highly digital" occupations are nearly two times that of wages in occupations that require only "basic digital" skills.[8] With fewer women and minorities receiving educational training for these skills, this could lead to further wage disparities.

Educational requirements will also increase with technological advancement. Occupations requiring a college degree will grow over the next decade. Even now, in times of record low unemployment and increased job creation, employers say they struggle to find the employees they need. Since 2010, nearly two thirds of new jobs created have required medium to advanced levels of digital skills. However, the education level of an average worker in the U.S. is falling behind that of other countries. Currently in Canada and South Korea, 60 percent of young workers are graduating from post-secondary programs. Additionally, while computer and technology skills are highly desirable, demand is also growing for skills machines cannot replicate: empathy, teamwork, critical thinking.[9] America's competitive advantage in terms of a skilled and educated workforce is clearly eroding.

Recommendations for addressing the anticipated changes of technological advancement and the incorporation of artificial intelligence include expanding worker displacement training programs, increasing access to education programs for digital skills enhancement, introducing midcareer job training, and maintaining or increasing funding for research and development. Worker displacement due to automation may cause unemployment to increase in the short run. The expansion of retraining programs for these workers would help bridge the skills gap temporarily. However, in the long run, increasing access to education programs centered around digital skills and machine learning would help the U.S. maintain its competitive edge. A highly educated work force has allowed the U.S. to dominate innovation and automation on the world stage. Thus, with the rapid rate of automation and technological advancements, midcareer job training may be essential to keeping workers in the labor force. By progressively maintaining continual education to match required skill sets, workers are less likely to become displaced. Thus, a commitment to furthering education programs would ensure sustained economic growth. Finally, the U.S. must maintain is dominance in research and development. R&D funding at the federal and state level have been dwindling over the last few decades. Federal funding is at its lowest since the early 1950s.[10] The U.S. could fall behind other developed countries without policies and funding to promote the development and commercial adoption of technological advances.

3.6. INCOME, EARNINGS AND OUTPUT

Tennessee's nominal personal income has enjoyed healthy growth since 2014 when income advanced 4.2 percent. The prior year was especially weak, with just a 1.0 percent gain. Growth was also strong in 2010 through 2012 as the economy rebounded from the trough of the Great Recession in the summer of 2009. Personal income growth for the nation has shown a roughly similar pattern, surpassing Tennessee's growth in some years and lagging our growth in other years. For 2019, the state is expected to see personal income growth of 5.2 percent, ahead of the pace for the nation (4.8 percent).

Between 2019 and 2029, Tennessee's nominal personal income should see a 4.3 percent compound annual growth rate, slightly lower than the 4.4 percent growth projected for the nation. A major factor restraining overall income growth will be slow growth in the labor force and employment, which will in turn dampen growth in wage and salary income.

Wage and salary income is the largest component of personal income, accounting for about 50 percent of total income in 2018. Strong job growth has helped buoy wage and salary income, in turn improving the performance of overall personal income. On the other hand, weak-to-modest growth in the average wage has kept income from growing faster still. The average wage grew 4.1 percent in 2007 on the eve of the Great Recession, but in no year since then has growth in the wage exceeded 4 percent. Growth was exceptionally weak in 2013 with an increase of just 0.2 percent. There was some acceleration between 2016 and 2018; growth in 2019 is expected to match last year's growth of 3.4 percent.

Weak growth in earnings has received considerable attention from analysts and the media. The puzzle is the absence of stronger wage growth in the face of a falling unemployment rate and a strong pace of job creation. Historically,

3.6. INCOME, EARNINGS AND OUTPUT, CONTINUED

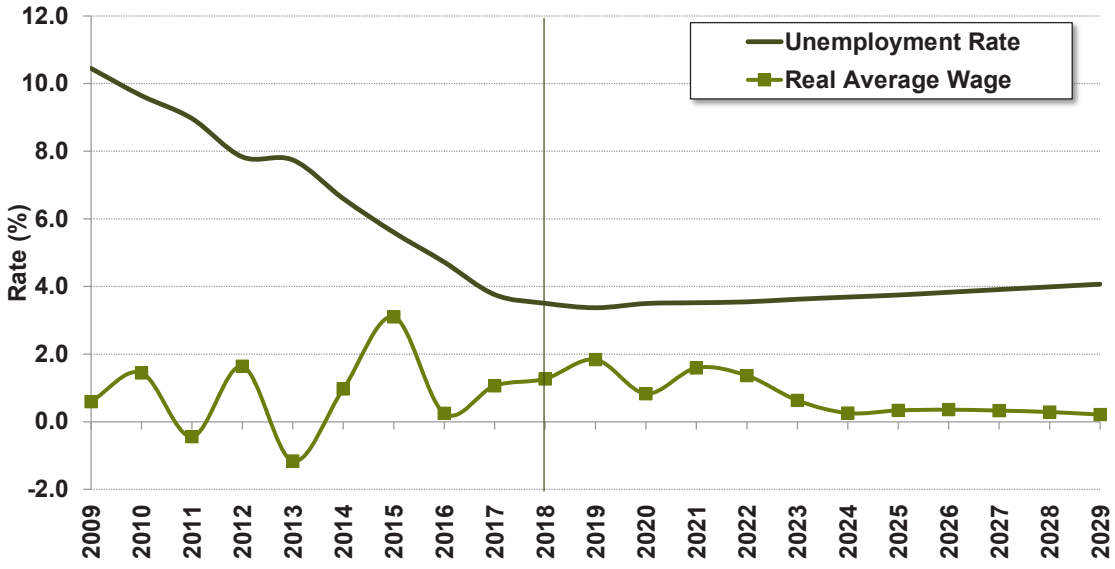
when unemployment rates have fallen, earnings growth has accelerated due to a tightening of labor market conditions. That has not happened during the current expansion. **Figure 3.9** shows this relationship between the Tennessee unemployment rate and the inflation-adjusted average wage. While there has been some wage rate acceleration since 2016, the gain has been modest; there is little evidence of a consistent trend in the earlier data. The forecast points to weak future wage growth, a result of the expectation of a slightly rising unemployment rate as the economy begins to move through the next decade.

Many explanations have been offered for the break in the historical linkage between these two metrics, including the declining influence of unions and global competition which places pricing pressures on businesses. There are also important compositional effects that have held back the overall average wage. One of these is the retirement of the Baby Boom generation. As these individuals leave the labor market, they leave behind a relatively high salary. New workers, on the other hand, come in at a lower level of earnings. Another compositional effect has to do with different occupations. There is some national evidence for rising wages for some workers where demand is currently high, including construction and production workers. Unfortunately, this evidence is not as clear in data for Tennessee.

Per capita income accounts for all personal income earned by Tennesseans, regardless of where that income is sourced. For example, if a Tennessee resident works in Georgia, the income accrues to Tennessee. Similarly, if one earns profits from an out-of-state business, some share of that income (depending on how the business is structured) is counted as Tennessee income. Because personal income and per capita income are residence-based measures, they are important metrics that reflect on the wellbeing of residents of Tennessee.

Per capita income in Tennessee has historically trailed per capita income for the nation as a whole. Two important explanations include lower levels of educational attainment and poorer health status in Tennessee compared to the nation. Because the state starts from a lower base level of per capita income, we must see stronger growth in Tennessee in order to catch up with the nation. If we simply match the U.S. per capita income growth rate, the disparity will grow. Tennessee's per capita income

Figure 3.9: Tennessee Unemployment Rate and Real Average Wage Growth Show Little Correlation



Source: Bureau of Labor Statistics, Bureau of Economic Analysis, and Boyd Center for Business and Economic Research.

3.6. INCOME, EARNINGS AND OUTPUT, CONTINUED

should be $48,912 in 2019 compared to U.S. per capita income of $56,562. Between 2009 (when per capita income actually contracted 1.7 percent) and 2019, per capita income grew at a 3.6 percent compound annual growth rate compared to 3.7 percent for the U.S. This slightly stronger growth for the nation widened the gap between per capita incomes from $4,827 to $7,650.

Per capita income varies widely across the state, with metropolitan areas generally performing better than their rural counterparts, as illustrated in **Figure 3.10**. A primary explanation is higher levels of educational attainment and a healthier workforce in metropolitan Tennessee. Just three Tennessee counties have per capita incomes that exceed the national average in 2018: Davidson, Fayette and Williamson. And just six counties exceed the statewide average, a sign of a skewed distribution of income across the state

The long-term forecast for Tennessee points to compound annual growth in per capita income of 3.5 percent between 2019 and 2029. In 2019, Tennessee's per capita income of $48,912 represented 86.5 percent of U.S. per capita income. By 2029, the state's per capita income is expected to reach $68,955, slipping to 84.5 percent of U.S. per capita income ($81,646). Note that despite comparable rates of growth, the disparity in per capita income will grow over time.

Tennessee and the U.S. both saw GDP contract in 2009. Since that time, GDP has seen decent growth. On a compound annual basis, Tennessee's GDP was up 4.2 percent between 2009 and 2019 compared to 4.0 percent for the national economy. The state's manufacturing sector was battered in 2009 with a 11.0 percent inflation-adjusted output setback; in durable goods, the setback was an astounding 17.5 percent loss. Manufacturing enjoyed exceptionally strong growth in output in 2011–2013. Growth in 2018 is projected at 2.7 percent and growth in 2019 is estimated to be 2.4 percent, consistent with a slowing national economy. Output growth in vehicle-related manufacturing has been very strong, with the exception of 2015. Growth in these sectors has slowed as national light vehicles have plateaued and started to decline. Professional and business services, along with financial activities, have seen several years of strong growth in the 2009–2019 window.

The state should see inflation-adjusted GDP rise at a 1.7 compound annual rate between 2019 and 2029 compared to 2.0 percent growth for the U.S. (See **Figure 3.11**.) The state's manufacturing sector is expected to experience output growth of 1.7 percent, with durable goods up 1.9 percent and nondurables up at the slower rate of 1.4 percent. The growth in output is encouraging in light of expected employment losses, signaling rising productivity in the state's industrial sector. Apparel and leather products is the only broad sector of the state economy that is expected to have a contraction in output by 2029; output was down sharply between 2009 and 2019.

Figure 3.10: Per Capita Personal Income Varies Widely Across Tennessee

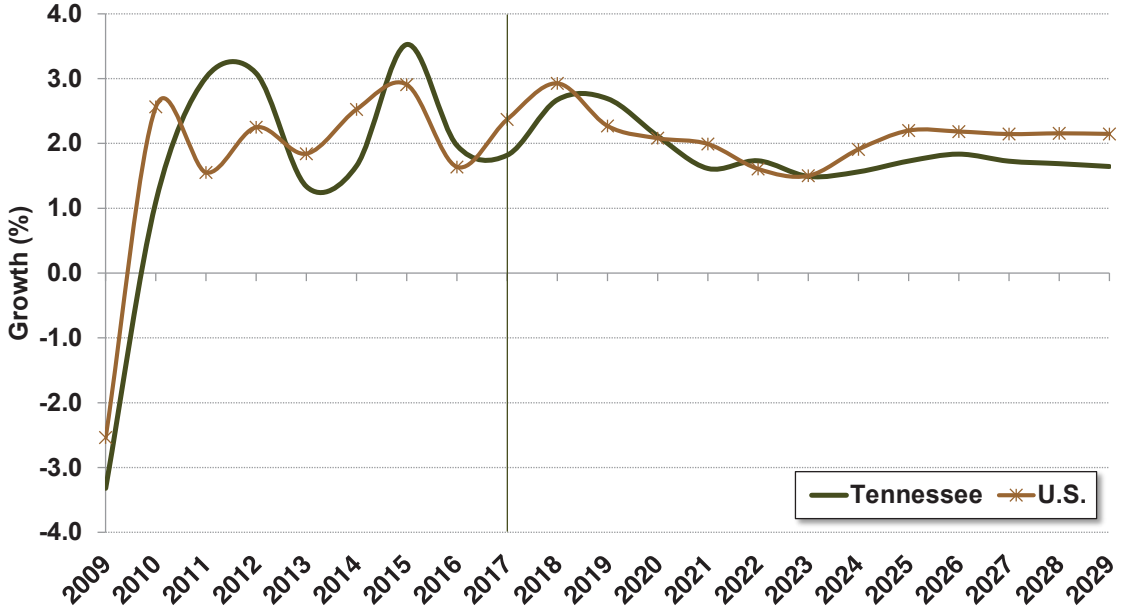
3.6. INCOME, EARNINGS AND OUTPUT, CONTINUED

Figure 3.11: Tennessee & U.S. Inflation-Adjusted GDP Growth Expected to be Modest



Source: Bureau of Economic Analysis, IHS Markit™ (copyright), and Boyd Center for Business and Economic Research.

3.7 FORECAST AT A GLANCE

• Growth over the next decade is expected to subdued due to the current short-run cycle of slower growth and weaker future growth in the labor force. Nonfarm employment is expected to advance at a 0.7 percent compound annual rate between 2019 and 2029.

• The state's manufacturing sector, which has enjoyed many years of sustained growth, will encounter setbacks as the 2020s unfold, consistent with the expected pattern for the nation.

• The state unemployment rate will drift upwards over the course of the next ten years, reaching 4.1 percent in 2029.

• Tennessee's inflation-adjusted personal income will see compound annual growth of 2.2 percent in the next decade compared to 2.3 percent for the nation.

• The state's inflation-adjusted GDP should be up at a 1.7 percent compound annual rate, slightly behind the pace of national output growth.

CHAPTER 4: PUBLIC HEALTH AND ECONOMIC WELLBEING IN TENNESSEE

IN THIS CHAPTER —

4.1. INTRODUCTION
- ACHIEVING HEALTH

4.2. MEASURING HEALTH OUTCOMES AND THE DETERMINANTS OF HEALTH
- POLICIES TO IMPROVE HEALTH

4.3. THE CASE FOR POOR HEALTH BEING AN ECONOMIC DRAG ON TENNESSEE

4.4. COUNTY LEVEL RELATIONSHIPS BETWEEN HEALTH AND ECONOMIC GROWTH – TENNESSEE AND THE U.S.

4.5. CONCLUSION

4.1. INTRODUCTION

Tennessee has better than average public health funding, spending $99 per person in state and federal dollars on public health programs.[1] Additionally, Tennessee is rated favorably in public health policy. However, population health in Tennessee remains very poor, far below the national average. Tennessee ranks number 42 of 50 states in terms of overall health outcomes, 46th in cancer deaths, 45th in heart disease deaths, 45th in diabetes, 41st in physical distress, and is also in the bottom 10 for access to clinical care, mental health providers, and preventable hospitalizations.[2] These rankings should not be viewed as unfavorable to the Tennessee Department of Health, nor to the regional organizations or local public health departments working in these areas, but rather as an indication of the magnitude of the challenge these agencies are facing.

In addition, while the state has experienced strong economic growth for the last decade and ranks in the top 15 states in terms of growth in employment and overall economic output,[3] this success obscures indications that Tennessee is far from reaching its full economic potential. Economic growth has not been distributed evenly over the state. Although Nashville and other metropolitan areas continue to experience growth, smaller markets and rural areas are either stagnating or in decline. Similarly, poor health indicators are not distributed uniformly over the state, and there are strong correlations between poor health and poor economic performance within the state. A significant facet of this linkage relates to the economic wellbeing of individuals and families where adults have relatively poor health stock. The takeaway from these statistics is that poor health is likely a

4.1. INTRODUCTION, CONTINUED

damper, if not an outright barrier, to economic and community development efforts in rural counties and for many individuals across the state.

Using data on counties in the state of Tennessee, as well as national and subnational comparisons, this chapter provides an overview of the key indicators of the determinants of health and metrics of the state's health care system. In addition, this chapter will present the relationship between poor health and economic productivity in the form of labor force participation and economic growth rates.

The goal of this chapter is to highlight poor health as an *economic* problem in the state and to show that improving health across the state, over the long term, will lead to improved economic growth and prosperity for individuals and in distressed areas. The caveat with investing in public health, as with investing in accessible and affordable education, is that the costs are immediate, but the benefits are gradually accrued over time. When individuals become healthier, jobs obviously do not instantly materialize in their local areas. Rather, these benefits come to pass because of coordinated efforts by health programs and economic and community development. While progress is likely to be slow, we conclude that investments in improving the health outlook of individuals in Tennessee has the capacity to improve the strength of the overall state economy and its attractiveness to existing and new industry.

Achieving Health

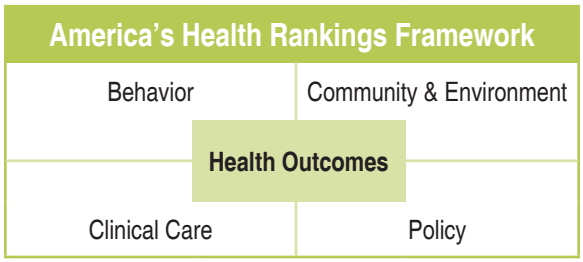
According to the World Health Organization, *health* is "a state of complete physical and mental and social wellbeing."[4] How can individuals, communities and populations achieve health? The most common answer is by increasing access to *health care*, that is the maintenance and improvement of health through guidance on healthy lifestyles and the provision of medical care. Under this framework, solutions hinge on expanding access, improving quality, and lowering the cost of medical care. This approach has generated countless national debates and news headlines on the structure of the health care system and its financing, yet it misses many of the determinants of health. While a robust and effective health care system is a vital part in the protection, restoration, and production of health, it is only *one* of several factors. Additional factors impacting the health of individuals and communities are related to health behaviors, social and cultural contexts, and the environment in which people live. Adverse health behaviors, such as tobacco, alcohol and substance use, poor eating habits, lack of sufficient sleep and exercise, as well as socioeconomic factors such as education, unemployment, poverty, unstable housing and unsafe communities, and the stress that living in such conditions entail, all significantly impact the achievement of health. Importantly, poor health is not only damaging to the individuals and communities experiencing it, but it also undermines the ability of the economy to grow and places to thrive.

Economists view health in a very similar fashion as education, that is as a form of *human capital*, intangible collective resources possessed by individuals and groups within a given population. Most people acknowledge that education increases engagement with the labor market and makes workers more productive—particularly when that education is relevant to the individual's occupation. By the same token, if two individuals are given a series of tasks to complete, all else equal, economists expect that the healthier individual will be more efficient in completing the work. This is borne out in research on the topic. Perhaps even *more so* than education, better health is linked to *greater productivity* across occupational domains. There are also clear linkages between health and attractiveness as a business location. Industry knows that health is a crucial determinant of labor force participation, at-work productivity or "presenteeism", and expected insurance costs for potential employers. It seems clear that economic development depends on a stable, engaged, and healthy workforce. How then can the public health needs of Tennesseans be addressed to improve economic growth and quality of life in the state?

[4] World Health Organization's Constitution (1948 [2014]) 48th ed. http://apps.who.int/gb/bd/PDF/bd48/basic-documents-48th-edition-en.pdf#page=7.

4.2. MEASURING HEALTH OUTCOMES AND THE DETERMINANTS OF HEALTH

Health outcomes represent the physical and mental wellbeing of residents. Such outcomes may be measured using outcomes like premature death, life expectancy, the incidence of deaths from cancer, cardiovascular disease, and diabetes, as well as physical and mental distress. On average, Tennesseans are losing 600,000 years of life due to premature death.[5]



While there are multiple frameworks for measuring the achievement of health, one of the most straightforward approaches is that of the United Health Foundation's *America's Health Rankings* in which health outcomes are presented as a function of individual behaviors, community and environmental conditions, clinical care, and policy choices. This framework is very similar to the Robert Wood Johnson Foundation's (RWJF) *County Health Rankings Model*.[6] To be more comprehensive, a mixture of measures from both frameworks has been included in this chapter.

Health behaviors are actions that individuals take that can improve or harm their health. Measures of behavior include:

- Alcohol, Drug, and Tobacco Use
- Diet and Exercise
- Risky Sexual Activity
- Educational Attainment (k-12)

Although Tennessee has comparatively low rates of excessive alcohol use,[7] at 15.7 percent of adults, this figure has been trending upward, gaining 10 percent in the last year from 14.3 percent. In addition, in the past 10 years, drug deaths have increased 58 percent, to 24.3 deaths per 100,000.[8] The opioid epidemic has partially fueled this trend, with nearly more pain prescriptions in the state than residents, more than 20,000 non-fatal overdoses,[9] and 1,304 overdose deaths in 2018.[10] Not only is opioid use a life and death issue, it is also an *economic issue*. The CDC estimates that *each* overdose death results in an economic cost of $1.3 million due to the loss of productive work years resulting from premature death. Academic research by the Boyd Center also has demonstrated that increases in opioid use per capita can explain over half of the decline in labor force participation since 2000. Additionally, a 10 percent decrease in opioid prescribing in Tennessee would lead to an increase in over $800 million in personal income in Tennessee.[11]

Furthermore, according to the Tennessee Department of Health,[12] more than 38,000 high school students in the state smoke, with 3,400 of children under the age of 18 becoming new daily smokers each year. Additionally, more than 1.1 million, or one in five, Tennessee adults smoke. A third of cancer deaths in the state are attributed to smoking, and 11,400 Tennessee adults die each year as a result of their tobacco use. This adverse health behavior costs the state $2.67 billion dollars, with $823.6 million paid for by TennCare, the state's Medicaid program. In addition, the shortened life-span of productive workers costs the state an estimated $3.59 billion.

[5] RWFJ's data show Tennessee loses an average of 9,100 of life years due to reduced life expectancy before age 75 per 100,000 population.

4.2. MEASURING HEALTH OUTCOMES AND THE DETERMINANTS OF HEALTH, CONTINUED

Residents in the state also struggle to maintain healthy and active lifestyles with more than 30 percent of Tennessee adults reporting that they did no physical activity or exercise other than their regular job in the past 30 days.[13] This leaves the state 47th in the country due to its low level of physical activity. And although residents report eating fruits and vegetables near the national average, one in three adults are obese with a body mass index of 30.0 or higher.[14] This is triple the rate of the state thirty years ago in 1990 when just over one in ten residents were considered obese. The national medical costs of obesity have been estimated to be $342.2[15] billion, with absenteeism linked to obesity leading to additional $8.65 billion in losses each year.[16]

Risky sexual behavior is also a problem in the state with chlamydia, the most commonly reported sexually transmitted infection (STI) for men and women, affecting 522.4 Tennessee residents per 100,000. According to the CDC, STIs, including HIV, cost nearly $16 billion to treat annually.[17] Teen births are also high in the state, with an average of 330 per 100,000 residents.[18] Teenagers who bear children are less likely to continue their education beyond high school, more likely to be obese in adulthood, and are more likely to experience depression and psychological distress.

In contrast to these trends, Tennessee is becoming a leader in educational attainment, measured as the percentage of individuals obtaining their high school diploma within four years of starting the 9th grade. Ranked 3rd in the country in 2019, with an 89.8 percent graduation rate, it seems clear that the state's focus on education is beginning to show results. Earning a regular diploma as opposed to a GED is associated with an improved heath outlook, as high school graduates are less likely to smoke, more likely to exercise, and more likely to self-report being healthy. Students who do well in high school also earn more than their less-educated counterparts, with each one point increase in a student's grade point average being associated with a 12 percent rise in adult earnings for males, and 14 percent for females.[19] Previous administrations, the Haslam administration in particular, have also prioritized increasing access to post-secondary education for all Tennesseans, particularly low-income individuals. The primary motivation for the "Drive to 55" initiative was that the state's Department of Economic and Community Development recognized that Tennessee's workforce was not sufficiently educated to make the state as attractive to current and potential employers as it needed to be.

In sum, choices surrounding behavior can play a significant role in health outcomes at the individual and population level. Adverse health behaviors often pose substantial costs to individual quality of life, as well as to the state budget and its potential for economic growth. At the same time, while individual choices can play a vital role in the overall health of a population, the context where individuals live can play an equal if not more important role in health outcomes. Indeed, research has found that a better predictor for an individual's health is not their genetic code, but their Zip code.[20] One lesson is that

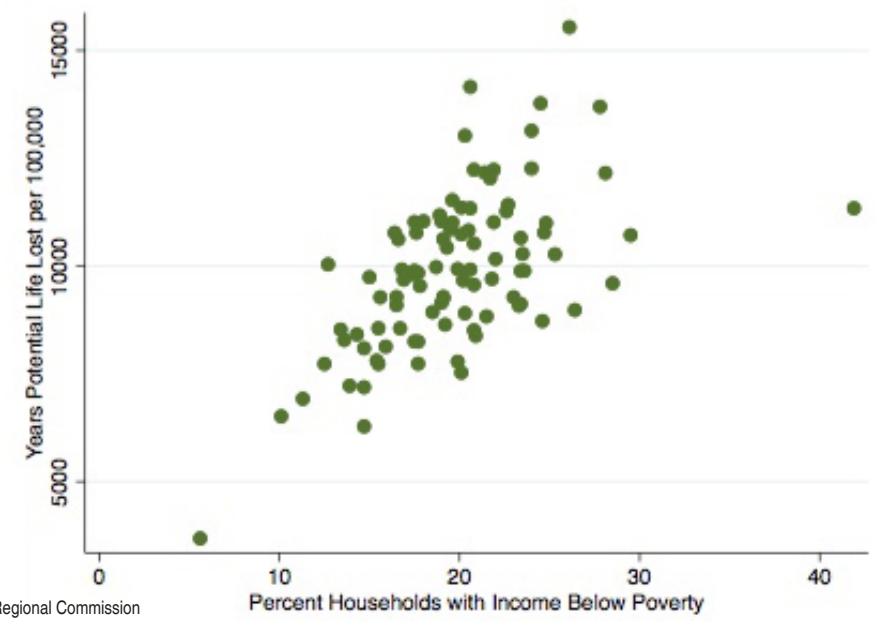
4.2. MEASURING HEALTH OUTCOMES AND THE DETERMINANTS OF HEALTH, CONTINUED

Figure 4.1: Relationship Between County-Level Poverty and Premature Death Rates in Tennessee Counties



Source: Appalachian Regional Commission

all of society bears costs associated with lifestyle choices that hamper individual health.

Community and environment describes the social and physical context in which individuals live, work, and spend their free time. Measures of community and environment include:

Community
- Educational Attainment
- Employment
- Income
- Family and Social Support

Environment
- Air and Water Quality
- Housing and Transit
- Food Security and Access
- Community Safety
- Occupational and Injury Deaths

In terms of community and environment factors, three key trends emerge from the data for Tennessee: children in poverty, food insecurity, and violent crime. The first trend, *children in poverty*, is a measure of the percentage of children living below the federal poverty threshold, or in households with less than $25,750 for a family of four.[21] In Tennessee, 22 percent, or nearly one in four children, live in poverty.[22] In addition, half of these children are in a family that spends more than 50 percent of its income on housing costs, limiting funds available for healthy food, clothing, and medical care.[23] Research has established that childhood poverty can lead to a range of adverse health outcomes, including risky and unhealthy behaviors such as smoking, truancy, as well as adult obesity, heart disease, and premature mortality. Childhood poverty costs an estimated $1 trillion annually, or 5.4% of the nation's gross domestic product.[24]

Figure 4.1 above shows the percentage of households in each Tennessee county below the

[24] McLaughlin, Michael and Mark Rank. 2018. "Estimating the Economic Cost of Childhood Poverty in the United States" *Social Work Research* 42(2): 73-83.

4.2. MEASURING HEALTH OUTCOMES AND THE DETERMINANTS OF HEALTH, CONTINUED

poverty level on years of potential life lost per 100,000 using data from the *Appalachian Regional Commission*'s "Health Disparities" report. It is clear from the figure that there is a strong and positive correlation between communities in poverty and life years lost. Simply put, communities in poverty do not live as long—one percent increase in household poverty at the county level is associated with 226 years of life lost in the community.

The second trend is related to *food security and access*, that is the likelihood of having sufficient nutritious food for all members of a household and access to healthy food options. These two factors present a challenge for many Tennessee communities, particularly in rural areas. While food insecurity has decreased in the state since 2015 and is now near the national average, many counties remain food deserts, that is an area with low income (poverty rate at least 20 percent) and low access (at least one third of the population lives more than a half mile from a supermarket in an urban area, or 10 miles in a rural area).[25] Many of these communities are served by convenience stores with high-sugar and high-fat foods, rather than fruit, vegetables, meat, and other staples. Even when such foods are in supply at these locations, they are often more expensive than the unhealthy counterparts and therefore may be less attractive to consumers on limited budgets. The health-related costs attributed to hunger and associated malnourishment have been estimated at $160 billion nationally, with an additional $17.8 billion in lost economic productivity, education costs, and charitable donations to alleviate hunger.[26]

The third and final trend is related to community safety and that is the rate of violent crime—the number of murders, rapes, robberies and aggravated assaults per 100,000 people in the population. Tennessee's violent crime rate is nearly double the national average, with 624 crimes per 100,000 in 2019.[27] Not only does violent crime have a direct impact on victims, it has the indirect effect of weakening community bonds through the dynamics of fear, anxiety, and stress. This can further amplify social isolation and mental health challenges. Individuals in unsafe communities are also less likely to spend time recreating outdoors and, as a result, report to be in poorer health.[28] Research has estimated a $65 billion price-tag for violent crime as a result of lost productivity.[29]

In sum, the context of a community and its environment *matters* for health outcomes. Research suggests that communities that are impoverished, lack access to healthy food, and are unsafe, among other forces, undermine the potential of residents to live long and healthy lives.

Clinical Care describes the availability and quality of medical treatment. Measures of clinical care include:

- Primary Care Physicians, Dentists, and Mental Health Providers
- Preventable Hospital Stays
- Low Birthweight
- Mammography Screenings
- Flu Vaccinations
- Uninsured Population

Tennessee has a high percentage of *preventable hospitalizations*, measured as the number of discharges for conditions that do not require hospitalization per 1,000 Medicare enrollees. Many of these hospitalizations occur due to a lack of primary care addressing chronic conditions in preventative settings. This is sometimes due to a lack of continuity of care and effective case management across multiple providers. While this figure has been trending downward in

4.2. MEASURING HEALTH OUTCOMES AND THE DETERMINANTS OF HEALTH, CONTINUED

Tennessee over the last 20 years, the state still has 59.3 unnecessary or preventable hospitalizations per 1,000 Medicare recipients.[30] Since the hospital is the most expensive location to receive care, these occurrences place a significant burden on patients, insurers, and hospital services.

Tennessee has an insufficient number of *mental health providers* with only 153 per 100,000 residents.[31] These providers, which include psychiatrists, licensed clinical social workers, counselors, marriage and family therapists, substance abuse counselors, and advanced practice nurses, offer essential care to those with mental and behavioral challenges. According to health disparities data collected by the *Appalachian Regional Commission*, Tennesseans in the state's 95 counties experience an average of more than four mentally-unhealthy days each month, and 14 percent of adults in the state report frequent mental distress.[32] The *National Institute of Mental Health* has found these residents are not alone; nearly one-in-five Americans experience some form of mental illness, not including those with substance abuse disorders.[33] Work absences and loss of labor productivity associated with mental health were estimated to cost $2.5 trillion globally in 2010, and that figure is anticipated to double by 2030.[34]

Combined these represent costly trends in the state, with costs borne by individuals, families, friends, communities and state and local governments. And while clinical care is a key aspect of health achievement, policies that narrowly focus on expanding such care often miss broader and potentially longer-term solutions that lead to healthy behaviors, communities, and environments, and prevent poor outcomes in the first place. Importantly, such an approach is more focused on preventing, rather than treating, poor health.

Policies to Improve Health

In addition to the three factors (behavior, community and environment, and clinical care) policy, is the final contributor to health outcomes. Policy is the programs, laws, and regulations at the local, state, and federal level that seek to impact health.

Some examples of policies that seek to *incentivize* healthy behaviors include promoting community recreation by adding greenspace and sidewalks, or using vacant lots as urban gardens and farmer's markets to improve the ability of residents to access fresh fruit and vegetables. There is evidence that reducing the cost of healthy food options, for example, leads to an increase in purchases over unhealthy counterparts that are rendered a more expensive choice. Data also overwhelmingly supports a link between health and greenspace, noting that these areas promote physical activity and reduce stress, even for at-risk populations such as those living in public housing or the elderly.[35] According to Tennessee's Vital Statistics, 71 percent of residents currently have access to parks and greenways.

Using grants from the USDA, Tennessee has had a Farmer's Market Nutrition Program (FMNP) associated with its Women, Infants, and Children (WIC) program since 1992.[36] The FMNP provides locally grown fruits, vegetables, and herbs to families with limited resources as well as nutrition information. Recipients receive $20 per year in the form of $5 checks. The program currently operates in the following counties: Bedford, Coffee, Hickman, Lincoln, Madison, Maury, Moore, Rutherford and Sullivan. The state also offers a similar program for elderly residents (SFMNP) in Davidson, Dyer, Shelby, Hamblen and Warren counties. The 14,000

4.2. MEASURING HEALTH OUTCOMES AND THE DETERMINANTS OF HEALTH, CONTINUED

participating recipients receive $35 each year.

Information, education, and communication campaigns (IEC) are also common policy strategies in reshaping health behaviors. These campaigns are sometimes tied to monetary incentives. This is the case with Tennessee's *Baby&Me—Tobacco Free Program*[37] which started in 2013. Eligible pregnant women enrolled in the program attend four prenatal smoking cessation sessions and receive education on the consequences of tobacco use. After starting the program, if a woman tests tobacco free, she receives a Walmart diaper voucher for $25. This voucher will continue each month for up to 12 months provided the woman continues to test negative for tobacco. Smokers who reside with pregnant women can also participate in the program and earn additional monthly diaper vouchers. Data released by the state shows that the program reduced the number of cigarettes smoked per day for pregnant participants, halved the rate of low birthweight births, and reduced hospital charges for newborns by an estimated $1.9 million.[38]

In some cases, policies may also *prohibit or criminalize* a behavior in an effort to curb adverse health choices. This includes age limits on the purchase of alcohol and tobacco products, proposed bans on e-cigarette vaping, criminalization of substance abuse, and passage of "dry" county laws that do not allow the sale of alcohol. There is some evidence that policies that restrict the availability of alcohol, including limiting the days or hours of alcohol sales, can be effective in reducing associated harms.[39] There also are policies that seek to penalize unhealthy behaviors. These policies include excise taxes on the sale of alcohol and tobacco, as well as on candy, soft drinks, fast food, and other consumables that have been linked to negative health consequences. While there is evidence to suggest that these so-called "sin taxes" are effective, with some studies finding that a one percent increase in tax on alcohol or tobacco decreases sales by half-a-percent, economists often point out that such approaches are inefficient as they treat the regular consumer of such products the same as the person who has an occasional drink or cheeseburger.[40]

In addition to these options, some policies that *engage the community* and *expand access to care* have been shown to have a positive impact. For example, *telemedicine*, that is the provision of care via the telephone or other telecommunications network has been shown to be effective at treating patients who live in remote areas or have difficulty traveling from their home.[41] Telehealth also provides a useful way of reaching communities as needs arise without committing to brick-and-mortar facilities that most often require significant capital investment. Tennessee is already moving in this direction, earlier this year adding the state as one of 29 other states to the *Interstate Medical Licensure Compact*,[42] which is expected to expand the ability of practitioners to engage in telemedicine by making it easier to treat individuals across state lines without getting additional licensure.

The key point is that expanding and creating efficient and effective policies would likely be beneficial to the state's success in addressing health challenges and spurring economic development. Doing so may also provide an opportunity for the state to lead the country in innovative solutions to shared policy challenges.

4.3. THE CASE FOR POOR HEALTH BEING AN ECONOMIC DRAG ON TENNESSEE

To examine the relationship between health, specific health conditions, and economic outcomes, we use data from the Center for Disease Control's Behavior Risk Factor Surveillance System (BRFSS). BRFSS is the world's largest telephone survey, netting approximately 500,000 respondents per year. Designed to be representative at the state level, it contains information on income, employment, health, access to care, and health behaviors.

One of the challenges with examining the consequences of access to care or health-related choices is that the consequences of those choices are not immediately felt. Rather, if individuals do not have adequate care—or information—or resources to maintain health, those problems will not manifest until midlife or later.

Figure 4.2 illustrates exactly such a story, depicting labor force participation rates by five-year age bands in Tennessee and the rest of the US. When Tennesseans are young (between 25 and 44), they participate in the labor force (defined as being employed or seeking work) at approximately the same rates as the rest of the U.S. (approximately 80 percent). By age 65, labor force participation in Tennessee and the U.S. is down to approximately 30 percent. However, between ages 45-64, we see clear evidence that Tennesseans are exiting the labor force earlier than their average counterparts across the nation. For individuals aged 50-59 in particular, Tennessee's labor force participation rates are 12 percentage points (approximately 20 percent) lower than the national average. It is worth noting that this is not consistent with labor force participation being generally lower in Tennessee. Rather the age at which labor force participation falls relative to the national average—50—is the approximate age at which risk for failing health begins to increase.

One of the primary reasons we care about labor force participation from a public perspective is its effects on the tax base. Income is the primary predictor of consumer spending, and ensuing sales tax, property tax, and other revenues. **Figure 4.3** depicts average income among BRFSS respondents by age group for Tennessee and the U.S. While for most age groups, the two values are relatively close,

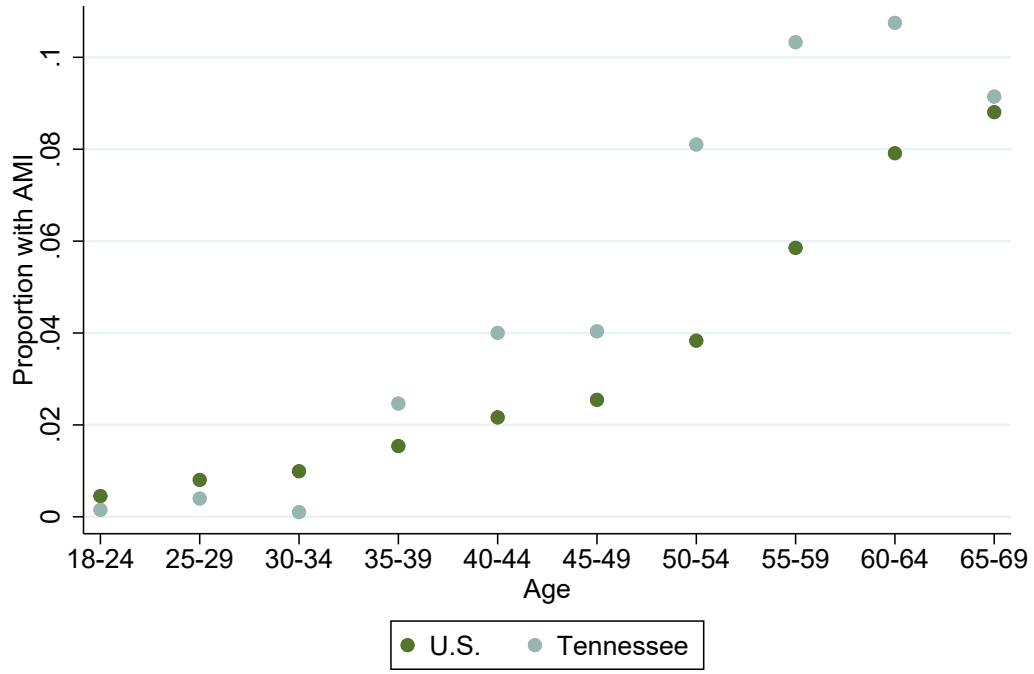
Figure 4.5: Proportion with an Acute Myocardial Infarction, by Age Group



Source: Appalachian Regional Commission

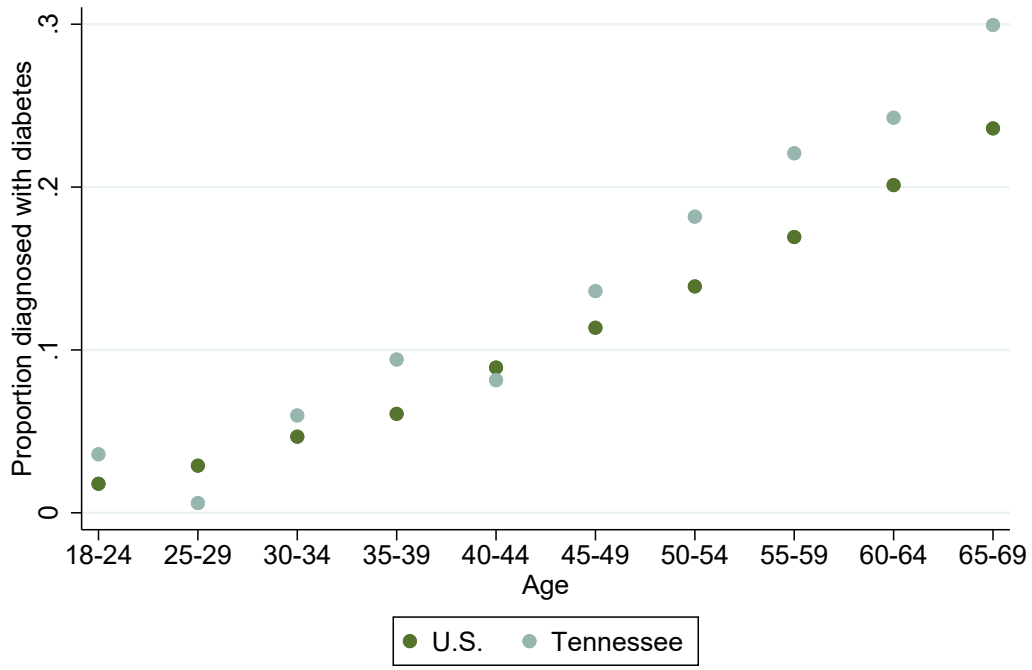
income for Tennesseans begins to fall sharply, compared to the national average. Therefore, we see that for a variety of factors, including health, older working-age Tennesseans are participating in the labor force at lower-than-expected rates, and earning relatively less when they are working. While there are several candidate mechanisms for sharper-than-average decline, earlier-than-average declines in health—particularly in a state in the bottom 10 in health rankings, are worth considering.

So, what evidence is there to link these lifecycle patterns to health? **Figure 4.4** plots the proportion of individuals in each age band reporting at least one day of poor health during the last 30 days. It is important to note that poor health is defined as a lack of functionality in some way, rather than having a mild acute illness. Compare the lifecycle patterns of Tennesseans (relative to the U.S.) in **Figure 4.4** with labor force participation patterns in **Figure 4.2**. For much of the early life (ages 30-44) individuals in Tennessee and the U.S. respond with similar rates. When Tennessee and the U.S. diverge later in life, the differences are virtual mirror images with one key distinction: the divergence in experiencing poor health days occurs at about five years of age younger than the drop off in employment outcomes. Between ages 45-49, Tennesseans begin disproportionately reporting days with poor health – by ages 50-54, they begin disproportionately selecting out of the labor force. The timing of this is consistent with health being a determining factor that nudges workers in Tennessee out of the labor force.

We may be also interested in specific health conditions that can explain the early exits from the labor force and lost income during peak earning years. One of the features of BRFSS is that it provides information on several chronic conditions that are most likely to subtract individuals from the labor force. For example, **Figure 4.5** depicts the number of individuals who has ever had an AMI (acute myocardial infarction – heart attack) by age group. While at virtually all age groups, heart attacks in Tennessee are more prevalent than the na-

4.3. THE CASE FOR POOR HEALTH BEING AN ECONOMIC DRAG ON TENNESSEE, CONTINUED

Figure 4.6: Prevalence of Diabetes by Age Group



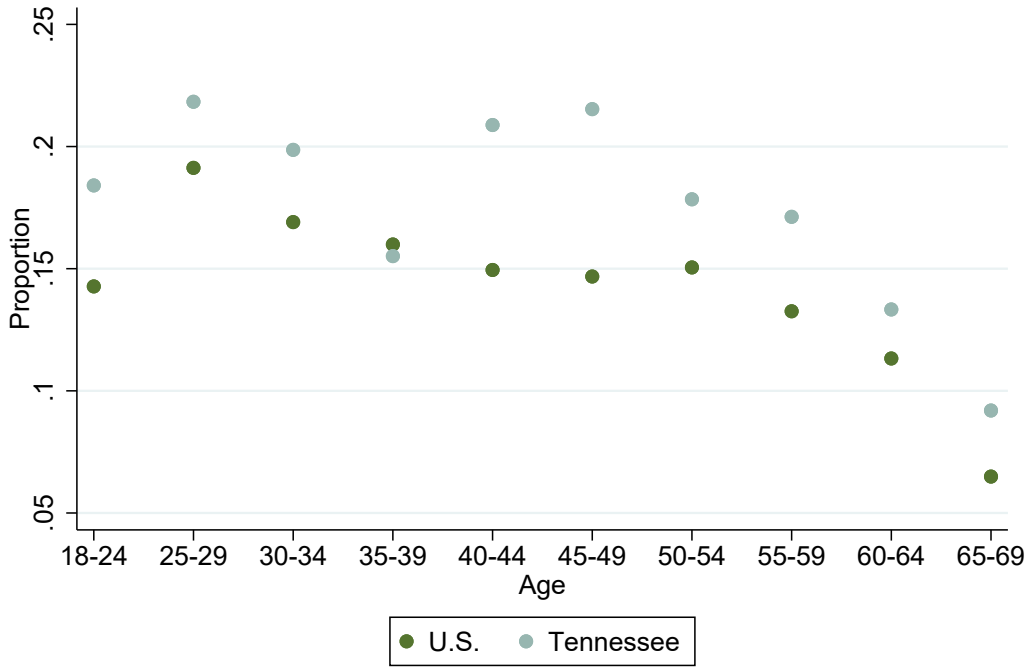
Source: Appalachian Regional Commission

tional average, the difference rapidly grows around age 50 when the differences in labor force participation and income become most pronounced. However, the magnitudes of these differences indicate they are insufficient to fully explain the decline in labor market outcomes. For example, between ages 55-59, Tennesseans are 4 percentage points more likely to have had a heart attack. Even if all heart attacks removed individuals permanently from the labor force (which we know is not the case), heart attacks would only explain 40 percent of the TN-U.S. difference in labor force participation. However, heart disease in general, even if insufficient to cause a heart attack, is hard on individuals, reducing energy and making it more difficult to be engaged productively in the labor force. To the extent to which prevalence of AMIs are a signal of generally poor cardiovascular health, heart disease may, in fact, be a key contributing factor to the worse labor market outcomes faced by older Tennesseans.

Figure 4.6 depicts the proportion of the population diagnosed with diabetes by age group. In this case, we are mainly interested in differences between Tennessee and the U.S. from ages 50 on – because most of those cases are type 2 diabetes – which are preventable. (Juvenile diabetes, or Type 1 diabetes, is hereditary and cannot be prevented. However, recent years have seen increased incidence of adult onset Type 1 diabetes. The factors behind these changes are not yet well understood.) While well-controlled diabetes may not be sufficient to remove someone from the labor force, poorly controlled diabetes (and the resulting complications thereof) can be debilitating. For diabetes and other chronic conditions, access to care is a crucial factor for maintaining the health status necessary for productive engagement in the labor force. To that end, **Figure 4.7** reports the proportion of individuals in each age band who were unable to see a doctor during the last 12 months because of cost. While Tennessee generally exhibits higher rates of cost-barriers-to-care than other states in all age groups, note that these differences are particularly pronounced for individuals aged

4.3. THE CASE FOR POOR HEALTH BEING AN ECONOMIC DRAG ON TENNESSEE, CONTINUED

Figure 4.7: Proportion of Individuals Who Report They are Unable to See a Doctor because of Cost



Source: Appalachian Regional Commission

40-50 years— or the decade immediately preceding the disproportionate labor force exits.

We may also be interested in the health behaviors that generate these conditions. In what areas might primary prevention interventions/nudges be most necessary to prevent chronic illness? While most of this is well trodden ground, it bears repeating. **Figure 4.8** depicts rates of obesity, sedentarity (not exercising) and smoking rates by age. For almost all ages, Tennesseans are more likely to smoke than the U.S. average. Additionally, from ages 35-54, Tennesseans are much less likely to exercise than the U.S. average. Together, with obesity rates approximately 15 percent higher than the national average during the midlife, these factors are a recipe for early onset of heart disease, diabetes, and other chronic conditions that, without access to care, can remove individuals from the labor force, the tax base, and the engine of economic growth during the prime of their working years.

All together, these pictures tell a compelling story: compared to the U.S. average, Tennesseans are more likely to smoke, less likely to exercise, and more likely to become obese. By the middle of their working lives, Tennesseans are more likely to have heart disease and/or diabetes, and are at a greater risk for heart attacks. During this time, Tennesseans also face higher barriers to care on the basis of cost and other factors (i.e., hospital closures). By age 50, they are less likely to participate in the labor force, and earn less money than the national average for their cohort when they do. This reduced income leads to substantial economic losses for the state, even in an era of strong economic growth. In fact, the opportunity costs of poor health among older workers may be particularly high when the labor market is tight. Having made the case that health and labor market outcomes are linked, statistically, at the individual level, we turn to the relationship between health and access to health care and economic growth.

4.4. COUNTY LEVEL RELATIONSHIPS BETWEEN HEALTH AND ECONOMIC GROWTH – TENNESSEE AND THE U.S.

While the relationship between health, employment, and income over the lifecycle is a useful starting point to motivate the relationship between health, access to care, and economic growth, the above analysis is incomplete in multiple ways. First, if the above relationships are true between Tennessee and the rest of the U.S., they should hold within Tennessee as well. More generally, how true are these relationships between *counties* across the U.S.? Second, the above is a snapshot of Tennessee and the U.S. for 2018. However, that doesn't take into consideration how these factors affect changes in overall economic activity.

In this section, we examine correlational relationship between health, access to care, and economic growth at the county level from 2013–2018 using multiple data sources. First, we use data from the Appalachian Regional Commission (ARC), which has complied data from several sources on incidence of disease and mortality rates attributable to specific conditions from CDC-WONDER and County Health Rankings. Second, as our proxy for economic growth, we use data on county-level total employment from Bureau of Labor Statistics' Local Area Unemployment Statistics (LAUS). Because the timing of the health data from ARC is somewhat varied, but mostly occurs between 2013 and 2018, those are the years we use from LAUS as well.

Figures 4.9 and 4.10 show that there is considerable variation in both employment growth and heart disease mortality in Tennessee counties. Heart disease mortality rates range from 15 per 100,000 to 35 per 10,000. There is also considerable variation in employment rate growth during the five-year span.

Figure 4.9 plots change in total employment rates from 2013–2018 and heart disease mortality for each of the 95 counties in Tennessee. Because the points overall depict a negative, but somewhat noisy relationship, **Figure 4.11** also includes a linear trend line. While the relationship cannot be interpreted causally, all else equal, 100 fewer heart disease deaths per 100,000 is associated with a 2 percentage point increase in employment growth in a given county. **Figure 4.10** demonstrates that although that relationship is stronger in Tennessee than the rest of the U.S., it is not *confined* to Tennessee. Because the scatterplots for all 3000+ counties in the U.S. can be difficult to interpret, we collapse counties for Tennessee and the U.S. into clusters with each dot on the graph representing 5 percent of counties (five per dot in Tennessee, and 60 per dot for the U.S.). What **Figure 4.12**

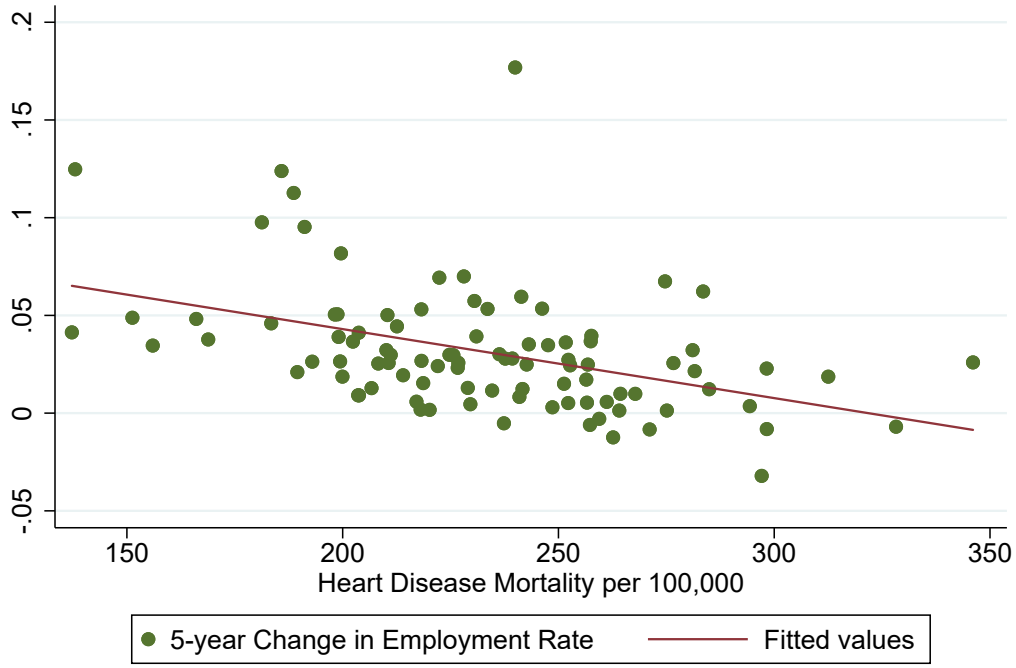
4.4. COUNTY LEVEL RELATIONSHIPS BETWEEN HEALTH AND ECONOMIC GROWTH – TENNESSEE AND THE U.S., CONTINUED

Figure 4.11: Employment Growth is Stronger in Heart-Healthy Counties



Source: Appalachian Regional Commission, Bureau of Labor Statistics and Centers for Disease Control.

conveys is that greater incidence of heart disease is linked to slower employment growth in both Tennessee and the U.S. It bears repeating that this relationship is not in any way causal, but reflects other factors such as education and other comorbidities that are likely correlated with heart disease mortality at the county level. Nevertheless, the overarching trend is that employment growth (and by proxy, economic development) is stronger in areas where individuals are in better cardiovascular health.

Figure 4.13 depicts a similar relationship between change in total employment and obesity. Generally, this relationship between health and employment growth at the county level holds for other conditions sufficiently common to be a signal of population health in that county (e.g., smoking rates, physical inactivity, diabetes, etc.) For other, less common conditions (e.g., COPD mortality), the relationship is less pronounced as that particular condition may not be indicative of overall county health.

By contrast, access to care is positively linked to economic growth at the county level, both in Tennessee and across the U.S. **Figure 4.14** shows that the number of primary care doctors per-capita is linked with greater growth in total employment. There are several possible mechanisms through which this relationship can operate. First, access to care may help keep workers healthy and productive. This relationship is especially important in rural areas where access to care is most likely to be limited. Second, the presence of adequate health services is likely to be a desirable feature for both businesses (who want healthy workers) potentially looking to expand or relocate, and also the workers themselves. Finally, health care is in and of itself a viable source of employment and can lead to some economic growth. Therefore, attempts to increase access to care are likely to yield benefits for employment and growth through multiple mechanisms.

4.5. CONCLUSION

Tennessee has a long history of relatively poor health, but strong economic growth. While the state has taken considerable measures to improve population health, there is much work to be done to understand what kinds of interventions work in this state and what services will have the most impact. With health care expenditures—particularly when managing chronic conditions—at stratospheric levels, poor health provides a strong economic disincentive for employers looking to relocate or expand their ranks. This especially likely to hold in rural areas where there is a smaller pool of potential employees from which to choose.

In this chapter, we have drawn linkages between environment and community, access to care, education, and population health. We have illustrated the relationship between health and labor force engagement, and health and economic growth at the state and county level. Tennessee has a lot to offer as a business location. However, taking steps to improve the health of the population over the next generation will be critical for unlocking the Tennessee's full economic potential.

PIEDMONT NATURAL GAS COMPANY, INC.
2020 Tennessee General Rate Case
Minimum Filing Requirements

31. Provide a schedule(s) of employees for the test period, identifying them as hourly or salaried, part or full time, and the account to which their compensation is charged. Identify the regular, overtime, and total hours worked during the test period. Also, show the regular and total earnings during the test period. For those employees working only a partial year, give the dates of employment. Identify pay raises, month and percentage, from the test period through the attrition year. Where appropriate, show the allocation of compensation for such employees or appropriate employee group between states and between utility and non-utility operations. Also, indicate any anticipated changes in employment levels through the attrition period.

Response: See attachment*. All information provided for in this response is for employees who direct charged their time to a Piedmont Business Unit during the test period (4/1/2019 – 3/31/2020). In the attached file, MFR 31 Details tab provides employee detail such as hourly/salary, part-time/full time, account, regular/overtime, total hours worked during test period, and pay period.

Note that all Piedmont Business Units are included in this dataset – including those not subject to Tennessee allocation (ie. North Carolina direct, South Carolina direct, and 2-state). Total Tennessee Labor dollars is calculated by Columns (A), (B), and (C).

- Column (A): Total Employee Labor Amount charged to Piedmont (Unallocated)
- Column (B): Allocation Factors for Tennessee. The allocation factors used in Column (B) are provided in the Excel file.
- Column (C): Total Employee Labor Amount charged to Tennessee Operations (Tennessee Direct or Allocated). Tennessee Direct charges have 100% allocation factor and 3-State Business Unit charges are allocated using the factor for the respective year. The allocation factors differ by year and by account type. Plant and other balance sheet accounts are allocated using the Net Plant Factor and O&M and Non-Regulated accounts are allocated using the Composite Factor.

The total amount of labor charged to Piedmont Tennessee from 4/1/19 through 3/31/20 was $26,195,845 (see Payroll Adj provided in Minimum Filing Requirement No. 12). Total population provided herein is $23,177,512. The difference between the populations is attributable to Duke Energy Business Services (DEBS) employees who charge their time to various allocation pools that are then allocated over the entire Duke Energy organization.

Piedmont receives a percentage of those costs according to the allocation methodology as set forth in Duke Energy Corporation's Cost Allocation Manual ("CAM"). These allocated costs are charged to a Piedmont 3 state business unit on Piedmont's books which then gets further allocated

* MFR Item 31 Attachment has been provided in electronic format only due to the volume of material. Please refer to the USB device located in the front binder pocket.

PIEDMONT NATURAL GAS COMPANY, INC.
2020 Tennessee General Rate Case
Minimum Filing Requirements

to Piedmont's North Carolina, South Carolina and Tennessee operations. There are approximately 7,500 DEBS employees whose labor charges are allocated in this manner.

To provide a further bridge for the difference, included is Piedmont's portion of the most highly compensated DEBS executives in the attached Excel file. The employee ID for these individuals starts with Z.

There are no anticipated significant changes in employment levels. Employee head count is anticipated to remain at the current level through the attrition period.
