Electronically Filed in TPUC Docket
Room on September 5, 2023 at 3:08 p.m.

REQUEST:

Refer to the responses and attachments to Consumer Advocate DR No. 1-1. Provide all Excel spreadsheets with all formulae intact.

RESPONSE:

The response to Consumer Advocate 1-01 did not contain any formulas. However, please see the response to Consumer Advocate 2-02, which contains the depreciation study workpapers supporting the currently approved Tennessee Direct depreciation rates that were provided in response to Consumer Advocate 1-01.

REQUEST:

Refer to the response to Consumer Advocate DR No. 1-1. Provide the complete Tennessee Direct Depreciation Study, including workpapers, underlying the depreciation rates, factors and parameters provided in <CAD-1-01-ATT1> "Current Tennessee Direct Depreciation Rates (Division 93) as of September 30, 2022." Provide spreadsheets with all formulae intact.

RESPONSE:

Please see Folder 1 for the requested workpapers. Due to the voluminous nature of the workpapers, parties have agreed to electronic service.

ATTACHMENT:

CAD_2-02_Folder 1 - 2014 TN Direct Workpapers

REQUEST:

Refer to the response to Consumer Advocate DR No. 1-3 <CAD_1-03_ATT1> "TN Proposed Rates." Explain and provide the formula used to separate the rates between Capital Recovery Rate, Cost of Removal Rate, and Gross Salvage Rate.

RESPONSE:

The cost of removal and gross salvage rates represent the portion of the overall rate that is in proportion to each component (i.e., cost of removal or gross salvage) of the net salvage. The equations for each are shown below, and the capital recovery rate compromises the remaining portion of the overall rate.

Cost of Removal Rate = Cost of Removal / (1-Net Salvage) * Accrual Rate

Gross Salvage Rate = Gross Salvage / (1-Net Salvage) * Accrual Rate

Capital Recovery Rate = Accrual Rate – Cost of Removal Rate – Gross Salvage Rate

REQUEST:

Refer to the response to Consumer Advocate DR No. 1-4. Provide the annual reports to TPUC and other relevant regulatory bodies that correspond and reconcile to Mr. Allis's proposed September 30, 2022, depreciation rates.

RESPONSE:

Please see Attachment 1 for the Tennessee Annual Report. The attached annual report is as of December 31, 2022, where Mr. Allis's depreciation study was conducted as of the Company's fiscal year ending date of September 30, 2022. Please see the response to Consumer Advocate 1-26 for a reconciliation of gross plant and accumulated depreciation between the attached annual report and Mr. Allis's depreciation study.

TENNESSEE ONLY

Name of Respondent	This Report Is:	Date of Report (Mo, Da, Yr)	Year of Report
ATMOS ENERGY CORPORATION	[X] An Original [ ] A Resubmission		Dec. 31, 2022

STATEMENT OF INCOME FOR THE YEAR

1. Report amounts for accounts 412 and 413, Revenue and Expenses from Utility Plant Leased to Others, in another utility column (i,j) in a similar manner to a utility department. Spread the amounts(s) over lines 2 thru 24 as appropriate. Include these amounts in columns (c) and (d) totals.

2. Report amounts in discount 414, Other Utility Operating Income, in the same manner as accounts 412 and 413 above.

3. Report data for lines 7, 9, and 10 for Natural Gas companies using accounts 404.1, 404.2, 404.3, 407.1, and 407.2.

Line No.	Account (a)	Reference Page Number (b)	Total Current Year (in dollars) (c)	Total Previous Year (in dollars) (d)
1	UTILITY OPERATING INCOME			
2	Operating Revenues (400)	300-301	222,540,422	153,303,937
3	Operating Expenses			
4	Operation Expenses (401)	317-325	156,471,689	94,165,581
5	Maintenance Expenses (402)	317-325	206,586	211,496
6	Depreciation Expenses (403)		16,365,671	15,773,928
7	Amort. & Depl. of Utility Plant (404-405)		-	-
8	Amort. of Utility Plant Acq. Adj. (406)		40,528	41,096
9	Amort. of Property Losses, Unrecovered Plant and Regulatory Study Costs (407.1)		-	-
10	Amort. of Conversion Expenses (407.2)		-	-
11	Regulatory Debits (407.3)		59,115	59,276
12	(Less) Regulatory Credits (407.4)		-	-
13	Taxes Other Than Income Taxes (408.1)		8,085,716	8,133,050
14	Income Taxes - Federal (409.1)		2,233,171	(4,134,500)
15	Income Taxes - Other (409.1)		(4,287,607)	6,216,054
16	Provision for Deferred Inc. Taxes (410.1)		8,453,664	1,050,637
17	(Less) Provision for Deferred Income Taxes-Cr. (411.1)		-	-
18	Investment Tax Credit Adj. - Net (411.4)		-	-
19	(Less) Gains from Disp. of Utility Plant (411.6)		-	-
20	Losses from Disp. of Utility Plant (411.7)		-	-
21	(Less) Gains from Disposition of Allowances (411.8)		-	-
22	Losses from Disposition of Allowances (411.9)		-	-
23	TOTAL Utility Operating Expenses (Enter Total of lines 4 thru 22)		187,628,533	121,516,618
24	Net Utility Operating Income (Enter Total of line 2 less 23) (Carry forward to page 116, line 25)		34,911,889	31,787,319

NOTE: This report reflects the operations of our Atmos Energy Kentucky/Mid-States Division, a division of Atmos Energy Corporation, in the state of Tennessee. General office overhead expenses, division headquarters operating expenses, interest and income taxes have been allocated in this report for financial reporting purposes only and such allocations may not be applicable for ratemaking purposes.

ATMOS ENERGY CORPORATION	(2)	A Resubmission		Dec. 31, 2022

GAS OPERATING REVENUES (ACCOUNT 400) - TENNESSEE ONLY

1. Report below natural gas operating revenues for each prescribed account, and manufactured gas revenues in total.
2. Natural gas means either natural gas unmixed or any mixture of natural and manufactured gas.
3. Report number of customers, columns (f) and (g), on the basis of meters, in addition to the number of flat rate accounts; except that where separate meter readings are added for billing purposes, one customer should be counted for each group of meters added. The average number of customers means the average of twelve figures at the close of each month.
4. Report quantities of natural gas sold in Mcf (14.73 psia at 60F). If billings are on a therm basis, give the Btu contents of the gas sold and the sales converted to Mcf.
5. If increases or decreases from previous year (columns (c), (e) and (g)), are not derived from previously

GAS OPERATING REVENUES (ACCOUNT 400) - TENNESSEE ONLY (Continued)

reported figures, explain any inconsistencies in a footnote.

6. Commercial and Industrial Sales, Account 481, may be classified according to the basis of classification (Small or Commercial, and Large or Industrial) regularly used by the respondent if such basis of classification is not generally greater than 200,000 Mcf per year or approximately 800 Mcf per day of normal requirements. (See Account 481 of the Uniform System of Accounts. Explain basis of classification in a footnote.)

7. See pages 108-109, Important Changes During Year, for important new territory added and important rate increases or decreases.

REQUEST:

Refer to the response to Consumer Advocate DR No. 1-5. The Company alleges Mr. Allis's depreciation courses are proprietary. Given that position:

a. Provide a narrative explanation of the most critical considerations parties to this proceeding should understand about Depreciation as Mr. Allis explained in his "Introduction to Depreciation" course? Include examples of "real-world" considerations.
b. Provide a narrative explanation of the most critical considerations parties to this proceeding should understand about life and net salvage analysis as Mr. Allis explained in his "Life and Net Salvage Analysis" course. Include examples of "real world" considerations.
c. Provide a narrative explanation of the most critical considerations parties to this proceeding should understand about analyzing the life of real-world property as Mr. Allis explained in his "Analyzing the Life of Real-World Property" course. Include examples "real-world" considerations.
d. Provide a narrative explanation of the most critical considerations the parties to this proceeding should understand about analyzing net salvage in real-world as Mr. Allis explained in his "Analyzing Net Salvage in the Real-World" course. Include examples "real-world" considerations.
e. Provide a narrative explanation of the most important critical considerations the parties to this proceeding should understand about depreciation and ratemaking issues as Mr. Allis explained in his "Depreciation and Ratemaking Issues" course. Include examples of "real-world" considerations.

RESPONSE:

The courses at SDP provide instruction about many of the technical aspects of depreciation, such as the development of original life tables, methods for estimating net salvage and approaches to calculate depreciation. Mr. Allis also does not teach every class in a particular course and so cannot opine on every consideration from each course. However, considerations discussed in these courses that Mr. Allis believes are important for parties to understand in this proceeding include the following:

a. Introduction to Depreciation
    i. Methods of actuarial life analysis
    ii. Iowa curves
    iii. A depreciation study results in estimates of service lives, which requires informed judgment and should not solely be based on mathematical analyses.
    iv. Depreciation methods, procedures and techniques

b. Analyzing the Life of Real-World Property
    i. Development of life tables and actuarial analyses
    ii. Consideration of different transactions, such as significant storms, and how one might consider these when performing a depreciation study
    iii. Life estimation vs. life analysis
    iv. The importance of informed judgment

c. Analyzing Net Salvage in the Real World
    i. Net salvage is part of the service value of an asset and is traditionally recovered through depreciation rates.
    ii. The traditional method of net salvage (which expresses net salvage as a ratio of retirements and recovers future net salvage using the straight line method) tends to result in conservative estimates of net salvage, particularly when compared to analyses that incorporate the age of historical and future retirements
    iii. In real-world applications, alternative methods of net salvage analyses or recovery, which have been used in a handful of states, have not equitable recovered net salvage over the useful lives of the related assets

For the Depreciation and Ratemaking Course, Mr. Allis participates in a discussion of current issues. This is different each year. The Life and Net Salvage Analysis course is no longer offered by the SDP, but had similar takeaways to the life and net salvage courses discussed above.

REQUEST:

Refer to the response to Consumer Advocate DR No. 1-7. Transaction Codes Workpaper:

a. Why is Code 9 identified as both "Beginning Balance" and "Gross Addition"?
b. The Transaction Codes Summary defines "Gross Additions" as "Placements of plant in service as replacements of plant retired or as additions to plant in service." What is the difference between the two? Are replacements recorded after retirement is recorded?
c. Are both "Gross Additions" and "Replacements" recorded at original cost as required by the Uniform System of Accounts? If not, explain any differences.

RESPONSE:

a. Transaction code 9 may be used either for additions or, in the case in which complete data is not available, for beginning balances. This code is used for both applications in part so as to use single digit transaction codes.

b. The only difference between these scenarios is whether the addition (i.e., new asset) is replacing a retired asset or not, and this distinction does not affect the service life analysis. All additions are recorded when they are placed in service, which may or may not be after the retirement of an asset that it replaces.

c. Yes.

REQUEST:

Refer to the response to Consumer Advocate DR No. 1-14 in which the Consumer Advocate requested explanations of abnormal study amounts. The Company responded "There are thousands of amounts in the tables in Mr. Allis's depreciation study. Mr. Allis has not done an analysis assessing the abnormality of each amount relative to every other amount in each table, and the Company objects to this DR as unduly burdensome to the extent it asks him to undertake an analysis which the Consumer Advocate can just as easily undertake for itself." Provide an explanation for the specific following abnormal amounts included in Mr. Allis's depreciation study:

Page	Amount
VII-7	937795
VII-8	681386
VII-16	165687, 120055, 269045
VII-20	202508, 155011, 262409, 127196, 107896, 117509

VIII-11	353811
VIII-12	595108,34838
VIII-13	6950623
VIII-15	1157473,1026081,108420
VIII-17	625401
VIII-19	108322

RESPONSE:

Mr. Allis does not agree with the characterization that each of these amounts is "abnormal." Further, the amounts listed above are comprised of several thousand records, which are provided in Attachment 1. For records since the last depreciation study, available descriptions have been provided. For those prior to 2015, the data is the same as in the previous depreciation study that was approved in Docket No. 15-00089.

Mr. Allis did not review each of these thousands of transactions in detail and, instead, used judgment when conducting service life analyses to determine whether retirement patterns in the original life tables were representative of future service life expectations. Thus, while, for example, those at earlier ages may not reoccur at the same level, these transactions are either small compared to the exposures at these ages (and, therefore, produce retirement ratios that are not atypical for the property studied) or for accounts with fewer transactions overall (in which case the statistical analysis did not provide as definitive of results). Others that occurred at later ages may be more reflective of typical experience for the account.

REQUEST:

Refer to the response to Consumer Advocate DR No. 1-15. The Consumer Advocate requested Mr. Allis to "apply Gannett Fleming's proprietary depreciation software to the hypothetical illustration discussed at study pages II-2 to II-21 [of his study] and provide copies of all computer-generated outputs including the Summary of Curve Fitting Results and remaining life calculations. Track each output to the unique section of Mr. Allis's study to which such outputs relate." Mr. Allis responded that "Mr. Allis did not perform the requested analysis of the hypothetical data shown in pages II-2 through II-21 for Atmos's depreciation study, nor would such an analysis impact the results of the study. Mr. Allis also does not recall performing such analysis on this particular hypothetical data set for any prior study or during the development of Gannett Fleming's depreciation software."

Thus, in response to the Consumer Advocate's request, Mr. Allis did not provide the results of the application of his software to the hypothetical example in his study, even though page 2 of his testimony states that he "developed and maintained Gannett Fleming's proprietary software." Provide an explanation of the full process Mr. Allis undertook to complete his study.

RESPONSE:

Mr. Allis has explained the process for his study in his direct testimony and depreciation study report. It does not involve analyses of hypothetical data sets. However, for life analysis, it does involve reviewing the available data, developing original life tables, performing preliminary mathematical curve fitting, and performing additional visual and mathematical curve fitting within Gannett Fleming's software on different bands and ranges of fit. The life analysis is only one part of the process however, as Mr. Allis conducts field reviews and meetings with Company Subject Matter Experts and then incorporates this information, the statistical life analysis, and his experience working on numerous other depreciation studies to develop the most reasonable forecasts of future service lives for the Company's assets.

REQUEST:

Refer to the response to Consumer Advocate DR No. 1-17:

a. Attachment <CAD_1-17_ATT1 – 2022 Retirements> does not show any amounts. Summarize the data by USoA amount and include the relevant totals.
b. Explain the impact these 2023 retirements have upon Mr. Allis's life studies and Cost of Removal Studies?

RESPONSE:

a. In the event the proper document was not provided in response to Consumer Advocate 1-17, it is being reattached to this response as Attachment 1. The retirement amounts can be found in Excel Column M, labeled "Amount", and the 300-level accounts are in Excel Column H, labeled "Utility Account".

b. These retirements provide a better representation of the actual retirement activity that has occurred for these accounts. Having a better understanding of the historic activity better informs the judgement used to develop the service life and net salvage estimates recommended in the Depreciation Study.

REQUEST:

Refer to the response to Consumer Advocate DR No. 1-22:

a. The Consumer Advocate requested the Company to "Explain and provide examples the Company's retirement unit cost *procedures for each account*." The response only addresses accounts 376.02. Provide the requested information for all remaining Company accounts.
b. Define "capital task level."
c. Define "capital expenditure type level."
d. Demonstrate that "each retirement translates to 300 FERC account."
e. Provide hard copies of five actual representative discrete additions and replacements reflecting the procedures described in the responses to Consumer Advocate DR Nos. 1-22 and 1-23, for the following accounts: 367.01, 376.01, 376.02, 378.00, 379.00, 380.00, 381.00.
f. Are all retirement unit costs ("RUC") recorded at "original cost" as required by the USoA? If not, explain any instances wherein RUC is not recorded at original cost.

RESPONSE:

a. The Company objects to this request on the grounds that providing examples of procedures for each account is unduly burdensome, duplicative, and overly broad. The example provided in response to Consumer Advocate 1-22 is representative of the Company's retirement unit cost procedures for each account, which is not stored in the format requested. As such, responding to this request would require the manual creation of a separate, nearly identical document for each account with only changes to the numbers used, not the procedures shown.

b. The task level is either capital or O&M. Therefore, the capital tasks are associated with capital related projects.

c. The expenditure type level is used to define CWIP charges such as labor, materials, AFUDC, and overheads.

d. Please see Attachment 1 for the retirement unit listing by account.

e. The Company objects to this request on the grounds it is unduly burdensome, duplicative, and overly broad for the reasons set forth in the response to subpart (a) of this DR. Subject to and without waiver of the foregoing objections, please see Attachment 2 for a project example from each account listed in the request. Each of these examples reflect the process as described in response to Consumer Advocate 1-22 and are representative of the process in other accounts.

f. Yes.

3. New Addition unitized to Account 10

REQUEST:

Refer to the response to Consumer Advocate DR No. 1-23:

a. Identify the USoA accounts to which the attachment <CAD_1-23_Att1-Capitalization Manual> applies.
b. Provide a copy of or link to the "Account Coding Manual" discussed in the Capitalization Manual.
c. How does the Capitalization Manual treat installation of new versus replacement?
d. Provide a flow chart demonstrating how new installation flows into a plant account versus a replacement. Identify and explain any different procedures.
e. Explain the following note at page 15 and elsewhere in the Capitalization Manual: "A systematic split between CWIP and Cost of Removal will be applied to capital projects for Mains and Services only that include both additions and retirements. The systematic split will be applied to the charge types Labor, Contractor Labor, and Contractor Services from the AP and Payroll sources."
f. Explain the "systematic split."
g. Explain why the "systematic split" only applied to Mains and Services.
h. Explain what ratios are applied to implement the "systematic split."
i. Provide example work orders or other documents by another name demonstrating the systematic split for example projects for the following accounts: 367.01; 376.00; 376.01; 376.02; 376.03; 378.00; 379.00; 380.00; 381.00.00.

RESPONSE:

a. The capitalization manual applies to all FERC accounts.

b. Please see Attachment 1 in response to Consumer Advocate 1-36.

c. Installation of a new asset is capitalized at the original cost. Please see the response to Consumer Advocate 1-34 for the procedure regarding a replacement project.

d. Please see the response to subpart (c).

e. The note is referencing the process described in response to Consumer Advocate 1-34.

f. Please see the response to Consumer Advocate 1-34.

g. The Company's first Time and Motion study was conducted for only Mains and Services, which was implemented in October 2015. The Company's Measuring and Regulating Time and Motion Study became effective in November 2016. Therefore, there was only about a year where the systematic split applied to only to the Mains and Services accounts.

h. Please see the response to Consumer Advocate 1-34.

i. Please see Attachment 1 for an example of the cor eligibility on a replacement project. This example is representative of other replacement work orders in other accounts.

REQUEST:

Explain what the normal annual ratios of new vs. replacement additions to each Main and Service account are.

RESPONSE:

Projects are determined on a year-to-year basis as determined by system need, growth opportunities, etc. and that there is no defined ratio that is a target. The ratio of new (growth) versus replacement (system integrity and system improvement) was 22% vs 78% in FY22 and 26% vs 74% in FY23.

REQUEST:

Explain if there are any portions of Plastic Main additions allocated to Steel Mains cost of removal or vice versa.

RESPONSE:

The Company does not allocate portions of Plastic Main additions to Steel Main cost of removal or vise versa.

REQUEST:

Explain what the normal replacement for Steel Mains is.

RESPONSE:

Atmos Energy replaces aged steel mains with new steel mains or high-density polyethylene (plastic) mains. The replacement process includes excavation, installation of the new main, pressure testing of new main, connection to existing main, purging and abandoning in place of main to be retired, and restoration of pavement or non-paved surfaces. A pipe prioritization tool is one method used to determine candidates for replacement based on factors including age, material, and operating history.

REQUEST:

Explain what the normal replacement for Plastic Mains is.

RESPONSE:

Atmos Energy replaces aged or difficult to locate plastic mains with new high-density polyethylene mains. The replacement process includes excavation, installation of the new main, pressure testing of new main, connection to existing main, purging and abandoning in place of main to be retired, and restoration of pavement or non-paved surfaces. A pipe prioritization tool is one method used to determine candidates for replacement based on factors including age, material, and operating history.

REQUEST:

The response to Consumer Advocate DR No. 1-34 states "labor costs are split between install/removal and entered into Power Plant… all material invoices and Company labor charged to the project follow this percentage split. If the replacement project is cost of removal eligible, then the install/removal split for contractor labor, contractor services, and Company labor defaults to 95%/5%, regardless of the split entered into Power Plant. Please see Attachments 1 and 2 for the time and motion studies that supports the use of the 95%/5% split."

a. Confirm this process is tantamount to allocating 5% of the final cost of a replacement addition to cost of removal. If not, explain why not.
b. Define "Cost of removal eligible."
c. Refer to Mr. Allis's net salvage proposals for accounts 376.01, 376.02, 378.00, 380.00, and 382.00. Explain how the 5% percent allocation resulted in such high negative net salvage ratios for these accounts.
d. The time and motion study to which the response cites states in the first paragraph: "this study, the methodology of sharing common costs and a more conservative approach of only applying the cost of "incremental" activities that were specifically driven by the retirement of the old asset in replacement project were considered." Explain why a removal such as capping and old pipe is "incremental" instead of an embedded element of a replacement project.
e. Explain why the Company's approach is not tantamount to adding an incremental 5% layer on top of the original cost of a replacement project and then allocating that 5% to Cost of Removal for use in depreciation studies.

RESPONSE:

a. This process allocates 5% of the total labor cost of a replacement project to COR.

b. Cost of removal eligible refers to replacement and retirement only projects.

c. Mr. Allis does not agree with the characterization of the net salvage estimates for these accounts as "high." These estimates incorporate the net salvage analyses shown in Part VII of the depreciation study. The 5% cited above is a percentage of the total project labor cost in which both the cost of removal and original cost of new assets are recorded at the same time. The Company's current assets are not all zero years of age and future retirements will occur at older ages than historical retirements. Because of these factors, one would not expect negative 5% net salvage estimates for these accounts even if 5% of project labor costs are recorded to cost of removal.

d. Although removal activities are conducted as part of replacement projects, the term "incremental" in the time and motion study is describing the methodology being utilized to determine on where to apply the costs of those activities that are common to both the retirement and to the new addition. Such activities are mobilization, excavation, backfilling, etc. Please see the third paragraph of that same page in the time and motion study which describes the incremental methodology.

e. As noted in subpart (a) above, this process does not add an incremental layer on top of the original cost of a replacement project, but allocates 5% of the total labor cost of a cost of removal eligible project to cost of removal. The Company's Time and Motion studies provided in response to Consumer Advocate DR No. 1-34 indicate that 5% of the total activities performed in a replacement or retirement project related to costs associated with removing the asset, which would not be incurred in a non-replacement or non-retirement project.
