

**BEFORE THE TENNESSEE PUBLIC UTILITY COMMISSION
NASHVILLE, TENNESSEE**

IN RE:

ATMOS ENERGY CORPORATION	)	
TENNESSEE DIRECT,	)	
KENTUCKY/MID-STATES DIVISION,	)	Docket No. 23-00050
AND SHARED SERVICES UNIT	)	
DEPRECIATION STUDY	)	

NOTICE OF FILING COMMISSION ORDERS FROM OTHER JURISDICTIONS

In footnotes 7 through 20 on page 16 of his pre-filed rebuttal testimony, Mr. Ned Allis provided citations to various Orders from other jurisdictions which are relevant to his testimony. In the interest of assisting the Commission and Staff in conveniently reviewing and evaluating Mr. Allis's testimony, Atmos Energy hereby gives notice of the filing of copies of those Orders. For ease of reference, these Orders are attached to this Notice in the same order as they are cited in Mr. Allis's pre-filed rebuttal testimony. In addition, each Order has been separately bookmarked.

Respectfully submitted,

Sims Funk, PLC

1. This case is before the Commission on exceptions to the October 1, 2018 Initial Decision issued in the above-captioned proceeding.¹ The central issue before the Commission is whether the rates proposed by Pacific Gas and Electric Company (PG&E) in its eighteenth revised transmission owner tariff (TO18) filing are just and reasonable and not unduly discriminatory or preferential. In this order, we reverse in part and affirm in part the Initial Decision, as discussed herein. We also direct further briefing regarding PG&E's return on equity (ROE). Initial briefs shall be due 60 days from the date of this order. Responses to those initial briefs shall be due 30 days later. No answers or additional briefs will be permitted. Finally, we direct PG&E to recalculate its TO18 rates in accordance with the directives in this order and the future order on the ROE issue and to submit the revised TO18 rates within 60 days of the Commission order on the ROE issue discussed below.

I. Background

2. On July 29, 2016, PG&E submitted its TO18 filing, pursuant to section 205 of the Federal Power Act (FPA),² to request an increase to its stated transmission rates. PG&E's filing and the parties' protests and answers are summarized in the TO18 Order.³ As relevant here, the Commission accepted for filing PG&E's TO18 rates, suspended them for five months to become effective on March 1, 2017, subject to refund, and established hearing and settlement judge procedures.⁴ The Commission held the hearing

¹ *Pac. Gas & Elec. Co.*, 165 FERC ¶ 63,001 (2018) (Initial Decision).

² 16 U.S.C. § 824d.

³ *Pac. Gas & Elec. Co.*, 156 FERC ¶ 61,238, at PP 2-8, 11-26 (2016) (TO18 Order).

⁴ TO18 Order, 156 FERC ¶ 61,238 at PP 1, 29-36. PG&E subsequently filed its proposed nineteenth revised transmission owner tariff (TO19) filing on July 27, 2017. The Commission accepted PG&E's filing, suspended it for five months, and established hearing and settlement judge procedures. *Pac. Gas & Elec. Co.*, 160 FERC ¶ 61,128 (2017). PG&E's TO19 rates became effective on March 1, 2018, and therefore, the

in abeyance to provide parties with an opportunity to settle the matter, but on March 17, 2017, settlement discussions were terminated and a trial-type evidentiary hearing ensued.⁵

3. On October 1, 2018, the Presiding Administrative Law Judge (Presiding Judge) issued the Initial Decision, which is summarized in greater detail below. On October 31, 2018, the California Public Utilities Commission (CPUC), Modesto Irrigation District (Modesto), the City of Santa Clara, California and M-S-R Public Power (together, Santa Clara/MSR), the Cities of Anaheim, Azusa, Banning, Colton, Pasadena, and Riverside, California (together, Six Cities), Transmission Agency of Northern California (TANC), Commission Trial Staff (Trial Staff), and PG&E filed briefs on exceptions to the Initial Decision.⁶ On November 20, 2018, California Department of Water Resources State Water Project (SWP), CPUC, Six Cities, TANC, Trial Staff, and PG&E filed briefs opposing exceptions.

II. Discussion

4. The Presiding Judge made determinations with respect to 11 major categories of PG&E's costs of service: (A) ROE; (B) Cost of Long-Term Debt; (C) Capital Structure; (D) Depreciation Rates; (E) Capital Additions; (F) Allocating Common, General and Intangible (CGI) Plant Costs; (G) Operation and Maintenance (O&M) Expenses Forecast; (H) Administrative and General (A&G) Expenses; (I) Allocators; (J) Sales Forecast; and (K) Miscellaneous Issues. The Presiding Judge also noted that an additional issue, Escalation Factors, had been resolved by the parties,⁷ and we do not address it here. Except as otherwise discussed herein, the Commission affirms the Presiding Judge's findings of fact and conclusions of law, as discussed in the Initial Decision. We, however, reverse the Initial Decision on the following issues as discussed further below:

TO18 rates approved in this order will be effective for the period of March 1, 2017 through February 28, 2018.

⁵ See *Pac. Gas & Elec. Co.*, Docket No. ER16-2320-000, at P 1 (Mar. 17, 2017) (terminating settlement judge procedures, designating a presiding administrative law judge, and establishing a procedural schedule).

⁶ Sacramento Municipal Utility District (SMUD) filed a one-page, untimely brief on exceptions on November 5, 2018, which adopted TANC's and CPUC's briefs on exceptions.

⁷ Initial Decision, 165 FERC ¶ 63,001 at P 796. This issue involved PG&E's proposed escalation factors to develop the forecasts of materials and supplies expense components of its operation and maintenance expenses and administrative and general expenses.

(B) Cost of Long-Term Debt (in part); (D) Depreciation Rates (in part); and (L) Miscellaneous Issues (in part). As stated above, we direct further briefings on the ROE issue.

A. Determining the ROE

5. PG&E requested a base ROE of 10.4%, but no lower than 10.25%. To support this proposal, PG&E's witness assessed PG&E's cost of equity by (1) estimating the cost of equity values for other electric utilities with comparable risks to PG&E; and (2) considering the effects of current capital market conditions.⁸ Acknowledging the process outlined by the Commission in Opinion No. 531, PG&E applied a two-step discounted cash flow (DCF) model to determine a zone of reasonableness and then utilized other models to support the placement of a specific ROE value within that zone. According to PG&E, the results of the alternative models, as well as a survey of state-approved ROEs, indicate that the median values derived from the DCF method are too low to be considered reasonable. Therefore, PG&E proposed an ROE from the upper end of its calculated range. PG&E also requested a 50 basis point adder to recognize PG&E's participation in CAISO, which would bring PG&E's total ROE to 10.9%.⁹

1. Initial Decision

6. The Presiding Judge began his analysis by acknowledging that the Supreme Court set out the criteria for determining a just and reasonable ROE in *Bluefield Waterworks & Improvement Co. v. Public Service Commission of West Virginia*¹⁰ and *Federal Power Commission v. Hope Natural Gas Company*.¹¹ The Presiding Judge acknowledged that *Hope* requires that a utility's ROE be "sufficient to assure confidence in the financial integrity of the enterprise, so as to maintain its credit and to attract capital."¹² Therefore, according to the Presiding Judge, an ROE that authorizes a utility to collect more than is necessary to satisfy *Hope* and *Bluefield* requirements exploits customers and is unjust and unreasonable.¹³

⁸ PG&E Filing, Ex. PGE-0014 (Testimony of Adrien M. McKenzie).

⁹ Ex. PGE-0014 at 6:19.

¹⁰ 262 U.S. 679, 692-93 (1923) (*Bluefield*).

¹¹ 320 U.S. 591, 603 (1944) (*Hope*).

¹² Initial Decision, 165 FERC ¶ 63,001 at P 45 (quoting *Hope*, 320 U.S. at 603).

¹³ *Id.* PP 10-11.

7. The Presiding Judge explained that the Commission uses the DCF to estimate the ROE necessary to attract equity investors. The Presiding Judge stated that this approach was set forth by the Commission in *Coakley v. Bangor Hydro-Electric Company*¹⁴ and in *Association of Businesses Advocating Tariff Equity v. Midcontinent Independent System Operator, Inc.*¹⁵ Although the Presiding Judge acknowledged the D.C. Circuit's decision in *Emera Maine*, he stated that the court's vacatur of Opinion No. 531 need not prevent the Commission from using the parts of Opinion No. 531 that the court found satisfactory as guideposts.

8. Therefore, consistent with the Commission's previously established DCF approach, the Presiding Judge explained that implementing the DCF model to determine a just and reasonable ROE involves several steps, including (1) selecting a proxy group of utilities; and (2) calculating the cost of equity for the utilities in that group, which includes calculating the expected growth rate. With regard to the proxy group, the Presiding Judge stated that the Commission prescribes five criteria for screening purposes.¹⁶ As relevant here, the Presiding Judge noted that Commission policy is that each utility included in the proxy group have a credit rating no more than one notch above or below PG&E's as listed by both S&P and Moody's. The Presiding Judge noted that no party disputed the inclusion of the following seven companies: (1) ALLETE; (2) Consolidated Edison; (3) Edison International; (4) OGE Energy Corp.; (5) PG&E Corp.; (6) Pinnacle West; and (7) WEC Energy Group. The Presiding Judge noted, however, that the parties to the proceeding each included additional companies that he ultimately excluded.

9. Next, the Presiding Judge considered the process by which the parties calculated costs of equity. The Presiding Judge observed that Six Cities and Trial Staff calculated the short-term growth rate for each of the proxy companies based on the five-year growth rate for each company forecasted by IBES, while PG&E used a composite forecast that included IBES, Zacks, Bloomberg, S&P Capital IQ, FactSet, and Value Line. The Presiding Judge rejected PG&E's composite forecast, stating that PG&E provided no Commission precedent that relied on the aforementioned companies. Additionally, the

¹⁴ Opinion No. 531, 147 FERC ¶ 61,234 (Opinion No. 531), *order on paper hearing*, Opinion No. 531-A, 149 FERC ¶ 61,032 (2014) (Opinion No. 531-A), *order on reh'g*, 150 FERC ¶ 61,165, Opinion No. 531-B, (2015), *vacated*, *Emera Me. v. FERC*, 854 F.3d 9 (D.C. Cir. 2017) (*Emera Maine*).

¹⁵ Opinion No. 551, 156 FERC ¶ 61,234 (2016) (Opinion No. 551).

¹⁶ Opinion No. 551, 156 FERC ¶ 61,234 at P 17; Opinion No. 531, 147 FERC ¶ 61,234 at P 92.

Presiding Judge noted that in Opinion No. 551, the Commission rejected a proposal to use Value Line.¹⁷

10. With regard to the adjusted dividend yield component of the DCF calculation, the Presiding Judge stated that Six Cities and Trial Staff multiplied the unadjusted dividend yield by one plus half the composite growth rate. In contrast, the Presiding Judge noted, PG&E's witness argued that PG&E's short-term growth rate, rather than the composite growth rate, should be used. The Presiding Judge stated that, in populating the DCF formula, $K = (D/P) (1 + 0.5g) + g$, it was "preposterous" for the identical "g" symbols in the formula to have different values, and that PG&E's witness offered no support for the notion that the Commission intended for the formula to be interpreted that way.¹⁸ Moreover, the Presiding Judge observed that in Opinion No. 551, the Commission made clear that the "g" variable represents the composite growth rate. The Presiding Judge thus dismissed PG&E's proposal.¹⁹ Because Six Cities and Trial Staff used the same DCF methodology, but Six Cities' analysis included more recent data, the Presiding Judge adopted Six Cities' DCF calculations for the seven proxy group companies. Thus, the Presiding Judge determined the costs of equity of these companies range from 6.94% to 9.13%, with a median of 7.83%.²⁰

11. Having determined the range of the zone of reasonableness of 6.94% to 9.13%, the Presiding Judge observed that, during times of unusual capital market conditions, the Commission has supported placing transmission owners' base ROE above the central tendency (i.e., the median) of the zone. Accordingly, the Presiding Judge asked: (1) whether the record supports placement of PG&E's ROE above the median of the zone of reasonableness, i.e., 7.83%; (2) if placement of the ROE above the median is warranted, whether the record supports placement of the ROE above the upper median, i.e., 8.54%; and (3) if placement of the ROE above the upper median proves warranted, where, between the upper median and the high end of the zone of reasonableness, i.e., 9.13%, the ROE should be placed.²¹

12. The Presiding Judge observed that during the most recent study period at the time, ending August 31, 2017, market conditions were similar to those in existence during the Opinion No. 551 study period, which the Commission designated as a period of

¹⁷ *Id.* PP 62-64; Opinion No. 551, 156 FERC ¶ 61,234 at P 62.

¹⁸ Initial Decision, 165 FERC ¶ 63,001 at P 66.

¹⁹ *Id.* PP 65-68.

²⁰ *Id.* P 69.

²¹ *Id.* P 172.

anomalous market conditions. After considering yields on one-month and 10-year Treasury Bonds, as well as Federal Reserve holdings, the Presiding Judge found that anomalous market conditions existed during the study period.

13. The Presiding Judge next considered the ROE values provided by PG&E's witness using alternative methodologies that the Commission had previously accepted in Opinion Nos. 531 and/or 551: 9.76% risk premium (Risk Premium), 9.09% Capital Asset Pricing Model (CAPM), 10.31% expected earnings (Expected Earnings). The Presiding Judge stated that since each of these values is substantially higher than the zone of reasonableness' median (7.83%) and upper median (8.54%) produced by the DCF analysis, there was support for an ROE above both benchmarks. Considering state-authorized ROEs, the Presiding Judge found that PG&E's list of vertically integrated utilities is most recent and representative, and notes that the median state-authorized ROE is 9.60%, 47 basis points higher than the upper end of the DCF zone of reasonableness (9.13%).²²

14. According to the Presiding Judge, although *Emera Maine* held that the Commission had not satisfactorily justified its placement of the ROE at the upper midpoint of the zone of reasonableness relevant to the parties in that proceeding, the court stated that the record provided support for placement of the ROE above the midpoint.²³ The Presiding Judge stated that *Emera Maine* arguably stands for the proposition that the Commission may validly use alternative ROE measures to determine whether the ROE should be placed above certain markers, such as the midpoint or median. The Presiding Judge reasoned that, if the record in Opinion No. 531 supported placing the ROE above the midpoint, the record in this proceeding supported placing the ROE not only above the upper median, but also at the high end of the zone of reasonableness.²⁴ The Presiding Judge concluded that since the alternative methodologies and the state-authorized ROEs yield results well above or within four basis points of the upper end of the zone of reasonableness, and since exceeding the zone of reasonableness would be unjust and unreasonable, the only solution was to place PG&E's ROE at the upper end of the zone, i.e., at 9.13%.

2. Briefs on Exceptions

15. PG&E maintains that its requested base ROE of 10.4% is supported by record evidence. PG&E argues, among other things, that the Initial Decision's recommended 9.13% base ROE was unjust and unreasonable because it: (1) conflated the statutory

²² *Id.* PP 173-74.

²³ *Id.* P 171 (referencing *Emera Maine*, 854 F.3d at 28).

²⁴ *Id.* PP 171-177.

zone of reasonableness with the range produced by the two-step DCF; (2) was based on an incomplete consideration of *Emera Maine*; and (3) used a proxy group of companies that did not consider PG&E's higher risks.

16. First, PG&E argues that the Initial Decision erred by assuming that the results of a two-step DCF analysis are equivalent to the range of lawful ROEs that might establish a utility's zone of reasonableness.²⁵ Second, PG&E argues that the Initial Decision perpetuated the error identified in *Emera Maine* because it "did not set forth a rational connection between the record evidence" presented by the various ROE approaches when it concluded that the DCF range was sufficient to establish PG&E's zone of reasonableness.²⁶ Accordingly, PG&E asserts that the Commission should establish a different zone of reasonableness and set PG&E's ROE within that zone. Additionally, PG&E argues that an ROE of 9.13% was not high enough to satisfy the capital attraction standards required by *Hope* and *Bluefield*²⁷ and would undermine the Commission's stated policy goal of attracting investment in infrastructure.²⁸

17. With regard to the proxy group, PG&E maintains that a departure from the Commission's standard screening criteria is warranted based on the specific circumstances of this proceeding. Citing *Emera Maine*, PG&E argues that its witness' recommendation to apply a screen of companies that satisfies *either* the S&P or the Moody's credit rating criteria could account for the facts specific to this proceeding. Regarding growth rates, PG&E contends that the broader list of sources beyond IBES better reflects the range of investors' growth expectations and represents consensus growth estimates that meet the Commission's requirement.²⁹

18. Trial Staff argues that the Initial Decision erred because it: (1) placed PG&E's ROE at the top of the zone of reasonableness without a sufficient connection to the record evidence; (2) determined that anomalous market conditions existed during the study period; and (3) rejected criticisms of certain alternative ROE methodologies.³⁰ Trial Staff states that, if the Commission ultimately decides to apply the framework proposed in Opinion No. 531, it would be necessary to reopen the record in order to allow participants

²⁹ *Id.* at 20-21.

³⁰ Trial Staff Brief on Exceptions at 3.

to submit evidence and briefs.³¹ Trial Staff states that the D.C. Circuit's determination in *Emera Maine* that the Commission did not establish a rational connection between the record evidence and the Commission's decision to use non-DCF analyses to place the ROE applies here as well. According to Trial Staff, since certain capital market conditions have existed for a decade and since other market conditions have changed, there is no justification for a finding of anomalous market conditions. Finally, Trial Staff argues that the underlying data of the Risk Premium, CAPM, and Expected Earnings models is flawed, and produces distorted results that do not support the Initial Decision's placement of PG&E's ROE at the top of the zone of reasonableness.³² Trial Staff argues that the appropriate ROE placement is the median of the Commission's two-step DCF model.³³

19. Six Cities also argues that the Initial Decision erred in concluding that anomalous capital market conditions justified placing the ROE above the DCF-derived median and in accepting flawed alternative pricing models to establish the ROE. Six Cities asserts that the policies outlined in Opinion No. 531 do not apply.³⁴ Six Cities maintains that the DCF methodology accurately reflects investor expectations and is a reasonable estimate of utilities' cost of equity capital.

20. TANC argues that the Initial Decision erred in: (1) finding that anomalous market conditions existed during the study period; (2) failing to make a finding of fact or conclusion of law that TANC testified to regarding anomalous market conditions; (3) determining that the ROE should be adjusted from the point of central tendency; and (4) placing the recommended ROE at the top of the zone of reasonableness.³⁵ As a general matter, TANC argues that the Commission should apply the ROE policy in place when the record in the TO18 rate period closed, rather than applying the new approach it proposed in Opinion No. 531.³⁶ According to TANC, the Commission's newly proposed policy is incomplete and should not be applied to a proceeding with a complete record.

³¹ *Id.* at 8.

³² *Id.* at 14.

³³ *Id.* at 12.

³⁴ Six Cities Brief on Exceptions at 3-5.

³⁵ TANC Brief on Exceptions at 1-2, 7. SMUD, Modesto, and Santa Clara/M-S-R adopt and incorporate TANC's exceptions with regard to ROE. See SMUD Brief on Exceptions at 1; Modesto Brief on Exceptions at 4; Santa Clara/M-S-R Brief on Exceptions at 4.

³⁶ TANC Brief on Exceptions at 10.

TANC contends that a departure from the Commission's prior policy and a retroactive application of the Commission's new approach would impose burdens on parties that relied on the Commission's older policy when submitting their filings.³⁷

3. **Briefs Opposing Exceptions**

21. PG&E opposes the exceptions of Six Cities, TANC, and Trial Staff. As a general matter, PG&E maintains that the Commission should adopt an overall ROE for PG&E of 10.9%, representing its requested ROE of 10.4% plus the 50 basis point incentive adder for continuing participation in the California Independent System Operator Corporation (CAISO). PG&E reiterates its belief that it is not an "average risk" utility and that the Commission's practice of applying the two-step DCF model and a measure of central tendency to determine ROE should not apply. PG&E argues that adopting the 7.83% ROE as advocated by Six Cities, TANC, and Trial Staff would negatively affect PG&E's ability to attract capital for future investment.³⁸

22. CPUC observes that the rate base of CPUC-jurisdictional projects is more diverse and presents more risks than PG&E's FERC-jurisdictional rate base. CPUC argues that the 9.13% ROE established by the Initial Decision is far more than what is required to attract investment in such activities. Additionally, CPUC agrees with Six Cities' statement that comparing state ROEs to Commission-allowed ROEs is of limited value due to the different ratemaking approaches taken by various regulators.³⁹

23. TANC, Six Cities, and Trial Staff support the Initial Decision's use of the DCF to calculate the zone of reasonableness, and disagree with many of PG&E's exceptions. First, they dispute PG&E's claim that the Commission should modify its screening criteria in selecting PG&E's proxy group.⁴⁰ Second, Six Cities and Trial Staff reiterate the Commission's preference for IBES when selecting growth rate estimates.⁴¹ Third, TANC, Six Cities, and Trial Staff support the Initial Decision's application of Opinion No. 551's guidance to use a composite growth rate for the adjusted dividend yield component of the DCF calculation rather than PG&E's proposed use of the short-term

³⁷ *Id.* at 14.

⁴¹ Six Cities Brief Opposing Exceptions at 27; Trial Staff Brief Opposing Exceptions at 12.

growth rate.⁴² In addition, Six Cities argues that PG&E misapplies relevant case law when describing the Commission's section 205 and section 206⁴³ obligations when establishing a reasonable ROE.⁴⁴ TANC and Six Cities also maintain their position that the ROE calculation methodologies that the Commission proposed in recent proceedings such as *Emera Maine* should not apply to this proceeding.⁴⁵ Trial Staff argues that it is unclear whether the Commission's new ROE policy is expected to be applied to this proceeding.⁴⁶

4. Commission Determination

24. In light of developments since the Presiding Judge issued the Initial Decision, we direct additional briefs on the ROE issues in this proceeding. Specifically, on remand from the D.C. Circuit in *Emera Maine*, the Commission proposed a new methodology for determining whether an existing base ROE is unjust and unreasonable under the first prong of section 206 and for determining a new just and reasonable base ROE under the second prong of section 206 when an existing base ROE has been found to be unjust and unreasonable, and the Commission directed briefing on how the methodology should apply to the New England transmission owners' (NETOs) base ROE at issue in *Emera Maine*.⁴⁷ Subsequently, in two proceedings involving the base ROE of Midcontinent Independent System Operator, Inc. (MISO) transmission owners (MISO TOs)⁴⁸ and other cases involving disputed ROEs,⁴⁹ the Commission directed the participants to address, or stated that it expects participants to address, whether and how the Commission's ROE

methodology proposed in the *Coakley* Briefing Order should apply to the facts of specific proceedings.

25. In the *Coakley* Briefing Order and MISO Briefing Order, the Commission proposed to establish a composite zone of reasonableness, giving equal weight to the DCF, CAPM, and Expected Earnings models.⁵⁰ The Commission proposed that, in order to find an existing ROE unjust and unreasonable under the first prong of section 206, that ROE must be outside a range of presumptively just and reasonable ROEs for a utility of its risk profile, absent additional evidence to the contrary. For an average risk single utility, that range would be the quartile of the composite zone of reasonableness centered on the measure of central tendency of the zone of reasonableness. For a below or above average single utility, that range would be the quartile of the zone of reasonableness centered on the measure of central tendency of the lower or upper half of the zone of reasonableness, respectively. The Commission proposed to determine a replacement ROE under the second prong of FPA section 206 using the above three models, plus the Risk Premium model.⁵¹ For an average risk single utility, the Commission proposed to determine the measure of central tendency of each zone of reasonableness produced by the DCF, CAPM, and Expected Earnings models and average those ROEs with the Risk Premium ROE, giving equal weight to each of the four figures. The Commission proposed to use the measure of central tendency of the lower and upper halves of the zones of reasonableness to determine ROEs for single utilities of below and above average risk, respectively.⁵²

26. Finally, the Commission proposed generally to use the same proxy group screening criteria as outlined in Opinion No. 531.⁵³ However, the Commission proposed to apply a high-end outlier test to the results of the CAPM, Expected Earnings and DCF analyses, noting, among other things, that neither the CAPM nor Expected Earnings analyses include a long-term growth projection based on GDP that would normalize the ROEs produced by the model.⁵⁴ The Commission proposed to treat as high-end outliers any proxy company whose cost of equity estimated with a given model is more than 150% of the median result of all of the potential proxy group members in that model before any high or low-end outlier test is applied, subject to a “natural break” analysis

⁵⁰ See, e.g., *Coakley* Briefing Order, 165 FERC ¶ 61,030 at P 30.

⁵¹ *Id.* P 17.

⁵² *Id.* P 17 & n.62.

⁵³ *Id.* P 49.

⁵⁴ *Id.* P 52.

similar to the approach the Commission uses for low-end DCF analysis results.⁵⁵ In the MISO Briefing Order the Commission explained that, as in the *Coakley* Briefing Order proceeding, the “scope of the paper hearing . . . includes all aspects of [the] proposed methodology.”⁵⁶

27. Additionally, on November 21, 2019, the Commission issued Opinion No. 569 in which it applied a revised methodology for analyzing existing base ROEs under section 206 of the FPA.⁵⁷ The revised methodology applied in Opinion No. 569 used the DCF model and CAPM in the Commission’s analysis, instead of the four models as was proposed in the *Coakley* Briefing Order and MISO Briefing Order.⁵⁸ On May 21, 2020, the Commission issued Opinion No. 569-A to grant rehearing on certain issues.⁵⁹

28. Because the Commission has proposed to change its approach for determining just and reasonable base ROEs, we will reopen the record here for the limited purpose of allowing the participants to this proceeding an opportunity to present written evidence concerning the Commission’s revised ROE methodology adopted in Opinion Nos. 569 and 569-A, and whether and how that revised methodology should apply to the facts of this proceeding. Therefore, we establish a paper hearing proceeding to provide the participants, including Trial Staff, the opportunity to submit additional evidence and argument concerning the limited issue of whether and how to apply the revised ROE methodology adopted in Opinion Nos. 569 and 569-A to determine PG&E’s ROE. As

⁵⁵ *Id.* P 53.

⁵⁶ MISO Briefing Order, 165 FERC ¶ 61,118 at P 20 (“In this order, as in the *Coakley* Briefing Order, we do not make any final determinations with respect to the proposed new methodology for analyzing the base ROE component of rates under section 206 of the FPA. The scope of the paper hearing established in this order includes all aspects of this order's proposed methodology.”).

⁵⁷ *Ass’n of Bus. Advocating Tariff Equity v. Midcontinent Indep. Sys. Operator, Inc.*, Opinion No. 569, 169 FERC ¶ 61,129 (2019), *order on reh’g*, Opinion No. 569-A, 171 FERC ¶ 61,154 (2020).[.

⁵⁸ *See, e.g., id.* PP 37, 276.

⁵⁹ Opinion No. 569-A granted rehearing to: (1) allow the use of the Risk Premium model; (2) give the short-term growth rate 80% weighting and the long-term growth rate 20% weighting in the two-step DCF model; (3) modify the high-end outlier test; (4) consider the use of Value Line short-term earnings growth estimates in the CAPM in future proceedings; and (5) calculate the ranges of presumptively just and reasonable base ROEs by dividing the overall composite zone of reasonableness into equal thirds. Opinion No. 569-A, 171 FERC ¶ 61,154.

stated above, initial briefs shall be due 60 days from the date of this order. Responses to those initial briefs shall be due 30 days later. No answers or additional briefs will be permitted.

B. Cost of Long-Term Debt

29. PG&E forecasted the cost of debt that it would incur for debt issuances that it expected to make during Period II (2017) by starting with recorded, end-of-year data from Period I (2015) and then estimating the long-term debt costs that it would incur during the remainder of 2016 and calendar year 2017. Specifically, PG&E started with its utility cost of debt of 5.09% as of May 31, 2016, and used (1) a forecast of future interest rates from IHS Global Insight for 2016 and 2017 to estimate changes to the interest rates on variable rate debt; and (2) a forecast of the three-month commercial paper rate for future interest rates on tax-exempt Pollution Control bonds, resulting in an average cost of debt forecast for 2017 of 5.13%.⁶⁰

1. Reasonableness of Forecasted Cost of Debt

a. Initial Decision

30. The Presiding Judge observed that PG&E forecast four new issuances of long-term debt for 2017, and that all were made at significantly lower cost than forecasted.⁶¹ The Presiding Judge thus found that there had been known and measurable changes to PG&E's long-term debt cost that would reduce its Period II cost of long-term debt. Therefore, the Presiding Judge found that PG&E's cost of debt, as forecasted, was unjust and unreasonable, and should be reduced.⁶²

31. In making this finding, the Presiding Judge explained that, in general, the Commission's preference is to rely on test year data, if it was "reasonable when made"⁶³ and that the Commission will rely on such data "unless it can be demonstrated that the estimates were either unreasonable when made or, if reasonable when made, subsequent events indicate that to use them as a basis for future projections would yield unreasonable

⁶⁰ Ex. PGE-0013 at 2:15-3.7.

⁶¹ Initial Decision, 165 FERC ¶ 63,001 at P 180 (citing PG&E Filing, Ex. PGE-0021 (Period II Statements) at 73, Ex. CIT-0015 at 2, and Ex. CIT-0063 (PG&E Data Response) at 1).

⁶² *Id.* P 181.

⁶³ *Id.* P 182 (citing *Sw. Pub. Serv. Co. v. FERC*, 952 F.2d 555, 557 (D.C. Cir. 1992) (*Southwestern Public Service*)).

results.”⁶⁴ The Presiding Judge stated that with respect to such subsequent events, the Commission has allowed the use of an adjustment to actual data to reflect “changes in the rate of return regardless of scale”⁶⁵ and that the Commission has described the rationale for this policy as follows:

Capitalization costs differ from other costs Interest rates and other security yields have tended to rise and fall rather sporadically and often unexpectedly over time without equally visible and convincing evidence of offsetting cost trends. We shall therefore continue to resist piecemeal, post-test year changes in other cost factors, but we will accord to financing costs the different and separate treatment that we think they deserve.⁶⁶

32. The Presiding Judge stated that the D.C. Circuit recognized the distinction between data related to capital structure and rate of return, explaining that “[t]he Commission does draw a distinction between changes in rate of return and all other changes, allowing a spot adjustment for the former even where the change is *slight*.”⁶⁷ The Presiding Judge stated that cost of debt is a component of a utility’s rate of return and that the record shows that there have been known and measurable changes in PG&E’s long-term debt cost rate. The Presiding Judge stated that even if it is assumed that PG&E’s estimates were reasonable when made, subsequent events – the actual debt issuances – “indicate that to use [the estimates] as a basis for future projections would yield unreasonable results.”⁶⁸ The Presiding Judge found that for PG&E’s proposed cost of debt to be just and reasonable, PG&E must recalculate that cost, using its actual long-term debt issuances and properly calculated coupon rates for 2017.⁶⁹

⁶⁴ *Id.* (citing *S. Cal. Edison Co.*, Opinion No. 55, 8 FERC ¶ 61,099, at 61,375 (*SoCal Edison*), *reh’g denied*, 9 FERC ¶ 61,006 (1979); *Southwestern Public Service*, 952 F.2d at 556 (“Where challengers of the proposed rate show that use of the estimates would be ‘unreasonable’ . . . even though the estimates were reasonable when made, the Commission will order a ‘spot adjustment’ in the light of more current data.”)).

b. Briefs on Exceptions

33. PG&E contends that the Initial Decision threw out PG&E's forecast without identifying any issues with its forecast methodology, and seemed to conclude that any divergence between the forecast and after-the-fact actual data would yield "unreasonable results."⁷⁰ PG&E argues that this approach is fundamentally inconsistent with the Commission's "reasonable when made" standard and is unsupported by *SoCal Edison*, on which the Initial Decision relied. PG&E notes that the Commission explained in *SoCal Edison* that "[t]he challenging party must demonstrate that the particular expense was...*substantially* in error because of subsequent events which were not reasonably foreseeable at the time such estimates were developed."⁷¹ PG&E also notes that in *SoCal Edison*, the Commission concluded that the estimate should be adhered to in that case, notwithstanding the fact that actual costs were different than the forecast in several respects.⁷² PG&E argues that the Presiding Judge made no finding in the Initial Decision that its forecast was "*substantially* in error" and contends that adopting the approach in the Initial Decision would reject the Commission's long-standing preference to rely on test year data and, as a result, no forecast would ever be accepted unless it happened to match exactly the actual experience after the forecast was made and right up until the hearing.⁷³ PG&E contends that its forecast was reasonable when made and relied on independent, third party data sources, and that its forecast should be used in establishing the cost of debt for the forecast period.⁷⁴

c. Briefs Opposing Exceptions

34. TANC, Trial Staff, Six Cities, and SWP contend that the Initial Decision correctly found that PG&E's cost of long-term debt as forecasted is unjust and unreasonable, given known and measureable changes that would reduce PG&E's Period II cost of long-term debt, and that PG&E's proposed cost of debt must be reduced.⁷⁵ TANC disagrees with

⁷⁰ PG&E Brief on Exceptions at 27-28.

⁷¹ *Id.* at 28 (citing *SoCal Edison*, 8 FERC at 61,375 (citation omitted, emphasis in original)).

⁷² *Id.* at 29.

⁷³ *Id.*

⁷⁴ *Id.*

⁷⁵ TANC Brief Opposing Exceptions at 43-45; Trial Staff Brief Opposing Exceptions at 16-17; Six Cities Brief Opposing Exceptions at 41-44; CDWR Brief Opposing Exceptions 3-5.

PG&E that the Initial Decision had to first find that PG&E's forecast was "substantially in error" before finding the forecast would yield unreasonable results, asserting that Commission precedent requires no such finding.⁷⁶ TANC contends that, unlike in *SoCal Edison*, PG&E's debt estimates are not based on recent trends and cannot be relied upon.⁷⁷ Six Cities argues that given the Commission's policy allowing for the use of post-filing data for rate of return and the unreasonable rates resulting from the use of PG&E's forecasted cost of debt, the Initial Decision properly determined that PG&E's cost of long-term debt should be updated to reflect actual data.⁷⁸

d. Commission Determination

35. We affirm the Presiding Judge's determination that PG&E's cost of debt, as forecasted, is unjust and unreasonable and must be reduced. PG&E argues that that the Initial Decision had to first find that PG&E's forecast was "substantially in error" before finding the forecast would yield unreasonable results. We disagree. In *Southwestern Public Service*, the D.C. Circuit explained that in *SoCal Edison*, the Commission restated its policy permitting spot adjustments to reflect changes in *any* area of costs or revenues, so long as the changes were unforeseeable and "*substantially in error*" and would yield unreasonable rates.⁷⁹ However, *Southwestern Public Service* went on to state that "[t]he Commission does draw a distinction between changes in rate of return and all other changes, allowing a spot adjustment for the former even where the change is *slight*."⁸⁰ As the Initial Decision notes, *Southwestern Public Service* emphasized the different treatment of rate of return cost in quoting an earlier Commission decision: "We . . . continue to resist piecemeal, post-test year changes in other cost factors, but we will accord to financing costs the different and separate treatment that we think they deserve."⁸¹ *Southwestern Public Service* concluded that Commission precedent reflects two independent exceptions to the general policy against spot adjustments of estimates that were reasonable when made. Specifically, the court found that spot adjustments may be used to reflect (1) changes in the rate of return regardless of scale; and (2) substantial deviations between estimates and later data that would result in unreasonable rates. As

⁷⁶ TANC Brief Opposing Exceptions at 44.

⁷⁷ *Id.* at 45.

⁷⁸ Six Cities Brief Opposing Exceptions at 44.

⁷⁹ *Southwestern Public Service*, 952 F.2d at 557-558 (emphasis in original).

⁸⁰ *Id.* at 558 (emphasis in original).

⁸¹ *Id.* (citing *Pub. Serv. Co. of New Mexico*, 10 FERC ¶ 61,053 (1980) (quoting *Union Elec. Co.*, 47 FPC 144)).

the D.C. Circuit explained in *Southwestern Public Service*, the two exceptions do not conflict; rather, they exist side by side.⁸²

36. Cost of debt is a component of a utility's rate of return. PG&E argues that the Initial Decision had to first find that PG&E's forecast was "substantially in error" before finding the forecast would yield unreasonable results.⁸³ However, as discussed above, rate of return is afforded different treatment than other cost components.⁸⁴ Accordingly, we disagree with PG&E's arguments concerning the "substantially in error" requirement and conclude that it does not apply to PG&E's forecast of long-term debt. Instead, as discussed above, the Commission will allow the use of an adjustment to actual data to reflect changes in the rate of return regardless of scale, even if estimates were reasonable when made and the change is slight. Here, the record shows that there have been known and measurable changes in PG&E's long-term debt cost rate, as discussed below.

37. In the Initial Decision, the Presiding Judge included a table that depicted PG&E's forecasted and actual amounts associated with four new issuances of long-term debt for 2017 (Period II). The table demonstrates issuances were made at significantly lower costs than forecasted:

Table 1	Debt Amount		Coupon Rate	
	Forecasted	Actual	Forecasted	Actual
New Issuance Q1 2017 (10-year)	\$245 million	\$400 million	4.54%	3.30%
New Issuance Q1 2017 (30-year)	\$455 million	\$200 million	5.54%	4.00%
New Issuance Q4 2017 (10-year)	\$289 million	\$1,150 million	4.54%	3.30%
New Issuance Q4 2017 (30-year)	\$536 million	\$850 million	5.54%	3.95%

⁸² *Southwestern Public Service*, 952 F.2d at 558.

⁸³ PG&E Brief on Exceptions at 28.

⁸⁴ *See supra* PP 47-48.

38. These differences show that there were known and measurable changes in PG&E's long-term debt cost rate. As discussed above, Commission precedent allows spot adjustments to be used for long-term debt forecasts, even if the estimates were reasonable when made, to reflect: (1) changes in the rate of return regardless of scale; and (2) substantial deviations between estimates and later data that would result in unreasonable rates.⁸⁵ We find that the Presiding Judge correctly applied the Commission's precedent here, and affirm this finding. Accordingly, we direct PG&E to recalculate its cost of long-term debt using its actual costs for 2017 in a compliance filing to be submitted within 60 days after the Commission order on the paper hearing we established above concerning the application of the Commission's proposed revised ROE methodology discussed above.

2. Use of Net Proceeds to Calculate Long-Term Debt Costs

39. PG&E proposed to calculate its cost of debt by dividing the annual payments that it must make on each debt issuance by the net proceeds of the issuance, which is the face value of the debt minus the issuance costs and any cash discount.⁸⁶

a. Initial Decision

40. The Presiding Judge concluded that the Commission's decision in *System Energy Resources, Inc.* dictated using the gross proceeds of the debt issuance to calculate PG&E's cost of debt, rather than net proceeds.⁸⁷ The Presiding Judge explained that in *SERI*, the company proposed to use the net proceeds method to calculate the cost-of-debt component of its capital structure, arguing that use of the gross proceeds method caused the company to under-recover its cost. The Commission rejected this argument and held that the cost-of-debt component should reflect the "company's total obligation [to its creditors] with respect to long-term debt."⁸⁸ Moreover, in denying rehearing in the *SERI* proceeding, the Commission concluded that the gross proceeds methodology "allows for a more accurate picture of [a company's] capital structure and, in turn, results in the correct calculation of [a company's] cost of capital."⁸⁹ Because PG&E made no attempt

⁸⁵ *Id.*

⁸⁶ See Ex. PGE-0046 (Rebuttal Testimony of Marques A. Cruz) at 11:12-12:3.

⁸⁷ Initial Decision, 165 FERC ¶ 63,001 at P 189 (citing *Sys. Energy Res., Inc.*, Opinion No. 446, 92 FERC ¶ 61,119 (2000) (*SERI*), *order on reh'g*, Opinion No. 446-A, 96 FERC ¶ 61,165 (2001)).

⁸⁸ *Id.* (citing *SERI*, 92 FERC at 61,449).

⁸⁹ *Id.* P 190 (citing Opinion No. 446-A, 96 FERC at 61,740; *Portland Nat. Gas Transmission Sys.*, Opinion No. 524, 142 FERC ¶ 61,197, at PP 263-265 (2013) (finding

to distinguish *SERI* in either of its post-hearing briefs, the Presiding Judge directed PG&E to use the gross proceeds method to recalculate its cost of debt.⁹⁰

b. Briefs on Exceptions

41. PG&E contends that although it did not distinguish *SERI*, it did explain that the applicable Commission regulation permits a utility to use net proceeds. PG&E states that clause B(6) of section 35.13 (h)(22)(ii) of the Commission's regulations provides that the cost of money to be used in the calculation of the weighted cost of long-term debt "is the yield to maturity at issuance based on the interest rate and *net proceeds* to the utility determined by reference to any generally accepted table of bond yields."⁹¹ PG&E notes that its witness demonstrated that the use of net proceeds is the only methodology that allows a utility to recover the full costs of its debt financing, and that no party presented testimony or examples to rebut this fact.⁹² PG&E argues that on that basis, the Commission should approve PG&E's use of net proceeds in this proceeding.⁹³

42. Trial Staff contends that the Initial Decision erred in finding that *SERI* dictates using the gross proceeds method, and that PG&E's proposal to use net proceeds to calculate its long-term debt costs is appropriate.⁹⁴ Trial Staff explains that the issue is whether PG&E's proposal to use net proceeds to calculate its long-term debt cost rate is appropriate, not whether the use of such method is appropriate to calculate the debt component of its proposed capital structure. Trial Staff asserts that *SERI* addresses the use of gross proceeds for long-term debt principal outstanding, to calculate the debt

that the *SERI* holding is not limited to electric utilities and that a natural gas pipeline must use the gross proceeds method); *El Paso Nat. Gas Co.*, Opinion No. 528, 145 FERC ¶ 61,040, at PP 583-585 (2013) (affirming the Presiding Judge's finding that the gross proceeds method must be used to compute the debt ratio for pipeline's capital structure)).

⁹⁰ *Id.* P 191.

⁹¹ PG&E Brief on Exceptions at 30 (citing 18 C.F.R. § 35.13(h)(22)(ii)(B)(6) (2020) (emphasis added)).

⁹² *Id.* at 30-31 (citing Ex. PGE-0046 at 13:9 – 19:14).

⁹³ *Id.* at 31. PG&E adds that, in the event that the Commission interprets *SERI* to be an obstacle to that result, it should reconsider its analysis in *SERI* and allow for the use of the net proceeds method, arguing that the *SERI* decision is simply incorrect. *Id.*

⁹⁴ Trial Staff Brief on Exceptions at 27.

component of the capital structure.⁹⁵ Trial Staff states that in *SERI*, the Commission approved a proposed switch to the embedded cost method for determining the long-term debt cost rate, but rejected the proposed switch to a net proceeds method for deriving the long-term debt ratio. Trial Staff argues that the gross proceeds methodology is appropriate to use to calculate the debt ratio but is not appropriate to calculate PG&E's long-term debt costs.⁹⁶ Trial Staff also notes that *SERI* indicates that the embedded cost of debt calculation considers discounts, which is clearly not the use of the gross proceeds method.⁹⁷

c. Briefs Opposing Exceptions

43. TANC opposes PG&E's and Trial Staff's argument that PG&E can use net proceeds to calculate its cost of debt, contending that Commission regulations require PG&E to use gross proceeds to compute its long-term debt costs.⁹⁸ TANC cites the Commission's explanation in *SERI* that the capital structure should reflect gross proceeds for debt because this method reflects the company's total obligation with respect to long-term debt.⁹⁹ TANC thus argues that the Commission should affirm the Initial Decision's directive that PG&E use the gross proceeds method to recalculate its cost of debt.¹⁰⁰

d. Commission Determination

44. The Presiding Judge explained that in *SERI*, the Commission rejected the company's proposal to use the net proceeds method to calculate the cost of debt component of its capital structure. However, as pointed out by Trial Staff, that decision addressed the use of gross proceeds for long-term debt principal outstanding to calculate the long-term debt ratio, not the long-term debt costs. Accordingly, we find *SERI* is distinguishable from the facts before us here. The Commission has previously stated that cost of debt should be on a net proceeds basis so that the utility can fully recover the

⁹⁵ *Id.* at 27-28.

⁹⁶ *Id.* at 28.

⁹⁷ *Id.* at 29 (citing *SERI*, 92 FERC at 61,447-48 & n.37).

⁹⁸ TANC Brief on Exceptions at 45-46.

⁹⁹ *Id.* at 47 (citing *SERI*, 92 FERC at 61,740).

¹⁰⁰ *Id.*

underwriter's compensation and the expenses of financing.¹⁰¹ Furthermore, section 35.13(h)(22)(ii)(a) of the Commission's regulations states:

The weighted cost [of long-term debt] is calculated by: (1) Multiplying the cost of money for each issue under clause (B)(6) below by the principal amount outstanding for each issue...

In turn, clause (B)(6) states that the "cost of money" is:

the yield to maturity at issuance based on the interest rate and net proceeds to the utility determined by reference to any generally accepted table of bond yields.

45. Accordingly, we agree with PG&E and Trial Staff and find that the use of net proceeds to calculate the long-term debt cost rate is appropriate. We therefore reverse the Initial Decision on this issue and conclude that PG&E's approach is just and reasonable.

3. Remaining Issues

46. In its filing, PG&E forecast a split 10-year and 30-year bond issuances as 35% and 65%, respectively.¹⁰² PG&E used a forecast of future interest rates from IHS Global Insight Inc. for 2016 and 2017 to estimate changes to the interest rates on PG&E's variable rate debt and a forecast of the three-month commercial paper rate for future interest rates on tax-exempt Pollution Control bonds.¹⁰³

a. Initial Decision

47. The Presiding Judge stated that PG&E's forecasted split of 10-year and 30-year bond issuances and forecasted interest rate estimates are part of a larger matter, i.e., whether PG&E used the correct methodology in forecasting its long-term debt. The Presiding Judge found that because the preceding analysis substitutes PG&E's actual cost of debt during 2017 with its forecasted cost of debt for that year, further questions regarding the validity of PG&E's forecast methodology are moot.¹⁰⁴

¹⁰¹ See, e.g., *Mich. Gas Storage Co.*, 87 FERC ¶ 61,038 at 61,165-66 (1999).

¹⁰² PG&E Initial Brief at 20.

¹⁰³ *Id.* at 17.

¹⁰⁴ Initial Decision, 165 FERC ¶ 63,001 at P 192.

b. Briefs on Exceptions

48. PG&E notes that since the Presiding Judge made no determination with respect to the above noted issues, instead finding them moot, there was nothing specifically to which PG&E can take exception with respect to its forecasted split of 10-year and 30-year bond issuances and its interest rate estimates.¹⁰⁵ That said, PG&E reiterates that events affecting it, including the fact that it was, at the time of the hearing, on a credit watch for possible downgrade, underscore why after-the-fact second-guessing of “reasonable when made” forecasts is not, and should not be, the Commission’s approach.¹⁰⁶

49. TANC concurs with the Initial Decision’s determination to use actual 2017 long-term debt costs, and agrees that such ruling obviates the need to decide these issues.¹⁰⁷ However, TANC states that if the Commission overturns the Initial Decision and determines PG&E’s debt on a forecast basis, TANC argues that PG&E’s forecasts for its split of 10-year and 30-year bond issuances and its interest rate estimates are unjust and unreasonable.¹⁰⁸

c. Briefs Opposing Exceptions

50. PG&E continues to argue that its forecasts for its split of 10-year and 30-year bond issuances and interest rate estimates are just and reasonable,¹⁰⁹ and TANC and SWP raise objections to various aspects of PG&E’s forecast methodology.¹¹⁰

d. Commission Determination

51. We affirm the Presiding Judge’s finding that, since we are directing PG&E to use its actual cost of debt during 2017 with its forecasted cost of debt for that year,¹¹¹ further questions regarding the validity of PG&E’s forecast methodology are moot. We note that

¹⁰⁵ PG&E Brief on Exceptions at 31.

¹⁰⁶ *Id.* at 32-33.

¹⁰⁷ TANC Brief on Exceptions at 41.

¹⁰⁸ *Id.* at 42-46.

¹⁰⁹ PG&E Brief Opposing Exceptions at 34-35.

¹¹⁰ TANC Brief Opposing Exceptions at 49-52; SWP Brief Opposing Exceptions at 4-5.

¹¹¹ *See supra* P 48.

PG&E stated that since the Presiding Judge found these issues moot, there was nothing specifically to which PG&E can take exception with respect to its forecasted split of 10-year and 30-year bond issuances and its interest rate estimates. We also note that TANC concurs with the Initial Decision's determination to use actual 2017 long-term debt costs, and that such ruling obviates the need to decide these issues. Therefore, we do not address PG&E's and TANC's arguments on PG&E's forecasted split of 10-year and 30-year bond issuances and its interest rate estimates.

C. Capital Structure

52. PG&E proposed a target capital structure of 47.00% long-term debt, 1.00% preferred equity and 52.00% common equity for 2017. According to PG&E, the same target capital structure was established by CPUC in Decision 12-12-034 on December 20, 2012.¹¹²

1. Initial Decision

53. The Presiding Judge stated that the Commission prefers to use the applicant's proposed capital structure if it satisfies a three-prong test, where the applicant "(1) issues debt that is not guaranteed by another entity, (2) has a bond rating, and (3) has an equity ratio that (a) is within the historical range approved by the Commission, and (b) is not excessive in comparison with the equity ratio of the proxy-group companies."¹¹³ The Presiding Judge found that PG&E satisfied this test because it issues its own bonds and has its own bond rating, and PG&E's capital structure is within the range allowed for utilities by the Commission.¹¹⁴ The Presiding Judge noted that historically, the Commission has allowed a maximum equity ratio of 68.86% (minimum debt ratio of 31.14%) and a maximum debt ratio of 64.76% (minimum equity ratio of 35.24%).¹¹⁵

54. The Presiding Judge also analyzed Trial Staff's forecast, which asserted that PG&E's capital structure at the end of Period II (December 31, 2017) should be 52.00%

¹¹² PG&E Filing, Ex. PGE-0021 (Period II Statements) at 70; Ex. S-0009 (Workpapers in Support of Trial Staff Testimony) at 463.

¹¹³ Initial Decision, 165 FERC ¶ 63,001 at P 194 (citing *Transcontinental Gas Pipe Line Corp.*, 80 FERC ¶ 61,157, at 61,667 (1997), *order on reh'g*, 84 FERC ¶ 61,084, at 61,415 (1998); *Enbridge Pipeline s (Southern Lights) LLC*, 139 FERC ¶ 63,015 (2012); *ITC Holdings Corp.*, 121 FERC ¶ 61,229, at P 49 (2007)).

¹¹⁴ *Id.* P 195 (citing Ex. S-0006 (Testimony of Douglas Green) at 72:20-73:1-6).

¹¹⁵ *Id.* (citing *Pac. Gas Transmission Co.*, 62 FERC ¶ 61,109, at 61,778-79 (1993); *Allegheny Power*, 106 FERC ¶ 61,241, at PP 25-27 (2004)).

common equity, 0.68% preferred equity, and 47.32% long-term debt.¹¹⁶ The Presiding Judge found that implementing PG&E's forecasted capital structure rather than that the capital structure forecasted by Trial Staff will increase the company's cost of service. Because Trial Staff's forecasted capital structure allocates a lower share to PG&E's preferred stock than does PG&E's forecast, the cost of PG&E's preferred stock, 5.52%, will be higher than the cost of PG&E's debt.¹¹⁷ The Presiding Judge thus concluded that for PG&E's rate of return to be just and reasonable the utility must implement Trial Staff's proposed capital structure rather than PG&E's forecasted capital structure to avoid the increase of cost of service.¹¹⁸ The Presiding Judge was not persuaded by PG&E's contention that it would have to maintain two separate capital structures, one for the Commission and one for CPUC, while the deviation of only 0.32%, between the two forecasted capital structures is too small to justify requiring it to carry this burden. The Presiding Judge concluded that "ratepayers deserve to pay no more than their cost of service" and "that consideration outweighs any concern one might have for PG&E's administrative burdens."¹¹⁹

2. Briefs on Exceptions

55. PG&E contends that the Initial Decision departs from the Commission's "three-prong test" for using actual capital structure, and instead relies on Trial Staff's forecast.¹²⁰ PG&E claims that the parties did not make a compelling argument for why it is necessary or appropriate for PG&E to change its capital structure.¹²¹ PG&E argues that the difference between its as-filed forecast and Trial Staff's forecast adopted in the Initial Decision is very small – a shift of 0.32% from preferred equity to long-term debt. In PG&E's opinion, that small difference is not sufficient to demonstrate that its proposed capital structure forecast was not reasonable when made and does not demonstrate that PG&E's estimate was "*substantially* in error," as required by Commission precedent.¹²² PG&E adds that the Commission should not order it to maintain two ever-so-slightly

¹²¹ *Id.* at 34.

¹²² *Id.* at 33-34.

different capital structures – one for its Commission-jurisdictional electric transmission business and a different one for its CPUC-jurisdictional businesses.¹²³

3. Briefs Opposing Exceptions

56. TANC contends that the Commission should deny PG&E’s exception on this issue because its contention that the parties did not make a compelling argument for a different capital structure is irreconcilable with Trial Staff’s testimony and therefore is baseless.¹²⁴

57. Trial Staff states that the Initial Decision properly found that PG&E must implement its proposed capital structure.¹²⁵ Trial Staff argues that PG&E does not dispute its forecast and that it recognizes that CPUC’s capital structure does not bind the Commission.¹²⁶ Further, Trial Staff cites the Initial Decision’s conclusion that “[r]atepayers deserve to pay no more than their cost of service,” and that that consideration outweighs any of PG&E’s concerns about administrative burden.¹²⁷

4. Commission Determination

58. We affirm the Presiding Judge’s finding that PG&E should adopt the capital structure proposed by Trial Staff’s witness. In developing his proposal, Trial Staff’s witness largely adopted PG&E’s target capital structure, which was established by the CPUC in 2012, but made adjustments to it based on more recent data. For example, Trial Staff’s long-term debt forecast was based on PG&E’s actual and forecasted debt issuances through December 31, 2017, using more recent FERC Form No. 1 data, that was obtained through discovery requests in this proceeding, and PG&E’s forecasted debt issuances through the end of 2017.¹²⁸ Because Trial Staff’s proposed capital structure is updated and more precise than PG&E’s, we find, on balance, that Trial Staff’s proposal is more persuasive than PG&E’s proposal.

59. Meanwhile, PG&E’s argument against adopting Trial Staff’s calculation focuses on the administrative burden of having to maintain two slightly different capital structures for its Commission-jurisdictional electric transmission business and its CPUC-

¹²³ *Id.* at 33-34.

¹²⁴ TANC Brief Opposing Exceptions at 53 (citing Ex. S-0006 at 71-76).

¹²⁵ Trial Staff Brief Opposing Exceptions at 17.

¹²⁷ *Id.* at 18–19 (citing Initial Decision, 165 FERC ¶ 63,001 at P 203).

¹²⁸ See Ex. S-0006 at 71-76; Trial Staff Initial Brief at 61-63.

jurisdictional businesses.¹²⁹ However, we conclude that the fact that PG&E believes maintaining two capital structures would be administratively burdensome is not persuasive, given that the CPUC-approved capital structure PG&E proposes to use is from 2012, and Trial Staff's adjustments reflect more recent data, as discussed above.¹³⁰ We therefore adopt the capital structure calculated by Trial Staff and direct PG&E to adjust its rate base accordingly on compliance.

D. Depreciation Rates

60. PG&E developed rates of depreciation for ten of its transmission plant accounts using the traditional, straight-line methodology.¹³¹ First, PG&E ascertained the original costs of plant in the account and added the net salvage amounts.¹³² Second, PG&E subtracted from that sum the amount of depreciation that has already been expensed, yielding the future or remaining accruals, which is the dollar amount of the plant remaining in the account to be depreciated. Third, PG&E determined the average remaining life of the facilities (the average life, in years, of how long facilities already in service are expected to last) by selecting the appropriate "survivor curves." The remaining accruals (undepreciated amounts) for each account were divided by the average remaining life to determine the account's average annual accrual (i.e., depreciation expense). That amount was then divided by the original cost of the facilities

¹²⁹ See Initial Decision, 165 FERC ¶ 63,001 at P 201. PG&E also argues that under Commission precedent its estimate can be rejected only if it is found to be substantially in error. See PG&E Brief on Exceptions at 33-34. . However, PG&E does not explain how the "substantially in error" standard applies to determining a utility's capital structure.

¹³⁰ We also note that the Commission is not bound by state commission decisions when examining wholesale rates. See, e.g., *Piedmont Mun. Power Agency v. Duke Energy Carolinas, LLC*, 162 FERC ¶ 61,109, at P 32 (2018).

¹³¹ PG&E Filing, Ex. PGE-0010A (Testimony of Ned. W. Allis) at 9, Table PGE-0010A-2.

¹³² Net salvage is a part of depreciation and either subtracts from or adds to what a company may collect through depreciation, depending on whether, on a net basis, a company received funds upon the retirement of an item, or incurred costs to retire an item. PG&E proposes net salvage amounts that add to depreciation in all of its accounts, ranging in amounts from 20% to 110% of the original costs.

to determine the depreciation rates. Using this methodology, PG&E proposed a composite depreciation rate of 3.26%.¹³³

61. TANC and Trial Staff followed the same methodology in calculating their proposed depreciation rates. TANC recommended reducing that rate to 1.94%, which would lower PG&E's proposed Transmission Revenue Requirement (TRR) by \$119 million.¹³⁴ Trial Staff proposed a composite rate of 2.08%, which would lower PG&E's proposed TRR by \$107 million.¹³⁵ Two of the components that factor into the calculation of the depreciation rates were disputed by the parties and are discussed below – the average remaining lives and net salvage amounts.

1. Average Remaining Service Lives and Dispersion Patterns (i.e., Iowa Curves)

62. The term “survivor curve,” as used by the participants in this proceeding, describes two patterns that are depicted on graphs. One is a pattern of small triangles or squares that depict an account's historic retirement dispersions—the percentage of facilities retired at different ages. These are referred to as “observed survivor curves.” The other is a smooth curve that purports to depict the account's future dispersion patterns. The participants have selected these curves from a family of 31 standardized survivor curves called “Iowa Curves”¹³⁶ that provide standardized patterns of retirement dispersion.¹³⁷ Average remaining life is determined by calculations involving the portion of the graph below the curve.¹³⁸

a. Initial Decision

63. The Presiding Judge explained that three categories of Iowa Curves, designated by the letters L, S and R,¹³⁹ are relevant to this proceeding, and that each letter represents a

¹³³ Ex. PGE-0010A at 6:7-10, 8, Table PGE-0010A-1.

¹³⁴ TANC, Ex. TNC-0005 (Testimony of James Garren) at 8, Table TNC-0005-1.

¹³⁵ Trial Staff, Ex. S-0001 (Testimony of Kevin J. Pewterbaugh) at 4:11-14, 7:14-15.

¹³⁶ So called because they were developed at Iowa State University.

¹³⁷ Ex. TNC-0005 at 11-12.

¹³⁸ For a more detailed description of how Iowa Curves work, see Initial Decision, 165 FERC ¶ 63,001 at PP 214-224.

¹³⁹ These letters describe the location of the mode relative to the average service

different dispersion pattern and also have numerical suffixes that differentiate the dispersion patterns further, *e.g.*, “R1,” “S2,” *etc.*¹⁴⁰ The Presiding Judge stated that the curves also have numerical prefixes that designate the average service life of the facilities (the number of years that a new unit of plant is expected to last).¹⁴¹

64. The Presiding Judge stated that before selecting an Iowa Curve, one must organize the historical data that shows past dispersion patterns; one means of doing so is to create an “original life table”¹⁴² and then use computer programs to mathematically determine which Iowa Curves most closely match the data in the original life tables.¹⁴³ The Presiding Judge stated that the programs use a “least squared differences” approach to determine the best mathematical fit, in which they square the difference between each data point contained in the original life table and the corresponding data point graphically represented in the Iowa Curve. The Iowa Curve with the least difference from the original life table is deemed the best mathematical fit.¹⁴⁴ The Presiding Judge stated that there are two methods of developing data with which to populate original life tables; (1)

life of the facility. An “S” (symmetrical) curve would be used if the mode coincides with the average service life; an “L” curve if the mode was at a younger age than (to the left of) the average service life; and an “R” curve if the mode falls after (to the right of) the average service life.

¹⁴⁰ Initial Decision, 165 FERC ¶ 63,001 at P 217 (citing Ex. PGE-0010A at 16:27-17:6, 18-22).

¹⁴¹ *Id.* (citing Ex. TNC-0005 at 4:15-16). For example, an Iowa Curve designated 48-S1 is designed to fit facilities with an S1 dispersion pattern and an average service life of 48 years.

¹⁴² An original life table contains six columns showing: (1) the age of the plant component, starting with 0.0 years, moving to 0.5 years, then proceeding at one-year intervals and ending with the oldest component; (2) the remaining accruals (the dollar amount that remains exposed to depreciation) at the beginning of each age interval; (3) the dollar amounts of the plant retirements during the age interval; (4) the retirement ratio (the ratio of the dollar amount of retirements during the interval to the dollar amount of the remaining accruals at the beginning of the interval); (5) the survival ratio (the ratio of the dollar amount of remaining accruals at the end of the interval to the dollar amount of the remaining accruals at the beginning of the interval); and (6) the percentage of surviving plant at the beginning of each interval. For an example, see PG&E’s original life tables for its Account No. 352.01, contained on pages 4-9 of Exhibit PGE-0029.

¹⁴³ Initial Decision, 165 FERC ¶ 63,001 at PP 218-220.

¹⁴⁴ *Id.* PP 220-224.

the “actuarial” method, which is based on actual historical data, and (2) the STAGE method, which involves statistical aging of PG&E’s facilities to calculate their likely vintages.¹⁴⁵ The Presiding Judge explained that another means of organizing unaged historical data is the Simulated Plant Record, which does not involve creation of original life tables.¹⁴⁶ The Presiding Judge stated that this method is used if the retirement dates or annual plant balances are known, but the vintages of the facilities are either not available or the paucity of data regarding such vintages precludes reliance upon them.¹⁴⁷ The Presiding Judge found that the actuarial method appeared to be the most reliable way of the three methods of organizing the data used to mathematically or visually compare the various curves.¹⁴⁸

65. The Presiding Judge noted that the participants actively dispute nine of the ten accounts, agreeing that the Iowa Curve selected for Account 352.02 should be the same as that selected for Account 352.01, because the former account lacks sufficient data upon which to otherwise select an appropriate curve.¹⁴⁹ The Presiding Judge stated that although PG&E, TANC, and Trial Staff all performed mathematical computations ranking Iowa Curves on a least squared basis, PG&E provided no mathematical analysis to support its Iowa Curve recommendations¹⁵⁰ and TANC’s analyses were suspect because they used the less accurate STAGE method and contained mathematical errors.¹⁵¹ The Presiding Judge found that the analyses Trial Staff prepared using PG&E’s actuarial tables are based on the soundest underlying data, and gave weight to the proposed Iowa Curves that most closely resemble the Iowa Curves ranked in Trial Staff’s mathematical analyses.¹⁵²

66. The Presiding Judge stated that TANC’s witness added data points with zero data to his original life tables, which make it more likely that his mathematical and visual

¹⁵² *Id.* PP 255-262.

comparisons will favor Iowa Curves that dictate longer average remaining lives and, therefore, lower depreciation rates, while PG&E's decisions to exclude selected data points beyond certain ages invariably favor Iowa Curves that dictate shorter average remaining lives and, therefore, higher depreciation rates.¹⁵³ Specifically, the Presiding Judge observed that PG&E's witness effectively disregards from 20 to 56 data points in his curve-fitting analysis of the nine disputed accounts.¹⁵⁴

67. The Presiding Judge explained that the National Association of Regulatory Utility Commissioners' 1996 publication, *Public Utility Depreciation Practices* (NARUC Manual), provides an authoritative reference for determining when exclusions of data, called "Truncation Cuts" or "T-cuts", are advisable and when they are not.¹⁵⁵ The Presiding Judge stated that PG&E's assigning less importance to certain data points is equivalent to eliminating them by T-cut.¹⁵⁶ The Presiding Judge explained that the purpose of T-cuts is to remedy irregular dispersion patterns and other irregularities, and that the NARUC Manual places principal emphasis on bimodality, which occurs when retirements hit a second peak in the frequency of retirements, each with its own mode.¹⁵⁷ The Presiding Judge stated that the NARUC Manual identifies two ways in which T-cuts can undermine the reliability of a service life analysis and should not be used: (1) a T-cut that excludes only a few ages can change the shape and remaining life of the best fit curve; and (2) T-cuts can create a "stub curve," which is an observed survivor curve that does not reach 0% surviving.¹⁵⁸ The Presiding Judge noted that the NARUC Manual also states that problems are exacerbated when the T-cut occurs near the mode of the retirement frequency curve, i.e., the steepest portion of the survivor curve and therefore, T-cuts near or at the mode of the retirement frequency curve should be avoided.

¹⁵³ *Id.* P 275.

¹⁵⁴ *Id.* P 270 & Table 3.

¹⁵⁵ *Id.* PP 276-277 & n.340 (citing Ex. TNC-0217 (excerpts from the NARUC Manual) at 2).

¹⁵⁶ *Id.* P 278.

¹⁵⁷ *Id.* PP 278-280. In statistics, the mode of a data set is the value that appears most often. As relevant here, it is the point, measured in years, when retirements in terms of historic installed costs are most frequent.

¹⁵⁸ Initial Decision, 165 FERC ¶ 63,001 at PP 284-287. The NARUC Manual explains that because the average remaining life is represented by the area under the complete curve, stub curves must be smoothed and extended to 0% surviving. NARUC Manual at 120.

68. The Presiding Judge observed that PG&E's T-cuts create problems against which the NARUC Manual cautions, including making T-cuts at or near the mode of the retirement frequency curve, or making T-cuts before the mode year.¹⁵⁹ The Presiding Judge also stated that the NARUC Manual cautions against the creation of stub curves that do not extend beyond 50% surviving, and noted that a number of PG&E's visual T-cuts occur well above that percentage.¹⁶⁰ The Presiding Judge stated that the Commission requires justifications for exclusions of data made in the course of service life estimates, and that PG&E did not provide adequate justifications for its T-cuts.¹⁶¹

69. The Presiding Judge provided a comparison of the Iowa Curves selected by the participants for each of the nine disputed accounts.¹⁶² The Presiding Judge found that for all nine accounts, PG&E employed T-cuts without adequate justification, which resulted in PG&E selecting Iowa Curves with shorter average remaining lives and thus higher depreciation rates. The Presiding Judge thus concluded that Trial Staff's proposed Iowa Curves were the most appropriate of those proposed for the transmission accounts at issue. The Presiding Judge found that, as a prerequisite to its depreciation rates being deemed just and reasonable, PG&E must recalculate those rates using the average remaining lives that Trial Staff prescribed. The Presiding Judge made similar findings for all of the accounts – that PG&E employed T-cuts without adequate justification.¹⁶³

70. With respect to Account 354 – Towers and Equipment, the Presiding Judge stated that TANC and Trial Staff selected an 86-R2.5 curve, and PG&E selected a 75-R4 curve.¹⁶⁴ The Presiding Judge explained that Trial Staff's mathematical analyses, using

¹⁵⁹ Initial Decision, 165 FERC ¶ 63,001 at PP 288-298.

¹⁶⁰ *Id.* PP 297-299. The Presiding Judge noted that the NARUC Manual allows that creation of such a curve may be permissible if the curve has so few retirements that no placement band meets that test. *Id.* at n.364.

¹⁶¹ *Id.* P 300 & n.366 (citing *S. Cal. Edison Co.*, 53 FERC ¶ 61,408, at 62,428 n.92 (1990) (rejecting average service life estimates where “the selective exclusion of certain of Edison's recorded data has not been justified”) (*1990 SoCal Edison Order*)).

¹⁶² *Id.* PP 310-486. As noted above, all participants agreed to use the same Iowa Curve selected for Account 352.02 as the one selected for Account 352.01.

¹⁶³ We discuss two of the accounts as discussed in the Initial Decision and in our determination below, as they illustrate the rationale that is applicable to all of the accounts.

¹⁶⁴ Initial Decision, 165 FERC ¶ 63,001 at P 360 (citing Ex. TNC-0005 at 39:5-11, 41:3-6; Ex. S-0001 at 28:7-29:5; Ex. PGE-0029 (Workpapers Supporting Ex. PGE-001A)

the actuarial, STAGE and Simulated Plant Record methods, taken together, strongly favor the 86-R2.5 curve.¹⁶⁵ The Presiding Judge included Figure PGE-0045-16 from PG&E's rebuttal testimony, which visually compares the 86-R2.5 curve and the 75-R4 curve with a STAGE observed survivor curve:

71. First, the Presiding Judge stated that a visual comparison of the two curves with a STAGE-observed survivor curve favors the 86-R2.5 curve.¹⁶⁶ Specifically, the Presiding Judge stated that although the 75-R4 curve more closely tracks the original curve through roughly age 62, the 86-R2.5 more closely tracks the original curve through the remaining years, which end at 96.5.¹⁶⁷ Next, the Presiding Judge noted that in the workpapers accompanying direct testimony, PG&E made a T-cut at age 79.5, justified on the ground

at 47)).

¹⁶⁵ *Id.* PP 361-363.

¹⁶⁶ *Id.* PP 364-366.

¹⁶⁷ *Id.* P 365.

that retirement ratios decreased significantly beyond that age.¹⁶⁸ However, the Presiding Judge stated that documents provided by PG&E during discovery showed that 2,683 of PG&E's steel structures are between 104 and 113 years old, and thus rejected PG&E's justification.¹⁶⁹

72. The Presiding Judge stated that PG&E's witness did not point to any dispersion irregularities discussed in the NARUC Manual that might serve as a justification for any of his T-cuts in his written testimony and data responses, but during his cross-examination at hearing, he invoked bimodality as a basis for his disregard of data points beyond a certain age.¹⁷⁰ The Presiding Judge stated that PG&E's witness cited to a large flat area beginning around age 75, arguing that it indicated bimodality.¹⁷¹ However, the Presiding Judge found that PG&E's description of bimodality does not comport with the NARUC Manual's definition as "the presence of two peaks on the retirement frequency curve,"¹⁷² i.e., two modes, rather than the existence of two trends in that pattern. The Presiding Judge also concluded that the observed survivor curve for Account 354 fit the description of bimodality contained in the NARUC Manual.¹⁷³

73. Further, the Presiding Judge found that PG&E's witness' "evolving" attempts to defend his T-cut for Account 354 do not survive scrutiny and that his placement of that T-cut disregards the instructions contained in the NARUC Manual.¹⁷⁴ The Presiding Judge stated that PG&E's witness makes his T-cut near the mode year of 79.5, and that this mode year is greater than the 75 year average service life of his selected Iowa Curve. Also, the Presiding Judge stated that although the NARUC Manual cautions against creating stub curves that terminate above 50% surviving, PG&E's witness creates a stub curve that terminates at 67.98% surviving. For these reasons, the Presiding Judge declined to adopt PG&E's proposed 75-R4 curve for this account. The Presiding Judge

¹⁶⁸ *Id.* P 368 and n.441 (citing Ex. PGE-0029 at 49; Ex. TNC-0216 (PG&E Data Response) at 2).

¹⁶⁹ *Id.* P 374 & n.455 (citing Ex. PUC-0161 (PG&E Data Response) Atch03 at tab "Total summary – pareto", columns A-B, line 18).

¹⁷⁰ *Id.* PP 377-378. As noted above, bimodality occurs when retirements hit a second peak in the frequency of retirements, each with its own mode.

¹⁷¹ *Id.* P 379 & n.465 (citing Tr. 1656:13-14 (Allis)).

¹⁷² *Id.* P 380 & n.467 (citing Ex. TNC-0217 at 2).

¹⁷³ *Id.* P 381.

¹⁷⁴ *Id.* PP 382-383.

also stated that because Trial Staff's mathematical analysis strongly favors the 86-R2.5 curve and a visual comparison also favors it, one must conclude that the 86-R2.5 curve best predicts Account 354's future dispersion patterns.¹⁷⁵

74. With respect to Account 356 – Overhead Conductors and Devices, the Presiding Judge stated that TANC selected an 89-L0.5 curve, Trial Staff selected an 83-S0.5 curve, and PG&E selected a 65-R2 curve.¹⁷⁶ The Presiding Judge stated that Trial Staff's mathematical analyses most favor TANC's 89-L0.5 curve and Trial Staff's 83-S0.5 curve over PG&E's 65-R2 curve.¹⁷⁷ The Presiding Judge included a graph that visually compared the three curves with the observed survivor curves prepared by PG&E using the actuarial and STAGE methods, shown here:¹⁷⁸

¹⁷⁵ *Id.* P 384.

¹⁷⁶ *Id.* P 412 (citing Ex. TNC-0005 at 46:8-10; Ex. S-0001 at 29:6-10; Ex. S-0003 (Supporting Schedules of Kevin J. Pewterbaugh) at 14; Ex. PGE-0029 at 75).

¹⁷⁷ *Id.* P 416.

¹⁷⁸ *Id.* P 418 & n.507 (citing Ex. PGE-0045 at 37&79). The Presiding Judge noted that TANC created this graph in its initial brief by overlaying two graphs in PG&E's witness' rebuttal and that PG&E did not dispute the accuracy of TANC's overlay.

75. The Presiding Judge rejected TANC’s 89-L0.5 curve on two bases, first because it projects a retirement-of-last-unit year that is roughly 2.9 times the average service life of the curve, and second, based on Trial Staff’s un rebutted statement that such a projection is not an accurate forecast of electric transmission plant dispersion.¹⁷⁹ Next, the Presiding Judge stated that the comparison between the two remaining Iowa Curves and the actuarial-observed survivor curve (consisting of triangles) and STAGE-observed survivor curve (consisting of squares) favor PG&E’s 65-R2 curve for the first 70 years and 60 years, respectively. However, the Presiding Judge stated that thereafter, the comparisons favor Trial Staff’s 83-S0.5 curve.¹⁸⁰

76. The Presiding Judge stated that PG&E’s witness, in his direct testimony, made a T-cut at age 60.5, stating in his workpapers that he gave “more consideration” to data points through this age because the data through that age fit “mid-mode R curves” the best, and contending that the later ages showed “a trend toward a lower mode curve with a very long tail”, which in turn indicated “maximum lives far beyond what could

¹⁷⁹ *Id.* P 419.

¹⁸⁰ *Id.* P 421.

reasonably be expected for overhead conductors and devices.”¹⁸¹ The Presiding Judge observed that in his rebuttal testimony, PG&E’s witness took a different tack, stating that “data points through around age 50 should be given more consideration than later data points” and that “data beyond age 50 ... should be given less consideration than that of data up around 50 or 55.”¹⁸² The Presiding Judge stated that, although PG&E’s witness was not clear on whether the T-cut is to be made at age 50.5 or 55.5, he clearly disregarded data points beyond the latter year.

77. In addition, the Presiding Judge found that PG&E first justified T-cuts in general by noting that the value of exposures decreases as the facilities age.¹⁸³ The Presiding Judge stated that although the NARUC Manual acknowledges that a low level of exposures can produce irregularities, he noted that the exposure level for Account 356 is \$62,070,239 at age 55.5, which is not a level that would create dispersion irregularities.¹⁸⁴ The Presiding Judge stated that PG&E further contends that its truncation of data is warranted, because “the retirement pattern begins to change between ages 50 and 60” and “[t]he initial pattern is consistent with the mortality characteristics of the assets in the account, whereas the trend in later ages is not.”¹⁸⁵ The Presiding Judge stated that to demonstrate the alleged change in the retirement pattern, PG&E’s provides a graph that includes all of the historical data points for Account 356, shown here:¹⁸⁶

¹⁸¹ *Id.* P 423 & n.510 (citing Ex. PGE-0029 at 75).

¹⁸² *Id.* P 424 & nn.511, 512 (citing Ex. PGE-0029 at 41).

¹⁸³ *Id.* P 425 & n.513 (citing Ex. PGE-0045 at 39:11-30 (citing Ex. PGE-0029 at 78-79 (original life tables using STAGE method))).

¹⁸⁴ *Id.* P 425.

¹⁸⁵ *Id.* P 426 & n.517 (citing Ex. PGE-0045 at 40:8-12).

¹⁸⁶ *Id.* P 427 & n.518 (citing Ex. PGE-0045 at 40, Figure PGE-0045-5).

78. The Presiding Judge stated that the graph provides no visual support for PG&E's contention that there is a material change in the retirement pattern "between ages 50 and 60" and that a change in the observable trend reflected in the historical data would not justify excluding evidence of that trend from its study.¹⁸⁷ The Presiding Judge found that PG&E's witness provided no evidence of the irregularities cited in the NARUC Manual that might justify his T-cuts, such as bimodality or irregularities due to inadequate exposures. The Presiding Judge explained that PG&E's T-cut is 19.5 data points before the mode of the selected Iowa Curve and therefore can fit any number of curves, and that this problem is exacerbated by the fact that the mode year of the selected curve, 74.5, is appreciably greater than his proposed average service life of 65 years. Accordingly, the Presiding Judge rejected PG&E's T-cut for Account 354.¹⁸⁸

79. The Presiding Judge noted that PG&E claimed that Trial Staff's curve was deficient because it assumed approximately one-third of PG&E's overhead conductors,

¹⁸⁷ *Id.* P 428.

¹⁸⁸ *Id.* P 430.

totaling approximately 6,000 miles, will be in service for more than 100 years. The Presiding Judge stated that PG&E's witness said that "estimate forecasts that over 30% of the assets in the account will be in service more than 100 years, despite that (*sic*) none have actually reached that age."¹⁸⁹ The Presiding Judge asserted that a spreadsheet PG&E provided in response to a CPUC data request contradicted this contention, stating that, as of 2016, 575 of PG&E's transmission overhead conductors had been in service 100 years or longer, some as long as 114 years.¹⁹⁰ The Presiding Judge noted that PG&E argued that the foregoing is a misinterpretation of the spreadsheet, because the data response states that the installation dates of 1900 and 1901 are default dates that PG&E filled in because it lacked the actual dates and that 1910, 1911 and 1912 are typographical errors for 1901.¹⁹¹ However, the Presiding Judge stated that a review of the spreadsheet shows this to be a disingenuous argument, explaining that although the vintage dates 1900 and 1901 appear frequently, the spreadsheet contains numerous other overhead conductors over 100 years old with installation dates not covered by the explanation contained in PG&E's data response, including 1902, 1903, 1906-1909, and 1913-1915, noting that the installation dates 1910-1912 appear infrequently.¹⁹²

80. The Presiding Judge also stated that the assumption that over 6,000 miles of PG&E's transmission overhead conductors will remain in service for more than 100 years is directly supported by PG&E's historical data.¹⁹³ The Presiding Judge explained that age 96.5 is the oldest vintage shown in PG&E's actuarial original life table for Account 356, and the percent surviving associated with that age is 35.16%. The Presiding Judge noted that as of 2016, PG&E had 18,437 miles of overhead conductors, thus 6,000 miles would represent 32.54% of the assets in this account.¹⁹⁴ The Presiding Judge opined that it is reasonable to predict that the percent surviving at age 100.5 will be reasonably close to 32.54%.

¹⁸⁹ *Id.* P 432 & n.522 (citing Ex. PGE-0045 44:6-10).

¹⁹⁰ *Id.* P 433 & n.523 (citing Ex. PUC-0184 (PG&E Data Response); Ex. PUC-0184Atch01 at tab "Transmission OH Conductor").

¹⁹¹ *Id.* P 434 & n.524 (citing PG&E Reply Br. at 67 (citing Ex. PUC-0184Atch01)).

¹⁹² *Id.* P 435 & n.525 (citing Ex. PUC-0184, Att. 01 at tab "Transmission OH Conductor").

¹⁹³ *Id.* P 437.

¹⁹⁴ *Id.* & n.528 (citing Ex. PUC-0107 (PG&E Data Response) at 96).

81. Finally, the Presiding Judge noted that PG&E contended that the foregoing argument is based on one data point, which, in turn, is “based on a very small amount of data for assets that are not representative of PG&E’s current transmission system” and should be eliminated by a T-cut.¹⁹⁵ The Presiding Judge stated that in forecasting percent surviving for years not covered by the original life table, one necessarily starts with the last data point, which will probably exhibit relatively low dollar values for retirements and exposures, and that PG&E does not explain why these dollar amounts should somehow invalidate the forecast of percent surviving and therefore rejected PG&E’s argument on this point. The Presiding Judge then concluded that Trial Staff’s mathematical analyses and PG&E’s visual comparison favor the 83-S0.5 curve, and that curve most accurately predicts the future retirement patterns of Account 356.¹⁹⁶

b. Briefs on Exceptions

82. PG&E argues that the Initial Decision erred by adopting the recommendations of Trial Staff’s witness, who recommended unreasonably long service life parameters that were not supported by the record.¹⁹⁷ PG&E asserts that Trial Staff’s proposals for calculating average service lives would result in PG&E having longer average service lives than similarly-situated utilities in California, namely Southern California Edison Company (SoCal Edison) and San Diego Gas & Electric Company (SDG&E).¹⁹⁸ Next, PG&E argues that the Initial Decision focuses almost exclusively on the mathematical life analyses of each party without giving weight to life estimation, which is based on informed judgment and is supported by the NARUC Manual, adding that PG&E’s witness has physically inspected PG&E’s property, while Trial Staff’s and TANC’s witnesses have not.¹⁹⁹

83. PG&E objects to the Initial Decision’s finding that its witness provided no mathematical analysis to support his Iowa Curve recommendations, arguing that its witness provided detailed mathematical and visual analyses of each plant account in his direct testimony and in responses to numerous data requests.²⁰⁰ PG&E also argues that the Initial Decision erred in interpreting the Commission’s statement in a 1990 SoCal

¹⁹⁵ *Id.* P 438 & n.530 (citing PG&E Reply Br. at 67).

¹⁹⁶ *Id.* P 439.

¹⁹⁷ PG&E Brief on Exceptions at 35.

¹⁹⁸ *Id.* at 36-38.

¹⁹⁹ *Id.* at 39-41.

Edison decision as being applicable to the use of T-cuts, contending that the discussion in that decision is related to net salvage analysis rather than life analysis.²⁰¹ PG&E contends that the Initial Decision incorrectly concluded that its witness uses selective information in plotting the graphs for his visual comparison, asserting that he provided graphs using both the actuarial and STAGE methods.²⁰²

84. PG&E also objects to the Initial Decision's finding that no T-cuts should be made for any account, arguing that the NARUC Manual states that careful selection of a T-cut can greatly enhance the reliability of the analysis.²⁰³ PG&E states that the Initial Decision relies on the NARUC Manual advising against making a T-cut at or near the mode of the survivor curve and against using a short stub survivor curve. PG&E contends that considerations such as bimodality and making a T-cut near the mode of the curve are often in conflict and the analyst must use informed judgment to weigh the competing factors and make the most reasonable determination. PG&E argues that its witness considered these factors while Trial Staff's and TANC's witnesses did not.²⁰⁴

85. Next, PG&E takes issue with the Presiding Judge's perception that its witness' technical explanations of his actuarial analysis in discovery, rebuttal, and cross-examination appear to have "evolved."²⁰⁵ PG&E argues that its witness' terminology only slightly changed to describe a significant decrease in retirements, and to explain the meaning of his words used to describe "trends in the data," "leveling-off period," and "bimodality" were the same.²⁰⁶ PG&E asserts that it was appropriate for its witness to make T-cuts to ensure the results of the analyses reflected the most reasonable estimate of the future.²⁰⁷

86. PG&E focuses on Account 354, Towers and Equipment to demonstrate that its T-cuts are appropriate.²⁰⁸ It explains that the discussion of T-cuts in the NARUC Manual is

²⁰¹ *Id.* at 41-42 and n.151 (citing *1990 SoCal Edison Order*, 53 FERC at 62,427-428).

²⁰² *Id.* at 42-43.

²⁰³ *Id.* at 43-46.

²⁰⁴ *Id.*

²⁰⁵ *Id.* at 44.

²⁰⁶ *Id.* at 45.

²⁰⁷ *Id.*

²⁰⁸ *Id.* at 47. PG&E states that it takes exception to the rulings on each account but

in a section on “Data Irregularities,” and contends that PG&E’s data reflects these irregularities.²⁰⁹ It notes that older data for much of its transmission assets are typically things such as lines running to old power houses in the mountains, which its witness claimed were not representative of PG&E’s assets generally and are not subject to upgrades and capacity increases that have happened as the load in California has grown much more significantly over the last 60 years.²¹⁰ In support of this assertion, PG&E depicts a graph for Account 354, indicating the types of data irregularities to which the NARUC Manual speaks.²¹¹ PG&E explains that, from age 75 through age 90, there is a clear leveling-off period followed by another decrease in the curve, representing a “stair step” pattern, and that from age 80 through 100, the data level off and then exhibit a second steeper grade of the curve, demonstrating a second mode and thus bimodality.²¹² PG&E notes that the NARUC Manual advises that it is appropriate to use a T-cut to remove these irregularities. PG&E states that the Presiding Judge relies on the NARUC Manual’s advice that a T-cut should not be made near the mode of the curve. However, PG&E argues that since Account 354 exhibits bimodality, and because the leveling-off and a second mode occurs beginning around age 75, it would be impossible to make a T-cut that eliminates bimodality while also making a T-cut that is not near the mode of the survivor curve.²¹³ PG&E contends that the realities of the historical data for Account 354 mean that not all of the NARUC Manual’s instructions on the use of a T-cut can be simultaneously satisfied, and that PG&E must instead use informed judgment to determine which of the competing instructions is more important – removing bimodality or making a T-cut near the mode of the curve.

87. PG&E asserts that the NARUC Manual recognizes the need to consider all information and make an appropriate, informed determination.²¹⁴ PG&E argues that in

has focused its objections and on support for PG&E’s witness’ use of a T-cut by focusing its discussion and analysis of the rulings for Account 354.

²⁰⁹ *Id.*

²¹⁰ *Id.*

²¹¹ *Id.* at 48.

²¹² *Id.* at 48-50.

²¹³ *Id.* at 51.

²¹⁴ *Id.* at 52 & n.186 (citing Ex. S-0041 (Excerpts from NARUC Manual) at 2). PG&E explains that when discussing stub survivor curves, the NARUC Manual states that “the analyst may be forced to choose between a more reliable longer stub, which by necessity reflects older data, and a less reliable shorter stub, which reflects more recent

this case, elimination of bimodality is more important than avoiding making a T-cut near the mode of the curve.²¹⁵ PG&E therefore argues that the Initial Decision's adoption of Trial Staff's proposals and its rejection of the "informed judgment" provided by its witness as required under the Commission's rules, authoritative depreciation textbooks, and longstanding depreciation practices was clearly improper.²¹⁶ PG&E also objects to the Initial Decision's conclusion that its witness had "no technical training that would allow him to visually or technically understand the life characteristics of transmission equipment," stating that its witness is a trained and certified depreciation expert.²¹⁷

88. Finally, PG&E states that the Initial Decision's adoption of Trial Staff's survivor curves means that the Commission believes that one third of PG&E's overhead conductors - over 6,000 circuit miles of conductor - will be in service for more than 100 years.²¹⁸ PG&E argues that this expectation is inconsistent with both engineering studies and industry information, both of which support maximum lives of these assets in the 80- to 90-year range, and is inconsistent with common sense.²¹⁹

c. Briefs Opposing Exceptions

89. TANC contends that since PG&E did not provide supporting argumentation for its exceptions to the Initial Decision's specific findings on the plant accounts other than Account 354, PG&E has waived its right to challenge any of the Initial Decision's determinations on those nine accounts.²²⁰ TANC and Trial Staff also contend that the Initial Decision thoroughly analyzed the testimony and arguments of all three depreciation witnesses in this case and correctly determined that the Iowa Curves proposed by Trial Staff are the appropriate and reasonable curves for PG&E's transmission plant accounts.²²¹ TANC argues that the conclusion in the Initial Decision

vintages and, therefore, is more likely to reflect the future."

²¹⁵ *Id.*

²¹⁶ *Id.* at 52-53.

²¹⁷ *Id.* at 54 & n.196 (citing Initial Decision, 165 FERC ¶ 63,001 at P 307).

²¹⁸ Although PG&E focuses its arguments on Account 354, this specific argument goes to Account 356 (Overhead Conductors and Devices).

²¹⁹ PG&E Brief on Exceptions at 54-55.

²²⁰ TANC Brief Opposing Exceptions at 54-56.

²²¹ *Id.* at 56-57; Trial Staff Brief Opposing Exceptions at 19-27.

that its witness used selective information in plotting the graphs for his visual comparison is supported by the record evidence.²²² Trial Staff states that it used the most complete set of PG&E's historical data and also applied all of the available mathematical Iowa Curve fitting methodologies to select the best fitting Iowa Curves.²²³

90. TANC and Trial Staff argue that the Commission should reject PG&E's claim that the Iowa Curves need to be consistent with those used by SoCal Edison and SDG&E, arguing that a utility's depreciation rate should be determined through an independent review of that utility's actual historical data rather than other utilities' experience.²²⁴ TANC contends that the Commission should reject PG&E's arguments that the Initial Decision erred in finding that its witness has provided no mathematical analyses to support his Iowa Curve recommendations.²²⁵ TANC notes that the Initial Decision did acknowledge the existence of PG&E's witness' mathematical analyses, but ultimately determined that the analysis did not support his Iowa Curve recommendations. TANC also argues that PG&E is incorrect in its claim that the Initial Decision erred in interpreting the Commission's statement in an earlier decision to the effect that "[t]he Commission requires justifications for exclusions of data made in the course of service life estimates," as being applicable to the use of a truncation cut or T-cut.²²⁶

91. TANC and Trial Staff contend that the Commission should affirm the Initial Decision's finding that PG&E's witness failed to justify the exclusion of significant amounts of PG&E's historical data from his Iowa Curve analysis through the use of T-cuts.²²⁷ TANC contends that PG&E's attempt to justify its T-cut for Account 354 remains unpersuasive and should be rejected for the same reasons provided by the Initial Decision. Trial Staff states that the NARUC Manual makes it clear that T-cuts are only appropriate when needed to exclude unreliable data, but that PG&E's T-cuts remove important actual data, which makes its proposed results unreasonable.²²⁸

²²² TANC Brief Opposing Exceptions at 62-64.

²²³ Trial Staff Brief Opposing Exceptions at 20.

²²⁴ TANC Brief Opposing Exceptions at 58-60; Trial Staff Brief Opposing Exceptions at 21-22.

²²⁵ TANC Brief Opposing Exceptions at 60-64.

²²⁶ *Id.* at 61-62 (citing *1990 SoCal Edison Order*, 53 FERC ¶ 61,408).

²²⁷ *Id.* at 64-69; Trial Staff Brief Opposing Exceptions at 24-27.

²²⁸ Trial Staff Brief Opposing Exceptions at 24-25.

92. Trial Staff explains that the Initial Decision carefully analyzed PG&E's complete set of data to determine whether irregularities made the data unreliable, focusing on the possible existence of bimodality, or the presence of two peaks on the retirement curve. Trial Staff asserts that PG&E's conclusory arguments that bimodality justifies its witness' T-cuts falls far short of the NARUC Manual standard, which states that "[m]inor stair steps or flat areas of curves may be ignored. Where appropriate, *significant* occurrences should be removed from consideration."²²⁹ Trial Staff also states that the Initial Decision correctly acknowledged that T-cuts are not appropriate in situations where a T-cut would occur near the mode of a frequency curve or would result in the creation of a stub curve that does not extend beyond 50% surviving.²³⁰ Trial Staff asserts that PG&E's T-cuts are incorrect for these very reasons, stating that for example, in Account 354, PG&E's witness proposes truncating with nearly 70% surviving and makes his T-cut before the mode, a clear violation of the principles set forth in the NARUC Manual.²³¹ Trial Staff concludes that the Initial Decision correctly found that its proposed Iowa Curves are the most appropriate for PG&E's transmission plant accounts at issue and that PG&E must recalculate a composite depreciation rate based on the average remaining lives prescribed by Trial Staff.²³²

d. Commission Determination

93. We affirm the Presiding Judge's determination that Trial Staff's proposed Iowa Curves are the most appropriate for all of the transmission accounts at issue. Our review indicates that the Presiding Judge thoroughly analyzed the record evidence presented by participants in determining which Iowa Curves are the best fit in calculating PG&E's depreciation rates. As an initial matter, with respect to PG&E's assertion that the Initial Decision erred in finding PG&E's witness provided no mathematical analyses, we disagree. The Initial Decision did not find that PG&E's witness provided no mathematical analyses, as PG&E claims; rather the Initial Decision observed the witness' performed mathematical computations ranking Iowa Curves on a least squared basis. However, as discussed below, we find that the witness did not use the results of those analyses for his average service life recommendations. Indeed, PG&E's recommended Iowa Curves were typically located to the left of the truncated original curve (based in part on historical data), which reduces the average service life and results in an increase in the depreciation expense. For the reasons discussed below, we agree with the

²²⁹ *Id.* at 25 & n.82 (citing NARUC Manual at 122 (emphasis added); Ex. TNC-0217 at 2).

²³⁰ *Id.* at 25-26.

²³¹ *Id.* at 26-27.

²³² *Id.* at 27.

Presiding Judge that PG&E's explanations of irregularities in the original curves and justifications for its truncations of data were not persuasive.

94. PG&E argues that the Initial Decision should have given more weight to its service life estimation, which was based on the informed judgment of its witness, who PG&E argues has physically inspected PG&E's property, while Trial Staff's and TANC's witnesses have not. However, as the Presiding Judge observes, PG&E's witness admits that he has visited less than one percent of PG&E's key transmission facilities and admits that he has no technical training that would allow him to visually or technically understand the life characteristics of transmission equipment.²³³ As explained below, we believe that there is adequate support in the record to adopt the service lives recommended by Trial Staff's witness and TANC's witness and this is consistent with the NARUC Manual.²³⁴

95. We also find unpersuasive PG&E's claim that the Iowa Curves need to be consistent with those used by the other investor-owned utilities in California (SoCal Edison and SDG&E). The Presiding Judge stated that, to the extent PG&E is similarly situated with certain other utilities, PG&E's historical dispersion patterns provide a better predictor of its future dispersion patterns than the dispersion patterns of other utilities.²³⁵ We agree. A principal consideration was whether the data in the record is sound and can be used to determine the appropriate Iowa Curves (as advocated by Trial Staff), or if the data is flawed, making it appropriate to exclude significant amounts of older data in determining appropriate Iowa Curves (as advocated by PG&E). While it is acceptable to use data from other utilities if the utility's historical data is lacking or flawed,²³⁶ the record in this proceeding for many of the accounts contains over 100 years of data,²³⁷ and we find that the Presiding Judge carefully examined this record in reaching his conclusions. Moreover, we find that the original life tables provided by PG&E represent

²³³ Initial Decision, 165 FERC ¶ 63,001 at PP 306-307.

²³⁴ NARUC Manual at 128.

²³⁵ *Id.* P 375.

²³⁶ In addressing net salvage values proposed by PG&E and Trial Staff, the Presiding Judge did consider whether values were "in line" with similarly situated SoCal Edison and SDG&E, because no parties in the proceeding accepted PG&E's net salvage data as flawless.

²³⁷ PG&E's plant is grouped in various accounts or asset classes. For most of the asset classes, PG&E provided continuous records of retirements from 1909 through 2015. See Ex. PGE-0010A at 10; Ex. PGE-0029 (showing original life tables with data from 1909 to 2015 for many of the accounts).

a reasonable underlying data set because PG&E used, among other tools, the actuarial method, which the NARUC Manual states is the preferred approach.²³⁸

96. When the Presiding Judge asserted that a spreadsheet PG&E provided in the hearing in response to a CPUC data request stated that, as of 2016, 575 of PG&E's transmission overhead conductors had been in service 100 years or longer, some as long as 114 years,²³⁹ PG&E argued that the foregoing was a misinterpretation of the spreadsheet, because the record evidence states that the installation dates of 1900 and 1901 are placeholder dates that PG&E reflected because it lacked the actual dates and that years reflected as 1910, 1911 and 1912 are typographical errors for the year 1901.²⁴⁰ The Presiding Judge stated that a review of the spreadsheet showed this to be a disingenuous argument, explaining that although the vintage dates 1900 and 1901 appear frequently, the spreadsheet reflected numerous other overhead conductors over 100 years old with installation dates not covered by the explanation contained in PG&E's record evidence, including 1902, 1903, 1906-1909, and 1913-1915, noting that the installation dates 1910-1912 appear infrequently.²⁴¹ PG&E made no other claims that the historical data were flawed or incorrect.²⁴² Therefore, we find that both Trial Staff and the Initial Decision correctly relied on PG&E's actual historical data for determining the appropriate average service lives for the accounts at issue.

97. With respect to the "informed judgment" of PG&E's witness, the Presiding Judge addressed his informed judgment when the witness asserted that the design of certain assets in the account have changed in ways that support a shorter average service life.²⁴³

²³⁸ The NARUC Manual states that actuarial methods yield more reliable results though they require more detailed data than other methods. NARUC Manual at 81, 111.

²³⁹ Initial Decision, 165 FERC ¶ 63,001 at P 433 & n.523 (citing Ex. PUC-0184 (PG&E Data Response); Ex. PUC-0184Atch01 at tab "Transmission OH Conductor").

²⁴⁰ *Id.* P 434 & n.524 (citing PG&E Reply Br. at 67 (citing Ex. PUC-0184Atch01)).

²⁴¹ *Id.* P 435 & n.525 (citing Ex. PUC-0184, Att. 01 at tab "Transmission OH Conductor").

²⁴² We note that PG&E did not squarely assert in its Brief on Exceptions that the historical data were flawed and thus it arguably waived this argument. See 18 C.F.R. § 385.711(c)(2) (2020) (arguments not raised on exceptions to an initial decision are waived). Nonetheless, we address the arguments PG&E raised at hearing on this issue.

²⁴³ Initial Decision, 165 FERC ¶ 63,001 at PP 341-343.

The Presiding Judge explained that in *Southern California Edison*,²⁴⁴ the Commission made clear that service life estimates must be based on more than mere conjecture. In discussing Account 354 (Towers and Fixtures), PG&E's witness acknowledges that most of the best fitting curves have average service lives of 80 years or more – longer than typical estimates of other utilities. He also avers that “higher mode curves are reasonable for towers, as retirements often occur for an entire line (towers and wires) when the line is upgraded or obsolete.”²⁴⁵ Providing justification for his recommended average service life of 75 years, study relied upon by PG&E's witness' explains that older towers were made of lattice steel and newer towers are more often tubular and made with galvanized steel. Noting that PG&E has no plans to paint its lattice towers, PG&E's witness states that although the 500 kV lines are younger in age (35 to 50 years), the towers may not last as long as the older 230 kV lines because the design of the 500 kV towers requires more maintenance.²⁴⁶ We find PG&E's witness' assertions are speculative and will reject them.²⁴⁷

98. Next, we find that PG&E is incorrect in its claim that the Initial Decision erred in interpreting the Commission's statement in the *1990 SoCal Edison Order* to the effect that “[t]he Commission requires justifications for exclusions of data made in the course of service life estimates,” as being applicable to the use of a T-cut. PG&E claims that the discussion in the *1990 SoCal Edison Order* is related to net salvage analysis rather than life analysis, and does not establish precedent with regard to the use of a T-cut. However, we find that the relevant discussion in that order involved SoCal Edison selecting an Iowa Curve using historical data, then shortening the average service life by six years to account for various alleged life-shortening factors. The Commission rejected SoCal Edison's downward adjustment to average service life, finding that selective exclusion of certain of SoCal Edison's recorded data had not been justified.²⁴⁸ We conclude that the Commission's reasoning in the *1990 SoCal Edison Order* is relevant to the selection of the appropriate Iowa Curve in determining PG&E's depreciation rates.

²⁴⁴ *Southern Cal. Edison Co.*, 38 FERC ¶ 61,040, at 61,107 (1987).

²⁴⁵ Exhibit PGE-0029 at page 47 of 122.

²⁴⁶ *Id.*

²⁴⁷ For example, the record includes a 2010 study by Quanta Technology (Quanta Report), commissioned by PG&E as part of its development of a maintenance and inspection program for its steel towers, that shows that with proper maintenance and repairs, PG&E's towers and structures have been shown to be capable of providing service for well over 100 years.

²⁴⁸ See *1990 SoCal Edison Order*, 53 FERC at 62,428 n.92.

99. We agree with the Initial Decision that PG&E has not supported its use of T-cuts. PG&E contends that not all of the NARUC Manual's instructions on the use of a T-cut can be simultaneously satisfied, and that PG&E must instead use informed judgment to determine which of the competing instructions is more important – removing bimodality or making a T-cut near the mode of the curve. However, the NARUC Manual is clear that T-cuts are only appropriate when needed to exclude unreliable data, such as bimodality, and thus careful selection of a T-cut can greatly enhance the reliability of the resulting analysis. As the Presiding Judge stated, PG&E's T-cuts for a number of accounts contravene the instructions contained in the NARUC Manual because they are too close to the mode, or are before the mode even though the mode year is greater than the average service life.²⁴⁹ In addition, the NARUC Manual also cautions against the creation of stub curves that do not extend beyond 50% surviving, but the record shows that a number of PG&E's visual T-cuts occur well above that percentage.

100. Finally, we agree with the findings in the Initial Decision, and the NARUC Manual that caution against considering minor stair steps or flat areas of curves that may be ignored. We first note that PG&E's witness in his written testimony and data responses did not point to any data dispersion irregularities and only during his cross-examination did he invoke bimodality as a basis for his disregard of data points.²⁵⁰ We agree with the Presiding Judge and Trial Staff that PG&E has not supported any bimodality with respect to age. Rather than one or two minor "stair steps" that should be ignored, a mode on a standard retirement frequency curve should dominate several years on either side of the mode with significant retirement experience. However, we do agree with the evidence provided in the Quanta Report that PG&E's 500 kV lines are unique and cannot be compared with other voltage levels and that PG&E's transmission assets experience locational bimodality (explained below). Nonetheless, we find that PG&E's witness failed to provide or support any bimodal retirement frequency curve nor demonstrate any bimodality with respect to age.

101. We note that PG&E's specific arguments in its Briefs on Exceptions focus on Account 354 (Towers and Fixtures), explaining that these arguments applied to all accounts at issue.²⁵¹ In this order, we specifically discuss Account 354 below, as well as Account 356 (Overhead Conductors and Devices), to demonstrate the flaws in PG&E's reasoning. As discussed further below, the flaws in PG&E's reasoning for these two accounts are very similar to the other accounts and thus our determinations with respect

²⁴⁹ Initial Decision, 165 FERC ¶ 63,001 at PP 290-296.

²⁵⁰ *Id.* P 377.

²⁵¹ As noted above, PG&E makes one argument about Account 356 (Overhead Conductors and Devices).

to these two accounts are equally applicable to all of the accounts at issue in this proceeding.²⁵²

102. For Account 354, TANC and Trial Staff selected an Iowa Curve with an 86-year average service life, while PG&E chose one with a 75-year average service life. The Presiding Judge noted that PG&E's witness had chosen to plot only a STAGE observed survivor curve (original) and, in performing this analysis, he had excluded a substantial number of historical data points (specifically, 21 data points from Ages 75.5 to 96.5).²⁵³ In his rebuttal testimony, PG&E's witness justified the truncation on the grounds that the smaller level of exposures beyond age 75 can result in more erratic movement making these older data points less reliable, and the trend in the data beyond age 75 was not consistent with the assets in that account.²⁵⁴ Specifically, PG&E's witness argued that he expected retirements in Account 354 to increase after age 75, not decrease, and for the assets generally to be retired by age 100.²⁵⁵

103. The record evidence in this proceeding undermines PG&E's assumption. Notably, Exhibit PUC-0161, which PG&E provided in discovery, shows that 2,683 of PG&E's steel structures are between 104 and 113 years old.²⁵⁶ Our review of Exhibit No. PUC-0161Atch3 indicates that 11,956 of PG&E's steel structures are aged 88.5 years or older.²⁵⁷ Based on PG&E's claims, these structures are approaching imminent retirement and are at the end of their service life; however, the discovery response also included a document by Quanta Technology²⁵⁸ that states steel structures are durable assets with

²⁵² Because we find our reasoning with respect to Accounts 354 and 356 is applicable to all of the accounts in dispute, we do not address TANC's argument that PG&E's decision to address only Account 354 means that PG&E has waived its right to challenge the Initial Decision's determinations regarding those other accounts.

²⁵³ See *id.* P 270, Table 3.

²⁵⁴ Ex. PGE-0045 at 73.

²⁵⁵ *Id.*

²⁵⁶ Initial Decision, 165 FERC ¶ 63,001 at P 374 & n.455 (citing Ex. PUC-0161 Att. 03).

²⁵⁷ See Ex. PUC-0161 (PG&E Data Response) Atch03 at tab "Total summary – pareto" lines 3-5.

²⁵⁸ Quanta Technology is a PG&E contractor that in 2010 assisted PG&E in designing a maintenance and inspection program for PG&E's steel towers.

long service-life capabilities if properly maintained.²⁵⁹ The document states that the predominant practice in the industry for management of structures is to repair or refurbish structures and components. The document acknowledges that the question of refurbishment or replacement of a structure is largely an economic decision dependent on the degree of deterioration or damage present. As pertinent here, the document states that “the long expected service life of structures, the durability of materials, and the ability to replace parts of the structure or reinforce a foundation, drive a predominant philosophy of repair or refurbish.”²⁶⁰ The Quanta Report also analyzed data for PG&E’s steel structure failures by Damage Type.²⁶¹ The report states that the most frequent age of structure failures²⁶² is around age 40 in the Worn/Aged category, age 50 in the Buckled/Bent category, and age 75 in the Rusted category. However, these Damage Types can occur at any time during a property unit’s life. In addition, the depreciation analyses performed by PG&E’s witnesses ignore all of the steel towers and structures that were installed and have been properly maintained for over 100 years. Accordingly, we disagree with PG&E that their data show any type of irregularities or bimodality after the age of 75 years.

104. PG&E states that the NARUC Manual discusses T-cuts in a section called “Data Irregularities,” and claims that its data experience the types of irregularities described there.²⁶³ PG&E cites its witness’ testimony, in which he claimed that older data for many of PG&E’s assets are typically things such as lines running up mountains to old power houses which are not representative of PG&E’s assets generally. PG&E’s witness went on to explain that these older assets are not subject to things like capacity upgrades that have happened as the load in California has grown much more significantly over the last 60 years. Thus, PG&E’s witness argued that PG&E’s accounts are not, for the most part, fully homogeneous, as that term is defined in the NARUC Manual.²⁶⁴ While the predominant force of retirement for transmission assets over the last 60 years may have been due to upgrades in capacity or re-conductoring of transmission lines, PG&E’s witness did not address whether this dominant trend reflected in his original curve has been increasing or decreasing and they appear to be decreasing over the last 20 years.

²⁵⁹ See Ex. PUC-0161 and Atch04 – Quanta Technologies on Structures at 5, 27.

²⁶⁰ *Id.* at 55.

²⁶¹ Quanta Report at 41-43.

²⁶² The Quanta Report defines “failure” as an indication that a *component* requires significant maintenance or replacement. Failure, as defined, does not mean the complete failure of a structure.

²⁶³ PG&E Brief on Exceptions at 47.

²⁶⁴ *Id.*

Specifically, these upgrades and reconductoring would appear to be a primary reason for structures and towers that could be maintained for well over 100 years to be retired earlier than necessary in their service life and this dominant retirement force should reduce the expected service life of the other remaining units.

105. Accordingly, we believe that an 86-year average service life is the most accurate because it includes all retirements from PG&E's capacity upgrades and all forces of retirement for an assumed largely homogeneous group because there was no evidence shown for the separation of different modes. Specifically, the data that PG&E chose shows only retirements that occurred during the experience band for the years 1999 through 2015 and for all forces of retirement for the installations that occurred from 1919 through 2015.²⁶⁵ The Commission typically determines depreciation rates by FERC Account unless there is evidence shown for the separation of different modes.²⁶⁶ PG&E has not shown good cause to remove its 500 kV system or older transmission lines from its analyses. Thus, the accounts should be treated as homogeneous for the purpose of determining depreciation rates. Accordingly, we reject PG&E's witness' proposed 75-year average service life as unreliable because he unjustifiably excluded significant historical data. We affirm the Presiding Judge's selection of Trial Staff's proposal, and direct PG&E to use an 86-year average service life as conservative because it more closely reflects use of all the historical data for the last 96 years.

106. For Account 356, TANC selected an Iowa Curve with an 89-year average service life, Trial Staff chose one with an 83-year average service life, and PG&E chose one with a 65-year average service life. We find that PG&E has not supported its proposal to use a 65-year average service life, and that the Presiding Judge's selection of Trial Staff's 83-year average service life is the best fit and the most reasonable selection. The Presiding Judge adequately addressed PG&E's argument that selection of Trial Staff's Iowa Curve will assume that over 6,000 circuit miles of overhead conductor could be in service for more than 100 years. With respect to PG&E's concern that selection of Trial Staff's Iowa Curve will assume that conductors will be in service for over 100 years, this concern is due to the tail end of Trial Staff's selected 86-R2.5 dispersion of retirements. However, only the 86-year average service life is used to determine the average remaining life, which ultimately determines PG&E's depreciation expense. The dispersion of retirements is exceptionally wide due to the inclusion of retirements of

²⁶⁵ Ex. PGE-0029 (Workpapers Supporting Ex. PGE-001A) at 81-83).

²⁶⁶ See NARUC Manual at 19 ("Rather than depreciating each item by itself (unit depreciation) or depreciating one single group containing all utility plant, a group contains homogeneous units of plant which are alike in character, used in the same manner throughout the utility's service territory, and operated under the same general conditions").

conductors necessitated from the re-conductor of transmission lines but significant amounts of exposures remaining in service. Specifically, the Presiding Judge stated that a spreadsheet provided by PG&E showed that, as of 2016, 575 of PG&E's transmission overhead conductors had been in service for 100 years or longer, some as long at 114 years.²⁶⁷ However, these 575 strands of conductor were not included the analyses of PG&E's witness.

107. The Presiding Judge noted that 96.5 years was the oldest vintage in PG&E's witness' actuarial life tables for Account 356, and the percent surviving associated with that age is 35.16%.²⁶⁸ PG&E's witness truncated 36 data points (from ages 60.5 – 96.5)²⁶⁹ for this account, explaining that this data was not representative of PGE's transmission system at large. However, PG&E demonstrated no difference between conductor installations over 60 years old or any reason why newer conductor installations could not last as long as the installations that were truncated.

108. PG&E also argues that the 83-year average service life used in Trial Staff's proposed Iowa Curve is inconsistent with both engineering studies and industry information which support maximum lives of these assets in the 80- to 90-year range.²⁷⁰ However, we find that Trial Staff's proposed Iowa Curve with an 83-year average service life is properly within that range. PG&E has not shown any plans to remove large amounts of conductor installations because they have reached the end of their service life and as noted above, its data show that conductors can last more than 100 years. The 83-year average service life reflects the best fit curve for the actuarial data for Account 356 and includes 60 years of re-conductor retirements from PG&E's significant load growth along with all other forces of retirement. Therefore, we affirm the Presiding Judge's selection of Trial Staff's 83-year average service life for Account 356 because it more closely reflects use of all the historical data

109. As to why PG&E's steel structures could last longer than the structures of other California utilities, another PG&E witness states "the length of time that a steel structure could stay in-service is dependent on the characteristics of the location in which that structure is installed."²⁷¹ The evidence in the Quanta Report also supports that PG&E's

²⁶⁷ Initial Decision, 165 FERC ¶ 63,001 at P 433 & n.523 (citing Ex. PUC-0184; Ex. PUC-0184 Att. 01 at tab "Transmission OH Conductor").

²⁶⁸ *Id.* P 437.

²⁶⁹ *Id.* P 270 and Table 3.

²⁷⁰ PG&E Brief on Exceptions at 55.

²⁷¹ Tr. at 1394 (PG&E witness Dasso).

existing steel structures have shown to have average service that are considerably greater than average industry data. Specifically, having studied 796 PG&E records, the Quanta Report concluded that transmission structures located in a coastal region to have peak age [mode] failure of about 60, with the peak age failure for structures in a valley or mountain region about 70.

110. As noted by the Presiding Judge, 96.5 years was the oldest vintage in PG&E's witness' actuarial life tables for all nine disputed accounts. Further, PG&E's witness effectively disregards through his use of T-cuts from 20 to 56 data points in his curve-fitting analysis of the nine accounts.²⁷² His Iowa Curve recommendations typically went through the data until his T-cuts, and then abruptly shifted to the left and downward, which project significant retirement experience, shorter average service lives and average remaining lives, and thus higher proposed depreciation rates. We agree with the Presiding Judge that PG&E's witness' T-cuts for all of the accounts run contrary to the guidance set forth in the NARUC Manual, for example by being too close to or before the mode or resulting in stub curves that do not extend beyond 50% surviving. We agree that PG&E's witness has provided no evidence of the irregularities cited in the NARUC Manual that might justify the foregoing T-cuts, such as bimodality or irregularities due to inadequate exposures. Accordingly, we find that PG&E failed to support its proposed Iowa Curves and affirm the Presiding Judge's determination that Trial Staff's proposed Iowa Curves are the most appropriate for all of the transmission accounts at issue and will produce depreciation rates that are just and reasonable. We therefore direct PG&E to recalculate its proposed depreciation rates on compliance using the average remaining lives that Trial Staff's witness prescribes.

2. Net Salvage and Cost of Removal Ratios

111. Net salvage value is the remaining value of a retired property less the cost incurred to decommission and remove the property. The net salvage ratio is the net salvage value divided by the original cost of the facility being retired, expressed as a percentage.²⁷³ Net salvage ratios are frequently negative because the cost of removing property often exceeds its salvage value at retirement. Negative net salvage ratios increase the overall depreciation expense that must be collected over the useful life of such property.²⁷⁴ The Commission has previously cited the guidelines for depreciation set forth in the NARUC

²⁷² Initial Decision, 165 FERC ¶ 63,001 at P 270 & Table 3.

²⁷³ NARUC Manual at 322; *see also* Initial Decision, 165 FERC ¶ 63,001 at PP 489-490. Hereafter, we will not include the "percent" unit to describe net salvage ratio values.

²⁷⁴ Initial Decision, 165 FERC ¶ 63,001 at P 490.

Manual.²⁷⁵ For net salvage calculation, the NARUC Manual suggests that past salvage and cost of removal data be used to project future values. It also suggests that data should be adequately quality controlled. For example, if certain transactions are considered to be unrepresentative of the future, they should be removed from the data.²⁷⁶ The Commission has typically accepted analysis that uses the straight-line method of depreciation.²⁷⁷ Additionally, the Commission has previously noted that net salvage ratios must be consistent with costs typically seen in the electric industry.²⁷⁸ To that end, industry data may be considered when determining appropriate net salvage ratios.

112. To determine net salvage ratios, PG&E's witness relied heavily on PG&E's historical data from 1996-2015 and considered three-year moving averages and the most recent five-year averages. PG&E's witness noted that costs of removal have been increasing.²⁷⁹ PG&E's witness then created account-by-account recommendations for the net salvage ratios by coupling the historical data with general trends seen by PG&E.

a. Initial Decision

113. The Presiding Judge stated that PG&E's calculations are generally most likely to replicate PG&E's future experiences. To calculate the historical net salvage ratio for its transmission plants, PG&E used historical data to divide the account's annual net salvage cost by the original cost of the facilities retired. PG&E's witness used multiple methodologies to calculate annual net salvage ratios for 1996-2015, including a 20-year average, three-year rolling averages, and a five-year average for 2011-2015. The Presiding Judge concluded that PG&E's methodology is consistent with Commission methodology.²⁸⁰ Although Trial Staff's witness argued that PG&E's witness recommends lower net salvage ratios than historical experience would dictate, the Presiding Judge concluded that PG&E's witness had used historical experience to conservatively adjust the net salvage ratios.

²⁷⁵ See, e.g., *Entergy Servs. Inc.*, 142 FERC ¶ 61,022 at P 40 (2013) (*Entergy Services*).

²⁷⁸ See *Entergy Services*, 143 FERC ¶ 61,116 at P 113.

²⁷⁹ Ex. PGE-001A (Testimony of Ned W. Allis) at 36-41.

²⁸⁰ Initial Decision, 165 FERC ¶ 63,001 at PP 489-501.

114. The Presiding Judge explained that TANC's witness applied two methodologies to calculate net salvage ratios, one consistent with Commission precedent and another method that is non-traditional.²⁸¹ TANC's witness considered the net salvage ratios of 82 companies, reviewing the maximum and minimum net salvage ratios, and the mean, mode, and average ratios. The Presiding Judge observed that TANC's methodology gives more weight to the historical data which TANC's witness perceived to be more reliable.²⁸² However, the Presiding Judge also observed that the companies reflected in TANC's industry analysis did not include any utilities that operate inside California.²⁸³

115. The Presiding Judge next explained Trial Staff's assertion that PG&E's historical data was insufficient, and therefore the net salvage ratios of other companies should be considered. Trial Staff used industry comparisons for 22 companies to calculate the industry average for specific accounts. Trial Staff also examined the historical data provided by PG&E's witness, removed outliers from historical data, and then compiled 20-year average net salvage ratios for each account.²⁸⁴ The Presiding Judge noted that while two California utilities were included in Trial Staff's analysis, they made up only a small percentage of the total industry analysis.²⁸⁵

116. The Presiding Judge rejected several of TANC's arguments. TANC maintained that PG&E's historical data is too flawed to support PG&E's analysis.²⁸⁶ Based on conclusions drawn from a review of workpapers which that accompanied PG&E's witness, TANC contended that PG&E's historic data frequently shows removal costs associated with no retirement assets, as well as negative cost of removal and negative gross salvage values. The Presiding Judge concluded that TANC's counsel was not qualified to review the data and recordkeeping irregularities from an internal audit and how those might bear on a depreciation analyst's ability to use historical data on which those workpapers are based. Further, the Initial Decision noted that TANC's testimony did not raise data concerns, and therefore PG&E was unable to address such concerns in its rebuttal testimony.²⁸⁷ The Presiding Judge also asserted that almost all industry

²⁸¹ *Id.* P 496 (citing Ex. TNC-0005 (Testimony of James Garren)).

²⁸² *Id.* PP 495-497.

²⁸³ *Id.* P 512.

²⁸⁴ *Id.* PP 493-500.

²⁸⁵ *Id.* P 511.

²⁸⁶ *Id.* P 505.

²⁸⁷ *Id.* PP 505-508.

statistics used by Trial Staff and TANC consisted of companies operating outside of California, making them difficult to compare to PG&E. The Presiding Judge noted that PG&E's witness stated that California has higher labor costs and more stringent environmental regulations, which can result in higher removal costs.²⁸⁸

117. The Presiding Judge then considered an account-by account analysis. For Account 352.01 & 352.02, Structures and Improvements, the Presiding Judge determined PG&E's and Trial Staff's net salvage ratio of negative 20%, or (20),²⁸⁹ most appropriate, noting the similarity to SoCal Edison's and SDG&E's values for the same accounts. For Account 353.01, Station Equipment, the Presiding Judge proposed a net salvage of (60), preferring PG&E's methodology and noting that the net salvage ratio is in line with SDG&E's salvage ratio for the same account. For Account 353.02, Step up Transformers, the Presiding Judge stated that historical data should take precedence which the data is adequate and found Trial Staff's recommended net salvage ratio of (1) best suits the account. For Account 354, Towers & Fixtures, the Presiding Judge determined PG&E's witness recommended ratio of (100) is most appropriate, again noting the value is in line with SoCal Edison's and SDG&E's net salvage values for the same account. For Account 355, Poles & Fixtures, the Presiding Judge accepted PG&E's proposed net salvage value of (80), finding the ratios are in line with SoCal Edison's and SDG&E's values for the same account. For Account 356, Overhead Conductors & Devices, the Presiding Judge again determined PG&E's net salvage ratio of (110), finding the value is comparable to SoCal Edison's and SDG&E's values for that account. For Account 357, Underground Conduit, the Presiding Judge approved a net salvage ratio of 0, which aligned with proposals of PG&E, Trial Staff and TANC. For Account 358, Underground Conductors & Devices, the Presiding Judge found Trial Staff's proposed net salvage ratio of (14) is best suited to the account and noted the ratio is between those of SoCal Edison's and SDG&E's values for the same account. For Account 359, Roads & Trails, the Presiding Judge supported PG&E's proposed ratio of (10), noting the values are in line with the average net salvage ratios for 1996-2015.²⁹⁰ Upon reviewing all accounts, the Presiding Judge determined that PG&E must use the methodology proposed by Trial Staff's witness to recalculate its depreciation rates for Account 353.2, Step-Up Transformers, and Account 358, Underground Conductors and Devices.²⁹¹

118. When assessing the non-traditional methods proposed to calculate net salvage ratios, the Presiding Judge rejected TANC's argument that the traditional method of

²⁸⁸ *Id.* PP 509-513.

²⁸⁹ Hereafter, we refer to negative net salvage ratios in parentheses.

²⁹⁰ *Id.* PP 514-561.

²⁹¹ *Id.* P 577.

determining net salvage ratios overcharges current customers. TANC's witness proposed calculating the account's average annual net salvage value for the most recent five years and then multiplying it by the average remaining life of the account's facilities. To calculate net salvage ratio, the net salvage amount would then be divided by the original cost of the facilities. The Presiding Judge supported Trial Staff's explanation that PG&E is collecting amounts that should enable it to recover the costs that will be incurred to retire the account's facilities in the future, and are not designed to match current costs. The Presiding Judge concluded that using TANC's approach would result in recovering far less than the original cost for the account's facilities.²⁹²

119. SWP proposed a methodology termed the "flat real recovery method" for each account, which aims to provide "intergenerational equity."²⁹³ SWP contended that current customers are subsidizing future customers because, while straight-line depreciation is captured equally over a period of time, the present value of money exceeds the future value due to inflation. The Presiding Judge rejected SWP's methodology, noting that the Commission has endorsed straight-line depreciation and that straight-line methodology is widely used.²⁹⁴ Further, the Presiding Judge pointed to Trial Staff's rationale that this methodology introduces uncertainty into the depreciation calculation, and the proposed salvage cost allocation is inconsistent with the allocation of other depreciation expenses.²⁹⁵

b. Briefs on Exceptions

120. TANC argues that the Initial Decision erroneously excused PG&E from satisfying its burden of proof to fully justify its proposed net salvage estimates.²⁹⁶ TANC notes that the Presiding Judge found counsel unqualified to discuss irregularities in PG&E's data. TANC maintains that the data used by PG&E's witness is not only unreliable, but numerous data entries in the net salvage calculations are not possible. For example, TANC points to removal costs being recorded for years in which there were no retirements and cites numerous deficiencies found by PG&E's internal audits, such as

²⁹² *Id.* PP 562-566.

²⁹³ See Ex. SWP-0001 (Testimony of David Marcus) at 12-16.

²⁹⁴ We note that no briefs were filed in support of SWP's proposed technique or the Presiding Judge's determination to dismiss the approach.

²⁹⁵ Initial Decision, 165 FERC ¶ 63,001 at PP 567-576.

²⁹⁶ TANC Brief on Exceptions at 46-47.

misstated plant and accumulated depreciation balances.²⁹⁷ TANC disagrees with the Presiding Judge's determination that TANC's depreciation expert did not discuss PG&E's recordkeeping irregularities in his testimony, which precluded PG&E from addressing such concerns on rebuttal. TANC contends that PG&E was given the opportunity to defend the quality of its data and address concerns on its accuracy.²⁹⁸

121. TANC also takes exception to the Initial Decision's and PG&E's reliance on the net salvage ratios of SoCal Edison and SDG&E to support PG&E's calculations, maintaining that PG&E's data is out of line with the other California utilities. TANC notes that the most recently authorized net salvage values for SoCal Edison and SDG&E are not found in the record, and request that the Commission take official notice of the most recent authorized values.²⁹⁹ TANC provides a table that illustrates that, for six accounts, the net salvage ratios calculated using PG&E's historical data exceed the authorized values for SoCal Edison and SDG&E. TANC then compares the net salvage ratios accepted by the Initial Decision to those of SoCal Edison and SDG&E, demonstrating that the PG&E's ratios exceed those of the other utilities in four of six accounts. TANC also cites the lack of record evidence that explains how the SoCal Edison and SDG&E net salvage ratios were determined.³⁰⁰

122. In its analysis, TANC reiterates that the net salvage ratios accepted by the Presiding Judge exceed that of SoCal Edison and SDG&E for Account 353.01 – Station Equipment, Account 354 – Towers and Fixtures, Account 356 – Overhead Conductors and Devices, and Account 359 – Roads and Trails.³⁰¹ For Account 355 – Poles and Fixtures, TANC notes anomalies in PG&E's data as well as the comparison to outdated SDG&E and SoCal Edison ratios.³⁰² For Account 358 – Underground Conductors and Devices, TANC notes that the net salvage ratio approved by the Presiding Judge, which was proposed by Trial Staff, exceeds the ratio request by PG&E, and again cites to outdated data in the record for SoCal Edison and SDG&E.³⁰³

²⁹⁷ *Id.* at 48-49.

²⁹⁸ *Id.* at 55-59.

²⁹⁹ *Id.* at 52, 64.

³⁰⁰ *Id.* at 51-53, 62-64.

³⁰¹ *Id.* at 66, 67, 70, 72.

³⁰² *Id.* at 67-68.

³⁰³ *Id.* at 71-72.

123. Trial Staff maintains that PG&E's historical data is flawed and results in net salvage values that are far more negative than the average utility net salvage ratio,³⁰⁴ and contends that the Initial Decision erred in accepting PG&E's net salvage calculations for five accounts. Trial Staff examines how PG&E's net salvage ratios vary significantly from PG&E's historical average.³⁰⁵ Trial Staff also asserts that the industry averages presented by Trial Staff's witness are adequately adjusted by five percentage points to account for the higher costs the Presiding Judge noted in California.³⁰⁶

124. Trial Staff analyzes five accounts in which the Presiding Judge accepted PG&E's net salvage estimates that differed from Trial Staff's.³⁰⁷ For Account 353.01, Station Equipment, Trial Staff's witness stated that much of the equipment is easy to remove and therefore PG&E's proposed net salvage value of (60) is unreasonable. Trial Staff notes that SoCal Edison has a net salvage ratio of (5) for this account, which is even lower than the value of (15) that Staff proposed. Trial Staff notes that a ratio of (60) will collect approximately \$56 million more in depreciation annually than Trial Staff's proposed value of (15)%. For Account 354, Towers and Fixtures, Trial Staff notes that historical data would indicate a net salvage ratio of (146), but PG&E has proposed (100)%, while industry average is just (34). Similarly, for Account 355, Poles and Fixtures, Trial Staff notes that PG&E's witness rejected PG&E's historical data which demonstrated a ratio of (148)%, and instead proposed (80)%. For Account 359, Roads and Trails, Trial Staff notes historical data indicates a ratio of (40)%, but PG&E's witness proposed (10)%.

c. Briefs Opposing Exceptions

125. PG&E contends that TANC and Trial Staff failed to show that the Initial Decision erred in its ruling on PG&E's net salvage values. PG&E asserts that TANC and Trial Staff repeated arguments that the Presiding Judge found unpersuasive. Further, PG&E states that on exceptions, TANC has attempted to introduce new arguments and information that were not in the record, and has mischaracterized information.³⁰⁸ PG&E also maintains that the net salvage calculations adopted by the Initial Decision, which largely follow PG&E's methodology, are superior for several reasons. First, PG&E states that the methodology is endorsed by the NARUC Manual, whereas the approaches

³⁰⁴ Trial Staff Brief on Exceptions at 31.

³⁰⁵ *Id.* at 33.

³⁰⁶ *Id.* at 34.

³⁰⁷ *Id.* at 36-40.

³⁰⁸ PG&E Brief Opposing Exceptions at 55.

of TANC and Trial Staff were unconventional.³⁰⁹ Additionally, PG&E's methodology utilized 20 years of historical, record data, rather than averages of unrelated utilities.³¹⁰ PG&E also argues that it correctly used comparable data from other California utilities, such as SoCal Edison and SDG&E, whereas other methodologies used broader industry averages. PG&E also points to the Presiding Judge's agreement that California has higher costs than industry averages.³¹¹

d. Commission Determination

126. We affirm in part and reverse in part the Presiding Judge's determinations with respect to PG&E's proposed net salvage values. Specifically, we affirm the Presiding Judge with respect to Accounts 352.01 (Structures & Improvements), 352.02 (Structures & Improvements – Equipment), 353.02 (Station Equipment – Step-Up Transformers), and 357 (Underground Conduit), for which no exceptions were filed by the parties. We also affirm the Presiding Judge with respect to accounts 353.01 (Station Equipment), 354 (Towers & Fixtures), 356 (Overhead Conductors & Devices), and 359 (Roads & Trails). However, we reverse the Presiding Judge with respect to accounts 355 (Poles & Fixtures) and 358 (Underground Conductors & Devices). Our determination on each of these accounts is discussed more fully below.

127. We note that the use of historical data to calculate net salvage ratios is appropriate here as it aligns with the methodology reflected in the NARUC Manual.³¹² When it is shown that historical data is insufficient to calculate net salvage ratios, industry data can be considered.³¹³ Trial Staff and TANC object to PG&E's use of historical data to calculate net salvage ratios and instead, favor the use of industry data. We agree with the Presiding Judge that PG&E's historical data is sufficient for the purpose of calculating net salvage values, except as otherwise discussed below.

i. Account 353.01, Station Equipment

128. For Account 353.01, Station Equipment, the Presiding Judge concluded that PG&E's proposed net salvage of (60) for this account was most appropriate. He

³⁰⁹ *Id.* at 38-39.

³¹⁰ *Id.* at 36-40.

³¹¹ *Id.* at 45-46.

³¹² NARUC Manual at 157-158.

³¹³ See *Entergy Services*, 143 FERC ¶ 61,116 at P 113 (references "consistent with costs typically seen in the electric industry").

reasoned that PG&E's recommendation was based on historical data showing that PG&E's net salvage ratio averaged (82) over 20 years and indicated that his conclusion was tempered by Trial Staff's industry statistics showing ratios ranging from 15 to (60). The Presiding Judge also noted that PG&E's proposed net salvage value for this account was in line with the net salvage ratio for SDG&E of (60) for this account and reasoned that (60) is less negative than PG&E's historical 20-year average ratio of (82) and lower than Trial Staff's calculation of an average ratio, based on PG&E's historical data with outliers removed, (78).³¹⁴

129. The Presiding Judge examined and declined to accept Trial Staff's recommendation of (15), which was based on an industry average of (10) adjusted downward to give some recognition to the historical data and TANC's proposed net salvage value based on the threshold for the most negative quartile among companies identified (20). The Presiding Judge reasoned that the industry statistics upon which Trial Staff and TANC witnesses rely provided little support for their positions, observing that none of the companies in TANC's survey are similarly situated to PG&E, and that the number of such companies in Trial Staff's survey was too small to give weight to the industry average.

130. We affirm the Initial Decision on this issue and find that PG&E's proposed net salvage ratio of (60) for Account 353.01 is most appropriate. We note for Account 353.01, the Presiding Judge has considered the methodology used by PG&E, and further considered the historical values analyzed by Trial Staff in which outlier transactions have been removed, as informed by the NARUC Manual. Further, the Presiding Judge has considered the net salvage ratios for similarly situated utilities SoCal Edison and SDG&E, and finds the proposed net salvage value for this account in line with those values.³¹⁵ Finally, we find that the Presiding Judge gave reasoned consideration to the methodologies proposed by TANC and Trial Staff, and reasonably rejected those proposals for the reasons identified above, and therefore we reject the arguments raised by TANC and Trial Staff in their briefs on exceptions to the Initial Decision.

ii. Account 354, Towers & Fixtures

131. For Account 354, Towers and Fixtures, the Presiding Judge concluded that PG&E's proposed net salvage of (100) for this account was most appropriate. He reasoned that PG&E's recommendation was based on historical data showing that PG&E's net salvage ratio averaged (145) over 20 years. The Presiding Judge also notes PG&E's proposed net salvage value for this account was in line with SDG&E's and

³¹⁴ Initial Decision, 165 FERC ¶ 63,001 at PP 519-525.

³¹⁵ The Presiding Judge relied on the net salvage ratios available in the record for SoCal Edison and SDG&E. See Ex. S-0005.

SoCal Edison's ratios of (100) and (70), respectively, for this account. Further, he reasoned that (100) is less negative than PG&E's historical 20-year average ratio of (145) and lower than Trial Staff's calculation of an average ratio (based on PG&E's historical data) with outliers removed, (112).³¹⁶

132. The Presiding Judge examined and declined to accept Trial Staff's recommendation of (39), which is based on an industry average of (34) adjusted downward to give some recognition to the historical data and TANC's proposed net salvage value based on the threshold for the most negative quintile among his companies (41). The Presiding Judge reasoned that the industry statistics upon which Trial Staff and TANC witnesses rely provided little support for their positions observing that none of the companies in TANC's survey are similarly situated to PG&E, and that they should have focused on SoCal Edison and SDG&E.³¹⁷

133. We affirm the Initial Decision on this issue, and find that PG&E's proposed net salvage ratio of (100) for Account 354 is most appropriate. Similar to his analysis for Account 353.01, the Presiding Judge has considered the methodology used by PG&E, and further considered the historical values analyzed by Trial Staff in which outlier transactions have been removed, as informed by the NARUC Manual. Further, the Presiding Judge has considered net salvage ratios for similarly situated utilities, i.e., SoCal Edison and SDG&E, and finds the proposed net salvage value for this account in line with those values. We find the Presiding Judge's analysis, and his consideration and rejection of other proposed approaches, to be reasonable, and, nothing in the briefs on exceptions to the Initial Decision persuade us otherwise. Accordingly, we affirm his decision.

iii. Account 355, Poles & Fixtures

134. For Account 355, Poles and Fixtures, the Presiding Judge concluded that PG&E's proposed net salvage of (80) for this account was most appropriate. He reasoned that PG&E's recommendation was based on historical data for this account showing that PG&E's net salvage ratio averaged (148) over 20 years. The Presiding Judge also noted that PG&E's proposed net salvage value for this account was supported by SDG&E's net salvage value of (100) for this account as reflected in its 2014 FERC Form 1, and a 2003 proposed SoCal Edison ratio of (115).³¹⁸ Trial Staff's analysis resulted in a historical ratio of (69) with outliers removed. The Presiding Judge found Trial Staff's removal of outliers from the historical data for this account unsupported, and thereby rejected those

³¹⁶ Initial Decision, 165 FERC ¶ 63,001 at PP 530-536.

³¹⁷ *Id.* PP 533-535.

³¹⁸ Initial Decision, 165 FERC ¶ 63,001 at PP 537-544.

adjustments, noting that if PG&E experiences an atypical ratio in one 20-year period, it will likely experience another atypical ratio in the subsequent 20-year period.³¹⁹

135. We overturn the Presiding Judge's determination in the Initial Decision, which authorized PG&E's proposed net salvage value of (80) for Account 355. First, we find that PG&E has not justified its proposal. PG&E's proposed ratio of (80) is significantly less than the average calculated by PG&E using its historical data, (148). This indicates that PG&E finds that its historical data needed significant adjustment. We find that Trial Staff's analysis of the PG&E's historical data, in which it removed outliers, is consistent with the NARUC Manual, which states that transactions considered to be unrepresentative of the future should be removed from the historical data.³²⁰ Therefore, we find that the Presiding Judge erred in dismissing Trial Staff's adjustment to remove outliers from the historical data. Trial Staff's analysis also aligns with a more recent net salvage ratio for a California investor-owned utility than what the Presiding Judge relied on in authorizing PG&E's proposal. Specifically, the Presiding Judge compared PG&E's proposed ratio of (80) to a ratio proposed by SoCal Edison in 2003. However, we find a more recent net salvage ratio available in SoCal Edison's 2014 Form 1 data, which is (70) for this account.³²¹ For these reasons, we overturn the Presiding Judge and authorize a net salvage ratio of (69), consistent with Trial Staff's analysis.

iv. Account 356, Overhead Conductors & Devices

136. For Account 356, Overhead Conductors & Devices, the Presiding Judge concluded that PG&E's proposed net salvage of (110) for this account was most appropriate. He reasoned that P&E's recommendation was based on historical data showing that PG&E's net salvage ratio averaged (129) over 20 years. The Presiding Judge also notes PG&E's proposed net salvage value for this account was in line with SoCal Edison's and SDG&E's ratios of (80) and (100), respectively. He further reasoned that (110) is less negative than PG&E's historical 20-year average ratio of (129) and lower than Trial Staff's calculation of an average ratio based on PG&E's historical data with outliers removed, (119).³²²

137. The Presiding Judge examined and declined to accept Trial Staff's recommendation of (45), which is based on an industry group average of (40) adjusted downward to give some recognition to the historical data and TANC's proposed net

³¹⁹ *Id.* PP 542-544.

³²⁰ NARUC Manual at 158.

³²¹ Ex. S-0005 at 7.

³²² Initial Decision, 165 FERC ¶ 63,001 at PP 545-550.

salvage value based on the threshold for the most negative quartile among identified companies (50). The Presiding Judge notes that TANC'S witness previously submitted a value of (125) for distribution overhead conductors in a state proceeding. He notes that the historical data that PG&E's witness uses appears reliable.³²³

138. We affirm Initial Decision on this issue, and find that PG&E's proposed net salvage ratio of (110) for Account 356 is most appropriate. We note that for Account 356, the Presiding Judge has considered the methodology used by PG&E and has further considered the historical values analyzed by Trial Staff in which outliers have been removed, as recommended by the NARUC Manual. Further, the Presiding Judge has considered the net salvage ratios available for SoCal Edison and SDG&E as similarly situated utilities, and found the proposed net salvage value for this account in line with those values. As with Accounts 353.01 and 354, we find that the Presiding Judge's analysis was reasonable and in accordance with the NARUC Manual's recommendations for calculating net salvage, and we therefore reject the arguments raised by TANC and Trial Staff in their briefs on exceptions to the Initial Decision.

v. Account 358, Underground Conductors & Devices

139. For Account 358, Underground Conductors & Devices, PG&E requested a ratio of (10). The Presiding Judge noted that TANC proposed a ratio of (6) and Trial Staff proposed a ratio of (14). He also noted that during the period, 1996-2015, PG&E's average net salvage ratio for this account was (71). The Presiding Judge observed that Trial Staff's witness based his recommended ratio of (14) on the average of his utility group (9), adjusted to give consideration to the historical data. He also noted that the witness expressed concern about the years that show a recovery of costs, but reflect no retirements, but in so doing did not reject of PG&E's historical data entirely.

140. The Presiding Judge concluded that Trial Staff's proposed net salvage ratio of (14) was best suited to the account, basing his finding on Trial Staff's methodology, which considers industry statistics yielding an industry average of (9) with a downward adjustment to (14) to give some recognition to the historical data. He reasoned that the ratio is midway between the ratios of the two entities in Trial Staff's industry group that are similarly situated to PG&E, SoCal Edison,(20), and SDG&E,(10).³²⁴ The Presiding Judge explained that Trial Staff's decision to give some consideration to the historical data appears warranted and stated that the 20-year period over which PG&E's ratio has

³²³ *Id.* P 546.

³²⁴ *Id.* P 556 (citing Ex. S-0005 at 11).

been averaged would appear to smooth out the distortions resulting from the years in which removal costs without retirements have been recorded.³²⁵

141. We note the Presiding Judge approved a ratio lower than that which PG&E proposes. Further, we observe the Presiding Judge deviated from the methodology he used to analyze other net salvage accounts where he relied upon PG&E's historical data as reflective of PG&E's historical experience, and instead based his finding on Trial Staff's approach. Trial Staff's witness calculated an industry average for each account based on authorized and proposed net salvage ratios from 22 companies. Trial Staff takes the historical data into consideration as well as the high removal costs in California and applies a (5) adjustment to the industry average net salvage ratios. While the industry average likely warrants adjustment to apply to California, a (5) adjustment appears unsupported and to be lacking sufficient justification for its application to the industry data.

142. We also note PG&E proposed its currently authorized value, (10)%, which indicates the company believes this value is sufficient to recover net salvage costs for this account. We further note a net salvage ratio of (10) for this account is within the zones supported by Trial Staff's analysis, i.e., 0 to (40), and TANC's analysis, i.e., 0 to (35). This value, while less than SoCal Edison's net salvage value for the same account, is equal to the value in the record for SDG&E. Accordingly, we find that PG&E has supported its proposed value. We therefore reverse the Initial Decision and find that PG&E's proposed value of (10) for Account 358 is more appropriate for this account.

vi. Account 359, Roads & Trails

143. For Account 359, Roads & Trails, the Presiding Judge concluded that PG&E's proposed net salvage of (10) for this account was most appropriate. He reasoned that P&E's recommendation was based on historical data showing that PG&E's net salvage ratio for the period 1996-2015 averaged (40) with outliers, and lower than Trial Staff's calculation of an average ratio (based on PG&E's historical data) with outliers removed, (20). The Presiding Judge stated that the 20-year average is more significant than the

³²⁵ During two of the years PG&E recorded removal costs without retirements, 1996 and 2001, the removal costs recorded were \$35 and \$340. During two of the intervening years, 1997 and 2000, PG&E recorded \$22,805 in retirements without any removal costs. During the period 2001-2008, PG&E recorded removal costs without retirements during five years, 2001-2003 and 2005-2006, and negligible retirement costs the other two years. However, due to retirements totaling \$2,163,418 in 2008, retirements for the eight-year period totaled \$2,169,282, whereas removal costs totaled \$1,538,867. PG&E's average net salvage ratio for the period was (71), the same as the 20-year average. *Id.* P 556 n. 634 (citing Ex. PGE-0029 at 106).

most recent five-year average (supported by TANC) and resolves distortions and anomalies in individual years.

144. The Presiding Judge examined and declined to accept Trial Staff's recommendation of (6), which was calculated based upon utilities in an industry group, and adjusted downward to give some recognition to the historical data, and TANC's proposed net salvage value of zero (0) based on an analysis that considers the prior five year period where no removal costs were incurred for this account.

145. We affirm the Initial Decision on this issue, and find that PG&E's proposed net salvage ratio of (10) for Account 359 is most appropriate. The NARUC Manual states that transactions considered to be unrepresentative of the future should be removed from the historic data.³²⁶ We note for Account 359, the Presiding Judge has considered the methodology used by PG&E, and further considered the historical values analyzed by Trial Staff in which outlier transactions have been removed, as advised by the NARUC Manual.

E. Capital Additions

146. PG&E developed its forecasted Period II weighted average balance for gross plant in service (i.e., PG&E's rate base) in two steps. First, PG&E has added and subtracted the forecasted 2016 plant additions and retirements, respectively, from the Period I end-of-year gross plant to arrive at a forecasted Period II beginning gross plant balance. Second, PG&E has added and subtracted, respectively, the forecasted monthly 2017 plant additions and retirements from the forecasted Period II beginning gross plant balance to arrive at twelve month-end balances. The weighted average gross plant balance for Period II is an average based on these thirteen balances.³²⁷

1. Capital Additions Forecast

a. Initial Decision

147. In examining PG&E's proposal, the Presiding Judge stated that the D.C. Circuit has set out criteria for assessing the justness and reasonableness of a utility's forecasts. Under the D.C. Circuit's opinion in *Villages of Chatham & Riverton v. FERC*,³²⁸ "[t]he utility must demonstrate that its estimates were reasonable when made, either by

³²⁶ NARUC Manual at 158.

³²⁷ Initial Decision, 165 FERC ¶ 63,001 at P 592 (citing Ex. PGE-0010 (Testimony of Beatrix H. Greenwell) at 28:16-23).

³²⁸ 662 F.2d 23 (D.C. Cir. 1981) (*Chatham*).

explaining the chain of reasoning that is employed to arrive at its projections, or by comparing its estimates with actual data, and so establishing their accuracy.”³²⁹ Thus, the Presiding Judge stated that the reasonableness of PG&E’s forecast turns on either: (1) the chain of reasoning PG&E used to determine an accurate in-service date; or (2) PG&E’s track record in accurately forecasting such dates. Finding scant information in the initial and reply briefs, the Presiding Judge observed that PG&E provided no explanation of how it ensures in-service dates are accurate. Moreover, the Presiding Judge was not persuaded by PG&E’s explanation of the utility’s procedures, and concluded that PG&E did not establish a coherent method for reasonably forecasting its operative dates and capital additions.³³⁰ Therefore, the Presiding Judge found that PG&E failed prong 1 of the *Chatham* test that requires to demonstrate that its estimates were reasonable when made by explaining the chain of reasoning that is employed to arrive at its projections.³³¹

148. Further, the Presiding Judge found that PG&E failed the second prong of the *Chatham* test, which evaluates the variance between the company’s forecasted and actual capital additions, because PG&E has a history of over-forecasting its capital additions by an average of 4.95%.³³² The Presiding Judge noted that PG&E asserted that CPUC’s testimony showed that PG&E’s actual capital additions exceeded the forecasts for 2006, 2009, 2010, 2013, and 2014, but found those figures to be misleading.³³³ The Presiding Judge instead relied on Six Cities’ testimony comparing forecasts and actual capital additions for seven consecutive years from 2007-2015, showing that PG&E’s has over-forecast during this seven-year period by 4.95%.³³⁴

149. Next, the Presiding Judge considered two proposed reductions to PG&E’s proposal based on PG&E’s past over-projections of capital additions and consequent

³²⁹ Initial Decision, 165 FERC ¶ 63,001 at P 595 (citing *Chatham* 662 F.2d at 29).

³³⁰ *Id.* PP 589, 597-600, 602, 607 (citing Ex. PGE-0043, Rebuttal Testimony of Bangalore Vijayraghavan).

³³¹ *Id.* P 607.

³³² *Id.* PP 608-609 (citing Ex. CIT-0045 (Six Cities Analysis of PG&E Projected Capital Additions vs. Actual Capital Additions) at 1).

³³³ *Id.* P 610 & n.692 (citing PG&E Initial Br. at 44 (citing Ex. PUC-0001 (Testimony of Geneva Looker); Tr. at 1925:9-1928:10 (Looker))).

³³⁴ *Id.* P 609 & n.691 (citing Ex. CIT-0045 at 1).

over-recoveries but declined to use them.³³⁵ The Presiding Judge reasoned that to continue to factor PG&E's past over-forecasts in determining its cost of service, regardless of the merits of the its current forecast, would amount to imposing a formula-rate regime on PG&E, when PG&E has exercised its right to use stated rates. Instead, the Presiding Judge chose to focus on PG&E's failure to properly forecast the operative dates of its capital additions for 2017.³³⁶ The Presiding Judge explained that capital expenditures go into the utility's rate base until the facility goes into service, and properly forecasting the service date is thus key to an accurate forecast.³³⁷ As the Presiding Judge explained, how much a capital addition adds to rate base in a given year turns not only on the size of the addition but also when it is added to rate base. The Presiding Judge noted that, because the calculation of rate-base size for the year is based on a thirteen-month average rather than on the end-of-year balance, a project that goes into rate base during January of the year adds 12/13 of its value to rate base, whereas a project that goes into rate base during December of the year adds only 1/13 of its value.³³⁸ The Presiding Judge found that the evidence painted a picture "of a company that projects operative dates with little regard for contingencies that might postpone them."³³⁹ Therefore, the Presiding Judge concluded that PG&E must remove \$76.839 million from its rate base to make its capital additions just and reasonable.³⁴⁰

b. Briefs on Exceptions

150. PG&E claims that the Initial Decision's conclusion that it is better for PG&E to over-forecast does not cite to record evidence and contends that the Initial Decision's finding reveals a strong bias against stated rates versus formula rates.³⁴¹ PG&E also

³³⁵ *Id.* PP 618-619 (citing Ex. CIT-0046 (Six Cities Analysis of Impact of Reducing PG&E's Capital Additions) and Ex. S-0023 (Testimony of Joseph R. Hoffman) at 10-16-12:12).

³³⁶ *Id.* P 620.

³³⁷ *Id.* P 593.

³³⁸ *Id.* P 611 (citing Ex. PGE-0010 at 28:20-23).

³³⁹ *Id.* PP 614- 615 (citing Ex. TNC-0018 (Testimony of David Cohen) at 19:10-20:5, Ex. PGE-0043 at 5:1-12, Ex. TNC-0183 at 4, and Tr. 1175:23-1177:1 (Vijayraghavan)).

³⁴⁰ *Id.* P 621; *see also id.* P 617 (citing *NEPCO Mun. Rate Comm. v. FERC*, 668 F.2d 1327, 1340 (D.C. Cir. 1981) (*NEPCO*)).

³⁴¹ PG&E Brief on Exceptions at 56.

contends that it properly justified its capital additions forecast.³⁴² In support, PG&E points to three witnesses that explained the forecast process, and asserts the Initial Decision erred in presuming their claims lacked credibility. PG&E argues that the Presiding Judge ignored its witness' testimony that PG&E's performance has recently improved and misinterpreted testimony that was presented to describe the capital expenditures PG&E was forecasting it would make.³⁴³ Regardless, PG&E contends that even if it did not make the required chain of reasoning showing, the final capital additions for 2016 were very close to the amount projected in 2017.³⁴⁴

151. Further, PG&E argues that it is impossible to give a precise forecast of when each project will be operational.³⁴⁵ PG&E contends that the Initial Decision erroneously relied on one data response to reach its conclusion,³⁴⁶ and disputes the Initial Decision's methodology that requires the utility to update its filed forecast to one made 18 months later.³⁴⁷ PG&E disagrees with the Initial Decision's finding that it failed the *Chatham* test because, in contrast to the circumstances there, PG&E did not base its forecast on absurd estimates or lack of information explaining the estimates. PG&E argues that its forecast was reasonable when made.³⁴⁸

152. CPUC states that the Initial Decision properly found that PG&E's capital additions forecast was not just and reasonable. CPUC argues that the Presiding Judge's decision to disallow \$77.839 million from PG&E's rate base, resulting in a TRR reduction of roughly \$12 million, is based on a well-reasoned review of the substantial evidence in the case, including an analysis showing PG&E's conclusory and inconsistent testimony.³⁴⁹

153. TANC contends that the Initial Decision failed to consider additional evidence on the record when finding that PG&E's capital additions forecast was unjust and

³⁴² *Id.* at 56-57.

³⁴³ *Id.* at 57-58.

³⁴⁴ *Id.* at 59.

³⁴⁵ *Id.* at 60.

³⁴⁶ *Id.*

³⁴⁷ *Id.* at 61.

³⁴⁸ *Id.*

³⁴⁹ CPUC Brief on Exception at 9.

unreasonable.³⁵⁰ First, TANC argues that any project not in the forecast is ineligible for inclusion in the rate base.³⁵¹ Therefore, TANC requests that the Commission disallow this practice.³⁵² TANC further contends that PG&E failed to use mitigating factors within its control that would help it accurately forecast capital expenditures and operative dates.³⁵³ TANC contends that the Initial Decision was correct to find PG&E does not have a coherent method for forecasting, but the Presiding Judge should consider additional evidence that identifies factors PG&E uses to delay its operative dates.³⁵⁴ Accordingly, TANC asks that the Commission consider this additional evidence.³⁵⁵

c. Briefs Opposing Exceptions

154. TANC contends that the Commission should deny PG&E's exceptions to the Initial Decision's finding because PG&E failed both prongs of the *Chatham* test.³⁵⁶ First, TANC contends, PG&E did not prove its capital additions forecast is just and reasonable because its argument to overturn the Initial Decision's findings relies on evidence the Presiding Judge stated was "no more than a litany of generalities."³⁵⁷ Second, TANC argues, PG&E did not prove that its historical data establishes that the capital additions forecast was just and reasonable when made.³⁵⁸ TANC states that the Initial Decision correctly rejected the evidence PG&E cites in its brief because that evidence did not consider the impact of capital additions on rate base.³⁵⁹ TANC contends that it demonstrated that the "Weighted Average Gross Plant in Service" varies depending on

the month during the test year the project becomes operational,³⁶⁰ and notes that PG&E's witness agreed with TANC's argument.³⁶¹

155. Six Cities contends that the Initial Decision's adjustment of PG&E's proposed capital additions was correct.³⁶² Six Cities agrees with the Initial Decision's finding that PG&E failed to establish "through a chain or reasoning or otherwise" that its proposed capital additions passed the *Chatham* test.³⁶³ Six Cities argues that PG&E ignores the discrepancy between its forecasted and actual capital additions.³⁶⁴ Six Cities claims the Initial Decision correctly relied on its witness' conclusion that PG&E historically over-forecasts its capital additions by approximately 4.59% annually.³⁶⁵ Six Cities also contends that the Initial Decision correctly denied as inconsistent and lacking credibility, PG&E's explanation for its over-forecasting methodology.³⁶⁶ According to Six Cities, PG&E's witness' argument against the suggested adjustment to its forecasted capital additions is that PG&E implemented several project management initiatives that are sufficient to satisfy the *Chatham* "chain of reasoning" prong.³⁶⁷ Six Cities argues that these initiatives do not satisfy the test because there is no sufficient evidence to show a relationship between the initiatives and PG&E's capital additions forecast.³⁶⁸ Six Cities further asserts that there is no evidence that these initiatives affect PG&E's ability to

³⁶⁰ *Id.* at 74.

³⁶⁷ *Id.* at 49.

³⁶⁸ *Id.* at 51.

meet its forecasted capital additions.³⁶⁹ Trial Staff supports the Presiding Judge's finding that PG&E's proposed capital additions forecast is unjust and unreasonable, as well as his reasoning in reaching this decision.³⁷⁰

156. PG&E contends that the D.C. Circuit's decision in *Cities of Anaheim, Riverside, Banning, Colton, & Azusa v. FERC*³⁷¹ correctly states that the Commission should not reject a test year forecast merely because it varies from the actual results.³⁷² PG&E contends that it made a reasonable test year forecast and the actual results, in terms of overall capital additions in the test year were very close to the forecast, noting that the mix of projects differed from that reflected in the forecast to the test year, and the operational dates differed from the test year.³⁷³

d. Commission Determination

157. We affirm the Presiding Judge's finding that PG&E's capital additions forecast will not produce just and reasonable rates. We disagree with PG&E's assertion that the Presiding Judge rejected the forecast merely because it varies from actual results. To make the determination on the justness and reasonableness of PG&E's proposal, the Presiding Judge correctly applied the two-prong *Chatham* test to evaluate PG&E's proposed capital additions forecast and concluded that PG&E failed both prongs. The record shows that the Presiding Judge, consistent with *Chatham*, carefully examined the chain of reasoning employed by PG&E to arrive at its proposed forecast and concluded that PG&E failed it because it provided no evidence (other than conclusory statements) describing procedures for assuring the accuracy of PG&E's forecasts, including the forecasted in-service dates.³⁷⁴ We agree that PG&E failed to support its proposed forecasts of capital additions.

158. We also disagree with PG&E's allegation that the Presiding Judge ignored the evidence it presented to show that its performance has recently improved. The Initial Decision fully addressed this issue in paragraph 613. Specifically, the Presiding Judge

³⁶⁹ *Id.*

³⁷⁰ Trial Staff Brief Opposing Exceptions at 27-29.

³⁷¹ 669 F.2d 799, 804 (D.C. Cir. 1981) (*Anaheim*).

³⁷² PG&E Brief Opposing Exceptions at 56 (citing Initial Decision, 165 FERC ¶ 63,001 at PP 489-586).

³⁷³ *Id.*

³⁷⁴ Initial Decision, 165 FERC ¶ 63,001 at PP 597-607.

reasoned that net capital additions, i.e., additions minus retirements, are what impact the rate base, not gross capital additions.³⁷⁵ We are also not persuaded that the Presiding Judge should have considered the witness testimony only for the narrow purpose it was presented. The Presiding Judge drew conclusions based on relevant data and calculations submitted into the record. In this case, we defer to the Presiding Judge's judgment as to which evidence was relevant to which issue.³⁷⁶ We also note that with regard to the credibility of witnesses, and the amount of weight to be accorded to particular testimony or evidence, the Presiding Judge was the trier of fact, had the opportunity to observe the witnesses' live testimony and demeanor, and was thus in the best position to evaluate the witnesses' credibility.³⁷⁷ PG&E has provided us with no reason to question the Presiding Judge's observations in this regard.

159. In addition, consistent with the second prong of the *Chatham* test, the Presiding Judge considered the discrepancies between prior forecasts performed by PG&E and actual data for previous years and concluded that there is a pattern of over-forecasting and not considering various contingencies in regard to projected in-service dates.³⁷⁸ We agree with the Presiding Judge's observation that there would be little incentive not to include its over-forecasts in in-service dates, and that the persistent forecasting problems documented in the record results in a capital additions forecast that is not just and reasonable.³⁷⁹ In reaching these conclusions, the Presiding Judge considered record evidence showing the persistent inaccuracies in PG&E's forecasting of in-service dates to be the decisive factor and on this basis found that PG&E must remove \$76.839 million from its rate base.³⁸⁰ Neither PG&E nor any other party has offered an alternative

³⁷⁵ *Id.* P 613.

³⁷⁶ See, e.g., *San Diego Gas & Elec. Co. v. Sellers of Energy and Ancillary Servs.*, Opinion No. 536, 149 FERC ¶ 61,116, at P 193 (2014).

³⁷⁷ See, e.g., *Inwood Lab. Inc. v. Ives Lab., Inc.*, 456 U.S. 844, 856 (1982) (holding that "determining the weight and credibility of the evidence is the special province of the trier of fact."); *El Paso Nat. Gas Co.*, 67 FERC ¶ 61,327, at 62,156 (1994) (finding that "[i]n matters where a decision had to be made as to the relative weight to be accorded the testimony of a witness, we will give great deference to the decision of the ALJ"); *Williams Nat. Gas Co.*, 41 FERC ¶ 61,037, at 61,095 (1987) (finding that "the rationale for affording deference to the determinations of the trier of fact on credibility is that the trier of fact is in the best position to evaluate such elusive factors as motive or intent").

³⁷⁸ Initial Decision, 165 FERC ¶ 63,001 at PP 613-619.

³⁸⁰ *Id.* PP 593, 611, 614-615.

reduction. We find that the Presiding Judge made a reasoned decision supported by record evidence.³⁸¹ We therefore affirm the Presiding Judge's finding and direct PG&E to remove \$76.839 million from its rate base.

2. Inclusion of Allegedly Imprudent Capital Costs

160. PG&E proposed that its TO18 TRR should include \$288.3 million in capital expenditures for a 3.5-mile 230 kV cable between the Embarcadero and Potrero Substations (Embarcadero-Potrero Project). According to PG&E, it developed the Embarcadero-Potrero Project to provide additional transmission capacity to the San Francisco 115 kV transmission cable system to allow for the shutdown of the Potrero power plant, as well as to provide an additional power source into the Embarcadero substation to improve service reliability to downtown San Francisco.³⁸² PG&E also proposed that its TO18 TRR should include approximately \$750 million for other projects.³⁸³

a. Initial Decision

161. First, the Presiding Judge addressed CPUC's assertion that PG&E's capital additions include imprudent capital costs.³⁸⁴ To analyze this assertion, the Presiding Judge relied on the standard of review set in *BP Pipelines (Alaska) Inc.*³⁸⁵ The Presiding Judge explained that under *BP Pipelines* "[t]o determine the prudence of an investment, the Commission evaluates whether a reasonable utility manager would have made the same investment under the same circumstances," and that a prudent determination is based upon what the utility knew the time it made the decision.³⁸⁶ Additionally, the

³⁸¹ We also disagree with PG&E's unsupported claim that the Presiding Judge's decision reveals a bias against stated rates as opposed to formula rates. The Presiding Judge found, correctly, that PG&E's forecasting was not just and reasonable due to persistent flaws in its forecasting, as discussed herein.

³⁸² See Ex. PGE-0009 (Testimony of PG&E Witness) at 17-18.

³⁸³ PG&E's other transmission projects are described in more detail in Ex. PGE-0009 at 19-64.

³⁸⁴ Initial Decision, 165 FERC ¶ 63,001 at P 622.

³⁸⁵ *Id.* P 623 (citing *BP Pipelines (Alaska) Inc.*, 153 FERC ¶ 61,233, at P 13 (2015) (*BP Pipelines*)).

³⁸⁶ *Id.*

Presiding Judge noted, there is a presumption of prudence until a challenging party creates serious doubt and the utility has the burden of dismissing those doubts.³⁸⁷

162. Next, the Presiding Judge considered CPUC's request to disallow \$73 million from PG&E's TRR to address the company's allegedly unjust and unreasonable practice of "self-approving" more than 60% of its capital additions finding this contention outside the scope of the current proceeding. The Presiding Judge reasoned that "simply showing that PG&E often bypasses CAISO when making capital additions is not evidence that the additions are unjust and unreasonable."³⁸⁸

163. Further, the Presiding Judge considered CPUC's contention that PG&E's expenditures on the Embarcadero-Potrero Project's cable exceeded just and reasonable costs by \$91.3 million.³⁸⁹ The Presiding Judge explained that PG&E filed for a Certificate of Public Convenience and Necessity (CPCN) with CPUC for the Embarcadero-Potrero Project with a final forecasted cost of \$196.8 million, while the forecast of the final cost of the Embarcadero-Potrero Project proposed by PG&E in this proceeding is \$288.3 million, which is \$91.3 million more than the forecast initially presented to and approved by CPUC.³⁹⁰

164. The Presiding Judge rejected CPUC's assertion that *Anaheim* applies and declined to defer to CPUC.³⁹¹ The Presiding Judge was not persuaded that, pursuant to *Anaheim*, CPUC's disallowance of capital costs incurred by PG&E was sufficient to rebut the presumption of prudence and shift the burden to PG&E to establish prudence of its expenders. The Presiding Judge reasoned that CPUC's characterization of \$196.8 million as the project's "maximum reasonable cost" is not equivalent to a determination that all costs in excess of the amount should be disallowed. In the Presiding Judge's view, CPUC's determination on capital costs in the CPCN proceeding was simply an adoption of PG&E's assessment, made prior to commencement of construction, as to what the

³⁸⁹ *Id.* PP 622, 627.

³⁹⁰ *Id.* PP 628, 632 (citing Ex. PUC-0001 at 28:27-29:1).

³⁹¹ *Id.* PP 634-635 (citing *Anaheim*, 669 F.2d at 799). The Presiding Judge explained that in *Anaheim*, the D.C. Circuit affirmed a Commission decision that "state disallowance of a cost incurred by a utility was sufficient to rebut the presumption of prudence and shift the burden to the utility to establish prudence of its expenditures." *Id.* P 635.

maximum cost of the project should be.³⁹² The Presiding Judge found that CPUC's claim that the final expense was above the amount PG&E told CPUC the Project would cost is not equivalent to a determination that all costs above this amount were imprudent and should be disallowed.³⁹³ The Presiding Judge was also not persuaded by the evidence presented by CPUC, specifically, three pages from a January 2015 report describing an internal audit that PG&E conducted to improve the efficiency of operations. The Presiding Judge concluded that the size, cost, and complexity of the Project meant some mistakes are inevitable but they do not constitute mismanagement³⁹⁴ or raise doubts to the prudence of the expenditures.³⁹⁵ The Presiding Judge also found CPUC's assertion of other issues including "whether PG&E's procedures related to capital additions, such as planning and prioritization, recordkeeping, cost estimating, and project cost containment are appropriate," did not warrant consideration as separate issue from the issue of alleged imprudent capital costs.³⁹⁶

b. Briefs on Exceptions

165. CPUC objects to the Initial Decision's conclusions on PG&E's "self-approved" transmission projects and the Embarcadero-Potrero Project. With respect to "self-approved" projects, CPUC first contends that the issue is within the scope of this case, and that the Presiding Judge erred in deciding otherwise.³⁹⁷ CPUC argues that the evidence it presents "demonstrates that PG&E's ad hoc practices to identify and pursue capital additions projects ensure that its rates cannot be just and reasonable because the practices result in capital additions that cannot be shown to be needed or cost effective."³⁹⁸ Accordingly, CPUC contends that the Presiding Judge's decision would leave the parties with no recourse to address these practices.³⁹⁹ CPUC also contends that

³⁹² *Id.* P 636.

³⁹³ *Id.* PP 634, 636.

³⁹⁴ *Id.* PP 641-43 (citing Ex. PUC-0018 (Jan. 2017 and Apr. 2013 CPUC Audit Reports)).

³⁹⁷ CPUC Brief on Exceptions at 10.

³⁹⁸ *Id.* at 10-11 (*emphasis omitted*).

³⁹⁹ *Id.* at 12.

the Initial Decision should have considered evidence that these practices are unjust and unreasonable.⁴⁰⁰

166. CPUC argues that PG&E must prove the scale of its self-approved projects and advancement practices and their impact on rates are “just and reasonable and not unduly discriminatory and preferential.”⁴⁰¹ CPUC identifies a list of PG&E’s self-approved projects to demonstrate the magnitude of this practice and claim that these projects add approximately \$750 million in capital additions to the utility’s rate base.⁴⁰² CPUC also argues that the record shows that PG&E does not have the necessary data or procedures to perform the data-driven, condition-based methodologies it claims it used to identify the capital additions.⁴⁰³ CPUC points to PG&E’s witness’ testimony describing the methodology used and argues that the evidence does not prove PG&E had appropriate procedures in place to comply with the methodology.⁴⁰⁴ Thus, CPUC concludes, PG&E could only apply an *ad hoc* process that relied on inaccurate and incomplete data.⁴⁰⁵

167. CPUC further contends that PG&E’s evidence to support its methodology reflects PG&E’s aspiration to perform data-driven and condition-based methodologies, but it did not apply these methods to the projects at issue.⁴⁰⁶ Additionally, CPUC claims that PG&E’s internal audits from 2012 to 2016 reflect the utility’s absence of records management procedures and lack of compliance with any that may have existed.⁴⁰⁷ CPUC claims that PG&E’s audits acknowledge that these issues could result in

⁴⁰⁰ *Id.* at 13.

⁴⁰¹ *Id.*

⁴⁰² *Id.* at 14-16.

⁴⁰³ *Id.* at 16.

⁴⁰⁴ *Id.* at 18.

⁴⁰⁵ *Id.*

⁴⁰⁶ *Id.* at 20, 23; *see also id.* at 21-23 (listing strategies).

⁴⁰⁷ *Id.* at 24; *see also id.* at 24-32 (list of internal audits). CPUC’s concerns with the audits include: (1) lack of procedures to comply with due dates and corrective work that is inappropriately delayed; (2) insufficient inspection of documents combined with supervisors’ failure to notice key errors within these records; (3) supervisors’ inconsistency adhering to or understanding records requirements; (4) missing or misfiled notifications and project documents; and (4) lack of control and consistency.

inaccurate forecasting of project costs.⁴⁰⁸ CPUC claims the audits evidence shows that PG&E's records management was so deficient that PG&E could not comply with its own standard.⁴⁰⁹ CPUC acknowledges that PG&E shows a need and desire for sufficient records management but argues that these processes were not in place prior to PG&E incurring the capital additions expenses at issue.⁴¹⁰

168. CPUC argues that PG&E's witness cross-examination testimony regarding project-by-project prioritization procedures is inconsistent with PG&E's claim of using data-driven, condition-based methodologies to prioritize projects.⁴¹¹ CPUC claims that PG&E's witness testimony in conjunction with the record shows that PG&E's procedures were limited, so its project-by-project analysis to rank transmission lines most in need of replacement relied on *ad hoc* procedures.⁴¹² CPUC contends that PG&E's ranking procedures are inadequate because of missing and inaccurate data and, therefore, the project prioritization procedure is not just and reasonable.⁴¹³

169. CPUC also argues that PG&E's Risk Informed Budget Allocation (RIBA) process, which uses a scoring system to identify and prioritize capital additions for transmission projects, is deficient because it does not establish a score until a transmission project is in the development phase.⁴¹⁴ CPUC contends that PG&E only identifies a RIBA score after it identifies and prioritizes a project as a part of its planning process to develop detailed budgets and work plans for the entire utility.⁴¹⁵ Next, CPUC contends that PG&E's

⁴⁰⁸ *Id.* at 31.

⁴⁰⁹ *Id.* at 32-33.

⁴¹⁰ *Id.* at 34.

⁴¹¹ *Id.* at 36.

⁴¹² *Id.* at 37.

⁴¹³ *Id.* at 39.

⁴¹⁴ *Id.* at 40 (citing PG&E Brief at 47 (representing that the RIBA process and other considerations “determine the ranking of which projects should have priority. Only after the projects were identified and ranked was a budget for the year applied to determine how much would be available for the Test Year”)).

⁴¹⁵ *Id.* at 41 (citing Ex. PGE-0037 (Rebuttal Testimony of Kevin Dasso) at 16:4-7 (RIBA ensures that projects having the greatest impact on the system safety and reliability are included in the portfolio of work put forth by the core operating Lines of Business)).

project advancement practices are not just and reasonable.⁴¹⁶ CPUC states that “[a]dvanced projects are capital addition projects that PG&E does not include in its capital additions forecast, but which are substituted for forecasted capital additions when those forecasted projects are delayed.”⁴¹⁷ According to CPUC, the Initial Decision acknowledges that this practice is dubious. CPUC contends it is unjust and unreasonable because PG&E does not notify parties that the projects are in rate base.⁴¹⁸

170. CPUC claims that the evidence demonstrates that PG&E’s self-approval and project advancement practices are not just and reasonable.⁴¹⁹ Therefore, CPUC contends that the Commission should remedy this issue by disallowing \$284.4 million (i.e., 25% of the costs of PG&E’s self-approved projects) from PG&E’s forecasted capital additions.⁴²⁰

171. Further, CPUC contends that the Initial Decision was incorrect when it found that the evidence did not show serious doubt about the prudence of PG&E’s cost overruns on the Embarcadero-Potrero Project.⁴²¹ CPUC agrees with the Commission’s holding in *BP Pipeline* “that a utility’s FERC-jurisdictional expenditures are presumed to be prudent, and that a party must provide more than a ‘bare allegation of imprudent’ to rebut this presumption, specifically, there must be ‘serious doubt’ about the prudence of an expenditure.”⁴²² However, CPUC contends that the Initial Decision failed to recognize that the record establishes serious doubt regarding PG&E’s expenditures.⁴²³ CPUC argues that the Initial Decision’s reliance on PG&E’s informal communication with CPUC and its decision not to enforce cost caps against the utility shifts the statutory

⁴¹⁶ *Id.* at 42.

⁴¹⁷ *Id.* (citing Ex. PGE-0043 at 2-8).

⁴²³ *Id.* at 48.

burden of proof from demonstrating serious doubt to actively attempting to stop imprudent expenditures.⁴²⁴ CPUC claims this is unlawful.⁴²⁵

172. CPUC claims that cost overruns and project delays were a foreseeable consequence of PG&E's project mismanagement because the management was not proportionate to the complexity of the projects.⁴²⁶ CPUC argues that the Initial Decision should have recognized that PG&E's inability to explain its cost overrun of \$91.5 million and inconsistencies between PG&E's testimony on the Embarcadero-Potrero Project and the issue at bar raises serious doubt about the prudence of the utility's cost overruns.⁴²⁷ According to CPUC, the only reason PG&E provides for the cost overruns is that the estimate of \$196.8 million was premature and the contingency was too low.⁴²⁸ CPUC states that PG&E's witness testimony fails to identify any specific reason that the cost overruns are inconsistent with PG&E's records and what the utility represented to CPUC when it approved the CPCN application.⁴²⁹ CPUC claims that this evidence establishes serious doubt as to the prudence of PG&E's cost overruns.⁴³⁰

173. Additionally, CPUC contends that the record reflects that PG&E has an incentive to underestimate costs of its projects to CPUC, and that PG&E did so here.⁴³¹ CPUC disagrees with the Initial Decision's finding that CPUC's failure to reopen the CPCN proceeding is relevant to analysis of PG&E's prudence.⁴³² CPUC claims that this finding fails to acknowledge PG&E's decision not to have CPUC authorize the Embarcadero-

Potrero Project's cost overrun is evidence that it imprudently managed the project.⁴³³ CPUC contends that this finding increases the burden to more than a showing of serious doubt.⁴³⁴ CPUC contends that no precedent supports the Initial Decision's finding that ultimately changes the burden of proof.⁴³⁵ CPUC also contends that while it acknowledges that *Anaheim* is distinct because it found certain expenditures were imprudent, the Initial Decision ignores important policy reasons raised in CPUC had raised as to why the Commission should apply the case.⁴³⁶

174. Finally, CPUC contends that its brief is sufficient to raise serious doubt about the prudence of PG&E's cost overruns on the Embarcadero-Potrero Project.⁴³⁷ CPUC claims the burden now lies with PG&E to show its cost overruns were prudent.⁴³⁸ CPUC claims the issue is not whether the project was prudent, but whether PG&E's expenditures were prudent.⁴³⁹ CPUC lists evidence it claims shows serious doubt including the fact that PG&E exceeded maximum reasonable costs, inconsistencies in PG&E's testimony, PG&E's failure to identify the reason for cost overruns, and that PG&E's actions were consistent with the natural incentive to under estimate costs during project approval.⁴⁴⁰ Therefore, CPUC contends that the Commission should shift the burden to PG&E to demonstrate with specific evidence that its costs were prudent.⁴⁴¹

c. Briefs Opposing Exceptions

175. PG&E explains that, in CPUC's pre-filed testimony and at hearing, it argued that PG&E's practice of "self-approval" of certain transmission projects violated

Order No. 890⁴⁴² because those projects did not go through CAISO's transmission planning process.⁴⁴³ However, PG&E notes that, since that time, the Commission issued an order⁴⁴⁴ denying a complaint by CPUC and others making this claim, and that CPUC therefore has revised its argument here.⁴⁴⁵ PG&E argues that the Commission should reject CPUC's attempt to reframe the self-approval issue, which attempts to show PG&E's advancement practices are unjust and unreasonable.⁴⁴⁶ PG&E also states that it produced volumes of project files that describe the reasons for and scope of each project.⁴⁴⁷ Therefore, PG&E contends that CPUC did not offer sufficient evidence to prove that the projects nor the costs associated with the projects were imprudently included in the capital additions forecast.⁴⁴⁸ Further, PG&E argues that accepting CPUC's argument would harm the Commission's desire to encourage settlements.⁴⁴⁹

176. Further, PG&E disagrees with CPUC's exception that claims PG&E did not identify a majority of projects the utility advanced in its rate case that costs an estimated \$300 million.⁴⁵⁰ PG&E claims that the calculation CPUC used is incorrect and

⁴⁴² *Preventing Undue Discrimination and Preference in Transmission Service*, Order No. 890, 118 FERC ¶ 61,119, *order on reh'g*, Order No. 890-A, 121 FERC ¶ 61,297 (2007), *order on reh'g*, Order No. 890-B, 123 FERC ¶ 61,299 (2008), *order on reh'g*, Order No. 890-C, 126 FERC ¶ 61,228, *order on clarification*, Order No. 890-D, 129 FERC ¶ 61,126 (2009).

⁴⁴⁸ *Id.*

⁴⁴⁹ *Id.* at 62.

⁴⁵⁰ *Id.* at 56-57.

unsupported by an analysis on the record.⁴⁵¹ PG&E does not agree with CPUC's claim that it is responsible for demonstrating how CPUC's calculations are wrong.⁴⁵² PG&E rejects CPUC's contention and claims it included approximately 2,200 capital projects in this filing and "[t]he fact that a small subset of forecasted projects did not go operational... is to be expected."⁴⁵³ PG&E contends that no party proved its capital additions were unjust nor unreasonable, so the Commission should authorize a full recovery of the capital additions.⁴⁵⁴

177. With respect to the Embarcadero-Potrero Project, PG&E contends that CPUC's witness did not provide evidence that any expenditures for the Embarcadero-Potrero Project were imprudent.⁴⁵⁵ PG&E also states that the Initial Decision correctly concluded that *Anaheim* did not apply, claiming that *Anaheim* is distinguishable from the issue here because there was no evidence CPUC had considered and disallowed any costs PG&E has incurred in implementing the project as imprudent.⁴⁵⁶ PG&E states that the current case is beyond the scope of *Anaheim* because there is no state commission decision to which this Commission could defer.⁴⁵⁷

178. PG&E contends that TANC's exception shows the utility does a good job managing its capital additions portfolio because only six projects of 2,200 exhibited poor project management.⁴⁵⁸ PG&E states that those six projects only indicate that PG&E could have done a better job with implementation, not that its forecast is unreasonable.⁴⁵⁹ PG&E contends that TANC's exhibits merely demonstrates that PG&E is constantly working to improve its processes and procedures.⁴⁶⁰ Further, PG&E claims that CPUC's

Brief on Exceptions incorrectly interprets PG&E's internal audit documents to claim the utility's processes are deficient and unable to produce reasonable capital additions forecasts.⁴⁶¹ PG&E asserts that these internal audits help it identify areas for improvement and provide feedback so the utility can improve over time.⁴⁶²

d. Commission Determination

179. The Commission has long held that “managers of a utility have broad discretion in conducting their business affairs and in incurring costs necessary to provide services to their customers” and that “the appropriate test to be used” in assessing the prudence of costs “is whether they are costs which a reasonable utility management...would have made, in good faith, under the same circumstances, and at the relevant point in time.”⁴⁶³ Even if a decision turns out to be incorrect in hindsight, the Commission's task is to review the prudence of a utility's actions and the costs resulting from the particular circumstances existing either at the time the costs were incurred or when the utility became committed to incur those expenses.⁴⁶⁴ As the Commission has also held, however, a presumption of prudence exists only until the challenging party creates a serious doubt as to the prudence of an expenditure. If this occurs, the regulated entity has the burden of proof to establish prudence.⁴⁶⁵

180. In this case, we find that CPUC has failed to raise serious doubts about the prudence of PG&E's capital expenditures at issue here. As relevant to the Embarcadero-Potrero Project expenditures, which is the only specifically identified transmission project for which CPUC makes a prudence challenge, the Initial Decision has addressed CPUC's arguments in detail in paragraphs 639-649, and we agree with the Presiding Judge's analysis on this issue. Specifically, we agree that, while CPUC raises concerns about the costs of the Embarcadero-Potrero Project, particularly the cost overruns from its initial forecast in the CPCN proceeding, any mistakes made by PG&E in developing this significant transmission project “do not constitute the kind of mismanagement that should raise serious doubts about the prudence of their expenditures.”⁴⁶⁶ On exceptions,

⁴⁶¹ *Id.* at 67.

⁴⁶² *Id.*

⁴⁶³ *New England Power Co.*, 31 FERC ¶ 61,047, at 61,084 (1985).

⁴⁶⁴ *Id.*

⁴⁶⁵ *BP Pipelines*, 153 FERC ¶ 61,233 at PP 12-14.

⁴⁶⁶ Initial Decision, 165 FERC ¶ 63,001 at P 644.

CPUC gives us no reason to revisit the Presiding Judge’s analysis, and we find its challenge does not raise serious doubts about the prudence of the costs PG&E incurred.

181. In regard to the issue of PG&E’s “self-approved” projects, CPUC has failed to raise discrete issues and present specific evidence raising doubts pertaining to the prudence of capital costs of a specific transmission project. As the Commission has explained, whether costs were prudently incurred is a fact-specific inquiry and the Commission must examine the prudence of specific costs.⁴⁶⁷ It does not suffice to make general, sweeping allegations of imprudence without focusing on costs incurred with respect to specific transmission projects, as is the case with CPUC’s challenge to the “self-approved” projects. Accordingly, we find that CPUC has not raised serious doubts as to the prudence of costs associated with PG&E’s so-called “self-approved” transmission projects. We therefore affirm the Presiding Judge’s findings on these issues.⁴⁶⁸

F. Allocating Common, General and Intangible (CGI) Plant Costs

182. CGI plant is a category of FERC Account 101 – Electric Plant in Service, which is applicable to the production, transmission, and distribution functions of electric service. Common plant-in-service is plant used by both production and transmission, but cannot be associated with either function directly. General plant-in-service consists of items used for utility purposes which cannot be accounted for elsewhere, such as vehicles, communication equipment, and the company’s central headquarters and office furniture. Intangible plant consists of non-physical capital items, such as fees and expenses

⁴⁶⁷ *BP Pipelines*, 153 FERC ¶ 61,233 at P 88 (“[a]ny prudence determination, including this one, is highly *fact-specific* and based upon the record and circumstances presented by a particular record.”) (emphasis added); *New England Power Co.*, 31 FERC at 61,084 (stating that it is the “[Commission’s] duty to determine the prudence of *specific* costs...” (emphasis added).

⁴⁶⁸ We clarify one aspect of the Initial Decision, although it does not change the outcome of our determination. To the extent that the Initial Decision could be read as stating that *Anaheim* provides that for the evidentiary burden to shift to a utility, there must be a decision by a state agency disallowing proposed capital expenditures as imprudent, we disagree. Our reading of *Anaheim* reveals that the state disallowance of capital costs is just one of the examples where a serious doubt as to prudence of costs is raised. See *Anaheim*, 669 F.2d at 809 (“where some other participant in the proceeding creates a serious doubt as to the prudence of an expenditure, then the applicant has the burden of dispelling these doubts and proving the questioned expenditure to have been prudent”).

associated with the incorporation of the company, franchise fees, patent rights, and licenses.⁴⁶⁹

183. PG&E allocates CGI plant costs in two steps. First, whenever practical, PG&E identifies plant used by a single line of business and directly assigns that plant to the corresponding “Unbundled Cost Category” within which the line of business falls.⁴⁷⁰ PG&E allocates the remaining, “residual” CGI plant costs to Unbundled Cost Categories based on Operation and Maintenance (O&M) labor ratios.⁴⁷¹ For Period II, PG&E directly assigned roughly \$461.1 million of CGI costs to Network Transmission, and allocated \$191.3 million of CGI costs to Network Transmission through the use of O&M labor ratios.

1. Initial Decision

184. The Presiding Judge found that PG&E failed to establish that its direct assignment of CGI costs was just and reasonable. The Presiding Judge explained that in *Kern River Gas Transmission Co.*,⁴⁷² the Commission stated that costs should be directly assigned only if the method of assignment is consistent and the cost’s relationship to a specific line of business is obvious and reviewable.⁴⁷³ The Presiding Judge found that PG&E failed to demonstrate that the relationship between the CGI costs and the lines of business to which it seeks to assign those costs is reviewable.

185. The Presiding Judge found that *Kern River* is applicable to the CGI costs at issue in this proceeding, and governs the appropriateness of PG&E’s proposed direct assignment of CGI costs,⁴⁷⁴ because CGI plant items are functionally similar to A&G expense items, and that both items are often overhead in nature.⁴⁷⁵ The Presiding Judge noted that some parties contended that *Kern River* does not apply to CGI costs, invoking

⁴⁷⁵ *Id.* P 659.

the Commission's decision in *Minnesota Power*, which held that General Plant costs should be allocated using labor allocators rather than plant allocators, and *Entergy*, in which the Commission applied *Minnesota Power* to both General and Intangible Plant.⁴⁷⁶ The Presiding Judge found those two cases to be distinguishable from the instant proceeding, explaining that in those cases, the Commission was choosing between the use of labor allocators and plant allocators, and was not addressing whether General and/or Intangible Plant costs should be directly assigned.⁴⁷⁷

186. The Presiding Judge explained that PG&E has the burden of establishing, among other things, that the relationships between its directly assigned costs and the function to which they are assigned are reviewable, including a showing that the documentation of its direct assignment of costs permits review of whether the transaction which gave rise to those costs actually occurred.⁴⁷⁸

187. The Presiding Judge stated that as part of her rebuttal testimony, PG&E's witness provided a three-page spreadsheet showing basic information regarding all CGI plant costs directly assigned during 2015.⁴⁷⁹ The Presiding Judge stated that PG&E's witness cited two planning orders as examples of documentation supporting the spreadsheet: one to install Supervisory Control and Data Acquisition for Electric Transmission amounting to approximately \$3.7 million, and another involving communications equipment costing \$100,000. However, the Presiding Judge found that PG&E's documentation submitted in support the planning orders and the explanations provided upon cross-examination were not sufficient to show that the alleged costs were incurred, and did not allow the "review of the assignment of such costs."⁴⁸⁰

188. Specifically, with respect to the \$3.7 million for Supervisory Control and Data Acquisition for Electric Transmission, the Presiding Judge stated that the only documentation that PG&E provided to support this transaction was a slightly more detailed spreadsheet which was not sufficient to show that the \$3.7 million in alleged

⁴⁷⁶ *Id.* P 660 (citing *Minn. Power & Light Co.*, 4 FERC ¶ 61,116, at 61,268, *aff'd*, 5 FERC ¶ 61,091 (1978) (*Minnesota Power*); *Entergy Services, Inc.*, 130 FERC ¶ 61,026, at P 88 (2010), *order on reh'g*, 143 FERC ¶ 61,120 (2013) (*Entergy*)).

⁴⁷⁷ *Id.* P 661.

⁴⁷⁸ *Id.* P 677.

⁴⁸⁰ *Id.* PP 678-697.

costs were incurred, much less to permit review of the assignment of such costs.⁴⁸¹ With respect to the second example, the Presiding Judge stated that after TANC submitted a data request, PG&E responded that it had no such invoice because the communications equipment had never been installed.⁴⁸²

189. The Presiding Judge stated in the data response, PG&E provided as an alternate example Planning Order 5753559 involving the installation of communications equipment related to the Cascade Substation in the amount of \$36,147.⁴⁸³ The Presiding Judge explained that the third page of PG&E's original spreadsheet shows that the costs expended under this planning order included approximately \$36,000 for general plant communications recorded to asset class EGP39700 (a common plant account) and directly assigned to Low Voltage Network Facilities.⁴⁸⁴ The Presiding Judge stated that the information that PG&E provided on Planning Order 5753559 in its data response is the sole documentation in the record purporting to support the information in its original spreadsheet. The Presiding Judge stated that *Kern River* requires that such documentation be sufficient to permit review of the relationship between the \$36,000 allegedly spent for communications equipment and the Low Voltage Network Facilities to which the alleged costs were assigned; however, the Presiding Judge found that PG&E's documentation fails to establish that the transaction listed under the planning order 5753559 even took place.⁴⁸⁵

190. Elaborating further, the Presiding Judge stated that PG&E's data response included a job estimate for Planning Order 5753559 which included another spreadsheet purporting to show detail regarding the communication and signaling equipment charged to the job. The Presiding Judge explained that the spreadsheet shows a breakdown of twelve work categories (e.g., engineering, station equipment and communication equipment); further breakdowns of the twelve work subcategories; and three tables setting out data for property installed, removal costs, and property retired.⁴⁸⁶ The Presiding Judge found that nothing in the data response supported PG&E's representations that Planning Order No. 5753559 involved an expenditure for communication equipment of roughly \$36,000 that has been recorded to asset class

⁴⁸¹ *Id.* P 681 & n.778 (citing Ex. PGE-0044 at 19-21).

⁴⁸² *Id.* P 682 & n.780 (citing Ex. TNC-0101 (PG&E Data Response) at 1).

⁴⁸³ *Id.* P 683 & n.781 (citing Ex. TNC-0101 at 1).

⁴⁸⁵ *Id.* P 685.

⁴⁸⁶ *Id.* PP 686-690.

EGP39700, much less the representation that this amount has been directly assigned to a transmission function.⁴⁸⁷ Specifically, the Presiding Judge pointed out a number of the various charges for communications equipment that appear in the data response and found that none add up to or fit the description of the roughly \$36,000 spent under Planning Order 5753559.⁴⁸⁸

191. The Presiding Judge added that TANC cross-examined PG&E's witness on this point, establishing that the costs of the only communications equipment shown in the detailed portion of the Planning Order No. 5753559 estimate that could have been directly assigned to any function totaled no more than \$12,000, and noted the contrast between that amount and the \$36,000 shown to be directly assigned in the original spreadsheet.⁴⁸⁹ The Presiding Judge stated that PG&E's witness referred to page 2 of the job estimate, which showed \$44,000 for communication equipment; however, the Presiding Judge noted that this data did not set forth the asset classes to which the costs were recorded, and does not show what, if any, portion of the costs could have been directly assigned.⁴⁹⁰

192. The Presiding Judge concluded that PG&E failed to demonstrate that its direct-assignment methodology for allocating CGI costs satisfies the *Kern River* test and therefore, concluded that PG&E must allocate all such costs based on O&M labor indicators.⁴⁹¹

2. **Briefs on Exceptions**

193. PG&E contends that the Presiding Judge properly ruled that *Kern River* applies to the CGI costs at issue, but incorrectly concluded that PG&E failed to meet the *Kern River* reviewability test.⁴⁹² PG&E estimates the Initial Decision's ruling would lower PG&E's TRR by approximately \$40 million, a reduction in rate base of approximately \$17 million and a correspondingly lower depreciation expense of \$23 million.⁴⁹³ PG&E states that

⁴⁸⁷ *Id.* at P 691.

⁴⁹² PG&E Brief on Exceptions at 62.

⁴⁹³ *Id.* at 63.

the spreadsheet reflected planning order attributes for all CGI plant costs to demonstrate that direct assigned costs were reviewable. PG&E asserts that reviewing a list of planning orders with direct-assigned CGI costs would clearly show by the planning order description, major work category, and funding identification number that the orders are Electric Transmission jobs.⁴⁹⁴ PG&E also asserts that these job estimates were provided in response to data requests. It argues the Presiding Judge attempted to tie the costs from the job estimates to the final plant additions amounts without recognizing the amounts included on the spreadsheet did not reflect final costs. PG&E contends that the Initial Decision failed to review record evidence from its rebuttal testimony that demonstrated that the relationship of CGI plant costs to Electric Transmission is obvious and reviewable.⁴⁹⁵ PG&E argues that it has demonstrated that its method meets the *Kern River* test and that CGI costs should be directly assigned to Electric Transmission.⁴⁹⁶

194. TANC and Six Cities contends that the Initial Decision erred by not following its precedent that CGI plant and related costs be allocated using a labor ratio as set forth in *Minnesota Power* and *Entergy* that alternate methods can only be used upon a showing that labor ratios would be unreasonable in the particular circumstances.⁴⁹⁷ Six Cities states that in Opinion No. 445,⁴⁹⁸ the Commission upheld an Initial Decision that found that the “use of labor cost ratios to allocate Administrative and General (A&G) and general and intangible plant (G&I) expenses was consistent with the Commission’s long-standing policy set forth in *Minnesota Power*.⁴⁹⁹ TANC further requests that the Commission grant exceptions and find that PG&E fails to meet its burden to show that labor ratios are unreasonable in this situation.⁵⁰⁰ TANC also argues that the Initial Decision errs in finding that *Kern River* is applicable to this proceeding, stating that *Kern River* addressed A&G costs, not the CGI costs at issue here, and fails to recognize the distinct differences between A&G expenses and CGI costs.⁵⁰¹

⁵⁰¹ *Id.* at 83-84.

195. Trial Staff notes that the Initial Decision did not specify which labor allocator should be used, and states that PG&E should use a Period II labor allocator to allocate Period II CGI plant-related costs.⁵⁰²

3. Briefs Opposing Exceptions

196. PG&E reiterates that the Initial Decision was correct in finding that *Kern River* applies to its CGI costs, but erred in finding that PG&E had not met the reviewability prong of the *Kern River* test.⁵⁰³ PG&E asserts that it demonstrated that its direct assignment methodology did meet that reviewability test.⁵⁰⁴ PG&E states that Trial Staff fails to mention the sworn testimony of its own witness supporting the use of direct assignment of CGI costs under *Kern River*.⁵⁰⁵ PG&E adds that in the December 19, 2017 Joint Statement of Position on the Issues, Trial Staff stated that its position, based on its review of PG&E's testimony, was that PG&E has satisfied the *Kern River* test with respect to CGI plant allocation.⁵⁰⁶

197. TANC argues that *Kern River* is inapplicable because it addressed A&G costs, not CGI costs.⁵⁰⁷ TANC and Six Cities contend that, even if *Kern River* did apply, the Initial Decision properly found that PG&E has failed to show that the relationship between CGI costs and its Network Transmission function was obvious and reviewable.⁵⁰⁸ Finally, TANC states that it does not oppose, but believes unnecessary, Trial Staff's exception that PG&E use a Period II labor allocator to allocate Period II CGI plant-related costs.⁵⁰⁹

198. Trial Staff states that the Initial Decision properly found that the *Kern River* test applies to the appropriateness of PG&E's proposed direct assignment of CGI costs.⁵¹⁰ Trial Staff contends that TANC's reliance on *Minnesota Power* and *Entergy Services* is

misplaced, explaining that in those two cases, the Commission was choosing between the use of labor allocators and plant allocators, and was not addressing whether CGI costs should be directly assigned.⁵¹¹ Trial Staff also asserts that TANC's claims that the Initial Decision fails to recognize the distinct differences between A&G expenses and CGI costs are not persuasive, stating that *Kern River* has broader applicability than simply A&G costs.⁵¹²

199. Trial Staff clarifies that it did not take exception to the Initial Decision's determination that PG&E failed the *Kern River* test.⁵¹³ Trial Staff also states that although its Initial Brief concluded that PG&E provided sufficient information demonstrating that the direct assignment and allocation methodologies are obvious and reviewable, the Initial Decision found that "PG&E did not put any of these documents in the record, so it is impossible to review their adequacy."⁵¹⁴

4. Commission Determination

200. We agree with the Presiding Judge that the *Kern River* test applies to the appropriateness of PG&E's proposed direct assignment of CGI plant costs. Although *Kern River* dealt specifically with A&G costs, the Commission stated that any cost can be accounted for on a direct basis regardless of the specific expense account, and that the test is specifically whether the method of directly assigning the cost is consistent and the relationship obvious and reviewable.⁵¹⁵ TANC and Six Cities contend that Commission precedent requires CGI costs to be allocated based on labor ratios, citing *Minnesota Power, Entergy Services*, and Opinion No. 445. However, in those cases, the Commission was deciding whether labor allocators or plant allocators should be used for allocating CGI costs, not whether CGI costs should be directly assigned. Thus, we find those cases are not applicable here. Accordingly, we find that the Presiding Judge was correct in applying *Kern River* in deciding whether PG&E's proposed direct assignment of CGI costs was just and reasonable.

⁵¹¹ *Id.* at 31-33.

⁵¹² *Id.* at 33-37.

⁵¹³ *Id.* at n.101.

⁵¹⁴ *Id.* (citing Initial Decision, 165 FERC ¶ 63,001 at P 685 n.786).

⁵¹⁵ *Kern River*, 117 FERC ¶ 61,077 at P 290 (stating that "the Commission's general policy is that direct costs should always be directly assigned and that indirect costs should be allocated by formula").

201. As the Presiding Judge explained, under the *Kern River* test, PG&E must establish that the relationship between the costs directly assigned and the Network Transmission function to which they are assigned is obvious and reviewable. First, PG&E must make a showing that its documentation supporting its direct assignment of costs permits review of whether the transactions which gave rise to those costs actually occurred. Then, PG&E's documentation must show that those costs are directly assignable. The Presiding Judge carefully evaluated the documentation provided by PG&E in rebuttal testimony and data response and found that the documentation was not sufficient to show that the alleged costs were even incurred, let alone sufficient to permit review of the assignment of such costs.⁵¹⁶ We agree.

202. Specifically, with respect to the \$3.7 million for Supervisory Control and Data Acquisition for Electric Transmission,⁵¹⁷ the Presiding Judge stated that the only documentation that PG&E provided to support this transaction was a slightly more detailed spreadsheet which was not sufficient to show that the \$3.7 million in alleged costs were incurred, much less to permit review of the assignment of such costs. Our review indicates that the only support that PG&E's offers that the \$3.7 million is directly assignable is its spreadsheet showing these costs as having a "Funding ID" of "Electric Transmission project."⁵¹⁸ We find that simply listing dollar amounts under a certain Funding ID is not sufficient to prove an obvious and reviewable relationship. With respect to Planning Order 5753559 involving the installation of communications equipment related to the Cascade Substation in the amount of \$36,000,⁵¹⁹ our review indicates that the Presiding Judge was correct in his finding that PG&E's documentation fails to establish that the transaction even took place, let alone that the cost were directly assignable. We find none of the various costs in the job estimate and spreadsheets included in PG&E's documentation match up with the \$36,000 amount that PG&E claims.

203. Accordingly, we affirm the Presiding Judge's conclusion that PG&E failed to demonstrate that its direct-assignment methodology satisfies the *Kern River* test and must allocate all such costs based on O&M labor indicators. With respect to Trial's Staff's recommendation that PG&E should use a Period II labor allocators to allocate Period II CGI costs, we disagree. Consistent with our finding in the section below addressing

⁵¹⁶ See *supra* PP 198-202.

⁵¹⁷ See Ex. PGE-0044.

⁵¹⁸ Ex. PGE-0044 at 16, 20.

⁵¹⁹ See Ex. TNC-0101.

allocators, we find that a Period I labor allocator calculated using 2015 recorded O&M labor costs is appropriate for allocating CGI costs in this case.⁵²⁰

G. O&M Expense Forecast

204. PG&E estimated \$285.798 million for 2017 Network Transmission O&M expenses, a 23.4% increase over the 2015 amount of \$231.641 million.⁵²¹ Trial Staff, Six Cities, and TANC proposed reducing the O&M expense by 6.52 to 7.74% and SWP proposed disallowing \$45 million from this expense, citing PG&E's tendency to over-forecast O&M expenses.⁵²²

205. PG&E also forecasted \$35.1 million in its Network Transmission O&M expenses as part of its Tower Coating Maintenance Program.⁵²³ PG&E commenced the program in 2016, and anticipated spending over \$400 million between 2016 and 2022 to assess and repaint approximately 6,000 transmission structures with non-lead-based paint.⁵²⁴

1. Initial Decision

206. The Presiding Judge noted that PG&E's witness does not justify PG&E's forecasted O&M expenses for three accounts included in PG&E's Network Transmission rates.⁵²⁵ The Presiding Judge notes that the failure to discuss Account 565, Transmission of Electricity by Others, leaves \$15.786 million of PG&E's forecasted transmission O&M expenses unaccounted for.⁵²⁶ The Presiding Judge also noted "contrary evidence," and explained that PG&E's O&M forecast cannot have been reasonable because PG&E admitted that its forecast expense includes a reserve fund intended to offset any litigation risk and refund obligation that might result from this proceeding.⁵²⁷ The Presiding Judge stated that PG&E admitted the litigation risk assessment is made after its transmission rate case is filed. Therefore, the Presiding Judge found that PG&E deliberately inflated

⁵²⁰ See *infra* P 249.

⁵²¹ Ex, PGE-0006 at 4:17-18.

⁵²² Initial Decision, 165 FERC ¶ 63,001 at PP 700-701.

⁵²³ Ex. PGE-0006 at 19:20.

⁵²⁴ Ex, TNC-0021 at 233.

⁵²⁵ *Id.* PP 702-709 (citing Ex. PGE-0006 (Testimony of Jessica Tsang)).

⁵²⁶ *Id.* PP 703-706.

⁵²⁷ *Id.* P 710.

its transmission O&M expense, thus lessening the credibility of its forecast. As a result, the Presiding Judge found that PG&E fails to satisfy the first prong of the *Chatham* test.⁵²⁸

207. The Presiding Judge noted that under *Chatham*, PG&E could demonstrate the reasonableness of its O&M forecast if it could establish that its forecasts have proven accurate over the years. Thus, the Presiding Judge examined PG&E's historical forecasts and determined that they have not been accurate, and thus fail to satisfy the second prong of the *Chatham* test. Six Cities, TANC, SWP, and Trial Staff applied different methodologies but all concluded that PG&E inflated its average forecasted O&M expense by amounts ranging from weighted average of 6.52% to a simple average 8.06% for the 2006-2011 and 2013-2015 timeframes.⁵²⁹ PG&E argued that while they have not modified their forecasting methodology since 2010 their forecasts are improving. The Initial Decision then considered PG&E's actual Network Transmission O&M expenses of \$220,664,664 through November 2017 and concluded that actual values O&M expense should be \$237,100,554 by adding PG&E's budgeted Network Transmission O&M expense for December. Therefore, the Presiding Judge determined that PG&E must reduce its Network Transmission O&M expense forecast by \$48,697,531 million for that expense to be just and reasonable.⁵³⁰

208. The Presiding Judge then reviewed TANC's assertion that the \$35.1 million PG&E forecasted for Network Transmission O&M expenses to recoat towers with non-lead based paint was imprudent. The Presiding Judge noted the prudence of PG&E's 2017 tower coating maintenance expenditures is not listed in the Joint Statement of Issues, and therefore TANC's challenge was outside of the scope of issues in the proceeding.⁵³¹ The Presiding Judge then noted that TANC's witness, proposed a reduction of \$2.419 million in O&M based on the company's reduced forecast for that

⁵²⁸ *Id.* P 719.

⁵²⁹ *Id.* P 721.

⁵³⁰ *Id.* PP 724-725. The Presiding Judge observed that, through November 2017, PG&E's Network Transmission O&M expenses totaled \$220,644,544 and PG&E had budgeted \$16.436 million for December 2017. The Presiding Judge then states that the total of these numbers, \$237,100,544, is appropriate for PG&E's Network Transmission O&M expense.

⁵³¹ *Id.* P 728. The Presiding Judge nevertheless reviewed the invoices TANC submitted as evidence and noted there could be plausible explanations for the expenditures at issue but because TANC failed to raise the issue through its prudence expert PG&E was deprived of the opportunity to file rebuttal testimony. *Id.* P 733.

program but did not question the prudence entirely.⁵³² The Presiding Judge dismissed the forecast concerns, stating that his proposed adjustments in the preceding section addressing PG&E's O&M Expense Forecast, which obviated the need to reduce the forecast further.⁵³³

2. Briefs on Exceptions

209. PG&E disagrees with the Initial Decision's assessment that its O&M forecast was not reasonable when made, noting that forecasts will never be exactly correct. PG&E asserts that estimates should not be rejected because they vary from actual data, and that doing so would result in historic-cost ratemaking.⁵³⁴ PG&E notes that the Presiding Judge would not have had access to actual data had the case gone to hearing in 2017, and therefore would not have been able to compare actual data to PG&E's forecast.

210. PG&E also defends its process, whereby their internal budgets are prepared after the forecast is prepared and filed, and its position to spend less than the full forecasted request, citing the regular challenges from intervenors in rate cases where the parties settle the rates at levels below the request. PG&E states that spending can be adjusted throughout the year to ensure safe and reliable operations of its transmissions facilities.⁵³⁵ PG&E argues that the forecasts were reasonable when made in April and May of 2016 and the Commission should accept the forecasts and resulting rates. Therefore, the Commission should not adopt the trued-up calculation for O&M expenses proposed by the Presiding Judge.⁵³⁶

211. TANC believes that the Initial Decision incorrectly determined PG&E's Tower Coating Maintenance Program is not imprudent. TANC states the Initial Decision failed to find the program expenditures imprudent despite evidence indicating that 36 of 71 towers a contractor surveyed did not have lead-based paint, thus did not require recoating. TANC argues the Presiding Judge did not adequately consider evidence regarding PG&E's performance under the 2016 contract during cross-examination. TANC maintains that the contract is important because it illustrates that many of the towers did not qualify for recoating, and this could indicate that future expenditures under

⁵³² *Id.* P 729 (citing Ex. TNC-0018 at 56:1-21 (Testimony of David Cohen)).

⁵³³ *Id.* P 729 & n.846.

⁵³⁴ PG&E Brief On Exceptions at 67 (citing *Pub. Serv. Co. of N.M. v. FERC*, 832 F.2d at 1217 (*Public Service Company of New Mexico*)).

⁵³⁵ *Id.* at 70-71.

⁵³⁶ *Id.* at 71.

the tower maintenance program could also fail to meet the Commission's definition for prudent management action.⁵³⁷

212. TANC also states that the Initial Decision incorrectly found the prudence of the tower maintenance program to be outside the scope of this proceeding. TANC argues that the program is part of PG&E's O&M expense and is therefore within scope.⁵³⁸ TANC also contends that the Initial Decision incorrectly failed to consider fluctuating cost and scope estimates for tower maintenance. TANC notes PG&E's inability to provide a reasonable forecast for the project and therefore should render the forecasted tower maintenance costs unjust and unreasonable.⁵³⁹ Therefore, TANC argues PG&E's forecast for O&M expenses for its Tower Coating Maintenance Program should be adjusted.

3. **Briefs Opposing Exceptions**

213. SWP, Trial Staff, Six Cities, and TANC support the Initial Decision's determination regarding the accuracy of PG&E's forecast, generally raising two arguments: (1) PG&E has a history of over-forecasting O&M expense, and has done so for seven of the previous eight years, and (2) PG&E keeps a "reserve fund" by reducing O&M expense below its forecasted levels. These points support the argument that PG&E's O&M expense forecasts were not reasonable when made (a requirement of *Chatham*).⁵⁴⁰ Trial Staff, citing *Public Service Company of New Mexico*, explains that forecasts can be rejected if it is found that relying on them would "yield unreasonable results."⁵⁴¹ Trial Staff argues that because the forecast was not reasonable when made and should be rejected, it is fair for the Presiding Judge to use actual expenses through November 2017 together with the budgeted amount for December of that year to determine a just and reasonable O&M expense.

214. PG&E agrees with the Initial Decision finding that its Tower Coating Maintenance Program cannot be found imprudent. PG&E also agrees with the Presiding Judge that, due to the timing of TANC's arguments regarding the Tower Coating Maintenance Program, PG&E was not able to file rebuttal testimony to address TANC's argument

⁵³⁷ *Id.* at 87-88.

⁵³⁸ *Id.* at 88-89.

⁵³⁹ *Id.* at 90-91.

⁵⁴⁰ *Chatham*, 662 F.2d at 29.

⁵⁴¹ Trial Staff Brief Opposing Exceptions at 38.

because TANC expressed the concern in the context of the forecast, and not concern with the implementation of the program.⁵⁴²

4. Commission Determination

215. We find that the Presiding Judge correctly determined that PG&E has not satisfied the test in *Chatham* to support its O&M expense forecasts. Under the first prong of *Chatham*, “[t]he utility must demonstrate that its estimates were reasonable when made, either by explaining the chain of reasoning that is employed to arrive at its projections, or by comparing its estimates with actual data, and so establishing their accuracy.”⁵⁴³ Under the second prong of *Chatham*, a utility can demonstrate that its forecast is reasonable if it can establish that its forecasts have been accurate over the years.⁵⁴⁴ Our review of the evidence in the record and the analysis of the Presiding Judge in the Initial Decision shows that PG&E over-forecasted its O&M expense.⁵⁴⁵ Additionally, PG&E’s practice of holding an amount in reserve for litigation risk, as confirmed by PG&E’s witness, further increases the amount by which its O&M expenses are over-forecasted. Therefore, we affirm the Presiding Judge’s finding that PG&E failed to demonstrate its forecast for 2017 Network Transmission O&M expenses were just and reasonable and the decision to use the actual data for the case year to calculate the O&M expense. Accordingly, PG&E must reduce its O&M expense forecast by \$48,697,531 to \$220,664,554.

216. Additionally, we find the Presiding Judge’s analysis regarding PG&E’s Tower Coating Maintenance Program is reasonable and based on record evidence, and we therefore affirm it. For example, the Presiding Judge noted that TANC’s witness did not challenge the prudence of any of PG&E’s tower coating maintenance expenditures; rather, he focused on whether PG&E had supported its forecasts for the costs of the program.⁵⁴⁶ Moreover, the Presiding Judge reasonably concluded that it was “highly questionable” whether TANC’s challenge to two invoices associated with the program

⁵⁴² PG&E Brief Opposing Exceptions at 71-72.

⁵⁴³ Initial Decision, 165 FERC ¶ 63,001 at PP 700 (citing *Chatham* 662 F.2d at 29).

⁵⁴⁴ *Id.* P 720.

⁵⁴⁵ *Id.* PP 721-724.

⁵⁴⁶ *Id.* P 729.

raised reasonable doubts as to the prudence of the costs PG&E incurred.⁵⁴⁷ Finally, in response to TANC's assertion that not addressing the condition of the towers prior to coating raised serious doubts as to the prudence of the expenditures, the Presiding Judge reasonably found that for PG&E to assess the condition of thousands of towers "might prove a needless expenditure of company money and resources."⁵⁴⁸ Therefore, we affirm the Presiding Judge's decision to allow costs for the program, and allow PG&E's forecasted Network Transmission O&M expenses to include \$35.1 million for its Tower Coating Maintenance Program.

217. We also affirm the Presiding Judge's determination that the reduced *forecast* for the Network Transmission O&M expense attributable to the Tower Coating Maintenance Program has been addressed by reducing the overall Network Transmission O&M expense by \$48,697,531. The Presiding Judge's adjustment is intended to allow PG&E to recover its actual costs. Reducing the Network Transmission O&M expenses by an additional \$2.419 million, as proposed by TANC, is therefore unnecessary.

H. A&G Expenses

218. PG&E forecasted its Network Transmission A&G expenses at \$84.199 million for 2017.⁵⁴⁹ PG&E estimated A&G expenses in two steps: (1) estimating total company A&G expenses; and (2) unbundling A&G expenses to Unbundled Cost Categories, including Network Transmission.⁵⁵⁰ PG&E unbundles its A&G expenses into Unbundled Cost Categories using O&M expense labor ratios.⁵⁵¹ PG&E forecasts company-wide A&G expenses of \$1,368,935,000 for 2017.⁵⁵² PG&E allocates \$907.451 million (66.29%) of the foregoing amount to its Electric Department and \$84.199 million (9.28%) of that amount to Network Transmission.⁵⁵³ The O&M labor ratios that PG&E

⁵⁴⁷ *Id.* P 733. The Presiding Judge also noted that TANC failed to raise this issue through its prudence expert, thereby depriving PG&E the opportunity to provide rebuttal testimony on this issue. *Id.*

uses are recorded adjusted 2015 ratios.⁵⁵⁴ The adjustment is necessary because PG&E implemented a new cost model effective January 2016, which affects how A&G expenses are treated.⁵⁵⁵

1. Initial Decision

219. The Presiding Judge found that PG&E's A&G expense forecast was just and reasonable at the time it was made.⁵⁵⁶ The Presiding Judge stated that under the test set out in *Chatham*,⁵⁵⁷ PG&E may establish reasonableness "either by explaining the chain of reasoning that it employed to arrive at its projections, or by comparing its estimates with actual data, and so establish their accuracy."⁵⁵⁸ The Presiding Judge found that PG&E's witness satisfied prong 1 of the *Chatham* test when she testified that PG&E's uses a two-step forecast methodology for estimating A&G expenses by (1) estimating the total company's A&G expenses; and (2) unbundling those expenses, including Network Transmission, to Unbundled Cost Categories.⁵⁵⁹

220. The Presiding Judge rejected TANC's and Trial Staff's claim that based on PG&E's forecast history, between 2006–2011 and 2013–2015, PG&E generally over-forecasted its A&G expenses.⁵⁶⁰ The Presiding Judge found the participants were only able to show that PG&E's forecasted A&G expenses exceeded actual expenses by as little as 2.0% and 2.6%.⁵⁶¹ Further, the Presiding Judge found that historically PG&E had under-forecasted its A&G expenses by an average of 1.0%.⁵⁶² Therefore, the Presiding Judge found that PG&E made a *prima facie* case that its A&G forecast was reasonable.⁵⁶³ Further, the Presiding Judge found that based on the record, PG&E's

⁵⁵⁴ Ex. PGE-0012 (Testimony of David Hartman) at 8:1-19.

⁵⁶³ *Id.*

increase in A&G labor expenses and decrease in Customer Care expenses is plausible and well documented and rejected Six Cities and Trial Staff's proposal to reallocate part of PG&E's A&G costs to Customer Care.⁵⁶⁴

221. The Presiding Judge also found PG&E's allocation of Edison Electric Institute (EEI) dues was just and reasonable.⁵⁶⁵ The Presiding Judge reasoned that PG&E is a member of EEI and it assigns 18.9% of its membership dues to its Network Transmission customers.⁵⁶⁶ The Presiding Judge explained that in *Delmarva Power & Light Co.*,⁵⁶⁷ the Commission found utilities may "allocate EEI contributions to wholesale customers only to the extent it can demonstrate that the contributions were used for a permissible purpose."⁵⁶⁸ The Presiding Judge found the record reflects that EEI's use of PG&E's dues does not determine how the utility must allocate those dues to its ratepayers.⁵⁶⁹ The Presiding Judge stated that, following a CPUC decision, PG&E allocates 43% of its dues to a FERC account that benefits stockholders rather than ratepayers.⁵⁷⁰ According to the Initial Decision, PG&E equally allocates the remaining 56.7% of the dues to generation, transmission, and distribution. The Presiding Judge found this allocation to be just and reasonable.⁵⁷¹ The Presiding Judge also concluded that witnesses sponsored by Trial Staff and PG&E have established that PG&E's contributions to EEI provide benefits to Network Transmission customers.⁵⁷²

222. Further, the Presiding Judge found that PG&E allocates only \$11.338 million out of its 2017 forecasted \$327 million in pension contributions to Network Transmission customers.⁵⁷³ The Presiding Judge stated that PG&E allocates pension benefits the same way the utility allocates its entire pension and benefits costs.⁵⁷⁴ The Presiding Judge found that PG&E was forecasting the same amount of pension benefits as it had in 2015, which the Commission deemed prudent.⁵⁷⁵ The Presiding Judge rejected TANC's opposition to PG&E's allocation, reasoning that TANC failed to raise doubt about the prudence of pension rates. Accordingly, the Presiding Judge found the \$11.338 million of allocated pension costs to Network Transmission to be just and reasonable.⁵⁷⁶

2. **Briefs on Exceptions**

223. Six Cities states that the Commission should reverse the Presiding Judge's finding that PG&E's A&G labor expenses were just and reasonable.⁵⁷⁷ Six Cities reiterates its arguments asserting that the record reflects a discrepancy from Period I to Period II between PG&E's forecasted employee additions or reduction and the total change in labor costs, and argues that PG&E failed to justify this "mismatch."⁵⁷⁸ Six Cities argues that PG&E failed to meet its burden of proof under FPA section 205 to demonstrate that its proposed rate is just and reasonable, and that it "must ensure that there is a sufficient evidentiary record for the Commission to make a reasoned decision."⁵⁷⁹

224. Next, Six Cities criticizes PG&E's explanation that the discrepancy is due to its new cost allocation methodology.⁵⁸⁰ Six Cities argues that the Initial Decision should not

Power Pool, Inc.*, 165 FERC ¶ 61,005, at P 10 (2018) ("[A]ny . . . proponents of the revised ATRR, still [have] the burden of proof to demonstrate that the rate is just and reasonable, and must ensure that there is a sufficient evidentiary record for the Commission to make a reasoned decision")).

⁵⁸⁰ *Id.*

have relied the explanation because it lacked specific and supporting evidence.⁵⁸¹ Six Cities also claims that the Presiding Judge based his conclusion on Exhibit PGE-0025⁵⁸² despite the explanation that the table in the exhibit is an example of how the methodology works.⁵⁸³ In addition, Six Cities argues that the Commission should apply its proposed adjustment to PG&E's A&G expenses.⁵⁸⁴ Six Cities claims the Commission should require PG&E to adjust its forecasted employee additions or reductions by reclassifying the employee headcount and labor costs to a Customer Care expense.⁵⁸⁵

225. TANC also disagrees with the Initial Decision's finding that PG&E's A&G forecast was reasonable when made.⁵⁸⁶ TANC believes the Presiding Judge did not engage in reasoned decision making because the Initial Decision fails to consider evidence that PG&E over-forecasted A&G expenses for Maintenance of General Plant, Office Supplies and Expenses, and Property Insurance.⁵⁸⁷ Additionally, TANC argues the Presiding Judge erred in dismissing its witness' testimony that demonstrates PG&E's failure to provide a reasoned explanation that it will not reduce its 2017 A&G expenses forecast regardless of its projected decline in "Gross Load at Area Out" during the test year.⁵⁸⁸ Further, TANC contends that the Initial Decision does not properly apply *Delmarva* to PG&E's recovery of EEI dues.⁵⁸⁹ According to TANC, *Delmarva* holds that the Commission allows utilities to "allocate EEI contributions to customers only to the extent such contributions are for research and development programs which the wholesale customer themselves could not contribute."⁵⁹⁰ TANC states that, during testimony, PG&E's witness admitted that the utility does not know how EEI spends its

dues.⁵⁹¹ Therefore, TANC requests the Commission find that it is not just and reasonable to allow PG&E to include EEI expenditures in its TO18 revenue requirement.⁵⁹² Finally, TANC disagrees with the Initial Decision's approval of PG&E's pension contributions claiming the ruling conflicts with FPA section 205.⁵⁹³

3. **Briefs Opposing Exceptions**

226. PG&E argues that Six Cities' and TANC's exceptions have no merit. PG&E's states that the Presiding Judge correctly found that its witness made a *prima facie* case that its A&G forecast was reasonable.⁵⁹⁴ Therefore, PG&E claims it met its burden of proof.⁵⁹⁵ Additionally, PG&E rejects Six Cities' argument about its proposed adjustment to Customer Care expenses, and states that the Initial Decision properly addressed this issue when it found that PG&E's explanation that the Customer Care labor expense decrease from 2015-2017 is primarily a result of the implementation of changes in how PG&E allocates certain costs was plausible and well documented.⁵⁹⁶ Further, PG&E criticizes TANC for challenging the Initial Decision's ruling on recovery of dues paid to EEI.⁵⁹⁷ PG&E argues that the Presiding Judge properly rejected TANC's argument.⁵⁹⁸

227. Trial Staff agrees with the Presiding Judge's finding that PG&E's allocation of its EEI dues to Network Transmission is just and reasonable.⁵⁹⁹ Trial Staff argues that TANC failed to raise the issue that EEI uses the contributions PG&E seeks to recover from Network Transmission for "lobbying, advertising, research, or any other specific purpose."⁶⁰⁰ Trial Staff contends that just because PG&E does not have a specific breakdown of the allocation of EEI dues does not mean it is unaware of how the dues

support the company and benefit customers.⁶⁰¹ Therefore, Trial Staff concludes that the Initial Decision's finding is correct.⁶⁰²

4. Commission Determination

228. We affirm the Presiding Judge's findings. We find that the issues raised by Six Cities and TANC in their briefs on exceptions have been thoroughly addressed by the Presiding Judge in the Initial Decision in paragraphs 740-795. Specifically, the Presiding Judge considered the expert testimony from Six Cities and TANC, as well as the rebuttal to that testimony from PG&E's expert witnesses and PG&E's expert witnesses' cross-examination. The Presiding Judge's findings are further supported by the record evidence, as detailed in the Initial Decision. Neither Six Cities nor TANC present arguments in their briefs on exceptions that warrant a different outcome. We find no reason to revisit Presiding Judge's findings. We therefore affirm the Initial Decision on the issue of A&G Expenses.

I. Allocators

229. PG&E uses Line-of-Business (LOB) allocators to allocate common costs between the Electric and Gas Departments. Once these LOBs are determined, PG&E then determines which Electric costs will be allocated directly to Network Transmission.⁶⁰³ As relevant here, PG&E used recorded Period I O&M labor expenses, adjusted to reflect a new cost model the company adopted in 2016, to calculate the LOB allocators, resulting in an allocator of 66.29% to the Electric Department and 33.71% to the Gas Department, and allocated 9.28% of the Electric LOB to Network Transmission.⁶⁰⁴

230. PG&E also sought to recover a portion of costs associated with its Short Term Incentive Pay (STIP), which is part of its compensation package, allocated in Account 920, A&G salaries.⁶⁰⁵ The STIP serves as an annual performance-based bonus. In 2017, PG&E estimated it would spend \$170.747 million on STIP, of which 66.29%, or \$113.186 million would be allocated to the Electric Department. Of that, 9.28% would be

⁶⁰¹ *Id.* at 42.

⁶⁰² *Id.* at 40.

⁶⁰³ Initial Decision, 165 FERC ¶ 63,001 at P 797.

⁶⁰⁴ *Id.* PP 798, 827.

⁶⁰⁵ Ex. PGE-0007 at 5:13-6:19.

allocated to Network Transmission and 35.74% would be capitalized and put into its rate base.⁶⁰⁶ As a result, PG&E's TRR includes a STIP component of \$6.749 million.⁶⁰⁷

1. Initial Decision

231. The Presiding Judge found PG&E's proposed allocators to be reasonable, subject to one adjustment. Six Cities contested PG&E's proposed allocators and instead suggested 64.74% to the Electric Department with 9.785% of that allocated to Network Transmission would be more appropriate. In support, Six Cities stated that the Electric Department is expected to lose more employees than the Gas Department. Trial Staff adopted Six Cities' proposed calculation, except Trial Staff's witness reclassified A&G costs to Customer Care.⁶⁰⁸ The Presiding Judge rejected Six Cities' proposed calculation, explaining that the O&M costs previously established are not in dispute.⁶⁰⁹ The Presiding Judge further explained that using actual 2015 (Period I) recorded labor costs to allocate common cost, and not projected labor costs, is the most accurate way of allocating such costs between Electric and Gas Departments.⁶¹⁰ Six Cities asserted that \$435,000 for O&M labor expense for vegetation management was incorrectly recorded and must be added to the Network Transmission labor expenses.⁶¹¹ The Presiding Judge accepted

Six Cities' vegetation management correction, which increased the Electric Department cost allocator from 66.29 to 66.30% of the company-wide common costs and increased the Network Transmission costs to 9.32% of the Electric Department costs.⁶¹²

232. The Presiding Judge stated that using Period II data would be logical to predict future costs. However, he asserted that neither Six Cities nor Trial Staff provided a workable forecast for PG&E's future Electric Department costs. Therefore, the Presiding

⁶⁰⁶ Ex. PGE-026 at 16.

⁶⁰⁷ *Id.* at 9-15.

⁶⁰⁸ Initial Decision, 165 FERC ¶ 63,001 at P 813.

⁶⁰⁹ *Id.* P 815.

⁶¹⁰ *Id.* P 825.

⁶¹¹ *Id.* PP 799-828.

⁶¹² *Id.* P 826. Six Cities pointed out that vegetation management was incorrectly recorded as an O&M labor expense decrease in PG&E's Period I statement, and should instead be added to the 2015 Network Transmission O&M labor expenses.

Judge stated that the 2015 O&M labor costs provide the best foundation to determine PG&E's allocators.⁶¹³

233. PG&E proposed a STIP component of \$6.749 million in its TRR. The Presiding Judge determined STIP metrics are specific to certain parts of the company, and identified the components that directly benefit electric customers.⁶¹⁴ TANC and SWP contended that few of the performance measures in PG&E's STIP have to do with transmission service.⁶¹⁵ Additionally, the Presiding Judge stated that Commission precedent requires the exclusion of expenses that do not benefit ratepayers.⁶¹⁶ The Presiding Judge determined that the Employee Safety component of the STIP (16%) is allowable, and notes 10.61% of is applicable to the Electric Department and correspondingly 1.49% to Network Transmission. The Presiding Judge determined the three remaining components, accounting for 20% of STIP costs including, (1) emergency response to 911 calls (5%), (2) duration of electric outages (5%), and (3) downed T&D wires (10%) should be allocated to Network Transmission customers based on O&M labor allocators solely within the Electric Department and these components do not benefit gas customers.⁶¹⁷ "Earnings from Operations" (2%) was disallowed, with the Presiding Judge explaining that approving expenses that help raise capital will enable PG&E to recover expenses that benefit shareholders but do not benefit the ratepayers.⁶¹⁸ Additionally, the Presiding Judge disallowed the Customer Satisfaction Score (15%), noting it benefits only retail customers. The Presiding Judge therefore allowed the following components in the STIP benefit electric customers and may be allocated to the Electric Department: (1) emergency response to 911 calls (5%), (2) duration of electric outages (5%), and (3) downed T&D wires (10%) and (4) Employee Safety (10.61%), for a total of 30.61%, or \$52.26 million. Of that, 9.32%, or \$4.871 million, should be allocated to Network Transmission.⁶¹⁹ The Presiding Judge also reduced the capitalization factor from 35.74 to 35.34% of STIP costs allocated to Network

⁶¹³ *Id.* PP 814-815.

⁶¹⁷ *Id.* P 857.

⁶¹⁸ *Id.* P 848 (citing *Public Service Company of New Mexico*, 813 F.2d at 448, 456).

⁶¹⁹ *Id.* P 859.

Transmission, which PG&E has not protested.⁶²⁰ As a result, the Presiding Judge determined the TRR for Network Transmission customers should include a STIP component of \$3.15 million,⁶²¹ which represents a reduction of approximately \$3.6 million from what PG&E proposed.

2. Brief on Exceptions

234. Six Cities argues that PG&E should use forecasted Period II data to calculate LOB allocators, instead of relying upon recorded Period I data as the Presiding Judge concluded.⁶²² Six Cities explains that the number of employees in the Electric Department is expected to go down relative to the number in the Gas Department, and therefore asserts that the allocator adopted by the Presiding Judge is overstated. Six Cities states that an Electric LOB allocation of 66.3% is unjust and unreasonable and PG&E should use forecasted Period II values instead, resulting in an Electric LOB allocation of 64.741%.⁶²³

235. PG&E disagrees with the Initial Decision's reduction of the STIP, and the determination that its STIP metrics are specific to individual components of the company and there for cannot be charged to Network Transmission Customers.⁶²⁴ PG&E argues that certain components of the STIP, such as "Earning from Operations," enable PG&E to raise capital at a competitive rate and thus, should be allowed. PG&E also notes that the customer care component of the STIP should be allowed because it benefits service to all customers, not exclusively retail customers.⁶²⁵ PG&E concludes that STIP is part of the overall compensation package and is less expensive for customers long-term than an across-the-board pay increase.

3. Briefs Opposing Exceptions

236. PG&E defends its LOB and Network Transmission allocators, agreeing with the Initial Decision that Six Cities' approach to estimating its allocators is flawed. PG&E

⁶²⁰ *Id.* PP 861-863.

⁶²¹ *Id.* P 864.

⁶²² Six Cities Brief on Exceptions at 58.

⁶²³ *Id.* at 59.

⁶²⁴ PG&E Brief on Exceptions at 73.

⁶²⁵ *Id.* at 75.

notes the modifications it has made to its allocation methodology, and that Six Cities' analysis that relies on upon headcount and escalation factors is inaccurate.⁶²⁶

237. TANC and CDWP concur with the Initial Decision's finding that the "Earnings from Operations" metric should be borne by shareholders because it does not give more than incidental benefits to transmission customers.⁶²⁷ SWP asserts that shareholders should fund any additional compensation to increase the financial performance, and notes the Commission has previously required costs that do not benefit ratepayers be excluded, citing *Public Service Company of New Mexico*, in which advertising costs were excluded.⁶²⁸ TANC and SWP also agree that Customer Satisfaction should not be included in the Network Transmission costs because customer care benefits primarily distribution customers.

4. Commission Determination

238. We affirm the Initial Decision regarding LOB allocators, finding the Presiding Judge's rationale to rely on known and measurable data as a basis for determining the allocators was reasonable and supported by the record. We note that Period II data can be used to project future 2017 costs; however, an accurate forecast of Period II data was not provided in this proceeding, and therefore we will rely on the known data from the Period I O&M labor expenses. Accordingly, we affirm the Presiding Judge's decision to accept PG&E's methodology to calculate LOB allocators using recorded Period I O&M labor expense data. Additionally, we accept the Presiding Judge's directive to recalculate PG&E's Network Transmission O&M labor expenses to include \$435,000 for vegetation management costs that were incorrectly recorded. Therefore, we affirm the Presiding Judge's decision to adjust PG&E's proposed Electric Department labor allocator to 66.30% of the company-wide common costs to the Electric Department, and a Network Transmission allocator of 9.32% of the Electric Department costs, or 6.18% of common costs.

239. We also affirm the Presiding Judge with respect to his conclusions addressing the allocation of STIP costs. Specifically, we affirm that the TRR for Network Transmission customers should include a STIP component of \$3.15 million. We find the Presiding Judge reasonably identified those components of the STIP that benefit PG&E's electric ratepayers, aligning with precedent that requires the exclusion of expenses that do not

⁶²⁶ *Id.* at 76-77.

⁶²⁷ TANC Brief Opposing Exceptions at 92.

⁶²⁸ SWP Brief Opposing Exceptions at 9-10 (citing *Public Service Company of New Mexico*, 813 F.2d at 456).

benefit ratepayers.⁶²⁹ The following STIP categories shall be recovered from Network Transmission customers: (1) emergency responses to 911 calls (5%), (2) downed transmission and distribution wires (5%), (3) duration of electric outages (10%), and (4) safety (10.61%, or 66.3% of 16%). We also affirm the Initial Decision's directive for PG&E to reduce the capitalization factor from 35.74 to 35.24% of STIP costs allocated to Network Transmission. This value is supported by 2015 data, which was the most current data available when the TO18 rate case was filed.⁶³⁰ The revised capitalization factor reduces the forecasted allocation of STIP costs to Network Transmission by \$1.721 million, resulting in a TRR for Network Transmission Customers of \$3.15 million. Accordingly, we affirm the Presiding Judge's STIP allocation of \$3.15 million to Network Transmission customers, which represents a reduction of approximately \$3.6 million from what PG&E proposed.

J. Sales Forecast

240. PG&E derived its stated Network Transmission rate for 2017 by dividing its projected cost of service by its projected load, of which its sales forecast is a part. Thus, PG&E's stated rate will vary inversely with the size of its projected load. PG&E projected that it will sell 81,679 gigawatt-hours (GWh) of electric energy in 2017, which would constitute a drop of 4.4% from its 2015 sales.⁶³¹

1. Initial Decision

241. The Presiding Judge found that PG&E failed to satisfy the first prong of the *Chatham* test, finding flaws in the chain of reasoning it used to support its forecast methodology.⁶³² The Presiding Judge noted that PG&E's witness used "time series regression" analyses to forecast sales for each of the company's major customer classes,⁶³³ and then adjusts the results of these time series regression forecasts to account

⁶²⁹ See, e.g., *Public Service Company of New Mexico*, 813 F.2d at 456.

⁶³⁰ See Initial Decision, 165 FERC ¶ 63,001 at P 863.

⁶³¹ Initial Decision, 165 FERC ¶ 63,001 at PP 865-866 (citing Ex. PGE-0015 (Testimony of Sam Wray) at 1:7-9 and Ex. PGE-0061 (errata), showing Ex. PGE-0015 at 10, tbl. PGE-0015-2).

⁶³² *Id.* P 884.

⁶³³ *Id.* PP 867-868 (citing Ex. S-0019 (Testimony of Dr. C. Shelley Norman) at 7:19-8:4).

for the impacts of “regulatory and legislative policies and goals.”⁶³⁴ The Presiding Judge found that PG&E’s witness’ description of his process would have satisfied *Chatham*’s chain-of-reasoning requirement absent any “countervailing information” on the record; however, the Presiding Judge explained that the record in this case contains contrary evidence provided by Trial Staff witness, who disputed PG&E’s methodology.⁶³⁵ The Presiding Judge determined that Trial Staff’s witness’ method of basing Net Adjustments on the monthly average of the impacts over the past three years, though not perfect, would better reflect the model’s forecast than the method outlined by PG&E, which treats the impacts occurring over the span of the study’s entire period equally.⁶³⁶ The Presiding Judge found that PG&E’s rebuttal to Trial Staff’s concerns to be unpersuasive because, instead of defending his model, he merely claimed that his regression model used all of the data gathered during the study period.⁶³⁷ The Presiding Judge concluded that Trial Staff’s witness’ findings exposed the flaws in PG&E’s chain of reasoning used to support its methodology, thereby failing to satisfy prong one of the *Chatham* test.⁶³⁸

242. The Presiding Judge found that PG&E also failed to satisfy the second prong of the *Chatham* test, explaining that in addition to historically over-forecasting its cost of service, PG&E has historically under-forecasted its sales, resulting in higher rates for a given revenue requirement.⁶³⁹ In reaching this conclusion, the Presiding Judge relied on the evidence present by witnesses for Trial Staff and SWP, demonstrating that PG&E has under-forecast its future retail sales for eight of the past nine years, resulting in an average under-forecast of 302 GWh.⁶⁴⁰ According to the Initial Decision, these witnesses also noted that removing 2009 from the calculation, an extreme outlier resulting from a deep and unexpected recession, would cause the average annual under-forecast for the eight year period to double to 609 GWh.⁶⁴¹ Due to PG&E’s “sound argument” for the inclusion of 2016 and his failure to rebut SWP’s efforts to exclude year 2009, the Presiding Judge found that the comparison should exclude year 2009 and include year

⁶³⁴ *Id.* P 869 (citing Ex. PGE-0015 at 5:2-9).

⁶³⁵ *Id.* PP 874-876, 880 (citing Ex. S-0019 at 11:24-12:4).

⁶³⁶ *Id.* P 883.

⁶³⁷ *Id.*

⁶³⁸ *Id.* P 884.

⁶³⁹ *Id.* P 885.

⁶⁴⁰ *Id.* P 886 (citing Ex. SWP-0001 at 41:17-19 and Ex. S-0019 at 5:12-14).

⁶⁴¹ *Id.* (citing Ex. SWP-001 at 43:1-7).

2016.⁶⁴² Additionally, the Presiding Judge found that the annual average disparity between PG&E's forecasted and actual sales over a four year period was double the disparity that was calculated by the naïve forecast, a validation tool which assumes that all years are alike.⁶⁴³ The Presiding Judge also found that PG&E's witness' attempts to restore the credibility of PG&E's forecasting and discredit Trial Staff's witness' naïve forecast comparison to be unpersuasive.⁶⁴⁴ The Presiding Judge noted that PG&E's failure to sufficiently address weather variations contributed to the inaccuracy of its forecasts.⁶⁴⁵ The Presiding Judge found that the large discrepancy between PG&E's sales forecasts and those presented by Trial Staff's witness calculated using the naïve forecast further demonstrate the unreliability of PG&E's methodology because the randomness of the naïve forecast was substantially more accurate than PG&E's.⁶⁴⁶

243. The Presiding Judge ultimately determined that the defects in PG&E's forecast methodology warrant a remedy and noted that the proposals of both SWP and Trial Staff were worth considering.⁶⁴⁷ The Presiding Judge found that SWP's proposed remedy shared the same obstacles as those proposed by other participants seeking payment by PG&E for their historic forecasting errors.⁶⁴⁸ The Presiding Judge found Trial Staff's method was plausible and well documented, and its witness' adjustments to PG&E's method were appropriate.⁶⁴⁹ The Presiding Judge examined Trial Staff's proposal explaining that it would use the average of the three most recent years of monthly measurement of the impact of customer use of Photovoltaic generation (PV) on PG&E sales to determine the Net Adjustment for PV to better reflect recent trends,⁶⁵⁰ reduce the

⁶⁴² *Id.* P 891.

⁶⁵⁰ *Id.* P 903.

sales forecast to account for PV,⁶⁵¹ eliminate the adjustment to Fuel Cell and Other,⁶⁵² and include a Gross Adjustment to the regression forecast to account for recent policy changes that encourage a more aggressive implementation of Conservation and Energy Efficiency (EE).⁶⁵³ According to the Initial Decision, Trial Staff's witness calculated that PG&E has under-forecast its sales by 173.082 GWh.⁶⁵⁴ The Presiding Judge thus determined that in order to make its sales forecast just and reasonable, PG&E must increase its forecast by 173.082 GWh to account for EE, Distributed Generation (DG), and Electric Vehicles (EV).⁶⁵⁵

244. Next, the Presiding Judge addressed the justness and reasonableness of PG&E's proposed forecast for its Helms Pumped Storage Project (Helms) load. The Presiding Judge explained that PG&E's Helms project works by pumping water to an upper reservoir when prices are low and releasing that water to a lower reservoir to generate electricity when prices are high consumes electric power and contributes to PG&E's gross load.⁶⁵⁶ According to the Initial Decision, PG&E employs a model called PLEXOS to forecast its Helms pumping load which purports to forecast circumstances in which it would be economically advantageous to pump.⁶⁵⁷ The Initial Decision states that PLEXOS provided a forecast for 2017 that all participants agree is too high. The Presiding Judge explains that PG&E attributes the inaccuracy of the forecast to two factors: (1) the model does not take into account certain transmission constraints and congestion that occur on PG&E's system; and (2) PG&E originally ran its PLEXOS model based on the assumption that all three of the Helms pumps would run at the same time, though that rarely occurs.⁶⁵⁸

245. After examining testimony by expert witnesses, the Presiding Judge ultimately concluded that PG&E's forecast for the Helms pumping was flawed, SWP's witness'

⁶⁵¹ *Id.*

⁶⁵² *Id.* P 907.

⁶⁵³ *Id.* P 909.

alternative load forecast was a reasonable approach, and that PG&E must make adjustments to its forecast of gross load for it to be just and reasonable.⁶⁵⁹ The Presiding Judge also noted that PG&E converts forecasted sales to forecasted gross load by adding losses of power that are expected to occur between transmission and distribution, and accounts for these anticipated losses by multiplying its forecasted sales by a factor of 1.058707.⁶⁶⁰

2. Briefs on Exceptions

246. PG&E contends that the Initial Decision goes against the Commission's accepted practice of allowing forecasts to be used to set rates so long as those forecasts were reasonable when made.⁶⁶¹ PG&E notes that while the Initial Decision found that PG&E's witness description would satisfy *Chatham*'s chain-of-reasoning requirement absent any countervailing information on the record, PG&E criticized the Initial Decision for continuing to look for "contrary evidence," despite PG&E's claim that its method was reasonable when made.⁶⁶² PG&E also states that the "contrary evidence" mounted against its forecasts was a mere disagreement, and that the Initial Decision incorrectly disposed of its witness' rebuttal to this evidence.⁶⁶³

247. PG&E claims that the Initial Decision was wrong when it stated that its witness did not deny that his regression model gave disproportionate weight to the impacts of the relevant technologies and practices on PG&E's sales over the past few years.⁶⁶⁴ PG&E asserts that its witness was clear when he testified that PG&E's regression-based forecast does not only capture the most recent trends.⁶⁶⁵ PG&E also claims that the Initial Decision's determination that Trial Staff's witness' testimony demonstrated flaws in PG&E's chain of reasoning was unsupported by the record and amounts to nothing more than a slight difference in opinion.⁶⁶⁶ PG&E asserts that this does not render its witness'

⁶⁵⁹ *Id.* PP 919-933.

⁶⁶¹ PG&E Brief on Exceptions at 76.

⁶⁶² *Id.*

⁶⁶³ *Id.*

⁶⁶⁴ *Id.* at 77.

⁶⁶⁵ *Id.*

⁶⁶⁶ *Id.*

forecast unreasonable.⁶⁶⁷ PG&E also notes misunderstandings may have led to differences in opinion, and cites Trial Staff's witness' misunderstanding of some of the information she used to form her opinion on behind-the-meter fuel cell technology.⁶⁶⁸

248. PG&E also objects to the Initial Decision's treatment of its historical sales forecasting performance.⁶⁶⁹ PG&E asserts that using historical average temperatures to forecast future temperatures is standard practice, and that its use of weather-adjusted results has allowed them to maintain a strong historical forecast performance.⁶⁷⁰ PG&E concludes that there was no valid reason for the Initial Decision to throw out its forecast in favor of the forecast outlined by Trial Staff's witness because she failed to show that her adjustments would be any more accurate than PG&E's approach.⁶⁷¹

249. PG&E contends that the Initial Decision treated its forecast for Helms pumping inconsistently with its treatment of the other forecast issues addressed in this proceeding, which culminated in a recommendation by the Initial Decision that is both unjustified and unsupported by the record.⁶⁷² PG&E criticizes the Initial Decision's reliance on actual costs rather than heeding the suggestion of Trial Staff's witness to look at the most recent twelve months of actual Helms pumping data to adjust PG&E's forecast.⁶⁷³ Instead, PG&E contends that the Initial Decision ignored the testimony of its expert witness, and adopted a different forecast proposed by the witness for SWP, which relied exclusively on a PLEXOS model that was not adjusted for known problems with that model.⁶⁷⁴ PG&E claims that this reliance led to a forecast that increased the Helms pumping load

⁶⁶⁷ *Id.*

⁶⁶⁸ *Id.*

⁶⁷¹ *Id.*

⁶⁷² *Id.* at 79.

⁶⁷³ *Id.*

⁶⁷⁴ *Id.*

considerably and decreased PG&E's recovery.⁶⁷⁵ PG&E concludes that the test for this issue should be whether the forecast was reasonable when made.⁶⁷⁶

3. Briefs Opposing Exceptions

250. SWP contends there is sufficient evidence to show that PG&E's forecast was not reasonable at the time it was made.⁶⁷⁷ It states that the testimony provided by its expert, including the naïve forecast, demonstrates the poor job PG&E has done of forecasting its gross load.⁶⁷⁸ SWP notes that an analysis of historical data, where PG&E has under-forecast its sales in eight out of its ten most recent rate cases, supports this conclusion.⁶⁷⁹ Additionally, SWP asserts that PG&E has a structural incentive to under-forecast because they generate more money when they do so.⁶⁸⁰ SWP next asserts that the Initial Decision's use of the model that maintains a two-pump constraint produces a just and reasonable forecast and should be affirmed.⁶⁸¹ SWP also criticizes PG&E's decision to run its model simulation without any constraint on the concurrent operation of the three pumps and make ad hoc adjustments to account for the fact that only two pumps were generally in operation at a time.⁶⁸²

251. Trial Staff states that the Initial Decision was correct in finding that PG&E's sales forecast was not just and reasonable, and that PG&E's sales forecast should be increased by 173.082 GWh in order to render it just and reasonable.⁶⁸³ Trial Staff contends that the Initial Decision's acceptance of its recommended adjustment to PG&E's sales forecast was fully supported by the record because Trial Staff's witness showed that PG&E's

⁶⁷⁵ *Id.*

⁶⁸² *Id.*

⁶⁸³ Trial Staff Brief Opposing Exceptions at 42 (citing Initial Decision, 165 FERC ¶ 63,001 at P 915).

methods used to adjust its forecast were unreasonable when they were made.⁶⁸⁴ Trial Staff asserts that PG&E mischaracterized the contrary evidence presented to the Presiding Judge by arguing that it was a mere disagreement.⁶⁸⁵ Trial Staff also agrees with the Initial Decision's finding that Trial Staff's witness' method of adjusting for impacts over the past 36-month period would better reflect the model's forecast than the method outlined by PG&E's witness, which treats the impacts occurring over the study's 153 months equally.⁶⁸⁶ Trial Staff also states its agreement with the Initial Decision's identification of PG&E's flaw in its chain of reasoning, and notes that PG&E's witness' failure to deny that his regression model gives greater weight to the impacts of the relevant technologies and practices on PG&E's sales during recent years is not inconsistent with PG&E's rebuttal that his testimony does not only capture the most recent trends.⁶⁸⁷ Trial Staff suggests that PG&E incorrectly stated that Trial Staff's witness misunderstood the information she used to inform her opinion about behind-the-meter fuel cell technology.⁶⁸⁸ Trial Staff concludes that this statement made by PG&E on Trial Staff's witness' conclusions goes beyond anything that was initially raised by PG&E's witness and that nothing in the record hints that the change cited by PG&E constitutes a policy shift of the type PG&E's witness sought to account for in his policy adjustments.⁶⁸⁹

4. Commission Determination

252. We affirm the Initial Decision on this issue. The Presiding Judge carefully considered several different forecast models presented by PG&E's witnesses, Trial Staff's witness, and SWP's witness, as well as rebuttal testimony, and determined that PG&E's sale forecast was not just and reasonable absent the adjustments described in the Initial Decision.⁶⁹⁰ The Presiding Judge concluded that, based on the record evidence, PG&E under-forecasted its sales for eight out of the ten years under consideration, and

⁶⁸⁴ *Id.* at 43 (citing Initial Decision, 165 FERC ¶ 63,001 at PP 877-880, 883, 900).

⁶⁸⁵ *Id.* (citing PG&E Brief on Exceptions at 76).

⁶⁸⁶ *Id.* at 42 (citing Initial Decision, 165 FERC ¶ 63,001 at P 883).

⁶⁸⁷ *Id.* at 44 (citing Initial Decision, 165 FERC ¶ 63,001 at P 883).

⁶⁸⁸ *Id.*

⁶⁸⁹ *Id.* at 45.

⁶⁹⁰ Initial Decision, 165 FERC ¶ 63,001 at PP 867-933.

under-forecasted sales over the 10-year period by an annual average of 404 GWh.⁶⁹¹ The Presiding Judge thus determined that these defects in PG&E's witness' analysis warranted a remedy.⁶⁹² Next, by carefully comparing the methodologies in the proposals set forth by Trial Staff's and SWP's witnesses, the Presiding Judge also found the method set forth by Trial Staff's witness to be both plausible and well documented and her adjustments to PG&E's method to be appropriate.⁶⁹³ We agree with the Presiding Judge's conclusions. The record shows that PG&E under-forecasted its sales for eight out of the ten years under consideration, and under-forecasted sales over the 10-year period by an annual average of 404 GWh.⁶⁹⁴

253. As for the forecast for Helms pumping load, the Presiding Judge evaluated both Trial Staff's and SWP's alternative load forecasts, as well as PG&E's rebuttal, and chose SWP's model as a reasonable approach.⁶⁹⁵ As the Presiding Judge noted, PG&E also revised its modeling such that it effectively adopted the approach that SWP's witness took in developing his alternative forecast.⁶⁹⁶ We again find that the Presiding Judge carefully examined the record evidence and made a reasoned decision on this issue. Accordingly, we affirm the Presiding Judge that PG&E must adjust its sales forecast in accordance with the alternative models to ensure that it is just and reasonable.

254. We reject PG&E's argument that the Presiding Judge should have accepted its sales forecast outright because it was reasonable when made. To determine whether PG&E's forecast is reasonable, the Presiding Judge correctly applied the two-prong *Chatham* test and concluded, based on his review of the record evidence, that PG&E failed both prongs and determined that PG&E has failed to meet its requirements.⁶⁹⁷ We also reject PG&E's assertion that the alternative model forecasts represent a mere difference in opinion. The record shows that the Presiding Judge considered multiple forecasts, their methodologies, and the drawbacks and strengths of each of the forecasts before making a final decision on which model to apply. The Presiding Judge's

⁶⁹¹ *Id.* P 892 (citing Ex. PGE-0049 (Rebuttal Testimony of Sam Wray) at 9; and Ex. SWP-0008 (Testimony of David Marcus) at 1).

conclusions that PG&E's methodology was flawed and that PG&E's has historically under-forecasted its sales were reasonable and supported by record evidence. We find no reason to disturb this reasoned analysis. We therefore affirm the Presiding Judge's finding in regard to PG&E's sales forecast and direct PG&E to adjust it in accordance with this finding.

K. Miscellaneous Issues

1. Inclusion of Certain Non-Capital Items

a. Habitat Conservation Plan Costs

255. PG&E proposed to include in Account 186, Miscellaneous Deferred Debits, \$20.193 million in costs association with its Habitation Conservation Plan as a component of rate base during the period in which those costs are recorded. PG&E included those costs in its calculation of Working Capital.

i. Initial Decision

256. The Presiding Judge found that PG&E's placement of its Habitation Conservation Plan costs in its rate base while recording these costs in Account 186 was not just and reasonable.⁶⁹⁸ The Presiding Judge noted that PG&E incurs two types of Habitation Conservation Plan costs: (1) the costs needed to develop the Habitation Conservation Plan before the Incidental Take Permit is received; and (2) the funds paid to a third-party mitigation land manager.⁶⁹⁹ According to the Initial Decision, the costs needed to develop the Habitation Conservation Plan are initially recorded in Account 186,⁷⁰⁰ but PG&E moves these costs into Account 303, Miscellaneous Intangible Plant, once they receive the Incidental Take Permit,⁷⁰¹ while the funds paid to the mitigation land manager remain in Account 186 until they are allocated to specific projects.⁷⁰² The Presiding Judge determined that, while it was appropriate for PG&E to record its Habitation Conservation Plan costs in Account 186, it was not appropriate for PG&E to include

⁶⁹⁸ *Id.* P 950.

⁶⁹⁹ *Id.* P 941 (citing Ex. CIT-0017 (Testimony of Terry Myers) at 15:14-17 and Ex. CIT-0030 at 2).

⁷⁰⁰ *Id.* P 942 (citing Ex. CIT-0017 at 15:11-14).

⁷⁰¹ *Id.*

⁷⁰² *Id.* (citing Ex. CIT-0030 at 2).

those costs in the rate base while those costs remained in the account.⁷⁰³ The Presiding Judge found that the used and useful standard, which states that “an asset may be included in a utility’s rate base only when the item is used and useful in providing service,” was not met by either of PG&E’s two types of Habitation Conservation Plan costs.⁷⁰⁴ The Presiding Judge further elaborated that the first category of Habitation Conservation Plan costs, used to develop the Habitation Conservation Plan, is not used and useful until PG&E receives the Incidental Take Permit, and the second category of the Habitation Conservation Plan costs, which goes to a mitigation land manager, does not benefit ratepayers while in Account 186 because these costs are not associated with any project.⁷⁰⁵ The Presiding Judge determined that prohibiting PG&E from including these costs in its rate base while they remain in Account 186 is not unfair to PG&E because they may move the costs of developing the Habitation Conservation Plan into Account 303 and collect them through rates once it receives the ITP,⁷⁰⁶ recover costs once the funds paid to the land mitigation manager are allocated to a project and the project goes into service,⁷⁰⁷ and recover funds allocated to maintenance projects through their TRR.⁷⁰⁸

257. Additionally, the Presiding Judge noted that, while the used and useful standard of ratemaking is only one of several tools available to the Commission, PG&E did not put forth any information that would suggest that the Commission should have employed another ratemaking standard.⁷⁰⁹ The Presiding Judge also found that PG&E’s two central justifications for including the costs in the rate base—that the costs must be incurred to comply with environment mandates and it would benefit ratepayers by reducing the cost of compliance—are mitigated by the fact that PG&E will eventually recover these costs through appropriate channels. The Presiding Judge concluded that PG&E’s placement of its HPC costs in its rate base while they are recorded in Account 186 is not just and

reasonable; therefore, the Presiding Judge concluded that PG&E must account for these misplaced costs by removing \$20.193 million from its rate base.⁷¹⁰

ii. Brief on Exceptions

258. In its brief on exceptions, PG&E reiterates several points of its witness' testimony, including that Habitation Conservation Plan costs allow PG&E to reduce environmental mitigation costs⁷¹¹ and to provide pre-negotiated compensatory mitigation.⁷¹² PG&E states that it recognizes that not all of the Habitation Conservation Plan costs should be included in TO18 Period II due to their lack of impact on servicing transmission customers.⁷¹³ PG&E also points to the Initial Decision's acknowledgement that the used and useful standard is "only one of several permissible tools available to the Commission."⁷¹⁴ PG&E asserts that it does, however, meet the prudence standard also cited in the Initial Decision.⁷¹⁵ Finally, PG&E contends that the Initial Decision incorrectly stated that PG&E will eventually recover their costs.⁷¹⁶ PG&E states that it would be unable to recover a return on investment because it would be prevented from investing in other company endeavors while the money was tied up in the initial stages of the Habitation Conservation Plan process.⁷¹⁷

iii. Briefs Opposing Exceptions

259. Six Cities asserts that it was inappropriate for PG&E to include the average balance of its Habitation Conservation Plan costs in its calculation of Working Capital.⁷¹⁸ Six Cities contends that PG&E's claim that the Initial Decision should have employed the

⁷¹⁰ *Id.* P 950.

⁷¹¹ PG&E Brief on Exceptions at 80 (citing Ex. PGE-0042 (Testimony of PG&E Witness) at 13 (errata)).

⁷¹⁷ *Id.*

⁷¹⁸ Six Cities Brief Opposing Exceptions at 61.

prudence standard instead of the used and useful standard to determine the appropriateness of PG&E's inclusion of the Habitation Conservation Plan costs in the rate base fails to address the relevant issue in this case.⁷¹⁹ Six Cities also notes its agreement with the Initial Decision's determination that PG&E's ratemaking treatment of Habitation Conservation Plan costs in the same manner as prepayments was inappropriate.⁷²⁰ Six Cities asserts that, because Habitation Conservation Plan costs do not share the same characteristics as prepayments, they should not be treated like them as PG&E does by including them in the Working Capital inclusion.⁷²¹ Six Cities further explains that while it was proper for the Habitation Conservation Plan costs to be included in Account 186, they should not be included in Working Capital because they are not used and useful, and their final disposition is uncertain.⁷²²

260. Trial Staff agrees with the Initial Decision's finding that PG&E's inclusion of Habitation Conservation Plan costs in its rate base while these costs were also recorded in Account 186 was not just and reasonable.⁷²³ Trial Staff also agrees with the Initial Decision's determination that PG&E failed to provide any evidence that would render the use of an alternative ratemaking standard necessary.⁷²⁴ Trial Staff contends that the relevant issue is whether PG&E can incorporate Habitation Conservation Plan costs into its base rate, not, as PG&E contends, whether the Habitation Conservation Plan costs are prudent.⁷²⁵ Finally, Trial Staff states that the Initial Decision was correct in finding that PG&E's justifications for incorporating the Habitation Conservation Plan costs into the rate base, including that it would incur costs to meet environmental standards and that it would be beneficial to ratepayers, were insufficient to rebut the contention that they were not used and useful to ratepayers.⁷²⁶ Trial Staff does, however, sympathize with PG&E's claim that it will not eventually have the opportunity to recover the relevant costs through

⁷¹⁹ *Id.* at 62.

⁷²⁵ *Id.*

⁷²⁶ *Id.* at 46-47.

appropriate channels.⁷²⁷ For this reason, Trial Staff contends that it would be fair to allow PG&E to accrue and capitalize the financing costs associated with its Habitation Conservation Plan investments because it would allow PG&E to recover the costs when the final placement of the costs is known.⁷²⁸

iv. Commission Determination

261. We affirm the Presiding Judge's finding on this issue. As to PG&E's argument that the inclusion of the Habitation Conservation Plan costs in its rate base should have been evaluated under a different standard, we refer back to paragraph 949 of the Initial Decision, which addressed this particular argument:

While the "used and useful" standard of ratemaking is only one of several permissible tools available to the Commission, PG&E has provided no evidence that suggests that the Commission needs to consider another ratemaking standard. PG&E's only justifications for including the costs in rate base are that the expenditures connected with the [Habitation Conservation Plan] (1) must be incurred to comply with environmental requirements and (2) will benefit ratepayers by reducing the costs of such compliance. While both contentions may be true, they do not rebut the contention that while the [Habitation Conservation Plan] costs are in Account 186, they are not connected with any project that is used and useful to ratepayers. Moreover, both considerations are mitigated by the fact that PG&E will eventually recover these costs through appropriate channels. (*internal footnotes omitted*)

We find that the Presiding Judge's analysis is reasonable and agree with his conclusions. We therefore direct PG&E to remove \$20.193 million from its rate base on compliance, consistent with the Presiding Judge's findings. However, we will allow PG&E to accrue and capitalize the financing costs associated with its Habitation Conservation Plan investments, which would allow PG&E to recover the costs when the final project-specific allocation of the costs is known.

b. Working Cash

262. PG&E proposed to include \$25.638 million attributable to cash working capital in rate base.⁷²⁹ PG&E explained that the working capital is necessary to maintain adequate

⁷²⁷ *Id.* at 47 (citing PG&E Brief on Exceptions at 81).

⁷²⁸ *Id.*

⁷²⁹ Ex. PG&E-0010 at 30:5-26 and 32:7.

levels of supplies, to meet required prepayments, and to meet ongoing cash disbursements that are made during a different period of time than related receipts for utility services rendered. PG&E explained that cash working capital is a component of working capital, and reflects the extent to which day-to-day cash from operational utility service is received earlier or later than the disbursements necessary to provide the service.⁷³⁰ As explained by Trial Staff, current accounts receivable and payable are forms of incidental short-term financing provided by one party to another: The party that receives a service benefits from the time value of the payment owed between the party's receipt of the service and its payment for the service. A current receivable on PG&E's books is an item for which PG&E's shareholders are providing short-term financing to another entity. Conversely, a current payable on PG&E's books is an item for which another entity is providing PG&E's shareholders short-term financing. PG&E, like most companies, always maintains an outstanding receivables balance and an outstanding payables balance. By maintaining the former balance, the company provides short-term financing. The financing costs associated with the time lag between when the good or service is provided and when payment is actually collected must be borne by somebody. Placing this financing cost in rate base under the heading cash working capital passes that cost on to ratepayers.⁷³¹

i. Initial Decision

263. The Presiding Judge noted that for calculating cash working capital, the Commission recognizes the formula approach for electric utilities and the lead-lag approach for all utilities; however, it does not use the balance sheet approach for ratemaking.⁷³² The Presiding Judge relied on Trial Staff's witness' assertion that PG&E's purported lag study approach is deficient because: (1) the data used by the company is stale; (2) PG&E uses a balance sheet approach to calculate the revenue portion of the lead-lag study; and (3) the company has failed to create a revenue lag study that applies specifically to the Network Transmission function.⁷³³ The Presiding Judge found the rebuttal by PG&E's witness unpersuasive.⁷³⁴ According to the Initial Decision, PG&E's witness explained that PG&E used 2014 as the base year in its lead-lag study because that was what they used for the most recent general rate case it filed with CPUC,

⁷³⁰ PG&E Initial Brief at 76; Ex. PGE-0042 at 21.

⁷³¹ Ex. S-0023 at 25:19-26:16; Ex. S-0026 at 57.

⁷³² *Id.* P 955.

⁷³³ *Id.* P 956 (citing Ex. S-0023 at 31:1-8).

⁷³⁴ *Id.* P 965.

and the study is only created every three years because it takes a lot of effort to create,⁷³⁵ and there are only minor changes in working cash flow over this short of a period of time.⁷³⁶ The Presiding Judge concluded that Trial Staff's witness' assertions and PG&E's witness' rebuttal make clear that PG&E has derived the lead-lag study in the current case from a company-wide lead-lag study that it prepared for a recent general rate case before CPUC, which are litigated every three years.⁷³⁷ The Presiding Judge stated that the Commission requires the most recent base year data available to be used, that the 2015 data should have been as accessible as the 2014 data, and that PG&E failed to cite any cases where the Commission suggested that it would accept older data based on the size of the variability between the data used and more recent data.⁷³⁸ Thus, the Presiding Judge determined that what PG&E considered to be its "lead-lag" study was deficient.

264. The Presiding Judge also determined that PG&E failed to demonstrate that creating a separate lead-lag study solely for Network Transmission would be burdensome, and PG&E failed to quantify the burden that it claims would result from developing a lead-lag study two years in a row.⁷³⁹ The Presiding Judge ultimately rejected PG&E's method of determining the revenue lag component of the lead-lag study, and noted that the method's compliance with CPUC guidelines does not justify its implementation in Commission proceedings.⁷⁴⁰ Due to the deficiency of PG&E's lead-lag study, the Presiding Judge determined that PG&E must remove \$25.638 million attributable to its cash working capital from its rate base.⁷⁴¹

ii. Brief On Exceptions

265. PG&E asserts that it was correct in including the working cash rate in its rate base and that the working cash calculation it used in its TO18 filing contained the proper components.⁷⁴² It also claims that a sound approach was used to calculate their revenue

lag.⁷⁴³ PG&E disagrees with the Initial Decision's determination that it should have developed a separate lead-lag study solely for Network Transmission.⁷⁴⁴ PG&E contends that its current process for calculating the lead-lag study results in a more sensible use of the company's resources, and argues that the requirement suggested in the Initial Decision would result in an excessive cost increase to Network Transmission customers.⁷⁴⁵ PG&E claims that it should not be denied the entire working cash balance because the Presiding Judge finds it unacceptable.⁷⁴⁶ Though PG&E asserts that the calculation as filed is reasonable, if the Commission disagrees, it requests that the 1/8th O&M calculation as described in the rebuttal testimony be permitted.⁷⁴⁷ Finally, PG&E asks that, if the Commission accepts the Initial Decision's recommendation to remove the entire working cash balance from the rate base calculation, PG&E should not have to make the Habitation Conservation Plan adjustment as outlined in the Initial Decision.⁷⁴⁸

iii. Brief Opposing Exceptions

266. Trial Staff asserts that the Initial Decision was correct in finding that PG&E should remove cash working capital from its base rate and agrees with the Presiding Judge's decision to reject PG&E's lead-lag study.⁷⁴⁹ Trial Staff contends that PG&E's claim, that requiring PG&E to create a separate lead-lag study solely for Network Transmission customers would be too costly and entail too much effort, is baseless and violates many tenants of cost of service ratemaking.⁷⁵⁰ Trial Staff also claims that PG&E's calculation is inconsistent with the established practice of the Commission.⁷⁵¹ Trial Staff reiterates their witness' testimony, which states that PG&E's lead-lag study was not fully developed because: (1) PG&E's use of stale data was not justified; (2)

⁷⁴³ *Id.* at 82 (citing Initial Decision, 165 FERC ¶ 63,001 at P 968).

⁷⁴⁴ *Id.*

⁷⁴⁵ *Id.* (citing *Golden Spread Elec. Coop., Inc. v. Sw. Pub. Serv. Co.*, 123 FERC ¶ 61,047 (2008) (*Golden Spread*)).

⁷⁴⁷ *Id.*

⁷⁴⁸ *Id.*

⁷⁴⁹ Trial Staff Brief Opposing Exceptions at 48.

⁷⁵⁰ *Id.* (citing PG&E Brief on Exceptions at 82).

⁷⁵¹ *Id.*

PG&E's decision to base its revenue lag on daily average amounts of outstanding revenues and billed revenues fails to weigh the outstanding bills and does not factor in the time between when the service is provided and paid for; and (3) PG&E inappropriately derives its revenue lag on a total company basis instead of developing a function-specific revenue lag for its network transmission customers.⁷⁵²

267. Additionally, Trial Staff asserts that PG&E's reliance on *Golden Spread* in its request for the Commission to accept the 1/8th calculation included in PG&E's rebuttal testimony was misplaced because, unlike in *Golden Spread*, PG&E's lead-lag study in the pending proceeding is deficient and provides no basis for the Commission to accept an alternate 45-day convention that would lead to a higher amount of cash working capital allowed in the base rate.⁷⁵³ Finally, Trial Staff notes that the Initial Decision misidentified the cash working capital amount that PG&E needed to remove from its base rate.⁷⁵⁴ Trial Staff claims that the proper reduction should be \$4.647 million, not \$25.638 million, and that only the cash working capital amount should be subtracted from the rate base, not the entirety of working cash.⁷⁵⁵

iv. Commission Determination

268. We agree with the Presiding Judge's determination that PG&E's lead-lag study is deficient. The data used in the lead-lag is from 2014, and we find there may be discrepancies between the cash flow from 2014 and the more recent year. As correctly noted by Trial Staff's witness, the revenue lag based on daily average amounts of outstanding revenues and billed revenues fails to weigh the outstanding bills and does not factor in the time between when the service is provided and when it is paid for.⁷⁵⁶ In addition, we find that PG&E inappropriately derives its revenue lag on a total company basis instead of developing a function-specific revenue lag for its network transmission customers. We therefore affirm the Presiding Judge's finding on this issue.

269. We also deny PG&E's request to accept an alternate calculation of the 1/8th O&M included in PG&E's rebuttal testimony as its working cash flow approximation, as had

⁷⁵² *Id.* at 49.

⁷⁵³ *Id.* at 50.

⁷⁵⁴ *Id.* at 48.

⁷⁵⁵ *Id.* (citing Ex. PGE-0021 at 132, line 16, col. 9).

⁷⁵⁶ Ex. S-0023 at 31:15:20.

been previously done in *Golden Spread*.⁷⁵⁷ We find that PG&E's reliance on *Golden Spread* is misplaced. In that case, the utility filed for a cash working capital allowance based on the 45-day convention and an intervenor attempted to use a lead-lag study to show that the utility had less cash working capital needs than the amount produced by the 45-day convention. The Commission rejected the lead-lag study as unreliable, and therefore accepted the utility's cash working capital as filed.⁷⁵⁸ Here it is PG&E's lead-lag study that is deficient. There is no basis for the Commission to accept the alternate 1/8th O&M calculations that would result in a higher amount of cash working capital allowed in rate base than under the methodology proposed in PG&E's filing.

270. Although we agree with the Presiding Judge that PG&E's lead-lag study is deficient, we reverse the Presiding Judge with respect to the amount of money that PG&E must remove from rate base. As correctly explained by Trial Staff,⁷⁵⁹ the proper reduction should be \$4.647 million, not \$25.638 million, and that only the cash working capital amount should be subtracted from the rate base, not the entirety of working cash. We therefore direct PG&E to remove \$4.647 million from its base rate.

c. Other Receivables

271. PG&E proposed to include \$12.813 million in its working cash under the heading "Other Receivables." PG&E described "Other Receivables" as a "summation of a series of receivables accounts at a total company level that are allocated out to business functions by labor percentages."⁷⁶⁰ These accounts cover revenues due to PG&E for goods or services that the company has provided.⁷⁶¹

i. Initial Decision

272. The Presiding Judge found that PG&E's inclusion of Other Receivables in the rate base was improper for the following reasons: (1) the removal of these costs would lower PG&E's TRR by \$1.244 million;⁷⁶² (2) the receivables included in this item are neither

⁷⁵⁷ 123 FERC ¶ 61,047.

⁷⁵⁸ *Id.* P 104.

⁷⁵⁹ Trial Staff Brief Opposing Exceptions at 48.

⁷⁶⁰ Ex. S-0026 (Responses to Data Request) at 55.

⁷⁶¹ See Initial Decision, 165 FERC ¶ 63,001 at P 974 (citing Ex. PGE-0021 at 132:4 and 133:4; Ex. S-00026 at 55).

⁷⁶² *Id.* P 976 (citing Ex. S-0024 at 31).

owed for Network Transmission Service nor PG&E's Network Transmission customers, but would essentially result in its Network Transmission customers cross-subsidizing the recipients of the goods and services covered by the receivables in question;⁷⁶³ and (3) the inclusion of these costs would augment PG&E's cash working capital calculation by employing a method not approved by the Commission.⁷⁶⁴ The Presiding Judge concluded that PG&E must remove Other Receivables from the rate base to render its rates just and reasonable.⁷⁶⁵

ii. Brief on Exceptions

273. PG&E asserts that the Initial Decision was incorrect in finding that the inclusion of Other Receivables in the cash working capital calculation would result in cross-subsidies.⁷⁶⁶ PG&E notes that its Network Transmission customers do not pay bills at different rates than their other customers, and that PG&E does not pay vendors for Network Transmission needs at different rates than vendors for their other customers.⁷⁶⁷ PG&E concludes that, because there was no evidence of cross-subsidy in the record, there was no basis for the Initial Decision's conclusion.⁷⁶⁸

iii. Brief Opposing Exceptions

274. Trial Staff contends that the Initial Decision correctly found that PG&E should be required to remove \$12.813 million in Other Receivables.⁷⁶⁹ Trial Staff also challenges PG&E's rebuttal that its inclusion of Other Receivables does not result in cross-subsidization.⁷⁷⁰ Trial Staff notes that PG&E fails to support its claim that the Network Transmission Customers do not pay different rates than other customers and that vendors for Network Transmission needs are not paid at different rates than other vendors, with

⁷⁶³ *Id.* P 977 (citing Ex. S-0023 at 26:19-27:7).

⁷⁷⁰ *Id.* at 51-52.

any factual basis.⁷⁷¹ Additionally, Trial Staff asserts that cross-subsidization results from allocating these receivables to the Network Transmission rate base that are not explicitly related to the provision of network transmission service, not, as PG&E claims, from the rate which PG&E's different customers pay their bills or that they themselves pay them.⁷⁷² Trial Staff also notes that the only connection between Other Receivables and PG&E's transmission revenue requirements, the revenue from one of the receivables counts as revenue credit against the TRR, is insufficient to justify PG&E's inclusion of Other Receivables in rate base.⁷⁷³ Trial Staff concludes that PG&E's inclusion of this item is essentially a proposal to have its ratepayers pay for the short-term financing that it provides to third parties.⁷⁷⁴

iv. Commission Determination

275. We affirm the Presiding Judge's finding that PG&E should remove \$12.813 million in Other Receivables. We find that the receivables included in this item are not owed for Network Transmission service and are not owed by PG&E's Network Transmission customers. PG&E's inclusion of non-Network Transmission receivables in the Network Transmission portion of Other Receivables is improper because PG&E's customers would be paying the short-term financing costs for invoices owed by other entities for services other than Network Transmission. Accordingly, we reject PG&E's contention that including the receivables at issue is not cross-subsidization. It is irrelevant that the rate applicable to other PG&E customers is not different. The cross-subsidization here is the result of the allocation of these receivables to the Network Transmission rate base that are not specifically related to the provision of network transmission service. We find this cross-subsidization unacceptable and direct PG&E to remove \$12.813 million from Other Receivables.

2. Prepaid Expenses That Should Not be Included in Rate Base

276. On June 29, 2004, PG&E issued a series of pollution control bonds. In this proceeding, PG&E proposed to include in its rate base a premium for insurance it purchased from the Financial Guarantee Insurance Company (FGIC) for those bonds.⁷⁷⁵

⁷⁷¹ *Id.* at 52.

⁷⁷² *Id.*

⁷⁷³ *Id.*

⁷⁷⁴ *Id.*

⁷⁷⁵ Ex. S-0039.

a. Initial Decision

277. The Initial Decision addressed Trial Staff's assertion that PG&E should be required to remove the 2004 pollution control bond premium from its rate base,⁷⁷⁶ and PG&E's rebuttal that the bond premium was a cost of doing business, not a cost to obtain debt financing, and should be included in the rate base.⁷⁷⁷ The Presiding Judge determined that PG&E's payment of the insurance premium was a cost of issuing the bonds and concluded that PG&E must remove the premium from its rate base.⁷⁷⁸

b. Brief on Exceptions

278. PG&E contends that the Initial Decision was incorrect so far as it instructed PG&E to remove the premium for insurance on the pollution control bonds, rejected its witness' testimony, and speculated that payment of the insurance premium was a cost of issuing the bonds without citing to the record.⁷⁷⁹ PG&E reiterates that it considers all relevant pre-payments, adds them together, and appropriately allocates the sum among various lines of business.⁷⁸⁰

c. Brief Opposing Exceptions

279. Trial Staff supports the Initial Decision's finding that PG&E should be required to recalculate its prepayments to remove the bond premium from its rate base.⁷⁸¹ Trial Staff contends that, in contrast to PG&E's assertions, the record shows that the bond premium should not be included in the base rate because it is a cost of issuing the bonds.⁷⁸² Trial Staff also highlights several points made by PG&E's witness, including: PG&E's insurance on the bond premium was a credit enhancement that allowed the company to issue a lower coupon rate, the FGIC on the control bonds cannot be removed unless the bonds are re-issued or redeemed, the bonds were issued using FGIC insurance as a credit

⁷⁷⁹ PG&E Brief on Exceptions at 84.

⁷⁸⁰ *Id.* at 85.

⁷⁸¹ Trial Staff Brief Opposing Exceptions at 52 (citing Initial Decision, 165 FERC ¶ 63,001 at P 995 (citing Ex. S-0023 at 34:2-9, 35:21-23)).

⁷⁸² *Id.* at 53.

enhancement and allowed PG&E to obtain a lower interest rate, and the bond premium was paid on the same day the pollution control bonds were issued.⁷⁸³ Trial Staff concludes that, because the payment of the insurance premium was a cost of issuing the bonds, the cost should be included in the cost of debt calculation used in determining cost of capital and removed from the base rate.⁷⁸⁴

d. Commission Determination

280. We affirm the Initial Decision and direct PG&E to remove the 2004 pollution control bond premium from rate base on compliance. The record shows that PG&E was able to obtain a lower interest rate by issuing the 2004 pollution control Bonds with FGIC insurance as a credit enhancement.⁷⁸⁵ Given that PG&E purchased the FGIC insurance at the same time that it issued the bonds, and made the purchase of the FGIC insurance for the express purpose of obtaining a lower interest rate, the payment of the insurance premium was a cost of issuing the bonds. We therefore find that the 2004 PC bond insurance premium paid to insure PG&E's debt obligations is a cost of acquiring debt and must be reflected in the cost of debt calculation used in determining cost of capital. We conclude that PG&E's proposed inclusion of the 2004 pollution control bond insurance premium in rate base is inappropriate.

3. Forecast of Non-Tariffed New Products and Services (NP&S) Expenses and Revenue

281. PG&E's Non-Tariffed New Products and Services (NP&S) are secondary products and services that the utility offers through its Network Transmission assets including: "(1) leases of transmission tower facility rights for wireless antennae affixtures (Wireless); (2) leases of space on transmission facilities for telecommunication usages (Wire-Line); and (3) transmission maintenance and consulting (Maintenance and Consulting)."⁷⁸⁶ For 2017, PG&E forecasted total net revenues of \$24.652 million,

⁷⁸³ *Id.*

⁷⁸⁴ *Id.*

⁷⁸⁵ Ex. S-0039.

⁷⁸⁶ Initial Decision, 165 FERC ¶ 63,001 at P 999 (citing Trial Staff Initial Brief at 131; *Pac. Gas & Elec. Co.*, 121 FERC ¶ 61,174, at P 7 n.5 (2007); Ex. S-0016 (Testimony of Trial Staff Witness) at 3:14-4:11; Ex. PGE-0002 at 11:5-27).

which consist of \$22.059 million from Wireless (89.5% of the total), \$2.371 million from Wire-Line and \$221,000 from Maintenance and Consulting.⁷⁸⁷

a. Initial Decision

282. The Presiding Judge stated that historically the Commission approved using a 50-50 revenue sharing mechanism of NP&S revenues between PG&E and its ratepayers.⁷⁸⁸ The Presiding Judge stated that under this mechanism, an unreasonably low NP&S net revenue forecast would deprive ratepayers of the share of revenue credit the Commission intended for them to receive.⁷⁸⁹

283. The Presiding Judge explained that PG&E uses different methods to forecast the net revenue of each NP&S.⁷⁹⁰ First, according to the Presiding Judge, to forecast Wireless net revenue, PG&E uses assumptions about the number of existing site, new sites, sites that it will decommission, and prospective additions of new equipment.⁷⁹¹ Second, the Presiding Judge stated that PG&E forecasts its Wire-Line net revenue by focusing on rental revenue from leasing and licensing contracts, and the adding an escalation percentage.⁷⁹² Finally, the Presiding Judge stated that PG&E forecasts Maintenance and Consulting net revenue by averaging the number of emergency responses, and the annual revenue and expenses from these responses.⁷⁹³

284. The Presiding Judge found that the methodologies PG&E uses to forecast NP&S net revenues do not satisfy the *Chatham* chain of reasoning, and therefore the forecasts are not just and reasonable.⁷⁹⁴ The Presiding Judge found “the liner regression upon

⁷⁸⁷ Ex. PGE-0002 at 13, tbl. PGE-0002-1.

⁷⁸⁸ Initial Decision, 165 FERC ¶ 63,001 at P 1000 (citing *Pac. Gas & Elec. Co.*, 132 FERC ¶ 61,272, at P 25 (2010); *Pac. Gas & Elec. Co.*, 128 FERC ¶ 61,288, at P 21 (2009); *Pac. Gas & Elec. Co.*, 124 FERC ¶ 61,305, at PP 19, 26 (2008); *Pac. Gas & Elec. Co.*, 121 FERC ¶ 61,174 at P 1; *Pac. Gas & Elec. Co.*, 106 FERC ¶ 61,058 (2004)).

⁷⁸⁹ *Id.* P 1001.

⁷⁹⁰ *Id.* P 1004.

⁷⁹¹ *Id.* P 1005.

⁷⁹² *Id.* P 1008.

⁷⁹³ *Id.* P 1009.

⁷⁹⁴ *Id.* P 1010 (citing *Chatham*, 662 F.2d at 29).

which the Wireless forecast is based is seriously flawed.”⁷⁹⁵ The Presiding Judge also found the testimony describing the Wire-Line forecast method was deficient because it failed to explain how PG&E calculates its escalation percentages.⁷⁹⁶ Finally, the Presiding Judge found that regardless of the methodologies used, PG&E repeatedly under-forecasted its net revenues between 2006-2015.⁷⁹⁷ The Presiding Judge explained that Trial Staff’s witness provided a viable alternative method for forecasting NP&S net revenues.⁷⁹⁸ As explained in the Initial Decision, Trial Staff’s witness forecast a pre-tax NP&S net revenue forecast of \$32,407,600, and a corresponding customer revenue credit of \$12,057,458.23, based on data available to PG&E at the time of filing.⁷⁹⁹ According to the Presiding Judge, Trial Staff’s witness calculated those numbers by applying a linear regression methodology, based on PG&E’s NP&S net revenues (recorded NP&S revenues minus recorded NP&S expenses) during 2006-2011 and 2013-2015 to calculate a 2017 NP&S net revenue forecast.⁸⁰⁰ Therefore, the Presiding Judge concluded that PG&E’s NP&S net revenue forecast was unjust and unreasonable, and that the utility must adopt Trial Staff’s forecast of NP&S net revenues and its accompanying customer revenue credit for this component.⁸⁰¹

b. Brief on Exceptions

285. TANC contends that the Initial Decision’s finding that identified deficiencies in PG&E’s NP&S forecasting methodologies demonstrates that the Commission must reinstate triennial review process of PG&E’s expenses and revenue forecasts.⁸⁰² TANC

⁷⁹⁵ *Id.* P 1015.

⁷⁹⁶ *Id.* P 1018.

⁷⁹⁷ *Id.* P 1022.

⁷⁹⁸ *Id.* PP 1022-1023.

⁷⁹⁹ *Id.* P 1023 (citing Ex. S-0017 at 1).

⁸⁰⁰ *Id.* (citing Ex. S-0016 at 6:17-7:13; Ex. S-0017 at 3).

⁸⁰¹ *Id.* P 1028.

⁸⁰² TANC Brief on Exceptions at 98-99 (citing *Pac. Gas & Elec. Co.*, 106 FERC ¶ 61,058 at P 2; *Pac. Gas & Elec. Co.*, 90 FERC ¶ 61,314, at 62,039 (2000); *Pac. Gas & Elec. Co.*, 121 FERC ¶ 61,174 at P 2.

contends that monitoring PG&E's forecasting methods is necessary to ensure its methods are appropriate and acceptable.⁸⁰³

c. Briefs Opposing Exceptions

286. PG&E contends that TANC provides no basis for its exception that claims the Initial Decision should order future triennial reviews of PG&E's NP&S forecasts.⁸⁰⁴ PG&E concedes that the Commission used to require triennial filings, but after several years, the Commission removed this requirement.⁸⁰⁵ Therefore, PG&E contends that the Commission should not re-impose the triennial requirement.⁸⁰⁶

287. Trial Staff contends that the Initial Decision was correct to find "the Commission has uniformly approved the continued use of the 50-50 revenue sharing mechanism [for the treatment of NP&S revenues] in numerous proceedings."⁸⁰⁷ Trial Staff cites TANC witness' concession that the 50-50 revenue sharing mechanism is appropriate here.⁸⁰⁸ Therefore, Trial Staff argues that TANC should address its contention to reinstate the triennial review of PG&E's NP&S revenue sharing mechanism is a separate petition.⁸⁰⁹

d. Commission Determination

288. We affirm the Presiding Judge's finding that the methodologies PG&E uses to forecast NP&S net revenues do not satisfy the *Chatham* chain of reasoning and suffered from various deficiencies.⁸¹⁰ We therefore agree with the Presiding Judge that these forecasts are not just and reasonable.⁸¹¹ We accept Trial Staff witness' alternative

⁸⁰⁹ *Id.*

⁸¹⁰ 662 F.2d at 29.

⁸¹¹ Initial Decision, 165 FERC ¶ 63,001 at PP 1010-1022.

method for forecasting NP&S net revenues and direct PG&E to adopt it in its revised TO18. Trial Staff's NP&S net revenue forecast is a linear regression calculated based upon actual recorded revenues minus actual recorded expenses.⁸¹² We also reject TANC's request that triennial reviews be reinstated. As PG&E notes, the Commission removed this requirement several years ago, and we see no reason to re-impose it here.

4. Income Tax and ADIT Costs Resulting From the Tax Cuts and Jobs Act

289. PG&E proposed to base its TO18 rates, which were in effect until March 1, 2018, on a 35% corporate income tax rate.⁸¹³ However, the Tax Cuts and Jobs Act of 2017 (Tax Act) lowered the federal corporate income tax rate from 35% to 21% effective January 1, 2018.⁸¹⁴

a. Initial Decision

290. The Presiding Judge stated that PG&E's TO18 rates would stay effective until March 1, 2018.⁸¹⁵ The Presiding Judge stated PG&E's tax rate was based on a 35% federal corporate income tax rate, but the Tax Act would lower this rate to 21% beginning January 1, 2018.⁸¹⁶ PG&E's witness confirmed that the utility would pay the lower rate during TO18 for January and February of 2018.⁸¹⁷ However, as the Presiding Judge explained, PG&E had yet to agree to refund this money to its Network Transmission customers.⁸¹⁸

291. The Presiding Judge explained that the Commission had previously found it was appropriate to revise test year estimates when "it can be demonstrated that the estimates were either unreasonable when made or, if reasonable when made, subsequent events indicate that to use them as a basis for future projects would yield unreasonable results."⁸¹⁹ In prior cases, the Commission ordered the utility to revise its rates to reflect

⁸¹² Tr. 697:14-699:25 (Tam).

⁸¹³ See Tr. 650:25-651:6, 651:14-16 (Battin)

⁸¹⁴ Tax Cuts and Jobs Act of 2017, Pub. L. No. 115-97, 131 Stat. 2054 (2017).

⁸¹⁵ Initial Decision, 165 FERC ¶ 63,001 at P 1032.

⁸¹⁶ *Id.* P 1032 (citing Tax Cuts and Jobs Act of 2017, Pub. L. No. 115-97, 131 Stat. 2045 (2017); Tr. 651:14-16) (Battin)).

⁸¹⁷ *Id.* P 1036 (citing Tr. 662:16-19 (Battin); Tr. 1720:22-171:1 (Majoros)).

⁸¹⁸ *Id.* P 1036.

⁸¹⁹ *Id.* P 1038 (citing *Sw. Pub. Serv. Co.*, 49 FERC ¶ 61,354, at 62,282 (1989);

the tax rate change.⁸²⁰ Accordingly, the Presiding Judge found that PG&E must revise its January and February 2018 income tax and ADIT calculations to reflect the 21% tax rate and refund its Network Transmission customers.⁸²¹

b. Briefs on Exceptions

292. PG&E states that the Commission has explained that “with respect to the corporate tax rate reduction in the Tax Reform Act of 1986, the Commission has required reductions to cost-of-service where the Act was enacted during the test period and the effected date of the reduction occurred within, or soon after, the test period.”⁸²² Here, the Tax Cuts and Jobs Act was enacted after the end of the test period and was not signed into law until December 22, 2017.⁸²³ PG&E thus requests the Commission reject the tax adjustment because of the complication of double counting that would occur from the TO18 settlement and the resolution of the Tax Cuts and Jobs Act.⁸²⁴

293. TANC contends that PG&E should use the tax rate adjustment to compute its after-tax share of net revenues from NP&S.⁸²⁵ TANC argues that PG&E should apply the correct federal corporate tax rate to the January and February 2018 NP&S.⁸²⁶

c. Briefs Opposing Exceptions

294. PG&E notes that on November 15, 2018 the Commission issued an order to show cause, which directed PG&E to show cause as to why its TO18 rates should not reflect

SoCal Edison, 8 FERC at 61,375).

⁸²⁰ *Id.* (citing *Sw. Pub. Serv. Co.*, 49 FERC at 62,283; *Kan. Gas & Elec. Co.*, 49 FERC ¶ 61,295, at 62,123-24 (1989); *Boston Edison Co.*, 42 FERC ¶ 61,374, at 62,097 (1988)).

⁸²¹ *Id.* P 1039.

⁸²³ *Id.* at 87-88.

⁸²⁴ *Id.* at 88.

⁸²⁵ TANC Brief on Exceptions at 98.

⁸²⁶ *Id.*

the reduced federal corporate income tax.⁸²⁷ According to PG&E, the Commission found that “the Consolidated TO19 Rate Proceeding is a comprehensive rate case looking at all aspects of PG&E’s rate and is an appropriate forum to investigate the impacts of the Tax Cuts and Jobs Act,” and thus concluded that PG&E had shown cause as to why its stated transmission rates should not be revised to reflect the reduced federal corporate income tax rate.⁸²⁸ Therefore, PG&E contends that the Commission should reject the Initial Decision’s tax adjustment recommendation.⁸²⁹

295. TANC contends that the Initial Decision’s directive that PG&E revise its federal corporate income tax and ADIT calculations to reflect the 21% tax rate and to refund its Network Transmission customers is correct.⁸³⁰ TANC argues that the Commission should reject PG&E’s exception to the Initial Decision’s ruling.⁸³¹ TANC contends that PG&E’s argument that under the TO19 settlement the TO18 ADIT will automatically flow back to customers is inaccurate.⁸³² TANC argues “the flow back of excess [ADIT] under the TO19 settlement is effective March 1, 2018. Accordingly, if the Commission reverses the Initial Decision in this regard, transmission customers will be denied of any flow back of excess [ADIT] PG&E has collected during the months of January and February 2018.”⁸³³ Thus, TANC contends that the Commission should order PG&E to return any excess ADIT to customers.⁸³⁴ TANC also contends that the *Williston* order PG&E cites is distinguishable because, here, Congress enacted the Tax Cut and Jobs Act during the test year and it became effective only one day after the end of the test year.⁸³⁵ Finally, TANC contends that PG&E’s claim that the Commission does not correct tax rate changes after the end of a test period is wrong.⁸³⁶ TANC claims that the

⁸³⁶ *Id.* (citing PG&E Brief on Exceptions at 88).

Commission makes an exception where there are “known and measurable changes of substantial nature.”⁸³⁷ TANC contends that the reduction from 35% to 21% is a known and measurable change of substantial nature, and therefore the Commission should order PG&E to revise its income tax rate for January and February 2018.⁸³⁸

d. Commission Determination

296. On March 15, 2018, the Commission issued a show cause order requiring PG&E to either (1) propose revisions to its stated transmission rate to reflect the reduced corporate tax rate; or (2) show cause why it should not be required to do so.⁸³⁹ PG&E filed a response to the Show Cause Order stating that no revisions are necessary to its transmission rate because it was addressing the reduced federal income tax rate in its TO19 Proceeding. The Commission accepted PG&E’s response.⁸⁴⁰ TANC did not request rehearing in the Show Cause proceeding. On December 20, 2018, the Commission approved an uncontested offer of settlement in the TO19 Proceeding.⁸⁴¹ On February 21, 2019, the Commission also granted PG&E’s unopposed motion to dismiss it from the Show Cause proceeding.⁸⁴² The issue of the tax cuts impact on PG&E’s

⁸³⁷ *Id.* at 97 (citing *Nat’l Fuel Gas Supply Corp.*, 51 FERC ¶ 61,122, at 61,334 (1990); *Papago Tribal Util. Auth. v. FERC*, 773 F.2d 1056, 1059, 1063 (9th Cir. 1985)). TANC states that the Commission has held it was obligated to require a regulated company adjust rates to a date outside of the test period to reflect changes in the tax law enacted during the test period. *Id.* (citing *Nat’l Fuel Gas Supply Corp.*, 51 FERC ¶ 61,334).

⁸³⁸ *Id.* at 98. TANC also argues that the Commission should reject PG&E’s allegation of bias. *Id.* at 94.

⁸³⁹ *Alcoa Power Generating Inc.—Long Sault Division*, 162 FERC ¶ 61,224, at P 4 (2018) (Show Cause Order).

⁸⁴⁰ *Pac. Gas & Elec. Co.*, 165 FERC ¶ 61,131, at P 18 (2018). TANC’s protest of PG&E’s response in the Show Cause proceeding was rejected by the Commission. *Id.* P 19.

⁸⁴¹ *Pac. Gas & Elec. Co.*, 165 FERC ¶ 61,244 (2018). We also note that TANC was an active party to the TO19 Proceeding. See *Pac. Gas & Elec. Co.*, 160 FERC ¶ 61,128, at PP 9, 21 (2017).

⁸⁴² *Pac. Gas & Elec. Co.*, 166 FERC ¶ 61,130 (2019).

January and February 2018 rates has therefore been resolved in the TO19 Proceeding. Accordingly, we find that this issue as moot and therefore dismiss it.⁸⁴³

III. Conclusion

297. As discussed herein, we affirm in part and reverse in part the Presiding Judge's Initial Decision. We also direct further briefing on the issue of how PG&E's base ROE should be calculated, as discussed above. Initial briefs shall be due 60 days from the date of this order. Responses to those initial briefs shall be due 30 days later. No answers or additional briefs will be permitted. We also direct PG&E to submit, within 60 days of the date of the order on the ROE issue discussed above, a compliance filing to reflect adjustments to its TRR as required by this order and the order on further briefing.

The Commission orders:

(A) The Presiding Judge's findings are hereby affirmed in part and reversed in part, as discussed in the body of this order.

(B) Further briefing is hereby directed on the issue of how PG&E's base ROE should be calculated, as discussed above. Initial briefs shall be due 60 days from the date of this order. Responses to those initial briefs shall be due 30 days later. No answers or additional briefs will be permitted.

(C) PG&E is hereby directed to submit a compliance filing reflecting adjustments to its TO18 TRR in accordance with the directives in the body of this order and a future order on the ROE issue, with such filing due within 60 days of the date of issuance of the order on the ROE issue, as discussed in the body of this order.

By the Commission.

(S E A L)

Nathaniel J. Davis, Sr.,
Deputy Secretary.

⁸⁴³ Finally, as we stated earlier, we reject PG&E's claims that the Presiding Judge is biased against stated rates.

In the matter of the application of	)	
CONSUMERS ENERGY COMPANY for	)	
accounting approval of depreciation rates for	)	Case No. U-15629
gas utility plant.	)	
_____	)	

At the September 29, 2009 meeting of the Michigan Public Service Commission in Lansing,
Michigan.

PRESENT: Hon. Orjiakor N. Isiogu, Chairman
Hon. Monica Martinez, Commissioner
Hon. Steven A. Transeth, Commissioner

OPINION AND ORDER

History of Proceedings

On July 31, 2008, Consumers Energy Company (Consumers) filed an application, with supporting testimony and exhibits, requesting approval of revised depreciation accrual rates for accounting and ratemaking purposes for the company's gas utility plant. The company also requested a determination that it had substantially complied with the June 26, 2007 order in Case No. U-14292 (June 26 Order).

On November 26, 2008, a prehearing conference was conducted before Administrative Law Judge James N. Rigas (ALJ). The ALJ granted petitions to intervene filed by Attorney General Michael A. Cox (Attorney General) and the Association of Businesses Advocating Tariff Equity (ABATE). The Commission Staff (Staff) also participated in the proceeding.

On December 3, 2008, Consumers filed a partial settlement agreement in this docket in which all parties agreed that the Commission should authorize the company to implement a proposed depreciation schedule from the date that Consumers implemented the settled retail rates in Case No. U-15506 until the Commission issues a final order in this proceeding. The parties to the settlement noted that implementing the proposed depreciation rates would decrease Consumers' depreciation expense by \$19.6 million annually from the depreciation schedule authorized before the settlement. On December 23, 2008, the Commission approved the settlement agreement.

Evidentiary hearings were conducted on April 27 and 28, 2009. On May 15 and May 27, 2009, the parties filed briefs and reply briefs. On July 1, 2009, the ALJ issued his Proposal for Decision (PFD). On July 17, 2009, Consumers, the Staff, and ABATE filed exceptions. On July 31, 2009, Consumers, the Staff, the Attorney General, and ABATE filed replies to exceptions. The record in this case consists of 340 pages of testimony and 28 exhibits received into evidence.

Positions of the Parties

Dane A. Watson of Alliance Consulting Group performed a depreciation study for Consumers and also provided the alternative net salvage calculations required by the June 26 order.

Mr. Watson testified that he calculated cost of removal expense using the traditional method (i.e., the straight line average group life method), the five-year net salvage method, the Statement of Financial Accounting Standards (SFAS) No. 143 approach, and the inflation adjusted method. 2 Tr 48, 52. According to Mr. Watson, his analysis using the traditional approach supports a reduction in depreciation expense of approximately \$19.7 million per year. 2 Tr 52-54.

Mr. Watson testified that Consumers' depreciation expense is decreasing largely because of a reduction in realized removal cost over the past few years, which in turn has allowed the company to lower the projected cost of future removals.

Mr. Watson observed that net salvage rates for Consumers were last approved in Case Nos. U-12999 and U-13730 using the average five-year net salvage percent of retirements.

Mr. Watson testified that using this approach would result in a more negative net salvage rate and higher depreciation expense than the traditional approach. 2 Tr 58-59. Mr. Watson opined that the traditional approach is more appropriate than the five-year average percent of retirements method because the traditional approach allows for the reflection of trends in net salvage.

Mr. Watson explained that under the SFAS No. 143 method, the net present value (liability) and removal cost expense were calculated in the same manner that Consumers calculates its legal Asset Retirement Obligations (AROs) for reporting in financial statements. 2 Tr 62; Exhibit A-3. Mr. Watson testified that in the inflation adjusted approach, he adjusted the inflation for the remaining future years of the assets based on the difference between the 30-year average historical inflation rate and the 30-year average projected inflation rate. 2 Tr 63; Exhibit A-4. Mr. Watson contended that the SFAS No. 143 approach was not appropriate for regulatory accounting because: 1) it was created solely for financial reporting purposes; 2) the Federal Energy Regulatory Commission (FERC) has stated that there is no reason to change to this method; 3) SFAS No. 143 accounting defers depreciation expense to future customers; 4) depreciation expense for removal cost increases every year requiring annual filings to ensure appropriate cost recovery in rates; and 5) it is difficult to accurately calculate liabilities or accretion under the SFAS No. 143 approach for mass property. 2 Tr 64.

Mr. Watson testified that the inflation adjusted approach was likewise problematic because it is impossible to predict future inflation and because the average ages of retirements are generally much shorter than the average life of the accounts. Thus, more years of inflation will act upon the

assets in the future as the average age of retirements moves toward the average life of the account. This will move the net salvage percentages more negative than is reflected in the current analysis.

Mr. Watson added that the traditional method of estimating future salvage and removal costs is the approach authoritative sources generally support, citing the publication *Public Utility Depreciation Practices* published by the National Association of Regulatory Utility Commissioners (NARUC) and the 1994 treatise *Depreciation Systems*, by Wolf and Fitch. 2 Tr 66-67.

Jan C. Anderson, the Manager of Depreciation Studies and Regulatory Filings for Consumers, testified that Consumers reviewed its records and determined that a retrospective change in retirement units using the Staff's proposed Standard Retirement Units (SRUs) would be an administrative burden, if it was feasible at all. According to Ms. Anderson:

The Company has electronic files for the more recent years of 1999 through to present that could be electronically reviewed. But, prior to that time, manual work orders would need to be reviewed. Although we don't have an exact historical work order count, with 1.7 million gas services, 26,000 miles of gas distribution main, and 1,700 miles of gas transmission main, it is estimated that more than two million work orders were processed to record these assets. And if it is conservatively estimated that each order would take only five minutes to review and repost using the proposed Standard Retirement Units, it would require 80 full time employees each working for a full year on this and nothing else, to convert the historical information to the Staff's proposed Standard Retirement Units.

2 Tr 23-24.

Ms. Anderson added that despite the difficulty in converting past accounts, Consumers would support the use of the Staff's proposed SRUs on a going-forward basis. Ms. Anderson recommended that the changes in retirement units should be effective on the first day of the subsequent year, provided there is at least 90 days from the order date to the first day of the subsequent year. In addition, the change in retirement units should be effective concurrent with an order in a general rate case.

The Staff recommended that the Commission adopt Consumers' depreciation method and depreciation rates, noting that it agreed with Consumers' analysis of the shortcomings of the alternative methods and added that the traditional method produces reasonable results without being overly burdensome or overly reliant on analytical tools. The Staff also recommended that the Commission reject Consumers' failure to perform the depreciation study using the recommended SRUs as required by the June 26 Order. The Staff noted that no party addressed Consumers' failure to conduct this study, and added that this issue was contested by the parties to Case No. U-14292. The Staff recommended that the Commission direct Consumers to conduct the study and to file it at a date to be set at the Commission's discretion.

The Staff recommended that the traditional method should continue to be used for determining the net salvage for Consumers' gas plant depreciation, and that the company's net salvage calculations should be adopted in this case. The Staff recommended that the rates and service lives set forth by the company in this case should also be adopted and that Consumers' next gas depreciation study should be filed two years from the date of issuance of the order in this case. Following this, the Staff recommended that regular depreciation cases should be filed every three to four years. Finally, the Staff recommended that Consumers perform a study of its cost of removal and salvage practices as part of its next depreciation study for the purpose of keeping these costs under control.

William W. Dunkel, the principal of William Dunkel and Associates, testified on behalf of the Attorney General. Mr. Dunkel asserted that the traditional method for calculating future cost of removal overrecovers removal costs in general and that the overrecovery is more significant in the early years when removal costs are collected. 2 Tr 149, 156. Mr. Dunkel explained that under the traditional approach, the current removal cost for new plant is established, and this cost is then

inflated to the year of removal to determine the future cost of removal. This future removal cost is then divided by the number of years of service to derive the annual amount that must be collected to retire the plant. Mr. Dunkel provided an example of a current removal cost of \$50 for a pipeline expected to last 50 years. Applying inflation, the future cost of removal of the pipeline is calculated to be \$649. Under the traditional method, the company must collect \$12.98 per year ($\$649/50$) to cover the cost of removal. 2 Tr 153. According to Mr. Dunkel, the traditional approach fails to take into account the difference in purchasing power of current dollars compared to future dollars. Mr. Dunkel testified, “Calculating that \$12.98 in Year 2057 dollars is owed, but collecting \$12.98 in Year 2007 dollars is an overcharge, because Year 2007 dollars are worth much more than Year 2057 dollars.” 2 Tr 154.

Mr. Dunkel testified that the traditional approach was developed at a time when net salvage tended to be positive. Now, however, net salvage is more likely to be negative and, according to Mr. Dunkel, the theory on which the traditional approach is based was not designed to properly handle prepayments by customers.

Mr. Dunkel advocated that the Commission adopt a depreciation method that he called the “Present Value/SFAS 143/FERC Order 631” approach. Mr. Dunkel testified that under this approach, customers in 2007 are required to pay the present value of their share of the future removal cost. Thus, 2007 customers are responsible for paying \$12.89 in 2057 dollars, rather than 2007 dollars. In year 2007, customers would pay enough such that the money they paid, plus 50 years of interest on that money, would sum to the \$12.89 needed for their share of the removal cost in year 2057 in 2057 dollars. 2 Tr 164.

James T. Selecky, a consultant in the field of public utility regulation and a principal in the firm of Brubaker & Associates, Inc., testified on behalf of ABATE. According to Mr. Selecky,

Consumers' proposed depreciation rates are excessive because the cost of removal component of the depreciation rates reflects unreasonable amounts for future inflation. As a result, the cost of removal expense included in the depreciation rates greatly exceeds the actual net salvage expense currently incurred and the net salvage expense likely to be incurred in the near future.

Mr. Selecky testified that Consumers' proposed net salvage ratios produce an annual net salvage expense of \$52.92 million. However, according to Mr. Selecky, Consumers' average actual annual net salvage expense over the last five years was \$6.89 million, an amount that is 8 times lower than the company's proposed cost of removal expense. 3 Tr 298. Mr. Selecky testified that based on his analysis, Consumers has overstated the amount of net salvage that is included in depreciation rates and that this overstatement of net salvage places an unreasonable burden on today's ratepayers and provides a substantial benefit to future ratepayers. Mr. Selecky opined that the amount of net salvage included in Consumers' depreciation rates should be reduced to reflect a more accurate expectation of the level of net salvage expense that the company expects to incur over the next five to ten year period. Mr. Selecky testified that the disparity between net salvage expense included in Consumers' depreciation rates and actual net salvage costs is largely attributable to an overestimate of future inflation rates.

Mr. Selecky recommended that Consumers' net salvage expense should be based on the actual net salvage cost experience of the company over 15 years, the longest period for which data was available. Once the historical 15-year average was identified, this amount was then grossed-up for inflation over a period of 10 years to determine an average accrual of \$9.956 million for net salvage. 3 Tr 314-315; Exhibits AB-3 and AB-4. Mr. Selecky noted that periodic depreciation cases will allow for adjustments if cost of removal expense increases in the future.

Proposal for Decision

The ALJ noted that the parties did not disagree on Consumers' method for calculating depreciation expense and rates related to the recovery of original plant investment cost but did disagree on how the company should calculate depreciation expense and rates for recovery of net salvage costs. The ALJ prefaced his findings by observing that the June 26 order established the Commission's view that comparing removal costs in today's dollars with the original cost of the plant being retired is problematic because it assumes that high inflation rates from the past will continue into the future and fails to take into account the time value of money. The ALJ found that the traditional method for calculating future removal costs, as advocated by the Staff and Consumers, did not address the concerns in the June 26 order because the traditional method does not address the time value of money or significant depreciation expense accruals.

The ALJ agreed with ABATE that the traditional method does not provide reasonable or accurate results, and agreed with Consumers and the Staff that because the method proposed by ABATE uses a time span that is much shorter than the service life of the plant items being depreciated, this method will not permit the utility to recover its actual plant in service retirement costs.

The ALJ found that the record provides a choice between Consumers' SFAS No. 143 method and the Attorney General's proposed present value method. The ALJ determined that the method presented by the Attorney General was least problematic and recommended its adoption by the Commission. The ALJ added that periodically reviewing the present value calculations will provide the opportunity for refinement and will address the concerns about the accuracy of the results.

The ALJ agreed with the Staff's recommendation that consideration of SRU's should be deferred to the rulemaking proceeding in Case No. U-14812 and with the Attorney General's recommendation that Consumers should be required to file its cost of removal study and next depreciation case two years after the final order in this case.

Exceptions and Replies

Consumers takes exception to the ALJ's recommendation that the present value method should be adopted for calculating net salvage. According to Consumers, the present value method causes current customers to underpay and forces later customers to pay too much for removal costs. Consumers argues that in addition to this inequity, future customers will also face a higher rate base, which will cost them more for carrying the cost of the assets' net book value; they will pay more for maintenance expenses; and they will pay more for future assets that are capitalized at a higher cost. Consumers asserts that the ALJ failed to recognize that under regulated accounting, every dollar of removal cost recovered from customers is charged to the depreciation reserve, and every dollar added to the reserve decreases Consumers' rate base. Consumers claims that adoption of the present value approach would result in a 50% increase in both future value cost and current value cost over the traditional method's straight-line recovery of removal costs.

Consumers argues that the ALJ erred in finding that the traditional method does not provide reasonable or accurate results and erred by selectively applying language from the June 26 order. Consumers points to the Commission's concerns about the size of the company's cost of removal expense, noting that subsequent to the June 26 order the company reduced its cost of removal expense by over \$19 million per year. According to Consumers, this reduction, coupled with the company's commitment to file another depreciation study in two years, addresses this concern. Consumers adds that the ALJ ignored the language in the June 26 order characterizing the

Attorney General's proposed present value approach as "radical." Consumers adds that the Attorney General's proposed reduction of \$47.5 million from the levels set in Case No. U-12999 demonstrates that the Commission's concerns about the Attorney General's approach were sound. Consumers claims that such a substantial reduction could have a significant adverse effect on the company's cash flow. Consumers also asserts that, despite the Attorney General's opinion to the contrary, the company would have to file a depreciation case every year to assure full cost recovery.

Finally, Consumers argues that if the Commission determines that an SFAS No. 143 approach to cost of removal calculation is most appropriate, the Commission should adopt the SFAS No. 143 approach presented by Consumers. Consumers argues that the calculation presented by Mr. Dunkel violates a basic requirement of SFAS No. 143: that the calculation must use the future value of removal costs at the planned time of removal. Consumers notes that Mr. Dunkel used 22.8 years as the average age of asset retirements, rather than the projected asset retirement age of 40 years. The \$28 million difference between Consumers' SFAS No. 143 method and Mr. Dunkel's version is the result of Mr. Dunkel's exclusion of 17 years of inflation.

The Staff likewise takes exception to the ALJ's recommendation that the Attorney General's present value method should be adopted for calculating future cost of removal expense. The Staff claims that, contrary to the ALJ's finding, shifting costs to future ratepayers by implementing the present value method will create intergenerational inequities because these inequities are intrinsic to the method. The Staff adds that the intergenerational inequity created by the present value method would not necessarily be corrected by holding depreciation cases on a regular basis.

ABATE argues that the ALJ erred in rejecting its approach for calculating net salvage. According to ABATE, the ALJ summarized the advantages of using the 15-year average historical

net salvage expense inflated for 10 years, but then rejected it on grounds that it uses a much shorter period than the service life of the plant being depreciated and resulted in a significant reduction in cost of removal expense. ABATE argues that it is unreasonable to find a method that uses future predictions of net salvage expense preferable to one that uses the best available historical information coupled with a future estimate of inflation. ABATE observes that all of the advantages associated with the SFAS No. 143 method are true of ABATE's proposed approach; however, the approach advocated by ABATE has the additional advantage of a basis in actual historical data.

Findings of Fact and Conclusions of Law

On October 14, 2004, the Commission issued an order in Case No. U-14292 requesting comments regarding "[the] future treatment of FAS No. 143-related issues, proper future ratemaking policy regarding those issues, necessary uniform system of accounts revisions, and other matters that are related to the retirement of tangible long-lived assets and the associated asset retirement costs." After reviewing the comments, the Commission issued a final order on June 26, 2007. In the June 26 order, the Commission observed, among other things, that, "an SFAS No. 143 approach applied to required [asset retirement obligations] ARO and other ARO accounts would be informative, even if the Commission determines that SFAS No. 143 should not be used for ratemaking." The Commission then directed the large utilities to:

[F]ile new depreciation cases in 2008, using 2007 cost of removal expenses as a basis, and to calculate cost of removal depreciation under: 1) the current method for calculating cost of removal; 2) the current method for calculating cost of removal using the standard retirement units proposed by the Staff; 3) the method proposed by Mr. Czech and using the standard retirement units proposed by the Staff; and 4) an SFAS No. 143 approach that considers the time value of money applied to required AROs and other AROs, with and without the standard retirement units proposed by the Staff. This additional information will allow the

Commission to assess the propriety of the different proposals and the efficacy of implementing them for each individual utility.

June 26 order, p. 33.

The Commission agrees with Consumers and the Staff that continued use of the traditional, straight-line depreciation method, coupled with the use of the Staff's proposed SRUs on a going-forward basis, is the most appropriate means of addressing future removal costs. As discussed by Mr. Watson in his rebuttal testimony, the net present value approach proposed by the Attorney General has been consistently rejected by most Commissions and does not comport with depreciation methods recommended by authoritative sources on depreciation accounting. The accrual for net salvage must be based on estimates of the future cost that will be incurred, not the removal cost at today's price level. Therefore, it is appropriate to ask current customers to pay for future costs of removal at inflated price levels, and, as Mr. Watson pointed out, the rate base offset compensates rate payers for the prior payment for the costs incurred by the utility. Finally, the Commission finds that the Attorney General's proposed method significantly decreases the cash flows available to utilities to meet their infrastructure and other public service obligations. This, in turn, has a negative financial effect on both the utility and its customers by requiring that such obligations be met with more expensive sources of external financing and by driving up the cost generally of obtaining money in the capital markets. The Commission finds that the Attorney General has not shown that the adoption of the net present value method would justify these increased costs for utility consumers.

The Commission disagrees with the Staff's recommendation that Consumers should be required to perform a depreciation study using the Staff's recommended SRUs as required by the June 26 order. While it is true that there was some dispute over the effects of changing to SRUs, the amount of effort required to update older, non-electronic records was not contemplated by the

Commission or the utilities. The Commission therefore agrees with Consumers that the Staff's recommended SRUs should only apply on a going-forward basis.

THEREFORE, IT IS ORDERED that:

A. Consumers Energy Company shall continue the depreciation rates authorized by the December 23, 2008 order approving a partial settlement agreement in this case.

B. Consumers Energy Company shall file a new depreciation case and an updated depreciation study by September 15, 2011.

C. Consumers Energy Company shall use standard retirement units proposed by the Commission Staff in Case No. U-14292 for new gas plant effective January 1, 2010.

The Commission reserves jurisdiction and may issue further orders as necessary.

Any party desiring to appeal this order must do so in the appropriate court within 30 days after issuance and notice of this order, pursuant to MCL 462.26.

JURISDICTION

O.C.G.A. § 46-2-20(a) provides that the Commission has general supervisory authority over gas companies.

O.C.G.A. § 46-2-23 provides that the Commission has exclusive power to determine what are just and reasonable rates and charges to be made by any person, firm or corporation subject to its jurisdiction. The rates for firm distribution service and ancillary services rendered by an electing distribution company must be established in accordance with Article 5 of Title 46, O.C.G.A. §§ 46-4-151 *et seq.*

O.C.G.A. § 46-2-25 provides in pertinent part that whenever any new rate schedule is filed, the Commission shall have authority, upon reasonable notice to the utility, to enter a hearing concerning the lawfulness of such rate, charge, classification, or service.

O.C.G.A. § 46-2-26.4 provides for the accounting treatments to be used in any proceeding before the commission to determine the rates to be charged by a gas utility. Subsection (b) provides as follows:

In any proceeding commenced after April 1, 2002, to determine the rates to be charged by a gas utility, the gas utility shall file jurisdictionally allocated cost of service data on the basis of a test period, and the commission shall utilize a test period, consisting of actual data for the most recent 12 month period for which data are available, fully adjusted separately to reflect estimated operations during the 12 months following the proposed effective date of the rates. After the initial filing, and until new rates go into effect, the utility shall file actual cost of service data as they become available for each month following the actual data which were filed. The utility shall have the burden of explaining and supporting the reasonableness of all estimates and adjustments contained in its cost of service data.

STATEMENT OF PROCEEDINGS

Pursuant to a Stipulation adopted by the Georgia Public Service Commission ("Commission") on June 17, 2005 in Docket No. 18368-U, the Commission and Atlanta Gas Light Company ("Atlanta Gas Light" or "Company") agreed to freeze base rates until April 10, 2010. The Stipulation provided in Paragraph 1 that the Company would file a rate case on November 1, 2009:

AGLC's base rates shall be frozen at their April 30, 2005 levels for a period of five years beginning May 1, 2005 and ending April 30, 2010 with the Company agreeing not to seek a rate increase and the Commission agreeing not to bring AGLC in for a rate proceeding during that period. On November 1, 2009 the Company shall file testimony and exhibits required in a general rate case filing along with supporting schedules required by the Commission to support a "traditional" rate case. Based on this settlement agreement, the test year utilized by the Company in its rate case filing shall be from December 1, 2009 to November 30, 2010.

June 17, 2005 Order on Reconsideration, Exhibit A, Para. 1.

Mindful of the difficulties faced by end-use customers in the current economic climate and acting under the belief that it could continue to operate under then-current levels for a brief period beyond the date new rates were to be effective under the prior order, on July 15, 2009, the Company filed a Petition to Postpone Scheduled Rate Filing. In an August 5, 2009 Order, the Commission agreed to permit the Company to file its next rate case on a date no sooner than April 1, 2010, but no later than June 1, 2010.

On April 28, 2010, the Commission issued a Procedural and Scheduling Order in the above-captioned docket directing the Company to file a general rate case on or before May 3, 2010, with proposed rate changes to become effective November 3, 2010. In that procedural order, the Commission suspended the filing as contemplated by O.C.G.A. § 46-2-25 for a five-month period ending November 3, 2010 and directed that the test period to be utilized shall cover the twelve month period ending May 31, 2011. The Commission also ordered that the following issues would be addressed in this proceeding:

- (a) For the test year period, what is Atlanta Gas Light Company's total revenue requirement? As part of the consideration of total revenue requirement, what are Atlanta Gas Light Company's just and reasonable operating expenses, depreciation expense, taxes, rate base and cost of capital?
- (b) For the test year period, what is the total revenue Atlanta Gas Light Company should be authorized to collect through the rates charged for its distribution services?
- (c) Are Atlanta Gas Light Company's rates just and reasonable and do they recover more or less than the Company's revenue requirement?
- (d) For the test year period, if Atlanta Gas Light Company's current rates are not just and reasonable, how should Atlanta Gas Light Company's rates be

modified so that the new rates are just and reasonable and reflect the Company's revenue requirement?

- (e) Are affiliate transaction costs fairly allocated?
- (f) Is the jurisdictionally allocated cost of service data fully adjusted separately to reflect estimated operations during the twelve (12) months following the proposed effective date of the rates? See O.C.G.A. § 46-2-26.4(b)?
- (g) Should the Pipeline Replacement Rider, or any other rider, be modified and if so, in what manner?
- (h) Should AGLC's Tariff be modified and updated?

In addition to participation by the Georgia Public Service Commission Public Interest Advocacy Staff ("PIAS") in this matter, interventions were filed by a number of interested parties. These interested parties included Gas South, LLC ("Gas South"); Georgia Watch; Resource Service Ministries; Resource Supply Management; SCANA Energy Marketing, Inc. ("SCANA"); and Southstar Energy Services, LLC d/b/a Georgia Natural Gas ("Southstar" or "GNG").

Hearings on AGLC's general rate case began on August 10, 2010, at which time the Commission received the testimony of numerous Company witnesses on behalf of AGLC, and concluded on August 11, 2010.

On August 19, 2010, PIAS pre-filed direct testimony. On August 19, 2010, Resource Service Ministries pre-filed the direct testimony of Michael O. Kimsey. Hearings on this second phase of the case began on September 13, 2010, during which seven public witnesses provided comments and the above-referenced parties testified, and concluded on September 14, 2010.

On October 1, 2010 AGLC filed rebuttal testimony regarding the testimony of the PIAS' witnesses, and, on Tuesday, October 12, 2010 hearings in this proceeding resumed, concluding on October 13, 2010.

On October 20, 2010, parties in this matter filed proposed orders and briefs.

At the Special Administrative Session on October 27, 2010, the Commission considered and decided the issues presented to it in this proceeding.

FINDINGS OF FACT AND CONCLUSIONS OF LAW

I Revenue Requirements

A. Atlanta Gas Light Company Rate Base

1. Utility Plant

Atlanta Gas Light Company's ("AGLC") utility plant for the test year was represented as being \$2,926,451,000 less a depreciation reserve of \$1,118,867,000. As discussed above, the test year set for this proceeding is the 12-month period ending May 31, 2011. These amounts include AGLC's proposed Customer First programs, and the depreciation reserve includes the depreciation rates proposed by Company witnesses Watts and Watson. Utility plant for the test year is comprised of the original proposed amount of \$2,920,023,000 (AGLC Exhibit No. 39 (MJM-4) Revised, Schedule 1 Revised, Column 8, Line 1) and an additional \$6,428,000 provided with the Company's errata (AGLC Exhibit No. 39 (MJM-4) Revised, Schedule 1a, sum of lines 1 and 6). The depreciation reserve for the test year consists of the original proposed amount of \$1,119,413,000 (AGLC Exhibit No. 39 (MJM-4) Revised, Schedule 1 Revised, Column 8, Line 3) less an adjustment for \$546,000 that is required to correct the depreciation rate used for general plant.

PIAS contends that an end of test period amount is more appropriate if the Commission adopts the Company's post test period adjustment associated with the implementation of the automated meter reading ("AMR") program. Tr. 937-41. PIAS also asserts that the Company will over earn in future years if an end of test year methodology is not adopted. (*Id.*). The Commission rejects PIAS' proposal of an end of test period methodology. PIAS' approach is not consistent with basic ratemaking principles and is not consistent with PIAS' own methodology adopted in previous rate cases. PIAS' contention that the Company will over earn in future years is not supported by the evidence in this case, and PIAS' analysis does not include potential decreases in revenues or potential increases in interest rates, benefit costs or other increases in rate base such as the Company's prepaid pension asset. Further, the Company was consistent in applying a post test year approach for the AMR program by also including post test year savings for the cost of service component associated with the program. The Commission rejects PIAS' proposal of an end of test period methodology. As provided in AGLC Exhibit No. 119 (MJM-7), use of a post test year methodology for the AMR program saves customers approximately \$200,000 in annual revenue requirement. Therefore, the Commission considers the Company's methodology for estimating utility plant just and reasonable and rejects PIAS' end of test year methodology.

2. AGL Services Company Plant

Included in the Company's test year rate base is approximately \$24 million of AGL Services

Company ("AGSC") net plant that the Company stated is used for AGLC's utility service to Georgia gas consumers. AGSC net plant includes an allocable portion of plant in service, construction work in progress, accumulated depreciation reserve and accumulated deferred income taxes. According to company witness Morley, these assets are utilized by employees of AGLC and AGSC in providing utility service to AGLC customers and would otherwise be reflected on the books and records of the Company if it were not a subsidiary of AGL Resources but a stand-alone company. Tr. 452. PIAS did not dispute these facts. Mr. Morley also stated that the Company's requested treatment of AGSC assets is consistent with this Commission's prior rate case decision in Atmos Energy's rate case in Docket No. 30442. (*Id.*). PIAS recommended excluding AGSC net plant from rate base because AGSC is a separate legal entity. Tr. 1100-01. PIAS also contended that AGSC finances its operations and that AGSC did not incur financing costs in the historic test year. AGLC contends that AGSC does not finance its operations and the actual costs to finance AGSC assets include the short-term debt, long-term debt and common equity costs of AGL Resources ("AGLR"). Tr. 1947-48. This is consistent with the costs to finance Atlanta Gas Light operations, and PIAS witness Kollen's support of the use of AGLR consolidated debt costs as the debt costs for the Company supports this fact.

Atlanta Gas Light clearly would be allowed to earn a reasonable rate of return on the AGSC plant if it were owned directly by the Company. Witness Morley demonstrated that this business model provides clear cost-saving benefits to customers. Tr. 2025. Therefore, the legal structure of AGLR is not the relevant factor when determining the appropriate ratemaking treatment of AGSC plant. Further, ownership of the plant by AGSC should not disqualify it for inclusion in Atlanta Gas Light's rate base. The Commission is also persuaded that this treatment is consistent with the Commission's treatment of Atmos Energy Corporation. The Commission agrees with AGLC that the substance of the transaction is that AGSC net plant is used to provide utility service to AGLC Georgia customers and the form is that AGSC net plant is on the books and records of AGSC and not AGLC. Accordingly, AGSC plant should be included in rate base.

PIAS also asserts that the Company's estimate of AGSC plant is overstated. Tr. 1102- 03. The Commission makes no such finding. In addition, PIAS asserts that construction work in progress ("CWIP") should not be included in rate base since it accrues Allowance for Funds Used During Construction ("AFUDC") on CWIP. Tr. 1102-03. Mr. Morley testified that AGSC does not accrue AFUDC on CWIP. Tr. 1958. Based on the evidence provided by AGLC through testimony, workpapers and data requests, the Commission accepts AGLC's estimate of AGSC plant.

3. CIAC and Customer Deposits

Contributions in aid of construction ("CIAC") was represented by the Company as \$37,440,000. AGLC Exhibit No. 39 (MJM-4), Revised, Sch.1 Revised. No party challenged AGLC's CIAC figures nor its statement that customer deposits would reduce rate base by \$81,000. Accordingly, the Commission accepts AGLC's CIAC and customer deposit recommendations.

4. ADIT

AGLC's rate base for accumulated deferred income taxes ("ADIT") is \$449,621,000, AGLC Exhibit No. 39 (MJM-4) Sch.1 REVISED including ADIT associated with AGSC plant, AGLC's proposed Customer First programs, the impact of the proposed depreciation rates supported by AGLC witnesses Watson and Watts and the impact of bonus depreciation, the latter of which the Company included in its rebuttal testimony (AGLC Exhibit No. 118 (MJM-6) Sch. 2). The components of the Company's proposed ADIT are as follows:

Reference	Amount
AGLC Exhibit No. 39 (MJM-4) Revised, Schedule 1, Revised, Column 8, Line 6	436,366,305
AGLC Exhibit No. 39 (MJM-4) Revised, Schedule 1a, sum of lines 2-5	1,314,220
AGLC Exhibit No. 118 (MJM-6), Schedule 2 - Bonus Depreciation	11,729,000
Impact of correction to depreciation rate for general plant	211,000
Total Proposed Test Year ADIT	<u>49,620,525</u>

5 Depreciation Rates

Atlanta Gas Light Company provided testimony and supporting documents concerning a depreciation study performed on behalf of the Company by witnesses Watson and Watts. Witnesses Watson and Watts initially recommended depreciation rates that would produce an increase in annual depreciation expense of approximately \$7.97 million. Based on a transcription error pointed out by PIAS during cross examination, the witnesses modified their recommendation such that the annual increase in depreciation expense would be \$6.88 million. The primary forces driving the increase in annual depreciation were an increase in negative net salvage for Account 376, Mains from -8 percent to -11 percent and an increase in negative net

salvage for Account 380, Services from -11 percent to -50 percent based on recent experience and a return to traditional regulatory accounting principles.

PIAS presented the testimony of Mr. Dunkel, who performed an analysis of the Company's depreciation expenses. Mr. Dunkel presented total depreciation expense based on AGLC's proposed rate base as \$70,658,000, approximately \$8 million less than Mr. Watson's and Ms. Watts' recommended depreciation expense of \$79,079,000 (based on AGLC's recommended rate base) and about \$1.6 million less than existing depreciation rates. Mr. Dunkel raised four concerns with the depreciation rates recommended by the Company. Tr. 1306-07. Mr. Dunkel first argued that the Commission should continue using the current approved non-traditional net salvage method for Account 376, Mains and Account 380, Services, instead of adopting the traditional net salvage and removal cost method recommended by witnesses Watson and Watts. Tr. 1306. Mr. Dunkel then referenced the transcription error noted in the original cross examination of Mr. Watson and Ms. Watts. Tr. 1307. Third, Mr. Dunkel stated that Atlanta Gas Light Company's original recommendation charged depreciation expenses on fully depreciated accounts. (*Id.*). Finally, Mr. Dunkel contended that, in calculating depreciation expenses, AGLC incorrectly used functional depreciation rates instead of account-based rates. (*Id.*).

AGLC made the appropriate correction in its rebuttal testimony to account for the original transcription error. Tr. 2233-34. AGLC also removed any depreciation expenses for fully depreciated accounts. Tr. 2007. On the issue of account-based rates versus functional rates, witnesses Watson and Watts noted on rebuttal that it has been a long-standing practice of Atlanta Gas Light Company to use function-level depreciation rates for its actual depreciation expense calculation on its books and that the Commission has approved the Company's use of this practice in the past. Tr. 2266-67.

Mr. Dunkel used a different method for determining removal costs than those used by Mr. Watson and Ms. Watts. Mr. Dunkel testified that removal costs, i.e., negative salvage value should be accounted for separately from other aspects of depreciation rates based on financial accounting methodologies and a Federal Energy Regulatory Commission ("FERC") order regarding the treatment of certain removal costs for accounting purposes. Tr. 1313-14. On rebuttal, Mr. Watson and Ms. Watts testified that financial accounting rules and regulated utility accounting rules often differ and alleged that Mr. Dunkel's depreciation approach was not consistent with the regulatory accounting rules that AGLC must follow. Tr. 2249-51. Mr. Watson and Ms. Watts also noted on rebuttal that the depreciation method recommended by Mr. Dunkel for net salvage would fail to recover even the amount that the Company is now paying in removal costs, much less allow AGLC to accrue costs for future removal as required under FERC rules. Tr. 2235-36. During the AGLC's cross-examination of Mr. Dunkel and in the rebuttal testimony, it was noted that Mr. Dunkel's approach has been adopted by five states and the jurisdiction of the District of Columbia.

Whereas Mr. Watson's and Ms. Watts' traditional methodology allows the Company to both recover current removal costs and accrue for future costs of removal, Mr. Dunkel's approach places an inequitable burden on future generations to pay for the removal of pipes now in use by customers

on the system. This non-traditional approach by Mr. Dunkel may reduce depreciation rates but it is not consistent with regulatory ratemaking accounting rules. The Commission finds Mr. Watson's and Ms. Watts' traditional depreciation methodology to be reasonable and therefore we adopt Mr. Watson's and Ms. Watts' accounting methodology and depreciation rates with the exception of net salvage value for services, Account 380, to negative 30 percent.. The Company is directed to include a second adjustment in the next rate case to complete the financial portion of restoring the traditional methodology of calculating net salvage value. Based on the rate base we adopt herein, the depreciation expense shall be \$79,079,000 for Atlanta Gas Light plant and \$6,276,000 of depreciation expense allocated from AGL Service Company plant and included in O&M Expense.

6 Lead/Lag Adjustments

PIAS proposed a number of changes to the lead/lag study performed by AGLC witness DePriest. Specifically, PIAS recommended changes to the Company's recommended expense lead days for pension expenses, retirement savings plus plan expenses, franchise fees, and AGSC allocated expenses. Tr. 942-46. In addressing PIAS' recommendation to add 45 days to the expense lead days for AGSC allocated costs, AGLC witness Morley testified that PIAS' approach does not allow AGSC the opportunity to recover the true and accurate costs incurred in providing services to AGLC. Tr. 1977. AGLC witness DePriest addressed the PIAS' other recommended lead/lag recommendations, stating that the PIAS' recommendations are inconsistent with accepted ratemaking theory, indicate a misunderstanding of the facts surrounding certain expense leads, and do not take into consideration changes in AGLC's business practices. Tr. 2210-11. The Commission finds the lead/lag recommendations of Company witness DePriest to be reasonable. Consistent with the facts provided for AGSC plant in rate base, the operating costs of AGSC include short-term and long-term debt and common equity. Further, the expense lead proposed by PIAS does not recognize AGSC's actual expense lead and would not allow AGSC the recovery of its total costs incurred in providing utility service to AGLC customers. Therefore, the Commission agrees with AGLC witness Morley regarding the expense lead for AGSC allocated charges. The operating costs of AGSC include short-term and long-term debt and common equity.

7. Working Capital Requirements

Cash Working Capital varies with revenue requirements and should be adjusted to reflect changes in revenue requirements as determined by the Commission. AGLC proposed a reduction to rate base for its Working Capital Requirement in the amount of \$10,337,000. This amount includes \$10,321,000 initially proposed by the Company (AGLC Exhibit No. (MJM-4) Revised, Schedule 1 Revised) plus an additional \$16,000 included in AGLC's errata (AGLC Exhibit No. (MJM-4) Revised, Schedule 1a). This amount also includes \$33,980,000 based on the Lead/Lag study results (AGLC Exhibit. No. (MJM-4) Revised, Schedule 3, Page 1 Revised).

In AGLC's witness Morley's rebuttal testimony, the Working Capital Requirement was reduced by \$1,026,000 to incorporate a correction that reduced the lead/lag component by \$137,000 and adjustments that increased the lead/lag component by \$426,000. AGLC also included an increase in the net pension asset of \$737,000 (AGLC Exhibit. No. 118 (MJM-6) Schedule 2). The increase in the net pension asset is the result of additional pension contributions made during the test year. The resulting Working Capital Requirement proposed by the Company is \$9,310,000.

PIAS asserts that an allocable portion of AGSC's workers compensation and injuries and damages reserves should be included as a component of working capital as well. The Company contends that inclusion of these reserves would also require the inclusion of other rate base items, all of which combined together would have a minor impact to the Company's total rate base amount. Furthermore, the Company contends that expenses associated with these items are appropriately included in rate base through the lead/lag results. The Commission agrees with the Company on this issue and finds AGLC's adjusted Working Capital Requirement to be reasonable.

8. Rate Base Determination

Accordingly, the Commission finds that the rate base for Atlanta Gas Light Company for ratemaking purposes is \$1,312,822,870.

B. Cost of Capital

Determination of the weighted average cost of capital requires three steps: (1) adoption of an appropriate capital structure; (2) determination of the cost rates for debt and equity, the two components of the capital structure; and (3) application of these rates to the adopted capital structure to determine the weighted average cost of capital ("WACC"). In this case, there is disagreement between AGLC and the PIAS regarding the capital structure, the cost rate for debt, and the determination of the appropriate cost rate for common equity.

1. Capital Structure

Capital Structure refers to the relative portions of debt and equity that are reflected in the capital accounts of a company. The common equity ratio, which is expressed in percent and represents total common equity divided by total capitalization, is a summary measure of the capital structure. In this case, AGLC recommended that a capital structure of 4.37% Short-Term Debt, 44.63% Long-Term Debt, and 51% Common Equity. In addition, AGLC witness Hevert testified that AGLC's proposed equity ratio was reasonable and supported this capital structure in

AGLC Exhibit No. 51 (RBH-8) and AGLC Exhibit No. 109 (RBH-22). Tr. 1861.

PIAS witness Kollen testified that AGLC failed to address or justify its proposed increase in the common equity ratio to the recommended 51% presented by Atlanta Gas Light Company in this case. Tr. 958-59. PIAS witness Parcel also disagreed with AGLC's proposed capital structure, arguing that the AGLC's proposed capital structure is not consistent with past structures maintained by Atlanta Gas Light Company and that AGLC's proposed common equity ratio fell outside the range of the proxy group used by Mr. Parcel. Tr. 1265-66.

In his rebuttal testimony, AGLC's witness Hevert responded to the PIAS' arguments. Mr. Hevert stated that, in making his proxy calculation, Mr. Parcel ignored the typical financing cycle for natural gas utilities and selected a quarter for which much of the short term debt is used to finance current, rather than permanent assets. Tr. 1856. Mr. Hevert also stated that Mr. Parcel failed to review the capital structures of the individual utility operating companies and instead reviewed the consolidated capital structures for his proxy group. (*Id.*). The Commission agrees with AGLC on this issue and finds the analysis by Mr. Hevert to be reasonable.

The Commission finds that the evidence supports the capital structure recommended by AGLC and finds the methodologies used by the Company in determining its capital structure appropriate. The Commission finds that the appropriate capital structure upon which to authorize just and reasonable rates in this proceeding is as follows:

<u>Component</u>	<u>Ratio</u>
Short-Term Debt	4.37%
Long-Term Debt	44.63%
Common Equity	51.00%

2. Cost of Debt Capital

The cost of debt capital as testified to by AGLC witness Cave on rebuttal included cost rates of 2.17% for short-term debt, and 5.76% for long-term debt. (AGLC Exhibit. No. 123, (SC-7), Schedule 1).

PIAS witness Kollen disagreed with the initial cost rates for both long-term and short-term debt as originally filed by the Company. One of Mr. Kollen's primary arguments was that the 30-day forward curve for the London Inter-Bank Offering Rate ("LIBOR") on which AGLC had based its initial calculations had decreased since the Company's original filing. Tr. 962-63. AGLC witness Cave testified that it is appropriate to update LIBOR rates, whether they increase or decrease, and therefore AGLC reduced its initial long-term debt rate from 5.86% to 5.76% and its

short-term debt rate from 2.88% to 2.17%. (AGLC Exhibit. No. 123, (SC-7), Schedule 1).

Mr. Kollen also disagreed with a number of assumptions used by the Company to calculate its long-term debt rate. Tr. 960-64. Mr. Kollen disagreed with the Company's assumptions that AGL Resources would refinance its 7.125% \$300 million debt issuance in January 2011; that AGL Resources would not make an incremental debt issuance in the test year; and that certain letter of credit and remarketing fees associated with variable long-term debt instruments would increase. *Id.* Mr. Cave testified that AGLC would agree to update its costs to reflect PIAS' recommendation of an annualized methodology on this point. Tr. 2090. As to the incremental debt issuance, Mr. Cave testified that AGL Resources had no intention to make such an issuance within the test year and that AGLC's evidence in this case supports that conclusion. Tr. 2092-93. Mr. Cave also presented testimony supporting the Company's proposed fees and renewal of its letter of credit and remarketing fees associated with variable rate long-term debt instruments. Tr. 2101-05.

For short-term rates, Mr. Kollen disputed the Company's assumption that AGL Capital Corp. would renew its credit facility in September or October of 2010 as well as the related fees associated with that renewal. Tr. 965. Witness Cave testified that AGL Capital Corp. did in fact renew its credit facility on September 15, 2010 and that the fees associated with that renewal were consistent with those provided by the Company in its initial case. AGLC provided support for the renewal and the associated fees with its rebuttal testimony. Tr. 2109-12.

The Commission finds that Atlanta Gas Light Company provided adequate support for its test-year costs related to projected financing activities within that period. The Commission finds that it is appropriate to update debt costs at the time of rebuttal testimony preparation for more current information, whether rates have increased or decreased, and therefore finds that the short-term debt cost and long-term debt cost presented by witness Cave are reasonable.

3. Equity Capital

The Commission heard the expert testimony of two witnesses on the cost of common equity during the hearings in this matter. In its direct and rebuttal case, AGLC presented the testimony of Mr. Hevert. In responsive testimony, the PIAS presented the testimony of Mr. Parcel. Mr. Hevert initially recommended a return of 11.25%. Tr. 504. Mr. Hevert later revised his recommended return to 11.00%. Tr. 1764. Mr. Parcel recommended a return of 10.0% based on his recommended range of 9.5% to 10.5%. Tr. 1226.

The United States Supreme Court in *Federal Power Commission v. Hope Natural Gas Co.*, 320 U.S. 591, 64 S. Ct. 281 (1944) articulated the standards to be used in the determination of the cost of capital. The standards set forth in the *Hope* case are:

1. The allowed return on common equity should be the same as that earned on other investments of comparable risk;

2. Utilities have no constitutional right to profits realized by more speculative ventures;
3. The allowed return should be sufficient to maintain the utility's credit standing and enable it to raise necessary capital; and
4. A reasonable return may vary over time, reflecting changing economic conditions.

Although this Commission adheres to no particular theory or methodology for the determination of the cost of equity, it does test the various recommendations before it against these standards to determine the reasonableness of the approaches and recommendations of the parties. Thus, the Commission is able to fulfill its function of engaging in a careful analysis of the theories and methodologies presented to it for application in the regulatory environment.

Mr. Hevert testified that the determination of an appropriate return on equity ("ROE") requires the exercise of judgment, particularly when the assumptions underlying the financial models used to estimate the cost of equity do not fully conform to the behavior of capital markets. Tr. 504. Mr. Hevert employed three market-based methodologies designed to estimate the return required by investors on the common equity capital committed to Atlanta Gas Light Company. The three methodologies employed by Mr. Hevert were: (1) the Capital Asset Pricing Model ("CAPM"), (2) the Risk Premium approach, and (3) the Constant Growth and Multi-Stage forms of the Discounted Cash Flow ("DCF") model. Tr. 505. Mr. Hevert noted that it is extremely important to consider the results of several analytical approaches in determining the appropriate ROE. (*Id.*) He also noted that such consideration must be tempered with due caution as to the results generated by each individual approach. Tr. 533.

In his direct testimony, Mr. Hevert summarized his results for the Constant Growth and Multi-Stage forms of the DCF model as follows:

	Mean Low	Mean	Mean High
Constant Growth			
DCF			
30-Day Average	8.29%	10.01%	11.48%

90-Day Average	8.29%	10.02%	11.48%
180-Day Average	8.39%	10.12%	11.58%
Multi-Stage DCF			
30-Day Average	10.39%	10.51%	10.62%
90-Day Average	10.40%	10.53%	10.65%
180-Day Average	10.51%	10.69%	10.87%

While Mr. Hevert calculated results for the CAPM, he did not give any specific weight to those results. Tr. 559. Mr. Hevert's Risk Premium approach calculations produced an ROE range of approximately 10.64% to 11.01%. Tr. 561. Based on these studies, Mr. Hevert testified in his direct testimony that AGLC's cost of capital should be set at 11.25%.

In arriving at his recommendation, Mr. Parcel utilized the Discounted Cash Flow, CAPM, and Comparable Earnings methodologies. Tr. 1226. Witness Parcel's results were as follows:

Methodology	Range
Discounted Cash Flow	9.0-10.0% (9.5% mid-point)
Capital Asset Pricing Model	7.6%

Comparable Earnings	10.8-12.1%
Adjusted Comparable Earnings	10.0-10.5% (10.25% mid-point)

In his rebuttal testimony, Mr. Hevert noted that market instability and investor risk aversion remain at comparatively high levels. Tr. 1763. As a result, he stated that some models used in his direct testimony now produce higher estimates of the Company's cost of equity while others, including the Constant Growth DCF model, produce lower estimates. Tr. 1764. Although Mr. Hevert testified that he believed that his initial recommendation remained valid, he stated that he recognized that this Commission has placed certain weight on the DCF model in the past. As a result, Mr. Hevert revised his cost of equity recommendation to 11.00%. Mr. Hevert also stated that no adjustment to his result was necessary based on investment risk relative to the industry. Tr. 1815.

Mr. Hevert also testified that he confirmed the reasonableness of his recommendation by comparing the market conditions in 2005 when the Commission agreed to a 10.9 ROE for Atlanta Gas Light Company to the market conditions existing today. Tr. 1886-90. He presented several measures of market risk and volatility from 2005 compared to current conditions and found that investors are much more risk adverse today compared to 2005. Accordingly, based on the market risk, he stated that investors require a greater return today than 2005 and that the current market data supports an increase to the 10.9% ROE awarded in 2005.

The Commission finds that an ROE of 10.75% is just and reasonable, and is supported by the evidence in this case. The Commission finds this ROE to be sufficient to maintain the financial integrity of the Company and to attract capital.

4. Weighted Average Cost of Capital

Combining the determinations made in the foregoing paragraphs of this Order, the overall rate of return on rate base for AGLC may be derived in percentages as computed below:

	Ratio	Cost Rate	Weighted Average Cost	Grossed-Up Cost
Long-Term Debt	44.63	5.67	2.53	2.53
Short-Term Debt	<u>4.37</u>	<u>2.17</u>	<u>0.09</u>	<u>0.09</u>
Total Debt	49.00		2.62	2.62
Common Equity	<u>51.00</u>	10.75	<u>5.48</u>	<u>8.94</u>
Total Capitalization	100%		8.10%	11.56%

C. Proposed Adjustments to Operations & Maintenance Expenses and Taxes Other Than Income

1. Operations and Maintenance Expense Before Adjustments

AGLC's projected operations and maintenance (O&M) expense for the test period ending May 31, 2011 is approximately \$214,799,000, including allocations from AGSC, as set forth in AGLC Exhibit No. 36 (MJM-1) Revised, Schedule 2 Revised. The Company increased this amount by \$957,000 to incorporate an increase in pension and other post retirement benefits and to adopt some of PIAS' proposed adjustments. Therefore, the Company's total O&M expense for the test year is \$215,756,000. AGLC witness Mr. Morley testified that the projected test year baseline O&M expense of \$187,573,000 is approximately \$3 million less than AGLC's actual O&M expense of \$190,557,000, after ratemaking adjustments, for the twelve months ended December 31, 2009. PIAS recommends adjustments that would result in a reduction of the Company's O&M expense by almost \$9 million. Tr. 947.

Based on a thorough analysis of the record, the Commission finds that AGLC's projected O&M expense is reasonable. The Commission adopts AGLC's projected O&M expense for the test period ending May 31, 2011 as modified by PIAS' adjustments noted below.

2. Acquisition Synergy Savings

AGLC proposed a 50/50 sharing of acquisition synergies. AGLC witness Steve Cave defined acquisition synergies to mean the cost savings that result from the provision of services from a service company—in this case, AGL Services Company—to multiple utilities and across multiple jurisdictions. Tr. 369. According to Mr. Cave, these savings occur when the parent company acquires an additional utility franchise, allowing overall costs to be spread among a larger asset base, thus reducing the allocations to each individual utility. (*Id.*). On rebuttal, AGLC witness Segal further described and recommended AGLC's specific proposal to

implement an acquisition savings 50/50 sharing policy for future acquisitions and the Company's proposal to share in the test year savings created by the prior acquisitions by AGL Resources of Virginia Natural Gas ("VNG") and NUI. Tr. 1543.

For future acquisitions of non-jurisdictional distribution companies, Mr. Segal recommended that demonstrated acquisition savings should be shared on a 50/50 basis for ten years, and that AGLC should have the right at that time to petition for an additional five years of savings. Tr. 1553. Under Mr. Segal's proposal, the Company would be required to demonstrate any realized net savings within two-years after the closing of an acquisition. Demonstrated net savings would then be shared with ratepayers through an interim surcredit, if a sharing period of at least ten years is adopted, until incorporated into rates in the next rate case. Tr. 1550. Mr. Segal stated that the AGLC's proposal for the sharing of future synergy savings is in the public interest because it is equitable and will increase the chances that transactions will be executed by AGL Resources, and will provide AGL Resources and AGLC with the proper incentive to maximize the synergies available from any such transactions. Tr. 1555.

PIAS witness Kollen objected to the Company's proposal regarding the sharing of future acquisition synergies on a number of grounds. Tr. 972-73. Mr. Kollen stated that the any expenses were "phantom" and not real expenses to the Company. Tr. 971-72. Mr. Kollen also disagreed with any pre-approval of future savings. Tr. 972. Mr. Kollen testified that AGL Resources did not need an incentive to make acquisitions and did not need additional incentives to make the VNG and NUI acquisitions. Mr. Kollen also testified that AGL Resources did not require regulatory certainty to acquire VNG and NUI and that AGLC should put forward a specific proposal for sharing future savings. (*Id.*).

On rebuttal, AGLC witness Segal addressed Mr. Kollen's concerns. Tr. 1544-53. Mr. Segal agreed with Mr. Kollen that AGLC should specify a specific sharing mechanism and provided the recommendation discussed above. Mr. Segal testified that this policy does not create risk for ratepayers, but assures that AGL Resources receives an equitable share of the savings it generates and has an incentive for increasing savings resulting from future acquisitions. Tr. 1548-49. Mr. Segal testified that the 50/50 sharing of current and future savings from an acquisition, for a period of 10 or 15 years, results in the customers receiving 62 to 69% of the net present value of the lifetime savings that result from the acquisition. Tr. 1623.

Applying the same 50/50 sharing ratio, Mr. Segal also recommended that the Commission adopt AGLC's proposal to share in the acquisition synergy saving created for AGLC by AGL Resources' acquisition of VNG and NUI, stating that AGL Resources has already shared a substantial portion of these savings with the ratepayers and that AGL Resources' shareholders should be allowed 50% of current and future savings on a going forward basis. Tr. 1560. Mr. Segal recommended that AGLC receive \$5.6 million related to the VNG merger for the next 5 years and \$8.8 million related to NUI for the next 10 years, with the right to petition this Commission to continue the NUI savings for an additional 5 years. Tr. 1561.

PIAS witness Kollen raised objections to the Company's proposal regarding the sharing

of future VNG and NUI savings. Tr. 970-72. Mr. Kollen testified that it is AGL Resources, not Atlanta Gas Light Company, that makes acquisitions. Tr. 970. Mr. Kollen also testified that AGL Resources and the AGLC do not recognize a need to gain the approval of this Commission for the acquisition of utilities that do not operate within the State of Georgia. (*Id.*). Mr. Kollen testified that AGLC opposed a sharing of the NUI savings in the prior rate case and that AGLC has requested similar treatment in prior rate cases before this Commission without success. (*Id.*). Mr. Kollen testified that any sharing should not be indefinite and that the proposal is a subsidization of AGL Resources. Tr. 971. Mr. Kollen testified that the proposal will result in an actual realized ROE above that authorized by the Commission and that no other AGL Resources affiliate receives such treatment. (*Id.*). Finally, Mr. Kollen testified that the savings that would be shown as an expense are not a cost of service and are not just and reasonable. Tr. 971-72.

Company witness Segal also responded to Mr. Kollen's testimony regarding the sharing of the current and future VNG and NUI savings. Mr. Segal testified that he does not agree that this Commission should have a role in the approval of non-jurisdictional acquisitions. Tr. 1545. Mr. Segal stated that the relevant factor for the Commission is its ability to review and approve the net savings to be shared. Mr. Segal next testified that any acquisition that benefits AGL Resources will also benefit AGLC through a reduction in the allocated cost of shared services. Tr. 1557-58. Finally, Mr. Segal testified that AGLC had already shared 100% of the NUI savings with the Company's ratepayers and that that had allowed AGLC to be able to agree to a 5-year stay out and avoid requests for rate increases during that period. Tr. 1560-64.

The Commission finds that it is appropriate to adopt a policy to encourage prudent acquisitions by the Company. For future mergers and acquisitions of non-jurisdictional distribution companies, the sharing of any net savings resulting from each of these transactions will be on a 50/50 basis between AGL Resources shareholders and the firm customers of AGLC. No net losses will be borne by AGLC customers. Atlanta Gas Light Company should make a showing to the Commission of its determination of net savings no later than 24 months following the legal close of any transaction, and based on the Commission's confirmation of these net savings. Demonstrated net savings will then be shared with ratepayers through an interim surcredit until incorporated into rates in the next rate case. The Company will issue interim monthly credits to firm customers so that their savings are shared immediately with ratepayers outside of a rate case proceeding. Sharing of these savings should extend for ten years from the date on which the savings begin to be shared.

The Commission finds this policy of ten years of sharing should also be used to determine any additional sharing of the Virginia Natural Gas (VNG) and NUI mergers. Since the VNG acquisition closed in October of 2000 and the Company began to produce savings from that transaction in 2001, no further sharing with the Company of those savings are appropriate. The Company will no longer recognize the sharing through its Grey Book accounting treatment. With the NUI acquisition, which still has five years to go under the 10 year policy, the Commission finds it is appropriate that the Company will share the \$17.6 million on a 25/75 basis between the AGLC shareholders and the AGLC ratepayers through December 2015.

3 Outside Services and Allocated AGSC Gas Operations and WMS Expense

PIAS witnesses Kollen and Wackerly contested the Company's proposal to increase the O&M expense starting January 1, 2011 over and above the 2010 budget expense amounts to include outside services costs associated with grounds maintenance and collection of certain regulator capacity information and AGSC allocated costs for an additional analyst to oversee the a meter accuracy program, and vendor training for new software systems. Tr. 949. Mr. Kollen and Mr. Wackerly argued that these adjustments should not be allowed because the expenses were not included in the 2010 budget or should have been amortized over three years as nonrecurring costs. Tr. 949-50. Company witness Reese testified that, in making its adjustments for these costs, Mr. Kollen and Mr. Wackerly used annualized costs for the elimination of AGSC allocated expenses instead of the five-month period used by the AGLC in its initial case. Tr. 2131. Ms. Reese also testified that all of the expenses challenged by Mr. Kollen and Mr. Wackerly were reasonable and that AGLC developed a process to predict costs that are expected to occur in 2011. Tr. 2132-33. Ms. Reese testified that, if AGLC applied an inflation factor to the 2010 budget, as was recommended by PIAS during the September 13 hearing, AGLC would have included an additional \$922,000 in costs for the five months ended May 2011, as opposed to the \$229,000 it determined based on the specifically identified 2011 cost increases. Tr. 2133. On the issue of non-recurring expenses, Ms. Reese testified that the impact to the Company's cost of service of including five months of expense versus a three year amortization to the total amount would be offset by the costs of adding another layer of accounting to track and record monthly journal entries, balance sheet review and reconciliation, and review of regulatory assets for financial reporting. Tr. 2137-38.

Based on the evidence presented, the Commission finds AGLC's proposed increase in expenses for 2011 to be reasonable.

4. Composite Ratio

PIAS asserts that 100% of Southstar/GNG's composite ratio formula should be included in the Composite Ratio instead of AGL Resources' ownership percentage in Southstar. Tr. 1106. AGLC witness Morley testified that, although AGL Resources is required under generally accepted accounting principles to include 100% of Southstar's assets, operating margin and operating expenses on its books and records, these amounts are offset elsewhere to properly report AGL Resources' 85% ownership interest in Southstar. Tr. 1997. Mr. Morley also stated that Southstar is much more decentralized than other AGL Resources affiliates and does not utilize AGSC services to the same extent as other AGSC affiliates. Tr. 2052-53. In addition, Mr. Morley also testified that, although the Company used a 75% ratio in its calculations (AGL Resources ownership interest in Southstar increased from 75% to 85% in January 2010), this difference is offset by the fact that the Company included AGL Networks ("AGLN") in the composite ratio, even though AGL Resources sold AGLN to a third party in June of 2010. Tr.

1999-2000. In contrast, PIAS included AGLN in its composite ratio when determining its proposed reduction to AGLC's allocated costs. Applying a consistent approach would have yielded a much lower adjustment than that proposed by PIAS. According to Mr. Morley, PIAS' adjustment would have been only \$34,000 had PIAS excluded AGLN from the composite ratio. Tr. 2001-01. The Commission finds the method used by the Company to calculate the Composite Ratio to be reasonable.

5. Federal and State Income Tax Expense

PIAS testified that AGLC incorrectly added AFUDC-equity to taxable income. Tr. 953. PIAS witness Kollen testified that AFUDC-equity is net of tax, unlike the AFUDC-debt component, which is before tax, and that, therefore, the Company's methodology includes the income tax expense on AFUDC-equity twice. (*Id.*). Company witness Morley testified that Mr. Kollen's recommendation is based on the assumption that AGLC uses a grossed-up, or debt and equity, pre-tax rate of return when calculating AFUDC for capitalization in its plant accounts. Mr. Morley testified that, to his knowledge, AGLC has never accrued AFUDC in the manner used in the PIAS' calculations. Tr. 1991-95. Further, Mr. Morley testified that Atlanta Gas Light Company uses the AGLC's authorized rate of return when accruing AFUDC to its plant accounts. Tr. 1957. The authorized rate of return consists of the debt pre-tax rate of return plus the equity after tax rate of return. This rate was provided in minimum filing requirement A-6. Mr. Morley also testified that the Company does not use the before tax equity rate of return when accruing AFUDC to its plant accounts. Tr. 2029-30; 2070-71. The Commission finds the evidence submitted by the Company on this issue to be reasonable.

6. Property Tax Expense

PIAS asserts that the test year property tax expense should be based on the plant balances as of December 31, 2010 as the Company's approach includes costs beyond the test year while failing to reflect a reduction in these costs after the end of the test year. Tr. 952-53. AGLC witness Morley testified that PIAS' approach was not consistent with PIAS' other related calculations, used inaccurate data, and continued to use an unsupported claim that the Company's rate base associated with base rates will decline over the next three years. Tr. 1987. Mr. Morley also testified that if PIAS used accurate information and consistent methodologies, PIAS' proposed adjustment would have been \$135,000 lower. Tr. 1990-91.

The Commission finds that the evidence in this case supports the methodology used by Atlanta Gas Light Company to be reasonable to calculate property tax expenses.

7. Modifications to Customer Care Center Allocations

PIAS witnesses Kollen and Wackerly disagreed with the Company's selection of allocation factors for costs associated with three specific departments within AGL Services Company's Customer Care Center. Tr. 1113-14.

First, PIAS did not believe that any costs should be allocated to Atlanta Gas Light for Department 6040 Credits and Collections MGT because PIAS believes the Company does not have any end-use customers. Tr. 1113. Company witness McIntyre testified that this department does perform certain functions for Atlanta Gas Light regarding the tracking of SONP data. Tr. 2169-70. Ms. McIntyre did recommend an adjustment in this department because the department direct charges 12% of its labor costs to Atlanta Gas Light. This adjustment resulted in a reduction to the Company's Customer Service expense of \$101,062.

PIAS also objected to the allocation of departments 6036 Customer Relations, 6019 Call Center Overhead, and 6045 Customer Services Technology using the factor of end-use customers instead of by call-volume. Tr. 1113. Company witness McIntyre testified that the PIAS had oversimplified the nature of the Customer Care Center by assuming that all of the services provided at the Center are directly related to call volume. Ms. McIntyre explained that the workload for the three departments in question are totally unrelated to the number of calls received at the Center. For example, the complaints handled by Department 6036 Customer Relations comes directly from the appropriate regulatory body, such as this Commission, or from utility executives, and is more closely related to the total number of end-users on a system and not call volume. Tr. 2166-67. Ms. McIntyre testified that the actual percentage of work for Department 6036 associated with Atlanta Gas Light is 63%, which is significantly higher than the call volume allocation of 18% recommended by PIAS. Tr. 2166.

The Commission finds that the Company has presented evidence sufficient to support its proposed allocation of the costs for the Customer Care Center, as modified in the testimony of Company witness McIntyre.

8. Non-Jurisdictional Expenses (Other than Marketing Service Provider Expenses)

PIAS recommended a \$210,000 adjustment to exclude certain expenses judged by the PIAS to be non-jurisdictional. Atlanta Gas Light Company witness Morley testified that AGLC inadvertently included certain non-jurisdictional costs in its costs of service. Tr. 2002-03. In total, the Company agreed that \$118,000 of the PIAS' \$210,000 adjustments could be viewed as non-jurisdictional and should be removed from the cost of service. Tr. 2003. Mr. Morley testified that the remaining \$92,000 represents jurisdictional expenses that should remain in the cost of service. (*Id.*). Based on the evidence presented, the Commission accepts the PIAS' recommendation as to the \$118,000 but agrees with AGLC to support the jurisdictional nature of the remaining \$92,000 in expenses.

9. Allocated Bad Debt and Credit Reporting

The PIAS recommended rejection of AGLC's proposal to increase the allocated AGSC customer accounting expense through the inclusion of bad debt and credit reporting expenses. Tr. 1111. The Company agrees with PIAS that this adjustment is appropriate. Tr. 2003-04. The Commission accepts the PIAS' and AGLC's recommendation to remove bad debt and credit reporting expense in the amount of \$49,000.

10. Allocated Expenses for Marketing Service Provider

PIAS proposed to exclude expenses associated with AGSC's marketing service provider in the amount of \$472,000 on the grounds that this Commission has traditionally excluded marketing and economic development expenses from the revenue requirement. Tr. 1111-12. PIAS also testified that AGLC's proposed allocation would result in the subsidization of marketers in the Atlanta Gas Light Company service territory and that AGSC marketing expenses should not be included for ratemaking purposes. Tr. 1112. AGLC proposes 50% inclusion of the costs associated with the Council for Responsible Energy ("CRE") and also agrees with the exclusion of \$21,000 associated with sponsorships but does not agree with the exclusion of the remainder of the costs. Tr. 1984. AGLC proposes a 50% inclusion of CRE costs because the CRE provides information to the public on how to be a more efficient user of energy by encouraging recycling, use of mass transportation, use of energy efficient appliances and the use of energy efficient devices. Tr. 2005. According to AGLC witness Morley, the remainder of the costs recommended for exclusion by PIAS is for research and analysis and seminars and conference fees which AGLC considers jurisdictional in nature. (*Id.*) In total, AGLC proposes a reduction in costs allocated to the marketing service provider of \$129,000.

The Commission agrees with the PIAS that certain costs allocated to the AGSC marketing service provider should be excluded. The Commission also finds, however, that it is

appropriate to include 50% of the costs associated with the CRE and to include costs associated with research and analysis and conference fees. The Commission therefore adopts the Company's proposal to reduce the costs allocated to the marketing service provider by \$129,000.

11. Variable Compensation

PIAS proposes to exclude \$3.19 million in long-term incentive ("LTI") plan compensation expenses on the grounds that the expenses are non-jurisdictional and should be allocated to shareholders. Tr. 947-48. This proposal would eliminate 100% of the LTI program from recovery through rates. AGLC witness Morley testified that the Company is only proposing a \$182,000 increase over the historic year, reflecting the fact that new personnel became eligible for AGLC's LTI plan. Tr. 1984. Mr. Morley further testified that the LTI expense is one component of Atlanta Gas Light Company's total compensation program and that a change in one of the components of the total compensation program would require a change to one or more of the other components to achieve a compensation structure that continues to compensate Atlanta Gas Light Company's employees at the 50th percentile level of the market compensation for such services. Tr. 1983-84. Mr. Morley also testified that a reduction in one component would result in an increase to another component, which, combined would have no impact to AGLC's compensation expense in the test year. Tr. 2068. Based on the foregoing, this Commission finds that the Company's use of the LTI plan as part of its overall compensation plan is appropriate.

12. Amortization of Rate Case Expenses

PIAS Witness Kollen recommended that the costs for this rate case be amortized over a five year period instead of the three-year period recommended by AGLC. Tr. 950-51. Company witness Morley testified that the AGLC's suggested three-year period is a conservative estimate of the time between rate cases and that the recent five-year stay-out is the only example over nearly 30 years in which five years passed between rate cases. Further, the current economic and financial environment in which Atlanta Gas Light Company operates indicates that it is more likely AGLC will file another rate case in three years or less as opposed to five years as supported by PIAS. Tr. 1985. The Commission agrees with AGLC that a three year amortization period for rate case expenses is a more realistic time period based on historic information and current economic conditions.

13. Pensions and Other Post Retirement Benefits ("OPEB" Expense)

In his rebuttal testimony, AGLC witness Morley proposed an increase in pension and OPEB expense of \$1,354,000. AGLC Exhibit No. 118 (MJM-6) Sch. 1. According to Mr. Morley, the basis for this increase was a decline in interest rates since AGLC's initial filing. Tr.

2013. Mr. Morley testified that an adjustment to reflect the impact of declining interest rates on pension and OPEB expense is consistent with the Company's update to its debt and equity costs, which also reflect the impact of lower interest rates resulting in lower debt and equity costs than when the Company initially filed its case. Tr. 2012-13.

Mr. Morley testified that as interest rates decrease, the amount of future obligations due by the pension and OPEB plans to retirees decreases. Tr. 2075-76. The interest component of the pension and OPEB expense then increases due to the substantially larger obligation. Mr. Morley compared this obligation to an increase in long-term debt, and when the principle amount due increases, the resulting expense increases as well. (Id.). Lastly, Mr. Morley testified that the increase in pension and OPEB expenses and test year contribution requirements are supported by the actuarial study performed by the Company's actuary, Mercer. Tr. 2079-80. The Commission accepts the adjustment proposed by witness Morley.

14. Bonus Depreciation Extension on Deferred Income Taxes

In his rebuttal testimony, Company witness Morley proposed an adjustment to include the impact of the bonus depreciation extension on deferred income taxes. Bonus depreciation is an additional amount of depreciation allowed above and beyond what would normally be allowed under enacted tax depreciation rates. The federal Economic Stimulus Act of 2008 provided for a 50% bonus depreciation deduction for eligible assets placed in service in 2008. This 50% deduction was extended into 2009 and then again recently into 2010. Capital projects eligible for bonus depreciation are allowed a deduction for 50% of the cost of the asset plus the normal tax depreciation rate allowed for that asset class. The normal tax depreciation rate is then applied to the asset after the application of the 50% bonus depreciation. Bonus depreciation accelerates depreciation expense for income tax purposes, which in turn increases the Company's rate base component for accumulated deferred income taxes. The increase in accumulated deferred income taxes reduces rate base, thereby reducing the Company's revenue requirement. The extension of bonus depreciation into 2010 resulted in a revenue requirement decrease of \$1.356 million from the Company's original estimated revenue deficiency of \$54.2 million.

D. Customer First Programs

AGLC included a total of 15 separate programs that are part of its 2010 Customer First business plan that will incur expenses during the test year. Atlanta Gas Light Company also noted that, although it is not seeking costs beyond the test year for the programs in this case, AGLC does seek an order from the Commission allowing Atlanta Gas Light Company to capitalize, as part of the new systems, the costs that would otherwise be expensed as incurred under generally accepted accounting principles Tr. 175. The Commission finds that Atlanta Gas Light Company is authorized to capitalize all costs incurred for information technology projects associated with the Customer First program. Costs that are to be capitalized include those costs associated with project activities that would normally be expensed as incurred, including but not

limited to feasibility studies and system requirement analyses and data conversion.

AGLC's case includes three programs that have been implemented or are in the process of implementation: (1) the in-sourcing of certain Customer Care Center functions from India to Riverdale; (2) the investment in automated meter reading ("AMR") meter technology and resulting elimination of outside service expenses; and (3) the Service Availability program. Tr. 93. The PIAS did not oppose the recovery of the costs of these programs that are included in the baseline revenue requirement with the exception of certain reductions in the AGSC Customer Care Call Center costs allocated to Atlanta Gas Light Company as discussed in Section I.C.7. Tr. 1115. The Commission finds the AGLC's proposed costs for these programs to be reasonable.

Three programs—Asset Compliance and Testing ("ACT"), Leak Survey, and Locates—are proposed to begin after the test year and have no revenue requirements in this proceeding.

The remaining programs are discussed below.

1 Customer Management Application ("CMA")

CMA is an information technology system which Atlanta Gas Light Company began to develop in 2006 as a first step to modernizing the legacy CIS information technology environment. The Commission finds that the Company's financial requirements for this program are appropriate to recover costs within the test year.

2. Distribution Integrity Management Program ("DIMP")

DIMP are the federal requirements that are the result of a federal rulemaking by the Pipeline and Hazardous Materials Safety Administration to amend the Federal Pipeline Safety regulations. Tr. 108. The PIAS agreed with the Company's costs for this program in the PIAS' recommendation for the recovery of costs in the incremental Customer First component of the revenue requirement. Tr. 1119. The Commission finds that the Company's financial requirements and underlying assumptions for this program are appropriate. The Company also identified WMS as necessary for compliance with DIMP. WMS is addressed in Section I.D.6.

3. Generation II Gatekeeper

The Generation II Gatekeeper program allocates a limited number of shut-off for nonpayment ("SONP") orders that Atlanta Gas Light Company will accept on any given day among all marketers based on each marketer's market share. Tr. 123. AGLC proposes to enhance this program to increase the Gatekeeper capacity to allow up to 13,000 additional annual SONP orders to be accepted into the Gatekeeper system and to complete up to 12,000 increased reconnects/turn-on orders associated with the increased SONP orders beginning the

first quarter of 2011. Tr. 124. AGLC would also create a SONP “SpeedPass” program, expected to begin in 2012, that will ensure next business day service for up to 30% of SONP requests submitted. Tr. 125.

The PIAS testified that the annualized revenues from the reconnect fees that will be generated from working more SONPs should be included as an offset to the annualized costs. Tr. 1119. The Company agreed that it should update its revenue forecasts to account for the additional reconnections but disagreed with the PIAS’ proposed adjustment. Tr. 2307. While the PIAS recommended making an adjustment to account for an additional 12,000 reconnects (\$300,000), Company witness Buchanan testified that this annualized number is not appropriate because Atlanta Gas Light Company will only receive the additional reconnection revenue for the last five months of the test year. Tr. 2307-08. AGLC therefore increased its test year forecast by 5,000 reconnects and \$125,000 to account for the increased number of reconnects and associated revenues for the 5 months from January 2011 through May 2011. Tr. 2308.

During the hearings, a number of intervening marketers raised concerns regarding the number of days	Qualified Business Days	Daily SONPs	Add. Annual SONPs	New Employees	Cost (millions)
As filed	5	1,800	13,000	9	\$.920
Double G2G	5	1,800	26,000	18	\$1.840
Reduce Target Days by 1 Business Day	4	1,800	0	29	\$2.6

Reduce Target Days by 2 Business Days	3	1,800	0	58	\$5.2

The Commission finds that it is appropriate to approve AGLC's Generation II Gatekeeper program and to require AGLC to further expand the scope of the Generation II Gatekeeper Program. AGLC is directed to make the investments necessary to increase the proposed Generatopm II Gatekeeper service level from the proposed up to 25 percent increase in services to up to 50 percent annual increase requested by marketers in this proceeding. The Company is further directed to make the investments to fund the order fulfillment improvements requested by marketers allowing the Company to move toward providing key marketer services within a three qualified business day performance period and make a corresponding number of SONP reconnections as requested within a corresponding three qualified business day period based on the information provided by the company.

This docket did not include a rulemaking to alter the Company's performance standards, and the Commission must go through the proper steps to make any changes to those current standards. The Company does need time to make the investment in both the people and the resources requested and obtain actual field data to determine how it can most efficiently provide it.

The Commission shall issue a Notice of Proposed Rulemaking (NOPR) on or after July of 2012 to alter the Company's performance standards. AGLC's officers have stated clearly that they will make a best efforts commitment toward achieving these improved three qualified business day order fulfillments for customer SONPs and three qualified business day order fulfillment for customer turn-ons and turn-offs, reconnections upon the conclusion of the hiring and training of these employees that will be needed to make this process work.

Until the NOPR is issued, the Company will report its progress to the Commission for attaining a three qualified business day order fulfillment beginning on September 2011 for the period ending June 30, 2011, and make subsequent reports no later than 60 days following the close of each calendar quarter thereafter.

4. Marketer Interface Application ("MIA")

AGLC has proposed to continue to provide further enhancements to its MIA system,

which is the customer service functionality within the EnerAct system currently used by marketers. Tr. 128-29. The PIAS did not recommend any adjustments to the AGLC's proposed costs for this program. Tr. 1121. The Commission finds that the Company's financial requirements and underlying assumptions for this program are appropriate to recover projected costs within the test year.

5. Support Welding and Tapping ("SWAT")

The SWAT program is AGLC's emergency response group related to large diameter and high pressure pipe. AGLC proposed to increase the number of SWAT personnel after the end of the test year but also requests \$0.084 million for depreciation expenses and \$0.407 in the rate base in the test year. Tr. 1121. PIAS did not recommend any adjustments to AGLC's proposed costs for this program. (Id.). The Commission finds that AGLC's financial requirements and underlying assumptions for this program are appropriate to recover projected costs within the test year. **Work Management System ("WMS")**

AGLC's Work Management System is an information technology application that provides logistics, safety compliance, construction and invoicing of all below ground distribution work. Tr. 106; AGLC Exhibit No. 10 (WMS-1 Revised). The Company proposes to implement upgrades to the WMS to provide application updates that extend vendor support, add new functionality such as real-time mobile updates, and provide a future application platform for all field service. Tr. 107. The PIAS supports this program but testified that discretionary costs incurred to enhance an application to achieve efficiency and productivity gains should be offset by savings of at least an equivalent amount. Tr. 1121. On rebuttal, AGLC witnesses Lindsey and Cogburn noted that WMS is not discretionary but is instead necessary to be in compliance with federal safety regulations. Tr. 1637. With regard to PIAS' testimony that WMS will increase productivity and efficiency, Mr. Lindsey and Mr. Cogburn testified that WMS increases work requirements and complexity to the current process.

PIAS also testified to not allow CWIP associated with WMS as a component of rate base. AGLC witness Morley testified that AGLC does not accrue AFUDC on information technology projects. Tr. 2008-09; 2070-71.

Based on the evidence before it, the Commission finds that the Company's financial requirements, including rate base treatment for the WMS CWIP, and underlying assumptions for this program are appropriate to recover projected costs within the test year.

6. Pressure Control

AGLC intends to increase the number of employees performing Pressure Control responsibilities by 6 in the test year and by 22 over the next three years. Tr. 114-21. Pressure control personnel are the Company's subject matter experts who are responsible for inspecting,

troubleshooting, and maintaining the Company's 4,425 district and city gate stations and emergency valves. Tr. 116. This work has been increased through agreements entered into between the Company and this Commission's pipeline safety staff. Tr. 117. The Company states that its primary concern is building its existing pressure control workforce because 22% of AGLC's existing pressure control employees are currently eligible for retirement with 13% more employees becoming eligible in less than 4 years. Tr. 119-20.

PIAS witnesses Kollen and Wackerly testified that AGLC had not justified the need for an increase in pressure control personnel. Tr. 1123. The PIAS witnesses testified that the Company's concerns regarding an aging workforce were exaggerated and that Atlanta Gas Light Company's current staffing structure is sufficient. Tr. 1122-23. In rebuttal, AGLC's witnesses Lindsey and Cogburn submitted additional evidence demonstrating the increased workload for the pressure control personnel over the past five years and in support of AGLC's claim that additional personnel are necessary to meet safety requirements. Tr. 1639-40. Mr. Lindsey and Mr. Cogburn also presented evidence in support of the Company's concerns with an aging workforce including Industry publications and a NARUC resolution discussing the need to address the "Greying of the workforce." Tr. 1641-45.

The Commission finds that the Company's request is reasonable regarding the need to increase staffing for its pressure control functions and that the Company's financial requirements and underlying assumptions for this program are appropriate to recover projected costs within the test year.

8. Customer Compliance First Program ("CCF")

The Company's CCF program is designed to provide enhanced safety and address attrition on AGLC's system. The program allows the Company to provide more repair service capabilities so that its service personnel can assist customers that would otherwise have to be left without gas service due to appliance or equipment repair issues. Tr. 134. In addition, where the necessary repair cannot be made by the Company's service personnel, the CCF program would provide service vouchers or appliance replacement vouchers to the customer to assist in having the safety issue remedied and remain on Atlanta Gas Light Company's system. (Id.). As to safety, AGLC noted that, when its service technicians are forced to leave a danger card on an appliance that is not up to code, there is a substantial risk that the customer or another unqualified person will attempt to relight the appliance in an un-safe manner.

PIAS witnesses Kollen and Wackerly testified that the program cannot realistically be considered a safety program unless this Commission determines that customers will not repair their appliances themselves without subsidies from all other Atlanta Gas Light Company customers. Tr. 1125. Mr. Kollen and Mr. Wackerly also opposed the program on the grounds that it does not provide an adequate return on investment and that the program will result in the subsidization of the Company's unregulated affiliate, UtiliPRO. Tr. 1126.

In response to PIAS' position regarding safety, Company witnesses Lindsey and Cogburn noted the dramatic increase in danger cards left by the Company from 2008 to 2009. Tr. 1647. Mr. Lindsey and Mr. Cogburn testified that leaving a customer's gas turned off creates a potentially critical situation where the customer may seek unqualified personnel to activate gas service or repair their appliances. (Id.). Mr. Lindsey also provided recent examples of customers' issues caused by customers relighting appliances after danger cards have been left. Tr. 1674-75. Mr. Lindsey and Mr. Cogburn also testified that this program was not designed in coordination with UtiliPRO. Tr. 190. Finally, on the issue of economic return, Company Witness Buchanan noted that the customer retention benefits of this program, along with the energySMART program discussed below, are forecasted to result in approximately \$1 million in additional revenue that will continue each year for as long as the customers remains on the Atlanta Gas Light Company's system. Tr. 2312. This would result in an estimated payback of the costs for both programs of 12 years. (Id.).

The Commission finds that it is appropriate to the In-Home Repair program as proposed by AGLC, but declines to approve the Customer Compliance First Repair or Replacement Voucher program. The Commission has reduced the funding requested by AGLC for these voucher programs from the additional revenue requirement approved in this proceeding.

9. energySMART®

The Company's proposed energySMART® program is designed to address part of the attrition issue the Company is experiencing by providing incentives to gas customers and potential infill customers located on the Company's existing mains for the purchase of efficient natural gas appliances so that those customers will be less likely to switch to another fuel source. Tr. 143-44. PIAS witnesses Kollen and Wackerly objected to the inclusion of the costs of this program for a number of reasons, including that it is a discretionary, non-cost-effective, program that it could result in the further erosion of gas sales due to the use of more efficient appliances, and that the program results in a wealth transfer. Tr. 1128. As discussed above, Company witness Buchanan noted that this program would slow customer attrition and result in an acceptable return on investment. Tr. 2312.

The Commission determines that it will not approve the additional funding requested for the energySMART® rebate program. The Commission has reduced the funding requested by AGLC for the energySMART® program from the additional revenue approved in this proceeding.

E Net Operating Income for Ratemaking

Company witness Buchanan presented the Company's revenue forecast for transportation revenue and service fees and other revenues.

Projected transportation revenue was derived from Atlanta Gas Light's billing unit forecast for the various customer classes. AGLC forecasts a net loss in residential customers of 1.47% over the 17 month period from the 2009 historic period through the test year ending May 2011. Tr. 287. Company witness Buchanan testified that the average number of residential customers on AGLC's system has declined for the last two years and that economic forecasts and housing start estimates indicate that these underlying conditions will remain relatively consistent with current status through the test year, with some recovery beginning late 2011. (Id.). Mr. Buchanan testified that Commercial customers for the test year are projected to grow by 438 customers (or 0.47%) to 94,519 in calendar year 2010 and decline by 994 customers (or 1.05%) to 93,525 in calendar year 2011. Tr. 288. These changes result in 0.0% growth over the 17 month period from the 2009 historic period through the test year ending May 2011. (Id.). PIAS witnesses Thebert and Solganick testified that, while the PIAS had some concerns regarding the level of documentation provided by the Company, the PIAS is satisfied that the Company's growth adjustments and usage appear reasonable and recommended acceptance as modified to remove the billing units and revenue associated with Customer Compliance First and energySMART programs. Tr. 1378-79.

The Commission finds that the Company has provided sufficient detail to support its forecast in this proceeding and that the Company's evidence is convincing. Therefore, the Commission adopts AGLC's forecast of \$423,722,000 in jurisdictional revenue based on its current rates. AGLC Exhibit No. 132 (PGB 11).

F Revenue Deficiency/Excess

The Commission finds a revenue deficiency of \$26,557,218 based on the determinations herein, calculated as follows:

Rate Base	\$1,312,822,870
Weighted Average Cost of Capital	8.10%
Operating Income Required	\$106,338,652
Operating Income Available	\$90,055,235
Operating Income Deficiency	\$16,283,417
Income Expansion Factor	61.32%
Additional Revenue Required	\$26,557,218

II. COST ALLOCATION AND RATE DESIGN

A. Cost of Service Study

AGLC presented a cost of service study ("COSS") performed by David Heintz for the test year period, AGLC Exhibit No. 60 (DAH-1 Revised), that shows the Company's total jurisdictional cost to be used for ratemaking purposes divided among seven rate classes, peaking service, meter reading and reconnections/turn-ons/meter sets.

This cost of service study demonstrates that the rate of return for the residential class is approximately 4.3% for the test year, significantly lower than the overall rate of return to the Company as a whole of 6.0%, with all other classes of service providing a rate of return significantly above the overall rate of return. Tr. 763.

The Commission concurs with Mr. Heintz that the COSS should measure the cost caused by various customer classes and services and that non-cost factors should be considered in the rate design phase. The Commission concludes that the cost of service study presented by witness Heintz is a reasonable indication of the costs caused by various customer classes and services.

B Rate Design Issues

The Company is proposing two changes to its general rate design. The PIAS also recommends the consideration of a Certificated Marketer Support class.

1. Changes to AG-1 Rates

Atlanta Gas Light Company is proposing to reduce rates for the Agricultural customer class ("AG-1") by 20% in order to move toward a more neutral level of revenue recovery between AG-1 rates and those of the Commercial G-11 rates for qualifying customers. Tr. 295-96. The PIAS recommends that the Commission accept the Company's proposed structure for the AG-1 class. The Commission finds the proposed change to the AG-1 Rate Schedule to be reasonable.

2. Changes to Commercial Rates

For the Commercial class, the Company is proposing to change the number of levels of customer chargers to distinguish Commercial customers by level of DDDC. Tr. 296. Currently, the only such distinction is between customers whose DDDC is less than 2.5 DDDC and those customers with a DDDC of greater than or equal to 2.5. (*Id.*). Company witness Buchanan, however, testified that 90% of AGLC's customers in the Commercial Class have a DDDC factor

below 20. The Company proposes to further differentiate the Customer Charge at the following DDDC levels:

Range	Customers	Current	Proposed
		Charge	Charge
0 to 2.5	53,753	\$20.39	\$20
2.5 to 7	23,505	\$40.78	\$40
7 to 20	10,289	\$40.78	\$45
20 to 200	6,360	\$40.78	\$75
> 200	177	\$40.78	\$175

The proposed Commercial rate design provides a move toward equalizing the value of AGLC's gas delivery service to Commercial customers based on size of customer. Tr. 298. The PIAS recommends that this Commission accept the Company's proposed changes to the Commercial Customer Charge. The Commission finds the proposed changes to the Commercial Customer Charge to be reasonable.

3 Proposed Certified Marketer Support Class

The PIAS recommends that the Company be required to add an additional class to its COSS for Certificated Marketer Support. Tr. 1383. According to PIAS witnesses Thebert and Solganick, Atlanta Gas Light Company should be required to add this additional class because the Company is proposing a number of initiatives to provide services that are focused on the Certificated Marketers and therefore the costs for providing these services should be analyzed within a COSS to determine if that class is appropriately supporting its costs of service. (*Id.*).

The Company recommends that the Commission reject PIAS' proposal to require the

addition of a Certificated Marketer Support class. Tr. 2315. Company witness Buchanan based the Company's rejection of this proposal on two principles. First, Atlanta Gas Light Company provides delivery service to end-use consumers, and all of the activities described in the Company's case are for the provision of this service. (*Id.*). Although costs are recovered from marketers, those costs are billed as pass-through charges directly to end-use customers. Therefore, there are no services provided directly to marketers and no base revenues provided directly by marketers without a corresponding pass through charge to the end-use customer. (*Id.*). Second, PIAS' recommendation to recover certain program costs through an increase in turn-on and reconnect charges results in an increased financial barrier to customers who wish to obtain gas service to their homes or businesses or to restore their service after it has been cut-off. Tr. 2316.

The Commission finds that because Certificated Marketer Support does not supply revenues that are not pass through charges collected from end-use customers, it is not appropriate to allocate costs to a Certificated Marketer Support class. The Commission therefore rejects PIAS' recommendation to require that AGLC add a Certificated Marketer Support class. The Commission also finds that the current turn-on and reconnect charge rates of \$25 continue to be appropriate at this time.

C Allocation of Rate Increase to Customer Classes

As mentioned above, the Company has proposed to allocate the Company's revenue requirement in a way that would produce a modest move toward rate parity among the customer classes. According to Mr. Buchanan, Commercial customers make up 6% of all customers, but contribute 24% of the Company's total base customer charge and DDDC revenues. Tr. 297. Mr. Buchanan testified that the Company's proposed changes in the rate design will provide a gradual move toward rate parity between the Commercial and Residential customer classes. PIAS recommended a reduction in base rates and that, with the exception the proposed changes for the Agricultural class, the decrease be allocated "across the board" on a revenue basis. Tr. 1385. The Commission adopts the Company's recommendation of a modest move toward parity.

III. TARIFF ISSUES

A. Low Income Senior Citizen Discount

In his direct testimony, Company witness Buchanan proposed a modification to the Social Responsibility Cost ("SRC") Rider to allow the Company to recover the full discount given to qualifying low income senior citizens through the SRC rider. Tr. 302-03. Currently AGLC provides a discount to qualifying low income senior citizens in an amount up to \$14 per

month but is only authorized to recover \$10.50 of the discount for customers whose income level is below \$12,000 per year. Tr. 303.

PIAS witnesses Thebert and Solganick did not oppose AGLC receiving full recovery for the Senior Discount but were concerned that, as originally proposed in the tariff, the Company will recover \$14 for each qualifying customer, regardless of those customer's actual base charges. Tr. 1390. The Company agreed with PIAS recommendation to modify the tariff language to allow for the recovery of the actual amount of the Senior Discount, without over-or under-recovery. Tr. 2317.

Witnesses Thebert and Solganick also recommended that the Company establish an audit process to validate the eligibility of customers currently receiving the Senior Discount. Tr. 1392-93. In addition, Ms. Thebert and Mr. Solganick discussed the possibility of funding the Senior Discount through a supplement from the Universal Service Fund ("USF"). Tr. 1394.

It is the Company's position that an audit of this particular group of customers is unnecessary and will require additional cost to perform. Tr. 2320. Company witness Buchanan noted that while AGLC estimates that approximately 66,000 customers in the Company's territory are eligible for the discount, only about 38,000 customers actually receive the discount. (*Id.*). The Commission finds that the evidence presented in this case does support the need for an audit of this particular group of customers at this time and approves the Company's generic tariff language that allows for recovery of audit costs through the SRC Rider.

Company Witness Buchanan testified that AGLC supports offsetting the recovery of the Senior Discount through the use of the USF. Tr. 2319. The Company also proposed tariff language in the SRC Rider to include a provision for the SRC rate to be adjusted to incorporate supplemental funds to offset the rider rate. (*Id.*). The Commission finds that it is appropriate to utilize the USF to supplement the Senior Discount and to approve the tariff language as recommended by the Company.

AGLC currently serves approximately 38,000 senior citizens who received the \$14.00 per month Social Responsibility Cost ("SRC") senior citizen discount. At the current level of service, AGLC estimates that \$532,000 per month would be required from the Universal Service Fund ("USF") to fully compensate the Company for providing the discount, or an estimate of approximately \$7,448,000 for the period November 2010 through December 2011. Under the provisions of this order, the Commission shall pre-authorize a monthly disbursement of \$532,000 from the USF to the Company to be applied toward the actual cost of the program from November 2010 through December 2011.

Since AGLC calculates the number of participating senior citizens on the 20th of the month prior to the month of service, a USF disbursement authorization letter shall be mailed to the bank by the 10th day of the month of service for the \$532,000 disbursement to take place on the 15th of that month. AGLC will apply the \$532,000 to the service month's SRC discount for

senior citizens.

AGLC shall continue to file a monthly "SRC Rate Calculation" in Docket No. 31647 to the Commission by the end of the month prior to the service month. The monthly report shall detail the total amount of the Low Income Senior Citizen Discount, Audit Costs (if applicable), any prior month adjustments to date, and the total amount of USF funds required to offset the discount and audit costs (if applicable). The monthly report shall also track the difference between the total amount of USF funds required and the \$532,000 monthly disbursement.

No later than December 1, 2011, AGLC shall file a "Comprehensive True-Up Report" for the period ending December 2011 to provide a total true-up of disbursed funds. Any amount of unused USF funds will be returned to the USF within 30-days of the acceptance of the report filed report unless the Commission decides to continue with the USF funding of the SRC. Any funds that are under-collected shall be reimbursed to AGLC within 30-days of the acceptance of the report. If the Commission, by Order, decides to continue with the USF funding of the SRC, the reimbursement of the true-up under-collected amount will be included with the next month's funding disbursement.

B Additional Proposals for Tariff Changes

The Company proposed tariff revisions to delete references to the Annual Transition Rate Mechanism Charge and to delete references concerning the Valdosta Pool as a peaking pool, as presented in redlined format in MFR 1-4 REVISED of AGLC Exhibit No. 41 (MJM-6 Revised). PIAS recommends approval of these tariff revisions. Tr. 1394-95. Further, PIAS recommends this Commission require AGLC and PIAS to discuss tariff sheets Rule 10, Rule 13, and Rule 17, and, if necessary, present any modifications to the Commission for consideration. Tr. 1395-96. PIAS also recommends that this Commission require AGLC to file its "Gas Consumption Bulletin" and its updated Unit Cost of Certain Mains and Services at least every five years, or more frequently, as needed. Tr. 1396. The Company does not oppose these recommendations. Tr. 2321-22. The Commission approves these proposed revisions and directs AGLC to file revised tariff sheets reflecting such changes.

The Company also puts forth tariff changes reflecting the revised rates and rate design necessary to recover AGLC's proposed rate increase. The PIAS has proposed a decrease in rates and that, generally, the decrease should be made in the DDDC Charge rate while keeping the Customer Charge the same as current. In proposing a rate increase, the Company recommends that the increase should be applied to the Customer Charge first, and the recovery of the residual requirement for the class should be through an adjustment to the DDDC charge.

The Commission finds a rate increase to be reasonable and that the increase should be applied as recommended by the Company.

SUMMARY OF FINDINGS OF FACT AND CONCLUSIONS OF LAW

Findings of Fact

The Commission finds as a matter of fact that the test period to be utilized in resolving this matter is the twelve month period ending May 31, 2011.

2.

The Commission finds as a matter of fact that the appropriate rate base for the test period is \$1,312,822,870.

3.

The Commission finds as a matter of fact that the appropriate and just reasonable return on common equity for the Company is 10.75%. The Commission further finds that the appropriate cost of long-term debt is 5.67% and the appropriate cost of short term debt is 2.17%. The Commission further finds that the appropriate capital structure is 51% common equity, 44.63% long term debt and 4.37% short term debt. This is appropriate as the Company has used the same methodology in 2005, which has been updated based on current market conditions. The Commission further finds that the appropriate overall return is 8.10%, which when grossed up by the expansion factor is 11.56%

4.

The Commission finds as a matter of fact that the Company's required operating income is \$90,055,235.

5.

The Commission finds as a matter of fact that the appropriate total revenue increase for the Company is \$26,557,218, as shown in more detail in the Revised Compliance Schedules for Customer First Rate Case filed by the Company on November 1, 2010. The Company's revenue requirement includes all of the authorized revenues for the Company's base case adjustments; adjustments recommended by the PIAS that were incorporated in the Company's proposed order; the Company's Customer First program, as modified in this order; the Company's acquisition synergies sharing policy, as modified in this order; and, the Company's return to a traditional depreciation methodology.

6.

The Commission finds as a matter of fact that the Company's proposed rate design

should be approved.

7.

The Commission finds that the Company is authorized to capitalize all costs incurred for the information technology projects associated with Customer First. Costs that are to be capitalized include those costs associated with project activities that would normally be expensed as incurred, including but not limited to feasibility studies and system requirement analyses and data conversion.

8.

The Commission finds as a matter of fact that it is appropriate to restore the traditional method for calculating net salvage to avoid deferring costs to future customers. The Commission finds that it is appropriate to phase in the revenue requirement necessary to make this conversion over two rate cases. In this case, the Commission shall change the net salvage value for services, Account 380, to negative 30 percent. The Commission directs the Company to include a second adjustment in the next rate case to complete the financial portion of restoring the traditional methodology of calculating net salvage value.

9.

The Commission finds that it is appropriate to adopt a policy to encourage prudent acquisitions by the Company. For future mergers and acquisitions of non-jurisdictional distribution companies, the sharing of any net savings resulting from each of these transactions will be on a 50/50 basis between AGL Resources shareholders and the firm customers of AGLC. No net losses will be borne by AGLC customers. Atlanta Gas Light Company should make a showing to the Commission of its determination of net savings no later than 24 months following the legal close of any transaction, and based on the Commission's confirmation of these net savings. Demonstrated net savings will then be shared with ratepayers through an interim surcredit until incorporated in the next rate case. The Company will issue interim monthly credits to firm customers so that their savings are shared immediately with ratepayers outside of a rate case proceeding. Sharing of these savings should extend for ten years from the date on which the savings begin to be shared.

10.

The Commission finds this policy of ten years of sharing should also be used to determine any additional sharing of the Virginia Natural Gas (VNG) and NUI mergers. Since the VNG acquisition closed in October of 2000 and the Company began to produce savings from that transaction in 2001, no further sharing with the Company of those savings are appropriate. The Company will no longer recognize the sharing through its Grey Book accounting treatment. With the NUI acquisition, which still has five years to go under the 10 year policy, the Commission finds it is appropriate that the Company will share the \$17.6 million on a 25/75

basis between the Company shareholders and the Company's ratepayers through December 2015.

11.

The Commission finds that it is appropriate to approve portions of the Company's proposed Customer First Business Plan. The Commission reduces the revenue request from \$13.3 million to \$9.5 million by removing additional funding for energySMART® rebate and the Customer Compliance First voucher program. The Commission, however, does approve the Customer Compliance First in-home repair program.

Included in the \$9.5 million is an expanded level of SONPs from the Generation II Gatekeeper program, and an expedited order fulfillment program. AGLC is directed to make the investments necessary to increase the proposed Generation II Gatekeeper service level from the proposed up to 25 percent increase in services up to 50 percent annual increase requested by marketers in this proceeding. The Company is further directed to make the investments to fund the order fulfillment improvements requested by marketers allowing the Company to move toward providing key marketer services within a three qualified business day performance period and make a corresponding number of SONP reconnections as requested within a corresponding three qualified business day period based on the information provided by the company.

This docket did not include a rulemaking to alter the Company's performance standards, and the Commission must go through the proper steps to make any changes to those current standards. The Company does need time to make the investment in both the people and the resources requested and obtain actual field data to determine how it can most efficiently provide it. The Commission shall issue a Notice of Proposed Rulemaking (NOPR) on or after July of 2012 to alter the Company's performance standards. AGLC's officers have stated clearly that they will make a best efforts commitment toward achieving these improved three qualified business day order fulfillments for customer SONPs and three qualified business day order fulfillment for customer turn-ons and turn-offs, reconnections upon the conclusion of the hiring and training of these employees that will be needed to make this process work.

Until the NOPR is issued, the Company will report its progress for attaining a three qualified business day order fulfillment beginning on September 2011 for the period ending June 30, 2011, and make subsequent reports no later than 60 days following the close of each calendar quarter thereafter.

12.

The Commission finds it appropriate to modify the Company's Social Responsibility Rider as proposed by the Company to continue to provide a discount to low income seniors, and apply sufficient funds by refund from the Universal Service Fund (USF) to fully cover the cost of providing this discount. Use of USF funds will begin in November 2010 and shall be authorized

for calendar year 2011. The Commission will retain jurisdiction over this to decide whether to extend this for any additional periods. The Commission finds that such a refund from the USF is equitable.

The Commission directs the Company to work with the Commission Staff to develop an appropriate means to audit participation in the discount program, both to periodically verify that customers receiving the discount remain eligible and to identify eligible customers that are not receiving the discount. The costs of the audit and customer outreach, which have been estimated in the range of fifty thousand to seventy-five thousand dollars, would also be authorized program expenses recoverable under the SRC rider.

CONCLUSIONS OF LAW

1.

O.C.G.A. § 46-2-20(a) provides that the Commission has general supervisory authority over gas companies.

2.

O.C.G.A. § 46-2-23 provides that the Commission has exclusive power to determine what are just and reasonable rates and charges to be made by any person, firm or corporation subject to its jurisdiction. The rates for firm distribution service and ancillary services rendered by an electing distribution company must be established in accordance with Article 5 of Title 46, O.C.G.A. §§ 46-4-151 *et seq.*

3.

O.C.G.A. § 46-2-25 provides in pertinent part that whenever any new rate schedule is filed, the Commission shall have authority, upon reasonable notice to the utility, to enter a hearing concerning the lawfulness of such rate, charge, classification, or service.

4.

O.C.G.A. § 46-2-26.4 provides for the accounting treatments to be used in any proceeding before the commission to determine the rates to be charged by a gas utility. Subsection (b) provides as follows:

In any proceeding commenced after April 1, 2002, to determine the rates to be charged by a gas utility, the gas utility shall file jurisdictionally allocated cost of service data on the basis of a test period, and the commission shall utilize a test period, consisting of actual data for the most recent 12 month period for which data are

available, fully adjusted separately to reflect estimated operations during the 12 months following the proposed effective date of the rates. After the initial filing, and until new rates go into effect, the utility shall file actual cost of service data as they become available for each month following the actual data which were filed. The utility shall have the burden of explaining and supporting the reasonableness of all estimates and adjustments contained in its cost of service data.

The Commission concludes as a matter of law that the Company has met its burden of proof to substantiate a revenue deficiency, which the Commission found as a matter of fact to equal \$26,557,218.

5.

The Commission concludes as a matter of law that the Company should be allowed to charge rates calculated to allow the Company an opportunity to recovery this deficiency and that such award will allow the Company the opportunity to earn a return on its assets which is not confiscatory, unjust or unreasonable.

6.

The Commission concludes as a matter of law that the provisions of this decision related to the allocation of the additional revenue requirement and the specific charges set by the Commission will provide the most equitable distribution of the additional revenue requirement mandated by the record.

7.

The Commission concludes as a matter of law that it has the authority under O.C.G.A. § 46-4-161 to refund funds from the USF to retail customers in such manner as the Commission shall deem equitable.

IV. ORDERING PARAGRAPHS

After consideration of all of the evidence presented in this proceeding in conjunction with consideration of the applicable law and regulatory policy within the existing legislative framework, and upon the Commission's findings of fact and conclusions of law, the Commission adopts and sets out the ordering paragraphs below.

A. WHEREFORE IT IS ORDERED, that Atlanta Gas Light Company is directed to increase rates to produce an increase in revenues in the amount of \$26,557,218, consistent with the provisions of this Order, with said rates to be effective for service rendered

on and after November 3, 2010.

B. ORDERED FURTHER, that the tariffs implemented by the Company to collect the aforesaid increased revenues of \$26,557,218 shall be submitted as a compliance filing within 30 days of the date of this Order subject to review by the Commission to ensure that such tariffs, as implemented, are proper and just. The rates shall be consistent with the findings of the Commission regarding Revenue Requirements in this Order utilizing the rate design methodology approved in this Order

C. ORDERED FURTHER, that the Company shall comply with all ruling and directives contained in the body of this Order.

D. ORDERED FURTHER, that the Commission shall pre-authorize a monthly disbursement of \$532,000 from the USF to the Company to be applied toward the actual cost of the program from November 2010 through December 2011.

E. ORDERED FURTHER, that due to the complexity of this matter and the short statutory deadline for the issuance of an order, the Commission issued a short order in this matter. The Commission now issues this more detailed order further explaining its decisions, findings and conclusions. To the extent that any provisions in the two orders are inconsistent, the provisions in this long order shall supersede any conflicting provisions in the short order.

F. ORDERED FURTHER, that all findings, conclusions and statements made by the Commission and contained in the foregoing sections of this Order are hereby adopted as findings of fact, conclusions of law, and statements of regulatory policy of this Commission.

G. ORDERED FURTHER, that unless specified otherwise in this Order, the decisions adopted herein shall be effective immediately.

H. ORDERED FURTHER, that any motion for reconsideration, rehearing or oral argument or any other motion shall not stay the effective date of this Order, unless otherwise ordered by the Commission.

I. ORDERED FURTHER, that jurisdiction over this matter is expressly retained for the purpose of entering such further Order or Orders as this Commission may deem just and proper.

The above by action of the Commission in Special Administrative Session on the 27th day of October, 2010.

OPINION AUTHORIZING PACIFIC GAS AND ELECTRIC COMPANY'S GENERAL RATE CASE REVENUE REQUIREMENT FOR 2007 - 2010

I. Summary

This Opinion adopts a Settlement Agreement that resolves most issues arising from Pacific Gas and Electric Company's (PG&E) general rate case Application (A.) 05-12-002. The adopted Settlement Agreement increases PG&E's revenue requirement for Gas Distribution, Electric Distribution, and Generation by \$213 million in 2007 and by \$125 million annually during 2008, 2009, and 2010. PG&E is also allowed to recover an additional \$35 million for a refueling outage at the Diablo Canyon nuclear power plant. Compared to the preceding year, this Opinion authorizes an increase in PG&E's general rate case (GRC) revenue requirement of 4.5% in 2007, 2.5% in 2008, 3.2% in 2009, and 1.7% in 2010. The increase in PG&E's overall revenue requirement is 1.4% in 2007, 0.8% in 2008, 1.0% in 2009, and 0.6% in 2010.

The other elements of the adopted Settlement Agreement include the following:

- The addition of a third attrition year, 2010, which shifts PG&E's next GRC to test-year 2011.
- A provision that keeps all 84 of PG&E's front counters open pending further developments in Phase 2 of this proceeding regarding PG&E's proposal to close its front counters.
- A Bill-Calculation Service for mobile home park owners with sub-metered tenants.
- A memorandum of understanding between PG&E and the Disability Rights Advocates (DIRA) wherein PG&E agrees to take certain measures to improve its operations affecting disabled persons.

The increased revenue requirement authorized by this Opinion is effective on January 1, 2007, pursuant to Decision (D.) 06-10-033. This revenue requirement is in addition to increases previously authorized in this proceeding for pensions costs in the amounts of \$98 million for 2007, \$102 million for 2008, \$106 million for 2009, and \$111 million for 2010.¹

There are additional elements of today's Opinion that consist of accounting and reporting requirements. These include a requirement for PG&E to record a regulatory liability for \$2.1 billion that PG&E has collected in rates but not yet spent to retire and remove assets from service.

The Settlement Agreement does not address issues raised by the Greenlining Institute (Greenlining). These issues focused on executive pay, supplier diversity, employee diversity, and corporate philanthropy. The issues raised by Greenlining are addressed separately. Greenlining and PG&E were able to resolve these issues, and their accord is adopted by today's Opinion.

This proceeding remains open to consider issues associated with PG&E's request to close many of its customer-service counters.

II. Procedural Background and Chronology

PG&E filed A.05-12-002 on December 2, 2005. In A.05-12-002, PG&E requested, among other things, authority to increase its GRC revenue requirement to \$5.238 billion effective January 1, 2007, for Gas Distribution, Electric Distribution, and Electric Generation. Compared to 2006, the requested

¹ These are estimated pension costs. The actual revenue requirement for pension costs will vary depending on several factors. See D.06-06-014 for an explanation of the variance.

GRC revenue requirement for 2007 represented an increase of \$524 million, or 11.1%. PG&E requested additional increases in 2008 and 2009.

A prehearing conference (PHC) was held on January 23, 2006. Assigned Commissioner Bohn issued a Ruling and Scoping Memo (ACR) on February 3, 2006, that established the scope and schedule for the proceeding. The ACR called for hearings to begin in May 2006 and a final decision in December 2006 on all issues except PG&E's proposed Performance Incentive Mechanism.

On March 2, 2006, the Commission issued Order Instituting Investigation (I.) 06-03-003, the companion investigation to this GRC. The purpose of I.06-03-003, which was consolidated with A.05-12-002, was to allow the Commission to (1) address matters raised by parties other than PG&E, and (2) issue orders on matters for which PG&E might not be the proponent.

In a related proceeding, A.05-12-021, PG&E requested recovery of contributions made to its employee pension plan in 2006. Granting A.05-12-021 would reduce PG&E's revenue requirement for pension costs in this GRC proceeding. On March 8, 2006, PG&E, the Commission's Division of Ratepayer Advocates (DRA), and the Coalition of California Utility Employees (CCUE) filed a settlement agreement that resolved all issues in A.05-12-021 and all pension-cost issues in this GRC proceeding. Among other things, the settlement allowed PG&E to recover the following GRC revenue requirement for pension costs: \$155 million in 2006, \$98.2 million in 2007, \$101.7 million in 2008, and \$106.1 million in 2009. The Commission adopted the uncontested settlement agreement in D.06-06-014.

DRA served its written testimony on GRC issues on April 14, 2006. The following parties served their written testimony on April 28, 2006: the Modesto Irrigation District (Modesto ID), the Merced Irrigation District (Merced ID), the

South San Joaquin Irrigation District (SSJID), DIRA, Aglet Consumer Alliance (Aglet), The Utility Reform Network (TURN), Greenlining, and others. The following parties served rebuttal testimony on May 17, 2006: PG&E, Southern California Edison Company (SCE), San Diego Gas and Electric Company (SDG&E), and Southern California Gas Company (SCG).

Ten public participation hearings (PPHs) were held at various locations in PG&E's service territory during April and May, 2006.² Hundreds of letters were also received from the public.

On May 30, 2006, the assigned Administrative Law Judge (ALJ) granted the joint motion of PG&E, DRA, and several intervenors to defer to early 2007 PG&E's proposal to close all of its front counters where customers can obtain help, information, and services. A noticed settlement conference regarding PG&E' proposal was held on February 15, 2007.

On May 31, 2006, the ALJ ruled that all issues associated with PG&E's proposed late-payment fee would be removed from this proceeding and considered, as appropriate, in I.03-01-012.³

A second PHC was held on May 25, 2006. Twenty-five days of evidentiary hearings were held between May 31 and July 7, 2007. During the evidentiary hearings, the ALJ admitted into the record the written testimony of 118 witnesses and approximately 157 other hearing room exhibits.

² The PPHs were held at the following locations: Oakland, Ukiah, Santa Rosa, King City, Salinas, San Louis Obispo, Modesto, Fresno, Woodland, and Chico.

³ I.03-01-012 is the companion investigation to PG&E's previous GRC proceeding, A.02-11-017.

After the conclusion of hearings, PG&E's requested revenue requirement for 2007 stood at \$5.109 billion. The decrease from the initial amount in the A.05-12-002 was due to (1) PG&E's concessions on several issues raised by DRA, Aglet, and TURN, and (2) the resolution of pension-cost issues by D.06-06-014. PG&E's revised request for 2007 represented an increase of \$395 million, or 8.38%, over its 2006 authorized revenue requirement. By comparison, DRA recommended \$4.734 billion for 2007, or \$375 million less than PG&E's request.

On August 16, 2006, PG&E and several parties held a noticed settlement conference to discuss a proposed settlement. On August 21, 2006, PG&E and most of the active parties jointly filed a settlement agreement⁴ and a motion to adopt the settlement agreement.⁵ The Settlement Agreement purports to resolve all issues except those raised by Greenlining. The parties joining in the Settlement Agreement are PG&E, DRA, Modesto ID, Merced ID, SSJID, DIRA, the Western Manufactured Housing Communities Association (WMA),

⁴ Settlement Agreement Among Pacific Gas and Electric Company, Division of Ratepayer Advocates, The Modesto Irrigation District, The Merced Irrigation District, The South San Joaquin Irrigation District, The Western Manufactured Housing Communities Association, The Disability Rights Advocates, The California Farm Bureau Federation, Southern California Edison, Southern California Gas Company, San Diego Gas and Electric Company, The Coalition of California Utility Employees. This document is referred to hereafter as "the Settlement Agreement" or "the Settlement."

⁵ Motion of Pacific Gas and Electric Company, Division of Ratepayer Advocates, The Modesto Irrigation District, The Merced Irrigation District, The South San Joaquin Irrigation District, The Western Manufactured Housing Communities Association, The Disability Rights Advocates, The California Farm Bureau Federation, Southern California Edison, Southern California Gas Company, San Diego Gas and Electric Company, The Coalition of California Utility Employees For Approval of Settlement Agreement. This document is referred to hereafter as the "Settlement Motion." The Settlement Agreement was attached to the Settlement Motion.

California Farm Bureau Federation (CFBF), SCE, SDG&E, SCG, and CCUE (together, the Settling Parties). Most of the Settling Parties join only in certain paragraphs of the Settlement Agreement that resolve the particular issues raised by these Parties.⁶ A copy of the Settlement Agreement is in Appendix C of today's Opinion.

Noticed technical conferences regarding the Settlement Agreement were held on August 23 and September 6, 2006. PG&E also responded to several written data requests regarding the Settlement Agreement.

The Settlement Agreement is opposed by Aglet, the Alliance for Nuclear Responsibility and the Sierra Club (ANR/SC), and TURN. Rule 12.2 of the Commission's Rules of Practice and Procedure (Rule 12.2) governs comments filed by parties who contest a settlement agreement. Rule 12.2 states:

Comments must specify the portions of the settlement that the party opposes, the legal basis of its opposition, and the factual issues that it contests. If the contesting party asserts that hearing is required by law, the party shall provide appropriate citation and specify the material contested facts that would require a hearing. Any failure by a party to file comments constitutes waiver by that party of all objections to the settlement, including the right to hearing.

Comments opposing the Settlement were filed on September 20, 2006, by Aglet, ANR/SC, and TURN. None of these parties requested an evidentiary

⁶ Settlement Motion, p. 2, Fn. 1. Modesto ID joins only in paragraphs 1, 2, 3, 10, 11, 19, 49, and 50 of the Settlement. Merced ID joins only in paragraphs 1, 2, 3, 10, 11, 19, and 50. SSJID joins only in paragraphs 1, 2, 3, 10, and 19. DIRA joins only in paragraphs 1, 2, 3, 13A, and 48. WMA joins only in paragraphs 1, 2, 3, 12, and 25. CFBF joins only in paragraphs 1, 2, 3, 13B, and 24. SCE, SDG&E, and SoCalGas join only in paragraphs 1, 2, 3, 13C, and 41. (See Settlement, para. 3, conditions M-S.)

hearing on the Settlement.⁷ Three sets of reply comments were filed on October 5, 2006, by (1) SCE, (2) jointly by SDG&E and SCG, and (3) jointly by the Settling Parties other than SCE, SDG&E, and SCG.

As noted earlier, the Settlement Agreement does not resolve issues raised by Greenlining. These issues – which include executive compensation, supplier diversity, employee diversity, and corporate philanthropy – were the subject of separate briefs. PG&E was the only party to respond to the issues raised by Greenlining. Greenlining filed an opening brief on August 7, 2006. PG&E filed a reply brief on August 21, 2006. Greenlining filed a closing brief on August 28, 2008. PG&E and Greenlining resolved these issues at the last minute in their comments on the Alternate Proposed Decision.

The ACR issued on February 3, 2006, set a schedule that provided for the issuance of a final decision regarding most GRC issues in December 2006. This schedule was extended in several ALJ rulings in order to provide time for the parties to reach a settlement. On August 11, 2006, PG&E filed a motion for the Commission to issue an interim decision that makes PG&E's GRC revenue requirement for the 2007 test year adopted in this proceeding effective on January 1, 2007, in the event the Commission issues a final decision adopting PG&E's GRC revenue requirement after that date. The Commission granted PG&E's unopposed motion in D.06-10-033. As a result, the 2007 GRC revenue requirement authorized by today's Opinion is effective as of January 1, 2007.

⁷ Greenlining's informal request for an evidentiary hearing was denied by the assigned ALJ in a ruling issued on October 6, 2006.

Greenlining and Aglet submitted timely requests pursuant to Rule 13.13(b) for an oral argument before a quorum of the Commission. The oral argument was held on March 2, 2007.

In the remainder of today's Opinion, we will first evaluate the Settlement Agreement and the opposition to the Settlement. We will then address the issues raised by Greenlining.

III. Summary of the Settlement Agreement

The Settlement Agreement purports to resolve all issues in this proceeding except those issues raised by Greenlining. The resolved issues include those raised by Aglet, ANR/SC, and TURN, who are not parties to the Settlement.

The Settlement Agreement adopts a GRC revenue requirement of \$4.927 billion in 2007.⁸ The following table compares the Settlement revenue requirement with the litigation positions of PG&E and DRA:

⁸ The revenue requirement adopted by the Settlement Agreement excludes costs that are (i) regulated by the Federal Energy Regulatory Commission (FERC), and (ii) the subject of other Commission proceedings, including replacement of PG&E's Diablo Canyon steam generators, the Contra Costa 8 generating facility, and Advanced Metering Infrastructure. The Settling Parties agree that under the Settlement there is no double recovery of costs in this GRC and other proceedings.

2007 GRC Revenue Requirement (\$ millions)							
		Comparison Exhibit		Settlement			
	2006 Authorized	PG&E	DRA	Settlement	Settltmt. vs. 2006	Settltmt. vs. PG&E	Settltmt. vs. DRA
Electric Distrib.	2,648	2,991	2,809	2,870	222	(121)	61
Gas Distrib.	1,027	1,062	1,001	1,047	21	(15)	46
Generation	1,039	1,056	924	1,010	(30)	(46)	86
Total	4,714	5,109	4,734	4,927	213	(182)	193
Source: Settlement, Appendix B.							

The GRC revenue requirement adopted by the Settlement for 2007 represents an increase of \$213 million, or 4.5%, compared to 2006. On a total system basis, the Settlement increases PG&E's billed revenues by 1.4% in 2007.

The Settlement Agreement adds a third attrition year – 2010 – to the GRC cycle. The Settlement provides for annual attrition increases of \$125 million in 2008, 2009, and 2010, and an additional \$35 million in 2009 for a refueling outage at Diablo Canyon. The following table compares the Settlement outcome for attrition to PG&E's and DRA's litigation positions:

2008 – 2010 Attrition GRC Revenue Requirement (\$ millions)					
	PG&E	DRA	Settlement	Settlement vs. PG&E	Settlement vs. DRA
2008	143	100	125	(18)	25
2009	180	131	125	(55)	4
2010	--	--	125	--	--
2009 Diablo Canyon Refueling			35	--	--
Source: Settlement, Appendix E.					

Compared to the immediately preceding year, the Settlement increases PG&E's GRC revenues by 2.5% in 2008, 3.2% in 2009, and 1.7% in 2010. The compound percentage increase over 2007 - 2010 is 12.46%. The above tables show that the Settlement provides PG&E with approximately \$634 million less than it requested in cumulative revenues for 2007, 2008, and 2009.⁹

As noted previously, the Settlement divides the GRC revenue requirement among Gas Distribution, Electric Distribution, and Electric Generation. The Settlement further divides the revenue requirement into numerous areas. Some of the specific dollar amounts for 2007 are as follows:

- Operations and maintenance (O&M) expense - \$1.079 billion.
- Depreciation expense - \$942 million.
- Total Company administrative and general (A&G) expense - \$772 million.
- Customer services expense - \$431 million.
- Net weighted capital additions - \$453 million.
- Rate Base - \$12.6 billion.
- Fossil decommissioning refund - \$26.8 million.
- Other operating revenues - \$116 million.

The Settlement resolves numerous issues that are not expressed in dollar terms. These issues include:

- Forecasts of customers, sales, and revenues at present rates.
- Continuation of the one-way Vegetation Management Balancing Account, and a new Vegetation Management tracking account.
- Uncollectibles factor.
- Various customer fees.

⁹ \$634 million = (3 x 182 million) + (2 x 18 million) + \$55 million.

- Continued operation of all front counters pending further litigation and possible settlement of PG&E's proposal to close its front counters.
- Billing services for mobile home parks.
- Direct access fees.
- Replacement of the Company airplane.
- Capitalization rates.
- A&G allocations to non-GRC operations.
- Franchise fee factor.
- Memorandum of Understanding between DIRA and PG&E.
- O&M labor factors.
- Results of operations model.
- Withdrawal of PG&E's proposed Earnings-Sharing Mechanism.
- Withdrawal of PG&E's proposed Performance-Incentive Mechanism.

The Settling Parties request that the Commission approve the Settlement Agreement without modification and find that the Settlement is reasonable in light of the whole record, consistent with the law, and in the public interest.

IV. Standard of Review

The Commission has long favored the settlement of disputes. This policy supports many worthwhile goals, including reducing the expense of litigation, conserving scarce Commission resources, and allowing parties to reduce the risk that litigation will produce unacceptable results.¹⁰ Although the Commission favors the settlement of disputes, Rule 12.2 provides that the Commission will not approve a settlement unless the settlement is reasonable in light of the whole record, consistent with the law, and in the public interest.

¹⁰ D.05-03-022, *mimeo.*, pp. 7-8.

The Settlement Agreement is opposed by Aglet, ANR/SC, and TURN. The Commission's policy is that contested settlements should be subject to more scrutiny compared to an all-party settlement.¹¹ As explained in D.02-01-041:

In judging the reasonableness of a proposed settlement, we have sometimes inclined to find reasonable a settlement that has the unanimous support of all active parties in the proceeding. In contrast, a contested settlement is not entitled to any greater weight or deference merely by virtue of its label as a settlement; it is merely the joint position of the sponsoring parties, and its reasonableness must be thoroughly demonstrated by the record.
(D.02-01-041, *mimeo.*, p. 13.)

For the preceding reasons, we will review the Settlement's resolution of every contested issue, with careful consideration given to each issue raised by Aglet, ANR/SC, and TURN. The purpose of our issue-by-issue review is not to second guess the Settlement outcome for every individual issue, but to assess whether the Settlement as a whole is reasonable in light of the entire record, consistent with applicable law, and in the public interest.

V. Review of the Settlement Agreement

A. Customer Services

PG&E's Customer Services organization consists of the processes, technology, and people that together link PG&E with its 5 million electric customers and 4.1 million gas customers. PG&E requested \$437.7 million for Customer Services expenses in 2007. PG&E also requested increases in several

¹¹ D.96-01-011, Finding of Fact (FOF) 5. See D.96-01-011, 1996 Cal. PUC LEXIS 23, 39, 40 ("This more detailed review and heightened scrutiny is especially appropriate when the settlement is not all-party.").

fees and its uncollectibles factor. DRA, Aglet, TURN, and others opposed certain aspects of PG&E's request.

The Settlement adopts \$431 million for Customer Services expenses in 2007, which is \$7 million less than PG&E requested. The following table compares the Settlement outcome with PG&E's and DRA's litigation positions:

Settlement Agreement re: 2007 Customer Services Expenses (\$ millions)							
		Comparison Exhibit		Settlement			
	2006 Authorized	PG&E	DRA	Settlement	Settltmt. vs. 2006	Settltmt. vs. PG&E	Settltmt. vs. DRA
Electric Distrib.	186.6	187.0	180.3	184.3	(2.3)	(3.7)	4.3
Gas Distrib.	237.6	250.7	245.1	246.8	9.2	(3.9)	1.7
Total	424.2	437.7	425.4	431.1	6.9	(6.6)	5.7
Source: Settlement Agreement, Appendix B, Lines 2, 12, and 28.							

The Settling Parties agree that capital expenditures for Customer Services is subsumed within the capital expenditures adopted by the Settlement for Electric Distribution, Gas Distribution, and Common Plant, which are addressed elsewhere in today's Opinion. The Settling Parties also reached the following agreements on other Customer Services issues:

- PG&E will keep its front counters open pending a resolution of this issue either through settlement or Commission decision. (Settlement, para. 24.)
- PG&E will implement billing services for mobile home park owners with sub-metered tenants. (Settlement, para. 25.)
- Direct access service fees will remain at their current level (Settlement, para. 26.)
- The uncollectibles factor will be 0.002586. (Settlement, para. 20.)

- The “restoration for non-payment” fee will be increased from \$20.00 during regular business hours and \$30.00 during non-business hours to \$25.00 and \$37.50, respectively. CARE customers are exempted from the increase. (Settlement, para. 22.)
- The non-sufficient funds (NSF) fee will be increased from \$8.00 to \$11.50. (Settlement, para. 21.)
- PG&E will implement a new service quality standard that pays \$100 to customers whose service is improperly shut off. (Settlement, para. 23.)

Below, we assess the reasonableness of the Settlement outcome for Customer Services in light of the record on the issues raised by DRA and others.

1. Front Counters

a. Position of the Parties

PG&E operates 84 “front counters” where customers can establish service, pay bills, and obtain a variety of utility services and information. About 40% of the front counters are located in PG&E service centers, which are used primarily for field service operations. The remainder of the front counters are located in office space either owned by PG&E or leased from others.

In A.05-12-002, PG&E proposed to close all 84 front counters by June 30, 2007, and to transfer many of the functions to pay stations operated by third parties. Closing the front counters would reduce PG&E’s revenue requirement by \$24 million annually starting in 2008. If the Commission does not approve PG&E’s proposal, PG&E requested \$37.1 million in expenses for front counters in 2007 and \$0.15 million for capital expenditures in 2007.

Several parties opposed PG&E’s proposal to close its front counters (i.e., DRA, TURN, and CFBF). The only party to contest PG&E’s expense request for continued operations was TURN, who argued for a 20% reduction of PG&E’s requested expenses. No party contested the requested capital expenditures.

On May 26, 2006, the active parties for front counter issues submitted a joint motion seeking to defer to Phase 2 of this proceeding all issues regarding PG&E's proposal to close its front counters. The unopposed motion was granted by an ALJ ruling issued on May 30, 2006.

The Settlement Agreement provides that (1) PG&E will keep its front counters open pending the resolution of this matter in Phase 2 of this GRC proceeding either through settlement or a Commission decision, and (2) PG&E should be granted \$37.1 million annually to operate all of its front counters. If any front counters are closed, PG&E will adjust its rates downward to reflect the savings from such closures.¹²

On February 7, 2007, PG&E filed a notice of a settlement conference on February 15, 2007, to discuss the potential resolution of all front-counter issues.

b. Discussion

The evidentiary record shows that PG&E's front counters are heavily used. Approximately 10% of all customer transactions occur at the front counters. During 2005, there were 4,560,387 payment transactions at the front counters and 1,080,918 non-payment transactions.¹³

The importance of the front counters to PG&E's customers was highlighted at the Public Participation Hearings (PPHs). Many of the speakers at the PPHs said that PG&E's front counters are often the only way to resolve customer service issues. For example, several speakers emphasized that PG&E's front counters provide vital services to farm communities. These speakers explained that many farm workers do not have checking accounts and rely on front

¹² Settlement Agreement, para. 24.

¹³ Exhibit DRA-9, p. 9-16.

counters to pay their bills in cash and to resolve billing problems. They also described how farmers' difficulties with PG&E can be much more complicated than those of typical residential customers because farmers generally use far more gas and electricity than most residential users, often have multiple meters and utility bills, and the agricultural tariff schedules can be difficult to understand. These speakers described how PG&E's representatives at front counters understand the special needs of farmers and can resolve problems quickly, while the PG&E's representatives in a distant call center are generally unfamiliar with the intricacies of arcane agricultural tariffs.¹⁴

In light of the clear public need for the services provided by PG&E's front counters, we concur with the Settlement outcome that keeps all front counters open and provides associated funding. To ensure this intent is fulfilled, we will order PG&E to not make any significant reductions to the staffing or operations of its existing front counters without Commission authorization¹⁵ pending the Commission's consideration in Phase 2 of an apparent settlement that has been reached on front-counter issues.¹⁶

2. Mobile Home Park Billing Service

There are approximately 1,627 mobile home parks (MHPs) in PG&E's service territory with master meters for gas and electric service. These MHPs

¹⁴ See, generally, Reporter's Transcript (RT) of the PPHs held in Woodland and Chico on May 17 and 18, 2006, respectively.

¹⁵ PG&E may, of course, make necessary changes to the operations and locations of its front counters in response to circumstances, such as moving the location of a front counter due to the expiration of a lease.

¹⁶ As noted previously, on February 7, 2007, PG&E filed a notice of a settlement conference on February 15, 2007, to discuss the potential resolution of all front-counter issues.

have around 89,000 sub-metered tenants. MHP owners are required by Pub. Util. Code § 739.5¹⁷ to (1) charge their sub-metered tenants the same rates that PG&E charges its directly metered customers, and (2) provide itemized bills to their tenants that have the same general form and content as the utility's bill.

In D.04-11-033, the Commission ordered PG&E to analyze the potential for providing bill-calculation services to MHP owners with sub-metered tenants.¹⁸ On June 27, 2006, PG&E, WMA, and TURN submitted a joint proposal for PG&E to calculate the gas and electric utility bills for sub-metered tenants of MHPs ("Joint Proposal").¹⁹ There is no opposition to the Joint Proposal.

The Joint Proposal is incorporated into the Settlement Agreement. The Settling Parties agree that the Joint Proposal is a reasonable compromise of the parties' positions and complies with § 739.5 and D.04-11-033.²⁰

a. Summary of the Bill-Calculation Services

PG&E, TURN, and WMA (collectively, "the Joint Parties") propose that PG&E offer to MHP owners a Bill-Calculation Service like that described in D.04-11-033. MHP owners will have to sign an agreement to use the Services for a minimum of 12 months. Once enrolled, MHP owners will enter information at www.pge.com that PG&E needs to calculate utility bills for each tenant. MHP owners will be responsible for (1) the collection of timely and accurate meter reads, and (2) the submittal of timely meter-read data to PG&E at www.pge.com.

¹⁷ All section references are to the Public Utilities Code unless otherwise noted.

¹⁸ D.04-11-033, Ordering Paragraph (OP) 12.

¹⁹ The Joint Proposal, which is contained in Exhibit PG&E-70, is modeled on SCE's MHP bill-calculation services approved by the Commission in D.06-05-016.

²⁰ Settlement Agreement, para. 25.

Using information provided by MHP owners, PG&E will calculate sub-metered tenants' bills in accordance with the applicable residential rate schedules and send the bill calculations to the MHP owners via email. PG&E's bill calculations will usually be performed within two business days.

PG&E will handle billing inquiries from MHP tenants by providing tenants with information on the bill calculation and applicable rate schedule. For all other disputes (*e.g.*, usage amounts, meter accuracy, etc.), PG&E will refer the tenant to the MHP owner for resolution and inform the tenant that a complaint may be submitted to the Commission's Consumer Affairs Branch.

The Joint Proposal gives PG&E until June 1, 2007, to begin offering the MHP Bill-Calculation Services in order to provide PG&E with sufficient time to design, develop, test, and implement the Services.

D.04-11-033 requires PG&E's costs for MHP Bill-Calculation Services to be recovered from MHP owners. PG&E intends to recover its costs via the monthly service fee and a special services fee shown in the following table:

Proposed MHP Bill Calculation Service Fees	
Description	Amount
One-Time Initial Setup Charge	Free
Monthly Customer Charge Includes: * Development Expense * Bill Calculation Transaction Fee * Bill Presentation	\$0.27 per tenant per month
Special Service Fee	Actual labor & materials

PG&E estimates that the one-time costs to develop the Bill-Calculation Services will be \$500,000, and that ongoing costs will be \$100,000 annually. The estimated costs exclude expenses already recovered in base rates. Assuming

development costs are spread over five years, PG&E would need to recover \$200,000 per year from MHP owners (for the first five years). The Joint Parties estimate the monthly fee of \$0.27 per tenant will recover all costs for MHP Bill-Calculation Services directly from MHP owners.²¹ Once the development costs are recovered, PG&E will adjust the monthly per-tenant fee.

The special services fee would apply when a MHP owner requests a service that is not part of the Bill-Calculation Services.²² Under these circumstances, PG&E would determine the feasibility of the requested service and provide the MHP owner with a cost estimate of the requested service. PG&E would only perform the requested service upon mutual agreement. PG&E will track its actual costs and bill the MHP owner upon completion of the request.

As directed by D.04-11-033, the Joint Proposal includes a draft service agreement and draft tariffs. The proposed agreement includes a description of the Bill-Calculation Services; tenant bill information requirements; a minimum service term of 12 months; and other terms and conditions. The agreement must be signed by the MHP owner prior to receiving Bill-Calculation Services.

b. Discussion

D.04-11-033 required PG&E to submit in the current GRC the following information regarding bill-calculation services for MHP owners:

²¹ The Joint Parties estimate that approximately 814 MHP owners with 44,500 tenants will utilize PG&E's bill-calculation service.

²² For example, MHP owners may receive a one-time refund and ask PG&E to perform the bill calculations necessary to allocate each tenant's proportional share of the refund. In this case, the Special Services fee would be assessed per calculation, and would be in addition to the monthly per-tenant fee.

In their next revenue requirement proceedings, the electric and natural gas utilities shall provide an analysis of the costs, benefits, and feasibility of providing bill calculation services to MHP owners. The utilities shall also provide examples of the appropriate tariff language, and an estimate of the rates necessary to recover the full costs of such services from the MHP owners. (D.04-11-033, OP 12.)

We find that the Joint Proposal satisfies the requirements of D.04-11-033. Consistent with D.04-11-033, the cost of the proposed Bill-Calculation Services will be recovered from MHP owners. Thus, PG&E's other customers will not be affected by the proposed Services.

The proposed Bill-Calculation Services should provide several benefits. First, the proposed Services are substantially similar to SCE's bill-calculation services approved by D.06-05-016.²³ Thus, adoption of the proposed Bill-Calculation Services for PG&E will facilitate statewide consistency in utility bills among sub-metered MHP residents. The proposed Services should also promote statewide consistency between the bills that sub-metered MHP tenants receive and the bills that other utility residential customers receive.

Second, the proposed Services should facilitate the provision of timely and accurate monthly bills to MHP tenants. This will help MHP owners' compliance with § 739.5. Timely utility bills may also help MHP tenants make better decisions about their monthly energy usage.

Third, the proposed Services may be less costly than current methods used by MHP owners to calculate utility bills for sub-metered MHP residents.

²³ D.06-05-015, *mimeo.*, pp. 341-349.

Finally, bill-calculation issues raised by tenants might be reduced because (1) PG&E may be able to produce more accurate bills and more effectively process rate changes, refunds, and credits, and (2) PG&E will handle tenant bill-calculation questions. This, in turn, should reduce the number of complaints about MHP bills handled by the Commission, which should reduce the burden on the Commission's complaint process.

For the preceding reasons, we will adopt the unopposed Joint Proposal for MHP Bill-Calculation Services. To implement these Services, PG&E shall file an advice letter (AL) in time to begin offering the Services by June 1, 2007. The AL shall contain tariffs and a services agreement that are substantially similar to the proposed tariffs and agreement attached to the Joint Proposal. So long as the AL conforms to today's Opinion, the Energy Division may approve the AL without a Commission resolution.

3. Issues Raised by DRA

All issues raised by DRA regarding Customer Services were resolved by the Settlement Agreement. The following is a summary of the record concerning the issues raised by DRA.

a. Customer Inquiry Assistance

PG&E receives 17 million customer inquiries annually for service, information, and assistance. PG&E handles most customer inquiries through its call centers and the internet. For 2007, PG&E requested \$95.7 million for Customer Inquiry Assistance expenses and \$1.0 million for capital expenditures.

DRA proposed a disallowance of \$3.021 million of PG&E's requested expenses. DRA objected to a \$1 million budget transfer in 2005 and a \$2.021 million increase between 2006 and 2007 for unidentified internet projects. DRA did not contest PG&E's capital expenditures in this area.

PG&E responded that the \$1 million budget transfer opposed by DRA was exactly offset by another budget transfer going the other way, resulting in a net effect of zero. PG&E also contended that DRA's proposed disallowance of \$2.021 for unidentified internet projects was unfounded, as PG&E had provided a detailed, multi-page listing of the projects in its work papers.

b. Customer Care

PG&E requested \$41.1 million for Customer Care expenses in 2007. PG&E did not seek capital expenditures in this area.

DRA recommended three disallowances. First, DRA recommended a disallowance of \$0.26 million for Community Choice Aggregation (CCA) activities. DRA claimed that PG&E had failed to support the expenses because a PG&E data response referenced a blank line in its work papers. PG&E responded that its data response erroneously referred to page 3-5 of its work papers instead of page 3-4. On page 3-4 of its work papers, PG&E provided detailed information supporting the requested amount of \$0.26 million.

Second, DRA opposed \$0.215 million for expenses that are usually reviewed and recovered in other proceedings. PG&E responded that DRA did not question the reasonableness of the expenses, only the venue for their review and recovery. PG&E argued that the expenses in question are for Customer Services and belong in GRC proceedings with other Customer Services expenses.

Finally, DRA proposed a disallowance of \$0.50 million for increased numbers of customer satisfaction surveys on the basis that PG&E had not justified the additional surveys. PG&E responded that the increase in surveys was intended to help PG&E measure and improve customer service.

c. Gas Field Services and Dispatch Operations

Gas Service and Dispatch personnel respond to approximately 3 million customer service requests annually, such as stopping and starting service, pilot relights, appliance safety checks, emergencies, and maintenance work. PG&E requested \$100.3 million for Gas Service and Dispatch expenses in 2007 and \$14.1 million for capital expenditures.

DRA proposed two disallowances. First DRA recommended a disallowance of \$4.4 million for gas service representatives (GSRs), contending that PG&E sought to transfer staff into this function without justification. PG&E responded that DRA ignored some offsetting transfers of staff out of this function. PG&E also represented that DRA's proposal would reduce staffing for GSRs by 21 employees. According to PG&E, the elimination of 21 employees would "severely reduce PG&E's ability to respond to emergencies, to meet customer scheduling commitments...and to complete compliance work. Delayed response to customer requests caused by a reduction in manpower could force customers to attempt to address hazardous service issues themselves...putting themselves, as well as their communities, in dangerous situations."²⁴

Second, DRA recommended a disallowance of \$5.4 million of expenses for the Field Automation System (FAS) software upgrade. DRA argued that PG&E's existing software was good enough. PG&E responded that the upgrade was needed because the existing software is obsolete, costly to support, and lacks many of the features of the software upgrade that would help PG&E to maintain and improve customer service.

²⁴ Exhibit PG&E-18, pp. 27-3 to 27-4.

d. Emissions Reduction

PG&E's Emissions Reduction program includes an existing Low Emission Vehicle program and a proposed Low Emission Energy Services (LEES) program. PG&E requested \$12.3 million for expenses in 2007 for its Emissions Reduction program and \$3.53 million for capital expenditures. PG&E testified that these programs ensure that PG&E complies with regulatory requirements governing the operation of its fleet, are responsive to the Governor's Climate Change Executive Order, and could eliminate more than 1.3 million tons of carbon emissions at a cost below current market values.

DRA recommended two disallowances. First, DRA proposed a disallowance of \$1.975 million of capital expenditures for compressed natural gas refueling facilities. DRA believed that two of PG&E's four proposed refueling facilities were not justified because PG&E was uncertain of how many facilities it would install. PG&E responded that it had proposed a range of two to four facilities, but the actual number would depend on the cost of the locations selected. If PG&E selected more expensive locations, it would install fewer facilities, but its total costs would not go down as DRA assumed.

Second, DRA proposed a disallowance of \$3.641 million of expenses for the LEES program. For the most part, DRA argued that other parties, and not PG&E's ratepayers, should pay for the expenses requested by PG&E. PG&E responded that its requested expenses are cost effective for ratepayers and would provide significant environmental benefits.

e. Discussion

After reviewing the record, we conclude that the uncontested Settlement outcome for the issues raised by DRA regarding Customer Services is reasonable in light of the record, consistent with applicable law, and in the public interest.

4. Issues Raised by Aglet, TURN, and Others

a. Billing, Revenue, and Records

PG&E's Billing, Revenue, and Records activities include the issuance of customer bills, maintenance of customer account information, payment processing, and revenue reporting. In 2004, PG&E issued over 66 million customer bills and 10 million late-payment notices.

PG&E initially requested \$92.1 million in 2007 for Billing, Revenue, and Records expenses and \$4.1 million for capital expenditures. TURN recommended averaging certain one-time expenses related to Energy Statement Redesign. PG&E agreed with TURN's recommendation. This concession reduced PG&E's request from \$92.1 million to \$89.9 million.

b. Customer Service Standards

PG&E presented data concerning its performance under the Quality Assurance Program and the Safety Net Program. PG&E did not request any changes to these programs or any expenses for these programs.

TURN did not raise any issues regarding existing standards, but TURN did propose a new standard. Specifically, TURN proposed a new "shut-off guarantee" that would require PG&E to pay \$100 to customers whose gas or electric service is erroneously shut off. PG&E was agreeable to TURN's proposal, although details must still be worked out, such as what constitutes an erroneous shut-off and when the program should start.

The Settling Parties agree that the Commission should adopt a new quality assurance standard for improper shut-offs and that the new standard should be explained via an advice filing to be made by PG&E within 90 days from today's

Opinion. Prior to making its filing, PG&E will meet with interested parties to resolve as many details of the new standard as practicable.²⁵

We find the Settlement outcome to be generally reasonable. The program provides two benefits: it provides compensation to the victims of error; and it provides a strong incentive to PG&E to avoid such errors. Our only concern is that the Settlement does not address who will pay for the new program. We conclude that because PG&E is the source of the error, PG&E should bear the cost of the program.

c. Critical Peak Pricing

i. Position of the Parties

PG&E requested \$0.52 million in 2007 for increased workload from the expected adoption of a new critical peak pricing (CPP) tariff by the Commission. TURN recommends that the Commission modify the Settlement Agreement to reduce PG&E's revenue requirement by \$0.52 million in 2007 for expenses associated with the CPP program. TURN believes the CPP expenses that PG&E seeks to recover in this GRC proceeding are duplicative of the CPP expenses that PG&E has sought to recover in either A.05-01-016 or A.05-06-006.

The salient issue, according to TURN, is whether PG&E notified the Commission in other proceedings that PG&E collects some CPP costs in GRCs. TURN does not believe that PG&E did so. Had the Commission been informed, TURN believes the Commission might have authorized lower amounts for the CPP budgets approved in other proceedings.

²⁵ Settlement Agreement, para. 23.

PG&E opposes TURN's recommendation and asserts that TURN has offered no evidence to support its allegation of double recovery of CPP costs.

ii. Discussion

We decline to adopt TURN's proposal to modify the Settlement Agreement to reduce PG&E's revenue requirement for the CPP program by \$0.52 million in 2007. TURN's proposal rests on its assumption that CPP funding approved by the Commission in other proceedings might have been lower if the Commission had known that PG&E intended to recover some CPP costs through GRC proceedings. However, PG&E testified that there is no double recovery of CPP program costs,²⁶ and TURN has presented no evidence to contradict PG&E's testimony. In the absence of any evidence of double-counting, there is no basis to adopt TURN's recommendation.

d. Direct Access Service Fees

i. Position of the Parties

PG&E's current direct access (DA) service fees were set in 1999 and have not changed since. Because PG&E's costs have increased since 1999, TURN recommends that the Commission (1) increase DA fees by 30%, (2) impose an additional interim charge of \$5 on DA customers over 20kW, and (3) examine DA costs and rates in PG&E's rate design proceeding A.06-03-005.

TURN believes its recommendation is consistent with the Commission's decision in the recent SCE GRC proceeding where the Commission addressed the same issue. There, the Commission adopted TURN's proposal to increase SCE's DA fees by 25%. The Commission determined that it was better to adopt

²⁶ Exhibit PG&E-18, pp. 26-7 and 26-8.

TURN's proposed increase immediately rather than wait for SCE to file an application and continue the subsidization of DA customers by all other customers while the application was processed.²⁷

PG&E opposes TURN's proposal. The Settlement Agreement adopts PG&E's position and keeps DA fees at current levels.²⁸ The Settling Parties maintain that there is insufficient evidence in the record regarding whether, and to what extent, DA fees should be increased.

ii. Discussion

PG&E's DA fees have not changed since 1999 even though PG&E testified that its costs have risen significantly since then.²⁹ The Settlement Agreement leaves DA fees frozen at their 1999 level. If the fees were correctly calculated in 1999, and the costs have risen significantly since that time, then the fees are too low now. However, there is not enough information in the record to establish accurate, cost-based DA fees. Revising DA fees based on an incomplete record could result in above-cost fees, which would be just as harmful as below-cost fees.

For the preceding reasons, we decline to adopt TURN's proposal to increase DA fees by 30% and to impose an additional \$5 charge on DA customers over 20kW. To ensure that PG&E's DA fees are appropriately updated, we will require PG&E to provide an analysis of its DA costs in its next GRC.

²⁷ D.06-05-016, *mimeo.*, p. 110.

²⁸ Settlement, para. 26.

²⁹ Exhibit PG&E-8, p. 3-3, Table 3-2.

e. Read and Investigate Meters

i. Position of the Parties

PG&E obtains data from gas and electric meters through (i) human meter readers, and (ii) telecommunication technologies that obtain data remotely.

PG&E requested \$104.7 million for meter reading expenses in 2007.³⁰

TURN recommends that the Commission modify the Settlement Agreement to remove \$1.027 million for meter-reader employee turnover. These expense are not justified, according to TURN, because PG&E has meter-reader attrition of 20% annually. Thus, the cost for employee attrition should be captured in the base year and no additional adjustment to PG&E's 2007 expenses is necessary. TURN also argues that PG&E should have lower expenses in the future for meter-reader attrition because of the Advanced Metering Initiative (AMI) project, which will eventually replace most meter readers.

PG&E responds that it will have increased expenses for employee turnover because of its aging workforce. Because meter readers are entry-level positions, PG&E expects increased turnover of meter readers as they leave their positions for higher-level positions vacated by retirees.

ii. Discussion

The record shows that PG&E has experienced increased turnover among meter readers in recent years. In 2004, PG&E experienced 20% turnover, followed by 29% in 2005. PG&E testified that it expects 35% turnover in 2006 as more entry-level meter readers are promoted to positions vacated by

³⁰ PG&E reduced its requested meter reading expense in 2007 by \$0.068 million in response to TURN's proposed reduction for the Itron Maintenance Contract.

retirements.³¹ Based on this evidence, we conclude that PG&E's request for an additional \$1.027 million to hire and train meter readers in 2007 is reasonable.

We agree with TURN that PG&E's expenses for meter-reader turnover should decline after 2007 as meter readers are phased out due to the AMI program. Even so, the declining costs for employee turnover should be reflected in the Stipulated AMI Project Benefits adopted by the Commission in D.06-07-027.³² These benefits include anticipated reductions in employee-related costs associated with the AMI program. As a result, it would be double counting to reflect these declining costs in this GRC proceeding.

For the preceding reasons, we conclude that the Settlement outcome for meter-reading expenses is reasonable in light of the record, consistent with applicable law, and in the public interest.

f. Uncollectibles Factor

i. Position of the Parties

Uncollectibles expense is equal to the uncollectibles factor times billed revenue. PG&E requested authority to increase its uncollectibles factor from 0.002 to 0.002772.³³ DRA recommended 0.002582 based on a five-year average.

The Settlement adopts an uncollectibles factor of 0.002586.³⁴ The Settling Parties submit that this outcome is reasonable because it is the midpoint between

³¹ Exhibit PG&E-18, pp. 28-2 and 28-3.

³² D.06-07-027, *mimeo.*, pp. 29-30.

³³ The assigned ALJ removed from consideration in the instant proceeding PG&E's proposed 0.015% adder "to accommodate additional write-off as a result of implementation of the late payment fee." (Exhibit PG&E-5, p. 8-10.)

³⁴ Settlement Agreement, para. 20.

PG&E's request and Aglet's recommendation (discussed below), and is very close to DRA's recommendation.

Aglet recommends an uncollectibles factor of 0.00240, which is equal to the recorded value for 2005. Although the 2005 recorded uncollectibles factor was below PG&E's 19-year average, Aglet believes that PG&E can sustain its credit and collections success into 2007. This is because Aglet believes the uncollectibles factor has been trending down and that PG&E plans to implement measures that will keep the uncollectibles factor at its current low level.

PG&E responds that the 2005 recorded uncollectibles factor was unusually low relative to the five-year average of 0.002586 and the 19-year average of 0.0028, and will likely increase in 2007.

ii. Discussion

We find the uncollectibles factor of 0.002586 adopted by the Settlement is reasonable. The adopted uncollectibles factor is equal to the five-year average.

We are not persuaded by Aglet that it is better to use the 2005 recorded uncollectibles factor of 0.00240. We agree with PG&E's assessment that the 2005 uncollectibles factor was low relative to the five-year and 19-year averages, and will likely rise in 2007. In fact, PG&E testified that uncollectibles were growing in early 2006 due to increasing natural gas prices and the recent Winter Customer Care and Relief Program.³⁵ Although Aglet contends that PG&E has implemented measures that should enable PG&E to maintain its low 2005 uncollectibles factor, the supporting evidence cited by Aglet is unconvincing. Specifically, the PG&E exhibits cited by Aglet generally show that PG&E has

³⁵ Exhibit PG&E-18, p. 31-2, L: 17-24; 24 RT 2196:23 to 2197:5, PG&E/Torres.

taken steps to improve the efficiency of its Credit Operations in order to absorb increased workload without an increase in costs. In our opinion, there is no clear linkage between the steps taken by PG&E to improve its organizational efficiency and continuation of the relatively low uncollectibles factor in 2005. In any event, PG&E testified that it has suspended its efforts to improve the efficiency of its Credit Operations, which weakens Aglet's argument.³⁶

We conclude for the previously stated reasons that the Settlement outcome with respect to the uncollectibles factor is reasonable in light of the record, consistent with applicable law, and in the public interest.

g. Late-Payment Fee Implementation Expense

i. Position of the Parties

PG&E initially requested a total of \$0.481 million over 2007 - 2009 to implement a late-payment fee. Subsequently, issues regarding the late-payment fee were removed from this proceeding pursuant to a ruling by the assigned ALJ.

Aglet recommends that the Commission take steps to ensure that the revenue requirement adopted by today's Opinion excludes expenses for the late-payment fee. PG&E responds that Aglet's recommendation is moot because late-payment fee expenses were excluded from the Joint Comparison exhibit on which the Settlement Agreement is based.

³⁶ Exhibit PG&E-18, p. 31-4, L: 1-9; Exhibit PG&E-5, p. 8-5, L: 28-32. The suspension of PG&E's efforts to improve the efficiency of its Credit operations is driven by uncertainty regarding the outcome of the ongoing Billing and Collections phase of I.03-01-012.

ii. Discussion

On May 31, 2006, the assigned ALJ issued a ruling that removed from this proceeding all issues associated with PG&E's proposed late-payment fee and notified the parties that such issues would be considered, as appropriate, in I.03-01-012. We affirm the ALJ's Ruling.

Based on PG&E's representations, described above, we are satisfied that there are no late-payment fee expenses included in the revenue requirement adopted by today's Opinion. Aglet asks us to take unspecified measures to ensure that such costs are excluded from the adopted revenue requirement. We do not see a need for additional measures, since the costs in question are already excluded from the revenue requirement adopted by today's Opinion.

h. Service-Restoration Fee

i. Position of the Parties

Currently, when a customer's service is shutoff for nonpayment, PG&E charges a \$20 fee to restore service during regular hours and \$30 after hours. PG&E requested a phased increase in the service restoration fee to \$40.00 during regular business hours and \$60.00 during non-business hours to reflect PG&E's actual costs. DRA recommended that the fee increase be limited to 25% for reasons of affordability. DRA further proposed that CARE customers receive a 20% discount on the fee.

The Settling Parties agree that the service-restoration fee should be increased from \$20.00 during regular business hours and \$30.00 during non-business hours to \$25.00 and \$37.50, respectively. The Settling Parties also

agree that CARE customers should be exempted from the increase.³⁷ The Settlement essentially adopts DRA's position.

Aglet concurs with the Settlement for three reasons. First, Aglet agrees that a fee increase is necessary, but Aglet contends that PG&E's requested fee exceeded PG&E's actual costs for service restoration. Second, DRA's recommended 25% fee increase provides an orderly transition to cost-based rates. Finally, Aglet submits that it is reasonable to retain a higher fee for overtime and holiday work, which is generally more expensive than work done during regular hours. Aglet believes a single rate would send the wrong price signal, encouraging customers to seek reconnections outside of regular hours.

ii. Discussion

We find the uncontested Settlement outcome for the increased service restoration fee is reasonable for the reasons given by DRA and Aglet, is consistent with applicable law, and is in the public interest.

i. Non-Sufficient Funds Fee

i. Position of the Parties

PG&E requested authority to increase its fee for bounced checks from \$8.00 to \$11.50. The Settlement adopts PG&E's request.³⁸ The Settlement Agreement also requires PG&E to file, within 30 days, a compliance advice letter to implement the increased fee.

TURN does not oppose an increased fee. TURN observes that PG&E justifies the increased fee for bounced checks based on increased working-cash

³⁷ Settlement, para. 22.

³⁸ Settlement, para. 21.

expense. PG&E explains that it takes an average of 36 days for a replacement check to post after the initial check bounces, causing an average working-cash expense of \$4.13 per bounced check. TURN argues, however, that PG&E's proposed fee structure should be rejected because it ignores that working-cash costs vary with the size of the bounced check and, as a result, requires smaller customers to subsidize larger customers.

To remedy this inequity, TURN proposes a fee equal to \$6.50 plus 1% of the bounced check. TURN states that tying the fee to the amount of the bounced check results in customers paying a fee that reflects the actual costs they impose on PG&E. Under TURN's proposal, the average fee would be \$9.20 for residential customers and \$22.12 for non-residential customers.

TURN alternately proposes that separate flat fees be adopted for each customer class based on class-average costs. TURN believes a class-based flat fee would be easy for customers to understand, easy for PG&E to implement, and reduce the cross-subsidization among customer classes.

Although PG&E does not currently have a late-payment fee, the Commission is scheduled to consider the imposition of a late payment fee in another proceeding. TURN recommends that the Commission protect customers against possible double collection of working-cash costs by modifying the Settlement Agreement to indicate that any increase to the bounced-check fee will be reconsidered if a late-payment fee is instituted before PG&E's next GRC.

PG&E opposes TURN's proposals. First, PG&E asserts that TURN's variable fee of \$6.50 plus 1% of the bounded check would be confusing to customers and costly for PG&E to implement. Second, PG&E contends that TURN's alternate proposal for separate flat fees for each customer class is not adequately supported by record evidence. Finally, PG&E states that TURN may

raise its concerns about the possible double recovery of working-cash costs from the imposition of a late-payment fee in I.03-01-012 where the Commission is scheduled to address PG&E's proposal to implement a late-payment fee.

ii. Discussion

There is no dispute that PG&E's costs for bounced checks have increased and that PG&E should be allowed to establish a fee structure to recover the increased cost. The only dispute is the nature of the fee structure.

We find that the Settlement Agreement's adoption of an increased flat fee of \$11.50 is reasonable because it will enable PG&E to recover its rising costs for bounced checks, is easy for customers to understand, and will be less costly for PG&E to implement than other approaches.

We decline to adopt TURN's variable-fee because, as PG&E testified, it would be more confusing to customers than a flat-fee and more costly to implement than a flat-fee.³⁹

On the other hand, we find merit in TURN's alternative proposal for a separate flat fee for each customer class. We agree with TURN that such an approach would reduce the cross subsidies inherent in a single flat-fee, which is a worthwhile goal. However, as noted by PG&E, there is no supporting record for specific flat fees. Therefore, we decline to adopt class-specific flat fees at this time. We will revisit this issue in PG&E's next GRC. There, PG&E shall provide a separate, cost-based flat fee for each of the major customer classes and supporting work papers.

³⁹ Exhibit PG&E-18, p. 31-16, L: 17-27.

We decline to adopt TURN's proposal to modify the Settlement to state that the increased fee for bounced checks adopted today will be reconsidered if a late-payment fee is implemented before PG&E's next GRC. We intend to address PG&E's proposed late-payment fee in I.03-01-012.⁴⁰ TURN can raise in that proceeding its concerns about possible double recovery of working-cash costs from the imposition of both a late-payment fee and a bounced-check fee.

For the preceding reasons, we find the Settlement outcome for the bounced-check fee is reasonable in light of the record, consistent with applicable law, appropriately balances the interests at stake, and is in the public interest. As set forth in the Settlement, PG&E shall file a compliance advice letter within 30 days from the effective date of today's Opinion to implement the revised fee.

j. Customer Retention & Economic Development

i. Position of the Parties

(A) The Settlement Agreement

PG&E's Customer Retention and Economic Development program supports efforts to (1) retain customers, assets, and service territory that would otherwise be acquired by publicly-owned utilities; (2) attract, retain, or expand businesses that have the option to locate outside of PG&E's service territory; and (3) acquire the utility distribution facilities on military bases.

PG&E requested \$4.35 million in 2007 for Customer Retention and Economic Development expenses. The components of PG&E's request were as follows: (a) \$2.03 million for customer retention, (b) \$1.65 million for economic

⁴⁰ See Administrative Law Judge's Ruling Removing From This Proceeding All Issues Regarding Pacific Gas and Electric Company's Late Payment Fee, issued on May 31, 2006.

development, (c) \$0.35 million for acquisition of military facilities, and (d) \$0.32 million for regulatory/legislative activities. PG&E did not request capital expenditures in this area. DRA did not address this matter.

The Irrigation Districts opposed any ratepayer funding for customer retention and economic development. They argued that the primary purpose of PG&E's activities in this area is to combat the loss of service territory and customers to publicly owned utilities. In addition, Merced ID and Modesto ID called for an investigation of PG&E's implementation of Schedule E-31 to determine if abuses are occurring.⁴¹ Modesto ID also called for an investigation of PG&E's compliance with the Removal of Idle Facilities Agreement.⁴²

The Settlement resolves the disputes between PG&E and the Irrigation Districts by providing zero funding for customer retention, while continuing to fund economic development, acquisition of military facilities, and regulatory/legislative activities.⁴³ Additionally, Modesto ID and Merced ID agree to withdraw, for now, their requests for an investigation of PG&E's implementation of Schedule E-31.⁴⁴ Modesto ID also agrees to withdraw, for now, its request for an investigation of PG&E's compliance with the Removal of

⁴¹ Schedule E-31, Distribution Bypass Deferral Rate, was approved pursuant to § 454.1. This statute authorizes PG&E to offer discounted electric service when there is a competing, bona fide service offer from an irrigation district.

⁴² D.04-05-055, issued in PG&E's 2003 GRC proceeding, adopted the Removal of Idle Facilities Agreement that was signed by PG&E and Modesto ID. This Agreement requires PG&E to remove certain idle facilities and was intended to address Modesto ID's concern about PG&E leaving idle electric distribution facilities in place, and presumably in rate base, for long periods of time. The Agreement expires on December 31, 2006, unless PG&E and Modesto ID agree to extend it.

⁴³ Settlement Agreement, para. 19.

⁴⁴ Settlement Agreement, para. 50.

Idle Facilities Agreement in light of a commitment between the parties to negotiate possible revisions to that Agreement.⁴⁵

(B) Aglet

Aglet opposes the Settlement provisions that provide \$1.65 million of ratepayer funding for economic development. Alternatively, Aglet proposes a disallowance of \$0.50 million for trade shows, marketing, and economic development organizations.

Aglet observes that the objective of PG&E's economic development is to attract, retain, or expand businesses that have the option of locating outside of PG&E's service territory. Aglet opposes ratepayer funding of economic development because it is unrelated to the delivery of safe and reliable utility service. Nor is there any societal benefit, since one utility's loss is another's gain.

Aglet maintains that PG&E has not shown that it is cost effective for ratepayers to fund economic development. The Commission uses the ratepayer impact measure (RIM) to determine the cost effectiveness of economic development expenditures. The RIM is equal to the net present value of future revenues from business customers that are attributed to PG&E's economic development efforts, less PG&E's marginal cost to serve these customers and the cost of PG&E's Economic Development program.⁴⁶ Ratepayers benefit if the net present value exceeds zero. Aglet argues that PG&E's RIM calculations have two fatal flaws. First, Aglet presented information which purports to show that electricity costs are not crucial to most location decisions by California businesses. Aglet posits that 83% of the revenues that PG&E includes in its RIM

⁴⁵ Settlement Agreement, para 49.

⁴⁶ Exhibit PG&E-5, p. 9-15, Footnote 11.

calculations should be excluded to reflect the fact that electricity costs play a small role in business location decisions.

Second, Aglet asserts that PG&E's RIM calculations assume that the marginal cost to serve the business load that results from PG&E's economic development efforts will remain unchanged for the foreseeable future. The reality, according to Aglet, is that marginal costs will increase over time. If rising marginal costs are factored in, ratepayers are worse off under the RIM test.

(C) TURN

TURN opposes the Settlement's provision of \$1.65 million for economic development. TURN notes that the requested funding is double what PG&E was granted in its last GRC and double PG&E's recorded expenditures in 2004. TURN contends that PG&E has not justified a 100% increase in costs, choosing instead to fall back on the claim that the requested spending is warranted under the RIM test. As an alternative, TURN proposes that the Commission limit ratepayer funding for economic development to PG&E's expenditures in 2004.

TURN also opposes the Settlement's provision of \$0.32 million for regulatory/legislative activities tied to economic development. TURN believes these activities provide few or no benefits to ratepayers, duplicate the activities of other departments, and probably include below-the-line lobbying activities.

(D) PG&E and the Other Settling Parties

PG&E responds that its requested funding for economic development is consistent with Commission precedent. In D.05-09-018, which approved SCE's and PG&E's applications for economic development rates, the Commission made the following findings of fact:

1. The cost of electricity is a major cost of doing business in California. By some estimates electric rates cause about

one sixth of what some experts believe is the overall 30% cost premium for doing business in California.

2. The implementation of successful economic development projects benefits ratepayers by (a) increasing the revenues available to contribute to the utilities' fixed costs of doing business, thus lowering rates to other customers, and (b) providing increased employment opportunities and improved overall local and economic vitality.
(D.05-09-018, *mimeo.*, p. 27.)

Furthermore, the Commission explained:

Section 740.4(h) of the Pub. Util. Code requires the Commission to allow recovery through rates of expenses and rate discounts supporting economic development programs to the extent that ratepayers "derive a benefit from those programs." As the utilities have demonstrated, the implementation of successful economic development projects would benefit ratepayers directly by increasing the revenues available to contribute to the utilities' fixed costs of doing business, thus lowering rates to other customers.
(D.05-09-018, *mimeo.*, p. 13.)

The Commission also addressed ratepayer funding of economic development in SCE's most recent GRC proceeding. Citing the above-quoted findings in D.05-09-018, the Commission concluded that SCE's economic development program should be adopted with full ratepayer funding.⁴⁷

In rebuttal to TURN, PG&E states that its economic development activities do not include any below-the-line lobbying costs. This is because the work performed by the Economic Development organization is done by different

⁴⁷ D.06-05-016, *mimeo.*, p. 115.

people and is different in kind from the regulatory work undertaken by PG&E's Public Policy and Governmental Affairs personnel.

ii. Discussion

Ratepayer funding for economic development is subject to § 740.4(a). This statute states, "The commission shall authorize public utilities to engage in programs to encourage economic development." § 740.4(c) sets forth the scope of economic development activities, which include business expansion, relocation, retention, and recruitment. §§ 740.4(b) and 740.4(h) allow rate recovery of utility economic development expenses to the extent of ratepayer benefit.

There is no dispute that PG&E's economic development activities fall within the scope of § 740.4. In light of the guidance provided by § 740.4, we conclude that PG&E should be authorized to recover economic development expenses in 2007 as set forth in the Settlement Agreement, but only to the extent that such expenses benefit ratepayers. Consistent with Commission precedent, we will use the RIM test to evaluate ratepayer benefits.⁴⁸

PG&E's RIM calculations show that its economic development expenditures are cost effective for ratepayers, even if 95% of the businesses that benefit from PG&E's expenditures would have located in PG&E's service area absent such expenditures.⁴⁹ Aglet presents two criticisms of PG&E's RIM calculations, both of which are unpersuasive. First, Aglet contends that the revenues included in PG&E's RIM calculations should be reduced by 83% to reflect Aglet's claim that electricity costs are a minor factor in business location decisions. Aglet's criticism is moot, as PG&E's RIM calculations show that its

⁴⁸ D.95-06-016, Attachment 1, 60 CPUC2d 265, 277.

⁴⁹ Exhibit PG&E-5, p. 9-18.

Economic Development program is cost effective even if 95% of the businesses that benefit from the program are free riders.

Second, PG&E's RIM calculations assume that the marginal cost to serve the load that results from PG&E's economic development efforts will remain unchanged for the foreseeable future. Aglet contends that if rising marginal costs are factored in, ratepayers would be worse off under the RIM test. However, Aglet overlooks the fact that PG&E also used the same marginal revenue throughout this period.⁵⁰ While we agree with Aglet that marginal costs will probably rise over the 10-year period reflected in PG&E's RIM calculations, it is just as likely that PG&E's marginal revenue will increase as well. We believe that PG&E's RIM calculations would show that PG&E's economic development expenditures are cost effective for ratepayers if both rising marginal costs and rising marginal revenues are factored in.

TURN criticizes the RIM test for economic development expenditures, claiming that PG&E should "demonstrate that each new expenditure will yield ratepayer benefits rather than hiding behind an overall RIM test analysis for the aggregate spending level."⁵¹ We disagree. The Commission previously held that the following standards set forth in D.95-06-016 should be used to evaluate the cost-effectiveness of utility economic-development programs⁵²:

[All] cost-effectiveness and program analysis should be conducted at the end use level, as defined for each program by the protocols governing the measurement and evaluation

⁵⁰ PG&E's RIM calculations used a marginal cost of \$0.0549/kWh and a marginal revenue of \$0.12200/kWh. (Exhibit PG&E-5-WP09, p. 9-24.)

⁵¹ TURN's comments on the Settlement Agreement, p. 37.

⁵² See, for example, D.04-07-022, 2004 Cal. PUC LEXIS 325, *208.

of...programs, as well as the program as a whole. The “program as a whole” includes any miscellaneous measure for which an end use is not designated for measurement. If the adopted measurement protocols do not specify or require measurement at the end use level, cost-effectiveness analysis should be applied at the level of the program as a whole. (D.95-06-016, Attachment 1, Fn. 2.)

Using the criteria in the above-cited decision, we find that because PG&E’s Economic Development program as currently structured contains no-end use elements, the “program as a whole” standard should apply to PG&E’s economic development expenditures. This is what PG&E did in its RIM test calculations.

For the preceding reasons, we find that PG&E’s requested economic development expenditures are cost effective for PG&E’s ratepayers, and that PG&E should be allowed to recover all of its requested expenses for economic development pursuant to § 740.4. We decline to adopt Aglet’s alternate recommendation to disallow \$0.50 million for trades shows, marketing, and economic development organizations. These activities appear to be an important element of PG&E’s Economic Development program, and failure to fund these activities would likely diminish the effectiveness of the program.⁵³

For the same reason, we decline to adopt TURN’s proposals to (1) limit funding for PG&E’s economic development to the 2004 recorded level of \$0.97 million, and (2) disallow \$0.32 million of requested funding for the

⁵³ PG&E’s RIM calculations do not appear to have included \$0.50 million for trade shows, marketing, and economic development organizations. However, because PG&E’s calculations show \$3.48 million of net benefits at a 95% free rider rate (Exhibit PG&E-5, p. 9-16), the inclusion of an additional \$0.50 million of costs in the RIM calculations would not change our conclusion herein that PG&E’s economic development expenditures are cost effective for ratepayers.

regulatory/legislative component of PG&E's Economic Development program. We caution PG&E that it should not use any economic development funds to engage in below-the-line lobbying activities. We expect PG&E to keep records that demonstrate no below-the-line lobbying was funded with economic development funds.

5. Conclusion re: Customer Services

Based on our review of the record, we conclude that the Settlement Agreement provisions regarding Customer Services are reasonable in light of the record, consistent with the law, and in the public interest.

B. Electric Distribution

1. Electric Distribution Revenues

DRA was the only party that presented testimony on PG&E's present and forecasted electric retail revenues. DRA and PG&E agreed on forecasted billings, sales, and electric revenues at present rates.

Modesto ID questioned PG&E's treatment of non-bypassable charges for departing load customers in the computation of revenues at present rates. PG&E responded that departing load customers are not included in the computation of GRC revenues; these computations deal strictly with retail revenue accounts.

The Settlement adopts PG&E's forecasts of Electric Distribution billings, sales, and revenues at present rates. There is no opposition to the Settlement outcome on this matter. We concur with this outcome.

2. Electric Distribution O&M Expenses

PG&E requested \$494 million for Electric Distribution operation and maintenance (O&M) expenses in 2007. DRA proposed \$462 million, for a difference of \$32 million. TURN also proposed several disallowances.

The Settlement Agreement adopts \$489 million. The following table compares the Settlement outcome to PG&E's and DRA's litigation positions:

Settlement Agreement re: 2007 Electric Distribution O&M Expenses (\$ millions)							
		Comparison Exhibit			Variances Increase/(Decrease)		
	2006 Authorized	PG&E	DRA	Settlement	Settlement vs. 2006	PG&E vs. Settlement	DRA vs. Settlement
	(A)	(B)	(C)	(D)	(D) - (A)	(D) - (B)	(D) - (C)
O&M	443.9	494.2	461.7	488.8	44.9	(5.4)	27.1
Source: Settlement Agreement, Appendix B, Line 1.							

The Settling Parties agree that the O&M labor factors for all of PG&E's lines-of-business (e.g., gas, electric, and generation) in this proceeding and others will be calculated from 2004 recorded adjusted O&M labor.⁵⁴

Below, we assess the reasonableness of Settlement outcome for Electric Distribution O&M expenses in light of the record on the issues raised by DRA and TURN.

a. Issues Raised by DRA

All issues raised by DRA regarding Electric Distribution O&M expenses were resolved by the Settlement Agreement. The following is a summary of the record concerning the issues raised by DRA.

⁵⁴ Settlement Agreement, para. 52.

i. Issues Other than Vegetation Management

(A) Distribution Line Equipment Inspect and Test

DRA recommended a disallowance of \$0.6 million of PG&E's requested expenses in 2007 for Distribution Line Equipment Inspect and Test. PG&E responded that DRA's proposed disallowance, which was based on a three-year average of data for 2002 - 2004, did not reflect a sharp increase in work in 2005. DRA agreed that data for 2005 indicated a need to increase its forecast of work in 2007, but the parties disagreed on how to adjust the forecast.

(B) Preventative Maintenance

Preventive Maintenance consists of 18 categories of work, three of which were disputed by DRA at the time of the Comparison Exhibit.

(1) Overhead Repairs

PG&E requested \$28.5 million for Overhead Repair expenses in 2007. PG&E testified that in 2005 the resources normally assigned to maintenance work were shifted to higher priority work, such as emergency response, storms, and new business. Consequently, PG&E's request for 2007 included work that was rescheduled from 2005.

DRA accepted PG&E's forecast of unit cost, but disputed PG&E's forecasted units of work in 2007. DRA used a four-year average of work during 2002 - 2005 to arrive at its forecast of \$23.3 million for 2007, which was \$5.2 million less than PG&E's request. PG&E responded that it must perform the rescheduled maintenance work in 2007, and that DRA's averaging technique did not capture the need to perform the rescheduled work in 2007.

(2) BG Projects

BG Projects covers preventive maintenance work that is infrequent or of a limited duration. PG&E requested \$3.0 million annually for BG Projects during

2007, 2008, and 2009. Of this amount, \$2.2 million was for specific projects that had already been identified, and the rest was for projects that have yet to be identified. DRA recommended a total of \$2.2 million during 2007-2009 for only those projects that had already been identified, with no placeholder for projects that could not be identified years in advance.

(3) Other

The Other category consists of special projects that, if grouped in other categories, would skew units and unit costs. PG&E requested \$1.2 million for Other work in 2007. DRA proposed \$0.4 million, for a difference of \$0.8 million. PG&E's forecast was based on specific projects that had been identified for 2007. DRA's forecast was based on the four-year average of expenses during 2002 - 2005. PG&E responded that (1) the 2002 accounting data is anomalous because of a credit that corrected an error from the previous year, and (2) recorded expenses showed a clear upward trend in recent years.

(C) Pole Asset Management

Pole Asset Management expenses consists of three categories of work. PG&E and DRA agreed on PG&E's 2007 request of \$1.7 million for Pole Engineering and \$6.3 million for Pole Restoration. The only dispute involved Pole Test and Treat expenses. PG&E requested \$12.7 million for these expenses in 2007. DRA recommended \$11.9 million, for a difference of \$0.8 million.

DRA and PG&E disagreed on the forecast of work on inaccessible poles. DRA accepted PG&E's 2007 forecast unit cost of \$125, but argued that only 6,000 poles need to be addressed, rather than PG&E's 2007 forecast of 12,710 poles.

PG&E responded that its Pole Test and Treat program is based on a ten-year cycle. When contractors work their assigned lists of poles to test and treat each year, they encounter poles that are not accessible for a variety of

reasons, such as locked gates, dogs, customer not home, etc. PG&E's contractors identified approximately 35,000 such poles in prior years.

PG&E testified that it needs to complete the final 12,710 poles in 2007 to remain in compliance with General Order (GO) 165, which requires utilities to test and treat all wood poles over 15 years old once every 10 years. This 10-year deadline did not exist prior to 2007, as GO 165 was adopted in 1997.

(D) Externally Driven Work

Externally Driven Work covers two areas: (1) New Customer Connection expenses, and (2) Work Requested by Others (WRO). There were no disputes regarding the first area.

PG&E and DRA disagree on WRO expenses for pre-parallel inspections.⁵⁵ PG&E requested \$0.7 million for pre-parallel inspection expenses in 2007, which was based on historical costs of \$662,000 in 2004 escalated by 3% annually. DRA objected to any ratepayer funding for pre-parallel inspections because PG&E had not provided historical data aside from 2004 costs.

PG&E responded that prior to 2005, pre-parallel inspection expenses were recorded in transmission accounts, and this was the reason historical data had not been provided in response to DRA's data request.

(E) Conclusion

The Settling Parties agree that the resolution of the previously identified issues raised by DRA is subsumed in the Settlement outcome for Electric

⁵⁵ PG&E and DRA initially had two other areas of dispute regarding WRO expenses. In rebuttal, PG&E agreed with DRA's \$10.2 million forecast for relocations, and PG&E agreed to reduce its GIS forecast from \$3.5 million to \$1.6 million. At hearings, DRA's witness agreed with PG&E's revised GIS forecast.

Distribution O&M expenses. Based on our review of the record regarding these issues, summarized above, we find that PG&E has provided reasonable justification for virtually all of the expenses contested by DRA. The Settlement outcome for Electric Distribution O&M expenses is consistent with our conclusion, in that the Settlement adopts a higher amount for Electric Distribution O&M expenses than recommended by DRA.

ii. Vegetation Management

PG&E requested \$154.4 million in 2007 for its Vegetation Management program. PG&E also sought to convert the one-way Vegetation Management Balancing Account to a two-way balancing account due to the significant costs that may be needed to comply with recent interpretations of utility obligations under Pub. Resources Code § 4293 by the California Department of Forestry and Fire Protection (CDF).

DRA disagreed with PG&E's requested expenses and PG&E's proposal to convert the one-way Vegetation Management Balancing Account to a two-way balancing account. No other parties addressed this matter. The areas where PG&E and DRA disagreed are summarized below.

(A) Routine Tree Trimming & Removal

PG&E requested \$136.7 million in 2007 for Routine Tree Trimming & Removal expenses. DRA proposed \$124.6 million, for a difference of \$12.1 million. PG&E calculated its 2007 expenses by multiplying its forecast of 1,580,191 units by its forecasted unit cost of \$86.51. DRA accepted PG&E's forecast of units but used a lower unit cost of \$78.83.

Contract work is the largest expense in this area. PG&E testified that contractor prices are increasing, as demonstrated by the 7.8% increase in contractor prices in 2006 compared to 2005. The reasons for the increased prices

include (1) higher costs for labor, insurance, fuel, and environmental compliance, and (2) an increase in the ratio of overhead line miles to tree volume.

DRA used the weighted average of unit cost increases from 2000 to 2005 to forecast unit costs for 2007. DRA's forecasted unit cost of \$78.83 in 2007 represented an increase of 1.6% over 2006.

(B) Increased Staffing

PG&E requested \$0.7 million in 2007 to increase its Vegetation Management staff from 51 to 58 full-time PG&E employees. The requested new staff consisted of one quality assurance specialist and six tree-trimming foresters. DRA proposed a disallowance of \$0.3 million. DRA accepted PG&E's request for one additional quality assurance specialist but recommended only three additional tree-trimming foresters. DRA asserted that its proposed staff increase was sufficient in light of PG&E's compliance level of 99%.

PG&E responded that it was striving not only for excellent compliance statistics, but also to improve customer service and agency relationships.

(C) Recovery of CDF-Mandated Costs

PG&E expressed concern regarding the recovery of costs that could result from the CDF's push to have PG&E substantially increase its inspection, assessment, and removal of trees and limbs. PG&E believes this work is unwarranted and is working with the CDF to allay its concerns. However, if the CDF's current position prevails, PG&E testified that the cost of the Vegetation Management program could increase by \$50 million per year.

DRA agreed that ratepayers should fund work required by the CDF. The only disagreement was whether the Commission should establish a two-way balancing account with automatic flow through of CDF-mandated costs as

proposed by PG&E, or a memorandum account in which PG&E could record CDF-mandated costs and later seek to recover these costs as proposed by DRA.

(D) The Settlement Agreement

The Settlement provides \$150 million for Vegetation Management expenses. This outcome is \$4.5 million less than PG&E requested and \$8.0 million more than DRA recommended. The Settlement also keeps the Vegetation Management Balancing Account as a one-way balancing account, and allows PG&E to track and recover costs for additional work required by the CDF via a new memorandum account established through the advice letter process.⁵⁶

(E) Discussion

In light of the record evidence recounted above, we find the Settlement outcome for Vegetation Management is reasonable, consistent with the law, and in the public interest. The Settlement expense amount of \$150 million is supported by the record. With the one-way balancing account, any part of the \$150 million that is not needed for Vegetation Management will be refunded to ratepayers. In addition, the Settlement provisions that permit PG&E to track and recover additional costs for specified CDF actions through an advice filing, subject to audit, are a reasonable compromise of DRA's and PG&E's litigation positions and fairly balance ratepayers' and shareholders' interests.

iii. Other Electric Distribution O&M Expenses

PG&E and DRA agreed on the amount of Electric Distribution O&M expenses in 2007 for the following areas:

⁵⁶ Settlement Agreement, para. 18.

Other Electric Distribution O&M Expenses - Areas Where PG&E and DRA Agree	
Description	2007 (Millions)
Operation/Maintain Substation	\$27.0
System Automation Maintenance	\$3.3
Corrective Maint. Expense	\$50.6
Electric Distrib. Major Emergency	\$10.9
Electric Engineering and Planning	\$19.1
Electric Mapping	\$10.9
Develop and Provide Training	\$0.8
Maintenance of Other Equipment	\$4.2
Operate Electric Distribution	\$32.4
Total	\$159.20

There is no opposition to PG&E's requested expenses in the above table. We find that DRA's review and concurrence with the above costs, combined with the lack of opposition, lends weight to the Settlement outcome that adopts almost all of PG&E's requested Electrical Distribution O&M expenses.

b. Issues Raised by TURN

i. Double Recovery of AMI-Related Costs

(A) Position of the Parties

PG&E testified that the only area where it requested duplicative costs in both this GRC proceeding (A.05-12-002) and the AMI proceedings (A.05-06-028 and A.05-03-016) was Information Technology (IT). The Settling Parties agree that PG&E has removed the duplicative IT costs from this GRC proceeding,⁵⁷ and

⁵⁷ The specific amounts removed are shown in Appendix G of the Comparison Exhibit. (Exhibit PG&E-79, p.1-3, L: 13-27 and pp. G-1 to G-15.)

that the Settlement eliminates double recovery of IT costs. The Settling Parties further agree that all AMI program costs and benefits will be addressed through the AMI balancing accounts established pursuant to D.06-07-027.⁵⁸

TURN remains concerned about double recovery of AMI program costs. Although the Commission directed PG&E to track AMI program costs and benefits through balancing accounts,⁵⁹ TURN believes this will not prevent double recovery. To safeguard ratepayer interests, TURN recommends that the Commission require PG&E to list and audit all expenses and capital expenditures requested in this GRC proceeding that might also be recovered through the AMI program or have to be written off because of the AMI program.

To demonstrate the need for such an audit, TURN cites PG&E's request in the instant GRC proceeding to install and maintain a significant number of residential time-of-use (TOU) meters. Now that the Commission has approved PG&E's AMI program, TURN states that the Commission must consider the risk of authorizing TOU meter costs in this GRC that could be stranded in a few years. TURN posits that simply having a balancing account to track AMI program costs and benefits does not address such concerns.

PG&E opposes TURN's recommendations. PG&E contends that the AMI proceeding addressed all costs and benefits that are incremental to PG&E's GRC. Further, D.06-07-027 requires all AMI program costs and benefits to be tracked and accounted for separately from normal GRC-related operations and costs.⁶⁰

⁵⁸ Settlement Agreement, para. 20.

⁵⁹ D.06-07-027, FOF 17, Conclusion of Law (COL) 8, and Ordering Paragraph (OP) 2.

⁶⁰ D.06-07-027, *mimeo.*, p. 47.

(B) Discussion

We agree with TURN that it is prudent to closely monitor PG&E's \$1.7 billion AMI program. However, we do not believe it is necessary to adopt new requirements at this time regarding oversight of PG&E's AMI program. In D.06-07-027, we ordered PG&E to provide testimony in its next GRC regarding AMI program costs and benefits.⁶¹ TURN will have an opportunity to conduct full discovery at that time on all issues that would otherwise be addressed in TURN's proposed audit. We appreciate TURN's watchdog role, and we encourage TURN to avail itself of the opportunity in the next GRC to carefully scrutinize PG&E's AMI program for duplicative and stranded costs.

For the preceding reasons, we decline to adopt TURN's recommendation to order PG&E to list and audit its AMI program costs.

ii. TURN's Alternate Proposal for TOU Meter Expenses

(A) Position of the Parties

PG&E requested \$16.5 million in 2007 for expenses to install electric meters. TURN's primary recommendation, which is addressed, *supra*, is to reduce PG&E's request by \$7.6 million. TURN's alternative proposal, which is addressed here, is to reduce PG&E's request by \$1.8 million. The Settling Parties agree that the resolution of TURN's proposed reduction of \$1.8 million is subsumed in the Settlement outcome for Electric Distribution expenses.⁶²

TURN observes that PG&E's request for meter installation expenses in 2007 includes \$1.4 million to offset the elimination of the residential TOU meter

⁶¹ D.06-07-027, FOF 20 and OP 15.

⁶² Settlement Motion, p. 33.

installation charge in 2006. PG&E assumed that it would install 5,000 residential TOU meters annually during 2007 through 2009, while not receiving the \$277 per-meter installation charge as it has in previous years. TURN submits that the AMI program will reduce and eventually eliminate TOU meter installations. As result, TURN believes that PG&E's forecast of TOU meter installations is too high, and recommends that the Commission modify the Settlement Agreement to remove the \$1.4 million.

PG&E also requested \$0.4 million for capital expenditures in 2007 to install 5,000 RTOU meters annually during 2007-2009. TURN recommends that the Commission modify the Settlement Agreement to deny PG&E's request to prevent these capital expenditures from being stranded as TOU meters are replaced under the AMI program.

Finally, PG&E forecasted a net increase in TOU meters from 11,671 in 2004 to 20,700 in 2007. TURN states that it would be imprudent to forecast a corresponding increase in maintenance costs for TOU meters that will likely be replaced during the GRC cycle as a result of PG&E's AMI program.

PG&E opposes TURN's recommendations. PG&E forecasts an increase in the number of installed TOU meters during the GRC cycle and, as a result, PG&E will incur higher maintenance and other costs. At the same time, because the Commission has eliminated the installation fee for TOU meters, PG&E will have less revenue to offset costs related to TOU meters.

(B) Discussion

The premise of TURN's proposed disallowance is that PG&E will not incur its forecasted level of expenses and capital expenditures for TOU meters during the GRC cycle because TOU meters will be replaced over the next few years by

the AMI program. We agree that TOU meters will eventually be replaced, but until that occurs PG&E will continue to have TOU-related costs.

PG&E testified that current demand for TOU meters is strong, and PG&E forecasts a net increase of 5,000 TOU customers annually through 2007. The strong demand is likely fueled, in part, by the elimination of the TOU meter installation charge by D.05-11-005.⁶³ PG&E must meet that demand, as PG&E is required by its tariffs to provide TOU service to customers that request it.⁶⁴

For the preceding reasons, we decline to adopt TURN's proposal to reduce PG&E's revenues requirement for TOU meters. Moreover, the proposal is largely moot, as any savings from the replacement of TOU meters should already be reflected in the Stipulated AMI Project Benefits adopted by D.06-07-027.

iii. Cessation of TOU Meter Installations

(A) Position of the Parties

TURN recommends that the Commission order PG&E to stop installing TOU meters because the newly installed TOU meters will be replaced within a few years by PG&E's AMI program. PG&E responds that it cannot not stop installing TOU meters because it is required by its tariff to provide a TOU meter to any customer who requests it. TURN replies that PG&E should file a petition to modify the decision directing PG&E to install TOU meters.

(B) Discussion

We decline to adopt at this time TURN's proposal to require PG&E to stop installing TOU meters. TURN did not address what effect its proposal might

⁶³ D.05-11-005, *mimeo.*, pp. 9, 10, and 33.

⁶⁴ Exhibit PG&E-15, pp. 21-3 and 21-4.

have on the Commission's policy of relying on demand side management (DSM) as one way to reduce the need for new generation resources and to combat global climate change. TOU meters advance the Commission's policy. We share TURN's concern about the cost-effectiveness of TOU meters in light of PG&E's impending AMI roll out, but TURN's proposal to cease installing TOU meters needs to be evaluated in the context of our policy of promoting DSM. We do not have a sufficient record to do so here.

iv. Forecasted Meter Expenses for 2007

(A) Position of the Parties

PG&E records expenses to install electric meters in its internal account Major Work Category (MWC) EY - Install Electric Meters and Devices. PG&E initially requested \$17.1 million for MWC EY in 2007, but subsequently agreed to two reductions: (1) DRA's reduction of \$0.335 million to normalize costs for Analog Cell Phone Replacement over the three-year GRC, and (2) TURN's reduction of \$0.238 million to normalize costs for the Agricultural Diesel Irrigation Pumping Conversion program over the three-year GRC. These two adjustments reduced PG&E's request for MWC EY in 2007 to \$16.5 million. With these two adjustments, PG&E and DRA no longer had any disputes regarding MWC EY, but PG&E and TURN continued to disagree on other aspects of MWC EY.

TURN submits that PG&E's request for \$16.5 million is unreasonable because it is 229% higher than 2005 recorded costs of \$7.2 million. TURN recommends that the Commission modify the Settlement to set PG&E's revenue requirement for MWC EY in 2007 at \$9.2 million, which is \$7.3 million less than PG&E requested. TURN's proposal is equal to PG&E's average annual costs for 2004 and 2005 escalated to 2007 by customer growth of 1.6% annually.

PG&E responds that TURN's reliance on 2004 and 2005 recorded expenses fails to capture significant additional expenses in 2007. PG&E provided four examples to demonstrate this point. First, PG&E's recorded expenses in 2005 were reduced by \$3 million due to increased capitalization of labor costs associated with a concerted effort to replace obsolete meters. PG&E forecasts a more normal meter replacement effort in 2007, resulting in a \$3 million increase in expenses (and a corresponding \$3 million reduction in capitalized labor costs).

Second, in D.05-11-005 the Commission eliminated the installation charge for TOU meters, thereby reducing PG&E revenues by \$1.4 million in 2007 relative to 2004. These revenues were previously used to offset PG&E's revenue requirement for MWC EY. PG&E states that it must recover the lost revenue in 2007 through a higher revenue requirement for MWC EY.

Third, PG&E forecasts a significant increase in the number of TOU meter installations in 2007 because of the elimination of the installation charge, which will cause a corresponding increase in installation expenses.

Finally, PG&E forecasts a substantial increase in electric meter installations for agricultural customers in light of the State's policy to reduce air pollution by converting diesel-powered irrigation to utility electric service as part of the Agricultural Diesel Irrigation Pumping Conversion (Ag-ICE) program.

(B) Discussion

PG&E requested an increase of 229% for MWC EY expenses in 2007 compared to recorded costs in 2005. We find that PG&E has justified most of this increase for the reasons summarized above, but not all of the increase.

The Settling Parties agree that the resolution of this matters is encompassed within the Settlement outcome for Electric Distribution expenses for O&M and Customer Services.⁶⁵ The Settlement Agreement adopts a revenue requirement of \$736 million in 2007 for Electric Distribution expenses for O&M and Customer Services, which is \$9 million less than PG&E requested and \$29 million more than DRA recommended.⁶⁶ We conclude that the portion of MWC EY expenses that PG&E has not justified is subsumed in the Settlement's reduction of PG&E's requested Electric Distribution expenses.

For the preceding reasons, we find the Settlement outcome for MWC EY is reasonable in light of the record. Accordingly, we decline to adopt TURN's proposal to modify the Settlement Agreement to reduce funding for MWC EY.

v. Revised Accounting for Meters

(A) Position of the Parties

PG&E records its costs for electric and gas meters in its internal expense accounts MWC EY (electric) and MWC HY (gas). Some of these costs are eventually transferred to, and capitalized in, the internal asset accounts MWCs 25 (electric meters) and 74 (gas meters). TURN contends that PG&E should capitalize meter costs in MWCs 25 and 74 immediately without clearing them through MWCs EY and HY. TURN believes its recommendation would allow parties and the Commission to more easily evaluate whether PG&E's meter expenses and capitalized costs are reasonable.

⁶⁵ Settlement Motion, p. 33.

⁶⁶ Settlement Motion, p. 21, Table 3; Settlement Agreement, Appendix B, p. 24, L: 1, 2.

PG&E opposes TURN's recommendation and states that it properly accounts for capitalized meter costs.

(B) Discussion

TURN has not shown that PG&E's accounting is erroneous. We decline to meddle with PG&E's internal accounting system by adopting TURN's proposal. It appears that PG&E has provided to TURN and the other parties sufficient information to enable them to understand and analyze PG&E's meter expenses and capitalized meter costs. We expect PG&E to do so again in its next GRC.

c. Conclusion

Based on our review of the record, we conclude that the Settlement Agreement outcome for Electric Distribution O&M expenses is reasonable in light of the record, consistent with the law, and in the public interest.

3. Electric Distribution Capital Expenditures

PG&E requested \$862.0 million for Electric Distribution capital expenditures in 2007. DRA recommended \$816.9 million, for a difference of \$45.1 million. No other parties addressed this matter. The Settlement adopts PG&E's request.⁶⁷

There is no opposition to the Settlement outcome on this matter. Below, we review the record regarding the issues raised by DRA in order to assess the reasonableness of the Settlement outcome for Electric Distribution capital expenditures.

⁶⁷ Settlement Agreement, Appendix G, Table 4-1.

a. Summary of the Record

i. Pole Asset Management

PG&E requested \$94.1 million to replace 15,000 utility poles in 2007 at a unit cost of \$6,276. DRA recommended a 5% reduction in the unit cost and a reduction of 1,000 in the number of units, resulting in a forecast of \$83.5 million.

PG&E responded that DRA's proposed reduction in unit costs ignored the shift that has occurred in the location of the poles to be replaced. PG&E represented that it will be replacing relatively more poles in the high-cost urban areas, thereby increasing costs above historical levels.

PG&E further contended that DRA's forecast of replacing 14,000 poles annually failed to address the "bubble" of pole replacements that must be done to stay in compliance with safety standards set forth in GO 95 and to proactively address aging infrastructure.

ii. Undergrounding Projects

PG&E requested \$55 million for capital expenditures in 2007 for undergrounding projects. DRA proposed a \$5 million disallowance based on past spending. PG&E responded that historical spending should not be used to estimate future expenditures in this area because historical spending had been suppressed by the energy crisis, PG&E's bankruptcy, and the need to fund higher priority projects.

iii. Tie-Cable Circuits

Tie-cable circuits connect distribution substations together. Most tie-cables are more than 40 years old. PG&E requested \$19.1 million for capital expenditures in 2007 to replace tie-cables. DRA proposed \$10.9 million, for a difference of \$8.2 million. DRA believed that a lower level of spending was appropriate given that tie-cables are reliable and are usually operated in parallel.

PG&E responded that its tie-cables are failing with increasing frequency because of their age. PG&E explained that because tie cables are a crucial part of its distribution system, the aging tie cables need to be replaced expeditiously to maintain system reliability. PG&E's expert witness explained why higher spending is prudent:

Although the failure of a single tie-cable will not generally lead to any customer interruptions, the failure of multiple tie cables could lead to a very large number of interruptions. The probability of two tie-cable outages occurring at the same time increases with the square of cable failure probability. If tie-cable failure rates increase by a factor of five, the probability of customer interruptions will increase by a factor of twenty-five. For this reason, deteriorated tie-cables at PG&E should be given a high priority for proactive replacement.
(Exhibit PG&E-4, p. 18-39, para. 3.)

PG&E asserted that the amount of tie-cable that needs to be replaced is known and the cost to replace the cable is not disputed. PG&E contended that its request for \$19.1 million is consistent with its 2005 recorded expenditures of \$17.8 million. PG&E also stated that DRA's forecast represented only 61% of what PG&E spent in 2005 and 54% of what PG&E planned to spend in 2006.

iv. Plastic Insulated Cables

PG&E requested \$13.875 million for capital expenditures in 2007 to replace plastic insulated cables. DRA proposed \$5.074 million, for a difference of \$8.801 million. DRA offered three reasons to support its forecast. First, DRA believes there is insufficient data on exactly when and where PG&E intends to replace plastic insulated cables. Second, the settlement reached in the Mission Substation Fire OII calls for a consultant's report on PG&E's system reliability,

and this report may provide guidance on where funds should be spent. Finally, the most PG&E has ever spent on this activity is \$4.630 million in 2003.

PG&E responded that it already knows, for the most part, when and where it will replace plastic insulated cable in 2007. PG&E also asserted that the consultant report from the Mission Substation OII is unlikely to provide new guidance as to where PG&E's capital expenditures should best be spent because (1) the report is limited to San Francisco, and (2) the study is not designed to analyze the optimization of plastic insulated cable replacement, but to identify ways to improve reliability overall.

PG&E disputed DRA's use of historical spending to forecast future capital expenditures in this area. PG&E asserted that two consultant reports found that PG&E needs to replace 300 to 400 miles of cable annually to maintain system reliability. PG&E's proposed expenditures, although large compared to historical spending, will replace less than 50 miles per year.

v. Lead Cables

PG&E requested \$8.70 million for capital expenditures in 2007 to replace paper insulated lead covered cables (PILC). DRA proposed \$2.03 million, for a difference of \$6.67 million. DRA raised four arguments in support of its recommendation. First, PG&E needs more data to optimize expenditures. Second, a forthcoming consultant's report required by the Mission Substation Fire OII settlement will likely provide guidance as to where PG&E should make its capital investments. Third, lead cables are reliable. Finally, the largest amount PG&E has spent in this category was \$1.83 million in 2004.

PG&E responded that historical expenditures in this area are not a good predictor of future requirements. Most PILC is at least 40 years old, and PILC failures have increased sevenfold in the last 20 years. PG&E believes the

growing rate of failures shows a need for capital expenditures above historical levels, and that no additional data is needed to support these investments.

PG&E acknowledged that the consultant's report from the Mission Substation Fire OII might provide additional guidance as to where PG&E's capital expenditures for PILC replacement would be best spent. However, PG&E argued that it has already identified a great deal of work, and that the consultant's report could recommend an increase in expenditures.

vi. Other Electric Distribution Capital Expenditures

PG&E requested \$6.6 million in 2007 to repair equipment. DRA proposed \$4.7 million, for a difference of \$1.9 million. DRA's proposal was equal to 2005 expenditures, and was based on a statement in PG&E's work papers that capital expenditures in this area would be static.

PG&E responded that the statement regarding a static level of capital expenditures was relative to PG&E's forecast of \$6.65 million of capital spending in 2005 for repaired equipment. Actual spending in 2005 was lower than forecast because funds were shifted to higher priority work, such as new business and emergency response. PG&E states that lower spending on repaired equipment in 2005 does not mean there is less work, only that the work has been deferred.

b. Discussion

The Settlement Agreement provides PG&E with the full amount of its requested revenue requirement for Electric Distribution capital expenditures. Based on our review of the record, we are satisfied that the requested funding is needed to maintain, repair, upgrade, and expand PG&E's Electric Distribution system. We expect PG&E to use all the funds granted by today's Opinion for Electric Distribution capital expenditures for this purpose. If PG&E fails to do, it should provide a detailed explanation in its next GRC.

With this understanding, we find the uncontested Settlement outcome for Electric Distribution capital expenditures to be reasonable in light of the record, consistent with applicable law, and in the public interest.

4. Electric Distribution Plant

PG&E forecasted \$16.810 billion of weighted-average plant in 2007 for Electric Distribution Unbundled Costs Categories (UCCs).⁶⁸ DRA forecasted \$16.754 billion, for a difference of \$54 million. The Settlement adopts \$16.808 billion. Other than the previously described issues concerning capital expenditures, there is no opposition to the Settlement outcome on this matter.

We find the Settlement result for Electric Distribution plant is reasonable in light of the record, consistent with applicable law, and in the public interest.

C. Gas Distribution

1. Gas Distribution Revenues

There were no disputes regarding PG&E's forecasts of gas customers, billings, sales, and 2007 Gas Distribution revenues at present rates. The Settlement Agreement adopts PG&E's forecasts. We concur with this uncontested outcome.

2. Gas Distribution O&M Expenses

PG&E requested \$143 million for Gas Distribution O&M expenses in 2007. DRA and TURN proposed several disallowances. The Settlement adopts \$140 million. The following table compares the Settlement outcome with PG&E's and DRA's litigation positions:

⁶⁸ Electric Distribution UCCs include Wires and Services, Trans-Level Direct Connects, and Electric Public Purpose Program Administration.

Settlement Agreement re: Gas Distribution O&M Expenses (\$ millions)							
	2006 Authorized	Comparison Exhibit		Settlement	Variances Increase/(Decrease)		
		PG&E	DRA		Settlement vs. 2006	PG&E vs. Settlement	DRA vs. Settlement
	(A)	(B)	(C)	(D)	(D) - (A)	(D) - (B)	(D) - (C)
O&M	138.8	142.5	133.0	139.9	1.0	(2.7)	6.9
Source: Settlement Agreement, Appendix B, Line 11.							

Below, we assess the reasonableness of the Settlement outcome for Gas Distribution O&M expenses in light of the record on the issues raised by DRA and TURN.

a. Issues Raised by DRA

DRA recommended that PG&E's requested expenses for Gas Distribution O&M in 2007 be reduced by \$10.156 million. The bulk of DRA's proposed disallowance was in three areas: (1) \$2.402 million for Field Service; (2) \$3.544 million for Building Maintenance; and (3) \$3.670 million for Customer Service Dispatch. These disallowances are addressed elsewhere in today's Opinion where we find the Settlement outcome for these matters is reasonable.⁶⁹

⁶⁹ Field Service is subsumed within our consideration of Gas Field Service and Dispatch Operations expenses. Building Maintenance is subsumed within our consideration of Corporate Real Estate expenses. Customer Service Dispatch is subsumed within our consideration of Customer Services expenses.

b. Issues Raised by TURN

TURN recommends that the Settlement be modified to reduce funding for Gas Distribution O&M expenses in five areas.⁷⁰ We address each area below.

i. Mark and Locate

(A) Position of the Parties

PG&E is required by federal and state law to participate in regional “one-call” notification systems for planned excavation affecting underground utilities.⁷¹ These one-call systems are commonly referred to as “USA,” an acronym for underground service alert. Builders and others planning to excavate must call the USA at least two working days prior to excavating, and PG&E must provide information to the excavators within that two-working day period. PG&E informs the excavators about the location of PG&E’s underground facilities, usually by having PG&E personnel visit the site, locate the underground pipes and wires, and place color-coded surface markings that show where the utilities are located (referred to as “Mark and Locate”). We address here PG&E’s Mark & Locate expenses for both gas and electric distribution.

USA notifications, called “tags,” are transmitted electronically to PG&E and processed by the Utility’s ticket-handling software and mapping personnel. The following table shows USA tag volume since 1992:

⁷⁰ PG&E conceded \$2.798 million (2007\$) of additional disallowances of Gas Distribution O&M expenses recommended by TURN. (TURN comments on the Settlement Agreement, p. 41, Table 1.)

⁷¹ 49 C.F.R. § 192.614 (2005) and Gov. Code § 4216.

<u>Year</u>	<u>USA Tags</u>	<u>% Increase in USA Tags</u>
1992	234,578	
1993	234,390	-0.1
1994	248,759	6.1
1995	263,002	5.7
1996	300,792	14.4
1997	356,371	18.5
1998	394,969	10.8
1999	442,325	12.0
2000	500,109	13.1
2001	508,237	1.6
2002	598,227	17.7
2003	663,325	10.9
2004	711,476	7.3

Source: Exhibit PG&E-4, Chapter 15, Table 1-4

The above Table shows that the number of tags increased by 9.4% annually during 2000 – 2004 and by 11.2% annually during 1995 – 2004. For 2005, PG&E forecasted a 20% decrease in units and an associated 27% increase in unit cost. The reduction in units is due to a change in California law⁷² that increased the life of a USA tag from 14 to 28 days.

Prior to 2005, many tags were extended beyond the 14-calendar day period, which was counted as a new tag. Most of these extensions did not require PG&E to re-mark because the excavator had maintained the marks. The only work associated with these tags was the administrative processing. With the longer valid period, PG&E expects fewer tags, but a higher percentage of tags will require field work, which increases unit cost.

⁷² Gov. Code § 4216. AB 1264.

After 2005, PG&E forecasts that USA tags will increase by 7% annually in 2006 and 2007, which is lower than the historic average, but similar to the 2004 increase. The net result is that PG&E expects to process 651,656 USA tags in 2007 at a total cost of \$31.2 million.

TURN recommends that the Commission modify the Settlement Agreement to reduce Mark and Locate expenses by \$1.201 million in 2007. TURN forecasts lower costs than PG&E because TURN believes the number of USA tags will grow by 4% annually during 2006 and 2007 compared to PG&E's forecast of 7% annual growth. TURN's forecast of lower growth is predicated on a slowdown of residential construction, which is one of the main drivers of PG&E's Mark & Locate expenses.

PG&E responds that its forecast is better than TURN's for five reasons: (1) TURN's proposed tag growth of 4% annually is less than historical growth; (2) PG&E's forecasted tag growth of 7% annually is conservative, as it is less than historical growth; (3) TURN's proposed growth rate is based on a small snapshot in time, the first few months of 2006, which were an exceptionally rainy period making construction difficult; (4) PG&E's 2005 actual costs were 1.5% higher than PG&E's 2005 forecast in A.05-12-002; and (5) there will likely be an increase in tags because of proposed changes in California law designed to improve safety for excavators.

(B) Discussion

TURN forecasts 4% annual growth of USA tags during 2006 and 2007. PG&E forecasts 7% annual growth. PG&E acknowledges that residential

construction is a significant driver of Mark & Locate expenses.⁷³ Official data shows that residential construction in California declined by 1.9% in 2005, the first decline since 1996.⁷⁴ Recent economic data show that the downturn in residential construction accelerated in 2006. In the first eight months of 2006 the pace of homebuilding in California was down nearly 16% from the same period in 2005.⁷⁵ Based on this data, we conclude that TURN's forecast of 4% annual growth in USA tags during 2006 and 2007 is more plausible than PG&E's forecast of 7% annual growth, and that TURN's forecast may actually be overly generous.

The information available for 2006 does not support PG&E's forecast of 7% annual tag growth in 2006 and 2007. During the first four months of 2006 there were 9% fewer tags than the comparable period for 2005.⁷⁶ PG&E submits that above-normal rain accounts for the reduced tags in 2006. It is true that the number of rain days during January-April 2006 was 27% higher than 2005.⁷⁷ However, TURN provided information which indicates that rain cannot account for this entire decrease in tags. PG&E's calculation of a 27% increase in rain days was based on the average of six weather stations over four months. TURN's review of the data shows that weather was drier at every weather station during February 2006 as compared to February 2005, with a total of 24 fewer rain days. Despite the drier weather, tags declined in February 2006 by 1.7% relative to

⁷³ Exhibit PG&E-18, p. 23-7, Line 31.

⁷⁴ TURN comments filed on September 20, 2006, p. 44.

⁷⁵ California Department of Finance October 2006 monthly economic update. (http://www.dof.ca.gov/HTML/FINBULL/2006_FB/October/Oct06.asp) We take official notice of this economic data pursuant to Rule 13.9.

⁷⁶ Exhibit TURN-15.

⁷⁷ Exhibit TURN-15.

February 2005.⁷⁸ This information demonstrates that it is unlikely that rain accounts for the entire decrease in tags during the first four months of 2006. A more reasonable explanation is that the significant decrease in residential construction was a major factor in the reduction of tags.

PG&E contends that its forecast of 7% annual growth in tags in 2006 and 2007 is reasonable because there will likely be an increase in tags during the GRC cycle due to proposed changes in California state law. PG&E testified that Cal/OSHA and Senator Tolakson are working to introduce legislation that will improve safety for excavators by requiring more excavators to call to have underground facilities located and marked prior to excavating.⁷⁹

PG&E's anticipation of new legislation is not a reasonable basis for finding that PG&E will have 7% annual growth in tags during 2006 and 2007. We conclude for the preceding reasons that TURN's forecast of 4% annual growth of tags during this period is reasonable and may even be too high.

The Settling Parties maintain that TURN's proposed disallowance of \$1.201 million is reflected in the Settlement outcome for Gas Distribution O&M expenses. The Settlement provides \$140 million for Gas Distribution O&M expense in 2007, which is \$3 million less than PG&E's request of \$143 million and \$7 million more than DRA's recommendation.

Almost all of the difference between PG&E and DRA was in three areas: (1) DRA's proposed disallowance of \$2.4 million for gas service representative staff levels; (2) DRA's proposed disallowance of \$3.7 million for a software upgrade to PG&E's Field Automation System (FAS); and (3) DRA's proposed

⁷⁸ TURN comments dated September 20, 2006, pp. 43-44.

⁷⁹ Exhibit PG&E-18, p. 23-8.

disallowance of \$3.5 million for several PG&E's projects to rehabilitate and renovate real estate facilities.⁸⁰ After reviewing the record on these issues, we find the Settlement outcome of providing PG&E with \$3 million less than it requested is reasonably close to how we would have decided the three disallowances proposed by DRA and all of TURN's proposed disallowances for Gas Distribution O&M expenses, including TURN's proposed reduction of \$1.201 million for Mark & Locate.⁸¹ We address TURN's other proposed disallowances of Gas Distribution O&M expenses below.

For the preceding reasons, we conclude that the Settlement outcome for Mark & Locate expenses is reasonable in light of the whole record, consistent with applicable law, and in the public interest. Therefore, we decline to adopt TURN's proposal to modify the Settlement Agreement on this matter.

ii. Leak Survey

(A) Position of the Parties

PG&E requested \$6.271 million for Leak Survey expenses in 2007. DRA did not contest PG&E's request. TURN recommends a disallowance of \$0.157 million. The reason for the difference between PG&E's and TURN's positions is that TURN proposes a 9% increase in Leak Survey expenses in 2007 compared to 2004, which is less than PG&E's requested 12% increase. TURN's escalation rate is based on recorded costs for 2000-2005, while PG&E's escalation rate is based on the 10-year average growth rate of 1.3% in the number of miles

⁸⁰ PG&E email to service list on November 22, 2006.

⁸¹ For example, it is likely that we would have granted PG&E's full requests for (i) FAS software upgrade, and (ii) building seismic retrofits and upgrades.

surveyed. TURN believes its approach is superior because PG&E's Leak Survey costs were mostly declining during 2000-2005.

PG&E responds that TURN's ignores the main driver of the long-term growth in these expenses, namely, the growth in PG&E's gas distribution system.

(B) Discussion

We find TURN's forecast for Leak Survey expenses in 2007 to be markedly better than PG&E's. As noted by TURN, PG&E's forecast of \$6.271 million is out of line with its actual expenses during 2000-2005, which were as follows:

PG&E Leak Survey Expenses (\$millions)							
2000 Actual	2001 Actual	2002 Actual	2003 Actual	2004 Actual	2005 Actual	2006 Forecast	2007 Forecast
5.965	5.848	5.665	6.033	5.610	5.651	6.075	6.271
Source: Exhibits TURN-13 and TURN-14							

PG&E's forecast of \$6.271 million for Leak Survey expenses is 11% higher than 2005. We agree with TURN's observation that PG&E's forecasted increase is excessive in light of PG&E's generally flat to declining expenses during 2000-2005. TURN's proposed increase of 9% for Leak Survey expenses in 2007 compared to 2004 (which exceeded 2005) is reasonable, if not generous.

Although we agree with the general merits of TURN's position, we decline to modify the Settlement Agreement to reduce funding for Leak Survey expenses in 2007 by \$0.157 million. The Settlement provides \$140 million for Gas Distribution O&M expense in 2007, which is \$3 million less than PG&E requested. The Settling Parties represent that the Settlement outcome takes into consideration TURN's position on Leak Survey expenses. We conclude that because TURN's proposed disallowance of \$0.157 million for Leak Survey

expenses is small compared to the Settlement Agreement's reduction of \$3 million for Gas Distribution expenses, it is reasonable to assume that TURN's disallowance is reflected in the Settlement. Based on this assumption, we find the Settlement outcome for Leak Survey expenses is reasonable in light of the whole record, consistent with the law, and in the public interest.

iii. Operate Gas Systems

(A) Position of the Parties

PG&E's Operate Gas System (OGS) activities include (1) monitoring system pressures, flows, odorant levels, (2) operating valves and regulator stations, and (3) adjusting gas flow rates in response to demand. PG&E requested \$3.3 million expenses for OGS in 2007.

TURN recommends a disallowance of \$0.135 million in 2007 because OGS costs generally declined during 2000-2005. PG&E responds that TURN's proposal ignores inflation and system growth. PG&E also contends that its efforts to drive down costs in 2000-2004 should not be used to deny recovery of future cost increases that are driven by inflation and system growth.

(B) Discussion

We generally agree with TURN that PG&E's forecast of OGS costs in 2007 is too high in relation to its recorded costs. PG&E's recorded and forecast costs for OGS are as follows:

(\$000)						
2000 Recorded	2001 Recorded	2002 Recorded	2003 Recorded	2004 Recorded	2005 Recorded	2007 Forecast
2,566	2,764	3,143	2,888	2,666	2,680	3,257
Source: Exhibit TURN-16						

We are not persuaded by PG&E that OGS costs will be 21.5% higher in 2007 compared to 2005. Likewise, we are not convinced by PG&E's argument that its successful efforts to constrain OGS costs during 2000-2005 cannot be continued in 2007.

Although we agree with the general merits of TURN's position, we decline to adopt its proposal to modify the Settlement Agreement to reduce OGS expenses in 2007 by \$0.135 million. The Settling Parties agree that the revenue requirement for OGS is subsumed within the Settlement outcome for Gas Distribution O&M expenses. The Settlement provides \$140 million for gas distribution operations expense in 2007, which is \$3 million less than PG&E's request of \$143 million. The Settling Parties further agree that the Settlement outcome takes into consideration TURN's position on OGS expenses. We conclude that because TURN's proposed adjustment of \$0.135 million for OGS is small in relation to the Settlement Agreement's overall reduction of \$3 million for gas distribution expenses, it is reasonable to assume that TURN's proposed adjustment is reflected in the Settlement Agreement. Based on this assumption, we find that the Settlement outcome for OGS expenses is reasonable in light of the whole record, consistent with the law, and in the public interest.

iv. Corrective Maintenance

(A) Position of the Parties

Corrective maintenance consists of repairing and replacing damaged or failed facilities. PG&E requested \$19.266 million for corrective maintenance expenses in 2007.

TURN proposes that funding for corrective maintenance be reduced by \$0.539 million based on historical costs during 2000-2005. TURN contends that its reduction is reasonable in light of lower unit costs in 2005.

PG&E responds that its forecast of 2007 expenses, which was based on 2004 recorded costs inflated by the ten-year average increase of 1.3%, is reasonable because (1) it is only 5% higher than 2004 recorded costs; (2) TURN's estimate ignores circumstances that drove down PG&E's unit costs in 2005, and which will not recur 2007; and (3) the 2005 data used by TURN does not reflect the fluctuating nature of corrective maintenance costs.

(B) Discussion

We decline to adopt TURN's proposal to modify the Settlement Agreement to reduce funding for corrective maintenance by \$0.539 million. PG&E's recorded and forecasted costs for corrective maintenance are as follows:

(\$000)							
2000 Recorded	2001 Recorded	2002 Recorded	2003 Recorded	2004 Recorded	2005 Recorded	2006 Forecast	2007 Forecast
20,505	20,900	19,883	17,912	18,312	18,288	18,715	19,266
Source: Exhibit TURN-17							

PG&E's forecast of 2007 expenses is based on 2004 recorded costs inflated by the ten-year average annual increase of 1.3%. The result is that 2007 forecasted costs are 5.2% higher than 2004 recorded costs, and less than recorded costs in 2000, 2001, and 2002. We conclude that this outcome is reasonable.

TURN argues that we should reduce PG&E's requested expenses in 2007 because PG&E forecasts that unit costs will be higher in 2007 compared to 2005. While there is some merit to TURN's position, other historical measures of costs discussed in the previous paragraph demonstrate that PG&E's forecast for 2007 is reasonable.

v. Meter Protection Program

(A) Position of the Parties

The purpose of PG&E's Meter Protection Program (MPP) is to correct gas meter installations that do not conform to Federal safety regulations. The program encompasses approximately 400,000 meter locations that are to be inspected and modified, as necessary, between 1990 and 2016. At the end of 2004, PG&E had inspected all 400,000 locations, found that approximately 107,000 meters required corrective action, had corrected approximately 66,000 meters, and had roughly 41,000 meters awaiting corrective action.

PG&E requested \$3.246 million for MPP expenses in 2007. PG&E's request was based on the remaining scope of the program, the program schedule, and unit costs. TURN recommends that the Commission modify the Settlement Agreement to reduce funding for the MPP in 2007 by \$0.359 million. TURN's proposal is based on the three-year average of expenses in 2003-2005 escalated by 5% to reflect more expensive work.

PG&E responds that unit costs in 2007 will exceed the historical average recommended by TURN because of (1) labor and material escalation, and (2) changes in the scope of work. In 2004, approximately 30% of the locations with inaccessible service valves were resolved by raising valve boxes instead of installing new valves. PG&E anticipates higher unit costs in 2007 and beyond as the easy-to-fix locations are depleted.

PG&E contends that TURN's use of a three-year average is flawed for several reasons. First, the MPP is driven by Department of Transportation and California Fire Code requirements. In order to achieve the goals of the program on schedule, PG&E must adhere to the forecasts in its testimony. Second, PG&E has finalized the scope of this program, resulting in a more accurate forecast.

Finally, over the three-year period used by TURN (2003-2005), PG&E's expenditures exceeded its 2003 GRC forecast by 8%, demonstrating PG&E's commitment to finishing this program on schedule in 2016.

(B) Discussion

We decline to adopt TURN's proposal to reduce funding for the MPP by \$0.359 million. The MPP is a vital public safety program, and we want to ensure that it is fully funded. Given the importance of the MPP to public safety, we expect PG&E to utilize all of the \$3.246 million of annual funding provided by today's Opinion for the MPP for that purpose only. If PG&E fails to do, it should provide a detailed explanation in its next GRC.

c. Conclusion

Based on our review of the record, we conclude for the preceding reasons that the Settlement outcome for Gas Distribution O&M expenses is reasonable in light of the record, consistent with applicable law, and in the public interest.

3. Gas Distribution Capital Expenditures

PG&E requested \$205.0 million for Gas Distribution capital expenditures in 2007. DRA recommended \$193.9 million, for a difference of \$11.1 million. No other parties addressed this matter. The following table compares PG&E's and DRA's litigation positions on Gas Distribution capital expenditures:

2007 GRC Comparison Gas Distribution Capital Expenditures by Functional Groups (\$000)				
	2007 Capital Expenditures			
Description	PG&E	DRA	PG&E > DRA	% Difference
Gas Pipeline Replacement Program	68,353	59,562	8,791	12.9%
Gas Meter Protection-Capital	695	695	0	0.0%
Gas Dist. Customer Connects	59,783	59,783	0	0.0%
Gas Dist. New Capacity – Gas	11,182	11,182	0	0.0%
Gas Dist. Reliability	15,767	13,423	2,344	14.9%
Gas Dist. Work Requested by Other	18,093	18,093	0	0.0%
Gas Dist. Emergency Response	203	203	0	0.0%
Gas Meters	30,918	30,918	0	0.0%
Total	204,995	193,860	11,135	5.7%
Source: Exhibit PG&E-79, p. D-2				

The Settlement Agreement adopts PG&E’s requested Gas Distribution capital expenditures of \$205.6 million.⁸²

Below, we assess the reasonableness of the Settlement outcome for Gas Distribution capital expenditures in light of the record on the issues raised by DRA.

a. Summary of the Record

i. Gas Pipeline Replacement Program

PG&E requested \$66.953 million in 2007 for Gas Pipeline Replacement Program (GPRP) capital expenditures. DRA recommended \$59.562 million, for a

⁸² The Settlement Agreement inadvertently incorporates PG&E’s requested capital expenditures of \$31.542 million for gas meters in 2007 when the Settling Parties agreed to DRA’s recommended amount of \$30.918 million. We will reflect the lower DRA amount in the revenue requirement and rate base adopted by today’s Opinion.

difference of \$7.391 million. Subsequently, PG&E and the Disability Rights Advocates agreed to a Memorandum of Understanding (MOU), which increased PG&E's 2007 request for the GPRP by \$1.4 million to \$68.353 million. There is no opposition to the MOU, which is addressed elsewhere in today's Opinion.

PG&E's request for GPRP capital expenditures in 2007 was based on the remaining scope of the program, PG&E's schedule commitment to the Commission, and pipe replacement costs. PG&E contended that its requested funding would allow PG&E to complete the remaining 250 miles of the highest risk pipe in PG&E's system by 2009 for all areas outside of San Francisco, and by 2014 for San Francisco. DRA's forecast for 2007 was based on the inflation-adjusted average of recorded expenditures during 2003-2005 and the ratio of historical budgeted expenditures to actual expenditures.

ii. Gas Reliability

PG&E requested \$15.767 million in 2007 for capital expenditures to maintain and enhance the reliability of its Gas Distribution infrastructure. DRA recommended \$13.423 million, for a difference of \$2.344 million. PG&E's request was based on historical expenditures and known future projects. DRA used a 4-year, inflation-adjusted average to determine its 2007 forecast.

b. Discussion

The Settlement Agreement provides PG&E with the full amount of its requested capital expenditures for Gas Distribution. The bulk of the difference between PG&E's request and DRA's proposal pertains to GPRP, where PG&E requested, and the Settlement adopts, \$7.391 million more than DRA recommended. The amount provided by the Settlement for GPRP capital spending is well above the historical four-year average adjusted for inflation.

The GPRP is a high-priority program that affects public safety and the reliability of PG&E's Gas Distribution system. We conclude that it is reasonable for the Settlement to provide substantially increased funding for this program, provided that PG&E actually spends these funds on the GPRP.⁸³ Therefore, we will approve the Settlement outcome for Gas Distribution capital expenditures with the condition that PG&E uses all the funds provided by the Settlement for the GPRP for this purpose. If PG&E fails to do, it should provide a detailed explanation in its next GRC. Absent a compelling explanation, we may impose a disallowance similar to the deferred-maintenance disallowance addressed elsewhere in today's Opinion.

With this condition, we find the Settlement outcome for Gas Distribution capital expenditures to be reasonable in light of the record, consistent with applicable law, and in the public interest.

4. Gas Distribution Plant

PG&E forecasted \$6.049 billion of weighted-average plant-in-service in 2007 for Gas Distribution UCCs.⁸⁴ DRA proposed \$6.028 billion, for a difference of \$21 million. The Settling Parties agree to \$6.048 billion, effectively adopting PG&E's forecast. There is no opposition to the Settlement on this matter.

We find that the uncontested Settlement outcome for Gas Distribution plant-in-service is reasonable in light of the whole record, consistent with applicable law, and in the public interest.

⁸³ PG&E's actual expenditures for the GPRP have sometimes fallen short of budgeted expenditures. (Exhibit DRA 15, p. 15-5, Table 15-3.)

⁸⁴ Gas Distribution (GD) UCCs include GD Pipes and Services, GD Gas Procurement Administration, and GD Gas Public Purpose Program Administration.

D. Electric Generation

1. Generation Revenues

There were no disputes regarding PG&E's forecasts of Electric Generation billings, sales, and 2007 revenues at present rates. The Settlement Agreement adopts PG&E's forecasts. We concur with this uncontested outcome.

2. Generation O&M Expenses

PG&E requested \$457 million in 2007 for Generation O&M expenses. DRA recommended \$406 million, for a difference of \$51 million. The Settlement adopts \$451 million, which is \$6 million less than PG&E requested and \$45 million more than DRA recommended.

a. Hydro Operations

PG&E has 68 hydro powerhouses located on 16 rivers and four tributaries of the Sierra Nevada, Cascade, and Coastal mountain ranges. The generating capacity of PG&E's Hydro system is 3,896 MW. The system includes 99 reservoirs, 76 diversions, 174 dams, 128 miles of canals and flumes, 135 miles of tunnels, 19 miles of pipe, 5 miles of natural waterways, and approximately 140,000 acres of fee-owned land. The Hydro system operates under 26 FERC licenses, 92 water right licenses, and 160 Statements of Water Diversion and Use.

PG&E requested \$143.9 million for Hydro O&M expenses in 2007, an increase of 42.3% over 2004 recorded expenses. PG&E's request was based on actual 2004 expenses, approved budgets for 2005, recommended budgets for 2006, and long-term plans for 2007. PG&E testified that the increased expenses in 2007 are due to higher maintenance costs for aging Hydro assets and significantly higher regulatory compliance costs for new FERC licenses, new environmental and safety regulations, and increased regulatory fees.

DRA recommended \$108.6 million for Hydro O&M expenses in 2007, or \$35.3 million less than PG&E requested. Aglet and TURN proposed disallowances of \$32.1 million and \$7.91 million, respectively.

The Settling Parties agree that the resolution of all issues regarding PG&E's revenue requirement for Hydro O&M expenses is subsumed in the Settlement outcome for Generation O&M expenses. The Settlement Agreement provides \$450.6 million for Generation O&M expenses in 2007, which is \$6.4 million less than PG&E requested.

Below, we assess the reasonableness of Settlement outcome for Hydro O&M expenses in light of the record on the issues raised by the parties.

i. Issues Raised by DRA

DRA recommended \$108.6 million for Hydro O&M expenses in 2007, or \$35.3 million less than PG&E requested. DRA's recommendation was based on the three-year average of Hydro O&M expenses during 2003 - 2005.

PG&E responded that DRA's reliance on historical information was inappropriate because it failed to capture significantly higher regulatory compliance costs associated with new FERC license conditions, new environmental and safety regulations, and regulatory fees.

Based on our review of the record, we find that PG&E has demonstrated that its Hydro O&M expenses will be significantly higher in 2007 compared to historical levels, primarily because of costly new conditions that are now being routinely attached to new and amended hydro licenses issued by FERC.

Therefore, we conclude that the Settlement outcome for Hydro O&M expenses is reasonable in light of the record on the issues raised by DRA.

ii. Issues Raised by Aglet and TURN

(A) Forecasted Hydro O&M Expenses for 2007

(1) Position of the Parties

Aglet recommends \$111.9 million for Hydro O&M expenses in 2007, or \$32.1 million less than PG&E requested. Aglet's recommendation is based on a linear trend of recorded and budgeted costs from 1998 through 2006, extrapolated to 2007. Aglet believes that reliance on historical data to forecast Hydro O&M costs in 2007 is reasonable because (1) there is no new Hydro plant that requires additional O&M expenses, (2) the observed trend of slowly increasing costs should cover increased operational needs, and (3) PG&E's requested Hydro O&M expenses are simply too far above historical levels. Aglet also identified the following "soft spots" in PG&E's work papers:

- FERC issued a new license for Rock Creek-Cresta in 2001, but implementation expenses jump from zero to \$698,000 in 2006.
- The costs for several projects rise dramatically, but FERC has not yet issued new licenses or licenses amendments for these projects, and the license conditions are uncertain.
- Bucks Creek Article 103 implementation costs spike in 2007, but the timing of such costs is uncertain.
- Costs at Helms for venting transformer cases and installing blast walls look more like capital projects than expenses.
- Hiring and training costs are relatively flat during 2005 - 2009, but the number of new hires declines from 13 in 2005 to 3 in 2008.
- Canal system improvements and flume repair costs rise from zero in 2006 to more than \$4 million in 2009, but repair needs for waterways that are 50 to 100 years old should be stable.
- Dam repair costs rise from zero in 2006 to more than \$3.3 million in 2009, but the listed activities are illustrative only.

- Lead paint and PCB monitoring and abatement costs rise from zero in 2005 to \$1 million in 2009, but PG&E has not shown any rise in associated hazards.
- Miscellaneous safety costs rise by a factor of seven beginning in 2007, but PG&E has not shown any rise in safety risks.

Aglet states that the above projects have some justification, but they look like a wish list. All told, Aglet finds that PG&E has not shown with clear and convincing evidence that a large increase in Hydro O&M expenses is necessary.

PG&E responds that Aglet's use of historical data to forecast Hydro O&M expenses fails to capture significantly higher regulatory, environmental, and safety compliance expenses. For example, compliance costs grew by 73% between 2003 and 2006. This was due primarily to the greatly expanded scope of FERC license conditions for six new licenses received between 2001 and 2003. PG&E's forecasted increase in 2007 assumes there will be a similar increase in compliance costs for five new licenses and two major license amendments that PG&E expects to receive by then.

Although some licenses have been delayed since PG&E filed A.05-12-002, thereby deferring some expenses, PG&E testified that it will incur costs for two projects in 2007 that were not included in its forecast of 2007 O&M expenses -- one project to clear and repair rock movement at the Belden project, and second project for a seismic upgrade of the Crane Valley Dam.

(2) Discussion

Aglet proposes to use historical data to forecast Hydro O&M expenses in 2007 rather than PG&E's project-based forecast. We find PG&E's approach to be superior to Aglet's. PG&E testified that all of the forecasted projects are cost effective and/or required for legal, safety, or other reasons. Aglet did not attempt to show with substantive evidence that any particular project is not

necessary, cost effective, or beneficial. PG&E's forecast also reflects the dramatic increases in regulatory, environmental, and safety compliance costs in recent years, and PG&E testified that such costs will continue to increase as PG&E receives new and amended FERC licenses.⁸⁵ In contrast, Aglet relies on historical data that does not capture the significant increases in compliance costs that PG&E has testified will drive Hydro O&M expenses in 2007.

For the preceding reasons, we find that PG&E has demonstrated with clear and convincing evidence that the Settlement outcome for Hydro O&M expenses in 2007 with respect to the issues raised by Aglet is reasonable in light of the record. Accordingly, we decline to adopt Aglet's proposal to reduce funding for Hydro O&M expenses.

(B) Delayed Projects

(1) Position of the Parties

TURN proposes that the Commission modify the Settlement Agreement to reduce Hydro O&M expenses in 2007 by \$1.94 million for delayed projects. The basis for TURN's proposal is a PG&E data response wherein PG&E admits that some of the regulatory compliance costs it forecast for 2007 may be deferred because of delays in the issuance of new FERC licenses and license amendments.

PG&E acknowledges that some regulatory compliance costs may be deferred because of the delays identified by TURN. PG&E contends, however, that the deferred costs will be offset by expenses for two unforeseen projects -- one project to clear and repair rock movement at the Belden project, and second project for a seismic upgrade of the Crane Valley Dam

⁸⁵ Exhibit PG&E-3, pp. 3-24 to 3-35.

TURN urges the Commission to reject PG&E's argument that the reduction of regulatory compliance costs in 2007 is offset by two new projects that were not included in PG&E's forecast. TURN argues that the cost and timing of the unforeseen projects is vague and, therefore, should not be used as justification for allowing recovery of \$1.94 million of deferred regulatory compliance costs.

(2) Discussion

We decline to adopt TURN's proposal to modify the Settlement Agreement to remove \$1.94 million for projects that have been postponed because of delays in the issuance of new FERC licenses and license amendments. PG&E will clearly incur these costs, it is only a question of when. We conclude that because PG&E's license applications have been pending at FERC for some time,⁸⁶ it is likely that FERC will issue the new licenses and license amendments sometime during the GRC cycle. Adopting TURN's proposal would effectively deny PG&E the ability to recover some or all of the regulatory compliance costs for these new licenses and amendments. Such a result would be unfair to PG&E and contrary to the public interest, since there is no question that these costs are reasonable and necessary.

Although there will be some reduction in PG&E's regulatory compliance costs in 2007 because of the delay in the issuance of new and amended licenses, we are persuaded that the reduction in costs will be more than offset by other costs that PG&E will incur in 2007 and subsequent years for two unforeseen projects.⁸⁷ These projects are (1) \$10 million for safety-related work to address

⁸⁶ Exhibit PG&E-3, p. 3-24, L:20-23.

⁸⁷ The Settlement Agreement provides PG&E with less money than it requested for Generation O&M expenses. The time-value-of-money savings that accrue from the

Footnote continued on next page.

rock movement at the Belden project, and (2) \$5-7 million for a seismic upgrade of the Crane Valley Dam.⁸⁸ PG&E will have to absorb the associated costs under the revenue requirement provided by the Settlement Agreement.

This is an important point for test-year ratemaking and the Commission's consideration of the Settlement. PG&E prepared its forecast of costs in 2007 with the information that was available to PG&E in 2005. Actual costs in 2007 and subsequent years of the GRC cycle will likely be higher and lower across the range of cost categories. The central issue is whether the Settlement Agreement contains a reasonable forecast of PG&E's regulatory compliance costs in 2007 and subsequent years. We find that it does for the preceding reasons.

(C) Regulatory Fees

(1) Position of the Parties

TURN raised two issues regarding Hydro-related regulatory fees. The first issue concerns PG&E's request for \$5.13 million of "other regulatory fees" (OR fees) in 2007. TURN opposes PG&E's request.

PG&E's requested OR fees consist of two components. The first is \$2 million for fees levied pursuant to the Endangered Species Act (ESA) for habitat restoration at the Upper North Fork Feather River (UNFFR) project. TURN states that the project has been postponed and that PG&E has admitted that the forecast of \$2 million is speculative. TURN argues that PG&E has not demonstrated with convincing evidence that it will incur ESA fees in 2007.

deferral of \$1.94 million of Regulatory Compliance costs is captured, at least to some degree, in the Settlement's reduction of Generation O&M expenses.

⁸⁸ 13 RT 1001:1-28, PG&E/Sweeney.

The second component is \$3.2 million that PG&E estimates it will pay to CALFED in 2007 to finance the Bay-Delta Program Ecosystem Restoration Program. TURN states that PG&E's forecast is based on (1) a draft report issued by CALFED in 2005, and (2) one of three possible methods identified in the draft report for calculating the fee. TURN asserts that PG&E does not know when CALFED will finalize the method for calculating the fee or begin collecting the fee. This demonstrates, according to TURN, that there is no basis whatsoever for allowing PG&E to recover CALFED fees.

The second issued raised by TURN regarding regulatory fees pertains to PG&E's request for \$2.757 million in 2007 for FERC Other Federal Agency (OFA) fees. TURN provided a PG&E data response wherein PG&E admitted that OFA fees are an "estimated liability" that might never be paid to the government:

Since 2003 FERC has not required licensees to actually pay the annual OFA fees. FERC provided each licensee with an estimated OFA fee liability for each licensed project in 2003. FERC has not indicated conclusively what the final OFA fee liability might be for 2003 or subsequent years. FERC may also decide to charge licensees for prior year OFA fees that it partially refunded. PG&E has continued to accrue an estimated liability amount to cover potential OFA fee charges. (Exhibit TURN-24.)

TURN recommends that the Commission either (1) adopt balancing account treatment for OFA fees, or (2) modify the Settlement to eliminate the entire \$2.757 million that PG&E requested for OFA fees in 2007.

PG&E responds that it expects to incur all of the forecasted regulatory fees in 2007. PG&E argues that although its forecast might be imperfect, that does not make its forecast unreasonable.

(2) Discussion

We are persuaded that it is more likely than not that PG&E will incur some level of OR Fees and OFA fees at some point during the GRC cycle. Therefore, we decline to adopt TURN's proposal to remove all funding for these fees from the Settlement Agreement.

We are also persuaded by TURN that PG&E's forecast of OR fees and OFA fees is subject to considerable uncertainty. For example, the OFA fees have not been paid since 2003, and TURN demonstrated through cross examination of PG&E's witness that PG&E does not know if it will pay all the fees as estimated, only a portion of the fees, or no fees at all.⁸⁹

Even though there is some uncertainty surrounding the amount of regulatory fees that PG&E will ultimately pay, we will not adopt TURN's proposed balancing account for OFA fees. Instead, in its next GRC, PG&E shall report on the amount of actual payments of OR fees and OFA fees over the duration of this GRC cycle and provide a forecast of future OR and OFA costs based on its actual payment history.

(D) Deferred Maintenance

(1) Position of the Parties

TURN recommends that the Commission modify the Settlement Agreement to exclude \$0.791 million for lead paint and PCB abatement expenses. PG&E requested and received funding for these expenses in its 2003 GRC, and now requests funding a second time for lead paint and PCB abatement.

⁸⁹ 13 RT 998, 22-26, Sweeney, PG&E.

TURN calls PG&E's request a classic example of deferred maintenance. It arises when a utility seeks money for a specific maintenance activity, does not perform the maintenance, and then seeks money again for the same maintenance activity, thereby requesting to be paid twice. TURN opines that excluding deferred maintenance from rates is vital to the integrity of test-year ratemaking.

TURN cites several Commission decisions that denied ratepayer funding for deferred maintenance. For example, in D.00-02-046 the Commission held:

It would be unjust and unreasonable to make ratepayers responsible for expenses directly attributable to deficient or unreasonably deferred maintenance, or to make ratepayers pay a second time for activities explicitly authorized by the Commission in the past. (D.00-02-046, Conclusion of Law 15, *mimeo.*, p. 536.)

More recently, the Commission disallowed \$1.4 million in annual expenses and \$3.4 million in capital costs that SCE requested for deferred pole maintenance, stating that "ratepayers should not be required to pay twice for the same authorized expense."⁹⁰

PG&E responds that it will not be paid twice. This is because PG&E's actual expenditures for environmental remediation work exceeded the 2003 GRC forecast. As shown in the following table, increased costs for other remediation work more than offset the under-run for lead paint and PCB abatement.

⁹⁰ D.04-07-044, *mimeo.*, pp. 105, 108-110.

(Millions of Dollars)				
<u>Lead Paint and PCB Abatement</u>	<u>2003</u>	<u>2004</u>	<u>2005</u>	<u>Total</u>
2003 GRC Forecast	1.6	1.6	1.3	4.5
Actual	0.8	0.6	0.7	2.1
Under Spent	0.8	1.0	0.6	2.4
<u>Environmental Compliance</u>				
2003 GRC Forecast	8.8	11.2	10.0	30.0
Actual	9.6	12.3	11.4	33.3
Over Spent	(0.8)	(1.1)	(1.4)	(3.3)
Total Over Spent	0.0	(0.1)	(0.8)	(0.9)

PG&E argues that under TURN's reasoning, PG&E would have no discretion to reschedule work to reflect changing priorities. This reasoning would require that all work be performed as estimated or PG&E would never be allowed to recover the cost of the work.

(2) Discussion

The Commission has repeatedly held that it is unjust and unreasonable to make ratepayers pay a second time for activities explicitly authorized by the Commission in the past.⁹¹ Here, there is no dispute that PG&E received funding for lead paint and PCB abatement in its prior GRC proceeding, and that PG&E seeks funding for these activities a second time in the current proceeding.

The Settlement Parties state that the issue of funding for lead paint and PCB abatement is subsumed in the Settlement outcome for Generation O&M

⁹¹ D.04-07-044, *mimeo.*, pp. 105, 108-110; D.00-02-046, COL 15.

expenses.⁹² The Settlement provides \$450.6 million for Generation O&M expenses in 2007, which is \$6.4 million less than PG&E requested.

In order to find that the Settlement Agreement is consistent with the law, which includes adherence to long-established Commission precedent, we must be satisfied that all of PG&E's lead paint and PCB abatement costs are excluded from the O&M expenses adopted by the Settlement. We conclude that the \$6.4 million reduction to O&M expenses adopted by the Settlement is sufficiently large to accommodate a 100% disallowance of \$0.791 million for lead paint and PCB abatement. Based on this conclusion, we find that the Settlement outcome is reasonable in light of the record, consistent with long-established Commission precedent, and in the public interest.

b. Nuclear Operations

PG&E's Diablo Canyon nuclear power plant has two generation units with a combined capacity of 2,200 megawatts (MW). PG&E requested \$310.8 million for Nuclear O&M expenses in 2007. DRA recommended \$295.6 million, which was \$15.2 million less than PG&E requested. Aglet, TURN, and ANR/SC proposed additional disallowances.

The Settling Parties agree that the resolution of issues regarding Nuclear O&M costs is subsumed in the Settlement outcome for Generation O&M expenses. The Settlement Agreement provides \$450.6 million for Generation O&M expenses in 2007, which is \$6.4 million less than PG&E requested.

⁹² Settlement Motion, p. 87.

Below, we assess the reasonableness of the Settlement outcome for Nuclear O&M expenses in light of the record for the issues raised by DRA, Aglet, TURN, and ANR/SC.

i. Issues Raised by the Parties

(A) New Information System and Pump

(1) Position of the Parties

TURN recommends that the Commission modify the Settlement to reduce PG&E's Nuclear O&M expenses in 2007 by \$1.2 million to reflect projected O&M savings from PG&E's planned capital expenditures for a new Plant Management Information System (PIMS) and a new, more efficient pump. Otherwise, ratepayers will fund the capital expenditures but receive none of the benefits.

PG&E responds that the O&M expense savings were reflected in its GRC application in the form of avoided costs (i.e., costs that would not be incurred and, therefore, not requested).

(2) Discussion

We find that PG&E has affirmatively demonstrated through clear and convincing evidence that the O&M expense savings from PIMs and the new pump are reflected in PG&E's application (and the Settlement Agreement) in the form of avoided costs.⁹³ Therefore, we decline to adopt TURN's recommendation.

(B) License Renewal Feasibility Study

Diablo Canyon operates pursuant to two licenses issued by the NRC that expire in 2024 (Unit 1) and 2025 (Unit 2). PG&E's request for Nuclear O&M

⁹³ 29 RT 2751:20-21, PG&E/Becker. See also Exhibit TURN-62.

expenses included \$16.8 million spread over 2007-2009 for a license renewal feasibility study. The purpose of the study is to analyze Diablo Canyon equipment and operations to determine whether to apply to the NRC for a 20-year extension of the two Diablo Canyon licenses.

DRA opposed funding for the license renewal feasibility study on the grounds that it is premature. ANR/SC and TURN opposed the feasibility study for the same reason and others. The Settling Parties agree that funding for the study is subsumed in the Settlement outcome for Generation O&M expenses. The Settlement Agreement provides \$450.6 million for Generation O&M expenses in 2007, which is \$6.4 million less than PG&E requested and \$44.3 million more than DRA recommended.⁹⁴

(1) Position of the Parties

ANR/SC and TURN recommend that the Commission modify the Settlement Agreement to remove \$16.8 million for the Diablo Canyon license renewal feasibility study. TURN alternatively proposes that the \$16.8 million be deferred as a regulatory asset that (1) accrues interest at the rate that applies to the allowance for funds used during construction (AFUDC), and (2) is amortized over the life of the renewed licenses beginning in 2024.

ANR/SC and TURN contend that it is premature to fund a study that will be completed in 2009, which is 15 years before the first NRC license expires in 2024. They believe that a study completed in 2009 will be irrelevant to circumstances in 2024. As such, the study will be a waste of ratepayers' money.

⁹⁴ Settlement, para. 17 and Appendix G, L. 19.

ANR/SC and TURN provide several examples of PG&E's record of vastly underestimating the future cost of operating Diablo Canyon and overestimating the service life of major power plant components and systems. Given this poor track record, they believe the Commission and the public can have little confidence that PG&E's license renewal study will be of any value in deciding whether to renew the licenses 15 years after the study is completed.

Another reason ANR/SC and TURN believe the study is premature is the recent enactment of Assembly Bill (AB) 1632.⁹⁵ This statute requires the California Energy Commission (CEC) to review the potential impacts of aging, seismic events, and nuclear waste accumulation at existing nuclear power plants.⁹⁶ ANR/SC and TURN believe the CEC's review, which is scheduled to be completed in 2008, will shape the State's policy on nuclear re-licensing. ANR/SC and TURN contend there is no point in ratepayers funding PG&E's study prior to the completion the CEC's study.

ANR/SC and TURN are particularly concerned that PG&E may use the license renewal study to unilaterally seek license renewal without prior Commission review of the study or Commission authority for PG&E to submit a re-licensing application. They state that there are many factors that must be considered before deciding whether to proceed with re-licensing. These factors include the ongoing accumulation of high-level nuclear waste at Diablo Canyon, the ever rising cost of nuclear power, and the Commission's evolving energy procurement policies.

⁹⁵ Statutes of 2006, Chapter 722.

⁹⁶ PRC § 25303(a)(8), (c).

PG&E responds that it is prudent to perform the license renewal feasibility study at this time in order to develop the factual and regulatory information needed to decide whether to apply for license renewal. The scope of the study would include (1) screening Diablo Canyon's structures, systems, and components to determine if they are within the scope of a renewed license; (2) performing an aging analysis of the in-scope systems and components to determine the need for additional monitoring programs; and (3) preparing a draft environmental impact report.

PG&E offers several other reasons why it is appropriate to conduct the license renewal feasibility study at this time. First, PG&E's witness testified that:

[t]he license renewal feasibility study will lead us to make a very important decision, which is whether or not to pursue license renewal at Diablo Canyon. The time frame for making that decision would be around the end of this general rate case...or roughly 15 years before the licenses expire...If we were not -- when that time came and we were to make that very important decision not to proceed with license renewal after considering all the issues, the costs, et cetera, then we need and the state of California needs time to plan for replacement power for Diablo Canyon. (Tr. 2767:8-24, PG&E/Becker.)

Second, doing the study now takes advantage of the fact that the NRC is staffed and has processes in place to consider license renewal applications because several other utilities have already decided to pursue license renewals.

Finally, performing the study now will enable PG&E to address any needed changes to plant structures, systems, and equipment to enable an additional 20 years of operations. PG&E testified:

The sooner we know that, the sooner we can make the changes, and the sooner the benefit would occur. And that

benefit would show up in plant reliability, in safety margins, et cetera. (Tr. 2768:8-20, PG&E/Becker.)

PG&E contends that ANR/SC's and TURN's proposal to deny funding for the study is short-sighted. Diablo Canyon provides 2,200 MW of base-load capacity that would require a considerable amount of time, planning, and investment to replace. Performing the study now will allow PG&E, and the Commission, to determine in the next five years whether to apply to the NRC for license renewal – a time frame that allows PG&E and the Commission to make alternative plans to replace Diablo Canyon's 2,200 MW of capacity should the decision be made to forgo license renewal.

PG&E opposes TURN's proposal to capitalize the costs of the study as a regulatory asset that accrues AFUDC and to amortize the regulatory asset over the term of the renewed licenses. PG&E believes that project costs should not be capitalized until it is decided that a project will be pursued. PG&E has not yet decided whether to pursue renewal of the Diablo Canyon licenses. When PG&E makes that decision, PG&E will begin to capitalize the project costs.

(2) Discussion

PG&E's proposed Diablo Canyon license renewable feasibility study will be completed in 2009, which is 15 to 16 years before the expiration of the current licenses. Ratepayers should fund the study only if 15-16 years of lead time is needed to decide if Diablo Canyon should be closed and, if so, to replace the 2,200 MW of base load capacity provided by Diablo Canyon.

California currently plans for long-term power procurement through the Commission's biennial adoption of a rolling 10-year long-term procurement plan (LTPP). Given the large amount of base load capacity provided by Diablo Canyon, we conclude that it is prudent to know 10 years in advance if 2,200 MW

of capacity will need to be replaced so that replacement capacity can be obtained in an orderly, cost effective, and timely manner.

TURN's comments on the Proposed Decision state that there is no need for 10 years of advance notice to plan for 2,200 MW of replacement capacity. In D.06-11-048, the Commission approved PG&E's application to acquire 2,250 MW of new generation capacity by mid-2010. This shows, according to TURN, that PG&E can acquire replacement capacity for Diablo Canyon in 4-5 years.

TURN overlooks the fact that the 2,250 MW of capacity was part of PG&E's first 10-year LTPP approved by D.04-12-048. The purpose of the LTPP is to identify resource needs a decade in advance in order to provide sufficient time to plan for, and procure, new capacity in an orderly and cost effective manner. While TURN evidently believes there is no need for long-term planning, we believe it would be reckless and gambling with the public interest to wait until only 4-5 years are left before the Diablo Canyon licenses expire to decide whether there is a need to acquire 2,200 MW of replacement capacity. The safer and more prudent course of action is to endeavor to know 10 years in advance if the large amount of power provided by Diablo Canyon will need to be replaced.

The LTPP is issued in even numbered years and is based on a long-term forecast of electricity supply and demand contained in the biennial Integrated Energy Policy Report (IEPR) that is issued by the CEC in the previous odd-numbered year.⁹⁷ We presume that in order to be incorporated into the IEPR, a final decision to forgo license renewal (and the accompanying need to procure 2,200 MW of base load capacity) would need to be made six to 12 months prior to

⁹⁷ D.04-12-048, *mimeo.*, pp. 165-167 and COL 42, pp. 235-36.

the CEC's issuance of its IEPR. That means approximately 12 years of lead time is needed to acquire replacement power once a final decision is made not to pursue license renewal.

The decision on whether to forgo license renewal should be made in a Commission proceeding or other appropriate venue. We anticipate that such a proceeding would be complex and contentious, but could still be completed within one year. That means a completed license renewal feasibility study should be submitted to the Commission for review approximately 13 years prior to license expiration, or in the year 2011.

Pursuant to the Settlement Agreement adopted by today's Opinion, PG&E's forthcoming GRC cycle will end in December 2010. We cannot wait until the GRC cycle beginning in 2011 to fund a license renewal study because doing so would delay the completion of the study until the end of 2012, assuming it took two years to prepare the study. We conclude, therefore, that it is reasonable to fund the study during 2007-2010 so that the study will be available for the Commission's review in 2011, and the results of the study incorporated into the LTPP issued in 2014.

For the preceding reasons, we find the Settlement Agreement's provisions that authorize \$16.8 million for the Diablo Canyon license renewal feasibility study to be reasonable and in the public interest. As noted by ANR/SC and TURN, AB 1632 requires the CEC to assess key policy and planning issues affecting the future role of nuclear power plants in the State. The statute requires the CEC to issue its assessment by November 1, 2008. PG&E shall incorporate the CEC's AB 1632 assessment into its license renewal study. To avoid unnecessary duplication and overlap with the CEC's study, PG&E should defer to the extent feasible its work on its own study, and associated spending, until

after the CEC issues its findings and conclusions. PG&E should incorporate the findings and recommendations of the CEC study in its own work.

We will require PG&E to submit by no later than June 30, 2011, an application on whether to pursue license renewal. The application shall include PG&E's license renewal study and shall address (1) whether renewal of the licenses is cost effective and in the best interests of PG&E's ratepayers, (2) the CEC's AB 1632 assessment, and (3) any legislative framework that may be established for reviewing the costs and benefits of license renewal.⁹⁸ As stated previously, it is our intent that the proceeding in 2011 will result in a decision on whether to pursue license renewal based on circumstances at that time, and that the results of the proceeding will be incorporated into the CEC's 2013 IEPR and the Commission's 2014 LTPP.

ANR/SC and TURN contend that it is premature to fund a study that will be completed approximately 15 years before the first license expires in 2024. For the reasons stated previously, we believe it is prudent to have a completed study in hand 13 years prior to license expiration. Funding the study in the 2007-1010 GRC cycle will provide 13 years of lead time.

ANR/SC and TURN maintain that because PG&E has a poor record of forecasting the cost of operating Diablo Canyon and the life of major power-plant components, there can be little confidence that PG&E's study will be of any value in deciding whether to renew a license 15 years after the study is completed. We agree that the cost of operating Diablo Canyon over the years has consistently exceeded PG&E's forecasts. That does not mean, however, that there is no need

⁹⁸ The CEC's 2005 IEPR urges the Legislature to establish a framework to review license renewal costs and benefits. (2005 IEPR, p. 4.)

for a license renewal feasibility study. The issue raised by ANR/SC and TURN goes to the merits of the study results, which cannot be judged until the study is submitted to the Commission for review. There will be ample opportunity at that time for the parties to review and litigate the contents of the study.

ANR/SC and TURN are concerned that PG&E may use the study to unilaterally seek license renewal. We have already addressed this concern by requiring PG&E to submit the study to the Commission as part of an application in 2011 on whether to proceed with license renewal. If PG&E fails to do so, we agree with PG&E's observation that the Commission "has ample means to deal with PG&E's failure to comply with the Commission's order to file an application, if that should ever come to pass."⁹⁹

TURN alternatively proposes that the cost of the license renewal study be deferred as a regulatory asset and amortized over the term of the renewed licenses. TURN's proposal is consistent with the USOA. The instructions for Account 183 state, in relevant part, as follows:

This account shall be charged with all expenditures for preliminary surveys, plans, investigations, etc., made for the purpose of determining the feasibility of utility projects under contemplation. If construction results, this account shall be credited and the appropriate utility plant account charged. If the work is abandoned, the charge shall be made to Account 426.5, Other Deductions, or to the appropriate operating expense account.

It makes sense to defer current expenditures for feasibility studies when a decision will be made within one or two years on whether to proceed with the

⁹⁹ PG&E opening comments on the Alternate Proposed Decision, p. 23.

project being contemplated and the project starts soon thereafter. That is not the case here. Adopting TURN's proposal could defer cost recovery until 2024, during which time the deferred costs would accrue interest based on PG&E's authorized rate of return, currently 8.79% pre-tax.¹⁰⁰ The \$16.8 million of deferred costs at the end of 2009 would balloon to \$60.2 million by the end of 2024 based on a compound annual escalation of 8.79%. The growth of the deferred costs would exceed inflation, thereby making ratepayers worse off with each passing year. We conclude that ratepayers will be better off to pay \$16.8 million during the forthcoming GRC cycle rather than a significantly higher amount in the future.

For the preceding reasons, we decline to adopt TURN's alternative proposal to defer recovery of the study costs.

(C) Additional Staffing

PG&E requested \$3 million in 2007 to address its aging workforce at Diablo Canyon by hiring and training an additional 10 engineers, 12 operators, and 15 utility workers. DRA opposed the staffing increase. DRA contended that PG&E had neither performed a cost-effectiveness study for its additional staffing proposal, nor asserted that it was safety-related or an NRC mandate.

PG&E responded that the aging workforce at Diablo Canyon is a serious issue. The average age of Diablo Canyon employees is 47.6 years. In five years, 42% of the employees at Diablo Canyon will be eligible for retirement. To replace its aging workforce.

¹⁰⁰ Settlement Agreement, Appendix G, Table 1-2, Line 33. AFUDC is not grossed up for taxes.

The Settling Parties agree that the resolution of issues regarding funding for additional staff at Diablo Canyon is subsumed in the Settlement outcome for Generation expenses. No party disputed the Settlement outcome on this matter.

We conclude that the uncontested Settlement outcome regarding additional staffing for Diablo Canyon is reasonable in light of the record, consistent with applicable law, and in the public interest.

(D) NEI Membership Dues

PG&E's forecast of Nuclear O&M expenses in 2007 included \$772,000 for membership in the Nuclear Energy Institute (NEI).¹⁰¹ TURN proposed a 50% disallowance of NEI membership fees because part of NEI's function is to advocate for nuclear power. TURN's proposal was consistent with the Commission's decision in the recent SCE GRC proceeding where the Commission reduced SCE's request for NEI membership fees by 50%. However, the Commission left open the possibility of 100% recovery of NEI fees in the future, but directed SCE to demonstrate exactly what portion of the NEI membership fee, if any, is used for the advocacy of nuclear power.¹⁰²

The Settling Parties agree that the Settlement outcome for Generation O&M expenses includes recovery of only 50% of NEI dues. In its next GRC, PG&E will present more detailed documentation supporting 100% recovery of NEI fees.¹⁰³ There was no opposition to the Settlement outcome for NEI dues.

We find the uncontested Settlement outcome for NEI funding is reasonable in light of the record, consistent with applicable law, and in the public interest.

¹⁰¹ Exhibit TURN-1, p. 9.

¹⁰² D.06-05-015, *mimeo.*, pp. 34-36.

¹⁰³ Settlement Motion, pp. 91-92.

ii. Fossil Operations

PG&E's Fossil operations currently consist of four generating units at the Humboldt Bay power plant (HBPP) that have a combined capacity of 135 MW. PG&E requested \$11.8 million for Fossil Generation O&M expenses in 2007 for the continued operation of the existing units at HBPP until new generation units come online in 2009. DRA did not oppose PG&E's request.

The Settling Parties agree that the resolution of issues regarding Fossil Generation O&M expenses is subsumed within the Settlement outcome for all Generation O&M expenses.¹⁰⁴ The Settlement also provides a one-way balancing account for certain specified HBPP costs that PG&E may be able to avoid depending on the timing of the HBPP re-power project.¹⁰⁵ The re-power project will replace four steam generators with ten 16.3 MW gas-fired generators. The on-line target for the new generators is May 2009.

(A) Issues Raised by TURN

(1) Position of the Parties

TURN recommends that the Commission modify the Settlement to reduce Fossil Generation O&M expenses by \$2.58 million. TURN's disallowance has four components. First, TURN notes that PG&E requested \$0.6 million for boiler recertification costs in test-year 2007. Because these costs are built into the test year, PG&E will recover these costs in each of the attrition years. TURN states

¹⁰⁴ Settlement Agreement, para. 17.

¹⁰⁵ The Settlement establishes a "memorandum account" to track the authorized and actual revenue requirement for specified projects for the existing generation facilities at HBPP. The estimated revenue requirement for these projects in 2007, 2008, and 2009 is \$1.3 million, \$0.9 million, \$0.7 million, respectively. In the event it is not necessary to perform these projects, PG&E will refund any over collection in the next GRC. (Settlement Agreement, para. 30.)

that boiler recertifications are scheduled for 2007 and 2009, but not for 2008. TURN argues that PG&E should not be allowed to collect revenues for boiler recertification in 2008 when no recertification will occur that year.

Second, TURN states that PG&E has admitted that there will be no need for boiler recertification in 2009 if the HBPP re-power project is completed in 2009. In light of these facts, TURN recommends a disallowance of boiler recertification costs for 2009.

Third, PG&E requested \$1.455 million for expenses in 2007 and 2008 to plan for Clean Water Act § 361(b) cooling water intake regulations. The Settlement Agreement provides for the tracking of these costs in the HBPP memorandum account. TURN believes that most of these costs may not materialize due to PG&E's plan to re-power HBPP in 2009, and recommends that the Commission not allow recovery of these costs at the present time. Instead, PG&E should track its actual expenses in the HBPP balancing account and recoup these expenses in the next GRC if required.

Finally, TURN notes that the costs of special projects for HBPP that are tracked in PG&E's internal account MWC CJ - Fossil Generation Projects. None of these costs are included in the proposed HBPP memorandum account. Again, TURN believes that most of these costs may not materialize due to PG&E's plan to re-power HBPP in 2009. TURN states that PG&E should be allowed to track in the HBPP balancing account the actual expenses for MWC CJ in 2009 and recoup these expenses in the next GRC if required. Otherwise, PG&E may collect revenues for costs that it might never incur.

PG&E opposes TURN's proposed disallowance. PG&E argues that it is speculative to assume that it will not incur forecasted costs for the existing generation units at HBPP because PG&E has not yet obtained the necessary

permits or set a construction schedule for re-powering HBPP. Until then, PG&E believes it is prudent to proceed under the assumption that the existing generation units at HBPP will continue to operate through the GRC cycle.

PG&E generally agrees that balancing account treatment is appropriate for costs that can be avoided due to the planned re-powering of HBPP. However, PG&E opposes balancing account treatment for any expenses and capital expenditures that are not earmarked for such treatment by the Settlement.

(2) Discussion

TURN asserts that the Settlement Agreement is unreasonable because it allows PG&E to recover overstated and avoidable costs for HBPP. We agree in part and disagree in part.

We agree with TURN that PG&E's requested revenue requirement for HBPP inappropriately included \$0.6 million for boiler recertification costs in 2008, even though there will be no recertification that year. However, we disagree with TURN that the Settlement allows PG&E to recover boiler recertification costs for the year 2008. The Settlement Agreement reduces PG&E's requested O&M costs for Generation by \$6.4 million.¹⁰⁶ The Settling Parties represent that the agreed-upon amount of O&M costs reflects consideration of TURN's position. Based on this representation, we conclude that the improper boiler recertification costs for 2008 are included in the Settlement's \$6.4 million reduction to PG&E's requested O&M costs.

Regarding the remainder of TURN's proposed disallowance, TURN is correct that some forecasted O&M expenses for the current units at HBPP may be

¹⁰⁶ Settlement Agreement, para. 17.

avoided if HBPP is re-powered in 2009 as PG&E anticipates. However, the avoided O&M expenses for the retired units will be offset, at least to some extent, by O&M expenses for the new units. TURN made no effort to show there will be a net reduction of PG&E's O&M expenses from the HBPP re-powering project. Absent such a showing, we decline to adopt TURN's proposed disallowance of HBPP O&M expenses or TURN's proposed tracking of HBPP O&M expenses for the existing facilities.

On a related matter, we note that the Settlement Agreement does not specify the means that PG&E will use to establish the HBPP balancing account. We will direct PG&E to file an advice letter to establish the one-way balancing account within 30 days from the effective date of today's Opinion. The account balance shall accrue interest at the rate on prime, three month commercial paper as reported in Federal Reserve Statistical Release H-15. The Commission's Energy Division may approve the advice letter without a Commission resolution if the advice letter complies with the requirements of today's Opinion.

iii. Electric Supply Administration

PG&E requested \$42.3 million for Electric Supply Administration (ESA) expenses in 2007 to plan for and acquire electric supply-side and demand-side resources. DRA proposed \$38.0 million, for a difference of \$4.3 million. DRA's proposal was based on its belief that PG&E would reach adequate staffing levels by 2006. PG&E responded that it needs more staff in 2007 compared to 2006 because its electric procurement activities continue to expand and increase in complexity. The resolution of DRA's proposed disallowance is subsumed in the broader Settlement outcome for Generation O&M expenses.

(A) Issues Raised by TURN

(1) Position of the Parties

TURN recommends that the Commission modify the Settlement Agreement to reduce ESA expenses by \$5.2 million in 2007. TURN asserts that PG&E's requested revenue requirement for ESA is a padded wish list. Rather than granting the wish list, TURN proposes that the Commission escalate PG&E's 2006 budget for ESA forward into 2007.

TURN provides several examples of "questionable items" to support its proposal. First, TURN claims that PG&E does not need four new staff positions for electric fuels management because (1) PG&E recently signed a settlement agreement that provides fixed prices for certain Qualifying Facilities (QFs), and (2) PG&E's new gas-fired plants will not be operational until 2008-2010.

Second, TURN believes a delay in the transition to geographic pricing for transmission indicates that two staff may not be required for all of 2007.

Third, TURN suggests that the reduction of PG&E's payments to QFs from twice per month to once per month pursuant to D.05-09-003 eliminates the need for one staff position.

Fourth, TURN argues that PG&E does not need three new staff positions in power settlements due to declining workloads for the FERC refund proceeding, refund negotiations with suppliers, and bankruptcy issues with Power Exchange (PX) and California Independent System Operator (CAISO) suppliers. TURN believes these activities will be substantially completed by 2007 and certainly before the end of the GRC cycle.

Fifth, TURN believes that PG&E might double collect its costs for one-half staff position assigned to Community Choice Aggregation (CCA). TURN claims

these costs will be charged to the Aggregators. Thus, PG&E is poised to collect the money twice – once from the Aggregators and a second time from ratepayers.

Sixth, TURN states that PG&E seeks to add one staff position in 2008 for AMI. This is inappropriate, according to TURN, because AMI-related costs are supposed to be excluded from this GRC.

Seventh, TURN contends that PG&E's request to recover costs for an Independent Evaluator of renewable solicitations is inconsistent with D.06-05-039 and Resolution E-3914.¹⁰⁷ TURN recommends that such costs be removed from this GRC and recorded in the Long Term Procurement Memorandum Account (LTPMA) in accordance with D.06-05-039 and Resolution E-3914.

Finally, TURN asserts that PG&E's request to increase staffing for long-term resource procurement from 12 to 30 positions is unsupported. TURN notes that PG&E needed only 12 staff positions to conduct its recent acquisition of Contra Costa 8 (CC8) simultaneously with major renewable and non-renewable solicitations. TURN submits that PG&E has not identified an increase in future workload relative to recent activity.

PG&E responds that TURN's proposed reduction of \$5.2 million is based on budgeted expenses for ESA in 2006. PG&E states that it is inappropriate to use the 2006 budget to forecast expenses in 2007 because of changed circumstances in 2007. PG&E also provided a point-by-point rebuttal to each of the arguments raised by TURN in support of its proposal.

¹⁰⁷ Resolution E-3914 was issued on April 21, 2005.

(2) Discussion

TURN recommends that the Commission modify the Settlement to reduce funding for ESA by \$5.2 million in 2007. TURN supports its recommendation with eight “questionable items” that purport to show that PG&E’s revenue requirement is too high. For the reasons set forth below, we find that the “questionable items” do not justify a modification of the Settlement Agreement.

First, TURN suggests that PG&E’s request for four new staff for electric fuels management is excessive because (1) PG&E has signed a QF settlement agreement that should reduce PG&E’s exposure to volatile gas prices, and (2) PG&E’s new gas-fired power plants will not be online until 2008-2010. In response, PG&E testified that the items cited by TURN will not affect PG&E’s workload. This is because PG&E expects a substantial increase in gas planning, trading, and scheduling activities for new QF gas tolling agreements. And although PG&E’s new gas-fired units will not come online until 2008 - 2010, PG&E testified that it will begin making long-term gas supply, transportation, storage, and hedging arrangements for these units in 2007.¹⁰⁸ For example, PG&E will hold requests for offers for long-term gas supply and gas storage during 2007; negotiate gas transportation agreements with gas pipelines in 2007; and begin hedging the gas positions for the new facilities in 2007.

Second, TURN doubts the need for two additional staff in 2007 to work on the CAISO Market Redesign (CMR). Because CMR has been delayed until November 2007, TURN believes the staff may not be required for all of 2007. In response, PG&E testified that although CMR has been delayed, much work needs to be done to prepare for CMR implementation. For example, PG&E will

¹⁰⁸ Exhibit PG&E-18, p. 13-3.

participate in simulations for the “new” market at the same time that it manages daily trading activities in the existing market. Market simulations will occur in the first, second and third quarters of 2007 according to the current ISO schedule, and the latter two will involve 24x7 simulations. Staff will need to be hired and trained in the new market processes prior to the November 2007 rollout.¹⁰⁹

Third, TURN suggests that a decrease in the number of payments to QFs (from two to one per month) could reduce staffing by one position. In response, PG&E testified that issuing payments is a minor factor in determining staffing needs. The steps preceding payment still need to be performed even though the number of payments will be reduced. For example, the QF meter data must be validated prior to issuing payment, and the same meter data must be submitted to the CAISO for market settlement purposes following the CAISO tariff timelines. PG&E represents that the work and timelines associated with these processes has not diminished. Moreover, PG&E represents that the reduced number of QF payments was anticipated when PG&E prepared its GRC request and was reflected in PG&E’s overall staffing request.¹¹⁰

Fourth, TURN believes that PG&E can reduce staffing by three positions due to reduced workload for the FERC refund proceeding, refund negotiations with suppliers, and bankruptcy issues with suppliers. In response, PG&E testified there are still many issues before FERC and on appeal. Additionally, claims in PG&E’s bankruptcy proceeding are still open because they are tied to the outcome of the FERC refund proceeding and global settlements. PG&E represents that none of this work will end until the conclusion of the FERC

¹⁰⁹ Exhibit PG&E-18, pp. 13-3 to 13-4.

¹¹⁰ Exhibit PG&E-18, p. 13-4.

refund proceeding, including rehearings and appeals. PG&E cannot predict when the FERC refund proceeding will end.

Fifth, PG&E requested one-half staff position for CCA-related activities. TURN asserts that PG&E will be charging Aggregators for this work, and that including it in this GRC is double-counting. PG&E testified, however, that it only charges Aggregators for work that is directly attributable to a specific Aggregator. The one-half staff position would be responsible for maintaining the software and databases required to offer CCA service, which is not directly attributable to a particular Aggregators. PG&E represents that the Commission requires utilities to recover such costs from all customers.¹¹¹

Sixth, PG&E seeks one staff position in ESA for AMI. TURN is concerned that PG&E is double counting AMI costs in the instant GRC proceeding and the AMI proceeding. However, the Settlement Agreement states that (1) the only area where PG&E presented costs in both the GRC and the AMI proceedings is Information Technology (IT),¹¹² and (2) PG&E removed the duplicative IT costs from its GRC request, as shown in Appendix G of the Comparison Exhibit.¹¹³ TURN provided no evidence to rebut the Settlement Agreement.

Seventh, TURN contends that PG&E's request to recover costs for an Independent Evaluator for renewable solicitations is inconsistent with D.06-05-039 and Resolution E-3914. However, PG&E correctly observes that Resolution E-3914 granted PG&E's request to establish the LTPMA because PG&E would incur costs for new long-term procurement activities in 2005 and

¹¹¹ Exhibit PG&E-18, pp. 13-5 to 13-6.

¹¹² Settlement Agreement, para. 51.

¹¹³ Exhibit PG&E-79, p.1-3, L: 13-27 and pp. G-1 to G-15.

2006 that were not included in its GRC revenue requirement.¹¹⁴ In approving the LTPMA, the Commission held that the GRC is the appropriate place to recover long-term procurement costs, stating:

SCE included its long-term procurement costs in its [GRC] revenue requirement request. While the Commission has yet to decide on the merits of SCE's request, the fact that SCE has included the long-term procurement cost in its GRC request would indicate an unequal treatment should PG&E's request to establish a memorandum account to track these costs be denied. That is, PG&E did not have an opportunity to present its long-term procurement costs for consideration by the Commission while SCE did have that opportunity. Simply because PG&E's GRC was completed before SCE's should not prevent PG&E from receiving the same opportunity to present its case. (Resolution E-3914, p. 5.)

The above statement in Resolution E-3914 indicates that the LTPMA was meant to bridge the gap between GRCs, i.e., to provide PG&E an opportunity to track and recover costs incurred in 2005 and 2006 that would have been included in PG&E's previous GRC. After 2006, costs for the Independent Evaluator are appropriately recovered through the GRC process.¹¹⁵

Finally, TURN argues that PG&E's request to increase staffing for long-term procurement from 12 to 30 is unsupported. TURN is correct that PG&E

¹¹⁴ Settling Parties' reply comments filed Oct. 5, 2006, pp. 45-47.

¹¹⁵ Resolution E-3914 states at p. 2 that PG&E's Advice Letter 2597-E requested authority to recover costs incurred through 2006 for long-term resource procurement via the LTPMA, and to recover costs incurred in 2007 and beyond in PG&E's next GRC application. Resolution E-3914 approves PG&E's request, with certain modifications. (Resolution E-3914-E, Ordering Paragraph 1.) The Resolution does not modify PG&E's request to recover costs for long-term procurement in 2007 and beyond in the instant GRC proceeding.

managed the CC8 and Long-Term Request for Offer (LT RFO) solicitation with fewer staff members than it is requesting for 2007. However, PG&E testified that although the long-term contracts mentioned above are executed, there is still much work to do in 2007 to bring these resources online, including regulatory, permitting, engineering, construction, and community outreach. PG&E represents that it cannot continue to work on the existing transactions (i.e., CC8 and seven long-term contracts resulting from PG&E's LT RFO solicitation) and future procurement processes and transactions with the existing staff.¹¹⁶

For the preceding reasons, we conclude that the Settlement Agreement provisions related to ESA are reasonable in light of the record.

c. Conclusion

Based on our review of the record, we conclude that the Settlement Agreement provisions regarding Generation O&M expenses are reasonable in light of the record, consistent with the law, and in the public interest.

3. Generation Capital Expenditures

PG&E requested funding for \$241.4 million of Generation capital expenditures in 2007, a 30% increase over 2004. By business unit, PG&E's capital expenditure request was:

Hydro: \$103.6 million.

Nuclear: \$134.4 million.

Fossil: \$3.4 million for the Humboldt Bay Power Plant.

DRA recommended that PG&E's requested capital expenditures be reduced by \$29.1 million. Other parties proposed additional reductions. The

¹¹⁶ Exhibit PG&E-18, p. 13-6.

Settlement Agreement adopts PG&E's position in full. Below, we assess the reasonableness of the Settlement outcome for Generation capital expenditures in light of the record on the issues raised by DRA and other parties.

a. Hydro Capital Expenditures

PG&E requested \$103.6 million for Hydro capital expenditures in 2007, and increase of 76.2% from 2004. PG&E testified that the primary drivers of Hydro capital expenditures are (1) new license conditions; (2) reliability projects to maintain and replace aging assets; (3) dam safety modifications in response to increasingly stringent regulations; and (4) automation and efficiency projects to increase the power provided by the existing water supply.

DRA opposed \$1.4 million that was requested by PG&E to replace the failed penstock at Coal Canyon. DRA recommended that PG&E present an analysis of the benefits of retaining Coal Canyon versus decommissioning. PG&E responded that retaining the Coal Canyon powerhouse is the least-cost alternative if downstream water users pay a fair share of the cost to rebuild and maintain the water conveyance system. PG&E also agreed to file an application with the Commission to modify the water contract with Cal Water Services.

The Settling Parties agree that the resolution of the previously described issue is subsumed in the Settlement outcome for Generation capital additions.¹¹⁷ Table 3-7 in Appendix G of the Settlement Agreement shows that the Settlement adopts PG&E's position on Hydro capital expenditures in 2007.

We find the Settlement outcome for the issues raised by DRA is reasonable in light of the record, consistent with the law, and in the public interest.

¹¹⁷ Settlement, para. 27.

i. Issues Raised by Aglet and TURN

(A) Position of the Parties

Aglet recommends that the Commission adopt Hydro capital expenditures of \$79.1 million in 2007 based on a linear trend of recorded and budgeted costs from 1998 to 2004, extrapolated to 2007. Alternatively, Aglet recommends \$82.5 million based on a three-year average of PG&E's data for 2004 - 2006.

Aglet observes that PG&E's requested capital expenditures for Hydro Generation represent an increase of 76.2% over three years. PG&E has asked for the moon, according to Aglet, without credible supporting evidence.

Aglet observes that much of PG&E's request is for re-licensing conditions. However, the timing of these expenditures is uncertain due to delays in the issuance of FERC licenses. PG&E also admits that some Hydro capital spending is "catch up" after years of limited investment due to bankruptcy and divestiture. Aglet contends that the Commission should not use catch-up spending as a basis to set rates.

Aglet urges the Commission to ignore PG&E's testimony during cross examination that the deferral of costs for delayed projects is offset by other costs for unforeseen projects that were not included in PG&E's request. Aglet states that it did not have an opportunity to test the reasonableness of such projects. It is too late for PG&E to amend its showing on Hydro projects, according to Aglet.

TURN recommends a \$12 million reduction to PG&E's Hydro plant-in-service in 2007. TURN represents that PG&E's forecast of 2007 plant-in-service assumed \$24 million of capital expenditures through 2006 to comply with FERC re-licensing conditions for the Upper North Feather River and Poe projects. However, these projects have been delayed, and PG&E currently expects re-licensing to occur in 2007. TURN estimates that both of these projects will be re-

licensed in mid-2007. Thus, rather than being in rate base for all of 2007 as PG&E originally forecast, the \$24 million would be added rate base in mid-2007, resulting in a weighted-average reduction to rate base of \$12 million in 2007.

PG&E opposes Aglet's proposal to use historical data to forecast Hydro capital expenditures in 2007. PG&E contends that the use of historical information is not useful when, as here, future conditions will be significantly different than historical circumstances.

PG&E likewise opposes TURN's proposal to reduce Hydro plant-in-service because of FERC delays in issuing hydro licenses. PG&E asserts that the FERC delays do not translate into a month-for-month delay in capital spending.

ii. Discussion

Aglet proposes to use historical data to forecast Hydro capital expenditures in 2007 rather than PG&E's project-based forecast adopted by the Settlement Agreement. We find PG&E's approach to be superior to Aglet's. PG&E testified that all of the forecasted projects are cost effective and/or required for legal, safety, or other reasons. Aglet did not attempt to show that any particular project is not necessary, cost effective, or beneficial. Thus, we have no reason to question the reasonableness of the projects. In contrast to PG&E's project-specific forecast, Aglet relies on historical data that does not reflect the regulatory and operational requirements that PG&E has testified will drive Hydro capital expenditures in 2007.

TURN recommends that the Commission reduce Hydro plant-in-service by \$12 million due to FERC's delay in renewing licenses for Hydro facilities. We decline to modify the Settlement on this basis. Although TURN has demonstrated that some capital expenditures will be postponed, there is no dispute that all capital spending for the delayed projects will be completed

during 2007. PG&E testified that the postponed capital spending will be offset, at least in part, by (1) higher AFUDC accruing on previous capital expenditures for the delayed projects,¹¹⁸ and (2) capital expenditures for new, safety-related projects that were not forecast by PG&E.¹¹⁹

Aglet urges the Commission to give no weight to PG&E's testimony that it will incur capital expenditures for projects that were not included in PG&E's request. We disagree. PG&E provided its testimony in response to a cross examination exhibit from TURN.¹²⁰ The cross-examination exhibit, which forms the basis for TURN's proposal to reduce Hydro plant-in-service by \$12 million in 2007, contains information that apparently came to light after PG&E submitted its forecast of 2007 plant-in-service.¹²¹ It would be unfair to prohibit PG&E from rebutting TURN's cross-examination exhibit as Aglet proposes. If TURN is allowed to use more recent information to discredit PG&E's showing, it is only fair that PG&E should be allowed to do the same to rehabilitate its showing.

For the preceding reasons, we conclude that PG&E has demonstrated with clear and convincing evidence that the Settlement outcome for Hydro capital expenditures is reasonable in light of the record, consistent with the law, and in the public interest.

¹¹⁸ 13 RT 964:25-965:5 and 967:12-14, PG&E/Sweeney.

¹¹⁹ The unanticipated capital expenditures include up to \$10 million to repair rock movement at the Beldon project and \$5 - \$7 million for seismic work at the Crane Valley Dam. (13 RT 1001:16-27, PG&E/Sweeney.)

¹²⁰ 13 RT 1001:16-27, PG&E/Sweeney.

¹²¹ Exhibit TURN-24, PG&E Response to DR 28-1; 13 RT 958-972, PG&E/Sweeney.

b. Nuclear Capital Expenditures

PG&E requested \$134.4 million for Nuclear capital expenditures in 2007. Aglet, ANR/SC, and TURN proposed several disallowances. DRA recommended that the Commission address in another proceeding PG&E's proposal to replace the reactor vessel heads.

The Settling Parties agree that the resolution of all issues regarding Nuclear capital expenditures is subsumed in the Settlement outcome for Generation capital additions.¹²² The Settlement adopts PG&E's request for \$195.0 million of weighted-average capital additions for Generation in 2007.¹²³

Below, we consider the reasonableness of the Settlement outcome in light of the record on the issues raised by the parties.

i. Issues Raised by the Parties

(A) Nuclear Core Plant Work

(1) Position of the Parties

PG&E requested \$36.2 million in 2007 for capital expenditures for Nuclear Core Plant Work. Aglet observes that PG&E's requested expenditures in 2007 are nearly ten times higher than its recorded expenditures of \$3.8 million in 2004. The only support in PG&E's application for dramatically higher capital spending in 2007 is a list of seven project titles.

PG&E's rebuttal testimony offered nine "Examples of 2007 capital projects" and a list of requested capital expenditures. Aglet states there is no narrative explanation or work papers supporting the list. The total 2007 capital

¹²² Settlement Motion, p. 101; Settlement Agreement, para. 27.

¹²³ Settlement Agreement, Appendix G, Table 3-7, Line 24.

expenditures for the nine projects is \$11.7 million, less than one third of the requested capital expenditures of \$36.2 million.

Aglet contends that a listing of project titles and a brief explanation of \$11.7 million of the requested spending is insufficient support for \$36.2 million of capital expenditures. Further, Aglet notes that none of the capital projects listed by PG&E is critical, which leads Aglet to believe that some of the projects might not be funded depending on the availability of funds.

Aglet proposes that the Commission approve \$13.1 million for Core Plant Work capital expenditures in 2007. Aglet's proposal is based on the three-year average of recorded and forecasted capital expenditures for 2004, 2005, and 2006.

PG&E responds that it has adequately identified the specific projects for its requested capital expenditures for Core Plant Work. PG&E argues that it is not appropriate to rely on historical information as recommended by Aglet when better, project-specific information has been presented.

(2) Discussion

PG&E requested \$36.2 million for Core Plant Work capital expenditures in 2007. The Settlement Agreement adopts PG&E's request. To support its request, PG&E provided (1) a list of over 200 capital projects that comprise its requested capital expenditures, and (2) a description of nine of the projects with associated capital expenditures of \$11.7 million.¹²⁴ All of the projects identified by PG&E appear to be necessary and useful to the provision of utility service.

Aglet asserts that PG&E failed to support its requested capital expenditures. We disagree. PG&E provided a detailed breakdown of its

¹²⁴ Exhibit PG&E-18, pp. 11-10 to 11-12 and Table 11-1.

requested capital expenditures for Core Plant Work. Aglet did not attempt to demonstrate that any particular project is unreasonable or would not be undertaken by PG&E. Absent such a showing, we decline to adopt Aglet's proposal to reduce capital spending for Core Plant Work by nearly two thirds. Instead, we find that PG&E has demonstrated with substantial, clear, and convincing evidence that the Settlement outcome for nuclear Core Plant Work is reasonable in light of the record.

Although we decline to adopt Aglet's recommendation, we share Aglet's concern about the dramatic increase in capital expenditures for Core Plant Work since 2004. As noted by Aglet, the Settlement provides \$36.2 million for Core Plant Work capital expenditures in 2007, which far exceeds PG&E's recorded expenditures of \$3.8 million in 2004. Further, all of the projects are ranked as less-than-critical in PG&E's project-priority ranking system.

The high level of capital expenditures provided by the Settlement relative to historic spending, combined with funding for less-than-critical projects, indicates that PG&E has some flexibility as to whether it will actually use all the funds provided by the Settlement for Core Plant Work. We invite parties in the next GRC proceeding to closely scrutinize PG&E's capital spending for Core Plant Work during 2007-2010 to determine whether PG&E spent all the capital funds authorized by today's Opinion for the 200-plus capital projects for Core Plant Work listed in Chapter 11 of Exhibit PG&E-18. If PG&E has not, we do not anticipate authorizing capital expenditures for these projects a second time unless PG&E can demonstrate that it had to divert funds to other Core Plant Work not listed in Exhibit PG&E-18.

(B) Radioactive Waste Storage Facility

(1) Position of the Parties

Diablo Canyon's spent nuclear fuel is currently stored on site in large pools of water. The storage capacity of the pools is nearly exhausted. To allow Diablo Canyon to operate past 2010, PG&E is currently building an independent spent fuel storage facility (ISFSF). The ISFSF, which is permitted by the NRC, consists of a pad on which shielded casks of spent fuel will be stored.

PG&E requested \$3.4 million for ISFSF capital expenditures in 2007 and \$8.9 million in expense.¹²⁵ The Settlement Agreement adopts PG&E's requested capital expenditures for the ISFSF.¹²⁶ Expenses for the ISFSF are subsumed in the Settlement outcome for Generation O&M expenses.¹²⁷ The Settlement Agreement adopts \$450.6 million for Generation O&M expenses in 2007, which is \$6.4 million less than PG&E requested.¹²⁸

ANR/SC argues that ratepayer funding for the ISFSF is premature for several reasons. First in June 2006, the Ninth Circuit Court of Appeals ruled that the NRC should supplement the environmental impact statement prepared in connection with the NRC's authorization of the ISFSF to consider the environmental impacts of terrorist attacks.¹²⁹ ANR/SC contends that ratepayer funding for the ISFSF project should not be allowed at this time because the project may need to be redesigned and reconstructed.

¹²⁵ Exhibit PG&E-3, Chapter 4, Tables 4-1a and 4-11 on pp. 4-55 and 4-65, respectively.

¹²⁶ Settlement Agreement, Appendix G, Table 3-7, Line 32.

¹²⁷ Settlement Motion, p. 88.

¹²⁸ Settlement Agreement, para. 17.

¹²⁹ *San Luis Obispo Mothers for Peace v. NRC*, 449 F.3d 1016 (9th Cir. 2006).

Second, the NRC held that PG&E may proceed with construction of the ISFSF at its own financial risk.¹³⁰ Because PG&E is at risk, ANR/SC believes there is no need for ratepayers to fund the ISFSF until there is resolution of the NRC proceeding pursuant to the Ninth Circuit order.

Third, there has been legislation pending in Congress since February 2005 that calls for spent nuclear fuel to be transferred to the federal government.¹³¹ ANR/SC contends that it would be irresponsible to force ratepayers to fund costs for a storage facility at Diablo Canyon that might not be used.

Finally, ANR/SC believes that onsite storage of high-level nuclear waste poses a substantial threat to public health and safety. ANR/SC urges the Commission to require hardened onsite storage (berms and/or bunkers) and dispersal of the casks over the site to protect against radioactive fallout in the event of a terrorist attack or other acts of malice.

PG&E responds that the Ninth Circuit did not revoke PG&E's license from the NRC to construct and operate the ISFSF. Further, an NRC order issued on September 6, 2006, denied a request filed by the Mothers for Peace to stop PG&E's construction and operation of the ISFSF.¹³²

PG&E submits that it is in the public interest to move forward with the ISFSF. The existing spent-fuel pools will be full in 2010. If the ISFSF is not built and ready to store spent fuel, the NRC will not allow Diablo Canyon to continue operations, and PG&E's customers will lose this base-load generating resource and bear the cost of replacement power.

¹³⁰ NRC Memorandum and Order CLI-06-23, September 6, 2005.

¹³¹ H.R. 4538 and S.2099.

¹³² NRC Memorandum and Order, Docket No. 72-26-ISFSI (September 6, 2006).

PG&E agrees with ANR/SC that PG&E does bear the financial risk for proceeding with the ISFSF. PG&E defines that risk as recovery of only abandoned-plant cost (and no AFUDC) in the event the ISFSF is not completed.

(2) Discussion

It is likely that Diablo Canyon will continue to operate after 2010. We believe that it is prudent to move forward with construction of the ISFSF for the reasons cited by PG&E. Therefore, we decline to adopt ANR/SC's request to modify the Settlement Agreement to deny funding for the ISFSF.

We appreciate ANR/SC's efforts to safeguard the nuclear waste accumulating at Diablo Canyon from terrorist attack. We encourage ANR/SC and PG&E to work cooperatively to explore cost-effective options for protecting the nuclear waste at Diablo Canyon from attack, such as covering the dry-storage casks with high mounds of dirt.

(C) Reactor Vessel Head Replacement Project

(1) Position of the Parties

PG&E requested a total of \$141 million of capital expenditures over the 2007 GRC cycle to replace the Diablo Canyon reactor vessel heads (RVHs). DRA proposed that PG&E file a separate application for the RVHs. PG&E responded that the RVHs need to be replaced, and that DRA and others could review the completed project in the next GRC. The Settlement adopts PG&E's request.¹³³

ANR is concerned about ever rising costs for Diablo Canyon. When Diablo Canyon was built, PG&E forecast that the RVHs would last the life of the plant. PG&E now says it needs to replace the RVHs half way through the

¹³³ Settlement Agreement, para. 27, and Appendix G, Table 3-7, Line 24.

current license period. ANR/SC also observes that the forecast cost for RVHs has risen from \$67 million in the recent steam generator replacement proceeding to \$141 million today. ANR/SC adds that PG&E has not shown a need for new RVHs and, therefore, there should not receive funding for new RVHs.

(2) Discussion

The Settlement allows PG&E to replace its RVHs while allowing DRA and others to review the completed RVH project in the next GRC.¹³⁴ We find this outcome to be reasonable in light of the record and in the public interest.

ANR/SC asserts that it is not necessary to replace the RVHs without citing any supporting evidence. In contrast, PG&E presented written and oral testimony explaining why it is necessary to proceed with this project during this GRC cycle. PG&E testified:

By the end of the current operating cycle on Unit 1, both reactor vessel heads at [Diablo Canyon] will be in the 'high susceptibility' category (as defined by the Nuclear Regulatory Commission) for the onset of cracking in the Reactor Vessel Head penetration nozzles. Nearly all of the domestic pressurized water reactors in this category have already replaced or have ongoing projects to replace their reactor vessel heads. (Exhibit PG&E-18, p. 11-9, L: 18-23.)

Furthermore, PG&E testified that it will be more costly if the RVHs are not replaced because the current RVHs will likely require significant additional maintenance.¹³⁵ Specifically, when questioned why PG&E has proposed to replace the RVHs in 2008 and 2009, PG&E's witness responded:

¹³⁴ Settlement Motion, p. 100.

¹³⁵ 29 RT 2734:8-25, PG&E/Becker.

[B]ased on extensive industry experience, the Diablo Canyon reactor vessel heads are about to enter a time period where repairs are becoming likely during refueling outages. And the costs of refueling outages escalate greatly once the repairs start to occur.... So the time to pursue such a project is now, not after those repairs start to occur. The cost to the ratepayer if we waited for the repairs to start to occur would be considerably more costly. (29 RT 2734:13-25, PG&E/Becker.)

For the preceding reasons, we decline to adopt ANR/SC's recommendation. However, we share ANR/SC's concerns about the ever rising costs of maintaining and operating Diablo Canyon. As noted in the Settlement Motion, DRA and other parties can review the cost of the RVH replacement project in the PG&E's next GRC. We encourage ANR/SC to do so.

ii. Conclusion re: Nuclear Capital Expenditures

We find the Settlement Agreement provisions regarding Nuclear capital expenditures are reasonable in light of the record. PG&E provided extensive and generally persuasive testimony supporting its requested Nuclear capital expenditures, which is adopted by the Settlement. Aglet, ANR/SC, and TURN raised several objections to the Nuclear capital expenditures adopted by the Settlement Agreement, all of which we find unconvincing for the previously stated reasons.

We also find the Settlement provisions regarding Nuclear capital expenditures are consistent with applicable law, as there is no credible evidence that any part of the Settlement outcome for Nuclear capital expenditures is contrary to any law, regulation, court order, or Commission decision.

Finally, we find that the level of Nuclear capital expenditures set forth in the Settlement Agreement is in the public interest, as this level will enable PG&E

to continue to operate its 2,200 MW Diablo Canyon Power Plant to provide a large amount of reliable, base load electric power to its customers.

c. Fossil Capital Expenditures

i. Position of the Parties

PG&E requested \$3.4 million for Fossil Generation capital expenditures in 2007, \$1.7 million in 2008, and \$8.3 million in 2009. All of the requested capital expenditures are meant to keep the existing generating units at HBPP operating until new units come online in mid-2009. However, the timeframe for the new units is somewhat uncertain, as PG&E has not yet obtained construction permits or developed a construction schedule.

DRA recommended a disallowance of all capital expenditures for HBPP based on PG&E's plans to replace the existing power plant in mid-2009.

The Settling Parties agree to provide rate recovery for some specified capital projects for the continued operation of the existing generation units at HBPP. These projects are listed in Appendix C of the Settlement Agreement. The estimated revenue requirement for these projects is \$1.3 million in 2007, \$0.9 million in 2008, and \$0.7 million in 2009. The Settling Parties also agree that PG&E will establish a memorandum account to track the difference between the authorized and actual revenue requirement associated with these projects, and, in the next GRC, will refund any unused revenue requirements.¹³⁶

TURN supports memorandum account treatment for HBPP capital expenditures but opposes the provision in the Settlement Agreement allowing PG&E to collect these funds as part of base rates. TURN believes these capital

¹³⁶ Settlement Agreement, para. 30.

projects are unlikely to occur absent major setbacks in the construction of replacement generating units on the site. To the extent that these projects prove necessary, TURN states that PG&E should record the capital costs in the memorandum account and seek recovery in the next GRC.

The Settling parties urge the Commission to reject TURN's proposed modification of the Settlement. They opine that the Settlement Agreement's memorandum account treatment of capital expenditures adequately addresses TURN's concerns about whether these funds will ever be spent.

ii. Discussion

We decline to adopt TURN's proposed modification of the Settlement Agreement. HBPP provides essential load support to the surrounding region. There is no dispute that the requested capital expenditures for the existing facilities at the HBPP will be necessary in the event there is a delay in re-powering HBPP. We believe that it is prudent to plan for these capital expenditures because, until the proposed re-powering project is reviewed by the responsible agencies and the necessary permits for construction and operation of the new units are received, there is uncertainty regarding when the existing units at HBPP will be retired.¹³⁷ The HBPP memorandum account provides sufficient protections to ratepayers in the event the relatively modest capital expenditures adopted by the Settlement prove unnecessary.

For the preceding reasons, we conclude that the Settlement outcome for Fossil Generation capital expenditures is reasonable in light of the record, consistent with the law, and in the public interest.

¹³⁷ Exhibit PG&E-18, p. 12-4.

d. Generation Plant

PG&E forecasted \$11.177 billion of weighted-average plant in 2007 for Generation UCCs. DRA forecasted \$10.928 billion, for a difference of \$249.3 million. The Settlement adopts \$10.954 billion, which is \$223.3 million less than PG&E requested and \$26.1 million more than DRA recommended. The reduced amount adopted by the Settlement compared to PG&E's request is due almost entirely to nuclear fuel, which is addressed below.

We find the Settlement outcome on this matter is reasonable in light of the record, consistent with applicable law, and in the public interest.

e. Nuclear Fuel Inventory

PG&E sought to include nuclear fuel in rate base. PG&E forecasted a weighted-average nuclear fuel inventory of \$221.9 million in 2007.

DRA opposed PG&E's request to include nuclear fuel in rate base. DRA contended that doing so would cost ratepayers more, since ratepayers would bear the carrying costs for fuel inventory at the weighted cost of capital rather than the three-month commercial paper rate. DRA recommended that PG&E recover its nuclear fuel inventory carry costs in its Energy Resource Recovery Account (ERRA) proceeding consistent with long-standing Commission policy.

The Settling Parties agree to exclude nuclear fuel from PG&E's rate base.¹³⁸ The carrying costs for nuclear fuel inventory will continue to be collected through the ERRA at the short-term interest rate. No party objected to the Settlement outcome on this matter.

¹³⁸ Settlement, para. 43.

We find the uncontested Settlement outcome for nuclear fuel inventory is reasonable in light of the record, consistent with Commission precedent that excludes nuclear fuel inventory from rate base,¹³⁹ and in the public interest.

E. Common and Miscellaneous Revenues, Expenses, and Capital

1. Other Operating Revenues

Other Operating Revenues (OORs) are revenues that are not directly derived from the provision of public utility services. OORs are estimated separately and reduce the utility's revenue requirement.

PG&E initially forecast that OORs in 2007 would be \$113.9 million. PG&E subsequently agreed to several minor increases proposed by TURN. With these concessions, PG&E's revised forecast was \$114.8 million.

The Settling Parties agree that OORs will be \$116.2 million in 2007.¹⁴⁰ The Settlement Agreement reflects the Settling Parties' agreement to increase the fees for bounced checks and reconnection fees.¹⁴¹

TURN was the only party to contest PG&E's forecast of OORs. As discussed below, TURN recommends that the Commission modify the Settlement to increase OORs for several items. The Settling Parties respond that the Settlement Agreement increases OORs by \$1.4 million above PG&E's litigation position to reflect TURN's positions on OORs. They contend that TURN's recommendation to modify the Settlement to increase OORs would constitute double counting.

¹³⁹ See, for example, D.06-05-016, *mimeo.*, pp. 271-275.

¹⁴⁰ Settlement, para. 44.

¹⁴¹ PG&E's litigation position for OORs also reflected increased fees.

Below, we assess the reasonableness of the Settlement outcome for OORs in light of the record on the issues raised by TURN.

a. Issues Raised by TURN

i. Reconnection Fees

(A) Position of the Parties

PG&E forecasted \$2.9 million of revenue from reconnections charges in 2007 based on 2004 recorded data. TURN projects \$3.2 million based on 2005 recorded data. TURN testified that there is a clear upward trend in revenues for the five-year period ending in 2005. In light of this upward trend, TURN contends that the 2005 recorded data provides a better basis to forecast 2007 revenues than the 2004 data used by PG&E.

PG&E disagrees with the validity of TURN's trending process. TURN used only the five most recent years even though 10 years of data was available. PG&E states that looking at the data over a longer period shows that recorded reconnection fees have increased four times and decreased four times over the period 1996-2005. This shows, according to PG&E, that reconnection fees fluctuate from year to year and do not follow a trend as suggested by TURN.

(B) Discussion

The record shows that for the 10-year period of 1996-2005, there was a clear down trend in reconnection fees during 1996-2000 and a clear up trend since then.¹⁴² In light of the clear uptrend, we conclude that TURN's forecast of 2007 reconnection fees using 2005 recorded data is superior to PG&E's forecast using 2004 recorded data.

¹⁴² 12 RT 809:23 – 810:2, PG&E/Hartman.

The difference between PG&E's and TURN's positions is \$0.3 million. The Settling Parties assert that adopting TURN's position would constitute double counting because the Settlement Agreement adopts forecasted OORs that exceeds PG&E's litigation position by \$1.4 million. We agree with the Settling Parties on this point. TURN was the only party to contest PG&E's forecast of OORs. Consequently, it is reasonable to assume that the amount of OORs adopted by the Settlement Agreement in excess of PG&E's litigation position can only be attributed to TURN.

ii. Timber Sales

(A) Position of the Parties

PG&E forecasted that revenues from timber sales in 2007 would be \$2.0 million. TURN forecasted \$2.8 million. TURN's forecast is equal to the four-year average of actual timber revenues in 2004 and 2005, and PG&E's forecast of timber revenues in 2006 and 2007. TURN contends that using a four-year average is reasonable because it smoothes out year-to-year fluctuations.

PG&E responds that its forecast is based on expected circumstances in 2007 and, therefore, is better than TURN's retrospective approach.

(B) Discussion

PG&E testified that its forecast of timber sales in 2007 is based on current timber stand conditions and environmental requirements. Using this information, PG&E forecasts that a much higher proportion of the timber harvested in 2007 will be red and white fir. PG&E represents that these trees are low-value, which will depress timber revenues in 2007.¹⁴³

¹⁴³ Exhibit PG&E-18, p. 9-3.

TURN does not challenge the veracity of PG&E's testimony. Rather, TURN contends a four-year average provides a better forecast for the 2007 test year and the GRC cycle as a whole.

We find that PG&E and TURN have both presented reasonable forecasts, but that PG&E's forecast will likely be more accurate, at least in 2007, because it is based on current conditions and requirements rather than historical circumstances. We conclude, therefore, that the Settlement outcome on this matter is reasonable in light of the record.

iii. Work Requested by Others

(A) Position of the Parties

PG&E forecasted that it would incur \$21.0 million of expenses in 2007 for work requested by others (WRO) and receive \$8.5 million of OORs for WRO. TURN recommends that the forecasted OORs for WRO be increased by \$1.7 million. TURN observes that PG&E forecasts a significant decrease in the proportion of WRO expenses recovered through WRO revenues. Specifically, total WRO revenues in 2004 comprised 47.7% of total WRO expenses, whereas PG&E's 2007 forecast has revenues at only 35% of total expenses. The result is a 50% increase in costs to ratepayers (\$10.2 million in 2004 to \$15.7 million in 2007).

TURN believes the main reason why WRO revenues decrease relative to expenses is that PG&E projects that non-generation WRO expenses will increase faster than associated revenues. Non-generation WRO revenues were 51.2% of total non-generation WRO expenses in 2004. PG&E projects that non-generation WRO revenues will fall to 42.2% of non-generation WRO expenses in 2007.

TURN recommends that the Commission increase forecasted WRO revenues by \$1.7 million to restore the proportionality between WRO revenues

and costs. Under TURN's adjustment, non-generation WRO revenues will remain at 51.2% of non-generation WRO expenses.

PG&E opposes TURN's proposal. PG&E states that it is important to recognize there are two categories of WRO expenses: (1) those expenses that are reimbursable, which should match related revenues (Reimbursable WRO); and (2) those expenses that are not reimbursable (Non-Reimbursable WRO). The forecast of Reimbursable WRO has no impact on PG&E's revenue requirement, since the forecasted expenses are exactly offset by matching forecasted revenues. Only the forecast of Non-Reimbursable WRO affects revenue requirement. Consequently, PG&E's forecasted increase in net WRO expenses relates solely to Non-Reimbursable WRO.

PG&E incurs Non-Reimbursable WRO expense in three areas: relocations, generation interconnects, and pre-parallel inspections. With respect to relocations, PG&E agreed to DRA's proposal to reduce PG&E's projected expenses for 2007 from \$11.5 million to \$10.2 million. The \$10.2 million figure for 2007 is the equal to PG&E's recorded relocation costs in 2004, without inflation. PG&E states that TURN has incorrectly used PG&E's original \$11.5 million figure rather than adjusted amount of \$10.2 million.

With respect to generation interconnects, PG&E agreed to DRA's proposal to reduce its projected expenses from \$3.5 million to \$1.6 million. PG&E states that TURN has incorrectly used PG&E's original \$3.5 million figure rather than the adjusted amount of \$1.6 million.

With respect to pre-parallel inspections, PG&E did not agree to any reduction of its projected expenses of \$0.7 million in 2007, even though DRA recommended zero funding. PG&E objected to DRA's proposal because the work does exist and PG&E is obligated to perform these inspections upon a

customer's request. Furthermore, in the last GRC these cost were categorized as transmission expenses that are not recovered in GRC proceedings. In 2005, PG&E began recording this work under distribution assets. PG&E's recorded expenses for 2004 (recorded in transmission) were \$662,000. PG&E's 2007 forecast of \$711,000 represents a modest increase from 2004 of less than 3% per year. PG&E submits that its forecast is reasonable and should be adopted.

(B) Discussion

TURN's principal concern is the decline in the ratio of WRO revenues to WRO expenses from 2004 to 2007. Seeing this decline, TURN concludes that something must be awry, and proposes that the Commission increase forecasted WRO revenues by \$1.7 million in 2007 to restore the ratio to its 2004 level.

TURN's proposal is flawed in two respects. First, it rests on a mistaken assumption that PG&E requests \$15.7 million of expense for Non-Reimbursable WRO in 2007 compared to \$10.2 million in 2004. As noted by PG&E, the \$15.7 million figure that TURN uses in 2007 does not reflect PG&E's concessions. When PG&E's concessions are reflected (\$1.3 million for relocations and \$1.9 million for generation interconnects), the amount requested by PG&E in 2007 for Non-Reimbursable WRO drops to \$12.5 million, not the \$15.7 million figure cited by TURN.¹⁴⁴

The remaining differences of \$2.3 million between the 2004 recorded expenses for Non-Reimbursable WRO cited by TURN (\$10.2 million) and the amount being requested by PG&E in 2007 (\$12.5 million) is entirely attributable to generation-related items, i.e., generation interconnects (\$1.6 million) and pre-

¹⁴⁴ \$12.5 million is the sum of: \$10.2 million (Exhibit PG&E-18, p. 17-2, L: 25) plus \$1.6 million (PG&E-18, p. 17-3, L: 18) plus \$0.7 million (PG&E-18, p. 17-3, L: 22.)

parallel inspections (\$0.7 million). TURN does not dispute the reasonableness of PG&E's forecasted expenses of \$2.3 million for these items. Rather, TURN's concern is focused on what it saw as an excessive increase in non-generation expenses.¹⁴⁵ In fact, as described above, if the two generation related items – generation interconnects and pre-parallel inspections – are disregarded, there is no increase in the Non-Reimbursable WRO expense for non-generation items.

The second flaw in TURN's proposal to increase WRO revenues in 2007 by \$1.7 million is that it is based entirely on the premise that there is fixed ratio of WRO revenues to WRO expenses. Underlying this premise is the implicit assumption that Reimbursable WRO revenues and expenses move in tandem with Non-Reimbursable WRO expenses. However, Reimbursable WRO is different than Non-Reimbursable WRO. TURN did not demonstrate a correlation between these two expense items; nor did it provide a rationale for why these items must move in tandem. Because Reimbursable WRO and Non-Reimbursable WRO are for different services and are triggered by different needs, they cannot be expected to remain in a constant ratio over time.

For the preceding reasons, we find the Settlement outcome for WRO revenues to be reasonable in light of the record. Accordingly, we decline to adopt TURN's proposal to modify the Settlement Agreement to increase the forecasted OOR in 2007 by \$1.7 million. In any event, this issue is largely moot. For the reasons described previously, the Settlement Agreement appears to adopt at least some of TURN's position on WRO (and other OOR issues).

¹⁴⁵ TURN Comments, pp. 75-76.

2. Administrative and General Expenses

Administrative and General (A&G) expenses are common costs that benefit all of PG&E's lines of business. PG&E conducted an A&G Study (Study) to determine the amount of A&G expense that should be included in its GRC revenue requirement. The Study examined 42 PG&E (Utility) departments and 26 PG&E Corporation (Holding Company) departments. The Study identified each department's total labor, materials, and contract costs. The Study then used an elaborate, multi-step process to allocate these costs among all the UCCs, including those relevant to this GRC.

The Settlement Agreement adopts total Company A&G expenses of \$772.3 million in 2007. This outcome is \$34 million less than PG&E's request of \$806.3 million and \$70.1 million more than DRA's recommendation of \$702.2 million. The Settlement also allocates the total Company A&G expenses among the UCCs. The amount of A&G expenses allocated to GRC-related UCCs is \$709.4 million in 2007, which is \$32.8 million less than PG&E requested and \$66.5 million more than DRA recommended.¹⁴⁶ The Settling Parties agree that the allocation A&G expenses among the UCCs adopted by the Settlement should be used to determine the A&G expenses in other proceedings until the next GRC.

DRA and TURN raised numerous issues regarding PG&E's requested A&G expenses. Below, we assess the reasonableness of the Settlement outcome for A&G expenses in light of the record on these issues. For convenience, we divided these issues into the following categories: (1) general matters and corporate services; (2) Holding Company issues; (3) employee compensation; (4) other A&G expenses; and (5) unbundling.

¹⁴⁶ Settlement Agreement, Appendix A, Line 16.

a. General Matters and Corporate Services

i. Issues Addressed by DRA

(A) Normalized Adjustments

DRA proposed a disallowance of \$1.145 million for “normalized adjustments.” The costs in question were for employee recognition awards, employee lunches and dinners, staff parties, and entertainment activities. PG&E responded that the costs in question are a customary part of doing business, and that failure to recover these costs would place PG&E at a competitive disadvantage in terms of employee recruitment and retention. The Settling Parties agree that the resolution of DRA’s normalized adjustments is subsumed in the overall Settlement outcome for A&G expenses.

(B) Time Tracking

DRA expressed concern that PG&E does not have a formal time-tracking system to record time and costs in the Public Policy and Governmental Affairs (PP&GA) departments, particularly those with below-the-line activities. DRA believed that the lack of a time-tracking system could result in excessive charges to ratepayers. The Settling Parties agree that PG&E will implement a time-tracking system no later than January 1, 2008.

(C) Corporate Services

PG&E’s Corporate Services includes all the Utility departments that provide services to the Company as a whole. DRA performed an in-depth review of Corporate Services. Based on its review, DRA concurred with much of PG&E’s requested expenses for Corporate Services in 2007. The areas of agreement included \$1.45 million for the Utility President and CEO; \$7.504 million for Corporate Accounting functions; \$1.477 million for Industrial Relations; \$1.0 million for the Compensation department; \$1.883 million for the

Professional Staffing and Diversity department; \$2.567 million for Corporate Security; \$0.681 million for the office of the Vice President (VP) of ISTS; \$25.7 million for legal settlements and judgments; and \$0.5 million for the office of the PG&E's Senior Vice President (SVP) and Senior Counsel.

DRA also proposed numerous disallowances of Corporate Services expenses. Most of DRA's proposed disallowances are summarized in the following table:

DRA's Proposed Disallowances of Corporate Services Expenses in 2007 (\$ Millions)		
	PG&E Request	DRA Disallowance
Utility Corporate Secretary	\$0.82	\$0.82
Utility Law Department	\$37.20	\$3.60
Health, Safety, and Claims	\$72.70	\$0.26
Utility SVP and CFO	\$0.78	\$0.35
Business and Financial Planning	\$1.53	\$0.26
Utility VP and Controller	\$3.93	\$1.75
Management Reporting	\$5.17	\$1.57
Capital Accounting	\$2.28	\$0.44
Accounts Payable	\$2.67	\$0.38
Utility Risk Management	\$5.54	\$1.50
Public Policy and Gov. Affairs	\$30.50	\$8.50
SVP Human Resources	\$0.80	\$0.29
HR Operations, Services & Systems	\$5.56	0.63
Supply Chain Purch. Operations	\$5.09	\$1.04
Total	\$174.57	\$21.39

DRA's proposed disallowances in the above table exclude DRA's "normalized adjustments" summarized previously. The bulk of DRA's proposed disallowances shown in the above table were based on its finding that PG&E's requested expenses were excessive when compared to historical expenses and staffing for Corporate Services.

PG&E responded that DRA's analysis of historical data overlooked a substantial amount of data that demonstrated PG&E's requested expenses were reasonable. PG&E also asserted that its expenses would be higher in 2007 compared to historical trends because of costly new requirements (e.g., Sarbanes-Oxley) and programs (e.g., reinstatement of PG&E's commercial paper program).

(D) Discussion

The resolution of the issues raised by DRA regarding A&G expenses is subsumed within the overall Settlement outcome for A&G expenses. The Settlement Agreement provides PG&E with \$709.4 million for A&G expenses in 2007, which is \$32.8 million less than PG&E requested.¹⁴⁷ We presume the Settlement Agreement, by providing PG&E with less money than it requested, reflects DRA's litigation position to some degree.

We commend DRA for the considerable effort it invested in reviewing and analyzing A&G expenses. Absent the Settlement Agreement, we would have adopted at least some of DRA's proposed disallowances for A&G expenses. TURN contested certain aspects of the Settlement outcome, which we address below. Putting aside the matters disputed by TURN, we find the Settlement outcome for general A&G matters and Corporate Services is reasonable in light of the record, consistent with applicable law, and in the public interest.

¹⁴⁷ Settlement Motion, p. 108.

ii. Issues Raised by TURN

(A) Capitalization of A&G Costs

(1) Position of the Parties

PG&E proposed seven separate capitalization rates for different categories of A&G expenses, including 32.61% for pensions, benefits, and workers' compensation. PG&E also proposed a capitalization rate of zero percent (0.00%) for some A&G expenses, including certain human resource (HR) functions. DRA agreed with PG&E's proposed capitalization rates, which the Settlement adopts.

TURN recommends that the Commission modify the Settlement to adopt a single capitalization rate of 33.09% for all A&G costs, which is equal to the average rate in 2005 and 2006 for pension, benefits, and workers' compensation costs (32.05% and 34.13%). Adopting TURN's proposal would reduce A&G expenses in 2007 by \$9.8 million compared to PG&E's request.

TURN claims that PG&E provided contradictory testimony regarding its proposed capitalization rate of 32.61% for pensions, benefits, and workers' compensation. On the one hand, PG&E stated in rebuttal testimony that its proposed rate of 32.61% for 2007 is based on 2004 data. On the other hand, PG&E's witness testified during cross-examination that PG&E's capitalization rate of 32.05% in 2005 was based on 2004 data. TURN argues that the fact that PG&E used the same 2004 data to calculate different capitalization rates for 2005 and 2007 casts doubt on PG&E's proposed capitalization rate of 32.61% in 2007.

TURN opposes PG&E's capitalization rates for other HR functions that range from 0% to 32%. For example, PG&E requests a capitalization rate of zero percent (0.00%) for the Benefits department based on the claim that this department would not avoid any costs in the absence of a capital program. TURN argues that PG&E's rationale makes no sense. The Benefits department

provides services to employees assigned to construction projects and, therefore, a portion of the department's costs should be capitalized.

PG&E opposes TURN's uniform capitalization rate of 33.09%. PG&E states that its multiple capitalization rates are based on a department-specific study that was conducted in conformance with the incremental standard prescribed by the Commission and the USOA. Under this approach, each A&G department identified to what extent the department's costs would be avoided in the absence of ongoing construction activities. The avoided costs were then used to determine appropriate capitalization rates. PG&E asserts that TURN has not shown any legitimate flaws in PG&E's approach.

(2) Discussion

TURN recommends a uniform capitalization rate of 33.09% for all A&G departments. To support its recommendation, TURN criticizes PG&E's capitalization rate of zero percent (0.00%) for some A&G departments, and cites PG&E's Benefits department as an example of a department that should capitalize some of its costs. TURN overlooks the fact that the Benefits department provides services to 17,000 retirees.¹⁴⁸ The absence of a capital program would not affect the services provided to retirees. Thus, the work of the Benefits department is driven more by the number of beneficiaries than by the number of employees assigned to construction projects. We concluded that PG&E's proposed capitalization rate of 0.00% for the Benefits department is more reasonable than TURN's proposed rate of 33.09%.

¹⁴⁸ Exhibit PG&E-6, p. 18-A24.

The record shows that PG&E determined its capitalization rates on a department-by-department basis using an incremental approach. Using this approach, each department determined what costs would be avoided in the absence of an ongoing construction program. The avoided costs were then used to calculate a capitalization rate.¹⁴⁹ In contrast to PG&E's approach, TURN proposes a single capitalization rate for all A&G departments. The calculations used by TURN to develop its proposed rate did not reflect the disaggregation of department costs into cost pools (capital, below-the-line, PG&E Corporation, and affiliates) or the effects of A&G expenses already capitalized through FERC Account 922. PG&E did take these items into consideration when calculating its capitalization rates. Thus, PG&E's approach for calculating capitalization rates is more precise than TURN's.

We conclude for the preceding reasons that there is more support in the record for PG&E's multiple capitalization rates than for TURN's single rate, and that the Settlement's adoption of PG&E's capitalization rates is reasonable in light of the record.

(B) Law Department Costs for Outside Counsel

(1) Position of the Parties

PG&E's requested \$19.6 million for outside legal counsel expenses in 2007. PG&E's request was based on recorded expenses for 2005. DRA and TURN both recommended \$16.2 million based on 2004 recorded expenses. The Settlement states that the resolution of this matter is subsumed within the overall Settlement outcome for A&G expenses.

¹⁴⁹ Exhibit PG&E-18, p. 34-22.

TURN argues that PG&E's use of 2005 data instead of 2004 data is rank opportunism. With this one exception, PG&E opposed the use of 2005 data to forecast expenses in 2007. The only reason that TURN can discern for PG&E's use of 2005 data here, but nowhere else, is that the 2005 expenses for outside counsel costs are higher than 2004 and thus more to PG&E's liking.

TURN maintains that the 2005 data used by PG&E is flawed because it includes costs for Department of Energy (DOE) litigation on nuclear waste. When asked to describe the status of the litigation, PG&E claimed the associated costs are being tracked in a balancing account and will be netted against litigation proceeds. TURN argues that PG&E is attempting to double recover DOE litigation costs - once through the balancing account and again in this GRC.

PG&E responds that because the Settlement provides \$34.0 million less than PG&E requested for A&G expenses in 2007, it is logical to assume that the Settlement provides PG&E with less than it requested for outside legal costs. PG&E states that TURN has not shown this outcome is unreasonable. PG&E also states that TURN's point about DOE litigation expenses is off the mark because PG&E did not request recovery of any DOE-related litigation costs in this GRC.

(2) Discussion

We conclude that the Settlement outcome for outside legal expenses is reasonable in light of the record. Although we would have preferred if the Settling Parties had used only 2004 base-year data to forecast outside legal costs in 2005, the fact that 2005 recorded data appears to have been used, at least in part, does not render the Settlement outcome unreasonable. TURN alleges that the 2005 data include costs for DOE litigation that PG&E is recovering elsewhere.

PG&E denies the allegation.¹⁵⁰ TURN did not substantiate its allegation with accounting records or other dispositive facts.

On a related matter, we note that in October 2006, PG&E was awarded \$42.8 million in damages from the federal government because of the DOE's failure to build a repository for radioactive waste from nuclear power plants. PG&E began remitting waste-storage payments to the federal government in 1985. The total amount paid through December 2004 was \$299 million. The Settlement Agreement does not address this matter.

We presume the \$42.8 million damage award will be flowed through to PG&E's ratepayers in accordance with the procedures applicable to PG&E's DOE Litigation Balancing Account. Under these procedures, PG&E is required to file an application regarding the disposition of the damage award and to flow through the award, net of associated costs, in its next GRC.

(C) Public Policy and Government Affairs

(1) Position of the Parties

PG&E requested \$30.5 million for the PP&GA department in 2007, an increase of 35% over 2004 expenses. TURN recommends that funding for the PP&GA department in 2007 be limited the department's recorded costs in 2004, plus 4.5%. TURN's proposal is \$7.7 million less than PG&E's requested funding.

TURN's main concern is that it believes much of the department's expenses are for below-the-line activities, such as lobbying government officials. Although the Settlement requires PG&E to implement an improved system for tracking the time spent by employees on below-the-line activities, TURN

¹⁵⁰ Exhibit TURN 47, Answer 3A, last sentence; Settling Parties' Reply Comments filed October 5, 2006, p. 65.

contends the tracking system will do little to prevent ratepayer funding of below-the-line activities. TURN argues that the best way to protect ratepayers is to implement TURN's proposed disallowance of \$7.7 million.

TURN offers several reasons why its proposed disallowance is reasonable. First, PG&E's requested funding for the PP&GA department in 2007 is 35% higher than the department's costs in 2004. TURN states that the 35% increase is seven times inflation and customer growth, which is unreasonable on its face.

Second, TURN contends that PG&E's requested funding includes an unwarranted increase for regulatory costs. For example, PG&E's request includes \$1.126 million for contracts by the Operations Revenue Requirements organization, even though PG&E spent less than half this amount in 2005.

Third, TURN believes it is unfair for ratepayers to provide a substantial increase in funding for the PP&GA department because doing so will strengthen PG&E's ability to obtain rate increases through the regulatory process.

Fourth, PG&E's request includes a 20% increase for the Area Public Affairs (APA) organization, which is responsible for opposing municipalization proposals. TURN asserts that the requested increase for the APA organization is not justified because PG&E has understated the portion of the organization's work that is devoted to below-the-line activities.

Fifth, PG&E justifies its request for significantly higher funding based, in part, on the need for more staff to oversee an increase in contracts related to political spending in recent years while also maintaining that the amount of staff time devoted to political work is expected to decrease due to the absence of major election campaigns. TURN submits that the internal contradictions of PG&E's position undermine its request for significantly higher spending.

Finally, PG&E's request includes an increase of 182% for internal communications expenses. TURN believes that such a large increase is patently unreasonable. TURN asserts that the requested increase is due to poor management that resulted in a meltdown of the internal communications organization, resulting in the departure of key staff and the use of expensive contractors. TURN believes these facts show that PG&E needs cost discipline.

PG&E responds that TURN's proposal to limit funding growth for the PP&GA department in 2007 to a 4.5% increase over 2004 is arbitrary and ignores the projected workload and costs for the department in 2007.

(2) Discussion

The Settling Parties agree that PG&E's total 2007 A&G expenses should be \$709.4 million. This outcome is \$32.8 million less than PG&E's request of \$742.2 million.¹⁵¹ The Settlement outcome reflects the Settling Parties' resolution of all issues raised by TURN, including TURN's proposed disallowance of \$7.7 million for PP&GA department costs.

We presume that the Settlement outcome reflects some, but not all, of TURN's proposed disallowance of PP&GA department costs. To determine if this is a reasonable outcome, it is necessary to assess whether the record supports the adoption of TURN's entire disallowance. If the answer is in the affirmative, then this would be one indication that the Settlement is not reasonable in light of the whole record. Conversely, if we find that some or all of TURN's disallowance should not be adopted, then this would lend weight to the conclusion that that Settlement is reasonable in light of the whole record.

¹⁵¹ Settlement Agreement, Appendix A, Line 16.

TURN recommended an increase of 4.5% PP&GA department expenses in 2007 compared to 2004, which represents the approximate customer growth from 2004 to 2007.¹⁵² TURN's proposal ignores inflation and other cost drivers, and assumes that expenses for the PP&GA department are strictly correlated with customer growth. TURN provided no evidence to support this assumption. In contrast, PG&E provided testimony showing that the drivers of cost growth for the PP&GA department are increases in work load that are not materially related to customer growth.¹⁵³ Based on PG&E's testimony, we conclude that an increase of greater than 4.5% is warranted for the PP&GA department.

TURN offers several reasons why its proposed disallowance of \$7.7 million is reasonable. We find that TURN has demonstrated that some disallowance of PP&GA costs is justified, and this is reflected in the Settlement Agreement for the previously stated reasons. However, we also find that PG&E has justified the bulk of its requested funding for the PP&GA department.

For the preceding reasons, we conclude that the Settlement Agreement outcome with respect to PG&E's PP&GA department is reasonable in light of the whole record, consistent with the law, and in the public interest.

(D) Membership Dues and Political Contributions

(1) Position of the Parties

PG&E requested recovery of membership dues for organizations that engage in political activities. TURN asked the Commission to disallow these costs. The Settlement Motion stipulates that the resolution of TURN's

¹⁵² Exhibit TURN-1, p. 57.

¹⁵³ Exhibit PG&E-6, Chapter 14; and Exhibit PG&E-18, Chapter 47.

recommended disallowance is subsumed within the Settlement's overall outcome for A&G expenses, O&M expenses, and rate base.

TURN observes that long-standing Commission precedent requires that political donations be funded by shareholders, not ratepayers. TURN argues that the Settlement Agreement fails to adhere to this precedent by not explicitly adopting the disallowances proposed by TURN for the following dues and contributions paid to organization that engage in political activities :

Organization	Disallowance
Local Chambers of Commerce	\$26,000
California Business Roundtable (CBR)	\$25,000
Calif. Commission for Jobs & Economic Growth (CCJEG)	\$50,000
BIPAC	\$6,000
Civil Justice Assoc. of Calif.	\$29,657
Total	\$136,657

The Settling Parties oppose any modification of the Settlement Agreement. They state that TURN's recommended disallowances are already reflected in the Settlement outcome for A&G expenses, O&M expenses, and rate base.

PG&E addresses each of TURN's proposed disallowances. PG&E agrees with TURN that membership dues for local Chambers of Commerce should be borne by shareholders. However, PG&E disagrees with TURN's proposed disallowance of \$26,000. PG&E represents that it never requested \$11,000 of this amount, and that the remaining \$15,000 is part of the overall Settlement.

PG&E opposes TURN's request to disallow \$25,000 paid to the CBR and \$50,000 paid to the CCJEG. Again, the resolution of these disallowances is part of the overall Settlement. Moreover, PG&E claims that these organizations do

more than lobbying and provide customer benefits. As such, PG&E believes it is proper to charge ratepayers for the membership dues for these organizations.

PG&E represents that TURN's proposed disallowance of \$6,000 for PG&E's contributions to BIPAC is moot because PG&E withdrew its request for BIPAC funding in its rebuttal testimony.

Finally, PG&E opposes TURN's disallowance of \$29,657 contributed to the Civil Justice Association of California. PG&E contends that reasonable parties may differ on whether this amount should be the responsibility of ratepayers or shareholders. PG&E opines that the test is not whether the Settlement adopts or rejects any particular position, but whether the Settlement generally balances the various interests at stake and is consistent with policy objectives and the law.

(2) Discussion

Long-standing Commission policy prohibits rate recovery of any costs for political lobbying or advocacy. This policy is reflected in numerous Commission decisions¹⁵⁴ and underlies the purpose of the below-the-line Account 426.4.¹⁵⁵ We find that TURN's proposed disallowances fall into this category.

¹⁵⁴ See, for example, D.96-01-011, 1996 Cal. PUC LEXIS 26, *14, and D.89-12-057, 1989 Cal. PUC LEXIS 687, *36.

¹⁵⁵ FERC Account 426.4 defines lobbying activities that should not be funded by ratepayers as follows: "This account shall include expenditures for the purpose of influencing public opinion with respect to the election or appointment of public officials, referenda, legislation, or ordinances (either with respect to the possible adoption of new referenda, legislation or ordinances or repeal or modification of existing referenda, legislation or ordinances) or approval, modification, or revocation of franchises; or for the purpose of influencing the decisions of public officials, but shall not include such expenditures which are directly related to appearances before regulatory or other governmental bodies in connection with the reporting utility's existing or proposed operations."

The Settlement Agreement would be inconsistent with the law and contrary to the public interest if it allowed into rates any of the costs that TURN seeks to disallow. PG&E has provided persuasive testimony that it has not sought, and the Settlement does not provide, rate recovery for some of TURN's proposed disallowances (i.e., \$11,000 for Chamber of Commerce membership dues and \$6,000 for BIPAC membership dues).¹⁵⁶

The Settlement's treatment of the remainder of TURN's proposed disallowance totaling \$120,657 is somewhat ambiguous. The Settling Parties do not state that TURN's proposed disallowances are adopted, only that the resolution of the issues raised by TURN are subsumed within the overall Settlement outcome. Fortunately, the amount at issue borders on being *de minimis*, and we may safely assume that all of TURN's remaining disallowance of \$120,657 is reflected in the Settlement Agreement.

We will adopt the Settlement Agreement with the understanding that it does not provide any funding for political activities. Henceforth, PG&E shall identify and track all expenditures for membership dues in organizations that engage in political activities, including all the organizations identified by TURN in this proceeding, and record an appropriate proportion of these expenditures in the below-the-line Account 426.4.

b. Holding Company Costs

i. Issued Raised by DRA

PG&E's parent company, PG&E Corporation (the Holding Company), provides support services to PG&E. PG&E requested \$65.96 million for these

¹⁵⁶ Exhibit PG&E-18, pp. 34-15 and 34-16; and Exhibit PG&E-18, pp. 46-28 to 46-29.

services in 2007, which represents 94% of the Holding Company's above-the-line costs. DRA recommended \$32.42 million, for a difference of \$33.54 million.

DRA's recommendation was based on an extensive review of Holding Company costs allocated to PG&E. DRA analyzed each category costs allocated to PG&E to determine the extent the Holding Company and PG&E each benefited from these costs. DRA then divided each category of costs between the Holding Company and the Utility based on their relative share of the benefits. Based on its analysis, DRA concluded that 49% of the Holding Company's costs should be allocated to PG&E.

PG&E responded that its request excluded all incremental costs for activities at the Holding Company that either (1) provide no demonstrable benefit to PG&E, or (2) if performed by PG&E, could be performed more efficiently or at a lower overall cost.

The Settling Parties agree that the resolution of the issues raised by DRA regarding Holding Company costs is subsumed within the Settlement outcome for A&G expenses. The Settlement provides PG&E with \$709.4 million for A&G expenses in 2007, which is \$32.8 million less than PG&E requested.¹⁵⁷

We commend DRA for its thorough analysis of Holding Company costs allocated to PG&E. Absent the Settlement Agreement, we would have adopted some, but not all, of DRA's proposed disallowance of these costs.

We assume the Settlement outcome reflects DRA's litigation position on Holding Company costs by providing PG&E with less money for A&G expenses than it requested. With this assumption in mind, we find the Settlement outcome

¹⁵⁷ Settlement Motion, p. 108.

for the Holding Company issues raised by DRA is reasonable in light of the record, consistent with applicable law, and in the public interest.

ii. Issues Raised by TURN

TURN challenges PG&E's requested revenue requirement for the Holding Company's SVP of the PP&GA department. PG&E requested \$0.619 million for this department in 2007.¹⁵⁸

TURN argues that this department's costs should be frozen at the 2004 level of \$0.420 million. PG&E responds that TURN's proposal is based on its mistaken belief that the department's costs increased from 2004 (\$0.420 million) to 2007 (\$0.530 million). However, PG&E's errata corrected the 2004 recorded amount for this department from \$0.420 million to \$0.702 million.¹⁵⁹ Therefore, PG&E's 2007 test-year request (\$0.619 million) is less than this department's costs in 2004 (\$0.720 million). PG&E believes this issue is now moot.

We find that the record shows that PG&E's requested expenses for the PP&GA department in 2007 are less than the department's actual costs in 2004. Therefore, we agree with PG&E that this issue is moot.

c. Employee Compensation

i. Total Compensation

DRA and PG&E jointly selected Towers Perrin to conduct the Total Compensation Study (Compensation Study). The purpose of the Compensation Study was to compare the total compensation paid to PG&E's employees (i.e., base pay, bonuses, and employee benefits) to the labor market represented by a

¹⁵⁸ PG&E allocated 47% of this department's total costs below-the-line because they relate to political contributions.

¹⁵⁹ Exhibit PG&E-16, p. 16-205; Exhibit PG&E-18, p. 46-24 to p. 46-26.

survey of selected industrial and utility companies. The Compensation Study revealed that PG&E's total compensation is 4.71% above the survey average. Towers Perrin considers +/- 10% of the market average to be the range of competitiveness. Since PG&E's total compensation falls within this range, the Compensation Study indicates that PG&E's total compensation is reasonable.

No party disputed the reasonableness of PG&E's total compensation. However, DRA contested one element of PG&E's compensation. The parties' litigation positions on this issues are summarized below.

(A) Employee Incentive Plan

PG&E employees are eligible for annual bonuses under the Performance Incentive Plan (PIP). The Total Compensation Study included the actual PIP payments made in 2004. PG&E requested \$56.2 million for PIP payments in 2007, equivalent to 50% of the maximum potential payout and below the historical average. Shareholders would bear the cost of PIP payments over 50%.

PG&E Corporation's Short-term Incentive Plan (STIP) is similar to PG&E's PIP. PG&E requested \$5.1 million in 2007 for STIP expenses, equivalent to 50% of the maximum potential payout.

DRA recommended that the Commission disallow half of PG&E's request for PIP, or \$28.1 million. DRA contended that PG&E's PIP payout percentage has increased significantly since 2000, and that ratepayers should not have to pay for the increase. DRA also argued that shareholders benefit from PIP costs and, therefore, should share the forecasted costs.

DRA argued that because STIP costs are incurred at the Holding Company level, these costs should first be disallowed in the same proportion as DRA's proposed disallowance of other Holding Company costs, and then reduced another 50% consistent with DRA's PIP recommendations.

PG&E responded that the requested PIP expenses are reasonable because total compensation, of which PIP is a component, is reasonable. Further, when a utility provides safe and reliable service and earns its authorized rate of return, as reflected in the PIP award, both customers and shareholders benefit and the Commission cannot realistically allocate between these two groups the reasonable PIP costs to achieve these twin goals. PG&E also contended that its request is supported by the Commission's decision in SCE's recent GRC. There, the Commission granted full recovery of incentive pay based on actual costs.¹⁶⁰ Here, PG&E has requested recovery of target costs (50% of maximum potential payout), which is lower than PG&E's historical percentage payout.

PG&E opposed DRA's proposed disallowance of STIP costs for the same reasons it opposed DRA's recommendation for PIP.

The Settling Parties agree that issues regarding total compensation, PIP, and STIP are subsumed in the Settlement outcome for A&G expenses. The Settlement provides PG&E with \$709.4 million in A&G expenses in 2007, which is \$32.8 million less than PG&E requested.¹⁶¹ No party contested this aspect of the Settlement Agreement.

(B) Discussion

We find that the uncontested Settlement outcome for total compensation, PIP, and STIP is reasonable in light of the record, consistent with applicable law, and in the public interest.

¹⁶⁰ D.06-05-016, *mimeo.*, p. 129.

¹⁶¹ Settlement Motion, p. 108.

ii. Pensions and Benefits

PG&E's employee compensation includes the following benefits:

(1) pension benefits, (2) various medical benefits, (3) post-retirement benefits other than pensions (PBOPs), (4) group life insurance, (5) flexible benefit program, (6) long-term disability (LTD), (7) retirement savings plan, (8) tuition refund, (9) relocation expenses, and (10) service awards.

PG&E requested \$768.98 million for benefits expenses in 2007 for the entire Company, before capitalized and other allocated amounts are removed. DRA, Aglet, and TURN raised several issues regarding PG&E's requested benefits expenses. Below, we assess the reasonableness of the Settlement outcome on benefits expenses in light of the record on the major categories of benefits expenses and the issues raised by the parties.

(A) Pension Contributions

In D.06-06-014, which was issued earlier in this proceeding, the Commission adopted an uncontested settlement agreement that authorizes PG&E to (1) contribute \$249.7 million to its Pension trust in 2006 and \$153.4 million annually in 2007-2009, and (2) recover the following revenue requirement for its GRC lines of business during 2006-2009:

\$ Millions				
<i>GRC Line of Business</i>	2006	2007	2008	2009
Electric Distribution	77.2	46.8	48.4	50.5
Gas Distribution	34.5	26.2	27.2	28.3
Electric Generation	43.3	25.3	26.2	27.3
GRC Total	155.0	98.2	101.7	106.1
Source: D.06-06-014, <i>mimeo.</i> , p. 2.				

PG&E is authorized by D.06-06-014 to recover the revenue requirement shown in the above table for the pension contributions in 2007-2009 in the base rates authorized by today's Opinion.¹⁶² The contributions authorized by D.06-06-014 are projected to result in a fully funded pension plan by January 1, 2010.¹⁶³

D.06-06-014 resolved all issues concerning PG&E's pension costs for the years 2007-2009. However, because the Settlement extends the GRC cycle through the year 2010, the Settling Parties agree that pension-contribution settlement approved by D.06-06-014 for the years 2007-2009 should be extended through 2010. The relevant provisions are in paragraphs 37-39 of the Settlement Agreement and include the following:

1. PG&E will make a total pension contribution of \$176.0 million for the year 2010, which equates to a net contribution of \$153.4 million. (D.06-06-014, FOF 10 and OP 5.)
2. PG&E will recover in base rates the revenue requirement for the portion of the pension contribution authorized for 2010 that is allocable to PG&E's GRC lines of business. Recovery of the pension-contribution revenue requirement for non-GRC lines of business will be authorized, as appropriate, in other proceedings and venues. (D.06-06-014, OP 6.)
3. The advice letter required by OP 7 of D.06-06-014 will extend through the year 2010.
4. The annual report required by OP 8 of D.06-06-014 will continue through the year 2011.

¹⁶² The revenue requirement is less than the contributions because a portion of the contributions is capitalized and recovered over time through depreciation expense.

¹⁶³ D.06-06-014, *mimeo.*, pp. 9 -10.

The revenue requirement for pension costs adopted in D.06-06-014 and the Settlement Agreement is in addition to the GRC revenue requirement adopted by the Settlement. The cumulative increase in GRC revenues (other than pension costs) adopted by the Settlement is \$1.637 billion through 2010.¹⁶⁴ The cumulative increase in revenues for pension costs is \$417 million through 2010.¹⁶⁵

There is no opposition to the Settlement outcome for pensions costs. We find the Settlement outcome on this matter is reasonable in light of the record, consistent with Commission precedent, and in the public interest.

(B) Issues Raised by DRA

(1) Medical Escalation Rates

PG&E requested \$217.8 million for medical benefit expenses in 2007. DRA recommended \$195.6 million. PG&E forecasted medical benefit costs in 2007 by escalating 2004 recorded costs by medical-trend factors less savings from plan changes. PG&E based its trend factors on (1) claims and enrollment information, (2) national trend data, and (3) Global Insight's forecast of the Employment Cost Index for Health Insurance (ECIHI).¹⁶⁶

DRA forecasted medical benefit costs in 2007 by escalating 2004 recorded costs by Global Insight's projection of the ECIHI. Aglet agreed with DRA.

¹⁶⁴ \$1.637 billion = \$852 million for 2007 (i.e., \$213 million x 4) + \$375 million for 2008 (i.e., \$125 million x 3) + \$250 million for 2009 (i.e., \$125 million x 2) + \$125 million for 2010, + \$35 million for the Diablo Canyon refueling outage in 2009 or 2010.

¹⁶⁵ \$417 million = \$98 million (2007) + \$102 million (2008) + \$106 million (2009) + \$111 million (2010). The amounts for 2007-2009 are from D.06-06-014, *mimeo.*, p. 2. The amount for 2010 is estimated.

¹⁶⁶ Global Insight is a private company that provides econometric forecasts that are used regularly in Commission proceedings.

PG&E responded that the ECIHI does not accurately track PG&E's medical benefits costs. PG&E also asserted that Global Insight's previous forecasts of the ECIHI have been (1) lower than PG&E's medical trend experience, and (2) lower than the actual ECIHI, as reported by the Bureau of Labor Statistics.

(2) Service Award Program

PG&E's Service Award Program provides each employee with a "thank you" gift at every five-year anniversary and at retirement. PG&E requested \$1.1 million for this program in 2007.

DRA argued that several Commission decisions have denied ratepayer funding for awards that fit into the category of social activities, and that PG&E's Service Award Program should be disallowed on the same basis.

PG&E responded that its Service Awards are not social activities, but tangible tokens of appreciation for continuous employee service. Moreover, the Service Awards Program is part of PG&E's total compensation package -- a package that is within the range of market compensation.

(3) Relocation Benefits

PG&E provides relocation benefits to assist employees with costs associated with Company-initiated moves. PG&E requested \$2.61 million for relocation expenses for PG&E employees in 2007 and \$0.7 million for Holding Company employees. DRA concurred with PG&E's request for its own employees, but recommended that PG&E's request for Holding Company employees be reduced by 50%. PG&E opposed DRA's proposed reduction.

(4) PBOP Medical and Disability Benefits

PG&E requested \$58.2 million in 2007 for contributions to a Voluntary Employee Benefits Association (VEBA) trust to fund PG&E's retirement medical plan. PG&E's request was based on the lower of (1) PBOP's expense determined

in accordance with Statement of Financial Accounting Standard (SFAS) No. 106, or (2) tax-deductible limits on VEBA contributions.

PG&E also requested \$66.1 million in 2007 for tax-deductible contributions to its LTD VEBA trust to fund (1) pay-as-you-go costs for current disabled employees, (2) the increase in the actuarial accrued liability, and (3) amortization of the unfunded accrued liability.

DRA concurred. No other party addressed this matter.

(5) The Settlement Agreement

The Settling Parties agree that the resolution of issues regarding medical escalation rates, Service Awards, allocation of Holding Company benefits costs to PG&E, and funding of PBOP and disability contributions is subsumed in the Settlement outcome for all A&G expenses. The Settlement Agreement provides PG&E with \$709.4 million for A&G expenses in 2007, which is \$32.8 million less than PG&E requested and \$66.5 million more than DRA recommended.

The Settlement Agreement also requires PG&E to contribute 124.3 million annually to its PBOP VEBA trusts during 2007 - 2010. As required by D.92-12-015 and D.95-12-055, the Settlement provides that PG&E will file at the end of the 2007 GRC cycle a consolidated true-up of the actual contributions to the PBOP VEBA trusts with the revenue requirement collected in rates.¹⁶⁷

There was no opposition to the Settlement outcome for benefits costs.

(6) Discussion

We find the uncontested Settlement outcome for benefits costs is reasonable in light of the record, consistent with applicable law, and in the public

¹⁶⁷ Settlement Motion, p. 184, and Settlement Agreement, para. 32.

interest. Our finding includes one caveat. Specifically, to ensure there is no misunderstanding of PG&E's obligation under the Settlement Agreement to contribute \$124.3 million annually to its PBOP trusts, we remind PG&E that Ordering Paragraph 2 of D.92-12-015 requires any funds collected in rates for contributions to PBOP trusts to be used for that purpose or returned to ratepayers.¹⁶⁸ The report that PG&E is required to submit pursuant to the Settlement Agreement in 2010 regarding its PBOP contributions¹⁶⁹ shall state if any funds collected in rates for PBOP contributions were not used for that purpose and, if so, identify the mechanism and timeframe for refunding the un-contributed amount to ratepayers, with interest.

(C) Aglet's Comparison of Utility Medical Costs

(1) Position of the Parties

Aglet is concerned that PG&E's employee medical expenses appear to be high compared to SCE's. The following table compares PG&E's and SCE's medical costs per employee in nominal dollars:

<u>Year</u>	<u>PG&E</u>	<u>Increase</u>	<u>SCE</u>	<u>Increase</u>
2004	\$7,553	--	\$5,317	14.0%
2005	\$8,666	14.7%	\$5,849	10.0%
2006	\$9,060	4.5%	\$5,849	0.0%
2007	\$9,957	9.9%	--	--

The above comparison leads Aglet to recommend that the Commission order PG&E to provide in its next GRC proceeding a report that (1) compares

¹⁶⁸ D.92-12-015, 46 CPUC 2d 499, 532. See also D.95-12-055, 63 CPUC 2d 570, 593-94, and D.00-02-046, 4 CPUC 3d 315, 463.

¹⁶⁹ Settlement Agreement, para. 32.

PG&E's unit medical benefit costs with similar costs for SCE, SDG&E, and SCG; (2) analyzes differences between PG&E's costs and similar costs for the same utilities; and (3) describes the status of negotiations with both represented and non-represented employees regarding future medical benefits.

PG&E opposes Aglet's recommendation. PG&E responds that the above table is misleading because it is limited to active employees and ignores retirees. PG&E's average medical cost for both active and retired employees was approximately \$7,000 per participant in 2006, which was lower than SCE's average of more than \$8,000.

PG&E also argues that Aglet's proposed report is unnecessary because PG&E already submits in GRC proceedings a Total Compensation Study that compares the total compensation paid to PG&E's employees (including medical benefits) to the total compensation paid by similar employers. PG&E states that the Total Compensation Study uses a fair methodology to compare employee benefits that minimizes the effects of employer differences in demographics, regional pricing differences, and plan utilization, which facilitates accurate comparison of benefit plans across employers.

(2) Discussion

Aglet has demonstrated that PG&E's medical benefit costs for active employees are significantly higher than SCE's. Still, PG&E's overall compensation, including medical benefit costs, is within the range of competitiveness, as discussed above. We agree with Aglet that it would be useful for PG&E to explain the reasons for its higher medical costs in the next GRC. But we will not require the specific reporting requirements recommended by Aglet.

(D) TURN's Linkage of P&B Costs to Payroll

(1) Position of the Parties

PG&E's forecast of pension and benefit (P&B) expenses in 2007 was based on 2004 recorded expenses updated to reflect cost trends and expected plan changes. The Settlement Agreement adopts PG&E's methodology.

TURN observes that PG&E did not forecast its P&B costs based on the number of employees it would have in 2007. Consequently, if employee numbers (and labor costs) change as a result of recommendations made by TURN or others, there will be no corresponding change to PG&E's P&B costs.

TURN believes it is unreasonable to assume that P&B costs will remain unchanged if there is a disallowance of employee labor costs. According to TURN, any disallowance of labor costs should translate into fewer employees and lower P&B costs. Therefore, if there is a disallowance of labor costs, TURN recommends that there also be a proportional disallowance of P&B costs.

PG&E responded that it would manage any disallowance of labor costs by reducing overtime and/or hiring-hall labor which have no associated P&B costs.

(2) Discussion

We decline to adopt TURN's recommendation to reduce PG&E's P&B costs in proportion to any disallowance of labor expenses. PG&E testified that if it needs to lower labor expenses, it intends to do so by reducing overtime and hiring-hall labor. PG&E further testified that (1) PG&E employees working overtime do not receive additional pensions and benefits, and (2) hiring-hall workers are not PG&E employees and do not participate in PG&E's P&B plans. Therefore, any reduction of overtime and hiring-hall labor would not affect

PG&E's P&B costs.¹⁷⁰ Thus, it is inappropriate to reduce P&B costs in proportion to disallowed labor expenses as TURN proposes.

We recognize that overtime and hiring-hall labor represent only a small portion of PG&E's labor costs. If the Commission were to disallow a significant amount of labor costs, it is likely that PG&E would have to reduce its workforce. It would probably make sense in that situation to reduce the P&B costs associated with the reduction in PG&E's workforce. However, because today's Opinion does not adopt a major reduction to labor costs, it is unnecessary to consider partial implementation of TURN's recommendation.

d. Other A&G Expenses

PG&E's request for Other A&G expenses in 2007 had four components. First, PG&E requested \$82.5 million for Account 925 expenses. These expenses include workers' compensation, settlements and judgments, and certain insurance costs. No party objected to the request.

Second, PG&E requested \$1.2 million for severance benefits. DRA argued that PG&E had not justified the need for this program. PG&E responded that the program benefits ratepayers by facilitating organizational restructurings that enhance operational effectiveness, and that the Commission has previously authorized funding for severance benefits.

Third, PG&E requested \$27.4 million for property insurance, directors and officers liability insurance, and general liability insurance. No party objected.

Finally, PG&E requested \$82 million for Miscellaneous A&G Costs, which included \$78.9 million for so-called "non-study departments" (NSDs). The NSDs

¹⁷⁰ Exhibit PG&E-18, p. 1-5, L: 20-26.

include ISTS and Corporate Real Estate (CRE). DRA proposed disallowances totaling \$68.7 million for ISTS and CRE, which are addressed, *infra*.

The Settling Parties agree that the resolution of issues concerning Other A&G expenses is subsumed in the Settlement outcome for all A&G expenses. The Settlement provides \$709.4 million for GRC-related A&G expenses in 2007, which is \$32.7 million less than PG&E requested \$66.5 million more than DRA recommended.¹⁷¹ There is no opposition to the Settlement on this matter.

We find the uncontested Settlement outcome for Other A&G expenses, including the outcome for ISTS and CRE expenses that is addressed, *infra*, is reasonable in light of the record, consistent with Commission precedent, and in the public interest.

e. Unbundling

The term “unbundling” refers to the process of separating PG&E’s costs into major lines-of-business called Unbundled Cost Categories (UCCs). By separating costs into UCCs, the Commission can better match the cost-of-service with the customers who receive those services. The unbundling process includes the allocation of common costs such as A&G expenses, which are not directly assignable to a particular UCC.

DRA agreed with PG&E’s list of UCCs and methodology for unbundling common costs, which is reflected in the Settlement Agreement. There is no opposition to this aspect of the Settlement.

We find the uncontested Settlement outcome on unbundling to be reasonable in light of the record and consistent with Commission precedent.

¹⁷¹ Settlement Agreement, Appendix A, Line 16.

f. Conclusion re: A&G Expenses

For the preceding reasons, we conclude that the Settlement Agreement provisions regarding A&G expenses are reasonable in light of the record, consistent with the law, and in the public interest, and should be adopted.

3. General Services and Other Support Costs

PG&E's General Services organizations provide services to PG&E as a whole. These services include transportation, materials handling, building services, and the Company airplane. Most expenses incurred by the General Services organizations are direct-charged to the organizations that use the services and are included in PG&E's requests for the user departments.

a. Areas of Agreement

There was no opposition to PG&E's requested expenses and capital expenditures in the following categories of General Services:

Areas of Agreement re: 2007 General Services Expenses and Capital Expenditures		
Area	Requested Expenses (millions)	Requested Cap. Ex. (millions)
Utility Support Operations	\$7.0	\$1.3
Materials Operations	- -	\$34.1
Purchasing Operations	\$0.1	\$1.3
Total	\$7.1	\$36.70

The Settling Parties agree that (1) expenses for the above categories of General Services are subsumed within the Settlement outcomes for A&G and O&M expenses, and (2) capital expenditures for the above categories of General Services are subsumed within the overall Settlement outcomes capital additions

and rate base.¹⁷² There was no opposition to the Settlement outcomes for the above categories of General Services.

Based on our review of the record, we find the uncontested Settlement outcome for Utility Operations Support, Materials Operations, and Purchasing Operations is reasonable in light of the record, consistent with the law, and in the public interest.

b. Issues Raised by the Parties

DRA, Aglet, and TURN opposed several facets of PG&E's requested expenses and capital expenditures for General Services. Below, we assess the reasonableness of the Settlement outcome for General Services in light of the record on the issues raised by the parties.

i. Transportation Services Capital Expenditures

PG&E operates a transportation fleet of approximately 11,937 cars, trucks, power-operated equipment, off-road equipment, and trailers. PG&E has 64 service facilities to maintain and repair its fleet.

PG&E requested \$150.2 million for capital expenditures in 2007 to replace worn-out fleet equipment, comply with environmental mandates, and to manage, repair, and maintain fleet assets.¹⁷³ PG&E also requested \$0.961 million for tools. DRA recommended \$72.9 million for fleet replacement and \$0.519 million for tools. TURN also had one recommendation.

The litigation positions of the parties are summarized below.

¹⁷² Settlement Motion, p. 188.

¹⁷³ The 2007 amount requested by PG&E reflects a reduction in capital expenditures of \$15.8 million during 2006-2009 that was proposed by TURN and accepted by PG&E.

(A) Equipment Replacement

DRA proposed two reductions to PG&E's requested capital expenditures in 2007 to purchase transportation vehicles and equipment. First, DRA recommended a reduction of \$24 million to replace long-term rentals with PG&E-owned equipment. Both parties agreed on the need to replace long-term rentals, but DRA proposed that this be accomplished over three years, whereas PG&E proposed that all rentals be replaced in 2007.

Second, DRA proposed a reduction of \$52.3 million based on historical capital expenditures. PG&E responded that historical spending had resulted in an aging fleet that is increasingly costly to maintain. Continued spending at historical levels would result in an even older fleet.

PG&E presented evidence that showed existing assets are getting older, and almost 30% are failing before being replaced. PG&E contended that it was unreasonable to expect employees to operate equipment past its life cycle or to expect customers to accept delays in service because of unreliable equipment.

(B) EPA Compliance

DRA disagreed with two elements of PG&E's request for capital expenditures to comply with the federal Environmental Protection Act (EPA). First, DRA proposed a disallowance of \$6.5 million based on its concern that \$6.5 million was being double counted. PG&E demonstrated in Exhibit PG&E-43 that the double counting error was \$1.275 million, not \$6.5 million. PG&E and DRA subsequently agreed to an adjustment of \$1.275 million.

Second, DRA proposed a disallowance of \$2.045 million for the purchase of green-fuel vehicles over 8,500 lb. gross vehicle weight. DRA's proposal was based on its reading of a PG&E data response, which DRA interpreted as indicating that PG&E might not purchase the vehicles. PG&E responded that

DRA's interpretation was incorrect; PG&E's data response had nothing to do with whether PG&E would purchase the vehicles, but whether the vehicles that PG&E purchased would qualify for a tax credit.

(C) Capital Tools

DRA proposed that PG&E's requested capital expenditures for tools in 2007 be reduced from \$0.961 million to \$0.519 million. DRA based its proposal on a four-year average of historical spending. PG&E responded that historical spending should not be used as the basis for future expenditures because of changed circumstances.

For example, in 2004 the Corporate Real Estate (CRE) department was responsible for fuel islands, fuel dispensers, wash racks, garage doors, and recycling systems. Responsibility for these items was transferred to Transportation Services in 2005. As a result, PG&E's requested capital expenditures for tools for CRE decreased significantly, but increased significantly for Transportation Services. PG&E argued that it was unfair to accept the CRE decrease without a corresponding increase for Transportation Services.

PG&E also contended that DRA's proposal should be adjusted to include \$0.115 million to replace PG&E's TRAC fuel system, which was installed in the 1980's and was not captured in the 4-year historical average used by DRA.

(D) Issues Raised By TURN

TURN recommended that PG&E's rate base be reduced by \$37.5 million due to improper accounting for rental savings. TURN argued that fleet rental costs were outside the Results of Operations (RO) model, and that ratepayers would pay the capital costs to replace rentals but would not receive the savings from reduced rental payments. PG&E agreed that customers should benefit from

reduced rental costs, and PG&E represents that it incorporated the projected savings into the Comparison Exhibit.

(E) The Settlement Agreement

The Settling Parties agree that the resolution of issues concerning Transportation Services capital expenditures is subsumed within the Settlement outcomes for capital additions and rate base.¹⁷⁴ There is no opposition to this aspect of the Settlement Agreement.

(F) Discussion

PG&E's Transportation Services organization is essential to PG&E's ability to provide utility services to the public. No party contests the Settlement provisions pertaining to Transpiration Services, and no party alleges that these provisions violate any law or regulation. To the contrary, the record shows that Settlement provides funding for PG&E's transportation fleet and operations to comply with applicable environmental laws and regulations.

For the preceding reasons, we conclude that the Settlement outcome for Transpirations Services is reasonable in light of the record, consistent with the law, and in the public interest.

ii. Company Airplane

(A) Position of the Parties

(1) The Settlement Agreement

PG&E requested \$18 million to replace its Company airplane, a Fairchild-Dornier 328 turbo-prop that PG&E purchased new in 1994. The existing airplane carries 350 to 400 employees monthly, primarily between Oakland and San Luis

¹⁷⁴ Settlement Motion, p. 188.

Obispo. The plane flew 559 hours in 2004 and 492 hours in 2005. PG&E expects increased usage of the Company plane due to major capital projects that are currently underway at the Diablo Canyon and Humboldt Bay power plants.

PG&E testified that the Company airplane increases employee productivity by limiting the hours spent traveling to and from job sites. Owning an airplane also provides PG&E with complete control over critical safety and reliability issues, such as pilot quality and training, aircraft maintenance, passenger and baggage manifests, and operational safety standards.

PG&E is concerned about the safety and reliability of the current airplane because of reduced access to spare parts and required refresher training courses for flight crews. According to PG&E, the availability of replacement parts has declined in the four years since the manufacturer declared bankruptcy. When PG&E can obtain a replacement part, it is usually a repaired unit. A repaired unit is not completely overhauled; only the broken component within the part is repaired. PG&E testified that it has received replacement parts with much higher total times on them than the part needing replacement.

PG&E performed a net present value (NPV) analysis of the alternatives for direct access to an airplane, including purchase, lease, charters, commercial airlines, and maintenance of the existing plane. Based on its analysis, PG&E concluded that the purchase of a used Embraer Legacy Shuttle is the best option. PG&E obtained price quotes in the range of \$15-21 million for a used Embraer. PG&E submits that its \$18 million request is an appropriate middle point to forecast the cost of the replacement plane.

PG&E testified that the replacement airplane, like the current plane, will be used to shuttle employees to job sites. There will be relatively little use of the plane for executive transport. PG&E also provided data showing that the

Holding Company rarely uses the existing plane. Given that PG&E will continue to be the primary user of the Company airplane, PG&E contends that it is appropriate that the cost of the replacement airplane be borne by PG&E, with appropriate charges to the Holding Company for its use of the airplane, if any.

PG&E charges for use of the Company plane. For PG&E employees and contractors, a \$400 charge is levied on the department for whom the PG&E employee or contractor works. If an elected official uses the aircraft, PG&E complies with all regulations governing services and gifts to elected officials. For other passengers, use of the plane must be approved by a Vice President and that officer's department is charged for use of the airplane. PG&E represents that it prohibits personal use of the plane.

DRA opposed PG&E's request for a replacement airplane on the grounds that PG&E had not adequately supported its request. If PG&E were allowed to acquire another airplane, DRA proposed that the cost of the plane be borne by the Holding Company, with appropriate charges to the Utility, because the Holding Company has priority use of the plane.

The Settling Parties agree that PG&E's request to acquire a replacement airplane is included in the \$81.9 million weighted-average capital additions for Generation adopted by the Settlement. The Settling Parties further agree that PG&E will review and update the charges for use of the airplane and submit a report to the Commission and DRA within 90 days of today's Opinion.¹⁷⁵

¹⁷⁵ Settlement Agreement, paras. 28 and 29.

(2) Aglet

Aglet opposes rate recovery for a replacement airplane. Aglet asserts that PG&E has not shown that it needs another plane, has not justified its estimate of the market value of the existing plane, and has not fairly allocated costs to the Holding Company, which has priority for use of the plane.

Aglet also recommends that the Commission remove from test-year expenses the majority of operating costs for a Company airplane. Aglet submits that PG&E has not justified rate recovery of expenses that benefit the Holding Company more than the Utility.

(3) TURN

TURN asserts that PG&E has not demonstrated a need for a replacement aircraft. The purported unavailability of spare parts is undermined by a newspaper article that quotes the general manager of a major aircraft servicing company as stating that the supply of spare parts is robust and that a typical Dornier 328 should have a service life of 30-40 years.

TURN criticizes PG&E's NPV analysis of acquiring a replacement plane. TURN states that PG&E did not analyze any intermediate options, such as retaining the existing plane for this GRC cycle and replacing it with a leased plane in 2010. TURN also believes that PG&E's NPV analysis is flawed because PG&E used a discount rate based on the lower, after-tax cost of capital instead of the higher, pre-tax cost of capital actually paid by ratepayers. Using an after-tax rate skews the NPV calculations in favor of ownership.

If PG&E is allowed to acquire a replacement plane, TURN recommends that PG&E lease rather than buy. TURN states that with PG&E's proposed 8-year depreciable life, owning an airplane would cost nearly \$9 million more over the GRC cycle relative to leasing. If a 13-year depreciable life is presumed

for a replacement aircraft (which mirrors the life of the current Dornier 328), ownership would cost \$6.5 million more than leasing over the 2007-2009 GRC cycle. If the Commission nonetheless allows PG&E to purchase an airplane rather than lease, TURN recommends that the Commission adopt a 13-year depreciation life for the aircraft (based on the life achieved by the current plane) rather than the 8-year life used in PG&E's analysis.

If the Commission approves either a purchase or lease, TURN asks the Commission to reduce rate base by \$2 million (by increasing accumulated depreciation) to include PG&E's estimated salvage value for the existing airplane. TURN represents that PG&E concedes that \$2 million is a reasonable estimate of the salvage value, and that PG&E confirmed that the Settlement does not incorporate this concession. TURN urges the Commission to include this concession in the final decision.

TURN recommends that PG&E implement three changes to its policies governing the Company airplane. First, PG&E must ensure that charges for use of the airplane are reasonable. PG&E has a chargeback system in place, and PG&E has agreed to review and update this system as part of the Settlement. However, TURN is concerned that this will only lead to an update of the current charge of \$400 per person, per flight. Rather than developing a generic cost estimate, TURN believes PG&E should calculate chargebacks based on the incremental cost of using the airplane for a specific trip.

Second, TURN recommends that PG&E implement a cost-containment policy for use of the plane. Currently, PG&E uses the plane when there are lower-cost alternatives. For example, PG&E's CEO used the plane when lower-cost commercial flights were readily available. TURN submits that it is not

reasonable for ratepayers to finance the preferred business travel arrangements of PG&E executives when less expensive (and suitable) alternatives exist.

Finally, TURN has uncovered problems with personal use of the Company plane. For example, PG&E's former CEO used the plane for personal travel and brought family members along. There is no evidence that PG&E was reimbursed for such usage. TURN recommends that the Commission require PG&E to establish a written policy on personal usage of the plane and to implement procedures which ensure that PG&E is compensated for any non-business use at the incremental cost of the trip (not a generic chargeback).

(B) Discussion

The Settling Parties agree that PG&E's request for \$18 million to purchase a replacement airplane is included in the Settlement's \$81.9 million weighted-average capital additions for Generation in 2007. The Settlement Agreement adopts the full amount of PG&E's request for Generation capital additions in 2007.¹⁷⁶ Based on this information, we conclude that the Settlement Agreement adopts PG&E's position on the replacement airplane.

We begin our analysis of the Settlement outcome with an assessment of PG&E's need for an airplane. PG&E testified that its plane is in the air 450 to 500 hours annually, and that the plane transports 350 to 400 employees monthly.¹⁷⁷ PG&E also testified that the plane is used primarily to shuttle employees between Company work sites, and there is very little use of the plane by the Holding Company or to transport executives to non-utility locations. According

¹⁷⁶ Settlement Agreement, Appendix G, Table 3-7, Line 32.

¹⁷⁷ Exhibit PG&E-88, p. 55-1.

to PG&E, the plane increases employee productivity by limiting the hours spent traveling hundreds of miles to and from job sites.

Based on PG&E's testimony, we conclude that PG&E has a reasonable need for an airplane. PG&E has also demonstrated that the Utility is the primary beneficiary of the airplane, even though the Holding Company uses the plane occasionally. Based on our conclusion, we deny Aglet's request to prohibit rate recovery of the majority of the expenses for an airplane.

We next consider PG&E's request to replace its existing airplane. TURN presented testimony which shows that keeping the existing aircraft has a slight cost advantage over the next 13 years compared to the acquisition of a replacement aircraft.¹⁷⁸ PG&E testified that its current plane is 13 years old and has become difficult to maintain since the manufacturer declared bankruptcy several years ago. TURN challenged PG&E's testimony with hearsay from an article in the *San Francisco Chronicle*. We accord greater weight to PG&E's sworn testimony that PG&E's existing aircraft will not adequately meet PG&E's needs because of the safety and reliability concerns caused by reduced access to quality parts and required training courses for PG&E's flight crews.¹⁷⁹ Based on the record evidence, we conclude that PG&E has demonstrated a reasonable need for a replacement aircraft. Therefore, we deny TURN's request to prohibit rate recovery of a replacement aircraft in the current GRC cycle.

PG&E and TURN presented conflicting testimony on whether it is cheaper to buy or lease a replacement airplane. PG&E performed an NPV analysis that used an after-tax weighted cost of capital and assumed that the cost of the lease

¹⁷⁸ Exhibit TURN-1, p. 13, Table 1.

¹⁷⁹ Exhibit PG&E-18, pp. 55-1 to 55-3.

must be increased by additional equity financing to offset “lease debt.”¹⁸⁰

PG&E’s analysis shows the NPV of leasing is marginally cheaper than buying.¹⁸¹

TURN used PG&E’s data and a pre-tax cost of capital. TURN’s analysis shows that leasing is cheaper than buying over a 13-year period.

We find that PG&E and TURN each presented a flawed analysis. PG&E’s analysis is flawed because it used an after-tax cost of capital, which is much lower than the pre-tax cost of capital paid by PG&E’s ratepayers. PG&E also used the inappropriate assumption that PG&E must borrow money to pay for a lease, even though the lease payments would be recovered in rates. The flaws in PG&E’s analysis increased lease costs relative to purchase costs.

TURN’s analysis is flawed in the way it set up the comparison for lease versus buy. The lease payments used by TURN assume a residual value of 60% for the leased aircraft.¹⁸² In contrast, TURN’s computation of depreciation expense under the purchase scenario assumes an aircraft salvage value of 20%. In order to have an apples-to-apples comparison of lease versus buy, it is necessary to have the same ending value for the aircraft under both the lease scenario and the purchase scenario. By using a 60% residual value for the lease scenario compared to a 20% salvage value under the purchase scenario, TURN understated the cost of leasing compared to buying. In addition, TURN included property taxes in its determination of aircraft purchase costs,¹⁸³ but TURN seems to have excluded property taxes from its determination of lease costs. TURN’s

¹⁸⁰ 33 TR 3132:1-4.

¹⁸¹ Exhibit PG&E-18, p. 55-6; Exhibit DRA-80, p. 17; and 33 TR 3129:24-28.

¹⁸² Exhibit TURN-1, Attachment 4, p. 5, and Attachment 5, p. 3.

¹⁸³ Exhibit TURN-1, Attachment 5, spreadsheets on pp. 4 and 5, Column 12.

treatment of property taxes appears to have inflated aircraft purchase costs relative to lease costs.

The information in the record is insufficient to make a precise comparison of leasing versus buying a replacement aircraft. Based on our review of the record, we conclude that the total costs to ratepayers to lease a replacement aircraft or purchase a replacement aircraft over the next 13 years will be similar, whether measured in present-value dollars or nominal dollars. For the preceding reasons, we find the Settlement Agreement's provisions that allow PG&E to purchase a replacement aircraft in 2007 for \$18 million are reasonable in light of the whole record and in the public interest.

We agree with TURN that (1) rate base should be reduced in 2007 by \$2 million for the net salvage value of the existing aircraft, and (2) the replacement aircraft should be depreciated over 13 years, which would mirror the life of PG&E's current aircraft. Based on our review of the RO model, it appears that both of TURN's recommendation are reflected in the Settlement Agreement in a round about way.¹⁸⁴

We decline to adopt TURN proposals to establish new policies and charges for the use of the Company airplane. PG&E testified that it already charges for use of the existing airplane:

¹⁸⁴ Our review of the Settlement RO model shows that \$18 million for the replacement plane is added to Diablo Canyon capital on January 1, 2007, and is depreciated at an annual rate of 3.9%. This rate reflects a service life that is much longer than TURN's proposed depreciation period of 13 years. The long service life assumed by the RO model for the replacement airplane more than offsets any cost increases that might be caused by the inclusion of zero salvage value for the current airplane in the RO model. In the next GRC, PG&E should reduce rate base by the actual salvage value on the existing airplane and present an appropriate depreciation expense for the replacement airplane based on a 13-year service life.

For PG&E employees and contractor's working directly for PG&E, a \$400 charge is made to the PCC or order number of the department for whom the PG&E employee or contractor works. If an elected official uses the aircraft, PG&E complies with all state and federal regulations governing services and gifts to elected officials. For other passengers, use of the airplane must be approved by a Vice President and the PCC or order number for that officer is charged for use of the airplane. (Exhibit PG&E-18, p. 55-6.)

Holding Company employees are treated the same as Utility employees.¹⁸⁵ The Settlement addresses the efficacy of PG&E's charges by requiring PG&E to evaluate its current charges and to report its findings to the Commission.¹⁸⁶

PG&E also testified that its policies prohibit personal use of the plane. To address TURN's concern about the need for a written policy on personal use of the airplane, the Settlement Agreement provides the following written policy:

PG&E employees (including employees, officers, and Board members of PG&E Corporation) will be prohibited from using the Company airplane for personal travel for themselves or their family. PG&E customers and contractors, including customers and contractors of PG&E Corporation, will also be prohibited from using the Company plane for personal travel for themselves or their family. (Settlement Agreement, para. 28.)

If there is a violation of the written policy, the individual will pay for the flight.¹⁸⁷

We conclude that PG&E's existing policies and the Settlement Agreement provisions regarding use of the Company airplane are satisfactory.

¹⁸⁵ 33 TR 3134: 3-9.

¹⁸⁶ Settlement, para. 29.

¹⁸⁷ 33 TR 3150: 23-28, 3151:1-2.

iii. Corporate Real Estate

PG&E's Corporate Real Estate (CRE) department is responsible for the planning, design, construction, maintenance, and operation of over 845 building and yards at more than 190 locations. PG&E's facilities include offices, call centers, data centers, meeting and training facilities, service centers, shops, warehouses, construction yards, and garages. These facilities support day-to-day operations as well as service restoration after storms and natural disasters.

The following tables show PG&E's requested CRE expenses and capital expenditures in 2007 and DRA's proposed disallowances:

2007 Corporate Real Estate Expenses		
Item	Requested Expenses (millions)	Proposed Disallowance (millions)
Building & Yard Maint.	\$11.30	\$6.07
Redevelop. & New Constr.	\$2.00	\$1.00
Building Seismic Safety	\$3.40	\$1.70
Americans w/Disability Act	\$4.80	\$2.40
Building Permit Initiative	\$0.52	\$0.26
Green Building Initiative	\$8.80	\$4.40
Repair & Replace Furniture	\$0.11	\$0.06
Real Estate Management	\$6.90	- -
Total	\$37.83	\$15.89

2007 Corporate Real Estate Capital Expenditures		
Item	Requested Cap. Ex (millions)	Proposed Disallowance (millions)
Tools, Equip., & Furniture	\$5.0	- -
Building & Yard Maint.	\$19.00	\$9.10
Redevelop. & New Constr.	\$18.77	\$11.20
Building Seismic Safety	\$1.88	- -
Building Permit Initiative	\$3.03	\$1.60
Green Building Initiative	\$5.87	\$4.70
Lemoore Service Center	\$0.50	\$0.50
Total	\$54.05	\$27.10

The bulk of DRA's proposed disallowances of CRE expenses was based on its conclusion that PG&E's requested expenses for maintenance, repairs, and upgrades were too ambitious in light of historical expending, and that the requested expenses should be spread over a longer period so as to mitigate the annual financial impact on ratepayers. PG&E responded that the timing of the expenses was driven by the age and condition of its buildings, seismic safety concerns, environmental stewardship, and regulatory compliance.

The majority of DRA's proposed disallowances of CRE capital expenditures stemmed from DRA's conclusion that PG&E's request was excessive in light of historical expenditures and activities. PG&E responded that its requested expenditures were driven by customer growth, the condition of its aging facilities, operational needs, and regulatory compliance.

The Settling Parties agree that the resolution of issues regarding CRE expenses (other than depreciation) is subsumed in the Settlement outcomes for

A&G expenses and O&M expenses.¹⁸⁸ The Settlement provides \$708.7 million for A&G expenses in 2007, which is \$32.8 million less than PG&E requested.¹⁸⁹ With respect to O&M expenses, the Settlement provides \$1.079 billion in 2007, which is \$15 million less than PG&E requested.¹⁹⁰ There is no opposition to the Settlement outcome on CRE expenses.

The Settlement Agreement adopts PG&E's requested CRE capital expenditures.¹⁹¹ There is no opposition to the Settlement outcome on this matter.

We conclude that the uncontested Settlement outcome for CRE expenses and capital expenditures is reasonable in light of the record summarized above. In our opinion, PG&E has justified almost all of its requested expenses for CRE, and all of its requested capital expenditures, which is consistent with the Settlement outcome. The Settlement outcome is also consistent with the law in that much of PG&E's requested CRE expenses and capital expenditures are needed to comply with various local, state, and federal requirements. Finally, the Settlement outcome is in the public interest because it provides PG&E with sufficient revenue to maintain and acquire real estate assets that are necessary to the provision of utility services to the public.

iv. Environmental Programs

PG&E's Environmental Programs encompass the Environmental Affairs department and personnel throughout the Utility who are responsible for (1) compliance with environmental laws, and (2) programs implemented solely

¹⁸⁸ Settlement Motion, p. 188.

¹⁸⁹ Settlement Agreement, para. 31 and Appendix A, Line 16.

¹⁹⁰ Settlement Agreement, para. 17.

¹⁹¹ Settlement Motion, p. 210.

for environmental purposes. PG&E requested the following for Environmental Programs in 2007: (i) \$2.6 million for A&G expenses; (ii) \$14.7 million for O&M expenses; and (iii) \$4.9 million for capital expenditures.

There was no opposition to PG&E's requested O&M expenses and capital expenditures. DRA proposed two reductions to A&G expenses. First DRA proposed a "normalized adjustment" of \$34,776 to remove costs for employee recognition awards; staff lunches, dinners, and parities; and entertainment activities. PG&E responded that these are legitimate business expenses.

Second, DRA proposed a disallowance of \$0.208 million based on PG&E's 2004 recorded expenses instead of PG&E's 2007 forecast. PG&E responded that it will have higher costs in 2007 compared to 2004 because of emerging issues associated with global climate change.

The Settling Parties agree that the resolution of issues regarding Environmental Programs expenses is subsumed in the Settlement outcome for all A&G expenses and O&M expenses.¹⁹² The Settlement provides \$708.7 million for A&G expenses in 2007, which is \$32.8 million less than PG&E requested.¹⁹³ With respect to O&M expenses, the Settlement provides \$1.079 billion in 2007, which is \$15 million less than PG&E requested.¹⁹⁴ The Settling Parties also agree that capital expenditures for Environmental Programs are subsumed in the broader Settlement outcome for capital additions and rate base.¹⁹⁵ The Settlement adopts PG&E's position on capital additions and rate base for common plant.

¹⁹² Settlement Motion, p. 188.

¹⁹³ Settlement Agreement, para. 31 and Appendix A, Line 16.

¹⁹⁴ Settlement Agreement, para. 17.

¹⁹⁵ Settlement Motion, p. 188.

We find that PG&E has justified the great majority of its requested expenses and capital expenditures for Environmental Programs in 2007. It is reasonable to expect that such expenses and capital expenditures will increase significantly in 2007 compared to 2004 due to major new environmental laws, such as the recently enacted law limiting greenhouse gas emissions in California.

DRA's proposed normalized adjustment is consistent with Commission precedent. We interpret the Settlement outcome, which grants PG&E less than it requested for A&G expenses as a whole, as accommodating a 100% disallowance for DRA's normalized adjustment of \$34,776. With this understanding, we find that the Settlement outcome for Environmental Programs is reasonable in light of the record, consistent with applicable law, and in the public interest.

v. Information Technology

PG&E's Information Services and Technology Services (ISTS) organization installs, operates, and maintains many of PG&E's information and telecommunication systems. PG&E requested the following funding for ISTS:

- \$72.37 million for A&G expenses in 2007 and \$55.8 million for Gas and Electric Distribution O&M expenses in 2007.
- \$57.5 million for capital expenditures in 2007.

DRA proposed several reductions to PG&E's requested expenses and capital expenditures for ISTS. No other party addressed ISTS. The disallowances proposed by DRA are shown in the following tables:

Proposed Disallowances of ISTS Expenses in 2007	
Item	millions
Customer Information System (CIS)	\$4.218
SAP Operations	\$0.121
Utility Applications	\$4.254
Security Risk Management A&G	\$7.360
Security Risk Management O&M	\$4.346
Total Proposed Disallowances	\$20.299

Proposed Disallowances of ISTS Cap. Ex in 2007	
Item	millions
Desktop Computers	\$6.640
CIS Infrastructure	\$1.100
Total Proposed Disallowances	\$7.740

The bulk of DRA's proposed disallowances for ISTS expense and capital expenditures was based on DRA's conclusion that PG&E's request for 2007 was excessive compared to historical spending. DRA was also concerned about possible double counting of AMI related costs recovered in other proceedings.

PG&E responded that DRA had overlooked or ignored historical data that showed PG&E's requested expenses and capital expenditures were reasonable. PG&E also argued that its request was reasonable in light of inflation, aging computers, and costly new regulatory requirements (e.g., Sarbanes Oxley). Finally, PG&E denied there was any double recovery of any AMI-related costs.

The Settling Parties agree that (1) the resolution of issues concerning ISTS capital expenditures is subsumed within the overall Settlement outcomes for

capital additions and rate base,¹⁹⁶ and (2) the resolution of issues concerning A&G and O&M expenses for the ISTS organization is subsumed within the overall Settlement outcome for all A&G and O&M expenses.¹⁹⁷ There is no opposition to the Settlement as it pertains to the ISTS organization.

Based on our review of the record, we conclude that the uncontested Settlement outcome for the ISTS organization is a fair compromise, reasonable in light of the whole record, consistent with the law, and in the public interest.

4. Common Plant Capital Expenditures

PG&E requested \$397.938 million for common plant capital expenditures in 2007 (including \$18 million for Diablo Canyon capital). DRA recommended \$256.896 million, for a difference of \$141.042 million. The Settlement Agreement adopts PG&E's position in full.

The Settling Parties agree on the following allocation of the capital expenditures for common plant:

Electric Distribution General Plant	\$2.192 million
Gas Distribution General Plant	\$1.080 million
Electric Generation General Plant	\$52.307 million
Common Plant	<u>\$342.359 million</u>
Total	\$397.938 million

Issues regarding specific components of the Settlement outcome for common plant capital expenditures (e.g., the Company airplane) are addressed elsewhere in today's Opinion. Except as noted elsewhere, we find the Settlement

¹⁹⁶ Settlement Agreement, paras. 27, 43.

¹⁹⁷ Settlement Agreement, paras. 17, 31.

outcome for common plant capital expenditures is reasonable in light of the record, complies with all applicable laws, and is in the public interest.

5. Customer Advances for Construction

Customer Advances for Construction (CAC) are refundable advances paid by developers for new utility facilities and are recorded as an offset (reduction) to rate base. PG&E used its December 2004 recorded CAC balance of \$125.424 million as its 2007 test-year forecast based on the assumption that CAC will remain stable. The Settlement adopts this amount.¹⁹⁸

a. Position of the Parties

TURN states there is a seasonal pattern for CAC. The pattern shows higher CAC balances during the summer, so that the annual average is higher than the year-end figure. So, rather than using a December 2004 amount as proposed by PG&E, TURN recommends that the Commission use the average 2005 CAC balance, thereby raising the CAC forecast by \$2.96 million.

PG&E responds that it used the December 2004 recorded CAC balance to forecast CAC in 2007 because (1) PG&E believes there will not be a substantial change in CAC over the next several years, and (2) the ending 2004 CAC balance is very close to the weighted-average balance for the four-year period of 2001 - 2004. DRA accepted PG&E's forecast as reasonable.

b. Discussion

TURN's recommendation would increase CAC by \$2.96 million for 2007, which is 2.4% above the Settlement amount of \$125.424 million. PG&E and TURN agree that the CAC balance is affected by the level of residential

¹⁹⁸ Settlement Comparison Exhibit, Tables 1-10 and 2-10, line 14 in each table.

construction activity.¹⁹⁹ Recent economic data shows there has been a substantial downturn in residential construction in California. In the first eight months of 2006, homebuilding in California was down nearly 16% from the same period in 2005.²⁰⁰ Based on this data, we conclude that it is reasonable to adopt the Settlement Agreement's slightly lower forecast of CAC in 2007.

6. Transfer of CAC to CIAC

As mentioned earlier, CAC consists of refundable advances paid by developers for new utility facilities. CAC is included in gross plant but excluded from rate base because it represents assets that were not paid with shareholder dollars. However, sometimes CAC is not refunded. When this occurs, it is transferred to contributions in aid of construction (CIAC). Like CAC, the CIAC balance is included in gross plant but excluded from rate base.

PG&E's forecast of CAC was based on 2004 recorded data. PG&E did not forecast CIAC, contending that it was unnecessary to do so because the CAC-to-CIAC transfer has no effect on rate base. The Settlement implicitly adopts PG&E's approach.

a. Position of the Parties

TURN states that PG&E used a budget-based approach to forecast plant-in-service, and there is no line item in the forecast to reduce forecasted plant-in-service (and rate base) for CAC-to-CIAC transfers. TURN maintains that PG&E's forecast of plant-in-service ignores the accumulation of CIAC from

¹⁹⁹ 16 TR 1288, L: 12-15, PG&E/Togneri; TURN Comments on the Settlement Agreement, p. 148.

²⁰⁰ California Department of Finance October 2006 monthly economic update. (http://www.dof.ca.gov/HTML/FINBULL/2006_FB/October/Oct06.asp) We take official notice of this economic data pursuant to Rule 13.9.

CAC-to-CIAC transfers. As a result, PG&E's forecasted rate base to be too high. To remedy this error, TURN recommends that the 2007 rate base be reduced by \$3.784 million based on a four-year average of CAC-to-CIAC transfers. TURN adds that the Commission adopted the exact same recommendation in the recent SCE GRC proceeding.²⁰¹ TURN believes there is no reason to decide this issue differently for PG&E.

PG&E opposes TURN's proposal. PG&E contends there was no need to separately forecast CIAC because the net effect for each CAC-to-CIAC transfer on rate base is zero. PG&E adds that although the Commission adopted an adjustment for CAC-to-CIAC transfers in the recent SCE GRC, the Commission did not address the merits of the issue. Rather, D.06-05-016 rejects SCE's assertion that the issue is immaterial and adopts TURN's proposed amount.²⁰²

b. Discussion

PG&E's forecast of rate base in 2007 is equal to its 2004 rate base plus budgeted increases during 2005-2007. The 2004 rate base reflects then-existing balances for CAC and CIAC.²⁰³ There is no dispute that PG&E's forecast of rate base in 2007 does not reflect an increased amount of CIAC relative to 2004.

PG&E argues that because CAC-to-CIAC transfers have no effect on rate base, it is unnecessary to forecast CIAC in 2007. We are not persuaded. The CIAC balance is not static, but grows over time with CAC-to-CIAC transfers. This can be seen with a simple hypothetical. In the hypothetical, \$10 is recorded in CAC every January 1 and transferred to CIAC every December 31. The

²⁰¹ D.06-05-015, *mimeo.*, pp. 217-218.

²⁰² D.06-05-016, *mimeo.*, pp. 218-219.

²⁰³ Exhibit TURN-1, pp. 77-78.

average CAC balance is always \$10, but the CIAC balance grows by \$10 each year, reaching \$100 after 10 years.

PG&E's forecast of rate base in 2007 does not reflect the increase in CIAC due to CAC-to-CIAC transfers during 2005-2007. Consequently, PG&E's forecasted rate base is too high. The Settlement adopts PG&E's forecast. It is the Commission's long standing policy that rate base should not include CIAC. The failure of the Settlement Agreement to reduce rate base for the accumulation of CIAC is contrary to decades of Commission precedent.²⁰⁴

Although we agree with the merits of TURN's position, we decline to modify the Settlement to reduce rate base in 2007 by \$3.784 million as recommended by TURN. The associated reduction to PG&E's revenue requirement in 2007, as calculated by the RO model, is \$0.225 million. The impact of TURN's proposed reductions is *de minimis* in relation to the rate base and revenue requirement adopted by the Settlement of \$12.550 billion and \$4.927 billion, respectively, and does not warrant our modifying, let alone rejecting, the Settlement Agreement.²⁰⁵

7. Working Cash

Working cash is part of rate base and consists of two elements: (1) funds needed for the utility's daily operations, which is generally calculated by adding and subtracting certain specified items; and (2) the timing of inflows and

²⁰⁴ The following is a partial list of the hundreds of decisions that have excluded CIAC from rate base: D.06-06-036, D.06-05-016, D.05-07-044, D.04-07-034, and D.01-08-039.

²⁰⁵ In its comments on the Alternate Proposed Decision, PG&E promises that in the next GRC proceeding it will remedy the erroneous method it used to forecast CAC-to-CIAC transfers in the instant GRC proceeding. We expect PG&E to uphold its promise.

outflows of cash that is calculated by a lead-lag study. The computation of working cash is guided by Standard Practice (SP) U-16, dated September 13, 1968. A positive amount of working cash represents a permanent investment in the utility and is included in rate base. Negative working cash represents funds provided by ratepayers and reduces rate base.

a. The Settlement Agreement

PG&E forecasted \$140.714 million of working cash in 2007. DRA recommended \$72.767 million.²⁰⁶ The amount sought by PG&E concedes several minor issues raised by DRA and TURN.

PG&E and DRA disagreed on several items of working cash, the most significant being the treatment of franchise fees in the lead-lag study. DRA proposed to increase the weighting of franchise fees in the lead-lag study by including franchise fees recovered in other proceedings and venues.

The Settlement Agreement adopts working cash of \$143.742 million.²⁰⁷ This is \$3.030 million more than PG&E requested and \$70.974 million more than DRA recommended.²⁰⁸ Most of DRA's proposed adjustments to working cash are not incorporated in the Settlement's calculation of working cash. Rather, the working cash adopted by the Settlement is a residual amount that is based largely on the effect that other elements of the Settlement have on the calculation of working cash. The Settling Parties agree that the resolution of all working cash issues is subsumed by the broader Settlement outcome for rate base. The

²⁰⁶ Settlement Agreement, Appendix G, Tables 1-9, 2-9, and 3-9.

²⁰⁷ \$143,742 million = \$53,941 (Electric Distribution) + \$56.381 million (Gas Distribution) + \$33.420 million (Generation). (Settlement, Appendix G, Tables 1-9, 2-9, and 3-9.)

²⁰⁸ Settlement Agreement, Appendix G, Tables 1-9, 2-9, and 3-9.

Settling Parties further agree that the Settlement outcome for working cash reflects consideration of Aglet's and TURN's proposals regarding working cash.

Aglet and TURN proposed that PG&E's working cash be reduced by the amount of customer deposits. TURN proposed a reduction of \$146.8 million and Aglet suggested a reduction of \$164.9 million. Adopting either amount would result in negative working cash. TURN also recommended two adjustments to the lead-lag calculation, resulting in a working cash reduction of \$5.286 million. We address Aglet's and TURN's proposed reductions to working cash below.

b. Customer Deposits

PG&E requires new customers to establish credit under Tariff Rule 6. A customer who does not qualify for credit must submit a deposit pursuant to Tariff Rule 7. PG&E refunds the deposits within 12 months to those customers that have generally paid their bills on time. PG&E must also pay interest on the deposits equal to the three-month commercial paper rate.

PG&E did not request interest on customer deposits as an operating expense. In addition, PG&E did not deduct customer deposits from working cash because SP U-16 stipulates that only "interest-free" customer deposits should reduce working cash. The Settlement adopts PG&E's position.

i. Position of the Parties

(A) Aglet

Aglet recommends that the Commission reduce PG&E's working cash (and rate base) by the amount of customer deposits. Aglet acknowledges that SP U-16 indicates that PG&E's interest-bearing customer deposits should be excluded from the calculation of working cash. However, in SCE's test-year 2003 GRC, the Commission found that circumstances had changed since SP U-16 was issued, and that customer deposits now represent a substantial and permanent

source of capital provided by ratepayers.²⁰⁹ In SCE's test-year 2006 GRC, there was no opposition to reducing rate base by customer deposits. The Commission concurred, stating that it was "reasonable to include the entire forecasted weighted average customer deposit balance as an offset to rate base."²¹⁰

Aglet forecasts customer deposits of \$164.891 million in 2007, the same as the 2005 average. Because customer deposits earn interest at the three-month commercial paper rate, Aglet recommends that PG&E's expenses in 2007 be increased to include this interest expense. Aglet submitted documents that showed the 3-month commercial paper rate reported in Federal Reserve Statistical Release, H-15, dated September 11, 2006, was 5.21%.

(B) TURN

TURN argues that the circumstance which led to a departure from SP U-16 for SCE apply equally to PG&E. TURN represents that the Commission's change in policy for SCE relied on two facts. First, SCE's customer deposits have grown significantly since SP U-16 was issued. TURN provided the following graph that shows PG&E's customers deposits have also grown significantly, rising from less than \$45 million in 1996 to almost \$150 million in December 2005:

²⁰⁹ D.04-07-022, *mimeo.*, pp. 242-247 and FOF 208-210 at p. 332.

²¹⁰ D.06-05-016, *mimeo.*, pp. 279-282, FOF 178 at p. 372.

The second reason for the Commission's change in policy for SCE was a widening of the spread between short-term interest rates and utility rates of return. TURN showed that the three-month commercial paper rate paid on customer deposits is currently around 5.5%, while PG&E's rate of return is approximately 13%, resulting in a spread of 7.5%.

TURN acknowledges that PG&E may have used customer deposits in prior years to finance large balancing account undercollections. However, TURN argues that the undercollections were caused by circumstances that will not recur due to the following new laws and regulations:

- Automatic increases in electric rates are required if power-cost balancing accounts are under collected by 5% or more.²¹¹
- Monthly revisions to gas procurement rates based on monthly gas price forecasts.

²¹¹ See § 454.5(d)(3), which was extended by D.04-12-048, *mimeo.*, p. 113.

TURN believes that the significantly reduced level of PG&E's balancing account undercollections since it exited from bankruptcy in April 2004 demonstrates that the previously identified reforms have permanently reduced the likelihood of large undercollections. In any event, TURN states that the level of balancing account undercollections is irrelevant to whether customer deposits are a permanent source of capital.

TURN suggests that the most reasonable forecast of customer deposits in 2007 is \$146.775 million, the recorded amount at the end of 2005.

(C) PG&E and the Other Settling Parties

PG&E opposes Aglet's and TURN's recommendation to reduce working cash (and rate base) to reflect customer deposits. PG&E contends their recommendation is contrary to SP U-16, which excludes interest-bearing customer deposits from the determination of working cash.

PG&E represents that it has historically used customer deposits to finance large undercollections in various balancing accounts. PG&E maintains that its balancing accounts were under collected 95% of the time during 1993-2004. These undercollections averaged \$690 million during 1993-1999, and \$3.8 billion during 2000-2004. At the end of 2004, PG&E's balancing accounts were under collected by \$159 million. PG&E believes that undercollections are likely to persist, although perhaps not at historical levels.

PG&E provided the following graph to illustrate that balancing account undercollections have significantly exceeded PG&E's short-term debt:

PG&E submits that the above graph shows that undercollections usually exceeded short-term debt outstanding, which proves that undercollections could not have been financed with short-term debt alone. Moreover, much of the short-term debt shown in the above graph was used for purposes other than balancing account undercollections, which demonstrates PG&E's need to use customer deposits to finance undercollections. PG&E argues that it would be unfair for the Commission to force PG&E to pay 13% on customer deposits when PG&E has consistently used customer deposits to finance balancing account undercollections on which PG&E earns the three-month commercial paper rate.

PG&E disputes TURN's contention that changed circumstances have made large undercollections unlikely in the future. TURN has not shown that undercollections will disappear, only that historical levels may not persist. PG&E also disagrees with TURN's that the level of undercollections since PG&E

exited from bankruptcy in April 2004 presages future undercollections. PG&E states that too little time has elapsed since April 2004 to establish a clear trend.

PG&E maintains that the Commission's decisions in the last two SCE GRC proceedings are not applicable to PG&E because these decisions do not address PG&E's history of large undercollections. More relevant, in PG&E's opinion, is the Commission's decision in PG&E's Test Year 1996 GRC. There, TURN argued that customer deposits should be deducted from working cash. The Commission did not address this issue explicitly, but the Commission's decision utilized SP U-16 to compute working cash, which resulted in the exclusion of customer deposits from the working cash computation.

If the Commission adopts Aglet's and TURN's proposal to decrease working cash for customer deposits, PG&E argues that symmetry demands that the Commission increase working cash for balancing account undercollections. This would be consistent with SP U-16, which provides for symmetrical treatment of short-term assets and liabilities. Specifically, under SP U-16, interest-bearing short-term assets and liabilities are both excluded from the working cash calculation. Similarly, non-interest bearing short-term assets and liabilities are included in the working cash calculation. PG&E contends that all the factors cited by Aglet and TURN for including customer deposits in the working cash calculation apply equally to balancing account undercollections.

In similar vein, PG&E notes the treatment of nuclear fuel inventory by the Settlement. PG&E agreed to remove nuclear fuel from rate base, even though nuclear fuel inventory requires a permanent commitment of capital. PG&E contends that if customer deposits are used to reduce rate base on the theory that they represent a permanent source of capital, it is only fair that nuclear fuel be added to rate base because it requires a permanent commitment of capital.

PG&E disagrees with the amount of customer deposits forecasted by Aglet and TURN for 2007. Aglet forecasted \$164.9 million based on the average of customer deposits during 2005. TURN forecasted \$147 million based on the 2005 year-end customer deposits. PG&E argues that TURN's graph shows that deposit levels were decreasing in 2005, and that trend could continue. Thus, adopting either Aglet's proposal or TURN's proposal could require PG&E to pay 13% on money that PG&E might never receive.

PG&E notes that Aglet would allow PG&E to recover a rate of interest on customer deposits of 5.21%. PG&E states that short-term rates have been increasing. If interest rates continue to increase, PG&E would be required to pay more interest on deposits than it recovers in rates. The net effect would be a loss for PG&E equal to the difference between the short-term rate being paid on deposits and the amount recovered in rates.

ii. Discussion

As a preliminary matter, we find that the uncontested aspects of the Settlement Agreement's computation of working cash to be reasonable in light of the record, consistent with applicable law, and in the public interest. The only concerns we have regarding working cash pertain to the issues raised by Aglet and TURN, which we address below.

The largest issue regarding working cash is whether to adopt Aglet's and TURN's proposal to treat customer deposits as a reduction to working cash. We decline to adopt their proposal. The record shows that PG&E and the Settlement Agreement calculated working cash in accordance with SP U-16, which has been in effect since 1969. As such, we view the Settlement outcome on working cash as presumptively reasonable.

Aglet and TURN raise several arguments for why it is appropriate to depart from a key element of SP U-16. Perhaps their best argument is that the Commission's decisions in the two most recent GRCs for SCE departed from SP U-16 and deducted customer deposits from working cash. They assert that the Commission should treat PG&E the same as SCE. We disagree. Our review of Commission precedent reveals that SCE is somewhat of an aberration in this regard. In the last two years alone there have been numerous Commission decisions that relied on SP U-16 to determine working cash.²¹²

The remaining arguments offered by Aglet and TURN have some merit, but so do PG&E's counter arguments. On the whole, we find that Aglet and TURN have not marshaled sufficient facts and arguments to overcome our presumption that Settlement Agreement's reliance on SP U-16 is reasonable.

For the preceding reasons, we find the Settlement outcome for customer deposits is reasonable in light of the record, consistent with Commission precedent, and in the public interest.

c. Lead-Lag Calculation of Working Cash

TURN proposes two changes to the lead-lag study, which together reduce PG&E's rate base by \$5.286 million. We address each recommendation below.

i. Revenue Lag

(A) Position of the Parties

PG&E's lead-lag study used data from 2004 to calculate the revenue lag. TURN states that because there is variability in the revenue lag data, it is better to use a longer period to calculate an average value. TURN recommends

²¹² See for example, D.05-12-020 and D.05-08-004.

averaging data for 2004 and 2005, which reduces revenue lag by 0.18 days. The adjustment would reduce rate base by \$4.2 million.

PG&E opposes TURN's adjustment on the grounds that it mixes data from different years. PG&E maintains that it is the Commission's general practice to use data from a single year in the lead-lag study.

(B) Discussion

PG&E used 2004 data in all of its working cash calculations, including the revenue lag computation, unless special circumstances existed.²¹³ PG&E saw no special circumstances to use data outside of 2004 to determine the revenue lag.

We decline to adopt TURN's proposal to use data from both 2004 and 2005 to calculate the revenue lag. We agree with PG&E that multiple years should only be used if warranted by special circumstances, which are not present here.

TURN argues that there is variability in the data for revenue lag, but TURN offers no quantification of such variability. PG&E testified that there was only a slight change in data between 2004 and 2005.²¹⁴ Slight changes in data from year to year are common and not worthy of special treatment. Furthermore, TURN selectively chooses to use 2005 data in only part of the working cash calculation. This pick-and-choose approach would set a bad precedent and cause further disputes in the already complex matter of determining "leads and lags" in the working cash study.

²¹³ Exhibit PG&E-2, pp. 12-12 to 12-13; Exhibit PG&E-18, p. 6-6, L: 28-29.

²¹⁴ 11 TR 721:22-24, PG&E/Jones.

ii. Savings Fund Lag

(A) Position of the Parties

PG&E's working cash calculation assumes zero lag days for the Company's matching contributions to the savings pool. TURN submits that the lag for the matching savings-fund contributions should be 16.81 days, the same as the lag for payroll less 0.49 days for float. Adopting TURN's recommendation would reduce rate base by \$1.111 million.

PG&E responds that TURN's proposal is contrary to the Commission's treatment of this issue in PG&E's 1996 GRC:

TURN recommends that savings fund contributions be accorded the same number of...lag days as payroll. TURN believes that, like payroll taxes (FICA), employee savings contributions are incurred at the same time labor cost is incurred. PG&E has agreed to make a similar adjustment for FICA...PG&E responds that, unlike FICA, it does not incur employee savings contributions until...the employee is paid. FICA is incurred over the period the obligation to the employee is incurred. PG&E makes a reasonable argument that FICA obligations are incurred differently from employee savings contributions. We will adopt PG&E's proposal. (D.95-02-015, 63 CPUC 2d 570, 617.)

PG&E concedes that its treatment of lag days for savings-fund contributions is not precise. Nevertheless, PG&E argues that its use of zero lag days is preferable to TURN's recommendation for two reasons. First, TURN's proposal is based on the average lag in wage payments, including performance incentive payments (PIP). The PIP extends the computed wage lag by taking into account PIP payments in mid-March of the following year. In contrast, matching savings-fund contributions are paid only on regular wages paid during the year

(or in the first week of January of the following year). Thus, associating the savings-fund lag with the wage lag (including PIP) creates a lag that is too long.

Second, savings-fund contributions are front loaded towards the early part of the year. As with FICA taxes that stop when an employee reaches the wage limit for the year (\$87,900 in 2004), PG&E's matching contributions to the savings fund stop when the employee reaches the 401(k) limitation.

If the Commission adopts TURN's proposal for computing the lag on savings-fund contributions, PG&E states that the proposal would need to be refined to better account for "front-loading."

(B) Discussion

TURN seeks to adjust the lag days for PG&E's matching contributions to the savings fund so that the savings-fund lag matches payroll lag. Adopting TURN's proposal would change the savings-fund lag from zero to 16.81 days,²¹⁵ reduce PG&E's rate base by \$1,111,000, and reduce PG&E's revenue requirement by approximately \$144,000 in 2007.

We agree with the logic of TURN's proposal. PG&E makes its matching contributions to the savings fund at the same time it pays wages. Thus, the two should be treated similarly in the working cash calculation.

Although we agree with TURN's proposal, PG&E raises two valid technical objections that we cannot resolve here. First, PG&E represents that savings-fund contributions are paid only on regular wages and not on PIP, so using the payroll lag as proposed by TURN (which includes PIP paid in March of

²¹⁵ Exhibit TURN-1, p. 86.

the following year) would overstate the lag.²¹⁶ Second, PG&E testified that savings-fund contributions (which are a match of employee contributions) tend to be front loaded during the year because of IRS limitations and otherwise.²¹⁷ PG&E's matching contributions to the savings fund plan end when the employee reaches the 401(k) limitation. TURN's proposal overstates lag because it assumes the payroll lag and the savings-fund contribution lag are the same.

There is an insufficient record to determine by how much the adopted revenue requirement reduction of \$144,000 should be reduced to reflect PG&E's two corrections. We conclude that because \$144,000 is insignificant in relation to PG&E's multi-billion revenue requirement adopted by today's Opinion, and because the \$144,000 should be reduced for the previously stated reasons, that the appropriate reduction to PG&E's rate base and revenue requirement is already reflected in rate base and revenue requirement adopted by the Settlement, both of which are lower than what PG&E requested in A.05-12-002.

In its next GRC proceeding, PG&E shall incorporate into the calculation of working cash a lag for employer savings-fund contributions in a manner consistent with today's Opinion.

The resolution of the savings-fund-contribution issue by today's Opinion is not inconsistent with D.95-02-015. There, the Commission appears to have addressed the lag for savings-fund contributions by employees. Today's Opinion addresses savings-fund contributions by the employer. Thus, the two decisions address somewhat different issues. Further, PG&E concedes in the instant proceeding that "its current treatment [of the employer's matching

²¹⁶ Exhibit PG&E-18, p. 6-8, L: 4-11.

²¹⁷ 11 TR 750:4-18, PG&E/Jones.

savings-fund contributions] may not be a precise computation of the ratemaking lag.²¹⁸ In light of PG&E's concession, the facts and circumstances in the instant proceeding warrant a different outcome than D.95-02-015.

8. Depreciation Expense

The purpose of depreciation expense for ratemaking purposes is to allow a utility to recover the costs it incurs to buy, install, and remove assets over the useful life of the assets. The Commission determines depreciation expense on an accrual basis using the straight-line, remaining life method described in Commission Standard Practice (SP) U-4, *Determination of Straight-Line Remaining Life Depreciation Accruals*, dated January 3, 1961. This method uses the following formula to calculate the annual depreciation expense accrual:

Depreciation Expense =	$\frac{\text{Plant Balance} - \text{Reserve} - \text{Gross Salvage} + \text{Cost of Removal}}{\text{Remaining Service Life of Asset(s)}}$

The components of the depreciation expense accrual are as follows:

Plant balance is equal to the original cost of assets (other than land) used to provide service to customers.

Reserve is the accumulated depreciation expense recorded to date for existing plant-in-service.

Gross salvage is the estimated future scrap value that will be realized when existing plant-in-service is retired.

Removal cost is the estimated future cost to remove existing plant-in-service.

²¹⁸ Settlement Motion, p. 239.

Remaining life is the expected average remaining life of plant-in-service.

In A.05-12-002, PG&E requested \$1.024 billion for depreciation expense in 2007 based on SP U-4 and the parameters in PG&E's testimony (e.g., remaining life and gross salvage).²¹⁹ The only parties to contest PG&E's request were TURN and DRA. Both parties disagreed with PG&E's forecast of net salvage.²²⁰ DRA also contested PG&E's proposal for refunding excess accumulated depreciation for fossil generation decommissioning.

a. Issues Raised by DRA

i. The Settlement Agreement

PG&E used SP U-4 to forecast depreciation expense in 2007. DRA agreed with this method, but advocated higher net salvage rates.²²¹ DRA's proposal was based on its observation that PG&E in recent years has collected around \$180 million annually for removal costs but has spent less than \$80 million annually. DRA's proposed net salvage rates would allow PG&E to collect

²¹⁹ Exhibit PG&E-2, p. 9-12 to p. 9-16, and Table 9-2.

²²⁰ Net salvage is gross salvage less removal costs. Net salvage can be positive or negative. For most retirements, removal costs are much higher than gross salvage value, resulting in negative net salvage.

²²¹ The net salvage rate is net salvage divided by the original cost of the plant being retired. The net salvage rate is often negative. For example, a utility pole that cost \$100 to install in 1960 and \$150 to remove and retire in 2000 will have a net salvage of -\$150 and a net salvage rate of -150% [-150% = -150/100]. If this asset class has a plant balance of \$600 million in 2000 and the previously described net salvage relationship applies to the entire account, the depreciation expense recovered in rates over the remaining life of the plant would be \$1,500 million less the depreciation reserve. The \$1,500 million is composed of \$600 million for the current plant balance and \$900 million (150% of \$600 million) for the expected future removal costs (i.e., negative net salvage).

\$9.6 billion of the \$12.3 billion that PG&E estimated it would need for negative net salvage over the next 30 years for existing Distribution assets.

PG&E responded that DRA used improper techniques to reduce negative net salvage. For example, PG&E's depreciation study used 15 years of historical data. Although DRA used the same data, PG&E claims that DRA excluded data for outlier years that reduced negative net salvage, but DRA did not exclude data for outlier years that went the other way. Similarly, DRA compared PG&E's negative net salvage to other utilities when the comparison resulted in a lower revenue requirement for PG&E, but DRA omitted comparisons that went the other way.

The Settlement Agreement adopts most of DRA's proposed net salvage rates. The following Table compares the Settlement with PG&E's and DRA's positions on depreciation expense:

2007 Depreciation Expense (\$ millions)							
	2006 Authorized	Comparison Exhibit		Settlement 2007	Variances Increase/(Decrease)		
		PG&E 2007	DRA 2007		Settlement vs. 2006	Settlement vs. PG&E	Settlement vs. DRA
	(A)	(B)	(C)	(D)	(D) - (A)	(D) - (B)	(D) - (C)
Depreciation	839	1,024	939	942	103	(82)	3
(Source: Settlement Agreement, Appendix A, p. 23, L: 31.)							

As shown in the above Table, the Settlement Agreement is very close to DRA's position on depreciation expense. Virtually all of the difference between PG&E's request and amount adopted by the Settlement is attributable to those DRA net salvage rates adopted by the Settlement.

The other issue contested by DRA concerned the refund of excess accumulated depreciation for fossil generation decommission costs. DRA and PG&E agreed there should be a refund, but disagreed on the amount of interest that should accrue on the refund. PG&E argued that the refund has been carried in the depreciation reserve for fossil decommissioning. This has had the effect of reducing rate base, with a corresponding benefit to ratepayers equal to the annual pre-tax rate of return of approximately 13%. DRA proposed that ratepayers receive an additional 5% interest on the over-accrual.

In rebuttal, PG&E maintained that customers have benefited from the reduced rate of return on rate base and will continue to do so until the over collection is refunded. The Settling Parties agree that ratepayers should retain the rate base reduction but not receive 5% interest on top of that.²²²

ii. Discussion

We find that the amount of depreciation expense adopted by the Settlement Agreement is reasonable in light of the record. PG&E submitted a comprehensive depreciation study, and the parties collectively submitted more than 900 pages of testimony on depreciation expense. This substantial record readily supports PG&E's requested depreciation expense, except for the net salvage component of depreciation.

With regards to net salvage, DRA has demonstrated that PG&E's net salvage rates are too low, since in recent years PG&E has collected about \$180 million annually for removal costs but has spent less than \$80 million

²²² Settlement, para. 42.

annually.²²³ In A.05-12-002, PG&E requested \$379 million annually for removal costs, but projected it would spend only \$88 million annually. The Settlement Agreement authorizes PG&E to recover \$299 million annually, which is very close to DRA's recommendation of \$296 million.²²⁴ Although the Settlement still has a gap of \$211 million between the amount of future removal costs that PG&E will collect in rates annually and the amount expended annually, this gap is normal and reasonable. As noted by PG&E, the annual accrual of future removal costs will exceed annual expenditures when, as here, new assets are being added faster than old assets are being removed and projected future removal costs are higher than current removal costs due to anticipated inflation.²²⁵

We also find that the amount of depreciation expense adopted by the Settlement Agreement is consistent with the law. Because the Settlement allows PG&E to recover a reasonable amount of depreciation expense, the Settlement is consistent with the Commission's authority under § 795 to set "proper and adequate rates of depreciation...[for] each public utility."

Finally, we conclude that it is in the public interest to authorize PG&E to recover the amount of depreciation expense set forth in the Settlement. The provision of gas and electric service to the public requires substantial investment. Utilities must recover the reasonable costs they incur to make such investments, including depreciation expense, in order to provide gas and electric service. The Settlement Agreement allows PG&E to recover its reasonable depreciation

²²³ Exhibit DRA-16, p. 16-10.

²²⁴ Settlement Motion, p. 247.

²²⁵ Settlement Motion, p. 270.

expense, including a reasonable amount of removal costs, and thereby enables PG&E to provide vital gas and electric service to the public.

We also find reasonable the Settlement's provisions on the interest owed by PG&E on a pending refund of excess accumulated depreciation for fossil decommissioning expense. We agree with PG&E's position that fossil decommissioning expense is part of the depreciation reserve and reduces rate base. Ratepayers have, in effect, earned interest on the excess decommissioning expense at a rate equal to PG&E's authorized rate of return, and will continue to do so until the over-collection is refunded.²²⁶ Thus, it is unnecessary for PG&E to pay additional interest on the refund as originally proposed by DRA.

b. Depreciation Issues Raised by TURN

TURN makes three proposals regarding the net salvage component of PG&E's depreciation expense accrual. First, TURN proposes that PG&E establish a regulatory liability for the money that PG&E has collected in rates for future removal costs but has not yet spent. Second, TURN asks the Commission to set PG&E's depreciation expense using what TURN calls "normalized net salvage" instead of the current straight-line remaining life method. Finally, TURN believes that PG&E should provide in its next GRC a depreciation study that uses the net present value approach described in SFAS No. 143 to determine future removal costs. We address each of TURN's proposals below.

i. Regulatory Liability for Removal Costs

Under SP U-4, the future cost to remove existing assets is recovered as part of depreciation expense on a straight-line basis over the average expected life of

²²⁶ Exhibit PG&E-18, p. 3-7, L: 1-7.

the assets. Thus, by the time an asset is retired, the utility has, on average, recovered the entire cost to remove the asset. Removal costs recovered in depreciation expense are part of the depreciation reserve and reduce rate base.

By the end of 2005, the cumulative amount of removal costs that PG&E had collected in rates exceed actual expenditures by \$2.1 billion. Most of the \$2.1 billion of pre-funded removal costs will not be spent for many years. Under the Settlement Agreement, the amount of removal costs that PG&E collects in rates will continue to exceed actual expenditures by approximately \$211 million annually. Thus, by the end of 2010, PG&E will have collected more than \$3.0 billion for removal costs that it has not yet spent.

For external financial reporting purposes, PG&E reports pre-funded removal costs as a regulatory liability pursuant to SFAS 71. Under generally accepted accounting principles (GAAP), a regulated entity such as PG&E must record a regulatory liability for future costs when (1) the regulator has provided rates to recover specified future costs, and (2) the regulated entity must return the funds collected in rates if the future costs do not materialize. The obligation to return the funds can be fulfilled either by future rate reductions or by paying other future costs with no corresponding effect on future rates.

(A) Position of the Parties

(1) TURN

TURN recommends that PG&E record in its regulatory books a regulatory liability for pre-funded removal costs. Excluded from TURN's recommendation are asset retirement obligations (AROs) that PG&E reports on its external

financial statements pursuant to SFAS 143.²²⁷ TURN does not explain why AROs are excluded from its proposal, even though PG&E's AROs are substantial.²²⁸

The basis for TURN's proposal is its concern that PG&E will not use the \$2.1 billion of pre-funded removal costs that it has already collected in rates to pay for removal costs. TURN believes that recording a regulatory liability on PG&E's regulatory books will help to ensure that PG&E either uses the \$2.1 billion for its intended purpose or returns these funds to ratepayers.

TURN recognizes that PG&E already reports the \$2.1 billion of pre-funded removal costs as regulatory liability on its external financial statements pursuant to SFAS 71. In doing so, PG&E has acknowledged that the Commission expects PG&E to either use the \$2.1 billion to pay for future removal costs or return these funds to ratepayers. However, there is no Commission decision that explicitly establishes this requirement. TURN believes it is necessary for the Commission to explicitly create a regulatory liability for pre-funded removal costs given PG&E's testimony that accumulated depreciation represents capital that belongs to investors rather than ratepayers.²²⁹

(2) Aglet

Aglet supports TURN's recommendation. Aglet states that TURN has identified a situation where ratepayers have pre-paid billions of dollars for removal costs but won't receive the benefit for decades. Given this situation, Aglet believes the Commission should explicitly order that PG&E's pre-funded

²²⁷ AROs are legal obligations to incur future costs to remove existing assets.

²²⁸ PG&E's SEC Form 10K for 2005 shows that as of December 31, 2005, that PG&E's regulatory liability for AROs was \$538 million, which was in addition to the regulatory liability of \$2.141 billion for pre-funded removal costs.

²²⁹ Exhibit TURN-53, Response to Q/ A 0001-73(h) and (i); 27 RT 2609-10, PG&E/White.

removal costs must be spent on removal costs or returned to ratepayers.

Although there is only a small probability that ratepayers might lose these funds in a future sale of the utility or other circumstances, Aglet contends that the stakes are too high for the Commission to ignore the issue.

(3) SCE

SCE intervened in this proceeding for the limited purpose of addressing the depreciation policies advocated by TURN. SCE takes no position on the specific depreciation rates or PG&E's revenue requirement.

SCE maintains that a regulatory liability is an accounting device that is limited to external financial reporting. The Commission has no need to establish regulatory liabilities for ratemaking purposes, according to SCE, because the Commission already has all the authority it needs to oversee and control the disposition of pre-funded removal costs.

(4) PG&E and the Other Settling Parties

PG&E believes it is unnecessary for the Commission to create a regulatory liability because the pre-funded removal costs will eventually be incurred regardless of (1) how PG&E accounts for these costs, or (2) any future changes to the regulatory framework under which PG&E operates.

(B) Discussion

PG&E receives a huge amount of capital from ratepayers to pre-fund future removal costs. The record shows that as of the end of 2005, the cumulative amount of removal costs that PG&E had collected in rates exceeded

cumulative expenditures by \$2.1 billion. The Settlement allows this figure to grow by \$211 million annually during 2007-2010.²³⁰

The *quid pro quo* for ratepayers is that PG&E will use the money it collects to pre-fund future removal costs to pay for removal costs. PG&E has recognized this regulatory bargain in its external financial statements where it reports a regulatory liability for pre-funded removal costs. Under SFAS 71, pre-funded removal costs can be reported as a regulatory liability only if the funds will be spent on removal costs or returned to ratepayers.

TURN and Aglet recommend that PG&E be required to classify pre-funded removal costs as a regulatory liability for ratemaking purposes. We agree for several reasons. First, doing so accurately reflects the regulatory bargain. Second, it is consistent with GAAP as demonstrated by the way PG&E reports pre-funded removal costs on its external financial statements. Finally, it provides an extra measure of assurance that PG&E will only use the amounts that it collects to pre-fund removal costs for their intended purpose.

SCE argues that it is unnecessary to classify pre-funded removal costs as a regulatory liability for ratemaking purposes. We disagree. PG&E has accumulated \$2.1 billion for removal costs that will not be incurred for years or decades. Under the Settlement, this amount will continue to grow at the rate of more than \$200 million per year. With the stakes so high and the actual incurrence of the removal costs far in the future, we conclude that it is appropriate to establish the regulatory liability as a reasonable protection of ratepayers' interest in making sure the huge amount of money collected for

²³⁰ Settlement Motion, p. 247 (difference between Settlement revenue requirement for future removal costs and projected asset removal expenditures in 2007).

removal costs is either spent for that purpose or returned to ratepayers (either in the form of a rate reduction or as an offset to other costs). Our action today will cause no harm to PG&E's shareholders, since PG&E already reports a regulatory liability for external financial reporting purposes.

We are also concerned about the consequences of our not adopting a regulatory liability. Pursuant to SFAS 71, a necessary condition for reporting a regulatory liability on external financial statements is a "rate action" that imposes a liability on a regulated entity.²³¹ The issue of whether PG&E should create a regulatory liability for pre-funded removal costs is squarely before us. If we decline to require PG&E to record a regulatory liability for ratemaking purposes, there will be less reason for PG&E to do so for external financial reporting purposes. We believe that such an outcome would undermine the regulatory bargain described previously, which is not our intent.

Our adoption of a regulatory liability for PG&E's pre-funded removal costs is consistent with our resolution of the same issue in the most recent SCE GRC proceeding. There, we held that:

TURN's request that the balance of funds collected for cost of removal...be recognized as a regulatory liability for ratemaking purposes is reasonable and will be adopted. The balance...is substantial, amounting to \$2.1 billion as of the end of 2004. This balance is already recognized as a regulatory liability for financial reporting purposes. SCE has not demonstrated any potential harm to the company...Formal recognition of our ratemaking responsibilities is a reasonable course of action and will establish regulatory certainty regarding ratemaking

²³¹ SFAS 71, para. 11.

treatment and principles that all parties generally agree is appropriate. (D.06-05-016, *mimeo.*, p. 204.)

We see no reason to treat PG&E differently from SCE.

We emphasize that our adoption of a regulatory liability for PG&E's pre-funded removal costs in no way prejudices how we might treat the regulatory liability if there is ever partial or full deregulation. We recognize, however, that if such an event were to occur, and PG&E has future removal costs at that time, PG&E may be entitled to keep some or all of the pre-funded removal costs in existence at that time to pay for future removal costs.

As noted earlier, PG&E reports a substantial regulatory liability for AROs on its external financial statements. We concur with this accounting. We invite parties to address in the next GRC whether it is necessary and reasonable to explicitly order PG&E to establish a regulatory liability for AROs.

ii. TURN's Normalized Net Salvage Proposal

PG&E estimated the future removal costs included in depreciation expense in accordance with the instructions in SP U-4. Using this guidance, PG&E first determined the ratio of recorded removal costs to recorded asset retirements for the last 15 years. PG&E multiplied this ratio by the current gross plant to project future removal costs. The projected future removal costs were then spread evenly over the average remaining life of existing plant-in-service.

Using the previously described method, PG&E estimated that it will cost approximately \$12 billion in future-year dollars to remove its entire gas and electric distribution system. PG&E spread this amount over 30.7 years to arrive at an annual accrual for future removal costs of \$379 million.

DRA agreed with the methodology that PG&E's used to estimate future removal costs, but DRA disagreed with some of the parameters used by PG&E.

Using its own parameters, DRA recommended that PG&E be allowed to recover \$296 million of removal costs in 2007.

TURN disagreed with the methodology used by PG&E. TURN recommends that PG&E be authorized to recover removal costs based on what TURN calls the “normalized net salvage approach.” Under TURN’s approach, the amount of removal costs recovered in rates would equal the annual average of PG&E’s out-of-pocket costs for the previous three years or five years. TURN’s proposal would allow PG&E to recover \$88 million in 2007 if a three-year period is used, and \$68 million if a five-year period is used.

The Settlement Agreement adopts removal costs of \$299 million in 2007 using PG&E’s method for forecasting removal costs combined with most of the parameters recommended by DRA. The Settlement is \$81 million less than PG&E requested and very close to DRA’s recommendation of \$296 million. The Settlement does not incorporate any elements of TURN’s recommendation.

(A) Position of the Parties

(1) TURN

TURN has two objections to the way removal costs are estimated in the Settlement Agreement. First, the Settlement forecasts removal costs in future-year dollars, and then spreads the future costs over the service life of plant-in-service. Because of inflation, future removal costs will be much higher than today. So, if an asset in 2007 has an expected service life that extends to 2037, ratepayers in 2007 will use 2007 dollars to pay removal costs stated in year 2037 dollars, ratepayers in 2020 will pay in 2020 dollars, and so on. Thus, ratepayers in 2007 will pay more in real dollars than ratepayers in 2020 and other future years. TURN believes this is illogical and unfair to ratepayers in 2007. TURN also contends that forcing ratepayers to pay for inflation that has not yet

occurred is why PG&E has accumulated \$2.1 billion in unspent future removal costs, a figure that will increase by \$211 million annually under the Settlement.

TURN's second concern is that the method used to estimate future inflation implicitly assumes that future inflation will match historical inflation. If the implicit inflation rate is too high, current customers will pay more than they should for future removal costs. If the forecasted inflation rate is too low, current customers will pay less than they should for future removal costs. Either way, ratepayers will pay too much for inflation or too little.²³²

TURN represents that SP U-4 does not mandate the use of inflation in the determination of removal costs. Rather, SP U-4 calls for removal costs to reflect "anticipated changes in labor costs for the immediate future."²³³ TURN asserts that including inflation from the distant future in the current accrual for removal costs is inconsistent with the emphasis in SP U-4 on "the immediate future."

For the previous reasons, TURN recommends that the Commission eliminate inflation from the determination of removal costs. TURN proposes that removal costs for this GRC cycle be based on a rolling three-year or five-year average of PG&E's recorded removal costs. TURN calls this alternative the "normalized net salvage approach." PG&E's revenue requirement for removal costs in 2007 would be \$88 million based on a three-year average of historical removal costs or \$63 million based on a five-year average.

²³² TURN adds that to the extent future inflation is assumed to be greater than zero, and to the extent current rates include future removal costs stated in nominal dollars, there will always be an overpayment that is occurring from a real-dollar perspective.

²³³ Exhibit PG&E-54, p. 40.

(2) PG&E and the Other Settling Parties

The Settlement Motion contains the following table to show the difference between the Settlement Agreement and TURN's proposal. The table shows on an illustrative basis (1) the 2007 revenue requirement for removal costs using the Settlement's SP U-4 accrual method and TURN's normalized net salvage method; (2) the approximate 2007 rate reduction from the reduction in rate base attributable to pre-funded removal costs; (3) the net 2007 revenue requirement for removal costs; and (4) projected expenditures for removal costs in 2007.

Comparison of 2007 Cost-of-Removal (COR) Revenue Requirement (In Millions)		
	Settlement [A]	TURN [B]
1. 2007 COR Revenue Requirement	299	88
2. Less: Rate Benefit from Reduced Rate Base Associated for Pre-Funded COR [C]	(150)	(150)
3. Net 2007 COR Revenue Requirement (Line 1 - 2)	149	(62)
4. Projected COR expenditures (2007) [D]	88	88
5. Net 2007 COR Revenue Requirement compared with 2007 projected COR expenditures (Line 3 - 4)	61	(150)
<u>Notes</u>		
[A] Traditional SP U-4 accrual method.		
[B] Normalized net salvage method based on the 3-year average of 2002-2004 recorded removal costs (PG&E-2 WP, Chapter 10, p 10-11 to 10-211).		
[C] Rate reduction based on \$2.1 billion of pre-funded removal costs (and corresponding reduction to rate base) less deferred taxes (approximately \$800 million) multiplied by PG&E's pre-tax rate of return (approximately 13.1%).		
[D] Projected 2007 COR expenditures based on the 3-year average of 2002-2004.		

The above Table shows that under the Settlement Agreement, ratepayers will pay \$299 million in 2007 to pre-fund future removal costs and receive a benefit of \$150 million from the rate base reduction for pre-funded removal costs.

The net cost to ratepayers in 2007 is \$149 million, which is approximately \$61 million more than forecasted removal expenditures of \$88 million in 2007.

PG&E states that the Settlement's forecast of removal costs of \$299 million is a conservative estimate. To demonstrate this point, the Settlement Motion provides an example based on PG&E's testimony that it had 2.3 million utility poles with an average replacement cost in 2007 of approximately \$6,000 per pole. On average, current removal costs constitute 10% of replacement costs, or \$600 per pole. The Settlement adopts future removal costs of \$1.52 billion for existing poles over the next 30.7 years. This equates to an average future removal cost of under \$700 per pole (i.e., \$1.52 billion divided by 2.3 million poles) for recovery over the next 30.7 years. This also equates to a conservative inflation rate of less than 0.5% annually (i.e., an increase from \$600 to \$700 over the 30.7-year average remaining life). Thus, TURN's concerns regarding enormous over-accruals using SP U-4 are unfounded.

TURN's proposal would have ratepayers pay only the historical three-year average cost of \$88 million. PG&E asserts that the three-year average does not take into account the far greater quantity of assets that will be removed in the future at a far higher unit cost. It also ignores the estimated \$150 million annual rate reduction from the \$2.1 billion reduction to rate base for pre-funded removal costs. As a result, TURN's proposal would provide a net rate reduction of \$62 million (\$88 million - \$150 million) due solely to an accounting change.²³⁴

²³⁴ Stated otherwise, if the normalized net salvage approach had been in effect all along there would be no pre-funded reserve and no rate base reduction. Rates for the current vintage of customers would be \$150 million higher if that were the case.

PG&E believes the \$62 million rate reduction unfairly benefits current ratepayers at the expense of future ratepayers.

PG&E disagrees with TURN's position that reflecting future cost levels in current depreciation is unfair to current ratepayers. TURN states:

If "intergenerational equity" is a guiding principle on such issues, the Commission needs to assign the costs of inflation to the generation of ratepayers that will pay those costs with inflated dollars. In other words, let current ratepayers bear the costs of current inflation, and leave the 2030 inflation to be borne by ratepayers in 2030. (TURN Comments, p. 112.)

PG&E argues that TURN's position conflicts with SP U-4, which states that the straight-line accrual method for depreciation used by DRA and PG&E meets the objective of an equitable sharing of costs.²³⁵

PG&E disputes TURN's argument that SP U-4 does not mandate depreciation rates that include future inflation for removal costs. Chapter 7 of SP U-4 includes numerical examples and tables that illustrate the calculation of removal costs. Since the adoption of SP U-4 in 1961, many depreciation studies have been completed and numerous Commission decisions have been issued that utilize the method described in SP U-4. PG&E maintains that it adhered to this guidance and precedent.

(3) SDG&E and SCG

SDG&E and SCG (together, Sempra) joined the Settlement Agreement for the sole purpose of supporting the use of SP U-4 to compute removal costs.

²³⁵ Exhibit PG&E-54, p. 5, para. 2.

Sempra states that TURN's proposed net-salvage approach is premised on TURN's allegation that PG&E will never spend the money for removal costs at the level it is collecting from ratepayers. Sempra maintains that TURN did not provide any evidence to support its allegation.

Sempra also disputes the following statement by TURN that SP U-4 prohibits the use of inflation in determining removal costs:

SP U-4 calls for basing predicted future cost of removal by "reflecting anticipated changes in labor cost for the immediate future." Including inflation costs going some years, even decades, into the future is inconsistent with the emphasis of SP U-4 on the "immediate future." (TURN's Comments filed on Sept. 20, 2006, p. 126.)

Sempra contends that TURN misconstrues SP U-4. TURN interprets the term "immediate future" to mean that future inflation is not prescribed in SP U-4. That is an incorrect interpretation of SP U-4, according to Sempra.

(4) SCE

SCE provides an example to illustrate the deferral of removal costs under TURN's proposal. Assuming \$1,000 of removal costs and a 10-year asset life, TURN's method would not allocate any costs to ratepayers during the asset's life. Instead, after the asset retires in year ten, ratepayers who did not benefit from the asset would bear the entire cost of removal over the ensuing three-year or five-year period. In contrast, the traditional SP U-4 accrual method allocates net salvage costs of \$1,000 over the asset's service life and to those ratepayers who receive the benefits of the asset.

SCE states that the recovery pattern for a single asset would also hold for a group of assets. SCE compared the cost recovery patterns for a group of utility poles that follow PG&E's service life and retirement dispersion characteristics.

As shown below, the SP U-4 accrual method recovers removal costs in a manner consistent with the pattern of the surviving poles' declining service value; TURN's normalized net salvage method would not.

Comparison of Removal Cost Recovery Pattern

Although only about 20% of the poles' collective service value remains after the first 40 years (area to the right of the vertical line), TURN's approach assigns nearly 80% of the removal costs to the ratepayers receiving service after this point. That is, the ratepayers who receive the last 20% of the service value of the poles would bear about 80% of the removal costs for all of the poles.

SCE argues that the above graph shows that TURN's pay-as-you-go approach shifts cost responsibility from current customers, who enjoyed the benefit of the asset's service value, to future customers. SCE claims that TURN presents no evidence to justify such a drastic change in Commission policy.

SCE claims that TURN wrongly asserts that the intent of SP U-4 is to exclude inflation from the computation of removal costs. SCE reads SP U-4 as advocating the widely-held practice of using the ratio of recorded net salvage costs to recorded plant retirement amounts (i.e., net salvage ratios) to estimate future removal costs. Consequently, SP U-4 incorporates an inherent inflation impact because of the time difference between the recorded costs reflected in the numerator and denominator.

(B) Discussion

The issue before us is whether to adopt TURN's proposed "normalized net salvage allowance approach" for setting rates to recover asset removal costs. Under TURN's approach there will be no recovery of removal costs until after assets have retired and the associated removal costs have been incurred. TURN's method is, in effect, a form of cash-basis accounting.²³⁶

TURN's proposal is a marked departure from the current accrual accounting for removal costs. The purpose of using accrual accounting is to allocate to current ratepayers their *pro rata* share of the costs that will eventually be incurred to remove those assets that are currently being used to provide utility service. This treatment is in harmony with GAAP, the USOA, and long-standing Commission practice under SP U-4.²³⁷

Accrual accounting for removal costs is fair to ratepayers because it ensures that ratepayers pay for the removal costs of those assets that serve them, and pay no removal costs for assets that do not serve them. On the other hand,

²³⁶ Exhibit PG&E-20, p. 11; Exhibit SDG&E-SCG-1, pp. 8-9; Exhibit SCE-1, pp. 11-15; and Exhibit TURN-3, p. 48.

²³⁷ FERC USOA, General Instruction 11; SP U-4, p. 5.

TURN's proposal would require ratepayers to pay for removal costs incurred in prior years for assets that are no longer in service. As a matter of equity, we believe that ratepayers should pay only for those assets that currently serve them. TURN's proposal fails this test.

Although TURN's proposal is flawed, TURN argues that the accrual method is even worse. TURN's main objection is that the accrual method requires ratepayers to pay for inflation that has not yet occurred. There is some merit to TURN's objection. TURN has shown that the accrual method front loads removal costs in terms of real dollars. On the other hand, the Settling Parties have demonstrated with their pole example, *supra*, that the accrual method set forth in SP U-4 (and as implemented by PG&E) results in a conservative projection of future inflation that probably understates future removal costs in nominal dollars. The understatement of future removal costs offsets, at least in part, the front loading of future removal costs in terms of real dollars.

TURN also objects to the accrual method because it relies on 30-year projections of future removal costs that will likely prove to be inaccurate, and thereby result in current ratepayers paying more or less than they should. TURN is undoubtedly correct, but its objection also applies to other elements of depreciation expense, including service lives, as SP U-4 explicitly recognizes.²³⁸ Indeed, TURN's objection applies to most elements of future test-year ratemaking. We conclude that because we endeavor to use reasonable assumptions to determine depreciation expense, including removal costs, and because we update these assumptions in every GRC proceeding, our use of

²³⁸ Exhibit PG&E-54, pp. 7-8.

projected future removal costs for ratemaking purposes is not unfair to current ratepayers. Moreover, because SP U-4 tends to understate future removal costs for the reasons described previously, it is unlikely that ratepayers will pay too much for future removal costs in terms of nominal dollars.

Next, TURN argues that the following sentence in SP U-4 shows that the Commission did not intend for removal costs to include future levels of inflation:

Predicted future cost of removal should be based on a reasonable projection of **recent experience** reflecting anticipated changes in labor costs **for the immediate future**. (Exhibit PG&E-54, SP U-4, p. 40. Emphasis added.)

Parenthesis We find that TURN's interpretation of SP U-4 is not supported by the tables in SP U-4 which illustrate what was intended by this statement. The record shows that PG&E calculated future removal costs in conformity with the detailed instructions and illustrative tables set forth in SP U-4.²³⁹

For the preceding reasons, we are not persuaded that there is a need to abandon our long-held practice of using SP U-4 to determine the removal cost component of depreciation expense. Although we will retain our current practice for the time being, we are concerned about the large and growing balance of pre-funded removal costs, which currently exceeds \$2.1 billion. We encourage TURN, DRA, and the others to carefully analyze pre-funded removal costs in the next GRC proceeding. To aid in this analysis, we will require PG&E to provide the following information in its next GRC proceeding:

- The then-current balance of pre-funded removal costs.

²³⁹ Compare Exhibit PG&E-54, pp. 37-39 with Exhibit PG&E-2 WP10, pp. 10-8, 10-16, 10-23, and 10-30.

- A year-by-year projection of (1) when the then-existing balance of pre-funded removal costs will be consumed, and (2) the implicit inflation rate for future asset removal costs.
- A five-year projection of the year-end balance of pre-funded removal costs showing for each year the gross additions to the balance, gross expenditures for removal costs, and the net change in the balance of pre-funded removal costs.

iii. Net Present Value Depreciation Study

(A) Position of the Parties

(1) TURN

TURN argues that the traditional accrual method for recovering future removal costs is flawed because it is based on nominal dollars instead of real dollars. To correct this perceived flaw, TURN recommends that PG&E provide in its next GRC an estimate of future removal costs using the net-present-value approach described in SFAS 143.

TURN states that its recommendation is consistent with the Commission's decision in the recent SCE GRC proceeding. There, the Commission ordered SCE to provide in its next GRC a depreciation study that includes (1) a detailed analysis justifying the reasonableness of applying the method proposed at that time by SCE for determining removal costs, (2) an analysis of the effects of past inflation on SCE's proposed cost of removal rates, and (3) a justification of the implicit inflation rates reflected in SCE's proposed removal rates.²⁴⁰

TURN believes that its recommendation is consistent with two accounting pronouncements: SFAS 143 and FASB Interpretation No. 47 (FIN 47). Together, these two pronouncements require PG&E to report on its external financial

²⁴⁰ D.06-05-016, *mimeo.*, pp. 205-210 and COL 33.

statements the “fair value” of PG&E’s legal obligation to incur future removal costs.²⁴¹ These legal obligations are referred to as “asset retirement obligations” (AROs) and constitute only a fraction of PG&E’s estimated future removal costs. In general terms, the fair value of AROs is the current market value of future removal costs or, when market value cannot be ascertained, the present value of future removal costs. PG&E used the present-value approach for its AROs.

TURN asserts that SFAS 143 and FIN 47 demonstrate that the accounting profession is moving towards a net present value approach for accruing all future removal costs. TURN also contends that because PG&E has successfully implemented SFAS 143 and FIN 47, PG&E should be able to determine the net present value of all of its future removal costs, not just the AROs that are the subject of SFAS 143 and FIN 47.

(2) PG&E and the Other Settling Parties

PG&E opposes TURN’s proposal to require PG&E to submit in its next GRC proceeding a study showing the present value of all future removal costs. PG&E believes the Commission should wait until it has received and reviewed SCE’s study to determine if a similar study is needed for PG&E. If, as PG&E expects, the SCE study shows that the implicit inflation rates are very conservative, there would be no need for PG&E to incur the additional expense of preparing a study.

²⁴¹ SFAS 143 and FIN 47 require PG&E to record an ARO at fair value in the period in which it is incurred if a reasonable estimate of fair value can be made. In the same period, the associated asset retirement costs are capitalized as part of the carrying amount of the related long-lived asset. In each subsequent period, the liability is accreted to its present value and the capitalized cost is depreciated over the useful life of the long-lived asset.

PG&E believes the record in the current proceeding shows that the traditional method for projecting future removal costs in SP U-4 understates future inflation and thereby results in a conservative estimate of future removal costs. If the understated removal costs were then discounted back to the present, the result would be a fictional present value that is less than current removal costs. PG&E argues that because such a study would not reflect reality, it would have no use and would be a waste PG&E's and the Commission's resources.

PG&E disputes TURN's suggestion that PG&E's successful implementation of SFAS 143 and FIN 47 shows that PG&E can determine the net present value of all removal costs. PG&E states that SFAS 143 and FIN 47 affected only a handful of accounts, not the entire spectrum of the GRC filing, which would be far more complex and subjective. Unlike SP U-4, which has a long history of interpretation and application, there is no detailed set of rules for determining the net present value of future removal costs. Because PG&E would be preparing the study with little guidance, the result is likely to be controversial.

(3) SCE

SCE asserts that TURN's proposal is inappropriate. This is because the present-value calculation prescribed by SFAS 143 uses the following parameters that are unsuitable for ratemaking: (1) the estimated cost to permanently retire, remove, and/or dispose of tangible assets; (2) estimated escalation rates; (3) a provision for third-party profits; (4) varying future scenarios weighted by the probability of occurrence; and (5) the entity's credit-adjusted risk free rate.

SCE sees three other flaws in TURN's proposal. First, TURN seeks to eliminate the use of nominal cost for only a single component of depreciation – future removal costs. TURN makes no attempt to apply a consistent approach by restating plant, accumulated depreciation, and deferred taxes at current value.

Second, TURN admits that the SFAS 143 calculation is complicated and requires “substantial judgment in the determination of inflation and discount rates.”²⁴² Finally, SP U-4 distinguishes between the “value concept” and the “cost concept.” The first is related to market value, while the latter refers to nominal accounting costs. SP U-4 rejected the value concept for ratemaking purposes.²⁴³ SCE states that SFAS 143 uses a value concept that was rejected by SP U-4.

(B) Discussion

We decline to adopt TURN’s proposal to order PG&E to submit in its next GRC a study showing the net present value of removal costs for all assets using the method set forth in SFAS 143 and FIN 47. We agree with PG&E and SCE that such a study would be complex and controversial. Unless there is a clear need for such a study, we should not require it.

We are not persuaded that there is a need. PG&E has provided persuasive evidence that SP U-4 understates future removal costs in nominal dollars.²⁴⁴ Thus, even though there is no explicit discounting of future removal costs under SP U-4 for the purpose of determining present value, there is an implicit discounting due to the understatement of future removal costs by SP U-4. TURN has not demonstrated that SFAS 143 and FIN 47 would provide results that are materially different from SP U-4.

Our resolution of this matter is consistent with our decision in the recent SCE GRC proceeding. There, we required SCE to provide additional information in its next GRC proceeding to justify the future removal costs determined in

²⁴² Exhibit TURN-3, pp. 48, 51.

²⁴³ SP U-4, p. 5.

²⁴⁴ See summary of evidence in the Settlement Motion at pp. 260-262.

accordance with SP U-4, but we did not require SCE to provide a net present value study of all future removal costs.

If TURN wishes to pursue this matter in the next GRC, we suggest that it consider a narrowly tailored, incremental approach based on GAAP. To this end, TURN may wish to present a side-by-side comparison of (1) removal costs for AROs determined in accordance with GAAP, and (2) removal costs for the same assets determined in accordance with SP U-4. PG&E shall provide to TURN, upon request, the information that TURN may need to make this comparison. Once we have the side-by-side comparison, we will be in a better position to make an informed decision on whether to adopt for regulatory purposes a GAAP-based, net-present-value approach for those removal costs that are classified as AROs under GAAP.

9. Taxes

a. Summary

PG&E presented testimony and forecasts on income taxes, property taxes, and other taxes that PG&E must pay in 2007. The Settling Parties agreed to PG&E's methods for computing taxes.

DRA agreed with PG&E's method for estimating income taxes. In reaching its conclusion, DRA reviewed several items, including recent Federal and State tax law changes; the Federal and State tax deductions for depreciation; Federal and State operating expense adjustments; Federal and State cost-of-removal deductions; Federal and State repair allowance; Federal deduction for State Franchise Taxes; and potential charitable contribution deductions.

TURN raised two concerns about PG&E's computation of income tax expense. First, TURN recommended that if the Commission decides to disallow meal and entertainment expenses, it must also remove the related tax deduction

for the disallowed expenses. PG&E agreed with TURN's proposal, which is reflected in the Comparison Exhibit and the Settlement Agreement revenue requirement. Second, TURN objected to PG&E's treatment of the income tax deduction for dividends paid on PG&E Corporation stock held in the Employee Stock Ownership Plan (ESOP), arguing that the benefit of the deduction should be flowed through to ratepayers. This matter is addressed below.

For property taxes, DRA found the results of PG&E's methodology (as set forth in its Application) reasonable and stated that the differences between DRA's property tax estimate and PG&E's were due to different plant estimates.

Finally, PG&E's forecasts for all other taxes was uncontested, including payroll, business license, federal highway use, and timber yield taxes. DRA, the only party to address these taxes, found that PG&E's method for forecasting these taxes was reasonable.

b. Discussion

PG&E and DRA provided dozens of pages of testimony and work papers regarding the various types of taxes paid by PG&E and the proper method for calculating the different taxes. The record indicates that PG&E and the Settlement Agreement have determined the various taxes in conformance with Commission precedent and all applicable tax laws and regulations.

With the exception of the ESOP, addressed below, we find that the tax amounts adopted by the Settlement Agreement are reasonable in light of the whole record, consistent with applicable law, and in the public interest.

c. Tax Deduction for ESOP Dividends

PG&E's parent company, PG&E Corporation, has an ESOP. Utility employees may invest their money in the ESOP, and the Utility (PG&E) will match 75% of employee contributions up to 6% of their salary. The cost of the

Utility's matching contributions is included in rates. Although PG&E Corp. operates the ESOP, 99.527% of the money in the ESOP relates to contributions from Utility employees and the Utility's matching contributions.

The dividends paid by PG&E Corp. to stock held by the ESOP are tax deductible. The total dividends paid to the ESOP in 2005 was \$30.043 million.

TURN recommends that the tax deduction for dividends paid to the ESOP be flowed through to ratepayers. DRA did not address this issue. PG&E opposes this adjustment. The determination of who should benefit from the tax deduction (ratepayers or shareholders) does not have any consequences for PG&E employees or the benefits they will receive under the ESOP program.

i. Position of the Parties

(A) TURN

TURN estimates that the total dividends paid to the ESOP in 2007 will be \$43.9 million. The RO model used by Settling Parties to calculate PG&E's revenue requirement shows that a tax deduction of \$43.9 million reduces PG&E's GRC revenue requirement by \$29.547 million.

TURN argues that PG&E's shareholders do not provide the funds that generate the tax deduction and, therefore, do not have an equitable right to the deduction. Rather, the deduction exists because PG&E Corp. has an ESOP that is funded largely by ratepayers (i.e., ratepayers paid the wages that fund the workers' contributions to the ESOP and PG&E's matching contributions).

TURN contends that in SCE's recent GRC proceeding the Commission held that the tax benefit belongs to ratepayers. Specifically, in A.04-12-014, SCE assigned to ratepayers the tax deduction for dividends paid to its ESOP. SCE

also agreed that this ratemaking treatment was consistent with Commission precedent.²⁴⁵ The Commission adopted this ratemaking treatment in D.06-05-016. TURN states that the Commission should not adopt divergent treatment for ESOP dividends in two proceedings presenting identical facts.

(B) PG&E and the Other Settling Parties

PG&E responds that the Commission held in D.84-05-036 that tax deductions attributable to management's use of retained earnings belong to shareholders, not ratepayers.²⁴⁶ Since dividends are paid out of retained earnings at the discretion of management, it follows that the tax deduction attributable to these dividends properly belongs to the shareholders.

PG&E explains that after the ratepayers fund employee wages, the employees may invest their pre-tax wages in the Savings Fund Plan, which includes the ESOP. The associated tax benefit is retained by the employees. Ratepayers also fund the Utility's matching contribution, and the tax benefit of the Utility's contribution is flowed through to the ratepayers. PG&E argues that just as the ratepayers cannot claim the tax benefit realized by employees when they contribute pre-tax wages to the Savings Fund Plan, the ratepayers cannot claim the tax deductions realized by shareholders when their retained earnings are used to pay dividends to stock held by the ESOP.

PG&E disagrees with TURN that the recent SCE GRC proceeding establishes an applicable precedent. PG&E represents that the ratemaking treatment of the tax benefit was not litigated or explicitly decided by the Commission. Instead, SCE's application assigned the tax benefit to ratepayers,

²⁴⁵ Exhibit TURN-44.

²⁴⁶ D.84-05-036, 15 CPUC 2d 42 at 48, 49.

which was not contested. PG&E testified that SCE now agrees with PG&E that the tax deduction for dividends paid to an ESOP belongs to shareholders.

ii. Discussion

The Settling Parties represent that they considered TURN's position on ESOPs and, even though the Settlement does not adopt TURN's position, that does not mean TURN's position is not reflected in the Settlement. They state that the ultimate question is not whether any particular issue is adopted or rejected by the Settlement, but whether the Settlement as a whole is reasonable.²⁴⁷ We agree. It is from this perspective that we will evaluate the Settlement outcome for ESOPs.

The Settlement provides PG&E with a revenue increase of \$213 million in 2007 compared to 2006. This is \$181 million less than PG&E's requested increase of \$395 million. The Settlement results in PG&E receiving 53.9% of its post-hearing, pre-settlement litigation position, and provides PG&E with \$600 million less than it requested in cumulative revenues for 2007, 2008, and 2009. Thus, the Settlement represents a significant compromise on PG&E's part.

The question is whether this outcome is reasonable in light of the whole record regarding the issues raised by TURN, including ESOPs. We find that it is. Previously in today's Opinion, we reviewed the record for all the issues still contested by TURN, and we find in all instances that the Settlement outcome for these issues is reasonable. In fact, we find the largest disallowances proposed by TURN other than ESOPs, such as TURN's proposed disallowance for asset removal costs, are unreasonable.

²⁴⁷ Settling Parties Reply Comments filed October 5, 2006, p. 120.

With this background in mind, we find that it is unnecessary to delve deeper into the merits of TURN's proposed disallowance for ESOP tax benefits. We conclude that the Settlement Agreement, by reducing PG&E's requested revenue requirement by \$181 million, represents a reasonable approximation of the likely litigation outcome of all issues raised by TURN and the other parties, including ESOPs. Accordingly, we decline to adopt TURN's proposal to modify the Settlement Agreement to reduce PG&E's revenues by an additional \$29.547 million.

We disagree with TURN's argument that today's Opinion represents a departure from Commission precedent in the SCE GRC proceeding. As PG&E correctly notes, our decision (D.06-05-016) in the SCE GRC proceeding did not explicitly address the ratemaking treatment of ESOPs.

F. Revenue Requirement and Rate Base

1. Results of Operations for 2007

PG&E calculated its GRC revenue requirement and rate base using the results of operations (RO) computer model that consists of thousands of inputs and algorithms. The same RO model was used to compute the Settlement RO, the Comparison Exhibit RO, and the ROs in PG&E's and DRA's filed testimony. The differences in the RO output between the Settlement and the Comparison Exhibit result from different inputs, and not from different modeling algorithms. The Settlement includes an RO for PG&E's aggregate GRC revenue requirement and rate base in 2007, and separate ROs for Electric Distribution, Gas Distribution, and Electric Generation.

Using the RO model, the Settling Parties calculated a total 2007 GRC revenue requirement of \$5.043 billion, comprised of \$2.950 billion for Electric Distribution, \$1.073 billion for Gas Distribution, and \$1.020 billion for Electric

Generation. Subtracting forecasted other operating revenues (OORs) of \$116 million leaves a net revenue requirement of \$4.927 billion in 2007.

Compared to 2006, the Settlement revenue requirement of \$5.043 billion represents an increase of \$237 million, or 4.5%, comprised of \$235 million for Electric Distribution, \$30 million for Gas Distribution, and a decrease of \$28 million for Electric Generation. The overall increase of \$237 million is offset by an increase of \$24 million in other OORs to yield the net increase in billed revenues of \$213 million.

The following table compares the weighted-average rate base for 2007 that was calculated by the RO model for the Settlement with PG&E's and DRA's litigation positions:

Settlement Agreement re: 2007 Weighted Average Rate Base (\$ millions)							
		Comparison Exhibit			Variances Increase/(Decrease)		
	2006 Authorized	PG&E	DRA	Settlement	Settlement vs. 2006	PG&E vs. Settlement	DRA vs. Settlement
	(A)	(B)	(C)	(D)	(D) - (A)	(D) - (B)	(D) - (C)
Rate Base	12,311	12,746	12,347	12,550	239	(196)	203
Source: Settlement Agreement, Appendix A, Line 36.							

The Settlement allocates the rate base to Electric Distribution, Gas Distribution, and Electric Generation.²⁴⁸

There is no dispute regarding the mechanics of the RO model used by the Settlement Agreement to calculate PG&E's revenue requirement and rate base

²⁴⁸ Settlement Agreement, Appendix G, Table 1-10 (Electric Distribution), Table 2-10 (Gas Distribution), and Table 3-10 (Electric Generation).

for 2007.²⁴⁹ We find that the RO model is reasonable in light of the record and consistent with Commission precedent.

2. Revenue Requirement for Attrition Years

a. Position of the Parties

i. The Settlement Agreement

An attrition rate adjustment (ARA) is an element of the Rate Case Plan that adjusts the utility's revenues in the second and third years of the typical three-year GRC cycle for the purpose of sustaining the utility's earnings at an adequate level.²⁵⁰ For PG&E, the second and third attrition years are 2008 and 2009.

PG&E requested that the Commission determine attrition revenue requirement increases for 2008 and 2009 based on the following:

- Detailed forecasts of capital expenditures.
- Detailed forecasts of O&M expenses for electric generation.
- At least 14 separate indices and union contracts for labor, administrative, and O&M expenses.
- Recovery of \$34.8 million in either 2009 or 2010 for a second refueling outage at Diablo Canyon in 2009.
- Miscellaneous cost changes that become final as a matter of law, such as postage rate changes, franchise fee changes, income tax rate changes, and ad valorem tax changes.
- A reduction in the calculated attrition revenue requirement increases of \$41 million in 2008 and \$56 million in 2009 (for

²⁴⁹ TURN found an error in the way the RO model accounted for rental savings in 2007 from the replacement of fleet rental vehicles with Company-owned vehicles. This error has been corrected in the revenue requirement adopted by today's Opinion.

²⁵⁰ D.00-02-046, *mimeo.*, p. 540, COL 44.

cumulative savings of \$97 million) to reflect estimated net savings from Business Transformation efforts.

PG&E's forecasted attrition revenue requirement increases are shown in the table below. PG&E also requested authority to implement attrition adjustments through advice letter filings in October of the prior year.

DRA agreed with some, but not all, of PG&E's attrition proposal. For the most part, DRA recommended that attrition increases in 2008 and 2009 be determined based on the adopted expenses and plant balances for 2007 escalated by a limited number of factors that have been widely used in prior GRC proceedings for PG&E and other utilities.

The Settlement adopts a four-year GRC cycle that spans 2007 through 2010. The Settling Parties further agree to "fixed-amount" attrition revenue increases for the years 2008, 2009, and 2010. The following table compares the Settlement attrition increases with the litigation positions of PG&E and DRA:

Attrition Revenue Requirement Increases (\$ millions)					
	PG&E	DRA	Settlement	Settlement Increase/(Decrease) Compared to:	
				PG&E	DRA
	(A)	(B)	(C)	(C) - (A)	(C) - (B)
Electric Distribution					
2008	67	52	63	(4)	11
2009	80	61	63	(4)	2
2010	N/A	N/A	63	N/A	N/A
Gas Distribution					
2008	25	18	22	(3)	4
2009	25	18	22	(3)	4
2010	N/A	N/A	22	N/A	N/A
Generation					
2008	50	30	40	(10)	10
2009	75	52	75	0	23
2010	N/A	N/A	5	N/A	N/A
TOTAL (after Transformation Savings)					
2008	143	100	125	(18)	25
2009	180	131	160	(20)	29
2010	N/A	N/A	90	N/A	N/A
Source: Settlement, Appendix E, p. 27, L: 6-9.					

The Settlement provides annual attrition increases of \$125 million in 2008, 2009, and 2010, plus a one-time increase of \$35 million in 2009 for a refueling outage at Diablo Canyon. The reason the attrition increase of \$125 million in 2008 rises to \$160 million in 2009 in the above table is to include \$35 million for the Diablo Canyon refueling outage. In 2010, the attrition increase is reduced from \$160 million to \$125 million to remove the \$35 million, and is reduced from

\$125 million to \$90 million to account for the fact that the \$35 million refueling related increase for 2009 is already built into revenues for 2010.²⁵¹

The total attrition revenues during 2008-2010 sum to \$785 million. This is equal to the cumulative \$125 million-increase-per-year attrition revenues of \$750 million (\$375 million + \$250 million + \$125 million), plus \$35 million for the second Diablo Canyon refueling outage in 2009. The year-over-year increase in billed revenues for base rates is 2.5% in 2008, 3.2% in 2009, and 1.7% in 2010.²⁵² The Settled net additions to rate base and end-of-year plant are shown in the Settlement Agreement, Appendix G, Tables 1-7, 2-7, and 3-7.²⁵³

The attrition revenue increases of \$125 million in 2008 and \$160 million in 2009 are near the mid-points of the ranges between PG&E's and DRA's recommendations for those years. The total amounts shown in the above table for 2008 - 2010 reflect PG&E's proposed reduction in its revenue requirements of \$41 million in 2008 and another \$56 million in 2009 (for a total of \$97 million in 2009) for PG&E's forecast of the net savings from Business Transformation.

The Settling Parties agree that PG&E's next GRC should be deferred by one year, until 2011. As a result, the Settlement provides an attrition increase of \$90 million in 2010 to be implemented through an advice letter filing.²⁵⁴

²⁵¹ If the refueling is postponed from 2009 to 2010, rates in 2009 and 2010 will be adjusted to ensure that ratepayer pay no more than \$35 million in total for the refueling outage. If no refueling occurs, the \$35 million will be refunded.

²⁵² Settlement Agreement, Appendix E, as corrected.

²⁵³ The Settling Parties agreed that an estimated \$8.1 million of projects at the Humboldt Bay Power Plant (HBPP) will be recorded in a balancing account and recouped in the next GRC, if required. The Tables in Appendix G of the Settlement Agreement omit capital expenditures at HBPP.

²⁵⁴ Settlement Agreement, paras. 45-47.

ii. Aglet

Aglet agrees that PG&E should receive attrition increases in 2008 and 2009, and Aglet supports an additional attrition increase of \$35 million for the refueling outage at Diablo Canyon. On the other hand, Aglet states that the Settlement's attrition increases are too generous.

Aglet contends that Settled attrition increases do not properly reflect Business Transformation savings.²⁵⁵ The practical effect of the Settlement, according to Aglet, is to give PG&E an annual increase of \$125 million during 2008-2010, plus an additional increase of \$41 million of Transformation savings in 2008 and \$56 million of savings in 2009. When Transformation savings are added, the net attrition increase is 3.4% in 2008 and 3.6% in 2009.

PG&E did not provide estimated Business Transformation savings for 2010. Aglet estimates the savings in 2010 will be at least \$95 million. These savings, when added to the Settlement's attrition increase of \$125 million for 2010, result in an attrition rate increase of at least 4.2% in 2010.

Aglet maintains that the Settlement attrition increases (3.4% in 2008, 3.6% in 2009, and 4.2% in 2010) are too high in light of Global Insight's forecasted increases in the Consumer Price Index (CPI) of 1.61% in 2008 and 1.48% in 2009. The 2009 increase is higher than PG&E's own forecasts of escalation rates for that year. PG&E forecasted 2009 escalation rates of 3.41% for administrative costs, 3.46% for labor, 0.95% for Electric Generation, and 1.78% for Gas Service. Aglet states that if the Commission does nothing else to revise the Settlement, it should

²⁵⁵ The purpose of PG&E's Business Transformation project is to improve the way the Company does business, with the goal of establishing PG&E as an industry leader in its business processes and customer service.

cap attrition increases, before Business Transformation savings, at PG&E's own forecasted escalation rates.

Aglet's preferred alternative is to modify the Settlement Agreement to replace the fixed-amount attrition increases (other than the fixed amount for Diablo Canyon refueling outage) with attrition increases based on forecast changes to the CPI for Urban Consumers (CPI-U). As noted above, Global Insight has forecasted CPI increases of 1.61% in 2008 and 1.48% in 2009.

Aglet believes that a CPI-based attrition mechanism fairly balances shareholder and ratepayer interests and is consistent with Commission precedent. In the most recent GRC for SCG and SDG&E, the Commission stated, "The most important issue for the [attrition] indexing method is to correctly identify the most appropriate index to reasonably adjust the post-test year revenue requirements.²⁵⁶" The Commission then approved a settlement that relied on CPI forecasts. The Commission concluded, "The CPI is a reasonable indicator of inflation for SCG and SDG&E for the post-test year period until the next GRC.²⁵⁷"

iii. PG&E and the Other Parties

PG&E responds that Aglet has not provided any valid reasons for rejecting the Settlement provisions regarding attrition.

b. Discussion

We find that the Settlement Agreement's attrition increases in 2008, 2009, and 2010 are reasonable in light of the record. PG&E provided extensive and

²⁵⁶ D.05-03-023, *mimeo.*, p. 14.

²⁵⁷ D.05-03-023, *mimeo.*, p. 73, COL 9.

generally persuasive testimony supporting attrition increases in the range of those set forth in the Settlement Agreement. Our main concern with PG&E's attrition proposal is that it used an overly complex methodology that relied on more than a dozen indices and forecasted capital expenditures for hundreds of projects. As such, PG&E's proposal was contrary to the Commission's long-standing policy that attrition adjustments should be simple and non-controversial.²⁵⁸ The Settlement Agreement, by adopting a fixed-amount attrition increases, complies with the Commission's policy.

Aglet's claim that the Settlement's attrition increases are "too generous" misconstrues the role that PG&E's forecasted Transformation savings play in calculating the Settled attrition increases. Aglet treats the forecasted savings as if they are additional payments from customers, adds them to the Settled attrition increases to develop higher attrition figures, and then concludes that the Settled attrition amounts are too high. In reality, the Transformation savings are not a stealthy attrition rate increase as Aglet seems to imply. PG&E's ratepayers will not pay a penny more for attrition increases than the fixed amounts explicitly set forth in the Settlement Agreement.

We decline to adopt Aglet's recommendation to cap attrition increases, before Business Transformation savings, at PG&E's own escalation rates. As shown in the previous table, PG&E's attrition proposal (which includes its escalation rates and transformation savings) results in higher attrition increases in 2008 and 2009 than the Settlement Agreement adopted by today's Opinion. Thus, adopting Aglet's recommendation would produce larger attrition increases

²⁵⁸ See, for example, D.02-02-043, 202 Cal. PUC LEXIS 168, *9.

than the Settlement Agreement. Moreover, PG&E's escalation rates set forth in Exhibit PG&E-8, Chapter 3, are not meant to apply to major cost drivers such as rate base additions and rapidly rising health care costs. Consequently, it would be inappropriate to determine attrition increases using only PG&E's escalation rates as Aglet proposes.

Turning to Aglet's proposal to base attrition increases on the CPI, we generally agree with Aglet that a CPI-based approach is relatively easy to implement, consistent with Commission precedent, and is fair to the utility and ratepayers. However, it is unnecessary to adopt Aglet's proposal here. The fixed-amount attrition increases in the Settlement Agreement are supported by the record, easy to implement, and reasonable when compared to the CPI. Excluding costs for the Diablo Canyon refueling outage in 2009, the attrition increases under the Settlement are 2.5% in 2008, 2.5% in 2009, and 2.4% in 2010.

By comparison, the annual CPI grew at an annual average of 2.5% during 1990-2005 and the utility-specific index grew at 3.2%.²⁵⁹ Aglet also provided a State of California forecast that shows the California-specific CPI increasing by 3.2% from June 2007 to June 2008 and by 3.0% from June 2008 to June 2009.²⁶⁰ Thus, the percentage attrition increases in the Settlement are on par with the historic CPI, less than the utility-specific cost index over the past 15 years, and lower than the forecast for the California CPI in 2008 and 2009. This comparison evidences the reasonableness of the Settled attrition increases.

For the preceding reasons, we find the Settlement provisions on attrition are reasonable in light of the record, consistent with the law, and in the public

²⁵⁹ Settlement Motion, p. 310.

²⁶⁰ Aglet Comments on the Settlement Agreement, Attachment, p. 45.

interest, and provide sufficient information to enable the Commission to easily implement attrition adjustments in accordance with the terms of the Settlement.

3. Interference with Other Proceedings

a. Position of the Parties

Aglet opposes a third attrition year in 2010 because a PG&E rate case for test-year 2011 would overlap with the GRCs for SDG&E and SCG (together, Sempra). Under the current rate case plan, Sempra will file rate cases for test-years 2008 and 2011. If PG&E's next rate case is pushed to a 2011 test year, it would coincide with Sempra's GRC. Aglet contends that concurrent litigation of two major GRCs is not practical for DRA, Aglet, and TURN.

PG&E believes that Aglet's concern about concurrent GRCs is unlikely to materialize. In August 2006, SDG&E and SCG each tendered an NOI for a 2008 test-year GRC. Both companies seek a five-year attrition period running from 2009 through 2013.²⁶¹ Acceptance of their proposal would move the next GRCs for SDG&E and SCG to a 2014 test year, thereby eliminating any overlap with a 2011 test-year GRC for PG&E.

b. Discussion

Aglet asks the Commission to reject the Settlement's provision for a third attrition year in 2010 to avoid concurrent GRC proceedings for PG&E and Sempra in 2011. We find that Aglet's concern is hypothetical at this point for the reasons cited by PG&E and, therefore, does not justify denial of the Settlement's provision for a third attrition year in 2010.²⁶² Even if the Commission does not

²⁶¹ SDG&E NOI, p. 8; SoCalGas NOI, p. 2.

²⁶² If history is a guide, the 2010 attrition increase authorized by today's Opinion is likely less than what PG&E would seek in a 2010 test-year GRC application.

adopt Sempra's proposal for a five-year GRC cycle (which would cause the next Sempra GRC to overlap with PG&E's 2011 test year GRC adopted herein), this would not be the first time the Commission has conducted two major GRC proceedings in a single year. For example, the Commission concurrently processed test-year 2003 GRCs for PG&E and SCE. The Commission has the resources to do so again.²⁶³ With proper planning and cooperation among the major parties, we believe that intervenors should be able to handle two concurrent GRCs as well.

4. PG&E Financial Health

a. Position of the Parties

Aglet recommends that the Commission find that granting PG&E all of its test year and attrition year requests is not necessary for PG&E to maintain the financial health it requires to provide adequate utility service. Aglet's makes its recommendation in response to PG&E's testimony that granting all of its request is "critical to providing PG&E sufficient revenues to continue providing safe and reliable service to customers, while providing PG&E a reasonable opportunity to earn its rate of return."²⁶⁴

Aglet believes the Commission should view this GRC in the context of PG&E's financial condition, which is very good. PG&E has investment grade credit ratings. In 2005, total return to shareholders exceeded 15%. During the same year, PG&E Corporation had enough cash to repurchase \$2.2 billion of

²⁶³ DRA does not share Aglet's concerns about concurrent GRC proceedings. (Settling Parties reply comments, p. 15.)

²⁶⁴ Exhibit PG&E-9, p. 1-1.

common stock. The trend of PG&E's ROE is improving, reaching 10.6% in 2004 despite an increase in its equity ratio to 52%.

Aglet states that the *sine qua non* of financial health is strong cash flows, which PG&E has in spades. PG&E Corporation's common stock dividend is \$1.32 per share, up 10% over 2004 levels. PG&E Corporation has set a target to grow earnings per share at an average annual rate of 7.5% through 2010. Standard & Poor's expects PG&E "to produce financial results that provide a cushion sufficient to support sound credit quality."²⁶⁵

Aglet agrees with Standard & Poor's that PG&E has sound credit quality. Aglet reviewed PG&E projected income statements, balance sheets, cash flows, and other ratemaking information.²⁶⁶ Based on its review, Aglet believes that PG&E's financial metrics will remain strong.

PG&E observes that, by necessity, it must operate within the revenues set by the Commission because it has no other source of revenue. PG&E also posits that it will remain financially healthy only if its capital expenditures are allowed into rate base and authorized revenues support the required level of investment.

b. Discussion

We agree with Aglet that PG&E is financially healthy. PG&E does not need all of the test-year and attrition year revenues it requested in A.05-12-002 to maintain the financial health that PG&E requires to provide good, safe, and reliable service. This is demonstrated by the fact that the Settlement Agreement provides less revenue to PG&E than it requested in A.05-12-002. Obviously,

²⁶⁵ Exhibit Aglet-2, p. 49.

²⁶⁶ Exhibit Aglet-9C, confidential calculations by PG&E, pp. 4-5. See also Standard & Poor's credit ratio guidelines, Exhibit Aglet 5-C, pp. 3-4.

PG&E would not have settled for less revenue if it believed that doing so would harm its financial health.

5. Vacancies

a. Position of the Parties

TURN believes the Settlement Agreement reflects the unrealistic assumption that PG&E will have zero employee vacancies at all times. TURN recommends that the Commission reduce PG&E's forecasted labor expenses by \$10.5 million in 2004 dollars to reflect a 1% vacancy rate.

TURN represents that PG&E did not provide the number of employees or vacancies for the 2007 test year. Nor did PG&E provide a forecast of test year labor expenses for straight time versus overtime. As a result, TURN found it impossible to evaluate whether the people that PG&E is adding to fill vacancies reduces overtime costs. To aid future analysis, TURN asks the Commission to require PG&E to provide forecasted and actual staffing levels in its next GRC.

PG&E opposes TURN's recommendation. PG&E states that TURN erroneously assumes that PG&E's forecast of labor costs was based on the number of employees available to perform the work. PG&E represents that it forecasted the amount of work that needs to be done and the cost of that work. To extent PG&E has vacant positions, PG&E intends to use overtime, temporary employees, and contractors to perform the needed work.

b. Discussion

We decline to adopt TURN's proposal to reduce PG&E's revenue requirement by \$10.5 million to reflect a 1% personnel vacancy rate. The fact that PG&E has vacancies does not support an inference that PG&E will have lower labor costs than set forth in the Settlement Agreement. To the contrary, the

record demonstrates that vacancies will not reduce PG&E's costs, since PG&E will backfill the vacancies with overtime, temporary help, and contractors.

For example, PG&E witness Burns testified that only 145 out of 160 budgeted positions in 2006 are staffed in the Electric Supply Administration department. However, the same witness also testified that the department was in the process of filling the vacancies, that staff was working significant overtime (without overtime pay) to fulfill workload objectives, that consultants are hired to meet short-term gaps, and that some work is not being done or being done in a less thorough manner.²⁶⁷ PG&E's other witnesses provided similar responses to cross examination by TURN.²⁶⁸ We do not believe it is in the public interest to overwork employees or to have needed work go undone. PG&E should be allowed to recover costs based on a reasonable forecast of the work to be done by an appropriate number of employees working a normal schedule.

We agree with TURN that PG&E should provide more information in its next GRC regarding forecasted staffing levels. Labor costs are one of PG&E's largest expenses and need to be carefully reviewed in GRC proceedings. TURN represents, however, that PG&E was unable to provide sufficient information for TURN to analyze whether filling vacancies reduces overtime costs. We appreciate TURN's efforts to review PG&E's labor costs. To aid TURN's efforts in the future, we will require PG&E to provide in its next GRC a forecast of labor costs for A&G Study departments and all other office-based departments, broken down by budgeted positions, filled positions (or vacancy rate), straight time,

²⁶⁷ 14 RT 1048-49, PG&E/Burns.

²⁶⁸ See, for example, Exhibit PG&E-18, p. 1-3, L:23 to p. 1-4, L: 23; Exhibit PG&E-18, pp. 47-2 to 47-3; TR 667:25 - 668:17, PG&E/Smith; and TR 1463:9-11, PG&E/Orsaba.

paid overtime, temporary labor, and outside contractors. We decline to apply this requirement to operating departments whose work is performed in the field. As noted by PG&E in its comments on the Alternate Proposed Decision, the forecast of costs for “field departments” is driven by the work to be done and the unit cost of the work, and not by forecasts of the number of employees needed to perform the work. Consequently, PG&E does not prepare, and we do not need, forecasts of labor costs for field departments at the same level of detail as for A&G Study departments and other office-based departments.

G. General Report Items and Other Miscellaneous Matters

PG&E’s testimony and the Settlement Motion included so-called General Report Items that consist of assorted matters. Several of the General Report items are addressed in other parts of today’s Opinion (e.g., issues raised by Greenlining). The remaining salient General Report Items and other miscellaneous matters are addressed below.

1. Escalation Rates

PG&E proposed escalation rates for most labor and benefit costs and certain non-labor costs based on data from Global Insight. DRA concurred with PG&E’s escalation rates. No other party addressed this matter.

We find PG&E’s escalation rates to be reasonable. We conclude that PG&E’s escalation rates, when combined with other factors driving up PG&E’s costs (e.g., rate base additions and rapidly rising health care costs) support the stipulated revenue requirement increases in the Settlement Agreement.

2. Productivity

California energy utilities are required by D.86-12-095 to provide reports on historic and forecasted productivity growth. As required by D.86-12-095, PG&E’s testimony included a Total Factor Productivity (TFP) analysis.

Depending on the metric, PG&E forecasted TFP in the range of 1% to 2% in 2007. DRA concurred with PG&E's TFP analysis. No other party addressed this topic.

We find that PG&E's TFP analysis complies with D.86-12-095 and the results of the analysis are reasonable and adequately supported. We conclude that PG&E's fairly low rate of TFP growth (which is typical for gas and electric utilities) lends general support to the stipulated revenue requirement increases in the Settlement Agreement.

3. Mission Substation

D.06-02-003 adopted a settlement agreement that resolves issues associated with a fire at PG&E's Mission Substation in San Francisco. The settlement requires PG&E to pay \$6.5 million from shareholder funds, with \$6.0 million to be used to improve safety and reliability in San Francisco, and the remaining \$500,000 to be paid to the State's General Fund. The decision also requires PG&E to "provide, in its next GRC...an accounting of the...\$6.5 million expenditure."

To comply with this requirement, PG&E submitted Exhibit PG&E-24 in the instant GRC proceeding. In its exhibit, PG&E represents that although not all of the transactions called required by D.06-02-003 have occurred, PG&E is (1) recording all of the \$6.5 million in the below-the-line Account 426.5, and (2) creating a reserve for the entire \$6.5 million. When expenditures are made for the transactions described in the settlement, the costs will be charged to the reserve and not to an above-the-line account. PG&E further represents that none of the expenditures were included in its forecasts for the 2007 GRC and none will be reflected in any future GRC.

No party raised any issues regarding this matter. Based on the foregoing, we find that PG&E has complied with the requirements of D.06-02-003.

4. MOU re: Operations Affecting Disabled Persons

Disability Rights Advocates (DIRA) raised several issues regarding the impact of PG&E's operations on people with vision and mobility disabilities. On June 27, 2006, PG&E and DIRA submitted a Memorandum of Understanding (MOU) that resolves those issues raised by DIRA that are not related to the closure of front counters.²⁶⁹ The MOU is contained in Attachment A of today's Opinion. The Settlement Agreement incorporates the MOU, including the additional costs and capital expenditures set forth in the MOU. There is no opposition to the MOU.

The MOU specifies the steps that PG&E will take to ensure that its local offices and pay stations are accessible to persons with mobility and vision disabilities (referred to hereafter as "disabled persons"). PG&E agrees that, with limited exceptions defined in the MOU, its entire network of authorized pay centers will be accessible to disabled persons.

The MOU also provides that PG&E will work with DIRA to complete new protocols to ensure access and safety around its construction projects in the pedestrian right of way for disabled persons. PG&E will retain a consultant to help PG&E implement the new protocols and to review compliance with the protocols during the first year of implementation.

PG&E does not know how many of its utility poles might impede the path of travel for disabled persons. The MOU provides that during 2007, PG&E's contractors who inspect utility poles in certain metropolitan areas as part of the pole test & treat program will measure the clearance between the pole and the edge of the sidewalk where it appears, based on a visual inspection, the pole may

²⁶⁹ The MOU is contained in Exhibit PG&E-71.

impede access on the sidewalk. PG&E and DIRA agree to meet and confer on data collected during 2007 to discuss whether further Commission proceedings or other actions are needed to address any barriers noted in the survey.

The MOU increases PG&E's forecast of expenses and capital expenditures for 2007 as set forth in the following table:

<u>Activity</u>	<u>2007 Expense Increase</u>	<u>2007 Capital Increase</u>
New protocols for temporary construction	\$1,900,000	1,400,000
Survey of utility poles	\$142,000	N/A
TOTAL	\$2,042,000	\$1,400,000

Of the \$2.042 million for increased expenses, \$1.862 million is for one-time costs in 2007 and \$0.180 million is for recurring costs in 2007, 2008 and 2009. The amounts shown in the above table are subsumed in the Settlement outcome for GRC revenues and rate base.

a. Discussion

We find the MOU is reasonable in light of the record and in the public interest because it requires PG&E, at a nominal cost to ratepayers, to (1) maintain and improve access to its local offices and pay stations by disabled persons; (2) enhance safe passage around PG&E's construction sites by disabled persons; and (3) determine the extent utility poles impede access to sidewalks and public rights of way by disabled persons. The MOU is consistent with the law because it promotes compliance with federal and state laws that protect the rights of people with disabilities to full and equal access to governmental programs,

services and activities, and places of public accommodation.²⁷⁰ As required by Commission precedent, there is sufficient information in the MOU to enable the Commission to implement and enforce the terms of the MOU.

5. Performance Incentive Mechanism

PG&E proposed a performance incentive mechanism (PIM) whereby PG&E would receive financial rewards and penalties based on various measures of service quality. The Assigned Commissioner's Ruling and Scoping Memo dated February 3, 2006, deferred PIM issues to Phase 2 of this proceeding.

The Settling Parties agree that PG&E will withdraw its PIM proposal and that no further action should be taken on PIM. There is no opposition to the Settlement outcome for this matter. We concur with this outcome.

VI. Approval of the Settlement

Rule 12.1 requires every settlement, whether contested or not, to be reasonable in light of the whole record, consistent with the law, and in the public interest. Contested settlements are subject to additional scrutiny to ensure that the contested elements of the settlement fairly balance the interests at stake, are consistent with Commission policy objectives, and comply with Rule 12.1.

A. Reasonable in Light of the Whole Record

In today's Opinion, *supra*, we have reviewed the evidentiary record regarding (1) every element of PG&E's requested revenue requirement for 2007 through 2010, and (2) every issue raised by PG&E, DRA, Aglet, ANR/SC, TURN,

²⁷⁰ These laws include Cal. Gov. Code §§ 4450, and 11135 *et seq.*, Cal. Civ. Code §§ 51 *et seq.*, and 54 *et seq.*; the ADA, 42 U.S.C. § 12101 *et seq.*, and Section 504 of the Rehabilitation Act of 1973, 29 U.S.C. § 794; and D.06-04-070, where the Commission ordered utilities to "maintain rights of way or alternative paths of travel" when working in the public rights of way. (D.06-04-070, OP 3.)

and others. Based on our exhaustive review of the record, we conclude that the Settlement is reasonable in light of the whole record. We also find that the Settlement Agreement provides sufficient information to enable the Commission to implement the provisions, terms, and conditions of the Settlement.

The Settlement Agreement is supported by a lengthy, comprehensive, and detailed record. Because the Settlement was reached after the conclusion of 25 days of evidentiary hearings, the formal evidentiary record is complete and has been thoroughly tested through sworn testimony and cross-examination. The Settlement is further supported by the Settling Parties' 323-page Motion to approve the Settlement and the lengthy comments and reply comments on the Settlement Agreement, which together address every issue (with the exception of issues raised by Greenlining).

In its comments on the Alternate Proposed Decision, TURN argues that today's Opinion has applied the wrong burden of proof in deciding contested issues. TURN argues that Commission precedent requires utilities to affirmatively demonstrate the reasonableness of all aspects of their application. Today's Opinion fails this test, according to TURN, because it reviews each contested issue for the sole purpose of determining whether the Settlement as a whole is reasonable in light of the entire record, consistent with the law, and in the public interest. TURN argues that this unfairly shifts the burden of proof to intervenors because it forces them to demonstrate that the entire bundle of outcomes is unreasonable, rather than forcing PG&E to demonstrate that every element of the Settlement is reasonable.

We disagree with TURN's reading of Commission precedent. The standard of review for every settlement, contested or not, is set forth in Rule 12.1. This Rule requires the Commission to evaluate a settlement as a whole. That is

exactly what we have done in today's Opinion. It is PG&E's burden to affirmatively demonstrate with clear and convincing evidence that the Settlement Agreement satisfies Rule 12.1. After reviewing the record for every contested issue, we find that PG&E has met its burden of proof with respect to the Settlement as a whole.

A major factor in determining whether a contested settlement is reasonable is the extent to which the settlement is supported by parties representing the affected interests.²⁷¹ The Settlement Agreement satisfies this requirement. DRA supports the Settlement in the interest of all public utility customers pursuant to its authority under § 309.5(a). PG&E supports the Settlement in the interest of its shareholders. CCUE supports the Settlement in the interest of PG&E's union employees. The Irrigation Districts, DIRA, WMA, CFBF, SCE, SDG&E, and SCG each support certain provisions of the Settlement in the interests of their particular constituencies. Of the 112 witnesses who submitted testimony, 106 were sponsored by the Settling Parties.

The Settlement Agreement represents a fair compromise of the Settling Parties' positions and interests. PG&E has demonstrated that much of its requested increase in billed revenues is reasonable. On the other hand, DRA and other parties have shown that not all of PG&E's request is reasonable. In light of this record, PG&E has agreed to accept approximately \$634 million less than it requested in cumulative billed revenues during 2007, 2008, and 2009 (before the modifications adopted by today's Opinion).²⁷² PG&E's ratepayers, as

²⁷¹ D.04-12-015, 2004 Cal. PUC LEXIS 574, *66.

²⁷² Settlement Agreement, Appendices A and E, show that PG&E agreed to accept revenue increases that were less than its request by \$181 million in 2007, 18 million

Footnote continued on next page.

represented by DRA, have agreed to accept approximately \$623 million more than recommended by DRA in cumulative revenues during 2007 – 2009.²⁷³ Thus, the cumulative increase in revenues adopted by the Settlement for 2007-2009 is roughly half way between PG&E's and DRA's litigation positions. Although no party took a position on PG&E's revenue requirement for 2010, the Settlement's increase of \$125 million for 2010 is consistent with prior years.

Compared to the immediately preceding year, the Settlement increases PG&E's GRC billed revenues by 4.51% in 2007, 2.54% in 2008, 3.17% in 2009, and 1.73% in 2010. These figures include \$35 million for the Diablo Canyon refueling outage. Of course, PG&E's overall revenue requirement is much larger than its GRC revenue requirement. At one point in 2006, PG&E's total Commission-authorized revenue requirement was approximately \$15.481 billion.²⁷⁴ The Settlement increases PG&E's total billed revenues by 1.37% in 2007, 0.80% in 2008, 1.01% in 2009, and 0.56% in 2010. The average annual increase in total billed revenues for the four-year period 2007-2010 under the Settlement is 0.9%.

Aglet, ANR/SC, and TURN oppose the Settlement outcome for certain issues. We have reviewed the record for every issue still contested by Aglet,

in 2008, and \$55 million in 2009. The cumulative amount during 2007 – 2009 = \$634 million = (3 x \$181 million) + (2 x \$18 million) + \$55 million. These figures exclude \$35 million for the Diablo Canyon refueling outage.

²⁷³ The Settlement Agreement, Appendices A and E, show that DRA agreed to accept revenue increases that exceeded its recommendation by \$193 million in 2007 and \$25 million in 2008, and was \$6 million less than DRA's recommendation for 2009. The cumulative amount during 2007 – 2009 = \$623 million = (3 x \$193 million) + (2 x \$25 million) – 6 million.

²⁷⁴ Resolution E-3956, p. 2, Advice 2706-E-A, p. 9, Table 2, Line 38; Advice 2723-G, Attachment 1, p. 2.

ANR/SC, and TURN. We find the Settlement outcome for all of these issues is supported by the record.

Finally, today's Opinion adopts several accounting and reporting requirements that are beyond the scope of the Settlement Agreement. Perhaps the most significant is the requirement for PG&E to record in its regulatory books a regulatory liability for its pre-funded asset removal costs, which totaled \$2.1 billion at the end of 2005. This requirement, which has no financial impact on PG&E, is in the public interest because it helps to ensure that PG&E will only use these funds for their intended purpose of paying for future asset removal costs. Conversely, it would be contrary to ratepayers' interests and Commission precedent if we did not require PG&E to record a regulatory asset.

The other requirements adopted by today's Opinion are listed below. Most of the items are not addressed explicitly by the Settlement Agreement, but are additional requirements that we deem necessary to ensure that the Settlement is reasonable in light of the record and in the public interest.

Additional Requirements Outside the Settlement

- We make it explicit that the cost of the new service guarantee that pays \$100 to customers whose service is wrongly shut off will be borne by PG&E.
- PG&E shall report in its next GRC the amount of actual payments of OR fees and OFA fees over the duration of this GRC cycle and provide a forecast of future OR and OFA costs based on its actual payment history.
- PG&E shall submit an application in 2011 on whether it is economically feasible and in the best interests of ratepayers to pursue the renewal of the Diablo Canyon operating licenses.
- PG&E shall track expenditures for membership dues in organizations that engage in political activities, including the organizations identified by TURN in this proceeding, and record

an appropriate proportion of these expenditures in the below-the-line Account 426.4.

- The report that on PBOP contributions that PG&E is required to submit at the end of the 2007 GRC cycle pursuant to the paragraph 32 of the Settlement Agreement shall state if any funds collected in rates for PBOP contributions were not used for that purpose and, if so, identify the mechanism and timeframe for refunding the un-contributed amount to ratepayers, with interest.
- In its next GRC, PG&E shall provide the following reports and information:
 - o Revised DA fees that reflect then-current costs and supporting workpapers.
 - o A separate, cost-based NSF flat fee for each of the major customer classes and supporting work papers.
 - o A report that demonstrates that (a) PG&E has reduced its reduce rate base by the actual salvage value on the existing airplane, (b) the depreciation expense for the new airplane is based on a 13-year service life.
 - o A working cash calculation that reflects a lag for PG&E's matching savings-fund contributions in a manner consistent with today's Opinion.
 - o Information regarding asset removal costs that includes: (1) the then current balance of pre-funded removal costs; (2) a year-by-year projection of (a) when the then-existing balance of pre-funded removal costs will be consumed, and (b) the implicit inflation rate for asset removal costs for each future year; and (3) a five-year projection of the year-end balance of pre-funded removal costs showing for each year the gross additions to the balance, gross expenditures for removal costs, and the net change in the balance.
 - o A forecast of labor costs for A&G Study departments and other office-based departments broken down by budgeted positions, filled positions (or vacancy rate), straight time, paid overtime, temporary labor, and outside contractors.

- o Upon request, such information as TURN may need to prepare a side-by-side comparison of asset removal costs for AROs determined in accordance with GAAP and SP U-4.

None of the requirements listed above is a modification of the Settlement. All are reporting requirements or other requirements for the next GRC, plus an accounting change.

B. Consistent with the Law

Aglet, ANR/SC, and TURN argue that the Settlement outcome for several issues is inconsistent with Commission precedent or other applicable legal requirements. We have carefully reviewed their arguments, *supra*. Based on our review, we find that the Settlement Agreement is consistent with the law.

C. The Public Interest

We find that the Settlement Agreement, supplemented by the additional reporting and other requirements listed above, is in the public interest because it enables PG&E to provide safe and reliable service at a reasonable cost through 2010. The Settlement does so by (1) setting a GRC revenue requirement that is consistent based on historical expenses, future trends, customer and system growth, and other cost drivers that set forth in the record; and (2) providing PG&E with the financial means to make necessary capital investments in its utility infrastructure and operations.

Equally important, the Settlement resolves numerous issues affecting the public interest that were raised by the parties. These issues include PG&E's provision of billing services for mobile home park owners, access to PG&E's facilities by disabled persons, and the continued operation of PG&E's front counters. The Settlement resolves all these issues in a way that it fair to the affected interests and beneficial to the public at large.

D. Additional Issues Raised by Aglet and TURN

We previously addressed in today's Opinion the numerous issues raised by Aglet, ANR/SC, and TURN regarding the Settlement outcome on individual matters. In addition to these individual issues, Aglet and TURN argue that the Settlement Agreement is not reasonable in light of the record and is not in the public interest. We address Aglet's and TURN's arguments below.

1. Flawed Settlement Process

TURN alleges that the Settling Parties did not provide TURN and Aglet with a meaningful opportunity to participate in settlement negotiations. When TURN and Aglet were invited to join the discussions, the Settling Parties had already settled many of the issues of importance to TURN and Aglet, including issues that had been raised by TURN or Aglet, but no other party.

In our opinion, the lack of Aglet's and TURN's participation in the initial settlement negotiations was unfortunate but does not make the Settlement unreasonable. There is no requirement that all interested parties participate in preliminary discussions. If that were the case, parties might find it difficult to reach settlements, as it is often easier to reach consensus with a few parties first, and then attempt to obtain consensus from a broader array of parties.

The only requirement regarding settlement participation is set forth in Rule 12.1, which requires the settling parties to hold a settlement conference with notice and opportunity to attend provided to all parties for the purpose of discussing the settlement. The Settling Parties complied with Rule 12.1 by holding a properly noticed settlement conference on August 16, 2006.²⁷⁵

²⁷⁵ After the Settlement was filed, PG&E and DRA held two technical conferences that were noticed and open to the public to answer questions regarding the Settlement.

Footnote continued on next page.

2. Overall Outcome Is Unreasonable

Aglet and TURN argue that the Settlement Agreement is unreasonable in relation to the range of dispute. The following diagram shows the litigation positions of PG&E, DRA, and TURN/ Aglet compared to the Settlement:

As shown in the above diagram , the consolidated TURN/ Aglet position is \$327 million below DRA’s position and \$702 million less than PG&E’s.²⁷⁶

Aglet and TURN each presented quantitative analyses that show the Settlement resolved all of their issues for pennies on the dollar. The low value accorded their issues shows that PG&E did not make any meaningful compromises on the issues they raised. Aglet and TURN believe this outcome is

PG&E also provided written responses to several questions regarding the Settlement.

²⁷⁶ The \$182 million figure in the diagram reflects the amount PG&E agreed to forgo as part of the Settlement, is now \$181 million, due to the fact that D.06-07-027, issued in the AMI proceeding, granted PG&E approximately \$887,000 in costs which were included in this proceeding pending determination of the issue in the AMI case. The \$213 million figure, representing the agreed to increase in revenue requirements over 2006 authorized revenues, does not change.

inconsistent with the strength of their positions, their success in prior GRCs, and the likely result of litigation.

We disagree with Aglet's and TURN's assertion that the Settlement is unreasonable because it places a low value on the issues they raised. The relevant test is whether the outcome is reasonable in light of the whole record. We have carefully reviewed the record for every issue still contested by Aglet and TURN. We find the Settlement outcome for all of these issues is supported by the record.

In their comments on the Alternate Proposed Decision, Aglet and TURN claim that the Settlement is unreasonable because it provides PG&E with a far better outcome compared to the previous GRC. We disagree. DRA observes in its reply comments that the Settlement Agreement provides for an increase of \$213 million in billed revenues for the 2007 Test Year. By contrast, the 2003 GRC increased billed revenues by \$264 million. Thus, the increase provided in the 2007 Settlement Agreement is lower than the 2003 GRC on both a real and nominal dollar basis. The following table shows that the 2007 Settlement also provides PG&E with a smaller percentage increase in its test-year billed revenues compared to the 2003 GRC:

Percentage Increase (Decrease) in Authorized Billed Revenues			
	Electric Distribution	Gas Distribution	Generation
Settlement Agreement: 2007 Test Year *	8.4%	2.0%	(2.9%)
D.04-05-055: 2003 Test Year **	8.5%	4.6%	3.9%
* Source: Settlement Agreement, para. 14. ** Source: D.05-05-055, 2004 Cal. PUC LEXIS 254, *3.			

We conclude for the preceding reasons that there is no merit to Aglet's and TURN's assertion that the Settlement is unreasonable when compared to the prior GRC.

3. No Justification of Outcomes for Individual Issues

Aglet and TURN submit that the Commission must determine whether the Settlement reasonably resolves every issue raised by each party actively involved in the proceeding. Aglet and TURN contend that it is impossible to determine how the Settlement resolves most of the issues they raised. This is because several issues they raised are not addressed by the Settlement Motion or the Settlement Agreement, and the remainder of the issues raised by Aglet and TURN are subsumed in broad Settlement outcomes for expenses and rate base.

In today's Opinion, *supra*, we review the record for every issue still contested by Aglet and TURN and the Settlement outcome for each of these issues. There is ample record to do so. The Settling Parties provided a 323-page Motion that identifies almost all contested issues raised by Aglet and TURN, summarizes the record for each issue, and provides extensive citations to the evidentiary record. The evidentiary record on Aglet's and TURN's issues is voluminous. Aglet and TURN each submitted lengthy comments on the Settlement Agreement that addressed every matter still at issue, including the few issues that were omitted from the Settlement Motion. The Settling Parties' lengthy reply comments likewise addressed those issues that were omitted from the Settlement Motion.

Based on our review of the record, we conclude that the Settlement Agreement is reasonable in light of the whole record, consistent with the law, and in the public interest.

4. Affected Interests Oppose the Settlement

Aglet argues that the Settlement Agreement is unreasonable because it is opposed by residential and small commercial customers who are (1) affected by the Settlement, and (2) represented by Aglet and TURN. Aglet's point has some merit, but it does not support a finding that the Settlement is unreasonable.

Aglet and TURN can only represent their members. In contrast, DRA is authorized by § 309.5(a) to represent all of PG&E's customers, including residential and small commercial customers. While Aglet and TURN oppose the Settlement on behalf of their members, DRA supports the Settlement on behalf of all of PG&E's residential and small commercial customers. For this reason, we conclude that the Settling Parties fairly represent the interests of PG&E's residential and small commercial customers.

E. Conclusion

For all of the previous reasons, we conclude that the Settlement Agreement is reasonable in light of the whole record; fairly balances the affected interests; is consistent with applicable law, Commission precedents, and Commission policies; and is in the public interest. Therefore, we will adopt the Settlement.

In accordance with Rule 12.5, the Settlement Agreement adopted by today's Opinion is binding on all parties. Such adoption does not constitute approval of, or precedent regarding, any principle or issue.

VII. Issued Raised by the Greenlining Institute

The Greenlining Institute (Greenlining) raised a number of issues that were not addressed by the Settlement Agreement, several of which were deemed

to be outside the scope of this proceeding.²⁷⁷ Below, we address only those issues that fall within the scope of this proceeding.

A. Executive Compensation

Greenlining proposed several new reporting requirements regarding executive compensation. In its comments on the Alternate Proposed Decision, Greenlining agreed to drop its proposals in exchange for concessions that were made by PG&E in its comments regarding other issues raised by Greenlining. Consequently, the issues raised by Greenlining regarding executive compensation are moot and are not addressed by today's Opinion.

B. Supplier Diversity, Personnel Diversity, and Philanthropy

Greenlining made numerous recommendations regarding (1) supplier diversity; (2) the diversity of PG&E's Board of Directors, management, and certain segments of PG&E's workforce; and (3) the amount and beneficiaries of PG&E's philanthropy. PG&E opposed Greenlining's recommendations. Subsequently, Greenlining and PG&E reached an agreement on these matters, which is set forth in PG&E's and Greenlining's comments on the Alternate Proposed Decision. The Greenlining-PG&E accord resolves all issues raised by Greenlining. There was no opposition to the accord in the parties' reply comments on the Alternate Proposed Decision.

²⁷⁷ The issues raised by Greenlining that were deemed outside the scope of this proceeding included (i) revisions to PG&E's GO 77-L reports to show CEO compensation next to overall cash philanthropy and/or philanthropy to underserved communities; (ii) the use of nuclear power to reduce dependence on fossil fuels; and (iii) access to the California Solar Initiative program for renters, minorities, and low-income customers. (See Assigned Commissioner's Ruling Clarifying Scoping Memo issued on June 9, 2006.)

The Greenlining-PG&E accord is summarized below. We find the uncontested resolution of the issues raised by Greenlining to be reasonable, consistent with the law and Commission precedent, and in the public interest. Therefore, we will adopt the Greenlining-PG&E accord.

1. Greenlining-PG&E Accord re: Supplier Diversity

In the PG&E-Greenlining accord, PG&E pledges to make a good-faith effort to meet a minority-contract goal of 20% by 2010 or earlier, and to reach the aspirational goal of 27% or better by 2015. To achieve these goals, PG&E pledges to (1) factor in achievement of supplier diversity goals in performance evaluations and compensation; (2) establish a technical assistance program in 2008 for small, minority-owned business; and (3) work with minority-business associations to develop programs to assist small and very small businesses.

2. Greenlining-PG&E Accord re: Board and Management Diversity

PG&E pledges to make a good-faith effort to being a national leader in the diversity of its Board of Directors. This will include a good-faith effort to ensure that the Board includes African-Americans, Latinos, and Asian Americans. PG&E will also make a good-faith effort to set 10-year aspirational goals for management diversity. To this end, PG&E will maintain its current programs that link management evaluations, promotions, and bonuses to the success of management diversity goals.

3. Greenlining-PG&E Accord re: Philanthropy

In a period of just four years, PG&E's cash philanthropy has increased from 0.25% to 1.2% of pre-tax income, and the proportion of PG&E cash philanthropic giving to underserved communities increased from 25% to almost 70%. PG&E pledges to make a good faith effort to maintain this progress.

VIII. Implementation of Today's Opinion

Pursuant to D.06-10-033, the 2007 revenue requirement adopted by today's Opinion is effective as of January 1, 2007. PG&E may collect in rates over the remainder of 2007 the difference between (1) the 2007 revenue requirement authorized by today's Opinion, and (2) the amount actually collected in base rates since January 1, 2007, and prior to the implementation of the revenue requirement adopted herein.

Within 10 days from the effective date of today's Opinion, PG&E shall file an advice letter with revised tariff sheets to implement (1) the revenue requirements authorized by today's Opinion, and (2) all accounting procedures, fees, and charges authorized by today's Opinion that are not addressed in the other advice letters required by today's Opinion. The revised tariff sheets shall (i) become effective on filing, subject to a finding of compliance by the Commission's Energy Division, (ii) comply with GO 96-A, and (iii) apply to service rendered on or after their effective date.

IX. Assignment, Categorization, and Need for Hearing

John A. Bohn is the Assigned Commissioner and Timothy Kenney is the assigned ALJ in this proceeding.

In Resolution ALJ 176-3164, dated December 15, 2005, the Commission preliminarily categorized A.05-12-002 as a ratesetting proceeding and preliminarily determined that hearings were necessary. These preliminary determinations were affirmed by the Assigned Commissioner's Ruling and Scoping Memo dated February 3, 2006. There was no appeal of the Ruling.

X. Comments on the Alternate Proposed Decision

The Alternate Proposed Decision of the assigned Commissioner in this matter was mailed to the parties in accordance with Pub. Util. Code § 311(d) and

Rule 14.2. Timely comments were submitted by Aglet, DIRA, DRA, Greenlining, PG&E, SCE, and TURN. Timely reply comments were submitted by Aglet, DRA, Greenlining, PG&E, SCE, TURN, and jointly by the Merced Irrigation District and the Modesto Irrigation District. These comments and reply comments have been reflected, as appropriate, in the final decision adopted by the Commission.

Findings of Fact

1. PG&E's front counters are heavily used. There is a public need for the many types of services and information available at PG&E's front counters.
2. D.04-11-033 required PG&E to present in this GRC proceeding an analysis of the feasibility of offering bill-calculation services to mobile home park (MHP) owners with sub-metered tenants.
3. There is no opposition to the joint proposal submitted by PG&E, TURN, and WMA for PG&E to calculate the gas and electric utility bills for sub-metered tenants of MHPs. The proposal is substantially similar to SCE's MHP bill-calculation service approved by D.06-05-016.
4. The proposed MHP Bill-Calculation Services should benefit MHP owners and tenants, and should not affect PG&E's non-MHP customers in any way.
5. The Settlement Agreement requires PG&E to implement a new service quality standard that pays \$100 to customers whose service is erroneously shut off, but there is no indication of who will bear the cost of the new standard.
6. Since PG&E's current DA fees were established in 1999, PG&E's costs have increased by 17% - 26%, depending on the category of cost.
7. PG&E incurs working-cash costs for bounced checks and recovers these costs through the NSF fee.

8. Compared to a flat fee, an NSF fee that varies by the size of the bounced check would be more costly for PG&E to implement and more confusing to customers.

9. The working-cash costs that PG&E incurs for bounced checks is proportional to the amount of the bounced check. Because the average amount for bounced checks varies by customer class, a uniform flat fee to recover PG&E's costs for bounced checks results in cross-subsidies among customer classes.

10. There is an insufficient record in this proceeding to determine a cost-based NSF flat fee for each customer class.

11. PG&E's requested expenses for its Economic Development program are cost effective under the RIM test.

12. PG&E requested \$5.13 million in 2007 for other regulatory (OR) fees and \$2.757 for FERC Other Federal Agency (OFA) fees. PG&E does not know with certainty whether, and to what extent, it will actually pay OR fees and OFA fees.

13. The current NRC operating licenses for Diablo Canyon expire in 2024 and 2025. It is prudent to know 10 years in advance of license expiration, or by 2014, whether the 2,200 MW of base load capacity provided by Diablo Canyon needs to be replaced so that replacement capacity and associated transmission capacity can be obtained in an orderly, cost effective, and timely manner.

14. PG&E's proposed Diablo Canyon license renewal feasibility will help policy makers reach a final decision by 2014 on whether to proceed with license renewal or, alternatively, begin the process of replacing the power provided by Diablo Canyon prior to the expiration of the operating licenses in 2024 and 2025.

15. AB 1632, which was enacted in 2006, requires the CEC to assess key policy and planning issues regarding the future of Diablo Canyon.

16. PG&E received \$42.8 million in October 2006 from the federal government to settle PG&E's lawsuit over the DOE's failure to build a repository for radioactive waste from nuclear power plants.

17. PG&E improperly recorded above-the-line some of its Chamber of Commerce dues and certain other costs for political lobbying. These costs should have been recorded in the below-the-line Account 426.4.

18. The Settlement Agreement requires PG&E to file at the end of the 2007 GRC cycle a report on the revenue requirement associated with contributions to PG&E's VEBA trusts to fund PBOPs.

19. PG&E has higher medical benefit costs for active employees than SCE. However, PG&E's total compensation is within the range of competitiveness.

20. PG&E has a reasonable need for a replacement Company airplane.

21. The costs to lease and buy a replacement airplane are similar.

22. The Settlement Agreement adopts a lower revenue requirement for the Company airplane than would occur under TURN's proposal to (i) depreciate the replacement plane over 13 years, and (ii) record an estimated salvage value of \$2 million for the current airplane.

23. PG&E's calculation of working cash improperly assumed zero lag days for the Company's matching contributions to the savings fund pool. The effect of PG&E's error was offset in the overall Settlement outcome for rate base.

24. PG&E had \$2.1 billion of pre-funded asset removal costs at the end of 2005, and the balance will grow by \$211 million annually through 2010.

25. D.06-05-016 required SCE to record a regulatory liability for pre-funded asset removal costs.

26. The Settlement attrition increases during 2008, 2009, and 2010 are (i) easy to implement, (ii) supported by PG&E's testimony, and (iii) consistent with

(a) the CPI, (b) utility-specific cost indices over the last 15 years, and (c) the State of California's forecast of the California-specific CPI.

27. Providing PG&E with a third attrition year in 2010 will result in a 2011 test-year GRC for PG&E, which would overlap with the currently scheduled test-year 2011 GRCs for SDG&E and SCG.

28. The Commission and DRA have sufficient resources to process simultaneous test-year 2011 GRCs for PG&E, SDG&E, and SCG.

29. PG&E is financially healthy.

30. Today's Opinion provides PG&E with sufficient revenues to maintain its financial health, to provide good, safe, and reliable utility service, and to make necessary capital investments.

31. D.06-02-003 requires PG&E to present in this GRC proceeding an accounting of the \$6.5 million of payments required by the decision. PG&E did so in Exhibit PG&E-24, which shows that none of the \$6.5 million will ever be charged to ratepayers.

32. The PG&E-DIRA MOU, which is contained in Appendix B of today's Opinion, resolves the issues raised by DIRA concerning the impact of PG&E's operations on disabled persons. There is no opposition to the MOU.

33. Labor costs are one of PG&E's largest expenses and need to be reviewed carefully in GRC proceedings.

34. PG&E was unable to provide sufficient information to enable TURN to analyze whether filling vacant employee positions reduces overtime costs.

35. The Settlement Agreement provides that PG&E will withdraw its performance incentive mechanism (PIM) from consideration in Phase 2 of this proceeding and that no further action should be taken on PIM in this proceeding.

36. The withdrawal of PG&E's PIM proposal leaves front-counter issues as the only remaining topic for Phase 2 of this proceeding.

37. The Settlement Agreement is supported by a comprehensive and detailed record.

38. The Settlement Agreement provides sufficient information to enable the Commission to implement the provisions, terms, and conditions of the Settlement.

39. The Settlement Agreement is supported by parties that fairly represent the affected interests.

40. The Settlement Agreement represents a fair compromise of the Settling Parties' positions and interests.

41. Today's Opinion reviews the record for every issue still contested by Aglet, ANR/SC, and TURN, and the Settlement outcome for each of these issues.

42. The Settlement Agreement erroneously inflates rate base by \$0.624 million for capital expenditures for gas meters and PG&E's revenue requirement by \$0.044 million.

43. PG&E's and Greenlining's comments on the Alternate Proposed Decision resolve all issues raised by Greenlining. The accord, which is summarized in the body of today's Opinion, requires PG&E to make good faith efforts to increase supplier diversity, Board-of-Directors diversity, management diversity, philanthropy, and cash philanthropic gifts to underserved communities.

Conclusions of Law

1. PG&E should not make any significant reductions to the staffing or operations of its front counters without Commission authorization pending the Commission's consideration of front-counter issues in Phase 2 of this proceeding.

2. The MHP Bill-Calculation Services proposed by PG&E, TURN, and WMA should be adopted because the proposal complies with D.04-11-033, is reasonable in light of record, complies with applicable law, and is in the public interest.

3. The rate base in Appendix C shall be reduced by \$0.624 million and the revenue requirement in Appendix C shall be reduced by \$0.044 million.

4. PG&E should file an advice letter (AL) in time to begin offering the Bill-Calculation Services by June 1, 2007. The AL should contain tariffs and a services agreement for the Bill-Calculation Services that are substantially similar to the proposed tariffs and services agreement attached to Exhibit PG&E-70.

5. It is unreasonable for ratepayers as a whole to pay \$100 under the new service quality standard contemplated by the Settlement every time PG&E erroneously shuts off a customer's service. Because it is PG&E's error, PG&E should bear the cost of the new service quality standard.

6. PG&E should include in its next GRC proceeding an up-to-date analysis of its DA fees and costs.

7. To eliminate cross subsidies among customer classes for bounced checks, PG&E should provide in its next GRC proceeding (i) a cost-based NSF flat fee for each of the major customer classes, and (ii) supporting work papers.

8. Section 740.4 allows for rate recovery of utility economic development expenses to the extent of ratepayer benefits.

9. In light of the uncertainty regarding the OR fees and OFA fees that PG&E will ultimately pay, it is reasonable to order PG&E to provide in its next GRC proceeding a report of OR costs and OFA costs paid over the course of this GRC cycle and a forecast of future costs based on its actual payment history.

10. It is in the public interest for PG&E to perform the Diablo Canyon license renewal feasibility study that is described in the body of today's Opinion.

11. PG&E should incorporate into its Diablo Canyon license renewal feasibility study the findings and recommendations from the CEC's assessment of Diablo Canyon conducted pursuant to AB 1632. To this end, PG&E should defer, to the extent feasible, the work on its study, and associated spending, until after the CEC issues its findings and recommendations.

12. PG&E should submit an application by June 30, 2011, on whether renewal the Diablo Canyon operating licenses is cost effective and in the best interest of PG&E's ratepayers. The application should address the matters identified in the body of today's Opinion.

13. Any unused revenue requirement tracked by the HBPP memorandum account should accrue interest at the three-month commercial paper.

14. PG&E is required to flow through to ratepayers the settlement award of \$42.8 million that PG&E received from the DOE, net of costs, in accordance with the procedures applicable to PG&E's DOE Litigation Balancing Account.

15. PG&E failed to comply with long-standing Commission policy and the requirements of the Uniform System of Accounts by not recording in the below-the-line Account 426.4 all Chamber of Commerce dues and certain other expenses for political lobbying or advocacy. PG&E should comply in the future.

16. D.92-12-015 requires that all funds collected by PG&E in rates for contributions to PBOP trusts pursuant to today's Opinion must be used for that purpose or returned to ratepayers.

17. The report that PG&E is required to submit pursuant to the Settlement Agreement at the end of the 2007 GRC cycle regarding its PBOP contributions should state if any funds collected in rates for PBOP contributions were not used for that purpose and, if so, identify the mechanism and timeframe for refunding the un-contributed amount to ratepayers, with interest.

18. In the next GRC, PG&E should reduce rate base by the actual salvage value on the existing airplane and present an appropriate depreciation expense for the replacement airplane based on a 13-year service life.

19. In its next GRC proceeding, PG&E's calculation of working cash should reflect a lag for the Company's matching contributions to the savings fund pool.

20. PG&E should be treated the same as SCE regarding the requirement to record a regulatory liability for pre-funded asset removal costs.

21. PG&E should either use pre-funded asset removal costs (ARCs) for their intended purpose or return these funds to ratepayers.

22. For the reasons set forth in the two previous Conclusions of Law, PG&E should record, for ratemaking purposes, a regulatory liability for pre-funded asset removal costs. The only exception should be pre-funded asset removal costs that are treated by PG&E as Asset Removal Obligations (AROs) under Generally Accepted Accounting Principles (GAAP).

23. PG&E's large and growing balance of pre-funded ARCs requires careful oversight. To this end, PG&E should provide in its next GRC the information regarding ARCs specified in the body of today's Opinion.

24. PG&E should provide to TURN in the next GRC proceeding such information as TURN may reasonably need to compare (i) removal costs for AROs determined in accordance with GAAP, and (ii) removal costs for the same assets determined in accordance with SP U-4.

25. PG&E has complied with the requirements of D.06-02-003.

26. The PG&E-DIRA MOU should be adopted because, for the reasons set forth in the body of today's Opinion, the MOU is reasonable in light of the whole record, consistent with law, and in the public interest.

27. To aid TURN's efforts to analyze PG&E's labor costs, PG&E should provide in its next GRC a forecast of labor costs for A&G Study departments and other office-based departments broken down by budgeted positions, filled positions (or vacancy rate), straight time, paid overtime, temporary labor, and outside contractors.

28. The Settling Parties complied with Rule 12.1 by holding a properly noticed settlement conference on August 16, 2006.

29. The lack of Aglet's and TURN's participation in the initial settlement negotiations does not make the Settlement Agreement unreasonable.

30. The Settlement Agreement is not unreasonable because it places a low value on the issues raised by Aglet and TURN. The test is whether such an outcome is reasonable in light of the whole record. The Settlement Agreement satisfies this test.

31. The Settlement Agreement is reasonable in light of the whole record, including the record for every issue contested by Aglet, ANR/SC, and TURN;

fairly balances the affected interests; is consistent with applicable law, Commission precedents, and Commission policies; and is in the public interest.

32. The motion to adopt the Settlement Agreement should be granted.

33. Except as set forth in the previous Conclusions of Law, the recommendations of Aglet, ANR/SC, TURN, and Greenlining should not be adopted for the reasons set forth in the body of today's Opinion.

34. The accord between PG&E and Greenlining regarding supplier diversity, Board of Directors diversity, management diversity, and corporate philanthropy is reasonable and in the public interest, and should be adopted.

35. Pursuant to D.06-10-033, the 2007 revenue requirement adopted by today's Opinion is effective as of January 1, 2007.

36. Unless otherwise specified herein, PG&E should file all advice letters required by today's Opinion within 30 days. The Energy Division should be authorized to approve all the advice letters filed by PG&E pursuant to today's Opinion without a Commission resolution if such advice letters comply with today's Opinion. Such advice letters should comply with GO 96-A and be subject to a finding of compliance by the Energy Division or its successor.

37. The Settlement Agreement should be corrected to fix an error that erroneously inflates (i) rate base by \$0.624 million for capital expenditures for gas meters, (ii) revenue requirement by \$0.044 million.

38. The following order should be effective immediately so that PG&E's revenue requirement authorized by today's Opinion may be implemented expeditiously.

O R D E R

IT IS ORDERED that:

1. The Settlement Agreement contained in Appendix C of this Order is adopted.
2. Pacific Gas and Electric Company (PG&E) is authorized to recover over the remainder of 2007 the (i) revenue requirement set forth in Appendix C of this Order, less (ii) the amount collected by PG&E in base rates since January 1, 2007, and prior to the implementation of the revenue requirement authorized by this Order, plus (iii) interest on the difference between (i) and (ii), with said interest based on the rate for prime, 3-month commercial paper reported in Federal Reserve Statistical Release H-15.
3. Within 10 days from the effective date of this Order, PG&E shall file an advice letter with revised tariff sheets to implement (i) the revenue requirement authorized by this Order, and (ii) all accounting procedures, fees, and charges authorized by this Order that are not addressed in the other advice letters required by this Order. The revised tariff sheets shall (a) become effective on filing, subject to a finding of compliance by the Commission's Energy Division, (b) comply with General Order 96-A, and (c) apply to service rendered on or after their effective date.
4. PG&E is authorized to implement and recover in 2008 through 2010 the annual attrition increases set forth in paragraph 47 of the Settlement Agreement. The attrition increases may be implemented by advice letter as set forth in paragraph 46 of the Settlement Agreement.
5. PG&E shall not make significant reductions to the staffing or operations of its 84 front counters without Commission authorization pending the Commission's consideration of front-counter issues in Phase 2 of this proceeding.

6. The Memorandum of Understanding (MOU) between PG&E and Disability Rights Advocates (DIRA) in Appendix B of today's Opinion is adopted. PG&E shall comply with the MOU.

7. PG&E shall file an advice letter (AL) in time to begin offering by June 1, 2007, the mobile home park Bill-Calculation Services described in the body of this Decision and Exhibit PG&E-70. The AL shall contain tariffs and services agreement that are substantially similar to those attached to Exhibit PG&E-70.

8. PG&E shall bear the cost of the new service quality standard adopted by the Settlement which provides for a \$100 payment to each customer whose service is erroneously shut off.

9. Within 30 days from the effective date of this Order, PG&E shall file a compliance advice letter to establish the one-way Humboldt Bay Power Plant (HBPP) memorandum account in accordance with paragraph 30 of the Settlement Agreement. The HBPP memorandum account shall accrue interest at the rate earned on prime, 3-month commercial paper as reported in Federal Reserve Statistical Release H-15.

10. PG&E shall incorporate into its Diablo Canyon license renewal feasibility study the findings and recommendations from the California Energy Commission's (CEC) assessment of Diablo Canyon conducted by the CEC pursuant to Assembly Bill 1632.

11. PG&E shall submit by June 30, 2011, an application on whether to renew the Diablo Canyon operating licenses. The application shall address the matters identified in the body of today's Opinion.

12. PG&E shall identify and track all expenditures for membership dues in organizations that engage in political activities, including all the organizations

identified by TURN in this proceeding, and record an appropriate proportion of these expenditures in the below-the-line Account 426.4.

13. In its next general rate case (GRC) proceeding, PG&E shall incorporate into its calculation of working cash a lag for the Company's matching contributions to the savings-fund pool. The lag for savings-fund contributions shall be determined in a manner consistent with the directions contained in the body of today's Opinion.

14. PG&E shall record, for ratemaking purposes, a regulatory liability for asset removal costs as set forth in the body of today's Opinion. The regulatory liability shall not apply to asset removal obligations (AROs) determined in accordance with generally accepted accounting principles (GAAP). Parties may address in PG&E's next GRC whether PG&E should record, for ratemaking purposes, a regulatory liability for AROs.

15. In its next GRC proceeding, PG&E shall provide to The Utility Reform Network (TURN), upon request, the information that TURN may need to compare (i) removal costs for AROs determined in accordance with GAAP, and (ii) removal costs for the same assets determined in accordance with Standard Practice U-4.

16. PG&E shall submit the following reports and information in its next GRC proceeding:

- i. An up-to-date analysis, along with supporting workpapers, of its DA costs so that appropriate DA fees may be set.
- ii. A separate flat fee for not-sufficient-funds for each of the major customer classes that reflects then-current costs and supporting work papers.

- iii. A report that demonstrates that (a) PG&E has reduced its rate base by the actual salvage value of the existing airplane, and (b) the depreciation expense for the replacement airplane is based on a 13-year service life.
- iv. The report that PG&E is required to submit pursuant to paragraph 32 of the Settlement Agreement at the end of the 2007 GRC cycle shall state if any funds collected in rates for contributions to trusts for post-retirement benefits other than pensions were not used for that purpose and, if so, identify the mechanism and timeframe for refunding the un-contributed amount to ratepayers, with interest.
- v. A report of the amount of actual payments of OR fees and OFA fees over the duration of this GRC cycle and a forecast of future OR and OFA costs based on its actual payment history.
- vi. A report that contains (a) the then-current balance of pre-funded asset removal costs (ARCs); (b) a year-by-year projection of (1) when the then-existing balance of pre-funded ARCs will be consumed, and (2) the implicit inflation rate for future ARCs; and (c) a five-year projection of the year-end balance of pre-funded ARCs showing for each year the gross additions to the balance, gross expenditures for ARCs, and the net change in the balance of pre-funded ARCs.
- vii. A forecast of labor costs in 2011 for A&G Study departments and other office-based departments, broken down by budgeted positions, filled positions (or vacancy rate), straight time, paid overtime, temporary labor, and outside contractors.

17. All advice letters filed pursuant to this Order shall comply with General Order 96-A and shall be subject to a finding of compliance by the Energy Division or its successor. The Commission's Energy Division may approve, without a Commission resolution, all the advice letters filed pursuant to this Order if such advice letters comply with today's Opinion.

18. The motion to adopt the Settlement Agreement is granted.

19. PG&E shall comply with its accord with the Greenlining Institute regarding supplier diversity, Board-of-Directors diversity, management diversity, and corporate philanthropy.

20. Application 05-12-002 is granted and denied to the extent set forth in the previous ordering paragraphs.

21. Application 05-12-002 and Investigation 06-03-003 remain open to address issues associated with PG&E's request to close its front counters.

This Order is effective today.

Dated March 15, 2007, at San Francisco, California.

MICHAEL R. PEEVEY

President

DIAN M. GRUENEICH

JOHN A. BOHN

RACHELLE B. CHONG

TIMOTHY ALAN SIMON

Commissioners

I will file a concurrence.

(END OF APPENDIX A)

Appendix B:

PG&E-DIRA Memorandum of Understanding (MOU)

Note: The Signed Copy of the MOU is in the Formal File for this proceeding. Appendix B of today's Opinion is an electronic copy of the MOU that does not show the parties' signatures.

Memorandum Of Understanding

This Memorandum of Understanding ("MOU") is made by and between Disability Rights Advocates ("DIRA") and Pacific Gas and Electric Company ("PG&E") (collectively, the "Parties"). In this MOU, the Parties agree on a mutually acceptable outcome to certain access issues raised by DIRA as an Intervenor in the Application of Pacific Gas and Electric Company for Authority, Among Other Things, to Increase Rates and Charges for Electric and Gas Service Effective on January 1, 2007 (A.05-12-002).

RECITALS

WHEREAS the *Application of Pacific Gas and Electric Company for Authority, Among Other Things, to Increase Rates and Charges for Electric and Gas Service Effective on January 1, 2007* (A.05-12-002), contains forecasts of costs for test year 2007;

WHEREAS DIRA has raised certain issues regarding the impact of PG&E's practices on people with Mobility Disabilities and Vision Disabilities including: (1) access to Local Offices; (2) access to Pay Stations; (3) access to Pedestrian Rights of Way around PG&E Construction Sites; and (4) whether utility poles impede access in the Pedestrian Right of Way; and

WHEREAS PG&E and DIRA desire to resolve the issues raised by DIRA without further litigation in the current proceedings.

AGREEMENT

NOW THEREFORE, in consideration of the above Recitals and for good cause, as demonstrated below, it is hereby agreed as follows:

1 Definitions

The terms specified in this Section 1, when used in this MOU and the Recitals with the initial letters capitalized, whether in the singular or the plural, shall have the meanings stated in this Section 1.

- 1.1 AAA: The American Arbitration Association, or any successor organization.
- 1.2 Applicable Law: All federal and state laws and regulations that protect the rights of people with disabilities to full and equal access to governmental programs, services and activities and/or places of public accommodation, including Cal. Gov. Code §§ 4450, and 11135 *et seq.*, Cal. Civ. Code §§ 51 *et seq.*, and 54 *et seq.*, the Americans with Disabilities Act of 1990, 42 U.S.C. § 12101 *et seq.* and its implementing regulations including the Americans with Disabilities Act Access Guidelines (“ADAAG”), and Section 504 of the Rehabilitation Act of 1973, 29 U.S.C. Sec. 794, provided however, that nothing in this MOU shall require such programs, services and activities or places of public accommodation to provide such access if exempted from doing so, or otherwise not required to do so, under these federal and state laws and regulations.
- 1.3 Compliance Period: The Parties agree that the MOU shall become effective the day after CPUC approval and shall remain in effect until January 1, 2010.
- 1.4 Construction Sites: Areas in the Pedestrian Right of Way where PG&E is performing construction or repair of electric or gas service equipment. As used herein, “Construction Sites” do not include inspections of electric or gas facilities in the Pedestrian Right of Way.
- 1.5 CPUC: The Public Utilities Commission of the State of California.
- 1.6 Effective Date: The effective date of this MOU is the day after the CPUC approves this MOU.
- 1.7 Local Offices: Those portions of the 84 existing PG&E-operated offices open to the public for payment of PG&E bills.
- 1.8 Mobility Disability: With respect to an individual, any limitation of a person’s ability to move his or her body, or a portion of his or her body, that would cause the person to meet the definition set forth in 42 U.S.C. § 12102(2)(a) and/or Cal. Gov. Code § 12926(k).

- 1.9 Pay Stations: Businesses owned and operated by third parties that are authorized by PG&E to accept payment of PG&E bills. Pay Stations are also known as Neighborhood Payment Centers.
- 1.10 Parties: Disability Rights Advocates and PG&E.
- 1.11 Pedestrian Rights of Way: Sidewalks and other pathways used by pedestrians along public rights of way in PG&E's electric and gas service territory.
- 1.12 Proceeding: *Application of Pacific Gas and Electric Company for Authority, Among Other Things, to Increase Rates and Charges for Electric and Gas Service Effective on January 1, 2007* (A.05-12-002).
- 1.13 Transaction-Related Elements: This term is defined in Section 4.1 of this MOU.
- 1.14 Vision Disability: With respect to an individual, any limitation of a person's ability to see that would cause the person to meet the definition set forth in 42 U.S.C. § 12102(2)(a) and/or Cal. Gov. Code § 12926(k).

2 Terms

- 2.1 DIRA agrees that if this MOU is approved by the CPUC, DIRA will not pursue further, on its own behalf, any of the issues that it has raised in this Proceeding prior to 2008, other than disputes regarding PG&E's implementation of this MOU. DIRA further reserves the right to seek enforcement of the obligations set forth in this MOU. Nothing in this Section 2.1, however, should restrict DIRA's ability to participate in future settlement discussions or evidentiary proceedings that may take place in the Proceeding concerning Local Offices and Pay Stations. Further, nothing in this Section 2.1 is intended to restrict DIRA's ability to represent third parties or practice law concerning the issues raised in this Proceeding, as envisioned by Rule 1-500 of the Rules of Professional Conduct of the State Bar of California.
- 2.2 This MOU embodies the entire understanding and agreement of the Parties with respect to the matters described, and it supersedes prior oral or written agreements, principles, negotiations, statements, representations, or understandings among the Parties with respect to those matters.

- 2.3 This MOU represents agreement between the Parties to the facts and law as specified. The Parties agree that this MOU should not constitute precedent regarding any principle or issue in this proceeding or in any future proceeding.
- 2.4 The Parties agree that this MOU is reasonable in light of the testimony submitted, consistent with law, and in the public interest.
- 2.5 The Parties agree this MOU shall not be construed against any Party because that Party or its counsel or advocate drafted the provision.
- 2.6 This MOU may be amended or changed only by a written agreement signed by the Parties.
- 2.7 The Parties shall jointly request CPUC approval of the MOU and shall actively support: (1) prompt approval of the MOU and (2) PG&E's request for additional funding as provided herein.
- 2.8 The Parties intend the MOU to be interpreted and treated as a unified, integrated agreement. In the event the Commission rejects or modifies this MOU, the Parties reserve their rights to renegotiate this MOU.
- 2.9 Captions are included for reference only, and are not intended to affect the meaning of the contents or the scope of this MOU.
- 2.10 This MOU shall be governed by and construed in accordance with California law. Each provision of this MOU shall be interpreted in such a manner as to be valid and enforceable under California law, but if any provision hereof shall be or become prohibited or invalid under any applicable law, that provision shall be ineffective only the extent of such prohibition or invalidity, without thereby invalidating the remainder of that provision or any other provision hereof.
- 2.11 This MOU may be executed in counterparts, which taken together shall constitute an original. Facsimiles of original pages shall be binding on the Parties to the MOU. The Parties shall exchange original signed counterparts as soon as possible.
- 2.12 The Parties agree that, except as otherwise noted below, the CPUC retains exclusive jurisdiction to enforce the terms of this MOU and resolve any disputes regarding the Parties' performance under this MOU.

3 Local Offices

- 3.1 To the extent that any of PG&E's Local Offices remain open to accept payments made in person by PG&E customers, such offices will be accessible to members of the public with Vision Disabilities and Mobility Disabilities in accordance with Applicable Law.
- 3.2 PG&E represents that a third party accessibility expert has surveyed, or will survey, each of its currently open Local Offices regarding their accessibility and compliance with Applicable Law. Consistent with the results of such surveys, PG&E will make all improvements necessary to ensure that all open Local Offices are accessible to people with Mobility Disabilities and Vision Disabilities in accordance with Applicable Law.
- 3.3 PG&E will engage a third-party accessibility expert to survey the accessibility of 10% of all open Local Offices in 2007, and 20% of all open Local Offices annually in 2008 and 2009. Prior to engagement of the expert, PG&E will notify DIRA of the identity of the expert and provide DIRA a reasonable time to object. If DIRA reasonably objects to PG&E's selected expert, PG&E will select a different expert, taking DIRA's concerns into account in the selection of the different expert. If such surveys identify barriers to accessibility in violation of Applicable Law, PG&E will have a reasonable time to make those improvements that are necessary to comply with Applicable Law. PG&E will provide the results of such surveys to DIRA, along with an estimate of the time that may be required to perform any necessary improvements.

4 Pay Stations

- 4.1 PG&E will engage a third-party accessibility expert to survey the transaction-related elements of accessibility at its Pay Stations ("Transaction-Related Elements") that are necessary to allow customers to complete PG&E-related transactions at such Pay Stations to ensure that these elements are in compliance with Applicable Law. These Transaction-Related Elements are set forth below:
 - Parking facilities for those Pay Stations that provide parking in a facility that is under the Pay Station's control;

- Pathway(s) from the parking area to the entrance of the Pay Station for those Pay Stations that control the pathway(s) from the parking area to the entrance, including ramps along the pathway(s) (if any);
 - Entrance(s) to the Pay Station, including ramps to the entrance(s) (if any);
 - Pathway(s) from the entrance(s) to the service counter(s) and other areas, if any, where PG&E-related transactions take place;
 - Service counter(s) and other areas or equipment, if any, where PG&E-related transactions take place; and
 - For those Pay Stations that are part of a franchise or that constitute a single location within a business entity that has five or more total locations, public restrooms provided by that Pay Station, if any, that are available to customers who conduct PG&E-related transactions at the Pay Station.
 - PG&E will survey 10 % or more of its Pay Stations annually in 2007, 2008 and 2009 to ensure compliance with these Transaction-Related Elements. PG&E will provide the results of such surveys to DIRA.
- 4.2 Prior to engagement of the expert described in Section 4.1 of this MOU, PG&E will notify DIRA of the identity of the expert and provide DIRA a reasonable time to object. If DIRA reasonably objects to PG&E's selected expert, PG&E will select a different expert, taking DIRA's concerns into account in the selection of the different expert.
- 4.3 If the above-referenced surveys identify barriers to accessibility concerning the Transaction-Related Elements that are not in compliance with Applicable Law, the relevant Pay Station operators shall be notified that they have a reasonable time to make the necessary improvements to remove such barriers and, if they fail to do so, the Pay Station will be removed from PG&E's network of authorized Pay Stations.
- 4.4 Only Pay Stations that comply with Applicable Law concerning the Transaction-Related Elements will be added to PG&E's network. At least three (3) of the Pay Stations that the third party accessibility expert

surveys each year will be Pay Stations that have been added to the network during the previous year.

- 4.5 Notwithstanding the above, should the need arise for the use of a new or existing Pay Station that does not provide accessible Transaction-Related Elements, PG&E will consult with DIRA prior to granting an exception to the above-stated policies, providing information to DIRA on the following factors: the location of the Pay Station, the number of payments it currently processes or is expected to process, the proximity of other Pay Stations that are accessible to persons with disabilities, and the Transaction-Related Elements that may not be accessible. PG&E will take these factors into consideration, as well as the feedback of DIRA, in determining whether or not to grant an exception.
- 4.6 PG&E agrees to create, maintain, and make reasonably available to the public (including by listing on its website) a list of Pay Stations that PG&E believes comply with Applicable Law concerning the Transaction-Related Elements. PG&E will make this list available to the public by June 30, 2007.

5 Resolution of Disputes regarding Local Offices and Pay Stations

- 5.1 Any controversy arising out of or relating to this MOU as it pertains to the accessibility of Local Offices or Pay Stations, shall be resolved at the request of any Party through a three-step dispute resolution process. First, the Parties will make a good-faith effort to meet and confer to attempt to resolve the dispute. Second, if the Parties cannot resolve the dispute through meet and confer, the Parties will attempt to resolve the dispute through mediation before a mutually-acceptable third-party mediator.
- 5.2 If mediation is unsuccessful, the Parties agree to submit the dispute to a final and binding arbitration before a randomly-selected arbitrator from the AAA panel in San Francisco, California, administered by and in accordance with the then existing Rules of Practice and Procedure of AAA. In the event of any such dispute, the parties shall be entitled to recover reasonable attorneys' fees and costs in accordance with applicable law regarding the recovery of attorneys' fees and costs.

- 5.3 This dispute resolution process does not apply to any dispute concerning any issue other than access by people with Mobility and Vision Disabilities to Local Offices and Pay Stations.

6 Temporary Construction Practices

- 6.1 PG&E agrees to prepare new protocols to ensure accessibility and safety around PG&E Construction Sites for persons with Vision Disabilities and Mobility Disabilities ("New Access Guidelines"). PG&E will include the New Access Guidelines in its Work Area Protection Guide, a copy of which is generally maintained in all PG&E crew trucks dispatched to job sites.
- 6.2 PG&E reserves the right to modify the New Access Guidelines to the extent such modifications are necessary to comply with law or, update its practices after determining the efficiency of the New Access Guidelines. If the New Access Guidelines are modified, PG&E will promptly provide a copy of the modified New Access Guidelines to DIRA.
- 6.3 PG&E agrees to conduct training of employees who will be required to comply with the New Access Guidelines. The training will inform the employees of the purpose of the New Access Guidelines and include a demonstration of the proper use of new barriers, warning signs and temporary wheelchair ramps that will be required by the New Access Guidelines. PG&E will also include the New Access Guidelines in its annual trench safety awareness training. PG&E will provide a copy of the relevant training materials to DIRA for review.
- 6.4 PG&E also agrees to make construction supervisors responsible for reviewing compliance with the New Access Guidelines when the supervisors visit Construction Sites. PG&E agrees to engage a disabled access consultant to assist PG&E in developing new construction protocols, training utility employees, and assisting PG&E supervisors in the field as needed regarding the use of the new equipment during the first year after this MOU is effective. Prior to engagement of the consultant, PG&E will notify DIRA of the identity of the consultant and provide DIRA a reasonable time to object. If DIRA reasonably objects to PG&E's selected consultant, PG&E will select a different consultant, taking DIRA's concerns into account in the selection of the different consultant. The consultant shall review PG&E's adherence to the New

Access Guidelines, including as appropriate its use of the new equipment contemplated by the New Access Guidelines at no fewer than ten (10) Construction Sites in each of PG&E's seven (7) geographic areas. PG&E will provide to DIRA a summary of the consultant's conclusions and recommendations regarding the use of the new equipment biannually.

- 6.5 The New Access Guidelines have not yet been completed. The Parties have been working, and will continue to work, together to finalize New Access Guidelines that are acceptable to both parties. The Parties anticipate that they will be able to reach agreement on New Access Guidelines by September 30, 2006.
- 6.6 PG&E agrees to consult with DIRA regarding its compliance with the requirements of this Section 6. PG&E reserves the right to make any modifications to its practices that PG&E deems necessary or appropriate consistent with the intent of this MOU. If the Parties are unable to reach agreement on any of these issues, the Parties will first attempt to resolve any disputes through mediation before a mutually agreeable mediator. If the Parties are unable to resolve a dispute regarding any issues addressed in Section 6 of this MOU after mediation, such dispute shall be subject to CPUC jurisdiction as provided in Section 2.13.
- 6.7 PG&E estimates that implementation of procedures to comply with the New Access Guidelines would cost approximately \$3.3 million in test year 2007. PG&E and DIRA request that the final decision in this proceeding increase PG&E's revenue requirement for test year 2007 to comply with the New Access Guidelines in the amount of \$3.3 million total (\$1.4 capital/\$1.9 million expense).

7 Utility Poles in Pedestrian Rights of Way

- 7.1 PG&E will obtain a sampling of its pole locations during 2007 to determine whether and to what extent they pose accessibility barriers for persons with Vision Disabilities or Mobility Disabilities.
- 7.2 During 2007, PG&E's pole test and treat contractors will measure the clearance between PG&E-owned or jointly-owned utility poles located in the Pedestrian Right of Way and the edge of a sidewalk where it appears based on a visual inspection that the distance between the pole and the edge of the sidewalk furthest from the pole may be less than 36 inches.

PG&E will keep a record of the information it collects through this survey and will provide such information to DIRA. PG&E's contractors shall not be required to measure the clearance of more than two locations on a single block where it appears that the distance between the poles and the edge of the sidewalk are uniform.

- 7.3 PG&E and DIRA will meet and confer in good faith regarding the data collected during 2007 to discuss whether further Commission proceedings or other actions are necessary or appropriate to address any access barriers noted in the survey.
- 7.4 PG&E estimates that its incremental cost estimate to conduct a survey in 2007 of approximately 42,000 utility poles in the San Francisco, San Jose and Sacramento areas is approximately \$142,000. PG&E and DIRA request that the final decision in this proceeding include an additional amount of \$142,000 in revenue requirements (expense) for test year 2007.

8 Intervener Status and Compensation

- 8.1 PG&E agrees that the issues resolved herein were properly raised by DIRA and that DIRA has made a substantial contribution to this proceeding, as defined by Rule 1803(a) of the Commission's Rules of Practice and Procedure. The Parties agree that it is reasonable and appropriate for DIRA to receive intervenor compensation for certain tasks performed to implement the MOU, to the extent directed by the Commission.

IN WITNESS WHEREOF this MOU is executed and agreed to by the following as of the date set forth below.

(END OF APPENDIX B)

Appendix C:

General Rate Case Settlement Agreement

Note: The Signed Copy of the GRC Settlement Agreement is in the Formal File for this proceeding. Appendix C of today's Opinion is an electronic copy of the MOU that does not show the parties' signatures.

SETTLEMENT AGREEMENT AMONG PACIFIC GAS AND ELECTRIC COMPANY, DIVISION OF RATEPAYER ADVOCATES, THE MODESTO IRRIGATION DISTRICT, THE MERCED IRRIGATION DISTRICT, THE SOUTH SAN JOAQUIN IRRIGATION DISTRICT, THE WESTERN MANUFACTURED HOUSING COMMUNITIES ASSOCIATION, THE DISABILITY RIGHTS ADVOCATES, THE CALIFORNIA FARM BUREAU FEDERATION, SOUTHERN CALIFORNIA EDISON, SOUTHERN CALIFORNIA GAS COMPANY, SAN DIEGO GAS AND ELECTRIC COMPANY, THE COALITION OF CALIFORNIA UTILITY EMPLOYEES

SETTLEMENT AGREEMENT

1. As a compromise among their respective litigation positions, and subject to the Settlement Conditions set forth in Section 3 of this Agreement, the parties to this Settlement (Settling Parties) agree on a mutually acceptable outcome to all issues in Application (A.) 05-12-002, Application of Pacific Gas and Electric Company for Authority, Among Other Things, to Increase Rates and Charges for Electric and Gas Service Effective on January 1, 2007 (2007 General Rate Case, or GRC), with the exception of issues raised by the Greenlining Institute. The Settlement is presented to the Commission pursuant to Rule 51 of the Commission's Rules of Practice and Procedure.

SETTLING PARTIES

2. The Settling Parties are as follows: the Division of Ratepayer Advocates (DRA), Pacific Gas and Electric Company (PG&E), the Modesto Irrigation District (Modesto ID), the Merced Irrigation District (Merced ID), the South San Joaquin Irrigation District (SSJID), the Western Manufactured Housing Communities Association (WMA), the Disability Rights Advocates (DIRA), the California Farm Bureau Federation (CFBF), Southern California Edison (SCE), Southern California Gas Company (SoCalGas), San

Diego Gas and Electric Company (SDG&E), and the Coalition of California Utility Employees (CCUE).

SETTLEMENT CONDITIONS

3. The Settling Parties agree to the following general conditions:
 - A. This Settlement resolves all issues raised by all Parties, with the exception of issues raised by the Greenlining Institute.
 - B. This Settlement and the tables presented in the Appendices embody the entire understanding and agreement of the Settling Parties with respect to the matters described, and it supersedes prior oral or written agreements, principles, negotiations, statements, representations, or understandings among the Settling Parties with respect to those matters.
 - C. Following Rule 51.8, the Settling Parties agree that this Settlement should not constitute precedent regarding any principle or issue in this proceeding or in any future proceeding.
 - D. The Settling Parties agree that this Settlement is reasonable in light of the entire record, consistent with law, and in the public interest.
 - E. The Settling Parties agree that no provision of this Settlement shall be construed against any Settling Party because that Settling Party or its counsel or advocate drafted the provision.
 - F. This Settlement may be amended or changed only by a written agreement signed by the Settling Parties.
 - G. The Settling Parties shall jointly request Commission approval of this Settlement and shall actively support prompt approval of the Settlement.
 - H. The Settling Parties intend the Settlement to be interpreted and treated as a unified, integrated agreement. In the event the Commission rejects or modifies this Settlement, the Settling Parties reserve their rights under Rule 51.7.
 - I. This document may be executed in counterparts, each of which shall be deemed an original, but all of which together shall constitute one and the same instrument.
 - J. This Settlement shall become effective among the Settling Parties on the date the last Party executes the Settlement as indicated below.

- K. In witness whereof, intending to be legally bound, the Settling Parties hereto have duly executed this Settlement on behalf of the Settling Parties they represent.
- L. The fact that the Settling Parties set forth specific amounts for certain categories of costs is not intended to limit PG&E's management discretion to spend funds as it sees fit and consistent with its obligation to serve.
- M. Merced ID joins only in the following sections of this Settlement: paragraphs 1, 2, 3, 10, 11, 19 and 50.
- N. Modesto ID joins only in the following sections of this Settlement: paragraphs 1, 2, 3, 10, 11, 19, 49 and 50.
- O. SSJID joins only in the following sections of this Settlement: paras. 1, 2, 3, 10 and 19.
- P. WMA joins only in the following sections of this Settlement: paras. 1, 2, 3, 12 and 25.
- Q. DIRA joins only in the following sections of this Settlement: paras. 1, 2, 3, 13A, and 48.
- R. CFBF joins only in the following sections of this Settlement: Paragraphs 1, 2, 3, 13B, and 24.
- S. SCE, SDG&E and SoCalGas join only in the following sections of this Settlement: paragraphs 1, 2, 3, 13C, and 41, but solely for the purpose of supporting the use of the traditional method for computing and reflecting net salvage rates (as described in Commission Standard Practice U-4). SCE, SDG&E and So Cal Gas did not address, and express no opinion on, the actual net salvage percentage rates adopted in the Settlement.

SETTLING PARTIES LITIGATION POSITIONS

Pacific Gas and Electric Company

- 4. At the end of hearings, and as reflected in Exhibit PG&E-79 (Comparison Exhibit), PG&E requested the Commission to approve total CPUC jurisdictional billed

revenue requirements of \$5.109 billion,²⁷⁸ effective January 1, 2007. This total consisted of \$2.991 billion for electric distribution, \$1.062 billion for gas distribution, and \$1.056 billion for electric generation. Compared to adopted revenue requirements for 2006, PG&E's request represented a total revenue increase of \$394.5 million, consisting of \$342.8 million for electric distribution, \$35.5 million for gas distribution, and \$16.3 million for electric generation.

5. PG&E's proposed revenue requirement for 2007 was based on the costs PG&E forecasted it would incur in 2007 to own, operate, and maintain its electric generating, electric distribution, gas distribution, and common and general plant, to perform the transactions necessary to procure electricity for its bundled-service electric customers and to procure gas for its core gas customers, and to provide customer services to its electric and gas customers.

6. In addition to the revenue requirement increases for 2007, PG&E requested attrition revenue requirement increases of \$143 million in 2008 and of \$180 million in 2009. These amounts reflect net savings from Business Transformation.

7. PG&E also sought to increase: (1) its uncollectibles factor from 0.002 to 0.002772; (2) its "restoration for non-payment" fee (gradually over the course of the rate case cycle) from \$20 to \$40 for reconnection during regular business hours and from \$30 to \$60 for reconnection during non-business hours (CARE customers would receive a 20% discount on the increased restoration for non-payment fee); and (3) its "non-sufficient funds" fee from \$8.00 to \$11.50.

²⁷⁸ This amount and all other amounts are in nominal FERC dollars unless noted otherwise.

Division of Ratepayer Advocates

8. At the end of hearing, and as reflected in the Comparison Exhibit, DRA's proposed overall forecast test year 2007 electric and gas distribution and electric generation CPUC jurisdictional billed revenue requirements would be \$2.809 billion, \$1.001 billion, and \$0.924 billion, respectively. Based on current authorized revenues, DRA's proposed revenue requirements would result in an increase of \$160.9 million for electric distribution and decreases of \$25.3 million and \$115.5 million for gas distribution and electric generation, respectively.

9. DRA's recommended attrition increases, after adjustment for Business Transformation savings, would total \$100 million in 2008 and \$131 million in 2009. DRA also recommended an uncollectibles factor of 0.002582. DRA proposed that any increase in the "restoration for non-payment" fee be limited to 25% more than the current fees, and that CARE customers should receive a 20% discount off the increased fees. DRA took no position on PG&E's proposed increase of the "non-sufficient funds" fee.

Modesto Irrigation District, Merced Irrigation District and South San Joaquin Irrigation District

10. Modesto ID, Merced ID and SSJID (the "Irrigation Districts") asserted that customers should not fund PG&E's \$2.0 million request for Customer Retention activities or the \$0.3 million request for related Regulatory/Legislative activities. SSJID also recommended disallowance of \$1.6 million for Economic Development activities and \$0.4 million for Military Facilities Acquisition activities.

11. In addition, Merced ID and Modesto ID called for an investigation of PG&E's implementation of Schedule E-31 to determine whether abuses are occurring. Modesto ID also called for an investigation of whether PG&E has complied with the terms of the Removal of Idle Facilities Agreement.

WMA

12. The Western Manufactured Housing Communities Association (WMA) filed a counter-proposal to PG&E's proposed bill calculation services for mobile home park owners. (PG&E's original proposal would have provided a limited amount of services to mobile home park owners at no cost to participating mobile home park owners.) Under WMA's counter-proposal, which was modeled closely after the billing services developed by Southern California Edison Company, PG&E would provide a higher level of service than originally proposed, performing the actual calculations for the mobile home park owners and charging a fee for such services to participating mobile home park owners. The joint proposal developed by WMA, PG&E and The Utility Reform Network (TURN) -- submitted as Exhibit PG&E-70 -- adopts WMA's counter-proposal with certain minor modifications.

DIRA, CCFB, SCE, SDG&E, So Cal Gas, CCUE

13. The other settling parties that also participated in the case include:

- A. Disability Rights Advocates (DIRA) submitted prepared testimony in the following areas: (i) access to local offices, (ii) access to third-party pay stations, (iii) access around PG&E construction projects in the pedestrian right of way; (iv) whether utility poles create barriers in the pedestrian right of way; and (v) whether PG&E's paving practices comply with applicable law. The Memorandum of Understanding (MOU) executed by DIRA and PG&E - submitted as Exhibit PG&E-71 - addresses the first four of these areas, without prejudging or compromising any further settlement negotiations with other parties concerning the local office and pay station issues. Regarding the fifth area, as part of the MOU, DIRA agrees to withdraw from the 2007 GRC its proposals regarding paving practices, as well as any other issues raised in the GRC but not addressed by the MOU. However, nothing in the MOU limits DIRA's right to seek to raise these issues in future GRC proceedings.
- B. The California Farm Bureau Federation (CFBF) presented direct testimony opposing the closure of the front counters at PG&E's local offices.
- C. Southern California Edison (SCE), San Diego Gas and Electric (SDG&E) and Southern California Gas (SoCalGas) Companies presented testimony on the

subject of depreciation in rebuttal to the testimony of The Utility Reform Network.

- D. The Coalition of California Utility Employees (CCUE) intervened in this case on behalf of its unions whose 35,000 members work at nearly all of the electric utilities in California, including approximately 13,000 working at PG&E.

SETTLEMENT TERMS

Revenue Requirement

14. The 2007 CPUC jurisdictional billed revenue requirement of \$2.870 billion for electric distribution, \$1.047 billion for gas distribution and \$1.010 billion for generation operations for a total of \$4.927 billion is reasonable. This represents increases of 8.4% and 2.0% in PG&E's electric and gas distribution revenues, and a decrease of 2.9% in generation operation revenues, for an overall increase of 4.5%, and compares to PG&E's requests (Comparison Exhibit, p.1-4) of increases in revenues of 12.9%, 3.5%, and 1.6% for electric and gas distribution and generation operations, respectively, for an overall increase of 8.4%. Appendices A and B summarize the proposed settlement revenue requirements. On a total system billed revenue basis, the revenue increase amounts to 1.4 % for 2007.

15. Forecasts of Customers and Sales: The forecasts of gas and electric customers and sales set forth in PG&E's showing (Ex.PG&E-8) will be adopted.

16. Revenues at Present Rates: The forecasts of adopted gas and electric revenues at present rates as set forth in PG&E's showing (Ex.PG&E-79, p.2-3. p.2-14, p.2-25) will be adopted. The forecasts of billed revenues at present rates as set forth in PG&E's showing (Ex.PG&E-2, Ch.14 (electric) and Ch.15 (gas)) will be adopted.

Operations & Maintenance (O&M) Expense

17. PG&E's 2007 expenses will be handled in the following manner: 2007 O&M expenses will be \$488.8 million for electric distribution, \$139.9 million for gas

distribution, and \$450.6 million for electric generation operations, for a total of \$1.079 billion. This compares to PG&E's litigation position set forth in the Comparison Exhibit of \$494.2 million (p. 2-4, Line 7 and 8), \$142.5 million (p. 2-15, Lines 7 and 8), and \$457.0 million (p. 2-26, Lines 5 and 7) for electric and gas distribution and generation operations, respectively, for a total of \$1.094 billion.

18. **Vegetation Management:** Vegetation Management expense (included in the above electric total) will be \$150 million in 2007 (SAP dollars).

- A. The Vegetation Management Balancing Account will remain a one-way balancing account.
- B. It is difficult to forecast the costs of the California Department of Forestry and Fire Protection (CDF) required work in this rate case, however, as PG&E and CDF are in discussions regarding hazard trees and PG&E's request for a major woody stem exemption from CDF. Thus, it is unclear whether these issues will dramatically increase costs for vegetation management or will not have any impact on those costs.
- C. A separate tracking account will be established in which PG&E shall record any increased inspection or removal costs PG&E incurs due to (a) new CDF rules and/or requirements that increase hazard tree inspections or removals; (b) re-interpretation by CDF of its existing rules and/or requirements that increase hazard tree inspection or removals; (c) changes in CDF enforcement approach that require PG&E to significantly increase the scope of its Vegetation Management program, either through significantly increased inspections or tree mitigation activities, or (d) new incremental work related to so-called major woody stems, including removal of the major woody stems, adding tree wire to existing lines if appropriate, or relocating power lines further away from major woody stems.
- D. PG&E shall send a letter, and a copy of the new CDF requirements, enforcement action, and/or rules, to the Commission's Energy Division and to DRA within 30 days to inform parties of this occurrence.
- E. If the costs in the separate tracking account exceed \$5 million in any calendar year, and if PG&E's overall expenses for Vegetation Management exceed \$150 million (as adjusted for attrition), PG&E shall be authorized to recover through an advice letter filing all costs appropriately recorded in this tracking account for that calendar year through the Distribution

Revenue Adjustment Mechanism (DRAM), or subsequent mechanism established by the Commission, subject to DRA audit of those costs showing compliance with the provisions above.

Customer Services Expenses

19. PG&E's distribution Customer Services 2007 expenses will be \$431.1 million for electric and gas distribution. This compares to PG&E's litigation position set forth in the Comparison Exhibit (p. 2-4 and 2-15, lines 9 and 11) of \$437.7 million. This reflects a "zero" allocation in expenses for the "customer retention" component of PG&E's Customer Retention and Economic Development Program. (This compares to the \$2.03 million originally sought by PG&E and reflected in Ex. PG&E-5, p. 9-1, Table 9-1, L:1.)

20. **Uncollectibles:** The factor used to calculate uncollectibles expense will be set at 0.002586.

21. **Non-sufficient Funds Fee:** The non-sufficient funds (NSF) fee for returned checks will be increased from the current \$8.00 to \$11.50. Within 30 days from the date of a Commission decision in this matter, PG&E will make a compliance advice filing to implement this provision.

22. **Restoration for Non-payment Fee:** The fees to restore service to customers whose service has been terminated due to lack of payment will be increased from the current \$20.00 for restoration during business hours and \$30.00 for restoration during non-business hours to \$25.00 for restoration during business hours and \$37.50 for restoration during non-business hours. However, CARE customers shall be exempt from the increase and shall continue to be liable for the current fees (\$20.00 and \$30.00). Within 30 days from the date of a Commission decision in this matter, PG&E will make a compliance advice filing to implement this provision.

23. **New Quality Assurance Standard for Improper Shut-offs:** The Commission should adopt a new quality assurance standard under which a customer would be paid

\$100.00 by PG&E if PG&E improperly disconnects gas and/or electric service to the customer. The Settling Parties also agree that the Commission should order PG&E to explain the new standard via an advice filing to be made by PG&E within 90 days of the date of the Commission's decision in this matter. Furthermore, the Settling Parties agree that, prior to PG&E's advice filing, PG&E should meet with any interested parties in order to resolve as many details concerning implementation of the new standard as practicable.

24. Closure of Front Counters at Local Offices: PG&E will keep its 84 front counters at local offices open pending resolution of this issue either through settlement or Commission decision. If any front counters are ultimately closed, PG&E will adjust its revenue requirement downward to reflect savings associated with such closures. The amount of such adjustment depends upon the number of front counters closed, and therefore cannot be determined at this time.

25. Billing Services for Mobile Home Parks: The billing services to be provided by PG&E for mobile home park owners, as jointly proposed by Western Manufactured Housing Communities Association (WMA), The Utility Reform Network (TURN) and PG&E in Exhibit PG&E-70 are reasonable and should be adopted by the Commission.

26. Direct Access Service Fees: Direct access service fees will remain at current levels.

Capital Additions

27. The net weighted capital additions for 2007 will be \$272.5 million for the electric distribution UCCs and \$98.1 million for the gas distribution UCCs and \$81.9 million for generation operation UCCs, for a total of \$452.5 million. The net additions for 2005, 2006, and 2007 are shown in the Appendix G, Settlement Comparison Exhibit, Plant in Service tables for electric and gas distribution and electric generation (p.1-7, 2-7, 3-7).

28. **Replacement Airplane:** The \$81.9 million of capital additions for generation operation UCCs includes PG&E's \$18.0 million capital request for a replacement airplane. PG&E employees (including employees, officers, and Board members of PG&E Corporation) will be prohibited from using the Company airplane for personal travel for themselves or their family. PG&E customers and contractors, including customers and contractors of PG&E Corporation, will also be prohibited from using the Company plane for personal travel for themselves or their family.

29. Currently, PG&E implements a charge back system for passenger use of the airplane, including PG&E Corporation employees. For PG&E Utility and Corporation employees, and contractors working directly for PG&E, a \$400 round trip charge is currently made to the PCC or order number of the department for whom each PG&E employee or contractor works. PG&E agrees to review and update its chargeback procedures and rates, and present the results of this update to the Commission and DRA within 90 days of a final decision in this case.

30. **Humboldt Bay Power Plant Memorandum Account:** The Settlement includes revenue requirements for some specific projects which may be required for the continued operation of the existing units at Humboldt Bay Power Plant. The estimated revenue requirements for these projects are: \$1.3 million in 2007, \$876 thousand in 2008 and \$709 thousand in 2009. These projects are listed in Appendix C. The Settling Parties further agree that PG&E will establish a memorandum account to track the difference between the authorized and actual revenue requirement associated with these projects, and, in the next GRC, will refund any over collection of revenue requirements if it is not necessary to perform these projects.

Administrative and General (A&G) Expense

31. PG&E's total utility 2007 A&G expenses will be \$772.3 million (\$2004). This compares to the \$806.3 million (\$2004) in PG&E's position in the Comparison Exhibit,

p. F-5. These amounts equate to CPUC jurisdictional A&G amounts in 2007 FERC dollars (Appendix B) of \$708.7 million compared to \$741.5 million, respectively.

32. A&G Expense – Post-retirement Benefits Other than Pension (PBOP) – Medical and Life, and Long-Term Disability Trusts: The estimate of total contributions for 2007 to the PBOPs medical and life, and LTD trusts will be \$124.3 million (total company before allocation to capital and other non-GRC UCCs). This total amount will also apply to the attrition years. In compliance with Decisions 92-12-015 and 95-12-055, PG&E will file a consolidated true-up of the revenue requirements associated with the PBOPs medical, life and LTD contributions at the end of the 2007 GRC cycle.

33. Capitalization Rates for A&G: The capitalization rates for those A&G items that are capitalized in the following accounts are as follows:

Account 920: Performance Incentive Plan	24.10%
Account 920: Salaries	11.12%
Account 921: Office Supplies	11.59%
Account 923: Outside Services	1.40%
Account 925: Workers Compensation	32.61%
Account 925: Third Party Claims	19.10%
Account 926: Pension and Benefits	32.61%

34. A&G Allocation to Non-GRC UCCs: It is more efficient to litigate common costs like A&G only once, in the GRC, and then to use the results in other CPUC proceedings, rather than re-litigating these common A&G costs multiple times. A&G expenses allocated to the Unbundled Cost Categories (UCCs) adopted in this 2007 GRC should be used in determining the A&G expenses in related proceedings in 2007 and future years until PG&E's next test year GRC, if the outcome of those proceedings would otherwise require specific calculation of A&G expenses. Specifically, the UCCs and related proceedings are: Gas Transmission (Gas Accord III and subsequent PG&E

Gas Transmission and Storage proceedings) and Nuclear Decommissioning (including SAFSTOR) (the 2006 Nuclear Decommissioning Cost Triennial Proceeding (NDCTP) and subsequent NDCTP filing).

35. **Time Tracking for PG&E's Public Affairs Related Functions:** PG&E shall, within 90 days of a final decision in this case, adopt a time reporting system to track time and expenditures of those public policy and governmental affairs organizations that have a mixture of below the line activities in addition to activities for which PG&E seeks cost recovery from the CPUC. The organizations will include Governmental Relations, Area Public Affairs, Corporate Environmental and Federal Affairs, Federal Governmental Relations, and Civic Partnership and Community Initiative. If other organizations with below the line activities, in addition to activities for which PG&E seeks cost recovery from the CPUC, are formed in the future, those organizations will also use the adopted time tracking system. PG&E shall have this reporting system implemented and in place by no later than January 1, 2008.

36. **Administrative and General Expense Analysis and Forecasting:** PG&E will work with DRA and other interested parties to improve the A&G presentation for the next GRC, which will also include presenting recorded, base year, and forecast data in a consistent, comparable, and transparent manner.

37. **Pension:** On June 15, 2006, the Commission issued D.06-06-014 in this proceeding and A.05-12-021 adopting an uncontested settlement agreement authorizing PG&E to recover contributions to its employee pension plan, or retirement plan, during 2006-2009. (See Ex. 1-5 and Tr. 1-25.) This final decision resolves the pension contribution issue in both proceedings, closing A.05-12-021 (which addressed the pension contribution in 2006) and leaving this proceeding (which covers pension contributions in 2007-2009) open to address all remaining GRC issues. (D.06-06-014, mimeo, pp. 2 and 26.) As a result, PG&E is making retirement plan net contributions of \$249.7 million in 2006 and \$153.4 million each year in 2007, 2008 and 2009. (D.06-06-014,

mimeo, p. 10.) Based on actuarial estimates and an assumed annual trust investment return of 7.5%, these contributions are projected to result in a fully funded pension plan by the beginning of the next GRC cycle on January 1, 2010. (D.06-06-014, mimeo, p. 9.) No issues remain to be resolved in this GRC regarding PG&E's retirement plan for the years 2007-2009.

38. However, because this Settlement extends through the year 2010 (see paragraph 45), the question of a pension contribution for 2010 is now raised.

39. The pension contribution settlement approved in D.06-06-014 for the years 2007-2009 should be extended through the year 2010 for the purposes of this Settlement. Specifically, the Settling Parties agree to the following:

- A. PG&E is required to make a total pension contribution of \$176.0 million for the year 2010, which equates to a net contribution of \$153.4 million for the year 2010. (See D.06-06-014, *mimeo*, Finding of Fact 10 on p. 21.)
- B. PG&E will continue to recover the revenue requirement for the portion of the pension contribution authorized for 2010 that is allocable to PG&E's GRC lines of business. Recovery of the pension-contribution revenue requirement for non-GRC lines of business shall be authorized, as appropriate, in other proceedings and venues. (See D.06-06-014, *mimeo*, Ordering Paragraph 6 on p. 25.)
- C. The advice letter required by Ordering Paragraph 7 of D.06-06-014 shall extend through the year 2010.
- D. The annual report required by Ordering Paragraph 8 of D.06-06-014 shall continue through the year 2011.

Franchise Fee Factors

40. The factors used to calculate franchise fees will be 0.007603 (electric) and 0.009736 (gas).

Depreciation Expense

41. The 2007 depreciation expenses for electric and gas distribution, and electric generation will be \$596.8 million, \$209.4 million, and \$135.4 million, respectively, for a

total of \$941.6 million. The depreciation parameters resulting from DRA's position on electric, gas, and common plant depreciation (see Ex. DRA-16, p.16-2 to 16-3; Ex. DRA-16, p.16-11 to 16-12, Table 16-2) will be used, with the exceptions as shown in Appendix D.

42. **Fossil Decommissioning Refund:** PG&E will refund in adopted rates \$26.812 million per year in fossil decommissioning funds from 2007 through 2010. In the next GRC, PG&E will present an estimate of its future fossil decommissioning needs and true up the fossil decommissioning reserve at that time.

Rate Base

43. Recorded 2004 plant will be used as a starting point for calculating test year 2007 rate base. Residual common plant and depreciation reserve will be allocated using the allocation method presented in Ex. PG&E-2, pp. 8-8 to 8-10. The rate base for 2007 is \$12.6 billion. The weighted average Nuclear Fuel Inventory of \$221.9 million will be removed from electric generation rate base. The appropriate recorded carrying costs will be collected through the Energy Resources Recovery Account (ERRA) at the short term interest rate.

Other Operating Revenues

44. CPUC-jurisdictional Other Operating Revenues will be \$80.1 million for electric distribution, \$26.0 million for gas distribution and \$10.1 million for electric generation. (This compares to the \$79.1 million electric distribution, \$26.0 million for gas distribution and \$9.7 million for electric generation in PG&E's position in the Comparison Exhibit, pp. 2-3, 2-14 and 2-25.) The increase for electric distribution reflects the agreement on the non-sufficient funds fee and reconnection fee rates described above.

2011 Test Year GRC

45. PG&E's next GRC will be deferred until test year 2011 and a provision will be made for an attrition adjustment for 2010.

Attrition

46. **Attrition Authorized for Implementation by Advice Letter:** The attrition relief for 2008, 2009, and 2010 will be authorized in this GRC, and will be implemented by advice letter.

47. **Attrition Mechanism:** The attrition adjustment for base revenues for 2008 will be \$125 million. The attrition adjustment for 2009 will be \$125 million, plus a one-time additional amount of \$35 million for a second refueling outage at Diablo Canyon Power Plant anticipated in 2009, for a total of \$160 million. If a second refueling is not performed in 2009, then the \$35 million will be refunded in 2010. The attrition adjustment for 2010 will be \$125 million, less the one-time additional amount of \$35 million from 2009, for a total of \$90 million. If the anticipated 2009 second refueling outage is delayed until 2010, an additional \$35 million will be provided in 2010, which will be refunded in the event the refueling does not take place.

Other Settlement Items

48. **MOU between DIRA and PG&E:** The Memorandum of Understanding (MOU) between Disability Rights Advocates (DIRA) and PG&E, submitted jointly by DIRA and PG&E as Exhibit PG&E-71, is reasonable and should be approved by the Commission, provided, however, that if the upcoming rate case cycle is extended through 2010 (as provided for in paragraph 45) then DIRA and PG&E shall negotiate conforming changes to the MOU which had been designed to last only through 2009. The costs set forth in paragraphs 6.7 and 7.4 of the MOU are included in the amounts set forth in this Settlement.

49. **Removal of Idle Facilities Investigation:** Modesto ID and PG&E agree to negotiate, in good faith, possible revisions to the existing Removal of Idle Facilities Agreement, which may include a possible extension to that agreement. Accordingly, Modesto ID withdraws its request that the Commission commence an investigation into PG&E's compliance with the terms and conditions of that agreement. To the extent Modesto ID and PG&E are unable to reach agreement on revisions to the agreement, Modesto ID reserves its right to seek an investigation, or file a complaint, regarding PG&E's compliance with the terms and conditions of such agreement in a different proceeding at such time.

50. **Schedule E-31 Investigation:** In acknowledgement of the requirement in Public Utilities Code Section 454.1 that the Commission review and report on PG&E's Schedule E-31, Merced ID and Modesto ID withdraw their request in this proceeding that the Commission commence an investigation of PG&E's implementation of Schedule E-31. Merced ID and Modesto ID reserve their right to seek such an investigation, or file a complaint, in a different proceeding at a later date.

51. **AMI:** The costs and benefits associated with Advanced Metering Initiative (AMI) are to be addressed through balancing accounts that will continue until at least 2010. (D.06-07-027, pp. 46-47.) Because AMI will not be fully deployed until 2011, the Commission has directed PG&E to evaluate continuing these balancing accounts through the 2010-2012 GRC cycle and to submit testimony to that effect in PG&E's 2010 GRC. (D.06-07-027, p. 46.) The testimony will be submitted in PG&E's 2011 GRC. The only area where PG&E presented costs in both this GRC and the AMI proceeding was Information Technology (IT). PG&E removed the duplicative IT costs from its GRC request, as shown in Appendix G of the Comparison Exhibit. (Ex. PG&E-79, p.1-3, L: 13-27 and pp. G-1 to G-15.)

52. **Cost of Capital Proceedings:** Outcomes in future Cost of Capital proceedings could affect PG&E's revenue requirement. The resulting revenue requirements from these proceedings will be calculated using the adopted 2007 rate base amounts.

53. **O&M Labor Factors:** O&M labor factors will be calculated from 2004 recorded adjusted O&M labor. The factors are shown in Appendix F.

54. **Other Balancing Accounts:** PG&E may transfer the balances in the Electric and Gas Credit Facilities Fees Tracking Accounts (the ECFFTA and GCFFTA) to the electric Distribution Revenue Adjustment Mechanism (DRAM), the Utility Generation Balancing Account (UGBA), the gas Core Fixed Cost Account (CFCA) and the Noncore Customer Class Charge Account (NCA) for recovery from customers.

55. **Results of Operations Model:** PG&E will work with DRA to continue to streamline and improve the results of operations model for the next GRC.

56. **Earnings Sharing Mechanism:** PG&E will withdraw, and the Commission will not adopt, the earnings sharing mechanism set forth in Exhibit PG&E-10, Chapter 6. DRA will withdraw, and the Commission will not adopt, DRA's alternative to PG&E's earnings sharing mechanism set forth in Exhibit DRA-18.

57. **Performance Incentive Mechanism:** PG&E will withdraw, and the Commission will not adopt, the Performance Incentives set forth in Exhibit PG&E-11. No further proceedings on this topic will take place in this docket.

Commissioner Timothy Alan Simon, concurring on 40a:

In voting to approve today's decision, I applaud the Settlement Agreement between the Division of Ratepayer Advocates (DRA) and Pacific Gas & Electric Company (PG&E) et. al ¹. I recognize that it is the result of a dedicated effort and it will provide significant benefits to consumers.

Although not part of today's decision, I also want to note my support for the ratemaking treatment The Utility Reform Network (TURN) advocated regarding customer deposits. I believe it has considerable merit. In future general rate cases I intend to pay close attention to how the CPUC's ratemaking policy in this area may impact low-income customers.

In particular, while understanding that customers of higher rate paying risk are required to indemnify that risk because their credit rating and income, I do have serious concerns about this approved practice². This long held practice may be potentially predatory and arguably antiquated. As a regulatory body, we should avoid practices that penalize the poor and accordingly should review these approved practices with scrutiny. To the extent that customers are making a capital contribution through this deposit process, they should be treated on par with other sources of capital—including, but not limited to, the investment banking and commercial banking community.

However, I also believe this area of concern presents opportunities. For example, I encourage PG&E to look at this class of rate paying customers as potential participants in programs offering education and training in financial literacy and energy efficiency. This has the potential of being a mechanism that can help people come out of a cycle of poverty enabled by the practice of having to make a capital contribution as a condition precedent to receiving a necessity. Given the opportunities that modern financial technology provides, I encourage PG&E to seek innovative solutions to develop savings products for low income

¹ The Settlement Agreement Among Pacific Gas and Electric Company, Division of Ratepayer Advocates, the Modesto Irrigation District, The Merced Irrigation District, The South San Joaquin Communities Association, The Western Manufactured Housing Communities Association, The Disability Rights Advocates, The California Farm Bureau Association, Southern California Edison, The Southern California Gas Company, San Diego Gas and Electric Company, The Coalition of California Utility Employees. customers by collateralizing customer deposits and/or direct debits to savings accounts. With these opportunities in mind, I cite for example the Treasurer of San Francisco, Jose Cisneros, who has worked with financial institutions to create deposit products for low income customers to reduce dependency on predatory services like check cashing. I encourage PG&E to follow suit and turn this practice to benefit the customers they serve.

Finally, while recognizing that PG&E has already been engaged in the Commission's diversity efforts, I want to highlight my belief in the importance of PG&E's commitment to achieving greater diversity goals, as contained in an agreement in principle between the Greenlining Institute and PG&E. These goals include the area of Supplier Diversity, Management Diversity, and Philanthropy. In the Supplier Diversity area, PG&E has announced in its agreement with Greenlining a good faith attempt to meet the following goals:

- minority-contract goal of 20% by 2010 or earlier and
- aspirational goal of 27% minority contracts by 2015, if not better.

In connection with the area of customer deposits, I envision one area that PG&E could explore as the management of such deposits by minority-owned financial institutions. I see this agreement between The Greenling Institute and PG&E to be a critical step in improving diversity opportunities for minorities, women, and the disabled veterans entities.

I. INTRODUCTION

These proceedings examine the appropriate rate levels for Central Vermont Public Service Corporation ("CVPS" or "Company"), our state's largest electric utility, both for the last twelve months, and on a prospective basis. The Vermont Department of Public Service ("Department" or "DPS"), the agency responsible for representing the interests of the people of the state, asks us to reduce CVPS's rates by 6 percent, retroactive to April 7, 2004, and by 7.16 percent, effective April 1, 2005.¹ CVPS has presented evidence that it argues supports the need for a 0.3 percent rate increase during the period from April 7, 2004, through April 6, 2005, (although CVPS does not request that we modify its rates for this period) and a 2.9 percent increase commencing April 1, 2005. AARP has no specific recommendation on rates.

In today's Order, the Vermont Public Service Board ("Board") finds that CVPS does not have a revenue deficiency. Instead, we conclude that CVPS's present rates are higher than is just and reasonable, and must be reduced (although by considerably less than advocated by the Department). Accordingly, we direct that CVPS return to ratepayers the amount by which its rates were excessive (approximately 1.25 percent), for the period April 7, 2004, through April 6, 2005, and reduce its rates by approximately 1.88 percent (relative to the rate levels in existence today) commencing April 1, 2005.² For the past period, this will mean that CVPS must provide its customers with refunds of the difference between the rates we set and those now in effect.

The rate reductions we find just and reasonable today present a sharp contrast to the large rate increases occurring in other states in New England. Several factors contribute to the rate decreases. First, CVPS had substantial overearnings in 2001, 2002, and 2003, which, pursuant to CVPS's previous agreement, are returned to ratepayers starting in these cases. Second, in 2002, the Board approved the sale of the Vermont Yankee Nuclear Generating Station ("Vermont Yankee") to Entergy Nuclear Vermont Yankee. The terms of the sale had the effect of reducing CVPS's costs noticeably. Third, CVPS has been able to take advantage of higher market prices

1. The two periods overlap by six days. Thus, the rates that we review for the first period, although set on a full-year basis, will be displaced on April 1, 2005.

2. In this Order, we refer to the twelve months commencing April 1, 2004, as Rate Year 1 and the second twelve-month period as Rate Year 2. We will require CVPS to calculate the precise rate changes based upon the rulings in this Order and submit a compliance filing showing the results.

to sell excess power (including power saved due to energy efficiency measures) on favorable terms. Fourth, CVPS's capital costs have declined, largely because of lower interest rates, but also due to investors' perception that the sale of Vermont Yankee reduced risks. Finally, Vermont's decision not to pursue electric retail choice has allowed us to avoid some of the cost effects of higher wholesale market prices and the risk premium demanded by investors because of uncertainties about retail choice.

This proceeding is in fact two separate rate investigations — covering two sequential periods. The first case, Docket 6946, has its origins in the sale of Vermont Yankee, of which CVPS owned 35 percent, and an associated Power Purchase Agreement.³ At the time we approved the sale of Vermont Yankee in 2002, we were concerned that the benefits of the sale might not flow through to ratepayers. We found that, in addition to the proceeds of the sale, one benefit of the sale would be the reduced power costs from Vermont Yankee beginning in 2004. This was due to the fact that the prices in the Power Purchase Agreement were below the cost of that power if CVPS had retained ownership. Our Order, therefore, directed CVPS and Green Mountain Power Corporation ("GMP") to file cost-of-service studies in April 2003.⁴

After the filing of those studies, CVPS and the Department entered into a settlement agreement which we reviewed in Docket 6866. On January 27, 2004, we approved the settlement, but only if CVPS and the Department affirmatively agreed to a series of conditions. CVPS asked us to reconsider that decision, stating that without changes, CVPS did not believe it could reasonably accept the conditions. Prior to our ruling on reconsideration, the Department filed a letter stating that a further modification of the settlement agreement would not be feasible or appropriate and asking us to immediately open this investigation. Accordingly, on April 7, 2004, we opened Docket 6946 pursuant to 30 V.S.A. § 227(b). The rates we now establish in Docket 6946 cover the twelve months ending March 31, 2005, and will be retroactive to April 1, 2004, the start of that investigation. On July 15, 2004, CVPS filed a proposal to increase rates by

3. Docket 6545, Order of 6/13/02 at 13.

4. Docket 6545, Order of 6/13/02 at 135–136.

5.01 percent; we opened Docket 6988 to consider that proposed rate increase.⁵ Our decision in that docket will apply prospectively, taking effect on April 1, 2005.

This Order addresses both proceedings. As noted, we find that CVPS must reduce its rates in both Rate Year 1 and Rate Year 2. There are many individual rulings, described below, that explain the differences between CVPS's position and what we find just and reasonable after consideration of the evidence. The largest single issue, however, relates not to costs that CVPS incurred in Rate Year 1 or will incur in Rate Year 2, but rather to accounting for CVPS's overearnings during 2001, 2002, and 2003. In 2001, CVPS and the Department had agreed to a Memorandum of Understanding resolving two CVPS rate increase requests. As part of that agreement, CVPS agreed that it would book for future return to ratepayers all earnings in excess of an 11 percent return on equity. CVPS booked some excess earnings in 2002 and 2003. The Department contests the calculation methodology CVPS employed and asserts that CVPS had overearnings in all three years — with a total more than \$14 million in excess of CVPS's calculation (before adding carrying costs). We find here that the Department's proposal is consistent with our approval of the MOU and is reasonable. Due to the magnitude of the recalculation of overearnings, we will allow CVPS to amortize the return to ratepayers over four years.

CVPS also raised a broad challenge to the Department's approach to these proceedings, arguing that a significant portion of the Department's proposed cost-of-service reductions are not based upon the application of traditional ratemaking policies. CVPS characterizes the Department position as advocating a "new regulatory paradigm" which "creates substantial uncertainty as to the predictability of the Vermont ratemaking system."⁶ Our review of the record does not lead us to the same conclusion. The number and extent of these new proposals is much less than the Company's claim of a "new regulatory paradigm" would suggest, although the Department has advocated some adjustments that it had not previously recommended. Most of the Department's proposals are consistent with positions it has advocated for many years in many

5. During the course of this proceeding, CVPS has reduced the amount of the rate increase that it seeks, so that the request is now for an increase of 2.9 percent. See CVPS Reply Brief at 14.

6. CVPS Brief at 3.

cases involving Vermont utilities. CVPS's assertion that they represent changes may stem from the fact that this is the first fully litigated rate case for CVPS in more than 10 years.⁷

For the adjustments that the Department had not sought in prior cases, we have evaluated each of these on its own merits, applying the regulatory principles that we typically use. For reasons that we explain below, we have not adopted some of these proposals, not because they are new, but because the adjustments are inconsistent with our fundamental ratemaking standards. We have accepted other "new" adjustments, based upon our conclusion that, based on the evidence and the law, the change was necessary to produce just and reasonable rates. This is consistent with basic principles of administrative law that we may need to modify past rulings when necessary to set just and reasonable rates — a policy routinely followed by American courts and commissions and which we explained in detail in a CVPS rate proceeding nearly 18 years ago.⁸

Moreover, we find that in numerous instances, such as proposed plant additions, it is CVPS (rather than the Department) that seeks changes to the standards we have previously enunciated. Indeed, CVPS made arguments here concerning the application of the known and measurable standard to plant additions that we rejected in CVPS's last fully-litigated rate cases in 1994. Similarly, CVPS sought to update its filing even though we ruled in the 1994 cases that such updates were impermissible.

We have also considered the Company's financial stability. In fact, our rulings reflect the fundamental financial health of the Company in recent years, and clear record evidence that such health is likely to continue.

Finally, today's Order addresses the concerns we expressed in our January 27, 2004, Order in Docket 6866 that CVPS has a large amount of deferred costs. CVPS will begin amortizing these costs April 1, 2004, so that by early 2007, the deferrals will have been fully

7. We issued our final order in the last fully litigated cases, Dockets 5701/5724, on October 31, 1994. Since that time, CVPS has had other rate increase requests, which were either settled or closed. Tr. 1/11/05 at 86 (Frankiewicz). See, e.g., Dockets 6120/6460, Order of 6/26/01; Dockets 6018/6120, Order of 3/2/01; Docket 5863, Order of 4/30/96.

8. *Tariff Filing of Central Vermont Public Service Corporation*, Docket 5132, Order of 7/31/87 at 31–35.

recovered. Even with these amortizations, we find that a small rate decrease is appropriate in both rate years.

II. POSITIONS OF THE PARTIES AND CONCERNS OF THE GENERAL PUBLIC

This section describes the parties' overall rate recommendations. The parties' positions on individual issues are discussed in the sections of this Order related to those issues.

Central Vermont Public Service Corporation

CVPS argues that a rate reduction for Rate Year 1 is not justified because it has an alleged revenue deficiency of \$0.881 million, or 0.3 percent. CVPS originally filed for an increase of 5.0 percent in rates, and now asserts that the record supports a rate increase of \$7.655 million, or 2.9 percent, in Rate Year 2. These positions take into account the Company's agreement with the DPS on power cost issues,⁹ and the reduction of regulatory asset amortizations by application of the \$3.8 million in deferred 2004 earnings.¹⁰ CVPS argues that its return on equity should be 11.0 percent.

Vermont Department of Public Service

The DPS argues that the Board should reduce CVPS's rates for Rate Year 1 by 6 percent, and order refunds in the amount of \$15.818 million. The DPS asserts that the Board should reduce CVPS's rates for Rate Year 2 by 7.16 percent (a reduction of \$18.858 million from CVPS's claimed cost of service). However, the DPS states that these amounts should be adjusted to reflect its power cost agreement with CVPS, its revised recommendation regarding incentive compensation,¹¹ and perhaps for the disallowance of unsupported plant costs.¹² The DPS argues that CVPS's return on equity should be 8.75 percent.

9. The agreement between CVPS and the DPS regarding power cost issues is addressed in Section VI.A, below.

10. CVPS's deferral of \$3.8 million in 2004 earnings is described on page 108, below.

11. The DPS's revised recommendation on incentive compensation is discussed in Section VI.E.2, below.

12. The DPS's recommendation regarding plant costs is discussed in Section V.A, below.

AARP

AARP did not provide a specific cost-of-service calculation for either rate year. Instead, AARP supports the recommendations of the DPS, except that AARP recommends a return on equity of 10.0 percent, an amortization period of 6 years for deferred debits, and that no costs associated with, or resulting from, the sale of Connecticut Valley Electric Company be charged to ratepayers.

Members of the General Public

In addition to hearing from formal parties in Dockets 6946 and 6988, we held a public hearing in both dockets on September 14, 2004, at eight locations in or close to CVPS's service territory via the Vermont Interactive Television Network. The purpose of the public hearing was to gather information from, and the opinions of, the public at large.¹³ Three members of the public spoke in support of a rate decrease for Rate Year 1, or against a rate increase in Rate Year 2. For example, one citizen stated in response to a recent bill insert he received from CVPS (which stated that absent a rate inquiry initiated by the Board, and the threat of a rate decrease, CVPS would not have sought an increase):

The disingenuousness of this position is beyond belief or comprehension. CV has stated in so many words that there is no actual need for a rate increase at this time. I don't know whether this is intended as leverage against a decrease or an attempt to shift blame for higher electrical rates in the public's eye to the Board. It is, however, a statement by CVPS that there is no immediate need for an increase, and I for one do not wish to be burdened with an elective rate increase . . .¹⁴

No members of the public at the public hearing opposed a rate decrease for Rate Year 1, nor did any support a rate increase in Rate Year 2. The Board also received some letters from the general public, largely in opposition to CVPS's requested rate increase for Rate Year 2.

13. Under Vermont law, our decision must be based upon the evidence presented by formal parties during the evidentiary hearings. However, Title 30 also provides for public (non-evidentiary) hearings; public comments play an important role by raising new issues or offering perspectives that we should consider.

14. Tr. 9/14/05 at 12-13 (French).

III. EARNINGS CAP

Dockets 6120 and 6460 were investigations into rate increases requested by CVPS. On June 26, 2001, the Board issued an order in those dockets approving a Memorandum of Understanding between CVPS and the DPS ("2001 MOU"). This settlement agreement recommended a rate increase for CVPS, and required ratepayers to pay rates that provided for full recovery of the costs of CVPS's purchases of power from Hydro-Québec pursuant to the contract between Hydro-Québec and the Vermont Joint Owners, despite CVPS's imprudent decision to commit to that contract and the fact that the power was not economically used and useful. In other words, pursuant to the 2001 MOU, CVPS was allowed to recover costs from ratepayers that would not have been allowed if the Board had based its decision in those cases on traditional cost-of-service methodologies.¹⁵ The 2001 MOU also provided ratepayers with several benefits including, among others, CVPS's write-down of \$9 million in regulatory assets, and a cap on CVPS's earnings in 2001, 2002, and 2003.¹⁶

The specific language in the 2001 MOU regarding this earnings cap is at the heart of one of the key issues in the proceedings before us today. The MOU does not specify an exact calculation methodology for implementing the earnings cap provisions of the 2001 MOU. CVPS and the DPS have proposed significantly different calculation methodologies. The different calculation methodologies lead to very different amounts of overearnings in 2001, 2002, and 2003. According to CVPS, using its recommended methodology, the Company's total overearnings over the three-year period the earnings cap was in effect were \$3,156,050;¹⁷ CVPS has proposed to return this amount, plus carrying costs, to ratepayers in the instant proceedings. According to the DPS, using its recommended methodology, CVPS's total overearnings over the three-year period the earnings cap was in effect were \$17,385,000;¹⁸ the DPS argues that, in these proceedings, we should order the return of this amount, plus carrying costs, to ratepayers. The difference between the two amounts is \$14,228,950.

15. Dockets 6120/6460, Order of 6/26/05 at 4–5.

16. Dockets 6120/6460, Order of 6/26/05 at 3.

17. Gibson reb. pf. 11/19/04 at 5.

18. Schultz sup. pf. at 4.

Findings

1. Paragraph 29 of the 2001 MOU states: "The Company's allowed rate of return on common equity shall be 11.00%." Dockets 6120/6460, Order of 6/26/01 at appendices page xxi.

2. Paragraph 30 of the 2001 MOU states:

To the extent that CVPS's calendar year earned return on equity on its Vermont jurisdictional electricity utility operations in 2001 exceeds 11.0%, the dollar amount of such excess shall be applied (a) to reduce regulatory asset accounts as specified by the DPS and approved by the Board at the time of any such excess, or (b) as otherwise agreed by CVPS and the DPS. Any such dollar amount of excess in 2002 and 2003 over CVPS's allowed return on equity in effect in such calendar year also shall be credited as provided herein, unless a superseding approved agreement or order on rates shall have earlier become effective.

Dockets 6120/6460, Order of 6/26/01 at appendices page xxi.

3. CVPS has recorded the following amounts as regulatory liabilities associated with the 2001 MOU's earnings cap:

- 2001 — \$0
- 2002 — \$680,874
- 2003 — \$2,475,176

Gibson reb. pf. 11/19/04 at 5.

4. CVPS received an accounting order from the Board dated April 4, 2003, authorizing the Company to defer the \$680,874 in 2002 overearnings shown in finding 3, above. This accounting order included the following paragraph:

3. This Order is limited to the accounting treatment for the subject dollar amount and does not bar any party from contesting or the Board from determining or modifying the subject dollar amount, in whole or in part, in any rate proceeding in which the subject dollar amount is reflected in cost of service.

Accounting Order of April 4, 2003.

5. CVPS's proposed calculation methodology starts with the Company's consolidated net income and common stock equity. It then reduces both items by the net income and common stock equity of its non-regulated subsidiaries and its New Hampshire utility subsidiary. The resulting net income is compared to the resulting common stock equity to arrive at the return on

equity for CVPS's Vermont jurisdictional electric utility operations. Schultz and DeRonne pf. at 33.

6. The DPS's proposed calculation methodology calculates the revenue requirement for the year of determination using actual information in the same format and manner that is routinely used for setting rates. The only adjustments to actual amounts are for standard accepted regulatory adjustments or adjustments to remove costs that are not to be included in regulatory cost of service. Schultz and DeRonne pf. at 33–34.

7. Using the DPS's proposed calculation methodology results in significantly higher overearnings than using CVPS's proposed calculation methodology. Specifically, the DPS's proposed calculation methodology results in overearnings of:

- 2001 — \$4,607,000
- 2002 — \$6,115,000
- 2003 — \$6,663,000

Schultz sup. pf. at 4.

8. Using the DPS's calculation methodology does not always result in higher overearnings than using CVPS's calculation methodology. The result is company-specific. For example, when the DPS applied its methodology to GMP in 2004, the DPS's calculation methodology resulted in underearnings, while a methodology similar to that proposed by CVPS resulted in overearnings. Tr. 1/13/05 at 16–18 (Schultz).

9. Two factors that can lead to differences in the results of the two proposed methodologies are: (1) below-the-line expenses and revenues; and (2) the amount of cash and temporary investments. Tr. 1/13/05 at 17–18 (Schultz).

10. CVPS had significant temporary cash investments during 2001, 2002, and 2003. The value of these temporary cash investments was:

- \$38,885,892 as of January 1, 2001;
- \$32,929,809 as of January 1, 2002;
- \$21,190,246 as of January 1, 2003;
- \$41,300,087 as of December 31, 2003.

Exh. CVPS-11 at 110; exh. CVPS-12 at 110; exh. CVPS-13 at 110.

11. CVPS's calculation included an 11 percent return on equity on the Company's temporary cash investments. These amounts are not being used to provide service to Vermont ratepayers; therefore, ratepayers should not be providing an 11 percent return on these investments. Tr. 11/4/04 at 94–95 (Schultz).

12. CVPS's calculation method included an 11 percent return on items that are normally excluded from ratemaking. For example, account 426 is always excluded for ratemaking purposes.¹⁹ In 2001, that account included the \$9 million write-off of deferred accounts that was committed to by CVPS in the 2001 MOU. CVPS's method would allow the Company to earn a return on this write-off. Schultz and DeRonne reb. pf. at 31; tr. 11/4/04 at 95 (Schultz).

13. The DPS's calculation method is based on the methodology used in setting rates.²⁰ Schultz sup. pf. at 5.

14. The purpose of an overearnings calculation is to reflect how the actual period results compare to the actual revenues that were collected. Actual results should not be replaced with estimates, even for those items for which the Board traditionally uses multi-year averages when setting rates. Schultz sup. pf. at 2.

15. If the Board orders CVPS to use a different methodology to recalculate its overearnings for 2001, 2002, and 2003, CVPS will not be required to restate its earnings for those years. Tr. 1/12/05 at 159 (Gibson).

Discussion

The dispute between the DPS and CVPS related to the 2001 MOU's earnings cap centers on Paragraphs 29 and 30 of the 2001 MOU. The issue before the Board is, given the language of the 2001 MOU, what overearnings calculation methodology should be used to calculate CVPS's overearnings in 2001, 2002, and 2003. The DPS recommends that we calculate CVPS's overearnings in the same way that we establish rates. CVPS recommends that we calculate its

19. Account 426 is composed of expenses that are not to be included in a cost-of-service filing. Tr. 1/12/05 at 17 (Gibson).

20. However, in a few specific instances, as noted in the discussion below, we find the DPS's methodology to be different from the cost-of-service methodology that we typically apply when setting rates. We have not accepted those specific elements in the DPS's methodology.

overearnings using information from its required filings with the Securities and Exchange Commission.

We have carefully reviewed the specific language of the 2001 MOU and the Board's Order approving it, and considered all the arguments made by the parties. We conclude that the DPS's cost-of-service-based calculation methodology should be used, and we require CVPS to use this methodology to recalculate its overearnings for 2001, 2002, and 2003, as part of its compliance filing in these proceedings. However, as explained in more detail below, when CVPS recalculates its overearnings, it should:

- remove 100 percent of transmission revenues before applying the wholesale allocation factor;
- include the portion of Construction Work In Progress on which it does not accrue an allowance for funds used during construction;
- treat all of its regulated affiliates above-the-line; and
- reflect our decisions in this Order regarding Distributed Utility Planning Demand-Side Management, and the 2002 Vermont Yankee Mid-Cycle Outage.²¹

This decision is a direct application of the terms of the 2001 MOU and the Board Order approving it, and is not a modification of either one. Paragraph 30 of the 2001 MOU requires CVPS to return its 2001, 2002, and 2003 overearnings to ratepayers; our decision today implements that paragraph. As discussed further below, the earnings cap provisions in the 2001 MOU use the language of traditional ratemaking practice. After reviewing this language, we conclude that the 2001 MOU does not specify an exact methodology for calculating CVPS's overearnings, but that the methodology for calculating overearnings must be consistent with traditional ratemaking practice.

One of the fundamental principles of traditional ratemaking is that ratepayers should not be required to pay for, or provide a return on, investments that do not serve them. The DPS's methodology is consistent with this principle, while CVPS's equity-based methodology is not.²² CVPS's methodology would require ratepayers to provide a return on items that are traditionally

21. These decisions increase CVPS's expenses in 2001, 2002, and 2003, and decrease CVPS's deferral accounts.

22. The DPS's proposal does not result in unjust and unreasonable rates that would deny CVPS a reasonable opportunity to recover its allowed return, in violation of 30 V.S.A. § 218, as CVPS contends. Rather, it provides CVPS a reasonable opportunity to recover its allowed return on investments that serve ratepayers.

excluded from rates, including millions of dollars of unused cash and the \$9 million writeoff that CVPS agreed to make as part of the 2001 MOU.²³ If we were to require ratepayers to provide a return on such items, we would be denying ratepayers one of the benefits they received from the 2001 MOU — the assurance that CVPS would return to ratepayers any earnings above its allowed return on equity. We consider that benefit to be particularly significant because other provisions of the 2001 MOU resulted in ratepayers paying for costs that would not have been included in rates if the Board had set CVPS's rates using traditional cost-of-service methodologies.²⁴

Our conclusion is that under the terms of the 2001 MOU CVPS must calculate its overearnings using a method that is consistent with traditional ratemaking practice. This is also consistent with the testimony of the Company's Chief Financial Officer at the time the Board was considering whether to approve the 2001 MOU. Mr. Boyle testified that the 2001 MOU "would not require that customers pay rates that are in excess of what should be due under cost of service ratemaking doctrines."²⁵ CVPS asserts that this testimony was provided in the context of arguing against the imposition of a protection against unjust enrichment, not in the context of the methodology for calculating overearnings.²⁶ However, Mr. Boyle's point that the MOU was adequate protection clearly rests on the comparison to traditional ratemaking. We accept this "traditional ratemaking" characterization of the 2001 MOU, and conclude that the 2001 MOU earnings cap provisions should be applied in a manner that ensures that ratepayers do not pay more during the 2001–2003 time period than they would have under cost-of-service ratemaking.

23. See, findings 11 and 12, above. CVPS argues that its rates are subject to a presumption of reasonableness, and that the DPS has not provided evidence or a compelling basis to overcome this presumption with respect to the implementation of the earnings cap. We disagree; the DPS has shown that CVPS's methodology would reduce overearnings by requiring ratepayers to pay a return on items that do not provide service to them. That would be unreasonable.

In addition, the DPS's proposed calculation methodology would not cause CVPS to write off \$9 million twice, as CVPS asserts. Rather, the DPS's proposed methodology would ensure that ratepayers are not required to pay a return on the single \$9 million writeoff that CVPS agreed to make.

24. Adoption of the DPS's recommendation would not deny CVPS benefits it received under the 2001 MOU, as CVPS argues. The Company still has the opportunity to earn an 11 percent return on investments that serve ratepayers, and CVPS is in a financially stronger and more stable position today than it was when the 2001 MOU was signed. See, findings 283 and 292, below, for more information regarding CVPS's improved financial situation.

25. Tr. 1/12/05 at 24 (Gibson).

26. CVPS Reply Brief at 141–142.

The DPS's recommended cost-of-service-based methodology would ensure this, while CVPS's proposed equity-based methodology would not.

Thus, we conclude that the language of the 2001 MOU and our Order approving that agreement require us to accept the DPS's proposed calculation methodology. However, we do understand that CVPS may have had some reason to believe that its recommended methodology is consistent with prior Board practice.²⁷ The last time the Company was subject to an earnings cap,²⁸ the Board accepted the results of an overearnings calculation methodology substantially similar to the one the Company has proposed using in the instant proceedings.²⁹ The DPS challenged CVPS's calculation methodology in the 1994 proceedings, arguing that the calculation of earnings should be consistent with ratemaking,³⁰ but the Board rejected the DPS's proposed adjustment because of an evidentiary failure.³¹ Even though the Board did not rule on the merits of either CVPS's or the DPS's methodology in the 1994 proceedings,³² given the Board's decision in those cases, we do not find it unreasonable for CVPS to have thought its calculation methodology might be acceptable to the Board in its current proposed application.

In recognition of this situation, we have decided it is appropriate to extend the period over which CVPS will return its 2001–2003 overearnings to ratepayers. CVPS had originally proposed a three-year amortization period. We conclude that a four-year amortization period is more appropriate. This will reduce the immediate impact on the Company's earnings and cash

27. CVPS Reply Brief at 141.

28. CVPS was subject to an earnings cap in 1993 as the result of a settlement agreement that it entered into with the DPS in Docket 5651. The earnings cap provision from that settlement agreement stated:

2(c). Central Vermont agrees to an effective Return on Equity ("ROE") applicable to its Vermont retail business to 12.0% and to credit to accrued [Demand-Side Management] costs any and all amounts earned in excess of that 12.0% ROE during 1993.

Exh. CVPS-43 at 2.

29. The sole difference is that the last time, CVPS included its CV Realty subsidiary in its calculation while in the instant dockets, the same subsidiary is excluded. Exh. CVPS-44 at 5–6 (Henkes pf. 5/27/94, pages numbered 33–34). CV Realty is CVPS's smallest subsidiary, with a 13-month average common equity investment of \$283,869, and net income of \$2,938 in 2003. Exh. CVPS-JHG-18 at 4.

30. Exh. CVPS-48 at 5 (Henkes sur. pf. 8/5/94, page numbered 19).

31. Dockets 5701/5724, Order of 10/31/94 at 91.

32. In fact, the Board expressly held the issue open by stating that it would not make the DPS's proposed adjustment "at this time." Dockets 5701/5724, Order of 10/31/94 at 91.

flow, while at the same time, ensuring that ratepayers will ultimately recover all the funds owed to them.

Appropriate Calculation Methodology

To decide upon an appropriate calculation methodology, we start with an analysis of the 2001 MOU and the Board's Order approving it. We conclude that the DPS's proposal, rather than CVPS's is appropriate, based on two related, fundamental considerations:

- (1) the meaning of the 2001 MOU's language; and
- (2) consistency with traditional ratemaking practice.

We address each of these considerations below.

Language of the 2001 MOU

Both CVPS and the DPS point to several key phrases in Paragraphs 29 and 30 of the 2001 MOU that they argue support their interpretations. The cited phrases include "allowed return on equity," "Vermont jurisdictional electricity utility operations," and "return on common equity." All of these phrases are commonly used in traditional ratemaking practice and form part of the basis for our conclusion that the language of the 2001 MOU requires us to approve an overearnings calculation methodology that is consistent with traditional ratemaking principles.

For example, the phrase "allowed return on equity" is very commonly used when setting rates. Each time the Board sets rates, it must decide the affected company's allowed return on equity.³³ In the context of the 2001 MOU, we find that the term indicates, as the DPS asserts, that the calculation must separate items on which the Company does not have an allowed return from those on which it does (in other words, separate those items serving ratepayers from those that do not).

Similarly, the concept behind "Vermont jurisdictional electricity utility operations" underlies much of our traditional ratemaking practice. When we set rates, we determine what costs are within our jurisdiction, and what costs are appropriately part of a company's utility

33. As noted below, the Board uses the terms allowed return on equity and allowed return on common equity interchangeably.

operations, and therefore recoverable from ratepayers. In the context of the 2001 MOU, we conclude that "Vermont jurisdictional electricity utility operations" do not include items that are normally excluded from ratemaking. Such items are generally excluded for one of three reasons:

- (1) they are not within the Board's jurisdiction (for example, costs incurred by CVPS's unregulated subsidiaries); or
- (2) they are within the Board's jurisdiction, but are not being used to serve ratepayers (for example, unused cash); or
- (3) they are within the Board's jurisdiction, but are not appropriate for recovery from ratepayers (for example, imprudently-incurred costs).

If something is not within the Board's jurisdiction, it is, by definition, not part of "Vermont jurisdictional electricity utility operations." And, it is consistent with the purpose of the earnings cap provision of the 2001 MOU (to return to ratepayers any earnings above CVPS's allowed return on equity) for items that are not being used to serve ratepayers or are otherwise not appropriate for recovery from ratepayers to be excluded from "Vermont jurisdictional electricity utility operations"; stated another way, it would be illogical to interpret the earnings cap provision as requiring ratepayers to provide a return on items for which it is inappropriate for them to pay.

CVPS asserts that "return on common equity" is not commonly used in Vermont in the context of a cost-of-service analysis; the Company argues the phrase "return on equity" or "ROE" is typically used instead.³⁴ This assertion is incorrect. Contrary to CVPS's arguments, "return on common equity" is a phrase that is often used in traditional ratemaking practice in Vermont. The Board has consistently used "return on common equity" and "return on equity" interchangeably in

34. CVPS cites *Petition of Green Mountain Power Corporation re Increased Rates*, 131 Vt. 284 (1973) in support of its position, arguing that this case shows that the Vermont Supreme Court distinguishes between "return on equity" and "return on common equity." In this decision, the Vermont Supreme Court refers often to GMP's "return on equity" and the phrase "common equity" is used only in two tables regarding CVPS's capital structure. However, the rate shown for GMP's common equity in the capital structure tables is the same as the rate later referred to by the Court as GMP's "return on equity." See the charts on page 295, and the text on pages 298–300. Thus, while this case is an example of the Vermont Supreme Court using the term "return on equity" in a cost-of-service context, the case provides no indication that the Vermont Supreme Court considers the two terms to be different. On the contrary, it appears to indicate that the terms can be used interchangeably.

the context of cost-of-service analyses across industries during the last 15 years.³⁵ In fact, to be precise, when we set a return on equity, we actually mean return on common equity, since that is the only class of stock for which we set a return. We do not, for example, set a return on preferred stock, even though that is also equity. Even the 2001 MOU, itself, uses the two terms interchangeably — Paragraph 29 quantifies CVPS's "allowed rate of return on common equity" while Paragraph 30 refers to an "allowed return on equity." If the two terms were not synonymous, it would not be possible to give meaning to the last sentence of Paragraph 30, since CVPS's "allowed return on equity" is not quantified anywhere in the 2001 MOU; only CVPS's "allowed rate of return on common equity" is quantified in Paragraph 29. Thus, we conclude that the use of the term "return on common equity" instead of "return on equity" in Paragraph 29 of the 2001 MOU does not support CVPS's argument that a cost-of-service-based methodology for calculating overearnings would be inconsistent with the 2001 MOU.³⁶

We do agree with CVPS that "common equity" is not the same as "rate base," but that is not the relevant distinction. The paragraph of the 2001 MOU that defines the earnings cap refers to CVPS's "return on equity on its Vermont jurisdictional electricity utility operations," not to its return on common equity. The key distinction is that CVPS includes millions of dollars of unused cash that was not serving ratepayers in the Company's common equity; however, this cash was not part of the Company's Vermont jurisdictional electricity operations.³⁷

Finally, we are not persuaded by CVPS's argument that the 2001 MOU's linkage of "earnings" to "operations," instead of to "rate base" or "utility property," supports its proposed

35. See, e.g., Docket Nos. 5841/5859, Order of 6/16/97 at 78, 300–306 ("return on common equity" used for setting the rate, "return on equity" used in discussion of a penalty that reduced the previously determined rate); Docket Nos. 5700/5702, Order of 10/5/94 at 78–82 ("return on equity" and "return on common equity" used interchangeably); Docket No. 5532, Order of 4/2/92 at 84 (uses "cost of equity" and "return on common equity" interchangeably); Docket No. 5491, Order of 9/27/91 at 3, 4 (uses both "return on equity" and "return on common equity").

Significantly, in Docket 5651, the earnings cap agreed to by CVPS referred solely to "return on equity." It was this earnings cap that the Board reviewed in Dockets 5701/5724, in which the Board accepted CVPS's overearnings calculation. The Company's present argument that its proposed methodology is integrally linked to the phrase "return on common equity" is inconsistent with that previous ruling.

36. In addition, if there were a distinction between the two terms, it would be significant that Paragraph 30 of the 2001 MOU, which describes the earnings cap, uses "return on equity," not "return on common equity."

37. Tr. 11/4/04 at 95 (Schultz).

calculation methodology. The fact that the 2001 MOU links earning to "operations" rather than to "rate base" or "utility property" is a distinction without a difference. As explained above, we find that "Vermont jurisdictional electricity utility operations" are made up only of items normally included in ratemaking. These are the same items that are included in rate base.

Consistency with Traditional Ratemaking Practice

Now that we have concluded that the language of the 2001 MOU requires that we approve a methodology that is consistent with traditional ratemaking practice, the next step is to consider which of the two methodologies presented in these proceedings is consistent with those practices.

Traditionally, utility rates in Vermont are based on a company's cost to provide utility services (including a return on its prudent investments that are used to provide service to ratepayers). The standard practice is for a utility to prepare a cost-of-service filing that is based on a historic test year, adjusted for known and measurable changes. This cost-of-service filing includes information on the utility's revenues, costs, rate base, and cost of capital. This filing is then reviewed, and further adjustments may be made to it. Ultimately, in a fully-litigated rate case, the utility's rates are based upon the final, adjusted cost-of-service and rate base information.³⁸

The DPS's cost-of-service-based methodology is generally similar to the methodology the Board uses to set rates. It starts with a cost of service, except that the cost of service shows actual results for the particular year in question, rather than information from a historic test year that is adjusted for known and measurable changes. In general, items are included or excluded from the earnings cap calculation based on whether they are included or excluded in a traditional cost-of-service calculation that would be used to set rates.

38. CVPS argues that because the 2001 MOU was a bottom-line settlement with no approved cost of service or rate base, it is reasonable to conclude that the methodology for calculating overearnings would not require the development of a cost of service and rate base for each year that the earnings cap was in effect. CVPS Reply Brief at 140. We disagree. Many bottom-line settlements approved by the Board do not include approved costs of service and rate bases. The fact that the 2001 MOU followed this general rule does not indicate anything regarding the parties' expectations with respect to the methodology for calculating overearnings, and most certainly does not indicate that the calculation of overearnings should ignore established ratemaking principles.

CVPS's methodology, on the other hand, is radically different from the methodology the Board uses to set rates. This equity-based methodology uses information from filings with the Securities and Exchange Commission regarding consolidated net income and common stock equity, adjusted to remove the portions of both items attributable to its non-regulated subsidiaries and Connecticut Valley Electric Corporation.³⁹ Other than that one adjustment, CVPS's methodology does not distinguish between items that are traditionally included or excluded from a company's cost of service. As a result, CVPS's methodology requires ratepayers to provide a return on the Company's millions of dollars of unused cash and other items that are not traditionally allowed in rates (such as the \$9 million write-off that CVPS agreed to as part of the 2001 MOU). This is inappropriate. As the DPS's earnings cap witness pointed out, including unused cash in common equity can distort the results of an earnings cap calculation. Cash is theoretically generating its own return, and is not providing service to ratepayers.⁴⁰ This issue is particularly important in CVPS's case because of the size of the Company's unused cash balances which averaged approximately \$36 million in 2001, \$27 million in 2002, and \$31 million in 2003.

Thus, we conclude that the DPS's proposed calculation methodology is generally consistent with the requirements of the 2001 MOU and traditional ratemaking practice. Accordingly, we find this methodology to be appropriate to use to calculate CVPS's overearnings in 2001, 2002, and 2003.

Having determined that, there are four issues regarding the details of the DPS's calculation methodology that relate to the consistency of the DPS's proposal with traditional

39. For seven decades, rate-regulated companies that trade public stock have routinely kept separate sets of accounts for SEC, tax, and rate-regulation purposes. Reconciliation of the three should be feasible whenever accuracy must be checked; but, since each set of accounts is kept for a different purpose, it is necessary and proper to distinguish between rate-regulation accounts and reports to the SEC. Indeed, without that distinction, rate review would have no meaning since all results would already be resolved by prior SEC filings. See, e.g., J. Bonbright et al., *Principles of Public Utility Rates*, (PUR 1988) at 287; and J. Suelflow, *Public Utility Accounting: Theory and Application*, (MSU Press 1973) at 18–20 and at 40: "a regulatory body cannot be bound in its interpretation of results by a prescribed system of accounts."

40. Tr. 1/13/05 at 17–18 (Schultz).

ratemaking practices.⁴¹ These are: (1) "averaging" adjustments; (2) transmission revenues; (3) construction work in progress ("CWIP"); and (4) treatment of regulated affiliates. Our decision rule with respect to all of these issues is that the starting point for the overearnings calculation in each year should be a traditional cost-of-service calculation, except that actual costs and revenues should be used to the extent possible. The only adjustments to these actual amounts should be for standard accepted regulatory adjustments or adjustments to remove costs that are not to be included in a regulatory cost of service.

Using this decision rule, we conclude that no adjustment to actual expenses should be made for those items for which the Board traditionally allows average expense levels in cost-of-service filings. Such "averaging" adjustments are appropriate to use when setting rates, but do not function as intended when calculating overearnings.⁴²

With respect to transmission revenues, in its cost-of-service filings in these proceedings, CVPS followed the historical practice of removing 100 percent of its transmission revenues before applying the wholesale allocation factor.⁴³ The DPS did not challenge this adjustment to CVPS's costs of service for ratemaking purposes.⁴⁴ CVPS argues that the same practice should be followed in the overearnings calculation.⁴⁵ The DPS, on the other hand, asserts that the transmission revenues should not be removed before applying the wholesale allocation factor. Instead, the DPS argues that the wholesale allocation factor should be applied to both revenues and expenses.⁴⁶ We are not persuaded by the DPS's argument. The DPS asserts that its recommended approach is "more equitable,"⁴⁷ but the DPS has not explained why the traditional

41. In addition, we note that CVPS and the DPS each pointed out some minor errors in the other party's overearnings calculations. After the errors were pointed out, the opposing party admitted that they should be corrected. Since these minor errors are no longer contested, we do not address them further. We do, however, expect that the overearnings calculations performed by CVPS as part of their required compliance filing will reflect the agreed-upon corrections.

46. Schultz sup. pf. at 2–3.

47. Schultz sup. pf. at 3.

practice is sufficiently equitable in a cost-of-service calculation for ratemaking purposes, but not in an overearnings calculation.⁴⁸ Therefore, CVPS should remove 100 percent of transmission revenues before applying the wholesale allocation factor when calculating its overearnings for 2001, 2002, and 2003.

The issue of CWIP is similar to that of transmission revenues. The portion of CWIP on which a company does not accrue an allowance for funds used during construction is traditionally included in a company's rate base. CVPS argues that it should also be included in its overearnings calculation.⁴⁹ The DPS, on the other hand, asserts that because there is no evidence that CWIP is providing service to customers, CWIP should not be included in CVPS's rate base in the overearnings calculation. As in the case of transmission revenues, we conclude that the DPS has not shown why the traditional practice is appropriate in a cost-of-service calculation for ratemaking purposes, but not in an overearnings calculation. Therefore, when calculating its overearnings for 2001, 2002, and 2003, CVPS should include the portion of CWIP on which it does not accrue an allowance for funds used during construction.

Our basic decision rule leads us to conclude that CVPS's regulated affiliates should be treated above-the-line in the calculation of its overearnings. As explained in Section VIII.A, below, we determine that CVPS should account for its regulated affiliates above-the-line in its cost-of-service filings in these proceedings. We considered whether there was some justification for treating the regulated affiliates differently in an overearnings calculation than in a cost-of-service used to set rates, and conclude that there is not. Removing the regulated affiliates from the cost-of-service calculation would not be a standard regulatory adjustment, nor would it remove costs that should be excluded from a cost-of-service. We are not persuaded by the DPS's argument that the regulated affiliates should be treated above-the-line in the overearnings calculations only to the extent that the regulated affiliates were included in the revenue

48. We clarify that our decision should not be interpreted as a ruling on whether the traditional practice regarding transmission revenues is appropriate in a cost-of-service proceeding. That issue has not been raised in these proceedings, and we do not address it. Rather, our decision is limited to the question of whether transmission revenues should be treated differently in an overearnings calculation than in a cost-of-service filing for the purpose of setting rates. We conclude that they should not.

49. Tr. 1/12/05 at 124–125 (Gibson).

requirement filing which led to the 2001 MOU.⁵⁰ That revenue requirement filing resulted in a bottom-line settlement that did not specify how the regulated affiliates were treated. In the instant proceedings, CVPS states that it treated all its regulated affiliates except for Vermont Yankee below-the-line in its filing that led to the 2001 MOU,⁵¹ but we do not conclude that this is sufficient basis for making a distinction among regulated affiliates. Instead we find that since CVPS's affiliates should be treated above-the-line in its cost-of-service filings for ratemaking purposes, they should also be treated above-the-line for calculations of overearnings.

Retroactive Ratemaking

CVPS asserts that if the Board were to accept the DPS's proposed calculation methodology and require the Company to recalculate its overearnings for 2001, 2002, and 2003, we would be engaging in prohibited retroactive ratemaking. We conclude that CVPS's arguments about retroactive ratemaking are misplaced. The 2001 MOU and our Order approving it set rates prospectively (from 2001 forward), with a requirement that earnings over 11 percent be returned to ratepayers. Our decision today is not retroactively changing CVPS's rates because the rates were set in 2001 by the 2001 MOU and the Board's June 26, 2001, Order approving that agreement.

As the Vermont Supreme Court stated:

Retroactive ratemaking occurs when rates are set at a level that permits a utility to recover past losses, or that requires it to refund past excess profits, that resulted from a disparity between projected expenses of a prior rate base and actual incurred expenses. *In re Central Vermont Pub. Serv. Corp.*, 144 Vt. 46, 52, 473 A.2d 1155, 1158 (1984). While "the Board may consider a utility's recent past operating experience with such adjustments as will make the test period reflect typical conditions in the immediate future," it may not set a rate "that requires a utility to refund to consumers a portion of its previously earned profits." *Id.* at 53, 56. "[T]he Board has no statutory authority to make whole either the utility company or its customers for inequities that existed in the past." *Id.* at 53.⁵²

50. Letter from Geoffrey Commons, Esq., DPS, to Susan M. Hudson, Clerk, Board, dated February 2, 2005, at 2.

51. CVPS Reply Brief at 236.

52. *In re Green Mountain Power Corp.*, 162 Vt. 378, 387–388 (1994). In this Order, all references to *In re GMP* are to this decision, unless otherwise specified.

The Vermont Supreme Court has consistently held that retroactive ratemaking is prohibited, whether the intent was to make utilities whole for costs not contemplated in a previous rate order (as in *In re CVPS*, *supra*) or to return excess utility profits to ratepayers (as in *In re GMP*, *supra*).⁵³

However, none of the cases identified by CVPS involve the application of a Board-approved settlement agreement, and CVPS has failed to explain how those cases apply to a situation where the utility has previously agreed, and the Board has previously ordered it, to return its excess earnings to ratepayers. Indeed, in the 2001 MOU, CVPS agreed, in return for valuable consideration, to return its excess earnings to ratepayers, and the Board issued an order approving the 2001 MOU. CVPS itself recognizes its obligation to return overearnings, notwithstanding the general prohibition on retroactive ratemaking. The Company reflected the return of its overearnings (calculated using its methodology) in its original cost-of-service filings in these proceedings. The disagreement in the instant proceedings relates to the calculation of overearnings under the 2001 MOU⁵⁴ — should CVPS be allowed to use a calculation methodology that results in the Company earning a return from ratepayers on items expressly excluded from legitimate "utility profits" (as that term is used in the CVPS and GMP appellate cases)? We conclude that CVPS should not be allowed to do so, and that requiring CVPS to recalculate its overearnings accordingly does not constitute retroactive ratemaking as defined by the Vermont Supreme Court. To read the 2001 MOU as CVPS now suggests is to argue, in essence, that the Company never intended to do what it promised to do.

CVPS tries to characterize its argument regarding retroactive ratemaking in many different ways. It alleges that:

53. We note, however, that 30 V.S.A. § 227(b) provides a specific exception to the Vermont Supreme Court's prohibition against retroactive ratemaking that is relevant to Docket 6946. Pursuant to 30 V.S.A. § 227(b), when the Board opens an investigation into a utility company's rates, and issues its decision within seven months, the decision is retroactive to the day the Board opened the investigation. In Docket 6946, CVPS waived the seven-month statutory deadline, and agreed that as long as the Board issued its decision by March 29, 2005, the decision would still be retroactive to the day the Board opened the investigation.

54. CVPS asserts that if the MOU is a contract, there is no ambiguity in its wording. CVPS further argues that if there is ambiguity, then the rule of uniform practical construction supports CVPS because the DPS did not object to CVPS's performance of the agreement. We explain later in this section of our Order why we do not find CVPS's arguments regarding the timing of the DPS's challenge to be persuasive. That same rationale applies here.

- (1) the DPS is asking the Board to alter the terms of a prior Board order;⁵⁵
- (2) an earnings cap based on a cost-of-service methodology automatically constitutes retroactive ratemaking;⁵⁶ and
- (3) requiring CVPS to recalculate its overearnings using the DPS's proposed methodology is the same as requiring the Company to correct an "error" (as defined in *Maine Public Advocate v. Public Utilities Commission*, 476 A.2d 178 (Me. 1984)).⁵⁷

We address each of these in turn.

First, we conclude that the DPS is not seeking to alter the terms of a prior Board order. Rather, the DPS is seeking to enforce the terms of a prior Board order. CVPS argues that the 2001 MOU requires the use of CVPS's overearnings calculation methodology. We disagree. Instead, as we concluded above, the 2001 MOU does not specify an exact calculation methodology, but does specifically refer to "allowed" earnings and repeatedly relies upon phrases consistent with the DPS's "traditional ratemaking" rationale. Therefore, it is necessary for us to determine what the appropriate calculation methodology is. That requires us to apply the 2001 MOU and our Order approving it; it does not require us to modify either of those documents.⁵⁸

Second, we find that an earnings cap based on a cost-of-service methodology does not constitute retroactive ratemaking. As we explained above, our decision today simply applies the terms of the 2001 MOU and our Order approving it. That 2001 Board Order set rates prospectively (from 2001 forward); those previously-established rates, with their required refunds of overearnings, still control. Nothing in our decision today changes the rates established in 2001. All we are doing is applying those rates, which include the terms of the 2001 MOU that require CVPS to return its overearnings during 2001–2003.

Third, CVPS relies on *In re Maine Public Advocate* which holds that "errors made in the calculation of a utility's base rates may be remedied only prospectively."⁵⁹ We conclude that

55. CVPS Brief at 85.

56. CVPS Reply Brief at 145–146.

57. CVPS Reply Brief at 146–147.

58. Since we are not modifying the 2001 MOU or our order approving it, CVPS's arguments regarding *In re Burlington Electric Department*, 151 Vt. 543 (1989), do not apply. (That case involved a modification to a prior Board order without proper notice and hearing.)

59. *In re Maine Public Advocate*, *supra* at 183.

requiring CVPS to recalculate its overearnings is not the same as requiring a utility to fix an error in the calculation of the utility's base rates. The methodology used to calculate CVPS's overearnings is unrelated to the calculation of CVPS's previous base rates. There was no error made in the calculation of CVPS's previous base rates. Those rates were established as part of the bottom-line settlement that is the 2001 MOU. As a result, there are no specific calculations of CVPS's previous rates that could be reconsidered, and the decision in *In re Maine Public Advocate* is not relevant to the issue before us.

Timing of Challenges to CVPS's Proposed Calculation Methodology

One of CVPS's arguments against the adoption of the DPS's proposed calculation methodology is that if the DPS or the Board disagreed with CVPS's proposed calculation methodology, it should have challenged it earlier, well before the instant proceedings.⁶⁰ CVPS claims that the 2001 MOU required resolution of issues concerning the determination of earnings cap amounts "at the time of any such excess."⁶¹ We do not accept that interpretation of the 2001 MOU. Nevertheless, today's Order has the same substantive effect as if the excess earnings had been determined shortly after the end of 2001, 2002, and 2003.

CVPS argues that various times would have been appropriate for the DPS and/or the Board to challenge CVPS's proposed calculation methodology including: (1) when the Company reported its 2001 earnings;⁶² (2) any time after early 2002 when CVPS provided its financial statements, including its earnings amounts, to the DPS;⁶³ (3) at the time CVPS filed its request for an accounting order that would enable it to defer the amount it calculated as its 2002

60. CVPS also challenges the timing of the DPS's proposal within the current case. The Company asserts that adoption of the DPS's proposal would be unfair because it wasn't made clear until three days before rebuttal hearings. We find that this contention is not supported by the record in these proceedings. While it is true that the DPS's last testimony on its recommended calculation methodology was filed three days before rebuttal hearings, the DPS first challenged CVPS's calculation methodology and described its proposed alternative in its direct testimony that was filed on October 1, 2004. In addition, as the DPS points out, its proposed methodology is consistent with the policy that the DPS recommended in Dockets 5701/5724, nearly 10 years ago.

61. CVPS Reply Brief at 130, quoting Paragraph 30 of the 2001 MOU.

62. CVPS Reply Brief at 148.

63. CVPS Reply Brief at 150–151.

overearnings;⁶⁴ and (4) in CVPS's cost of service filed in Docket 6545 or in Docket 6866, the ensuing investigation into the settlement agreement between the DPS and CVPS.⁶⁵ CVPS asserts that by not challenging CVPS's calculation methodology earlier, the DPS "accepted or acquiesced in the Company's method of calculation."⁶⁶

We are not persuaded by CVPS's arguments. While the DPS could have challenged CVPS's earnings cap calculation methodology at any of the times identified, the 2001 MOU did not require it to do so. If it was important to CVPS that the amount of overearnings be finally determined before it closed its financial books for the year in question, CVPS could have petitioned the Board to make such a determination. CVPS did not do so.

CVPS states in its reply brief that "A determination by the Board at this late date which changes the calculation of the recorded excess earnings amounts raises serious financial concerns for the Company and its stakeholders."⁶⁷ CVPS also contends more broadly that adoption of the DPS's recommendation threatens CVPS's financial stability. We are not persuaded by these assertions. First, CVPS's total shareholder return has been near, or at, the top of all publicly-traded electric and combination utilities in 2001, 2002, and 2003.⁶⁸ That is an indication of a financially healthy company, not one that is financially unstable. We do understand that restatement of earnings for prior years can affect a company's financial health; however, CVPS's Chief Financial Officer testified that if the Board required CVPS to recalculate its overearnings, the Company would *not* be required to restate its earnings for 2001, 2002, and 2003.⁶⁹ Thus, CVPS has failed to demonstrate that any "serious financial concerns" will result from a recalculation of its overearnings using the DPS's methodology.

CVPS requested that the Board issue an accounting order, which was expressly limited to the accounting treatment of the amount of overearnings identified by CVPS. As stated in finding

64. CVPS Brief at 85. CVPS also argues that by the time CVPS filed its request for an accounting order related to 2002 overearnings, the Board could no longer require CVPS to recalculate its 2001 overearnings because CVPS's calculation was a "mistake" and such mistakes can't be corrected in a retroactive fashion. CVPS Reply Brief at 146–147.

65. CVPS Brief at 63–64.

66. CVPS Reply Brief at 139.

67. CVPS Reply Brief at 130.

68. Exh. Board-1; tr. 11/2/04 at 83 (Gamble).

69. See, finding 15, above.

4, above, the accounting order also explicitly provided that any party may contest, and the Board may modify, the identified dollar amount in any rate proceeding in which the identified dollar amount is reflected in the cost of service. Thus, the accounting order explicitly deferred a ruling on whether CVPS calculated the amount of the overearnings correctly until a future rate proceeding.⁷⁰

CVPS asserts that the Board's accounting order allowed the DPS to challenge, in the future, CVPS's calculation of the deferred amount, but not the methodology used by CVPS to determine the amount to be deferred.⁷¹ There is simply nothing in the Board's April 4, 2003, accounting order to support such a distinction. On the contrary, the accounting order clearly stated that CVPS's calculation could be reviewed in future rate proceedings.⁷² Not only is it eminently reasonable to conclude that the calculation methodology is part of the calculation, but also the accounting order expressly provides that the order is limited to the accounting treatment of the excess earnings. CVPS's calculation methodology is clearly outside the scope of the "accounting treatment" that was the subject of the Board's limited approval.

We are troubled that, once again, CVPS appears to be asserting that, even though the Board's accounting order expressly stated that the Board could modify the overearnings deferral amount in any rate proceeding in which the amount is included in the cost of service, it is, in effect, too late for the Board to do so. This is the latest example of a disturbing situation — the Board issues an accounting order that states it is limited to the accounting treatment of a particular amount, only to later have the company argue that the accounting order resolved more than just the accounting treatment. As we stated in Docket 5983 (a rate case involving Green Mountain Power Corporation):

Under 30 V.S.A. § 221, the Board is authorized to issue accounting orders; notice and opportunity for hearing are not necessarily required. We must stress that, in the absence of full notice and opportunity for hearing on a request for an accounting order, such an order will not have final effect in a

70. The instant proceedings are CVPS's first rate proceedings since the accounting order was issued.

71. CVPS Brief at 54.

72. See, finding 4, above.

later rate proceeding under 30 V.S.A. §§ 225-227, and it would be wrong for any party to think otherwise.⁷³

Comparison with Treatment of GMP

CVPS asserts that the DPS is proposing to treat the Company much more harshly than it did GMP.⁷⁴ CVPS notes that, pursuant to two different settlement agreements approved by the Board in two different dockets, GMP has been subject to an earnings cap since 2001.⁷⁵ However, the DPS has not challenged GMP's overearnings calculations for 2001 and 2002, although it has examined GMP's calculation methodology for 2003. CVPS alleges that challenging CVPS's earnings cap calculations back to 2001, while only challenging GMP's back to 2003, constitutes "disparate treatment."⁷⁶

The DPS argues that the DPS-GMP settlement agreements are explicitly non-precedential, as are virtually all settlement agreements filed with the Board, because each company's circumstances are different, particularly with respect to an earnings cap. However, the DPS points out that it did require GMP to recalculate its 2003 earnings using the same methodology that the DPS is recommending in the instant proceedings.⁷⁷

We disagree with the Company's argument that it is unfair for the DPS to challenge CVPS's overearnings calculations for 2001 and 2002 when it did not challenge GMP's overearnings calculations for the same time periods. Far more significant is that the same policy is being applied to all utilities in a comparable situation at the same time. The DPS did not challenge either GMP's or CVPS's overearnings calculations in Dockets 6866 and 6867, which were contemporaneous. But, in 2004, the DPS challenged both utilities' overearnings calculations. The fact that the relevant calculation for GMP extended only back through 2003, while the relevant calculation for CVPS extended back through 2001, does not mean that the DPS is treating CVPS more harshly than it is GMP. Rather, it is simply a reflection of the fact

73. Docket 5983, Order of 6/8/98 at 20.

74. CVPS Brief at 69–72.

75. Docket 6107, Order of 1/23/01 at 121 (order paragraph 6); Docket 6867, Order of 12/22/03 at 43 (order paragraph 8).

76. CVPS Brief at 72.

77. DPS Reply Brief at 11.

that GMP's and CVPS's situations are different. Docket 6866 led to a final resolution of issues for GMP, including the establishment of new rates, while, as described in Section I, above, Docket 6867 did not lead to a final resolution of issues for CVPS. As a result, the instant proceedings are the appropriate place to consider CVPS's overearnings calculations pursuant to the Docket 2001 MOU, which includes the years 2001, 2002, and 2003.

CVPS's Other Arguments

CVPS makes two additional arguments in support of its position regarding the overearnings calculation methodology; as explained below, we do not find either of these arguments persuasive.

CVPS argues that a new ruling on the method for determining compliance with earnings caps is not warranted in order to take account of an intervening change in the applicable legal context or otherwise to avoid inequitable administration of the laws. This argument is unavailing because we have not based our determination on either a change in law or to avoid the inequitable administration of the law.

Finally, CVPS argues that if the Board wants to change the earnings cap calculation methodology, it should do so in a proceeding with all stakeholders, with any changes applied prospectively. CVPS makes the same assertion with respect to a change in accumulated depreciation policy. We explain why we reject this argument in our discussion of that issue in Section V.B, below.

Decisions on Other Issues That Affect the Overearnings Calculation

Two of our other decisions in this Order have an impact on CVPS's overearnings in 2001, 2002, and 2003. As discussed in Section V.C below, CVPS incorrectly deferred Distributed Utility Planning Demand-Side Management costs that should have been expensed, and there are additional funds that were previously collected from ratepayers for that purpose that should be returned to ratepayers now. CVPS should treat these Distributed Utility Planning Demand-Side Management costs as expenses in the years in which they should have been recorded (the funds to be returned to ratepayers should be treated as a reduction to the cost of service in 2003) for

purposes of performing the overearnings calculation. As discussed in Section VI.A below, we are reducing the amount of CVPS's deferred costs as a result of the 2002 Vermont Yankee Mid-Cycle Outage by \$403,000. CVPS should include this \$403,000 in its 2002 expenses when performing the overearnings calculation.

IV. DEFERRED COSTS AND REVENUES

Findings

16. CVPS has deferred recognizing certain revenues and expenses in accordance with accounting orders and other orders issued by the Board. Gibson pf. at 36–37; exhs. CVPS-JHG-13 at 2, CVPS-JHG-14, CVPS-JHG-15, and CVPS-JHG-16.

17. CVPS has relatively high balances in deferred debits and regulatory assets, which distort the Company's actual financial position and ratemaking accuracy. *Id.*; tr. 1/12/05 at 13–14 (Gibson).

18. The deferred costs include: Distributed Utility Planning Demand-Side Management costs; Distributed Utility Planning Account Correcting for Efficiency costs; Docket No. 6270 Independent Power Production ("IPP") costs; Docket No. 6330 Retail Choice costs; Vermont Yankee Fuel Rod Repair costs; Vermont Yankee Incremental Power costs due to the sale of Vermont Yankee; and Incremental Decommissioning costs for the Yankee Atomic Electric Power Company ("Yankee Atomic") the Connecticut Yankee Atomic Power Company ("Connecticut Yankee") and the Maine Yankee Atomic Power Company ("Maine Yankee"). The deferred revenues include various deferred credits as partial offsets to the deferred costs described above. Gibson pf. at 36–37; Schultz and DeRonne pf. at 23–24; exh. CVPS-4A; exh. CVPS-JHG-13.

19. CVPS's original cost-of-service filing for Rate Year 1 included amortization of these deferred costs and revenues. CVPS's original cost-of-service filing for Rate Year 2 did not reflect the effects of beginning the amortization of these deferred costs and revenues in Rate Year 1. Schultz and DeRonne pf. at 23–24.

20. Rate Year 1 amortizations can be recorded on the Company's books during Rate Year 1. Tr. 1/11/05 at 69 (Frankiewicz).

21. If amortization is reflected on the books of account in Rate Year 1, the amount recognized should not be included in deferral accounts in subsequent years. *Id.* at 62–63.

22. A three-year amortization period for most deferred expenses is reasonable. Talbot/Roschelle pf. at 26; Gibson pf. at 37.

23. In a rate case, regulatory assets, deferred charges, and regulatory liabilities that the Board finds reasonable are included in the cost of service that the Board establishes for setting rates. When the amortization of these amounts is complete, the amounts remain "in rates." This could lead to charges being over-recovered or under-recovered in rates, when the amortization for particular costs and revenues ends. Behrns pf. at 16–19.

24. If, at the conclusion of an amortization cycle, the yearly amortization amount associated with a regulatory asset or deferred debit is booked as a regulatory liability, there will be no over-recovery of costs to the Company. The converse is true if completed regulatory liabilities are booked as regulatory assets. *Id.*

A. Deferred Accounts Included in Test-Year Rates

25. CVPS's current rates include the amortization and recovery of several regulatory assets. These are Connecticut Yankee Dismantling, Maine Yankee Dismantling, SFAS 109 Deferred Taxes, and 2002 Millstone Refueling. There is no dispute regarding the continued amortization of these accounts. The balance and expense for each account that is currently being recovered in rates are summarized in the table below:

	Balance 12/31/03	Recorded to Expense in Test Year	Carrying Charges
<u>Regulatory Assets</u>			
Connecticut Yankee Dismantling	\$ 2,979,858	\$ 794,364	No
Maine Yankee Dismantling	7,287,060	1,038,190	No
SFAS 109 Deferred Taxes ⁷⁸	5,639,760	209,468	No
2002 Millstone Refueling	109,087	654,524	No
<u>Regulatory Liabilities</u>			
Vermont Yankee Recapture	393,939	48,732	No
Total (Net)	\$ 15,621,826	\$ 2,647,814	

Exh. CVPS-JHG-13.

B. Deferred Accounts That Will Be Amortized Beginning in Rate Year 1

1. Regulatory Assets

Docket 5980 Distributed Utility Planning Demand-Side Management and
Docket 5980 Distributed Utility Planning Account Correcting for Efficiency

26. Findings 136–145, below, are incorporated by reference.

Docket 6270 VEPPI Cost Mitigation/Docket 6330 Retail Choice

27. On January 29, 2000, the Board issued two accounting orders to CVPS related to:
 (1) Docket No. 6270 (Rule 4.100) costs; and (2) the Docket No. 6330 Retail Choice Petition and
 DPS Electric Utility Industry Restructuring Bill-Backs. Gibson pf. at 38 –39.

28. In accordance with these two accounting orders, the Company deferred and continues to
 defer: (1) its costs incurred to pursue the mitigation of the power costs incurred by the Vermont
 Electric Power Producers, Inc. ("VEPPI"), the Board's Rule 4.100 Purchasing Agent, that was the
 subject of Docket 6270; and (2) the costs incurred by the Company or billed-back to it by the

78. Of the \$209,468 amortized, \$58,229 is allocated to Accumulated Deferred Income Tax Liability, and the remainder (\$151,239) is allocated to the Income Statement (though not all allocated amounts affect Vermont retail rates). Exh. CVPS JHG-13 at Attachment PSB 1-1B.

DPS relating to the effort to implement a voluntary restructuring program in CVPS's service territory that was the subject of Docket 6330. Gibson pf. at 38 –39.

2. Deferred Debits

Vermont Yankee Fuel Rod Repair

29. In 2002, Vermont Yankee experienced an unscheduled outage to resolve defects affecting certain of the plant's in-core fuel rods (referred to as the 2002 "Mid-Cycle Outage"). Vermont Yankee determined that individual fuel rods had developed small leaks that released radioactivity into the core. Vermont Yankee decided that the best course of action was to shut down and fix the problem. Page pf. at 4.

30. The 2002 Mid-Cycle Outage lasted approximately 12 days. During this time, Vermont Yankee remedied the problem. Page pf. at 5.

31. CVPS incurred replacement power costs for energy and costs to secure options to purchase energy at a fixed cost. Vermont Yankee also incurred incremental operation and maintenance costs that it passed on to its sponsors, including CVPS. Page pf. at 6.

32. Vermont Yankee offset part of the costs through a credit arising from a vendor warrantee for the defective fuel. Page pf. at 7.

33. On July 18, 2002, the Board issued an accounting order that authorized CVPS to defer the costs associated with the defective fuel rods at Vermont Yankee. Gibson pf. at 39; Schultz and DeRonne pf. at 27.

34. In Docket 6460, power costs were based upon an expected forced outage rate for Vermont Yankee of 4 percent. The actual production in 2002 was significantly above the target assumed by the forced outage rates (after factoring out the period of the Mid-Cycle Outage, the costs of which CVPS has deferred). Lamont pf. at 7.

35. The value of the power production in excess of the 4 percent forced outage rate is \$403,000. CVPS's proposed deferral account should be reduced by this \$403,000.⁷⁹ Lamont reb. pf. at 5; tr. 2/18/05 at 74–75 (Schultz, Watts).

79. See Section VI.A for the discussion of this adjustment.

Vermont Yankee Incremental Costs Due to Sale

36. As part of the Docket No. 6545 Order of June 13, 2002, approving the sale of Vermont Yankee, the Board issued two accounting orders for CVPS. Pursuant to the first such order, CVPS was authorized to defer any incremental income tax expense recorded under Statement of Financial Accounting Standards No. 109 as a result of its receipt of the cash proceeds resulting from the sale of Vermont Yankee and commencement of the related transaction agreements. Pursuant to the second accounting order, CVPS was permitted to defer incremental costs (excluding incremental income tax expenses covered under the first accounting order arising as a result of the receipt of the cash proceeds) that occur in 2002 after the sale of Vermont Yankee and consummation of the related transaction agreements. Gibson pf. at 39; exh. CVPS-JHG-15 at 2; see Docket 6545, Order of 6/13/02 at 141–144.

37. The Company deferred its applicable Vermont Yankee sale incremental costs. These costs represent the difference between the costs that the Company would have incurred had it not pursued the sale and those it incurred by pursuing the sale. This difference is primarily related to the Company's need to reflect the deferral and amortization of refueling maintenance costs for Vermont Yankee. Page pf. at 13.

38. Rate Year 1 rate base balance for the Vermont Yankee sale incremental costs should be \$5,954,406, and Rate Year 1 amortization should be \$1,984,802. Exh. DPS-L&A-11, at page 1 of schedule SR15, and at page 7 of schedule 8.

Vermont Yankee — June 04 Fire Outage

39. In mid-2004, Vermont Yankee experienced an unscheduled outage due to a busbar fault and subsequent transformer fire. As a result, CVPS incurred additional replacement power costs during this time period of \$835,946.⁸⁰ Watts pf. at 12–13; Page reb. pf. at 13–14.

40. CVPS may be able to recover some or all of these costs through the Ratepayer Protection Plan that Entergy Nuclear Vermont Yankee and Entergy Nuclear Operations (jointly "Entergy") implemented as part of the power uprate of Vermont Yankee. Lamont pf. at 4; Deehan reb. pf. at 7–8.

80. Our ruling on the rate treatment of the \$835,946 is set forth below in Section VI.A.

41. CVPS has conducted a preliminary review of the facts relating to the outage and concluded that these incremental costs are eligible for recovery under the Ratepayer Protection Plan. Deehan reb. pf. at 8.

42. CVPS filed a petition asking the Board to resolve the issue of whether the cause of the outage was related to the uprate (and thus reimbursable by Entergy) or not. Docket 6812-A, Order of 3/4/05.

Yankee Atomic and Connecticut Yankee Incremental Decommissioning

43. Yankee Atomic is a retired single 185 MW nuclear power generating station located in Rowe, Massachusetts. Yankee Atomic recovers its costs through power contracts that remain in effect until decommissioning is complete (expected for 2006). Jewell-Kelleher YA (Yankee Atomic) pf. at 2–4.

44. Connecticut Yankee is a retired single 583 MW nuclear power generating station located in Haddam Neck, Connecticut. The plant is currently being decommissioned (a process that is expected to be complete in 2007). Jewell-Kelleher CY (Connecticut Yankee) pf. at 2–4.

45. CVPS pays a share of Connecticut Yankee decommissioning costs through the power contracts. Jewell-Kelleher CY pf. at 3.

46. In late 2002, CVPS received a forecast that the decommissioning costs for Yankee Atomic and Connecticut Yankee would be substantially higher than had been previously forecast. At that time, CVPS sought and received an accounting order from the Board authorizing deferral of the incremental decommissioning expense. Tr. 2/18/05 at 56 (Frankiewicz); Gibson pf. at 41; Page pf. at 13.

47. Decommissioning costs for Connecticut Yankee, Yankee Atomic, and Maine Yankee (in which CVPS also had an ownership share) have increased recently. A large part of this increase is due to the United States Department of Energy's failure to remove the spent nuclear fuel (as required by contract). Increased security costs and the declining financial markets (which reduced decommissioning fund earnings) have also contributed. As a result, the decommissioning funds are inadequate to meet expected decommissioning expenses. Page pf. at 13–18; exh. CVPS CJF-15 at 5 (Page response).

48. Yankee Atomic has filed and settled with the Federal Energy Regulatory Commission ("FERC") to renew collections at a higher level to cover its decommissioning obligations. Connecticut Yankee is also requesting a large increase to its current obligations. Watts pf. at 8; Page pf. at 18–19.

49. The decommissioning costs for Connecticut Yankee and Yankee Atomic as set out in FERC tariffs have increased by approximately \$2,345,200 during Rate Year 1.⁸¹ Exh. DPS-CVPS-Joint-2.

3. Regulatory Liabilities

6062 VEPPi Cost Mitigation (and Docket 6270)

50. On June 9, 2003, the Board issued an accounting order authorizing CVPS to defer the saving credits achieved through the implementation of the Memorandum of Understanding approved in Docket 6270. Gibson pf. at 41–42.

51. CVPS recorded these savings, with carrying costs, as regulatory liabilities. Gibson pf. at 41–42.

52. The Company has been recording regulatory liabilities for savings it has been accruing through March 31, 2005. Frankiewicz reb. pf. at 10.⁸²

53. The savings to be accrued after March 31, 2005, were reflected in Rate Year 2 purchased power costs. The amount of these savings are \$373,500. Frankiewicz reb. pf. at 10; exh. DPS-CVPS-Joint-2 at 1.

54. The balance for the credit in Rate Year 1 should be \$561,482. CVPS includes both Rate Year 1 amortization, and the savings to be achieved after March 31, 2005 (which were also included in the Company's power cost calculation), in its Rate Year 2 balance. These two amounts should be removed from the Rate Year 2 starting balance, which should be \$371,321 (\$561,485 less Rate Year 1 amortization of \$187,164). Exh. DPS-L&A-11 at page 10 of schedule 8; exh. DPS-L&A-12 at page 10 of schedule SR8.

81. Our ruling on the rate treatment of the \$2,345,547 is below in Section VI.A.

82. The Department corrected exh. DPS-L&A-12 at page 10 of schedule SR8 to reflect the removal of Rate Year 1 amortization of \$187,164. Tr. 2/18/05 at 77-78 (Schultz).

6460 Millstone Decommissioning

55. Pursuant to the settlement approved in Docket Nos. 6120 and 6460, and in accordance with a letter to the Board dated September 10, 2002, the Company recorded on its books a regulatory liability equal to the retail amount of Millstone III decommissioning expense included in the Docket Nos. 6120 and 6460 settlement cost of service which were subsequently not billed to or paid by the Company. Gibson pf. at 41–42.

56. Since the Company does not expect to pay this expense in Rate Year 1 or Rate Year 2, the Company continues to increase the regulatory liability up to the day before each rate year begins. Gibson pf. at 41–42.

57. Presently, CVPS is not paying any Millstone III decommissioning expense, and no decommissioning costs are included in the cost of service for either Rate Year 1 or Rate Year 2. Page pf. at 21.

58. The Rate Year 1 rate base balance for the 6460 Millstone Decommissioning regulatory liability should be \$382,664, and Rate Year 1 amortization should be \$127,555. Schultz and DeRonne pf. at 31; Gibson pf. at 42; exh. DPS-L&A-11 at page 11 of schedule 8.

59. Rate Year 2 rate base should be increased \$404,937 to reflect the reduction in the credit balance from \$596,268 to \$191,331. The amortization credit should be reduced by \$110,952 to \$127,555. Exh. DPS-L&A-11 at page 11 of schedule 8.

5800 Brockway Mills Refund

60. On July 30, 2003, the Board accepted a proposal by the Company to record a credit received from Brockway Mills, Inc. related to Docket No. 5800 in Account 254.0 (Other Regulatory Liabilities) with carrying costs. Gibson pf. at 42–43.

61. CVPS recorded these savings until the next rate case as a regulatory liability. Gibson pf. at 42–43.

62. The Rate Year 1 rate base balance for the 5800 Brockway Mills Refund regulatory liability should be \$161,064, and Rate Year 1 amortization should be \$53,688. Schultz and DeRonne pf. at 32; exh. DPS-L&A-11 at page 12 of schedule 8.

63. The removal of Rate Year 1 amortization and carrying costs from the Rate Year 2 rate base balance reduces the credit by \$66,305 (from \$146,837 to \$80,532). *Id.*

6270 Non-Petitioning Utilities

64. In accordance with Docket No. 6270, the Company received reimbursement for legal fees from non-petitioning utilities that were to benefit from the agreements reached to mitigate the cost of Rule 4.100 Qualifying Facility Contracts with VEPPI. This amount was required to be set aside for the benefit of ratepayers, and to be addressed in the Company's next rate proceeding. Gibson pf. at 43.

65. The Rate Year 1 amortization needs to be removed from the Rate Year 2 rate base balance, which should be reduced by \$106,396 from \$265,991 to \$159,595. The amortization credit in Rate Year 2 does not require an adjustment. Schultz and DeRonne pf. at 32; exh. DPS-L&A-12 at page 13 of schedule 8.

66. The Rate Year 1 rate base balance for the 6270 Non-Petitioning Utilities regulatory liability should be \$319,189, and Rate Year 1 amortization should be \$106,396. *Id.*

Summary

67. The deferral account balances and amortization expenses for Rate Year 1 and Rate Year 2 which we find reasonable, in accordance with the findings above, are summarized as follows:

	Balance to Amortize 3/31/04	Amortize or Expense in RY 1	Balance to Amortize 3/31/05	Original Accrual	Per- iod
<u>Regulatory Assets</u>					
Dkt 5980 DUP DSM ⁸³	\$ -	\$ -	\$ -	1/01-3/04	5 yr.

85. See Section V.C, below, for the explanation of the zero balance in Distributed Utility Planning Demand-Side Management deferral account.

86. As explained in Section III, below, we require CVPS to recalculate its overearnings in 2001, 2002, and 2003, as part of its compliance filing in these proceedings. The balance in the 6460 Earnings Cap 02 & 03 regulatory liability account, the amortization amount, and the rate base effects will be determined by this recalculation.

* See Section VI.A, below, for a discussion of our decision with respect to these deferral accounts.

Exh. DPS-L&A-11 at page 1 of schedule SR8; exh. DPS-L&A-12 at page 1 of schedule SR8.

C. Deferred but Not Subject to Rate Recovery

69. CVPS's deferred accounts include certain deferred debits and regulatory liabilities which are not subject to recovery in rates. Exh. CVPS-JHG-15.

70. The deferred debit for incremental tax expense due to the Vermont Yankee sale does not accrue carrying charges, nor has any tax due to the sale been assessed. *Id.*

71. In April, 2001, the Board approved an accounting order authorizing CVPS to record SFAS 133 unrealized gain or loss on derivative instruments and hedging activities, including CVPS's sell-back arrangement with Hydro-Québec, as a deferred asset or liability. The deferred asset or liability will be eliminated when the power at issue is delivered at the contract price. No carrying charges accrue on the these balances. *Id.*

72. In Docket 6545, the Board ordered that any refunds that CVPS receives from Vermont Yankee Nuclear Power Corporation, as its share of any Nuclear Electric Insurance Liability refund (or certain other funds), should be applied to the benefit of ratepayers. The Board required the Company to consider applying these funds for the development and use of renewable resources. In accordance with CVPS's Board-approved plan for using these funds, the Company established a regulatory liability account for these funds, which are kept in an interest-bearing account. No carrying charges accrue on these amounts. *Id.*

73. The balance in deferral accounts that are not subject to rate recovery are:

	Balance 12/31/03	Carrying Charges
<u>Deferred Debits</u>		
VY Incr. Tax Due to Sale	\$ 2,887,218	No
SFAS 133 Unrealized Loss	1,295,800	No
<u>Regulatory Liabilities</u>		
SFAS 133 Unrealized Gain	444,200	No
NEIL Insurance Refund	461,242	No
Total (Net)	3,277,576	

Exh. CVPS-JHG-15.

D. Deferred for GAAP Purposes

74. In order to comply with Generally Accepted Accounting Principles ("GAAP"), the Company maintains certain deferral accounts. Exh. CVPS-JHG-16.

75. The Rural Line Extensions account reflects costs incurred by the Company to construct line extensions on behalf of customers who chose to reimburse the Company under a financing agreement for a period of years. These amounts include finance costs that are paid by the customer, and are reflected as a reduction to the Company's cost of service, according to traditional ratemaking policy. This deferred balance is reduced as customers make payments, and the associated income is recognized. *Id.* at 1.

76. The Hydro Relicensing Costs account reflects costs (such as environmental studies) incurred by the Company in order to relicense a hydroelectric facility. The costs are deferred until the FERC license is received, at which time the costs are reclassified to Electric Plant in Service, and amortized over the license period, in accordance with GAAP. There are no carrying costs accrued on these deferred costs. *Id.*

77. The IRS Tax re: VIDA Bonds deferred charge is related to an IRS settlement in 1983 concerning the tax treatment of the interest on bonds issued to finance the Bradford hydro facility. The balance does not accrue carrying charges and is reduced through a monthly amortization to Account 930.2, until 2012. *Id.*

78. The Intangible Asset-Supplemental Retirement Plan deferred charge represents the unamortized expense for the non-qualified supplemental retirement benefit plan for certain retired officers and directors. There are no carrying costs accrued. The deferred balance is reduced through charges to a non-operating expense (below-the-line) to reflect the current year's expense and declining obligations under this plan. *Id.*

79. CVPS reflects certain portions of the costs and revenues associated with Yankee Atomic and Connecticut Yankee decommissioning as "deferred for GAAP purposes." In addition, as described above, CVPS's deferral accounts include deferred costs associated with incremental decommissioning expenses, which will be amortized and recovered in rates. Carrying costs are not accruing on the GAAP-deferred balance. The deferred asset balance is reduced as decommissioning costs are incurred and paid to the sponsors. *Id.* at 2; see finding 46, above.

80. The Company follows the accrual method of accounting, as defined by GAAP. As such, at the end of every accounting period, costs for work performed by employees between the last payroll period-end date and the last day of the accounting period are estimated and recorded to O&M expense and capital projects. This deferred balance represents the accrued payroll related to capital projects. There are no carrying costs accrued. The total balance is reversed in the next accounting period. *Id.*

81. The Miscellaneous Deferred Debits account includes miscellaneous deferred charges, such as work in progress, items that are to be reimbursed, and items whose proper final disposition is uncertain, in accordance with the FERC definition for Account 186. These items do not accrue carrying charges and are reclassified as receivables, expenses, or assets when additional information is obtained. *Id.*

82. The New Hampshire Pilot Stranded Costs regulatory liability account is related to the Connecticut Valley Electric Company's New Hampshire pilot program and was written off in 2004 as part of the Connecticut Valley Electric Company sale transaction. Carrying costs were not accrued. *Id.*

83. The Millstone Asset Retirement Overfunding regulatory liability account is the difference between the SFAS 143 Asset Retirement Obligation and the decommissioning trust fund asset balance. It is not being returned to ratepayers in this rate proceeding because the plant

is currently operating and the ultimate decommissioning cost is not known. Carrying costs are not accrued. The liability balance will be ultimately decreased when decommissioning of the asset is complete. *Id.*

84. There is no dispute about the accounting treatment for costs and revenues that are deferred for GAAP purposes, and we find such treatment is reasonable. The amounts in these accounts are as follows:

	Balance 12/31/03	Carrying Charges
<u>Deferred Debits</u>		
Rural Line Extensions	\$ 32,358	Yes
Hydro Relicensing Costs	3,470,481	No
IRS Tax re: VIDA Bonds	43,399	No
Intangible Asset/Suppl. Retirement Plan	201,298	No
YA Incr. Decommissioning	6,345,255	No
CY Incr. Decommissioning	10,347,262	No
Accrued Payroll	95,615	No
Other Deferred Debits	85,155	No
Subtotal	20,620,823	
<u>Regulatory Liabilities</u>		
New Hampshire Pilot Stranded Costs	50,238	No
Millstone Asset Retirement	890,507	No
Subtotal	940,745	
Total (Net)	19,680,078	

Exh. CVPS-JHG-13 at Attachment PSB 1-1A; exh. CVPS-JHG-16.

Discussion

In Docket 6866, we considered a Memorandum of Understanding between CVPS and the Department under which the parties agreed that CVPS's rates would be frozen during 2004, with earnings in excess of an allowed 10.5 percent return on equity applied for the benefit of CVPS's ratepayers. During our review of that agreement, we found that CVPS had a high, and swiftly

increasing, level of deferred costs on its books, which we found troubling.⁸⁷ We concluded that these large deferrals were a significant concern and observed that the deferred balance had been increasing substantially. We noted that cost deferrals "result in current charges being passed on to future ratepayers, possibly resulting in intergenerational inequities."⁸⁸ When a company adds carrying-costs to deferral accounts, the effect is similar to an increase in rate base for future recovery. Our Order conditionally accepting the MOU reflected our concern; we approved the agreement, but only if both the Department and CVPS affirmatively agreed to a number of conditions which were designed to begin addressing the large deferral account balances. In essence, we found that "level rates for current ratepayers must not be achieved by excessively deferring costs for future ratepayers to bear."⁸⁹

Neither CVPS nor the Department fully accepted the conditions in the Docket 6866 Order; as a result, our concerns about the level of deferred costs were not then addressed.⁹⁰ The amount of deferred costs remains large — \$23,216,368 (excluding the Docket 6460 Earnings Cap regulatory liability). In these proceedings, CVPS has proposed to reduce its deferral accounts, primarily by recovering the deferred amounts from ratepayers over a three-year period. CVPS acknowledges that recovering these deferred costs will improve its balance sheet from a financial perspective.⁹¹ The Company considers the rate impact of the recovery of these costs through amortization to be small and manageable.⁹² In general, the Department does not oppose these recoveries.

The reference to deferral accounts actually encompasses a large number of regulatory assets (Account 1823), deferred debits (Account 1860), and regulatory liabilities (Account 2540) that can be broadly grouped into four broad categories, each of which has different rate and policy implications:

87. In fact, we have been concerned with CVPS's increasing deferrals for some time. As CVPS noted: "The Board's had a concern actually all the way back to 5701/5724. It's the same concern of the high level of deferred debits, and reg assets" Tr. 1/11/05 at 117 (Frankiewicz).

88. Docket 6866, Order of 1/27/04 at 15–16.

89. Docket 6866, Order of 1/27/04 at 3.

90. The deferral accounts are not solely regulatory assets, which reflect costs deferred by CVPS for future recovery from ratepayers. They also include regulatory liabilities, *i.e.*, amounts that CVPS must return to ratepayers.

91. CVPS Brief at 228.

92. *Id.*

- those that are deferred and currently being recovered in rates;
- those proposed to be amortized commencing either in Docket 6946 or Docket 6988;
- those that are deferred, but not subject to rate recovery; and
- those that are deferred for Generally Accepted Accounting Principles ("GAAP") purposes.⁹³

In these proceedings, we are concerned primarily with the first two categories of deferrals. These categories — which total \$23,216,368 in deferred obligations — reflect expenses from prior periods that CVPS has deferred, generally pursuant to the terms of Board-issued accounting orders.⁹⁴ In this section, we address four issues:

- (1) Whether the amortization of the deferral accounts commences in Rate Year 1 (as proposed by the Department) or Rate Year 2 (as advocated by CVPS);
- (2) Whether the amortization period for most deferrals for which CVPS proposes to begin amortizing in these proceedings should be over three years (as proposed by CVPS) or over six years (as recommended by AARP);
- (3) Whether we should require CVPS to establish a "reverse" deferral account that would continue to track amortizations after the end of the recovery period, so that these amounts could be returned to ratepayers (in the case of regulatory liabilities) or recovered from ratepayers (for regulatory assets); and
- (4) The use of accounting orders for events that are not extraordinary.

In addition, in separate sections of this Order, we address issues concerning specific deferral accounts.⁹⁵

93. As an example of an account deferred pursuant to GAAP, CVPS is required to pay the decommissioning costs for several nuclear plants of which it is a part owner. The rates for these payments are set by FERC, and will run through 2010. GAAP requires that CVPS record the total of this future stream of payments as a regulatory liability.

94. The accounting orders contain explicit provisions stating that they no have bearing on ratemaking treatment, including the amount (if any) that the Company can subsequently recover in rates.

95. These include recovery of Distributed Utility Planning Demand-Side Management and Distributed Utility Planning Account Correcting for Efficiency deferrals, the amount of the Vermont Yankee 2002 Mid-Cycle Outage deferral, and whether to expense or amortize incremental decommissioning costs for Connecticut Yankee and Yankee Atomic and for the VEPPI Cost Mitigation. See Sections V.C, V.D, and VI.A.

Starting Rate Year for Amortization

These proceedings are the first rate proceedings since CVPS deferred many of the costs and revenues identified above. Therefore, this is the time for us to decide the recoverability and amortization of those costs. CVPS and the Department disagree on when amortization of deferred costs and revenues should begin — in Rate Year 1 or Rate Year 2. This issue applies to all of CVPS's deferral accounts for which it is requesting to begin amortization in these proceedings.

The Company's cost-of-service filings for both Rate Year 1 and Rate Year 2 reflect amortization of the deferred costs net of regulatory liabilities as an expense. However, CVPS did not reduce the deferred balances shown in Rate Year 2 as necessary to reflect the amortizations in Rate Year 1. The Company claims that it did not intend to begin amortization in Rate Year 1, but that the Rate Year 1 amortization was for "illustrative" purposes.⁹⁶ The Company argues that the amortization was reflected in Rate Year 1 "in order to present an accurate Cost of Service" ⁹⁷ CVPS further asserts that the amortization cannot be reflected in Rate Year 1 because, in addition to being "illustrative," it is not "known." CVPS bases this latter argument on two points: first, the Company asserts that it has not recorded the amortization on its books of account. Second, CVPS contends that the accounting orders authorizing the deferrals state that the costs will be deferred until the next "rate proceeding;" thus, the amortization cannot be reflected in Rate Year 1 because Docket 6946 is a "rate investigation," not a "rate proceeding." Finally, CVPS argues that it is wrong to start amortization in Rate Year 1 because CVPS will not have an opportunity to earn its return on equity.

The Department proposes accounting for amortization of deferred accounts beginning in Rate Year 1, and reflecting the impact of that amortization on the deferred balance in Rate Year 2, in a manner consistent with the Company's original filing.⁹⁸

For several reasons we conclude that all deferrals should be amortized beginning in Rate

96. Frankiewicz reb. pf. at 5–7.

97. Gibson reb. pf. 11/15/04 at 12. It is not readily apparent how including an expense item that the Company did not intend to recognize is "more accurate" than simply reflecting the Company's proposal to start amortization in Rate Year 2.

98. Schultz and DeRonne reb. pf. at 23.

Year 1.⁹⁹ First, the accounting orders authorizing the deferrals provided that the amounts would be deferred until the next rate case. Just like Docket 6988, Docket 6946 is a proceeding in which we will determine CVPS's rates. In this regard, there is no distinction between whether the case commenced under 30 V.S.A. § 227(a) or § 227(b).¹⁰⁰ Second, commencing the amortization in Rate Year 1 will allow CVPS to recover these expenses and remove them from the Company's books more quickly. Third, amortization in Rate Year 1 will contribute to rate stability by making the rate decrease smaller. If amortization were to begin in Rate Year 2, the rate decrease in Rate Year 1 would be one percent larger.¹⁰¹ Fourth, such treatment provides a close match between the period in which the costs were incurred and the time period in which they are expensed. This is important for equity reasons – the ratepayers who benefit from a service should be the ones to pay for it. Finally, beginning amortizations in Rate Year 1 allows CVPS to record them in the same accounting period as it recognizes the 2004 earnings that it deferred pursuant to our February 18, 2005, Accounting Order, thereby also contributing to rate stability.

We are not persuaded by CVPS's claim that starting amortization in Rate Year 1 will prevent the Company from recovering those costs. This assertion might have some merit if we found that CVPS's Rate Year 1 rates were below its costs. Here, however, we find that CVPS's rates are excessive and must be reduced. The rate reduction we find is necessary includes the amortization as an expense. If we accepted CVPS's proposal to start the amortization in Rate Year 2, the Rate Year 1 rate reduction would be larger, by the amount of the Rate Year 1 amortization expense. CVPS thus fully recovers these costs if, as we require, amortization begins in Rate Year 1.¹⁰²

We also find no merit in CVPS's assertion that it cannot record this amortization on its books. In fact, we flatly reject CVPS's apparent theory that it can control ratemaking treatment of an issue through its own unilateral decisions about how to book items. The proper purpose of

99. Our conclusion might have been different if the evidence had shown that CVPS had a revenue deficiency in Rate Year 1. If that had been the case, requiring CVPS to begin amortizing its deferral accounts in Rate Year 1 would have increased the revenue deficiency and might have affected the Company's ability to earn its allowed rate of return.

100. CVPS acknowledged this fact during the hearings. Tr. 1/12/05 at 29 (Gibson).

101. Frankiewicz reb. pf. at 8.

102. See also *Federal Power Commission v. Hope Natural Gas*, 320 U.S. 591 (1944).

such accounting may be to try to predict regulatory decisions; it is certainly not to supplant them. As CVPS acknowledged at the hearing, it can record the expense in Rate Year 1 if we order it.¹⁰³ We do so here.

Our decision to begin amortization in Rate Year 1 requires that we adjust the Rate Year 2 amortization expense to reflect the Rate Year 1 recoveries. Through our decision, the amortization of deferrals net of regulatory liabilities is known and measurable in Rate Year 1 and the deferred balances for Rate Year 2 should be reduced by the expense reflected in Rate Year 1.

Amortization Period

CVPS proposed that the deferred balances should be amortized over three years.¹⁰⁴ The Department agreed with CVPS on the amortization time period. AARP proposes that deferred costs should be amortized over six years, with the understanding that each cost should be included in rate base, and that no carrying costs should accrue once amortization begins. AARP does so to reduce the rate effect of the amortization expense.

We find that for regulatory assets, deferred debits, and most regulatory liabilities that will begin amortization in Rate Year 1, the amortization period proposed by CVPS is reasonable. These amortization periods provide an appropriate balance between the need to reduce deferred balances quickly, and the benefit of mitigating the rate impact during that time. We understand that, if we amortized the deferrals over a longer period, the annual amortization expense would be less, which would initially cause a larger rate reduction. But such a course would keep the deferrals on the books longer and exacerbate inter-generational equity concerns. Nevertheless, for the reasons we discuss in Section III above, we conclude that a four-year amortization of the earnings cap regulatory liability is appropriate to ensure that ratepayers receive the funds owed them in a timely fashion, while also reducing the impact on the Company's earnings and cash flow.

103. Tr. 1/11/05 at 69 (Frankiewicz).

104. Except for Distributed Utility Planning Account Correcting for Efficiency (2 years) and Distributed Utility Planning Demand-Side Management (5 years). Gibson pf. at 37.

Reverse Amortization

We now turn to the ratemaking treatment that should occur when the amortization period of a particular deferred cost or revenue expires, and that amount has been fully amortized.

The Department recommends that the Board rule that when the amortization period of a regulatory asset ends, any associated rate revenues should be booked as a regulatory liability for the benefit of ratepayers and not flow through to income, which inures ultimately to the benefit of shareholders. The Department proposes that this process be reversed when the amortization period of a regulatory liability ends. The Department maintains that such treatment prevents over-recovery of assets, a violation of generally accepted accounting principles and FERC guidelines.

CVPS would have the Board rule that when a regulatory asset is fully amortized, the associated rate revenue (that is still being recovered in rates) flows to the Company's current income. The reverse is true for regulatory liabilities. This treatment would be in effect until the Company's next rate change. CVPS argues that this policy provides an incentive for efficient behavior, helps it avoid frequent, expensive rate cases, and is consistent with traditional ratemaking. CVPS contends that the Department's proposal represents a ratemaking policy change, and should be considered more broadly.

To date, we generally have not required CVPS or other companies to record a reverse amortization expense after the deferral is fully amortized.¹⁰⁵ This means that when an asset is fully recovered, CVPS continues to recover the same amount in rates. As CVPS suggests, at times of rising prices, this can help mitigate the need for rate increases as the Company effectively receives an "increase" as each asset is fully recovered.

When deferral accounts were used sparingly, this regulatory approach did not have much effect. Now, as we have explained, CVPS has many deferrals. In two years, when the assets that begin amortization in Rate Year 1 are fully recovered, more than one percent of CVPS's rates would be associated with expenses that no longer exist.

We are thus persuaded that it is appropriate to adopt the policy urged by the Department.

105. One exception is demand-side management expenses, for which the Board directed CVPS to track the amortization in a similar manner to what the Department recommends. See Section V.C for further explanation.

To allow the continued recovery of a regulatory asset after it has been fully amortized (and fully recovered in rates), does indeed constitute over-recovery of that asset. Moreover, the fact that the reverse effect is true for regulatory liabilities provides the balance which the Company contends is lacking.¹⁰⁶ Accordingly, our ruling is consistent with the Department's recommendation: upon the expiration of a regulatory asset or liability, the corresponding rate revenue shall be booked as a reverse amortization in an opposing regulatory liability or asset account.

Accounting Orders

The significant cost deferrals that CVPS seeks to begin to recover through amortization in these proceedings have largely arisen because the Company experiences certain events that increase its expenses. GAAP allows regulators to require a company to record its costs and revenues in a different time period than a non-regulated company would. In Vermont, we authorize such treatment through accounting orders or through explicit rulings in cases that require the Company to record costs and earnings in a specific way. We usually consider accounting order requests without providing general public notice of the request (except to the Department) and without evidentiary hearings.¹⁰⁷ We have counterbalanced this policy by affirmatively stating that the accounting order affected solely the accounting treatment of the relevant costs (or revenues) and that it had no precedential effect on the ratemaking treatment of those costs (or revenues). As we ruled in Docket 5983, such limitations are essential, given the abbreviated procedures employed:

We must stress that, in the absence of full notice and opportunity for hearing on a request for an accounting order, such an order will not have final effect in a later rate proceeding under §§ 225–227, and it would be wrong for any party to think otherwise.¹⁰⁸

One set of costs and revenues that the Board may authorize a regulated company to defer

106. It is important to recognize that these amortizations are, themselves, the result of special accounting treatment that permits present recovery of past expenses. Reversing the amortization when the underlying regulatory asset or liability is fully amortized not only is consistent with the rationale behind that accounting treatment — to reflect an expense or income over an extended, but not indefinite time period — but also promotes more accurate recognition of such expenses and income.

107. See 30 V.S.A. § 221.

108. Docket 5983, Order of 6/8/98, at 20.

under GAAP are those associated with exceptional or extraordinary events. In fact, the bulk of the deferrals that we consider in these proceedings fall into this category; in reliance upon the Company's assertions that the events which cause these costs or revenues are "extraordinary," we issued a number of accounting orders that allow CVPS to "book and defer" costs and revenues. For example, in 2003 we authorized CVPS to defer the incremental decommissioning expenses for Yankee Atomic and Connecticut Yankee. These were large added expenses that CVPS could not reasonably anticipate.

An extraordinary event or transaction under GAAP is one that is "abnormally and significantly different from the ordinary and typical activities of the company, and which [sic] would not reasonably be expected to occur in the foreseeable future."¹⁰⁹ The GAAP standard encompasses four key considerations in determining whether an event is "extraordinary," and therefore merits a request for an accounting order. These considerations are:

- Is the amount material?
- Was the event unplanned?
- Was the event beyond CVPS's management control?
- Is the problem unusual, abnormal, and not likely to be repeated?¹¹⁰

The evidence in these proceedings and our experience with accounting orders raises questions about our recent practice. In particular, we have two sets of concerns: (1) whether we have been issuing such Orders too readily; and (2) whether the current practice is unfairly "one-sided" in that it tends to reflect cost deferrals, but not necessarily revenue deferrals (which would tend to benefit shareholders more than ratepayers). For example, some of the expenses that CVPS seeks to recover through deferrals relate to unplanned outages at Vermont Yankee. CVPS has suggested that such outages meet the GAAP standard because each outage has a different cause.¹¹¹ This interpretation of the GAAP standard, however, fails to consider that breakage at a power plant is not an unusual event. On the contrary, CVPS (in its power planning) and we (in our ratemaking) expect power plants to have outages for reasons that cannot be anticipated

109. Gibson reb. pf. 11/15/04 at 13–14.

110. Page reb. pf. at 8–9.

111. Taken to its logical extreme, CVPS's argument would justify special accounting treatment for all outages at power plants, except those that are recurring.

(which is why CVPS includes a forced outage rate in the power cost models).

Similarly, the list of deferrals shows many cost deferrals, but few revenue deferrals. In 2004, for example, CVPS sought an accounting order for \$835,000 in incremental replacement power costs associated with a fire at Vermont Yankee. At the same time, CVPS did not request special treatment for a \$6.6 million gain that it received on the sale of Connecticut Valley Electric Company. Ratepayers would thus have the costs deferred, but the revenues would, in the absence of an earnings cap, go to shareholders.

Moreover, CVPS itself acknowledged that it has used accounting orders as a substitute for a fuel adjustment clause.¹¹² The Company suggests that this approach is reasonable since every successful candidate for extraordinary cost treatment need not satisfy all four of these key considerations, but that a balance of these considerations is appropriate.¹¹³ We understand that each event is different and that it is impossible to delineate a bright line test to define extraordinary events. But it seems very unlikely that an event or transaction could be considered extraordinary unless it met all four of the GAAP criteria.

We are also concerned that broad use of the accounting orders as if they were a fuel adjustment clause has the affect of altering the balance of risks that we consider in setting the Company's return on equity. The risk level we find for CVPS, and on which we base the Company's allowed return on equity, encompasses the fact that Vermont does not have a fuel adjustment clause. If CVPS uses these accounting orders in such a way as to mirror (in large part) the effect of such a clause, we would need to downgrade our assessment of the risks that CVPS faces.

At the present time, we do not envision specific changes to our accounting order practices. However, we will expect CVPS to better explain how future requests meet the GAAP requirements and, most importantly, why they are extraordinary. In addition, we will give

112. ". . . as soon as a bill comes in, and we pay it, absent an accounting order, it would have to be expensed. It comes out of both columns, regulatory liability and the regulatory asset, and if it's so extraordinary, you know, it's not deemed to be in rates, then it's not recovered. If it's expensed. *That's why we have to have the accounting order. Certainly in the absence of a fuel and purchase power clause here in Vermont.*" Tr. 1/11/05 at 124–126 (Frankiewicz) (emphasis added).

113. Page reb. pf. at 9; tr. 11/2/04 at 169–170 (Gibson).

consideration to requiring CVPS to commence amortization in the same manner that it would for plant additions (i.e., at the time the event is completed), rather than deferring those costs indefinitely.

Finally, we want to make clear that, when we issue an accounting order, we are authorizing the Company to defer such costs, not mandating that treatment. We acknowledge that in the past, some accounting orders included the phrase "is authorized and shall defer . . ." However, this language was not intended to require deferral until the next rate proceeding or to prevent the earlier recovery of the deferred costs, as CVPS has suggested it did.

V. RATE BASE

A utility's rate base represents the unrecovered prudent investment in facilities dedicated to the provision of a public service. Upon this rate base, the utility earns a risk-adjusted return comparable to similarly-situated companies. Unlike revenue or expense adjustments, a dollar change in rate base does not result in a dollar reduction in the expected earning potential of a regulated utility. Rather, a dollar reduction in rate base equals a reduction in expected earnings equal to the utilities' cost of capital¹¹⁴ times the amount of the rate base adjustment. Thus, assuming a 10.0 percent cost of capital and a rate base reduction of \$100, the expected earnings of a utility would be reduced by \$10 per year.¹¹⁵

A. Plant Adjustments

Findings

Rate Year 1 Plant Adjustments

85. CVPS's original cost-of-service filings included plant additions that would increase the Company's Rate Year 1 rate base by \$7.2 million. Some of these proposed plant additions are not known and measurable. As a result, net reductions to CVPS's Rate Year 1 cost of service and rate base, by plant category, are as follows:

114. Technically speaking, a utility's cost of capital equals the weighted-average cost of capital. See Section VII for more detail.

115. A utility's income taxes would also be reduced.

Plant Category	Net Rate Base Reductions	Accumulated Depreciation	Def. Inc. Tax	Depreciation Expense
Distribution Substation	(\$25,846)	(\$115)	(\$450)	(\$654)
Distribution Purchases	(\$100,998)	(\$1,499)	(\$876)	(\$3,727)
Facilities	(\$53,929)	(\$314)	(\$763)	(\$1,444)
Information Systems	(\$119,290)	(\$5,948)	(\$4,428)	(\$13,034)
Communication	(\$7,431)	(\$99)	(\$619)	(\$374)

Schultz and DeRonne pf. at 4–5; exh. DPS-L&A-11 at schedule 5; exh. CVPS-CJF-3.

86. CVPS's proposed Distribution Substation plant additions include costs associated with replacing the Bethel Breaker and upgrading the Weybridge 80 and 81 relays. The Bethel Breaker is not scheduled to be in service during Rate Year 1 and there is no documentation to support the cost of the Weybridge relay upgrades. Schultz and DeRonne pf. at 11.

87. CVPS's proposed Distribution Purchases plant additions include blanket work orders for regulators and meters that are significantly higher than the non-growth-related five-year averages for those items. Some of the costs requested for these blanket work orders should be disallowed. Schultz and DeRonne pf. at 13; exh. DPS-L&A-11 at schedule 5.

88. The following proposed Facilities plant additions have been cancelled or deferred beyond Rate Year 1: General office- replace computer room; GO-Switchgear upgrade; Engineering building renovations; the SOB-Tel/Data/SCADA unit; and card readers for fuel dispensers. Schultz and DeRonne pf. at 15; exh. DPS-L&A-11 at schedule 5.

89. CVPS duplicated two of its proposed Information Systems plant additions in its original cost-of-service filing. The duplicates should be removed. Also, the proposed "SAN" expansion does not meet the known and measurable test and should be removed. Schultz and DeRonne pf. at 16.

90. CVPS cancelled two of its proposed Communications Systems plant additions that were related to site improvements. Schultz and DeRonne pf. at 17; exh. DPS-L&A-11 at schedule 5.

91. Deferred hydroelectric relicensing costs in Rate Year 1 amounted to \$29,231. As a result, the following changes to CVPS's cost of service and rate base are warranted:

Plant Category	Net Rate Base Addition	Accumulated Depreciation	Def. Inc. Tax	Depreciation Expense
Hydro Re-licensing	\$29,231	\$225	\$0	\$1,172

Schultz and DeRonne pf. at 19; exh. DPS L&A-11 at page 2 of schedule SR 3.

92. As a result of adjustments to CVPS's cost of service and rate base, CVPS's proposed rate base should be reduced in Rate Year 1 by \$278,263, net of relicensing costs. Accumulated depreciation should be reduced by \$7,750, deferred income taxes should be reduced by \$7,136, and depreciation expense should be reduced by \$18,061, also net of relicensing costs. Exh. DPS-L&A-11 at schedule 5 and page 2 of schedule SR3.

Rate Year 2 Plant Adjustments

93. CVPS's original cost-of-service filings included plant additions that would increase the Company's Rate Year 2 rate base by \$20.9 million.¹¹⁶ Exh. CVPS-CJF-7.

94. CVPS's capital budgets for 2005 and 2006 have not yet been approved. Some projects that were originally part of CVPS's cost-of-service filings may be cut as part of the budget approval process. Schultz and DeRonne sur. pf. at 7; tr. 1/10/05 at 175 (G. White); tr. 11/1/04 at 75 (Jones).

Production

95. CVPS did not provide cost support for the Glen Station modernization and Silver Lake Automation projects. In addition, based on the projects' late projected in service date, the projects may slip beyond the end of the rate year. Therefore, the following reductions to CVPS's requested cost-of-service and rate base should be made:

116. CVPS's proposed plant additions are shown on lines 2 through 9 of exh. CVPS-CJF-7.

Plant Category	Net Rate Base Reduction	Accumulated Depreciation	Def. Inc. Tax	Depreciation Expense
Production	(\$436,539)	(\$2,496)	(\$6,978)	(\$11,933)

Schultz and DeRonne pf. at 7; exh. DPS-L&A-12 at page 1 of schedule 5.

Transmission Substations

96. Some of CVPS's proposed additions to Transmission Substation plant are not known and measurable due to unsupported or undocumented costs. As a result, the following reductions to CVPS's requested cost-of-service and rate base should be made:

Plant Category	Net Rate Base Reduction	Accumulated Depreciation	Def. Inc. Taxes	Depreciation Expense
Transmission Substations	(\$388,737)	(\$2,989)	(\$5,169)	(\$9,893)

Schultz and DeRonne pf. at 9–10; exh. DPS-L&A-12 at page 1 of schedule 5.

Transmission Lines

97. Some of CVPS's proposed additions to Transmission Line plant are not known and measurable due to unsupported or undocumented costs. As a result, the following reductions to CVPS's requested cost-of-service and rate base should be made:

Plant Category	Net Rate Base Reduction	Accumulated Depreciation	Def. Inc. Tax	Depreciation Expense
Transmission Lines	(\$353,083)	(\$1,775)	(\$5,811)	(\$8,499)

Schultz and DeRonne pf. at 10–11; exh. DPS-L&A-12 at page 1 of schedule 5.

Distribution Substations

98. CVPS did not provide any cost support for the Weybridge relay upgrade project.
Schultz and DeRonne pf. at 11.

99. CVPS did not provide sufficient information to conclude that a portable transformer will actually be purchased. The Company did not provide evidence to justify its need, and the description provided indicates that the portable transformer is a discretionary item. Schultz and DeRonne pf. at 12.

100. CVPS has not provided any information to support the cost of the new spare substation transformer. In addition, the transformer appears to be a discretionary purchase and it is not known whether it will be acquired. Schultz and DeRonne pf. at 12.

101. CVPS has described the Breaker Replacement as a project for the replacement of old breakers that no longer operate reliably. However, the Company did not provide supporting information regarding this project. Schultz and DeRonne pf. at 12.

102. The following reductions to CVPS's requested cost of service and rate base should be made to remove costs associated with proposed projects that do not meet the known and measurable standard:

Plant Category: Distribution Substations	Net Rate Base Reduction	Accumulated Depreciation	Def. Inc. Tax	Depreciation Expense
Weybridge Relay Upgrade Project	(\$20,000)	(\$427)	(\$578)	(\$540)
Portable Transformer	(\$784,615)	(\$10,474)	(\$5,768)	(\$21,747)
Sub. Transformer Replacement Spare	(\$75,385)	(\$336)	(\$1,311)	(\$1,908)
Breaker Replacement	(\$54,692)	(\$230)	(\$899)	(\$1,309)

Schultz and DeRonne pf. at 11–13; exh. DPS-L&A-12 at page 2 of schedule 5; findings 98–101, above.

103. Some of CVPS's other proposed additions to Distribution Substations plant are not known and measurable due to unsupported or undocumented costs. As a result, the following reductions to CVPS's requested cost-of-service and rate base should be made:

Plant Category	Net Rate Base Reduction	Accumulated Depreciation	Def. Inc. Tax	Depreciation Expense
Distribution Substations	(\$117,308)	(\$658)	(\$1,870)	(\$3,042)

Schultz and DeRonne pf. at 12; exh. DPS-L&A-12 at page 2 of schedule 5.

104. Total reductions to proposed Distribution Substation plant additions should be:

Plant Category	Net Rate Base Reduction	Accumulated Depreciation	Def. Inc. Tax	Depreciation Expense
Distribution Substations	(\$1,052,000)	(\$12,125)	(\$10,426)	(\$28,546)

Exh. DPS-L&A-12 at page 2 of schedule 5.

Distribution Purchases

105. CVPS did not provide documentation supporting the inclusion of two meter test equipment purchases in rate base in Rate Year 2. These meter test equipment purchases are considered discretionary. As a result, the following reductions to CVPS's requested cost of service and rate base should be made:

Plant Category: Distribution Purchases	Net Rate Base Reduction	Accumulated Depreciation	Def. Inc. Tax	Depreciation Expense
Meter Test Equipment	(\$67,398)	(\$829)	(\$713)	(\$2,418)

Schultz and DeRonne pf. at 14; exh. DPS-L&A-12 at page 2 of schedule 5.

106. Some of CVPS's other proposed additions to Distribution Purchases plant are not known and measurable due to unsupported or undocumented costs. As a result, the following reductions to CVPS's requested cost of service and rate base should be made:

Plant Category	Net Rate Base Reduction	Accumulated Depreciation	Def. Inc. Tax	Depreciation Expense
Distribution Purchases	(\$256,756)	(\$7,908)	(\$4,506)	(\$9,108)

Schultz and DeRonne pf. at 13–14; exh. DPS-L&A-12 at page 2 of schedule 5.

107. Total reductions to proposed Distribution Purchases plant additions should be:

Plant Category	Net Rate Base Reduction	Accumulated Depreciation	Def. Inc. Tax	Depreciation Expense
Distribution Purchases	(\$324,154)	(\$8,737)	(\$5,219)	(\$11,526)

Exh. DPS L&A-12-at page 2 of schedule 5.

Facilities

108. The project identified as SOB-Tel/Data/SCADA was not allowed into rate base in Rate Year 1. CVPS flowed some of the costs associated with that project through to Rate Year 2. As a result, the following reductions to CVPS's requested rate base and cost of service should be made:

Plant Category: Facilities	Net Rate Base Reduction	Accumulated Depreciation	Def. Inc. Tax	Depreciation Expense
SOB-Tel/Data/SCADA	(\$25,967)	(\$619)	(\$224)	(\$708)

Exh. DPS-L&A-12 at page 2 of schedule 5; finding 88.

109. Some of CVPS's other proposed additions to Facilities plant are not known and measurable due to unsupported or undocumented costs. As a result, the following reductions to CVPS's requested cost of service and rate base should be made:

Plant Category	Net Rate Base Reduction	Accumulated Depreciation	Def. Inc. Tax	Depreciation Expense
Facilities	(\$89,046)	(\$1,611)	(\$1,926)	(\$2,532)

Schultz and DeRonne pf. at 15–16; exh. DPS-L&A-12 at page 2 of schedule 5.

110. Total reductions to proposed Facilities plant additions should be:

Plant Category	Net Rate Base Reduction	Accumulated Depreciation	Def. Inc. Tax	Depreciation Expense
Facilities	(\$115,013)	(\$2,230)	(\$2,150)	(\$3,240)

Exh. DPS-L&A-12 at page 2 of schedule 5.

Information Systems

111. CVPS duplicated two of its proposed Information Systems plant additions in its original cost-of-service filing (the Liebert HVAC and the 3835 Replacement). The duplicates should be removed. Also, the proposed "SAN" expansion does not meet the known and measurable test and should be removed. Schultz and DeRonne pf. at 16.

112. CVPS did not provide sufficient information to support the cost of the Main Frame project. In addition, the project's scheduled completion date is so late in Rate Year 2 that the project may not be completed during the rate year. Schultz and DeRonne pf. at 17.

113. The following reductions to CVPS's requested rate base and cost of service should be made to remove costs associated with proposed projects that do not meet the known and measurable standard:

Plant Category: Information Systems	Net Rate Base Reduction	Accumulated Depreciation	Def. Inc. Tax	Depreciation Expense
Liebert HVAC	(\$71,527)	(\$6,998)	(\$6,686)	(\$4,539)
3835 Replacement	(\$38,877)	(\$9,930)	(\$2,885)	(\$6,809)
SAN Expansion	(\$38,600)	(\$5,345)	(\$4,734)	(\$6,751)
Mainframe upgrade	(\$11,135)	(\$81)	(\$197)	(\$1,056)

Exh. DPS-L&A-12 at page 3 of schedule 5; findings 111–112, above.

114. Some of CVPS's other proposed additions to Information Systems plant are not known and measurable due to unsupported or undocumented costs. As a result, the following reductions to CVPS's requested cost of service and rate base should be made:

Plant Category	Net Rate Base Reduction	Accumulated Depreciation	Def. Inc. Tax	Depreciation Expense
Information Systems	(\$32,502)	(\$1,596)	(\$2,294)	(\$6,463)

Schultz and DeRonne pf. at 17; exh. DPS-L&A-12 at page 3 of schedule 5.

115. Total reductions to proposed Information Systems plant additions should be:

Plant Category	Net Rate Base Reduction	Accumulated Depreciation	Def. Inc. Tax	Depreciation Expense
Information Systems	(\$192,641)	(\$23,950)	(\$16,796)	(\$25,618)

Exh. DPS-L&A-12 at page 3 of schedule 5.

Communications

116. CVPS's original cost of service filing erroneously omitted \$454,494 of proposed Communications plant additions. This error should be corrected. Schultz and DeRonne pf. at 18; exh. DPS-L&A-12 at page 3 of schedule 5.

117. CVPS did not provide sufficient support for the requested video conferencing equipment. Schultz and DeRonne pf. at 18.

118. CVPS cancelled two of its proposed Communications Systems plant additions that were related to site improvements. Exh. DPS-L&A-12 at page 3 of schedule 5; finding 90.

119. The following reductions to CVPS's rate base and cost of service should be made to remove costs associated with proposed projects that do not meet the known and measurable standard:

Plant Category: Communication Systems	Net Rate Base Reduction	Accumulated Depreciation	Def. Inc. Tax	Depreciation Expense
Video Conference Equipment Unit Pilot	(\$10,164)	(\$85)	(\$973)	(\$483)
Video Conference Equipment	(\$7,692)	(\$16)	(\$152)	(\$209)
Site Improvements/ Additions	(\$9,975)	(\$483)	(\$1,595)	(\$504)
Emergency Generator Site	(\$5,250)	(\$275)	(\$831)	(\$264)

Exh. DPS-L&A-12 at page 3 of schedule 5; findings 117–118, above.

120. Total additions to proposed Communications Systems plant additions should be:

Plant Category	Net Rate Base Addition	Accumulated Depreciation	Def. Inc. Tax	Depreciation Expense
Communications Systems	\$381,279	\$11,771	\$52,170	\$18,770

Exh. DPS-L&A-12 at page 3 of schedule 5.

121. CVPS incurred costs to relicense its hydroelectric dams. Those costs have been deferred. As a result, the following increases to CVPS's cost of service and rate base should be made:

Plant Category	Net Rate Base Addition	Accumulated Depreciation	Def. Inc. Tax	Depreciation Expense
Hydro Re-licensing	\$1,431,538	\$15,299	\$0	\$51,780

Schultz and DeRonne pf. at 19.

122. As a result of adjustments to CVPS's cost of service and rate base, the Company's proposed rate base should be reduced in Rate Year 2 by \$1,049,350, net of relicensing costs. Similarly, accumulated depreciation should be reduced by \$27,232, deferred income taxes should be reduced by \$379 and depreciation expense should be reduced by \$28,705, net of relicensing cost. Schultz and DeRonne pf. at 19; exh. DPS L&A-12 at page 3 of schedule 5 and schedule SR3.

Discussion

Plant investment is typically the largest component of a utility's rate base. This investment is constantly changing as utilities acquire new plant and perform periodic maintenance and replacement of their existing plant. When the Board sets rates for an investor-owned utility such as CVPS, it determines the utility's plant investment for the test year, and then adjusts that investment for known and measurable changes.¹¹⁷

CVPS's plant investment at the end of the test year in the instant proceedings was approximately \$483 million.¹¹⁸ The Company's original cost-of-service filings in these proceedings include additions to utility plant investment that increase CVPS's Rate Year 1 rate base by \$7.2 million, the Company's Rate Year 2 rate base by \$20.9 million. CVPS asserts that all these proposed additions are known and measurable. The DPS disagrees with this assertion, arguing instead that many of the Company's proposed additions are not known and measurable. However, in a recommendation that is more lenient than traditional Vermont ratemaking

117. This section of our Order refers to gross plant investment. In order to determine a utility's rate base, an additional step is required — the gross plant investment must be reduced by the amount of accumulated depreciation on that plant. Also, reductions may be required if a plant investment was not prudently made or is not "used and useful" for the delivery of service.

118. CVPS-CJF-3.

practice, the DPS does not propose that the Board disallow all the costs associated with proposed plant additions that are not known and measurable. Instead, the DPS contends that the Board should allow a percentage of unsupported plant costs (with the percentage varying by type of plant), because it is reasonable to expect that some non-growth-related capital spending will occur, and it is appropriate for CVPS to earn a return of and on plant necessary for the Company to meet its service quality and reliability standards.¹¹⁹

Our evaluation of CVPS's proposed plant additions begins with a review of the known and measurable standard, as defined by the Vermont Supreme Court, and as applied by this Board. The Vermont Supreme Court has defined the known and measurable standard as "changes that are measurable with a reasonable degree of accuracy and have a high probability of being in effect in the adjusted test year."¹²⁰ The Board has consistently held, including in CVPS's last fully-litigated rate case, that witnesses' representations alone are not sufficient support for a project to meet the Court's known and measurable standard. Rather, the Board has required some tangible work-product that shows that the project is likely to actually be completed; examples include work orders, cost-benefit analyses, or other types of written support for a project's cost and completion date.

In these proceedings, we conclude that CVPS has not met its burden of showing that all of its proposed additions meet the known and measurable standard. CVPS failed to provide appropriate cost support for many of its projects, and did not demonstrate that all of its proposed projects would be in service during the appropriate rate year. CVPS attempted to overcome this lack of documentation by asserting that all of its projects were known and measurable because they have gone through the Company's capital budgeting process and experts within the Company had stated that they would occur.¹²¹ We are not persuaded by this argument. The Company's own witness admits that CVPS's capital budgets for 2005 and 2006 have not yet been approved, and that some projects included in CVPS's cost-of-service filing may be cut during the budget approval process.¹²² In addition, the DPS has shown that some projects that were

119. DPS Brief at 4, 14.

120. *In re GMP*, *supra*, at 381.

121. G. White reb. pf. at 7.

122. *See*, finding 94, above.

included in past capital budgets were later cancelled.

The DPS identifies several specific projects included in CVPS's cost-of-service filings that do not meet the known and measurable standard,¹²³ and recommends that the Board disallow the costs associated with these projects. After reviewing the evidence and the parties' arguments, we conclude that these proposed adjustments are reasonable, and we hereby accept them.

We also accept the DPS's recommendation that we depart from a strict application of the known and measurable standard, and allow CVPS to include in rates a portion of the costs that it has not shown meet that standard. No party has opposed allowing this portion of CVPS's costs in rates, and we determine that such an approach is appropriate in these particular circumstances. Therefore, and without ruling on the merits of the DPS's underlying rationale, we accept the DPS's proposed levels of plant additions to be included in rate base.

In addition, we accept an adjustment to CVPS's Rate Year 1 and Rate Year 2 rate bases and costs of service that is agreed upon by CVPS and the DPS. This adjustment corrects an omission in CVPS's original cost-of-service filings related to deferred hydroelectric relicensing costs.

Thus, for the reasons explained above, we conclude that CVPS should reduce its proposed Rate Year 1 rate base by \$278,263, and its Rate Year 2 rate base by \$1,049,350. In addition, CVPS should make the corresponding reductions to accumulated depreciation, deferred income taxes, and depreciation expense that are shown in findings 92 and 122, above.

Two additional items deserve discussion. First, CVPS argues that all of its proposed projects are necessary for the Company to provide service to customers, and that it is inappropriate for the Board to deny recovery of the costs associated with these projects. This argument reflects a misunderstanding about the issue before us today. We are not being asked to decide whether CVPS will ever be allowed to recover the costs associated with a particular project. Rather, we are being asked to determine whether it is appropriate for CVPS to recover now the costs associated with a particular project that has not yet been implemented. It is very possible that some of the projects we determine are not known and measurable today will occur

123. See, findings 86–90, 95, 98–101, 105, 108, 111–112, and 117–118.

in the future. If so, CVPS can request recovery of the costs associated with those projects at such time as it can show that the projects are known and measurable.

Finally, we are concerned about the level of support CVPS filed in support of its proposed plant additions in these proceedings. This same issue arose in CVPS's last fully-litigated rate cases. In those cases, the Board rejected certain proposed changes to the Company's rate base because of a lack of supporting documentation. The Board stated that:

The company provides no support for capital additions beyond the statements of a company witness. More specifically, there are no exhibits, workpapers, underlying work orders and associated cost/benefit analysis that would enable either the Department or the Board to conclude that these investments are indeed interim period non-growth related investments.¹²⁴

We expect CVPS to present such supporting information for its proposed capital additions with its initial testimony in its future rate cases.

B. Accumulated Depreciation

Findings

123. CVPS's proposed rate base for Rate Year 1 includes an average accumulated depreciation balance of \$218,353,000. CVPS's proposed rate base for Rate Year 2 includes an average accumulated depreciation balance of \$218,978,000. Exh. CVPS-CJF-3; exh. CVPS-CJF-7.

124. CVPS's Rate Year 2 accumulated depreciation should be increased by \$15,299 to correct an error in CVPS's original cost-of-service filing related to hydroelectric relicensing costs. Schultz and DeRonne pf. at 19.

125. For each proposed plant addition that is disallowed, there is a corresponding adjustment to accumulated depreciation. CVPS's accumulated depreciation should be reduced by \$7,975 in Rate Year 1 and \$42,529 in Rate Year 2 to reflect the changes to CVPS's plant balances. Schultz and DeRonne pf. at 19; exh. DPS-L&A-11 at schedule 5; exh. DPS-L&A-12 at page 3 of schedule 5.

126. Rates currently being collected by CVPS assume recovery of depreciation expense.

124. Dockets 5701/5724, Order of 10/31/94 at 37.

Depreciation is being recorded on CVPS's books. Tr. 11/2/04 at 152 (Gibson); tr. 1/11/05 at 76–78 (Frankiewicz).

127. CVPS's method for calculating its adjustment to accumulated depreciation is to increase test-year accumulated depreciation by 50 percent of the test-year depreciation expense. Frankiewicz reb. pf. at 3.

128. CVPS's method for calculating interim-period depreciation results in an average accumulated depreciation for Rate Year 1 of \$214,707,441. However, the accumulated depreciation balance on the books of the Company on March 31, 2004, (the day before Rate Year 1 begins) is \$216,722,616. Exh. DPS-34; tr. 1/11/05 at 75–78 (Frankiewicz).

129. CVPS's method for calculating interim-period depreciation results in an average accumulated depreciation for Rate Year 2 of \$222,737,225. Given that, according to CVPS's original cost-of-service filings, CVPS's accumulated depreciation balance as of March 31, 2004, (the day before Rate Year 1 begins) is \$216,714,895, and that CVPS has requested annual depreciation expense of \$16,059,627, this means that CVPS's accumulated depreciation balance at the beginning of Rate Year 2 will be \$232,774,522. It is not mathematically possible to have an average Rate Year 2 balance of \$222,737,225 when the beginning balance is \$232,774,522. Schultz and DeRonne reb. pf. at 21; exh. DPS-L&A-10.

130. CVPS's original filing includes an error in the calculation of annualized test-year depreciation expense. This expense was \$16,059,627 (\$1,338,302 per month) in the original filing, while the correct amount should be \$16,090,512 (\$1,340,876 per month), for an annual difference of \$30,888, or 0.19 percent. Exh. DPS-34.

131. If the correct amount of monthly depreciation is used, CVPS's accumulated depreciation balance as of March 31, 2004, (the day before Rate Year 1 begins) is \$216,722,616, and its accumulated depreciation balance at the beginning of Rate Year 2 is \$232,813,128. Using these amounts in the analysis shown in finding 129, above, does not change the conclusion; CVPS's average accumulated depreciation for Rate Year 2 is still less than the accumulated depreciation balance at the start of Rate Year 2. Exh. DPS-L&A-10; findings 129–130, above.

132. The interim-period adjustment to accumulated depreciation should be calculated as follows:

- Add interim-period depreciation to the accumulated depreciation balance at the end of the test year to determine the accumulated depreciation balance at the end of the interim period;
- Average the accumulated depreciation balance at the end of the test year and the accumulated depreciation balance at the end of the interim period to determine the average interim-period accumulated depreciation balance;
- Subtract the average interim-period accumulated depreciation balance from the average test-year accumulated depreciation balance to determine the interim-period adjustment to accumulated depreciation.

Schultz and DeRonne sur. pf. at 19.

133. The rate-year adjustment to accumulated depreciation should be calculated as follows:

- Add rate-year depreciation to the accumulated depreciation balance at the end of the interim period to determine the accumulated depreciation balance at the end of the rate year;
- Average the accumulated depreciation balance at the end of the interim period and the accumulated depreciation balance at the end of the rate year to determine the average rate-year accumulated depreciation balance;
- Subtract the average rate-year accumulated depreciation balance from the average interim-period accumulated depreciation balance to determine the rate-year adjustment to accumulated depreciation.

Schultz and DeRonne sur. pf. at 19.

134. CVPS's average Rate Year 1 accumulated depreciation balance should be increased by \$4,015,000 to reflect interim-period and rate-year depreciation. Schultz and DeRonne pf. at 20–21; exh. DPS-L&A-11 at page 1 of schedule 6.

135. CVPS's average Rate Year 2 accumulated depreciation balance should be increased by \$20,075,000 to reflect interim-period and rate-year depreciation. Schultz and DeRonne pf. at 21; exh. DPS-L&A-12 at page 1 of schedule 6.

Discussion

Depreciation is the accounting convention that defines the pace at which utilities should recover the cost of their prudently-incurred investment in physical "plant" that is used to serve ratepayers. Accumulated depreciation is the sum of all the depreciation a utility has already collected from its ratepayers on its plant that remains in service, plus amounts collected for net

salvage and future cost of removal of that plant.¹²⁵ Each year, a utility's accumulated depreciation increases by the amount of depreciation expense that it records in its financial books, and decreases by the amount of accumulated depreciation on plant that is retired. For ratemaking purposes, gross plant is reduced by accumulated depreciation to arrive at the net plant on which a company earns a return. An increase in accumulated depreciation has the effect of reducing the rate base upon which a return is earned. Thus, an increase in accumulated depreciation results in a reduction in ultimate rates. The converse is also true — a decrease in accumulated depreciation has the effect of increasing the rate base upon which a return is earned, thereby resulting in an increase in ultimate rates.

The DPS argues that CVPS's accumulated depreciation should be adjusted in four ways:

- (1) to correct an error in CVPS's original cost-of-service filing related to hydroelectric relicensing costs (this applies to Rate Year 2 only);
- (2) to reflect the DPS's recommended disallowances of additions to CVPS's plant balances;
- (3) to reflect changes to depreciation expense resulting from the DPS's recommendations regarding net salvage rates; and
- (4) to properly reflect interim-period and rate-year depreciation.

CVPS does not contest the correction of the error relating to hydroelectric relicensing costs. It also does not contest the principle that accumulated depreciation should be adjusted to reflect changes in plant balances,¹²⁶ although it does contest the DPS's recommended changes to its plant balances (see the discussion in Section V.A, above). CVPS does not directly address the DPS's proposed changes resulting from its recommendations regarding net salvage rates; however, CVPS does contest CVPS's proposed changes to those rates (see the discussion in Section VI.D, below). In addition, CVPS acknowledges that accumulated depreciation should be adjusted to reflect interim-period depreciation, although it contests the methodology that the DPS uses to calculate interim-period depreciation. Finally, CVPS argues that accumulated depreciation should not be increased to reflect rate-year depreciation.

125. When plant is retired, the asset is removed from rate base and accumulated depreciation on that plant is removed from the utility's total accumulated depreciation.

126. Frankiewicz pf. at 23.

We have reviewed the uncontested adjustment related to hydroelectric relicensing costs described in finding 124, above, and conclude that it is appropriate and should be made. We have also reviewed the DPS's proposed adjustment to accumulated depreciation to reflect changes in CVPS's plant balances. Accumulated depreciation should be adjusted to be consistent with plant account balances. Since we have accepted the DPS's proposed adjustments to plant balances (see Section V.A, above), it is necessary to make the corresponding adjustments to accumulated depreciation. Therefore, we accept the DPS's proposed adjustment to accumulated depreciation shown in finding 125, above.

We do not accept the DPS's proposed \$903,634 reduction to the average Rate Year 1 accumulated depreciation balance, and \$2,710,902 reduction to the average Rate Year 2 accumulated depreciation balance. The DPS proposes these reductions in order to reflect its recommended change in depreciation expense related to net salvage rates.¹²⁷ As explained in Section VI.D, below, we have rejected the DPS's recommended change in depreciation expense related to net salvage rates. Consequently, it is not appropriate to make the corresponding reductions to the Rate Year 1 and 2 average accumulated depreciation balances.

Interim Period and Rate Year Depreciation

We now turn to the issue of adjusting accumulated depreciation to reflect interim-period and rate-year depreciation.

Vermont ratemaking uses a historic test year adjusted for known and measurable changes. The Vermont Supreme Court has held that, while the Board's discretion is broad, it may not reject an adjustment that is unquestionably known and measurable.¹²⁸ The Vermont Supreme Court made that statement when it required the Board to adjust test-year rate base for interim-period depreciation because (1) interim-period depreciation is known and measurable, and (2):

. . . once customers have, in effect, returned a portion of a utility's investment, they should not be required to pay for that portion a second time, once as depreciation expense and again as a return on plant value which had not been correspondingly reduced to reflect the "return of" the investment through

127. Schultz and DeRonne pf. at 21–22.

128. *In Re GMP*, *supra*.

depreciation expense payments.¹²⁹

The same principles apply to rate-year depreciation; both interim-period and rate-year depreciation are known and measurable amounts already reflected in rates as an expense. In both instances, ratepayers will have returned a portion of a utility's investment. Therefore, under the Vermont Supreme Court's standard, ratepayers should not be required to pay for that portion a second time, and the Board must recognize an adjustment to accumulated depreciation for interim-period and rate-year depreciation.

The Vermont Supreme Court's decision in *In re GMP* does address the issue of interim-period depreciation, as CVPS suggests.¹³⁰ However, the logic of the Supreme Court's decision extends beyond simple recognition of interim-period depreciation and mandates that we incorporate adjustments that are known and measurable. The Supreme Court clearly set out the public policy reason for applying the known and measurable change principle to the test-year rate base — to ensure that ratepayers do not pay for the same portion of a utility's investment twice, once as depreciation expense, and a second time as return on plant value which had not been reduced to reflect the return of a portion of the investment through depreciation expense payments. This principle applies to rate-year depreciation just as to interim-period depreciation; ratepayers will pay depreciation expense in the rate year, the amount of that expense is known and measurable, and a utility's rate base should be adjusted to reflect the recovery of that portion of its investment from ratepayers. It would be wrong for the Board to ignore the core rationale of the Vermont Supreme Court's decision in *In re GMP* and to limit the Court's holding only to the issue of interim-period depreciation.

We also reject CVPS's assertion that the anti-updating provisions of 30 V.S.A. § 225(a) undermine the Vermont Supreme Court's rationale in *In re GMP* by denying a utility an "ample opportunity" to present evidence of plant additions during the rate year.¹³¹ This assertion is not plausible on its face. Section 225(a) was in effect at the time the Supreme Court issued its

129. *In re GMP*, *supra*, at 383.

130. CVPS Brief at 153.

131. CVPS Brief at 135.

decision in *In re GMP*,¹³² yet that decision stated that GMP had had an ample opportunity to introduce evidence regarding its rate-year plant additions.¹³³ We have to infer that the Vermont Supreme Court understood 30 V.S.A. § 225(a)'s mandate at the time it considered GMP's appeal. Since the statute has not changed, the Vermont Supreme Court's decision still controls.

More significantly, CVPS did have an ample opportunity to present evidence regarding its plant additions. This opportunity was at the time that CVPS filed its costs of service in these rate cases. CVPS chose not to present sufficient evidence at that time, even though the Company knew of the limits imposed on updating by 30 V.S.A. § 225(a). Instead, CVPS provided insufficient evidence to show that its plant additions were known and measurable, and then tried to update the support for its plant additions with additional evidence months later, after the DPS pointed out the deficiencies in CVPS's initial filing. The DPS challenged this additional evidence on the grounds that it violated the anti-updating provisions of 30 V.S.A. § 225(a). After reviewing the DPS's objection, and CVPS's response to it, we struck the additional evidence from the record.¹³⁴ It is inappropriate for the Company to now blame the DPS and Vermont law for the consequences of its own timing decisions.

Calculation Methodology for Interim Period and Rate Year Depreciation Adjustments

Given that we have decided that adjustments should be made for interim-period and rate-year depreciation, we must next determine the appropriate calculation for these adjustments.

The DPS asserts that the correct methodology for calculating the adjustments for interim-period and rate-year depreciation is that which the Board has applied in recent cases involving other Vermont utilities (Dockets 6596 and 6914).¹³⁵ Essentially, this methodology calculates

132. There were minor modifications to 30 V.S.A. § 225(a) in 1999; however, the anti-updating provisions of that section were not affected.

133. "A general trend is no substitute for evidence, especially when, as here, the utility seeking the rate increase has had an ample opportunity to introduce evidence as to its adjusted test year additions to plant, and did not do so." *In re GMP*, *supra*, at 384.

134. Tr. 1/10/05 at 193–196 (Chairman Dworkin, for the Board).

135. Docket 6596 *Tariff filing of Citizens Communications Company, d/b/a Citizens Energy Services, requesting a rate increase in the amount of 40.02%, to take effect December 15, 2001*, Order of July 15, 2002 (referred to herein as the "Docket 6596 Order"); Docket 6914 *Investigation into the Existing Rates of Shoreham Telephone Company, Inc.*, Order of November 4, 2004 (referred to herein as the "Docket 6914 Order"). The DPS has used a

(1) an interim-period adjustment that is the difference between the average interim-period accumulated depreciation balance and the average test-year accumulated depreciation balance; and (2) a rate-year adjustment that is the difference between the average rate-year period accumulated depreciation balance and the average interim-period accumulated depreciation balance.¹³⁶

CVPS has calculated the interim-period depreciation adjustment using the methodology that the Board approved in Dockets 5701/5724, CVPS's last litigated rate cases. No adjustment was made in those dockets for rate-year depreciation, and CVPS did not calculate a rate-year depreciation adjustment in the instant proceedings.

We have reviewed both parties' arguments regarding the two proposed methodologies, and conclude that the DPS's methodology should be applied in these proceedings, for the reasons explained below. Therefore, we accept the DPS's proposed adjustments to average accumulated depreciation of \$4,015,000 in Rate Year 1, and \$20,075,000 in Rate Year 2.¹³⁷

Most importantly, the DPS's methodology is consistent with the Vermont Supreme Court's decision in *In re GMP* because it adjusts CVPS's accumulated depreciation for all known and measurable changes (not just interim-period depreciation), and because it ensures that ratepayers do not pay twice for the same investment.

Second, the DPS's proposed methodology is identical to the calculation methodologies that we applied in both the Docket 6596 Order and the Docket 6714 Order, and is related to the methodology that the Board had considered in Docket 5532, the case that led to the *In re GMP* ruling from the Vermont Supreme Court. Thus, the DPS's proposed methodology is consistent

similar methodology for years. Tr. 1/13/05 at 28–30 (Schultz). As most rate cases were settled, the Board did not delineate it in detail until 2002.

136. Schultz and DeRonne sur. pf. at 19.

137. The DPS's adjustments are to the adjusted test-year accumulated depreciation balances shown in CVPS's original cost-of-service filings in these proceedings. In other words, the DPS used its methodology to calculate the appropriate interim-year and rate-year adjustments to test-year accumulated depreciation balances to arrive at the rate-year average accumulated depreciation balance, then proposed an adjustment equal to the difference between that rate-year average accumulated depreciation balance, and the rate-year average accumulated depreciation balance shown in CVPS's original cost-of-service filings.

with recent Board precedent.¹³⁸

Third, and importantly, the DPS has shown that CVPS's methodology for calculating its adjustment to accumulated depreciation produces mathematically impossible results in which CVPS's average rate-year accumulated depreciation balance is less than CVPS's accumulated depreciation balance at the beginning of the rate year (see findings 128 and 129, above). This persuades us that CVPS's methodology does not protect ratepayers from paying twice for the same investment as *In re GMP* requires. Therefore, rates based on CVPS's methodology would not be just and reasonable, and we must revisit the interim-period calculation methodology that we accepted 10 years ago in Dockets 5701/5724 in order to arrive at just and reasonable rates.¹³⁹

We are not persuaded by CVPS's multiple arguments in support of its position on this issue. First, CVPS claims that because its methodology has not been found to be unjust or unreasonable, it should be accorded a presumption of reasonableness.¹⁴⁰ As explained above, we reach the opposite conclusion — using CVPS's methodology would not result in just and reasonable rates. None of CVPS's other arguments can overcome this fundamental failing of its proposed methodology. Nevertheless, the discussion below addresses CVPS's other arguments regarding this issue.

Case-by-Case Development of the Law

Many of CVPS's arguments in support of its methodology fail to recognize the critical

138. We acknowledge that this methodology is different than the one we approved 10 years ago in Dockets 5701/5724. The intent of the two methodologies was the same — to implement the Vermont Supreme Court's decision in *In re GMP*, *supra*. However, after considering the evidence in more recent cases and the instant proceedings, we conclude that the DPS's methodology more closely adheres to the Vermont Supreme Court's decision.

139. Consistent with both Vermont Supreme Court and United States Supreme Court precedents, our overall revenue determination in this proceeding is based on a functional end-result test. *See, Federal Power Commission v. Hope Natural Gas*, 320 U.S. 591 (1944); *Duquesne Light Co. v. Barasch*, 488 U.S. 299 (1989); "It is not the theory, but the impact of the rate order which counts." *Id.* at 314. *See also Verizon v. FCC*, 535 U.S. 467, 526, 122 S. Ct. 1646, 1680 (2002): "we held, as usual that a rate setting methodology would normally be judged only by the overall impact of the rate orders."

140. CVPS Brief at 136–137.

role of case-by-case evolution in the development of the law,¹⁴¹ and the responsibility of a tribunal to "discard(s) the old rule when it finds that another rule of law represents what should be according to the established and settled judgement of society."¹⁴² Given these well-established legal principles, CVPS should not be surprised that during the 10 years since the Board issued its order in Dockets 5701/5724 (CVPS's last fully-litigated rate cases), the Board has modified some of the ratemaking methodologies that it accepted in those dockets. It would be incorrect for the Board to apply to CVPS only those methodologies that it accepted in Dockets 5701/5724, and to ignore any orders it has issued in the last 10 years in litigated cases involving companies other than CVPS that altered those ratemaking methodologies.¹⁴³

Similarly, it is inconsistent with the case-by-case development of the law (not to mention the seven-month standard of Title 30) for CVPS to assert that the Board should convene a proceeding or workshop for all utilities before making changes to any previously accepted ratemaking methodology. The Board must resolve disputed issues in cases before it. It is impractical, unrealistic, and contrary to judicial economy, to expect the Board to never change a regulatory policy or calculation methodology, except in generic proceedings that involve all the state's utilities.

In addition, CVPS's argument that any significant changes to accumulated depreciation should only be implemented prospectively in a subsequent proceeding is incompatible with well-established administrative law precedent that policies may be changed at the same time they are applied.¹⁴⁴ This precedent makes clear that, contrary to CVPS's assertions, it is not unfair to

141. Docket 5132, Order of 7/31/87 at 31. "[t]here is thus a very definite place for case-by-case evolution of statutory standards." Docket 5132, Order of 7/31/87 at 33, quoting *SEC v. Chenery Corp.*, (Chenery II), 332 U.S. 194, 203 (1947).

142. Docket 5132, Order of 7/31/87 at 31, quoting Justice Cardozo in *THE NATURE OF THE JUDICIAL PROCESS* (1921) at 151, quoting, with approbation, *Day v. Connecticut Co.*, 89 Conn. 74, 99.

143. We are concerned that the Company's Chief Financial Officer believes that the Board should ignore previous ratemaking orders issued in litigated cases involving companies other than CVPS. See tr. 1/11/05 at 152–153 (Gibson). This contrasts sharply with CVPS's argument that it is entitled to any favorable aspects of our treatment of GMP.

While most settlement agreements involving CVPS and GMP expressly state that they are not precedential, orders in litigated cases are precedential for all parties within a jurisdiction, not just for those who were parties to the individual cases. This is the common regulatory standard throughout our nation.

144. Docket No. 5132, Order of 7/31/87 at 33–34.

apply a result that is consistent with other cases in which CVPS was not a party. The question before the Board in the instant proceedings is: what is the appropriate accumulated depreciation adjustment calculation methodology for CVPS to use? CVPS was certainly given notice in the DPS's direct prefiled testimony that this would be an issue in these proceedings, and the Company had an opportunity during the rebuttal phase of these proceedings to present evidence regarding the appropriateness of applying the DPS's proposed methodology to CVPS.

Precedential Nature of Board's Orders in Dockets 6596 and 6914

Contrary to CVPS's assertions,¹⁴⁵ the Docket 6596 Order and the Docket 6914 Order are precedential. We find CVPS's multiple, scatter-shot arguments related to this issue to be unpersuasive and either inaccurate or irrelevant to the decision before us in these proceedings. Many of the Company's assertions relating to these two orders are addressed elsewhere in this Order; the discussion below focuses only on those not addressed elsewhere.

- It is irrelevant that the Docket 6596 Order did not reference prior Board or Vermont Supreme Court decisions related to accumulated depreciation, and did not state that the Board was establishing a new methodology that was to be used in all future cost-of-service studies. It is not necessary for a Board order to cite previous relevant Board and Vermont Supreme Court decisions in order for the order to be precedential. In addition, it is not necessary for a Board order to explicitly state that a particular decision should apply to other utilities in the future in order for it to serve as precedent. CVPS appears to confuse notice-and-comment rulemaking with common-law contested-case adjudication.
- The methodology we approved in Dockets 6596 and 6914 is different than that accepted by the Board 11 years ago in Dockets 5701/5724, and the two methodologies do produce different results. However, given the case-by-case evolution in the development of the law, the fact that the two methodologies differ and produce different results does not affect our decision regarding which will produce just and reasonable rates in the instant proceedings.
- No party has suggested that Citizens' agreement to the DPS's rate-year methodology in Docket 6596 should be extended to CVPS. We understand that CVPS does not agree to the DPS's proposed adjustment; that is why the issue is before us to resolve. However, the mere fact that CVPS has not agreed to a concept does not mean that this Board must reject that concept.

145. CVPS Brief at 146.

- Some small elements of the Docket 6914 Order may or may not have ambiguities;¹⁴⁶ however, that is irrelevant to our decision today regarding which methodology is most appropriate to use in the instant proceedings.

We reject CVPS's characterization of the interim-period and rate-year accumulated depreciation adjustment methodology approved by the Board in Docket 6596 as a "utility-specific penalty on Citizens."¹⁴⁷ Nowhere in the Docket 6596 Order does it state, or imply, that the accumulated depreciation adjustment we approved in that Order was a "penalty." We assume this is a reading error by CVPS, rather than a misrepresentation of the Board's Order.

Timing of Challenges

We reject CVPS's argument that it is appropriate for the Company to continue to use its proposed methodology for calculating the appropriate adjustment to accumulated depreciation because neither the DPS nor the Board challenged that methodology in any of CVPS's rate cases since Dockets 5701/5724 (until the instant proceedings). All of CVPS's rate cases since Dockets 5701/5724 resulted in bottom-line settlement agreements among the parties or were closed without resolution. It is unpersuasive for CVPS to argue now that a methodology should not be changed because the old methodology was not challenged in cases that were settled or closed. Furthermore, as the Board stated in Docket 5983:

. . . the rate-making process relies upon the use of evidentiary presumptions to facilitate reaching a conclusion about the overall justness and reasonableness of rates without requiring an exhaustive review of hundreds or thousands of detailed cost of service items in every rate case; according to Board practice, in each rate case, a utility's filing receives the benefit of a rebuttable presumption that 'expenditures claimed to support the rates were reasonable and prudent.' Rate proceedings then focus on those aspects of a filing that parties choose to examine and present to the Board.¹⁴⁸

It is unrealistic to expect the DPS to challenge every possible issue in every rate case; and CVPS's litigation costs would be far higher over time if we accepted its argument to that effect today. As the Board stated in Docket 5983, requiring the DPS to litigate every potential cost

146. CVPS argues that the Docket 6914 Order's description of the steps taken to calculate the adjustments was circular (for example, adding interim depreciation expense to average interim year accumulated depreciation).

147. CVPS Brief at 154.

148. Docket 5983, Order of 2/27/98 at 18–19 (footnote omitted).

item in every rate case would be "an outcome inimical to the administrative process, and likely impossible to comply with within the statutory period allowed for utility rate cases."¹⁴⁹ This same rationale applies to the Board. The Board can, and often does, raise issues in rate cases that no party has addressed. However, it is not feasible for the Board to review in detail every item not addressed by a party. Thus, the fact that neither the DPS nor the Board challenged CVPS's methodology for calculating the adjustment to accumulated depreciation in CVPS's prior rate cases is unpersuasive. The issue has been raised in these proceedings, and in this Order, we resolve the dispute regarding it.

Retroactive Ratemaking

Given the schedule in Docket 6946, which CVPS itself proposed, Rate Year 1 is almost over. That does not mean, however, that we are engaging in prohibited retroactive ratemaking by applying the DPS's proposed methodology to CVPS in Rate Year 1.¹⁵⁰ On the contrary, 30 V.S.A. § 227(b) specifically provides that when the Board, on its own motion, opens an investigation into a utility's rates, the final order shall be retroactive.¹⁵¹ Our decision today is consistent with the statute's requirements that we (1) determine just and reasonable rates, and (2) apply our decision regarding those rates retroactively.

149. Docket 5983, Order of 2/27/98 at 19.

150. CVPS also asserts that it would be retroactive ratemaking to apply the DPS's proposed methodology to CVPS in Rate Year 1 because the Board's decision in Docket 6914 was not issued until well after the filing of the cost-of-service studies in these proceedings. We conclude that this argument is incorrect. The timing of the Board's decision in Docket 6914 is irrelevant for the purpose of deciding the issue in these proceedings. As discussed above, well-established administrative law holds that policies may, and sometimes should, be changed at the same time they are applied. Thus, the Board could, if it found the evidence in these proceedings supported it, apply a new accumulated depreciation adjustment policy. The key question under Vermont law is whether that methodology is reasonably directed towards our goal of establishing just and reasonable rates. *In re Green Mountain Power Corp.*, 142 Vt. 373, 380 (1983).

151. 30 V.S.A. § 227(b) states, in relevant part:

If the board does make its determination within such seven months then its final order shall be retroactive to the day that the proceedings were instituted and such final order shall contain a directive that the company, other than a common carrier of passengers by motor vehicle, shall repay to the persons from whom collected between the time the proceedings were instituted and the final order all sums which the board determines are in excess of the rates ultimately found to be just and reasonable.

As described in more detail in the Procedural History, CVPS committed to extend the statutory seven-month deadline as part of its scheduling proposal, which the Board accepted.

Cost Recovery

CVPS asserts that the DPS's proposed adjustment violates 30 V.S.A. § 218(a), because, according to the Company, it denies CVPS the opportunity to recover the costs of the plant necessary to serve customers, thereby making the Company's rates "insufficient."¹⁵² This is not so — the DPS's proposed adjustment does not deny CVPS recovery of its legitimate costs, it simply ensures that the Company only recovers those costs once.

Finally, CVPS argues that the DPS's adjustment reduces the Company's ability to recover the costs of its capital assets, promotes more frequent utility rate cases, and burdens regulatory lag.¹⁵³ This argument is closely linked to CVPS's assertions regarding its inability to provide evidence supporting its rate-year plant additions, because of the anti-updating provisions of 30 V.S.A. § 225(a). We have already addressed CVPS's arguments regarding this point. CVPS chose not to present supporting evidence at the time the statute requires such evidence to be presented. If the results of the Company's decision are more frequent utility rate cases and increased regulatory lag, CVPS must accept responsibility for the consequences of its own actions.

Correction to Annualized Test Year Depreciation Expense

No party has asked that the depreciation expense and accumulated depreciation calculations be revised to reflect CVPS's correction of its annualized test-year depreciation expense described in finding 130, above. Nevertheless, we conclude that the error should be corrected. Therefore, we require CVPS, as a part of its compliance filing in these proceedings, to modify the DPS's recommended adjustments to rate-year average accumulated depreciation in both Rate Years 1 and 2 to reflect the correct value of annualized test-year depreciation expense.¹⁵⁴

152. CVPS Brief at 136–137.

153. CVPS Brief at 138.

154. As explained in Section VI.D, below, we also require CVPS to modify the adjustment to depreciation expense to reflect this correction.

C. Distributed Utility Planning Demand-Side Management

Findings

136. CVPS is seeking recovery of Distributed Utility Planning Demand-Side Management expenditures incurred from January 1, 2001, through December 31, 2003. The total Distributed Utility Planning Demand-Side Management expenditures for this period, including carrying costs and adjustments, are \$359,864. These expenditures are reasonable, as they were incurred to acquire demand-side management resources from high use customers in identified constrained transmission and distribution areas in CVPS's service territory. Welch pf. at 2; exh. CVPS-JHG-14 at Attachment PSB 1-2.

137. Under the terms of the Memorandum of Understanding approved by the Board in Dockets 6120 and 6460, CVPS's current base rates include the collection of \$195,546 each year for recurring Distributed Utility Planning Demand-Side Management costs. This Memorandum of Understanding became effective July 1, 2001. Therefore, only half that amount, or \$97,773, was collected from ratepayers in 2001 for recurring Distributed Utility Planning Demand-Side Management costs. Welch pf. at 2–3; tr. 1/12/05 at 160–161 (Frankiewicz).

138. CVPS's Distributed Utility Planning Demand-Side Management expenditures for 2001 through 2003 should be adjusted for the amount of recurring Distributed Utility Planning Demand-Side Management costs recovered from ratepayers in rates during those years. When this calculation is performed, CVPS's Distributed Utility Planning Demand-Side Management deferral account has a negative balance of \$184,479. Welch pf. at 2–3; tr. 1/12/05 at 161–162 (Frankiewicz).

139. All of the amounts associated with the Distributed Utility Planning Demand-Side Management regulatory asset should be removed from CVPS's cost of service and rate base because CVPS has already fully recovered these amounts from ratepayers. The removal results in a \$76,759 reduction to amortization expense and a \$345,417 reduction to rate base in Rate Year 1. In Rate Year 2, the removal results in a reduction to amortization expense of \$84,173 and a reduction to rate base of \$378,779. Schultz and DeRonne pf. at 24–25; exh. DPS-L&A-11 at page 2 of schedule 8, and schedule 15; exh. DPS-L&A-12 at page 2 of schedule 8, and schedule 15.

140. The (\$184,479) balance in CVPS's Distributed Utility Planning Demand-Side Management deferral account should be returned to ratepayers. Tr. 1/12/05 at 161–162 (Frankiewicz).

141. The adjustments to the balance in CVPS's Distributed Utility Planning Demand-Side Management deferral account should be reflected in the calculation of CVPS's overearnings in 2001, 2002, and 2003, pursuant to the 6120/6460 MOU. Tr. 1/13/05 at 14 (Schultz).

Discussion

There is no dispute regarding the amount of CVPS's Distributed Utility Planning Demand-Side Management expenditures for the period 2001 through 2003 that is appropriate to be recovered. There is also no dispute regarding the amount of recurring Distributed Utility Planning Demand-Side Management expenditures that were included in CVPS's rates during that time period. There is a dispute regarding how those recurring expenditures should be used to adjust the amount of Distributed Utility Planning Demand-Side Management expenditures that CVPS now seeks to recover.

The Board's January 11, 1995, Order in Dockets 5701/5724 granted CVPS's request to amend the Board's October 31, 1994, Order in those same dockets so that it was clear that:

. . . the Company dedicate all C&LM [Conservation and Load Management] dollars [that are] included in *its rate year cost of service as C&LM Recurring Amounts* to its C&LM programs and that any amounts not expended in a particular year for such purposes be held for use in subsequent years or for eventual return to ratepayers.¹⁵⁵

The DPS argues that the amount of CVPS's Distributed Utility Planning Demand-Side Management costs should be adjusted in each year (2001, 2002, and 2003) by the amount of recurring Distributed Utility Planning Demand-Side Management expenditures collected from ratepayers in those years. When this calculation is performed, and any amounts not spent in a particular year are carried forward to future years, the balance in CVPS's Distributed Utility Planning Demand-Side Management deferral account is a negative \$184,479.

155. Dockets 5701/5724, Order of 1/11/95 at 2, 3 (italics in original). "Conservation and Load Management" is an older term that is synonymous with Demand-Side Management.

CVPS does not contest that all Distributed Utility Planning Demand-Side Management amounts reflected in CVPS's last rate case cost of service that were not expended in a particular year for such purposes should be held for use in subsequent years.¹⁵⁶ In addition, CVPS admits that ratepayers are entitled to a refund of \$184,479.¹⁵⁷ However, CVPS argues that the adjustment for recurring expenditures should only be made in 2001. The Company asserts that the adjustment should not be made in 2002 or 2003 because CVPS was subject to an earnings cap, and the recurring amounts not properly applied to 2002 and 2003 Distributed Utility Planning Demand-Side Management balances caused part of CVPS's overearnings adjustment that is included in its overearnings regulatory liability. CVPS argues that the DPS's adjustment is not necessary for years 2002 and 2003 because the appropriate amount will be returned to ratepayers through the overearnings adjustment. CVPS further asserts that if the Board does accept the DPS's adjustment to Distributed Utility Planning Demand-Side Management balances, the Board should reduce the overearnings deferral amounts to avoid double counting these amounts.¹⁵⁸

CVPS is correct in noting that making the DPS's proposed adjustment for recurring Distributed Utility Planning Demand-Side Management expenditures for 2002 and 2003, without making a corresponding adjustment to CVPS's overearnings for those years, would result in a double recovery by ratepayers. This logic is similar to that which underlies our determination in Section V.B regarding interim-period and rate-year accumulated depreciation. There, we required an adjustment to ensure that ratepayers do not pay CVPS twice for the same investment; here, we require an adjustment to ensure that CVPS does not pay back ratepayers twice for the same refund.

To properly implement the requirements of our January 11, 1995, Order in Dockets 5701/5724, we conclude that the adjustment for recurring Distributed Utility Planning Demand-Side Management expenditures should be made in each of the three years (2001, 2002, and 2003), effectively removing the Distributed Utility Planning Demand-Side Management asset

156. CVPS Reply Brief at 96.

157. Tr. 1/12/05 at 162 (Frankiewicz).

158. CVPS Reply Brief at 96–97.

from the list of deferral accounts shown on exh. CVPS-4A. Based on the Board's January 11, 1995, Order in Dockets 5701/5724, the difference between what CVPS collected in rates for Distributed Utility Planning Demand-Side Management recurring expenses, and its actual expenses in 2001, 2002, and 2003, (\$184,479) should be returned to ratepayers.¹⁵⁹ We require CVPS to reflect this decision in its compliance filing in these proceedings.

Furthermore, to avoid double-recovery by ratepayers, our decisions regarding CVPS's Distributed Utility Planning Demand-Side Management deferral account, including our decision that the excess recurring expenses be returned to ratepayers, should be reflected in the calculation of CVPS's overearnings in 2001, 2002, and 2003. As explained in Section III, we require CVPS to recalculate its overearnings for 2001, 2002, and 2003, using the cost-of-service methodology proposed by the DPS, as modified by the Board. Consistent with our decision that CVPS should not have deferred its Distributed Utility Planning Demand-Side Management costs because it had already recovered them from ratepayers, the Company's actual Distributed Utility Planning Demand-Side Management expenditures in each of those three years should be included in the calculation of its overearnings for 2001, 2002, and 2003. In addition, CVPS's return to ratepayers of \$184,479 in excess Distributed Utility Planning Demand-Side Management collections should be included in the 2003 overearnings calculation.

159. This decision is consistent with the Vermont Supreme Court's decision in *In re GMP, supra*, which prohibited the Board from reducing GMP's rate base to credit ratepayers for the amount of amortization expenses that exceeded the projected amounts for demand-side management expense in the adjusted test year. The key fact is that in the case decided by the Vermont Supreme Court, the Board had not stated that demand-side management expenses would be subject to special accounting treatment at the time the rates including those expenses were set. This is not the case with respect to CVPS. On the contrary, in Dockets 5701/5724, the Board granted the Company's request to establish a special accounting treatment for demand-side management expenses. Our decision today simply requires CVPS to implement the special accounting treatment that it, itself, had requested. If *In re GMP, supra*, were to prohibit such use of deferral accounting, this could have significant adverse affects on Vermont utilities, including CVPS (especially in light of CVPS's substantial deferred account balances discussed in Section IV, above).

D. Distributed Utility Planning Account Correcting for Efficiency ("ACE")¹⁶⁰**Findings**

142. The formula for calculating ACE is gross lost revenue minus the production savings and other incremental operational savings experienced by CVPS during the calculation period. Welch pf. at 4; Gibson pf. reb. at 16–17.

143. The avoided costs used to compute ACE should be adjusted for the latest available market price information and forecasts for the remainder of the period. Bentley reb. pf. at 2–3; Welch pf. at 3–4.

144. The balance in the Distributed Utility Planning ACE deferral account, including carrying costs, as of March 31, 2004, should be \$145,830. Exh. DPS-L&A-11 at page 3 of schedule 8.

145. The balance of the Distributed Utility Planning ACE deferral account should be amortized over two years. Gibson pf. at 37; Docket No. 5980, Order of 9/30/99 at A-19 (Paragraph 33 of the Memorandum of Understanding).

Discussion

CVPS and the DPS agree in principle on the formula that should be used to calculate ACE. They also agree that the most recent information available should be used to calculate the production savings component of the ACE calculation. However, they disagree about the most recent avoided cost information. As a result, they have calculated slightly different Distributed Utility Planning ACE amounts.

CVPS and the DPS also disagree on when the amortization of the balance in the Distributed Utility Planning ACE deferral account should start. CVPS argues that it should begin at the start of Rate Year 2 while the DPS asserts that it should begin at the start of Rate Year 1. For the same reasons articulated in Section IV, above, regarding when the amortization of other deferral accounts should begin, we conclude that the amortization of the Distributed Utility Planning ACE deferral account should begin at the start of Rate Year 1.

160. Distributed Utility Planning ACE is designed to enable a utility to collect its net lost revenues resulting from the installation of energy efficiency measures, pursuant to Distributed Utility Planning, in its service territory between rate cases.

Given this decision, it is necessary for us to determine the balance in the Distributed Utility Planning ACE deferral account as of March 31, 2004, the end of the interim period. The most recent information available should be used to calculate the production savings component of the ACE calculation, and the latest calculations of the Distributed Utility Planning ACE amount were performed by CVPS; the DPS did not address these calculations. However, CVPS did not provide the balance in the deferral account as of March 31, 2004, including carrying costs.¹⁶¹ Based on the evidence in the record, the difference between the DPS's and CVPS's positions regarding the balance in the deferral account at the beginning of Rate Year 1 is likely to be *de minimus*.¹⁶² Since the only number in the record for the balance as of March 31, 2004, is the DPS's, and the difference appears to be so small, we will accept the DPS's number of \$145,830.¹⁶³

However, we do not accept the DPS's recommendation regarding the changes in the balance of the Distributed Utility Planning ACE deferral account during Rate Years 1 and 2. The DPS correctly determined the amount of monthly amortization (\$6,076) by dividing the balance in the deferral account at the start of Rate Year 1 by 24.¹⁶⁴ But the DPS also added to the balance in the deferral account the Distributed Utility Planning ACE related to the energy efficiency measures projected to be installed during each month of Rate Year 1.¹⁶⁵ This is not consistent with past practice in Vermont.

Traditionally, the Board approves recovery of a specified amount in an ACE deferral account, and that amount is amortized in even increments over two years. At the end of the two-year amortization period, the ACE deferral account is fully amortized.¹⁶⁶ ACE associated with

161. According to CVPS, the value of the deferral account as of March 31, 2004, *excluding* carrying costs is \$124,623. Exh. CVPS-BWB-1 shows the amount of Distributed Utility Planning ACE that is accumulated in each month from January 2000 through December 31, 2005. The figure of \$124,623 is arrived at by summing the values for each month through March 31, 2004.

162. According to the DPS, the ACE deferral balance, excluding carrying costs, as of December 31, 2005, (a date that is in the middle of Rate Year 2) is \$167,269; according to CVPS, that figure is \$172,914. Exh. DPS-CEW-2. Exh. CVPS-BWB-1.

163. See finding 144, above.

164. Exh. DPS-L&A-11 at page 3 of schedule 8.

165. Tr. 11/4/04 at 83 (DeRonne); exh. DPS-L&A-11 at page 3 of schedule 8.

166. Tr. 11/1/04 at 182–184 (Welch).

any new energy efficiency installations is deferred in a new deferral account until the utility's next rate proceeding, when it is reviewed for its appropriateness before cost recovery is allowed.¹⁶⁷ The DPS has argued that it is appropriate to change Board policy and establish what is in essence a "revolving" Distributed Utility Planning ACE account in order to ensure that CVPS does not overcollect Distributed Utility Planning ACE by continuing to collect amortization in rates beyond the point at which the deferral account is fully amortized.¹⁶⁸ This is a valid concern; however, we believe it is better addressed through the concept of "reverse amortization", which we explain in more detail in Section IV. Reverse amortization will ensure that ratepayers do not pay twice for Distributed Utility Planning ACE deferral costs, while preserving the opportunity for the Board to review the appropriateness of the Distributed Utility Planning ACE deferral costs for recovery in a rate case.

Therefore, the formula for determining the change in the balance in the Distributed Utility Planning ACE deferral account that is used on page 3 of schedule 8 of both exh. DPS-L&A-11 and exh. DPS-L&A-12 (unamortized monthly balance = prior month's unamortized monthly balance + Distributed Utility Planning ACE amounts due to new installs – current month's amortization) should be adjusted to remove the amounts shown under the column labeled "Installs." Instead, each monthly balance should be the previous monthly balance less the current month's amortization. When this simple mathematical calculation is performed, the Distributed Utility Planning ACE deferral account's 13-month average balance for Rate Year 1 is \$109,373, and the Distributed Utility Planning ACE amount included in CVPS's rate base in Rate Year 1 should be reduced by \$27,418.¹⁶⁹

In addition, the DPS took the balance in the deferral account at the start of Rate Year 2 and divided it by 24 to determine the amount of monthly amortization in Rate Year 2. This is also incorrect. Once the monthly amortization is determined for the deferral account, it should remain constant (at \$6,076 per month) until the balance in the deferral account is eliminated.

167. Gibson reb. pf. 11/15/04 at 18.

168. Tr. 11/4/04 at 86–87 (DeRonne).

169. \$136,791 – \$109,373. The \$136,791 was the 13-month average deferral account balance included in CVPS's original cost-of-service filing for Rate Year 1 in these dockets, not the deferral account balance resulting from the revised calculations CVPS submitted in its rebuttal testimony.

Using the unamortized balance in the deferral account as of the start of Rate Year 2, and the same formula for calculating each month's unamortized balance, the Distributed Utility Planning ACE deferral account's 13-month average balance in Rate Year 2 is \$36,458, and the Distributed Utility Planning ACE amount included in CVPS's rate base in Rate Year 2 should be reduced by \$128,091.¹⁷⁰

In each rate year, the total amortization expense is \$72,915 (\$6,076 *12 months). Compared to CVPS's original cost-of-service filing, this represents a reduction to Distributed Utility Planning ACE amortization expense in Rate Year 1 of \$18,279, and a reduction to Distributed Utility Planning ACE amortization expense in Rate Year 2 of \$36,784.

VI. COST OF SERVICE

A. Power Costs

Findings

146. CVPS receives the bulk of its power, both capacity and energy, from Vermont Yankee and the Hydro Québec Joint Owners Contract ("Hydro-Québec"). These two sources provide a total of about 320 MW of capacity and a projected 2.12 million MWh of energy in Rate Year 1 and 2.28 million MWh of energy in Rate Year 2. Watts pf. at 4.

147. CVPS owns or purchases energy produced by hydro facilities in Vermont and New Hampshire which exceeds 250,000 MWh in an average year, receives about 150,000 MWh annually (on average) through its ownership of the Millstone 3 nuclear plant, and owns or has entitlements in other generation sources that produce about 125,000 MWh annually for CVPS. Watts pf. at 4.

148. CVPS is entitled to, and committed to, purchase more energy from its power supply resources than it currently needs to meet its own expected demand requirements in most hours of the year, except for time periods when Vermont Yankee is not generating. CVPS's resources can deliver up to 235 MW around-the-clock and meet a peak load capacity of 415 MW. CVPS's load

170. \$164,549 – \$36,458. The \$164,549 was the 13-month average deferral account balance included in CVPS's original cost-of-service filing for Rate Year 2 in these dockets, not the deferral account balance resulting from the revised calculations CVPS submitted in its rebuttal testimony.

averages 275 MW, ranging from approximately 205 MW to 360 MW, depending upon the time of day and year. Watts pf. at 5.

149. CVPS sells excess power back through the New England wholesale market and through bilateral contracts. This occurs in most hours of the year. Watts pf. at 6; Lamont pf. at 2.

150. Since CVPS is a net seller on the market, its revenues are directly affected by the market price for power. Recent increases in the market price of power have allowed CVPS to sell back its excess power at a higher price. Watts pf. at 9; Lamont pf. at 2–3.

151. The Connecticut Valley Electric Company sale (described in part VI.B of this Order) reduced CVPS's energy demand requirements by about 130,000 MWh. Watts pf. at 8.

The Power Cost Stipulation

152. CVPS and the Department entered into an agreement resolving most power cost issues.

153. The Net Power Costs (Purchased Power and Production Fuel) for Rate Year 1 are \$128.389 million. Of this, Purchased Power is \$124.863 million and Production Fuel is \$3.526 million. For Rate Year 2, the Net Power Costs are \$124.777 million, consisting of \$121.864 million in Purchased Power and \$2.913 million for Production Fuel. Exh. DPS-CVPS Joint-2.

154. The effective forced outage rate for Vermont Yankee for both rate years is 2.12 percent.¹⁷¹ Exh. DPS-CVPS Joint-2 at 1.

155. The Rate Year 1 Purchased Power Costs reflected in finding 153 include the following amounts as expenses:

2004 Vermont Yankee Fire Outage	\$835,900
Small Power Provider Savings	(\$373,500)
CY/YA ¹⁷² Incremental Decommissioning	\$2,345,200

171. The forced outage rate calculates the typical period in which a generating facility does not generate power or generates only at reduced power. During these periods, the power cost calculations assume the reduced power output and/or different mix of resource use and the potential need to purchase replacement power to service customer load. Planned outages, such as the Vermont Yankee refueling outage, are generally excluded from the calculation.

172. Connecticut Yankee and Yankee Atomic.

Exh. DPS-CVPS-Joint-2 at 1.¹⁷³

156. Transmission by Others includes charges CVPS incurs for general use of the region's Pooled Transmission Facilities and VELCO's transmission system, as well as other specific charges for facilities CVPS uses. Watts pf. at 22.

157. Transmission by Others costs are \$13.562 million in Rate Year 1 and \$14.895 million in Rate Year 2, of which \$9.202 million and \$10.604 million, respectively, are VELCO costs. Exh. DPS-CVPS Joint-2 at 2.

158. The Transmission by Others figures reflect the favorable impact of the Highgate convertor station receiving phased-in Pooled Transmission Facilities treatment beginning February 2005. This reduced costs by \$45,000 in Rate Year 1 and \$575,000 in Rate Year 2. Exh. DPS-CVPS Joint-2 at 2.

2002 Vermont Yankee Mid-Cycle Outage

159. Findings 29–35, above, are incorporated by reference.

Nuclear Decommissioning Costs

160. Findings 43–49, above, are incorporated by reference.

Docket 6270 Savings

162. Findings 39–42, above, are incorporated by reference.

173. As discussed below, the parties ask the Board to decide whether these amounts should be expensed in Rate Year 1 or deferred and then amortized in Rate Year 2 (or some combination of the two). Exh. DPS-CVPS-Joint-2; exh. CVPS-CJF-15. *See also*, findings 160–162.

Discussion

Power costs represent the largest component of CVPS's cost-of-service. Purchased power alone — largely from Vermont Yankee and Hydro-Québec — is nearly half of CVPS's cost-of-service. Thus, CVPS's management of its power supply costs can significantly impact the overall rate levels.

At the present time, CVPS has entitlements for more power than it needs. In most hours of the day, CVPS has excess energy and capacity, which it sells through bilateral contracts with other utilities or through the New England wholesale market. From a ratemaking perspective, the Board has traditionally allowed CVPS to include the cost of all of its power resources in the power costs, even if those were not necessary to serve Vermont load. To balance these charges, we have consistently included the revenues from these wholesale arrangements (adjusted to reflect the market prices expected to prevail in the adjusted test year). This regulatory treatment means that Vermont ratepayers benefit from the sale of the excess power, particularly if the market price for power in these wholesale transactions exceeds the costs of the power.¹⁷⁴ Moreover, energy efficiency savings also produce a benefit for Vermont ratepayers as they allow CVPS to sell more power than the Company otherwise would have. Significantly for the present case, wholesale power costs have risen well above the level in the 1990s and the test year. The effect is that a company like CVPS, which has power available for sale, will be earning more from wholesale transactions than in prior years and thus needing less revenue from its retail customers.

In this case, the Department and CVPS have largely agreed on the power costs for both rate years. They embodied this consensus in a Power Cost Agreement.¹⁷⁵ In the Power Cost Agreement, these parties specify the appropriate costs for Purchased Power, Production Fuel, and Transmission by Others for each of Rate Years 1 and 2. The Agreement did not resolve all disputes, however. Instead, the parties deferred several specific issues to the Board for resolution. We address each of these below.

174. If the resale value of the power is below its cost, ratepayers fare less well and end up paying extra costs for power that is not needed to serve them. Even so, the net cost to retail customers would be less than if purchased power costs were considered and power sales revenues were not.

175. Exh. DPS-CVPS-Joint-2.

2002 Vermont Yankee Mid-Cycle Outage

During 2002, Vermont Yankee experienced an unanticipated shutdown to replace defective fuel rods. The fuel rods had developed small leaks and were releasing radiation into the core. Vermont Yankee had identified the problem earlier in the year and, after investigation, decided that the best option was to shutdown the facility to remedy the problem (rather than waiting for the scheduled refueling outage in October of that year).

The Mid-Cycle Outage lasted 12 days. The loss of the Vermont Yankee power forced CVPS to acquire replacement power. CVPS also incurred other expenses for Vermont Yankee's operation and maintenance expenses to remedy the problem and replace the defective fuel. At CVPS's request, we issued an accounting order on July 18, 2002, authorizing CVPS to defer these incremental costs. Subsequently, Vermont Yankee received partial compensation from the fuel vendor; CVPS reduced the deferral amount based upon its share of these recoveries. CVPS now seeks recovery of the remaining deferral amount.

The Department generally does not oppose the recovery of the amounts deferred from the 2002 Mid-Cycle Outage. However, the Department points out that during the rest of 2002, Vermont Yankee had an output greater than the Board had assumed in setting CVPS's rates in 2001 (Dockets 6120/6460). According to the Department, the parties had used a 4 percent forced outage rate in formulating the stipulation in that case; Vermont Yankee's actual performance was much better during 2002, particularly after factoring out the Mid-Cycle Outage for which CVPS was already expected to receive compensation.¹⁷⁶ The Department takes the position that in determining the appropriate amount that CVPS can recover, we should assess the financial harm to CVPS of Vermont Yankee's under-performance and not limit our ruling to the time period of the Mid-Cycle Outage.¹⁷⁷

CVPS argues first that the Department's proposed adjustment has no impact on rates as a downward adjustment to the Mid-Cycle Outage regulatory asset would lead to a similar

176. The parties have agreed that the period in which Vermont Yankee was not generating power due to the Mid-Cycle Outage should not be considered in calculating the forced outage rate on a going-forward basis. The reason for this agreement is that CVPS is being compensated already for the outage through the deferral of incremental costs which CVPS will begin amortizing as part of these proceedings.

177. DPS Brief at 26–27.

downward adjustment to overearnings in 2002.¹⁷⁸ In addition, CVPS argues that the Department's proposal is not consistent with the terms of the Mid-Cycle Outage Accounting Order, which was limited to the period of the outage.¹⁷⁹ Finally, CVPS states that, if the Board makes an adjustment, the proper amount is \$403,000, not the amount the Department had previously recommended.¹⁸⁰

Vermont Yankee is a favorably-priced source of power for CVPS; when it is not operating, CVPS must purchase replacement power (or use its excess resources, losing the resale revenues), often at higher prices. To reflect this in ratemaking, we assume that Vermont Yankee will be unavailable a certain percentage of the time and that other sources will provide the power during that time. We embody these assumptions in a forced outage rate, which is typically derived based upon the recent operating performance of Vermont Yankee. For example, in this proceeding, the Department and CVPS have agreed that the rates we set here should be based upon a 2.12 percent forced outage rate.¹⁸¹ Of course, actual performance does not necessarily reflect these assumptions. If Vermont Yankee's operating performance matches the assumptions incorporated into the forced outage rate, CVPS benefits in the form of lower power costs than we had assumed. Conversely, CVPS bears the risk that Vermont Yankee produces less power than assumed and its earnings may be adversely affected. Typically, we do not attempt to recapture these gains or compensate CVPS for its losses (the performance would be incorporated into the forced outage rate for the next rate case).

CVPS's deferral of the costs associated with the 2002 Mid-Cycle Outage alters this normal allocation of risk. Instead of CVPS incurring the higher costs that arise because Vermont Yankee performed less well than expected, the deferral assigns these costs to CVPS's ratepayers. In this situation, we conclude that CVPS should offset the deferral amount by the better-than-average performance to mitigate the effect of the shifting of risk allocation. Both the Department and CVPS agree that the value of the gain is \$403,000 and we accept that figure.

We find the terms of the accounting order in which we authorized the deferral do not

178. CVPS Brief at 109.

179. Page reb. pf. at 24.

180. The Department agreed with the \$403,000 figure. Lamont reb. pf. at 5.

181. Exh. DPS-CVPS-Joint-2 at 1.

require a different result. First, as we have explained elsewhere in this Order,¹⁸² accounting orders do not dictate ratemaking treatment. The determination of the appropriate amount that CVPS can recover in rates was deferred to this proceeding. Second, to the extent that CVPS is now attempting to use accounting orders as substitutes for fuel adjustment clauses,¹⁸³ fairness dictates that the adjustment cannot be one-way.¹⁸⁴ Yet the effect of CVPS's proposal is to obtain recovery for the part of the year when Vermont Yankee's performance was worse than expected, while ignoring the superior performance in the surrounding period.

We agree with CVPS that our ruling on this issue may not have any impact on the ultimate rates. CVPS excluded the deferred amount from its overearnings calculation for 2002. As a result of our decision, CVPS will reduce the deferral amount to be recovered through amortizations starting in Rate Year 1, but it will also need to adjust the amount of the deferral excluded from the 2002 overearnings calculation. The evidence suggests that these two amounts will offset.

Expensing of VEPPI Cost Mitigation, Incremental Decommissioning Costs, and 2004 Vermont Yankee Fire Outage

In Section IV, above, we describe CVPS's various regulatory assets and liabilities. In its original filing, CVPS proposed to amortize most of these deferrals over three years beginning in Rate Year 2. The Company also included the same amortizations (or, in the case of the 2004 Mid-Cycle Outage, the full expense) in Rate Year 1. CVPS characterized these as illustrative, *pro forma* adjustments. In its later filings and brief, CVPS removed the Rate Year 1 amortizations for most of these accounts. The Department supports commencing the amortization of all of these accounts in Rate Year 1, with corresponding adjustments to Rate Year 2 to reflect the amortization that occurred in Rate Year 1. Above, we adopt the Department's recommendation, for the reason we explained.

182. See finding 4, above.

183. See discussion on page 55, above.

184. As we discuss above, such use of accounting orders is inappropriate. Power plant outages generally are not extraordinary; in fact, the reason we include a forced outage rate is because we expect power plants to be out-of-service for specific reasons that cannot be anticipated.

In the Power Cost Agreement, CVPS and the Department identify three particular cost items that these parties agree should be either treated as an expense in Rate Year 1 or deferred with amortizations to begin in Rate Year 2. The three items are as follows:

- 2004 Vermont Yankee Fire Outage. In June, 2004, Vermont Yankee experienced an outage due to a busbar fault and subsequent transformer fire. CVPS incurred \$836,000 in incremental replacement power costs as a result. The Board authorized the deferral of the added costs of the 2004 Fire Outage in an Interim Accounting Order dated July 12, 2004, although we subsequently stayed portions of that Order and deferred a final accounting order to this proceeding.¹⁸⁵ CVPS also reflected the costs of the 2004 Fire Outage in Rate Year 1 as expenses.¹⁸⁶
- VEPPI Cost Mitigation. CVPS receives credits from VEPPI as a result of agreements approved by the Board in Docket 6270. CVPS proposes to amortize these credits, as a reduction to purchased power costs. A portion of the credits are incremental in Rate Year 1 and the Department seeks to expense them instead of deferring and amortizing the credits.
- Incremental Decommissioning Expenses. CVPS will need to pay incremental decommissioning expense associated with Maine Yankee, Yankee Atomic, and Connecticut Yankee during Rate Year 1. The Board authorized CVPS to defer these incremental decommissioning expenses in an Accounting Order dated October 29, 2003.¹⁸⁷

In the Power Cost Agreement, the parties reflected each of these items as expenses in Rate Year 1, but continued to request that the Board decide whether to expense the item in that Rate Year or defer and amortize the costs beginning in Rate Year 2.¹⁸⁸ The Department takes the position that CVPS should either reflect the costs as expenses in Rate Year 1 or defer them for recovery starting in Rate Year 2, but not both. The Department asks us to adopt the former approach.¹⁸⁹ CVPS favors deferring these costs and amortizing them beginning in Rate Year 2. CVPS asserts that the costs for the decommissioning and VEPPI cost mitigation were erroneously included in Rate Year 1 as an expense.¹⁹⁰ CVPS takes the position that absent such

185. Gibson pf. at 40.

186. In its Reply Brief, CVPS suggests that these costs are not reflected in the rates now in effect for Rate Year 1 and that they are not reflected on the Company's books. CVPS Reply Brief at 114. This is true, but misses the point. CVPS *did* include the 2004 Fire Outage costs as expenses in its Rate Year 1 cost of service.

187. Gibson pf. at 41; Page pf. at 13.

188. Exh. DPS-CVPS-Joint 2 at 1; exh CVPS-CJF-15 at 1.

189. Tr. 2/18/05 at 77 (Schultz).

190. Tr. 2/18/05 at 39 (Frankiewicz).

treatment, CVPS will have no ability to recover them. According to CVPS, it has a revenue deficiency in Rate Year 1; expenses added in Rate Year 1 exacerbate that deficiency and deny CVPS any opportunity to recover these deferred costs.

We conclude that, particularly in light of the fact that we find CVPS to have excess earnings in Rate Year 1 — even after reflection of these three items as expenses — it is reasonable to incorporate them as expenses now rather than create another set of deferrals that will be charged to future ratepayers (or, in the case of the VEPPI mitigation, serve as a credit). In the case of the 2004 Vermont Yankee Fire expense, it is undisputed that the actual expense occurred in Rate Year 1.

As to CVPS's claim that deferral and amortization is necessary in order to allow CVPS to recover these costs (or ratepayers to receive the benefit of the VEPPI credit), we disagree. In this Order, we find that CVPS must reduce its rates in Rate Year 1. Inclusion of these cost items will have the effect of making the reduction smaller. Moreover, by including them in our cost analysis, we have allowed CVPS to recover them.¹⁹¹

Our decision today means that the accounting order associated with each of these expenses (and credit) will terminate. The full rate recovery in Rate Year 1 makes such treatment moot.¹⁹²

It is possible that CVPS will be reimbursed for some or all of the expenses of the 2004 Vermont Yankee Fire Outage. As part of a Memorandum of Understanding with the Department in Docket 6812, Entergy has established a Ratepayer Protection Plan, under which Entergy will reimburse CVPS and GMP for replacement power costs (and lost resale revenues) arising from outages at Vermont Yankee caused by the power uprate authorized in that Docket and the plant modifications that enabled that power increase. CVPS has requested that the Board determine whether the 2004 Fire Outage was uprate-related and thus whether Entergy is obligated to provide reimbursement.¹⁹³ The Department raised concerns during the instant cases that, if CVPS is successful, the recovery may not be passed on to ratepayers.

191. CVPS's argument would have had more validity if, in fact, we had found a revenue deficiency in Rate Year 1.

192. Frankiewicz reb. pf. at 10–11.

193. The Board has opened Docket 6812-A to consider CVPS's petition.

We expect that CVPS will ensure that any recovery from Entergy will be returned to ratepayers. The purpose of the Ratepayer Protection Plan was to ensure that ratepayers were not exposed to higher costs due to uprate-related outages at Vermont Yankee. Failure to return this money to ratepayers would defeat this purpose, given that in today's Order we are allowing CVPS to recover in rates the costs of the 2004 Vermont Yankee Fire Outage. Thus, we direct that, if CVPS receives full or partial reimbursement from Entergy, the Company will book the amount received as a regulatory liability for return to ratepayers in the next rate proceeding.

Levelization of Decommissioning Costs

The Department raises concerns about the timing of the decommissioning expenses for Connecticut Yankee, Maine Yankee, and Yankee Atomic (jointly referred to as the "Yankee" plants). Because of increased costs for decommissioning these three facilities, CVPS reflects high costs in both Rate Years 1 and 2. After that time, CVPS's expected decommissioning obligation is smaller (assuming current estimates remain unchanged). As a result, the Department is concerned that reflection of the actual Yankee decommissioning expenses for Rate Years 1 and 2 will lead to "significant overpayment by ratepayers in years subsequent to Rate Year 2."¹⁹⁴ The Department's proposed remedy is to levelize the decommissioning expenses over the period from April 1, 2004, through 2010.¹⁹⁵

CVPS opposes levelization of the Yankee decommissioning expense. CVPS takes the position that, if we levelize the decommissioning expense, CVPS will recover significantly less than it must pay during the early years, which adversely affects its cash flow and denies the Company an opportunity to earn its allowed return.¹⁹⁶ CVPS also notes that levelization would increase the regulatory asset balances and impose a cash flow constraint on the Company.¹⁹⁷

The evidence demonstrates that CVPS will have to pay the actual Yankee decommissioning costs, not the levelized rate. If we adopted the Department's proposal, we would thus embed in CVPS's rates a cost component that we know is below the Company's

194. DPS Brief at 46.

195. Schultz and DeRonne pf. at 38–39.

196. CVPS Reply Brief at 155.

197. CVPS Reply Brief at 158.

actual costs. We are not persuaded that, considering the magnitude of the change in decommissioning costs after this year (which is small in relation to CVPS's overall cost of service)¹⁹⁸ and the possibility that those costs will change again in the future, such a course is reasonable.

Moreover, the Department's proposal would have future ratepayers pay the costs for decommissioning that are associated with expenses that are arising today. As a general rule, the Board's policy has been that current ratepayers should pay for current costs. Using this rationale, we agree with CVPS that current ratepayers should be paying for increased decommissioning costs.¹⁹⁹

We are concerned, however, that the decommissioning costs that we use for setting rates are in excess of those that will apply after Rate Year 2. Therefore, beginning April 1, 2006, we will require CVPS to book and defer the difference between the decommissioning cost for Rate Year 2 on which we set rates and the actual decommissioning cost payments.²⁰⁰ CVPS will amortize the balance in this account in its next rate case.

Treatment of Decommissioning Costs

In its cost-of-service filings, CVPS includes the decommissioning costs for Connecticut Yankee, Yankee Atomic, and Maine Yankee as part of purchased power expense. According to the Department, none of these plants is operating, so the costs are not actually power costs.²⁰¹ Therefore, the Department asks that we classify these costs as non-fuel production. CVPS maintains that the FERC chart of accounts requires these costs to be recorded as purchased power expense.²⁰²

198. The effect of the levelization is \$718,826 in Rate Year 1 and \$1,520,678 in Rate Year 2. Exh. DPS-L&A-11 at schedule 10.

199. Tr. 2/18/05 at 53 (Frankiewicz).

200. It is our assumption that this will result in a regulatory liability, i.e., the costs in rates will exceed decommissioning costs. This is consistent with the current FERC rate schedules under which CVPS pays these costs. If the Yankee decommissioning costs increase from levels now projected for 2006 and beyond, we require CVPS to notify the Board.

201. DPS Brief at 46.

202. Tr. 2/18/05 at 50 (Frankiewicz).

The parties agreed that the outcome of this dispute has virtually no monetary impact;²⁰³ there is no significance for rate setting if the decommissioning costs are recorded in purchased power or in non-fuel production. Given this fact, it appears that the only significance is whether FERC accounting will be the same as Board accounting. CVPS's proposal would align our accounting with FERC, whereas the Department's would not.²⁰⁴ For this reason, we adopt CVPS's recommendation to continue recording the decommissioning costs in purchased power accounts.

B. Sale of Connecticut Valley Electric Company

Findings

163. CVPS sold the assets of its New Hampshire subsidiary, Connecticut Valley Electric Company ("CVEC"), to Public Service Company of New Hampshire ("PSNH") effective January 1, 2004. Gibson pf. at 2, 7.

The Sale Transaction

164. CVPS sold the assets of CVEC at the sum of book value plus \$21 million. Gibson pf. at 19.

165. The \$21 million payment was intended to cover stranded costs associated with CVPS's provision of wholesale power to CVEC. The intent of the payment was to hold CVPS's ratepayers harmless from the effects of the termination of the CVEC power arrangement that otherwise would have meant a shift of costs to Vermont retail ratepayers. Gibson pf. at 19; Deehan reb. pf. at 12; exh. DPS-37.

166. As part of the transaction, CVEC and CVPS allowed the wholesale power agreement between them to end. PSNH also received open access transmission service from VELCO and CVPS. Deehan reb. pf. at 12.

167. The \$21 million represented the parties' estimate of the loss to CVPS from termination

203. Tr. 2/18/05 at 50 (Frankiewicz). Mr. Frankiewicz suggested that there may be a minor working capital difference.

204. CVPS Reply Brief at 155, citing exh. CJF-14 and tr. 2/18/05 at 76 (Schultz).

of the power contract. At the time of closing, the estimated loss became \$14.351 million, resulting in a \$6.649 million gain for CVPS which the Company recorded on January 1, 2004.²⁰⁵ Schultz and DeRonne pf. at 65.

168. On January 1, 2004, CVPS recorded the estimated loss of \$14.351 million and a future liability for power costs through 2016. CVPS proposed to amortize the liability over 12 years as a reduction to the actual power cost obligation recorded and paid each year. Schultz and DeRonne pf. at 64; tr. 1/12/05 at 46–47 (Gibson).

169. The sale of CVEC eliminated the risk that significant power costs incurred to serve CVEC customers would be shifted to CVPS's customers as a result of restructuring in New Hampshire. Deehan reb. pf. at 12–13; Gibson pf. at 7, 18–19.

Events Prior to the Sale

170. On February 28, 1997, the New Hampshire Public Utility Commission ("NHPUC") adopted a restructuring plan that found that CVEC should terminate its wholesale requirements power agreement with CVPS and ruled that no above-market (or stranded costs) recovery would be allowed in CVEC's rates. Deehan reb. pf. at 9.

171. Implementation of the NHPUC's restructuring order would have had a material adverse impact on the Company. It also would have required CVPS to record a loss contingency at that time of \$75 million under SFAS 5. Deehan reb. pf. at 9, 13; exhs. CVPS-WJD-4, CVPS-8, CVPS-9, and CVPS-10.

172. CVPS challenged the NHPUC's restructuring order in federal court. After years of litigation, the U.S. District Court permanently enjoined the NHPUC's restructuring plan, determining that until FERC established stranded cost compensation and the wholesale arrangement was legally terminated, the restructuring plan could not proceed. Deehan reb. pf. at 9.

173. CVPS also participated in litigation at FERC concerning the NHPUC's Order. CVPS charged all of the costs of the FERC litigation to CVEC. Frankiewicz reb. pf. at 23.

174. As a result of the federal litigation (generally referred to as the "*Patch*" case), the loss

205. CVPS states that the present value of these expected credits is \$6.2 million. Deehan reb. pf. at 14.

contingency estimated at \$75 million in 1997 dropped to \$33 million in 2001 and \$14.6 million at the time of the sale on January 1, 2004. Deehan reb. pf. at 9–10.

Cost-of-Service Effects

175. CVPS will flow the stranded cost payment from PSNH back to Vermont retail customers in the form of credits. Deehan reb. pf. at 14; exh CVPS-WJD-5.²⁰⁶

176. Prior to the sale, CVEC compensated CVPS for costs associated with operations, maintenance, and infrastructure services provided by CVPS to CVEC through direct assignment of costs, to the extent that these costs could be identified. In addition, CVPS entered into a service contract with CVEC to allocate a share of other costs, such as infrastructure costs, that could not be directly assigned. Tr. 11/2/04 at 144–145 (Gibson); tr. 11/3/04 at 85–86 (Gibson).

177. As part of the sale, CVPS terminated the service contract with CVEC. Schultz and DeRonne pf. at 70.

178. The sale of CVEC causes a loss of some economies of scale and scope that CVPS enjoyed through the ownership of CVEC. Gibson pf. at 20.

179. CVPS took some steps to mitigate cost impacts of the CVEC sale, such as closing the Ascutney Service Center and the transfer of employees who worked in CVEC's service territory. Gibson pf. at 21.

180. Only a few employees left CVPS as a result of the CVEC transfer. Schultz and DeRonne pf. at 64.

181. CVPS cannot readily reduce many of the fixed costs that had been allocated to CVEC. These include costs such as the computer network necessary to meet customer service obligations. These general operating costs are shared by the consolidated entity, so that with the sale of CVEC, the remaining customers of CVPS must pick up all of the costs. Gibson pf. at 20; Schultz and DeRonne pf. at 64.

182. Largely because of the CVEC sale, the allocation of costs to wholesale services dropped

206. CVPS reflects this payment as a \$1,195,920 credit to power costs in each year. Exhs. CVPS-CAW-A2 and CVPS-CAW-B2. This credit does not include return of the \$6.6 million gain, which CVPS proposed to pass on to shareholders.

from 4.73 percent to 1.1 percent. Tr. 11/2/04 at 17 (Frankiewicz).

183. The change in the allocation of wholesale costs means that the sale has the effect of transferring approximately \$1.846 million annually in costs to CVPS and its Vermont retail ratepayers. These cost increases would not have occurred if CVEC had not been sold. Schultz and DeRonne pf. at 63; tr. 11/2/04 at 145–147 (Gibson); tr. 1/11/05 at 99–100 (Frankiewicz).

184. The power costs that are stranded and are reallocated through the wholesale allocation factors comprise Purchased Power, Production, Transmission by Others, Highgate, and Other Operating Expenses and Return. Tr. 1/11/05 at 103 (Frankiewicz)

185. The termination of the service contract, by which direct costs as well as cost allocations for general corporate overhead were assigned to CVEC, results in the transfer of \$1.9 million in Rate Year 1, and a slightly larger increase in Rate Year 2, to Vermont customers. Tr. 11/2/04 at 145–147 (Gibson); Deehan reb. pf. at 14–15.

186. Most of the costs associated with the service contract are for administrative and general expenses. Other costs are for production, transmission, distribution, customer accounting, and customer service. Exh. CVPS-55.

187. In Rate Year 1, \$1.327 million of the service contract costs are administrative and general. In Rate Year 2, this figure is \$1.405 million. After assigning a proportionate share of payroll taxes, these amounts increase to \$1.376 million and \$1.456 million, respectively.²⁰⁷ Collectively, the other categories of expenses allocated under the service contract total to \$0.536 million in Rate Year 1 and \$0.558 million in Rate Year 2. Exhs. CVPS-CJF-2 and CVPS-CJF-6; exh. CVPS-55.

207. In its cost-of-service filings, CVPS did not break out the payroll tax between the administrative and general expense category and other categories. On exh. CVPS-55 (which shows the test year figures analogous to the Rate Year 1 and 2 amounts), CVPS showed that 62.5 percent of its payroll expense under the service contract applied to administrative and general costs. We have allocated the payroll expenses in each rate year using the same percentages. Thus, in rate year 1, we have added 62.5 percent of the \$78,000 in taxes — \$48,750 — to the administrative and general category to reflect the tax effects of the allocation.

Discussion

For over 70 years, CVPS owned and operated a New Hampshire retail subsidiary, CVEC, as an integrated part of its utility operation. CVPS acquired power supply resources beyond those necessary to serve its native Vermont load in order to provide power for the CVEC load, with the costs charged to the New Hampshire customers. CVEC also paid CVPS for other elements of the retail service. To the extent that costs were directly attributable to CVEC, CVPS assigned those costs to its subsidiary. For joint and common costs that could not be directly assigned, CVPS and CVEC entered into a service contract under which CVPS was allocated a share of those costs.²⁰⁸ Through the service contract, portions of costs such as the billing system could be passed on to CVEC.

These cost allocation methodologies ensured that CVEC and its customers paid for the direct costs that CVPS incurred to serve them. In addition, CVPS could take advantage of the economies of scale arising from the larger entity. This had the effect of reducing the cost of service for Vermont ratepayers. Traditional ratemaking methodologies led to even further reductions in costs for CVPS's Vermont customers since CVPS's overall cost of service is adjusted by allocating a portion of its costs to wholesale services. Due to the size of the CVEC commitment, the wholesale cost allocator was 4.73 percent.²⁰⁹

In 1996, the New Hampshire Public Utilities Commission ("NHPUC") began steps towards electric restructuring.²¹⁰ On February 28, 1997, the NHPUC adopted a restructuring plan that found that CVEC should terminate its wholesale requirements power agreement with CVPS. Significantly, the NHPUC also specified that no above-market cost recovery would be allowed in CVEC's retail rates. The NHPUC also ruled that CVEC was imprudent for not terminating its FERC-authorized power contract with CVPS to take advantage of lower market costs. This decision would have required CVPS to record a significant loss contingency under SFAS 5, then-estimated to be \$75 million.²¹¹

CVPS challenged the NHPUC's ruling in federal court in what became referred to as the

208. Tr. 11/2/04 at 144–145 (Gibson); tr. 11/3/04 at 85–86 (Gibson).

209. Schultz and DeRonne reb. pf. at 28.

210. Deehan reb. pf. at 9.

211. Deehan reb. pf. at 9; Schultz and DeRonne pf. at 59.

Patch case. The U.S. District Court upheld FERC's exclusive jurisdiction over the wholesale power arrangement and enjoined the NHPUC from proceeding until FERC had established stranded cost compensation and terminated the wholesale power arrangement.²¹² At the same time, CVPS initiated a proceeding at FERC to establish an exit fee under FERC's open access transmission regulations. An Administrative Law Judge issued a ruling that was generally favorable to CVPS.²¹³

At the same time it pursued litigation, CVPS also conducted negotiations with New Hampshire parties to try to resolve the dispute. These ultimately led to an agreement to sell CVEC to PSNH. CVPS pursued the sale in order to mitigate harm that was being imposed on the Company by the NHPUC's policies.²¹⁴

The sale to CVEC was a three-party arrangement between CVEC, CVPS, and PSNH. CVPS sold the assets of CVEC for book value. CVPS agreed to terminate the wholesale power sale arrangement with CVEC. In exchange, PSNH agreed to pay CVPS \$21 million. This figure represented the parties' assessment of the stranded costs that CVPS would experience from having incurred the long-term arrangements to serve the CVEC load that would now be PSNH's responsibility. As such, it was based upon the parties' market price forecasts. The parties closed the transactions on January 1, 2004. By the time of the closing, long-term market price forecasts had changed, so that the stranded cost estimate had dropped to \$14.351 million.²¹⁵ As a result, CVPS recorded a loss of this amount and a gain of \$6.649 million (which represented the difference between the original estimate and the January 1, 2004, estimate) on the closing date.²¹⁶

CVPS states that the \$21 million payment to terminate the power contract was designed to ensure that, over time, the loss of CVEC loads would not result in increased power costs being recovered from CVPS customers.²¹⁷ CVPS planned to amortize the stranded cost payment

212. Schultz and DeRonne pf. at 59; Deehan reb. pf. at 9.

213. Deehan reb. pf. at 10.

214. Gibson pf. at 7.

215. The \$14 million stranded cost estimate could increase over time if market prices fall from current levels, thus reducing CVPS's revenues from selling the excess power. Tr. 1/12/05 at 47–49 (Gibson).

216. Schultz and DeRonne pf. at 64–65.

217. Gibson pf. at 19.

(offset by the \$6.649 million gain) over 12 years as a reduction to the actual power cost obligation recorded and paid each year.²¹⁸ CVPS also observes that, given the expected cost and market value of the power, in combination with the stranded cost payment received, CVPS expects that its Vermont customers will receive net power cost credits.²¹⁹ CVPS calculates the net present value of those expected credits as of January 2005 is \$6.2 million.²²⁰

The Department challenges CVPS's proposed ratemaking treatment. From a broad perspective, the Department points out that CVPS booked a \$6.649 million gain on January 1, 2004, which inured to the benefit of shareholders. At the same time, CVPS has proposed to increase costs by \$1.9 million in Rate Year 1 and \$2.0 million in Rate Year 2 due to elimination of the service contract and an estimated \$1.8 million each year due to the change in wholesale allocation factors. In addition, according to the Department, the service to Vermont ratepayers is the same today as it was prior to the sale, yet as a result of the CVEC sale, ratepayers incur added costs.

The Department proposes two particular adjustments to make the transaction more fair. First, the Department objects to flowing back the costs of the service contract to CVPS. The Department recommends reversing CVPS's reflection of the elimination of the service contract. Second, the Department argues that we should flow back the \$6.649 million gain from the termination of the power contract to ratepayers over a three-year period. According to the Department, this treatment will offset the additional costs that Vermont ratepayers would otherwise absorb as a result of the sale of CVEC and the change in wholesale cost allocators that ensued.²²¹

AARP supports the Department's recommendations. AARP argues that the testimony "burst the bubble" of the rebuttable presumption that CVPS was prudent in negotiating the terms of the CVEC sale. AARP asserts that, in the absence of the rebuttable presumption, CVPS has not presented sufficient evidence to justify any increased cost to Vermont ratepayers as a result of

218. CVPS included a reduction of \$1,195,920 in each of Rate Years 1 and 2 to incorporate this amortization. Exhs. CVPS-CAW-A2 and CVPS-CAW-B2.

219. Deehan reb. pf. at 14.

220. Deehan reb. pf. at 14.

221. Schultz and DeRonne reb. pf. at 66.

the CVEC sale.

CVPS opposes the Department's adjustments. CVPS states that it has recorded all of the costs of the transaction above the line and asks that the Board allow recovery for all of them. CVPS also argues that it has proposed no adjustment to its cost of service, other than the \$1.8 million adjustment for the service contract, that sought to recover common costs from Vermont ratepayers.²²² CVPS adds that it has taken actions to pass the gain from the sale on to customers; the Company points to the accounting order that we issued on February 18, 2005, under which the Company will defer overearnings in 2004 (computed under the Company's methodology) to 2005. CVPS says that this assures that all excess earnings — caused largely by the gain on the CVEC transaction — can be reflected to the benefit of customers at the start of new rates on April 1, 2005. CVPS argues that this action, coupled with the annual reversal of the \$14.4 million SFAS No. 5 loss contingency, assures that customers benefit from the excess net profits of the transaction.²²³

Turning first to AARP's arguments, we find no basis to conclude that CVPS may have been imprudent in negotiating the CVEC sale. To the contrary, the record shows that CVPS's aggressive pursuit of litigation in both federal court and at FERC and the ultimate sale to CVEC avoided potentially negative consequences to the Company and its Vermont ratepayers. Had CVPS not sold CVEC and the NHPUC order requiring restructuring was ultimately upheld, the restructuring might have resulted in higher power costs for CVPS and its Vermont ratepayers. CVPS would still have the same power resources, but would no longer receive revenues from the sale of power to CVEC.²²⁴ The evidence shows that the potential magnitude of these costs was large — as of 1997, CVPS estimated that the power resources it had to serve CVEC would, if that sale was no longer available, have been in excess of their market value by approximately \$75

222. CVPS Reply Brief at 191.

223. CVPS Reply Brief at 187–188.

224. Tr. 11/2/04 at 138–139 (Gibson). As we explain above, in rate proceedings, we traditionally do not bar recovery of power purchases and entitlements in excess of what is needed to serve CVPS's load. Instead, we attribute resale revenue to any power in excess of CVPS's actual needs. To the extent that the price of the power CVPS acquired to serve CVEC exceeded the resale value, Vermont ratepayers may have paid the difference. We have also generally allowed such treatment when wholesale transactions are terminated.

million over their remaining life.²²⁵ By the time of the sale agreements, this figure had dropped to \$21 million, for which CVPS received compensation;²²⁶ market price rises subsequent to that time have now reduced the estimated stranded costs to only \$14.4 million. Thus, CVPS's litigation and sale avoided substantial additional power costs to Vermont ratepayers.

The Department's proposed adjustments do not challenge the merits of the sale, but focus on the cost shifts that arise from the sale. The first cost shift arises from the termination of the service contract, whereby CVPS allocated certain costs to CVEC. In large part, we do not accept the Department's recommendation. Over 60 percent of the costs allocated under the contract are general overhead expenses (or associated payroll taxes). For example, portions of officers' salaries were assigned through this mechanism. These expenses are not readily avoidable; after the CVEC sale, most of these costs remain unchanged.

Other costs allocated under the service contract, however, are associated with specific functions that CVPS will no longer provide to CVEC. These include allocations for customer accounting and billing, the bulk of which are associated with payroll.²²⁷ Although the Company's billing system does not change with the end of the CVEC contract, CVPS no longer needs the employees that previously provided such support to CVPS. Similarly, production, transmission, and distribution services will no longer be performed. Instead of the full costs of the service contract, we find it reasonable to allow CVPS to recover \$1.376 million in Rate Year 1 and \$1.456 million in Rate Year 2.²²⁸

The second cost shift identified by the Department is the change in the wholesale allocation factor. CVPS asserts that there is no actual change in costs, so the Department's adjustment must be rejected. In a narrow sense, CVPS is correct — the loss of CVEC did not shift costs to CVPS (except for the costs directly assigned or allocated through the service contract). However, it fails to consider the fact that, in addition to these two methods of

225. Deehan reb. pf. at 9–10.

226. This change is attributable to two factors. First, the market price for power has increased, allowing CVPS to resell the power for more and reducing the stranded cost loss. Second, CVPS was able to sell the power at cost for the intervening period, so that the CVEC customers paid a share of the costs.

227. Exh. CVPS-55; exhs. CVPS-CJF-2 and CVPS-CJF-6.

228. See finding 187.

assigning costs to CVPS, the ratemaking methodology we employ also allocates a certain portion of other costs through the wholesale allocation factor. This factor will be directly affected by the large reduction in wholesale power sales to CVEC. The parties could not calculate it precisely, but the financial impact on Vermont ratepayers of this change appears to be approximately \$1.8 million annually.

To compensate ratepayers for these added costs (at least in the short run), the Department proposes to allocate the \$6.6 million gain from the termination of the CVEC power contract, amortized over three years. We find this approach reasonable. The cost shift to Vermont ratepayers from the wholesale allocation factor change is real. As presently structured, CVPS would have Vermont ratepayers absorb the full impact of this change, while simultaneously retaining the full value of the \$6.6 million gain for its shareholders. CVPS has not shown why this allocation of costs and benefits is reasonable.

We recognize that CVPS has deferred some overearnings from 2004, the bulk of which are attributable to the CVEC sale, to 2005.²²⁹ However, this adjustment is for accounting purposes only; it is not revenue that we can consider for ratemaking purposes in 2005. We expect that CVPS's deferral of these earnings will help the Company's financial standing, but it has no bearing on the rates we set today. Similarly, the deferral does not actually return any of the \$6.6 million to ratepayers.

CVPS also states that the Department's approach fails to recognize the stranded cost payments that are being used to benefit ratepayers. Specifically, CVPS will amortize the \$14.4 million over 12 years to offset the stranded power costs. CVPS's ability to secure full compensation for these stranded costs is a positive aspect of the sale as structured. These payments, however, do not provide ratepayers with an additional benefit as CVPS suggests; rather, they simply make ratepayers neutral as to the power costs that will be returned to CVPS as a result of the termination of the wholesale arrangement.

Overall, we find that the proposed amortization of the \$6.6 million over three years is reasonable. Both the \$6.6 million gain and the \$1.8 million increase in annual costs result directly from termination of the CVEC power contract. It is appropriate to offset the increased

229. In fact, the \$6.6 million exceeds the deferred overearnings.

power costs by the \$6.6 million gain. We, therefore, adopt the DPS's proposed amortization of the \$6.6 million gain over three years.

C. Regulatory Commission Expense

Findings

188. Findings 170–174 above are incorporated here.

189. CVPS included the half of its costs of litigating the *Patch* case in its calculation of regulatory commission expenses. Schultz and DeRonne pf. at 57–60.

Discussion

Regulatory commission expenses can vary greatly from year to year. For example, over the past five years, they have ranged from \$569,579 to \$1,245,520.²³⁰ Because of this variance, the Board typically establishes the regulatory commission expense for CVPS using an average of the previous five years.

No party challenges the use of the five-year average. However, both the Department and AARP object to the inclusion of the costs associated with the *Patch* case. The Department asserts that the issues that CVPS litigated related to the power costs that would be charged to CVEC customers, not CVPS ratepayers. As such, the costs for the litigation should be borne by CVEC or CVPS shareholders.²³¹ AARP supports the Department's recommendation.

CVPS maintains that the *Patch* case costs should be charged to Vermont ratepayers. According to CVPS, these costs were necessary to permit CVPS to obtain the sale of CVEC on terms that covered the power costs that CVPS had incurred to serve its subsidiary and thereby minimized the financial impact on CVPS's Vermont ratepayers. CVPS points out that, in the absence of the *Patch* litigation, CVPS's Vermont ratepayers would have ended up paying for all of the stranded costs when the power contract with CVEC was terminated.²³²

The Department's position would have merit if we could be assured that all of the

230. Schultz and DeRonne pf. at 57–58.

231. DPS Brief at 60.

232. CVPS Reply Brief at 182–183.

financial impacts of the NHPUC's restructuring order would have been borne by CVEC's ratepayers or by shareholders. But, as we discuss in the previous section, under traditional ratemaking in Vermont, it is likely that CVPS's Vermont ratepayers would have absorbed at least part, if not all, of the excess stranded costs.

CVPS's pursuit of the *Patch* case and FERC litigation avoided the potential for shifting these significant excess power costs to CVPS's Vermont ratepayers. For this reason, we accept CVPS's position that it is reasonable to assign half of the costs of the *Patch* litigation to retail customers.

D. Depreciation Expense

Findings

190. CVPS's annual depreciation expense results from the application of revised depreciation rates calculated in a depreciation study prepared in 2001, and based on CVPS's plant in service balances as of December 31, 2000. Majoros pf. at 4–5; exh. DPS-MJM-1.

191. CVPS began using the depreciation rates calculated in its 2001 depreciation study on April 1, 2002. Majoros pf. at 5.

192. Plant and equipment are removed from service at the end of their useful lives. Sometimes the retired plant and equipment may be physically removed and can be resold for value. This is called gross salvage. The cost of removing the retired plant less the value received for the salvage is net salvage. Net salvage can be positive or negative. Majoros pf. at 20, 33.

193. CVPS's current depreciation rates include a component for future negative net salvage of at least \$1.6 million per year. Majoros pf. at 21 and 33; exh. DPS-MJM-1 at 8; exh. DPS-MJM-3 at page 8 of statement C.

194. During the most recent five-year period available, CVPS's actual expenditures for net salvage have been, on average, positive \$0.5 million. Majoros pf. at 21, 33; exh. DPS-MJM-3 at statement D.

195. An asset retirement obligation ("ARO") is a liability resulting from a legal obligation to retire or decommission a plant asset. In this context, a legal obligation is "an obligation that a party is required to settle as a result of an existing or enacted law, statute, ordinance, or written or

oral contract or by legal construction of a contract under the doctrine of promissory estoppel." Exh. CVPS-40 at 4; 103 FERC ¶ 61,021 at ¶ 2 (FERC 2003) (referred to herein as "FERC Order 631").

196. Statement of Financial Accounting Standards No. 143 ("SFAS 143") was issued in June 2001. SFAS 143 requires that prior and future amounts of "non-legal AROs"²³³ be reported as a regulatory liability in financial statements. Majoros pf. at 22, 25.

197. As a result of SFAS 143, in 2002 CVPS identified \$4.3 million of non-legal ARO collections relating to prior years that were included in its accumulated depreciation account. This \$4.3 million was classified as a regulatory liability. Majoros sur. pf. at 5, 25–26; exh. CVPS-10 at 59.

198. CVPS's regulatory liability associated with non-legal ARO collections grew to \$5.2 million at the end of 2003. Majoros sur. pf. at 26; exh. CVPS-10 at 59.

199. FERC Order 631 was issued on April 9, 2003. It requires an identification of amounts accrued for cost of removal for non-legal retirement obligations that are included in the depreciation reserve. It also requires jurisdictional entities to maintain subsidiary records for the purpose of identifying the amount of specific allowances collected in rates for non-legal AROs included in depreciation accruals. R. White reb. pf. at 20.

200. The matching principle of accounting provides that both initial and future expenditures should be allocated to the accounting periods in which the service potential of an asset is consumed. R. White reb. pf. at 9.

201. The standard or criterion that should be used to determine a proper net salvage rate is cost allocation over economic life in proportion to the consumption of the service potential. R. White reb. pf. at 9.

202. The economic principle underlying both the accounting and ratemaking treatment of cost of removal is that in addition to return of and return on invested capital and taxes, a revenue requirement for cost of removal is created when an asset is placed in service. R. White reb. pf. at 9.

233. If a company does not have a legal obligation to retire or decommission a plant asset, the cost of removing that plant asset is considered a non-legal retirement obligation (referred to herein as a "non-legal ARO").

203. If CVPS has over-collected from ratepayers for the cost of future net salvage, ratepayers should receive rate relief through downward adjustments in CVPS's net salvage rates. Tr. 1/10/05 at 60 (R. White).

204. CVPS's depreciation expense should be increased by \$1,172 in Rate Year 1 and by \$51,780 in Rate Year 2 to correct an error in CVPS's original cost-of-service filings related to deferred hydro relicensing costs. Schultz and DeRonne pf. at 19; exh. CVPS-4.

205. CVPS's depreciation expense should be reduced by \$19,233 in Rate Year 1, and \$80,486 in Rate Year 2 to reflect changes to CVPS's plant balances. These adjustments incorporate the corrections to CVPS's communications plant balances that are shown on exh. CPVS-4. Schultz and DeRonne pf. at 18; exh. CVPS-4 at pages 2–4; exh. DPS-L&A-11 at schedule 5; exh. DPS-L&A-12 at schedule 5.

Discussion

Depreciation allows the recovery of the cost of an asset to be spread over the asset's expected life, thereby enabling all ratepayers who benefit from the asset to pay a portion of the asset's cost. Traditionally, net salvage is also collected through depreciation rates.²³⁴ Depreciation rates are established based on depreciation studies that review the assumptions underlying the current depreciation rates.

In these proceedings, the DPS argues that CVPS's depreciation expense should be adjusted for three reasons.²³⁵ First, the DPS asserts that depreciation expense should be increased to correct an error in CVPS's original filing related to the Company's deferred hydro relicensing costs. CVPS agrees with this adjustment. The proposed adjustment, which is shown in finding 204, above, is appropriate, and we hereby accept it.

Second, the DPS argues that depreciation expense should be reduced to reflect the DPS's recommended changes to plant balances. CVPS does not contest the adjustment of depreciation

234. R. White reb. pf. at 9; DPS Brief at 82.

235. The DPS also states that CVPS's depreciation expense should be reduced because several of the average lives on which the depreciation rates are based are too short. However, the DPS does not propose alternative lives in these proceedings, stating instead that it expects CVPS's next depreciation study to address this issue. Majoros pf. at 6.

expense to reflect changes to plant balances (although the Company does contest the adjustments to the plant balances, as discussed in Section V.A, above). It is appropriate to modify depreciation expense to reflect adjustments to plant balances. Since we have accepted the DPS's recommended changes to CVPS's plant balances, we also accept the DPS's proposed adjustments to depreciation expense that reflect the effects of those changes (*see* finding 205, above).

Third, the DPS advocates reducing CVPS's depreciation expense because future net salvage is bundled into CVPS's depreciation rates, even though CVPS has no legal obligation to incur those costs.²³⁶ The DPS argues that net salvage should be separated from other depreciation expenses through the use of a "net salvage allowance" that is, in essence, a normalized expense. According to the DPS, the net salvage allowance should be equal to the average of the last five years' net salvage expense (whether that amount is positive or negative). However, in these proceedings, as a transitional measure, the DPS recommends a zero net salvage allowance, rather than the positive \$0.5 million net salvage allowance that would apply if a five-year average was used.²³⁷ To support its position, the DPS points out that CVPS has collected considerably more in net salvage than it has spent, on average, over the last five years. The DPS argues that this proves that CVPS's net salvage rates are excessive.²³⁸

CVPS does not agree with the DPS's position regarding the collection of net salvage. CVPS asserts that it is appropriate to continue to collect net salvage through depreciation rates, regardless of whether CVPS has a legal obligation to incur those costs. As a practical matter, CVPS asserts that even though it may not have a legal obligation to incur removal costs for most of its plant, it does in fact incur removal costs.²³⁹ CVPS argues that the DPS's net salvage allowance proposal would create intergenerational inequities because, under that proposal, the entire cost of removal of an asset would be born by ratepayers at the time the asset is retired, rather than spread among all ratepayers who benefitted from the use of the asset.²⁴⁰ CVPS asserts that comparing its annual collections for net salvage with its realized net salvage costs is

236. Majoros pf. at 6.

237. Majoros pf. at 36–37.

238. DPS Brief at 77.

239. CVPS Reply Brief at 216.

240. R. White reb. pf. at 3–4, 14–15.

inappropriate because annual collections are for the future removal of all plant now in service, not just to pay for the plant that was retired in a particular year.²⁴¹ CVPS asserts that its net salvage rates will be reexamined as part of its next depreciation study, which it expects to conduct in 2006.²⁴²

The DPS has highlighted an important policy issue — in contrast to collections for depreciation, which enable the utility to recover costs that it has already incurred, collections for net salvage are, in essence, prepayments by ratepayers for expenses that the utility estimates it will incur at some point in the future. This is a significant distinction, and one that persuades us that collections for net salvage should be tracked and reported separately from other funds collected via depreciation expense. For this reason, we accept the DPS's recommendation that we require CVPS to follow the recording and reporting requirements of FERC Order 631 for Vermont jurisdictional ratemaking purposes. In other words, CVPS must track and report its prior and future net salvage collections in a separate subsidiary account, and we expect this separate account to be shown in future cost-of-service filings.²⁴³

However, we do not require CVPS to stop collecting net salvage through its depreciation rates. Intergenerational equity is of great concern to us. CVPS has convinced us that to adopt the DPS's recommendation regarding a net salvage allowance would create inequities by requiring ratepayers at the time an asset is retired to pay all the net salvage costs (or allow ratepayers at the time an asset is retired to receive the benefit if the net salvage costs are negative).²⁴⁴ Instead, net salvage costs should be recovered from ratepayers over an asset's expected lifetime. This concept of spreading cost recovery over time to match the costs with the benefits is similar to the purpose behind depreciation. Given that depreciation and net salvage rates are determined using

241. CVPS Reply Brief at 216.

242. Tr. 1/10/05 at 75–76 (R. White); tr. 1/12/05 at 146 (Gibson).

243. We believe this issue may also have implications for CVPS's next depreciation study. In addition to changing depreciation rates, depreciation studies often lead to "rebalancing" the depreciation reserve among different plant accounts. We would expect that any future rebalancing would not shift funds from net salvage to depreciation or vice versa. Collections for past expenses should be kept separate from collections for estimated future expenses. This expectation is consistent with statements made by CVPS's chief financial officer during cross-examination. Tr. 1/12/05 at 114–115 (Gibson).

244. During cross-examination, the DPS's own witness admitted that under the DPS's recommendation, ratepayers at the time an asset is retired would pay all the net salvage costs for that asset. Tr. 1/10/05 at 140 (Majoros).

the same service life estimates and dispersion patterns, it is acceptable for the collection mechanism (the depreciation rate itself) to combine net salvage with depreciation, provided that the recoveries for the two items are tracked and reported separately, as discussed above.

We are not persuaded by the DPS's argument that, because CVPS has collected more in net salvage than it has spent, on average, over the last five years, the Company has overcollected net salvage. Because the recovery of net salvage costs is spread over an asset's lifetime, while actual net salvage expenses are linked to a particular year's retirements, it would be surprising if collections for net salvage matched CVPS's net salvage expenses in any particular year.²⁴⁵

In addition, we disagree with the DPS's characterizations of SFAS 143 and FERC Order 631,²⁴⁶ both of which were enacted subsequent to CVPS's last depreciation study. Rather, we are persuaded by CVPS's arguments, and the actual language of the two documents that, for regulated entities, these new policies impose new tracking and reporting requirements for non-legal AROs, but do not require that net salvage costs no longer be recovered through depreciation rates.²⁴⁷

Finally, the DPS has recommended that we order CVPS to conduct a new depreciation study immediately. We decline to do so at this time. In making this decision, we are relying on CVPS's representation that it will conduct a new depreciation study in either 2005 or 2006, which is five years after its last depreciation study was performed. We are persuaded that it is reasonable to conduct a new depreciation study every five years, and decline to order the Company to do so more frequently. Nevertheless, we are very interested in the results of CVPS's next depreciation study, and we require the Company to file it with the Board and the DPS when it is completed, which should be no later than December 31, 2006.

245. We are expressly not ruling on whether CVPS has overcollected net salvage during the period that its current depreciation rates have been in effect. There is insufficient evidence in the record to decide this issue. We expect, however, that the level of net salvage collections will be reviewed in CVPS's next depreciation study, and that net salvage rates will be adjusted downward at that time if the data shows that to be appropriate.

246. The DPS asserts that SFAS 143 and FERC Order 631 require the separation or unbundling of non-legal cost of removal allowances from depreciation rates, although the DPS admits that SFAS 143 provides an exception for regulated utilities, provided certain conditions are met. *Majoros* pf. at 24 –25, 31.

247. Exh. CVPS-40 at 7, 42; FERC Order 631 at ¶¶ 37–39.

Correction to Annualized Test Year Depreciation Expense

As explained in finding 130 and Section V.B, above, CVPS's original filing includes an error in the calculation of annualized test year depreciation expense. No party has asked that CVPS's depreciation expense calculation be revised to reflect the Company's correction of its annualized test year depreciation expense. Nevertheless, we conclude that the error should be corrected. Therefore, we require CVPS, as a part of its compliance filing in these proceedings, to adjust depreciation expense in both Rate Year 1 and Rate Year 2 to reflect the correct value of annualized test year depreciation expense.

E. Payroll-Related Items

1. Number of Employees

Findings

206. On December 31, 2003 (the end of the test year in these proceedings), CVPS had 514 employees and 11 vacant positions. Gamble pf. at 39; tr. 1/11/05 at 20 (Gamble); exh. CVPS-JFG-9; exh. CVPS-JFG-16; exh. CVPS-JFG-17.

207. CVPS's filed cost of service for Rate Year 1 includes 34.5 employees more than CVPS had as of December 31, 2003, for a total of 548.5 full-time equivalent employees. CVPS's filed cost of service for Rate Year 2 includes 7 more employees than its Rate Year 1 cost-of-service, for a total of 555.5 full-time equivalent employees. Tr. 1/11/05 at 21 (Gamble).

208. As of August 17, 2004, CVPS had 524.3 full-time equivalent employees. Tr. 1/11/05 at 21–22 (Gamble).

209. As of October 31, 2004, CVPS had 527 full-time equivalent employees. Tr. 1/11/05 at 23 (Gamble).

210. As of December 2004, CVPS had around 530 full-time equivalent employees. The Company had 5.5 fewer full-time equivalent employees than it had projected in its cost-of-service filings that it would have in December 2004. Tr. 1/11/05 at 28, 34–35 (Gamble).

211. CVPS filled 16 new positions in calendar year 2004. However, nine months into Rate Year 1, CVPS still had approximately 18 fewer employees than it included in its Rate Year 1 cost of service. Findings 206, 207, and 210, above.

212. CVPS originally budgeted for 532.2 full-time equivalent employees in 2005. Schultz and DeRonne pf. at 50.

213. As of January 11, 2005, only six external positions were listed as open on CVPS's website, one of which was for Catamount, Inc. This is not a complete list of CVPS's job openings because (1) when a job becomes open, it is first posted internally and not on CVPS's website, and (2) the list on the website does not include jobs for which someone has been hired from outside the Company, but has not yet started work. Tr. 1/11/05 at 24–27 (Gamble).

214. CVPS's original cost-of-service filings for both rate years did not account for ongoing vacancies. Gamble reb. pf. at 34.

215. CVPS's five-year average turnover rate is 6.2 percent. The lowest number of employees to leave CVPS in any one year since 1999 has been 25. Twelve employees left CVPS between January 1, 2004 and August 17, 2004. Schultz and DeRonne pf. at 49.

216. CVPS's requested number of employees should be reduced by 11 in each rate year in order to account for vacancies. Schultz and DeRonne pf. at 49; findings 214–215, above.

217. The average compensation expense for the 34.5 positions added by CVPS in Rate Year 1 was \$24,806. CVPS's Rate Year 1 cost of service should be reduced by \$272,866, which is \$24,806 times 11 positions. Schultz and DeRonne pf. at 51.

218. The average compensation expense for the 41.5 positions added by CVPS in Rate Year 2 was \$32,571. CVPS's Rate Year 2 cost of service should be reduced by \$358,280, which is \$32,571 times 11 positions. Schultz and DeRonne pf. at 51.

219. The electric industry has the oldest average age of employees among all industry groups, except for religious organizations. Gamble pf. at 40.

220. Based on CVPS's employee demographics, the Company expects a significant number of retirements to occur over the next 20 years. Gamble pf. at 41; exh. CVPS-JFG-18.

221. Sixteen of the additional full-time-equivalent employees included in CVPS's cost-of-service filings are related to succession planning for employees who will be retiring after the end of Rate Year 2. Ten of these 16 positions are related to Engineering and Operations. Due to the technical nature of this work, and to assure safety, it may take as long as four years to complete the training of qualified employees. Gamble pf. at 39–40.

Discussion

CVPS projected significant increases in the number of full-time equivalent employees during Rate Years 1 and 2, when compared to the test year for these proceedings. However, CVPS did not persuade us that these increases are known and measurable. On the contrary, as explained below, the evidence in this proceeding has convinced us that it is unlikely that CVPS's number of employees will increase as the Company originally projected.

The DPS and CVPS agree that the Company's requested number of employees should be adjusted downwards to account for vacancies. However, they disagree on the size of this adjustment. The DPS argues that the Company's turnover rate for the last five years supports the use of 11 vacancies (which was also the number of vacancies at the end of the test year).²⁴⁸ In addition, the DPS points out that CVPS's number of employees has been significantly below 548.5 throughout Rate Year 1, and nine months into Rate Year 1, CVPS still had approximately 18 unfilled positions.²⁴⁹

CVPS argues that this figure is too high because it includes retirements and involuntary terminations, in addition to voluntary terminations. CVPS asserts that retirements and involuntary terminations should not be used to calculate the vacancy rate because (1) CVPS is prehiring replacements for impending retirements, therefore the vacancy rate related to retirements is expected to approach zero; and (2) in the past few years, there were a high number of involuntary terminations, especially related to raising the bar on management performance, and it is not reasonable to expect that this high level of involuntary terminations will continue at the same rate.²⁵⁰ As a result, CVPS recommends a rate of 3.7 vacancies.²⁵¹

We are persuaded that the DPS's vacancy rate is more appropriate. Not only does 11 vacancies better match CVPS's historic turnover rate, using this vacancy rate also brings the number of employees included in the cost of service closer to the actual number of employees

248. Schultz and DeRonne pf. at 49.

249. DPS Brief at 54.

250. Gamble reb. pf. at 34–35.

251. CVPS uses an average of 11 voluntary terminations per year, and the average time to fill most positions of 4 months to calculate its vacancy rate of 3.7. Gamble reb. pf. at 35.

that CVPS had during the first nine months of Rate Year 1.

With respect to Rate Year 2, in order for CVPS to reach its projected number of employees, it would have to hire all the employees it originally anticipated hiring in Rate Year 1 but did not, plus the seven additional employees it originally projected hiring in Rate Year 2. CVPS has not convinced us that it will hire all these additional employees during Rate Year 2, particularly since its 2005 budget (which covers three months of Rate Year 1 and nine months of Rate Year 2) included only 532.2 employees, far fewer than the 555.5 employees included in CVPS's Rate Year 2 cost of service.

CVPS has argued that the vacancy rate related to retirements is expected to approach zero, and that there will be fewer involuntary terminations during the rate years. These assertions may be true. However, they do not change the fact that nine months into Rate Year 1, CVPS still had approximately 18 unfilled positions, and there is nothing in the record that convinces us that this situation will change significantly in Rate Year 2.²⁵²

We note, however, that reducing CVPS's number of employees by a vacancy rate of 11 still leaves approximately 7 positions unfilled nine months into Rate Year 1, and an additional 7 positions to be filled in Rate Year 2. Even though it could be argued that these additional positions are not known and measurable, we do not reach that conclusion in this Order. Rather, CVPS has persuaded us that it is necessary for its staffing levels to increase slightly in order to train new employees who can replace those expected to retire after Rate Year 2.²⁵³ We recognize that the aging of the workforce is an issue confronting the electric utility industry as a whole, and we are pleased that CVPS is planning for expected retirements. Our decision today takes into consideration CVPS's decision to prehire replacements for some impending retirements in order to ensure that the replacements are adequately trained. An adequately-trained workforce will benefit ratepayers; for this reason, we allow CVPS to include the costs of

252. On January 11, 2005, CVPS had only six positions advertised on its website (one of which was for an unregulated subsidiary). We recognize that these six positions do not include all jobs that the Company had posted as of January 11, 2005. However, there is no quantitative evidence in these proceedings regarding the number of jobs that the Company had posted internally as of that date, or of the number of jobs that were recently filled with outside hires who had not yet started work.

253. The record does not indicate how many of the approximately 16 new positions that the Company filled in calendar year 2004 were related to succession planning.

the remaining currently unfilled positions in rates.

2. Employee Incentive Plan

Findings

222. CVPS has an Employee Incentive Plan ("EIP") under which non-union employees (excluding officers) have the ability to earn an annual incentive payment if certain performance objectives are met. Gamble pf. at 27–28.

223. The EIP has a broad payout range. CVPS designed the EIP so there is a 90 percent chance of reaching the threshold performance level (below the threshold no payment is made), a 50 percent chance of reaching the target performance level (at which the target payout is made), and a 10 percent chance of reaching the maximum performance level (at which the maximum payout is made). The maximum payout is twice the target payout. Gamble pf. at 29.

224. CVPS requests in its filed costs of service the target payout amounts of \$887,380 in Rate Year 1, and \$1,187,760 in Rate Year 2. Gamble pf. at 29; tr. 11/2/04 at 35–36; exh. DPS-L&A-11 at page 2 of schedule 11; exh. DPS-L&A-12 at page 2 of schedule 11.

225. Fifty percent of CVPS's EIP is based on three Company-level measurements, and 50 percent of the EIP is based on specified team-level measures. Exh. CVPS-JFG-33 at 3.

226. The three Company-level measures used to calculate CVPS's EIP, along with the weight given to each, are: (1) utility earnings per share (50 percent); (2) cash flow (25 percent); and (3) whether CVPS meets its service quality standards (25 percent). Exh. CVPS-JFG-33 at 3.

227. The Team-level measures used to fund CVPS's EIP are divided among four categories: financial, customer, process, and people. For teams that work with external customers, the customer measures are given a weighting between 35 and 45 percent. Exh. CVPS-JFG-33 at 3.

228. The EIP's 2004 target for utility earnings per share is \$1.24, while the utility earnings per share for 2002 and 2003 were \$1.49 and \$1.57, respectively. Schultz and DeRonne pf. at 43.

229. Fifty percent of CVPS's requested EIP expense (in other words, 50 percent of the target payout amount) should be disallowed in Rate Year 1 in order to share the expected costs of the EIP equally between shareholders and ratepayers. Schultz and DeRonne sur. pf. at 41–42.

230. Fifty percent of the Company's requested EIP expense should be disallowed in Rate

Year 2, after removing an amount that is not known and measurable as provided in confidential exh. CVPS-JFG-29, in order to share the expected costs of the EIP equally between shareholders and ratepayers. Schultz and DeRonne sur. pf. at 41–42; exh. CVPS-JFG-29.

231. CVPS's Vice President for Strategic Change and Business Services is responsible for overseeing all aspects of human resources, and was the Company's primary witness regarding the design of CVPS's EIP. Gamble pf. at 1, 27–33; Gamble reb. pf. at 25–33.

232. CVPS's Vice President for Strategic Change and Business Services incorrectly stated in her prefiled direct and rebuttal testimony, and during her live testimony during the direct portion of these proceedings that the weight given to the three Company-level measures used to fund CVPS's EIP were: (1) utility earnings per share (*25 percent*); (2) cash flow (25 percent); and (3) whether CVPS meets its service quality standards (*50 percent*).²⁵⁴ Gamble pf. at 30; Gamble reb. pf. at 26, 28; tr. 11/2/04 at 36 (Gamble); exh. CVPS-JFG-33 at 1.

233. CVPS's Vice President for Strategic Change and Business Services did not discover the error described in finding 232, above, until sometime after the rebuttal hearings in these proceedings when she began looking back at the Company's 2004 performance. Exh. CVPS-JFG-33 at 1.

Discussion

The DPS argues that 50 percent of the amount CVPS has requested for its EIP should be excluded from the costs of service for both Rate Years 1 and 2 because: (1) the EIP is based 75 percent on financial goals and only 25 percent on meeting service quality and reliability goals; (2) the EIP's goals are not appropriate because they are set too low; (3) CVPS lowered its earnings per share goal because earnings are expected to decrease due to the sale of CVEC and the return of costs previously paid by CVEC customers to Vermont ratepayers; and (4) the EIP has too many discretionary measures for which there is no means to verify that the decisions are justified.²⁵⁵ Alternatively, the DPS argues that 50 percent of the amount CVPS has requested for

254. The italics indicate the errors. As can be seen by comparing finding 232 with finding 226 which indicates the correct weights for the three measures, the percentage weights for "utility earnings per share" and "whether CVPS meets its service quality standards" were reversed.

255. DPS Brief at 52.

its EIP should be disallowed in order to provide for an equal sharing of costs between ratepayers and shareholders.²⁵⁶

CVPS argues that the requested amount for its EIP (which is the target payout amount) should be allowed because its EIP is necessary to provide employees incentives for cost-effectively meeting the Company's goals, and to enable the Company to remain competitive with the marketplace.²⁵⁷ CVPS also asserts that the DPS has misunderstood the EIP's components. CVPS explains that its EIP is based 50 percent on Company measures, and 50 percent on Team measures. The Company states that the DPS is correct that 75 percent of its Company measures are financial goals, and 25 percent are service quality and reliability goals, but asserts that the DPS ignores the contribution of Team measures. According to CVPS, for teams that work with external customers, between 35 and 45 percent of the Team measures are focused on customer-oriented goals. Therefore, for teams that work with external customers, between 30 and 35 percent of the EIP is based on customer-focused goals (including both the Company and Team measures).²⁵⁸ Finally, CVPS argues that not all of its teams have discretionary goals, but that discretionary goals are necessary for some of its teams in order to prevent "absurd results."²⁵⁹

We do not dispute CVPS's contention that its EIP provides its employees with incentives for cost-effectively meeting the Company's goals. However, the Company's goals benefit both shareholders and ratepayers. As a result, shareholders and ratepayers should share equally in the expected costs of the EIP.

We have two reasons for requiring that the EIP's expected costs be shared equally between shareholders and ratepayers. First, most of the EIP is not focused on customer goals. CVPS correctly points out the error in the DPS's assertion that only 25 percent of the EIP's overall weight is assigned to customer service and reliability goals. The Company has shown that only 25 percent of the EIP's Company measures are customer-oriented goals, but the overall weight, including the Team measures, is between 30 and 35 percent for those teams that work with external customers. Nevertheless, this range still indicates that only approximately one-

256. Schultz and DeRonne sur. pf. at 41–42.

257. CVPS Reply Brief at 169.

258. CVPS Reply Brief at 170–172.

259. CVPS Reply Brief at 172–173.

third of the EIP's weight is assigned to customer service and reliability goals.²⁶⁰

Second, the Company has set inappropriately low targets for some of the measures, particularly its utility earnings per share measure, which by itself accounts for 25 percent of the overall EIP. The 2004 target for this measure is 21 percent below actual 2003 utility earnings per share, and 17 percent below actual 2002 utility earnings per share. It is not appropriate to provide an incentive for performance significantly below the previous two years' achievements, particularly if, as the DPS argues, the target was reduced because CVPS's regulated utility operations will need to absorb nearly \$4 million of additional costs as a result of CVPS's sale of CVEC.²⁶¹

We are not basing our disallowance on the EIP's use of discretionary measures. CVPS has convinced us that discretionary goals are appropriate for some teams, and we do not conclude, at this time, that CVPS's EIP relies too heavily on discretionary measures. However, we remind CVPS that it is responsible for maintaining sufficient documentation justifying the discretionary determinations. Should CVPS fail to maintain such documentation, we may well reach a different conclusion regarding the EIP's reliance on discretionary measures in the future.

The remaining issue to decide is, "what are the EIP's expected costs?" CVPS has stated the EIP was designed so there would be a 50 percent chance of reaching the target performance level, which would result in the target payout being made. Thus, it is equally likely that CVPS would pay more or less than the target payout. As a result, we conclude that the target payout level is the best estimate of the EIP's expected costs in each of the rate years.²⁶² Therefore, we

260. CVPS stated that for 2005, the weighting of the Company portion of the EIP has been changed to: (1) 33 1/3 percent utility earnings per share; (2) 33 1/3 percent cash flow; and (3) 33 1/3 percent whether CVPS meets its service quality standards. Substituting these percentages in the calculation performed on page 3 of exh. CVPS-JFG-33 results in an overall weight of between 34 percent and 39 percent for customer-oriented goals. These percentages are still considerably less than half of the EIP's overall weight.

261. Schultz and DeRonne sur. pf. at 38.

262. The only other basis upon which we could estimate the EIP's expected costs in the rate years would be to use past EIP payout levels as a guide for future expected payout levels. According to CVPS, the EIP's actual payout for 2002 performance was 68 percent of the maximum possible payout for regular employees, and 69 percent of the maximum possible payout for key contributors. The EIP's actual payout for 2003 performance was 70 percent of the maximum possible payout for regular employees, and 71 percent of the maximum possible payout for key contributors. Gamble pf. at 32–33.

Even though the payout levels for these two years were both near 70 percent of the maximum possible, we do not find it reasonable to assume that this level will continue. If the Company is correct that the EIP is designed so

are persuaded that 50 percent of the Company's requested EIP expense should be disallowed in Rate Year 1. In addition, we conclude that 50 percent of the Company's requested EIP expense should be disallowed in Rate Year 2, after removing an amount that is not known and measurable as provided in confidential exh. CVPS-JFG-29.²⁶³

Finally, we are compelled to comment on Ms. Gamble's error regarding the weights assigned to the utility earnings per share and service quality and reliability portions of the EIP. We do not believe Ms. Gamble deliberately misled the Board, and we believe that she acted properly in promptly informing the Company's legal department, who in turn immediately informed the Board and the other parties in these proceedings. Furthermore, we realize that everyone makes a mistake occasionally. Nevertheless, we are astounded that someone in her position could make this particular mistake not once, but *three times*, both orally and in written prefiled testimony. We are very troubled that the Company's senior executive with primary responsibility for overseeing all aspects of human resources, including the implementation of CVPS's EIP, could have such a fundamental misconception regarding the EIP's priorities. We are very interested in the way the EIP balances shareholder and ratepayer concerns, and we were disturbed to discover late in these proceedings that the EIP accorded only half as much significance to the Company's service quality and reliability goals and twice as much significance to utility earnings per share as CVPS's senior executive with responsibility for the EIP thought it did. This situation reinforces our original concern regarding the EIP's balance between shareholder and ratepayer interests, which we have addressed in this Order through an equal sharing of the EIP's expected costs between shareholders and ratepayers.

there is only a 50 percent chance of meeting the target payout, that is true for each year that the EIP is in effect; past payout levels would not be any indication of future payout levels. (Similarly, if one flips a coin four times and the first three times it comes up heads, the probability that it will come up heads again is still 50 percent. The events are independent, and past results do not affect the probability of future events.)

263. Confidential exh. CVPS-JFG-29 was filed with Ms. Gamble's supplemental testimony describing the results of CVPS's recent negotiations with its employee union. The new union contract covers the period January 1, 2005–December 31, 2008. Gamble sup. pf. at 3.

3. Officers' Compensation

Findings

234. CVPS multiplied the total salaries of all Vermont regulated utility employees (including officers) by an adjustment factor of 74.85 percent to calculate the Operations and Maintenance portion of those employees' salaries. The 74.85 percent adjustment factor is based on the percentage of compensation dollars that are spent, on average, by all utility employees working on Operations and Maintenance activities, as opposed to capital projects, unregulated activities, or other "below-the-line"²⁶⁴ activities. Gamble pf. at 43; Gamble reb. pf. at 37–38.

235. The DPS asked CVPS to provide information regarding individual officers' compensation that was charged below-the-line. CVPS initially provided no information regarding how individual officers' compensation was allocated between ratepayers and shareholders, and later provided a calculation that shows that 88.9 percent of a particular unidentified officer's time was charged to Vermont utility operations during the test year. Schultz and DeRonne pf. at 51–52; Schultz and DeRonne sur. pf. at 43–44; Gibson reb. pf. 11/15/04 at 28–29.

236. Because CVPS failed to demonstrate that an appropriate amount of officers' compensation has been charged below-the-line, 10 percent (\$96,514) of the requested amount of officers' compensation should be removed from the costs of service for both Rate Years 1 and 2. Schultz and DeRonne pf. at 52.

Discussion

A long-standing regulatory principle is that ratepayers should not pay for costs incurred to support a utility's unregulated affiliates or other below-the-line activities. It is the utility's responsibility to maintain records that will allow regulators to verify that costs, including payroll costs, allocated to activities that are excluded from ratemaking are not included in a utility's cost

264. "Below-the-line" is a regulatory term of art that is used to refer to items that are charged (or credited) to shareholders. "Above-the-line" is the term of art used to refer to items that are charged (or credited) to ratepayers. Literally, "the line" refers to the line on the utility's income statement (Net Utility Operating Income) that is the dividing point between items that are charged (or credited) to ratepayers versus shareholders.

of service.²⁶⁵

In these proceedings, CVPS has failed to provide records showing what portion of its officers' compensation was charged below-the-line. Instead, it relies upon an allocation percentage that was calculated based upon how all employees spend their time. However, the DPS has argued that officers provide a different level of service to regulated and unregulated operations than the general employee complement.²⁶⁶ CVPS notes another difference between how officers spend their time compared to employees as a whole — officers generally do not spend time on capital projects.²⁶⁷ For these reasons, the evidence presented by CVPS regarding the allocation of one officer's compensation is insufficient to support the use of an allocation factor that is based on all employees' compensation.

CVPS has asserted that the actual allocation of individual officers' compensation is not readily available because specific employee salaries lose their identity in the Company's general ledger system.²⁶⁸ This is not an acceptable reason to fail to provide appropriate documentation regarding the allocation of officers' compensation. It is CVPS's responsibility to ensure that its recordkeeping enables the Company to provide information regarding the allocation of all costs, including payroll costs, above- and below-the-line.

Because CVPS has not provided information regarding the actual allocation of individual officers' compensation, we are unable to ascertain whether 74.85 percent is the correct factor to use to allocate the officers' time. The Company has not met its burden of proof on this issue. Therefore, we accept the DPS's proposed additional 10 percent reduction to officers'

265. As the Board stated in Dockets 5841/5859:

We require utilities operating in this state to keep clear and detailed records that provide justification for corporate costs that are allocated to an affiliate. . . . It is thus critical that a company like Citizens, whose corporate structure is characterized by a variety of affiliates and profit centers, be able to fully document and justify transactions among the entities. In view of this structure, it is essential that the Company demonstrate the reasonableness of *all* charges to Vermont ratepayers. If such expenses cannot be fully substantiated and documented, we would have no choice but to exclude them from rates in the future.

Dockets 5841/5859, Order of 6/16/97 at 231 (emphasis in original).

266. Schultz and DeRonne pf. at 51.

267. Gibson reb. pf. at 29.

268. Gibson reb. pf. at 28; tr. 11/3/04 at 29–30 (Gibson).

compensation.²⁶⁹ It is imperative that a utility's failure to meet its recordkeeping responsibilities not result in a windfall to the company, or its corporate officers.²⁷⁰

4. Other Payroll Adjustments

Findings

237. Temporary employee salaries for Rate Year 2 should be reduced by \$91,175. Gamble reb. pf. at 37; Schultz and DeRonne pf. at 51; exh. CVPS-4.

238. Wages and salaries for Rate Years 1 and 2 should be reduced by \$68,720, and \$20,560, respectively, to correct errors in CVPS's original filing. Gamble pf. at 42; exh. DPS-L&A-11 at page 2 of schedule 11; exh. DPS-L&A-12 at page 2 of schedule 11.

Discussion

CVPS and the DPS have agreed that two additional adjustments should be made to payroll, as described in findings 237–238, above. We conclude that the adjustments are reasonable and should be made.

5. Payroll Tax Expense

Findings

239. Payroll tax expense should be adjusted to reflect the adjustments made to payroll expense. Gibson pf. at 31.

240. The payroll tax expense adjustment should be calculated by multiplying the respective payroll expense adjustments by the test year's effective social security rate of 7.12 percent. Schultz and DeRonne pf. at 53.

269. This adjustment results in an allocation factor of 67.365 percent — $0.7485 * 0.9 = 0.67365$ or 67.365 percent.

270. It would be inappropriate for a utility's failure to keep accurate records regarding the allocation of its officers' time to result in higher retail rates and increased collections from ratepayers, which could lead to higher earnings per share which, in turn, could result in increased incentive compensation for the utility's management.

Discussion

CVPS and the DPS agree that payroll tax expense should be adjusted to reflect the adjustments made to payroll expense. However, they disagree on the effective tax rate that should be used in the calculation.

The only effective tax rate in the evidentiary record in these proceedings is that proposed by the DPS — 7.12 percent. In CVPS's reply brief, it asserts that the Company used a combined tax rate of 7.65 percent to calculate its payroll tax expense, and argues that "the DPS calculated rate must be rejected so that the Company can recover its rate year Social Security tax expense."²⁷¹

The payroll tax expense is a combination of social security tax expense and medicare tax expense. Based on our experience with utility company payroll tax expense, we know that medicare tax is assessed on all of each employee's earnings, but social security tax is only assessed on each employee's earnings up to a certain limit, which is changed by the federal government each calendar year. As a result, it is common for a utility company's total payroll tax expense to be less than would result if the full 7.65 percent tax rate that is applied to individual employees' earnings below the specified limit were applied to the company's total payroll expense.

This is, in fact, what occurred for CVPS in 2003, as shown by the DPS. The DPS divided CVPS's test year payroll tax expense of \$1,868,807 by CVPS's test year payroll of \$26,234,661 to arrive at an effective payroll tax rate of 7.12 percent.²⁷² The DPS has proposed using this effective payroll tax rate to calculate the adjustment to payroll tax expense.

In other words, the DPS has proposed using a lower effective payroll tax rate to calculate its reduction to payroll tax expense than CVPS has proposed. This results in a smaller reduction to payroll tax expense than if the Company's proposed effective tax rate was used.²⁷³ As a

271. CVPS Reply Brief at 178.

272. Exh. DPS-L&A-11 at schedule 12; exh. DPS-L&A-12 at schedule 12.

273. The DPS has proposed a \$53,332 reduction to payroll tax expense in Rate Year 1, and a \$82,150 reduction to payroll tax expense in Rate Year 2. For comparison purposes, multiplying the same payroll adjustment shown on exh. DPS-L&A-11 at schedule 12, by CVPS's proposed effective tax rate results in a \$57,274 reduction to payroll tax expense in Rate Year 1, and a \$88,222 reduction to payroll tax expense in Rate Year 2.

result, we are confused by CVPS's assertion that if the DPS's effective tax rate is used, the Company will not recover its rate year Social Security tax expense. On the contrary, if the DPS's effective payroll tax rate is used, the Company will collect more payroll tax from ratepayers than it would if its proposed effective tax rate were used to calculate the adjustment.

We recognize that CVPS's effective payroll tax rate during the rate years may be higher or lower than 7.12 percent. However, based on the evidence in the record, we cannot conclude that there is a known and measurable change to the effective payroll tax rate for the rate years. Thus, we accept the DPS's proposed effective tax rate for the purpose of calculating the adjustment to payroll tax expense for two independent reasons: first, because substantively it is the appropriate effective payroll tax rate to use, and second, because CVPS's proposed effective payroll tax rate is not in the evidentiary record in these proceedings.

In the Company's compliance filing, CVPS should include an adjustment to payroll tax expense that is equal to 7.12 percent times our approved adjustments to payroll expense.

6. 401(k) Expense

Findings

241. 401(k) expense should be adjusted to reflect the adjustments made to payroll expense. Frankiewicz pf. at 10.

242. The 401(k) expense adjustment should be calculated by multiplying the respective payroll expense adjustments by the test year's effective 401(k) employer match rate of 2.95 percent. Schultz and DeRonne pf. at 56.

Discussion

CVPS and the DPS agree that 401(k) expense should be adjusted to reflect the adjustments made to payroll expense. However, they disagree on the effective employer match rate that should be used in the calculation.²⁷⁴

274. We were surprised to learn of this disagreement for the first time in CVPS's brief. During the direct hearings, Board staff asked the DPS's cost-of-service witness whether the DPS's proposed adjustment to 401(k) expense was the result of a dispute with the methodology the Company used to calculate its proposed adjustment, or whether it was simply the result of the DPS's recommended payroll adjustment. The DPS's witness replied that the

The only effective employer match rate in the evidentiary record in these proceedings is that proposed by the DPS — 2.95 percent. In CVPS's reply brief, it asserts that the DPS employer match rate should be rejected.²⁷⁵ However, neither CVPS's calculation of its 401(k) expense nor its recommended employer match rate are in the evidentiary record.²⁷⁶ Therefore, we accept the DPS's proposed effective tax rate for the purpose of calculating the adjustment to payroll tax expense.

In the Company's compliance filing, CVPS should include an adjustment to 401(k) expense that is equal to 2.95 percent times our approved adjustments to payroll expense.

F. Medical Insurance

Findings

243. CVPS's average medical insurance cost per employee, prior to capitalization, in Rate Year 1 is \$10,118. A Hewitt Associates study shows the national average total medical insurance cost per employee in 2003 was \$6,295. Schultz and DeRonne pf. at 53.

244. CVPS's average medical cost per employee is higher than the national average per employee because: (1) CVPS's plan has 2.6 dependents per employee — for comparison purposes, Cigna, the second largest provider of insurance for privately insured individuals in Vermont, has a national average contract size of only 2.25 dependents per employee; (2) CVPS's workforce is older than the national average, and older employees generally have higher medical expenses; and (3) Vermont health care is more costly than the national average because there is less competition for medical services in Vermont. Gamble reb. pf. at 40; exh. CVPS-JFG-19; exh. CVPS-JFG-26.

245. CVPS employees' contribution to medical expense increased from 15 percent in 2003 to 19 percent in 2004. This change was not reflected in CVPS's costs of service for Rate Years 1

DPS's proposed adjustment was just a flow-through of the payroll adjustment. Tr. 11/4/04 at 93 (Schultz).

275. CVPS Reply Brief at 181.

276. We note that the DPS originally stated its recommended effective employer match rate in its direct prefiled testimony. CVPS had the opportunity to present evidence regarding its calculation of its 401(k) expense adjustment and its recommended effective employer match rate in the rebuttal phase of these proceedings, but the Company did not do so.

and 2. CVPS's medical expenses for Rate Years 1 and 2 should be reduced by \$118,772 to reflect this change. Gamble reb. pf. at 44; Gamble sup. pf. at 6; exh. DPS-L&A-11 at schedule 13; exh. DPS-L&A-12 at schedule 13.

246. CVPS's most recent agreement with its employees' union provides for: (1) significant increases in employee co-pays for hospital stays, outpatient surgery, office visits, and pharmaceutical drugs, beginning April 1, 2005; and (2) increases in employees' health insurance premiums, beginning in 2006. Non-union employees will experience the same increases in employee co-pays. Gamble sup. pf. at 4–5; exh. CPVS-JFG-28 at 1.

247. According to CVPS's medical insurance broker, employers with more than 500 employees expect to experience a 14 percent increase in medical insurance costs in 2004. In addition, estimates of increases in medical insurance costs for 2005 range from 12 percent to 18 percent. Gamble reb. pf. at 38; exh. CVPS-JFG-19.

248. The State of Vermont projects increases in its medical insurance costs for its two largest insurance plans of 16 and 18 percent between fiscal years 2004 and 2005, and 22 and 23 percent between fiscal years 2005 and 2006. Gamble reb. pf. at 39.

249. The fiscal year 2003 actuarial valuation under Statement of Financial Accounting Standards No. 106 prepared by Towers Perrin for CVPS shows inflation assumptions for pre-age 65 retiree medical costs of 8 percent, 7 percent, and 6 percent for 2004, 2005, and 2006, respectively. Schultz and DeRonne pf. at 55.

250. In April 2004, Towers Perrin provided CVPS updated inflation assumptions for pre-age 65 retiree medical costs of 12 percent, 11 percent, and 10 percent for 2004, 2005, and 2006, respectively. However, these rates were not part of a completed actuarial report. Tr. 1/11/05 at 19–20 (Gamble); exh. CVPS-JFG-24.

Discussion

The DPS argues that the medical expenses included in CVPS's cost-of-service filings are excessive because: (1) CVPS's medical cost per employee is significantly above the national average in 2003; (2) the medical inflation rates used by CVPS are too high; and (3) CVPS failed

to reduce its medical costs by the increase in employee contributions to medical costs between 2003 and 2004.²⁷⁷

CVPS disagrees with the DPS's first two arguments, but agrees that its medical expenses should be reduced to reflect the increase in employee contributions between 2003 and 2004.

CVPS admits that its medical insurance costs per employee are above the national average, in part due to the Company's "generous medical program design."²⁷⁸ However, CVPS has persuaded us that this is not the only reason CVPS's medical insurance costs are above the national average.²⁷⁹ In addition, CVPS has taken steps to change its "generous" medical insurance program. CVPS's employee payments increased from 6.5 percent of total health claims in 2001 to 19.2 percent in 2004 (the national average is 20 percent).²⁸⁰ Furthermore, CVPS's new contract with its employee union increases employee co-pays substantially beginning in 2005, and provides for additional contribution increases beginning in 2006.

As for medical inflation rates, the evidence in these proceedings shows that expert estimates vary. The DPS's proposed inflation rates are based upon a 2003 actuarial valuation that was later updated (although not as part of a complete new report). The inflation rates from the 2003 report are significantly lower than the other expert estimates, and do not appear reasonable to us. At the same time, however, we are not persuaded that the medical inflation rates used by CVPS in its cost-of-service filings (14 percent for 2004, and 12 percent for 2005 and 2006) are appropriate either. While they are within the range of inflation rates provided by experts, and are less than the projected increases for the State of Vermont's two largest medical insurance plans, they are higher than the inflation rates included in the 2004 update of Towers Perrin's actuarial valuation, which the Company has relied upon in the preparation of previous financial disclosures.²⁸¹ We conclude that the updated Towers Perrin medical inflation rates are the appropriate rates to use in these proceedings — 12 percent in 2004, 11 percent in 2005, and 10 percent in 2006.

277. DPS Brief at 58.

278. Exh. DPS-Cross-8 at 1; Gamble reb. pf. at 39–40.

279. See finding 244, above, for a list of the other reasons.

280. Gamble pf. at 47–48.

281. Gamble reb. pf. at 38–39.

Therefore, we require CVPS to recalculate its medical expense for both rate years, taking into account: (1) the agreed-upon \$118,772 adjustment for the increase in employee medical insurance premiums from 2003 to 2004; (2) medical inflation rates of 12 percent in 2004, 11 percent in 2005, and 10 percent in 2006; and (3) the results of the Company's new contract with its union employees.

G. Director and Officer Liability Insurance

Findings

251. Director and Officer liability insurance protects shareholders from their own decisions regarding management of the company. Schultz and DeRonne pf. at 67–68.

252. Director and Officer liability insurance is a necessary cost of doing business for utility companies. A utility company must have Director and Officer liability insurance in order to attract capable people to serve as officers and directors. Deehan reb. pf. at 26.

Discussion

The DPS argues that since there is no identifiable benefit to ratepayers from Director and Officer liability insurance, the entire cost of that insurance should be removed from CVPS's cost of service.²⁸² Alternatively, if that recommendation is not accepted, the DPS asserts that the increase in premium between 2002 and 2003 should be removed, and the remaining balance shared 50/50 between ratepayers and shareholders.²⁸³

CVPS argues that the full amount of the Company's Director and Officer liability insurance should be allowed in its cost of service because it is a necessary aspect of providing service to consumers. The Company asserts that without Director and Officer liability insurance, CVPS will not be able to attract capable people to serve as the Company's officers and directors.²⁸⁴

282. DPS Brief at 65.

283. Schultz and DeRonne pf. at 69.

284. Deehan reb. pf. at 26.

While the DPS is correct that shareholders receive the direct benefits of Director and Officer liability insurance, we are persuaded by CVPS that such insurance is a necessary cost of doing business because without such insurance, CVPS would have a difficult time attracting quality officers and directors. For this reason, we conclude that Director and Officer liability insurance does have an indirect benefit to ratepayers that justifies requiring ratepayers to pay at least part of the cost.

However, Director and Officer liability insurance protects the Company as a whole, not just its regulated utility operations. As such, its costs should be shared by all portions of the Company, in proportion to the benefit each receives from the insurance. Since the Director and Officer liability insurance protects CVPS's shareholders from the actions of its management, we conclude that the best proxy for allocating the insurance's benefits among the Company's different operations is the allocation of CVPS's officers' time.

As discussed in Section VI.E.3, above, we determined that it was appropriate to charge 67.365 percent of CVPS's officers' time to regulated utility operations.²⁸⁵ Applying this same adjustment factor to CVPS's requested \$393,000 expense for Director and Officer liability insurance²⁸⁶ results in a disallowance of \$128,256 of the requested costs.²⁸⁷

H. Tree-Trimming

Findings

253. Falling trees (and tree limbs) are the number one cause of outages on CVPS's system and have the largest impact on overall system reliability. Every year approximately 2,500 tree-related outages occur. Outages caused by trees tend to be longer in duration because they usually cause significant damage. G. White pf. at 14-15.

285. CVPS allocated 74.85 percent of its officers' time to regulated operations and maintenance. We accepted the DPS's 10 percent reduction to that allocation. $0.7485 * 0.9 = 0.67365$ or 67.365 percent.

We recognize that the payroll allocation factor does not just separate costs between regulated and unregulated activities. Rather, it separates regulated operations and maintenance activities from regulated capitalized activities and unregulated activities. However, given CVPS's own statements that officers generally do not spend time on capital projects (Gibson reb. pf. at 29), we do not believe this significantly distorts the allocation factor.

286. Exh. DPS-L&A-11 at page 1 of schedule SR2.

287. $393,000 - (393,000 * 0.67365) = 128,256$

254. During the test year ending December 31, 2003, CVPS spent \$5,221,854 on tree trimming in distribution and transmission rights-of-way. Dickinson pf. at 3.

255. CVPS requested tree trimming expenses of \$6,284,444 in Rate Year 1 and \$6,466,224 in Rate Year 2. Dickinson pf. at 2-3.

256. CVPS's tree trimming expenses are increasing due to higher contractor fees which are a result of increased costs in fuel, labor, equipment and liability insurance. Dickinson pf. at 3.

257. Inspecting and treating poles before they become a public hazard and undermine system reliability is prudent. G. White pf. at 17.

258. CVPS requested pole treatment expenses of \$304,000 in Rate Year 1 and \$523,000 in Rate Year 2. Dickinson pf. at 3.

259. In order to maintain system reliability and ensure public safety, it is necessary to expend the full amount of the expected tree trimming and pole treating expenditures annually. Tr. 11/1/04 at 30 (Dickinson).

Discussion

Downed trees and tree limbs materially affect reliability and create safety hazards for CVPS employees and the public. Similarly, aged poles subject line workers and the public to unnecessary hazards that could be easily avoided by replacing those poles that show signs of structural deterioration.

CVPS and the DPS agree that maintaining a program of annually trimming trees and treating poles helps to ensure system reliability and safety. They disagree, however, on whether the Board should require the Company to spend all the funds requested for tree trimming and pole treatment each year, and to carry forward any unspent funds into the next year. The DPS asserts that the Board should impose this requirement, and should require CVPS to report its actual annual expenditures and amounts carried forward, compared to the amounts included in the Company's rates.

CVPS claims that the DPS's recommendation is one-sided, as it only addresses underspending of budgeted amounts and does not address what would happen if the Company spent more than the amounts included in rates.

Ensuring public safety and system reliability is a critically important task for CVPS. The amount that CVPS spends annually on tree trimming and pole treatment directly affects the Company's ability to remove potentially hazardous trees and replace aged poles.²⁸⁸ Without such attention to the condition of the rights-of-way and structural integrity of poles, CVPS's system reliability and safety could deteriorate. Therefore, we approve CVPS's request for tree trimming and pole treatment expenses, as stated in findings 255 and 258, above.

However, as we stated in our decision in a 1978 CVPS rate case:

In allowing the Company [tree trimming, pole treatment and overhead maintenance] costs, the Board expects that the funds approved be spent exclusively on these programs and within the time schedule to which the Company testified.²⁸⁹

Consistent with this long-standing expectation, in these proceedings we require CVPS to spend the entire amount included in rates for tree trimming and pole treatment each year on such activities. If CVPS is unable to do so, it should carry forward into subsequent years the amount of unspent funds. We also require CVPS to include in its annual reports filed pursuant to PSB Rule 4.903 the amounts spent for each of the above-mentioned programs, the amount to be carried forward into subsequent years, and a comparison of the amounts actually spent to the amounts allowed in rates. To the extent that CVPS spends more than the amounts allowed in rates in a given year, the Company may include the excess amounts as a credit toward the next year's spending so long as CVPS provides a detailed accounting, with supporting documentation, of the amount expended in excess of the amount collected in rates.

I. Cost Savings from Capital Additions

Findings

260. Capital additions to replace vintage mainframe tape technology (WO 6682), purchase a new network printer (Rutland WO 6778) and a so-called Tivoli Enhancement (WO 6782) will result in expected operating expense savings in both rate years. The net effect of these adjustments is \$81,250 and \$98,500 in Rate Year 1 and Rate Year 2, respectively. Schultz and

288. Tr. 11/1/04 at 30 (Dickinson).

289. Docket No. 4230, Order of 12/8/78 at 19.

DeRonne pf. at 72; Schultz and DeRonne sur. pf. at 16; Monder reb. at 11–12; exh. DPS-L&A-6 at schedule SR 22; exh. DPS-L&A-7 at schedule SR22.

261. CVPS's costs of service reflected cost savings associated with a video conferencing plant addition. This project resulted in cost savings of \$1,658 in Rate Year 2. As the video plant addition is not known and measurable (*see* Section V.A), these cost savings do not exist. Schultz and DeRonne sur. pf. at 17.

262. The net effect of these adjustments is \$79,592 and \$96,842 in Rate Year 1 and Rate Year 2, respectively. CVPS's regulated operating and maintenance expense should be adjusted to reflect these cost savings. Schultz and DeRonne sur. pf. at 16; Monder reb. at 11–12; exh. DPS-L&A-6 at schedule SR 22; exh. DPS-L&A-7 at schedule SR22.²⁹⁰

Discussion

CVPS and the Department agree that CVPS's cost of service should be reduced to reflect the cost savings from the three capital additions mentioned above. We conclude that these reductions are appropriate. If ratepayers are paying for capital additions, they should also benefit from any cost savings that result from these proposed capital additions. If, on the other hand, certain capital additions are disallowed, then the anticipated cost savings that were to be derived from the proposed capital addition should also be removed from the Company's cost of service. Consistent with these principles, we conclude that the agreed-upon cost adjustments shown in finding 260 above, are acceptable.

CVPS's cost-of-service filing included cost savings arising from the addition of new video conferencing equipment. In Section V.A, we conclude that CVPS has not demonstrated that its proposed plant addition is known and measurable. As a result, we need to reverse the cost savings that CVPS attributed to this plant addition. CVPS had reflected cost savings

290. The Department's uncontested testimony states that the effect of the cost savings from the video conferencing plant disallowance occurs in Rate Year 2 only. However, the Department's schedules reflect these savings in both Rate Years. See exh. DPS-L&A-6 at schedule SR 22. The Department's Brief also reflects this adjustment in the totals for both years. We assume that the Department's schedules and brief represent its position.

of \$1,658.²⁹¹ We accept the parties' recommendation that we offset the cost savings identified above by these costs savings that are not known and measurable.

J. Revenues

1. Unbilled Revenues

Findings

263. In its cost-of-service filings, CVPS used the actual, billed revenues from customers that occurred during the test year (calendar year 2003). CVPS did not include unbilled revenues, even though these revenues were earned by the Company. Schultz and DeRonne pf. at 39; Anderson reb. pf. at 2.

264. The difference between the Accrued Utility Revenues between December 31, 2002, and December 31, 2003 is \$777,387, which is the amount of unbilled revenues that CVPS excluded. Schultz and DeRonne pf. at 41.

265. Including these unbilled revenues would have no effect on the Company's revenue requirement, but would affect the percentage increase or decrease arising from this Order. Anderson reb. pf. at 2–3.

266. CVPS records its unbilled revenues, as required by GAAP. Tr. 1/12/05 at 37 (Gibson).

Discussion

In calculating the amount (and percentage) by which CVPS's rates should increase or decrease, we determine the Company's revenue requirement and then compare that figure to the Company's test year revenues. As a result, any adjustments to the test year revenues have a direct effect on the final rate levels.

In its cost-of-service filing, CVPS reflected the actual, billed revenues from customers that occurred during the test year.²⁹² These billed revenues do not, however, reflect all of the actual revenues earned from regulated operations during 2003. Rather, CVPS also earned \$777,387 in unbilled revenues that the Company excluded from its revenue totals.²⁹³

291. CVPS witness Monder testified that the savings were actually \$6,630. Monder reb. pf. at 9. However, in its Reply Brief, CVPS accepts the Department's figure of \$1,658. CVPS Reply Brief at 206.

292. Anderson reb. pf. at 2.

293. Schultz and DeRonne pf. at 41.

The Department argues that we should adjust CVPS's cost-of-service filing to reflect the unbilled revenues. According to the Department, CVPS's filing, by excluding these revenues, does not reflect the actual calendar-year 2003 revenues from regulated operations.²⁹⁴ The Department asserts that ignoring the unbilled revenues would "ignore sales that have occurred." It also, the Department maintains, would result in a mismatch of revenues and expenses by including the costs associated with producing the revenue while excluding the resulting revenue.²⁹⁵

CVPS takes the position that its approach is consistent with past ratemaking conventions in that the Board had not previously adopted an adjustment for unbilled revenues. The Company suggests that the Department has selectively reversed its position on these revenues simply to justify lower rates.²⁹⁶ CVPS also states that the unbilled revenues only reflect estimates based upon kWh sales, not all of the time-of-day kWh and kW elements of the Company's rate structure, so that the amount of unbilled revenues is not precise.²⁹⁷

We accept the Department's recommendations and direct CVPS to adjust the test-year revenues to include the unbilled revenues that it originally excluded. Inclusion of unbilled revenues will mean that the revenues used for determining the rate changes are based upon actual sales to customers that occurred during the historic test year.²⁹⁸ This resolution is also consistent with our previous rulings on the issue.²⁹⁹

We recognize that we have not made such an adjustment for CVPS in prior cases. That fact alone is not sufficient basis for failing to take into account revenues where the evidence demonstrates that CVPS earned the revenues during the test year. Moreover, as the Department has argued, adjusting revenues to reflect the unbilled revenues that CVPS earned also better matches the revenues with the underlying expenses. CVPS's cost of service is based upon its

294. DPS Brief at 47–48.

295. *Id.* at 48.

296. CVPS Brief at 346.

297. CVPS Reply Brief at 165; Anderson reb. pf. at 3–4.

298. Schultz and DeRonne sur. pf. at 47.

299. *Tariff filing of Citizens Communications Company, d/b/a Citizens Energy Services*, Docket 6596, Order of 7/15/02 at 91–94.

expenses during calendar year 2003 (the test year). The Department's adjustment aligns the revenues with these costs.

Finally, we reject CVPS's assertion that it is unfair to adjust for unbilled revenues now when they serve to increase the test year revenues. Our task here is to determine the appropriate rate treatment based upon the evidence before us, which shows that CVPS received these revenues. As CVPS acknowledged, an adjustment for unbilled revenues can be either positive or negative.³⁰⁰ We would expect to recognize adjustments to revenues (whether positive or negative) in the future.

2. Cable Television Pole Attachment Revenues

Findings

267. CVPS collects pole attachments fees from telephone companies and third-parties, including cable television ("CATV") companies. CVPS also pays attachment fees to telephone companies for attachments of CVPS wires on telephone facilities. Anderson pf. at 3.

268. Pole attachment revenues received by CVPS are shown as a credit in the cost-of-service. The revenue for each attachment is based upon the actual number of jointly-owned and solely-owned poles (as of December 31, 2003) and whether the attaching company uses two feet of space (Tariff 2) or one foot (Tariff 1). Anderson pf. at 3; Schultz and DeRonne pf. at 61; Anderson reb. pf. at 6.

269. The two-foot rate is twice the one-foot rate. Anderson reb. pf. at 7.

270. CVPS has billed Adelphia at the two-foot rate. If these pole attachments were priced at the one-foot rate, the revenues would be reduced by \$373,085 in both Rate Years 1 and 2. Anderson reb. pf. at 8.

271. CVPS has set aside reserves of \$447,100 on its books to reflect the expectation that the Board will require it to charge CATV providers at the one-foot rate and to otherwise reduce its pole attachment rates in Docket 6605. Anderson pf. reb. at 7–9; tr. 11/3/04 at 253 (DeRonne).

300. Tr. 1/12/05 at 158–159 (Gibson).

Discussion

CVPS derives revenues from companies that attach to the poles that CVPS owns, including jointly-owned poles. A substantial portion of the pole attachment revenue is from cable television companies. CVPS also pays attachment fees to telephone companies when it attaches its own wires to the telephone companies' poles.³⁰¹ The pole attachment revenues exceed the costs and provide a credit to the Company's cost of service.

In preparing its cost-of-service filings, CVPS made a preliminary calculation that CATV pole attachment revenues were \$866,585.³⁰² CVPS then made two adjustments to this figure, reducing the amount to \$419,475. These adjustments reflect the Company's expectation that CATV payments will decline as a result of the Board's investigation into CVPS's pole attachment rates (Docket 6605). First, CVPS expects that the Board will only require CATV providers to pay for one foot of space on the pole as opposed to the two-feet rate that CVPS generally charges, reducing revenues in both rate years by \$373,085. Second, CVPS assumes a further downward adjustment of \$74,025 in both rate years due to an expectation that the Board will lower the pole attachment rates themselves.³⁰³ CVPS has recorded a reserve on its books based upon these expectations, which it asserts is required by GAAP.³⁰⁴ CVPS asserts that, unless the Board makes the adjustments proposed by CVPS, the Company will not have a fair opportunity to earn its return if the ruling in Docket 6605 is adverse. Finally, CVPS states that the Board can take steps in Docket 6605 to protect the interest of customers if the Board rejects CVPS's position in that case.³⁰⁵

The Department opposes both adjustments. According to the Department, it is not known and measurable that either of the outcomes CVPS expects will occur.³⁰⁶ The Department points out that CVPS has continued to bill its CATV attachers at the higher rate.³⁰⁷ Instead, the

301. Anderson pf. at 3.

302. Anderson reb. pf. at 6; Schultz and DeRonne pf. at 61.

303. CVPS Brief at 342; Anderson reb. pf. at 8; Schultz and DeRonne pf. at 61–62.

304. Anderson pf. reb. at 7–9.

305. CVPS Brief at 343.

306. Schultz and DeRonne pf. at 62.

307. Schultz and DeRonne reb. pf. at 48.

Department asks that, until Docket 6605 is resolved, the test year billed revenues from CATV pole attachments should be included in CVPS's rates.³⁰⁸

The Department's assertions concerning reliance upon the potential outcome of Docket 6605 have some merit. At the present time, we conclude that CVPS's adjustments are not known and measurable.³⁰⁹ With the resolution of Docket 6605 unknown, we cannot know if CVPS will prevail on any or all of its arguments. Moreover, because of this uncertainty, it is impossible to measure the proposed adjustment to the test year revenue levels. CVPS's decision to record a reserve on its books for the potential loss of revenue does not convert the uncertainty into a known and measurable change. The result and magnitude of the financial impact are still unknown.

We understand that the timing of Docket 6605 and this proceeding means that, if we do not reflect the revenue adjustment CVPS proposes and the Company ultimately loses its pole attachment argument, CVPS may earn less than it would if we accepted the adjustment. The known and measurable standard notwithstanding, CVPS has proposed that we allow its adjustment and then take action in Docket 6605 to protect the interests of consumers. If we can assure that ratepayers could be fully protected from paying rates based upon CATV revenue reductions that do not occur, we could allow CVPS's adjustment now. To achieve this result, the difference between the pole attachment revenues we allow in rates for both periods and the revenues that would derive from using the same billing determinants but applying the conclusions in Docket 6605 would need to flow back to ratepayers.

CVPS did not specify how the Board could legally achieve this result, although we see two possible approaches. First, we could issue an accounting order requiring CVPS to track the difference between the amount of revenue we include in rates and the revenue collected based upon the final ruling. Such a decision would have the adverse effect of continuing the practice of using accounting orders for events that are not truly extraordinary. As we explain elsewhere in

308. DPS Brief at 60.

309. Significantly, CVPS does not argue that the adjustment it proposes is known and measurable. Instead, CVPS relies upon the other arguments described above.

this Order, it would be preferable to limit the use of accounting orders to events that are consistent with GAAP's description of what constitutes an extraordinary event.

A second approach, which we adopt, would require CVPS, as part of its compliance filing in this docket, to submit a specific proposal to protect the interests of consumers following any final order in Docket 6605. CVPS's proposal should ensure the difference in CATV revenues (including the effect of any possible retroactive adjustment) is returned to ratepayers in a timely fashion. If CVPS elects not to propose such a mechanism (consistent with Vermont law), we cannot conclude that CVPS's adjustment is known and measurable. In this case, CVPS's compliance filing should not include the adjustment to the CATV revenue proffered by the Company.

Finally, we are concerned about the Company's apparent inconsistency in this proceeding. On the one hand, CVPS says that it is sufficiently likely to lose the CATV case that it must record a loss on its books.³¹⁰ If the likelihood of success is as dim as CVPS seems to suggest, it is not clear why it is reasonable to charge ratepayers for the cost of litigating what CVPS now characterizes as a losing position. We will consider this issue in CVPS's next rate proceeding. At present, we can only infer from CVPS's continued litigation that it views its prospects for success more favorably than its current position — and the booking of a reserve — would suggest, in which case the Department's argument carries greater weight.

K. Agreed-Upon Adjustments

Findings

272. The \$3,500 that CVPS paid for the production and distribution of a video entitled "Patriotism and You" should be removed from the costs of service for both Rate Years 1 and 2. Schultz and DeRonne pf. at 75; Gibson reb. pf. 11/15/04 at 30.

273. Safety training costs for Rate Year 1 should be increased \$9,000. Safety training costs for Rate Year 2 should be increased \$8,000. Schultz and DeRonne pf. at 67; exh. CVPS-4.

310. By contrast, in the hearing on CVPS's request for an accounting order in these dockets, CVPS took the position that the outcome of the instant cases could not be reasonably quantified.

Discussion

CVPS and the DPS have agreed on two miscellaneous adjustments.³¹¹ For the reasons explained below, we conclude that the adjustments are appropriate, and we hereby accept them. First, the Board has long held that shareholders, not ratepayers, should pay for utility companies' charitable and community service activities. Consistent with this policy, the costs associated with the "Patriotism and You" video should be charged to shareholders, not ratepayers. Second, the adjustment to safety training costs corrects an error made by CVPS in its original filing — it had reflected the discount offered rather than the projected costs.

VII. COST OF CAPITAL

Findings

274. CVPS's capital structure, rates for each capital component of the capital structure and weighted average cost of capital for Rate Year 1 is shown in the table below.

Description	Ratio	Cost Rate	Weighted Average Cost of Capital
Long Term Debt	40.29%	7.29%	2.94%
Preferred Equity	5.10%	6.43%	0.33%
Common Equity	54.61%	10.00%	5.46%
Total	100.0%		8.73%

Exh. DPS-L&A-11, Schedule SR4; Talbott and Roschelle pf. at 8.

275. CVPS's capital structure, rates for each capital component of the capital structure and weighted average cost of capital for Rate Year 2 is shown in the table below.

311. In addition, CVPS and the DPS agreed that a \$31,000 adjustment to the costs of service for both Rate Years 1 and 2 that was originally proposed by the DPS should *not* be made. The \$31,000 was the amount of a penalty that CVPS paid as a result of the Board's decision in Docket 6758 (*Investigation into Fourteen Utilities' Provision of Service to Customers Pursuant to Expired Special Contracts or at Special Rates Without Board Approval*). The DPS originally stated that the penalty was inappropriately included in the filed costs of service, but later agreed with CVPS that the penalty was not included. Schultz and DeRonne pf. at 74; Gibson reb. pf. 11/15/04 at 30; Schultz and DeRonne sur. pf. at 49.

Description	Ratio	Cost Rate	Weighted Average Cost of Capital
Long Term Debt	39.75%	5.77%	2.29%
Preferred Equity	4.72%	6.31%	0.30%
Common Equity	55.53%	10.00%	5.55%
Total	100.0%		8.14%

Exh. DPS-L&A-12, Schedule 4; Talbott and Roschelle pf. at 8.

276. An allowed return on equity of 10 percent adequately compensates investors, given the level of perceived risks in CVPS's business. Talbot and Roschelle pf. at 5; tr. 11/5/04 at 45–46 (Talbot and Roschelle).

277. The 10-year Treasury bond yield currently ranges between 4 and 5 percent, the lowest level in over 40 years. Woolridge pf. at 2.

278. Capital costs, including equity costs, for U.S. corporations are at their lowest levels since the 1960's. Talbot and Roschelle pf. at 6; Woolridge pf. at 2.

279. CVPS's common and preferred equity ratio is 60 percent, approximately 20 percent higher than the equity ratios of other similarly-situated electric utilities. Exh. DPS-JRW -3.

280. The use of accounting orders which defer the recovery of prudently incurred, but unexpected, increases in purchased power is viewed by the investment community as an adequate substitute for purchased power adjustment clauses. Exh. DPS-Cross-19.

281. The Company's purchased power strategy reduces operational risk and minimizes its capital expenditure requirements. Exh. DPS-41; exh. DPS-Cross 22 at 17.

282. By purchasing a substantial amount of its power commitments under fixed long-term contracts, CVPS reduces its exposure to wholesale electric price volatility under FERC's Standard Market Design ("SMD"). Exh. DPS-Cross-26.

283. CVPS's bond ratings have been affirmed by Standard & Poor's (BBB-) and upgraded by Fitch (BBB+), in part, because of the improving regulatory climate in Vermont, a diverse customer mix, low operating risks, and interest coverage ratios commensurate with the ratings

category. Exh. CVPS-JCC-12; exh. DPS-45; exh. CVPS-5 at 40 (2001 CVPS Annual Report); exh. CVPS-7 at 48 (2003 CVPS Annual Report).

284. CVPS has a demonstrated history of strong, stable cash flows and moderate financial leverage. Exh. DPS-Cross-22 at 16.

285. CVPS benefits from operating in Vermont because retail competition has not been approved, therefore the risk of bypass has been essentially eliminated. Exh. DPS-Cross-22 at 16.

286. CVPS benefits from customer diversity as its five largest customers represent only 5 percent of the Company's total electric revenue. Exh. CVPS-10 at 2.

287. CVPS is a traditional, regulated electric utility company which operates in a relatively low-risk business characterized by secure, predictable cash flows and solid capitalization. Exh. DPS-Cross-22 at 17.

288. Investors regard the stocks of smaller companies to be slightly more risky than the stocks of companies with larger capitalization due to the lack of liquidity.³¹² Talbot and Roschelle pf. at 11; tr. 11/5/04 at 65 –66 (Talbot and Roschelle).

289. As of September, 2003, CVPS had a market capitalization of approximately \$250 million. Talbot and Roschelle pf. at Schedule 2a.

290. CVPS has approximately 12.25 million shares outstanding, of which 5.5 million shares are owned by institutions. Woolridge sur. pf. at 3.

291. Approximately 5 percent of CVPS's outstanding shares (roughly 612,500) trade on a monthly basis. Woolridge sur. pf. at 3.

292. CVPS was ranked first in the nation in the Edison Electric Institute's 2003 index for five-year shareholder returns, providing shareholders a 205 percent return.³¹³ Talbot and Roschelle pf. at 7.

312. Liquidity refers to the ability of stockholders to buy and sell shares of a particular company in a timely manner. Woolridge sur. pf. at 3.

313. The index includes changes in stock prices and dividend re-investments for the period from January 1, 1999, to December 31, 2003.

Discussion

There are three essential steps in setting the weighted average cost of capital. First, we determine an appropriate capital structure. Second, we determine the cost of each capital component. Third, we determine the cost of each capital component according to its proportion of the total capital structure. The sum of these weighted capital components is the weighted-average cost of capital. In these proceedings, the capital structure and the costs of preferred equity and debt are not in dispute.

While debt is less expensive than equity, there are limits to the amount of debt that can be used to finance utility operations before equity investors begin to demand higher returns. Therefore, an appropriate amount of equity is necessary to minimize overall capital costs. Based on the record evidence and agreement between the parties, we find that it is appropriate to use a capital structure in Rate Year 1 consisting of 40.29 percent long-term debt, 5.10 percent preferred equity and 54.61 percent common equity. For Rate Year 2, we find that it is appropriate to use a capital structure consisting of 39.75 percent long-term debt, 4.72 percent preferred equity and 55.53 percent common equity. We conclude, based on the record, that long-term debt and preferred equity costs in Rate Year 1 are 7.29 percent and 6.43 percent, respectively. In Rate Year 2, we conclude that long-term debt and preferred equity costs are 5.77 percent and 6.31 percent, respectively.

In these proceedings, the parties disagree on the appropriate return on equity. CVPS, the Department and AARP recommend returns on equity of 11.0 percent, 8.75 percent and 10.0 percent, respectively. Based on the record evidence, we conclude that a return on equity of 10.0 percent appropriately compensates investors for the level of risk they may encounter by holding CVPS stock. Authorizing a 10.0 percent return on equity provides CVPS with the opportunity to generate risk-adjusted returns that are comparable to the potential returns of similarly-situated electric utilities. It also assures CVPS's investors that the Company will remain financially sound and have the ability to raise additional capital, if necessary.

We recognize that we are authorizing a different return on equity in these proceedings than we recently authorized for GMP (10.50 percent) and Vermont Gas Systems, Inc. ("Vermont

Gas") (10.98 percent).³¹⁴ Each time we determine a company's return on equity, we consider that company's particular situation. Our decisions regarding GMP and Vermont Gas reflect the circumstances facing those companies, circumstances that do not apply to CVPS. In GMP's case, roughly 20 percent of its retail revenues are generated from a single industrial customer. With such a concentration of revenues in one large industrial customer, we have no trouble concluding that investors perceive GMP as more vulnerable than CVPS. With regard to VGS, the Board authorized a 10.98 percent return on equity as an incentive to investors to assume greater risk for building out VGS' transmission pipe system into areas of Vermont that are currently unserved.

CVPS asserts that the cumulative effect of a series of company-specific risks warrant an 11.0 percent return on equity. These risks include the lack of a purchase power adjustment ("PPA") clause, FERC's Standard Market Design ("SMD") rules, negative perceptions of the investment community, incomplete implementation of a performance-based regulatory regime and the discontinuance of the Account Correcting for Efficiency ("ACE") mechanism. CVPS argues that the Board must also consider the effects of the DPS's proposed cost-of-service adjustments may have on investors' perceptions of CVPS's ability to earn a reasonable return on their investment.³¹⁵ We address each of CVPS's assertions below.

Purchase Power Adjustment Clause

Purchase power adjustment clauses provide utilities with the ability to flow through increases or decreases in the cost of power directly to retail customers in between rate investigations. Vermont Supreme Court precedent prohibits the use of PPA clauses as such flow-through mechanisms are inconsistent with the customer notice requirements of 30 V.S.A. § 225.³¹⁶ Accordingly, CVPS claims that a higher return on equity of 11.0 percent is appropriate. To support its argument that investors are demanding a higher return on equity, CVPS relies on a portion of a Standard & Poor's report that states:

Although short-lived the [Vermont Yankee Nuclear Power Plant] outage underscores one of the potential vulnerabilities that Vermont's [Investor

314. Docket 6867, Order of 12/23/03 at 42 (order paragraph 6); Docket 6829, Order of 10/7/2003 at 4.

315. CVPS Reply Brief at 229.

316. *In re Allied Power & Light Co.*, 132 Vt. 354 (1974).

Owned Utilities] face in a long-term outage. Neither utility (i.e. CVPS and GMP) has access to an automatic fuel and purchase adjustment clause.³¹⁷

However, after reviewing the entire Standard & Poor's report, we reach a different conclusion than CVPS. Rather than advising investors to either demand higher returns on equity or sell their Vermont-based holdings, the report, instead, informs investors that both CVPS and GMP have the ability to obtain timely redress in the form of accounting orders in the absence of a PPA. As we explain above in Section IV, this Board has issued accounting orders due to extraordinary events. The report also provides investors with assurances that because CVPS has ample cash reserves and access to capital, the potential risk posed by Vermont's PPA prohibition is offset. The Company's diverse customer mix, stable load growth and low operating risks mitigate the amount of potential risk associated with the lack of a PPA.

We also note that the Company, in its private placement memorandum to investors, downplayed the effects, if any, of Vermont's lack of a PPA. In the memorandum, CVPS stated that:

The company recognizes that adequate and timely rate relief is required to maintain financial strength, particularly since Vermont law does not allow power and fuel cost to be passed to consumers through a fuel adjustment clause. The company will continue to review costs and request rate increases when warranted.³¹⁸

The positive attributes of CVPS's diverse customer mix, low operating risks and long-term fixed-priced purchase power contracts offset any additional risks facing CVPS as a result of the PPA prohibition.

Standard Market Design

CVPS contends that FERC's SMD rules create new uncertainty due to increased volatility in wholesale power costs even for load serving entities who have secured all of their power resource requirements through fixed-price contracts.³¹⁹ The SMD rules, according to CVPS, have also created uncertainty in the wholesale ancillary services market, such as operating

317. Exh. DPS-Cross-19.

318. Exh. DPS-Cross-22 at 24.

319. CVPS Brief at 19.

reserves. As an example of these additional risks in the operating reserves market, CVPS points to its experience during an extreme cold weather pattern in January, 2004. According to CVPS, the Company incurred extraordinary expenses over a three-day period when operating reserve charges increased dramatically due to short supplies of natural gas.³²⁰

In response, the DPS claims that CVPS has overstated the SMD-related risks, if any. To the extent such risks do exist, the DPS contends that electric utilities are accustomed to mitigating their impact.³²¹ The DPS notes that CVPS mitigates such risks by procuring a substantial portion of its power requirements under long-term contracts. As a result, the DPS asserts that most of CVPS's power purchases are not subject to large price swings.

The DPS also contends that, contrary to CVPS's assertions that these risks are meaningful, the bond rating agencies discount them. The DPS states that SMD-related risks actually received little to no attention in the investment analyst reports that CVPS submitted into the record.³²² Rather than express specific concerns over SMD rules, according to the Department, these same reports listed a series of positive attributes which enhance CVPS's credit rating such as regulatory support for supply cost recovery, the sale of Vermont Yankee, increases in operating efficiencies, and adequate capitalization ratios.³²³

We conclude that CVPS has overstated the concerns of the investment community with regard to the potential impact SMD rules may have on investor returns. FERC's SMD rules are not specific to CVPS.³²⁴ Similar rules apply to investor-owned electric utilities in most of the United States. Thus, there is no basis for assigning to CVPS an additional risk premium compared to other electric utilities. In addition, CVPS purchases a substantial portion of its power under long-term contracts, the cost of which we are allowing to be recovered from ratepayers. Therefore, most of CVPS's power purchases are not affected by the volatility of the regional wholesale power market.³²⁵ And, while CVPS is exposed to weather-related spikes in

325. Exh. DPS-Cross-26 at 59.

operating reserve charges, there are opportunities to offset these costs by selling excess power into the wholesale market at favorable prices.

Perceptions of the Investment Community

CVPS contends, that as a result of past decisions issued in 1998 regarding the recovery of Hydro-Québec power costs, the investment community perceives Vermont as a difficult jurisdiction. Past Board decisions, according to CVPS, are viewed as inconsistent and at odds with stockholders' interests. CVPS argues that such inconsistencies lead to the conclusion that investors should be allowed to earn a higher rate of return. To improve its image and dispel these negative perceptions, CVPS contends that it is necessary for this Board to authorize an 11.0 percent return on equity.

Pointing to the same investment analyst reports that CVPS relies upon, the DPS claims that investment analysts have a positive view of the regulatory environment in Vermont.³²⁶ Additionally, the DPS states that despite the Company's assertions in this proceeding regarding negative perceptions of regulation in Vermont, CVPS portrayed a positive and improving regulatory environment in a recently issued Private Placement Memorandum.³²⁷

CVPS's assertions regarding the investment community's negative perceptions of Vermont are unsupported by the record evidence and inconsistent with statements the Company has made to the investment community. Investors clearly consider CVPS's stock to be a solid investment, in fact it ranked first among all investor-owned utilities in the United States in the 2003 Edison Electric Institute's index for total shareholder returns over the five-year period ending December 31, 2003. Investors who purchased CVPS stock on January 2, 1999, earned a cumulative return of 205 percent by the end of 2003. Compared to a -3.0 percent cumulative return for the S&P 500 index over the same period, CVPS investors were clearly compensated well for the risks they assumed.³²⁸ Additionally, at the end of 2004, Fitch IBCA, a credit rating

326. DPS Brief at 91.

327. In connection with the issuance of \$75 million first mortgage bonds, CVPS issued a Private Placement Memorandum to generate investor interest and solicit CVPS bonds.

328. Talbot and Roschelle pf. at 7; exh. CVPS-10 (2003 CVPS Proxy Statement at 15).

agency, upgraded outstanding CVPS bonds from BBB to BBB+ and considered the Company's outlook to be positive.³²⁹

We also note that CVPS's own statements to the investment community in its \$75 million private placement memorandum are inconsistent with the Company's assertions in this proceeding. In that Memorandum, CVPS characterized its operations as "relatively low risk" with "secure, predictable cash flows and solid capitalization" which are the result of a regulated rate structure that has produced "stable EBITDA"³³⁰ and "strong interest coverage ratios."³³¹ In addition, CVPS's cost of capital witness testified that the investment community's perceptions of Vermont were improving.³³² Based on the record evidence, we find CVPS's assertions in these proceedings to be inconsistent with its own statements to potential investors, and therefore, unpersuasive. Due to the recent bond rating upgrades and the cumulative five-year returns on CVPS stock compared to other investor-owned utility stocks, we can only conclude that the investment community has a favorable opinion of the Vermont regulatory environment.

SERVE Plan

According to CVPS, the current SERVE³³³ plan is the functional equivalent of a partial Performance-Based Regulation plan ("PBR"). CVPS states that it could, however, be reasonably viewed as a step toward the creation of a more complete plan since performance standards and the risk of financial penalties for poor customer service are important features of a PBR mechanism as well as for CVPS's SERVE plan.³³⁴ Despite the similarities, CVPS asserts that the current SERVE plan imposes extra risks in the form of financial penalties for poor customer service but does not include the financial incentives for exceptional performance that other, more

329. Exh. DPS-45 (Fitch Press Release, December 14, 2004.); exh. CVPS-5 at 56 (2001 CVPS Annual Report); exh. CVPS-7 at 48 (2003 CVPS Annual Report).

330. EBITDA stands for Earnings Before Interest, Taxes, Depreciation and Amortization expenses.

331. Exh. DPS-Cross-22 at 17. We note here that in fairness that the May, 2004 Memorandum predates the submission of the Department's prefiled testimony on October 1, 2004.

332. Tr. 11/4/04 at 225 (Cater).

333. "SERVE" stands for Serving Everyone with Reliability, Value and Excellence. Established in October, 2003, the SERVE plan represents the Company's Service quality and reliability plan. G. White pf. at 3.

334. CVPS Brief at 22.

complete PBR plans provide.³³⁵ According to CVPS, there are more down-side risks inherent in the current SERVE plan than up-side risks, therefore, investors should be allowed to earn a higher return on equity.

The DPS claims that CVPS has overstated the alleged down-side risks of the current SERVE plan. Similar to the alleged SMD concerns mentioned above, the DPS points out that investment analysts made no specific statement related to the current SERVE plan in the investment reports that CVPS entered into the record.³³⁶

Based on the record evidence, we conclude that CVPS's SERVE plan does not impose upon the Company any additional risks that could not be readily offset. The record evidence clearly indicates that any potential down-side risks, if they exist at all, associated with the SERVE plan have been offset by other positive attributes of CVPS's operations such as low operating risks, stable EBITDA and secure, predictable cash flows.

Account Correcting for Efficiency

These proceedings are the first earnings investigation since the discontinuance of the Account Correcting for Efficiency ("ACE"), a mechanism that provided the Company with a method of recovering net revenue losses resulting from system-wide demand-side management measures implemented by the Energy Efficiency Utility ("EEU"). As a result, CVPS asserts that an 11.0 percent return on equity is warranted because the elimination of ACE revenues exposes the Company to the risk that its earnings will erode.³³⁷ According to CVPS, as long as the unit price of providing electric service exceeds marginal cost, the loss of the ACE revenues adversely affects the Company's financial performance.³³⁸

In response, the DPS asserts that the elimination of the ACE mechanism does not impose any additional risk on investors. Similar to CVPS's assertions related to the perceived amount of additional risks related to SMD and the SERVE plan, the elimination of the ACE mechanism was not specifically mentioned in the investment analyst reports submitted by the Company.

335. CVPS Brief at 22

336. DPS Brief at 93–94.

337. Cater pf. at 14.

338. Cater pf. at 14–15.

The record evidence does not support CVPS's contentions that elimination of the ACE mechanism has increased risks. CVPS made no explicit reference to the elimination of the ACE mechanism in its Private Placement Memorandum to investors even though that document was issued in May, 2004, nearly 12 months after ACE was discontinued. Given the lapse in time, CVPS should have been fully aware of the financial implications of the ACE phase-out, if any, at the time it issued its Memorandum. Had there been a significant financial impact, then CVPS would have been obligated to disclose the nature of these potential impacts and fully describe the attending risks that the elimination of ACE would have presented to investors. The fact that the company did not specifically raise the issue in its Memorandum suggests to us that CVPS believes that the discontinuance of ACE is a non-material event.

Contrary to CVPS's opinion that the discontinuance of the ACE mechanism exposes the Company to the potential risk of earnings erosion, we conclude that it is more likely that CVPS will actually benefit from system-wide energy efficiency measures. The EEU's efforts result in less energy consumption by CVPS customers. As a result, the company is able sell more excess power into the wholesale market at favorable rates. Such actions improve the financial performance of the Company, rather than impair it.

Liquidity Risk

Investors in companies with small market capitalizations are typically exposed to additional risks as a result of their inability to consummate large stock transactions in a timely manner.³³⁹ CVPS is considered to be a small capitalized ("small-cap") company.³⁴⁰

The DPS asserts that while CVPS is considered to be a small-cap company, there is no empirical evidence to support the contention that investors do in fact demand an extra liquidity risk premium. In the DPS's opinion, there is no basis for increasing its return on equity recommendation of 8.75 percent until CVPS has presented evidence of a liquidity premium.

Investors' expected returns are not readily observable. It has been a long-standing regulatory practice to infer the amount of future expected returns by examining forecasted growth

339. Woolridge sur. pf. at 3.

340. Talbot and Roschelle pf. at 13.

rates of similarly-situated companies and the level of risks these companies are expected to encounter. Similarly, the amount of liquidity risk that investors assign to small-cap stocks is unobservable. Therefore, we must also infer the amount of this type of risk.

The market capitalization of the list of similar-situated companies analyzed by AARP is as follows:³⁴¹

Company	Market Capitalization (\$ Millions)
Avista	850
CVPS	250
Green Mtn Power	125
MGE	575
Otter Tail	690
Vectren	1,900
WPS	1,700
Average	870

There are 12.25 million CVPS shares outstanding, of which approximately 45 percent are held by institutions who are more likely to place larger orders than non-institutional owners.³⁴² CVPS's market capitalization is approximately 28.7 percent of the mean average of the above-captioned companies. On this evidence, we conclude that CVPS investors face an additional risk compared to the investors of the other electric companies in the above-captioned group because of a perceived liquidity risk. The market capitalization of the Company is smaller than the other companies and a large percentage of the Company's stock are held by institutional investors who are inclined to trade relatively large blocks of stocks. It is, therefore, appropriate to increase the Company's return on equity above the recommendation of the DPS as compensation.³⁴³

341. Talbot and Roschelle pf. at schedule 2a.

342. Woolridge sur. pf. at 3.

343. We note that GMP is also a small-cap stock for which we authorized a return on equity of 10.5 percent in Docket 6867. As stated earlier, our authorization of a 10.5 percent return on equity was based on a different set of facts and circumstances that do not apply to CVPS.

Basis for Decision

As with countless other rate cases before this Board, our decisions are guided by the law and regulatory precepts that have evolved over the last 100 years. These proceedings are no different. And, in spite of the changing nature of the law and regulation, our unwavering goal is to strike a balance between the interests of ratepayers who desire low-cost reliable service and investors who hope to maximize their returns on invested capital.

The DPS, AARP and CVPS have recommended returns on equity of 8.75 percent, 10.0 percent and 11.0 percent, respectively. All of the recommendations were based on analyses using traditional methodologies³⁴⁴ of estimating required returns. Two of the three parties also relied, in part, on recently authorized returns on equity in other jurisdictions. The DPS's recommendation of 8.75 percent was predicated on the proposition that risk premiums were shrinking.

Neither the law nor regulatory precepts prescribe a methodology for setting the appropriate return on equity. All that is required of us, is to authorize a return on equity that is fair and reasonable to all stakeholders. It is not necessarily the method used to establish an appropriate return on equity that is important but the end result.³⁴⁵ We conclude that adopting the DPS' recommendation would result in an unfair decision based on an unproven supposition that fails to strike a balance between the interests of ratepayers and investors. Therefore, we reject the DPS's recommendation. Instead, we conclude that, based on the record evidence, a return on equity of 10.0 percent provides CVPS with the opportunity to generate risk-adjusted returns that are comparable to similar-situated companies and assures the financial soundness of the Company.

344. These methods were the Discounted Cash Flow, Capital Asset Pricing methodology and historical risk premium methodology.

345. *In re FPC v. Hope Natural Case Co.*, 320 U.S. 591, 602 (1944).

VIII. OTHER ISSUES

A. Treatment of Regulated Affiliates

Findings

293. CVPS owns interests in affiliates that are subject to the jurisdiction of FERC. These "regulated affiliates" are:

- the Vermont Electric Power Company ("VELCO");
- the Vermont Yankee Nuclear Power Corporation ("VYNPC");
- Connecticut Yankee;
- Maine Yankee; and
- Yankee Atomic

(the last four, collectively, are often referred to as "the Yankees"). Gibson pf. at 28; exh. CVPS-7 at 29–31.

294. CVPS owns 50.5 percent of VELCO's outstanding common stock. Exh. CVPS-7 at 30.

295. CVPS has a 58.85 percent ownership interest in VYNPC. *Id.*

296. CVPS has a 2 percent ownership interest in Maine Yankee, 2 percent ownership interest in Connecticut Yankee, and 3.5 percent ownership interest in Yankee Atomic. *Id.* at 31.

297. Vermont's consistent ratemaking treatment for decades has been to consider both investments and returns on rate-regulated affiliates above-the-line in a Vermont utility's cost of service. This means that equity investments, income, and tax effects of regulated affiliates are traditionally included in cost-of-service filings. Behrns sur. pf. at 16; Behrns pf. at 12.

298. CVPS proposes that past precedents be changed and that it now be allowed to treat its regulated affiliates below-the-line for ratemaking purposes. In CVPS's cost-of-service filings in these proceedings, the investments in the affiliates were removed from the Company's rate base, equity earnings in the affiliates was not credited, and there was no deduction for equity earnings of these affiliates in the income tax calculation. Gibson pf. at 27 –28; Frankiewicz pf. at 21; Behrns pf. at 12.

299. The treatment of the regulated affiliates proposed by CVPS represents a change in the treatment previously afforded such affiliates in the Company's prior rate cases over many years,

as well as in this Board's consistent treatment of other investor-owned utilities in Vermont. Deehan reb. pf. at 20; Behrns pf. at 11.

300. At present, the FERC-approved returns on equity for the Yankees are less than the Company's current allowed return on equity on its Vermont utility operations. The FERC-approved return on equity for VELCO is currently higher than the Company's current allowed return on equity on its Vermont utility operations. CVPS responses to Board's 1/24/05 Memorandum, dated 2/2/05, at Attachment PSB 2-1A.

301. Above-the-line ratemaking treatment for affiliates whose allowed return on equity is greater than CVPS's allowed return on equity, in general, decreases CVPS's overall retail revenue requirement. The converse is also true. Behrns sur. pf. at 16; tr. 1/13/05 at 178–180.

302. The effect of the established ratemaking treatment of the Yankees, generally, represents an increase to the Company's revenue requirement. Conversely, treating VELCO similarly reduces the Company's retail revenue requirement. Behrns pf. at 12.

303. Historically, costs for CVPS's decommissioning obligations for the Yankees were recovered in rates. Behrns sur. pf. at 16.

304. CVPS's costs for services provided by VELCO are recovered in rates. Exh. DPS-L&A-11 at schedule SR1; exh. DPS-L&A-12 at schedule SR1.

305. CVPS's regulated affiliates are very much integrated and a part of the Vermont jurisdictional income. Tr. 11/3/04 at 135 (Gibson).

306. The retail ratemaking treatment of CVPS's investments and earnings in its regulated affiliates has no effect on the rates or return on equity of those affiliates. Behrns sur. pf. at 16; tr. 1/13/05 at 179–180 (Behrns).

Discussion

CVPS proposes to treat its FERC-regulated affiliates below-the-line³⁴⁶ for ratemaking purposes.³⁴⁷ CVPS acknowledges that this would be a departure from the way CVPS has treated

346. See footnote 264 for a definition of "the line."

347. There is no dispute regarding the proposed accounting treatment for CVPS's unregulated affiliates, such as Catamount Resources Corporation. They have been, and continue to be, accounted for below-the-line.

its regulated affiliates in its prior rate cases. The Company argues that this change in the treatment of its regulated affiliates is appropriate for two reasons.

CVPS's first argument is that, as a matter of law, the Board must treat CVPS's regulated affiliates below-the-line. For this proposition, CVPS relies upon an aspect of federal law known as the "Filed Rate Doctrine." That doctrine, as characterized by CVPS, holds that rate-regulated affiliates are subject to the exclusive ratemaking jurisdiction of FERC.³⁴⁸ CVPS now contends that treating CVPS's regulated affiliates above-the-line for Vermont ratemaking purposes denies the Company the ability to recover its FERC-approved rates (which include FERC's return on equity determinations) for the affiliates.³⁴⁹ CVPS also argues that above-the-line treatment constitutes "trapping" of costs for wholesale power, citing *Mississippi Power & Light Co. v. Mississippi*, 487 U.S. 354, 108 S.Ct. 2428, 101 L.Ed.2d 322 (1988).

Second, CVPS claims that, as a matter of policy and discretionary judgment, the Board should approve its requested accounting treatment for its regulated affiliates. CVPS bases this argument on various changes in the electric industry in recent years.

The DPS recommends treating both the costs and the benefits of CVPS's FERC-regulated affiliates above-the-line.³⁵⁰ The DPS maintains that this has consistently been the accepted practice for CVPS and all other Vermont utilities.³⁵¹ As explained by the DPS:

Vermont's traditional rate making treatment is to include above the line in CVPS's cost of service its investments and returns on investment [sic] that were made to supply energy to Vermont ratepayers, who have defrayed the cost of those investments, and who therefore deserve to share in any attendant economic gains.³⁵²

The DPS contends that it is not advocating any positions that trigger Filed Rate Doctrine concerns. The DPS does not dispute CVPS's assertion that the Board lacks the authority or the jurisdiction to "challenge, alter or deny CVPS and its regulated affiliates the recovery of the

348. See, *Nantahala Power & Light Co. v. Thornberg*, 476 U.S. 953, 970 (1986).

349. CVPS Brief at 328 and 331.

350. The DPS expressly denies CVPS's assertion that it is recommending that only some of the Company's regulated affiliates be treated above-the-line. Tr. 1/13/05 at 178–180 (Behrns).

351. Behrns pf. at 12.

352. DPS Reply Brief at 26, citing Behrns sur. pf. at 16.

affiliates' FERC authorized ROEs."³⁵³ The DPS maintains that it is not seeking to "prevent the recovery of costs including the ROE specified in the affiliates' rate schedules . . ."³⁵⁴ as CVPS contends.³⁵⁵ Additionally, the DPS counters each of the points CVPS makes concerning the Filed Rate Doctrine. To wit, the DPS states, and the record demonstrates, that it is not asking the Board:

- to interfere with any FERC-filed rate schedules;
- to interfere with any FERC-jurisdictional service relationship;
- to deprive FERC of its plenary authority over interstate wholesale rates;
- to interfere with the ability of either CVPS or its affiliates to "enjoy" the rates ordered by FERC;
- to find that FERC's actions have been unreasonable;
- to compel CVPS to seek any changes before FERC, or to "take indirect action to change the voluntarily entered and FERC-authorized arrangement;"
- to take action to preempt FERC in matters that are within the FERC's exclusive jurisdiction.³⁵⁶

The DPS further contends that no evidence in the record supports CVPS's claim that the DPS is seeking to deny CVPS its ability to recover from ratepayers the FERC-regulated costs it incurs from its affiliates. On the contrary, the DPS states that the evidence in the record shows that CVPS can and will recover from ratepayers the full, unadjusted costs of FERC-regulated utility expenses.³⁵⁷

For the reasons explained below, we conclude that CVPS should, as in the past, account for the investments in its regulated affiliates above-the-line in rate base, and the earnings therefrom, including the income tax effect, above-the-line in its cost of service.

CVPS's principal argument is that Vermont's traditional above-the-line accounting treatment for regulated affiliates violates the Filed Rate Doctrine. This argument fails to distinguish between the tariffed rates approved by FERC for services that CVPS receives from its

353. DPS Reply Brief at 24.

356. DPS Reply Brief at 24.

357. DPS Reply Brief at 24.

regulated affiliates, and CVPS's equity investments and the equity in earnings related to those activities. State regulators may not interfere with the recovery of FERC-tariffed rates from ratepayers, but the state-jurisdictional ratemaking treatment of earnings by utilities from their FERC-regulated affiliates' operations is, as the DPS points out, squarely and entirely within state jurisdiction.³⁵⁸

A recent survey of the Filed Rate Doctrine's history, purpose, and scope is set out in *Pacific Gas and Electric Co. V. Lynch*, 216 F.Supp. 2d 1016 at 1029–1035, (N.D. Cal. 2002). That case involved many billions of dollars affected by California's failed experiment with deregulation. The Court, in a thorough and persuasive opinion, notes that the root and essence of the Filed Rate Doctrine can be simply stated: "that regulated providers [must] charge end-users only the rate on file with the appropriate regulatory agency."³⁵⁹ The Court observed that, "historically, the filed rate doctrine's primary purpose has been to prevent price discrimination."³⁶⁰ Over time, in regard to electricity regulation, "the filed rate doctrine came to have a subsidiary application demarking the boundary between federal and state regulatory authority." Importantly, "the doctrine also operates to prevent state regulators, as well as courts, from taking action that fails in any manner to account for the fact that in most instances today, a utility must purchase power delivered to consumers pursuant to the rate filed with the appropriate federal agency."³⁶¹ Relying on that point, the *Pacific Gas* court ruled that California regulators could not ignore the net effect of federally-regulated power transactions (in that case a net loss) on the regulated utility's necessary retail revenue requirements. Applying that ruling in the present case means that we accept the Department's position and will consider the net effect of

358. See, 30 V.S.A. § 209(3); 16 U.S.C. § 824(a), and *Re Central Maine Power Co.*, 20000WL 347057 (ME.P.U.C. 2000), at 3:

By contrast, FERC does not have authority over the allocation in a retail ratemaking proceeding of gains received by a utility from its investment in a FERC-regulated utility The allocation of revenues for purposes of retail ratemaking is an area clearly within the jurisdiction of state utility commissions.

359. *Pacific Gas*, *supra*, at 1031.

360. *Id.*

361. *Id.* at 1032.

CVPS's federally-regulated power transactions (in this case a net gain) on the regulated company's retail revenue requirements.

Nantahala does not suggest a different result. That case codified the FERC's exclusive jurisdiction over the rates charged to interstate wholesale customers. Treating CVPS's regulated affiliates above-the-line for Vermont ratemaking purposes does not, in any way, alter the rates charged to CVPS by its "wholesale-as-seller" affiliates. *Mississippi Power & Light* prohibited states from barring "regulated utilities from passing through to retail customers FERC-mandated wholesale rates."³⁶² Vermont's traditional above-the-line treatment of regulated affiliates is unrelated to the recovery of FERC-tariffed wholesale rates for utility services from Vermont retail ratepayers. In this case, we are allowing recovery from Vermont ratepayers of CVPS's costs for FERC-tariffed services from its regulated affiliates. Moreover, CVPS's contention that above-the-line treatment of the investment and earnings of its regulated affiliates constitutes "trapping" as described in *Mississippi Power & Light* is unfounded, because above-the-line treatment for retail rate setting does not affect the FERC-regulated affiliate's ability to recover its FERC-set rates. In short, CVPS's ratepayers have always paid, and will continue to pay wholesale rates the FERC finds just and reasonable, for power that is otherwise prudently obtained.

Here, too, *Pacific Gas* offers some helpful insights. Rejecting a utility argument much like that presented by CVPS, the Court stated that:

Quoting selectively from some seminal filed rate cases, PG&E argues that the filed rate doctrine forbids state regulators from looking to sources of revenue other than retail rates when determining whether existing rates are sufficient to cover operating costs.³⁶³

Expressly rejecting that concept as a matter of law, the Court held, in the same paragraph, that the filed rate doctrine, itself:

. . . does not require that retail rates be excessively high when utilities are receiving revenue from other sources. Retail rate setting based on a regulated utility's "overall financial structure" may be reasonable.

362. *Mississippi Power & Light*, *supra*, at 372.

363. *Pacific Gas*, *supra*, at 1048.

In fact, after specifically considering a situation much like CVPS's — the "offset" potential of revenues from utility sales into a regional power market, the Court explicitly stated that:

. . . if retail rates alone were insufficient to recover costs, but were sufficient in combination with other revenue, properly considered, then wholesale costs would not be trapped and there would be no violation of the filed rate doctrine.³⁶⁴

This, of course, is fully consistent with the basic *Hope*, *Bluefield*, and *Duquesne* line of cases stating that revenue determinations are tested by a functional end-result test compared to the utility's overall position.³⁶⁵

We also find that CVPS's proposed treatment is at odds with the past and current practice of CVPS and all other utilities in Vermont.³⁶⁶ The record evidence — including CVPS's rebuttal testimony — does not show any reason why we should deviate from that practice now.³⁶⁷ Simply put, changes in the industry are not of a nature, nor of a magnitude relative to CVPS, that would warrant reversal of such a fundamental, equitable, practice.

The fundamental rationale articulated by the DPS for continuing to treat regulated affiliates above-the-line is straightforward: ratepayers have paid for those investments through rates, and therefore deserve to share in the economic benefits of the investments. As CVPS's Chief Financial Officer recognized: "In my mind, those either [sic] power companies, the nuclear power companies, or VELCO . . . are very much integrated and part of the Vermont

364. *Id.* at 1048.

365. See footnote 139 and cases cited therein.

366. In fact, CVPS's position in this docket is contrary to CVPS's own testimony two years ago:

Central Vermont will continue to account for its ownership interests and other passive investments held by Custom [Investment Corporation][VYNPC was at issue in Docket 6835], dividends, interest and gains received therefrom, and tax treatment and benefits, as "above the line" for ratemaking purposes. All tax savings will result in a *lower cost of service* for Central Vermont, thus keeping rates lower than they otherwise would be without the savings from this corporate structure.

Docket 6835, Jean H. Gibson pf. 4/7/03 at 8. (emphasis added). Having asked us to rely upon that concept when it wished to have retail ratepayers compensate it for underperforming regulated affiliates in the past, CVPS is poorly placed to ask us to reverse that policy now.

367. See Deehan reb. pf. at 19.

jurisdictional income"368 We are persuaded that this rationale continues to be good public policy, and in the general interest of Vermont ratepayers.

One additional point deserves emphasis. We are particularly troubled by CVPS's attempt to treat its investment and equity earnings in VELCO as below-the-line, thus denying to retail customers the benefits of increasing profits in that sector. This effort is fundamentally inconsistent with VELCO's actual position in a very recent proceeding which involved the most significant VELCO project in half a century. In that proceeding, the Board reviewed, and ultimately approved, VELCO's request for the largest expansion of the VELCO transmission system in decades, funded by a very significant increase in its equity. In response to concerns raised by parties regarding who would benefit from the project, the Board concluded that:

The evidence before us demonstrates that the primary beneficiaries will be the citizens of Vermont, who will benefit from the improved reliability, economic development, and enhanced safety that results from a more robust electric grid.

It is true that VELCO will benefit from the project through an increase in its equity, dividends from which have traditionally been used to *reduce the bills charged to Vermont's ratepayers by VELCO's utility owners*.³⁶⁹

It is difficult to believe that CVPS, owning more than 50 percent of VELCO's stock and with direct representation on VELCO's Board of Directors, could have been unaware of the position that VELCO asked us to rely upon in that proceeding. In any case, the Order of 1/28/05, makes clear the Board's reliance on the traditional practice of treating Vermont utilities' investment in VELCO above-the-line for Vermont ratemaking purposes.³⁷⁰ Yet CVPS did not even address the VELCO proposition in its testimony, its Brief, or its Reply Brief.

Accepting the Department's position that CVPS should have included its regulated affiliates' equity in rate base, and the earnings in its cost of service, the following adjustments are required:

368. Tr. 11/3/04 at 135 (Gibson).

369. Docket 6860, Order of 1/28/05 at 223 (emphasis added).

370. In addition, we note that CVPS is the only one of VELCO's owners that has requested below-the-line treatment of its investment in VELCO.

Rate Year 1

B. Customer Service Agreement**Findings**

307. CVPS and the DPS have reached an agreement regarding the customer service issues raised in these proceedings ("Customer Service Agreement"). Exh. DPS-CVPS-Joint-1.

308. Under the terms of the Customer Service Agreement, until CVPS and the DPS establish a further, more formal resolution, and beginning as soon as CVPS can implement changes (no

later than 1/21/05), CVPS will permit former customers who have remaining unpaid balances from former accounts to add such arrearages to the balance of a newly established account, rather than requiring payment of the arrearage before a new account is established. The arrearage may be paid over a reasonable payment term. Exh. DPS-CVPS-Joint-1 at ¶ 1.

309. The Customer Service Agreement also provides that CVPS and the DPS will engage in negotiations regarding the following issues:

- the arrearage issue described in finding 308, above;
- interpretation and application of the "reasonableness" criteria for payment arrangements, including, but not limited to, how to handle situations where individual representatives appear to be responding to consumers in ways that are inconsistent with CVPS's stated understanding of the rules;
- flexibility on medical notes;
- an escalation process for the DPS to work with CVPS in cases where the Company appears to the DPS to be taking an inflexible stand on billing and policy disputes, or where CVPS does not believe it can act in the way requested by the DPS, including, but not limited to, an understanding that CVPS will seek Board clarification of the issue of applicability of Section 229 to billing disputes should cases continue to arise where CVPS believes Section 229 is a barrier to settling a dispute; and
- credit and collection practices, generally.

Exh. DPS-CVPS-Joint-1 at ¶ 2.

310. Under the terms of the Customer Service Agreement, CVPS and the DPS will report progress to the Board within 60 days of a Board order in these proceedings. Exh. DPS-CVPS-Joint-1 at ¶ 3.

Discussion

DPS and CVPS witnesses presented considerable evidence regarding several customer service issues. Subsequent to the admission of this evidence, the DPS and CVPS reached an agreement in which they state that they would like to engage in further discussions relating to these issues, and therefore ask the Board not to resolve any of the customer service issues raised in these proceedings.

The terms of the Customer Service Agreement are described in findings 308 – 310, above. We have reviewed the Customer Service Agreement and conclude that it is reasonable. The Board has long recognized the value of negotiations between willing participants, and we are pleased that the DPS and CVPS have agreed to engage in further discussions regarding these customer service issues. Therefore, we hereby approve the Customer Service Agreement in its entirety, and we make no other ruling on any of the customer service issues raised in these proceedings.

C. Rate Design

In Docket 6866, we considered a Memorandum of Understanding ("MOU") between CVPS and the Department. One of the terms of that agreement was that CVPS would file a petition for a rate redesign within 60 days of the Board's Order approving the MOU. Under the terms of that agreement, CVPS would accompany the rate design filing with a fully-allocated cost-of-service study.

As we explain above, following the Board's Order approving the MOU (with conditions),³⁷¹ CVPS sought reconsideration of the Board's Order. This ultimately led to the Department withdrawing its support for the MOU and requesting that the Board open an investigation into CVPS's rates.³⁷² As a result, the previous agreement for CVPS to submit an updated rate design no longer exists.

It has been more than eight years since the Board last comprehensively reviewed CVPS's rate design. That investigation, Docket 5835, was the result of a rate design filing that the Board required as a condition of CVPS's last fully-litigated rate case.³⁷³ CVPS has experienced changes in its cost structure over that period of time, particularly since the New England power market (and the allocation of capacity costs) is now quite different than it was in Docket 5835 and CVPS has sold its substantial ownership stake in Vermont Yankee. We find it reasonable to reexamine CVPS's present rate design in light of these and other changes. Therefore, as a

371. Docket 6866, Order of 1/27/04.

372. See Docket 6866, Order of 4/7/04.

373. Docket 5835, Order of 3/17/97 at 2.

condition of this Order, we direct CVPS to file a new rate design, supported by a fully allocated cost-of-service study, within 90 days of this Order.

IX. CONCLUSION

Vermont law in Section 218(a) of Title 30 requires that utility rates be just and reasonable. The evidence in these proceedings demonstrates that CVPS's rates over the last year (Rate Year 1) exceed just and reasonable levels by 1.25 percent. In accordance with Section 227(b), CVPS must provide a refund to its customers to return the difference between these rates and the charges that CVPS imposed under its existing tariffs for the period from April 7, 2004, through March 31, 2005. CVPS also must reduce its rates by 1.88 percent (relative to the rates under existing tariffs) commencing April 1, 2005, on a service-rendered basis.

These proceedings also address concerns that we raised in two prior decisions. As part of our approval of the Vermont Yankee sale, we required CVPS to submit a cost-of-service analysis in April of 2003 because of our expectation that the sale of Vermont Yankee would benefit CVPS and its ratepayers and could justify rate decreases. More recently, in Docket 6866, we conditionally approved a CVPS/Department agreement to freeze rates.³⁷⁴ The most significant of these conditions required CVPS to begin amortization of its large deferral accounts. In today's Order, both of these concerns are addressed. CVPS will begin amortization of its outstanding deferral accounts effective April 7, 2004. And our ruling on the overall rate levels ensures that the rates are just and reasonable, consistent with our intent in requiring the 2003 cost-of-service filing.

To the extent the findings in this Order are inconsistent with any proposed findings, such proposed findings are denied.

³⁷⁴. As we explain in the Introduction, CVPS and the Department did not agree to the conditions, so the rate freeze never took effect.

X. ORDER

IT IS HEREBY ORDERED, ADJUDGED AND DECREED by the Public Service Board of the State of Vermont that:

1. Central Vermont Public Service Corporation ("CVPS") is entitled to rates that will reduce retail revenues by approximately \$3,304,000, or 1.25 percent below existing base rates, on service rendered on or after April 7, 2004.

2. CVPS is entitled to rates that will reduce retail revenues by approximately \$4,949,000, or 1.88 percent below existing base rates, on service rendered on or after April 1, 2005.

3. CVPS shall, on or before March 31, 2005, submit a compliance filing calculating the precise decreases required by this decision. CVPS shall provide copies of the compliance filing to the parties in these proceedings.

4. As part of its compliance filing in these proceedings, CVPS shall recalculate its overearnings for 2001, 2002, and 2003, using the Vermont Department of Public Service's ("DPS") cost-of-service-based calculation methodology. When CVPS recalculates its overearnings, it shall:

- remove 100 percent of transmission revenues before applying the wholesale allocation factor;
- include the portion of Construction Work In Progress on which it does not accrue an allowance for funds used during construction;
- treat all of its regulated affiliates above the line; and
- reflect our decisions regarding Distributed Utility Planning Demand-Side Management and the 2002 Vermont Yankee Mid-Cycle Outage that are described in Paragraphs 7 and 8, below.

5. CVPS shall include in its compliance filing its proposal for refunding to ratepayers the exact amount, plus interest, that was over-collected from ratepayers during the period April 7, 2004, through March 31, 2005.

6. As described in Section VI.J.2 of this Order, CVPS shall include in its compliance filing its proposal to protect the interests of its customers in the event that the Board issues an order in Docket 6605 that would result in CVPS earning more than \$419,475 in Cable Television pole attachment revenues based on the same billing determinants used in the instant proceedings. If

CVPS elects not to submit such a proposal, CVPS shall reduce the revenues authorized by paragraphs 1 and 2 of this Order by \$447,100.

7. CVPS shall remove recurring Distributed Utility Planning Demand-Side Management expenditures from the balance in its Distributed Utility Planning Demand-Side Management deferral account, thereby reducing the balance in this account to zero. In addition, CVPS shall return to ratepayers the difference between what CVPS collected in rates for Distributed Utility Planning Demand-Side Management recurring expenses and the Company's actual expenses in 2001, 2002, and 2003 (\$184,479).

8. CVPS shall reduce the amount of its deferral account associated with Vermont Yankee's 2002 Mid-Cycle Outage by \$403,000.

9. On or before March 31, 2005, CVPS shall file tariffs in conformance with the above findings and conclusions.

10. If CVPS receives full or partial reimbursement for additional costs from Entergy Nuclear Vermont Yankee and Entergy Nuclear Operations, Inc., under the Ratepayer Protection Plan approved in Docket 6812, the Company shall book the amount received as a regulatory liability for return to ratepayers in its next rate proceeding.

11. If the decommissioning costs for Yankee Atomic, Connecticut Yankee, or Maine Yankee increase from levels now projected for 2006 and subsequent years, CVPS shall notify the Board.

12. Beginning April 1, 2006, CVPS shall book and defer the difference between the decommissioning costs for Yankee Atomic, Connecticut Yankee, and Maine Yankee for Rate Year 2 on which we set rates and the actual decommissioning cost payments. CVPS shall amortize the balance in this account in its next rate case.

13. CVPS shall follow the recording and reporting requirements of FERC Order 631 for Vermont jurisdictional ratemaking purposes. CVPS shall track and report its prior and future net salvage collections in a separate subsidiary account. CVPS shall show this separate account in future cost-of-service filings.

14. CVPS shall conduct a new depreciation study, and file it with the Board and the DPS when it is completed, which shall be no later than December 31, 2006.

15. CVPS shall spend \$6,284,444 for tree trimming expenses in Rate Year 1, and \$6,466,224 in Rate Year 2 and in each subsequent year that the rates we approve in this Order are in effect. CVPS shall spend \$304,000 for pole treatment expenses in Rate Year 1 and \$523,000 in Rate Year 2 and in each subsequent year that the rates we approve in this Order are in effect. If CVPS spends less than these amounts for tree trimming and pole treatment in a particular year, CVPS shall carry forward the unspent amounts to future years. If CVPS spends more than these amounts in a particular year, CVPS may carry forward the extra expenditures as a credit to future years.

16. In CVPS's annual report required by PSB Rule 4.903B, CVPS shall include the amounts spent on tree trimming and pole treatment, the amounts to be carried forward into the subsequent year, and a comparison of the amounts actually spent to the amounts allowed in rates.

17. The Customer Service Agreement between CVPS and the DPS that was admitted into evidence as exh. DPS-CVPS-Joint-1 is approved. Within 60 days of today's Order, CVPS and the DPS shall file a report with the Board regarding the progress of their negotiations pursuant to the Customer Service Agreement.

18. CVPS shall file a new rate design, supported by a fully allocated cost-of-service study, within 90 days of this Order.

Dated at Montpelier, Vermont, this 29th day of March, 2005.

OFFICE OF THE CLERK

FILED: March 29, 2005

ATTEST: s/Susan M. Hudson
Clerk of the Board

NOTICE TO READERS: This decision is subject to revision of technical errors. Readers are requested to notify the Clerk of the Board (by e-mail, telephone, or in writing) of any apparent errors, in order that any necessary corrections may be made. (E-mail address: Clerk@psb.state.vt.us)

Appeal of this decision to the Supreme Court of Vermont must be filed with the Clerk of the Board within thirty days. Appeal will not stay the effect of this Order, absent further Order by this Board or appropriate action by the Supreme Court of Vermont. Motions for reconsideration or stay, if any, must be filed with the Clerk of the Board within ten days of the date of this decision and order.

Appendix A: Hearing Schedule

Technical Hearings held in 2004:

November 1–5, 2004

Technical Hearings held in 2005:

January 10–13, 2005

February 18, 2005

Appendix B: Procedural History

On June 13, 2002, in our Order in Docket 6545 (approving the sale of the Vermont Yankee Nuclear Power Station to Entergy Nuclear Vermont Yankee, LLC), the Board required that:

Central Vermont shall file, in April, 2003, an updated cost-of-service based upon a test year ending December 31, 2002, with appropriate additional information as necessary to determine whether a rate decrease is appropriate in 2003 or 2004.³⁷⁵

Docket 6866

Pursuant to the Board's Order in Docket 6545, CVPS filed cost of service studies on April 15, 2003. After a period of investigation by the Department, on July 11, 2003, the Department and CVPS filed a Memorandum of Understanding ("MOU") between them, which froze CVPS's rates for 2004, lowered CVPS's allowed return on equity from 11 percent to 10.5 percent for both 2003 and 2004, and established an earnings cap for 2004. The Board opened Docket 6866 to consider the MOU on July 22, 2003. After intervention by AARP, testimony, hearings, and briefs, the Board approved the MOU on January 27, 2004, but only on the condition that CVPS and the Department both affirmatively accept certain enumerated conditions. On February 3, 2004, CVPS notified the Board that it could not accept the modifications. CVPS asked for reconsideration. The Board convened a workshop based upon CVPS's motion. Subsequently, the Department requested, on March 26, 2004, that the Board open an investigation into CVPS's rates. The Board granted CVPS's motion to reconsider, in part, but the approval of the MOU never took effect as the parties to it did not accept the Board's conditions.

Docket 6946

On April 7, 2004, pursuant to 30 V.S.A. § 227(b), the Board opened the investigation requested by the Department — Docket 6946. This docket covers rates for the period from April 7, 2004, through April 6, 2005. The Board convened a prehearing conference on April 28,

375. Docket 6545, Order of 6/13/2002, at 165 (ordering paragraph 16).

2005. At that time, CVPS proposed a schedule for the rate investigation that included CVPS's express agreement to waive the statutory seven-month deadline for resolution of this proceeding. On April 30, 2005, we accepted a slightly revised proposed schedule that was agreed upon by CVPS and the DPS.

Docket 6988

On July 15, 2004, CVPS filed revised tariffs and cost-of-service schedules, requesting an increase in its retail rates of 5.01 percent, effective August 29, 2004, to be implemented on April 1, 2005.

On August 12, 2004, the Board opened Docket 6988, which suspended CVPS's tariff filing and opened an investigation into the filing.

Parallel Proceedings

By Order dated September 8, 2004, in Docket 6988, the Board agreed to consolidate Dockets 6946 and 6988 for purposes of hearings, discovery, and other scheduling matters. The test year in both dockets is calendar year 2003.

AARP was granted intervention in both Dockets.

The Board conducted a public hearing on September 14, 2004, using eight Vermont Interactive Television ("VIT") sites.

The Board held technical hearings as duly noticed and scheduled on November 1, 2, 3, 4, and 5, 2004.

After the filing of CVPS's rebuttal testimony, on December 10, 2004, the Department filed objections to the admission of certain prefiled testimony and exhibits. The Department supplemented this motion on December 27, 2004. The Department asserted that portions of CVPS's rebuttal testimony violated the provision of Section 225(a) that prohibits a company from updating a rate request or the proof that supports it. CVPS filed its response to the Department's objections on January 5, 2005. At the technical hearing on January 10, 2005, the Board granted the Department's request in large part, with the exception of two exhibits, based

upon our conclusion that the portions of the testimony to which the Department objected represented impermissible updates.³⁷⁶

The Board continued technical hearings on January 10, 11, 12, and 13, 2005.

On January 19, 2005, CVPS filed a request that the Board: (1) arrange for mediation; (2) issue an accounting order; (3) bifurcate these proceedings; and (4) hold a workshop. On January 28, 2005, the Board denied CVPS's request on all elements except the requested accounting order, for which the Board scheduled and heard oral argument on February 2, 2005.

Also on February 2, 2005, CVPS and the Department filed responses to questions from the Board regarding proposed treatment of regulated affiliates in the Company's cost of service, rate base, and overearnings calculations. In its request to the parties, the Board stated that, absent objection, it intended to incorporate the responses into the record. No party objected to the responses being included in the record; we hereby admit them.

On February 8, 2005, CVPS and the Department filed a corrected settlement concerning some, though not all, of the issues regarding power costs.

On February 10, 2005, CVPS filed a notice that there were errors in the testimony of CVPS witness Joan Gamble. On February 11, 2005, the Board directed the parties to assess the impact of the error, and scheduled a hearing on (1) the basis and implications of the error, and (2) the power cost settlement.

The Board issued an accounting order on February 18, 2005, authorizing CVPS to defer recognition of a portion of its 2004 earnings, subject to several conditions.

Also on February 18, 2005, Hearing Officer Ann Bishop held a continued technical hearing regarding the power cost settlement and the errors in Joan Gamble's testimony.

On March 16 and 17, 2005, Board staff participated in two conference calls with the parties regarding scheduling issues. As a result of those conference calls, on March 18, 2005, CVPS filed a letter clarifying that it waived the statutory seven-month deadline for resolution of Docket 6946 until March 29, 2005. On the conference calls, the parties asked if the Board would provide them with an advance electronic copy of the spreadsheet the Board used to keep track of

376. Tr. 1/10/05 at 193–196 (ruling discussed by Chairman Dworkin).

the cost-of-service and rate base decisions embodied in its final order. The parties stated that this would be a convenience for them given the short time period in which to prepare and review the required compliance filing, given the new rates' effective date of service rendered on and after April 1, 2005. On March 23, 2005, CVPS filed a letter requesting that the Board require the parties to treat the electronic spreadsheet as confidential information until today's Order was issued.

On March 25, 2005, the Board sent the parties an electronic copy of this spreadsheet, and required the parties to keep it confidential until today's Order was issued. In addition, the Board reminded the parties that in the event of a conflict between the spreadsheet and today's Order, the Order will control.

CAUSE NO. 42359

APPROVED:

BY THE COMMISSION:

David E. Ziegner, Commissioner

Scott R. Storms, Chief Administrative Law Judge

On December 30, 2002, PSI Energy, Inc. ("PSI," "Petitioner," or "Company") filed its Petition for authority to increase rates and charges for retail electric utility service and approval of revised rules and regulations applicable to such service. PSI's Petition also sought approval of other items related to rates identified in the caption above, and indicated PSI's intent to comply with and utilize the provisions of the Commission's Minimum Standard Filing Requirements ("MSFRs"). Participants in this Cause included the Indiana Office of Utility Consumer Counselor ("OUCC"), and several parties that intervened in this proceeding including: the Citizens Action Coalition of Indiana, Inc. ("CAC"); Indiana and Purdue Universities; an *ad hoc* group of PSI industrial customers known as the PSI-Industrial Group ("PSI-IG"); the International Brotherhood of Electrical Workers, Local Union No. 1393 ("IBEW Local 1393"); The Kroger Co. ("Kroger"); Steel Dynamics, Inc. – Pittsboro Division ("SDI"); and Nucor Corporation ("Nucor") (collectively, the "Intervenors"). On January 21, 2003, this Commission designated from its staff Bradley K. Borum, Laura Cvengros and Matthew Inman, as testimonial staff in this Cause ("Testimonial Staff" or "Staff"). On April 1, 2003, this Commission designated Kristina Kern-Wheeler and Andrea Brandes as Counsel to the Testimonial Staff.

On February 11, 2003, this Commission conducted a Prehearing Conference and thereafter issued its Prehearing Conference Order, which established the 12 months ended September 30, 2002, as the test year in this Cause, with adjustments allowed for changes thereafter that are fixed, known and measurable and occur within 12 months following the end of the test year. May 31, 2003 was established as the cut-off date for rate base determination and for updating Petitioner's actual number of employees, salaries and wages, benefits, payroll taxes and property taxes. Petitioner was ordered to file schedules to support such updates by July 15, 2003. August 31, 2003 was established as the cut-off date for updating Petitioner's major projects as defined in this Commission's MSFRs, Petitioner's construction-work-in-progress ("CWIP") balances, any amounts deferred by Petitioner pursuant to Commission orders, the actual number of customers and the average customer usage. Petitioner identified in its Petition the following projects as major projects eligible for a special later cutoff date: its Noblesville Repowering Project, Madison Generating Station, Henry County Generating Station and Gibson Generating Station Unit 4 selective catalytic reduction equipment ("SCR"). Petitioner was required to support these August 31, 2003 updates by its rebuttal testimony filing date of October 6, 2003. PSI reserved the right to update its major project amounts up to 10 days before the final set of hearings in this Cause.

On March 28 and April 11, 2003, PSI prefled its case-in-chief testimony and exhibits in this Cause. A hearing on PSI's evidence commenced June 9, 2003. On July 15, 2003 PSI filed its May 31, 2003 Cut-Off Date Update Filing as required by the Prehearing Conference Order. On August 19, 2003, the Intervenor and the OUCC prefled testimony and exhibits constituting their respective cases-in-chief. The Intervenor's filing evidence included the CAC, PSI-IG, Purdue University, and Kroger. The Testimonial Staff filed its report, testimony and exhibits, on September 3, 2003. Petitioner prefled its August 31, 2003, Cut-Off Date Update Filing, and its rebuttal and update testimony and exhibits, on October 6, 2003. PSI filed a final update to its major projects on October 20, 2003, as provided in the Prehearing Conference Order. The OUCC filed updated and corrected Public's Exhibit ("Pub. Ex.") No. 8U and Revised Pub. Ex. No. 3 on October 31, 2003. PSI filed Petitioner's Exhibit ("Pet. Ex.") X-32 and OO-3, both as corrected, on October 31, 2003. A hearing on the prefled testimony and exhibits of the Intervenor and Testimonial Staff commenced on November 3, 2003, followed by a hearing on Petitioner's update and rebuttal evidence. On October 22, 2003, a Field Hearing in this Cause was held in Kokomo, Indiana, and on October 27, 2003, a Field Hearing was held in Bloomington, Indiana as required by Ind. Code § 8-1-2-61(b).

At the close of the record, the parties were authorized to file proposed orders and briefs in support, as well as exceptions to proposed orders and reply briefs, in accordance with an agreed upon procedural schedule. The Presiding Commissioner and Chief Administrative Law Judge attended all of the Evidentiary Hearings in this proceeding, and have thus observed the demeanor and credibility of the witnesses. All proposed findings of the parties not specifically determined in this Order are hereby rejected. This Commission, having examined the evidence and being duly advised in the premises, now finds that:

1. **Notice and Jurisdiction.** Due, legal and timely notice of the filing of the Petition was given and published by PSI, as required by law. Proper and timely notice was given by PSI, as required by law, to its customers summarizing the manner and extent of the proposed changes in its retail rates and charges. Due, legal and timely notice of the public hearings herein was given and published by this Commission. PSI is a public utility as defined in Ind. Code § 8-1-2-1 and is subject to regulation by this Commission in the manner and to the extent provided for in the Public Service Commission Act, Ind. Code § 8-1-2. This Commission has jurisdiction over PSI and the subject matter of this Cause.

2. **Petitioner's Characteristics.** PSI is an Indiana corporation with its principal office in the Town of Plainfield, Hendricks County, Indiana. PSI is engaged in the business of generating and supplying electric utility service to over 740,000 customers located in 69 counties in the central, north central and southern parts of the State of Indiana. PSI is a wholly-owned subsidiary of Cinergy Corp. ("Cinergy"), a publicly-held corporation, and an affiliate of The Cincinnati Gas & Electric Company ("CG&E"), also wholly owned by Cinergy.

PSI provides electric utility service to the public by means of electric utility plant, properties, equipment and facilities owned, operated, managed and controlled by it, which are used and useful for the convenience of the public in the production, transmission, distribution and furnishing of electric utility service to retail customers in the State of Indiana. PSI also engages in sales for resale of electric energy to municipal utilities, rural electric membership corporations, Wabash Valley Power Association, Inc. ("WVPA"), Indiana Municipal Power Agency ("IMPA"), and other utilities, which in turn supply electric utility service to customers in areas not served directly by PSI.

3. **Current Rates and Relief Requested.** Petitioner's current base retail electric rates and charges were approved by Order entered by this Commission, on September 27, 1996, in Cause No. 40003 ("1996 Order" or "Cause No. 40003"). By its Petition here, PSI requests this Commission's approval to increase those rates and charges. Petitioner originally requested that this Commission approve an increase in the amount of \$200,420,000. However, after the updates made in accordance with the Prehearing Conference Order, and with certain compromise positions set forth in Petitioner's rebuttal testimony, Petitioner reduced the requested increase in its basic retail electric rates to \$178,303,000, which would represent an approximately 11.2% increase over Petitioner's current average retail rates. Pet. Ex. OO-3; Pet. Ex. DD, p. 3.

4. **Petitioner's Rate Base.**

A. **Used and Useful Determinations.** In determining Petitioner's rate base, we have been charged with making basic determinations in connection with our ultimate conclusion as to the fair value of Petitioner's utility plant actually used and useful in rendering retail electric utility service to the public. The following findings underlie these determinations.

(I) **Petitioner's Generating Facilities.** The evidence in this Cause shows that PSI owns and operates 11 generating stations, which are capable of producing approximately 6,800 megawatts ("MW") of electric generating capacity (summer-rated). Approximately 76%

of PSI's generating capacity is coal-fired, 20% is natural-gas or synthetic gas-fired, 3.5% is oil-fired and approximately 0.7% is hydro-powered. Pet. Ex. O-1. PSI's Gibson Unit 5 is jointly owned, with PSI owning 50.05% of the unit and WVPA and IMPA owning 25% and 24.95%, respectively. Pursuant to a 2002 Joint Generation Dispatch Agreement ("JGDA"), PSI jointly dispatches its generating plants with CG&E's generating plants. Pet. Ex. B, pp. 7-8.

PSI's electric generating properties consist of five primarily coal-fired stations (Cayuga, Edwardsport (one oil-fired unit), Gallagher, Gibson, and Wabash River), having a total of 20 individual generating units, one hydroelectric generating station (three units), and 27 rapid-start peaking units, including peaking units at PSI's Madison Generating Station and at PSI's Henry County Generating Station. The Madison and Henry County Stations were acquired by PSI, February 5, 2003, after this Commission approved their purchase by PSI in Cause No. 42145. PSI also owns and operates two generating units at its Noblesville Repowering Project, near Noblesville, Indiana, approved by this Commission in Cause No. 41924 and completed in June 2003. Pet. Ex. O, pp. 2-3.

PSI's coal-fired stations use primarily Illinois Basin coal from mines located in Indiana. PSI owns and operates various pollution control equipment located at its generating stations, including flue gas desulfurization equipment ("scrubbers") at its Gibson Units 4 and 5, SCRs at Gibson Units 2, 3 and 4, and modular cooling towers at PSI's Cayuga Station. Pet. Ex. B, p. 9. PSI's witness John J. Roebel, Vice President of the Generating Resources Group, described the status and costs of the Company's evolving plan to comply with federal NO_x reduction requirements ("Compliance Plan"). At the time of PSI's case-in-chief filing, the active NO_x Compliance Plan included SCRs, Boiler Optimization Programs, low-NO_x burners, and new precipitators, at various units at PSI's Gibson, Cayuga, Gallagher, and Wabash River Stations. Several additional projects have been deferred due to the receipt of early reduction credits. Mr. Roebel explained that the following NO_x Compliance Plan projects are in-service or were expected to be in-service by the summer of 2003: Boiler Optimization Programs at Cayuga Units 1 and 2, Gallagher Units 1 and 2, Wabash River Unit 2, and Gibson Unit 3; Low NO_x Burners at Gallagher Unit 4 and Wabash River Unit 6; and SCRs at Gibson Units 2, 3 and 4. Mr. Roebel testified that all of PSI's electric generating and related facilities are used and useful by PSI in the provision of utility service to its retail electric customers. Pet. Ex. O, p. 5.

No party took issue with the used and useful nature of PSI's generating facilities. We find that, as of the applicable cut-off date, updated as permitted by the Prehearing Conference Order, the above-described properties were used and useful and reasonably necessary for the convenience of the public and should be included in PSI's rate base.

(2) Petitioner's Transmission and Distribution Facilities. The evidence presented in this Cause demonstrates that PSI owns and/or operates over 5,800 circuit miles of transmission lines, over 130 transmission substations, approximately 20,500 miles of distribution lines, approximately 440 distribution substations and various other distribution equipment, such as capacitors, line transformers, street lights and meters. PSI's transmission system is jointly owned with WVPA and IMPA. PSI is interconnected with nine other utility control areas, and

the Cinergy transmission system is interconnected with twelve other utility control areas. Pet. Ex. B, p. 10.

Approximately one year ago, PSI and CG&E transferred functional control of the operation of the Cinergy transmission system to the Midwest Independent Transmission System Operator, Inc. ("Midwest ISO" or "MISO"). PSI and CG&E are also parties to the East Central Area Reliability Council Agreement ("ECAR Agreement"), which coordinates the planning and operation of generation and transmission facilities and provides for maximum reliability of the regional bulk power supply. In the opinion of PSI's witness Ronald R. Jackups, Vice President, Electric System Operations, PSI's transmission facilities are used and useful in providing service to PSI's retail electric customers. Pet. Ex. M, p. 8. No party took issue with the used and useful nature of PSI's transmission and distribution ("T&D") facilities. We find that, as of the applicable cut-off date, such facilities were used and useful and reasonably necessary for the convenience of the public and should be included in PSI's rate base.

(3) Petitioner's Office and General Facilities. The evidence shows that PSI's office facilities generally consist of the Company's corporate offices in Plainfield and numerous field offices located throughout PSI's service territory. These office facilities are used to provide customer service, sales, economic development, billing, payment, engineering, financial, accounting, service dispatch, construction, maintenance, service restoration, and other services necessary in the conduct of the electric utility business. In addition, PSI's 24-hour Call Center, garage and storeroom are located at its corporate offices. Pet. Ex. M, pp. 8-9. No party took issue with the used and useful nature of PSI's office and general facilities. We find that Petitioner's office and general facilities were, as of the applicable cut-off date, used and useful and reasonably necessary for the convenience of the public and should be included in PSI's rate base.

B. Original Cost of PSI's Electric Property. PSI's proposed jurisdictional net original cost of its electric utility plant in service, including plant in service net of accumulated depreciation, fuel stock, emission allowances, and materials and supplies ("M&S"), was \$3,662,350,000, as of the appropriate cut-off date in this case. Pet. Ex. OO-3. No party took issue with Petitioner's jurisdictional net original cost rate base, and we find that the jurisdictional net original cost of PSI's electric utility property used and useful for the benefit of the public is \$3,662,350,000, comprised of the following elements:

Net Electric Utility Plant in Service	\$3,463,726,000
Fuel Stock	\$67,925,000
Emission Allowances	\$14,651,000
AFUDC Continuation/Deferred Depreciation	\$75,202,000
Materials and Supplies	<u>\$40,846,000</u>
Net Utility Rate Base	<u>\$3,662,350,000</u>

Pet. Ex. X-1, as updated as of October 6, 2003, and as adjusted per Pet. Ex. OO-3.

C. Fair Value of PSI's Electric Property.

(1) Legal Requirements. Ind. Code § 8-1-2-6 requires this Commission to value a public utility's property at its "fair value." In *Indianapolis Water Co. v. Public Service Comm'n*, 484 N.E.2d 635 (Ind. Ct. App., 1985), the Indiana Court of Appeals confirmed that a utility should be entitled to earn a fair rate of return on the fair value of its utility property used and useful in serving the public. The Court gave this Commission the following four basic directives regarding the application of the concept of "fair value:"

- (a) It is upon the statutory "fair value" of its used and useful property that a utility should be allowed to earn a return.
- (b) "Fair value" is not an either/or situation as to original cost or reproduction cost new. It is a conclusion or final figure, drawn from all the various values or factors to be weighed in accordance with the statute by this Commission.
- (c) In its determination of "fair value", this Commission may not ignore the commonly known and recognized fact of inflation.
- (d) While original cost is one of the factors that this Commission should consider in arriving at a "fair value" figure, it is not necessarily, in and of itself, an accurate reflection of the "fair value" of the utility's property.

In the *Indianapolis Water Co.* case, the Court of Appeals referred to the Supreme Court's holding in *Public Service Comm'n v. City of Indianapolis*, 235 Ind. 70, 131 N.E.2d 308, 325 (1956), that "reproduction cost new less depreciation cannot be disregarded in fixing a valuation for rate making purposes." The Court of Appeals went on to indicate that these observations "are as pertinent today as they were in 1956." *Indianapolis Water*, 484 N.E. 2d at 640. The Court of Appeals reiterated that this Commission must authorize rates that provide the utility with the opportunity to earn a fair rate of return on the fair value of its property in *Gary-Hobart Water Corp. v. Indiana Utility Regulatory Comm'n*, 591 N.E.2d 649, 653-54 (Ind. Ct. App., 1992), *reh'g denied*.

(2) Reproduction Cost New Less Depreciation. A valuation of PSI's electric utility plant as of September 30, 2002, was made by PSI witness John J. Spanos. This study was based on the reproduction cost new of such property, less depreciation. The total appraised value at that date was determined to be not less than \$5,269,844,632. The valuation was determined by applying cost trend factors to the original cost of the various types of PSI's utility property. Reductions for depreciation were based on physical inspection, analysis of PSI's mortality experience with respect to its property history and past retirements of property and judgment based upon Mr. Spanos' experience. Pet. Ex. T, p 15. No party took issue with Mr. Spanos' valuation. After adjustments for major projects, fuel stock, emission allowances, M&S and jurisdictional separation, PSI's evidence showed, and we find, that the reproduction cost new less depreciation value of PSI's utility property is not less than \$5,799,973,000. Pet. Ex. Z-8.

(3) Fair Value Determination. The fair value of Petitioner's used and useful property at August 31, 1995, found in Petitioner's last rate case was \$2,838,569,000 (excluding M&S, fuel stockpile and *pro forma* fuel). Adjusting this value for inflation since the cut-off date in the 1996 Order produces a Consumer Price Index ("CPI") adjusted value of \$3,438,471,000. To this value must be added PSI's property additions, net of retirements, since the 1996 Order, of \$1,215,055,000, and M&S, fuel stock and emission allowances of \$203,006,000. Such a calculation results in a valuation of Petitioner's total jurisdictional plant in service and used and useful in the provision of retail electric service to the public of \$4,856,532,000. Pet. Ex. C-6. We find that the fair value of Petitioner's total jurisdictional plant in service and used and useful in the provision of retail electric service to the public is \$4,856,532,000.

5. Fair Rate of Return. Having determined the fair value of Petitioner's used and useful property for the provision of retail electric utility service in Indiana, we turn now to a determination of a level of net operating income that represents a reasonable return on that property. This determination requires balancing the interests of the investors and consumers through the exercise of a fair and enlightened judgment, having regard to all relevant facts. *See, Bethlehem Steel Corp. v. Northern Ind. Public Serv. Co.*, 397 N.E.2d 623, 630 (Ind. Ct. App., 1979).

In the case of *Bluefield Water Works & Improvement Co. v. Public Serv. Comm'n*, 262 U.S. 679, 692-693 (1923), the Court set the standard against which a determination of a fair rate of return is measured:

What annual rate will constitute just compensation depends upon many circumstances and must be determined by the exercise of a fair and enlightened judgment, having regard to all relevant facts. A public utility is entitled to such rates as will permit it to earn a return on the value of the property which it employs for the convenience of the public equal to that generally being made at the same time and in the same general part of the country on investments in other business undertakings which are attended by corresponding risks and uncertainties; but it has no constitutional right to profits such as are realized or anticipated in highly profitable enterprises or speculative ventures. The return should be reasonably sufficient to assure confidence in the financial soundness of the utility and should be adequate, under efficient and economical management, to maintain and support its credit and enable it to raise the money necessary for the proper discharge of its public duties. A rate of return may be reasonable at one time and become too high or too low by changes affecting opportunities for investment, the money market and business conditions generally.

262 U.S. at 692-693.

In the case of *Federal Power Comm'n v. Hope Natural Gas Co.*, 320 U.S. 591 (1944), the Court expanded on the guidelines to be used to assess the reasonableness of the allowed return, and recognized that revenues must cover capital costs:

From the investor or company point of view it is important that there be enough revenue not only for operating expenses but also for the capital costs of the business. These include service on the debt and dividends on the stock . . . by that standard the return to the equity owner should be commensurate with returns on investments in other enterprises having corresponding risks. That return, moreover, should be sufficient to assure confidence in the financial integrity of the enterprise, so as to maintain its credit and to attract capital.

320 U.S. at 603.

One widely accepted method for evaluating the reasonableness of a public utility's return involves a consideration of capital structure and development of an overall weighted cost of capital. However, this Commission utilizes cost of capital estimation evidence as only one factor in determining the fair rate of return for a public utility. Cost of capital testimony, while relevant evidence in the determination of a fair rate of return, is clearly not the only consideration. We have repeatedly found:

Cost of capital is an important element of the ratemaking process. However, we have pointed out many times that cost of capital is not synonymous with the fair rate of return. Ultimately, the determination of a fair rate of return is the prerogative of the Commission, taking into consideration all the relevant evidence. The objective is to determine the return which is reasonably sufficient to assure confidence in and financial soundness of the utility and adequate, under efficient and economical management, to maintain and support its credit and to enable it to raise the money necessary for the proper discharge of its public duties. *Columbus Gas Light Co. v. Public Serv. Comm'n of Ind.*, 193 Ind. 399, 404-406, 140 N.E. 538, 540 (1923); *Bluefield Water Works & Improvement Co. v. Public Serv. Comm'n*, 262 U.S. 679, 692-693 (1923). These goals go well beyond the use of formulas and mathematical calculations which may imply a level of precision which does not really exist. . . . Rather, we are to exercise the flexibility afforded us by statute and the Indiana Supreme Court.

See, PSI Energy, Inc. Cause No. 40003, (Ind. Util. Reg. Comm'n, September 27, 1996), at 34-35.

The Indiana courts have supported this view and have held that, in determining an appropriate rate of return, it is not necessary for this Commission to determine the cost of capital, and that the Commission may consider evidence regarding the cost of capital in conjunction with other evidence presented in the proceeding. *Bethlehem Steel Corp. v. Northern Ind. Public Serv. Co.*, 397 N.E.2d 623, 630 (Ind. Ct. App., 1979); *Office of Utility Consumer Counselor v. Public Serv. Co.*, 449 N.E.2d 604, 607 (Ind. Ct. App., 1983). Determining a fair rate of return is the prerogative of this Commission after giving weight to all material evidence. The Indiana Court of Appeals has recognized that it is appropriate for this Commission to utilize the rate of return as a "balance wheel" to provide a limited margin of error for the resolution of other issues. The Commission's primary objective is to reach an overall result that is equitable and that will permit continuity of utility services on a sound financial basis. *L. S. Ayres & Co. v. Indianapolis Power & Light Co.*, 351 N.E.2d 814, 821 (Ind. Ct. App., 1976). The determination of a utility's revenue requirement is primarily an exercise of informed regulatory judgment. If the judgment is to be exercised properly, the Commission must examine every aspect of the utility's operation, and the economic environment in which the utility functions, to ensure that the data it has received is representative of operating conditions that will, or should, prevail in future years. *City of Evansville v. Southern Ind. Gas & Electric Co.*, 339 N.E.2d 562, 568 (Ind. Ct. App., 1975).

With this background in mind, we now turn our attention to the evidence submitted in this proceeding concerning Petitioner's capital structure, cost of capital, and other matters relevant to the determination of a fair return for Petitioner, including: the relative risks facing the energy industry and PSI; PSI's financial condition, financing requirements and financial objectives; PSI's credit quality; and PSI's performance in rendering retail electric utility service in Indiana.

A. Capital Structure. The Prehearing Conference Order provided that the economic and financial data used in determining Petitioner's cost of capital and capital structure shall not be restricted as to the time or method of adjustment used for financial and accounting exhibits, but should be as current as possible and updated as of the prefiling dates set forth in that order. Pursuant to this provision, Petitioner's October 6, 2003 filing updated its actual capital structure as of August 31, 2003, with certain updates for events that occurred in September 2003. Pet. Ex. X-32, Corrected; Pet. Ex. VV-1.

Intervenor Kroger took issue with PSI's regulatory capital structure and argued that short-term debt should be included in PSI's capital structure for ratemaking purposes. Kroger Ex. No. 1, p. 16. Additionally, PSI-IG witness Michael Gorman expressed concern about the \$200 million equity infusion to PSI from its parent company, Cinergy Corp. PSI-IG Ex. No. 3, p. 8. PSI witnesses Stephen M. Farmer and Ronald R. Reising addressed these arguments and concerns relative to the capital structure to be utilized in this case for ratemaking purposes.

(1) Short-Term Debt in the Regulatory Capital Structure. Mr. Stephen Farmer, PSI's Revenue Requirements Manager, opposed the inclusion of short-term debt in PSI's capital structure for regulatory purposes, explaining that short-term debt is used to finance items that are not in rate base, such as certain regulatory assets and cash working capital needs and CWIP. Pet. Ex. QQ, p. 2. Mr. Farmer pointed out that this Commission, in excluding short-

term debt from PSI's regulatory capital structure in Cause No. 40003, rejected the OUCC's argument in that case -- and not repeated by the OUCC here -- that the portion of PSI's short-term debt that exceeded PSI's CWIP balance should be included in PSI's capital structure for ratemaking purposes. *Id.*

Mr. Farmer further noted that in Cause No. 40003, the OUCC witness Matthew Kahal testified that it would be appropriate to exclude short-term debt from the capital structure only if short-term debt balances are comparable to (or less than) CWIP balances. Mr. Farmer pointed out that the balance of PSI's short-term debt outstanding at August 31, 2003, was \$112,333,000, while its CWIP balance was \$154,456,000. While acknowledging that a portion of PSI's CWIP is eligible for CWIP ratemaking treatment (*i.e.*, qualified pollution control expenditures), Mr. Farmer pointed out that short-term debt is also used to finance working capital needs and costs of assets that are not recovered in rates. Pet. Ex. QQ, p. 3. As for a suggestion that short-term debt may have become a permanent component of PSI's capital structure, Mr. Farmer observed that PSI's investment in plant in service has increased significantly since the end of the test period in this case -- yet during this same period PSI's short-term debt balance has not increased appreciably.

In support of Kroger's position, Mr. Kevin Higgins quoted from Standard and Poor's 2001 publication, "Corporate Ratings Criteria" that states:

Traditional measures focusing on long-term debt have lost much of their significance, since companies rely increasingly on short-term borrowings. It is now commonplace to find permanent layers of short-term debt, which finance not only seasonal working capital but also an ongoing portion of the asset base.

Mr. Farmer responded that financial analysts do not make a regulatory distinction between used and useful plant included in rate base and other assets. Pet. Ex. QQ, p. 5. Financial analysts, he said, include short-term debt as part of company capitalization because the "asset base" of a company would include investments in plant not receiving rate treatment (*e.g.*, non-qualified pollution control property CWIP investments and regulatory assets). During cross-examination, Mr. Farmer also pointed out that the same Standard and Poor's publication quoted by Mr. Higgins also states that "Flexibility can be jeopardized when a firm is overly reliant on bank borrowings or commercial paper." Tr. at Y88.

As additional support for its position that short-term debt should be included in PSI's capital structure, Kroger emphasized the difference between PSI's capitalization and PSI's original cost depreciated rate base, arguing that a utility's rate base should approximate its capitalization. Kroger Ex. No. 1, pp. 10-11.

In response, Mr. Farmer indicated that that balance between capitalization and rate base is simply a theory that presumes "perfect ratemaking" -- that is, perfect and perfectly timed recovery of the utility's costs, and consistently fair returns earned by the utility, year in and year out. In reality, ratemaking and recovery of costs are not perfect. The utility may or may not

earn consistently fair returns year in and year out. Tr. at Y56-61 and Y89-90. Mr. Farmer presented a number of explanations for the difference between PSI's rate base and its capitalization. These explanations include: changes in accounts receivables balances; changes in accounts payable balances; different rate case cut-off dates for rate base on the one hand, and capital structure on the other; PSI's use of its sale of accounts receivables proceeds to redeem outstanding first mortgage bonds and preferred stock; impacts on capital structure and retained earnings produced by various accounting requirements; and less than reasonable returns earned by PSI at various times, effectively shrinking investors' capital investments. Tr. at Y56-61. With regard to this latter reason -- investors' capital investments effectively diminishing over time to the extent that the utility earns less than a reasonable return -- Mr. Farmer emphasized that utility investors expect and demand a reasonable return over time of their principal actually invested, not a return on a diminished capital investment. Tr. at Y60.

The evidence indicates that Petitioner's short-term debt balances have been used to finance construction-work-in-progress and other capital items, such as regulatory assets, not in PSI's rate base. If short-term debt had been financing plant additions in Petitioner's rate base, the short-term debt would have been increasing appreciably as substantial plant was added. Moreover, as Mr. Farmer pointed out, the cost of short-term debt is reflected in the application of Allowance for Funds Used During Construction ("AFUDC") to CWIP expenditures. Consequently, customers regularly receive the benefit of Petitioner's lower-cost short-term debt through lower capitalized AFUDC rates. Accordingly, based on our review of the evidence presented in this Cause, we conclude--as we did in Cause No. 40003--that PSI's short-term debt should not be included in its capital structure for ratemaking purposes.

(2) Cinergy's \$200 Million Equity Infusion to PSI. PSI-IG witness Michael Gorman expressed concern over PSI's receipt of a \$200 million equity infusion from its parent company, Cinergy Corp., and recommended that certain assurances be made by PSI in order to support its claim that the equity infusion will positively enhance its credit rating. PSI-IG Ex. No. 3, p. 8. The assurance Mr. Gorman wanted was that such equity infusion will occur without increasing Cinergy's overall debt level. *Id.* Mr. Gorman argued that if Cinergy is making an equity infusion in PSI by issuing additional debt, the higher debt level of Cinergy could have as much negative credit rating impact on PSI as the positive impact credited from the increase in PSI's common equity and the decrease in its debt leverage. *Id.* Mr. Gorman noted that PSI's bond rating is heavily tied to Cinergy's bond rating and he said that analysts were concerned with Cinergy's highly leveraged capital structure. *Id.* at 9.

In response to Mr. Gorman's concern, PSI witness Ronald R. Reising, Cinergy's Vice President of Finance, noted that Cinergy has raised over \$900 million in additional equity since December 2001, and that the funds raised by Cinergy's equity issuances supported the funding of the \$200 million infusion to PSI. Pet. Ex. EE, p. 15. Similarly, in earlier testimony, PSI witness Mr. James E. Rogers, Chairman and CEO of both Cinergy and PSI, explained that Cinergy made the \$200 million equity infusion in order to strengthen PSI's balance sheet and maintain PSI's credit ratings. Pet. Ex. A, p. 29.

Regarding the \$200 million equity infusion from PSI's parent, we conclude that PSI adequately explained both the source of the funds (from the \$900 million in equity issuance funds raised by Cinergy since December 2001) and, more importantly, the use of the funds to strengthen PSI's balance sheet and preserve PSI's credit quality.

(3) Commission's Ultimate Finding Regarding PSI's Regulatory Capital Structure. Based on the foregoing, we find that the PSI capital structure to be used in this case is:

<u>Description</u>	<u>Capitalization</u>
Common Equity	\$1,603,374,000
Preferred Stock	42,333,000
Long Term Debt	1,402,254,000
Deferred Income Taxes	519,273,000
Unamortized ITC – 1970 & Earlier	193,000
Unamortized ITC – 1971 & Later	30,571,000
<u>Customer Deposits</u>	<u>9,741,000</u>
<u>Total Capitalization</u>	<u>\$3,607,739,000</u>

B. Cost of Capital. It was undisputed that PSI's evidence demonstrated that its embedded cost of long-term debt was 6.37%, preferred stock 6.11%, and customer deposits 6%, or that post-1970 unamortized investment tax credits should have the weighted cost of long-term debt, preferred stock and common equity capital. Pet. Ex. X-32 Corrected; Pet. Ex. VV-1. There was disagreement only concerning Petitioner's current cost of common equity capital. Petitioner, OUCC, and PSI-IG submitted testimony sponsoring the results of their respective cost of common equity capital studies. Staff submitted testimony concerning the results of these three studies. CAC submitted testimony addressing certain aspects of Petitioner's risk profile.

(1) Petitioner's Cost of Common Equity Evidence. In his testimony filed on March 28, 2003, Petitioner's witness Dr. Roger A. Morin recommended that PSI be allowed to earn an 11.5% return on its common equity capital, based on studies he performed using the Capital Asset Pricing Model ("CAPM"), the Risk Premium ("RP"), and Discounted Cash Flow ("DCF") methods of determining the cost of such capital. Pet. Ex. G, p. 4. During his oral testimony on June 12, 2003, Dr. Morin indicated that there had been a slight decrease in long-term interest rates and some slight changes in dividend yields from the time of his March 2003 prefiled testimony, resulting in a slight decrease in his recommended return on common equity from 11.5% to in the vicinity of 11.2% to 11.3%. Dr. Morin noted in his oral update that he would be submitting a full-fledged update before the final phase of hearings. Tr. at G109-G110. In his testimony filed as a part of PSI's August 31, 2003 Update, Dr. Morin reduced his recommended cost of common equity to 11.2%, based on more recent data. Pet. Ex. TT, pp. 2-3. Use of Dr. Morin's cost of common equity in PSI's proposed regulatory capital structure produced an overall, weighted cost of capital of 7.63%. Pet. Ex. X-32, Corrected; Pet. Ex. VV-1.

Dr. Morin performed two CAPM analyses, one using what he characterized as the "plain vanilla" CAPM and another using an empirical approximation of the CAPM ("ECAPM"). He also performed six RP analyses: (i) a historical RP analysis of the electric utility industry using Treasury bond yields; (ii) a historical RP analysis of the electric industry using A-rated utility bond yields; (iii) a historical RP analysis of the natural gas utility industry using Treasury bond yields; (iv) a historical RP analysis of the natural gas industry using A-rated utility bond yields; (v) a study of the risk premiums allowed in the electric utility industry relative to Treasury bond yields; and (vi) a study of the risk premiums allowed in the electric utility industry relative to A-rated utility bond yields. He performed DCF analyses, using both Zacks Investment Research, Inc. ("Zacks") and Value Line Investors' Service ("Value Line") dividend growth estimates, on three surrogates for the Company: (i) a group of electric utilities that make up Moody's Electric Utility Index; (ii) a group of investment-grade, vertically integrated electric utilities; and (iii) a group of natural gas distribution utilities. Pet. Ex. G, pp. 4 and 46; and Pet. Ex. TT, p. 3. His revised cost of common equity capital results ranged from 10.3% to 12.5%, averaging 11.2%. Pet. Ex. TT, p. 3.

In his testimony, Dr. Morin indicated that he believes that all of the traditional cost of equity estimation methodologies are difficult to implement when you are dealing with the fast-changing circumstances of the current electric utility industry. Dr. Morin indicated that he believes that past earnings and dividends of electric utilities are simply not indicative of the future, as historical growth rates of earnings and dividends have been depressed by eroding margins due to a variety of factors, including structural transformation to a more competitive environment. As a result, Dr. Morin testified that he believes that these historical data are not representative of the future long-term earning power of these companies. Moreover, Dr. Morin indicated that he believes that historical growth rates are not representative of future trends for several electric utilities involved in mergers and acquisitions, as these companies going forward are not the same companies for which historical data are available. Pet. Ex. G, pp. 13-14. Dr. Morin indicated that a similar conclusion applies to historical risk premiums. He testified that historical measures of risk, such as beta, are necessarily downward-biased in assessing the present fluid circumstances of the electric utility industry. Current changes in the fundamentals of electric utilities are not yet fully reflected in historical data. Pet. Ex. G, p. 14.

Dr. Morin stated that the return allowed for a public utility must necessarily reflect the investors' return requirements and be commensurate with returns on investments in other firms having corresponding risks. The allowed return, he said, should be sufficient to assure confidence in the financial integrity or strength of the firm, in order to maintain its creditworthiness and the ability to attract capital on reasonable terms. The attraction of capital standard focuses, he testified, on investors' return requirements that are generally determined using market value methods, such as the RP, CAPM or DCF methods. These market value tests define fair return as the return investors anticipate when they purchase equity shares of comparable risk in the financial marketplace. The economic basis for market value tests is that new capital will be attracted to a firm only if the return expected by the suppliers of funds is commensurate with that available from alternatives of comparable risk. Pet. Ex. G, pp. 6-8.

Dr. Morin testified that the heart of utility regulation is the setting of just and reasonable rates by way of a fair and reasonable return, and concluded that the end result of this Commission's decision in this proceeding should be to allow PSI the opportunity to earn a return on common equity capital that is: (i) commensurate with returns on investments in other firms having corresponding risks; (ii) sufficient to assure confidence in PSI's financial integrity; and (iii) sufficient to maintain PSI's creditworthiness and ability to attract capital on reasonable terms. Pet. Ex. G, p. 10.

(a) Dr. Morin's CAPM and Risk Premium Results. Dr. Morin testified that the fundamental concept underlying the CAPM is that risk-averse investors demand higher returns for assuming additional risk, and higher-risk securities are priced to yield higher expected returns than lower-risk securities. The CAPM quantifies the additional return, or risk premium, required for bearing incremental risk. It provides a formal risk-return relationship anchored on the basic idea that only market risk matters, as measured by beta. Denoting the risk-free rate by " R_F " and the return on the market as a whole by " R_M ", he stated the formula for the "plain vanilla" CAPM is as follows:

$$K = R_F + \beta(R_M - R_F)$$

Dr. Morin testified that under this formula the return required by investors (K) is made up of a risk-free component (R_F), plus a risk premium given by $\beta(R_M - R_F)$. To derive the CAPM risk premium estimate, three inputs are required: the risk-free rate (R_F), the beta (β) and the market risk premium ($R_M - R_F$). For the risk-free rate, Dr. Morin used 5.0%. For the beta, he used 0.72, and for the market risk premium, he used 6.8%. Pet. Ex. G, p. 15.

Dr. Morin explained that the basis for his 5% risk-free rate was the actual yield on long-term Treasury bonds, in February 2003, shortly before he filed his initial testimony in March of 2003. Pet. Ex. G, p. 16. Dr. Morin's market risk premium of 6.8%, was based on the results of both forward-looking and historical studies of long-term risk premiums, as shown in the Ibbotson Associates study, *Stocks, Bonds, Bills, and Inflation, 2002 Yearbook*. Pet. Ex. G, p. 20. This study, he said, compiles security returns from 1926 to 2001 and shows that a broad market sample of common stocks outperformed the income component of long-term U.S. government bonds by approximately 7.5%. Pet. Ex. G, p. 20.

To determine an appropriate beta for PSI, whose common stock is not publicly traded, Dr. Morin used two proxies -- the average beta for the electric utility industry, as reported by Value Line, and the average beta of a group of natural gas distribution utilities that he selected. Pet. Ex. G, p. 17. The average beta for the electric utility industry, he said, was 0.71 as of January 2003, and the average beta for the group of natural gas distribution utilities was 0.72 as of January 2003. Pet. Ex. G, pp. 17-18; Pet. Ex. G-2; and Pet. Ex. G-3. He observed that ongoing changes in risk fundamentals are not yet fully reflected in historical beta estimates for electric utilities and, as a result, the historic beta estimates are downward biased. Pet. Ex. G, p. 19. Given the dramatic changes occurring in the electric utility operating environment, Dr. Morin stressed the need to be forward-looking because investors consider prospective long-term risks when making investment decisions. Pet. Ex. G, p. 18. In his "plain vanilla" CAPM study,

Dr. Morin used a beta of 0.72, for what he characterized as a conservative estimate, of the beta applicable to PSI's electric utility operations. Pet. Ex. G, p. 20. Use of that beta, together with a risk-free rate of 5.0% and a market risk premium of 6.8%, produced in Dr. Morin's initial testimony a CAPM-based estimate of PSI's cost of common equity of 9.9% ($5.0\% + 0.72 \times 6.8\%$), and 10.2% with flotation costs. Pet. Ex. G, p. 23.

Dr. Morin testified that because the CAPM produces a downward-biased estimate of equity cost for companies with a beta of less than 1.00, expanded CAPMs have been developed, which relax some of the more restrictive assumptions underlying the traditional CAPM responsible for this bias and thereby enrich its conceptual validity. Pet. Ex. G, p. 23. Using this "empirical" version of the CAPM, he said that the formula becomes:

$$K = R_F + 0.25 (R_M - R_F) + 0.75 \beta (R_M - R_F)$$

Utilization of this formula produced a return on common equity of 10.4% without flotation cost, and 10.7% with flotation costs, using 5.0% for R_F , a market risk premium of 6.8% and a beta of 0.72. Pet. Ex. G, p. 23.

For his RP approach to cost of common equity, Dr. Morin examined historical risk premiums for the electric utility industry from 1931 to 2001 using Moody's Electric Utility Index as an industry proxy. Pet. Ex. G, p. 24; and Pet Ex. G-4. A risk premium was estimated by computing the actual return on equity capital for Moody's Index for each year from 1931 to 2001, using the actual stock prices and dividends of the index, and then subtracting the long-term government bond return for that year. The resulting average risk premium over the period was 5.6% over long-term Treasury bonds. Given that long-term Treasury bonds were yielding 5.0% shortly before Dr. Morin's March 2003 filing, he determined the implied cost of equity for the average electric utility using this method to be $5.0\% + 5.6\% = 10.6\%$ without flotation cost, and 10.9% with flotation costs. Pet. Ex. G, p. 24.

Dr. Morin testified that he did not adjust his risk premium results to account for PSI's risk relative to the industry because PSI's total investment risks are currently comparable to those of the electric utility industry. He noted that PSI's bonds are currently rated "A3", which is close to the industry average. Because the historical risk premium estimate from the Moody's electric utility industry group reflects the risk of the average electric utility and because PSI's total investment risks are currently comparable to those of the industry, Dr. Morin concluded that the expected equity return from the Moody's group is applicable to PSI. Pet. Ex. G, p. 24.

Using the same historical analysis described above, but substituting the yield on A-rated electric utility bonds for the yield on U.S. Treasury bonds, produced an average risk premium of 4.5% in Dr. Morin's initial testimony. Pet. Ex. G, pp. 25-26; and Pet. Ex. G-5. Adding this premium to the current yield on A-rated bonds of 7.0% produced an implied cost of equity for the average electric utility of 11.5% without flotation cost, and 11.8% with flotation costs, he said. Pet. Ex. G, p. 26.

Applying the same risk premium analysis to the natural gas utility industry produced an implied cost of equity for the average electric utility of 10.7% without flotation cost, and 11.0% with flotation costs, using long-term Treasury bonds for the risk free rate, in Dr. Morin's initial testimony. Pet. Ex. G, p. 26; and Pet Ex. G-6. Substituting the long-term bond yield for A-rated utilities for the yield on Treasury bonds produced an average risk premium of 5.0%, which, when added to the yield on A-rated bonds of 7.0% at the time of his initial testimony, produced an implied cost of equity of 12% (7.0% + 5.0%) without flotation cost, and 12.3% with flotation costs.¹ Pet. Ex. G, pp. 26-27; and Pet Ex. G-7.

Dr. Morin also examined the historical risk premiums implied in the returns on common equity ("ROE") allowed by regulatory commissions over the last decade relative to the contemporaneous level of the long-term Treasury bond yield. Pet. Ex. G, p. 27. This allowed risk premium approach produced an average ROE spread over long-term Treasury yields of 5.1% for the 1993-2002 period. Dr. Morin's data showed that there has been a rising trend of the risk premium in response to lower interest rates and rising competition and restructuring. Pet. Ex. G, pp. 27-28. These studies produced costs of common equity of 11.3% and 11.4% at the time of Dr. Morin's initial testimony, depending on whether long term Treasury bonds or A-rated utility bonds were used. Pet. Ex. G, pp. 27-30. Dr. Morin updated the CAPM and RP results of his study in October 2003, using data as of the end of August. He indicated that, as of the end of August 2003, the yield on long-term Treasury bonds was 5.3%, compared to 5.0% in February when he prepared his initial study. The following table summarizes Dr. Morin's ROE estimates obtained from his CAPM and RP studies, updated as of August 31, 2003:

Risk Premium Methods	%ROE
CAPM	10.9%
ECAPM	11.4%
Risk Premium Electric Utility Treasury Bonds	11.2%
Risk Premium Electric Utility "A"-Rated Bonds	12.1%
Risk Premium Natural Gas Treasury Bonds	11.3%
Risk Premium Natural Gas "A"-Rated Bonds	12.5%
Allowed Risk Premium Treasury Bonds	11.3%
Allowed Risk Premium "A"-Rated Bonds	11.4%

Pet. Ex. TT, p. 3.

¹ Dr. Morin stated that all of his market-based estimates (CAPM, RP and DCF) include an adjustment for flotation costs, as these costs are incurred but not expensed at the time of issue, and therefore must be recovered via a rate of return adjustment. Pet. Ex. G, p. 42. Flotation costs include a direct component in the form of compensation to the security underwriter for its marketing/consulting services, for risks involved in distributing the issue, and for operating expenses associated with the issue. Flotation costs also include an indirect component in the form of downward pressure on the stock price as a result of the increased supply of stock from the new issue, the latter frequently referred to as market pressure. Pet. Ex. G, p. 42, and Pet. Ex. G, Appendix A.

(b) Dr. Morin's DCF Results. Dr. Morin observed that according to DCF theory, the value of any security to an investor is the expected discounted value of the future stream of dividends or other benefits. Pet. Ex. G, p. 30. One widely used method to measure these anticipated benefits in the case of a non-static company, he said, is to examine the current dividend plus the increases in future dividend payments expected by investors. This valuation process, he said, can be represented by the following formula, for the traditional DCF model:

$$K_e = D_1/P_0 + g$$

K_e = investors' expected return on equity

D_1 = expected dividend during the coming year

P_0 = current stock price

g = expected growth rate of future dividends, earnings, book value

Pet. Ex. G, pp. 30-31. The idea of this market value approach, is to infer K_e from the observed share price, dividend, and from an estimate of investors' expected future growth. Pet. Ex. G, p. 31.

Dr. Morin applied the DCF model to three proxy groups for PSI: (i) Moody's electric utilities; (ii) a group of vertically integrated electric utilities that he selected; and (iii) a group consisting of widely-traded dividend-paying natural gas distribution companies, drawn from the Value Line edition of the Value Line Gas Distribution Group. Dr. Morin used the spot dividend yields reported in the January 2003 edition of Value Line. Pet. Ex. G, pp. 31-32. Because dividends are paid quarterly in practice, Dr. Morin observed, the investors' required return must be determined with a DCF model that reflects the quarterly nature of dividends payments. Pet. Ex. G, p. 33; see also, Pet. Ex. G, pp. 33-36; and Pet. Ex. G-8.

Dr. Morin explained that, as a proxy for expected growth, he examined growth estimates developed by professional analysts employed by large investment brokerage institutions. These forecasts, he said, are made by large reputable organizations, and the data are readily available to investors and representative of the consensus view of investors. Because of the dominance of institutional investors in investment management and security selection, and their influence on individual investment decisions, analysts' growth forecasts influence investor growth expectations and provide a sound basis for estimating the cost of equity with the DCF model. Dr. Morin used analysts' long-term growth forecasts contained in Zacks as proxies for investors' growth expectations in applying the DCF model. He also used Value Line's growth forecast as an additional proxy. Pet. Ex. G, p. 37.

Dr. Morin did not use historical growth rates in his DCF approach because he believes that they have little relevance as proxies for future long-term growth. Pet. Ex. G, p. 38. They are downward-biased by the sluggish earnings performance in the last five years, due to the structural transformation of the electric utility industry from a regulated monopoly to a more competitive environment. Pet. Ex. G, p. 38. He illustrated this point by adding the historical growth rates over the past five years of 2.1%, -1.3%, and 3.5% for the electric utility companies that make up Value Line's Electric Utility composite group to the average 5.0% dividend yield

prevailing in February of 2003 for the companies he examined; this produced cost of equity estimates of 7.1%, 3.7%, and 8.5%, using earnings, dividends, and book value growth rates, respectively. He observed that such estimates of common equity costs are less than, or close to, the cost of debt for these companies. Pet. Ex. G, p. 38.

Dr. Morin, in his initial testimony, stated that for the electric utilities that make up Moody's Electric Utility Index (Column 2 of page 1 of Pet. Ex. G-10), the average long-term growth forecast obtained from Zacks was 5.2% and, adding this growth rate to the average expected dividend yield of 5.8% (Column 3), produced an estimate of equity costs of 11.0% for the group, unadjusted for flotation costs or quarterly timing. Providing for the quarterly timing of dividends and adding an allowance for flotation costs to these results brings the cost of equity estimate to 11.5%, shown in Column 5 of Pet. Ex. G-10. Pet. Ex. G, p. 39. Using Value Line's long-term earnings growth forecast of 5.4%, instead of the Zacks consensus forecast, the cost of equity for the Moody's group is 11.1%, and, after provision for quarterly timing and allowance for flotation costs, the cost of equity estimate is 11.6%, as shown on page 2 of Pet. Ex. G-10. Pet. Ex. G, p. 39.

Using a group of 13 vertically integrated electric utilities (*i.e.*, publicly listed parent companies whose electric utility operating subsidiaries include both transmission and distribution ("T&D") and generation activities), and the average long-term growth forecast obtained from Zacks of 6.6% for this group, and adding this growth rate to the average expected dividend yield of 5.6%, produced an estimate of equity costs of 12.2% for the group. Pet. Ex. G, pp. 39-40; and Pet. Ex. G-11. Providing for quarterly timing of dividends and adding an allowance for flotation costs to the results of Column 4 of Pet. Ex. G-11 brings the cost of equity estimate to 12.7%. Pet. Ex. G, p. 40. Removing the impact of significant outliers from the result, to produce a truncated average, resulted in a 12.0% cost of common equity. Pet. Ex. G, p. 40.

Using Value Line's long-term earnings growth forecast of 6.5%, instead of the Zacks consensus forecast, Dr. Morin produced a cost of equity for the vertically integrated electrics of 12.0%. Pet. Ex. G, p. 40. Allowance for quarterly timing and flotation costs brought that cost of equity to 12.5%. The truncated average was 12.0%. Pet. Ex. G, p. 40.

Dr. Morin testified that using the average long-term growth forecast obtained from the Zacks corporate earnings database for the gas distribution group of 5.5%, and adding that growth rate to the average expected dividend yield of 4.7%, produced an estimate of equity costs of 10.2% for the gas distribution group. Pet. Ex. G, p. 41, and Pet. Ex. G-12. Dr. Morin added that providing for quarterly timing of dividends and flotation costs to this result brings the cost of equity estimate to 10.7%. Pet. Ex. G, p. 41. Repeating the same procedure, but using Value Line's long-term earnings growth forecast of 8.7%, instead of the Zacks consensus growth forecast, produced a cost of common equity for the gas distribution group of 13.6%, unadjusted for flotation costs. Pet. Ex. G, p. 41. Adding an allowance for flotation costs and allowing for quarterly dividend payments brought this cost of equity estimate to 13.8%, while the truncated average result was 13.6%. Pet. Ex. G, p. 41; and Pet. Ex. G-12.

Dr. Morin updated the DCF results of his study in October 2003, using data as of the end of August. He indicated that the DCF results for the vertically integrated electric and natural gas distribution utilities had decreased significantly from February when he prepared his initial study, in part due to the substantial revision in dividend taxation which lowered dividend yields (increased stock prices) and in part due to the lowering of utility growth forecast by analysts. The table below summarizes Dr. Morin's DCF estimates of the costs of common equity to PSI, updated as of August 31, 2003:

DCF Study	%ROE
Moody's Electrics Zacks Growth	10.3%
Moody's Electrics Value Line Growth	10.3%
Vertically Integrated Electrics Zacks Growth	10.6%
Vertically Integrated Electrics Value Line Growth	10.8%
Natural Gas Distribution Zacks Growth	10.4%
Natural Gas Distribution Value Line Growth	12.1%

Pet. Ex. TT, p. 3.

(2) OUCC's Cost of Common Equity Evidence. Edward R. Kaufman, OUCC's Lead Financial Analyst testified regarding PSI's financial condition, overall capital market conditions, and conducted analyses resulting in an initial recommended cost of equity of 9.15%. Mr. Kaufman subsequently updated his recommended cost of equity in October 2003 ("October Update") to 9.25%. Pub. Ex. No. 8U, p. 2. To estimate PSI's cost of equity, Mr. Kaufman employed DCF analyses as well as CAPM methodologies, using two proxy groups of electric companies as well as PSI's parent company, Cinergy. Pub. Ex. No. 8, p. 4. Mr. Kaufman's cost of equity estimates from these analyses ranged from 7.94% to 10.12% in his initial prefiled testimony, and 8.02% to 9.67% in his October Update. Pub. Ex. No. 8, p. 4; and Pub. Ex. No. 8U, Schedule 1, p. 2.

Mr. Steven C. Carver, a principal in the firm Utilitech, Inc., also testified on behalf of the OUCC, and sponsored a weighted overall cost of capital of 6.86%, based upon Mr. Kaufman's initial 9.15% recommendation. Both were later updated to 6.74% and 9.25%, respectively. Pub. Ex. No. 8, p. 4. and Pub. Ex. 3 Revised at Schedule D. OUCC witnesses Mr. Timothy Geswein and Dr. Peter M. Boerger also testified regarding PSI risk levels and required ROE in light of such risks.

Mr. Kaufman characterized Petitioner's financial condition as strong, with a common equity ratio of 47.9% (using a "traditional" securities rating capital structure) that is higher than the 24 electric utilities covered in the C.A. Turner Utility Reports ("Turner Reports"). Pub. Ex. No. 8, p. 5. His testimony quoted from Cinergy's presentations to analysts and the testimony of its CEO, Mr. Rogers, to illustrate how the Company believes it has solid liquidity, recently affirmed investment grade credit ratings, increasing cash flow based on reduced environmental

capital requirements and rate increases, and substantially reduced risk due to regulatory and legislative relief as well as improvements in system reliability. Pub. Ex. No. 8, p.6.

Mr. Kaufman observed that the interest rates for US Treasury Bonds are currently at their lowest point in 30-40 years, and indicated that the year-end 2002 yield on long-term government bonds was 4.55% -- the lowest year-end yield since 1966. He also identified the fact that the yield on "A" rated utility bonds as of August 5, 2003 was 6.64% and that their annual average yield had not been below 7% since 1968. Pub. Ex. No. 8, p. 7. Mr. Kaufman added that the current 4% prime rate is the lowest since April of 1959. These low costs of debt, he explained, should translate into lower costs of equity as well. Pub. Ex. No. 8, p. 7. Mr. Kaufman noted that the Petitioner recognized a 130 basis point decline in the long term risk free rate of return since Petitioner's last rate case (as demonstrated comparing of Dr. Morin's CAPM risk free rate of return in the last case (6.3%) and the CAPM risk free rate of return he used in the current proceeding (5.0%)).

Mr. Kaufman stated that because PSI's common stock was not publicly traded, one could not apply the DCF or CAPM model directly to PSI. Rather, PSI's cost of equity could be estimated only through the use of a proxy group. Pub. Ex. No. 8, p. 8. He first applied the DCF and CAPM analysis to Dr. Morin's selection of vertically integrated electric utilities as a proxy group. Pub. Ex. No. 8, p. 11. He also examined his own proxy group of electric utilities, using a set of screening criteria that yielded a similar but not identical selection to that used by Dr. Morin. Mr. Kaufman also used Cinergy as a proxy for PSI. Pub. Ex. No. 8, p. 11. The main difference between the criteria Mr. Kaufman used to form his proxy group and that which Dr. Morin used was that Mr. Kaufman included a combination of electric and gas companies in his proxy group and required companies he used in his proxy group to derive at least 75% of revenues from electric operations (instead of 50%, as used by Dr. Morin). Pub. Ex. No. 8, p. 11. Mr. Kaufman explained that he believes that all three of the selected proxy groups in his analysis are notably riskier than PSI because of the group members exposure to power market trading and foreign operations. Pub. Ex. No. 8, p. 13.

In doing his DCF analyses, Mr. Kaufman used the Turner Reports for current dividend yields of large publicly held utilities, converting the current yield to a forward yield by multiplying the current yield by $1 + 1/2$ of the Company's expected growth rate. He noted that this conversion methodology has been regularly accepted by the Commission in prior rate proceedings. Pub. Ex. No. 8, pp. 16-17. To estimate the growth rate, Mr. Kaufman employed both historical and forecasted growth rates of earnings, dividends and book value per share, using Value Line as the primary source of growth data. The estimated growth rates that he used were 4.35% for his primary proxy group, 4.18% for Dr. Morin's vertically integrated electric utility proxy, and 2.90% for Cinergy. Pub. Ex. No. 8, p. 18. In an effort to ensure that his analysis was conservative Mr. Kaufman did not include any negative or very low positive growth figures in his analysis. Pub. Ex. No. 8, p. 18. Mr. Kaufman reviewed his estimate of long run growth rates by reference to Reuters Multex.com and CA Turner's Quarterly Dividend Monitor reported data. Pub. Ex. No. 8, p.19.

Mr. Kaufman prepared multiple DCF analyses intended to allow him to cross check results and examine the impacts of alternative data sources. He summarized these alternative analyses in a chart within his testimony that reflects 3 and 6 month average dividend yields:

	3-month	6-month
Value Line (Primary Proxy)	9.09%	9.31%
Multex (Primary Proxy)	9.80%	10.02%
Value Line (Dr. Morin's Proxy)	9.12%	9.43%
Multex (Dr. Morin's Proxy)	9.81%	10.12%
Cinergy (Value Line)	7.94%	8.24%
Cinergy (Multex)	9.71%	10.02%

Mr. Kaufman's initial prefiled range of common equity costs for his DCF methodology ranged from 7.94% to 10.12%. Pub. Ex. No. 8, p. 21. His October Update reflected a narrower range of DCF results from 8.02% to 9.62%. Pub. Ex. No. 8U, Schedule 1, p. 1.

	3-month	6-month
Value Line (Primary Proxy)	9.15%	9.11%
Multex (Primary Proxy)	9.53%	9.49%
Value Line (Dr. Morin's Proxy)	9.17%	9.19%
Multex (Dr. Morin's Proxy)	9.59%	9.62%
Cinergy (Value Line)	8.02%	8.21%
Cinergy (Multex)	9.48%	9.67%

Mr. Kaufman employed the same proxy groups that he used in his DCF analysis and explained that he believes that the CAPM is typically less reliable than the DCF model because of challenges associated with estimating the market risk premium; issues concerning the application of arithmetic versus geometric means; and, controversies surrounding the basis selected for the risk-free return rate. Pub. Ex. No. 8, pp. 23-25.

For his CAPM risk-free rate, Mr. Kaufman reviewed short term, intermediate term and long term interest rates, ultimately using 30-year Treasury securities as an estimate of long-term yields, and giving virtually no weight to short term and intermediate term interest rates. Pub. Ex. No. 8, p. 26. In an effort to produce a result that is more consistent with the long term perspective needed for cost of equity, Mr. Kaufman used both 3-month and 6-month average yields, rather than a spot yield that might subject his results to unreasonable variability. Pub. Ex. No. 8, p. 26.

Mr. Kaufman's CAPM calculations relied primarily upon Value Line's published betas, but he also reviewed and presented two other sources of beta, derived from Security Risk Evaluation by Merrill Lynch and SmartMoney.com. Pub. Ex. No.8, p. 27. A review of the other betas presented by Mr. Kaufman demonstrates that the betas he relied upon were the largest betas from the three sources that he reviewed. Mr. Kaufman calculated both a geometric mean risk

premium and an arithmetic mean risk premium, then averaged the risk premiums, multiplied the average by beta, and combined the product with the risk-free interest rates of long term Treasury securities, producing three CAPM results. Mr. Kaufman supported his use of both the geometric and arithmetic mean risk premium by quoting from a 1982 edition of *Stocks Bonds Bills and Inflation*, by Dr. Roger Ibbotson and from two final orders of this Commission, *People's Gas and Power*, Cause No. 39315, (*Ind. Util. Reg. Comm'n*, October 21, 1992) and *Indiana American Water*, Cause No. 40103, (*Ind. Util. Reg. Comm'n*, May 30, 1996). OUCC Exhibit 8, Kaufman Direct, page 24 line 17 through page 25 line 18. Mr. Kaufman's primary CAPM proxy group relied upon a beta of 0.610, as compared with the average beta for Dr. Morin's proxy group of 0.642 and Cinergy's beta of 0.70. Pub. Ex. No. 8, p. 27.

Mr. Kaufman's CAPM study results are summarized in the following table:

	3 month	6 month
Primary proxy group	7.98%	8.09%
Dr. Morin's proxy	8.15%	8.26%
Cinergy	8.48%	8.59%

Mr. Kaufman's October Update to his CAPM analysis showed the following increases from the results of his direct testimony:

	3 month	6 month
Primary proxy group	8.81%	8.50%
Dr. Morin's proxy	8.79%	8.48%
Cinergy	9.09%	8.78%

Mr. Kaufman's cost of equity ("COE") results in his initial prefiled testimony ranged from 7.94% to 10.12%, with the midpoint of his range at 9.03%. Pub. Ex. No. 8, p. 29. Giving more weight to his DCF results, Mr. Kaufman concluded in his initial prefiled testimony that Petitioner's cost of equity was 9.15%. In his October Update he concluded that cost of equity had increased 10 basis points to 9.25%. Pub. Ex. No. 8U, p. 6, and Pub. Ex. No. 8, p. 29.

Mr. Kaufman indicated on cross-examination that, while his updated recommended cost of equity for PSI increased, the bottom-end of his updated range increased (from 7.94% to 8.02%) and the top-end of his updated range came down significantly (from 10.12% to 9.67%). Tr. at Q86-Q88. Mr. Kaufman also acknowledged that there was no specific numerical weighting assigned by him to arrive at his estimate of cost of equity for PSI. Tr. at Q88. Mr. Kaufman further acknowledged that he basically combined them and reached his ultimate conclusion concerning his recommended cost of equity for PSI. Tr. at Q88.

Mr. Kaufman testified on cross-examination that he believes that his 9.25% cost of equity for PSI should be reduced if this Commission approves PSI's proposed trackers in this proceeding, as trackers serve to reduce risk. Mr. Kaufman explained that he was not

independently testifying to that conclusion; but instead was merely summarizing the testimony of other OUCC witnesses who address the risk mitigation effects of such trackers. Tr. at Q92-Q93 and Q98. Mr. Kaufman clarified on cross-examination that his reference to PSI's proposed trackers that reduce risk, and therefore require a reduction in PSI's cost of equity, do not include PSI's existing: (i) Fuel Cost Charge tracker; (ii) Demand-Side Management tracker; (iii) Construction Work In Progress tracker; or (iv) Sulfur Dioxide Emission Allowance tracker. Tr. at Q93-Q97. Instead, Mr. Kaufman testified that he was only referring to PSI's newly proposed: (i) Nitrogen Oxide Emission Allowance tracker; (ii) Midwest ISO Management Cost and Revenue Adjustment tracker; and (iii) Purchased Power tracker. Tr. at Q97-Q98.²

Mr. Kaufman noted that Dr. Morin's proxy groups contain some electric utilities that were not comparable to PSI. Pub. Ex. No. 8, pp. 36-37. Mr. Kaufman also explained how Dr. Morin's exclusive reliance on forecasted earnings per share in arriving at a growth rate for the DCF method, while ignoring actual growth in dividends per share and book value per share tended to overstate the cost of equity. Pub. Ex. No. 8, pp. 37-38. Mr. Kaufman was also critical of Dr. Morin's method for increasing the actual current dividend yield to a future yield by multiplying the current yield by one plus the Company's expected growth rate, rather than one plus one-half the expected growth rate. Mr. Kaufman supported his one plus one-half growth position by quoting from prior Commission orders and argued that Dr. Morin's full year growth adjustment inappropriately assumes a full year's worth of growth, while a half-year growth adjustment for converting a current yield into a forward annual yield for the DCF model is more appropriate. Pub. Ex. No. 8, pp. 37-39. He was further critical of the fact Dr. Morin's growth rate forecasts were applicable to the next 5-7 years, rather than in perpetuity. Pub. Ex. No. 8, p. 39.

Mr. Kaufman also responded to Dr. Morin's argument that many electric utilities have experienced low or negative growth over the last several years, and criticized Dr. Morin's use of Green Mountain Power's forecasted earnings rate of 19.5% per year. Mr. Kaufman explained that historical data can be used in determining a growth rate for a DCF analysis only if such dramatic "outliers" are removed from the analysis. Pub. Ex. No. 8, pp. 40-42. Mr. Kaufman defended the use of historical data and criticized Dr. Morin's analysis in exhibit RAM-9 which purportedly demonstrates that it is inappropriate to use historical growth rates. Mr. Kaufman noted that many of the companies used by Dr. Morin in RAM-9 are not used by Dr. Morin in his DCF analysis, and contends that if one removes outliers and uses reasonable judgment any concerns about using historical growth rates can be alleviated. Mr. Kaufman added that at the current retention ratios employed by most utilities, the dividend growth rates predicted by Dr. Morin's DCF models are not supportable. Pub. Ex. No. 8, pp. 46-47.

² Mr. Kaufman stated that he had not quantified a specific basis point adjustment to his recommended 9.25% cost of equity for PSI if this Commission approved any combination of those three proposed trackers. Tr. at Q98-Q100. Mr. Kaufman also stated during cross examination that he had asked PSI to quantify the value of PSI's proposed trackers in a data request and that PSI had failed to provide him with a response on that issue. Tr. at Q98.

Mr. Kaufman further criticized Dr. Morin for: (a) relying exclusively on intermediate-term forecasts in earnings per share to estimate the growth rate in dividends for his DCF model; (b) his failure to use historical growth data; and (c) adjusting his DCF models by 20 basis points to account for the quarterly timing of dividends.³ Mr. Kaufman also disagreed with the market risk premium used by Dr. Morin in his CAPM analysis, as well as Dr. Morin's exclusive reliance on the arithmetic mean return to estimate his historic risk premium. Pub. Ex. No. 8, pp. 51 and 53. Mr. Kaufman noted that Dr. Morin's reliance on income returns, rather than total returns, overstates the market risk premium in his CAPM analysis. Mr. Kaufman explained that, while Dr. Morin relies on Ibbotson Associates ("Ibbotson") to support his use of income returns versus total returns, Mr. Kaufman believes that Ibbotson's conclusion is illogical on this point and actually supports a lower, rather than higher, risk premium. Pub. Ex. No. 8, pp. 53-55.

Mr. Kaufman further testified in response to Dr. Morin's estimate of a prospective market risk premium, and explained that Dr. Morin's analysis was based on a DCF model, adjusted to capture a full year's future growth, which overstates the forward yield. Mr. Kaufman indicated that Dr. Morin's model compounds that error by inappropriately adjusting for quarterly timing of dividends. He added that Dr. Morin's aggregate market data produces an unusually high dividend yield of 2.5%, particularly in relation to Value Line's calculated averages of 2.1%. Pub. Ex. No. 8, pp. 55-57. He was further skeptical of Dr. Morin's 2.5% figure because his calculation included non-dividend paying companies, whereas Mr. Kaufman's Value Line data excluded those companies, logically meaning Dr. Morin's results should be lower, not higher, than Mr. Kaufman's. Mr. Kaufman questioned Dr. Morin's exclusive reliance on long-term government yields, as a proxy for his risk-free rate of return, claiming that it is also appropriate to consider other maturities as a proxy for the risk free rate of return. Pub. Ex. No. 8, p. 57.

Mr. Kaufman also responded to Dr. Morin's testimony regarding an upward adjustment to beta for delayed recognition within beta of changes in risk fundamentals. Mr. Kaufman noted that Dr. Morin made a similar argument in PSI's last rate case and indicated that Cinergy's beta has declined since PSI's last rate case. Mr. Kaufman also indicated that he believes that Dr. Morin's ECAPM analysis is redundant, and notes that this type of analysis was rejected by the Commission in PSI's last rate case as the use of adjusted beta already increases beta for companies with a beta that is below 1.0. Pub. Ex. No. 8, p. 64.

With respect to Dr. Morin's RP models, Mr. Kaufman indicated that Dr. Morin's failure to include 2002 data in his risk premium analysis very likely serves to artificially overstate the historical risk premium. Pub. Ex. No. 8, pp. 65-66. He also noted that most of Dr. Morin's RP models were biased as they are based on an arithmetic mean risk premium. Pub. Ex. No. 8, p. 67. Mr. Kaufman further indicated that Dr. Morin's risk premium models do not react to changes in capital markets and should be given little if any weight.

³ Mr. Kaufman noted that the Commission has accepted the quarterly dividend adjustment in prior cases, but indicated that he believes that if this approach is utilized a corresponding downward adjustment should be made to account for the timing of how a utility earns its profits (and invests them during the year). Pub. Ex. No. 8, pp. 48-49.

Mr. Kaufman challenged Dr. Morin's proposed 30 basis point upward adjustment to the cost of equity to account for, what he believes to be, overstated flotation costs. Mr. Kaufman explained that actual flotation costs associated with Cinergy's most recent stock issuance amounted to \$1.55 million, or less than 1% of the stock issue. Mr. Kaufman stated that while he believes that some adjustment for flotation costs is merited, he recommends the adjustment be only 5-10 basis points. Mr. Kaufman stated that the flotation cost adjustment proposed by the OUCC would increase PSI's net operating income ("NOI") by approximately \$1.1 million per year whereas the Petitioner's proposed adjustment would increase PSI's NOI by approximately \$5.5 million per year. Pub. Ex. No. 8, pp. 75-76. Mr. Kaufman noted that the Commission rejected Dr. Morin's overstated estimate of flotation costs in the last PSI rate case, Cause No. 40003. Pub. Ex. No. 8, pp. 75-77.

OUCC witness Timothy Geswein testified regarding the general business risk levels faced by PSI and in response to observations made by PSI witness Rogers regarding industry risks. Mr. Geswein explained that, as a regulated monopoly energy provider, PSI Energy is insulated from many risks and feels few direct impacts from national economic events of the type referenced by Mr. Rogers. He characterized PSI Energy as a "low-risk regulated, franchise monopoly" for which even the Company's regulatory risks have been mitigated.

OUCC witness Dr. Peter Boerger testified in response to Mr. Reising regarding his analysis and discussion regarding PSI's risk profile, and noted that every business faces risks, but that the state's grant of a monopoly service territory to PSI causes electric utilities to be viewed as low risk enterprises despite the factors raised by Mr. Reising. Pub. Ex. No. 5, pp. 3-4. Dr. Boerger also indicated that legislation enacted since PSI's last rate case has favorably affected the Company's risk profile. Changing the Fuel Adjustment Charge ("FAC") earnings test under IC 8-1-2-42.3 has reduced the probability that PSI would return excess earnings to ratepayers, compared to the situation that existed during the last rate case. In 2002, new financial incentive and cost recovery mechanisms for coal-fired investment and related environmental expenditures were enacted within IC 8-1-8.8 that may allow PSI to track increased depreciation and operation and maintenance ("O&M") for its new NOx investments. These legislative changes should be considered as reducing the company's cost of equity below that which would be required in the absence of such legislation. Pub. Ex. No. 5, pp. 12-13.

Dr. Boerger also explained the need to segregate the risks imposed on PSI Energy by its parent in determining the utility's cost of capital. He notes Cinergy's involvement in recent years with relatively risky merchant activities and the role of PSI to sponsor a large power trading operation, explains how Standard & Poors attributed such higher-risk nonregulated activities to both Cinergy and PSI in its publications. Pub. Ex. No. 5, p. 14. Dr. Boerger noted that a substantial share of the risk facing the company has been mitigated, and the cost of that mitigation is being paid already by Indiana consumers. Pub. Ex. No. 5, p. 15.

(3) PSI-IG's Cost of Common Equity Evidence. Michael Gorman testified for the PSI-IG and recommended that PSI's cost of common equity capital should be in the range of 9.7% to 10.3% and that PSI's authorized return on equity in this case not exceed 10%.

PSI-IG Ex. No. 3, p. 2. He based his recommendation on a DCF analysis (10.1%), an RP analysis (9.9%-10.3%), and a CAPM model (9.7%). PSI-IG Ex. No. 3, p. 2. He stated that Cinergy's use of leveraging and entry into more risky power/gas trading and a merchant generation operation had created credit rating pressure on PSI. Mr. Gorman maintained that rates should not be set in a way that will allow PSI to contribute dividends in excess of reasonable levels to its parent company to help accelerate the pay-down of parent company debt related to failed unregulated business investments. PSI-IG Ex. No. 3, p. 3. On cross-examination Mr. Gorman acknowledged that he was not aware of any year since the formation of the Cinergy Corp. holding company structure in which the Cinergy operating companies had funneled up to Cinergy Corp. cash in excess of the Cinergy Corp. annual dividend. Tr. at T35-T36. Mr. Gorman agreed with PSI's proposed capital structure, consisting of common equity, preferred stock and long-term debt, but not short-term debt. PSI-IG Ex. No. 3, p. 7.

Mr. Gorman testified that the *Bluefield* and *Hope* cases have established that the return for a public utility should: (i) be sufficient to maintain financial integrity; (ii) attract capital under reasonable terms; and (iii) be commensurate with returns investors could earn by investing in other enterprises of comparable risk. PSI-IG Ex. No. 3, p. 11. Mr. Gorman also testified that the utility's cost of common equity is the return that investors expect, or require, in order to make an equity investment in the utility. PSI-IG Ex. No. 3, p. 11. Mr. Gorman also testified that it is extremely difficult, if highly impractical, to eliminate all higher equity return component premiums to compensate for deregulated market risks. PSI-IG Ex. No. 3, p. 13.

In doing his DCF analysis and RP estimates for PSI, Mr. Gorman used the group of electric utility companies that Dr. Morin selected for his analysis, agreeing that this group is reasonably comparable to PSI. PSI-IG Ex. No. 3, p. 12, and PSI-IG Ex. No. 3, Schedule 1. In his constant growth DCF analysis, Mr. Gorman relied upon the average of the weekly high and low stock prices over a 13-week period ending July 14, 2003. PSI-IG Ex. No. 3, p. 14. He also used the most recently paid quarterly dividend, as reported in Value Line, which he annualized and adjusted for the next year's growth to produce the adjusted dividend rate that he used. PSI-IG Ex. No. 3, p. 14.

With respect to dividend growth rates, Mr. Gorman relied on a consensus of professional security analysts as a proxy for investor consensus of future dividend growth rate expectations. Mr. Gorman testified that security analyst growth estimates have been shown to be more accurate predictors of future returns than growth rates derived from historical data. He used the average of three sources of growth rate estimates, including Zack's Detailed Analyst Estimates, First Call and Multex.com Investors. The consensus estimate was a simple arithmetic average or mean of surveyed analysts' earnings growth forecasts.

The result of his DCF analyses was a cost of common equity of 10.1%. PSI-IG Ex. No. 3, p. 16. He said that his comparable group average five-year growth rate of 4.65% is sustainable over an indefinite period of time, because it does not exceed the growth rate of the overall U.S. economy, which, is estimated to grow at a rate of 5.6%. According to Mr. Gorman, this represents a ceiling for a sustainable growth rate for a utility over an indefinite period of time. PSI-IG Ex. No. 3, p. 16.

With respect to Mr. Gorman's RP analysis, his first such model estimated the difference between the required return on utility common equity investments and U.S. Treasury bonds over the period 1986 through 2002, using regulatory commission authorized common equity returns for electric utility companies. PSI-IG Ex. No. 3, p. 17. His second equity RP method was based on the difference between regulatory commission authorized returns on common equity and contemporary A- rated utility bond yields, over the period 1986 through July, 2003. PSI-IG Ex. No. 3, p. 17. This analysis, he said, showed an average indicated equity RP of authorized electric utility common equity returns over U.S. Treasury bonds of 4.86%. PSI-IG Ex. No. 3, p. 17 and Schedule 5. Mr. Gorman testified that his average indicated equity RP authorized electric utility common equity returns over contemporary Moody's utility bond yields was 3.43%, and, removing the two highest and lowest premium estimates, produced an equity RP in the range of 3% to 4% over that period. PSI-IG Ex. No. 3, p. 18 and Schedule 6. Using the long-term Treasury bond yield of 5.3% (projected by Blue Chip Financial Forecasts) and an equity risk premium of 4.4% to 5.6%, produced an estimated common equity return in the range of 9.7% - 10.9%, with a midpoint estimate at 10.3%. PSI-IG Ex. No. 3, p. 18. Adding his equity risk premium of 3% to 4% over utility bond yields to the average yield on a utility bond with an A-rating for a 13-week period ending July 11, 2003 of 6.37%, produced a cost rate for common equity in the range of 9.4% to 10.4%. PSI-IG Ex. No. 3, p. 18.

With respect to his CAPM approach, Mr. Gorman started with the Blue Chip Financial Forecasts for projected long-term Treasury bond yields of 5.3% for his risk-free cost rate. PSI-IG Ex. No. 3, p. 20. He used a beta of 0.64 obtained by averaging the group betas for his comparable group of electric utilities. PSI-IG Ex. No. 3, p. 21 and Schedule 8. He derived two market based premium estimates, one forward looking and one based on long-term historical average. He estimated the expected return on the Standard & Poor's ("S&P") 500 by adding an expected inflation rate of 2.2%, to the long-term historical arithmetic average real return on the market. He produced an estimated return of 9.4%. PSI-IG Ex. No. 3, p. 21. The market premium is the difference, he said, between the 11.8% expected market return and his 5.3% risk-free estimate, or 6.5%. PSI-IG Ex. No. 3, p. 21. Using Ibbotson's arithmetic average of achieved total returns on the S&P 500 of 12.7% and the total return on long-term Treasury bonds of 5.7%, produced an indicated equity risk premium of 7.0%. His CAPM estimated return on common equity ranged from 9.5% to 9.8%. PSI-IG Ex. No. 3, p. 22. He concluded that PSI's cost of common equity was in a range from 9.7% to 10.3%. PSI-IG Ex. No. 3, p. 22.

Mr. Gorman was critical of Dr. Morin's original recommendation of an 11.5% cost of common equity. PSI-IG Ex. No. 3, pp. 24-25. Mr. Gorman said that in his CAPM analysis Dr. Morin used a beta of 0.72 which was considerably higher than the actual Value Line beta of 0.65 for his investment grade vertically integrated electric utility companies. His use of a beta higher than his electric utility sample increased his result. PSI-IG Ex. 3 pp. 25-26. Mr. Gorman also took issue with Dr. Morin's 30 basis point adjustment for flotation costs. *Id.* Mr. Gorman also did not accept Dr. Morin's ECAPM analysis. Mr. Gorman testified that that the Value Line beta Dr. Morin relied on to estimate a utility beta is already adjusted for the tendencies of betas lower than one to increase toward a market beta of one over time. Thus Dr. Morin's adjustment is redundant. PSI-IG Ex. No. 3, p. 26.

With respect to Dr. Morin's historical RP analysis, Mr. Gorman was critical of Dr. Morin's achieved return on utility stocks, compared with Treasury securities and utility bond yields. PSI-IG Ex. No. 3, p. 27. He said that the yields on Treasury securities and utility bonds have been depressed by the dramatic decrease in interest rates over the last 20 years. PSI-IG Ex. No. 3, pp. 27-28. He stated further that the achieved returns on the utility stocks and yields on utility bonds over the last several years have been driven by high expectations of large profits produced by competitive operations related to the wholesale market trading and merchant plant development. PSI-IG Ex. No. 3, p. 28. This, he said, gave the indicated equity risk premium a bias upward. PSI-IG Ex. No. 3, p. 28.

Mr. Gorman also took issue with Dr. Morin's computation of an allowed risk premium on electric utilities. He said that Dr. Morin arbitrarily selected the time period 1993 through 2002 to estimate the spread between regulatory-authorized returns on equity and contemporary utility bond yields and Treasury bond yields. Mr. Gorman also questioned the implication in Dr. Morin's approach, that a utility's equity risk increases with decreases in interest rates. Mr. Gorman further testified that he thought that Dr. Morin's additions of an equity risk premium to contemporary utility bond yields may overstate a fair return for regulated utility operations. PSI-IG Ex. No. 3, p. 30. He said that current bond yields are affected by the much higher risk of non-regulated energy markets, and said that the average authorized return on equity above contemporary energy industry bond yields produces a return on equity that may exceed that appropriate for lower risk regulated operations. PSI-IG Ex. No. 3, pp.30-31.

In discussing Dr. Morin's DCF analyses, Mr. Gorman claimed that the information supporting Dr. Morin's analyses was stale and needed to be updated. PSI-IG Ex. No. 3, p. 33. Mr. Gorman criticized Dr. Morin's proposal for a 30-basis point flotation cost adjustment. Mr. Gorman said that PSI should not be accorded flotation costs, because it is a wholly-owned subsidiary of Cinergy and does not sell its stock to the public. PSI-IG Ex. No. 3, pp. 34-35. He added, however, that if it is reasonable to allocate a portion of Cinergy's flotation expenses to PSI, PSI should be required to account for those expenses. PSI-IG Ex. No. 3, p. 35. Mr. Gorman also questioned Dr. Morin's proposal for a 20-basis point adjustment to reflect quarterly dividend compounding, claiming that it provides investors an opportunity to earn the dividend reinvestment return twice, once through the authorized return on equity and a second time when dividends are received by investors and actually reinvested by investors. PSI-IG Ex. No. 3, p. 33.

Mr. Gorman testified that he believes a commission should exercise its judgment, based on the arguments and positions taken by the expert witnesses, in determining the fair rate of return for the utility. Tr. at T27. In this regard, Mr. Gorman indicated that relevant considerations for a commission in determining a utility's fair rate of return include the utility's financial condition, the prospects for a credit rating downgrade for the utility, and the utility's performance in rendering utility service. Tr. at T28-T30. Mr. Gorman further testified that, in determining the fair rate of return for a utility, a commission should be forward-looking and consider business, financial, regulatory, and other issues likely to be experienced by the utility while the rates approved are expected to be in effect. Tr. at T29. Mr. Gorman acknowledged

that the fair rate of return authorized for a utility could be different than the estimated cost of capital for the utility. Tr. at T30-T31.

(4) CAC Evidence on Cost of Equity. Dr. Michael F. Sheehan testified on behalf of CAC and addressed certain factors which are relevant to PSI's risk and ROE. He noted that in regulatory proceedings, risk has a significant impact on the determination of the return on equity and provided an assessment of how the industry and PSI's risks have changed, with specific reference to the many supportive and risk-reducing regulatory structures that have been adopted by this Commission. While Dr. Sheehan did not sponsor specific calculations of risk premiums or adjustments to PSI's return on equity, his testimony provides an overview of PSI's level of risk that is relevant to our overall consideration of the fair return for PSI.

Dr. Sheehan noted that he believes that since PSI's last rate case in Cause No. 40003, Cinergy has adopted a policy of gradually shifting risk from the holding company to PSI ratepayers. This was done through requests for preapprovals of investment expenditures; preapprovals of cost deferrals to subsequent rate cases; and, the adoption of a growing number of trackers, such that much of the revenue requirement is now governed by trackers. CAC Ex. C, p. 31. He explained that the regulatory mechanisms have shifted risks to ratepayers as, without the use of trackers, cost increases occurring between rate cases would have to be absorbed by the utility. With the use of trackers cost increases are automatically passed on to ratepayers in higher rates as they occur. These shifts in risk, according to Dr. Sheehan, argue for elimination of some of the risk premium received by the utility in the ROE determination. CAC Ex. C, p. 33.

Mr. Bruce Biewald also testified on behalf of CAC on the subject of PSI risk exposure and return on equity. Mr. Biewald indicated that the Commission should consider, in determining whether the Company's requested ROE is excessive, the risk reduction effect that has occurred due to the Company's existing and proposed trackers and pre-approved costs; and, whether the approval of the Company's merchant plant acquisition acted to shift risks from Cinergy to PSI customers regarding the investment in those plants. CAC Ex. B, p.7.

Mr. Biewald explained that he believes the Company's various special rate riders and its CWIP tracker have allowed the recovery of 8.4% of its operating income during the test year. CAC Ex. B, pp. 8-9. He noted that in addition to the existing Riders 60, 62, 63, 66 and 67, PSI is seeking approval for new proposed trackers in the form of Rider 68 (MISO), Rider 69 (NOx) and Rider 70 (Purchased Power). CAC Ex. B, p. 9. According to Mr. Biewald, the Company's rate tracking mechanisms effectively reduce its shareholders' exposure to risk in that they: (1) reduce regulatory lag; (2) allow certain significant categories of costs (e.g. environmental costs) that increase to be put into rates without consideration of other, related categories of costs (e.g. cost of capital) that decrease; (3) tend to defer general rate cases with their attendant risks and costs; and, (4) tend to decrease the scope and detail of regulatory review of tracked costs compared to a general rate case. In addition, Mr. Biewald noted, "such riders can, in many situations, greatly reduce volatility of net earnings on a monthly, quarterly and annual basis." CAC Ex. B, p.10.

With respect to Dr. Morin's peer group of utility companies used to calculate his ROE, Mr. Biewald noted that PSI has the highest number of trackers among the 26 utility companies, and is one of only two companies that have trackers for perhaps the four most significant cost categories that are commonly tracked: 1) fuel adjustment; 2) purchased power; 3) environmental cost recovery; and, 4) emission allowances. According to Mr. Biewald's analysis, the large number of PSI's rate adjustment trackers relative to its industry peers suggest that the Company is relatively well protected against many risks to which other utilities are often exposed. CAC Ex. B, p.11

(5) Testimonial Staff's Testimony. In his testimony Mr. Inman indicated that he did not prepare an independent cost of equity study for PSI, choosing instead to analyze the cost of equity estimates of PSI and other parties in the case. IURC Staff Ex. No. 1, p. 3. Mr. Inman agreed with Dr. Morin's 20-basis point quarterly dividend adjustment to reflect the fact that current stock prices, which reflect expected quarterly dividend payments, are lower than the standard DCF result suggests. IURC Staff Ex. No. 1, p. 5. Logic dictates, he said, that an upward adjustment to the standard DCF model would correct the understatement. IURC Staff Ex. No. 1, p. 5. Mr. Inman also testified that, in the DCF model, the current dividend yield must be adjusted to reflect the expected dividend yield. Mr. Inman indicated that there are two common methods which calculate the expected, or forward, dividend yield -- full-year and half-year. Citing recent Commission proceedings, Testimonial Staff recommended use of the half-year method of calculating forward dividend yield. IURC Staff Ex. No. 1, p. 5. Mr. Inman further noted that Dr. Morin's DCF results were higher in his March 2003 prefiled testimony than those produced by other methods of determining the cost of common equity capital.⁴ Mr. Inman stated that Staff's final DCF recommendations begin with Dr. Morin's current yield data and growth forecasts for each of his DCF calculations and adjust for the half-year dividend yield method, a quarterly dividend adjustment and direct flotation costs. IURC Staff Ex. No. 1, p. 7.

With respect to the CAPM model, Testimonial Staff used the February to July 2003 six-month average of 30-year Treasury bond yields to obtain a rate of 4.86%. This average was used to smooth out the recent swings in long-term bond yields. IURC Staff Ex. No. 1, p. 8. By comparison, Dr. Morin used 5.0% in his initial testimony, and 5.3% in his updated testimony. Pet. Ex. G, p. 16; and Pet. Ex. TT, p. 3. Mr. Inman anticipated the higher interest rate in Dr. Morin's update and stated in his September 2003 prefiled testimony that considering the bottoming out of interest rates and the recent upswing in long-term bond yields, it would not be surprising if Dr. Morin chooses to leave his estimate as it is or even revises it upward. IURC Staff Ex. No. 1, p. 8.

Mr. Inman indicated that Testimonial Staff did not dispute Dr. Morin's use of the 0.72 Value Line suggested beta in his CAPM calculations. IURC Staff Ex. No. 1, p. 9. For the market rate of return, Staff agreed with Dr. Morin's use of the period beginning 1926 and extending through the most recent available year as this takes into account nearly all economic scenarios and is most representative of all possible returns. IURC Staff Ex. No. 1, p. 9.

⁴ However, this changed in Dr. Morin's October 2003 update which showed that his October 2003 DCF results were below his October 2003 CAPM and RP results. Pet Ex. G, p. 46; and Pet. Ex. TT, p. 3.

However, while supporting this approach, Mr. Inman observed that Dr. Morin failed to include 2002 data in his calculation of the market risk premium. To adjust for this deficiency, Mr. Inman included 2002 data in his market risk premium calculation to ensure that his calculation accurately reflects data extending through this period. Mr. Inman stated that Testimonial Staff supported giving weight to both the arithmetic and geometric means of computing annual growth rates. IURC Staff Ex. No. 1, pp. 12-13.

Mr. Inman said that Testimonial Staff believes that the proper market risk premium to be used in this case should include total return on long-term Treasury bonds, and not just income thereon. Adjusting Dr. Morin's results for use of total return on long-term bonds, and giving equal weight to the arithmetic mean and the geometric mean market risk premiums, Testimonial Staff arrived at a market risk premium of 5.55%. IURC Staff Ex. No. 1, p. 14. Testimonial Staff used Dr. Morin's 6.1% prospective risk premium, resulting in a CAPM market risk premium input of 5.83%, which produced a CAPM estimate of PSI's cost of common equity of 9.05%. Mr. Inman said that the primary reasons for the 85 basis point difference between Staff's and Dr. Morin's original unadjusted CAPM estimates are: (i) Staff's use of then more current, lower risk-free rates; (ii) Staff's use of lower market risk premium due to inclusion of 2002 data; (iii) Staff's equal weighting of the geometric and arithmetic mean risk premiums; and (iv) Staff's use of 30-year Treasury bond total return. IURC Staff Ex. No. 1, p. 15.

With respect to flotation costs, Staff recommended allowing one-half of Dr. Morin's proposed flotation cost adjustment, which would amount to a 15 basis point adjustment to the CAPM and RP methods, and a 2.5% gross up of the dividend yield produced by the DCF method. IURC Staff Ex. No. 1, p. 17. Testimonial Staff recommended rejection of Dr. Morin's ECAPM calculation on the grounds that the Value Line beta already contains an adjustment of beta, therefore it was unnecessary for Dr. Morin to make a further adjustment of beta. IURC Staff Ex. No. 1, p. 17.

With respect to the RP method Mr. Inman, in conformity with previous Commission orders, adjusted Dr. Morin's RP calculations by equally weighting the arithmetic and geometric mean risk premium, using Dr. Morin's source data. IURC Staff Ex. No. 1, p. 18. Testimonial Staff then adjusted Dr. Morin's flotation costs to allow for direct costs only and updated his 30-year Treasury bond data and A-rated utility bond yields. IURC Staff Ex. No. 1, p. 18. Testimonial Staff accepted Dr. Morin's statistical analyses of hundreds of risk premiums allowed by state regulatory commissions over a 10-year period compared with long-term Treasury bond yields, but observed that Dr. Morin's results do not account for the differences in risk factors that may have been considered by the various state commissions in the hundreds of data points. IURC Staff Ex. No. 1, pp. 18-19. For that reason, Testimonial Staff said, the results of Dr. Morin's allowed RP calculations are questionable. IURC Staff Ex. No. 1, p. 19.

Giving somewhat less weight to the DCF results than Dr. Morin, Testimonial Staff produced lower results, concluding that a reasonable cost of common equity would be in the range of 10.25% to 10.50%, which, as Mr. Inman observed, falls in the lower end of Dr. Morin's suggested range of 10.2% to 13.6%. IURC Staff Ex. No. 1, p. 19. In his oral direct testimony, Mr. Inman updated his reasonable range of cost of equity for PSI to 10.35% to 10.55%. Tr. at

T51-T52. Mr. Inman noted that Staff offered several different weighting mechanisms for consideration to provide this Commission with options based upon previous Commission orders which have given less weight to the DCF method. IURC Staff Ex. No. 1, p. 19. Staff's different weighting mechanisms included a 8%/46%/46% CAPM/RP/DCF (excluding ECAPM) weighting which produced a top-end 10.96% cost of equity, and a 40%/40%/20% CAPM/RP/DCF (excluding ECAPM) weighting which produced a low-end 10.24% cost of equity. IURC Staff Ex. No. 1, p. 20.

Mr. Inman observed that Regulatory Research Associates, Inc. ("RRA") tracks major rate case decisions by state commissions. Mr. Inman testified that RRA reported that the average cost of equity authorized by state commissions for the electric industry for the first six months of 2003 was 11.38%, and 11.16% for all of 2002. IURC Staff Ex. No. 1, p. 22. Mr. Inman stated on cross-examination that RRA reported that the average cost of equity authorized by state commissions for the electric industry for the first nine months of 2003 was 10.91%, which could be 11% if you excluded the 9.5% awarded to New Jersey Central Power & Light.⁵ Tr. at T106-T107. Mr. Inman observed that Dr. Morin's original 11.5% recommendation falls just above the midpoint, and Staff's recommended range falls in the lower end, of the range RRA reported thus far for 2003. IURC Staff Ex. No. 1, p. 22.

Observing that the determination of an exact investor required return on equity is impossible, Mr. Inman said that finding a range of reasonableness for ROE is more realistic. IURC Staff Ex. No. 1, p. 22. He observed that experts and non-experts alike will agree that the results of the CAPM, RP and DCF methods are driven by the inputs, of which there are countless possibilities and legitimate arguments regarding the appropriate inclusion or exclusion of various inputs. IURC Staff Ex. No. 1, pp. 22-23. Mr. Inman testified that Mr. Gorman also used DCF, RP and CAPM calculations in formulating his cost of equity recommendation of 9.7% to 10.3%, and noted that experts that use different inputs into the same formulas can arrive at different final cost of equity ("COE") estimates. IURC Staff Ex. No. 1, pp. 23-24. Mr. Inman concluded with the observation that, as the Commission has noted in other cases, the Petitioner has recommended a high COE and all opposing experts have recommended much lower COE's. The true COE most probably lies somewhere in between. IURC Staff Ex. No. 1, p. 24.

Mr. Inman stated in his prefiled testimony that PSI's credit rating downgrade risk could increase as a result of this rate case. IURC Staff Ex. No. 1, p. 24. In this regard, Mr. Inman stated that a downgrade of PSI's credit rating would lead to increased debt costs, a reduction in financing options, and ultimately higher costs to consumers. IURC Staff Ex. No. 1, p. 25. Therefore, Mr. Inman testified that it is important to PSI and to its customers that this Commission's final order in this Cause, regardless of the findings on cost of capital and rate of return, recognizes PSI's strengths and position relative to its industry peers. IURC Staff Ex. No. 1, p. 25. Mr. Inman noted that conspicuously absent from Petitioner's case-in-chief testimony was an analysis of the impact of PSI receiving something less than its requested increase, such as

⁵ We note that this August 1, 2003 decision was premised, in large part, in response to quality of service problems of the utility and that the 9.5% was only put into effect on an interim basis. See, 2003 N.J. PUC LEXIS 253 and 2003 N.J. PUC LEXIS 243.

50% or 75%.⁶ Mr. Inman concluded that he believes that approval of a rate increase for PSI which is less than the full amount requested, but is an amount that could still be considered “substantially all” will not endanger PSI’s credit rating. IURC Staff Ex. No. 1, p. 26.

(6) Petitioner’s Rebuttal Evidence on Cost of Equity.

(a) Rebuttal Concerning OUCC’s Cost of Common Equity Evidence. Dr. Morin testified for PSI in rebuttal to the cost of common equity capital testimony submitted by other parties. Dr. Morin observed that Mr. Kaufman’s recommended ROE of 9.15% (prior to being updated to 9.25%) was substantially under the average returns on common equity allowed in the electric and natural gas utility rate cases in the first six months in 2003 of 11.40% and 11.38%, respectively, as reported by RRA in its survey of regulatory decisions dated June, 2003. Pet. Ex. No. FF, p. 15. Dr. Morin also observed that it was well under the average returns of 11.6% and 11.7% allowed on common equity for the utilities in Mr. Kaufman’s sample groups as reported in the Turner Reports survey for September, 2003. Pet. Ex. FF, p. 15. Dr. Morin concluded that Mr. Kaufman’s recommendation was: (a) well outside the zone of currently allowed rates of return for Mr. Kaufman’s comparable companies; (b) well outside the mainstream of recently authorized returns for electric and natural gas utilities allowed by state regulatory agencies throughout the country; and (c) would be among the lowest, if not the lowest, in the country if adopted. Pet. Ex. FF, p. 16.

Dr. Morin testified that he believes that Mr. Kaufman’s dividend yield calculation in his DCF analysis understate flotation costs by 20-25 basis points. Pet. Ex. FF, pp. 16-17. Mr. Kaufman’s flotation cost approach, Dr. Morin observed, assumes that all past flotation costs associated with past securities issues have been recovered, which he said is not the case here. Pet. Ex. FF, p. 17. Because such costs were not expensed in the past, Dr. Morin said, investors should be compensated for flotation costs for the entire time that these initial funds are retained by the firm, on an on-going basis. Pet. Ex. FF, pp. 17-18. In theory, Dr. Morin said, flotation costs could be expensed and recovered through rates as they are incurred. However, this procedure is not considered appropriate here because the common equity capital raised in a given stock issue remains in the utility’s common equity account and continues to provide benefits to ratepayers indefinitely. Pet. Ex. FF, p. 18. He reiterated that unlike the case of bonds, common stock has no finite life, so that flotation costs cannot be amortized and must, therefore, be recovered via an upward adjustment to the allowed return on equity. Pet. Ex. FF, p. 18.

Dr. Morin also disagreed with Mr. Kaufman’s dividend yield calculation in his DCF analysis, because Mr. Kaufman multiplied the current dividend yield by one plus one half the expected growth rate ($1 + 0.5g$), rather than by one plus the expected growth rate ($1 + g$), thereby understating the return expected by the investor. Pet. Ex. FF, p. 19. Dr. Morin explained that the fundamental assumption of the annual DCF model used by Mr. Kaufman is that dividends are received by investors annually, at the end of each year, and that the first dividend is to be received by the investor one year from now. Pet. Ex. FF, p. 19. Instead, he said,

⁶ The Petitioner’s rebuttal evidence did include such a 75% scenario. Pet. Ex. HH, pp. 4-5; Pet. Ex. HH-1; Pet. Ex. GG, pp. 6-10; and Pet. Ex. EE, pp. 5-6.

dividends are received quarterly. Because the appropriate amount of dividends to use in the annual DCF model is the prospective dividend one year from now, rather than the dividend one-half year from now, Mr. Kaufman's approach, Dr. Morin testified, understates the proper dividend yield, thereby understating PSI's cost of equity by approximately 15 basis points. Pet. Ex. FF, p. 19. Dr. Morin emphasized that because the price of a stock reflects the quarterly payment of dividends, it is essential that the DCF model used to estimate equity costs also reflect the compounding of quarterly dividends in the same way that bond yield calculations are routinely adjusted to reflect semiannual interest payments. Pet. Ex. FF, p. 20. By failing to recognize the quarterly nature of dividend payments in his DCF computation, Dr. Morin said that Mr. Kaufman understated PSI's cost of equity capital by about 20 basis points. Pet. Ex. FF, p. 21.

Dr. Morin also disagreed with Mr. Kaufman's use of the average stock price over the past three and six months to derive the dividend yield to use in his DCF. Pet. Ex. FF, p. 23. Dr. Morin indicated that he believes because the analyst is attempting to determine a utility's cost of equity in the future, current stock prices provide a better indication of expected future prices than any other price. Pet. Ex. FF, p. 23. Dr. Morin also took issue with Mr. Kaufman's proxies used to derive his DCF growth rate component, which was an average of all of the rates calculated, using Mr. Kaufman's proxy group. Pet. Ex. FF, p. 24. Dr. Morin reproduced those rates in the following table, based on Mr. Kaufman's Schedule 4:

TABLE 3				
Mr. Kaufman's Growth Rates				
Primary Group of Electric Utilities				
	ALL	Excl DPS	Forecast	Only DPS
	(1)	(2)	(3)	(4)
Historical 10 yr. EPS	3.8%	3.8%		
Historical 5 yr. EPS	4.5%	4.5%		
Historical 10 yr. DPS	2.2%			2.2%
Historical 5 yr. DPS	3.1%			3.1%
Historical 10 yr. BPS	3.1%	3.1%		
Historical 5 yr. BPS	4.2%	4.2%		
Forecast EPS	6.2%	6.2%	6.2%	
Forecast DPS	4.7%		4.7%	4.7%
Forecast BPS	4.7%	4.7%	4.7%	
Multex Forecast EPS	4.9%	<u>4.9%</u>	4.9%	
<u>Turner Forecast DPS</u>	<u>3.1%</u>		<u>3.1%</u>	<u>3.1%</u>
Average	4.0%	4.5%	4.7%	3.3%

Pet. Ex. FF, p. 25.

Dr. Morin said that based on this table the overall average growth rate from all the proxies, as shown in Column 1, is 4.0%, and that the dividend growth proxies average of 3.3% shown at the bottom of Column 4 is an outlier, compared to the average of 4.5% computed by excluding the dividend proxies (Column 2) and compared to the average of 4.7% obtained from

the growth forecast proxies (Column 3). Pet. Ex. FF, p. 25. Dr. Morin testified that historical growth rates are inappropriate proxies for expected growth at this time, as are dividend growth rates, both historical and prospective. Excluding the historical proxies and the outlying dividend growth forecast from Mr. Kaufman's numbers, he said, produced average growth estimates of between 5% and 6%. Pet. Ex. FF, p. 25. Use of a 5% growth rate, he said, would have raised Mr. Kaufman's DCF estimates by at least 100 basis points. A similar bias applies to Mr. Kaufman's estimates derived from his second group of vertically integrated electric utilities. Pet. Ex. FF, pp. 25-26.

With respect to Mr. Kaufman's use, as proxies for the DCF growth component, of historical ten-year and five-year growth rates, Dr. Morin stated that, under circumstances of stability, it would be reasonable to assume that historical growth rates in dividends/earnings influence investors' assessment of the long-run growth rate of future dividends/earnings; however, Dr. Morin concluded that these are anything but stable times in the electric utility industry. Pet. Ex. FF, p. 26. Dr. Morin went on to indicate that historical growth rates are downward-biased by the sluggish earnings performance in the last five years. In addition, Dr. Morin testified that he believes historical growth rates are largely redundant, because such historical growth patterns are already incorporated in analysts' growth forecasts, which, he said, should be used in the DCF model. Pet. Ex. FF, p. 26. Dr. Morin added that published studies in academic literature demonstrate that growth forecasts made by security analysts are reasonable indicators of investor expectations and that investors rely on such forecasts. Pet. Ex. FF, p. 28. These studies, he said, present detailed empirical evidence that the average analysts' expectation is more similar to expectations being reflected in the market place than are historical growth rates. Pet. Ex. FF, p. 28. Based on the foregoing analysis, Dr. Morin recommended that this Commission reject the use of historical growth rates as proxies for expected growth in the DCF calculation in this proceeding.

While Dr. Morin agreed with Mr. Kaufman's proxy used for the risk-free rate in his CAPM analysis, he said that he believes that Mr. Kaufman utilized an understated beta. Pet. Ex. FF, p. 29. He also criticized Mr. Kaufman's use of the geometric average of realized returns in measuring market return, as well as Mr. Kaufman's use of the "plain vanilla" CAPM without adjustment. Pet. Ex. FF, pp. 29-30. Dr. Morin maintained that the problem he saw with Mr. Kaufman's beta estimates of 0.61 and 0.64 for his two samples of electric utilities, is that historical betas are downward-biased estimates of the true risk of electric utilities. Pet. Ex. FF, p. 30. The true underlying beta of electric utilities, he said, has been gradually increasing in past years because of increasing risk for electric utilities. Yet, the historical beta measured over a five-year estimation period lies midway between the true beginning-of-period beta and the current end-of-period beta, seriously underestimating the current beta. Pet. Ex. FF, p. 31. Dr. Morin said that use of a beta of 0.70, rather than Mr. Kaufman's beta of 0.61-0.64, would increase his ROE estimate by approximately 40-50 basis points, assuming a market risk premium in the range of 6.0%-7.0%. Pet. Ex. FF, p. 32.

Dr. Morin maintained that only arithmetic averages are appropriate when measuring investor expected returns and criticized Mr. Kaufman for using geometric, as well as arithmetic, mean returns in his CAPM analysis. Pet. Ex. FF, pp. 32-33. He pointed out that the effect of

using both the geometric and arithmetic mean market risk premiums of 4.7% and 6.4%, rather than the arithmetic mean of 6.4% alone (see Pub. Ex. 8, Schedule 5), was to decrease Mr. Kaufman's estimate of the required market return by 0.90%. Pet. Ex. FF, p. 33. This, in turn, biased his CAPM result downward by some 55-65 basis points, using Mr. Kaufman's beta estimates 0.61-0.64. Pet. Ex. FF, p. 33. Dr. Morin noted that the widely-cited Ibbotson Associates publication from which Mr. Kaufman's market return estimate is derived, and from which Mr. Kaufman quotes in his testimony, contains a detailed and rigorous discussion of why geometric averages should not be used in estimating the cost of capital. Pet. Ex. FF, p. 33. Dr. Morin maintained that performance appraisal is one thing and cost of capital estimation is another matter entirely. In estimating the cost of capital, he said, the goal is to obtain the rate of return that investors expect, that is, a target rate of return. On average, investors expect to achieve their target return. This target expected return is, in effect, an arithmetic average. The achieved or retrospective return is the geometric average. In statistical parlance, the arithmetic average is the unbiased measure of the expected value of repeated observations of a random variable, not the geometric mean. Pet. Ex. FF, p. 34.

Dr. Morin also disagreed with Mr. Kaufman's sole use of the raw form of the CAPM to estimate the cost of capital. He said that there have been countless empirical tests of the "plain vanilla" CAPM to determine to what extent security returns and betas are related in the manner predicted by the CAPM. The results of the tests, he said, support the conclusion that beta is related to security returns, that the risk-return tradeoff is positive, and that the relationship is linear. The contradictory finding is that the risk-return tradeoff is not as steeply sloped as the predicted CAPM. That is, low-beta securities earn returns somewhat higher than the CAPM would predict, and high-beta securities earn less than predicted. Pet. Ex. FF, p. 37. The result of these observations, he said, is that a CAPM-based estimate of the cost of capital underestimates the return required from low-beta securities and overstates the return from high-beta securities. He said that Mr. Kaufman's CAPM based estimate understated PSI's equity cost by about 50-60 basis points from this bias alone, as shown by a comparison of Dr. Morin's CAPM and ECAPM studies. Pet. Ex. FF, p. 37.

Dr. Morin also noted that Mr. Kaufman's original ROE recommendation for PSI of 9.15% implies a risk premium of only 3.75% over long-term U.S. Treasury bonds, given that long-term Treasury bonds were yielding about 5.4% in the month of August, 2003. Pet. Ex. FF, p. 39. He said that the implied risk premium over "A"-rated electric utility bonds would be about 2.35%, given that A-rated electric utility bonds are currently yielding about 6.8%. Pet. Ex. FF, p. 39. Dr. Morin cited empirical risk premium literature and evidence that indicates that current risk premiums are much higher, and concluded that the risk premium implied in Mr. Kaufman's recommendation is much lower than generally found in empirical finance literature. Pet. Ex. FF, p. 40.

Dr. Morin did not agree with Mr. Kaufman's view that the market risk premium between stocks and bonds has narrowed over time. Pet. Ex. FF, p. 40. In fact, he stated that he believes the opposite to be true, particularly for the electric utility industry, citing studies by Brigham, Shome, and Vinson (1985), Harris (1986), Harris and Marston (1992), Carleton, Chambers and Lakonishok (1983), and Maddox, Pippert and Sullivan (1995), who, he said, have demonstrated

that, beginning in 1980, utility risk premiums varied inversely with the level of interest rates, rising when interest rates fell and declining when interest rates rose. Pet. Ex. FF, pp. 40-41. Concurrent with the steady decrease in interest rates in the last decade, he said, utility risk premiums have thus escalated -- not narrowed. Pet. Ex. FF, p. 41. The reason for the inverse relationship, he said, is that when interest rates rise, bondholders, whose interest rates are fixed, often suffer a decrease in the market value of their bonds, experiencing a capital loss. This is referred to as interest rate risk. Stockholders, on the other hand, are more concerned with the firm's earning power. In order to avoid interest rate risk in an environment of rising interest rates, investors tend to become more willing to undertake equity investment which, although subject to some fear of loss of earning power, is less sensitive to the fear of interest rate risk. Pet. Ex. FF, p. 41. The resulting increase in the supply of funds available for such equity investments causes a downward pressure on the market price for equity. So, generally it is observed that if bondholders' fear of interest rate risk exceeds shareholders' fear of loss of earning power, the risk differential will narrow and hence the risk premium will shrink. Pet. Ex. FF, p. 41. This is particularly true, he said, in high inflation environments. Interest rates rise as a result of accelerating inflation, and the interest rate risk of bonds intensifies more than the earnings risk of common stocks, which are partially hedged from the ravages of inflation. This phenomenon, he said, has been termed as a "lock-in" premium. Conversely, in low interest rate environments, he said, as in the case currently, when bondholders' interest rate fears subside and shareholders' fear of loss of earning power dominate, the risk differential will widen and hence the risk premium will increase. Pet. Ex. FF, pp. 41-42. To corroborate this phenomenon further, Dr. Morin said that regulators have, in fact, systematically and correctly increased the authorized risk premium when interest rates declined, and conversely decreased the authorized risk premium when interest rates increased. Pet. Ex. FF, p. 42.

Dr. Morin pointed out that Mr. Kaufman's contention that the market risk premium has declined over time is undermined by his own references, citing the Ibbotson Associates study often quoted in Mr. Kaufman's testimony, which finds no evidence that the market price of risk or the amount of risk in common stocks has changed over time. Pet. Ex. FF, p. 42. Rather, Ibbotson said that there is no significant statistical correlation in successive annual market risk premiums, that is, there is no trend. Pet. Ex. FF, p. 42.

In rebuttal to Mr. Kaufman's criticism of Dr. Morin's ECAPM analysis, Dr. Morin said that he believes that unadjusted raw betas are inappropriate to use in a CAPM analysis because current stock prices reflect expected risk, that is, expected beta, rather than historical risk or historical beta. Pet. Ex. FF, p. 43. Historical betas, he said, whether raw or adjusted, are only surrogates for expected beta, which is why Value Line and other investment information services report adjusted betas. Pet. Ex. FF, pp. 43-44. He said that one of the most well known results in finance is that a CAPM-based estimate of cost of capital underestimates the return required from low-beta securities and overstates the return from high-beta securities based on the empirical evidence. Pet. Ex. FF, p. 44. The empirical form of the CAPM that he used in his initial testimony, he said, refines the standard form of the CAPM to account for this phenomenon. Pet. Ex. FF, p. 44.

Dr. Morin also rejected Mr. Kaufman's criticism of his use in his DCF analysis of an analyst's earning growth forecast as a proxy for the growth component, pointing out that near-term dividend growth rates cannot be relied upon, as it is widely expected that energy utilities will continue to lower their dividend payout ratio over the next several years, in response to the gradual penetration of competition in the revenue stream. Pet. Ex. FF, p. 45. Dr. Morin also rejected Mr. Kaufman's claim that additional risks and higher expected returns associated with unregulated activities of electric utility holding companies overstate investors' required returns for their regulated operations. Pet. Ex. FF, p. 47. He pointed out that the energy utilities in his sample groups are largely dominated by their regulated operations and that Mr. Kaufman, himself, included in his proxy groups only those companies with at least 75% of revenues derived from electric utility operations. Pet. Ex. FF, p. 48.

Dr. Morin testified that he believes that Mr. Kaufman's DCF analysis result is understated by 155 basis points: (i) 20 basis points from the omission of an appropriate flotation cost allowance; (ii) 15 basis points from the understatement of growth in the dividend yield component due to the use of the wrong DCF functional form; (iii) 20 basis points due to the use of the annual DCF model rather than the quarterly version; and (iv) 100 basis points from the understated growth rates, mainly the inappropriate use of the dividend growth rates. Pet. Ex. FF, p. 53. Adjusting these numbers in this manner would raise Mr. Kaufman's original DCF range of ROEs from 7.94% - 10.12% to 9.5%-11.7%, Dr. Morin said. Pet. Ex. FF, pp. 53-54.

Dr. Morin concluded that he believes that Mr. Kaufman's CAPM analysis results are understated by 165-195 basis points: (i) 40-50 basis points from the use of an understated beta; (ii) 55-65 basis points from using geometric means instead of arithmetic means in estimating the market risk premium from historical data; (iii) 50-60 basis points from the understatement of expected return inherent in the "plain vanilla" version of the CAPM; and (iv) 20 basis points from the understatement of flotation costs. Pet. Ex. FF, p. 54. Allowance for the understatements would raise Mr. Kaufman's recommended original ROE from a range of 7.98%-8.59% for his CAPM studies to a range of 9.7% - 10.6%. Pet. Ex. FF, pp. 54-55.

(b) Rebuttal Concerning PSI-IG's Cost of Common Equity Evidence. Dr. Morin indicated that he believes that Mr. Gorman's procedures and methodologies are generally sound and in keeping with the practices of finance professionals. Pet. Ex. No. FF, p. 56. He agreed with: (i) Mr. Gorman's sample of electric utilities used in his DCF and CAPM analyses; (ii) his use of analysts' growth forecasts as proxies for expected growth in the DCF model; (iii) his use of long-term Treasury bond yields as proxies for the risk-free rate in the CAPM analysis; (iv) part of his market risk premium component of the CAPM analysis; and (v) the broad outline of his risk premium analysis. Pet. Ex. No. FF, pp. 56-57. He disagreed with Mr. Gorman regarding: (i) the absence of a flotation cost adjustment; (ii) the failure of his DCF model to recognize the quarterly payment of dividends; (iii) the beta estimates used in his CAPM analysis; (iv) part of his market risk premium component in the CAPM analysis; (v) the failure to employ the empirical version of the CAPM in keeping with the vast literature on the subject; and (vi) the failure to account for the inverse behavior between the allowed risk premium and the level of interest rates. Pet. Ex. No. FF, p. 57.

Dr. Morin said that in his opinion Mr. Gorman's dividend yield component in his DCF analysis is understated by 30 basis points as it does not allow for flotation costs, and, as a result, a legitimate expense is left unrecovered. Pet. Ex. FF, pp. 57 and 59. Dr. Morin testified that Mr. Gorman's allegation that a flotation cost allowance is inappropriate if the utility is a subsidiary whose equity capital is obtained from its parent, such as is the case of PSI, ignores the fact that the parent-subsidiary relationship does not eliminate the costs of a new issue -- it merely transfers them to the parent. Pet. Ex. FF, p. 59. Fair treatment, he said, must consider that, if the utility-subsidiary had gone to the capital markets directly, flotation costs would have been incurred by that utility. Pet. Ex. FF, p. 59.

Dr. Morin said that Mr. Gorman's failure to recognize the quarterly nature of dividend payments in his DCF computation understates his cost of equity capital by about 20 basis points. Pet. Ex. FF, p. 61. He said that Mr. Gorman's use of a 0.64 historic beta for his electric sample understates his results because historical beta measures for an industry in a state of heightened risk are understated. Pet. Ex. FF, pp. 61-62. He observed that use of a more appropriate beta for PSI of 0.70 would raise Mr. Gorman's CAPM estimates by approximately 50 basis points, using Mr. Gorman's market risk premium estimate of 7.0%. Pet. Ex. FF, p. 62.

Dr. Morin believed that, in his risk premium analysis, Mr. Gorman appropriately examined the historical risk premiums implied in the ROEs allowed by state regulatory commissions in hundreds of electric utility ROE decisions over a 16-year period, 1986-2002, relative to the contemporaneous level of long-term Treasury bond yields and A-rated utility bond yields. However, although the average ROE spread over long-term Treasury yields was 4.9% for the 1986-2002 period, Mr. Gorman used a range of 4.4% to 5.6% rather than 4.9%. Pet. Ex. FF, pp. 63-64. Dr. Morin disagreed with the use of this range because of the rising trend of the risk premium in response to lower interest rates, rising competition and restructuring. Pet. Ex. FF, p. 64.

Dr. Morin testified that in his DCF approach, Mr. Gorman did not allow for flotation costs (30 basis points) and employed underestimated dividend yield data (20 basis points), thereby understating PSI's cost of equity by 50 basis points. Pet. Ex. FF, p. 68. He added that Mr. Gorman's CAPM result was further understated by 50 basis points because of his use of the raw form of the CAPM. Finally, he said, a recognition of the rising allowed risk premium over time in response to lower interest rates and rising competition and restructuring, ignored by Mr. Gorman, would have raised his risk premium estimate to above 11%. Pet. Ex. FF, p. 68.

(c) Rebuttal Concerning Staff's Cost of Common Equity Evidence. In his response to Testimonial Staff's original recommendation of ROE allowance in the range of 10.25% to 10.50%, Dr. Morin said he disagreed with Staff's two adjustments to his DCF analysis. Staff used the one-half year $(1 + 0.5g)$ adjustment factor to the dividend yield, rather than the full year $(1 + g)$ factor. Second, Staff reduced his flotation cost adjustment by one half, from 30 to 15 basis points, based on the actual costs reported for Cinergy's most recent stock offering. Restoration of the full flotation cost adjustment and application of the functional form of the DCF model he proposed would raise Staff's original range by 30 basis points from 10.25% - 10.50% to 10.55% - 10.80%. Pet. Ex. FF, p. 70.

Dr. Morin also disagreed with two of Staff's adjustments to his CAPM analysis. First, he said that he believes that Staff's risk-free rate needed to be updated to reflect current capital market conditions. Staff used a 4.9% risk-free rate based on a six-month average of 30-year Treasury bond yields. The yield was in excess of 5% for the months of August and September 2003, Dr. Morin said, and was 5.3% at the time Dr. Morin's rebuttal testimony was prepared at the end of September. Pet. Ex. FF, p. 70. He was also critical of Staff's use of geometric means to measure expected returns. Failure to rely exclusively on the arithmetic mean biased Staff's CAPM result downward by some 55-65 basis points, he said. Pet. Ex. FF, p. 70. He also was critical of Staff's ignoring what Dr. Morin considered the overwhelming empirical evidence that the "plain vanilla" CAPM understates the return on low-beta stocks. Pet. Ex. FF, p. 71.

(7) Discussion and Findings Concerning Cost of Equity Capital Evidence.

Based on the entirety of the testimony presented on this issue, it is apparent that we have been presented with a highly detailed discussion of the cost of equity capital by various parties to this proceeding. In evaluating the evidence presented on this issue we concur with Mr. Inman's observations that: (i) the determination of an exact investor required return on equity is impossible; (ii) the results of the CAPM, DCF and RP methods are driven by the inputs for each, of which there are countless possibilities and legitimate arguments to include this and exclude that; and (iii) a petitioning utility will tend to support methodologies and inputs that support a higher result and those in opposition will tend to support methodologies and inputs which produce a lower result. IURC Staff Ex. No. 1, pp. 22-23. Our discussion and analysis of this issue also serves to illustrate that the goals for setting the fair rate of return for a public utility go well beyond the use of formulas and mathematical calculations which may imply a level of precision which does not really exist. With this in mind, we turn our analysis to the cost of capital evidence submitted in this proceeding.

The witnesses testifying concerning Petitioner's cost of capital all used similar approaches. Dr. Morin, Mr. Kaufman and Mr. Gorman, all utilized standard methodologies for determining a cost of common equity capital: DCF studies, the CAPM model, and/or the RP approach. As is typically the case, however, they came to different conclusions. Dr. Morin's updated DCF studies produced a range in the cost of equity from 10.3% to 12.1%. His updated CAPM and RP methods produced costs of equity in the range of 10.9% to 12.5%. Mr. Kaufman, on the other hand, produced lower estimated costs of equity in his updated study, ranging from 8.02% to 9.67% utilizing the DCF methodology, and from 8.48% to 9.09% utilizing the CAPM model. Mr. Kaufman's initial study produced DCF results ranging from 7.94% to 10.12%, and CAPM results ranging from 7.98% to 8.59%. Mr. Gorman calculated a cost of equity in the range of 9.7% to 10.3%, utilizing a DCF analysis, a RP analysis, and the CAPM model. Testimonial Staff witness Inman, analyzing the cost of equity estimates of the other parties, recommended a cost of equity range of 10.25% to 10.50% in his prefiled testimony. Mr. Inman noted on cross-examination that he did not perform a complete update of his analysis; however, as part of his testimony, Mr. Inman provided an updated range of PSI's cost of equity capital from 10.35%-10.55%.

We note that unlike the last PSI rate case in which there was extensive testimony from the experts regarding the strengths and weaknesses of the DCF, RP, CAPM, and ECAPM *models*, the issues in the present cause focus more on the *inputs* utilized in the models, rather than the models themselves. While the parties offer little insight as to why their approach has changed, it is apparent based on our review of the evidence in this Cause that unlike the last rate case in which the DCF model presented lower results compared to the other models, the models utilized in the present proceeding offer a certain level of uniformity in their results. Perhaps this fact alone helped to eliminate any incentive an expert might otherwise have to criticize the results of a particular model as part of this proceeding.⁷ While it is not necessary for us to resolve extensive debate regarding the value and utilization of each of the models, there are disagreements regarding some of the major inputs used by the experts within the various models. While we do not believe that it is necessary for us to address every issue upon which the experts disagreed, we think that it is important for us to review the major areas of disagreement prior to reaching a conclusion on these issues.

The evidence presented in this Cause, on cost of equity issues and the major areas of disagreement among the various experts, is summarized in the following table:

Summary of ROE Estimates and Areas of Disagreement					
	<i>Witness / Party</i>	<i>Morin / PSI</i>	<i>Inman / IURC</i>	<i>Kaufman / OUCC</i>	<i>Gorman / PSI-IG</i>
Original	CAPM	10.20 – 10.70%	9.21%	7.98 - 8.59%	9.50 - 9.80%
	DCF	10.70 – 13.60%	10.42 - 13.52%	7.94 – 10.12%	10.10%
	RP	10.90 – 12.30%	9.69 - 11.02%	NA	NA
	ARP	11.30 – 11.40%	11.30 - 11.40%	NA	9.40 - 10.90%
	Recommendation	11.50%	10.25 - 10.50%	9.15%	10.00%
Updated	CAPM	10.90 – 11.40%	NA	8.48 - 9.09%	NA
	DCF	10.30 – 12.10%	NA	8.02 - 9.67%	NA
	RP	10.90 – 12.50%	NA	NA	NA
	ARP	11.30 – 11.40%	NA	NA	NA
	Recommendation	11.20%	10.35 - 10.55%	9.25%	NA
Major Areas of Disagreement - All Models					
All	Floatation costs Adjustment	0.30%	0.15%	0.05 - 0.10%	0.00%
CAPM	Beta	0.72	0.72	0.65 – 0.70	0.64
	Market Risk Premium Mean "Arithmetic vs. Geometric"	Arithmetic	Both	Both	Arithmetic
	ECAPM	Accept	Reject	Reject	Reject
DCF	Half - vs. Full -Year Div. Growth	Full-Year	Half-Year	Half-Year	Full-Year
	Quarterly Compounding Adj.	0.20%	0.20%	0.00%	0.00%
RP	Risk Premium Mean "Arithmetic vs. Geometric"	Arithmetic	Both	NA	NA

⁷ Only the ECAPM remains as a model subject to any meaningful criticism from the experts in this Cause.

The recommended ROE estimates (as adjusted) presented in this Cause range from 9.25–11.20%, a spread of 195 basis points. Several factors contributed to the variation in estimates including: varying weights applied by the experts to several ROE models; the use of Arithmetic vs. Geometric mean returns; Spot vs. Average T-Bond and dividend yields; and, the wide array of proxy groups used in an effort to replicate PSI's risk profile. While we do not find it necessary to resolve each of the sometimes overlapping disagreements between Dr. Morin, Mr. Kaufman, Mr. Gorman and Mr. Inman, in arriving at either an appropriate cost of capital, or a fair rate of return determination, we note that specific aspects of Dr. Morin's analyses raised concerns on the part of the various other parties and are therefore worthy of additional review and discussion by the Commission.

The Commission recognizes that there were disagreements between the Petitioner and the other witnesses with respect to the following issues: 1) The level, or inclusion, of flotation costs by Dr. Morin (Kaufman, Inman and Gorman); 2) Dr. Morin's failure to utilize the one-half year $(1 + 0.5g)$ adjustment factor for the dividend yield in the DCF model (Kaufman and Inman); 3) the beta estimate utilized by Dr. Morin in his CAPM Model (Kaufman and Gorman); 4) Dr. Morin's use of only the Arithmetic Mean rather than Arithmetic & Geometric mean in his CAPM and/or RP Model (Kaufman and Inman); and, 5) the appropriate inclusion of the ECAPM analysis performed by Dr. Morin (Kaufman, Inman and Gorman). We discuss each of these issues as follows:

(a) Flotation Costs (Applicable to all Models)

In his testimony Dr. Morin cited empirical finance literature to support his conclusion that flotation costs are roughly equal to 5% of electric utility stock offering proceeds. Therefore, with an average expected dividend yield of 5% for electric utility stocks, Dr. Morin concluded that the proper adjustment to the return on equity should be $[5/(1.00-.05)]-5 = 0.3\%$ (thirty (30) basis points). Pet. Ex. G, p. 44.

Mr. Kaufman questioned Dr. Morin's proposed thirty (30) basis point upward adjustment to the cost of equity. Mr. Kaufman took issue with Dr. Morin's use of empirical studies of average electric utility stock issue costs and indicated that the actual flotation costs incurred by Cinergy should be considered when determining a fair flotation cost adjustment. Mr. Kaufman explained that actual flotation costs associated with Cinergy's most recent stock issuance amounted to \$1.55 million, or less than 1% of the stock issue, which Mr. Kaufman contends supports a reduction from the 30 basis points proposed by Dr. Morin. While Mr. Kaufman indicated that he believes that some adjustment for flotation costs is merited, he recommends the adjustment be only 5-10 basis points. Pub. Ex. No. 8 p. 77.

Mr. Gorman indicated that he does not believe flotation costs are applicable to PSI, as the company does not have publicly traded common stock. If Cinergy's flotation costs are applicable to PSI, then PSI should account for them explicitly and not simply add a blanket flotation adjustment as suggested by Dr. Morin.

Testimonial Staff recommended allowing a 15 basis point adjustment to the CAPM and RP methods and a 2.5% gross up of the dividend yield produced by the DCF method. Mr. Inman's flotation cost adjustment is based on Dr. Morin's flotation cost estimate and Cinergy's actual flotation costs related to their most recent stock offering.

Analysis and Findings of the Commission on this Issue

Based on the testimony presented, we are faced with a range of recommendations regarding flotation costs. Mr. Kaufman and Mr. Inman both agree that flotation costs may appropriately be included, albeit at a reduced level from that proposed by Dr. Morin. Mr. Gorman contends that if flotation costs are allowed at all, they should be subject to specific accounting treatment to ensure that only costs incurred by PSI are charged to PSI. The witnesses that favor a reduction or elimination of flotation costs are fairly uniform in their assessment that an analysis of the actual flotation costs incurred by Cinergy should result in a determination by the Commission that a reduction of the upward adjustment proposed by Dr. Morin to account for flotation costs is appropriate.

In undertaking a textbook analysis of the flotation costs issue, Dr. Morin provides a formula that estimates flotation costs that typically might be encountered as part of an electric utility stock offering. While Dr. Morin provides testimony as to why he believes the other witnesses are wrong in proposing to reduce flotation costs, and the impact that such a reduction would have on his proposal, he does not explore the possibility that a reduction of flotation costs could appropriately occur based on the modification of his flotation cost estimate, which does not consider the actual costs encountered by Cinergy. The fact that Dr. Morin's mathematical equation does not overlay fact specific issues applicable to PSI, demonstrates the shortcomings of a formula as it does not include a mechanism to allow the Commission to consider the actual flotation costs encountered by Cinergy as part of recent stock offerings. We believe that our review of this issue would be incomplete without consideration of this very important fact specific issue.

Accordingly, having reviewed the entirety of the record on this issue, the Commission agrees that an adjustment to the return on equity to account for flotation costs is appropriate. We find the recommendations of Mr. Kaufman and Mr. Inman to be particularly instructive on this issue as they both favor a reduction of the flotation costs proposed by Dr. Morin, based on consideration of actual flotation costs incurred by Cinergy. We find this approach to be reasonable and hereby find that a fifteen (15) basis point upward adjustment to the cost of equity to account for flotation costs is appropriate and should be approved in this Cause.

(b) Quarterly Compounding Adjustment and Expected Dividend Yield (DCF Model)

In his testimony, Dr. Morin explained that the common practice of companies is to pay dividends quarterly. Therefore, Dr. Morin indicated that investors' required return must be determined with a DCF model that reflects the quarterly nature of dividend payments. Dr. Morin asserted that an upward adjustment to the return on equity should be made to account for quarterly payment and compounding of dividends, based on the assumption that dividends

received may be reinvested at the return on equity rate. Dr. Morin explicitly adjusted his DCF estimates upward by 20 basis points to account for the quarterly timing of dividend payments.

Mr. Kaufman agreed with Dr. Morin's reasoning, but did not agree that an explicit adjustment should be made to the DCF model. Mr. Kaufman reasoned that utilities receive payments from customers on a monthly basis instead of a yearly basis. This allows the utility to invest their monthly profits in projects that earn a fair return for the utility. However, no downward adjustment is made to the utility's return on equity to account for the monthly timing of these payments. Therefore, Mr. Kaufman concluded that an adjustment should not be made for quarterly payment of dividends. Mr. Gorman testified that he believes that adding the adjustment suggested by Dr. Morin would allow shareholders to earn the dividend compounding return twice, once on the authorized return on equity and the second time when dividends are received. PSI-IG Ex. No. 3, p. 33.

Dr. Morin and Mr. Gorman both used the full-year method to estimate the expected dividend yield. Dr. Morin indicated that he believes that the use of a one-half year adjustment to the dividend yield in the DCF model results in the understatement of the appropriate dividend yield, which in turn results in an understatement of PSI's cost of equity. In contrast to the position set forth by Dr. Morin and Mr. Gorman, Mr. Kaufman and Mr. Inman utilized a one-half year $(1+0.5g)$ adjustment factor to the dividend yield in the DCF model. Mr. Kaufman recognized that Dr. Morin's analysis was based on a DCF model adjusted to capture a full year's future growth, and indicated that he believes this approach overstates the forward yield. Mr. Inman agreed with Mr. Kaufman's criticism of applying the full year's growth to the current dividend yield. Citing recent Commission rate case proceedings, including *In re Indiana American Water Company*, Cause No. 42029 (*Ind. Util. Reg. Comm'n*, November 6, 2002), Testimonial Staff recommended use of the half-year method of calculating forward dividend yields.

Commission Analysis and Findings on these Issues

With respect Dr. Morin's testimony in which he indicates that an adjustment to the DCF model must be made to reflect the quarterly nature of dividends, we note that this issue is not new. This very issue was presented to the Commission in Cause No. 40003, (*Ind. Util. Reg. Comm.*, September 27, 1996). In Cause No. 40003, the Commission found, in resolving a dispute on this issue between the OUCC witness and Dr. Morin, that:

We find the logic of the quarterly DCF a useful alternative, and no sufficiently sound reason has been presented for rejecting it. We find it difficult to believe that the timing of dividend payments is not reflected in the price of a stock. We agree with Dr. Morin that it is inconsistent to use a stock price which reflects quarterly dividends in a model which assumes annual dividend payments unless the model is adjusted to reflect the quarterly dividends which lend to the investor expectations which give rise to the stock price.

While we may appropriately be guided by precedent on this issue, we also find that we could revisit this issue if faced with a persuasive argument. However, the only persuasive argument put forth on this issue was presented by Dr. Morin. Therefore, we again find, based on the evidence presented in this Cause that it would be inconsistent to use a stock price which reflects quarterly compounding of dividends in a model that assumes annual dividend payments unless the model is adjusted to reflect the quarterly compounding of dividends. Therefore, we agree with Dr. Morin on this issue and find that his upward adjustment to the return on equity was appropriately included to account for quarterly payment and compounding of dividends.

With respect to our consideration of forward dividend yield, the Commission is persuaded by the arguments presented by Mr. Kaufman and Mr. Inman in support of their use of the half year method of calculating the forward dividend yield. In reaching this determination we also recognize that we have recently accepted this approach in other proceedings, including Cause No. 42029 (*Ind. Util. Reg. Comm'n*, November 6, 2002), which was referenced by Mr. Inman. In Cause No. 42029 we stated that:

The Commission has considerable experience with the DCF model for estimating the cost of equity. We are well aware of the advantages and limitations of the various approaches used by each of the witnesses. For example, the half-year method used by the OUCC for calculating the forward yield is the most frequently used approach in this jurisdiction and is rarely a point of contention in DCF analysis. We believe it fairly represents the dividend payments expected and received by investors, while the full-year method employed by Petitioner overstates dividend yield.

Cause No. 42029 at 31.

Therefore, based on our review of the specific evidence presented in this case, we find that the proposal set forth by Mr. Inman and Mr. Kaufman to use of the half year method of calculating the forward dividend yield, is appropriate as it fairly represents the dividend payments expected and received by investors. We find that the full-year method employed by Dr. Morin overstates the dividend yield, and is therefore rejected by the Commission in this Cause.

(c) Arithmetic and Geometric Means (CAPM and RP Models)

The application of geometric and/or arithmetic mean risk premiums was an important point of dispute in both the CAPM and RP models in this Cause. Dr. Morin testified that he believes that only arithmetic averages are appropriate when measuring expected risk premiums. Dr. Morin pointed out that the effect of using both the geometric and arithmetic mean risk premiums, rather than the arithmetic mean alone, is to decrease estimates of expected risk

premiums. This in turn, according to Dr. Morin, biases the CAPM and RP results downward. Consistent with Dr. Morin, Mr. Gorman utilized arithmetic averages in the calculation of his risk premiums.

In performing his CAPM analysis Mr. Kaufman averaged his calculated geometric and arithmetic market risk premium means for use as the market risk premium. Mr. Kaufman stated that this approach is consistent with the Commission's past approval of arithmetic and geometric means. Mr. Kaufman directed us to two final orders of this Commission, *People's Gas and Power*, Cause No. 39315, (Ind. Util. Reg. Comm'n, October 21, 1992); and, *Indiana American Water*, Cause No. 40103, (Ind. Util. Reg. Comm'n, May 30, 1996), which he indicated support his conclusion that the use of geometric and arithmetic mean risk premiums are appropriate. Mr. Inman stated that Testimonial Staff agrees with Mr. Kaufman's approach in which he gives weight to both the arithmetic and geometric means when computing the appropriate risk premium means to apply to the CAPM and RP models.

ECAPM and Beta.

Dr. Morin used "plain vanilla" and "empirical" versions of the CAPM. He was the only expert that performed an ECAPM analysis. In his testimony, Dr. Morin asserted that empirical studies have shown that betas tend to converge to unity over time (i.e., historical betas below one are expected to rise to 1.00, and betas above 1.00 are expected to fall to one). Therefore, the use of historical betas necessarily biases a security's market risk downward for a security with a beta less than 1.00. Dr. Morin testified that the ECAPM adjusts beta for its tendency to move to 1.00.

Mr. Kaufman, Mr. Gorman, and Mr. Inman made exclusive use of the "plain vanilla" version of the CAPM and expressly rejected Dr. Morin's use of the ECAPM. Each stated that Value Line (the source of Dr. Morin's beta estimates) adjusts betas for their tendency to move to 1.00 over time. Therefore, the ECAPM analysis performed by Dr. Morin is redundant. These witnesses also noted that the ECAPM model was rejected by the Commission in Cause No. 40003.

While all parties used Value Line as their source for beta estimates in their CAPM models, there was no overall consensus among the experts with respect to the use of an appropriate *estimate* of the beta to be utilized. As with the foregoing issues, the variation in the approaches taken by the experts only serves to further demonstrate that expert opinions will differ with respect to the inputs they utilize--as well as the conclusions they ultimately reach--in undertaking an individual analysis of the issues.

In his testimony, Dr. Morin examined the average betas of two proxy groups: the average of Value Line's reported betas for the electric utility industry, which is 0.71; and, the average beta of Value Line's natural gas distribution universe with a market value in excess of \$500MM, which is 0.72. Based on his evaluation of these two proxy groups, and his assertion that backward looking betas do not fully reflect a company's risk profile, Dr. Motion utilized the higher of the two betas, or 0.72.

While Mr. Inman accepted Dr. Morin's beta of 0.72, Mr. Kaufman and Mr. Gorman both expressed concern regarding the beta utilized by PSI's witness. Mr. Kaufman and Mr. Gorman both rejected Dr. Morin's use of a proxy group of Natural Gas Distribution companies that are not involved in electric operations, as they do not believe that this group can serve as a reasonable proxy for PSI. Based on his analysis of this issue, Mr. Kaufman established a beta of 0.610, for the proxy group that he developed; an average beta of 0.642 based on his review of Dr. Morin's proxy group; and, a beta of 0.70 for Cinergy. Based on this overall review, Mr. Kaufman initially recommended a beta in the range of 0.610 to 0.70. In updating his testimony in this Cause, Mr. Kaufman revised his beta range to 0.65-0.70. Mr. Gorman testified that he used a beta of 0.64, obtained by averaging the group betas for his comparable group of electric utilities.

Commission Analysis on these Issues

The application of geometric and/or arithmetic mean risk premiums has been previously presented to the Commission for consideration. This issue was raised in *Indiana American Water*, Cause No. 40103, (*Ind. Util. Reg. Comm'n*, May 30, 1996), in which the Commission stated:

The debate over the proper use of the arithmetic and geometric means is an issue we consider resolved. As we stated in *Indianapolis Water Company*, Cause No. 39713-39843, each method has its strengths and weaknesses, and neither is so clearly appropriate as to exclude consideration of the other.

Cause No. 40103 at 41.

Mr. Kaufman and Mr. Inman utilized arithmetic and geometric means, while Dr. Morin and Mr. Gorman utilized only arithmetic means. Based on the disparate results from the experts, and consistent with our findings in Cause No. 40103, we find that we must analyze this issue based on our understanding that each method has its strengths and weaknesses, and neither is so clearly appropriate as to exclude consideration of the other.

With respect to the appropriate beta to be utilized, we have been presented with a number of options by the experts regarding this input, ranging from 0.64-0.72. In reviewing this issue the Commission recognizes that the modification of this single input in the CAPM model results in dramatically different proposals regarding the recommended cost of equity. A comparison between Dr. Morin and Mr. Gorman's CAPM analysis, and the beta they utilized, is instructive regarding the impact of this single input. While these two witnesses agreed on many issues, they did not agree on beta. Dr. Morin concluded that 0.72 was an appropriate beta and Mr. Gorman indicated that he believed a beta of 0.64 should be utilized. The difference in this single input, between these two experts, accounted for a swing of 54 basis points and resulted in vastly different outputs from their respective CAPM models. While we do not believe that it is necessary for us to choose a single beta from among those utilized by the experts, we recognize

that this issue is one important factor for us to consider in reaching a determination on an appropriate cost of equity.

With respect to the ECAPM analysis preformed by Dr. Morin we note that the Commission rejected this model in Cause No. 40003, and found that: "the Empirical CAPM is not sufficiently reliable for ratemaking purposes." Cause No. 40003 at 32. We went on to conclude that the ECAPM "...would adjust, in essence, future expectations with regard to investor perceptions of relative risks for further change which may occur years hence." The Commission concluded that "...we do not believe exercises in approximating future cost of capital are conducive to such precise estimation as the Empirical CAPM would suggest." *Id.* We find that nothing presented in this Cause has changed our prior determination that ECAPM is not sufficiently reliable for ratemaking purposes and hereby reject the model in this proceeding.

(d) Other Evidence Relevant to the Determination of a Fair Return

(1) Petitioner's Current Financial Condition and Financial Objectives. PSI witnesses Reising and Esamann testified concerning PSI's current financial condition and financial objectives. Pet. Ex. B, pp. 3-5, and 32-41; Pet. Ex. E, pp. 10-19; and Pet. Ex. DD, pp 3-10 and 27-35. PSI's capital structure on a financial basis as of September 30, 2003 reflects 52.60% common equity, including a \$200 million capital infusion from Cinergy. According to Mr. Reising, PSI's general financial objective is to achieve the fundamentals necessary to provide assured and reasonable access to capital markets in order to continue to provide cost effective, safe, adequate, environmentally compliant and reliable service to its customers. Specific financial objectives necessary to enhance or maintain the desired financial strength include: (1) achieving and maintaining at least a 50% common equity ratio for PSI on a financial capitalization basis; and (2) maintaining PSI's credit ratings at current levels (*e.g.*, an "A-" rating for PSI's senior secured debt), with an ultimate goal of improving PSI's credit ratings one notch (to "A" for PSI's senior secured debt). Pet. Ex. E, pp. 10-11.

With respect to PSI's stated objective of improving its credit rating, Dr. Morin offered an analysis of what he believes the optimal bond rating for an electric utility's senior secured securities should be. Dr. Morin explained that when a company substitutes lower cost debt for equity, the average weighted cost of capital decreases up to a point, while the bond rating progressively deteriorates. Dr. Morin testified that over the long run, a strong "A" bond rating will minimize the cost of capital to customers. According to Dr. Morin, the implication for PSI is clear that long-term achievement and maintenance of a strong "A" bond rating is in both investors' and customers' best interests; and this Commission should establish rates so as to create the financial conditions conducive to PSI achieving an "A" credit rating. Pet. Ex. G, pp. 47-51; and Pet. Ex. FF, pp. 76-78.

Mr. Fetter testified that recent events have negatively impacted the views of credit rating agencies and investors with regard to the utility sector. According to Mr. Fetter, utilities operating within today's financial environment should seek to minimize the uncertainties that could affect a utility's financial health and its credit ratings. Pet. Ex. H, pp. 15-17; Pet. Ex. E, pp. 6-8; and Pet. Ex. EE, pp. 7-8.

Mr. Fetter testified that PSI's securities are currently rated by the three major credit rating agencies as follows:

	<u>Fitch</u>	<u>Moody's</u>	<u>Standard & Poor's</u>
Senior Secured Debt	A-	A3	A-
Senior Unsecured Debt	BBB+	Baa1	BBB
Junior Unsecured Debt	BBB	Baa2	BBB-
Preferred Stock	BBB	Baa3	BBB-

Pet. Ex. E, p. 12.

In recent assessments of PSI's credit ratings, the three major credit rating agencies have all emphasized PSI's large capital expenditure requirements and the importance of constructive regulatory support. For example, Fitch's August 2001 report stated that "PSI's rising capital requirements related to compliance with environmental regulations and planned new capacity additions is a credit concern and will require regulatory support to prevent a decline in credit quality." Pet. Ex. E, p. 13. Similarly, Fitch's June 2002 report on PSI summarized PSI's key credit concerns as "the relatively high level of capital expenditures needed to comply with environmental regulations and the need for rate increases in Indiana to support the asset transfers." Pet. Ex. E, p. 13. Moody's September 2002 report commented on its rating of PSI as follows: "The rating, however, considers PSI's somewhat high debt load, future capital expenditures for environmental compliance, and financial measures which on a stand alone basis are relatively low when compared to most other companies in their peer rating category." Pet. Ex. E, p. 14. S&P's July 2002 report on PSI addressed certain regulatory challenges facing PSI, including: "uncertainty involving environmental issues related to new source review, as well as the potential for stricter emission standards." Pet. Ex. E, p. 14. Finally, Moody's third quarter 2002 report on PSI noted the following concerns: "PSI's liquidity will continue to be negatively affected by large environmental expenditures for its coal plants and its somewhat high debt load" and "PSI's cash flow has been variable in recent years and generally insufficient to cover dividend requirements and capital expenditure needs." Pet. Ex. E, pp. 14-15.

Mr. Fetter explained that regulation is a key factor in assessing the credit profile of a utility, because a state public utility commission determines rate levels and terms and conditions of service. Investors want to be confident that the utility operates within a stable regulatory environment that will allow the utility the opportunity to earn a reasonable return on its investment while meeting the demand, reliability, service, and environmental requirements of its service area. Important considerations include the allowed rate of return, the cash quality of earnings, the timely recovery of capital investments, the stability of earnings, the strength of its capital structure and moderation of the utility's need to finance externally. Positive consideration is also given to mechanisms that enable rates to be adjusted expeditiously to accommodate major swings in costs which cannot be reasonably forecasted to fit into a standard base rate case proceeding. Pet. Ex. H, pp. 7-10.

Mr. Fetter, along with PSI witnesses Reising and Paul G. Smith, General Manager, Budgets and Forecasts for Cinergy Services, examined several rate increase scenarios and their expected impact on PSI's credit quality. Mr. Fetter initially examined both a "status quo" (*i.e.*, no rate relief) scenario and a full rate relief scenario. He concluded that if the Commission did not approve substantially all of the rate relief requested by PSI, certain key credit ratios for PSI – specifically, cash flow, interest protection, and leverage measures – would significantly decline within a very short period of time. PSI would be reviewed for a possible credit rating downgrade. Pet. Ex. H, pp. 16-22; Pet. Ex. E, p.19; Pet. Ex. F, pp. 3-9; Pet. Ex. GG, pp. 2-10; Pet. HH, pp. 2-5; and Pet. Ex. EE, pp. 3-6.

In rebuttal testimony, PSI and Mr. Fetter analyzed the potential impact of the OUCC's \$18 million rate increase recommendation on PSI's credit quality. Additionally, in response to Mr. Inman's observation that PSI failed to examine alternative rate increase scenarios and their impact on PSI's credit quality, PSI and Mr. Fetter analyzed the potential impact of a \$150 million rate increase on PSI's credit quality.

Mr. Fetter emphasized that a small increase, such as that proposed by the OUCC, would be inconsistent with PSI maintaining its current "BBB+" corporate credit rating status and would preclude PSI from having any opportunity to improve its credit rating. In Mr. Fetter's judgment, given PSI's ongoing need for capital expenditures, under this \$18 million rate increase scenario, credit rating agencies would not only review PSI for a likely downgrade, but might even downgrade PSI two notches. Pet. Ex. GG, pp. 2-6. Additionally, if this Commission authorized a \$150 million annual increase, Mr. Fetter indicated that from a credit quality perspective, PSI would likely be on the dividing line between its current "BBB+" rating and a downgraded "BBB" credit rating. At a minimum, Mr. Fetter felt that serious consideration would be given to a negative watch or outlook if current rating levels were maintained.

(2) Relative Risk Faced by PSI. The various parties in this case held divergent views concerning the risks currently facing the energy industry in general and PSI in particular. PSI's witnesses were of the view that the energy industry is in a highly uncertain state, stemming from a number of extreme and unexpected industry events. Mr. Rogers explained that PSI faces both expected and unexpected challenges. Chief among these challenges is the substantial uncertainty associated with environmental regulation; the ownership, operation, pricing, and reliability of the transmission grid; continuing uncertainty about wholesale market design and operation; and risks associated with achieving fair returns demanded by investors. Pet. Ex. A, pp. 3-4 and 16-29; Pet. Ex. DD, pp. 7-10; and Pet. Ex. EE, pp. 7-8.

Other parties to this proceeding took the view that Indiana's constructive regulatory statutes and policies, combined with the numerous trackers utilized by PSI, effectively mitigate virtually all environmental, transmission, and resource adequacy risks that might otherwise be faced by PSI. As pointed out by Dr. Sheehan, the use of trackers allows for periodic cost adjustments between rate cases and thus eliminates financial risk for a utility. These reduced risks, according to Dr. Sheehan, argue for elimination of some of the risk premium received by the utility in the ROE determination. CAC Ex. C, p. 33. Mr. Biewald shared Dr. Sheehan's

conclusion and observed that, of Dr. Morin's peer group of utility companies used to calculate his ROE, PSI has the highest number of trackers. Mr. Biewald indicated that the large number of PSI's rate adjustment trackers, relative to its industry peers, suggest that the Company is well protected against many risks to which other utilities are often exposed. CAC Ex. B, p.11.

Testimonial Staff also recognized that PSI is protected from certain risks by its use of trackers. Dr. Borum indicated that Indiana law and the rate adjustment tracking mechanisms proposed by the Company give PSI the flexibility to address future challenges and mitigate future uncertainties in a constructive manner. However, he observed, this flexibility and mitigation is achieved by shifting much of the uncertainty and the associated risks to ratepayers. Such shifting of risk must be recognized and reflected in the Commission's decision regarding the cost of equity capital. IURC Staff Ex. No. 3, p. 5. Therefore, Dr. Borum concluded that we should feel comfortable approving a ROE on the lower end of the range recommend by Mr. Inman.

Mr. Kaufman shared the concerns expressed by other witnesses and recommended that his proposed cost of equity should be reduced if the trackers requested by PSI in this Cause are approved. While we do not accept Mr. Kaufman's invitation to reduce his proposed cost of equity, clearly the trackers PSI has requested are an important consideration vis-à-vis our overall consideration of risks faced by PSI and our determination of an appropriate cost of equity.

(3) PSI's Operational Performance. PSI presented evidence concerning its operational and financial performance, and encouraged this Commission to consider its performance in this rate setting process. Specifically, PSI urged this Commission to determine a fair return for PSI based on the higher end of the cost of equity range to reward the company for its performance in terms of reliability, efficiency, cost competitiveness, and customer service. Both Mr. Rogers and Mr. Esamann argued that rewarding strong performance represented good public policy. Dr. Borum of the Testimonial Staff opined on cross-examination that rewarding strong performing utilities through the rate setting process, and in particular in the determination of a fair return for the utility, was consistent with good public policy. Dr. Borum also testified that he believed that PSI was a strong performer in terms of the various attributes that make up customer service – reliability, efficiency, cost-competitiveness, etc. Pet. Ex. B, pp. 11-31; Pet. Ex. DD, pp. 10-21 and 31-34; Pet. Ex. FF, pp. 78-80; Pet. Ex. GG, pp. 19-20; Tr. at E39-E43, E106-E109, E118-E119 and R98-R99.

PSI presented evidence demonstrating that its electric delivery system performed reliably in terms of the frequency and duration of customer interruptions, and outage restoration, and had relatively low O&M costs as compared to peers. While cautioning that individual service territory characteristics make comparisons in this area difficult, Mr. Esamann testified that, in 2002, the average number of sustained interruptions for the year per customer, known as the Electric System Average Interruption Frequency Index ("SAIFI") (including severe storm impacts) was 1.57, and the average time to restore power after an interruption, known as the Electric Customer Average Interruption Duration Index ("CAIDI") (again including severe storm impacts) was 1.81 hours. In 2003, PSI's overall average SAIFI and CAIDI results remained

good, even including the effect of an extended period of severe weather in July. Pet. Ex. B. pp. 20-23; Pet. Ex. M, pp. 59-63; and Pet. Ex. DD. p. 32.

The evidence also shows that PSI provides quality customer service, at competitive costs, as measured by both external and internal customer satisfaction measurements. According to the most recent J.D. Power and Associates customer satisfaction studies, Cinergy and PSI finished in the top quartile for overall residential and midsize business customer satisfaction. In both surveys – residential and midsize business – Cinergy ranked #2 overall in the Midwest region. PSI's own surveys of its residential customers indicate that 89% of responding customers are "satisfied" or "very satisfied" with PSI's customer service. At the same time, PSI's customer service cost per customer is slightly below the ECAR investor-owned utility average. Pet. Ex. B, pp. 27-31; and Pet. Ex. DD, pp. 31-32.

C. Ultimate Findings Regarding Fair Rate of Return for Petitioner. As we have discussed, the courts have emphasized that the determination of a fair rate of return is the prerogative of this Commission, taking into consideration all of the evidence. Our primary objectives in determining a fair rate of return for PSI are to determine a return which is reasonably sufficient to: instill confidence in the financial soundness of the utility; allow PSI to maintain and support its credit ratings; and, to enable PSI to raise the money necessary for the proper discharge of its public utility responsibilities. We have also examined a number of qualitative factors relevant to the determination of a fair return for PSI, specifically: PSI's financial condition and financial requirements; PSI's credit quality; risks facing PSI and the mitigation of those risks through the use of trackers; and PSI's performance as a utility. We find as follows with regard to these important qualitative factors.

First, we find that PSI has continuing, significant financing requirements – a minimum of \$600 million of capital expenditure needs during 2004 and 2005. Next, we find that PSI's current credit quality is investment grade (a BBB+ corporate credit rating), but that the lack of substantial rate relief in light of PSI's current and continuing capital investments could potentially result in a downgrade. The prospect of a downgrade or a negative credit outlook – and the accompanying impact on PSI's ability to access financing on reasonable terms – could be significant given PSI's ongoing financing needs. Further, we find that today's energy industry presents numerous risks, perhaps especially to Midwestern utilities that are heavily reliant on coal.

The expert testimony in this Cause presents us with a range of options with respect to our determination of an appropriate cost of equity. As noted previously, the recommended estimates presented in this matter range from 9.25 – 11.20%, a spread of 195 basis points. Mr. Kaufman's proposal fell at the low end of the range, as he recommended a cost of equity of 9.25% and prefaced this recommendation with a recommendation that this percentage should be reduced if this Commission approves PSI's proposed trackers in this proceeding. Dr. Morin came in with the highest recommended cost of equity of 11.2%. The cost of equity proposed by Mr. Gorman and Mr. Inman fell within the range established by Mr. Kaufman and Dr. Morin. Consistent with our analysis of the specific inputs and issues in dispute, we recognize that it is not necessary for us to agree or disagree with the specific inputs or overall cost of equity proposed by any single

expert. Rather, our determination regarding the appropriate cost of equity in this matter should be a product of our evaluation of the entirety of the evidence presented on this issue by the various parties.

In the present case, PSI presented their proposed cost of equity of 11.2%, as consistent with the cost of equity approved for most other electric utilities throughout the country. Implicit in this approach is the view that proposals that are lower than that proposed by PSI should be rejected by the Commission as outside of the norm. Dr. Morin testified that Mr. Kaufman's recommended ROE of 9.15% (prior to being updated to 9.25%) was substantially under the average returns on common equity allowed in electric and natural gas utility rate cases in the first six months in 2003 of 11.40% and 11.38%, respectively. Pet. Ex. FF, p. 15. While Dr. Morin was quick to criticize Mr. Kaufman's proposal, conspicuously absent from his own analysis is any consideration of the impact that PSI's requested trackers have (or should have) on his proposed cost of equity.

The use of trackers is a significant issue that distinguishes PSI from other electric utilities, and was subject to much discussion in this Cause. While we recognize PSI's strong performance as compared to many of its industry peers, and believe that the ROE approved in this case reflects our positive assessment of PSI on this issue, the inescapable fact is that *trackers reduce risk* to a utility and PSI has many more trackers than its peers. Therefore, we must--in reaching our determination regarding an appropriate cost of equity--properly consider the effect these trackers have in reducing risk, to ensure that these reduced risks are properly reflected in the cost of equity approved by the Commission.

Under these circumstances, we recognize that our determination may not readily allow for the side-by-side comparison of PSI's cost of equity to that of its peers, as advocated by Dr. Morin. However, we also recognize that PSI's decision to utilize trackers, coupled with the divergent options of the experts regarding the various inputs used in the models presented in this matter, has made our decision on the cost of equity issue very fact specific. Because of this, any attempt to make a generalized comparison between the cost of equity approved in this case, and the cost of equity approved for other electric utilities, will undoubtedly fail, unless the comparison fully and carefully reflects the fact specific issues that underlie the basis of our decision on this issue.

Therefore, based on the entirety of the evidence on this issue, including consideration of the Company's performance, in terms of customer service quality, reliability, efficiency, cost-competitiveness, the results contained in well respected customer satisfaction studies, and the risks faced by PSI, we find that it is appropriate to consider the efficiency and quality with which the utility is managed and the utility's overall performance in our determination of a fair rate of return for the utility. Accordingly, based on our review of the testimony presented by all of the parties, and consistent with our analysis of the specific issues disputed by the parties referenced in the our foregoing discussion of these issues, the Commission is persuaded, that the evidence in this proceeding supports an authorized cost of equity capital for PSI of 10.5%. Therefore, we find for purposes of this Cause, that PSI's cost of common equity capital should be 10.5% and its overall cost of capital is 7.30%, computed as follows:

<u>Description</u>	<u>Capitalization</u> <u>(in thousands)</u>	<u>Ratio</u>	<u>Cost</u>	<u>Weighted Cost</u>
Common Equity	\$1,603,374	44.44%	10.50%	4.67%
Preferred Stock	42,333	1.17%	6.11%	0.07%
Long Term Debt	1,402,254	38.87%	6.37%	2.48%
Deferred Income Taxes	519,273	14.39%	0.00%	0.00%
Unamortized ITC - 1970 & Earlier	193	0.01%	0.00%	0.00%
Unamortized ITC - 1971 & Later	30,571	0.85%	8.53%	0.07%
Customer Deposits	9,741	0.27%	6.00%	0.01%
Total	<u>\$3,607,739</u>	<u>100.00%</u>		<u>7.30%</u>

Having determined the cost of capital we must now determine a reasonable fair rate of return for Petitioner. Given that the Commission's determination of Petitioner's fair value rate base of \$4,856,532,000 includes inflation, a comparable amount of inflation must be removed from the rate of return to reach a determination regarding the fair rate of return. The removal of inflation from the cost of equity and/or from the weighted cost of capital provides a reasonable fair rate of return. The inflation factors as provided by OUCC's, witness Mr. Kaufman in Attachment 1, of his testimony, reference inflation from the Consumer Price Index ranging from 1.5% to 3.0%. To determine a range for the fair rate of return, inflation was removed from the cost of equity as a first determinant, and then from the weighted cost of capital. Therefore we find that a reasonable fair rate of return is in the range of 4.30% to 6.63%

6. Operating Income at Present Rates.

A. General. For the 12 months ending September 30, 2002, PSI's jurisdictional operating income from its electric utility operations on a going level basis; adjusted for changes which were fixed known and measurable at the time of the hearing; and, which occurred during the test year, or on or before September 30, 2003, was shown by PSI to be as follows:

Operating Revenues (including CWIP)	\$1,284,140,000
Operating Expenses and Taxes	
Fuel Expense	378,286,000
Purchased & Exchanged Power Expense	9,519,000
Other Operation and Maintenance Expense	391,580,000
Operating Revenue Deduction	(28,917,000)
Depreciation and Amortization Expense	218,316,000
Taxes Other than Income Taxes	58,415,000
Federal and State Income Taxes	<u>69,215,000</u>
Total Operating Expenses and Taxes	<u>\$1,096,414,000</u>
Net Operating Income	<u><u>\$187,726,000</u></u>

Pet. Ex. OO-3, updated October 31, 2003.

This represents a rate of return on original cost depreciated rate base under present rates of 5.13%.

B. Undisputed Pro Forma Adjustments. PSI proposed a number of *pro forma* adjustments to its operating income, per books, which were undisputed. It proposed other adjustments that, though disputed at some point in the process of this rate case, were compromised or were no longer in dispute at the conclusion of the Evidentiary Hearing in this Cause. All such *pro forma* adjustments proposed by PSI, either as originally proposed and undisputed, or as compromised with the compromised positions having been fully identified by the parties, are hereby accepted even though they may not be specifically discussed herein. The disputed adjustments are hereinafter discussed.

C. Disputed Pro Forma Revenue Adjustments. In making our determinations regarding an appropriate level of operating expenses to be used in setting Petitioner's rates, we are guided by our overall objective of achieving a level of expenses which are representative of probable future experience. The Indiana courts have emphasized the importance of viewing test year results and out of period adjustments in the context of estimating a representative ongoing level of utility expenses. See, e.g., *City of Evansville v. Southern Indiana Gas & Electric Co.*, 167 Ind. App. 472, 339 N.E.2d 562, 575, in which the Court stated that: "The theory underlying the use of any test year and of any adjustment method in the rate-making process demands that the data used provide an accurate picture of the utility's operations during the period in which the proposed rates will be in effect." In the matter of *L.S. Ayres & Co. v. IPALCO et al.*, 169 Ind. Ct. App. 652; 351 N.E.2d 814, p. 820, the Court stated that: "test-year results are relevant for a determination of utility rates only to the extent that past operations are representative of probable future experience. . . . [I]f future operations will be required to bear higher tax rates or higher levels of wages and salaries than were incurred during the test year, test-year data must be adjusted to reflect increased costs." With these guidelines in mind, we turn to an examination of the disputed pro forma revenue and expense adjustments at issue in this case.

In this Cause, PSI proposed a Summer Reliability Tracker to allow the Company to adjust its rates to reflect the fluctuating cost of purchased power necessary to meet reserve requirements, and PowerShare® costs during the months of June through September. PSI's proposal included an offset to these summer expenses in the form of crediting the adjustment with a portion of annual off-system sales profits. Because this proposed mechanism tracked the off-system sales profits from a zero base, PSI made adjustments to remove retail and wholesale non-firm revenue and expenses from its test period income statement.

The Summer Reliability Tracker and its components; Trading Expenses, Purchased Power and PowerShare® costs, are discussed in detail later in this order. We will begin with a discussion of the off-system sales adjustment.

(1) Off-System Sales Profits. As part of its Summer Reliability Tracker PSI proposed to adjust its rates for purchase power costs during the months of June through September. PSI's proposal included an offset to these expenses in the form of crediting the adjustment with a portion of annual off-system sales profits. Because this proposed mechanism

tracked the off-system sales profits from a zero base, PSI made adjustments to remove retail and wholesale non-firm revenue and expenses from its test period income statement. Through its Summer Reliability Tracker, PSI initially proposed to flow back to its customers 100% of its June through September off-system sales profits, plus 25% of its off-system sales profits earned in the non-summer months (October through May). Mr. Esamann testified that he believes off-system sales profits, like purchased power costs, are variable, can be substantial, and are ultimately unpredictable. He proposed to use a tracking mechanism for such credits to customers, rather than trying to build an ongoing level into base rates. Pet. Ex. B, p. 58. Modifying its initial proposal that its customers be credited with 100% of off-system sales profits achieved during the summer months and 25% of such profits achieved during the eight non-summer months, PSI ultimately proposed a 50-50 sharing of profits throughout the year. Pet. Ex. DD, pp. 25-26.

The OUCG opposed PSI's Summer Reliability Tracker and proposed instead that test period off-system sales profits of \$18.7 million or some other reasonable *pro forma* projection be reflected as a credit to PSI's revenue requirements. Pub. Ex. No. 6, p. 16; Pub. Ex. No. 2, p. 28. PSI-IG witness Phillips concurred with the OUCG and indicated that he believed that customers should be credited with the profits from off-system sales in PSI's base rates. Testimonial Staff witness Cvengros testified that while the test year shows approximately \$18 million in off-system sales, the Commission could instead choose to utilize a tracking mechanism, comparable to PSI's current purchased power tracker in the amount of \$13 million, with or without a sharing mechanism for profits exceeding the amount in base rates.

As discussed in greater detail below, the Commission is persuaded that PSI's off-system sales profits are highly variable and therefore are appropriate for tracking treatment. In addition, the Commission hereby finds that PSI's approximate test period off-system sales profits in the amount of \$18.7 million should be recognized in base rates, as discussed below.

(2) Rate Migration.

(a) PSI Proposal. PSI proposed an adjustment to reflect lost revenues from customer migrations in its power rate schedules. Testifying in support of the adjustment, PSI witness Bailey observed that any time rates are redesigned or modified to produce a different revenue requirement, there is a potential that specific customers may be better off under a different rate schedule than the one under which they are currently billed. Pet. Ex. BB, p. 7. The Company's analysis in this case showed that 1,537 accounts would migrate from Rate LLF to Rate HLF, resulting in a \$3,233,000 net revenue loss. *Id.* Its analysis further showed that the migrations from Rate HLF to LLF will involve 410 customers, with net lost revenue of \$3,419,000, for a total of \$6,652,000 in lost revenues from customer migration. *Id.* The Company's experience, he said, indicates that, even with notification, only about 50% of customers will actually migrate. Accordingly, PSI reduced the total amount of potential revenue loss by 50% to \$3,326,000. This amount was proportionally allocated to the two power rate schedules and used to develop the Company's revenue requirements. *Id.* In addition, as PSI's proposed phasing-in of rate design allows an opportunity to determine the actual number of migrations, the Company proposed to limit the amount to be recovered in Phase II rates to the

actual effects of the migrations. *Id.* PSI further proposed to reconcile actual lost revenue due to migrations during Phase I to the amount included in rates. Any difference would be returned or charged to customers through one of the Company's standard contract riders. *Id.* at 7-8.⁸

(b) Kroger Position. Kroger opposed Petitioner's migration revenue adjustment, and indicated that PSI's potential for revenue losses from customers switching rate schedules is an ordinary risk of business under current rates. Kroger Ex. No. 1, p. 24. Kroger's witness Mr. Higgins argued that revenue impacts from customers who switched rate schedules prior to the test year cutoff are already included in the Company's proposed revenue requirements, and there is nothing in this case that changes the fundamental relationship between HLF and LLF. So, he contended, there is no reason to reward PSI with additional revenues on the speculation that customers, who have not previously seen fit to change their rate schedules, will suddenly do so now. *Id.*

(c) PSI Response. In response to Mr. Higgins' testimony, Mr. Bailey testified that PSI has strived to provide customers with rate options, among them being rates that reflect more than just differences associated with voltage level, but also rate options relative to their load factor. It would make little sense, Mr. Bailey observed, for PSI actively to identify and notify customers of potential savings if the only end result for PSI was a reduction in revenue. Pet. Ex. SS, pp. 14-15. PSI contends the proper course is to notify customers of potential savings and allow a known, quantifiable revenue shortfall to be reflected in rates. Mr. Bailey rejected Mr. Higgins' contention that nothing changes the relationship of HLF and LLF in this case, pointing out how much additional revenue could be potentially lost solely as a result of incorporating the effects of the rate increase into the rate design. *Id.*

(d) Discussion and Findings. We find that PSI's proposed rate treatment associated with expected migrations is reasonable as the procedure provides rate options to affected customers, which allows them to select rates most favorable to their respective operations. In addition, the Company indicated that it makes an extensive effort to notify customers of potential bill savings, and that the phased-in rates provide an opportunity to "true-up" the estimated migrations to actual. In conjunction with the phased adjustment, actual migrations will be known prior to the second phase, so the revenue impact can be readily determined. This revenue figure can then be used to develop Phase II rates, and any over-or under-recovery of funds from Phase I rates can be reconciled. As PSI is seeking a dollar for dollar recovery of funds lost through rate migrations--no more and no less—we find that PSI will not be financially rewarded by this adjustment. Therefore, we find that, in this instance, this adjustment is reasonable and is hereby approved.

⁸ Mr. Bailey observed that for a customer to be considered in the Company's migration analysis, the customer must be able to save at least five percent on its annual bill or have the potential to save at least \$600 annually. *Id.* at 8. Mr. Bailey testified that the Company planned to notify customers following an order in this Cause detailing the potential bill savings. It will follow this letter with a personal telephone call if needed and a personal visit in some cases. *Id.*

D. Disputed Pro Forma Expense Adjustments.

(1) Depreciation Expense.

(a) Rates.

(i) Evidence. PSI proposes to increase its annual depreciation accrual by \$79,088,000, for a total *pro forma* annual depreciation expense of \$233,022,000, Pet. Ex. X-21, Sch. C-3.36 (as updated by Pet. Ex. OO-3), based on a traditional depreciation study prepared by Mr. John J. Spanos, of Gannett Fleming, Inc. Mr. Spanos testified for PSI, and began his testimony by defining depreciation as the loss in service value not restored by current maintenance, incurred in connection with the consumption or prospective retirement of the utility plant in the course of service from causes that can be reasonably anticipated or contemplated against which the Company is not protected by insurance. As examples of such causes, Mr. Spanos cited wear and tear, decay, exposure to the elements, inadequacy, obsolescence, change in demand and the requirements of public authorities. Mr. Spanos' depreciation study was presented in Pet. Ex. T-1.

Mr. Spanos stated that he utilized the straight line remaining life method of depreciation with equal life group procedures. He testified that annual depreciation is based on a method of depreciation accounting that seeks to distribute the unrecovered costs of fixed capital assets over the estimated remaining useful life of each unit or group of assets in a systematic and rational manner. Pet. Ex. T, p. 7. Mr. Spanos determined his recommended annual depreciation rates in two phases. First, he estimated the service life and net salvage characteristics for each depreciable group. Then he calculated the composite remaining life and annual depreciation rates based on the service life and net salvage estimates determined in the first phase.

With regard to the first phase, Mr. Spanos stated that his service life and net salvage study consisted of compiling historical data from records related to PSI's plant, analyzing this data to obtain historic trends of survival and net salvage characteristics, obtaining supplementary information from management and operating personnel, interpreting that data and forming judgments of average service life and net salvage characteristics. He analyzed the Company's accounting entries that recorded plant transactions during the period 1956 through 2001. These transactions included additions, retirements, transfers, sales and the related balances. Mr. Spanos utilized the retirement rate method to analyze this service life data. He stated this method is most appropriate because it determines the average rate of retirement actually experienced by the Company during the period of time covered by his study.

Mr. Spanos applied the retirement rate method to each different group of property, using the retirement rate method to form a life table, which, when plotted, shows an original survivor curve for that property group. *Id.* at 9. Each original survivor curve, according to Mr. Spanos, represents the average survivor pattern experienced by these several vintage groups during the experience band study. He said that the survivor patterns did not necessarily describe the life characteristics of the property group. Therefore, he must interpret the original survivor curves in

order to use them as valid considerations in estimating service life. He utilized the Iowa type survivor curves to perform these interpretations.

Mr. Spanos made field reviews of PSI's properties in September, 1999 and April, 2002. The purpose of his field review was to allow him to become familiar with Company operations and obtain an understanding of the function of the plant; the reasons for past retirement; and, the expected future causes of retirement. *Id.* at 10. Mr. Spanos estimated the net salvage percentages by incorporating the historical data for the period 1989 through 2001 and considering estimates for other electric companies. He also utilized the demolition cost estimates prepared by Sargent & Lundy and sponsored by PSI witness Mr. Alan Wendorf.

As to the second phase of his study, in which he calculated the composite remaining life and annual depreciation rates, Mr. Spanos testified that he calculated annual depreciation rates for each group based on the straight line remaining life method, using remaining lives weighted consistent with the equal life group procedure. His calculations of annual depreciation accrual rates were developed as of September 30, 2002. *Id.* at 11. Mr. Spanos stated that the straight line remaining life method of depreciation allocates the original cost of the property, less accumulated depreciation, less future net salvage value, in equal amounts to each year of remaining service life. As to the equal life group procedure, he stated the property group is subdivided according to service life. The relative size of each equal life group is determined from the property's survivor curve. This procedure eliminates the need to base depreciation on average lives. The full cost of short lived units are accrued during their lives leaving no deferral of accruals required to be added to the annual cost associated with long lived units. He further stated that the equal life group procedure allocates the capital costs of a property group to annual expense in accordance with the consumption of the service value of the group.

PSI witness Alan Wendorf, Executive Vice President of Sargent & Lundy, LLC, ("S&L") testified regarding the results of a study that estimated the cost of dismantling certain PSI generating stations. Pet. Ex. U, p. 2. Mr. Wendorf testified that in its study S&L made several assumptions with respect to the decommissioning of PSI's plants. For example, they assumed that the only thing necessary to decommission an ash pond was to pump it dry and cover the ash pond with approximately two feet of soft soil. They also assumed that there was sufficient room on site to dispose of all the non-hazardous debris and that there was sufficient fill material on site to cover all this debris. *Id.* at 3. They also assumed that tens of thousands of feet of underground pipe and electrical conduit could be left in place and it would not be necessary to fill in the cooling lake at the Gibson Generating Station. In Mr. Wendorf's opinion, many of these assumptions were conservative and minimized dismantling cost numbers -- *i.e.*, the estimated costs represent the lower end of potential dismantling costs.

Mr. Wendorf estimates of the net cost of dismantling each of PSI's generation stations in 2002 dollars are: Gallagher Generating Station - \$23,691,800; Wabash River Generating Station including the PSI portion of the Wabash River Repowering project - \$33,698,900; Cayuga Generating Station - \$37,544,000; Gibson Generating Station - \$118,434,500; Edwardsport Generating Station - \$12,376,200; and Noblesville Generating Station - \$7,554,000. *Id.* at 6. The details of these estimates are contained in Mr. Wendorf's exhibits, Pet. Ex. U-1 through U-6.

Mr. Michael Majoros testified for the OUCC and indicated that before the Commission allows the current recovery of a future dismantlement cost, it should ensure that such cost will in fact be incurred. He said it is doubtful PSI will dismantle plants unless the Company plans to install new plants at the same site and location as the retired plant. In these circumstances Mr. Majoros said that if there were dismantling costs, such costs should be part of the cost of a new plant. In his opinion, based on the probability of actual plant dismantlement for PSI, Mr. Wendorf's dismantlement estimates should be excluded in their entirety in determining depreciation rates in this proceeding. Pub. Ex. No. 9, p. 20.

Mr. Majoros said that he believes that the underlying premise for including dismantling costs is false. In his opinion it is doubtful that PSI will ever dismantle any of its generation plants to "Greenfield" conditions. Based on his observations during his own plant tour, he concluded that the Company has no plans to even retire these plants, let alone dismantle them. He noted that the retired boilers that he observed had been retired in place, yet this was the largest component of Mr. Spanos' dismantlement costs. *Id.* at 18 Mr. Majoros also relied on a nationwide survey conducted by his firm of steam generating units exceeding 50 MW that have been retired since 1982. According to Mr. Majoros, as of the date of his testimony, 64% of the retired generating units contained in the nationwide survey were retired in place, not dismantled. *Id.* at 19. Finally, Mr. Majoros indicated that PSI has not recorded any final retirements for any electric generating units or plant sites in the last 15 years, and other than Henry County, has no legal obligation to dismantle any of its plants. Mr. Majoros observed that it is unreasonable to assume that PSI, or any other utility, would spend \$700 million to dismantle its production plants, absent a legal obligation to do so. *Id.* at 18-19.

Mr. Majoros went on to state that Mr. Spanos' approach projects substantial past inflation into the future. Thus, he said, Mr. Spanos' future net salvage rates for all other accounts are inflated future net salvage ratios. In Mr. Majoros' opinion, this results in excessive costs of removal charges because the inflated ratios charge current ratepayers for future inflation that has not occurred. Mr. Majoros calculated that over the most recent five years, PSI has only experienced \$7.1 million in negative net salvage on average. This number, he said, should be contrasted with Mr. Spanos' recommendation of \$54.2 million annual recovery of negative net salvage. *Id.* at 24.

Mr. Majoros disagreed with Mr. Spanos regarding the incorporation of future net salvage and terminal net salvage values in depreciation rates. Mr. Majoros indicated that he believes the incorporation of future net salvage and terminal net salvage values increase depreciation rates and inflate estimates of costs that will probably not be incurred. Mr. Majoros also stated that six (6) of the Company's proposed lives in the transmission, distribution and general plant function are too short, thereby overstating the associated depreciation expense. Pub. Ex. No. 9, p. 4. Mr. Majoros proposed a substantially lower annual depreciation expense primarily based on his conclusion that net salvage value should be ignored. *Id.* at 5.

Mr. Majoros also disagreed with Mr. Spanos' use of net salvage ratios in his depreciation rate calculation. He said that this issue is significant, because Mr. Spanos essentially capitalized

costs the Company has no real obligation to incur and then inflated those costs. Mr. Majoros complained that Mr. Spanos was less than forthcoming about how he utilized Mr. Wendorf's cost study. *Id.* at 17. He said that Mr. Wendorf's cost studies were estimates made in terms of 2002 dollars. He said that even though Mr. Spanos stated he relied on Mr. Wendorf's studies, the figures from Mr. Wendorf are not traceable to Mr. Spanos study. Instead, he said, Mr. Spanos applied net salvage ratios to plant balances which resulted in substantially greater amounts of dismantlement costs than estimated by Mr. Wendorf. Mr. Spanos' equivalent numbers exceed \$700,000,000, which means, Mr. Majoros contended, that Mr. Spanos inflated Mr. Wendorf's estimates. *Id.* at 18.

Mr. Majoros went on to discuss the Statement of Financial Accounting Standards ("SFAS") No. 143. He said that pursuant to this accounting standard, all companies, including PSI, must determine whether or not they have an actual legal obligation to dismantle and/or remove retired assets. Pub. Ex. No. 9, p. 25. These legal obligations are called "Asset Retirement Obligations" ("AROs"). If the Company does have an ARO, the net present value of the cost of removal is capitalized and included in the cost of the asset and depreciated over the life of the asset. It is not included as a negative net salvage ratio in depreciation rate calculation, as proposed by Mr. Spanos, but rather, it is added directly to the cost of the assets. He stated that if a Company does not have an ARO, future costs of removal are not considered as a cost of the asset and, therefore, should not be included in the company's depreciation expense on its general financial statements. Mr. Majoros stated that under Generally Accepted Accounting Principles ("GAAP"), electric utilities are required to conduct a review to determine if they have any AROs. PSI, he said, conducted such a review and had quantifiable AROs of \$6,890,212. *Id.* at 27.

Mr. Majoros then went into a discussion of the life study methods. He stated that Mr. Spanos used two basic methods. The life span method and the retirement rate actuarial method. In addition to these methods Mr. Majoros also used the geometric mean turnover ("GMT") method. *Id.* at 50. Mr. Majoros testified that he did not disagree with Mr. Spanos' use of the life span method, but did disagree with his application of the method because Mr. Spanos included negative future net salvage in his calculations.

Mr. Majoros also discussed the production life depreciation calculations performed by Mr. Spanos. He said these calculations were predicated on the life method. Based upon his own calculations and independent studies, Mr. Majoros accepted Mr. Spanos' terminal retirement years for steam and other production functions and found them to be reasonable. *Id.* at pp. 52-57. With regard to transmission, distribution and general functions, Mr. Majoros concluded that some of the accounts analyzed by Mr. Spanos utilized service lives that were too short. In particular, Mr. Majoros objected to the service lives used by Mr. Spanos for account 354, 356, 365, 366, 367 and 397. Pub. Ex. No. 9, p. 60. As to vintage amortization accounting Mr. Majoros only disagreed with the five years Mr. Spanos proposed for Account 391.1, office furniture and equipment -IT systems. Mr. Majoros recommended a 10 year amortization for this account. *Id.* at 64.

Mr. Majoros then described an analysis to identify the amount of past collections of non-legal AROs included in PSI's accumulated depreciation account and two alternative versions for

a specific going forward allowance. As to the former, he stated that Mr. Spanos estimated the amounts to be \$281 million as of December 31, 2002. Mr. Majoros said that this amount represents money charged to ratepayers in the past for which PSI has no legal cost or obligation. *Id.* at 36-37. With regard to his proposed going forward allowance, he stated that non-legal AROs included in depreciation expense should be included in a specifically identifiable allowance and should be accounted for separately in depreciation expense and accumulated depreciation accounts. He described his first alternative as an allowance calculated in much the same manner as the Company allowances for legal AROs. For this calculation, Mr. Majoros used Mr. Wendorf's 2002 net present value amount for production plants. For transmission, distribution and general plant, he used Mr. Spanos' future net salvage proposal and estimated remaining life to determine the net present value of these amounts. He stated that the annual allowance using this method is \$3.3 million.

Mr. Majoros' preference is to use his second alternative, a five year rolling net salvage allowance approach which has been used by other administrative agencies such as the New Jersey Board of Public Utilities; the Pennsylvania Public Utility Commission; the Missouri Public Service Commission; and, on a trial basis by the Kentucky Public Service Commission. *Id.* at 45-50. Mr. Majoros characterized this as the Pennsylvania Public Utility Commission's normalized net salvage allowance approach. This approach is based on the average of the most recent five years worth of actual net salvage activity shown in PSI's depreciation study. *Id.* at 38. He said that the net salvage is treated just as any other normalized expense, except that it is charged to accumulated depreciation. He said that the normalized net salvage allowance amount under this proposal is \$7.1 million. Mr. Majoros concluded this portion of his testimony by stating that the Commission should reject PSI's net salvage amount of \$54.2 million and substitute his preferred normalized allowance of \$7.1 million.

The PSI-IG presented the testimony of James T. Selecky with regard to depreciation. Mr. Selecky stated that he supports excluding net salvage from the development of the calculation of book transmission, distribution and general depreciation rates. In his opinion, the net salvage expense should be included in the revenue requirement as a cost to serve as an operating expense, and not a component of depreciation rates. PSI-IG Ex. No. 2, p. 4. Mr. Selecky stated that the annual net salvage component of depreciation expense that PSI is requesting is significantly greater than PSI's actual net salvage expense. In fact, he states, the level of expense as proposed by PSI is approximately six times greater than the historical level typically incurred by PSI on an annual basis. He said that the consequences of PSI's proposed treatment of net salvage are that it unnecessarily raises rates for today's ratepayers and produces inter-generational inequities by shifting cost burdens to today's ratepayers from future ratepayers.

Mr. Selecky stated that PSI's proposed depreciation expense for transmission, distribution and general plant contains an annual net salvage component of \$23,460,000. However, PSI's average actual annual net salvage expense over the last 10 years was a negative \$3,879,000 and over the last 5 years PSI's net salvage expenses averaged a negative \$3,737,000.

Mr. Selecky stated that the large difference between net salvage expense proposed to be included in depreciation rates and PSI's actual net salvage expense in recent years is due in part

to the fact that proposed net salvage percentages included in the development of depreciation rates include estimates of future inflation and may not capture the economies of scale that would occur if large retirement activity occurred during a single year. Also, net salvage ratios included in depreciation rates, he contended, may be developed from limited retirement experience that is not typical. *Id.* at 7. Mr. Selecky stated that under PSI's methodology, if an asset with a service life of 50 years is retired in 2000, PSI compares the cost to remove the asset in 2000 dollars with the installed cost of the asset which, in this case, was measured in 1950 dollars. As a result, the net salvage ratio is developed in costs stated in dollars from different time periods. While the cost of the asset and the cost to remove the asset are stated in nominal dollars, the net salvage ratio provides an estimate of future inflation. As the result, according to Mr. Selecky, PSI's net salvage percentages require today's ratepayers to pay estimated costs of future inflation based on historic trends.

Mr. Selecky proposes that this Commission eliminate the net salvage ratio from the development of depreciation rates and include a net salvage provision as an operating expense. He recommends that a 10 year average actual net salvage expense be included as an operating expense in PSI's total cost of service. *Id.* at 10. He states that two other commissions have adopted this approach -- the Pennsylvania Utility Commission and the Missouri Public Service Commission. He proposed a reduction of \$23,460,000 in depreciation expense and an increase of \$3,879,000 in operating expense.

Mr. Selecky also claimed that the use of an inflation factor applied to Mr. Wendorf's dismantling studies was inappropriate in that this would require today's customers to pay for inflation that may not occur. Mr. Selecky developed his own net salvage ratios for production plant. *Id.* at 18. In developing his proposed ratios, he excluded switchyard costs and contingency costs from the ratios. In his opinion, switchyard costs represent the costs associated with non-steam production investment and it would be inappropriate to recover these costs in depreciation rates developed for steam plant. He removed Mr. Wendorf's contingency because he believes it does not represent a true cost, and, he maintained that as more plants are dismantled, one would expect technological improvements over 2002 technology. This resulted in a proposed reduction to the steam production depreciation expense of approximately \$28,038,000.

Mr. Selecky also opposed PSI's use of the equal life group ("ELG") procedure and recommended that the Commission order PSI to revert to the use of the Average Life Group ("ALG") procedure to develop depreciation rates. Mr. Selecky claimed that use of the ELG procedure results in increasing the depreciation rates in the early life of an asset and implies a precision for allocating consumption of assets that does not exist. PSI-IG Ex. No. 2, p. 28.

Laura L. Cvengros, Assistant Director of the Electricity Division, for the Commission, also presented testimony with respect to depreciation. Ms. Cvengros performed a "reality check" on how PSI's \$84 million depreciation adjustment was derived. IURC Staff Ex. No. 2, p. 3. She reviewed the depreciation study sponsored by Mr. Spanos and compared that depreciation study to PSI's current depreciation rates. PSI current depreciation rates are based on the testimony and exhibits presented by the OUCC, which resulted of a settlement in a prior PSI rate case, Cause No. 39584 that carried the rates forward into PSI's last rate case, Cause No. 40003.

Ms. Cvengros testified that she compared various components of PSI's depreciation study with similar components of the OUCC's depreciation study in Cause No. 39584. Staff compared the net salvage ratios proposed by Mr. Spanos in this proceeding with those used by the OUCC and found them to be consistent except for five accounts. IURC Staff Ex. No. 2, p. 12. She also found that, generally, the average service lives used by Mr. Spanos in his study were longer than those used by the OUCC to develop PSI's current depreciation rates. Ms. Cvengros explained that the general lengthening of average service lives for most accounts would have the effect of reducing the depreciation expense for those accounts. Ms. Cvengros concluded that Staff does not believe that the increased depreciation expense in this Cause was caused by significant changes in methods/procedures from the depreciation study used to set PSI's current depreciation rates, and recommended that the Commission approve PSI's proposed depreciation rates. *Id.* at 9 and 13.

Mr. Spanos testified in rebuttal to the testimony of Messrs. Majoros and Selecky. He first discussed why the ELG procedure should be preferred to the ALG procedure. He opined that the ELG procedure, contrary to Mr. Selecky's opinion, can be viewed as an accurate form of book depreciation. Pet. Ex. II, p. 2.

In Mr. Spanos' opinion, the ELG procedure correctly matches depreciation expense of the straight line allocation of service value over the period the assets are in service and avoids the back-end loading of the ALG procedure. Under the ALG procedure, he observed, the depreciation for each property group is based on the average service life of the account or vintage. As a result of using an average, the cost of short term lives is not fully accrued by the time of their retirement and the service value of long lived items is more than fully accrued in order to make up for the under accruals of the short lived items. Mr. Spanos testified that the ELG method has been known to experts for many years but its widespread use was constrained by the large amount of computation required. Because the ALG procedure can be readily performed, it became the choice of experts by default prior to the use of computers due to ease of understanding. *Id.* at 3. With the advent of modern computer equipment, however, this constraint has been removed and this procedure, which is more accurate, is available to all companies.

Mr. Spanos stated that his service life estimates were based on a number of factors, including judgment. *Id.* at 8. According to Mr. Spanos, Mr. Majoros should have incorporated other considerations and made better use of industry data. Mr. Spanos stated the retirement rate method is the most commonly used life analysis when age retirement data are available. It develops historical indications of the rate of retirements by age intervals. The Geometric Mean Method, included in Mr. Majoros analysis, was used many years ago according to Mr. Spanos, to analyze un-aged data before the development of the simulated plant record method. It is no longer used to analyze un-aged data and was never used when age retirement data was available.

Mr. Spanos then discussed Mr. Majoros' use of industry data. *Id.* at 9. Although Mr. Majoros presented several statistics, Mr. Spanos stated he used only the maximum life or the upper limit as a measure of the reasonableness of his estimate. This use of the maximum

recorded lives, in Mr. Spanos' opinion, is not appropriate. According to Mr. Spanos, the purpose of comparing the results of statistical analysis with other electric utilities' data is to ascertain whether the results fall within a range of reasonableness. Typically, when defining the range of reasonable service life estimates for an account, Mr. Spanos excludes several estimates of both the low and upper end of the range. In contrast, Mr. Majoros relied on the very longest service lives used in the industry to justify his estimates, Mr. Spanos observed. Mr. Spanos described in detail a number of examples where he believes Mr. Majoros inappropriately used industry data. *Id.* at 9-11. Due to these problems, Mr. Spanos concluded that all the bases used by Mr. Majoros are flawed and his recommendations as to survivor curve estimates must be rejected. *Id.* at 12.

In response to the recommendations of Mr. Majoros and Mr. Selecky with regard to net salvage for accounts other than production, Mr. Spanos indicated that these witnesses have proposed a radical change in the basis for determining PSI's allowance for net salvage for transmission, distribution and general plant. He noted that Mr. Majoros also proposed this treatment for the production plant accounts. *Id.* at 13. Their proposal is that the net salvage be removed from the calculation of depreciation and be included as an operating expense. Mr. Spanos characterized this proposal as one of net salvage costs incurred in the past, related to retired plant that served customers in the past, to be collected from current customers in the same manner as current operation and maintenance expense is collected. *Id.* at p.13.

Mr. Spanos was not aware of any authoritative text on the subject of depreciation that supports their proposal to expense net salvage costs. He stated that the two depreciation texts most often cited by depreciation experts as authoritative support the traditional approach that he used here. Addressing Mr. Majoros' statement that state commissions have adopted his approach, Mr. Spanos said that the Pennsylvania Commission does use the five-year net salvage amortization, because it was required to under a 1962 court order interpreting a Pennsylvania statute. Mr. Spanos agreed that the Missouri Commission adopted the Majoros approach in a case. He noted, however, that Mr. Majoros failed to mention that this approach was not used in a later case by the Missouri Commission but, rather, the traditional approach used by Mr. Spanos in this matter was used. As to the two Kentucky cases cited by Mr. Majoros, Mr. Spanos stated that the two utilities were small cooperatives that did not maintain detailed records of costs of removal and gross salvage by account. In other Kentucky cases where the utility maintains detailed records of net salvage, as PSI does, Mr. Spanos noted the traditional methodology had been used. He concluded, by stating that 47 state utility commissions use the traditional method of incorporating net salvage in determination of annual depreciation rates. *Id.* at 15.

Mr. Spanos stated why it is more appropriate and equitable to recognize net salvage costs during the life of the plant. He said the net salvage value cost of an item of plant is part of its service value and, therefore, is part of the item's cost of providing service. That cost, he said, should be collected from the customers that receive the service. Thus, an allocable portion of the net salvage costs should be recovered each year from the customers receiving the value of the service rendered by the item of plant. *Id.* at 15-16. In his opinion, this approach is equitable in that the customers are responsible for the costs of plant that provides them with service. In contrast, Mr. Spanos said, expensing net salvage after the item has been removed from service recovers an entire element of an item's cost of service from customers who do not receive service

from that item, or if a customer has received service from the Company for a number of years, that customer has received only a portion of the item's service value. These results are not equitable, he contended, and violate the principle that customers should pay the cost of plant that serves them.

Mr. Spanos also disagreed with the position of Mr. Selecky and Mr. Majoros that net salvage costs for accounts other than for production plant that may occur in the future should not be collected from customers until they occur. Mr. Spanos testified that the amount of net salvage that should be included in the annual cost of service, and collected from current customers, is a portion of the net salvage related to the current plant in service as a result of allocating these costs to each year of service rendered by the plant. The amount should not be limited only to the current net salvage costs. Current net salvage costs are related to plant that previously rendered service. *Id.* at 18. Mr. Spanos stated that allocating net salvage costs during the life of the related plant is more appropriate and equitable and is in accord with sound ratemaking principles. In his opinion, delaying collection until such costs are incurred results in a charge to customers for plant from which they did not receive service, and as a result of the delay of recovery, also results in higher revenue requirements.

Mr. Spanos said that the current net salvage accruals are larger than current salvage costs because current cost experience is related to plant retirements that largely come from an older plant base that was constructed to serve fewer customers, while current net salvage accruals relate to plant presently in service that serves a much larger customer base. *Id.* at 23. In his opinion, it is appropriate for PSI to recover amounts for future net salvage costs that are greater than the amounts currently expended for such costs because the amount that PSI spends for plant additions is far greater than the amount it proposes for recovery of original costs. For example, according to Mr. Spanos, in the year 2001 PSI total plant additions were over \$236,000,000. Adding the net salvage costs of \$6.5 million for that year to this amount results in a total expenditure of over \$240 million in 2001. This total expenditure is approximately \$60 million greater than the proposed level of depreciation expense that includes recovery of past original costs and future net salvage costs. *Id.* at 23. In Mr. Spanos' opinion, basic equity requires that customers pay for the service value, original cost less net salvage of the plant, from which they receive the service. The fact that this results in accruals for net salvage that are greater than the current experience is neither unfair nor unusual. It is reality, according to Mr. Spanos.

In response to Mr. Majoros' discussion of SFAS 143 and FERC Order 631, Mr. Spanos stated these accounting pronouncements do not control ratemaking. *Id.* at 24. He said that, in general, GAAP in recent years has moved away from the matching principle in favor of an asset and liability based approach for purposes of improving potential investors' ability to ascertain a company's financial condition. Mr. Spanos said blind compliance would set standards for ratemaking purposes that would violate principles of customer equity by expensing the cost of retiring plant, resulting in charges to today's customers for plant that served past customers. Mr. Spanos added that although utilities may not have a legal obligation to remove plant, they nevertheless do so on a regular basis and will continue to do so in the future.

Mr. Spanos also testified that it is not appropriate to develop net salvage percents for production plant based on the estimated costs of dismantling in current dollars as Mr. Selecky did. Pet. Ex. II, p. 28. He stated that the net salvage costs to be recovered from current customers are those costs that will be incurred when the plant currently providing service is retired. Mr. Spanos escalated the dismantling cost developed by Mr. Wendorf to the year of probable retirement as a factor to be considered in the estimation of net salvage for production plant account. Mr. Spanos stated that the use of current dollar amount to cover future dismantling costs will result in under recovery and customer inequity. Mr. Spanos also considered the indication of net salvage developed from historical retirements, most if not all of which represent interim retirements, and compared these results to the escalated costs from Mr. Wendorf's dismantlement studies. The historical data, he said, also supports the net salvage percent that he has estimated for the accounts. He said that the net salvage percents that he developed result in an estimate of future net salvage costs that are less than the sum of the probable future net salvage costs related to both interim and final retirement. *Id.* at 29.

Mr. Spanos also stated, contrary to Mr. Selecky's position, that it is appropriate to expect that costs of dismantling will escalate at a rate of 3% per year. He noted the long term inflation rate as measured by the Consumer Price Index has averaged approximately 3%. He noted that the Handy Whitman Index for all steam production plant has increased at an average rate of 5.1% during the past 30 years. Therefore, in his opinion, it is more likely the dismantling costs will escalate at a rate greater than 3%.

Mr. Wendorf also presented rebuttal testimony on behalf of PSI. He first discussed Mr. Selecky's exclusion of the contingency factor that Mr. Wendorf included in his demolition estimate. Mr. Wendorf stated that this contingency factor was intended to cover unknowns and that experience teaches that almost every complex project, such as demolition of a generation station, ends up with unknowns. Many unknowns do not become apparent until detailed engineering proceeds immediately prior to actual demolition activities and still others will not be identified until actual demolition activities commence. *Id.* at 2.

Mr. Wendorf noted that his estimates assumed that all underground piping, electric duct and foundations would remain in place, an unlikely event if the sites are reused. Mr. Wendorf looked at the resulting increased costs for one station, Cayuga, if these assumptions were changed. If below ground items have to be demolished and moved, PSI would have to backfill the voids and the debris would have to be disposed off-site. This simple change, according to Mr. Wendorf, results in a significant increase (over \$15 million) in the estimated cost to demolish the Cayuga station. This change alone is approximately double the 25% contingency (\$8,139,000) included in the demolition estimates which Mr. Selecky removed. *Id.* at 4.

In response to the position of Mr. Majoros, that his estimates assume returning the sites to a "Greenfield" condition, Mr. Wendorf stated that a key assumption in his demolition estimates was that PSI would not have to remove the contents at the ash ponds at the stations. He assumed that the ash ponds at all these stations could be pumped dry and covered with two feet of soil and seeded. He stated that, contrary to the position set forth by Mr. Majoros, the use of two feet of soil to cover several years of bottom and fly ash does not constitute a return to a Greenfield

condition. Pet. Ex. JJ, p. 5. Mr. Wendorf investigated what it would cost if PSI were required to remove and dispose of all stored ash from the existing ash pond at Cayuga to an off site landfill designed to contain the material in an environmentally acceptable manner. He assumed that such a landfill could be required and constructed within 10 miles of the Cayuga site. Changing this assumption about ash removal according to Mr. Wendorf, would add more than \$100 million to the estimated cost of demolishing the Cayuga site. *Id.* at 5. Mr. Wendorf sponsored an exhibit detailing his analysis and that exhibit demonstrates that the incremental costs of demolishing the Cayuga station would be at least \$155 million as compared with the original demolition cost estimate of \$37,544,000. *Id.* at 6. He believes that the demolition estimates that he has developed in this proceeding are conservatively low with the 25% contingency factor included.

In response to Mr. Majoros' conclusion that, as certain boilers have been retired in place, PSI will never dismantle these plants to Greenfield conditions, Mr. Wendorf indicated that the only retired in place boilers on the PSI system are the recently retired boilers at Noblesville and the Wabash River Unit 1. *Id.* at 7. The turbines associated with all three of these boilers are still in service as part of the Noblesville Repowering Project or the Wabash River Coal Gasification Repowering Project. This situation is entirely different from a completely retired plant, he observed. Removal of these boilers while the remainder of the plant continues in operation would be a very complicated and expensive matter, with no real benefit, since there are interconnecting pipelines and electrical cables located in the area of this boiler which are still in use. Before demolition could begin on a single boiler it would be necessary to determine which of these pipelines and cables would have to be protected, terminated, capped or rerouted to allow continued operation of the remaining units. This process would require extensive engineering and field investigatory work. *Id.* at 8.

Mr. John Roebel was the Company's final rebuttal witness on the subject of depreciation. He responded to Mr. Majoros' assertion that PSI will not dismantle certain generating stations at the end of their useful lives. Pet. Ex. KK, p. 2. Mr. Roebel stated that, in his opinion, demolition will take place, because it is the reasonable thing to do. He stated that he believes that PSI will dismantle these stations in order to reuse the sites as future generating stations. According to Mr. Roebel, the Commission is well aware of the public concern that has accompanied some attempts to construct new generation in Indiana and elsewhere. In contrast, Mr. Roebel noted that there was virtually no local opposition to the recent Noblesville Repowering Project. These sites were selected originally because they were good sites for generation stations with access to water and to fuel supplies. He noted that there are not many good generating sites that are not already being used today and that he is not aware of any open sites that could be used for a major generation station without significant expenditures for new transmission facilities alone.

Mr. Roebel then discussed PSI's experience with regard to dismantling generating units and re-using sites. He stated the Company had completely retired one major generation station, its Dresser Generating Station, located near Terre Haute. PSI, he said, had dismantled that station and is now using the site for a machine shop. *Id.* at 3. He also noted that PSI has constructed additional generation at existing sites. PSI's Cayuga CT Peaking Unit was built at the Company's Cayuga Station site, the Wabash River Coal Gasification Repowering Project was constructed at the Wabash River Station reusing the existing Unit 1 turbine and other facilities

and most recently PSI has reused the Noblesville site and many existing facilities and infrastructures as part of the Noblesville Repowering Project.

(ii) Discussion and Findings. In evaluating the merits of this issue we are faced with various proposals from expert witnesses in response to depreciation expenses proposed by PSI. In undertaking our review of this issue, the Commission recognizes our evaluation of depreciation expenses involves the examination of many variables. The U.S. Supreme Court identified the uncertainties associated with the use of depreciation expenses in *Lindheimer v. Illinois Bell Telephone Company*, 292 U.S. 151, 168-170, 54 S.Ct. 658, 665-666 (1934), in which it stated:

If the predictions of service life were entirely accurate and retirements were made when and as these predictions were precisely fulfilled, the depreciation reserve would represent the consumption of capital, on a cost basis, according to the method which spreads that loss over the respective service periods. But if the amounts charged to operating expenses and credited to the account for depreciation reserve are excessive, to that extent subscribers for the telephone service are required to provide, in effect, capital contributions, not to make good losses incurred by the utility in the service rendered and thus to keep its investment unimpaired, but to secure additional plant and equipment upon which the utility expects a return.

Confiscation being the issue, the company has the burden of making a convincing showing that the amounts it has charged to operating expenses for depreciation have not been excessive. That burden is not sustained by proof that its general accounting system has been correct. The calculations are mathematical, but the predictions underlying them are essentially matters of opinion. They proceed from studies of the behavior of large groups of items. These studies are beset with a host of perplexing problems. Their determination involves the examination of many variable elements and opportunities for excessive allowances, even under a correct system of accounting, [are] always present. The necessity of checking the results is not questioned. The predictions must meet the controlling test of experience.

Id.

Our determination of appropriate depreciation rates is important, as excessive depreciation rates produce excessive depreciation expense. Since depreciation expense flows dollar-for-dollar into the revenue requirement, excessive depreciation expense results in an excessive revenue requirement that is ultimately passed on to ratepayers.

As alluded to by various witnesses in this proceeding, PSI's current depreciation rates are a result of a Settlement Agreement in Cause Nos. 39584 and 39584-S-2 (*Ind. Util. Reg. Comm'n*, February 17, 1995), the terms of which were subsequently incorporated into Cause No. 40003. While we have been presented with a wealth of testimony on this issue, we

recognize that the determination of appropriate depreciation levels is far from an exact science, and decisions on this issue must be made on a case-by-case basis.

To assist us in our evaluation of the issues, we were presented with a traditional Depreciation Study ("Depreciation Study") prepared by Mr. Spanos. A second study, in response to the Depreciation Study, was prepared by Mr. Majoros. In response to PSI's testimony, Mr. Selecky and Mr. Majoros both proposed to remove some amount of net salvage from depreciation rates and proposed to treat such costs as expenses. The most contentious issue with regard to the determination of depreciation rates and expense in this proceeding was the proper treatment of dismantling costs. Mr. Spanos testified that dismantling costs should be included in current depreciation rates. Mr. Majoros disagreed and indicated that he does not believe that PSI will dismantle its generation stations and return them to Greenfield conditions, as it has no legal obligation to do so.

In our consideration of this issue we note that PSI's estimates are not based on the cost of returning these generating station sites to Greenfield conditions. In addition, we do not find testimony, that indicated that three boilers located at operating generating stations were retired in place, controlling in our consideration as to whether these stations will be demolished at the end of their useful lives. The rebuttal testimony of Mr. Wendorf and Mr. Roebel make it clear that it is much more expensive and difficult to remove a single boiler and associated equipment while other units at a generating station are still in operation than to do so when the entire plant is demolished. This Commission is aware of the controversy that can be generated when a public utility proposes to construct a generation facility on a new site. It appears reasonable for PSI to maintain its current generation sites for future use as generating stations. Therefore, this Commission concludes dismantling costs should be included in fixing PSI's depreciation rates.

The next issue is the timing of the collection of such costs. The parties did not disagree that dismantling costs are a part of the cost of current facilities providing current service. They disagreed as to the timing of the collection of such costs and their amount. This Commission can either find that current customers should pay a share of dismantling costs, which will not be incurred for a number of years, or, in the alternative, conclude that these costs should be passed on to a future generation of customers. This Commission does not believe that the latter alternative constitutes sound regulatory policy, or is based on sound ratemaking principles. Current customers are receiving service from PSI's generation facilities. A part of the costs of those facilities is dismantlement upon retirement. Therefore, we do not believe it would be appropriate for the Company to backload the dismantlement costs for future ratepayers to pay when the facilities associated with these costs are providing service to current customers. Rather, we find it is appropriate that these costs be shared by all customers that received service from PSI's generation facilities. Accordingly, this Commission finds that dismantlement costs are properly included in determining the depreciation rates approved in this cause.

The only challenge to the estimated costs of dismantling PSI's generating stations, presented by Mr. Wendorf, was Mr. Selecky's proposal to eliminate the 25% contingency. We believe that Mr. Wendorf's testimony on this issue provides an adequate explanation as to why such a contingency is needed. Mr. Wendorf also demonstrated that minor changes in

conservative assumptions could more than use up the contingency. Therefore, based on the facts presented in this Cause, we find that Mr. Wendorf's approach is acceptable to the Commission.

The final issue regarding dismantlement costs is whether inflation should be factored into the dismantlement cost estimates to be utilized in determining PSI's depreciation rates. Mr. Selecky and Mr. Majoros objected to the use of inflation. Mr. Spanos utilized Mr. Wendorf's dismantlement costs which are stated in 2002 dollars, and factored inflation up to the year of the projected dismantlement as a factor in his consideration, along with his analyses of historical, or interim retirements. We find Mr. Spanos' approach to be realistic and consistent with past experience. Inflation has been a fact of life in the American economy for many years. Not factoring inflation into dismantlement costs to be incurred in the future would understate those costs, with the result being that future customers would have to pay costs arising from facilities that are not serving them. This result flies in the face of matching rates with costs incurred for service, a sound ratemaking principle followed by this Commission. Moreover, current customers receive a benefit by factoring in inflation, as it may appropriately allow for a reduction in rate base because of the increased accumulated reserve for depreciation. Accordingly this Commission finds that accounting for inflation in determining the dismantlement estimates to be used as part of PSI's depreciation rates is reasonable.

Turning to the net salvage values for transmission, distribution and general plant, Mr. Selecky and Mr. Majoros urged this Commission to utilize historical average of actual net salvage expense incurred by PSI for determining the net salvage to be utilized for these accounts and then expense these averages as a separate cost of service item. In effect, they are proposing that net salvage values be eliminated from the depreciation rates determination in this proceeding.⁹ In contrast, Mr. Spanos took the traditional approach and utilized estimated net salvage values for these accounts based on historical net salvage costs as a percent of the original cost of the retired assets that produced the gross salvage or required costs to remove. Pet. Ex. II, p. 20. Mr. Majoros recognized that Mr. Spanos' approach was not abnormal, but he and Mr. Selecky cited a number of state commissions where an historical average approach had been adopted.

Based on our review of the decisions cited by Mr. Majoros and Mr. Selecky, we note that only one state commission, the Pennsylvania Public Service Commission, following the directive in a decision by the Pennsylvania Supreme Court, has implemented the historical average approach. While the Missouri and Kentucky Public Service Commissions have utilized the historical approach to net salvage values in some cases or on a trial basis, subsequent decisions have adopted the approach advocated by Mr. Spanos.

We believe that there is a sound basis for the traditional approach on this issue that is utilized by a majority of states. Utilizing historical averages as an item to be expensed to current customers means that these customers will be paying for salvage costs at levels that may not be sufficient. That means that the next generation of customers will be paying for salvage costs

⁹ Mr. Selecky proposed a 10-year average, while Mr. Majoros used a 5-year average. Mr. Majoros made the same proposal with regard to production plant.

related to facilities from which they may never have received service. The use of best estimates of future salvage costs addresses this inequity. Moreover, use of historical averages for dismantling costs does not take into account the current configuration of PSI's system with regard to its production, transmission, distribution and general facilities. Facilities in service 40-50 years ago did not take into account the significantly enhanced customer base that PSI now serves, nor the current configuration of PSI's facilities that serve these customers. It seems appropriate to utilize best cost estimates for net salvage values taking into account specific facilities now serving PSI's customers in developing depreciation rates that today's customers should pay. Accordingly, we find that the use of historical averages for net salvage values with regard to transmission, distribution and general plant for the purpose of expensing them outside the context of the depreciation determination should be, and hereby is, rejected.¹⁰

With respect to the use of the ELG or ALG methodologies to determine average service lives, we note that Mr. Selecky advocates the use of ALG to determine average service lives as opposed to Mr. Spanos' ELG methodology. This Commission on numerous occasions has accepted the use of the ELG methodology. *See, Indiana-American Water Co.*, Cause No. 40703, 1997 Ind. PUC LEXIS 429 (*Ind. Util. Reg. Comm'n*, December 11, 1997). Therefore, based on our review of the testimony we find that Mr. Spanos' use of the ELG methodology is acceptable.

Based on our review of the record on this issue, we find that the depreciation rates developed in Mr. Spanos' Depreciation Study and proposed by PSI for approval by this Commission are reasonable and appropriate and should be approved and used to determine PSI's *pro forma* operating expenses in this case. In approving PSI's proposal in this Cause, we recognize the complexity of this issue, and the fact that it will be necessary for us to carefully review this issue on a case-by-case basis in future proceedings before the Commission.

(b) Accelerated Depreciation on NO_x Equipment.

(i) Evidence. In its case-in-chief testimony, PSI requested authority to apply a 15-year depreciation rate to its NO_x compliance projects for the purpose of providing assurance of equipment cost recovery. Pet. Ex. C, p. 24. In particular, the Company would apply this accelerated depreciation rate to the same equipment approved by this Commission for use by PSI in Cause Nos. 41744, 41744-S1, 42061 and 42061-S1. Subsequently, PSI altered its request to seek authority to apply an 18-year depreciation rate to its NO_x compliance equipment. Pet. Ex. OO, p. 4.

The only party to oppose this request was Kroger. Mr. Higgins testified that PSI's request would result in a depreciation rate of 6.67% instead of the 3.52% rate derived from the depreciation study sponsored by PSI witness Spanos, and the revenue requirement related to this

¹⁰ With respect to another area of contention related to average service lives for a few accounts, Mr. Majoros proposed longer lives than those used by Mr. Spanos for six accounts. We find Mr. Spanos' testimony provides an adequate explanation on this issue and we decline to substitute the calculations of Mr. Majoros for only those few accounts.

difference was \$10.5 million. Mr. Higgins testified that he believed that this request should be denied as it would compound the cost burden to customers at a time when the Company was seeking a 15% rate increase. Kroger Ex. No. 1, p. 21.

(ii) Discussion and Findings. We find PSI's request to be in accordance with the law and reasonable. IC 8-1-2-6.7(b) permits PSI to seek Commission approval of a 10-year depreciation rate for equipment deemed to be clean coal technology. We believe PSI's proposal is reasonable, will ensure cost recovery of Commission approved projects to which PSI is statutorily entitled, and should be approved. Therefore, we find that PSI should be authorized to utilize an 18-year life over which to depreciate its Commission-approved NO_x equipment. We note that our decision here is entirely consistent with our November 25, 2003 Order in Cause No. 42411.

(2) Purchased Power. In opposing PSI's proposed Summer Reliability Tracker, the OUCC contended that PSI's 2003 level of purchased power expense should be included in base rates. In response, Mr. Esamann indicated that the inclusion of the OUCC's proposed level of purchased power expense in PSI's base rates would require the Commission to use an abnormally low level for the expense, given that the Company's 2003 purchased power costs were by far the lowest level of forward reliability purchased power costs experienced by PSI since prior to 1999 (less than \$2 million). Pet. Ex. DD, pp. 18-19. He said, this low level of purchased power expense is likely to be temporary, given the expected gradual increase in wholesale power prices and the approximately 100 MW of annual demand growth PSI is experiencing on its retail system. *Id.* at 19. Accordingly, Mr. Esamann said, if the Commission were to include a base amount in PSI's rates, he would recommend the use of an average of the last two years' forward reliability purchased power costs, which amounts to \$10.5 million. *Id.* That level, he said, is still lower than PSI's estimated annual purchased power costs over the next few years. *Id.*

Consistent with our discussion of the issue below, we find that PSI's purchased power costs are variable and therefore appropriate for tracking treatment. Accordingly, we decline to include an amount of purchased power costs in base rates. The details of our finding on this issue are set forth below.

(3) PowerShare® PowerShare® is a peak load managing program that provides PSI's commercial and industrial customers with two options, CallOption and QuoteOption. Under CallOption, the customer contractually commits to reduce its load under certain prescribed circumstances in exchange for a premium. In addition, at times of system peak when the customer is called on to reduce its load, and the customer complies, the customer receives an energy credit. The QuoteOption program is similar, except that the customer is not required to reduce its load when called upon. Pet. Ex. AA, pp. 11-12. Therefore, QuoteOption customers receive only the energy credits if they are called to reduce load and they comply. *Id.*

PSI proposed that the test period level of PowerShare® expense should be included in base rates, in an amount of approximately \$1 million. No party objected to the base level amount of PowerShare® expense. PSI also proposed that PowerShare® costs be tracked as part

of the Summer Reliability Tracker, so that only actual PowerShare® costs are collected from ratepayers. While we discuss the entirety of the Summer Reliability Tracker below, we find that that PSI's base rate amount of \$1,023,000 million of test year expense is reasonable and should be approved as an appropriate level of PowerShare® expense.

(4) Service Company Allocations.

(a) Evidence. PSI witness Barry F. Blackwell, Director of Cost Accounting and External Reporting for Cinergy Services, Inc., (the "Service Company") provided testimony regarding the processes used to assign costs between PSI and its affiliate companies, pursuant to various service agreements which PSI has entered into with those affiliates. Pet. Ex. L, p. 2. Mr. Blackwell testified that the Service Company updates the cost allocation ratios it uses in allocating costs to its client companies by performing a cost study at least annually, taking into consideration specific changes that are fixed, known and measurable. *Id.* at 10-12. Mr. Blackwell cited as an example of such a change the Financial Accounting Standards Board's ("FASB") Emerging Issues Task Force ("EITF") Issue 02-3, Accounting for Contracts Involved in Energy Trading and Risk Management Activities ("EITF 02-3"), which requires that all revenues and expenses on energy trading derivatives be presented on a net basis beginning January 1, 2003. *Id.* at 12-13.

Mr. Blackwell stated that this change will result in substantial reductions in reported operating revenues, purchased and exchanged power expenses and gas purchased expenses. *Id.* Mr. Blackwell explained that prior to this accounting change, these revenues and expenses were recorded on a gross basis, with no offset of energy trading revenues against energy trading costs. *Id.* In Mr. Blackwell's opinion the accounting changes mandated by EITF 02-3 comport with cost causation principles, because costs will be allocated to Cinergy's trading operations in a manner more closely aligned with the services that they receive from the Service Company. *Id.* at 13-14.

OUCG witness Carver testified in opposition to PSI's adjustment related to changes in the allocation ratios, citing three issues with the allocation methods used by the Service Company: 1) use of net versus gross revenues in determining allocation factors; 2) the Service Company's derivation of the peak demand allocator; and 3) consideration of newly acquired and sold properties. Mr. Carver recommended that PSI back out \$3.045 million in *pro forma* adjustment to test year operating expenses related to costs allocated to PSI by the Service Company. Pub. Rev. Ex. No. 3, Sch. C-17.

With respect to Mr. Carver's first issue, the net versus gross revenue issue, Mr. Carver believes that PSI's reliance on EITF 02-3 in developing its proposed allocation factors inconsistently applies net versus gross revenue recognition in developing revenue-related allocation factors. Mr. Carver asserts that when net revenue is used to derive allocation factors for trading operations, the same approach should be used in deriving allocation factors for non-trading operations. Mr. Carver argued that the approach of using net revenues for trading operations but gross revenues for regulated operations means that a disproportionate share of costs are allocated to regulated operations. Pub. Ex. No. 1, p. 96.

With respect to Mr. Carver's second issue, the derivation of the peak demand allocation factor, Mr. Carver testified that PSI erred when it adjusted this allocation factor to add the capacity of the Madison and Henry County generating units to PSI's actual system peak demands. *Id.* at 97. Mr. Carver stated that this adjustment is contrary to the Utility Service Agreement, which states that the electric peak load ratio should reflect the domestic firm electric maximum system demands for the immediately preceding 12 calendar months. According to Mr. Carver, the Utility Service Agreement requires the allocation to be based on demand, not capacity or supply levels. *Id.* at 98.

Turning to Mr. Carver's third issue, the full year effect of properties newly acquired or sold during 2002 and 2003, Mr. Carver cited, as one example, a discontinued operation that had been removed from the development of allocation factors as its operations were winding down in 2002 and was expected to have little or no activity in 2003. *Id.* at 99-100. In contrast, he cited a newly acquired property that began operations in 2002, but the allocation study only included three months of revenue for this property. *Id.* The effect of this inconsistency, according to Mr. Carver, is that more costs are allocated to regulated operations than appropriate. *Id.* Mr. Carver argued that these types of transactions should be fully and consistently recognized on a forward-looking basis. *Id.* Mr. Carver concluded that PSI should perform a new allocation study, with updated numbers consistent with the fixed, known and measurable provisions of the Prehearing Conference Order so that, in his view, more appropriate allocation factors could be developed. *Id.*

Testifying in rebuttal, Mr. Blackwell addressed the three issues raised by Mr. Carver. Pet. Ex. NN, p. 1. Mr. Blackwell criticized Mr. Carver's proposal to use revenues from non-trading operations net of fuel and purchased power costs to derive revenue-based allocators. *Id.* at 2-5. He noted that many of Cinergy's companies do not have fuel purchases and purchased power costs. Thus, Mr. Blackwell pointed out, utilizing Mr. Carver's methodology of using revenues, net of fuel and purchased power costs, would result in just the sort of mixing of net and gross revenues that Mr. Carver claimed to be seeking to avoid. *Id.* That is, Mr. Carver is recommending that the Service Company use gross revenues for affiliated companies that do not have fuel and purchased power costs and net revenues for those that do. *Id.*

Mr. Blackwell observed that fuel and purchased power costs should be treated differently in non-trading operations than they are in trading operations, because fuel and purchased power are real costs of power furnished to end-use customers. *Id.* Mr. Blackwell explained that fuel and purchased power costs represent real costs of goods sold in a traditional sense when incurred in serving end-use customers, while on the other hand, financial trading transactions are simply financial transactions, with no physical goods flowing from one party to another. *Id.* at 3. Mr. Blackwell testified that EITF 02-3 recognized this distinction by requiring all physical trading activity be presented on a gross revenue basis and financial trading activity to be presented on a net revenue basis. *Id.* at 2-5. Moreover, as explained by Mr. Blackwell, the same issue arises in the cost allocation process, where gross revenues from trading operations do not accurately convey the extent of services being provided to these trading operations. *Id.* Mr. Blackwell produced a chart (Pet. Ex. NN-1) illustrating a trend in which a decreasing level of costs are

allocated to the Service Company's utility company affiliates, including PSI, during a time in which PSI's business, and presumably the amount of services it utilizes from the Service Company, has not changed to a significant degree. Pet. Ex. NN, p. 7.

Regarding Mr. Carver's issue with the derivation of the peak demand allocator, Mr. Blackwell conceded that the Service Company had deviated from the allocation methodology set forth in the Utility Service Agreement. Accordingly, Mr. Blackwell stated, the Service Company revised its system peak demand allocation ratios to conform to the requirements of the Utility Service Agreement. PSI adjusted its earlier *pro forma* to reflect this change. Pet. Ex. NN, p. 7; Pet. Ex. PP, p. 3.

With respect to Mr. Carver's third issue with the Service Company's cost assignment practices, that of the consideration given to newly acquired and/or sold properties, Mr. Blackwell disagreed with Mr. Carver. *Id.* at 7. Mr. Blackwell explained that, in accordance with the Utility Service Agreement, the Service Company performs an annual cost allocation study, based on historical data gathered during the third quarter. *Id.* at 7 – 8. He said that when the Service Company knows of companies that are winding down their operations and will no longer be taking services from the Service Company, it excludes from its calculations of the allocation factors the data associated with these companies. *Id.* Mr. Blackwell testified that when an acquisition of a company occurs outside the annual study timeline, the Service Company determines the effect of the acquisition and updates the appropriate allocation factors where such effect is expected to be material. *Id.* He testified that the Service Company reviewed all revenue/sales based allocation factors, picking up twelve months of data for various entities sold/purchased/discontinued in 2002 and 2003, as requested by Mr. Carver, and determined that the amount of costs allocated to PSI based on these allocation factors would have been merely \$90,000 less, which in Mr. Blackwell's opinion is not material in PSI's case. *Id.* at 9 – 10.

(b) Discussion and Findings. Other than the three issues identified by the OUCC, there were no issues raised with respect to the assignment of costs between PSI and its affiliates. Regarding the first issue raised by OUCC, the derivation of revenue-based cost allocation factors on net revenue versus gross revenue basis, this Commission finds that the methodology proposed by PSI is reasonable. The evidence supports PSI's proposition that there is a sound basis for distinguishing between revenues generated from trading operations and revenues generated from other types of operations. The FASB has required that financial trading transactions should be accounted for on a net revenue basis, whereas physical trading transactions should continue to be accounted for on a gross revenue basis. Although Mr. Carver argues that consistency requires that net costs be used for both, PSI's testimony demonstrated that Mr. Carver's approach, while resolving one set of inconsistencies, introduces another set of inconsistencies. This Commission is aware of the possible concern of the financial community regarding measuring financial trading operations based on gross revenues, and agrees that deriving allocation factors based on these gross revenues can distort the apparent extent of trading operations and the amount of services they may take from the Service Company. Ultimately, whether or not an allocation methodology allocates more costs to utility affiliates, as opposed to non-utility affiliates, is not the issue. The determination that must be made is

whether the costs incurred by the Service Company are allocated properly to those affiliates that cause the costs to be incurred.

With respect to Mr. Carver's second issue, the derivation of the peak demand allocation factor, Mr. Blackwell conceded that Mr. Carver correctly determined that PSI erred when it adjusted this allocation factor to add the capacity of PSI's new generating units (Madison and Henry County) to PSI's actual system peak demands, in a manner contrary to the Utility Service Agreement. Mr. Blackwell indicated that he revised the system peak demand allocation ratios to conform to the requirements of the Utility Service Agreement. Therefore, as Mr. Blackwell corrected this error there is no pending dispute between the parties on this issue.

With respect to Mr. Carver's conclusion that a complete updated cost allocation study, based on the acquisition or dissolution of properties is needed, we find that while Mr. Carver raises legitimate concerns on certain aspects of this issue, based on the totality of the evidence presented in this Cause we question the overall cost/benefit of doing such a study. Based on our review of the evidence presented, it is apparent that PSI reviewed all revenue/sales based allocation factors, picking up twelve months of data for various entities sold/purchased/discontinued in 2002 and 2003, and determined that the amount of costs allocated to PSI would have been merely \$90,000 less. There is no indication in the record that a complete updated study would yield a materially different result than that used by PSI here. Furthermore, at the Evidentiary Hearing in this Cause, Mr. Howe observed that in order to include all changes in test year operating expenses related to changes in allocation factors which were fixed, known, and measurable by September 30, 2003 (12 months after the test period), as allowed by the Prehearing Conference Order, PSI could not begin the required cost allocation study until October 1, 2003, when the latest data through September 30, 2003 would have become available. Since such a study takes several months to complete, it clearly could not have been completed by the date of PSI's rebuttal prefilings, or even the date of the evidentiary hearing. Tr. at Y30 – Y31.

In any event, the issue before this Commission is whether the cost allocation methodology utilized by the Service Company is representative of future costs to be properly allocated to PSI, when the rates determined in this proceeding will be effective. Other than the three issues raised by OUCC, there were no issues raised with regard to the assignment of costs between PSI and its affiliate companies. We find that the costs assigned to PSI represented in this proceeding are just and reasonable and should be fully recoverable by PSI.

(5) Sale of Accounts Receivable/Forfeited Discounts/Uncollectible Expense.

(a) Evidence. In February 2002, Cinergy replaced an existing accounts receivable sales agreement with a newly structured receivables sales facility that has a maximum funding capacity of \$400 million. Under this Agreement, PSI, along with Cinergy's other utility operating companies, sells its accounts receivable to an affiliate, Cinergy Receivables Company, LLC ("Cinergy Receivables"). The receivables purchased by Cinergy Receivables are then used as collateral for Cinergy Receivables to secure non-recourse loans from third party lenders. The purpose of these loans is to enable Cinergy Receivables to purchase the accounts receivable. PSI sells its accounts receivables in order to receive upfront cash, rather than waiting until the

accounts receivables are collected. This cash helps the Company preserve its various bank lines of credit to meet other short-term financing needs. Pet. Ex. QQ, p. 8.

Summarizing the Company's own adjustment in computing *pro forma* operating income under current rates, Mr. Farmer said that the Company eliminated all test period expenses related to the sale of accounts receivable other than uncollectible accounts expense totaling \$5.7 million. *Id.* at 13. Uncollectible accounts expense was not eliminated, he said, because the Company recognized that a portion of *pro forma* revenues included in this case would not be realized, because they would be uncollectible. PSI developed a factor, based on a four-year average relationship of uncollectible accounts expense to revenues that was applied to *pro forma* test period revenues. The effect of PSI's adjustment was to adjust test period uncollectible accounts expense for changes in revenue levels in addition to the elimination of all costs not directly related to non-payment by customers.

OUCC witness Carver sponsored OUCC Adjustment C-5, which increased PSI's test period revenues by \$5,419,000, the test year's level of forfeited discount revenues, which PSI had proposed to exclude. Pub. Ex. No. 1, p. 17. Forfeited discounts and late payment fees are merely different names for the same revenue (*i.e.*, customer charges due to late bill payment). Mr. Carver stated that it was his view that the ratepayers should be no worse off as a result of PSI selling its accounts receivable than would be the case if the account receivable sale had never occurred. *Id.* at 21. Mr. Carver testified that if the effect of the sale is a good deal for the regulatory participants, it would be reasonable to expect the arrangements to positively improve the utility's operating income and cash flow, and ratepayers should reasonably expect to participate in these benefits. However, in Mr. Carver's view, the net impact of the Company's arrangement to finance its receivables with an affiliate was detrimental to the ratepayers.

Mr. Carver conceded that it is certainly possible that the receivable sales agreement could accelerate PSI's cash realization to the point that this annual cost could be reasonable. However, the only way, he said, to determine the benefit of cash flow acceleration is through a lead-lag study, which PSI has not done. *Id.* at 24-25. Instead, he said, PSI's rate base calculation assumes that "zero" is a reasonable approximation of PSI's cash working capital requirement that would result from a detailed lead/lag study. In Mr. Carver's opinion, such an assumption is inappropriate because a properly conducted lead/lag study could result in a negative cash working capital requirement. Mr. Carver indicated that a zero cash working capital assumption is inappropriate where ratepayers are asked to bear the additional costs of the "zero" cash working capital requirement assumption, but receive no benefit from the receivable sales agreement.

Mr. Carver calculated that Cinergy Receivables realized net income of about \$4.4 million in 2002, before income taxes. He stated that OUCC Schedule A-1 recognizes both forfeited discount and uncollectibles in the development of the revenue conversion factor, while the Company recognized only the uncollectibles. He added that if the Commission concludes that the forfeited discount should be removed from test year revenues and excluded from the revenue conversion factor calculation, then the Commission should also revise PSI's tariff to remove all provisions for charging late payment fees to its customers.

Mr. Farmer testified in rebuttal to Mr. Carver's adjustment. He stated it would not be proper to credit the cost of service with forfeited discount revenues, because under the Cinergy Accounts Receivable Purchase and Sales Agreement, PSI does not retain the right to keep revenues received from customers due to late payments. Rather, he observed, PSI has transferred that right to the purchaser of the receivables. However, he pointed out, PSI's customers *have* received significant benefits from the sale of accounts receivable in the form of cost savings. Pet. Ex. QQ, p. 7. Mr. Farmer explained that by selling accounts receivable the Company is able to accelerate the recovery/realization of billed revenues by converting receivables (a non-earning asset) immediately into cash. He stated that if PSI did not sell these receivables, it would incur costs to finance the lag between the time when revenues are billed and payment is received from customers. Accordingly, without the accounts receivable sales agreement, PSI would incur a permanent financing requirement that would likely be met by issuing commercial paper, borrowing against credit lines, or reflecting increased equity and/or debt borrowing in PSI's capital structure. By selling the accounts receivable, PSI is able to eliminate this payment lag. PSI and its customers will benefit to the extent that the fee charged by the purchaser of the receivables is less than the cost that would have been incurred if the Company were to finance the receivable itself. *Id.* at p. 8-10.

Mr. Farmer gave examples of ways in which PSI customers have benefited from such accounts receivable sales. *Id.* One example was the Company's use of the proceeds from its initial sales of account receivables to retire/redeem preferred stock and first mortgage bonds, as part of the financial restructuring that took place in the late 1980's. In addition, the Company used some of the cash to finance capital investments. However, Mr. Farmer pointed out that the primary benefit of selling accounts receivable is to utilize the cash received from such sales to meet ongoing working capital needs. If a utility has working capital needs due to the lag in the cash realization of billed revenues relative to the payment of operating costs incurred by the Company, that capital need is generally recognized in the setting of rates by including a cash working capital allowance in the rate base. However, because of its accounts receivable sales, Mr. Farmer stated, the Company has not requested, and is not requesting, that a cash working capital allowance be reflected in the rates approved in this case. *Id.* at 8-10.

Mr. Farmer noted that in order for Mr. Carver's contention that customers have not benefited from the sale of accounts receivable to be accurate, the Company's cash working capital needs must be negative. This statement, according to Mr. Farmer, is incorrect because PSI's accounts receivable balance (an indicator of potential cash working capital needs) is approximately \$175 million. At the hearing on PSI's rebuttal testimony, Mr. Farmer was questioned about the level of profit earned by Cinergy Receivables as a result of its sale of accounts receivable agreement with PSI. Mr. Farmer indicated that approximately 40% of the \$4.4 million (*i.e.*, \$1.76 million) of profits in 2002 was attributable to the purchase of PSI's accounts receivable Tr. at Y123-Y124. The remainder of the \$4.4 million is attributable to the purchase of accounts receivable from CG&E.

Mr. Farmer pointed out that Mr. Carver agrees that PSI, under its arrangement with Cinergy Receivables, has transferred, and, therefore, does not own the rights to forfeited

revenues. At the same time, Mr. Carver observed, PSI also no longer incurs costs associated with late payment by its customers. Mr. Farmer stated that if one were to accept Mr. Carver's adjustment, the cost of service used to set rates in this proceeding would be credited with revenues that PSI does not retain. Mr. Farmer disagreed with Mr. Carver's position that if the Commission accepts PSI's adjustment, it should revise PSI's tariff to remove all provisions for charging late payments to its customers. Pet. Ex. QQ, p. 15. Mr. Farmer stated that there is a cost when a customer makes a payment late that is not changed, regardless of which party is bearing that cost. In this case, PSI has passed the risk of late payment to the purchaser of its accounts receivable, and it is appropriate that the purchaser receive the late payment revenues.

(b) Discussion and Findings. The effect of Mr. Carver's adjustment is to credit PSI's revenues with \$5.4 million that is not in fact retained by the Company. Based on our review of the record it appears that PSI will not realize its account receivable revenues, because they have been sold to an affiliated entity. Mr. Carver does not dispute the terms and conditions under which the account receivables are being sold to Cinergy Receivables. Nor does Mr. Carver disagree that if the deal is a good one for PSI, then customers will share in the benefits. Mr. Farmer testified that historically PSI customers *have* benefited from the Company's sale of account receivables, as PSI has used the revenues from previous sales to refinance preferred stock and long-term debt and finance construction investments.

In the current proceeding, Mr. Farmer made it clear that selling the account receivables has enabled the Company not to request working capital as a component of its rate request, even though PSI's account receivables total \$175 million. This level of receivables is a strong indication that PSI would not have a negative working capital allowance as suggested by Mr. Carver, even if we recognized a negative cash working capital requirement, which we do not. We find that there is a cash working capital benefit to PSI and customers that results from PSI's sale of accounts receivable, albeit one that is not quantified. Accordingly, we do not accept Mr. Carver's recommendation that PSI be credited with \$5.4 million in revenues. At most, the record reflects that a \$1.76 million credit to revenues might be justified to reflect the level of annual profit earned by Cinergy Receivables by virtue of its agreement with PSI. However, even that amount of credit fails to recognize that PSI does not retain those revenues, and for this reason we will decline to make any adjustment to PSI's proposed *pro forma* revenues. We also decline to revise PSI's tariff to remove all late payment charges, as there is a cost associated with the late payment of bills, and this cost should be recovered from the late payees to address these costs.

(6) Production O&M Expenses.

(a) Evidence. OUCC witness Brosch proposed two adjustments with regard to PSI's production O&M expenses. OUCC Adjustment C-7 reduced production, non-fuel O&M expenses related to PSI's Madison, Henry County, Edwardsport and Noblesville production facilities. Mr. Brosch claimed that the costs included by PSI for the Madison and Henry County stations are based upon budget values that are not fixed, known and measurable and in his opinion, overstate the expenses related to actual cost levels experienced at those stations. He stated that his Adjustment C-7 reflects the adjustments that are needed to restate the Madison and

Henry County related O&M increases, based upon actual 2002 expense levels, in lieu of the Company's budgeted values.

OUCC Adjustment C-8 was made, according to Mr. Brosch, to correct and restate amounts within PSI's adjustment for NO_x expenses sponsored by Mr. Farmer. Pub. Ex. No. 2, p. 90. According to Mr. Brosch, the Company's proposed adjustment is predicated entirely upon budgeted costs for ammonia and contractors' services anticipated to be incurred due to the addition of the SCR equipment at Gibson Units 2, 3 and 4. The OUCC's Adjustment C-8, he said, substitutes actual SCR O&M cost information for the estimates utilized by the Company. Mr. Brosch stated that the largest differences between the Company's adjustments and OUCC's Adjustment C-8 relates to the difference in ammonia costs. Mr. Brosch concluded that an allowance for ammonia of \$141,000 for each of the Gibson SCR units is appropriate.

Mr. Farmer presented rebuttal testimony in response to the OUCC's Adjustments C-7 and C-8. Mr. Farmer noted that, as a practical matter, a utility must estimate annual costs of new projects which have not been in-service during all 12 months of the test year. Pet. Ex. QQ, pp. 16-18. With regard to Adjustment C-7, Mr. Farmer stated that Mr. Brosch had made a mathematical error and had double counted a \$380,000 reduction. After correcting for this error, Mr. Farmer determined that the difference between the O&M expenses related to this issue as presented by PSI were only 17% greater than the actual 2002 expenses, recommended by Mr. Brosch. Pet. Ex. QQ, pp. 16-18. In order to test the reasonableness of PSI's estimates for purposes of reflecting an ongoing level of production O&M, Mr. Farmer compared PSI's estimates to the actual, non-labor O&M incurred for the 12 months ended August 31, 2003 at the Madison and Henry County facilities. This comparison showed a difference of only 9%. Given this small difference, Mr. Farmer concluded that the Company's *pro forma* cost level was reasonably representative of an ongoing cost level. In Revised Schedule C-7, Mr. Brosch corrected the double counting error, but still proposed lower O&M costs for the Madison and Henry County Stations.

With respect to the OUCC's Adjustment C-8, Mr. Farmer confirmed that the NO_x O&M costs included in the case are primarily driven by costs incurred to operate the Gibson SCRs. The SCRs were operated in 2002 and are being operated in 2003 in order to generate early reduction NO_x credits. *Id.* at 18-20. He noted that Gibson Units 2 and 3 SCRs were declared commercial in July, 2002 and that the Gibson Unit 4 SCR was declared commercial in July, 2003. He stated the in-service dates are significant to the issue of determining annual O&M costs, because in both 2002 and 2003 the SCRs were declared commercial two months into the NO_x compliance season of May-September. Accordingly, because the SCRs were in service during only a portion of the NO_x compliance season and not the normal five months, the 2002 data used by Mr. Brosch to make his adjustment is not representative of normal ongoing cost levels.

Mr. Farmer testified that SCR operating expenses are primarily driven by the costs of ammonia and that Mr. Brosch's ammonia costs are predicated on information provided by PSI in response to OUCC Discovery Request 23-565. At the time the responses were provided, the latest available month was May, 2003, and the Company's response set forth an *average* price

paid in 2002 up to that time of \$170.09 per ton. However, that same data response stated that the price paid in May was \$322.70 per ton, an increase of 90% when compared to the average 2002 price. Mr. Brosch did not take into account, Mr. Farmer pointed out, the higher prices for ammonia in 2003, compared with 2002, which were set forth in the data response.

To test the reasonableness of Mr. Brosch's ammonia costs and PSI's projected ammonia costs utilized in its adjustment, Mr. Farmer looked at current information based on actual deliveries and costs of the ammonia used at the Gibson Station. The Company's invoiced cost of ammonia purchased for 2003 was \$1,107,659, excluding the cost of one tanker load, which remained outstanding at that time. Pet. Ex. QQ, p. 20. Given the fact that the Gibson Unit 4 SCR ran for only a part of the season, Mr. Farmer concluded that the Company's \$1,141,000 initial estimate of annual ammonia expense for a normal five-month compliance period at today's prices is reasonable and more representative of ongoing cost levels. In contrast, Mr. Farmer noted that Mr. Brosch's allowance for annual ammonia expense of \$423,000 would grossly understate the costs being incurred by PSI in operating its Gibson Units. In Revised Schedule C-8, Mr. Brosch revised his *pro forma* adjustment to accept PSI's proposed ammonia costs. However, Mr. Brosch maintained his lower O&M Material, and Contractor Labor amounts.

(b) Discussion and Findings. We find that PSI's estimates of the subject costs are reasonable. In making OUCC Adjustment C-7, regarding PSI's production non-fuel O&M expenses, Mr. Brosch utilized actual 2002 data in an effort to demonstrate that PSI's adjustment was overstated. Mr. Farmer utilized more recent data in an effort to show that Mr. Brosch's adjustment was understated. The difference between the actual twelve months ended August 31, 2003, and PSI's original *pro forma* adjustment amount was only 9%. Given the apparent variability in non-labor O&M costs, as evidenced by the fact that the twelve months ended August 31, 2003 for the Henry County Plant was \$158,000 less than the actual 2002 costs, this Commission finds that PSI's estimate represents a reasonable approximation of an ongoing level of production, non-fuel O&M expenses and it should be approved.

The lack of a full test year of operating data also was present in determining the ongoing level of production O&M expenses related to the operation of the Gibson SCR units. Mr. Farmer explained that the SCRs were not declared commercial until July 2002 and July 2003, and the normal NO_x compliance five-month season is May 1 through October 1. Thus, actual O&M expense for 2002 data used by Mr. Brosch was understated. Mr. Farmer, again utilizing more recent data than Mr. Brosch, testified that it could cost PSI \$1,316,700 for the cost of ammonia, alone, to operate these SCR units using actual 2003 ammonia prices. PSI had proposed a total annual production O&M expense for NO_x equipment of \$1,333,000. With Mr. Brosch's acceptance of PSI's proposed ammonia expense, the difference between PSI's proposed adjustment and the OUCC's proposed adjustment is only \$170,000. Because PSI used more recent data, we find that Mr. Farmer's estimate of production O&M costs for operating the Company's SCR facilities is not unreasonable.

(7) Software Amortization Costs.

(a) Evidence. OUCC witness Carver sponsored OUCC Adjustment C-12, which reduced PSI's amortization expense by \$1,257,489. Mr. Carver explained that this adjustment recognized the August, 2003 termination of certain software investment amortizations. Pub. Ex. No. 1, p. 33. He stated that in general the Company records its software investment as Intangible Plant and then amortizes the investment over its anticipated useful life, normally five or ten years. Mr. Carver noted that PSI's July 31, 2003 update filing removed amortizations that expired by May 31, 2003. Mr. Carver opined that his adjustment to remove all amortizations that will expire by September 30, 2003, was in accord with the Prehearing Conference Order, which allowed for fixed, known and measurable adjustments through the twelve months following the end of the test year.

On rebuttal Mr. Farmer pointed out that he believed that Mr. Carver was applying inconsistent standards in making his adjustments to Intangible Plant and Tangible Plant. For purposes of depreciation expense, Mr. Farmer noted, Mr. Carver had utilized plant balances as of May 31, 2003, which Mr. Farmer observed was consistent with his reading of the Prehearing Conference Order. Pet. Ex. QQ, pp. 29-31. Mr. Farmer testified that, at a minimum, intangible and tangible plant should be treated alike. If PSI's depreciable plant were updated to August 31, 2003, PSI's investment in depreciable plant, excluding plant subject to amortization, would increase by \$25,675,000 and amortizable plant would decrease by \$6,598,000. He also stated that if the depreciable plant were so updated to September 30, 2003, as Mr. Carver updated plant subject to amortization, the increase in PSI's depreciation expense may be even higher, due to additional depreciable plant investment. *Id.* at 31-32. Mr. Farmer stated that the cut-off date should be the same for items as interrelated as depreciation and amortization expense associated with PSI's rate base.

(b) Discussion and Findings. Based on our review of the testimony it appears that Mr. Carver applied inconsistent standards to plant subject to depreciation and plant subject to amortization. For the former, he used plant balances as of May 31, 2003. For the latter, he used plant balances at September 30, 2003. This resulted in the update of an expense that was decreasing, without a corresponding update to an almost identical expense that was increasing. We find that adjustments to test year results of the same basic cost items should be done in a consistent manner. Therefore, in this case we agree with Mr. Farmer that it makes sense to use the general rate base cut-off date of May 31, 2003 which was agreed to by all parties, and to also update depreciation and amortization expense which constitute a *return of* that same rate base amount.

(8) Public Safety Advertising.

(a) Evidence. PSI proposed an adjustment to test year expenses in the amount of \$619,000 related to the Company's public safety advertising program. Pet. Ex. Y-18. In support of that adjustment, PSI witness Leigh J. Pefley testified that, beginning in 2003, PSI significantly stepped up its public safety advertising. Pet. Ex. J, p. 10. She stated that through periodic radio advertising, PSI intends to build public awareness of where power lines are

located and the need to stay clear of them. She said that the initial phase of the campaign consisted of a nine-week schedule, beginning in March, of radio advertisements in the major markets of Indianapolis, Terre Haute and Lafayette as well as over 27 non-major markets. The second phase of the project will consist of ten weeks of radio advertising during the months of June through November. She stated that PSI plans to continue its public safety awareness advertising on an annual basis. Ms. Pefley was of the opinion that it was important to convey to PSI's customers how to be safe around electricity and that the Company's program accomplished that goal.

OUCC witness Carver stated that while the OUCC encourages public utilities to conduct public safety awareness campaigns, in his opinion, there were too many uncertainties surrounding the annually recurring magnitude of PSI's campaign, implemented in 2003, to fully justify the adjustment. Pub. Ex. No. 1 p. 64. He testified that PSI did not provide any studies or quantitative analyses to support the decision to implement the new safety advertising program. *Id.* at p. 64. Instead, the Company appears to have decided to increase its public safety advertising based on recent incidents involving public contact with electrical facilities, where the victims may not have been aware of the existence of electrical facilities or the dangers posed by electricity—however, specific information regarding incidents of this nature had not been provided by PSI. *Id.*, at 64-67. Mr. Carver added that PSI also had expended less than \$10,000 in public safety advertising during the six-year period ending with calendar year 2002. He stated that PSI's affiliates similarly expended little on public safety advertising, even though significant levels of advertising expense appear to have been included in PSI's last Indiana retail rate case. *Id.* at 68-71. Given this history, Mr. Carver was concerned that, absent assurance otherwise, PSI's safety advertising expenditures could again be reduced following this rate case. *Id.*, at 72-73. Mr. Carver proposed that if PSI is allowed to recover some level of safety advertising expense in retail rates, the Company's adjustment should either be reduced by 50%, or PSI should be required to make an annual filing with the Commission, with copies to the OUCC, explaining any reduction in public safety advertising expense greater than 10% of the allowed amount.

Mr. Esamann submitted rebuttal testimony in response to Mr. Carver's testimony. He described the Company's 2003 campaign and said that by the end of August, 2003, PSI had incurred actual expenditures of \$408,000. Pet. Ex. DD, pp. 40-41. Mr. Esamann also gave assurance that PSI is committed to a multi-year public safety campaign. He said that PSI has already undertaken steps to develop a media schedule for 2004, with the creation of at least two additional media spots for 2004. Mr. Esamann stated that these costs were prudently incurred and should be fully reflected in the ratemaking process. He also said that PSI would have no objection to filing an annual report as suggested by Mr. Carver. *Id.* at 42.

(b) Discussion and Findings. Based on the evidence presented on this issue, we find that PSI should be allowed to recover some level of public safety advertising expense and that it should not be necessary for PSI to report to the Commission regarding the ongoing level of these expenditures. Through its testimony, PSI demonstrated the importance of undertaking an ongoing public safety advertising campaign and we believe that PSI should, and will, utilize the full amount allocated by the Commission for this purpose.

Mr. Carver does not contest the level of the \$619,000 expense or the actual expenditures made by PSI in 2003, but believes that the Company did not fully demonstrate the need for the recurring level of such costs. While Mr. Esamann's rebuttal testimony provides some assurance that PSI plans to continue its public safety advertising program in the future, our review of the historic level of these expenditures indicates that even if the amount requested by PSI is reduced as Mr. Carver proposed, it would still represent a dramatic increase in expenditures for this purpose. Therefore, we agree with the OUCC that a 50% reduction in the amount proposed by PSI is warranted and find that PSI should be allowed to recover \$310,000 of program costs. We also find that the Company should not be required to submit annual reports regarding its expenditures on public safety advertising campaigns.

(9) Salaries, Wages, Benefits, and Incentive Compensation.

(a) Evidence. PSI proposed a *pro forma* adjustment which reflected an annualized level of salaries, wages, and benefits at the May 31, 2003 cut-off date. In the end, there was no challenge to PSI's proposed adjustments. Tr. at P50. We find that PSI's proposed salaries, wages and benefits should be approved. In addition, PSI also seeks recovery of \$12,883,000 in incentive pay expense. Pet. Ex. PP-8, Sch. C-3.17, p. 2. Mr. Verhagen testified in support of PSI's level of incentive. He stated that PSI began using incentive pay in 1987 and described the Company's major incentive pay programs: (1) the Cinergy Corp. Annual Incentive Plan ("AIP"); (2) the Energy Merchant Business Unit Annual Incentive Plan ("EMBU AIP"); (3) the Cinergy Corp. Non-Union Employee Incentive Plan ("NEIP"); (4) the Cinergy Corp. Union Employee Incentive Plan ("UEIP"); and (5) the Cinergy Corp. 1996 Long-Term Incentive Compensation Plan ("LTIP"). Pet. Ex. R, p. 10.

According to Mr. Verhagen, the AIP is a short-term incentive plan that allows employees to receive cash payments as certain performance goals are attained during the preceding calendar year. The AIP is available to selected exempt employees of PSI and Cinergy Services. The purpose of the AIP is to attract, retain and motivate employees, enhance teamwork and high levels of achievement and to facilitate the accomplishment of specific corporate business units and individual goals. Employees are selected to participate in the AIP. Mr. Verhagen stated that the compensation committee of the Cinergy Corp. Board of Directors monitors on an ongoing basis the AIP performance goals and the level of compensation paid through the AIP. Performance goals are the objective that the relevant business unit and individual employees must attain in order for the employees to receive payment under the AIP. Mr. Verhagen stated that for the Regulated Business Unit ("RBU") employees participating in the AIP, the individual goals and the employee's business unit goals were weighted equally. *Id.* at 11-12. In 2002, the business unit goals of the RBU were based on the following factors: (1) electric SAIDI; (2) electric CAIDI; (3) gas CAIDI; (4) lost time accident rate; (5) number of traffic accidents; (6) customer satisfaction score results; (7) O&M expense levels; and (8) capital expenditure level. *Id.*

The EMBU AIP, according to Mr. Verhagen, is another short-term incentive plan that provides cash payments to employees if certain performance goals are met. Like the AIP, the

EMBU AIP is available to selected employees, but these employees do not participate in the AIP. The performance goals for the EMBU AIP consist of a corporate earnings component and EMBU earnings component. Performance goals are related to the business segment of the EMBU to which the employees are assigned individual performance goals. Mr. Verhagen noted that PSI's rates reflect labor expense from Cinergy Services and Cinergy Power Generation Services employees who allocate time to PSI and who participate in the EMBU AIP because they work at PSI's generating stations, provide generation support and provide back office support. The EMBU AIP goals for the generation business segment are based on the actual performance of Cinergy's generation fleet and the individual generating station where the respective employees work. *Id.* at 12-14.

The NEIP is available to exempt and non-exempt employees of PSI and Cinergy Services who do not participate in another incentive plan. The NEIP is a short-term incentive plan, according to Mr. Verhagen, that allows employees to receive cash payments if Cinergy Corp. attains certain corporate performance goals during the calendar year. Mr. Verhagen testified the purpose of the NEIP is to attract, retain and motivate employees, enhance teamwork and achieve high levels of corporate goals. This plan, like the others, is monitored by the compensation committee. The NEIP uses the same performance measures as the AIP's corporate performance measure. *Id.* at 14-15.

Mr. Verhagen testified that the UEIP is available to union employees of PSI, Cinergy Services and CPGS who do not participate in another incentive plan. Like the other plans described, the UEIP permits union employees to receive cash payments if Cinergy Corp. attains certain performance goals or if their business unit attains certain performance goals during the preceding calendar year. *Id.* at 15-16.

The purpose of the LTIP is to assist in attracting, retaining and motivating executives by keeping Cinergy's compensation package competitive and to align a portion of the executive compensation with corporate interests by encouraging and enabling executives to acquire Cinergy stock. Mr. Verhagen stated that under the LTIP certain employees may be granted an incentive and non-qualified stock options, stock appreciation rights, restrictive stock, dividends equivalent to opportunity to earn performance based shares and certain other stock-based awards. *Id.* at 17-18.

Mr. Verhagen testified that this Commission has previously considered PSI's incentive compensation plans. He said that PSI's current AIP and LTIP are similar to the AIP and performance share plans previously reviewed in Cause No. 40003. In addition, PSI's AIP and performance share plans were considered in Cause Nos. 37414-S2 and 38809 (1989) and Cause Nos. 39584 and 39584-S2 (1994). He stated that in each case the proceedings resulted in PSI's rates reflecting incentive compensation costs. *Id.* at 19. Mr. Verhagen stated that incentive compensation is a necessary component of any company's compensation and benefit package in order to keep total compensation competitive. He pointed out that many utility companies and non-utility companies offer these types of incentive compensation plans. PSI must offer such plans in order to remain competitive and be able to attract and retain a high caliber workforce. In addition, PSI's incentive compensation plans pay out reasonable levels of incentive

compensation. For these reasons, Mr. Verhagen believed that it is appropriate for PSI to reflect these costs in its rates. *Id.* at 20.

Mr. Verhagen also discussed the allocation of the costs of the various compensation plans to PSI. He said that PSI recognizes that this Commission has required shareholders to bear a portion of the incentive compensation costs. He also recognizes that Cinergy's shareholders, as well as its customers, benefit from the achievement of the goals used in these incentive compensation plans. Mr. Verhagen stated that the costs of the corporate goals under the AIP and EMBU AIP, were allocated 50% to the shareholders, 50% to the customers. The individual goals and the RBU goals under the AIP were allocated 100% to the customers. The EMBU AIP earnings goals were allocated 50% to the shareholders and 50% to the customers. Like the AIP, the EMBU business segment goals and the individual goals were allocated 100% to the customers. For the LTIP, Mr. Verhagen stated that the total shareholder return was allocated on a 50%/50% basis. Mr. Verhagen allocated 100% of NEIP and UEIP costs to PSI's customers. *Id.* at 21-22.

The OUCC did not propose any adjustment to PSI's proposed level of incentive compensation expense to be included in PSI's rates. Mr. Carver presented detailed testimony discussing our past treatment of incentive compensation in Indiana rate cases. Pub. Ex. 1, pp. 77-80. His testimony also highlighted the significant escalation in PSI's incentive compensation costs in relation to the amount PSI has proposed to include in cost of service. *Id.* at 80-82. Mr. Carver further testified that it was unnecessary for the Commission to create unique shareholder incentive mechanisms in order to focus individual employees on achievements that enhance corporate financial objectives. Any additional shareholder incentives would not directly influence the day-to-day activities of individual employees who, on average, have about 9.8% of their compensation "at risk" through the incentive plans discussed by Mr. Verhagen. *Id.* at 82-83.

CAC presented the direct testimony of Dr. Michael Sheehan, who testified that he had five problems with PSI's executive incentive program. First, he said, the levels appeared to be excessive. Second, the underlying premise that high levels of incentive pay produce high levels of corporate performance has not been substantiated. Third, he said, not only do incentives appear not to work, in fact they have a tendency to produce bad behavior on the part of a significant number of executives. Fourth, he said, even if the incentives proposed by PSI might work in theory, they are usually tied to goals that have flaws or lead to misdirection. Finally, he maintained that building incentives into rates means that ratepayers are charged for incentive payments even when the incentives are subsequently not justified by performance or are not paid to employees of the utility.

Dr. Sheehan noted that under the allocation of the incentive programs proposed by Mr. Verhagen, 75% of the costs of these programs are being allocated to PSI's ratepayers which in his opinion is not appropriate, at least as the programs are applied to executives. CAC Ex. C, p. 64. First, he said the incentive programs are primarily directed to the goals of maximizing the financial performance of the holding company, Cinergy, which, in his opinion, is not an appropriate goal and embodies an intrinsic conflict of interest for PSI employees. He said that

this Commission should not allow any cost of recovery at all for the costs associated with Cinergy's financial performance. *Id.* at 64.

In support of his argument that the costs of executive incentive plans should not be allocated to PSI, Dr. Sheehan cited three articles, from researchers at the Wharton School of Business, Indiana University, and Harvard University, respectively. *Id.* at 66-68. Dr. Sheehan claimed that these studies tended to show that substantial incentives have motivated counter-productive behavior. He said that the provision of substantial incentives to Cinergy executives on loan to PSI to maximize the returns to PSI, could, in his opinion, lead to predatory behavior against PSI. *Id.* at 69. He said that if the Commission approves the allocation of the costs to PSI, it should only be done in conjunction with the creation of a tracker or true-up mechanism. Otherwise, in cases where the goals are not met and the anticipated ratepayer benefits are not forthcoming, and thus the costs are not offset, the ratepayers will still have to fund the full cost of the incentive programs and Cinergy will "pocket the money." Dr. Sheehan conceded during cross-examination that he had not read the Wharton study prior to preparing his testimony, and that these studies did not support his opinions in several key respects. For example, he indicated that the Harvard study was based on the "rent extraction" theory, which is a minority theory in the field of incentive compensation. In addition, the Indiana University study did not differentiate whether the stock options it studied were paid as part of a base compensation package or incentive pay to motivate a desired behavior.

In response, Mr. Verhagen pointed out that Dr. Sheehan performed no analysis of the programs involved in this case. On the other hand, Towers Perrin Company ("Towers") had analyzed Cinergy's executive compensation programs and concluded that: (1) Cinergy's total annual executive compensation is competitive with the proxy peer group at the 50th percentile; and (2) the long-term incentives paid by Cinergy in 2002 were only 66% of the level of long-term incentives paid by the proxy peer group at the 50th percentile and 33% of the long-term incentives paid by the proxy peer group at the 75th percentile. In Mr. Verhagen's opinion, these studies show that Cinergy's compensation programs result in reasonable levels of compensation when compared to its proxy peer group. Pet. Ex. MM, p. 2.

Mr. Verhagen pointed out that Dr. Sheehan presented no evidence to support his conclusion that the structure of PSI's incentive compensation program is flawed because it motivates executives to accomplish goals contrary to PSI's best interests. Mr. Verhagen said that PSI's interest and Cinergy's interests are interwoven and inseparable. He noted that the AIP for the RBU has performance goals based on electric service reliability, safety and customer satisfaction and that these goals are obviously in the best interest of PSI customers. *Id.* at 3-4.

Mr. Verhagen stated that Dr. Sheehan erred in contending that performance goals based on the corporate performance and total shareholder return are contrary to the interests of PSI's customers. Over the long term, he said, Cinergy Corp. could not favor shareholders interest over the interest of PSI customers. Doing so would ultimately cause PSI's service level to deteriorate, which would produce widespread customer dissatisfaction. This would ultimately reduce Cinergy Corp. net income and total shareholder return. *Id.* Mr. Verhagen also responded to Dr. Sheehan's statement that the portion of the incentive expense allocated to PSI is not appropriate.

Mr. Verhagen stated that PSI's *pro forma* adjustment strikes a reasonable balance as the costs of AIP performance goals related to corporate performance and the total cost of the LTIP are allocated 50% to shareholders and 50% to customers. He said such an allocation is reasonable given that the performance goals provide inexplicably intertwined benefits to shareholders and customers and these incentive programs result in total compensation levels that are reasonable and necessary to attract talented employees.

(b) Discussion and Findings. It is commonly accepted that incentive compensation plans may be necessary in order for utilities to attract and retain highly qualified individuals. Dr. Sheehan does not dispute this fact. Instead, he generally objects to PSI's *pro forma* executive compensation adjustment on two grounds: (1) there is no showing that executive compensation plans enhance employee performance; and (2) the percent of the expense allocated to PSI is not appropriate.

Dr. Sheehan cites three business journal articles in support of his conclusion that there is not a link between incentive compensation and corporate performance. The first article surveyed several studies on the relationship between corporate performance and the levels of equity ownership by a firm's management and concluded that the studies were mixed as to whether increased equity ownership produced improved firm performance. The second article was admittedly a minority view and was predicated on the "rent extraction theory" in executive compensation. The final article cited by Dr. Sheehan is also a minority view, which leads us to the conclusion that the majority view is that there is a direct link between executive compensation and improved corporate performance.

As to Dr. Sheehan's objections regarding the level of costs assigned to the PSI shareholders, we have previously approved the recovery of incentive compensation costs through rates where: (1) the incentive compensation plans are not pure profit-sharing plans, but rather incorporate operational as well as financial performance goals; (2) the incentive compensation plans do not result in excessive pay levels beyond what is reasonably necessary to attract a talented workforce; and (3) shareholders are allocated part of the cost of the incentive compensation programs. PSI's incentive compensation plans incorporates operational goals as well as pure profit sharing goals. The Towers study demonstrates that these incentive compensation plans are not excessive and are reasonable to attract and retain the employees required to manage and operate PSI. Accordingly, we find that PSI's *pro forma* adjustment for employee incentive compensation is appropriate and should be approved.

(10) Voluntary Early Retirement Program Expense.

(a) Evidence. PSI proposed an adjustment to its test year Voluntary Early Retirement Program ("VERP") expense. It proposed to eliminate the actual 2002 VERP expense of \$19,100,000 and replace it with a representative level of annual VERP expense of \$5,389,000. Pet. Ex. Y-6, Sch. C-3.9. Mr. Howe sponsored this adjustment on the basis that all related employee expense levels in this case reflect the reduced number of employees resulting from PSI's VERP. It is only appropriate, he said, to reflect the corresponding costs of those employee reduction programs over the years for which rates approved in this case will be in effect,

especially when such costs are less than the corresponding cost savings (benefits) proposed to be reflected in PSI's rates. Pet. Ex. Y, pp. 6-7.

Mr. Verhagen testified that from 1995 through 2001, PSI offered five different VERPs to reduce employees. Pet. Ex. R, pp. 38-39. In 2002, he said, PSI offered three separate VERPs which essentially offered enhanced retirement benefits to those employees who accepted early retirement. *Id.* at 39. Mr. Verhagen stated that of the 425 employees eligible to participate in the Company's 2002 VERPs, 302 employees accepted the Company's offer.

OUCG witness Carver proposed to eliminate PSI's VERP adjustment, thereby eliminating from rates any VERP expenses. Pub. Ex. No., 3, Adj. C-13. Mr. Carver did not dispute the wisdom of, or need for, VERPs. Pub. Ex. No. 1, at 40. Nor did he question the recurring nature of these expenses. Tr. at P62-P63. Rather, the basis for his disallowance was his opinion that because the reduced expenses have been experienced since 2002, but will not be reflected in rates until April, 2004, PSI's shareholders have already received some of the benefits of the VERPs. *Id.* at 41. Mr. Carver claimed that the Company was seeking a deferral and amortization of the actual 2002 VERP expenses, and that it was not appropriate to recover from customers the costs of the VERPs on a prospective basis when PSI does not propose to flow through to customers the related savings on a retroactive basis. Mr. Carver estimated these retroactive savings to be \$16.9 million. As an alternative to complete disallowance, Mr. Carver proposed that PSI be allowed to amortize over four years the difference between the 2002-03 expense of \$21.554 million and the pre-2004 savings estimate of \$16.9 million.

In response, Mr. Howe pointed out that PSI's salaries and wage expense in this case eliminated all of the former employees who elected to take the 2002 VERP, even if those people had not yet left the Company. Pet. Ex. PP, pp. 5-6. He clarified that PSI was not seeking a deferral and amortization of the actual 2002 VERP expenses, but rather, PSI was seeking to have a representative level of VERP expenses built into future rates. At the hearing on PSI's rebuttal case, Mr. Howe indicated that he has checked the reasonableness of his proposed annual VERP amount. He indicated that PSI has conducted six VERP offerings in the last five years, with an average annual cost of approximately \$5.6 million. He also noted, that since PSI filed its case-in-chief testimony, the Company has instituted another VERP program in 2003 at a cost of about \$4 million. Mr. Howe indicated that this evidence supports PSI's proposed annual VERP expense of approximately \$5.4 million. Tr. at Y34 – Y35.

(b) Discussion and Findings. In order to frame the issue for our consideration, PSI proposed to eliminate the actual 2002 VERP expense of \$19,100,000 and replace it with a representative level of annual VERP expense of \$5,389,000. Pet. Ex. Y-6, Sch. C-3.9. The OUCG's proposed adjustment, taken in conjunction with PSI's adjustment, would serve to eliminate VERP expenses from rates. Pub. Ex. No., 3, Adj. C-13. In order to undertake our review of this issue, we accept PSI's VERP adjustment as the appropriate starting point for our consideration and resolution of this issue.

Based on our review of the evidence presented on this issue, PSI appears to have premised its pro forma adjustment on a methodology that would effectively amortize the cost of

its 2002 VERP over a four-year period. While we recognize that costs rise and fall between rate cases, the pro forma adjustment developed by PSI, which projects future costs (but not savings) from programs that may or may not occur, fails to fully address many issues, including: the anticipated level of any future workforce reduction programs; the costs associated with the programs; and, the anticipated level of overall savings associated with the implementation of future VERPs.

In evaluating PSI's request for a *pro forma* adjustment for VERP expenses, we recognize that implicit in undertaking VERPs is the expectation that there will be short term costs and possible long term savings associated with the programs. Accordingly, in undertaking our review of this issue we must consider the anticipated future level of such programs in conjunction with any cost savings that may occur as a result of the programs. Based on the evidence presented, we cannot determine, with any degree of certainty the actual level of costs and savings associated with the possible implementation of future VERPs. Therefore, we accept the OUCC's adjustment and find that VERP expenses should not be included in rates.

(11) Property Taxes.

(a) Evidence. PSI's *pro forma* operating expenses included an adjustment of \$151,000 to test period property taxes. Pet. Ex. X-23, as revised by the August 31, 2003 cut-off date update filing. PSI witness Farmer sponsored this adjustment and included the tax law changes noted in the testimony of PSI witness Charles J. Winger.

Mr. Winger explained that the 2002 Indiana General Assembly legislated changes in the manner that required Indiana property taxes to be re-calculated for the actual 2002-pay 2003 tax year. Pet. Ex. Q, p. 7; Pet. Ex. X, p. 29. Mr. Winger testified that property tax is a function of two basic factors: (1) the assessed value of real and personal property; and (2) the property tax rate. Pet. Ex. Q, p. 11. PSI estimated the assessed value of its real and personal property to be \$1,301,708,000, which represented actual plant balances as of September 30, 2002, plus *pro forma* adjustments for plant additions, retirements and estimated changes in material, supplies and fuel inventories, as determined by Mr. Farmer. Mr. Winger estimated the tax rate to be 2.49%. He started with the actual 2001-pay 2002 average tax rate for PSI of 2.64% and adjusted it downward by 5.7%. This downward adjustment was determined by comparing the average Indiana statewide net tax rate for the 1994-pay 1995 to the same rate for the 1995-pay 1996, the last time that Indiana experienced a statewide reassessment of real property.

Mr. Farmer took into account the information provided by Mr. Winger and accounted for the *pro forma* plant additions and retirements listed on Schedule B-2, the adjustment to the coal stock inventory from Schedule B-4 and the adjustment to the material and supplies inventory from Schedule B-6. He also estimated a payment in lieu of taxes applicable to the Madison Generating Station, in the amount of \$952,000, and he eliminated 50% of the Child Care Center property taxes. These changes resulted in a *pro forma* total property tax expense of \$31,421,000 and an adjustment to test year operating expense of \$151,000. Pet. Ex. X-23, updated October 6, 2003.

OUCU witness Carver proposed the elimination of Mr. Farmer's adjustment to test year property taxes. Pub. Ex. No. 3, Adj. C-19. Mr. Carver did not necessarily disagree with PSI's calculations. Rather, he said, the basis for his disallowance is the delay that has been experienced statewide in the finalizing of assessed values, tax rates and tax bills. Pub. Ex. No. 1, p. 104. Mr. Carver's adjustment was a "placeholder" until more complete property tax data becomes available in August and September, 2003, he said. Mr. Carver proposed that the property tax annualization be updated as an exception to the Prehearing Conference Order. Pub. Ex. No. 1, pp. 107-108. He proposed that: (1) PSI update its calculations for actual tax bills; (2) update Schedule WPC-3.38c to reflect final and provisional tax bills; (3) if any provisional tax bill exceeds 50% of the previous tax bill, reduce such amount to reflect the lesser of 50% of the prior tax bill or the 2001 total tax bill adjusted to reflect the composite net increment/decrement for all other counties with final tax bills; and (4) identify all counties that have failed to provide final or provisional tax bills and the annualization for these counties should be based on the 2001 tax bill adjusted in the manner called for in item (3).

Mr. Farmer opposed Mr. Carver's proposal and noted that the 2001 tax liability is primarily based upon the assessed value of property at December 31, 2000. Pet. Ex. QQ, pp. 34-37. The problem with Mr. Carver's proposal is that these assessed values will not be matched or synchronized with the value of plant included in this case and therefore will likely not be representative of an ongoing level. Mr. Farmer further observed that changing the property tax valuation method to fair value will not have a significant impact on PSI property assessments, because over 90% of PSI's assessed value is made up of property referred to as "state board distributable" property. The assessed value of such property is predicated on the net tax basis of the property (net book value) as recorded on the Company's books. In Mr. Farmer's view, it would be inappropriate to use the net book values as of December 31, 2000, as proposed by Mr. Carver, given that the test period in this case is based on a 2002 test period pro forma into 2003. Mr. Farmer opined that the December 31, 2000 property evaluation and assessments are stale and do not provide the proper matching of plant costs included in the rate base in this case. *Id.* Mr. Farmer also testified that Mr. Carver's proposal to use the lesser of 2001 pay 2002 tax or the 2001 tax adjusted for some net increment/decrement is also flawed because the basic presumption behind Mr. Carver's proposal is that the 2002 pay 2003 tax bills in all counties will change from the prior year by the same percentage relationship.

As an alternative to Mr. Carver's proposal, Mr. Farmer proposed that the Company's proposed retail jurisdictional portion of property tax expense (\$30,100,000) should be included in PSI's base rates. *Id.* at 38-39. If the jurisdictional portion of any future annual property tax expense, using allocators approved in this case, is less than \$30,100,000, PSI will return to customers the amount by which the base level exceeds the jurisdictional portion of property tax actually billed and charged to expense. PSI will return any excess amount to customers through one of PSI's tracking mechanisms that allocate costs based on demand allocators, since property tax is allocated based on demand. (*i.e.*, CWIP tracker, Clean Coal Operating Cost tracker, or Summer Reliability Tracker). This credit mechanism would continue until the first year that PSI's actual property tax expense exceeds the amount included in base rates, at which time the crediting would end for that and all succeeding years.

(b) Discussion and Findings. This Commission is certainly cognizant of the uncertainty facing millions of property owners, including public utilities, created by the statewide reassessment mandated by the Indiana courts and the General Assembly. We appreciate the creativity of the parties in attempting to deal with these uncertainties. After considering all of the evidence, we are persuaded that Mr. Farmer's rebuttal proposal should be adopted. Importantly, this ensures that PSI's customers will pay no more than PSI's actual property tax expense for a given year. Another advantage of this proposal is the administrative ease by which it can be implemented and reviewed by this Commission and any party of interest. Given that PSI's actual 2001–pay 2002 tax is within \$151,000 of PSI's proposed property tax level, and that PSI has added significant taxable property since 2001, we find it reasonable for PSI to include its proposed property tax expense in base rates and to implement its proposed reconciliation and crediting mechanism, utilizing the CWIP tracker, Standard Contract Rider No. 62.

(12) Trading Expense.

(a) Evidence. PSI proposed an adjustment to test period expenses related to certain trading expenses. Mr. Farmer testified as to a representative level of trading expense based on actual test period amounts. Pet. Ex. QQ, pp. 39–40. He stated that PSI's July 31, 2003 update removed \$5,124,000 in trading expenses for trading floor rent, building expense and other trading related costs that were charged to test period expense. A portion of this *pro forma* adjustment (approximately \$3.9 million) was removed from test period expenses, not because it was not representative or properly allocated to PSI, but because of the existence of an explicit off-system sales profit sharing mechanism included in PSI's proposed Summer Reliability Tracker. PSI's rationale for excluding this portion of the trading expenses was that there were likely incremental O&M expenses embedded in its test period expenses associated with maximizing off-system sales profits. Because incremental O&M expenses associated with maximizing off-system profits are not separately identified or accounted for on PSI's books and records, these trading expenses are intended to serve as a proxy for the potentially embedded incremental O&M costs. PSI reasoned that, if the explicit off-system profits incentive sharing mechanism in its proposed Summer Reliability Tracker is approved and implemented, it would be appropriate to remove these “proxy” incremental O&M expenses. Conversely, PSI stated that if the proposed Summer Reliability Tracker is not approved, it would be appropriate to include these trading expenses in PSI's revenue requirements.

Mr. Farmer explained that these expenses represent personnel and systems costs that are properly allocated to PSI based upon PSI's use of trading personnel for both off-system purchases and sales. These expenses consist of costs related to power trading functions; rent and building expense; salaries, benefits and expenses for confirmation and billing functions; generation and supply scheduling; costs of transmission scheduling and congestion management; Information Technology support; trading expenses in the Midwest; and general management of trading activities. Mr. Farmer testified that these expenses result in a total cost of \$3,953,000. Mr. Farmer indicated that the remainder of the expenses eliminated by PSI in its July 31, 2003 update (\$1,171,000) did not support PSI's off-system sales activities and therefore should be

excluded from PSI's revenue requirements with or without approval of the Summer Reliability Tracker. Pet. Ex. QQ, p. 40.

The OUCC, while opposing the Summer Reliability Tracker and the explicit incentive sharing mechanism for off-system profits, made no corresponding adjustment for PSI's elimination of the related trading expenses. Mr. Brosch surmised that the trading cost exclusion remained appropriate even if PSI off-system sales are not tracked because the implementation of the JGDA results in PSI being more insulated from trading results in that all new off-system sales of PSI energy occur through intercompany transfers to CG&E.

(b) Discussion and Findings. Consistent with our determination that test-period off-system sales profits of \$18.7 million should be included in base rates, and that an amount for trading expenses should be reflected in a corresponding reduction of the amount included in base rates, we find that PSI's *pro forma* expenses shall include \$3,953,000 for trading expenses.

(13) Deferred Costs.

(a) Deferred Dynegy Buyout Costs.

(i) Evidence. In 1999, PSI and the OUCC entered into a Settlement Agreement pertaining to a buyout of PSI's Gasification Services Agreement with Dynegy Power Corp. – an agreement whereby Dynegy provided PSI with synthetic gas for use at PSI's Wabash River Coal Gasification Repowering Project ("WRCGRP"). This Commission, in an order dated September 9, 1999 in Cause No. 41468, approved the PSI/OUCC Settlement Agreement. Pursuant to this settlement agreement, PSI was authorized to recover the costs of the contract buyout fee, "Costs to Achieve" (additional costs to implement the buyout transaction, specifically, the costs involved in converting the WRCGRP to use both natural gas and syngas), and carrying costs on the unamortized balance of the buyout fee and the costs to achieve, over an 18-year period (the "Dynegy Buy-out Amortization"). Pet. Ex. X, pp. 22-23; Settlement Agreement, Cause No. 39312, pp. 3-4 (PSI Motion for Administrative Notice Filed May 30, 2003).

In this case, PSI proposed an upward adjustment of \$928,000 to the annual Dynegy Buy-out Amortization. Pet. Ex. X-14, Sch. C-3.25. Mr. Farmer explained that this adjustment reflects the transfer of certain plant installed in the WRCGRP conversion process from the Dynegy Buy-out Amortization amount to PSI's rate base, and the "true-up" of the costs to achieve to the actual costs incurred by PSI in connection with the buyout and conversion. Pet. Ex. X, p. 22.

OUCC witness Brosch, in OUCC Adjustment C-9, proposed a \$2,651,000 reduction in PSI's total Dynegy Buy-out Amortization expense, citing a number of perceived problems with PSI's calculations underlying the unamortized amount. First, Mr. Brosch objected to the capitalization of labor costs within the deferred costs to achieve, theorizing that such capitalization could lead to a double recovery of labor costs that were reflected in PSI's rates in

Cause No. 40003. Pub. Ex. No. 2, p. 79. Accordingly, Mr. Brosch removed \$981,608 in capitalized labor costs that were incurred to convert the facility to a dual fuel plant. Pub. Ex. No. 2, pp. 81-82. Second, Mr. Brosch objected to PSI's calculation of the Buy-out Amortization amount because he believed the Amortization amount should be calculated to reflect tax savings created by the deductibility of the one-time buy-out cost of \$246.7 million. *Id.* Mr. Brosch stated that PSI is calculating carrying costs on the entire buy-out amount of \$246.7 million, even though its actual cash outlay was \$146.7 million, by his calculations, after taking into consideration his estimate of the associated tax benefits. According to Mr. Brosch, customers have received no benefit from the income tax deferrals, because there has been no rate case to account for changes in capital structure and capital costs since Cause No. 40003. *Id.* at 84. Mr. Brosch thus calculated carrying charges on the buy-out amount *after* deducting his estimated tax benefits. *Id.* at 84-85.

In response, Mr. Farmer indicated that there is no double recovery, real or potential, of labor costs. Pet. Ex. QQ, pp. 22-24. He pointed out that labor costs associated with construction projects are capitalized and are not treated as an ongoing expense for ratemaking purposes – a point that Mr. Brosch generally agreed with on cross-examination. Pet. Ex. QQ, p. 22; Tr. at Q25-Q28. Mr. Farmer explained that Mr. Brosch's labor adjustment assumes that the labor force involved in the conversion came from the labor pool, the costs of which were expensed in the last rate case as non-construction, as opposed to the pool of employees the costs of which were capitalized. Mr. Farmer pointed out that Mr. Brosch has provided no support for this assumption. In fact, as Mr. Farmer explained, in PSI's last rate case, 22% of the Company's labor costs were capitalized. Mr. Farmer also pointed out that capitalized labor costs are ultimately recovered from customers over time in the form of depreciation expense. Hence, he said, there is no double recovery of labor costs because the labor costs incurred during the conversion are likewise recovered over time through the Buy-out Amortization, not as an ongoing level of expense. Pet. Ex. QQ, pp. 22-24.

As to Mr. Brosch's proposal to reflect tax benefits as a reduction in the amount to be recovered through the Buy-out Amortization, Mr. Farmer explained that the entire basis for Mr. Brosch's adjustment (*i.e.*, that customers have not benefited from the income tax deferrals because the transaction occurred between rate cases) is incorrect. Customers have, in fact, received benefits. Pet. Ex. QQ, p. 26. Mr. Farmer cites three changes in PSI's rates related to the recovery of carrying charges on qualified pollution control property that utilized PSI's updated cost of capital – including the tax benefits cited by Mr. Brosch. Mr. Farmer testified that each updated cost of capital included zero cost deferred income taxes as recorded on the Company's books, including the Dynegy deferred income taxes related to the Dynegy buyout. Mr. Farmer calculated this benefit as producing \$1,102,000 in annual savings to customers. Pet. Ex. QQ, p. 27. Mr. Farmer pointed out that if Mr. Brosch's adjustment were accepted, customers would receive benefits from Dynegy deferred taxes twice: once through the reduction in the amortization of the Dynegy regulatory asset, and a second time through calculation of CWIP revenues. *Id.* In addition, Mr. Farmer pointed out that Mr. Brosch only considered the cash flow implications of the Dynegy deferred income taxes up until the assumed order date in this proceeding, without looking beyond the cash flow implications after the order in this proceeding.

For example, Mr. Farmer explained that, the cash flow benefit of the Dynegy tax deduction decreases over time as the deferred taxes payback.

With regard to Mr. Brosch's elimination of depreciation expense when calculating interest and the regulatory asset amortization, Mr. Farmer observed that the Settlement Agreement in Cause No. 41468 clearly states that PSI is entitled to recover "costs to achieve" in addition to recovery of carrying charges on the unrecovered amounts. Pet. Ex. QQ, pp. 28-29. Thus, according to Mr. Farmer, PSI is entitled to recover a return on, as well as a return of, PSI's actual costs to achieve.

(ii) Discussion and Findings. The outcome of this dispute is determined by our approval of the provisions of the Settlement Agreement and basic utility ratemaking principles. The Settlement Agreement provides that PSI shall be entitled to recover, over an 18-year period, the Indiana retail jurisdictional portion of the Buy-Out Fee, including estimated costs to achieve. The Settlement Agreement further provides that PSI shall also be entitled to recover carrying costs on the unamortized balance of such amount. In short, this provision provides that PSI is entitled to a return of (*e.g.*, labor and depreciation expense), and a return on (*e.g.*, carrying costs), its investment associated with the Dynegy buy-out.

The Settlement Agreement expresses the intent that PSI be allowed to recover all of the costs associated with converting the WRCGRP to natural gas. To the extent that labor costs were incurred as part of the conversion project, Mr. Farmer demonstrated that such costs were capitalized and were properly recorded as costs to achieve. Pursuant to the Settlement Agreement, PSI is entitled to recover these labor costs through amortization. The same conclusion for depreciation (PSI's capital investment) is inescapable under the Settlement Agreement. In fact, Mr. Brosch agreed on cross-examination that both labor and depreciation (capital investment) costs were incurred by PSI in connection with the conversion of the WRCGRP to natural gas use. Significantly, while Mr. Brosch proposed to exclude both labor and depreciation costs from the amortization calculations, he confirmed that depreciation costs were a part of PSI's initial 1999 estimate of costs to achieve.

In sum, we decline the invitation to reopen the Settlement Agreement entered into between PSI and the OUCC, and find that PSI's adjustment for the Dynegy Buy-out Amortization is reasonable and should be accepted.

(b) Merger Costs.

(i) Evidence. In this case, PSI proposed a *pro forma* adjustment of \$7,419,000 for unrecovered merger transaction costs and costs to achieve merger benefits incurred through October 31, 1996. This *pro forma* adjustment was designed to allow PSI to recover its total unrecovered merger-related costs of \$46,206,000 over a four-year period. Mr. Howe sponsored the annual amortization amount of \$11,559,000. Pet. Ex. Y-12, Sch. C-3.16.

PSI witness Steffen explained that this Commission, in Cause No. 40003, determined that PSI's deferred merger transaction costs were reasonable, and authorized PSI to recover the

merger transaction costs deferred through January, 1995 (\$23.7 million) over a 10-year period (\$2.4 million per year), beginning October 1, 1994. Pet. Ex. C, p. 25. He testified that as of the applicable cut-off date, PSI's unrecovered deferred merger transaction costs will approximate \$2.6 million. PSI proposes to amortize the projected unamortized balance of merger transition costs over four years.

Mr. Steffen further testified that this Commission in Cause No. 40003 authorized PSI to recover in rates its costs to achieve merger savings incurred up to August 31, 1995 (\$17.7 million), amortized over a 10-year period, and to defer, for subsequent recovery, its costs to achieve merger savings incurred after August 31, 1995 until October 31, 1996. Pet. Ex. C, p. 26. Mr. Steffen stated that the Company's incurred costs to achieve merger savings consisted primarily of the costs of voluntary workforce reductions programs, relocation, information systems consolidation and re-engineering efforts associated with the consolidation of operations. *Id.* He also testified that the recovery of such costs was reasonable and consistent with the Settlement Agreement and Orders in Cause No. 40003, because they were required to complete the merger and realize the related merger benefits reflected in PSI's proposed revenue requirement. *Id.* at 27.

OUCG witness Brosch proposed to significantly reduce PSI's proposed adjustment, so as to lengthen the recovery period from four additional years (PSI's proposal) to ten additional years – without carrying costs. Pub. Ex. No. 3, Adj. C-10. Mr. Brosch rationalized this additional 6-year recovery period on the basis that PSI retained the labor savings realized from 1997 through 2003 for its shareholders and now proposes to charge customers, over a 4-year period, the costs that generated such savings. Pub. Ex. No. 2, p. 97.

In rebuttal testimony, Mr. Howe disputed Mr. Brosch's proposal that PSI recover its merger savings costs over ten years, without carrying charges. Pet. Ex. PP, pp. 7-8. He noted that the Settlement Agreement and the related Commission Order in Cause No. 40003 approved a total amortization period of ten years, and that PSI's adjustment even increases the recovery period by one year. By comparison, he pointed out, Mr. Brosch's adjustment increases the recovery period to a total of 16 years.

(ii) Discussion and Findings. Pursuant to several settlement agreements and orders, we have previously recognized that PSI is entitled to recover merger transaction costs, and costs to achieve merger savings incurred up until October 31, 1996, over a 10-year period. Mr. Brosch does not dispute the reasonableness of these deferred merger savings costs, nor does he dispute the entitlement of PSI to recover these costs. Instead, Mr. Brosch argues that since the related merger savings were not reflected in the Company's rates during the deferral period, the amortization period agreed to by the OUCG in Cause No. 40003 should be extended by six additional years. As we have previously authorized PSI's recovery of these incurred costs over a 10-year period we find that the Company's proposed adjustment reflects a consistent application of the previously-approved settlement agreements and orders. Accordingly, we approve PSI's proposed *pro forma* adjustment on this issue.

(c) Amortization of Midwest ISO-Related Deferred Costs.

(i) Evidence. PSI proposed recovery, via a four year amortization, of the deferred MISO administrative costs, consistent with this Commission's December 1, 2002, Order in Cause Nos. 42257 and 42266, which authorized the deferral of certain costs incurred as a result of taking transmission service for retail customers under the Midwest ISO open access transmission tariff ("OATT"). In entering that order, we approved a Settlement Agreement among PSI, Vectren Energy Delivery of Indiana, Inc., Indianapolis Power & Light Company and the OUCG that allowed PSI and the other utilities to defer ongoing Midwest ISO Administrative Adder Costs (i.e., costs incurred under Midwest ISO Schedules 10 and 10-B), for subsequent recovery in a base rate case from Indiana retail customers, over a four-year amortization period. Pet. Ex. Z, pp. 29-30.

OUCG witness Mr. Carver originally opposed the recovery for the reason that the "MISO cost deferral and amortization recovery request does not appear to represent either the net cost incurred by the Company or ongoing expense levels." Pub. Ex. No. 1, pp. 51-53. Mr. Carver testified that, the Company experienced a rather notable increase in 2002 transmission revenues in comparison to 2001 and that this increase over 2001 appears to have been maintained during 2003. *Id.*, at 56. Mr. Carver concluded that because PSI had the benefit of these increased revenues, it should be denied recovery of the deferred costs.

On rebuttal, PSI witness Kent K. Freeman pointed out that the assumption upon which Mr. Carver based his position, namely that "PSI has realized a significant increase in transmission revenues," was unfounded. In comparing later periods to 2001, Mr. Carver had failed to include all transmission revenues which are included in two different account numbers, – accounts 447850 and 456850. Pet. Ex. RR, p. 2. Mr. Freeman observed that, if the overlooked revenue from account 447850 had been included for the calendar years 2001 and 2002 and year-to-date August, 2003, Mr. Carver would have seen that there was *not* a significant increase in transmission revenues in 2002 over 2001. *Id.* at 3. Indeed, including revenues from both accounts for all three periods showed that PSI transmission revenues had *decreased* in both 2002 and year-to-date 2003. *Id.*

Additionally, Mr. Freeman observed that Mr. Carver, failed to take into account the substantial benefits that the Midwest ISO has provided to PSI's customers, as discussed in the testimony of PSI witness Ronald R. Jackups, Pet. Ex. M, pp. 23-26, and as observed by this Commission in its final order entered in Cause Nos. 42027 and 42032 (*Ind. Util. Reg. Comm'n*, December 17, 2001), approving the transfer to the Midwest ISO of functional control of operation of PSI's transmission facilities. These benefits, he said, include, among other things, the substantial benefits of increased market competition and elimination of pancaked transmission rates within the Midwest ISO. *Id.*

In reaction to Mr. Freeman's testimony, Mr. Carver presented a Revised Pub. Ex. No. 3, which, in effect, accepted PSI's amortization of deferred MISO costs. Mr. Carver admitted that his adjustment to Schedule C-14 was intended to allow PSI recovery of the full amount of its

proposed MISO amortization. Tr. at P70. On direct examination at the hearing, Mr. Freeman indicated that it was his understanding that Mr. Carver had intended to accept PSI's proposal, but that in order to do so, Mr. Carver needed to make one minor adjustment to his schedule. Mr. Carver had made an adjustment to the *pro forma* level to eliminate the portion related to PSI's wholesale customers. However, when the deferred balance was updated through August 31, 2003, PSI had removed the wholesale portion from the account, correcting the error. Thus, Mr. Carver's adjustment was no longer necessary.

(ii) Discussion and Findings. It appears based on the foregoing, that there is no current dispute over the appropriateness of including the four-year amortization of deferred MISO expenses. We therefore accept PSI's adjustment in this case to recover over four years its deferred Midwest ISO-related administrative costs.

(d) Post-In Service (Deferred) Depreciation and AFUDC.

(i) Evidence. Mr. Carver sponsored OUCC Adjustments B-1 and C-18. Adjustment B-1 adjusts PSI's Schedule B-3, which includes in PSI's rate base an estimate, subject to true-up, of the August 31, 2003 book balance related to the post-in-service capitalization of carrying costs and depreciation expense. Adjustment C-18 adjusts the Company's Schedule C-3.37, which reflects the Company's *pro forma* amortization of deferred depreciation and AFUDC/carrying cost continuation on estimated deferral balances as of August 31, 2003.

(ii) Discussion and Findings. The sole basis for these adjustments was Mr. Carver's utilization of Mr. Majoros' depreciation rates instead of the depreciation rates sponsored by Mr. Spanos. Public's Ex. No. 1, p. 103. Given our findings above with respect to PSI's depreciation in this order it is not appropriate to make further adjustments.

(14) Interest Synchronization. Mr. Carver sponsored OUCC Adjustment C-20, which synchronized the interest deduction for income tax purposes with the OUCC's weighted cost of debt and rate base recommendations. As Mr. Carver made clear, however, the only reason for this adjustment is that the OUCC utilized a different rate base and cost of capital than PSI. Pub. Ex. No. 1, p. 111. He indicated that if the Commission ultimately adopts a rate base and cost of capital different than that proposed by the OUCC or PSI, interest synchronization should be recalculated, using the Commission's findings. Thus, there is really no issue here. The Commission's revenue requirement ultimately approved here will include interest synchronization that is consistent with the rate base and cost of capital approved herein.

E. Conclusion. On the basis of the foregoing, we find that PSI's *pro forma* jurisdictional electric net operating income under present rates, adjusted to a level which fairly represents its current operations, is \$196,564,000, summarized as follows:

Operating Revenues	\$1,284,140,000
Operating Expenses and Taxes:	
Fuel Expense	378,286,000
Purchased & Exchanged Power Expense	(5,228,000)
Other Operation and Maintenance Expense	386,214,000
Operating Revenue Deduction	(28,917,000)
Depreciation and Amortization Expense	218,316,000
Taxes Other than Income Taxes	58,415,000
Federal and State Income Taxes	80,491,000
Total Operating Expenses and Taxes	<u>\$1,087,576,000</u>
Net Operating Income	<u>196,564,000</u>

When applied to the fair value rate base determined for Petitioner in Finding No. 4C above, this operating income produces a return of only 4.05%, which is outside the range established in Finding No. 5C. In addition, the return on Petitioner's original cost depreciated rate base would be 5.37%, which is below the Commission's determination of 7.30%. Accordingly, on the basis of the evidence and the foregoing determinations, we find that the electric operating income to Petitioner, under its present rates for the electric utility service rendered and to be rendered by it, is not sufficient to provide Petitioner a fair return upon the fair value of its electric properties used and useful for the convenience of the public. Therefore, Petitioner's current rates are unjust and unreasonable.

7. **Rate Level to be Authorized.** We find that a net operating income of \$267,500,000 is hereby found to be a fair return upon the fair value of Petitioner's electric property used and useful and reasonably necessary for the convenience of the public. This provides a fair rate of return of approximately 5.51% which is within the range of reasonableness established in Finding No. 5C. In order to provide such utility operating income, an increase in Petitioner's gross annual retail electric operating revenues to \$1,406,596,000 is required. The increase in revenues will give rise to increased tax expense and as a result, total operating expenses will be \$1,139,096,000. On that basis, we find that Petitioner's *pro forma* operating results will be:

Operating Revenues	\$1,406,596,000
Operating Expenses and Taxes:	
Operation and Maintenance Expenses	731,041,000
Depreciation and Amortization Expenses	218,942,000
Taxes Other than Income Taxes	60,129,000
Federal and State Income Taxes	128,984,000
Total Operating Expenses and Taxes	<u>\$1,139,096,000</u>
Net Operating Income	<u>\$267,500,000</u>

Our findings as to the appropriate level of *pro forma* operating results are based on the evidence of record and giving appropriate weight to the need for Petitioner to maintain and support its credit, to attract capital necessary to discharge its public duties and to earn a return commensurate with that earned by enterprises of corresponding risk. We find that rates estimated to produce these results are just and fair and should allow Petitioner the opportunity to earn a reasonable return on its property dedicated to providing electric utility service to the public. Accordingly, on the basis of all of the evidence and the foregoing determinations, we find that the retail electric rates authorized herein for the electric utility service rendered, and to be rendered, should provide a fair return on the fair value rate base of its electric properties used and useful for the convenience of the public, and therefore are just and reasonable.

8. Revenue Allocation.

A. Jurisdictional Separation and Retail Cost of Service Studies.

(1) Evidence. PSI submitted the results of its jurisdictional separation and retail cost of service studies, prepared by Kent K. Freeman, PSI's Manager, Rates Services. In performing these studies, Mr. Freeman utilized the average of the 12 monthly coincident peak demands on its system ("12-CP") methodology to allocate production and transmission demand-related plant costs and expenses. Mr. Freeman testified that use of the 12-CP methodology allocates production demand related costs to each customer class on the basis of its contribution to the average of the 12 coincident monthly peaks during the test year. Pet. Ex. Z, pp. 3, 5, 19, 22 and 23. This is the same methodology that PSI has utilized, and this Commission has accepted, on numerous occasions since 1971. According to Mr. Freeman, the 12-CP method is also consistent with the FERC's allocation guidelines in PSI's case.

In performing his separation study, Mr. Freeman said that he first segregated PSI's customers into three categories: (1) one customer who purchases high pressure steam from PSI's Cayuga Generating Station; (2) wholesale customers who purchase firm power from PSI and resell it to ultimate consumers or to their members for resale (*e.g.*, WVPA and IMPA); and (3) retail electric customers who purchase firm power from PSI as ultimate consumers. *Id.* at 6. Thereafter he allocated costs among PSI's retail customers, utilizing the 12-CP method to allocate production demand related costs. Pet. Ex. Z-7 summarizes the resulting jurisdictional separation based on Mr. Freeman's studies. Pet. Ex. Z-13 summarizes the results of PSI's retail cost service study, after reflecting a proposed 33% subsidy/excess reduction. *Id.* at 28.

Nicholas Phillips testified for the PSI-IG and proposed an alternative cost of service study methodology. His methodology was based on the average of the coincident peaks in the four summer months ("4-CP"), which he contended, because PSI has been a summer peaking system in recent years, "more accurately reflect PSI's electric system and cost structure." PSI-IG Ex. No.1, p. 10. He contended that the 12-CP method is appropriate only for a system with a flat load pattern in which each of the monthly coincident peaks is relatively equal. PSI-IG Ex. No.1, p. 10.

OUCC witness Michael Brosch, supported Petitioner's use of the 12-CP method to allocate production demand related costs. He discussed the "peak and average" method to allocate such costs, which includes an energy weighting in the development of the production demand allocator, but accepted the use of the 12-CP methodology, as a "compromise between usage of fewer peak hours and utilization of an energy weighted methodology such as Peak and Average." Pub. Ex. No. 2, pp. 100-106.

In response to Mr. Phillips' proposition to utilize the 4-CP method to allocate production demand related costs, Mr. Freeman indicated that this Commission has recognized that a utility's ability to utilize valley period months to perform scheduled maintenance is a reason to use the 12-CP approach. Pet. Ex. RR, p. 12. In that regard, this Commission has stated, "the 12-CP method is often utilized to reflect the full range of operating realities throughout the year including system demand, scheduled maintenance, and reserve requirements." *Indiana Michigan Power Company*, Cause No. 39314, (*Ind. Util. Reg. Comm'n*, October 15, 1997, at 171). Mr. Freeman defended his continued use of the 12-CP methodology and was critical of Mr. Phillips for having analyzed only system demand, without taking into account these other considerations. Pet. Ex. RR, p. 12. Mr. Freeman noted that the 4-CP methodology is used by PSI where it is appropriate -- in the tracking of purchased power costs incurred for the summer months only. Pet. Ex. RR, p. 13.

Mr. Freeman testified that the utilization of a cost allocation methodology has a major impact on the total cost of service assigned to the retail jurisdiction and then among retail customer classes. Pet. Ex. RR, p. 12. It similarly has a significant impact on rate groups and, thus, even if one were to agree with Mr. Phillips that PSI's loads have changed, he did not believe that such a fact would automatically lead to a reallocation of all past investments in production facilities. He observed that a majority of PSI's production facilities were in service during the last PSI retail rate case test period and the 12-CP methodology was utilized in the retail cost of service study underlying the rates approved in that case. He thought it inappropriate now to in effect "reallocate" those facilities in this case." Pet. Ex. RR, pp. 12-13.

(2) Discussion and Findings. We find that PSI's use of the 12-CP methodology to allocate production demand related plant and operating costs is reasonable, based on the testimony of Messrs. Freeman and Brosch. While qualified experts may differ on which methodology is the best fit, based on the evidence presented in this Cause, we cannot conclude that PSI's choice of the 12-CP is unreasonable. We agree with Mr. Freeman that a change in cost allocation methodology can have significant impacts on customer classes and, thus, such a change should not be lightly undertaken, especially where, as here, so much of PSI's plant was in service at the time of its last rate case and costs were assigned using the 12-CP methodology in that case. We find that the results of PSI's jurisdictional separation and retail cost of service studies should be accepted and utilized to allocate operating revenues among customer classes and to design PSI's retail electric rates.

B. Reduction in Subsidy/Excess Revenues.

(1) Evidence. PSI proposed a 33% reduction in the current levels of subsidy/excess revenues between rate groups as its movement towards fully reflecting its cost of service. Mr. Freeman explained that a review of the Company's four major rate groups shows a narrow band of current levels of subsidy/excess revenues. Further, Mr. Freeman testified that the Company's current retail cost of service study shows that the Company's current rates are substantially within the reasonable bounds of cost-based rates. Pet. Ex. Z, p. 29, and Pet Ex. RR, pp. 8-10.

Mr. Brosch recommended that PSI's rate class RS be "assigned no more than the overall percentage increase in total retail revenues ultimately ordered by the Commission." Pub. Ex. No. 2, pp. 108-109. Mr. Freeman concluded that Mr. Brosch's approach would decrease revenues from Rate RS by approximately \$6.5 million if the Company's rate request were approved in this case, which then would have to be allocated to other customer groups. *Id.* Mr. Freeman pointed out that such a shifting of cost responsibilities would negate the Company's proposed 33% reduction in inter-class subsidies, and move RS away from producing a return at virtually the system average rate of return, to a rate below the system average, as shown on Pet. Ex. RR-2, p. 2, and Pet. Ex. RR, p. 10.

(2) Discussion and Findings. We do not accept Mr. Brosch's invitation to ignore existing subsidies disclosed by Mr. Freeman's cost of service study in this case. We find that the 33% reduction in those subsidies is appropriate and should be ordered. This will be a significant step in achieving equity among rate classes, and it is consistent with past orders of this Commission on this subject. The rates as approved herein shall produce substantially the revenue shown in the columns under Column L in Pet. Ex. Z-13, filed as part of PSI's October 15, 2003 workpapers.

9. Rate Design.

A Cost and Revenue Adjustment Mechanisms. The Petitioner proposed three mechanisms to track costs and revenues that it contends are substantial, variable and largely outside of its control. They include a Summer Reliability Tracker (proposed new Standard Contract Rider 70); a NO_x Emission Allowance rate adjustment mechanism (initially proposed new Standard Contract Rider 69); and, a Midwest ISO-Related rate adjustment mechanism (proposed new Standard Contract Rider 68). PSI also proposed minor changes to its existing fuel adjustment ("Rider 60") and SO₂ emission allowance (Rider 63) tracking mechanisms, which were unopposed. We approve each of these cost and revenue tracking mechanisms as discussed below.

(1) Petitioner's Proposed Summer Reliability Tracker.

(a) Background. Mr. Esamann explained that, since 1999, PSI has had to make substantial forward reliability power purchases for the summer months to maintain adequate reserves to meet anticipated customer peak load requirements. Pet. Ex. B, p. 41.

Because of these substantial purchased power needs, in 1999 PSI petitioned this Commission for approval of a purchased power cost tracking mechanism. This Commission initially approved PSI's purchased power tracking mechanism (PSI Standard Contract Rider 67) on a limited basis in Cause No. 41448. *Id.* at 42. In our April 2001 Order in Cause No. 41448-S1, this Commission approved the extension of that mechanism through 2002. In March 2002, in Cause No. 42200, PSI petitioned this Commission and requested the indefinite extension of its purchased power tracker. Alternatively, PSI requested that this Commission extend PSI's purchased power tracker for a 2-year period in Cause No. 42200, and ultimately resolve the design of PSI's tracker in this rate case. *Id.* at 43-44. In our June 2003 Order in Cause No. 42200, we approved the extension of PSI's purchased power tracker through 2004, and determined that the ultimate resolution of the future use of the tracker would be made in this rate case.

PSI implemented its PowerShare[®] program in 2000, in the wake of the Midwest capacity shortage and the resulting 1998 and 1999 wholesale power market price spikes. *Id.* at 44. PowerShare[®] CallOption creates demand reductions through customer commitments to reduce load during times of system peak. Customers are compensated for this commitment to reduce demand in two ways: (1) an option premium payment, which gives PSI the right to call for load reductions within certain parameters, and (2) an energy payment based on actual load reductions. The payments are provided in the form of customer bill credits. *Id.* Mr. Esamann said that although no contractual load reduction commitments are provided under PSI's QuoteOption, the latter is also capable of reducing demand, through appropriate pricing signals to its customers. *Id.* at 45. Under the QuoteOption, customers are compensated by means of energy credits when they choose to reduce load in response to these price signals. *Id.*

With respect to off-system sales, Mr. Esamann testified that in Cause No. 40003, \$6 million of off-system sales profits were built into PSI's base rates. Accordingly, in each year since 1996, PSI retail customers have received the benefit of this annual \$6 million credit through rates.

(b) Petitioner's Proposal. PSI's proposed Summer Reliability Tracker consists of the three components discussed immediately above – purchased power costs, PowerShare[®] costs, and off-system sales profits. With regard to the purchased power component, PSI proposed that the tracker apply to PSI's actual purchased power costs (demand components only) for forward reliability purchases (*e.g.*, monthly or weekly forward purchases) made for the summer months of June through September in order to maintain an adequate PSI reserve margin (15% to 17%). These forward reliability purchased power costs would be eligible for recovery via the tracker, subject to PSI's demonstration to the Commission that its purchase decisions were reasonable at the time made. The energy components of such purchase costs would be eligible for recovery via PSI's fuel adjustment charge tracker. Pet. Ex. B, at p. 46. Under PSI's proposal, no level of purchased power costs would be reflected in PSI's base rates. Pet. Ex. CC, pp. 1-9.

With regard to the PowerShare[®] component of the Summer Reliability Tracker, PSI proposed that the tracker allow recovery of PSI's actual June through September PowerShare[®]

CallOption and QuoteOption costs above (or below) the \$1,023,000 test period level to be included in base rates. Mr. Bailey testified that the test year contains \$1,023,000 of expenditures in the form of bill credits related to PSI's PowerShare® CallOption program, and that even with PSI's proposed transition of this program to more traditional DSM pricing, PSI believes that program expenditures will be at or above this level. Pet. Ex. AA, p. 14; Pet. Ex. CC, pp. 1-9.

With regard to the off-system sales profits component of the Summer Reliability Tracker, PSI initially proposed to flow back to customers 100% of PSI's actual June through September off-system sales profits, plus 25% of actual PSI off-system sales profits earned in the non-summer months (October through May). In response to other parties' concerns, in rebuttal PSI modified this sharing proposal to a 50%/50% sharing of off-system sales profits achieved on a year-round basis. In the early years of the tracker's existence, PSI believes that this feature could result in the net impact of the tracker being a credit, rather than a charge, to customers. Pet. Ex. B, p. 47. Pet. Ex. CC, pp. 1-9.

Similar to the process that has been utilized for its current purchased power tracking mechanism (PSI Standard Contract Rider 67), PSI proposed on an annual basis, in the spring, to present to the Commission its June through September forward purchased power and PowerShare® arrangements. After the close of that summer period, PSI would present the Commission with its actual June through September purchased power, PowerShare®, CallOption and QuoteOption costs, as well as its annual off-system sales profits. After the Commission has completed its review, the net impact (credit or charge) of these June through September costs, along with 50% of PSI's annual off-system sales profits, would be passed through to retail customers via the Summer Reliability Tracker. *Id.* Pet. Ex. CC. p. 8.

Under PSI's proposal, the Summer Reliability Tracker credit or charge will be allocated to all firm retail customers based on their contribution to the summer peak demand, and the credit or charge would be refunded or collected over a 12-month period. Non-firm or interruptible customer loads would not be allocated any of the costs or credits related to the Tracker. The credit or charge would be reconciled to actual at the end of the 12-month cycle to ensure that only the approved credit or charge was ultimately refunded or collected through the Tracker. Pet. Ex. CC, pp. 3-4; Pet. Ex. CC-1.

In connection with its Summer Reliability Tracker proposal, PSI requested corresponding accounting relief, specifically, authority to defer for subsequent recovery or credit, its June through September purchased power and PowerShare® costs, and its off-system sales profits. Pet. Ex. CC, p. 9.

(c) Rationale for PSI's Proposal. Mr. Esamann indicated that he believes that a continuation of a purchased power tracking mechanism, such as that incorporated into PSI's proposed Summer Reliability Tracker, is desirable. The continuing volatility of the wholesale power market; PSI's increasing need for purchased power to maintain an adequate reserve margin; the positive credit quality implications of such a mechanism; and, sound regulatory policy reasons support having such a tracker in place. Pet. Ex. B, at 49. Mr. Esamann testified that the wholesale power market continues to present the potential for high prices, volatility and

price spikes. As recently as March 2003, he related, wholesale market prices spiked to \$135 per MWH. *Id.* at 50. He pointed out that almost 130,000 MWs of power plant projects have been cancelled since the beginning of 2000, with the majority of those cancellations occurring in the Eastern Interconnect region. As projects are cancelled and demand grows, demand will catch up or overtake supply, leading to increasing prices, he predicted. *Id.* at 51. Mr. Esamann concluded that he cannot envision a Midwest wholesale power market that, for many years into the future, does not have some price spikes. *Id.* at 52. According to Mr. Esamann, the question is not whether there will be price spikes, but how frequently and how high they will be. For this reason, PSI believes that it is far more appropriate to address its purchased power costs via a tracker mechanism, rather than attempt to build a representative level into base rates.

Mr. Esamann next turned to the issue of PSI's continuing need for purchased power. He emphasized that PSI customers' demand for electricity continues to grow. Mr. Esamann testified that, even during this period of economic downturn, the PSI system experienced a new peak record demand in the Summer of 2002, after experiencing a 3.6% increase in peak in 2001. *Id.* He explained that even with the addition of the Noblesville Repowering Project (representing approximately 200 additional MWs) and the Madison and Henry County Generating Stations (approximately 663 MWs combined), PSI's projected planning reserve margins for 2003 and beyond, without forward reliability purchases, are well below PSI's 15% minimum reserve margin. PSI's projected reserve margins range from just below 11% in 2003, down to 8.3% in 2006, and 11.4% in 2010 -- a deficit of several hundred megawatts in almost every year for the next eight years. *Id.* at 53. Thus, he said, PSI will need to continue to purchase several hundred megawatts of forward power to satisfy its reserve margin needs for the next several summers. By 2006, he said, PSI's purchased power needs will rise to almost 450 MWs. *Id.*

Mr. Esamann also addressed the positive credit quality implications associated with the purchased power tracking component of the Summer Reliability Tracker. He observed that Commission approval of PSI's continued use of a purchased power tracking mechanism will give investors and credit rating agencies assurance that PSI will have an opportunity to recover the majority of its purchased power costs incurred to provide reliable service to customers, and this assurance should assist PSI in attracting necessary capital at reasonable costs. *Id.* at 55. Maintenance of credit quality is important both for utilities and their customers, he observed. *Id.* at 56. Reduced credit quality results in higher debt costs that, in turn, will result in higher rates charged to customers in the future. *Id.*

Mr. Fetter underscored the credit quality implications associated with tracking and recovery of purchased power costs. According to Mr. Fetter, the financial community relies on the presence of fuel and purchased power adjustment mechanisms to protect investors from the variability of fuel and purchased power costs that can have a substantial impact on the credit profile of a utility, even when prudently managed. These mechanisms mitigate a portion of the risk and uncertainty related to the day-to-day management of a regulated utility's operations. Conversely, the absence of such protection is factored into a utility's credit profile as a negative element. Pet. Ex. H, pp. 25-26.

Mr. Fetter noted that Standard & Poor's stated in November 2002 its opinion concerning the importance of electric utilities having the opportunity to recover fuel and purchased power expenses:

When assessing the importance of productive regulation to the credit strength of an electric utility, something to consider is the means by which the utility can expect to recover variable expenses, particularly fuel and purchased-power expenses, which have highly erratic unit costs. Recent, and in some cases, extreme volatility in the U.S. wholesale electricity markets, as well as in the natural gas markets, underscores this importance. It is no coincidence that utilities with stronger fuel and power cost recovery mechanisms typically enjoy loftier credit ratings.

Pet. Ex. H, at pp. 26-27.

Mr. Esamann offered a number of regulatory policy rationales in favor of the use of purchased power tracking mechanisms. For example, a utility should have a reasonable opportunity to recover the prudently incurred costs associated with meeting its obligation to provide adequate and reliable service to its customers. Moreover, a basic principle of ratemaking is that reasonable costs of providing utility service should be reflected in the prices charged for that service. In Mr. Esamann's opinion, consistent with these principles, tracking mechanisms are appropriate regulatory tools for reflecting costs that are volatile, substantial, and largely outside of the utility's control. Mr. Esamann noted that another way to encourage cost-effective supply decisions is to set up regulatory mechanisms that encourage the utility to plan in advance and to hedge against spot market price volatility and availability risk. PSI believes strongly that encouraging advance planning and hedging strategies will align customer and shareholder interests in achieving reliable and cost-effective electric utility service.

As to the PowerShare[®] component of the Summer Reliability Tracker, Mr. Esamann noted that PSI's PowerShare[®] program impacts are analogous to purchased power and, as such, should be treated the same as purchased power for ratemaking purposes. In PSI's experience, PowerShare[®] costs tend to be highly variable from year to year, and thus lend themselves to tracking treatment. Having a tracker, and assurance of cost recovery for prudent PowerShare[®] costs, will also provide PSI with an incentive to maximize the use of the PowerShare[®] program. Pet. Ex. B, at p. 57.

With regard to the off-system sales profit component of the Summer Reliability Tracker, Mr. Esamann testified as to why he believes that tracking, rather than base rate treatment of such revenues is appropriate, and why an explicit incentive sharing mechanism should be included. Because off-system sales profit can be variable, unpredictable, and largely outside of the utility's control, Mr. Esamann explained that it makes sense to use a tracking mechanism for such credits to customers, rather than building an ongoing level into rates. Pet. Ex. B, pp. 57-58. He noted that off-system sales profits will vary widely from year to year, depending upon a number of

factors such as wholesale market conditions, the performance of PSI's generating system, and PSI native load customer demand and energy requirements.

As for the 50/50 incentive sharing proposal, Mr. Esamann testified that allowing PSI the opportunity to earn and retain a portion of off-system sale profits will encourage PSI to maximize off-system sales opportunities. In Mr. Esamann's view, such a sharing aligns customer and shareholder interests in maximizing off-system profits for the benefit of all stakeholders. Mr. Fetter shared this view, emphasizing that such activities, which are outside the sphere of PSI's traditional regulated operations, deserve to be encouraged with the benefits being shared by both customers and shareholders. Pet. Ex. B, pp. 61-62. Mr. Esamann testified that PSI takes on potential costs and risks whenever it transacts business in the wholesale market and without the opportunity to retain a portion of off-system sales profits, a rational utility would work to ensure that its native load customer demands are met, but would not necessarily take on the potential incremental costs and risks necessary to maximize the use of its generation in the off-system sales market. Pet. Ex. B, pp. 58-61.

Finally, Mr. Esamann testified that off-system sales represent one area where a utility can work to actually earn a return that approximates the net operating income authorized by the Commission in the utility's rate order. Allowing PSI to retain a portion of off-system sales profits achieved will give PSI a more realistic opportunity to earn its authorized return, while still remaining subject to the fuel adjustment charge statute's earnings test. Pet. Ex. B, pp. 60-61. Mr. Esamann concluded that PSI's proposed Summer Reliability Tracker is designed with symmetry and balance, with appropriate consideration to risk and reward. Customers will pay for PSI's costs of forward reliability purchases and PowerShare® costs for the summer months (subject to PSI's demonstrating the reasonableness of its forward purchases), while throughout the year customers will receive the benefits of off-system sales profits generated from PSI generation. Pet. Ex. B, p. 59.

(d) Positions of OUCC, Intervenors, and Testimonial Staff. The OUCC opposed the totality of PSI's proposed Summer Reliability Tracker, while other Intervenors opposed certain aspects of the proposal. The OUCC took the position that tracking treatment was neither necessary nor desirable for PSI's purchased power costs, for PSI's PowerShare® costs, or for PSI's off-system profits. Rather, the OUCC proposed that a test period base level of such costs and revenues be built into PSI's base rates in this case, with no tracking mechanisms for fluctuations between those base levels and actual levels experienced by PSI in the future. Additionally, the OUCC opposed the Summer Reliability Tracker's explicit sharing mechanism for off-system sales profits. Pub. Ex. No. 2, p. 28.

OUCC witness Brosch testified that tracking treatment is not necessary for several reasons. First, he argued that tracking is no longer necessary because PSI has recently added capacity to its system, thus reducing its purchased power needs, and because wholesale market prices have moderated since PSI's purchased power tracker was first approved in 2000. He also argued that revenues from load growth should be sufficient to compensate PSI for any increased purchased power expense it experiences going forward. Pub. Ex. No. 2, pp. 32-33. OUCC witness Endris added his view that "a request to track a cost [of purchased power] that represents

only 1% of the test year fuel expense is insubstantial and undeserving of tracker treatment." Pub. Ex. No. 6, p. 8. Instead of tracking treatment, the OUCC argued for base rate treatment of PSI's purchased power costs, based on PSI's actual Summer 2003 purchased power costs (approximately \$2 million). As for PSI's PowerShare® costs, OUCC witness Endris took the position that "The CallOption program expense is similarly negligible compared to total fuel expenses. ..." Pub. Ex. 6, p. 8.

OUCC witnesses Brosch and Endris also testified on the off-system sales component of PSI's proposed Summer Reliability Tracker. Mr. Brosch opposed tracking off-system profits and recommended building in a base level instead. He offered his opinion that the test period level of off-system profits achieved by PSI of approximately \$18.7 million appeared to be representative of an ongoing level of such profits and even possibly conservative since the test period level did not include the availability of new generation added by PSI (Madison, Henry County, and Noblesville Repowering). Pub. Ex. No. 2, pp. 41-43. In further support of the OUCC's position that PSI's off-system sales should be addressed through base rates rather than through a tracking mechanism, Mr. Endris testified that in his opinion PSI native load customers likely would not receive as much benefit through the Company's proposed off-system sales profit sharing mechanism as they would get through continued traditional ratemaking treatment that includes actual test year results in setting rates. Pub. Ex. No. 6, p. 5.

With respect to PSI's proposed sharing of off-system sales profits, Mr. Brosch testified that PSI needs no special incentive to make off-system sales. In his view, the better answer would be an approach where there is no tracking, whereby the Company would have the opportunity to retain for shareholders 100% of any incremental profits earned on such sales between rate cases. Public's Ex. No. 2, p. 43. Mr. Brosch also noted that, since the 2002 implementation of the Joint Generation Dispatch Agreement, PSI's off-system sales have generally been limited to system energy transfers of surplus hourly energy to CG&E, which in Mr. Brosch's view insulates PSI from market and profitability risks. Finally, Mr. Brosch stated his opinion that there is simply no shareholder entitlement to additional returns, since shareholders are not "at risk" for plant production costs. Pub. Ex. No. 2, p. 44.

Mr. Endris also testified that PSI does not need any further incentives to maximize profits from off-system sales. Pub. Ex. No. 6, pp. 16-19. PSI has engaged in off-system sales activity in every year subsequent to the Commission's order in Cause No. 40003, without any special treatment tracking off-system sales. One can only conclude based upon actual results that the current traditional method, with 100 percent retention of all changes in profits, provides adequate incentive to PSI to engage in reasonable off-system sales effort. Pub. Ex. No. 6, p. 23. Mr. Endris also claimed that the dollars, volumes, and types of sales to be included in the proposed sharing mechanism are difficult to reconcile with actual historical results. *Id.* at 9. This kind of confusion, he maintained, should lead the Commission to reject PSI's proposal and instead determine that test period off-system sales profits of \$18.7 million, or some other reasonable *pro forma* projection, should be reflected as a credit to revenue requirements." *Id.* at 16.

Mr. Endris was also concerned that the transaction documentation and analysis involved in determining off-system sales profits is voluminous, complex and contentious and will lead to

frequent and difficult litigation. Pub. Ex. No. 6, p. 26. He believed the required audits would be costly and resource-intensive, which costs, he suspected, would be borne by the ratepayers, either as a drain on the very profits to be shared or as an expense hitting the FAC earnings test. *Id.* at 26-27. He concluded, as Mr. Brosch did, that PSI should "receive traditional ratemaking treatment of appropriate off-system sales profits as a reduction to revenue requirements and let PSI retain 100% of profits thereafter." Pub. Ex. No. 6, p. 32. Such treatment, he contended, would provide PSI "its desired incentive to maximize the use of the PSI generating resources to achieve off-system sales margins while not subjecting ratepayers to this insufficiently-supported sharing mechanism." *Id.*

The OUCC's alternative was to propose that a base amount of expected purchased power costs and off-system sales profits, such as the \$2 million of Summer 2003 purchased power costs and the \$18.7 million of test period off-system sales profits, be included in base rates, and that PSI shareholders and customers share in costs and profits above or below this amount, with 90% going to PSI's customers and 10% to its shareholders, on an annual basis. This alternative approach, the OUCC claimed, would properly credit customers for the burden of capacity costs included in base rates, as well as incentivize PSI to economically maximize the pursuit of both purchased power and off-system sales profits. Pub. Ex. No. 1, p. 37; Pub. Ex. No. 2, p. 61.

Intervenor PSI-IG was supportive of the continuation of PSI's purchased power tracker, but opposed tracking PowerShare[®] costs above or below the level included in base rates. PSI-IG Ex. No. 1, p. 25. As for the off-system profits component of the Summer Reliability Tracker, Mr. Phillips took the position that customers should be credited with the profits from off-system sales in PSI's base rates, because PSI is allowed to earn a return on all of its generating stations. *Id.* Mr. Phillips also testified that eliminating any off-set for off-system sales from base rates shifts all of the risk to the customers and provides PSI with no incentive to make such sales. He said that to the extent PSI earns more from off-system sales than the amount included in its base rates, the profits should be shared with its customers through a tracking mechanism separate from the Summer Reliability Tracker. Mr. Phillips recommended that this Commission approve only the minimum recovery of purchased power costs in the tracking mechanism without the PowerShare[®] credits or other provisions PSI has requested. *Id.* at 26.

Intervenor Kroger took issue only with the off-system profits component of the Summer Reliability Tracker, and specifically the incentive sharing mechanism. Kroger witness Kevin C. Higgins testified that, assets that are being used to make these profits possible are being fully funded by ratepayers -- and ratepayers should receive a significant share of any benefit. The Company's share should be limited to the amount needed to provide it with adequate incentive to make profitable off-system sales transactions. He proposed that the \$18.7 million in profits from off-system sales during the test period be credited against base rates for the rate-effective period and on either side of this \$18.7 million there should be a reasonably-sized deadband. Mr. Higgins proposed that as long as the annual amount of off-system sales profit remained within the deadband, no further rate adjustments would be made. In the event that profits from off-system sales fall below or rise above the deadband, he recommended that some sharing of incremental benefits or decremental shortfall take place, implemented through a tariff rider. Mr. Higgins proposed a 50/50 sharing of incremental benefits or decremental shortfall outside the

deadband and a deadband of + or -\$3 million. This approach, Mr. Higgins claimed, fully aligns the interests of shareholders and ratepayers, and provides the Company with ample incentive to make profitable off-system sales. Kroger Ex. No. 1, pp. 6-8.

Intervenor CAC opposed certain aspects of the Summer Reliability Tracker. CAC witness Bruce E. Biewald contended that the proposed tracker will reduce or eliminate the incentive for the Company to manage costs and risks associated with the tracked costs. Mr. Biewald also predicted a net cost to customers from the proposed Summer Reliability Tracker beginning in 2004, and he claimed that the system for accounting and tracking of transactions is complex and prone to abuse. More specifically, Mr. Biewald recommended that this Commission disallow the Summer Reliability Tracker's off-system sales profit sharing mechanism and require the Company to credit all such profits to customers. Mr. Biewald recommended that this Commission approve a modified version of the Summer Reliability Tracker that allows customers to retain 100 percent of off-system sales profits in all months of the year. Modifying the tracker in this manner, he claimed, would greatly increase the probability that customers would indeed receive a net credit from the tracker. CAC Ex. B, pp. 4-5, and 20.

Testifying on behalf of the Commission's Testimonial Staff, Dr. Borum and Ms. Cvengros indicated that they were generally supportive of PSI's proposed Summer Reliability Tracker. Ms. Cvengros observed that, while somewhat unwieldy as packaged together as a single tracker, the components of the Summer Reliability Tracker are all well-defined elements. IURC Staff Ex. No. 2, p. 28. Both Dr. Borum and Ms. Cvengros agreed that tracking treatment for PSI's summer purchased power costs was appropriate, so long as the tracker procedures called for upfront Commission scrutiny and approval of PSI's purchased power decisions, and as long as the tracker included a mitigation credit feature, whereby customers can be credited with profits derived from off-system sales made from the purchased power capacity. The Testimonial Staff believes that PSI's proposed Summer Reliability Tracker contains these essential elements and is an acceptable purchased power tracking mechanism. IURC Staff Ex. No. 2, p. 31.

On the subject of purchased power cost tracking, Dr. Borum characterized the costs to be tracked as largely outside of the control of management. In Dr. Borum's view, purchased power is a primary example of such uncontrollable costs. Dr. Borum opined that the use of trackers "reduces regulatory lag, and thus limits the utility's incentive to keep costs low." However, he observed, continuation of a pre-approval process for forward power purchases is necessary to meet PSI's summer reliability requirements and continuation of the pre-approval regulatory process connected with the Summer Reliability Tracker will reduce financial uncertainty and risks for PSI, in return for an up-front review and input by interested groups in the resource planning and acquisition processes implemented by PSI. Staff, he said, believes that treating forward purchases similar to the regulatory treatment of building additional generation capacity will promote a resource portfolio planning process in which forward purchases are appropriately considered. Additionally, Staff witness Cvengros noted that, while PSI's purchased power needs in the near term may be relatively small when compared to previous years, PSI's growing customer load will require increasing quantities of purchased power at about the time an order would be expected in this Cause. As a consequence, denying PSI's proposed Summer Reliability

Tracker on the grounds that PSI does not currently have to make substantial purchases would probably require the Company to file another petition for a purchased power tracker shortly after an order is issued in this Cause. IURC Staff Ex. No. 3, pp. 5, 13, 17, IURC Staff Ex. No. 2, p. 28.

With regard to the PowerShare[®] component of PSI's Summer Reliability Tracker, Ms. Cvengros opined that the PowerShare[®] costs above or below the amount to be included in PSI's base rates are not likely to be excessive and PSI would not suffer a financial hardship were they to be excluded from the Tracker. On the other hand, she explained that Staff views the PowerShare[®] program as being analogous to a purchased power option contract, whereby the Company pays an upfront demand premium in exchange for the right to have access to power when needed at specified prices. The only difference is that PowerShare[®] provides curtailable power, instead of deliverable power – but both have the same effect in maintaining an adequate reserve margin during peak periods. In sum, Staff believes the PowerShare[®] program costs are legitimate expenses that should be recovered by the Company, and the Summer Reliability Tracker provides an acceptable, but not the only, method of recovering such costs. IURC Staff Ex. No. 2, pp. 28 and 29.

With regard to the off-system profits component of the Summer Reliability Tracker, Staff witness Cvengros explained that Staff views the off-system sales profit sharing component as an expansion of the mitigation credit that has been employed in connection with PSI's existing purchased power tracker. In Ms. Cvengros' view, PSI's sharing proposal explicitly addresses a sharing of off-system sales profits, in contrast to the implicit sharing that occurs today with a base level of off-system profits included in rates. Staff believes that an explicit sharing mechanism provides a better incentive to the utility to make economically efficient off-system sales, as well as easier review and monitoring of the shared profits. IURC Staff Ex. No. 2, p. 28.

While not opposed to PSI's proposed off-system sales sharing mechanism, Ms. Cvengros did offer some alternatives for the Commission's consideration. For example, if the Commission believes that the proposed 50%/50% sharing of off-system profits is inadequate, Ms. Cvengros noted that an adjustment of the shared portion of profits between 50%/50% and 80%/20% to customers' favor would be reasonable, and should not cause a financial hardship on the Company. Alternatively, Ms. Cvengros noted that the Commission could include a base amount of off-system sales in PSI's rates, with or without some sharing of profits above that base amount. Based on PSI's estimate of its test period off-system profits without an explicit sharing mechanism, Ms. Cvengros recommended \$13 million as an appropriate base amount of off-system profits to be included in rates should the Commission prefer that approach. IURC Staff Ex. No. 2, p. 31, Attachment K.

In response to other parties' criticisms concerning the complexity of identifying off-system sales profits for purposes of sharing, Ms. Cvengros agreed that the process is complex, but noted that the process for determining off-system profits is the same process necessary for determining fuel costs for the FAC. Dr. Borum concurred on this point, explaining that the JGDA dictates how off-system sales costs and revenues must be allocated between PSI and its affiliate, CG&E. IURC Staff Ex. No. 1, pp. 26-33; IURC Staff Ex. No. 2, p. 27.

(e) PSI Rebuttal. Mr. Esamann testified that PSI continues to believe that cost tracking mechanisms are appropriate for costs that are substantial, variable or volatile, and largely outside of the control of management. Just as important, he said, PSI continues to believe that cost tracking mechanisms benefit both customers and the company in numerous ways -- by allowing the utility to recover its prudently-incurred costs of providing service, no more and no less; by helping to level the playing field between competing options (capital versus expense options), thus encouraging the most economic choices; by eliminating artificial disincentives to pursuing the most economic choices (again, capital versus expense options, or forward versus spot market choices); by encouraging advance planning and hedging as opposed to reliance on volatile spot markets, thus aligning customer and company interests in reliability and price certainty; and by allowing the utility to defer the need for repeated general rate cases. Pet. Ex. DD, p. 17.

He maintained that PSI's purchased power and PowerShare[®] costs are collectively significant, variable, and largely outside of its control -- similar to fuel costs. Tracking treatment, he said, assures that the utility will recover these costs of providing service on a timely basis, no more and no less, while base rate treatment, alone, of these cost items would inevitably result in an over or under recovery. Pet. Ex. DD, pp. 17-18.

He emphasized that tracking treatment goes a long way toward leveling the playing field between capital and expense options -- maintaining that a utility can mitigate its purchased power and peak load management risks by building additional "iron-in-the-ground" capacity, and if the reserve margin is large enough, the utility can virtually eliminate the need for any reliance on purchased power or peak load management programs. But, he said, a total long-term reliance on on-system generation may not be the most economic option for the utility's customers. A purchased power and PowerShare[®] tracking mechanism gives the utility the flexibility to rely on the power market when appropriate and encourages the utility to make the most economic choice, by allowing the utility an opportunity to recover its out-of-pocket purchased power and peak load management costs. Pet. Ex. DD, pp. 17-18.

Mr. Esamann criticized the OUCC's proposed level of purchased power expense to be reflected in PSI's base rates as an alternative to PSI's proposal. He observed that the Company's 2003 purchased power costs were by far the lowest level of forward reliability purchased power costs experienced by PSI since prior to 1999 (less than \$2 million). *Id.* at 18-19. Moreover, he said, this low level of purchased power expense is likely to be temporary, given the expected gradual increase in wholesale power prices and the approximately 100 MWs of annual demand growth PSI is experiencing on its retail system. *Id.* at 19. Accordingly, he said, if this Commission were to include a base amount in PSI's rates, he would recommend that this Commission use an average of the last two years' forward reliability purchased power costs, which amounts to \$10.5 million. That level, he noted, is still lower than PSI's estimated annual purchased power costs over the next few years. *Id.*

To the OUCC's argument that tracking treatment is not necessary for off-system sales profits and, instead, off-system sales profits of \$18 million should be included in base rates, Mr.

Esamann pointed to the variability associated with off-system sales profits -- a variability that is in large part outside of PSI's control and dependent, instead, on market prices, weather and customer demands. He added that the test period level of \$18 million in off-system sales profits experienced by PSI was by far the highest level of off-system sales profits earned by PSI from 1996 through the test period. However, he said, if the Commission decides to include a level of off-system sales profits in base rates, PSI believes that a reasonable level of trading expenses should also be included in PSI's base rates. In its case-in-chief PSI excluded certain of its trading expenses from its rate increase request, essentially in exchange for an explicit off-system sales sharing mechanism. Pet. Ex. DD, pp. 19-20.

With respect to the OUCC's contention that PSI needs no special incentive to make off-system sales, Mr. Esamann testified that PSI continues to believe that incentivizing it to maximize off-system sales profits through a sharing mechanism makes sense for both customers and the Company. In Mr. Esamann's view, an incentive sharing mechanism will increase the overall size of the "pie" (the off-system sales profits), with benefits created for both customers and the Company. Pet. Ex. DD, pp. 20-21. Mr. Esamann observed that although it is easy to say that a utility should always seek to maximize off-system sales profits for the benefit of native load customers, it is important to keep in mind that there are costs and risks associated with maximizing such sales profits. If the utility has no upside opportunity, there will naturally be a disincentive for the utility to incur those incremental costs and risks. Pet. Ex. DD, p. 21.

He emphasized that there are incremental costs and risks associated with having and keeping the Company's generation available for off-system sales opportunities, even when it is not anticipated to be needed for native load customers' demand requirements. There are, he said, different levels of costs that are incurred to serve anticipated native load customer demands, versus serving anticipated native load customer demands plus anticipated off-system sales opportunities. Such costs include costs associated with committing, ramping up, and dispatching the units -- and different levels of these costs will be incurred to serve anticipated native load customer demands, versus serving anticipated native load customer demands plus anticipated off-system sales opportunities. There are also costs associated with maintaining and repairing the utility's power production facilities that may not need to be incurred for native load customers purposes. If PSI concluded that sufficient off-system sales opportunities were available, and if PSI were incented to get that unit back on-line and running in order to capitalize on wholesale market opportunities, PSI would likely incur such extraordinary O&M costs, he said. Pet. Ex. DD, pp. 21-22.

Mr. Esamann went on to explain why there is likely to be a difference in the level of off-system sales achieved with and without an incentive sharing mechanism, observing that if PSI lacked a meaningful incentive opportunity in this area, PSI would likely commit its system differently than it does today. It would of course continue economic dispatch, but would commit its units to meet anticipated native load requirements, rather than to meet native load requirements plus wholesale market opportunities. In any given hour, he said, PSI may have surplus energy available to sell into the wholesale market, depending on actual native load demands versus the level of demand anticipated the day-before. Nevertheless, he estimated that

this difference in unit commitment would result in a decrease in off-system sales profits on the order of magnitude of \$4 million annually. Pet. Ex. DD, p. 23.

Moreover, Mr. Esamann emphasized that there are other benefits to native load customers associated with having PSI's generating units committed to meet native load demands plus wholesale market opportunities. If native load demands should exceed expectations, or if PSI experiences a generating unit outage, the "market-committed" generation can instantaneously be used to meet native load customer demands, because that generation is already ramped up and running and native load customers have "first call" on PSI generation. Under the alternative, "native load only" commitment scenario, however, native load customer demands would need to be partially met through potentially higher cost hourly market purchases until such time as incremental PSI generation could be ramped up and committed. Pet. Ex. DD, pp. 22-24.

(f) Commission Discussion and Findings. Pursuant to IC 8-1-2-42(a), this Commission has the legal authority to approve tracking mechanisms for fluctuating costs. As a general rule, IC 8-1-2-42(a) states that: "A public, municipally owned, or cooperatively owned utility may not file a request for a general increase in its basic rates and charges within fifteen (15) months after the filing date of its most recent request for a general increase in its basic rates and charges..." *Id.* However, this section goes on to indicate that: "The phrase 'general increase in basic rates and charges' does not include changes in rates related solely to the cost of fuel or to the cost of purchased gas or purchased electricity or adjustments in accordance with tracking provisions approved by the commission." Ind. Code § 8-1-2-42(a). The proposition that the Commission has the authority to approve the tracking of certain costs has also been affirmed by the courts. *See, City of Evansville v. SIGECO*, 339 N.E.2d 562, 593 (Ind. Ct. App. 1975); *L.S. Ayres v. Indianapolis Power & Light Co.*, 351 N.E.2d 814, 838-39 (Ind. Ct. App. 1976).

Against this legal and regulatory backdrop, we will now consider the evidence regarding tracking treatment of PSI's purchased power and PowerShare[®] costs. The evidence in this case establishes that the wholesale market continues to exhibit the potential for volatility, that it is reasonable to consider PSI's purchased power and PowerShare[®] costs collectively given their analogous functions, and that PSI's collective purchased power and PowerShare[®] costs are potentially significant. Moreover, the evidence indicates that even with the addition of incremental generating capacity in 2003, PSI continues to have a need for purchased power in order to maintain an adequate reserve margin, and that PSI's retail load continues to grow. While PSI's Summer 2003 purchased power costs were relatively low, the evidence suggests that PSI's purchased power needs and costs are likely to increase over time given PSI's load growth and expected wholesale market price increases and volatility.

Importantly, as we concluded in both our April 2001 Order in Cause No. 41448-S1 and our June 2003 Order in Cause No. 42200, a number of regulatory policy rationales support the continued use of purchased power tracking mechanisms. A utility should have a reasonable opportunity to recover prudently incurred costs associated with meeting its obligation to provide adequate and reliable service to its customers. Additionally, credit quality is of importance to both utilities and their customers, and there is a recognized connection between the periodic

review and adjustment of rates and positive credit quality. Last, but not least, a purchased power tracking mechanism is consistent with our goal of leveling the playing field among resource options and thereby encouraging pursuit of the most cost-effective options. We concluded in 2001 and 2003, and we conclude today, that continuation of a purchased power tracker mechanism for PSI will align the mutual interests of PSI's customers and shareholders in reliable and cost-effective electric utility service.

Notably, these same regulatory policy rationales support approval of tracking treatment for PSI's PowerShare® costs, albeit to varying degrees. We believe that approval of the PowerShare® component of the Summer Reliability Tracker will allow the recovery of prudently incurred costs associated with providing reliable electric service, and will provide PSI with an incentive to maximize the usefulness of its PowerShare® program. In sum, the law, the evidence, and regulatory policy all support approval of a tracking mechanism for PSI's purchased power and PowerShare® costs. Accordingly, we hereby approve the purchased power and PowerShare® components of PSI's proposed Summer Reliability Tracker. We also approve PSI's corresponding accounting request for authority to defer for subsequent recovery via the Tracker, its June through September purchased power and PowerShare® costs.

With respect to the off-system sales profit component of the Summer Reliability Tracker, the Commission recognizes that a number of options were presented to us for consideration by the various parties. In undertaking our review of this issue, the Commission recognizes that fair and reasonable asset optimization programs, that present corresponding benefits to ratepayers, should be encouraged. While the utilization of ratepayer funded resources in the pursuit of off-system sales profits should result in a corresponding reward to ratepayers for the risk being borne, the Commission is cognizant that PSI should have an appropriate incentive to optimize its generation assets. The Commission believes that balancing the interests of PSI and its ratepayers is appropriate and, if done properly, will provide a benefit that might not otherwise be possible.

In the present case, PSI achieved \$18.7 million of such profits during the test period and a significantly larger amount during calendar year 2002. Yet, Mr. Esamann testified that PSI projects *losses* in the area of off-system profits for both 2003 and 2004. We agree with PSI that off-system sales revenues are potentially significant, volatile or variable, and largely outside the control of the utility and may therefore be tracked. In reaching this conclusion we find that tracking off-system sales profits does not appear to be overly complicated and administratively burdensome. As Ms. Cvengros and Dr. Borum both pointed out, the same information that will be necessary to track off-system sales profits is already captured and analyzed in connection with PSI's fuel adjustment charge proceedings.

While we are granting approval to track off system sales profits, we do not believe that the 50%/50% sharing proposal put forth by PSI presents the optimum approach to addressing this issue. In presenting several options for our consideration, we note that Ms. Cvengros indicated that the Commission could include a base amount of off-system sales in PSI's rates, with or without some sharing of profits above that base amount. This approach was also recommended by the OUCC, Kroger, and PSI-IG. We are persuaded by the recommendation that we include a

level of off-system sales profits in base rates and find that this should be done in conjunction with the use of a 50/50 sharing mechanism.

In adopting this approach, we are cognizant of PSI's concern that the amount included should reflect a reasonable level of trading expenses which were not included in the explicit sharing proposal advocated by PSI in this Cause. While we are persuaded by the OUCC's proposal that we include \$18.7 million in rates for this purpose, this amount does not reflect trading expenses. Therefore, consistent with our earlier findings, we find that \$18.7 million of test-period off-system sales profits, minus \$3,953,000 for trading expenses, for a net value of \$14.747 million, should be included in base rates to reflect the test-period. We further find that off-system sales profits should be tracked from this amount and shared 50/50 between PSI and ratepayers. We also find that tracking should be above and below the net amount in base rates; PSI may not apply a net annual off-system sales profit of less than zero to the tracker; and, all off-system sales net income should be included as jurisdictional income for purposes of the FAC earnings test. In addition, PSI's corresponding request for accounting relief is also approved.

(2) NO_x Emission Allowance Tracker.

(a) PSI's Testimony. PSI witness Farmer testified that Petitioner's proposed NO_x emission allowance rider provides a rate mechanism for the recovery of charges to operating expense resulting from PSI's use of NO_x emission allowances ("EA") in order to comply with the federal and state NO_x SIP Call requirements. He explained that beginning in May 2004, PSI will be required to substantially reduce the amount of NO_x emitted from its power plants. Emission allowances will be consumed for each ton of NO_x emitted into the atmosphere during the months of May through September. Even though PSI will receive various allocations of zero cost NO_x emission allowances from the Indiana Department of Environmental Management ("IDEM"), PSI's future NO_x SIP Call compliance strategy includes the possibility of purchasing or selling NO_x emission allowances in order to minimize the cost of compliance to retail customers. PSI's proposed Standard Contract Rider No. 69 would allow for cost recovery of NO_x emission allowances as such allowances are consumed. Pet. Ex. CC, p. 10.

Mr. Farmer explained that the concepts incorporated within the Company's proposed NO_x Emission Allowance Adjustment are similar to the concepts embodied within its SO₂ Emission Allowance Adjustment, approved by the Commission in Cause Nos. 39584 and 39584-S2. Both riders, he said, are "zero based" riders, meaning that there are no costs being recovered in base rates. Both riders provide for the recovery of costs of emission allowances consumed due to the operation of the Company's own generating units used to serve native load customers, as well as the cost of emission allowances included in the cost of power purchased or transferred for economy, reliability, or operating purposes, to the extent such costs are specifically identified or can be reasonably estimated. Costs under both riders are allocated to retail customers based on kilowatt-hour sales. According to Mr. Farmer, both riders provide for the recovery or crediting of net gains and losses from the sale of emission allowances that have been allocated to the Company by the environmental agencies or emission allowances purchased by the Company on behalf of native load customers. Pet. Ex. CC, p. 11.

PSI initially proposed that Standard Contract Rider No. 69 provide for the sharing of net gains and losses associated with NO_x EA sales at a ratio of 80% to customers and 20% to the Company. However, in response to concerns raised by other parties, in rebuttal PSI modified its NO_x emission allowance cost tracking proposal in two ways: First, PSI changed its initial proposal to provide customers with 100% of net emission allowance sales proceeds; and second, PSI proposed to incorporate the NO_x emission allowance tracking features into PSI's existing SO₂ emission allowance rate adjustment mechanism (Standard Contract Rider No. 63). Pet. Ex. CC, pp. 10-22; Pet. Ex. QQ, p. 42.

(b) OUCC's, Intervenor's, and Testimonial Staff's Testimony. The OUCC's only objections to the proposed NO_x emission allowance tracker involved the 80%/20% sharing feature, and the use of a mechanism separate and apart from PSI's existing SO₂ mechanism. As mentioned above, PSI addressed both of these concerns in its rebuttal testimony.

Intervenor PSI-IG took the position that PSI should propose this tracker, if appropriate, if and when the costs are of significant magnitude to warrant another adjustment to customers' bills. Alternatively, PSI-IG was of the opinion that the NO_x emission allowance tracker should be treated the same as PSI's SO₂ allowance cost tracker (i.e., 100% of net sales proceeds should be credited to customers). PSI-IG Ex. No. 1, p. 27.

Testimonial Staff generally supported approval of rate adjustment mechanisms for the recovery of SO₂ and NO_x emission allowance costs incurred providing service to jurisdictional retail customers. Dr. Borum testified that Staff has no objection to the costs of NO_x emission allowances being passed to ratepayers through a tracker similar to the one being proposed by PSI for SO₂ allowances, but had concerns regarding the proposed 80/20 sharing between the Company and ratepayers of gains or losses from selling NO_x emission allowances. Staff recommended that the NO_x tracker be consistent with the SO₂ tracker, with all gains or losses from sales of the emission allowances going to ratepayers, rather than an 80/20 split. IURC Staff Ex. No. 3, p. 26.

(c) Commission Discussion and Findings. With PSI's rebuttal modifications to its NO_x emission allowance tracking proposal, there appears to be very little dispute among the parties on this topic. We conclude that it is reasonable to authorize PSI to track and recover NO_x emission allowance costs incurred in connection with providing retail electric service, and to authorize PSI to credit customers with 100% of net proceeds associated with any sales of jurisdictional NO_x emission allowances. Accordingly, we approve PSI's NO_x emission allowance proposal as modified in its rebuttal testimony.

(3) Midwest ISO-Related Cost and Revenue Adjustment Mechanism.

(a) PSI's Testimony. PSI also requested approval of a new Midwest ISO Management Cost And Revenue Adjustment Standard Contract Rider ("Midwest ISO Rider") to track, for recovery or credit, changes in the amount of PSI's Midwest ISO Management Costs and Revenues included in base rates as a result of this proceeding. PSI is proposing to track (i) costs billed to PSI by the Midwest ISO under Schedule 10 (ISO Cost Recovery Adder), or a

successor provision (including Schedule 10-FERC), of the Midwest OATT, or any successor Tariff for the Midwest ISO; (ii) costs billed to PSI by the Midwest ISO under Schedule 16 (Financial Transmission Rights Administrative Service Cost Recovery Adder), or a successor provision, of the Midwest OATT, or any successor Tariff for the Midwest ISO; (iii) costs billed to PSI by the Midwest ISO under Schedule 17 (Energy Market Support Administrative Service Cost Recovery Adder), or a successor provision, of the Midwest ISO OATT, or any successor Tariff for the Midwest ISO; (iv) costs billed to PSI by the Midwest ISO for standard market design or other government mandated transmission costs PSI is required to pay on behalf of its Indiana retail electric customers; and (v) certain Midwest ISO transmission revenues assigned to PSI by the Midwest ISO. Pet. Ex. Z, pp. 30-31; and Pet. Ex. RR, pp. 13-14.

PSI proposed to include in its base retail rates \$5.554 million for Schedule 10 costs. As there are no current charges billed under Schedules 16 and 17, such Schedule 10 costs are the only costs that PSI proposed to include in base retail rates. PSI also proposed to include in the fixing of base rates Midwest ISO transmission revenues of \$10.905 million as a revenue credit, thus reducing base retail rates. The net of these two items resulted in a reduction in PSI's proposed base rates of \$5.351 million. Pet. Ex. Z, p. 31.

Mr. Freeman said that under the Midwest ISO Rider, the total of these cost categories would be added together and the transmission revenues subtracted to determine the net amount for each quarter. The difference between this net amount and \$1.337 million (one quarter of \$5.351 million) would be recovered or credited, whichever is applicable, to the customers through the Midwest ISO Rider. Mr. Freeman said that the annual retail electric jurisdictional costs to be incurred by PSI under Midwest ISO Schedules 16 and 17 are estimated to be approximately \$2.1 million. Consistent with PSI's Fuel Cost Charge Standard Contract Rider and PSI's Emission Allowance Charge Standard Contract Rider, PSI proposed to adjust the Midwest ISO Rider on a quarterly basis. To the extent that any costs to be recovered under the Midwest ISO Rider are not billed by the Midwest ISO to PSI pursuant to Midwest ISO Schedules 10, 16 or 17, PSI will demonstrate in its quarterly filing the amount and reasonableness of such costs. Pet. Ex. Z, pp. 31-33.

PSI witness Ronald R. Jackups emphasized that the proposed Rider addresses costs and revenues that are variable, substantial, and outside the control of PSI, but which result from PSI taking transmission service under the Midwest ISO OATT to serve PSI's retail electric customers. More specifically, Mr. Jackups explained that the costs and revenues covered by the proposed Rider are: (1) the result of the decisions of the FERC; (2) variable in amount from year to year; (3) variable as to timing; (4) substantial in individual and aggregate amounts; and (5) outside the control of PSI (i.e., dependent upon the actions of the FERC, the Midwest ISO, customers and loads, etc.). Further, as federally set and imposed charges at retail, necessary in order to provide retail service, Mr. Jackups testified that the costs to be incurred are just, reasonable and necessary. Pet. Ex. M, pp. 46-48.

(b) OUCC, Intervenors', and Testimonial Staff's Testimony. The OUCC opposed PSI's proposed Midwest ISO Rider because such costs failed to meet the five (5) rate tracking criteria recommended by OUCC -- including its view that PSI's Midwest ISO's costs

are relatively stable and insignificant in the context of PSI's overall O&M expenses (only 0.678%, before tax). Although Mr. Carver's testimony specifically addressed the \$5.761 million of MISO Schedule 10 costs, the MISO charges are still immaterial even after considering the additional \$2.1 million estimated by PSI witness Freeman (Pet. Ex. Z, pp. 31-33) attributable to MISO Schedules 16 and 17. In lieu of PSI's proposed Midwest ISO rider, OUC would alternatively recommend the continuation of the deferral mechanism previously authorized by the Commission -- to the extent PSI does not separately recover any increased administrative costs through increased transmission revenues, MISO related efficiencies or through retail base rates. Pub. Ex. No. 1, pp. 57-59.

Intervenor PSI-IG opposed the tracking of Midwest ISO-related costs above or below the amount to be included in base rates, and opposed PSI's proposed Midwest ISO Rider as premature and probably inappropriate. PSI-IG witness Phillips said that PSI can request approval of this mechanism, if appropriate, when all matters regarding the MISO, costs, operations, rules and regulations are known. PSI-IG Ex. No. 1, p. 26.

Testimonial Staff endorsed PSI's proposed tracking of Midwest ISO related costs and revenues, including costs that are (1) the result of decisions by the FERC; (2) variable in amount from year to year; (3) variable as to timing; (4) substantial in individual and aggregate amounts; and (5) outside the control of PSI. Dr. Borum testified that, Staff agrees that these MISO-related revenues and MISO-related costs are appropriately recovered through a tracker, in that "PSI's proposal is balanced . . . designed to flow through to ratepayers MISO-related transmission revenues received by PSI . . ." Dr. Borum noted that PSI has very little control over these costs or revenues since they are incurred through MISO tariffs and schedules approved by the FERC. Staff Ex. No. 3, pp. 23-24.

(c) PSI Rebuttal Testimony. In rebuttal, PSI witness Freeman testified that the Midwest ISO Rider: (1) is not limited to just PSI's Schedule 10 costs; (2) covers costs that PSI is currently incurring and revenues that PSI is currently receiving; and (3) covers costs and revenues that have shown a significant variance (for example, an eight-month variance of over \$10 million in transmission revenues). Pet. Ex. RR, pp. 5-7.

(d) Commission Discussion and Findings. We find reasonable PSI's proposal to track Midwest ISO related costs and revenues, including costs that are: (1) the result of decisions by the FERC; (2) variable in amount from year to year; (3) variable as to timing; (4) substantial in individual and aggregate amounts; and (5) outside the control of PSI. PSI's proposal is balanced and designed to flow through to customers Midwest ISO-related transmission revenues received by PSI. Therefore, we find that PSI's proposal to track Midwest ISO related costs should be approved.

(4) Modifications to PSI's Existing SO₂ Emission Allowance Tracker. Separate and apart from its rebuttal proposal to incorporate NO_x emission allowances into its existing SO₂ emission allowance tracker (Rider 63), PSI also proposed a minor modification of its current Rider 63 SO₂ Emission Allowance Adjustment (originally approved in IURC Cause No. 40003). The purpose of this minor modification is to conform to the manner in which costs applicable to

native load customers are captured today. Mr. Farmer explained that this proposed conforming modification does not involve any substantive changes. The primary reason for the modification, he said, is the fact that the Company has various processes in place that are used to specifically identify emission allowance costs applicable to native load customers. Pet. Ex. CC, pp. 12-13.

No party objected to PSI's proposed modification to its SO₂ emission allowance tracking provisions, and as mentioned above, IURC Testimonial Staff supported continuation of SO₂ tracker. Accordingly, we accept PSI's proposed modifications and approve PSI's proposed modified Standard Contract Rider No. 63.

(5) Modifications to PSI's Existing Fuel Adjustment Charge Mechanism. PSI also proposed minor modifications to its existing fuel adjustment charge mechanism, Standard Contract Rider No. 60. Mr. Farmer explained that, since PSI's last retail rate case, there have been several significant proceedings relating to the fuel adjustment charge, such as this Commission's generic FAC case, Cause No. 41363, and cases interpreting the generic FAC case, such as SIGECO's and NIPSCO's FAC45 cases, and PSI's FAC56 case. PSI simply proposed to update Rider 60 to reflect current practices. Pet. Ex. CC, pp. 13-14. No party objected to these minor proposed changes to PSI's Rider 60. We find such changes to be appropriate in light of our various FAC orders issued since PSI's last rate case, and we hereby approve PSI's proposed modifications to its Standard Contract Rider 60.

B. Real Time Pricing ("RTP").

(1) PSI Proposal. PSI proposed to terminate its RTP program (Standard Contract Rider No. 21), which consists of a two-part rate – an access charge for the customer's historic load ("CBL"), which is billed at standard tariff rates, and an energy charge for the customer's incremental or decremental energy usage that is billed at a real time price. Currently, 57 PSI customers participate in RTP, with an expected peak load reduction of about 15 MWs. Pet. Ex. AA, p. 15.

PSI witness Jeffrey R. Bailey testified that PSI began its RTP Program in 1996. Its primary objectives were to elicit load responses by customers in response to changes in price. To that end, it was reasoned that customers would reduce load during high priced periods and thereby produce demand savings to PSI. Similarly, customers could shift load to, or grow their load during, lower priced periods, creating demand savings or incremental revenue growth. *Id.* at 16. The Company's analysis, after more than seven years of experience, however, revealed that, on average, RTP customers were receiving a nearly 40% discount from tariffed rates for the RTP portion of their bills (*i.e.*, load above the CBL). For some customers the discount was even higher. Absent any modification of the RTP Program, this subsidy by PSI's other industrial and commercial customers would continue, Mr. Bailey observed. *Id.* As a result, he said, PSI has concluded that it and its other industrial and commercial customers were not receiving a proportionate amount of value from these RTP customers relative to other demand response programs. PSI's conclusion was to eliminate its RTP Program, effective with a final order in this Cause. *Id.*

Mr. Bailey testified that while the Company's analysis confirmed that *some* customers do respond to high prices, about two-thirds of the customers on the RTP program were only minimally responsive or not responsive at all. *Id.* at 17. Over the last couple of years, he said, market prices have been very low. Because the RTP commodity price is the lesser of the market price or PSI's marginal generation costs, PSI's low generation costs, combined with low market prices, has meant that customers have generally received low price signals and have not had an incentive to shift their load to lower priced, off peak periods. *Id.* So, he observed, while customers are receiving a big discount from tariff rates, PSI is not receiving the proportionate value created when customers shift load to off-peak periods. In essence, he said, the program is not cost-effective. *Id.*

Mr. Bailey said that PSI had investigated various potential ways to modify the program, including putting "fixed adders" on the commodity portion of the price and demand charges on the T&D portion of the price to improve cost recovery from the RTP customers, but that ultimately the Company determined that these actions were drastic enough to impact RTP customers nearly as much as termination of the program, altogether. Even after such changes, he observed the Company could not be certain the pricing mechanism would function satisfactorily. *Id.*

He added that the credits for load reductions under PowerShare[®] were far less than the discounts generated under RTP. *Id.* The Company concluded that a more appropriate valuation (*i.e.* credit or discount commensurate with value created) would be achieved through PowerShare[®], either through its CallOption or QuoteOption components. *Id.* Additionally, he said, PowerShare[®] has other features that make it preferable to the RTP program, including greater certainty in the amount of peak load reduction (customers contract to reduce a certain amount under CallOption). *Id.* In contrast, the Company under RTP must rely on the customer to reduce load voluntarily in response to price signals, with no upfront estimate of the load reduction the customer may be able to produce. *Id.*

As for the impact of termination of the program on customers, Mr. Bailey testified that, on average, customers will experience bill increases of about 8% before the increase requested in this cause. *Id.* at pp. 8-9. He added that a small number of customers will see bill increases exceeding 20% before the rate increase requested. *Id.* Recognizing that this is a potential hardship for customers, the Company proposed to phase-out the RTP program over a two-year period. *Id.*, p. 20-21. The Company calculated the benefits received by customers under the RTP program relative to its base tariff and proposed to offer these benefits as credits on each RTP customer's electric bill during the phase out period. The initial credits, he said, would be based on 67% of the savings from the base tariff – as defined during the test period – at the time new tariffs are approved (Phase I), and would be reduced to 33% at the end of the first year (Phase II). At the conclusion of the second year, the credits would cease (Phase III). Pet Ex. BB, p. 9.

PSI proposes that its Rate LLF and HLF customers that are not on the RTP program provide a subsidy necessary to fund the bill credits during the two-year phase out period.

Accordingly, PSI would file three consecutive sets of tariffs for Rates LLF and HLF – Phase I, Phase II, and Phase III. The amounts of the subsidies required would be as follows:

RTP Credits			
	Total	Phase I	Phase II
Applicable to HLF	\$7,492,263	\$5,019,816	\$2,472,447
Applicable to LLF	\$ 187,694	\$ 125,755	\$ 61,939
Total	\$7,679,957	\$5,145,571	\$2,534,386

Id. at 9-10.

The Company proposed to transition RTP customers that do have the capability of curtailing usage to its PowerShare® program, and they would be eligible for the program even while they are getting bill credits from the RTP program phase-out. Pet Ex. AA, p. 21. Mr. Bailey observed that the Company's Time-Of-Use rate is another option that may be a good fit for some RTP customers.

Mr. Bailey added that there may be some customers who can create additional value by the nature of operations they adopt, citing as an example a customer that can consistently reduce its load during peak hours, which may create value for PSI that is in excess of the PowerShare® CallOption premiums. For these customers, he said, the Company will entertain a special contract, subject to Commission approval. *Id.*

(2) PSI-IG Position. The PSI-IG opposed elimination of the RTP rate. It argued that the rate is theoretically sound and accurately sets forth hourly rates based on PSI's hourly costs. PSI-IG Ex. No. 1, p. 21. To PSI's point that RTP customers do not adequately shed load at the time of PSI's summer peak, witness Phillips argued that the RTP rate should not be discontinued for that reason, arguing that their rate is not an interruptible rate, but a rate that charges customers an accurate price for each hour of the year. *Id.* He added that the customer has the option of paying an extremely high price during high cost hours or reducing purchases based on operational and economical considerations and that PSI should not be allowed to eliminate this rate because it does not agree with the choice made by its customers. *Id.* at 21-22.

Mr. Phillips argued that the current RTP has a 10% adder to hourly costs for HLF and a 25% adder to hourly costs for Rate LLF, which, he said, means that PSI always recovers actual hourly costs, plus a 10% to 25% adder to those actual hourly costs. So, he said, it is impossible for PSI to lose money with respect to the cost to serve its RTP customers. *Id.* at 22. He concluded that the elimination of this rate structure would be viewed as a backward step for providing customers with accurate price signals and an economic choice. *Id.*

(3) Kroger Position. Kroger disagreed with PSI's proposal to have rates HLF and LLF customers fund a subsidy to former RTP customers migrating to those rate schedules. Kroger witness Higgins observed "the irony of this situation is that the purpose of the subsidy is to shield the RTP customers from the immediate pain of paying these very same HLF and LLF

rates; so the customers who are already on these 'painful' rates are asked to pay even more, in order to 'ease the pain' of the RTP customers that are now joining them." Kroger Ex. No. 1, p. 22. Accordingly, Mr. Higgins recommended that PSI's subsidy proposal be denied, arguing that if Rates HLF and LLF are found to be just and reasonable, then there is no compelling reason to shield RTP customers from the pain of being on these rates. *Id.* at 23. Alternatively, he argued that if the RTP subsidy is adopted, it should be funded, 50% by PSI and 50% by all customer classes, in proportion to each class's base revenue requirement. *Id.*

(4) Testimonial Staff's Testimony. Staff witness Dr. Borum stated that the Testimonial Staff is not convinced that the RTP program should be terminated, rather than continued or modified. IURC Staff Ex. No. 3, p. 35. The problems cited by PSI, he maintained, are essentially financial. *Id.* He said that wholesale market prices have been low for the past few years and as PSI's on-system incremental costs are also low, RTP customers have not shifted load in response. *Id.* Thus, he observed, if PSI is getting no value from load shifting, putting these customers on regular tariffs allows the Company to collect more revenues. *Id.* In essence, he said, PSI wants to terminate the program because it is not receiving enough financial benefit in today's low price environment. PSI's financial concerns do not mean that the RTP program has no value, he argued. *Id.*

Dr. Borum said that he is convinced that retail prices that are designed to better reflect actual hourly wholesale market costs will benefit both customers and utility companies. Over time, he argued, customers shifting loads in response to these hourly wholesale market costs would benefit both the RTP program participants and the utility with lower overall costs. Thus, Staff believes PSI has put undue emphasis on immediate results and under-valued the likelihood of significant effectiveness of the RTP program over time. *Id.*

Dr. Borum noted that this Commission, in approving a previous version of PSI's purchased power tracker, directed PSI to explore all possible methods and resources of providing efficient and economical energy to its customers, including "innovative rate options." *Id.* at 35-36. As a result, he said, Staff recommended that "approval of the purchased power tracker be conditioned on PSI entering into a collaborative process with Staff and other interested groups to not only explore whether and how the RTP program should be modified, but to actively evaluate the feasibility of implementing other innovative rate options." *Id.* at 36.

(5) PSI Rebuttal. PSI's witness Bailey testified in response to Mr. Phillip's claim that the Company's proposals on the RTP and PowerShare[®] Programs would be reviewed as a backward step for providing customers with accurate price signals and an economic choice. He said that the Company's proposal to eliminate the RTP rider and transition its customers to special contracts or to the newly enhanced PowerShare[®] program would constitute an appropriate course to maximize the value of its peak load management program. Pet Ex. SS, p.2.

Responding to Mr. Borum, Mr. Bailey testified that PSI's track record shows continued experimentation with innovative rate and demand-side management options, and demonstrates that the Company is committed to the goal of reducing the need for additional generating capacity. He said that the Company is certainly willing to discuss with Staff and interested

parties real time pricing and other innovative rate options for the future. However, he believes that the current RTP program is so flawed that the only feasible option is termination. There is no clear solution, he said, to improve price signals from a market that currently does not adequately reflect the long-term cost of capacity. *Id.* at 3.

Regarding the contention that PSI's request to terminate the RTP is largely motivated by short-term financial concerns, Mr. Bailey responded that PSI's revenue requirement is derived completely independently of any of its optional rate programs, and would remain the same if the RTP program is retained or terminated. *Id.* PSI's direction, he said, is not motivated by financial self-interest, but rather by the fact that the program is not cost effective. *Id.* He added that retention of the program would cause other customers to bear the burden of a program that produces no tangible value for them. *Id.*

As to Mr. Phillip's complaint that PSI appears to be driven by some notion of revenue neutrality in its RTP proposal, Mr. Bailey responded that PSI *is* driven by the notion of revenue neutrality, pointing out that one only needs to read the RTP rider (Standard Contract Rider No. 21) to see that the design of the RTP program was to make customers "bill neutral" with respect to their historical usage. *Id.* Customers could then respond to real time prices accordingly, he said. *Id.* With respect to Mr. Phillip's contention that because PSI charges an adder to hourly costs, it is impossible for PSI to lose money with respect to the cost to serve its RTP customers, Mr. Bailey responded that even if PSI recovers the incremental costs of generation (*e.g.*, fuel), there is not sufficient remaining margin to support the cost of additional capacity that RTP customers are using. *Id.* at 5.

To Dr. Borum's contention that by eliminating the RTP Program PSI is no longer reducing the disconnect between wholesale and fixed retail prices and Mr. Phillips' opinion that the RTP is theoretically sound and accurately sets forth hourly rates, Mr. Bailey responded that a major point in the Company's case-in-chief is that the price signals being sent to RTP customers are *not* accurate. *Id.* He explained that the RTP pricing mechanism sends a price signal to customers based on the lesser of PSI's internal generation cost or the market. Whatever the signal attempted to be sent from wholesale prices, he said, is negated by a mechanism that allows the customer to always receive the lowest price of generation or market. *Id.* Mr. Bailey testified that the fact that the RTP program is voluntary, not mandatory, substantially influences the long-term cost effectiveness of the program, as customers have no long-term requirement to remain with the program and subject themselves to the volatility of the wholesale market. *Id.*, at 5-6.

PSI proposes to terminate the program, he said, because it does not produce its intended goal of price response. *Id.* at 7. A prerequisite, he said, to a customer's being placed on the rider was its ability to shift load from higher cost to lower cost pricing periods and to add new load during lower cost pricing periods. If such load shifting is not occurring, and PSI cannot depend on the program for peak load reduction, then the program is not fulfilling its intended purpose, Mr. Bailey testified. *Id.* Other options, he said, like special contracts or PowerShare[®], will save the customer money and produce a benefit to PSI and its remaining customers. *Id.* The Company's position, he said, is that if a customer is going to pay less than tariffed rates, then that customer must bring something of value to the Company, and non-participating customers.

However, under the RTP rider, the discount to participating customers is large while the benefit to the Company and remaining customers is small. *Id.* at 7-8.

Mr. Bailey also disagreed with Mr. Phillips' contentions that a separate cost of service study should be done for RTP customers, observing that RTP is a Rider to Rates HLF and LLF, and the customers on RTP are properly HLF and LLF customers who have chosen to participate in a voluntary rider available to those rates. *Id.* at 8. PSI, he observed, has numerous riders each of which is included with its base rate for cost of service purposes, citing examples PSI's Smart Saver® under Rate RS, Optional Commercial Electric Service under Rate CS, Total Electric Commercial Service under Rate LLF, and Time-of-Use options under both Rates LLF and HLF. *Id.* None of these riders, he pointed out, have ever been fully segregated from its base rate for the development of rates.

Defending the Company's proposed phase-out of the RTP credits to affected customers, Mr. Bailey said that the proposed phase-out, to mitigate the large rate increase the RTP customers will incur if the entirety of their load is immediately placed on Rates HLF or LLF, is something the Company has done in the past, with some success. He cited as an example, Cause No. 40003, where the Company used a three-year phase-in approach to mitigate the bill impacts to Rate MLF customers as that rate was combined with Rate HLF. *Id.* He said that while the Company believes that termination of the RTP program is proper, it also recognizes the hardship it may cause customers because of a large increase in their bill all at one time. A gradualism approach, he observed, is common in the industry and, in the Company's opinion, the right thing to do here. *Id.* at 8-9.

(6) Evidence at Hearing. On cross-examination by PSI at the November hearings in this Cause, Dr. Borum clarified that his testimony was not intended to call for the continuation of the RTP program as is. Rather, he believes that a collaborative process involving interested parties is the best way to examine the future of the RTP program and other innovative rate programs. He also indicated that a goal of any collaborative process concerning innovative rate options should be to increase the cost effectiveness of the rate options. Tr. at R107-R108.

(7) Discussion and Findings. This Commission and its regulated utilities have a responsibility not only to encourage experimental innovative rate options, but also to ensure that programs meet standards of cost effectiveness. Based on the evidence we find that it is apparent that the RTP program, as currently designed, has some serious flaws. No party presented evidence that the program was, in fact, cost effective. However, this Commission believes that innovative rate options such as real time pricing, which encourage customers to react to hourly wholesale market prices, are an important offering.

Consistent with the recommendation of Testimonial Staff, we find that the best venue to deal with the RTP problems would be a collaborative process involving PSI, Staff, and other interested parties. Before this pilot program is discontinued, we feel that the parties should consider ways that it can be redesigned or modified in order to make it an effective program. While the collaborative parties are meeting, the RTP program shall continue in place as is. However, our decision does not prejudice that continuation of the RTP program is necessary or

appropriate. Rather, the goal of the collaborative is to design rate options which will be effective while providing value to PSI, its participating customers, and PSI's non-participating customers (these options may or may not include some form of a real time pricing program). Additionally, we find that the collaborative process should be concluded by October 15, 2004. PSI shall file a report detailing the efforts of the collaborative process by November 15, 2004.

Because PSI has met its burden of proof in regards to the termination of the program *as it is currently designed*, we find that the RTP rider, Rider No. 21 should be extended until January 31, 2005, whereupon it will automatically terminate. However, we would expect that it will be replaced by one or more innovative pricing options developed during the collaborative, or that the majority of PSI's RTP customers will be transitioned to PSI's PowerShare[®] program.

In reaching the foregoing conclusions we also find that phase-out credits proposed by PSI are not necessary or appropriate. While we recognize that in many instances it might be appropriate to phase in the effect of rate changes when certain classes of customers are disproportionately affected by a certain change, we recognize that the very customers we would be seeking to protect through the phase out in this instance have already reaped financial benefits from a program that does not appear to be working as envisioned. As the program will not end until January 31, 2005, and may be replaced by an improved RTP program, current customers will have a sufficient opportunity to prepare for the change. Therefore, we find that phase out credits are not necessary and are hereby denied.

C. PowerShare[®] Program CallOption Pricing Change.

(1) Background. PSI's witness Bailey described PSI's PowerShare[®] program, offered under its Standard Contract Rider No. 23. This program, implemented in January, 2000, is currently a market-based program that provides financial incentives in the form of bill credits to industrial and commercial customers to reduce their electric demand during PSI's peak load times. Customers may choose to participate in either CallOption or QuoteOption.

CallOption requires customers to commit to a pre-selected load reduction, based on historic or usual demand, at a selected strike price. The strike price is selected by the customer based upon the customer's willingness and ability to comply with the call for load reduction. In return for this commitment to reduce when called, CallOption customers receive a monthly premium payment from PSI as a credit to their bill. In addition, when customers are called to reduce load, they receive an energy credit. PSI's standard CallOption product may be exercised by PSI when the next day's market prices are projected to be greater than the customer's selected strike price. The term of the standard CallOption program agreement is four months – June through September. Pet. Ex. AA, pp. 10-11. Mr. Bailey also described the QuoteOption component of PowerShare[®], which allows a customer to elect whether or not to reduce its load when called upon by PSI when prices reach a minimum price. No monthly premium is paid to QuoteOption customers since they may elect not to respond when called, but an energy credit is paid for load reductions made in response to PSI's calls.

(2) PSI Proposal. Mr. Bailey explained that since inception of the program, PowerShare® has been a market-based program, where the credits provided to customers for load curtailments have been based on the value of those curtailments in the short term wholesale energy market. Because market prices are highly variable, customer credits have varied dramatically from year to year. In 2000 and 2001, customer credits were relatively high and these credits produced excellent customer participation. However, recent low market prices have resulted in low credits for customers that have the ability to curtail load. These low credits have drastically reduced participation in the PowerShare® program, even as PSI has set new peak demand records and has installed additional generating capacity. So, while the PowerShare® program has great potential value to PSI in providing needed capacity, it has been valued less by customers because of the current low market-based credits. *Id.* at 13.

In an effort to reinvigorate the program, and to transition it to a stable program capable of producing consistent capacity value for PSI, the Company proposed to treat PowerShare® CallOption similar to PSI's regulated DSM programs, which are evaluated based upon the long-term avoided costs, rather than on short-term market prices for the summer ahead. In essence, PSI will be giving a long-term capacity value to the CallOption customer's agreement to curtail usage. Under this new pricing methodology, the credits offered to PowerShare® CallOption customers would be based upon the value of avoiding investment in a combustion turbine as opposed to the short-term, highly variable market value. This should, Mr. Bailey said, stabilize the credits PSI can pay customers at an attractive level to customers in exchange for an agreement to reduce their load when called upon. While this would be a material increase over current credit levels, the Company does not anticipate that such credits would exceed half the value of the annual avoided cost of a combustion turbine, he said. *Id.*

Mr. Bailey testified that the test year contains \$1,023,000 of expenditures in the form of bill credits related to PSI's PowerShare® CallOption program, and with the transition of this program to more traditional DSM pricing, PSI believes that program expenditures will be at or above this level. The change in philosophy which results in increased credits to customer should, he said, enhance customer participation levels. *Id.* at 14

(3) Positions of Other Parties and Testimonial Staff. Testimonial Staff expressed disappointment over PSI's proposal to move to a capacity avoidance cost standard for PowerShare® credits. Staff indicated that it is important that utilities find effective ways to provide price signals to end-use customers. The CallOption program was one means of providing price signals to customers who are sophisticated enough to understand and react to those price signals. Staff noted however, that with low market prices, came lower participation and the Commission should not take a negative view of the program when participation fluctuates widely due to the change in premium payments. IURC Staff Ex. No. 2, p.24. PSI-IG witness Mr. Phillips also recommended maintaining the short-term market pricing of CallOption premiums. He testified that using market prices would increase participation when the market prices were high, precisely when such load reduction is most needed. PSI-IG Ex. No. 1, pp. 23-24.

(4) PSI Response. PSI responded that the changes it is proposing to PowerShare® should enhance, rather than detract from the goal of providing price signals that result in changes in customer consumption patterns. Mr. Bailey observed that PSI's proposal merely replaces a short-term, volatile wholesale market price signal with a stable, long-term price signal for the CallOption component of the PowerShare® program. He emphasized that PSI will maintain *short-term wholesale market pricing* through the PowerShare® *QuoteOption* component. This change, he contended, will make PowerShare® an even more effective rate option than the current structure. Pet Ex. AA, p. 10.

(5) Discussion and Findings. We find PSI's PowerShare® proposal reasonable. The CallOption program requires a contractual commitment to reduce load and allows the Company to depend on the load reductions in its Integrated Resource Plan. Under the current proposal, customers would be paid the true value of that reduction. In the current wholesale market, as CallOption is currently structured, it does not appear that customers are getting paid any capacity value. Moreover, the QuoteOption aspect of the PowerShare® program maintains a short term market price based option. Thus, PSI can still benefit when prices are high through higher participation in the QuoteOption program. Therefore we approve the pricing change as proposed by the Company.

D. Line Extension Advance Deposit ("LEAD") Credit.

(1) Evidence. PSI witness Pefley testified in support of PSI's proposed change in its LEAD credit. Ms. Pefley testified that PSI's Standard Contract Rider No. 52, Line Extension – Advance Deposit, is patterned after 170 IAC 4-1-27(C) ("Rule 27") which provides that PSI will require a line extension advance deposit if the estimated cost of extending its facilities to serve a customer exceeds the estimated revenue from the customer over a period of 2 ½ years. Pet. Ex. J, p. 11. Ms. Pefley said that the Company has determined that the application of Rider 52 does not provide for a sufficient amount to allow the Company to earn an adequate return on its line extension costs. She pointed out that while the number of customers has increased by 16% since the end of the test period in the last rate case, PSI's net investment to connect such customers to its system has increased by more than twice this amount, with the result that new customers are not bearing the full costs of connecting to PSI's system. In these circumstances, she said, the unrecovered costs are being passed on to existing customers and results in regulatory lag for PSI between rate cases. PSI proposed to replace the 2½ years of revenue credit in Rider No. 52 with a credit equal to the actual net book value of the plant investment required to connect new customers as of the end of the test period in this proceeding. *Id.* at 13. For the residential class, the credit is a fixed dollar amount per customer. Ms. Pefley maintained that PSI's proposed approach is fair because it reflects the connection costs embedded in the distribution rates that the customer will pay.

OUCG witnesses Endris and Brosch opposed PSI's proposed change to Rider No. 52. Mr. Endris had three concerns with the proposal: (1) in his opinion, PSI has not sufficiently demonstrated that it needs the change; (2) PSI's proposal does not adequately reflect the benefits and contributions of new customers; and (3) PSI's proposal would impede economic growth. Pub. Ex. No. 6, p. 39. Mr. Endris argued that PSI provided no historical analysis demonstrating

that the experience since the last rate case is any different from the past. He said that Ms. Pefley failed to consider that some of the growth in plant investment is for replacement projects due to deterioration or obsolescence. In addition, Mr. Endris indicated that Ms. Pefley failed to show whether some projects contributed disproportionately to the increase in PSI's net plant investment.

Mr. Endris thought that PSI's proposal ignored the prediction of PSI witness Stevie that the 2003-2008 growth rate in kilowatt-hour sales will be greater than the growth rate in peak demand. If this is true, Mr. Endris argued, the new customers will be contributing to fixed cost recovery to a greater extent than their contribution to peak demand capacity requirements. Therefore, he maintained, the capacity cost recovery is likely to contribute to PSI's overall rate of return in a manner that would tend to offset increases in plant investment in the accounts identified by Ms. Pefley. *Id.* at 45.

Mr. Endris went on to testify that the proposed change also upsets the balance of customer and utilities' interests underlying Rule 27. Mr. Endris claimed that if the Commission had intended the line extension rule to result in no increases in rate base, it would not have utilized a revenue basis, but rather something linked to return on investment. Pub. Ex. No. 6, p. 47. Mr. Endris also argued that the Commission's balancing of interests has an impact upon economic development in the form of new housing growth. He said this Commission could have chosen to have the customer pay 100% of the hook-up charges, but instead chose to impose a lesser financial burden. According to Mr. Endris, PSI's proposed change upsets this balancing of interests. *Id.* at 48.

Mr. Brosch asserted that the proposed Rule 27 change ignores the revenues and profits to be contributed by the new customer. Pub. Ex. No. 2, p. 117. He pointed out that a new fixed credit of \$856 would be available for a new residential customer regardless of whether the projected revenue from that customer would justify capital expenditure. He also said the proposed credits do not reflect costs, because the net depreciated cost of plant balances used in Ms. Pefley's calculations are not the values included in the revenue requirements. *Id.* at 118. Finally, Mr. Brosch argued that the investments reflected in the depreciated plant accrual balances were made for different reasons, not just to connect new customers. These balances further include, he said, all prior vintages of construction, rather than the current period costs that might indicate what it actually costs to serve customers today. *Id.* at 119-120.

On rebuttal, Ms. Pefley disagreed with Mr. Endris' concern about PSI's proposal impeding economic development. Ms. Pefley observed that construction costs come in eighth in a list of site selection factors -- behind availability of skilled labor and labor costs. Pet. Ex. LL, p. 2. She also did not believe that the proposed Rider 52 change will significantly impact larger commercial or industrial customers locating in PSI's service territory. Ms. Pefley presented an analysis which showed that using PSI's proposed LEAD credit to several actual connections in PSI's Noblesville service territory, only one large commercial or industrial customer would have been required to pay a deposit in the amount of \$57. *Id.* at 3. With respect to the possible chilling affect on residential development predicted by Mr. Brosch, Ms. Pefley observed that the increase in the cost of a new home under PSI's proposal would be only approximately 0.5% for

the average non-electric space heating customer and 0.9% for the average electric space heating customer.

Ms. Pefley also disagreed with Mr. Brosch's characterization of PSI's proposal as being contrary to sound economic theory. She said that there is no rational economic theory that supports the provision of a credit against distribution construction costs based on fuel cost charge derived revenues that are a dollar-for-dollar pass-through, with no profit margin, as the current rule provides. *Id.* at 4. She observed that Rider 52 as proposed is consistent with the regulatory principle of cost causation, in that it provides a credit to each class of customers based on the distribution-related construction costs reflected in that class's rates. She also stated that Rider 52, if approved, would provide an "apples to apples" standard by crediting constructions costs to connect a customer with construction costs reflected in the rates that the customer will pay. *Id.* at 5. Ms. Pefley also rejected Mr. Endris' claim of a need to perform an analysis of individual work orders, observing that the problem of utility investors and existing customers subsidizing the connection costs of new customers is not new or unique to PSI. *Id.* at 6.

(2) Discussion and Findings. In support of her request in this Cause Ms. Pefley directed our attention to two specific provisions in the rule. The first provision is 170 IAC 4-1-27(C) which states as follows:

Each electric utility shall, upon proper applications for service from overhead and/or underground distribution facilities, provide necessary facilities for rendering adequate service, without charge for such facilities, when the estimated total revenue for a period of two and one half (2½) years to be realized by the electric utility from permanent and continuing customers on such extension is at least equal to the estimated cost of such extension.

170 IAC 4-1-27(C)

Ms. Pefley then indicated that PSI is requesting relief from the Commission under section 170 IAC 4-1-27(H), which states:

This Rule 25 [this section] shall not be construed as prohibiting an electric utility from (1) making extensions without charge where the cost of the same is greater than is provided in (C) above, or (2) providing an alternate plan to be approved by the commission; provided that in the application of this subsection (H) no discrimination is practiced between customers whose service requirements are similar.

170 IAC 4-1-27(H)

Our line extension Rule 27 permits a utility to collect a line extension deposit when the estimated costs to connect a new customer exceed 2½ years of anticipated revenues from the

customer. Thus, a linkage is established between the expected stream of revenues and profits from the customer and the service connection costs required to achieve such revenues and profits. We note that this approach has been applied by Indiana electric utilities for many years.

It is undisputed under Rule 27 that someone must pay for new customer connections and if the new customer does not bring sufficiently compensatory profits to the utility, that new customer must pay a deposit. Alternatively, if a new customer's revenues are expected to be large, the costs to connect and serve the customer will be recovered relatively quickly through regular monthly billings and the new revenue stream, so that no subsidization is caused by new customers. At issue under the Company's new proposal is whether or not a revenue-based framework of evaluation is reasonable, or should be modified in the manner PSI now advocates.

As the modification requested by PSI is properly characterized as a request for variance under 170 IAC 4-1-27(H), the burden of proof is upon PSI to fully support its variance request in order for us to conclude that we may properly deviate from the provisions contained in the rule. We do not have sufficient evidence before us to make such a finding. PSI's proposed changes to Rider 52 reflect a construction credit based upon PSI's construction costs relating to the extension of service, without regard to whether a new customer will generate large streams of revenues and profits or only modest new revenues. The OUCC maintained that the present framework of analysis is valid, and that the Company has not proven otherwise.

We agree with the OUCC on this issue. PSI failed to provide any cost justification for its position. The Company's distribution plant balances include costs of constructing plant for replacement, modernization, highway relocations and reliability enhancement in addition to costs to connect and serve new customers. In order to accurately isolate costs to connect new customers, a special study seems necessary to disaggregate plant costs incurred for this purpose and relate such costs to the profits contributed from new customers. The evidence in this proceeding compels the conclusion that PSI's variance request is not supported by sufficient evidence to allow us to find that we should deviate from the requirements of Rule 27. Therefore, we deny PSI's request to modify the existing LEAD credit mechanism.

E. Optional High Efficiency Residential Service Rate. Mr. Brosch testified that PSI had originally proposed to continue a 20 percent discount under Standard Contract Rider 6.3. Pub. Ex. No. 2, p.111. He said that the discount arose during implementation of PSI's Smart Saver program and was intended as an incentive to promote the installation of high efficiency electric heating and cooling equipment. However, during discovery PSI stated that it appeared that the 20 percent discount would not pass the Utility Cost Test, but that a 10 percent discount would. PSI recommended a reduction of the discount to 15 percent, in order to continue to avoid adverse impact to customers currently on the rate. *Id.* at 111. Mr. Brosch testified that the OUCC supported reducing the Rider 6.3 High Efficiency discount to 15 percent. We find this compromise and proposal of the OUCC and PSI reasonable, and it is approved.

F. Customer Connection Charges. PSI proposed increasing its residential and commercial customer connection charges from \$8.15 to \$9.90. Mr. Brosch objected to these increases, claiming that PSI's current customer connection charges are higher than other Indiana

electric utilities. Pub. Ex. No. 2, p.109. However, in describing the cost support supplied by PSI in support of the proposed connection charges, Mr. Brosch admitted that a customer connection charge as high as \$11.20 could be justified. *Id.* at 110. Mr. Brosch recommended that the charge remain at \$8.15, because this rate recovers a “high percentage” of customer-related fixed costs.

In response to Mr. Brosch’s proposition, Mr. Bailey observed that the fixed connection charge is intended to recover fixed costs and if the charge is not large enough to recover such costs, the part not covered is recovered through variable charges, which penalizes large volume users. This result, according to Mr. Bailey, creates an intra-class subsidy issue not considered by Mr. Brosch. *Id.* at 18. In Mr. Bailey’s opinion, the cost of connection does not vary with usage and should be recovered through fixed charges.

No party disputed that PSI’s proposed connection charge of \$9.90 is cost justified. Nor did any party dispute that connection costs do not vary with usage and should be recovered as a fixed charge. PSI has proposed a gradual increase, which will ultimately lead to the goal of cost causation – having customers who cause costs to be incurred be responsible for those costs. This Commission has repeatedly endorsed this fundamental principle of ratemaking. We find the development of PSI’s proposed residential and commercial connection charge of \$9.90 to be just and reasonable. We authorize PSI to increase the connection charge to Rates RS and CS in the manner described in Mr. Bailey’s testimony (Pet. Ex. BB, pp. 2-3), commensurate with the relief granted herein and it is approved.

G. PSI’s Lighting Tariff Proposals.

(1) Evidence. PSI proposed several changes to its lighting tariffs (Rate SL – schedule for street lighting service, rate AL – schedule for area lighting service, and rate OL – schedule for outdoor security lighting) in order to streamline its offerings of lighting equipment by restricting the number of lighting options provided to customers, and decoupling the capital costs of the lighting systems from the tariff. Mr. Bailey indicated that the number of lighting types and fixtures has grown considerably over the years, and this has made the administration of PSI’s lighting programs more difficult and time consuming. Pet. Ex. BB, p. 11. PSI proposed to freeze certain rate schedules (SL, AL and OL), and transition customers to an Outdoor Lighting Equipment Service (“OLES”) agreement for maintenance and equipment costs, and Rate UOLS – Unmetered Outdoor Lighting Service or Rate MOLS – Metered Outdoor Lighting Service for the energy charges associated with the lighting equipment. *Id.* at 12.

Mr. Bailey explained that customers would benefit from these changes because, the OLES agreement provides a one-on-one equipment contract with the customer where the customer pays the current price of the lighting system. This locks in the customer’s equipment purchase price, eliminates future rate increases, and eliminates subsidies to other lighting customers. Customers will have an option to pay for the lighting system up-front or over time, up to a maximum of ten (10) years. At the end of the equipment contract, the customer will no longer have a monthly payment for the equipment. In contrast, under rates SL, AL, and OL customers pay a monthly fee for the equipment as long as they require electric service. *Id.* Mr. Bailey also recommended eliminating several PSI lighting rates that were frozen.

OUCG witness Mr. Brosch commented that he did not object to PSI's proposals to freeze and phase out rates SL, AL and OL, as long as PSI continues to offer rate OLES at reasonable cost-based rates. Pub. Ex. No. 2, p. 113. Mr. Brosch noted that PSI should clarify its proposal for OLES pricing.

In response to Mr. Brosch's testimony, PSI witness Bailey confirmed that future charges under OLES will continue to be cost based. More specifically, PSI committed to the use of actual cost to acquire and install the lighting systems with appropriate loadings, and will use a rate of return for the computation of levelized fixed charge rates based on the most recent figures approved by the Commission. In brief, the calculations for the recovery of capital related costs will be the same as PSI has used historically in the development of its lighting rates; however, the recovery period will be no longer than ten years, and can be less at the customer's discretion. Additionally, PSI committed that the capital portion of the various lighting rate schedules will not be increased as long as the same lighting system is used by the customer.

(2) Discussion and Findings. PSI's proposed changes to its lighting schedules are hereby approved. Under the new rates, customers will pay cost-based rates for the lighting equipment, and a separate kwh charge for the energy used. No party objected to the streamlining of these tariffs and we find the new proposal to be a more workable and efficient method of offering various lighting services to PSI's customers.

H. General Terms and Conditions for Electric Service. PSI proposed certain minor changes in the General Terms and Conditions for Electric Service contained in its retail electric rate tariff. Pet. Ex. BB-3. No party objected to any of PSI's proposed changes to its General Terms and Conditions. Based on the evidence presented, and the lack of opposition to the proposed changes, we find that PSI's General Terms and Conditions for Electric Service as contained in its proposed retail electric rate tariff are reasonable and should be approved.

I. Undisputed Changes to Tariff. In addition to the changes, deletions and additions to or from PSI's current retail electric rate tariff previously discussed, PSI proposed various other rate schedule changes, deletions and additions which were not disputed in this proceeding. All of such changes, deletions and additions to or from PSI's current retail electric rate tariff that were not disputed are hereby approved, even though they may not be specifically discussed herein.

10. Fuel Cost Adjustment Charge Issues.

A. New Base Cost of Fuel. PSI proposed in this proceeding to increase the base cost of fuel to be used in its fuel cost adjustment charge proceedings from 14.112 mills per kWh to 14.484 mills per kWh. Pet. Ex. X, pp. 34-35. No party challenged such proposal. We find that such proposal is reasonable and proper and should be approved. When PSI files its new schedule of rates and charges as ordered below, PSI should file with the Electricity Division of this Commission a new base cost of fuel as approved by this Finding, and a new fuel cost charge as

approved on the date of approval of the new rates and charges, modified to reflect the new base cost of fuel.

B. Authorized Net Operating Income for Fuel Cost Adjustment Charge Purposes. For purposes of the earnings test contained in the fuel cost adjustment charge statute, and consistent with our return findings in this Order, PSI shall be authorized to earn \$267,500,000, prior to any additional return on qualified pollution control property approved by the Commission, pursuant to Ind. Code §§ 8-1-2-6.6 and 6.8, not taken into account in this case as of the August 31, 2003 update of Petitioner's plant for rate base purposes. The Commission also finds that, for purposes of computing the authorized net operating income for IC 8-1-2-42(d)(3), the increased return shall be phased-in over the appropriate period of time that the Petitioner's net operating income is affected by the earnings modification as a result of the Commission's approval of this Order.

C. OUCC Recommendation to Restate PSI's Books and Records for FAC Earnings Test Purposes. Mr. Brosch recommended that the Commission recognize that the FAC earnings test is vulnerable to serious distortions due to accounting reclassifications and what Mr. Brosch termed as abusive levels of selective rate tracking and excessive cost deferrals. Pub. Ex. No. 1, pp. 20-23 and 127. In fact, Mr. Brosch asserted that the FAC earnings tests cannot be relied on to backstop inappropriate regulatory policies or the approval of piecemeal rate trackers and accounting deferrals. Mr. Brosch took particular exception to the Company's accounting for mark-to-market valuation adjustments recorded by the Company pursuant to Financial Accounting Standards Board Statements Nos. 133 and 138. Mr. Brosch explained that from late 1997 through November 2001, the Company recorded unrealized gains and losses relating to the market value of certain trading positions above-the-line. Mr. Brosch quoted from Mr. Farmer's prefiled testimony wherein Mr. Farmer stated that PSI began recording mark-to-market gains and losses below-the-line in December 2001 in response to an accounting directive from the Chief Accountant of FERC that was received in August 2001. *Id.* at 122. The effect of this accounting change was that such revaluations would not thereafter be included in reported utility operating income.

Mr. Brosch objected to the inconsistency between the accounting policy before and after the FERC directive. He proposed that this Commission should direct PSI to restate its books for purposes of the FAC earnings test, to reflect the application of either an above-the-line or below-the-line classification of mark-to-market gains and losses across all relevant reporting periods. Mr. Brosch sponsored an attachment to his testimony (MLB-3) which purported to show that if mark-to-market gains and losses had been excluded from jurisdictional above-the-line income, PSI's cumulative earnings differential through the relevant period in PSI's FAC58 would have shown a cumulative earnings excess of \$58.3 million rather than the cumulative earnings deficit of \$6.6 million reported by PSI.

PSI witness Farmer urged this Commission to reject the OUCC's invitation to retroactively restate its FAC earnings test results due to the fact that the FERC now directs utilities to account for mark-to-market gains and losses below-the-line. He observed that, with one exception related to the accounting for PSI's Marble Hill related costs, which by order of the

Indiana Supreme Court were directed to be excluded from ratemaking processes, the FAC earnings test has always been calculated by reference to a utility's actual books and records. Pet. Ex. QQ, p. 44. Mr. Farmer testified that PSI has faithfully calculated its earnings test results by reference to its actual books and records, complying with FERC-mandated accounting requirements, including the directive to record mark-to-market gains and losses below-the-line, beginning in 2001. *Id.* It was Mr. Farmer's view that the Indiana custom and practice of following actual books and records should not be changed retroactively to produce a different result from that shown by the Company's books and records.

D. Discussion and Findings on this Issue. We are mindful of the fact that accounting principles represent a dynamic rather than a static set of rules, and that changes in accounting principles are typically applied on a prospective as opposed to a retroactive basis. We also recognize that there will likely be many such changes in the future. An important principle of regulation is that a utility maintain its books and records in accordance with generally accepted accounting principles and orders of the bodies that regulate the utility. There is no suggestion here that PSI has done anything other than act in accordance with this principle. We do not believe it would be good policy to require a utility to restate its income in a way that does not reflect its actual books. For the reasons stated above, we reject the OUCC's recommendation that PSI adjust and retroactively restate its books for FAC earnings test purposes.

II. Purdue University Issues.

A. Evidence. Intervenor Purdue University ("Purdue") witnesses, Mr. Van Meter and Ms. Haase suggest Rider 67 - and its successor Rider 70 - should not be applied to Purdue because it is unfair for Purdue to pay costs to meet PSI's peak demand when Purdue has self generation that can meet Purdue's peak load requirement. Purdue has a special contract with PSI. Ms. Haase also complains that PSI failed to update the proportionate contribution to peak demand, noting that Purdue installed significant self generation after entering into its contract with PSI. Purdue Ex. No. 2, pp. 8-9. For this reason, Ms. Haase recommends that PSI update its load calculations when costs are updated. *Id.* at 11. Additionally, Mr. Van Meter complains generally about the volatility that trackers provide in Purdue's bill. He noted that trackers make up more than 10 percent of Purdue's bill to PSI, and cause great fluctuation in Purdue's bill, making it difficult to budget. Purdue Ex. No. 1, pp. 9-10.

In response, PSI witness Bailey stated that whatever load Purdue places on PSI's system during peak load conditions contributes to PSI's peak. In addition, in accordance with operating criteria, PSI must carry spinning and supplemental reserves associated with whatever Purdue load it is experiencing. The stability and predictability of Purdue's load is immaterial to this process. Pet. Ex. SS, pp. 12-13. Therefore, PSI must carry, and plan for, sufficient reserves attributable to meeting the load that Purdue imposes on PSI's system.

Mr. Bailey explains that Ms. Haase's contention, that PSI has failed to update the proportionate contribution to peak demand, is simply incorrect. As the lead negotiator of the Purdue contract, Mr. Bailey noted that PSI recognized that Purdue's load would change as a result of their additional generation. In the development of the allocators in Cause No. 40003,

PSI made a *pro forma* adjustment to reflect the amount of load Purdue expected to take from PSI following the addition of its new generating equipment. *Id.* at 13. In response to Ms. Haase's contention that PSI should update its load calculation when costs are updated, Mr. Bailey explained that while the loads of Purdue are readily ascertainable, the class loads for PSI's major rate schedules are not. Allocators for PSI's major rate schedules are derived through load research and require an extensive study. Mr. Bailey comments that it is not practical or cost effective to update them outside the context of a rate case. *Id.*

In response to Mr. Van Meter's concern about the volatility that rate tracking mechanisms produce for Purdue, PSI indicated that it understands the concern, but that Purdue probably has more certainty in its electric bill than any other PSI customer, due to its special contract. Mr. Bailey noted that Purdue's electric bill from PSI was only 0.78% of its budget for 2002-2003. *Id.* at 14.

At the evidentiary hearing Purdue entered into three stipulations, namely: (1) Purdue places load on PSI's system during PSI peak load conditions; (2) PSI must carry and plan for reserves attributable to meeting all of its anticipated load, including the load associated with Purdue's contract; and (3) there are expenses other than purchased power that Purdue has difficulty accurately budgeting.

B. Discussion and Findings. As to the applicability of PSI's Summer Reliability Tracker to Purdue, we find that it is appropriate. Purdue concedes that it placed load on PSI's system at times of peak demand, and that PSI must carry and plan for reserves, including reserves to meet Purdue's needs. Purdue's self generation does not change the fact that it contributes to PSI's peak and should pay its fair share of purchased power costs – both energy and demand components. Concerning Purdue's complaint that PSI failed to update Purdue's contribution to peak demand to account for its additional generation, we find that not to be the case. Mr. Bailey explained that PSI took the additional self generation into account when calculating Purdue's contribution to peak demand. Additionally, we find that there is no basis for updating demand allocators every time costs are updated as proposed by Purdue. We agree with Mr. Bailey, that updating demand allocators outside of a rate case is not practical or cost effective

Finally, concerning the volatility of trackers, while we understand the concern, the record reflects that trackers were 10% of Purdue's bill, and electricity makes up less than 1% of Purdue's budget. Based on the evidence presented in this Cause, we do not find the volatility of trackers to be overwhelming to Purdue.

12. Holding Company Issues.

A. Evidence. CAC witness Christopher Williams testified that Cinergy's holding company and business unit structure lends itself to abuse and conflicts of interest, claiming that the organizational structure, operating policies and executive pay and performance programs of Cinergy since the merger between PSI and CG&E in 1994 have had the effect of "hollowing out"

PSI, significantly compromising the corporate integrity of PSI in performing its public service role in order to serve the total shareholder return goals of Cinergy. CAC Ex. A, p 7.

CAC witness Michael Sheehan also indicated that PSI has been "hollowed out" as Cinergy has been gradually dismantling PSI's management control over its utility business and operations and transferring that control to one or another of Cinergy's unregulated subsidiaries. CAC Ex. C. p. 36. He said that this was so with respect to control over PSI's operations, the division of loyalties in management, and the structure of incentive pay for executives. Dr. Sheehan pointed out that PSI managed much of its operations via service agreements with affiliates, which are unregulated and which, in his view, have their own interests to maximize. *Id.* at 37-40. He also pointed out that many of the management positions "ostensibly working for PSI and having loyalties to PSI and its function as a regulated utility are employees of, or hold positions with, one or another of Cinergy's unregulated subsidiaries." *Id.* CAC witness Mr. Biewald claimed that the JGDA was extremely complex and subject to manipulation. CAC Ex. B, pp. 22-23. He said that each of the 14 PSI officers listed in Cinergy's 2002 Annual Report on Form 10-k is an officer of at least one other unregulated Cinergy subsidiary or Cinergy itself, and none is actually employed by PSI, but rather, by Cinergy Services Inc., or Cinergy Power Generation Services Inc. *Id.* at 41.

Dr. Sheehan also claimed that the structure of executive incentives at Cinergy predominantly favor improving the financial condition of Cinergy, as opposed to PSI. Dr. Sheehan concluded that Cinergy's executive incentive programs serve to direct the attention of PSI's executives and affiliate executives working at PSI away from PSI's public utility goals and responsibilities and focus it, instead, on Cinergy's goals, which are largely directed to its unregulated companies and operations. *Id.* at 43. As to what should be done about this, Dr. Sheehan recommended that this Commission establish a separate docket to investigate the ongoing dismantling of PSI via Cinergy's structural changes, and the accounting ramifications of the resulting already dense web of inter-affiliate, less than arms length transactions, claiming "there is too much smoke here to safely ignore." *Id.* at 44.

Both CAC and the OUCC also urged this Commission to initiate a separate investigation into PSI's implementation of the 2002 Joint Generation Dispatch Agreement, citing concerns with PSI's implementation protocols. OUCC witness Mr. Endris testified that an investigation was needed to fully understand the tremendous complexity of intra-company energy transfers and to ensure that customers have not been short-changed. Pub. Ex. No. 6, p. 52.

PSI witnesses Esamann and Reising disagreed with CAC's claims. Mr. Esamann observed that there are numerous safeguards in place to guard against abuse and conflicts of interest, and pointed out that many benefits and synergies (cost savings) accrue to PSI by virtue of its participation in a holding company, service company and business unit structure. The safeguards in place, he said, include federal and state laws; SEC, FERC and IURC oversight; PSI's own affiliate guidelines; FERC code of conduct requirements; the provisions of Cinergy's own service agreements; and, the provisions of agreements such as the 2002 JGDA and the Joint Transmission System Agreement ("JTA") between PSI and CG&E. Pet. Ex. DD, p. 36.

Mr. Esamann pointed out that the Cinergy merger has also allowed PSI and CG&E to share their best practices in a variety of areas that benefit customers, such as power production operations, T&D system operations, and customer service operations. Being part of a merged, holding company structure, he added, also allows PSI and CG&E to share both operating and financial resources. Important to customers, he said, is the fact that PSI has access to CG&E operating resources – such as CG&E generation through the JGDA, CG&E line trucks and line crews for storm restoration purposes, and a variety of expertise shared between the Cinergy companies. *Id.* at 37-38.

Expanding on Mr. Esamann's observation, Mr. Reising gave examples of protective financial safeguards in place, consistent with the legal separation between PSI and Cinergy. For example, the creditors of PSI clearly have the priority claim on the assets of PSI. Further, PSI is legally prohibited by the Public Utility Holding Company Act of 1935 ("PUHCA") from loaning money to Cinergy. PSI is also prohibited from guaranteeing the debt of Cinergy. Finally, there are no cross defaults between Cinergy debt and PSI; in other words, if there would be a default on Cinergy debt, that default would not trigger a default on PSI debt. *Pet. Ex. EE*, pp. 12-14.

Mr. Reising pointed out the financial support that Cinergy and the holding company structure have provided to PSI. For example, PSI's dividend payout ratio averaged only 31% for the four-year period from 1999 to 2002. By virtue of being a part of the Cinergy holding company structure, PSI was able to rely on its affiliates to fund the majority of Cinergy's dividend payout during this period. PSI's lower dividend payout ratio allowed PSI to improve its liquidity by almost \$240 million versus what it would have been if PSI had met a standard 70% dividend payout ratio in each of those years.

Mr. Esamann disagreed with CAC's contention, and that of the OUCC, that the Commission should initiate a separate investigation into Cinergy's implementation of the JGDA. He observed that since April, 2002, PSI has worked hard to implement the JGDA in a manner consistent with both the spirit and letter of the agreement, working to fashion a number of business rules to implement the JGDA in a fair and objective manner. The Company's primary business rules, and the system energy transfers that take place under the JGDA, he observed, have been presented to the Commission in PSI's various FAC proceedings. Additionally, consistent with the terms of the JGDA and the underlying Indiana settlement agreement, he pointed out, the hourly market prices at which system energy transfers are priced are regularly audited by an independent audit firm, Jefferson Wells, and the related audit reports have also been presented to the Commission and to the OUCC in connection with PSI's FAC proceedings. *Id.* at 38-39.

Mr. Esamann further emphasized, as did Staff witness Borum, that the 2001 Indiana settlement agreement that accompanied the JGDA required PSI to meet with the Indiana signatory parties in January 2004, to assess the feasibility, efficacy and equity of continuing joint system dispatch and system energy transfers. Subsequently, in March 2004, PSI must initiate a proceeding before the Commission to begin a formal assessment of the functioning of the JGDA.

Id. at 39.¹¹ Given these commitments and PSI's ongoing presentation of information concerning JGDA system energy transfers in its quarterly FAC proceedings, Mr. Esamann saw no reason for a separate Commission investigation into JGDA issues. *Id.*

B. Discussion and Findings. We believe that the record has adequately established numerous benefits of its merger – financial, operational, and synergistic -- with CG&E, as well as the continuing presence of safeguards in place to protect against abuses. As for the JGDA, that Agreement will be the subject of our further review, under Cause No. 41954. Therefore, it would be premature for this Commission to establish an investigation into the JGDA at this stage of the proceedings. As for allegations that PSI has been "hollowed out" we do not believe that the evidence supports such a claim. This Commission is satisfied that PUHCA, in conjunction with additional safeguards, including the Commission's full jurisdiction over PSI's operations, remains in place. Therefore, based on the evidence presented on this issue we do not believe an investigation is warranted on this issue and hereby deny all requests for such an investigation.

13. Environmental Planning.

A. Testimony Presented by the CAC. CAC witness Chris Williams stated that the CAC is concerned that PSI has essentially adopted a policy of making capital investments to address environmental risk only to the extent and at the times required by law. CAC Ex. A, p. 8. CAC witness Mr. Bruce Biewald also noted that PSI's actions reflect an approach of doing the minimum required. According to Mr. Biewald, PSI has reduced its DSM expenditures, is too reliant on coal, and doesn't promote renewables. CAC Ex. B, pp. 37-43.

Mr. Biewald indicated that he believes there is a disparity between the way Cinergy/PSI manages its financial risk versus the way it manages environmental risk, arguing that PSI could more actively address its environmental risks. He conceded PSI has made some effort to diversify its generation mix, to reduce emissions from its existing plants, and to implement demand-side management programs. Mr. Biewald cited EPA data (eGRID¹¹) showing Cinergy's generation mix in the year 2000 was 98% coal. Cinergy's emissions of CO₂, SO₂, and NO_x in 2000 were 67 million tons, 560 thousand tons, and 154 thousand tons, respectively. According to Mr. Biewald, PSI's share of Cinergy's generation was about 59% in 2000 amount. PSI's share of CO₂ emissions was also 59% of the total. For SO₂, PSI's share was higher (66% of total) and its NO_x share was lower (53% of total). These shares are based upon EPA's eGRID data. Mr. Biewald concluded that PSI should serve its customers with low cost, reliable power in a way that also diversifies the resource mix, cleans up the existing fleet of plants, and expands energy efficiency programs.

Mr. Biewald recognized that Cinergy has made investments in selective catalytic reduction ("SCR") to control NO_x emissions. He also noted that the repowering of Noblesville has increased the station's capacity and switched its fuel from coal to gas. This represents

¹¹ The initiation of discussions, as agreed in Cause No. 41954 (*Ind. Util. Reg. Comm'n*, September 11, 2001), was extended at the request of the parties until June 1, 2004.

progress toward improving the efficiency of Cinergy's generating mix, and diversity of its fuel supply, but Noblesville represents just 300 MW of capacity in a system of about 12,000 MW. Mr. Biewald noted that PSI progress in diversifying its resource mix is very gradual, and not designed to meet environmental mandates that are not yet in place. Carbon dioxide emissions, fine particulates, and toxics such as mercury will likely need to be addressed by Cinergy in the near future.

Mr. Biewald also testified that demand side programs and renewable generating resources will be essential components of a low cost and prudent strategy to manage these emissions and associated risks. Given the Company's heavy reliance on coal generation and its pronounced vulnerability to new environmental regulations, Mr. Biewald suggests that aggressively pursuing DSM would seem to be a prudent environmental risk management policy that the Company should not overlook. In addition, Mr. Biewald testified that if PSI were to utilize an increased share of renewable generating capacity, this would also serve to reduce its exposure to environmental risks at costs that could reasonably be borne by customers. Mr. Biewald concluded his testimony by recommending that PSI should aggressively develop and implement cleaner generating resources and energy efficiency programs, in order to better serve its customers.

B. PSI Testimony. PSI witnesses agreed that environmental compliance planning is complex and that a utility the size of PSI cannot wait until the last minute, or until all requirements are fully known to begin such planning. Mr. Roebel testified that even after environmental compliance equipment is installed there remain operating challenges that must be addressed. He also described how PSI had to begin construction of, not just plan for, SCRs for compliance with the NO_x SIP Call while a court order staying those requirements was still in place. Mr. Roebel went on to explain that PSI has been actively planning and evaluating options for compliance with what the Company believes will be more stringent environmental requirements in the near future. Pet. Ex. KK, p. 4. Similarly Mr. Esamann explained that he believed that it is good public policy to encourage utilities such as PSI to present their environmental compliance plans to regulators and interested customer groups. Mr. Esamann went on to state that with mercury rules imminent the Company anticipates that it will be submitting an environmental compliance and cost recovery plan to the Commission in 2004. Pet. Ex. DD p. 35.

C. Discussion and Findings. It is very clear for the record in this proceeding that major coal burning utilities such as PSI face significant environmental compliance costs and challenges. We agree with the CAC that it is prudent for PSI to begin evaluating options and planning to address environmental compliance issues well before the specific requirements are known with absolute certainty. Due to PSI's reliance on coal, the development of an improved resource mix, including the implementation of cleaner generating resources in conjunction with the utilization of energy efficiency programs, must be undertaken by PSI in order to ensure long term benefits to its customers. Accordingly, we anticipate and expect that future environmental compliance issues will come before us for review, and anticipate that PSI will take the steps necessary to address environmental compliance issues in a proactive manner consistent with our findings herein.

14. The FERC-Seven-Factor Test. PSI witnesses Ronald R. Jackups and Edward F. Kirschner explained the FERC Seven Factor Test for classifying PSI's facilities as transmission or distribution and why PSI is seeking this Commission's approval of such classification in this case. Mr. Jackups testified that the FERC's Seven-Factor Test provides specific criteria to determine whether facilities should be classified as transmission facilities or distribution facilities under the Uniform System of Accounts. Pet. Ex. M, p. 63. Mr. Kirschner described in detail each of the tests. Pet. Ex. N, pp. 8-13.

Mr. Jackups said that the Midwest ISO Agreement requires that, prior to the end of the fourth year of the transition period of the Midwest ISO, each transmission owner shall file a request with the appropriate regulatory authority for a determination as to which of its electric system facilities are transmission facilities and which are distribution facilities, in accordance with the FERC's Seven-Factor Test. Pet. Ex. M, pp. 63-64. Mr. Jackups explained that because of the potential for changes in the transmission and distribution components of PSI's retail electric rates when the FERC's Seven-Factor Test is implemented, PSI elected to request this Commission's review of the Company's implementation of the FERC's Seven-Factor Test in this proceeding, so that any changes ordered by this Commission could be implemented within the context of this general rate case. Pet. Ex. M, p. 64.

Mr. Kirschner testified that the application of the FERC Seven-Factor Test resulted in the determination that all of PSI's electric delivery system facilities rated 69 KV and above, networked or radial, should be classified as transmission, and that all of PSI's electric delivery system facilities rated below 69 kV should be classified as distribution. Pet. Ex. N, p. 8. This represented no change from PSI's previous classification of its facilities. Pet. Ex. N, pp. 8 and 14.

No party contested these classifications or objected to PSI's implementation of the FERC's Seven-Factor Test in this proceeding. We find that PSI has properly implemented the test and has appropriately determined which of its facilities should be classified as transmission facilities and which should be classified as distribution facilities for purposes of the FERC Seven-Factor Test.

15. Compliance with Hold Harmless Commitment. PSI witness John P. Steffen submitted testimony regarding the Company's compliance with the "hold harmless" provisions of the Indiana Settlement Agreement as approved by this Commission in its March 29, 1994 Order in Cause No. 39897. Mr. Steffen testified that under the terms of the Settlement Agreement as approved by the March 29, 1994 Order, PSI was required to make affirmative showings with respect to net merger production capacity savings, net merger production cost savings and net merger non-fuel O&M cost savings. Pet. Ex. C, p. 28. Mr. Steffen also said that the March 29, 1994 Order also required PSI to submit, as part of certain post-merger general rate case proceedings, information regarding 16 different categories. Mr. Steffen sponsored an exhibit that set forth this required information. *Id.* at 27-31; Pet. Ex. C-8.

As to production capacity savings, Mr. Steffen said that Ms. Diane Jenner's direct testimony shows that PSI has used a target planning reserve margin of less than 20%, PSI's previous standalone margin, since the 1994 merger. Pet. Ex. C, p. 31. With respect to production cost savings, Mr. Steffen noted that under the 2002 Joint Generation Dispatch Agreement and as part of the Indiana Settlement Agreement in Cause No. 41954, PSI committed to provide its retail electric customers with \$7.3 million in annual joint dispatch savings rate credits through 2004. Mr. Steffen testified that since April, 2002, PSI has implemented these credits through its fuel adjustment clause. *Id.* at 32. As to non-fuel O&M costs, Mr. Steffen sponsored an exhibit which showed that O&M costs for this proceeding would have been an estimated \$8.3 million higher but for the merger. Pet. Ex. C-9. Mr. Steffen said that converting the non-fuel O&M costs to a per customer basis shows that PSI's annual non-fuel O&M cost per customer today is \$579, compared to an indexed PSI annual non-fuel O&M per customer of \$583 in 1992. Pet. Ex. C, p. 37.

Mr. Steffen testified that the non-fuel O&M savings produced by the merger exceed the cost of the merger and, therefore, PSI's customers have been held harmless from the effects of the merger and are clearly better off as a result of the merger. *Id.* at 38. Mr. Steffen added that it was noteworthy that this demonstration was made by referencing only non-fuel O&M savings, without any consideration given to the savings produced by deferred capacity, and joint dispatch and financing and fuel cost savings.

No party disputed Mr. Steffen's testimony regarding PSI's compliance with the "hold harmless" provisions of the Settlement Agreement in Cause No. 39897. We find that PSI has complied with the provisions of that settlement and the terms and conditions of the March 29, 1994 Order approving it.

IT IS THEREFORE ORDERED BY THE INDIANA UTILITY REGULATORY COMMISSION that:

1. PSI shall be, and hereby is, authorized to place into effect rates and charges for retail electric utility service rendered by it in the territories served by it in the State of Indiana in accordance with this Order, including an annual increase to its rates and charges of \$107,344,000 which represents an increase in operating revenues of 8.36%. Said rates will produce total jurisdictional electric operating revenues of \$1,406,596,000 and, on the basis of annual jurisdictional electric operating expenses of \$1,139,096,000, will result in annual jurisdictional electric utility operating income \$267,500,000. PSI is hereby authorized to file with the Commission a new schedule of rates and charges which will properly reflect, establish and provide the operating revenues herein authorized. Said schedule of rates and charges should be in accordance with this Order.

2. PSI shall file with the Electricity Division of this Commission, appropriate tariffs using the rate design criteria specified in Finding No. 9 of this Order, including the rates and charges authorized herein for Phase I. Such Phase I rates and charges shall be effective upon such filing, subject to refund, pending review and approval by the Commission's Electricity Division. For Phase II, PSI shall file with the Commission's Electricity Division appropriate

tariffs for such phases, including the applicable rates and charges authorized herein, at least forty-five (45) days before their respective implementation dates in order to allow sufficient time for review and approval. The rates and charges for Phases II shall be effective upon approval of the filed tariffs.

3. PSI's filing of its new Phase I rates and charges with the Commission's Electricity Division shall be accompanied by a simultaneous refiling of: (a) its fuel cost charge in effect on the date of the approval of such new rates and charges, modified to reflect the new base cost of fuel provided for in Finding No. 10A of this Order; (b) its Clean Coal Operating Cost Revenue Adjustment, Standard Contract Rider No. 71 to reflect the effect of costs that will be contained in base rates in accordance with the provision of this Order; and (c) its Qualified Pollution Control Property Revenue Adjustment, Standard Contract Rider No. 62 to reflect the effect of costs that will be contained in base rates in accordance with the provision of this Order.

4. PSI shall be, and hereby is, authorized to recover in its retail electric rates its deferred Dynegy buyout costs, as determined in accordance with Finding No. 6D(13)(a) of this Order, and to continue to defer, for subsequent recovery in its retail electric rates, the unamortized balance of its deferred Dynegy buyout costs, as determined in accordance with that same Finding.

5. PSI shall be, and hereby is, authorized to recover in its retail electric rates its deferred transaction costs and costs to achieve benefits associated with the 1994 Cinergy merger, as determined in accordance with Finding No. 6D(13)(b) of this Order, and to continue to defer, for subsequent recovery in its retail electric rates, the unamortized balance of its deferred transaction costs and costs to achieve benefits associated with the 1994 Cinergy merger, as necessary.

6. PSI shall be, and hereby is, authorized to: (a) recover in its retail electric rates its Midwest ISO-related deferred administrative costs, all as determined in accordance with Finding No. 6D(13)(c) of this Order; and (b) to continue to defer, for subsequent recovery in its retail electric rates, the unamortized balance of its Midwest ISO-related deferred administrative costs, all as determined in accordance with that same Finding.

7. PSI shall be, and hereby is, authorized to recover in its retail electric rates its post-in service deferred depreciation and AFUDC, as determined in accordance with Finding No. 6D(13)(d) of this Order, and to continue to defer, for subsequent recovery in its retail electric rates, the unamortized balance of its post-in service depreciation and AFUDC, all as determined in accordance with that same Finding.

8. Commencing with the first day of the month coincident with or immediately following the effective date of this Order, PSI is hereby authorized to place into effect the depreciation rates approved in Finding No. 6D(1) of this Order.

9. PSI's proposed classification of its electric delivery system facilities as transmission facilities and distribution facilities, as described in Finding No.14 of this Order, shall be, and hereby is, approved for purposes of the FERC Seven-Factor Test.

10. PSI shall be, and hereby is, authorized to implement the charges and credits for the payment of its Indiana property taxes incurred after the effective date of this Order in the manner provided in Finding No. 6D(11) of this Order.

11. PSI shall be, and hereby is, authorized to implement the Summer Reliability Standard Contract Rider, NO_x Emission Allowance Standard Contract Rider, and Midwest ISO Cost and Revenue Adjustment Standard Contract Rider, all as determined in Finding No. 9A of this Order.

12. PSI shall be, and hereby is, directed to participate in a collaborative process involving Commission Staff and other parties concerning PSI's RTP Program, all as provided in Finding No. 9B of this Order.

13. This Order shall be effective on and after the date of its approval.

HADLEY, RIPLEY AND ZIEGNER CONCUR; McCARTY AND LANDIS ABSENT:

APPROVED: MAY 18 2004

**I hereby certify that the above is a true
and correct copy of the Order as approved.**

Nancy E. Manley, Secretary to the Commission

PUBLIC SERVICE COMMISSION
OF WEST VIRGINIA
CHARLESTON

At a session of the PUBLIC SERVICE COMMISSION OF WEST VIRGINIA in the City of Charleston on the 5th day of December 2008.

CASE NO. 06-0960-E-42T

MONONGAHELA POWER COMPANY and
THE POTOMAC EDISON COMPANY both
dba ALLEGHENY POWER,

Rule 42T application to increase electric rates and charges.

CASE NO. 06-1426-E-D

MONONGAHELA POWER COMPANY and
THE POTOMAC EDISON COMPANY both
dba ALLEGHENY POWER,

Request for approval of change in depreciation rates in accordance with Rule 20 of the Commission Rules of Practice and Procedure.

COMMISSION ORDER

BACKGROUND

On July 26, 2006, Monongahela Power Company ("Mon Power") and The Potomac Edison Company ("Potomac Edison") both dba Allegheny Power (jointly "Companies"), filed revised tariff sheets reflecting increased rates and charges of approximately 12.8 percent annually, or \$99.8 million, for furnishing electric service to their customers in West Virginia. The proposed rates and charges were to become effective on August 25, 2006. The requested increase reflected the net impact of a traditional base rate increase as well as the proposed reinstitution of the Expanded Net Energy Cost ("ENEC") mechanism. On August 22, 2006, The Commission suspended the revised tariff sheets and deferred new rates for the Companies until May 23, 2007.

On September 26, 2006, the Companies filed proposed depreciation rates pursuant to Rule 20 of the *Rules of Practice and Procedure*, 150 C.S.R. 1, which filing was docketed as Case No. 06-1426-E-D. The Companies requested that the depreciation rates not take effect immediately, and that the Commission approve the depreciation rates in sufficient time to be reflected in the base rates established in the final order in Case No. 06-0960-E-42T. The Commission suspended the proposed depreciation rates until May 23, 2007, the same date the proposed customer rates and charges in Case No. 06-0960-E-42T were set to go into effect, and consolidated the two cases. *See*, Commission Order entered December 20, 2006.

The Consumer Advocate Division of the Public Service Commission ("CAD"), the West Virginia Energy Users Group ("WVEUG"), the International Brotherhood of Electrical Workers Local 2357 ("IBEW"), Kroger Company, Utility Workers Union of America ("UWUA"), Monongalia County General Hospital ("Mon General") and West Virginia Community Action Partnership ("WVCAP") filed petitions to intervene in this case. Those petitions were granted by the Commission. Certain individuals also filed petitions to intervene. The individual petitions to intervene were denied by the Commission because the interests of the individuals were already represented by the CAD.

After hearings and briefing the Commission issued an Order on May 22, 2007 ("Original Rate Order").¹ In that Order, the Commission established new depreciation rates for the Companies, approved an ongoing procedure for current recovery, deferral of over- or under-recoveries and true-up of the Companies' net fuel costs and certain other components of cost and revenue designated as ENEC. For purposes of base rate revenue requirements the Commission applied a return on equity of 10.50 percent to the Companies' capital structure to arrive at an overall return of 8.44 percent. This return was applied to a rate base of \$1,178,874,203 resulting in a return on rate base of \$99,496,983, which, along with allowances for operation and maintenance expenses, depreciation and taxes, resulted in a revenue requirement of \$1,082,732,803. In calculating this revenue requirement, the Commission included the ENEC components offset by an equal level of going level revenue to essentially zero out the ENEC components. The resulting revenue requirement was lower than the Companies' going level revenue and the Commission revised rates resulted in an overall net base rate decrease of \$6,183,900.

On June 15, 2007, the Companies filed a Petition requesting that the Commission reconsider and clarify the Original Rate Order. In that Petition, the Companies also requested that the Commission set the issues raised in the petition for a hearing. The Companies contended that the Commission should reconsider its earlier decision because the Commission had (i) misapprehended important ratemaking principles; (ii) failed to

¹The procedural background set forth in this Order is abbreviated. Please refer to the Original Rate Order for a more complete recitation of the procedural history of this case.

take proper account of uncontroverted evidence in the record; and/or (iii) miscalculated adjustments it had determined to make.

The Companies claimed that the Original Rate Order resulted in revenues that are lower than the position of the Companies regarding their cost of service and that the rates ordered by the Commission are not just and reasonable. The Companies asked that the Commission reconsider four specific revenue requirement determinations. These were:

- 1) the Consolidated Tax Adjustment ("CTA") applied by the Commission to determine an appropriate level of income tax expense;
- 2) the determination that the rate base of the Companies should be reduced by recording certain accumulated deferred income taxes ("ADITS") as an offset to the Companies' proposed recognition of increased income tax expense associated with the net transfer of generating assets on January 1, 2007 (In the alternative the Companies asked that the Commission recalculate the correct amount for this rate base credit if the ADITS in question were not eliminated altogether.);
- 3) the determination of appropriate depreciation rates for the Companies; and
- 4) the requirement that bonuses pursuant to a variable pay plan should be allowed for ratemaking purposes, but only if responsiveness to customers was a factor for evaluating employee performance.

In addition to asking for reconsideration with regard to the above listed items (or correction of the ADITS amount), the Companies requested that the initial annual review of right-of-way maintenance be changed to coincide with a twelve-month period ending on the last day of May, 2008.

The Staff, CAD and WVEUG responded to the Petition for Reconsideration. The positions of each of these parties are discussed below.

DISCUSSION

A. Consolidated Tax Adjustment

In its Original Rate Order, the Commission calculated the income taxes of the Companies for ratemaking purposes after taking into consideration significant tax losses experienced by various companies which file a consolidated income tax return with the Companies ("Consolidated Tax Group"). The Commission considered the impact of tax losses for all members of the Consolidated Tax Group after adjusting to reflect normalization of differences between book and tax depreciation. Companies witness, Mr Warren, had described this methodology as a CTA to differentiate it from a methodology

which considers only the tax loss of the parent company. Mr. Warren referred to the parent company loss methodology as a Parent Company Loss Adjustment ("PCLA").

1. Arguments of the Companies

The Companies requested that the Commission reverse its initial decision on this matter and not use the tax losses of all affiliated members of the Consolidated Tax Group to calculate a consolidated tax savings, or an effective income tax rate.² The Companies further argued that even if the Commission did consider the tax losses of all affiliated members of the consolidated tax group, there were alternative "time value" methods of considering the effects of consolidated tax savings and the Commission should consider those methods. The Companies argued that the approach taken by the Commission was ill-conceived and contrary to the historic approach of the Commission to the issue. Petition for Reconsideration at 3-4. They contend that the Commission applied a version of CTA that is even more suspect than the highly discredited Pennsylvania model, which had been described by witnesses and cited by the Commission, and which itself is conceptually inferior to the methodologies implemented by two other jurisdictions that apply a version of the CTA. *Id.* at 4.

The Companies also requested that if the Commission does not change its effective tax rate or "actual taxes paid" approach for setting the income tax component of revenue requirements in this case that it provide for recovery of taxes when the circumstances giving rise to the Original Rate Order have been resolved. To accomplish this, the Companies suggested that the Commission should allow the Companies to begin recovery of their tax expenses immediately upon the exhaustion of the net losses cited in the Original Rate Order. Petition for Reconsideration at 5. The Companies argued that, without some mechanism for expedited consideration of documented income tax expenses, once such tax expenses are incurred they will be subjected to additional delay in the recovery of income tax expense until the completion of a subsequent rate proceeding. *Id.*

In requesting reconsideration of the CTA decision, the Companies argued that the Commission historically calculated an effective income tax rate after considering the tax losses of the parent company of a consolidated group, but not the tax losses of other affiliated companies. The Companies state that this "parent company" tax loss approach was adopted by the Commission in a number of prior cases, including cases for the Companies. Petition for Reconsideration at 5. Specifically, the Companies noted that the Commission had used only the parent company tax loss for purposes of calculating an

² The Commission refers to both "consolidated tax savings" and "effective tax rate" in its discussion of income taxes. The consolidated tax savings is defined as the difference, stated as a percentage, between the total income tax payable by individual members of the consolidated group and the total income tax payable by the consolidated group after taking losses of individual members of the group into account. The effective income tax rate is the net tax rate after adjusting the statutory tax rate by the consolidated tax savings. For example, if the statutory tax rate is 35 percent and the consolidated tax savings is 50 percent, the effective tax rate would be 17.5 percent.

effective income tax rate in West Virginia American Water Company, Case Number 03-0353-W-42T ("2003 WVAWC case"). *Id.*

The Companies maintain that the use of any effective tax rate other than the rate that would have applied to them on a separate return basis was wrong. The Companies continue to argue at length that they have a valid income tax expense based on their separate return basis taxes because this amount is paid to their parent company pursuant to a Tax Sharing Agreement ("TSA") among the affiliated companies within Allegheny Energy. The Companies point out that their witness, James Warren, provided testimony about tax allocation agreements in general and the TSA in particular. Mr. Warren testified that the TSA establishes a reasonable related-party economic relationship among parties in the Consolidated Tax Group. Petition for Reconsideration at 10. They further note that the TSA is the mechanism through which the income tax payments of the Companies are transmitted when those payments, by virtue of the Consolidated Tax Group income tax liability, are paid to the taxing authorities. In other words, the TSA acts as a clearinghouse for the tax liabilities due from and tax benefits due to the various group members. *Id.*

2. Responses to Arguments Made by the Companies

The CAD, Staff and WVEUG responded to the Petition for Reconsideration. *See generally*, responses filed on July 9, 2007. Each respondent disagreed with the position of the Companies and supported the Commission determination that the effective current income tax rate for the purposes of this case was zero. WVEUG argued that:

[T]he record that has been developed and relied upon by the Commission in this proceeding demonstrates two undisputed points: (1) Allegheny has paid zero dollars in taxes since 2000 (and will likely not pay taxes for an additional four years); and (2) Allegheny Energy's losses from its unregulated entities have in fact harmed the regulated utilities and their ratepayers in the form of increased rates and the shifting of risk to ratepayers from shareholders.

WVEUG Response at 5. The CAD, in supporting the original decision of the Commission with regard to the consolidated tax savings issue, argued:

At page 7 of their Petition the Companies state: 'The Companies' **accounting records** appropriately reflect income tax expense incurred and paid by the Companies. **But for the Companies' participation in consolidated tax returns**, the Companies' incurred income tax expense would have been paid directly to the taxing authorities and fully reflected in the rates established in the Order.' [Emphasis added] These two sentences sum up the frailty of the Companies' position on income taxes. Making an accounting entry is not the same as paying taxes to a taxing authority. . . . While the Companies would like to pretend that they do not participate in a consolidated tax return, the facts are that the Companies do indeed

participate in a consolidated tax return, and as a result have not made income tax payments to a taxing authority since 2000.

CAD Response at 7. (Emphasis in original). Staff, in addressing the issue of payments made to parent company Allegheny Energy as a “clearing house” rather than to a taxing authority, argued:

The Companies argue their tax expense is a prudently incurred expense and the Commission has no right to deny it. Staff finds this curious since it has clearly been established that no money will be paid to the State or Federal Government. Merriam-Webster defines a tax as ‘a charge usually of monies imposed by authority on persons or property for public purposes.’ So, one would reasonably expect a prudent ‘tax’ expense to be paid to an authority figure and that money would then be used for a public purpose. Therefore, Staff would disagree with the Company’s description of this ‘tax’ expense as prudently incurred. Staff asserts the removal of this expense is permissible and does not constitute an unconstitutional taking of property in violation of the US and West Virginia Constitution.

Staff Response at 3-4.

3. *Commission Decision*

The Commission does not agree with the positions set forth by the Companies on the issue of CTA. In the Original Rate Order in this case the Commission explained why it was adopting a consolidated tax savings calculation and an effective income tax rate which uses the losses of the entire Consolidated Tax Group, rather than only the losses of the parent company. *See generally*, Original Rate Order at 28-33. The Commission noted that this case contains a fact pattern that is significantly different from the 2003 WVAWC case cited by the Companies. *Id.* at 31. In the 2003 WVAWC case, the losses of the parent company accounted for ninety-seven percent of the losses. In this case, the losses of the parent are slight in comparison to the losses of the group as a whole. Moreover, in the 2003 WVAWC case, that company was a taxpayer with no loss carry forwards. *Id.* “Therefore, the only effect the losses had in that case were to lower the effective tax rate.” *Id.* In this case, we noted that the Consolidated Tax Group had not been a taxpayer since 2000 and probably will not be a taxpayer for several more years due to the impact of prior years tax losses. *Id.*
