FIRST DISCOVERY REQUEST OF THE
CONSUMER ADVOCATE DIVISION

Question:

1-129. Revenue Reconciliation. Refer to the File <TAWC - Exhibit REV - 2 Revenue at Present and Proposed Rates.xlsx> included with the Company's filing. Provide a reconciliation of revenues between the "Test Period at Present Rates" and the amounts recorded on the Company's ledger by customer class (Residential, Commercial, etc.), and by territory (Chattanooga, Lookout Mountain, etc.), and by determinant type (customer charges, usage charges, riders, other). In addition, provide a narrative explanation for revenue variances greater than 1%.

Response:

The Company objects to this request on the grounds that it is overly broad, unduly burdensome and seeks information that is not available in that TAWC does not maintain general ledger data at the rate zone level for PCOP Rider Revenue. PCOP Rider revenues are posted to a different general ledger account, 25689900 as an Expense Recovery Rider and are recorded under the Company's four service territories. Subject to and without waiving the foregoing objections, please see TAW_R_CADDR1_129_062524_Attachment, which is being provided in excel format only. Please note that there is a reconciliation of revenues between the "Test Period at Present Rates" and the amounts recorded on the ledger.

There is one base revenue variance greater than 1% that is related to Private Fire Service. Test Year revenue under the Company's current rates is 2.7% higher than what was recorded in the general ledger. This is due to return of advance private fire service billings of $30,133 & net accrual/reversals for quarterly billings of $41,530. The remaining variance is $1,151 and is less than 1%.

There is one variance related to the Company's PCOP rider. This is due to an $8,680 expense recovery adjustment that occurred in March of 2023. Once the credit is accounted for, the remaining variance is $1.06 and is less than 1%.

Question:

1-142. Weather Normalization. Refer to the File <TAWC - Exhibit CBR-3.xlsx>, Tab "Exhibit CBR-3", included with the Company's filing. This spreadsheet provides the weather normalization calculation for the residential customer class. Admit or deny that the Company's model does not consider "normal" weather (based on a 30-year average or any other average time basis) as part of this calculation.

Response:

Normal weather for the residential model is defined to be the 10-year average of weather conditions in the service territory from January 2014 through December 2023. Weather data in the statistical model for residential usage is modeled as monthly deviations from the 10-year average, and these deviations are projected as zero for the forecast period.
