Subject: [EXTERNAL] Docket No. 22 00087 Superior Wastewater Systems, LLC Notice of Rate Change

I am a resident of Kings Chapel community where Superior Wastewater System services our community. I trying to determine why (understand) the revenue is only \$101,447.00. At this amount of money this would service 240 residences. $35.11 \text{ per month} \times 12 \text{ months} = \$421.32 \text{ annual for a residence}$. $\$101,447 \text{ divided } \$421.32 = 240 \text{ residences}$. Kings Chapel is a growing community adding homes each month. My understanding our community has nearly 420 residence per the web site. So $\$421.32 \times 420 \text{ residences} = \$176,954.40 \text{ on an annual bases}$. Is our community broken up into different revenue streams? I believe it's all on one system. If different revenue areas. Is our expenses divided correctly? IS there different dockets for our community? Should the whole neighbor be looked at as a whole? I sure it a simple explanation, but it a good question.

Thanks,
Paul Satterwhite
